Sunday March 29th 1891

It has been snowing & blowing out of doors all day. J. D. Davis went home at 11:00 o'clock this morning. This is a wet snow and will probably make the feed for "range" cattle a good deal better, and I think that they need it for some of them are beginning to look pretty thin

Monday March 30th 1891

(Monument Hall Route 4 trip)

9:55 in cove

At 8:00 a.m. Elmer & I started in the cove after specimens & returned at 10:00 A.M. We got a load of box work apiece under the fallen rocks in the Post Office & of a rich brown color. We brought our loads out, emtied our cans, & started in the cove after another load at 10:30 a.m. & returned at 11:50 a.m after getting our loads in the Post Office & in the same place as we did this morning. After dinner, Elmer & I started in the cove at 1:20 & went to the South End of Red Hall. While Elmer was getting his load I explored a deep crevice straight ahead & found it to be the crevice that Father lost a chisel some months ago and I found it on the 17th inst.. after we had loaded up & got started we met M. A. Moore of Hot Springs, S. D. in the Post Office. He had a gaboline (gasoline) light of about 8 candle power with him. We got of the cove at 4:10 P. M, at 8:10 P.M M.A. Moore & I started in the cove after specimens & returned at 11:55 P.M. We went to the South of Red Hall and I got my load of box work in the deep crevice that I explored this afternoon & lost my ~~chisel~~ chisel. As we were coming out M.A. Moores gasoline lamp caught, in Red Hall, on fire and melted to pieces. J. M. Moore came out with M. A. Moore from Hot Springs
