Topic Question 1:

I like strategy D the best. It will make it safer for bicyclists and pedestrians while also allowing improved parking and traffic congestion. This option also addresses the beaver pond area which is a major concern. The road is intruding on the habitat and people stop their cars in the middle of the road to view the pond creating traffic jams and unsafe road conditions.

Strategy B is my second choice with A being my third.

Topic Question 2:

Strategy C is going to cause confusion, anger, and frustration to park visitors. Keeping track of which day of the week they can drive on the road is going to be a major issue. Even if there are a lot of signs showing the schedule, many people are not going to read them. If the goal is for "bike/pedestrian only" time on the road, it would be better to have it closed to vehicles during certain hours of the day. Additionally, there will be problems with park employees and volunteers who have to drive to their duty station on days the road is closed to vehicles. Some visitors will not understand why some people get to drive on the road while others do not.

Topic Question 3:

Going with option B or D and eliminating the wait time might be a consideration. If there are clearly defined parking places and non-parking measures are taken on the rest of the road, then it might not be necessary to limit traffic on the road. By moving the road so visitors have to go through the entrance station in Moose, the number of vehicles using the road may go down since a lot of locals use the current entrance in Moose to avoid paying entrance fees.

Topic Question 1:

Alternative A should be chosen. All of the alternative plans include some type of closure or delay of entry to the road, thus forcing significant traffic through the city of Jackson. Maintaining awareness of the closure times will make it difficult for visitors to plan efficient travel. There should be a plan developed that maintains the road at all times but still addresses the volume of traffic with adequate parking and turnouts and speed bumps to control speed.

Topic Question 2:

Strategies B, C, and D all offer interesting ideas for improving access and controlling traffic, but unfortunately they all involve temporary road closures. Such an arrangement will greatly complicate the access to the park from the growing Teton Village area.

Topic Question 3:

As stated above, plans B, C and D all have interesting ideas for providing more parking and a safer roadway. Their downfall is the closure of the road for certain periods of time. If the times are standard, then there may be closures when none are needed, and if they are based upon current traffic, then the arbitrariness of the closures could impact badly on visitor travel plans.

Topic Question 4:

Any plan that improves parking and turnouts, and improves the road service without forcing temporary closures of the road would be a great improvement. We have traveled the Wilson-Moose road many times since our first visit in 1985. The need for an access to the park for all of the visitors staying along the southern portion of Highway 390 without having to drive back through Jackson is very important.

Topic Question 1:
See below

Topic Question 2:
See below

Topic Question 3:
See below

Topic Question 4:
See below

Comments: Moose-Wilson is a primary destination when visiting GTNP and we spend a large portion of our time there, doing what everyone else there does - watching wildlife, visiting the LSR Preserve, checking on the Western Center for Historic Preservation's progress at White Grass Ranch, and hiking to and around Phelps Lake. And making our way to Teton Village for the aerial tram ride and a cold Coke. Thus we recognize both the value and the challenges of the current configuration and use status. It is nonetheless extremely hard to contemplate restricted access. It would be very helpful to know what is meant by "peak use" times. Relative dollar cost estimates (or cost ranges) of the options should also be provided early on to assist in assessing the options. Is it correct that the remediation project will be 100% funded by taxpayer dollars?

Otherwise, I think the presentation of information is EXCEPTIONALLY WELL DONE, and thank you

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

My apologies if I missed this point. What problem(s) is this project addressing? Does "someone" or some entity believe that the current state of this corridor is NOT protecting the natural and cultural resources of the park? Why is a change required? That is my comment. I suppose what I'm looking for is a problem statement. Then I could understand how each of the alternatives help provide the most feasible solution. Is one potential alternative to simply leave it alone?

Topic Question 1:
Plan C

Topic Question 2:
Doing nothing to change the current situation. It is an issue that needs to be addressed now and not left open for further delayed management.

Topic Question 3:
A multiuser path that runs from Wilson to Moose would be ideal.

Topic Question 4:
Please implement plan C. If that option is not selected, please consider pedestrian and bicycle use of the road in the plan that is chosen.

Topic Question 1:
rerouting the road, putting in bike path for traffic and noise reduction

Topic Question 3:
a bridge across the Snake so that the park is not used to get to the airport

Topic Question 4:
I like option D.

I go to GTNP every year and enjoy spending time on my bike. The bike path is one of the best aspects of the park and is enjoyed and shared by riders of many skill levels.

Comments: Noise is becoming an issue in the park - - On a hike to Surprise lake, we were shocked how loud the noise was from the motorcycles below. Would like to see biking further encouraged in the park

Has the park considered closing River Road to cars?

I would hope that the bike path be extended to Yellowstone, or at least to Moran on the East side.

Topic Question 1:

Of the proposed alternatives, none in my opinion would adequately improve the Moose Wilson Road. However, The ideas of a separate bike path and improvements to the dirt section of the road would be great. A bike path would insure the safety of visitors to the park who choose to ride their bikes by giving them a safe space where they wouldn't be threatened by cars on blind corners. The dirt section of the road deteriorates so rapidly midsummer that in my opinion it would be overall less maintenance and a better experience on the road for drivers.

Topic Question 2:

Limiting the traffic in any way as laid out in a few of the proposals is not a good idea in my opinion. Limiting access would only confuse and frustrate our guests who are trying to use the Moose-Wilson road.

Topic Question 3:

Perhaps expanding the parking at the LSR Preserve. Many times going to hike around Phelps, it can be up to an hour to get a parking spot for most of the summer.

Comments: I can't reiterate enough how much I am against the proposals that limit car traffic on the Moose Wilson Road. As I said above, it will only add to the confusion and frustration of our guests who are trying to enjoy the National Park via the road. If anything the infrastructure should be improved as I stated in question 1. Thank you for your time.

Topic Question 1:

Complete pathway for bikes throughout corridor. Maximize recreational opportunities while limiting automobiles and their associated pollution, noise, and congestion. Encourage healthy lifestyle recreation while protecting resource.

Topic Question 2:

Through auto traffic is not appropriate in the corridor. The park has excess vehicular traffic and alternative modes of transportation should be encouraged.

Topic Question 3:

Increase interpretive opportunities including staffing naturalists in the corridor.

Topic Question 1:

You should continue to allow two way traffic on the road. If you do decide to limit (something I hope you will not do), you will need to have that notice way before the Ranger Gate, and provide ample turn around for visitors who already have their cars full of family and food for a fun day in the park. You would have to electronically have that notice at inns, hotels, motels, condos, etc., so people would know beforehand the park is full. You should go back to the drawing board, and realize that the Park's part of the Moose Wilson Road is part of the overall road system in the valley. Actions you take will affect other parts of the system; I don't want to enter the Park by going through Jackson - the traffic is already overcrowded.

Topic Question 2:

Limiting road use and leaving the road as narrow as it is. Also why are you installing parking lots when there are no activities near by? If you want people to view the animals, that's something else; but with the recent uptick in grizzly use of the road, there could be some unfortunate incidents. We've been visiting since 1982 and find the current solutions are creating more problems than are being solved. Like it or not, Grand Teton Park is really part of the larger Jackson Hole eco/human/movement system.

Topic Question 3:

Ease of access that welcomes visitors to the park. Widen the road for two way traffic for Park visitors. Making this entry on the west bank more difficult is perhaps sending the wrong message to first time visitors. Visitors to the park will not be as up-to-date on the strategies, but will know when access is denied. There have

Topic Question 4:

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

I'm not sure what you're trying to solve. It seems all the options raise more problems that will frustrate potential visitors to the park. Especially first-time visitors. Vacation population has grown on the west bank since 1982. I don't think you can reverse that trend, so the park may need to adapt more creatively. This park is not in an isolated position as some other parks are. You are part of the mix in the valley - rethink what you're trying to do.

Topic Question 1:

Alternative B serves the needs of the valley by realizing that visitors are our life blood. Closing the road on certain days would be a huge irritant to our visitors that are here a couple nights.

Topic Question 2:

C. We do not need to provide cyclist traffic. This road is not safe when approaching an unseen cyclist on a curve. There is great cyclist access to the park already built. Closing to provide this access is extremely damaging to visitor needs and therefore damaging to the valley.

Topic Question 1:

Only A and C and D, those that preserve the natural and rustic experience of wildlife viewing should be carried forward. The Disneyland alternative B should be dropped. With B you are creating a sanitized Jenny Lake experience.

Topic Question 2:

B is awful. What next? A three-lane road for passing convenience?

Topic Question 3:

No, anyone who has actually visited and driven on the road knows that this is the best location for viewing moose and other wildlife. Alternative B would reduce the viewing experience to the equivalent of spotting a moose in the tiny pond at the intersection of Moose-Wilson with Route 22.

Topic Question 4:

Visit http://www.mooseworld.com/sightings_wyoming.htm.

Or <http://www.mooseworld.com/slideshow13/slideshow13.htm>.

Think about what the wildlife viewing experience is like at Oxbow Bend: it's an overlook designed for cars. That's why it is so rare to see wildlife.

Comments: If you decrease the rustic nature of Moose-Wilson and increase the traffic you will have effectively removed one of the two remaining areas where a Jackson Hole visitor can actually spot wildlife

without a circus "wildlife spotting" of cars pulled off the road where an animal, typically a moose, happens to wander into view.

In addition, you will be posting the number of moose killed on a new section of Moose-Wilson.

Don't ask people to watch for wildlife while simultaneously increasing the risk of their disappearing.

Correspondence Text

Topic Question 1:

Realignment of portions of the road- -this is an old road that needs to be made vehicle and traveller friendly

Improve parking areas- -the congestion occurs when tourists think they can stop their vehicles in the middle of the road. Parking areas will give them a place to get off the roadway.

Paving the south portion of the road- -the potholes that develop are hazardous and in the long run, the cost to pave should outweigh the continual need to grade the road

Not allowing taxis or other commercial vehicles- -It doesn't improve the park experience to see them. I think the wildlife expeditions type of tours should only be allowed at certain times of the day and be very limited in scope and size.

Extend the bike pathway through this section of the Park- -I would have to say "it's about time". This alone could cut down on a lot of car travel- -what a fun stretch to ride for visitors and locals alike.

Moving the entrance to Moose Wilson road to within the Park but NOT where the entrance is located is a good idea to prevent people without Park passes from using the road as a free ride.

Topic Question 2:

Relocating the park entrance to a newly created four way- -entering the Park is already a slow process.

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

There are rarely pass holder entrance lanes available and tourists spend too much time asking questions of the gate personnel. If it is where the Moose Wilson road is to be diverted, then that would slow things down even more.

Limiting the number of cars on the Moose Wilson road- -I would think this is going to be a vast waste of Park personnel, time, and expenditures. The need for this is very small. Make the road better, add a bike path and don't allow commercial traffic and a lot of the issues will be resolved.

One way travel at peak periods- -this is unpredictable and another poor use of Park budget money. The road gets congested occasionally because of it's poor condition, narrow width and lack of pull outs.

The three concepts addressed above should be "back burner" options if the realignment, paving, bike path, parking areas do not sufficiently reduce congestion. There is congestion throughout all of the Parks in the summer but that's the reality of summer in Jackson Hole. I think lining people up with reservations, one way traffic, etc is going to create more of a mess.

Topic Question 3:

I think there are good aspects of all of the plans except for number one. Number one makes no sense because something needs to be done to a very popular stretch of the Park. I think an ultimate plan that combines aspects from the other three ideas is best.

Topic Question 4:

Keep the road open- -it's a highlight for many. Nothing has been done to improve it over the years, so of course there are problems- -it's antiquated. Making it a better road and rerouting it to allow for pullouts and smoother travel will help immensely with what is really just occasional congestion.

Comments: I have been a Jackson homeowner and resident since 1985. I travel the Moose Wilson road through the Park a couple of times a year. The biggest problem with it is the fact that it's been ignored by the Park for so long. It's popular for a reason and the Park should do what it can to make it a safe route to travel for everyone. Restrictions to its use should be a last resort.

PEPC Project ID: 48252, DocumentID: 60898

Topic Question 1:

In my opinion, the best alternatives are plans A (no changes) or D.

The rustic nature of the road should be maintained, especially the unpaved portion at the southern end. If anything, I would consider converting the entire road to gravel. This might limit the number of vehicles, or at least decrease speeds in the area.

Increased parking areas would be welcome. Plan D's multi-use pathway would seem favorable to those seeking non-motorized access, without significantly affecting motor travel.

Limiting the number of vehicles entering the area would allow for traffic control, without prohibiting travel. This would seem acceptable if traffic control is a major issue.

Topic Question 2:

I think that plans that prohibit two-way motor vehicle travel during any day/time periods are prohibitive to visitation of the park by people staying in the Teton Village area. Having stayed in Teton Village several times, the Moose-Wilson Road was our primary route for entrance to the park. Removing this option, for example by limiting the road use to one-way traffic or for bicycles only, would significantly impact these visitors in a negative way.

Plans B & C appear to have these restrictions

Topic Question 3:

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

Could you consider charging an additional fee for using this area (annual pass holders would be exempt)? This might control visitation in the area by discouraging "casual" visitors, while generating some additional revenue for maintaining and servicing this particular area. It could be simply a fee for motor vehicles (e.g. \$2-\$5); pedestrians and non-motorized vehicles could also be exempt. This might require an entrance station at the north end of the road (as in some of the plans), or you could try just charging it for those passing through the south station.

Another possibility would be to offer a shuttle bus for people who are visiting and/or utilizing the area. For example, those who are hiking the Death Canyon trail could park at the main Visitor Center and ride the shuttle to the trailhead. This would remove some vehicle traffic. Personal vehicle traffic could still be allowed (which would not affect through traffic). Having visited Zion N.P. before and after implementation of the shuttle buses, I find using the shuttle buses convenient and less stressful. Zion isn't a perfect analogy, but it has some similarities.

Topic Question 1:
See only comment below

Topic Question 2:
See only comment below

Topic Question 3:
See only comment below

Topic Question 4:
See only comment below

Comments: As a former White Grass Ranch guest in the 1950s and then a wrangler in the early 1960s, but also a climber and hiker who has spent a lot of time in the Open/Death/Stewart/Avalanche Canyon areas, I'd like to endorse the Death Canyon/White Grass portion of Plan D. The Tetons are inescapably big, and despite the abrupt verticality of the east side of the range, the approaches are necessarily lengthy. Moving the Death Canyon trailhead farther east as in either Plans B or C would add either 0.4 or 1.0 miles to the approach. While this is not much for campers intending to overnight in the range, it is a considerable burden- -0.8 or 2.0 miles roundtrip- -to anyone trying to do an already challenging one-day hike or climb.

Last time I was there, two years ago, the road from the fork of the Death Canyon and White Grass roads was obviously in need of improvement. And finding a parking place near the trailhead reminded me of when gambling was still practiced in Jackson.

Topic Question 1:

Bike access; slower speed limits. The entire bike ecosystem in the park is becoming a wonderful thing. We live in the summers in the park and love the bike paths. Having a couple of days (maybe the weekends) just for bikes is a great idea. Some people live there, and maybe there could be some car access for a few hours in the early morning or evening on the weekend. In many other parks, like the Rockbridge parkway in DC, access only to bikes on weekends is a blessing.

Topic Question 2:

I liked D, until I saw the "reservation system." That is government bureaucracy at its finest. People go to the Laurence Rockefeller Preserve on a whim, not by reservation. We have a house in the park and often go to the Preserve on a moment's notice, or decide which hiking trail to take on the way to Moose. A reservation system is against the entire idea of the park, that it is open to wandering and going where one wants without government intervention. Though, having a park pass is a good idea. There is currently no gate on the North side. Slower speed limits are good. Bike access is great. Thus, if you are stuck on having reservations, C is better.

Topic Question 3:

Just more bike access; slower speed limits; a gate on the North side; and NO RESERVATIONS.

Topic Question 4:

The road should be an access to the park - - to hiking, the Rockefeller Preserve, etc. It should not be a throughway to the ski resort.

Topic Question 1:

I did like the idea to add intervals between vehicle entrances, I LOVE the multiuse path Idea, and I like the idea not to change the road itself.

Topic Question 2:

I think that limiting traffic to go halfway in the the parking lot and forced to turn back would only create mor traffic driving the wrong way around to the other entrance of the road, and tehereby dioubling traffic on the mosse wilson road (I know I would go in both ends and turn around).

Topic Question 3:

One of my key elements to my vacation to YNP/GTNP every summer is a drive down this road looking for wildlife, one of the worst downfalls of this is the crazy drivers, and bad traffic. Motorhomes tend to clog the place up pretty good even though they are not suggested (permitted?) there.

My strategy: Improve the road to be the same width start to finish, add barricaded sharp turns at each end to physically limit vehicle length (NO OPTION to enter if your vehicle is too big), and turn it into a one way road, why not increase tourism to jackson by creating a loop trip (jackson tourism council would probably make regular donations for this!)? I would add multi use pathways that are closer to nature, and a bit from the road (within shouting distance though-to attract people to bike/walk the corridor and get closer to nature, while reducing traffic) and would allow for half of the roadway to be used for parking, and every so often would have pullouts (no parking,) on the other half to allow for passing.

Topic Question 4:

Dont ruin this DRIVE, it is what makes people learn to love nature, and want to preserve it, if its not worth seeing nature, they wont care to preserve it.

I wouldnt be opposed to a standard wait time to be able to enter (no matter when you show up or how big the line is, you must wait 20 minutes to enter. I would be sure that it is where I want to go before waiting that long.) This should only be used with extremely judiciously though, why play games?

Topic Question 1:

Question 1:

I like a mix of several of the strategies. Here are the parts of the suggestions I think should be part of the final plan.

Traffic/Roads:

- I agree with using the White Grass road as the access road for Death Canyon Trailhead (Alternative D). The current access road to Death Canyon is awful, but this does not seem to be a limiting factor in the volume of traffic on the road.
- I think the re-alignment of the road (including moving the north end of the road to inside the Moose entrance station - Alternative B) is a good idea.
- The same can be said of the unpaved section- due to the popularity of the road, why leave it unpaved? It does not seem to limit traffic. We should pave the unpaved section of the road.
- Viewing areas/turnouts are a good idea, they seem to concentrate visitor stops and currently work very well on the Inner Park Road.

The reasons I support these options is that I think they will continue to let people enjoy the corridor while improving the flow of traffic and access to existing areas.

Commercial Activity:

As listed in multiple plans, I think that commercial vehicles and taxis should be prohibited from using the road. Small wildlife viewing tours with permits should be allowed, but should be restricted where they can park due to the width of the road (turnouts only). I like the idea of all the non-motorized tours, painting

courses, etc as long as they do not affect the traffic (i.e. bikes blocking the whole lane for the entirety of their trip preventing cars from passing).

Pathway:

I like the idea of a Pathway, people really enjoy the one to Jenny Lake. I think it is essential that the pathway does not create too much habitat alteration/destruction though. One of the reasons it works so well from Moose to Jenny Lake is that it is going through open sagebrush plains parallel to the road. If too many trees or terrain alterations have to be made, it will be very expensive and hurt the character of the park. If done with these considerations in mind, I think it will add to the experience for many visitors.

Topic Question 2:

Here are aspects of the plans that I feel should not be implemented.

Traffic:

I feel that arbitrarily limiting the traffic usage of the road on certain days/certain hours is confusing and does not benefit the majority of Park visitors. In the same way, reservations are cumbersome and limiting as well. I think going this route will anger more visitors with unnecessary regulation rather than it will improve people's overall experience. As someone who lives in the park, the Moose-Wilson Road is useful to get to other parts of the county as well (such as Teton Village) without wasting time and gas going around through Jackson. It seems to be an important corridor for guests staying in Teton Village in the summer to access the park as well. Closing any section of the road would damage the economy of Teton Village and the area as a whole.

Entrance Stations:

While I feel it is important to collect entrance fees from visitors accessing the road from the north side, I feel it is easier and has less impact to move the road behind the existing Moose entrance station than to build an additional station. It seems a waste of resources and more expensive in the long term. It will also cut down congestion in Moose if people heading northbound do not have to go through a second entrance station.

Topic Question 4:

Obviously human/wildlife conflicts are a potential issue. I think that wildlife closures in the past have been valid and we should continue to have them when necessary.

Comments: Thanks for considering my thoughts.

Topic Question 1:
Strategy D. It seems to be the most versatile in keeping old with new for the sake a diversified experience for several groups.

Topic Question 2:
Strategy A. Too much road/path in a naturally diverse area would detract from this historical corridor.

Topic Question 3:
Roads and paths AND migration corridors to not be inhibited with modern roadway details, ie - guardrails, blacktop etc. The multiuse pathway be constructed so that slower speeds for bikes avoid any conflicts with walkers and hikers AND animals. Also on the multi-use path and road, it would nice to have a surface not blacktop that accommodates the look and feel of the area but allows access to all. A brick road might be an answer. There should be no access on this path/roads during any migration periods, snow or no snow.

Topic Question 4:
Animals need to be first but this is a historic corridor that should be preserved for the use of all.

Comments: Thanks for your work to preserve such a great part of GTNP.

Topic Question 1:
Strategy four to leave the road as it is!

Topic Question 2:
To restrict access to the road in any way. I have lived here for over forty years and have seen the traffic increase with minimal additional impact to the environment. This road allows people to get closer to wetland activity then on any other road. Which allows people to be aware and self educate about wetlands and how important they are to our ecosystem. If a bike/ pedestrian trail was created it would allow for education through interpretive signage.

Topic Question 3:
To leave the road as it is with minimal realigning and add a bike/pedestrian path

Topic Question 1:

separate bike path from roadway to allow family biking opportunity. pave dirt section to alleviate dusty, potholed, and dustguard poisoned roadbed that would adversely affect any adjacent bike path. plow the northern part of the road to white grass road intersection in winter to allow access to popular backcountry skiing. fix existing roadbed without any realignment. viewing the wildlife is the highlight for tourists why steer them away. provide enough turnouts to encourage visitors to get out of their cars and walk a bit on the pathway. I could back the closing of the road for 2 days a week or at certain times during the day especially if paving of dirt section or bike path is not done. reservations for horse use in the granite area should be implemented to get a handle on this ever increasing use.

Topic Question 2:

reservations for travel on the mw road will be a costly nightmare. road realignment is unnecessary and expensive. leaving things the way they are now on the mw corridor is not a viable option. it is kicking the can down the road.

Topic Question 3:

what about closing the road everyday during certain hours, say, 7am-9am and 1pm-3pm. just close gates on either end. if you are parked along the road plan to work around the closure or get stuck on the inside of closed gate.

Topic Question 4:

we need to mix and match the ideas in alternatives abcd. their is no rhyme or reason to the way the strategies are grouped within the alternatives. the commercial sight seeing outfits cause more congestion

than they are worth. how about a park sponsored tour during the daily morning closure (7am-9am) for wildlife viewing and ranger rap.

Topic Question 1:

Need to pave unpaved sections of Moose-Wilson to minimize air particulates.

Provide ITS devices to inform motorists in strategic locations outside the park to give motorists the opportunity to adjust their travel plans utilizing the existing infrastructure in place, such as turnouts, driveways, parking lots,... that have minimal roadway improvement costs. Also consider other technologies such as local radio, email, hotlines, website, apps.....Strategic locations would be on 89 N&S, Moose, Wilson, WYO 22 E&W, WYO 390 @ Alpines, leaving Teton Village...

Toll gates on either end of corridor to manage the number of individuals entering and exiting. Don't use vehicles per hour as indicator, as there are many other various modes of travel such as hiking, biking, horseback. The common denominator is the number of individuals.

Create multiuse pathways for all nonmotorized users bikers, hikers, and horseback.

Topic Question 2:

Reduced speed limits will not work unless there is increased enforcement.

Topic Question 3:

Close off middle section of corridor to all modes year round, to preserve the natural integrity and minimize wildlife interactions in the area. between Death Canyon and Sawmill ponds.

Create a one-way couplet between Death Canyon and Sawmill Ponds, utilizing existing alignment as the

Southbound one-way and the proposed realignment as the Northbound one-way where wildlife interactions would in theory only interact with one direction at a time. At certain times of the year two-way traffic can be placed on either road for incident management, such as, wildlife jams, repairs/maintenance.....

Turn entire existing corridor into multiuse pathway for only nonmotorized use, eliminate vehicle use.

Topic Question 4:

Study did not address unintended impacts occurring outside the park limits, such as parking of horse trailers on county and private roads south of the Granite Canyon entrance.

Reducing the demand in the corridor, will in turn increase it elsewhere.

Topic Question 1:

Alternative A(do nothing) and Alternative C ... The construction peak period and visitor peak periods seem to coincide around here making for a lot of aggravation. Road Realignment seems like an innocuous term but I think it will be like most projects ... Take twice as long and cost twice as much.

Topic Question 3:

Pave the dirt section, construct larger pullout areas especially near the moose munch area , strategically place "no stopping" signs and consider a multiuser pathway if it can be done simultaneous with the use of the main road.

Topic Question 4:

If you are going to go with any strategy which creates queues or in any way precludes use of the road as a thoroughfare, then you need real time signage at the airport explaining the road situation. TV and nearby residents frequently use the road to go to and from the airport.

Comments: I frequently use Moose-Wilson to ride my road bike. It's one of the only ways to do a loop ride. I am also a runner and mountain biker. As much as I would love a paved multi-use pathway, I think it should be secondary to paving the dirt section

Topic Question 2:

Restricting vehicle traffic would be a terrible idea. What about the L. Rockefeller Reserve that has a trail going up to Phelps Lake? Has any thought been given to the impact closing this road to vehicle traffic for two days would have on this park of the park? Also, having a reservation system for use of the road is a terrible idea, further restricting how and when people can get to the Reserve.

Topic Question 3:

I didn't see this in the story, but I believe thought should be given to basically leaving the road as it is, perhaps with some small amount of widening and paving the un-paved portions of the road. Other than that, leave it as it is.

Topic Question 1:

I think Plan D is best. We need to separate bikes and cars for safety reasons. A separate bike/pedestrian path will encourage more bikers/walkers and fewer cars. The reservation system for cars will work effectively without putting the ranger at the gate at risk of abuse from angry drivers and will control the bumper-to-bumper car traffic. Keeping most that road unpaved is essential in controlling speeding and unsafe passing of vehicles.

Topic Question 2:

Allowing bikers and vehicles to share is not working. Paving or widening the road will only increase vehicle traffic. One concern I have is allowing shuttle service - the commercial boat tour companies would consider this a great shortcut to the river and increase vehicle traffic and speeding - please exclude them under the shuttle service allowance. Also, more road alignment and construction will disrupt the wildlife so that should be kept at a minimum (which made me consider Alternative C (road closed to cars 2 days/week) but that wouldn't be fair to people who can't be here on those 2 days).

Topic Question 4:

Thanks for allowing public input. This is a critical decision in protecting that precious area from over use of vehicles and protecting the wildlife.

Topic Question 1:

None of the options as drafted really address the current problems. GTNP has continued to see increased visitor count over the years but has not increased the infrastructure to keep up with the demand. A prime example is creation of the LSR with such limited parking. I hiked around Phelps lake last weekend and saw almost no one else on the trail even though there was more than a 30 minute wait to get a parking spot. The LSR could easily triple the parking capacity with no significant impact on visitor enjoyment or impact to the environment. The park should work to open up new areas for visitor access since visitor counts will only increase in the future and no one should be excluded from being able to enjoy our national parks. Improvements to the moose-Wilson road without restricting access is the only solution that makes sense but is not among the four options the park is considering. Why invest in road improvements only to limit use of these improvements?

Topic Question 1:

I think the road should stay basically as it is . I have lived here for 35 years and am a tour guide in the park and travel it frequently,at least once a week in the summer. The road is a treasure,a chance to slow down, roll down the windows,look in the forest for wildlife. The visitors on my tour love the road until the pavement ends.The bumps can be painful for some people . People must go slow, it is a chance for people to go slow that are used to racing around on freeways, the visitors on my tour find it peaceful and I love this part of the tour to slow down and look for animals in the forest. For alot of people who cannot hike, this is really special for them to go slow through the forest. Straightening the road will increase speed and danger for animals and people. There are areas that could use a turn out to let people in a hurry go by or to view wildlife, the area around the beavers ponds is narrow and could use a pull-out area south of the ponds, maybe trails so people aren't walking on the road. speed limit signs and enforcement.I really think the money would be well spent in paving the rest of the road from the Rockefeller Ranch to the south entrance .When there are bears eating the berries in the fall let them have every other day off from traffic (or days or weeks) so they have a chance to get their berries they need so badly before hibernation.Also for their safety and the residents near by so they aren't looking for food elsewhere because of pressure from traffic and people.

Topic Question 2:

straightening the road, would make it more dangerous, needing to crawl around that road keeps it safe...some of the curves could use more visibility....

Topic Question 3:

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

perhaps make the road one way , going south from 10 pm until 4 am then make it only north from 4 am to 7 am....two way the rest of the time...just a thought.Please , never put any lights on the road or hideous speed bumps, we have lived with that bumpy road long enough...thank you.

Topic Question 4:

pave the rest of the road, let the bears have the road in the fall when they need to add weight and need the berries, maybe every other day close the road when the berries are ripe for a few days or a week....Another thing, I would hate to see trees and vegetation torn up for a newer and faster road. Still keep it limited to no trailer traffic as it has been and weight and width limits...

Comments: It is a beautiful road, just needs to be paved on the south end and a few pullouts for wildlife viewing and for people to pass safely.... and blind curves cleaned up a bit. Straightening it out or doing anything to make it faster is a bad idea. Also, in the fall, let the bears have the road to themselves for a week while the berries are at their ripest...I don't know anyone who has a problem with this. Also, please no street lights or improvements that would encourage more traffic ... keep it quiet and slow.

Topic Question 1:
keep road the same, create multi use bike and pedestrian path.

Topic Question 2:
Closure is wrong because it causes an imbalance of traffic flow, idling lines and erratic visitor experiences causing huge negative impacts environmentally and to the visitor experience
Other alternatives are costly to the NPS in the long run - without providing multimodal transportation gives the NPS more management options for diffusing traffic in order to preserve the park
Without a pathway, the visitor will be in danger
Wildlife and pathways are proven to work well together

Topic Question 4:
Thank you for all your work! We are so excited about the idea of a bike path. More people will bike instead of drive!

Topic Question 1:

ALTERNATIVE D! Best for the environment
Best for the visitor experience
Best for keeping the same Character of the road - SLOW, NARROW
Best for reducing traffic - encouraging active transportation that doesn't involve a car
Best for getting people out of their cars and experiencing the environment responsibly

Topic Question 2:

ALTERNATIVES A, B AND C! Closure is wrong because it causes an imbalance of traffic flow, idling lines and erratic visitor experiences causing huge negative impacts environmentally and to the visitor experience
Other alternatives are costly to the NPS in the long run - without providing multimodal transportation gives the NPS more management options for diffusing traffic in order to preserve the park
Without a pathway, the visitor will be in danger
Wildlife and pathways are proven to work well together

Topic Question 4:

Keep the road the same narrow, slow, rural character
Too much traffic is bad because it detracts from the historical, cultural, resource values
Bikes, transit and pedestrians reduce traffic
Use technology, transit and pathways to reduce cars while enabling quality visitor experiences
Peak traffic is reduced by transit, pathways and technology

Topic Question 1:

I regularly bicycle through the Moose-Wilson corridor from my home to Jenny Lake and back and have had many near misses with cars off the bike path and both damage to my road bike on the unimproved section including several near crashes due to the unstable and extremely variable road surface. Since I live just off Moose Wilson Road myself I also drive it several times a week (usually both coming and going) when it's open to access anything north of Teton Village. I believe ALTERNATIVE "D" would be level of magnitude improvement in public safety, particularly for cyclists and pedestrians. By removing everything except vehicle traffic and then improving parking access along the road it should greatly improve the safety and efficiency of vehicle use as well. Last but not least, I have used the Death Canyon trail head multiple times myself including just a few weeks ago during a through hike from the top of the Tram at the resort, to Marion Lake then camping on Death Canyon Shelf and down Death Canyon the following day. I can assure you by the time I reached the trail head I was dead dog tired and to have to walk another mile or two along that road before reaching my car (even though essentially flat) would have been a really painful experience (Death Canyon is NO JOKE, lol). The road to the trail head is definitely in need of improvement and there's never enough parking anywhere near the trail head. That's why I am in favor of Alternative D and am in fact extremely excited that the Park Service has proposed that as one of the possible solutions to improve the experience of everyone using the Moose Wilson corridor.

Topic Question 2:

First off, we know there's a problem otherwise we wouldn't be considering improvements so option A is a bad idea. As I already stated for non vehicle traffic it's extremely dangerous (I ride it all the time, I know) and mixing pedestrian/bicycle traffic with vehicle traffic is always a dangerous proposition compounded by the fact that drivers are watching wildlife and not other drivers/riders/pedestrians on an extremely

narrow road with very little roadside parking. Alternative B doesn't address that problem at all and C reduces bicycle access to two days a week (what days would those be?) and vehicle traffic to 5 days a week which would greatly limit access for both users including hikers vehicle access to trail heads when the whole problem we're having is due to increased demand across the board. Reducing access will only exacerbate the primary problem you're trying to solve. I also see nightmare management scenarios for alternative C as a practical matter.

Topic Question 3:

I think the traffic volume Northbound from the Granite Canyon entrance station is already regulated by simply having to transit the station itself. By creating another station Southbound at the entrance in Moose would do the same thing Southbound. I honestly think that's all that would need to be done. If you have a lot of vehicle traffic during peak periods you'd have a line waiting to transit (as you do Northbound right now) if not, no line. It's self regulating.

Topic Question 4:

I think that's it. Again, as someone who uses the Moose-Wilson corridor continuously when open both on bicycle, on foot, by vehicle and via trailheads (as well as on skis in the winter) I am very excited about the prospect of safe transit on my bike as well as better and safer access by vehicle and improved access to the Death Canyon trailhead =)

Topic Question 1:
I believe that the bike path is the best alternative because it encourages physical activity and fitness and because the people who are currently biking the road are at risk, especially due to increased traffic.

Topic Question 1:

Primarily, as a 77 year-old goddaughter of Mardy Murie, who has always lived, across from the Aspens on 390, and counted on M-W Road as THE one escape route for geological process such as the flood and earthquake faultline possibilities, which Dr. John David Love, Ph.D. explained to us several times from our house, (unless of course the NEPA planned 'north bridge' comes to fruition). Two-lane traffic, less paving and improvement will slow it all down.
Ranger law-enforcement is terrific! No Park Funding on changes. Great acoustics now. Widen the ditch bridges about a foot or two.

Topic Question 2:

Paving, replacing potholes, dust or mud revision, instead of speed-bumps, would waste finances and also would all allow speeders to endanger themselves and animals. In fact any upgrade of this road would increase danger. If you need to save money close it in the winter. No cyclist or walking pathways needed to bring unprotected tourists in among the bears or moose during berry-season without a vehicle to shelter them. No limiting numbers of vehicles, barring at certain hours/days or times/ no realignment, no closing sections.

Topic Question 3:

Replace and multiply pullouts so the traffic has more choices, it keeps tempers and panic down. Radar to enforce speed limits.

Topic Question 4:

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

A sign board at both entrances giving rules: do not leave your car, etc.

Comments:

Thank you very much for allowing us to comment on a subject of so much care and concern to

Yours faithfully,

Mary Louise McGraw Breitenbach, M.Ed.,MAC, WLPC; WLAT;

NCAC II; DOT/SAP.

Topic Question 1:

I think realigning the north portion of the road to create the 4-way intersection INSIDE the park is the best idea of all. It promotes the notion that this corridor is a 'park' road - not a public thoroughfare. And for northbound travelers you don't have to sit in two lines to get into GTNP.

Topic Question 2:

The separate bicycle pathway is not necessary - as long as the vehicle traffic is better regulated.

Topic Question 3:

Implement a slower speed limit - 10-15 mph on the entire road. This would make it a bit safer for bicycles.

Create traffic calming zones (at granite trailhead parking, LSR and Death Canyon intersections and Sawmill ponds parking) using two elements - stops signs at each location and a narrow(er) roadway creating one way at a time traffic for 50-100 yards. This would allow visitors time to read directional signs, choose to park and/or take the alternate roads without being honked at by those just trying to get through.

Topic Question 4:

It seems that the park could offer an alternative route along the southern edge of the park boundary (along Range Road and the current dirt road extension) and an additional easement southbound from the airport to allow for the town/county/WYDOT to construct a 'northern' bridge over the snake with easy access to the airport and northbound 89.

Comments: We have been visiting GTNP for nearly 20 years on an annual basis and moved here over a

year ago. We've generally avoided the moose-wilson corridor because of the through traffic and the almost constant pressure to 'move along' by those using this as an alternative path to/from Moose and parks north.

While this corridor shortens the trip from Teton Village to Moose by 17 miles, the longer trip through the town takes only about 15 minutes more due to the higher speeds allowed on the public roads.

Topic Question 1:

I like alternative D. I myself am a huge road biker. To be able to SAFELY ride 34 miles from the town of Jackson, through GTNP, past Teton Village and back to town on a bike path would be wonderful. I also believe this path would benefit tourism as well. Let's let Jackson Hole be known for awesome safe paths with a view for biking and walking. Bikes or peds will have much less impact on wildlife. What would be better - 25 cars pulled over to see the moose, or 50 bikes! Having a safe option to ride to the Preserve is also very appealing and the parking there is not good.

Topic Question 2:

Economically I think it would be a disaster to close the road, or make it one way. If I was a tourist and pulled up to the closed end, I would not be very happy. By road closures, I am guessing this would be a nightmare for the Park Service and staff. Plus Moose/Village road is a nice scenic alternative for locals who are in the park and live south or west of town. I enjoying have the option, especially in the evening. I'd rather drive slow, look for animals then deal with traffic heading into town on the highway.

Topic Question 1:

I think I would favor alternative B. We have traveled to JH each of the past 12 or 13 years, and this is our favorite spot for wildlife photography. I am in favor of paving. We have had rainy weather and the muddy run was less than ideal. More parking area would be a positive improvement.

Topic Question 2:

I do like that alternative D focuses on visitors, but I'm afraid that it would attract so many visitors that it would discourage wildlife from "hanging out" there!

Topic Question 3:

I'm not sure if there is a posted speed limit on the road. It needs to be very visible and enforced.

Topic Question 4:

I have always felt sorry for residents traveling that road who have to wait for people blocking the road to view wildlife. They deserve priority planning to us visitors. They seem much more patient than the residents here in the Northeast!

Topic Question 1:

Alternative D, I believe this option would be best for the environment, continuing to provide access to key trail heads, and making a safer user experience for bicyclists.

Topic Question 2:

Alternatives A,B,and C, I believe that they will not solve all of the issues with the Moose Wilson road and that Alternative D is the most comprehensive solution.

Topic Question 4:

I personally enjoy riding my bike to trailheads in the park and then hiking and would be more inclined to do this if there was a safe separated use pathway like the one to Bradley Taggart and Jenny Lake. I also believe moving the entrance beyond the pay guard station will deter short cutting from the airport to Teton Village and the Aspens.

Topic Question 1:

My suggestion is that the road should be left basically as it is. My reason is that the road has been this way for quite a long period of time and is very acceptable (Don't fix something that is not broken). I think the other alternatives are too complicated and add additional cost of structuring new roads and monitoring them with new rules and added personnel (ie days the road is open and some days only walker and cyclists can use it). Additionally, I think it is very important, even though I recognize this is a park road, if there were ever a catastrophic event this road may be one of the only means of escaping the West Bank. It would be nice if the present dirt portion of the road be chip sealed in order to cause less damage to cars from pot holes. A few additional parking spaces at the Granite Canyon trail head would be a nice improvement.

Topic Question 2:

Adding alternating days for auto direction does not improve the situation, it only makes the issue more complicated. The same is true for having the road open some days just for cyclists and pedestrians. We have wonderful bike paths and trails throughout the park and we don't need to change this wonderful area to accommodate walkers and cyclists. They can use the corridor, as they have for years, to walk and cycle.

Topic Question 4:

chip seal the portion of the road that is presently only dirt.

Topic Question 1:
Alternative D

Although more costly, it addresses the bicycle/auto conflict most thoroughly. If no separate bicycle-walking path is built, I would strongly suggest no bicycles at all at any time.

Topic Question 2:
Alternative A

This alternative does nothing to address the bicycle/auto conflict. It also does nothing to discourage the use of the corridor simply for commuting. None of the alternatives seem to address this (see question 3 below).

Topic Question 3:

With regard to discouraging the use of the corridor simply as a commuting route, you may consider abandon it near the Sawmill Ponds and following the bench north to connect with the Teton Park Road near the turnout to the north.

Unless a bicycle path is built, I would disallow their use altogether.

Topic Question 4:

I am wondering why you would not locate the Moose entrance to a location (maybe where the old post office stood) to avoid a second entrance station.

Topic Question 1:

We appreciate having the opportunity to share thoughts on the plans for the Moose-Wilson Road...our favorite wild life viewing spot for many years.

1. Appropriately pave the existing road where needed so as to provide safe travel in all weather conditions.
2. Provide (without damaging habitats) safe turn- a- rounds in designated areas.
3. Perhaps add additional parking areas where vehicles can be parked and visitors can walk to secure viewing areas or experience that specific area.
4. If not cost prohibited a small public rest room facility.
5. Allow daily commuters to know ahead of entering the road if there is congestion, problems, etc. so they can seek alternative route to their destination.
6. Past experience...park rangers have been most helpful in directing traffic if needed or sharing relevant information about the viewing of wildlife. Perhaps having a ranger positioned at the beginning of the road at either entrance to answer any questions, point out where wild life is, etc. would be helpful. Having rangers arrive simply when wildlife has been seen and "crowd control" is needed could perhaps be offered on a more scheduled basis. Having said that we are very, very aware of funding/budget challenges in carrying out many initiatives.

Topic Question 2:

1. Do not offer on site (on the road) lectures, informational sessions, etc. Visitors can have this kind of experience at the Murie Center where information abounds.

Topic Question 4:

We will be returning in Sept. for our 13th visit to the Tetons and as always a hi-light of our visit is the Moose-Wilson Rd.

Thank you for all the effort being put into this project to protect a most cherished spot.

Correspondence Text

Topic Question 1:

The preliminary alternatives contain several strategies that are aimed at managing people. These should be fine tuned, as the protection of the resource can only happen with management of the human element.

1. The Moose- Wilson Corridor should have a defined carrying capacity of cars and the road use should be limited to meet that on a daily basis.
2. Parking areas need to be clearly defined and kept from extension by rocks, or other permanent barriers to protect the surrounding vegetation.
3. Restrooms need to be available at all major trailheads.
4. The speed limit needs to be set at 20 miles per hour for the corridor and enforced.
5. The road should be temporarily closed for grizzly bear activity.
6. The road should be open to cyclists, but made safer by the reduced speed limit, road surface improvement, and being widened in dangerous locals.
7. The road should be improved to meet safety standards for a 20 mile an hour speed limit and pull-outs should be clearly defined and limited from expanding.
8. Areas of high wildlife activity should be avoided, but if a new road section only moves the issue to another area of high wildlife use then other solutions should be found.
9. Parking lots at the Laurance Rockefeller Preserve should remain at the same size level. Parking at the new trailhead in Death Canyon should be limited to 40 cars to reduce impact on that area. Building a new lot at the end of the pavement and rerouting the trail are excellent ideas.
10. Commercial activity should be limited by permit and limited to three trips per day for each company. Guides need training on best practices for viewing wildlife and other issues.
11. Educational use by park partners should also be limited to three vehicles per day per partner. Guides need to be trained.

12. Paving the dirt section will be safer for cyclists and also for cars.
13. Keep winter access as it is now with closed gates and no grooming.
14. Realigning the road so there is one entrance station that catches all the traffic coming from the north allows for better communication to the visitor.

Topic Question 2:

1. Increased development in the winter with grooming is not compatible with wildlife.
2. Building a separate bike trail while lovely, is not necessary if the speed limit is reduced and the road made safer.

Topic Question 3:

1. More details about the possibility of a shuttle system in the future should be built into the final plan.
2. At the two entrances to the corridor (where visitors may have to wait), small interpretive stations should be built to provide information, offer suggestions of alternatives, and provide short programs for waiting visitors.
3. Staffing for monitoring people, corridor changes and wildlife needs to be planned and funded.

Topic Question 4:

The final plan should have some back-up options that allow for changes in the plan based on human response, animal response, and technology. It is hard to predict what may occur in the future that can solve the problems we face now, but we need to build in flexibility while still taking action.

Comments: Good luck!

Topic Question 1:

Option A (no action) is the best of those offered. I urge you to consider the Moose-Wilson Road problem in a context larger than just the land within the boundaries of Grand Teton National Park. In my view, the future of the Moose-Wilson Road is linked inextricably with the question of whether to build a North Bridge leading from the Teton Village area to the Jackson Hole Airport. Restrictions on the use of the Moose-Wilson Road as envisioned in Options B, C and D will inevitably build local political momentum for the construction of a North Bridge and for the expansion of Route 391 into a four-lane highway. To my mind, a North Bridge and a four-lane highway would do much more harm to wildlife and wetlands in our valley than the continuation of unrestricted two-way traffic on the Moose-Wilson road. A North Bridge would also unbalance the economy of the county by marginalizing tourist-centered and other businesses in the Town of Jackson while causing Teton Village to mushroom. It would also stimulate housing and perhaps other kinds of development on the private land immediately south of the southern boundary of the Grand Teton National Park, near the entrance gate along the Moose-Wilson road. I can also foresee the likelihood of increased tourist-season demand for flights in and out of the Jackson Hole Airport, which in turn could increase the pressure for lengthening the runways with the attendant harm to sage grouse and other wildlife.

Topic Question 2:

See above.

Topic Question 3:

If funds are available, I would be open to considering the rerouting of the Moose-Wilson road to the East, starting roughly at the Granite Canyon parking area and continuing nearly to Moose, so that it would go

through the sage brush and away from bear habitat. If there is a political consensus to have a bike path through the Moose-Wilson Corridor, I would want the bike path to run close to the rerouted road in order to leave as much wildlife habitat as possible. I would favor this rerouting ONLY if the rerouted Moose-Wilson Road remains open to two-way traffic every day of the week of the months when the road is open. As stated in answer to question 1, I believe any constriction in the use of the Moose-Wilson road will inevitably increase momentum toward construction of a North Bridge, which I believe would end up damaging the National Park and the whole valley.

Correspondence Text

Topic Question 1:

Plan A is no plan at all and does not address the best interest of the park, the wildlife, or visitors. Elements of plans B, C, and D all have some merit. I like plan B's move of the entrance station to the east of the M/W corridor - it may be even more preferable to move it to near the Dornan's turn-off so all access to the visitor center and M/W is controlled and fees charged. Re-alignment and improved parking is necessary for any workable plan. Congestion alerts are needed in all plans. I like the bicycle only idea for plan C but think that it is unworkable to close the road completely to autos for 2 days every week. Plan D provides the best bicycle solution but would be the most costly and disruptive to the environment. It would not solve the auto congestion problems.

Topic Question 2:

I think the primary focus must be on the environment of the park and preservation of wildlife habitat. Creation of a new bicycle path would be most disruptive for the environment and habitat and without major changes in auto traffic, plan D solves nothing. Complete closure of the road to auto traffic would be nice for bikers but very disruptive for all (the vast majority) other users and solve nothing on days when the road is open for vehicular traffic.

Topic Question 3:

I believe the only workable, environmentally friendly, and cost-effective plan is to move the entrance station and re-align the current congested roadway, add multiple pull-offs, increase/improve parking, and convert the roadway to one-way, multiple-use traffic at a reduced speed limit. This addresses the bicycle/walking needs, the traffic congestion, the risk to humans and wildlife from the current narrow,

congested, and excessive speed of commuter traffic, and would be the most cost-effective and environmentally friendly improvement to accessing this portion of our National Park.

Topic Question 4:

GTNP has the perfect model in the Jenny Lake scenic bypass road that would serve the needs of all constituents well on the M/W corridor.

Don't, under any circumstances listen to or bow to the influences of our un-informed Congressional representatives of the idiots in Cheyenne who would convert this treasure to a state park and destroy the environment.

Comments: Please keep our park safe for the wildlife and accessible to visitors. The purpose of the park is not to provide local commuters with a short-cut to work.

Topic Question 1:

I think that adding a bike lane would improve safety for vehicles and bicycles. More pullouts for wildlife and nature viewing (and also to allow people to pass safely).

Topic Question 2:

I am concerned about establishing a reservation system during peak periods. That may create confusion for visitors, so the implementation would need to be done sensitively.

Topic Question 3:

Limit speed.

Topic Question 4:

I like alternative D, as it seems to engage visitors in the exceptional natural attributes of the area while preserving access.

Comments: This is obviously the result of a lot of work by many people. Thank you for allowing us to participate in the process.

Topic Question 1:
None. The status quo isn't great. Alternatives B,C & D are worse.

Principal issues are:

1. visitors and residents need certainty of being able to use the road in both directions at all hours. It is an integral part of the region's transportation network.
2. Each of proposals B, C & D seem to include unnecessary expense with limited benefits.
3. Proposals B, C & D are not environmentally sound and will result in greater traffic and pollution in the valley than exists today or is necessary tomorrow.

Topic Question 2:

Any sort of quotas or limitations become problematic. You will be forcing people to travel over 20 miles to the alternative routes, resulting in additional traffic and pollution.

Topic Question 3:

Encouragement of car pooling, particularly at the parking for LSR Center. Relocate the southern part of MW Road out of the woods and in a straighter alignment through the existing sagebrush meadows. (there's an existing dirt road there from the JY Ranch days...) Utilize the existing road for the bike path. Limit use of the bike path to daylight hours. Relocate the Moose fee stations to the east, perhaps even east of the Snake River, obviating the need to relocate Moose Wilson road.

Prompt a discussion by offering NPS cooperation in analyzing a direct connection along the south

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

perimeter of the park towards the airport. While this roadway and bridge would ultimately have to be built by other agencies, it would significantly reduce the demand for traffic in the Moose Wilson corridor.

Topic Question 4:
See below

Comments: Moose Wilson Road

The National Park Service (NPS) proposals regarding Moose Wilson Road are not well-considered and ignore many of the goals of the NPS and the community.

Background:

The Mission Statement of the National Park Service (NPS) calls for the NPS to promote and regulate the use of Federal areas known as national parks, monuments and reservations. It further calls for the NPS to conserve the scenery and the natural and historic objects and the wild life therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations." A recent handbook of the NPS notes that The National Park Service still strives to meet those original goals, while filling many other roles as well: guardian of our diverse cultural and recreational resources; environmental advocate; world leader in the parks and preservation community; and pioneer in the drive to protect America's open space.

Although it is not in the mission statement, this federal agency presumably also has a goal of being good stewards of our tax money. If the NPS invests or expends its funds wisely, then it can do more to conserve the scenery, take care of the wildlife, and provide for the enjoyment of our parks by our citizens and visitors.

Grand Teton National Park (the Park) is an integral part of the Jackson Hole community. It contains, for example, the Jackson Hole airport, whose terminal was recently expanded and which is the busiest airport in Wyoming. The road networks within the park, including Highway 89, Gross Ventre Road, the Teton Park Road, and, importantly, Moose Wilson Road, are an integral part of the regions transportation infrastructure. The bike paths within the park are appropriately coordinated with the evolving bike paths in the surrounding community. The NPS must continually balance its needs to preserve the wildlife and scenery of the park for future generations with its equal goal to accommodate visitation and enjoyment of the park by existing generations.

To a large extent, the Park relies on the Community and the Community relies upon the Park. The Park receives over 2.5 million visitors per year and employs over 200 people throughout most of the year. While the federal government collects all park fees and then appropriates funds for expenditures, visitor fees effectively fund much of the parks payroll and the maintenance and the conservation of its features. Yet, less than 20% o the visitors stay in the park itself. The vast majority are day-trippers, staying or residing in the surrounding communities, principally the town of Jackson and the West Bank/Teton Village area. Very few accommodations have been added to the Park itself since the Jackson Hole Lodge opened in 1955. Meanwhile, the Parks overall visitor count has more than doubled.

Effectively, the Park relies heavily on the communities to its south to house its visitors. At the same time, the Jackson Hole and Teton Village communities rely upon the Park to be one of the primary attractions of their tourism-based economies. Both the Park and these communities are hurt if the highway connections between them are compromised.

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

Moose-Wilson Road is a primary corridor for residents and visitors from the southern community to visit the park. The number of accommodations in Teton Village alone, located at the south entrance to Moose Wilson Road, greatly exceeds the overnight capacity of the entire park.

Despite its serpentine route and partially unpaved surface, Moose Wilson Road has impressive usage statistics; fully one third of visitors to the park from the south (i.e. Jackson/Teton Village) use the south entrance on Moose Wilson Road as opposed to the main park entrance in Moose itself. This is true even in the winter, when both Moose Wilson Road and the Teton Park Road access only winter-use parking areas. Even this one in three proportion is probably undercounted, as visitors accessing Moose Wilson Road from the north are not currently counted.

This road is important. It is probably the most utilized unpaved road in the State of Wyoming. Most other roads with such traffic would have been paved many years ago.

Some Points:

-One of the four proposals is to leave the status quo. If that's the outcome, then the Park is exerting substantial funds and effort for nothing. All three of the other proposals reduce access to the park, which is inconsistent with the NPS goals of providing for enjoyment of the same.

-There is no mention in the report of coordination with the surrounding community, including important partners in the overall transportation infrastructure, such as the Wyoming Department of Transportation, Teton County's Road Department, the Town of Jackson, and the Pathways organization. Changes to Moose Wilson Road will impact each of these and these organizations should be formally included in the planning and implementation of any changes. Closure of the road, for example - whether permanently, on two days of the week or sporadically when quotas are reached - will cause increases in traffic on other roads.

-The Park does not exist in a vacuum. The impact on the surrounding community should be taken into consideration.

-All of the proposals are environmentally foolish. Moose-Wilson Road is itself an inefficient transportation corridor. The proposed changes make it worse, as many visitors and residents on the West Bank will have to drive to the park to find if the car quotas have been exceeded, then drive over 20 miles on the only alternative roads in order to get to where they want to be. This will worsen traffic and pollution. The NPS is supposed to be an environmental advocate.

-There is no mention of car pooling, which is a valid environmental strategy virtually everywhere else.

-Much has changed since the Park was created, while its roadways have not. Wilson and the West Bank now have a significant visitor and residential community. Although not mentioned in the report, this is much of the cause of the increased usage of Moose Wilson Road. None of the proposals attempt to accommodate these visitors and residents. Instead, they are designed to restrict the access of these visitors and residents to the Park, contrary to the NPS Mission Statement.

-The NPS itself helped create this problem through the construction of the Laurence S. Rockefeller Center. The Moose Wilson Road was already overburdened, even before the construction of LSR. This significant addition to the park was built at the approximate center of Moose Wilson Road without any

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

improvements to the access road itself. Now, all of the proposals seem to be designed to preserve access to LSR from both directions, but at the detriment of access to other parts of the park, particularly from the south. Thru traffic, from say Teton Village to Jenny Lake, is being sacrificed to accommodate newly created traffic to and from LSR.

-There is no mention in any of the plans of any increase in the parking provided at LSR, although the road would often be blocked at such parking lot. That parking lot is already insufficient in size to the demand. Throughout much of the summer, the NPS employs people just to manage the queue for parking in this limited lot, resulting in idling cars and other cars that then drive further to other park facilities, creating pollution and additional traffic on Moose Wilson Road. The parks goals should be the reverse; to get people off the road and out of their cars. The lot should be expanded in size. Preference should also be given to car pooling, perhaps with specific parking for cars with three or more people. That would encourage groups to come together, reducing traffic and pollution.

-The countys transportation infrastructure is insufficient. Except for the bridge at Moose, accessed via Moose Wilson Road, there is only one highway bridge across the Snake River. That one bridge, on Highway 22, connects the significant residential and visitor population on the West Bank with the town of Jackson. If this road were to be closed by an accident or periodic maintenance, this significant population would have no reasonable access to most of the regions schools and hospitals. Moose Wilson Road is the only viable alternative route, for example, between the ski area and the regions hospital - two institutions that unfortunately have a close and necessary relationship.

-Except for Moose Wilson Road, Teton Village visitors and residents must drive a lengthy and circuitous route to the south to in order to access the numerous attractions to the north. This creates pollution and traffic and has already resulted in significant infrastructure needs along Highway 22 and through Jackson. The NPS proposals will only make this worse. It is nine miles from Teton Village to Moose along Moose Wilson Road. It is 25 miles using the only viable alternative, through Jackson.

Some Suggestions:

-Although not mentioned in the report itself, Proposals B, C & D all seem to have an intent to close the leakage, whereby visitors can drive south on Moose Wilson Road and access some key attractions, including LSR Center, without paying the parks visitor fees. Proposal B achieves this by building a new road and intersection and removing the existing road. Proposal C builds and presumably staffs a new entrance fee station on Moose Wilson Road. Proposal D both relocates the road and builds and presumably staffs a new entrance fee station.

It would be far cheaper to relocate the existing Moose entrance station to the east of the existing Moose Wilson Road. This would have the additional advantage of slowing traffic through the area around the Craig Thomas Discovery and Visitor Center. In fact, maybe the fee station should be on the east side of the Snake River Bridge, thereby also capturing leakage by people accessing the Craig Thomas Center and the river access at Moose without paying the visitor fees. It is not uncommon for the visitor centers at National Parks to be inside of the fee-paying areas. Yellowstone itself is a good example.

-Theres an old landing strip in the sagebrush east of the Sawmill Ponds. Proposals B, C & D call for a new alignment in this area. The sub-base of that old landing strip still exists and could reduce the costs of building the new road.

-There are similar sage brush meadows to the east and south of the LSR Center. A new Moose Wilson

Road through these meadows could be a more effective transportation corridor, extending all the way from the southern park entrance to Moose. Access to LSR could then come from the east instead of the west. The road would be cheaper to improve and maintain in the flat terrain than in the hillside where it now exists and where the proposals have it continuing to exist south of LSR. This alignment is similar to that of the Teton Park Road itself north of Moose and would take traffic away from the more environmentally sensitive area between the mountains and the ponds.

-The existing road could easily become the bike path. The unpaved portions could simply be paved to the width of a bike path. This would be far cheaper, and better, than building a new bike path and removing the existing road.

-The proposals mention several times that the pathway would be within 50 of the edge of Moose-Wilson Road. Perhaps this was an important criteria when the Jennie Lake bike path was built, so it didnt intrude deeper into the parks pristine landscape than the road itself. In this case, however, the roadway right of way exists and its utilization as a bike path would be a significant improvement for the environment and the wildlife. This is not unlike utilization of the Old Pass Road as a bike and hiking route, which only very roughly follows the path of the newer and more efficient roadway.

A bike path is much better with a larger separation from the road, allowing visitors to enjoy the natural beauty and sounds of the park without highway noise and pollution. Again, that is consistent with the goals of the NPS. Tour groups could convert to more environmentally-sound bicycle and electric bike tours, rather than the converted jeeps now used. The disabled could also enjoy the parks pristine environment utilizing the bike path. Bike trails are seldom used in the evenings and perhaps this one should be specifically closed from dusk to dawn, when most animals are more prone to use the area.

-Hikers could still access the Death Canyon trailhead using the bike trail. The parking lot at Death Canyon would become a bike parking lot. The parking at LSR Center should be expanded to allow people to park there to access Death Canyon and other attractions. Administrative vehicles could still use the old road to access the Whitegrass facility and to patrol and maintain the bike path, much as one occasionally encounters administrative vehicles on Old Pass Road.

-The Valley ultimately needs another Snake River highway crossing. The NPS should include in its proposals a longterm plan for a Snake River crossing along the south edge of the park. It is less than three miles in a direct line from the south Moose Wilson entrance to the Jackson Hole airport. It is 13 miles from Teton Village to the airport via Moose Wilson Road and 22 miles via Jackson. A road along the south edge of the Park to the airport would greatly reduce the distance from the airport to Teton Village. The NPS controls the land along about half of this alignment, to the center of the Snake River. Other government agencies control much, although not all, of the remaining distance to the airport. Ultimately, construction of a Teton Village-to-Airport connector would require additional land acquisition on the east side of the river and significant funding for the road and the bridge.

The benefits, however, are incontrovertible. Visitors and residents would have much better access between the airport and the ski area. It would reduce traffic in the Moose Wilson corridor. It would improve utilization of the ski area and accompanying businesses. It would increase the values of real estate in both Teton Village and the areas around the airport. It would reduce the traffic issues in the town of Jackson and make it easier for residents and visitors to access the businesses in town, rather than just passing by them to get to the airport. Finally, it would provide an important alternative to the critical Highway 22 bridge in the event of an accident or closure for maintenance.

Obviously, an airport-to-ski area connection is something that would have to be considered within an overall plan for the regions transportation infrastructure. It is beyond the scope of the study undertaken for Moose Wilson Road and it would require significant funding from other agencies. However, it would be an important improvement to the area and it would reduce pollution and improve the environmental considerations in the park. In that sense, it is consistent with the goals of the NPS. Furthermore, the public reaction to limitations on access to Moose Wilson Road would be much less if there were a viable alternative to Moose via the airport. It would only be slightly further - and probably faster - to get to Moose from Teton Village via the airport rather than via Moose Wilson Road.

The NPS should prompt that discussion today by offering to set aside a 100 transportation corridor along the southern border of the park to the center of the river. It would improve the publics perception of the NPS and its proposals regarding the Moose Wilson Road area.

Topic Question 1:

I have lived in Wilson over 23 years and driven the Moose - Wilson many times to view and photograph wildlife. I drove it today for the first time this year because I'm aware of the increased traffic and the awful potholes the road is known for. I say do nothing to that road and do not pave it ever, it will only increase it's use and require repaving every year at our city tax expense.

There are no longer residences on the road, tourists and wildlife are the only users. Close the road permanently! Give it back to wildlife for their safety. There are lots of roads in the Teton NP for visitors to view and photograph wildlife, let's give the Moose-Wilson road back to the bears, moose, and all the rest of its first inhabitants!

Topic Question 2:

Read my answer to Question 1

Topic Question 3:

Retread my response to Question 1

Topic Question 4:

Use the \$\$\$ to fix and maintain Spring Gulch Rd for those citizens who live on it and pay taxes. visitors aren't paying for our road repairs, Teton County residents are.

Topic Question 1:

It seems to me that a plan that improves the situation while making as little change as possible is the right thing. You should keep the road true to its slow, narrow character, while enhancing the visitor experience and protecting the environment.

Topic Question 2:

Unwarranted expense is a negative. Costs should be kept reasonable, while accomplishing necessary improvements.

If there is no completed pathway, visitors to the area are put in risky situations.

It seems necessary to keep this area open, as complete closure would affect traffic flow and pleasing visitor experience.

Topic Question 4:

I like Alternative D.

Comments: As a regular, happy visitor to this area for the last 4 years, we have enjoyed this particular area while attending the Grand Teton Music Festival. We liked and want to see the best thing done for the Moose-Wilson Corridor, and Alternative D seems the best for anyone visiting the area. It also seems good for the environment as it would see the road remain slow and narrow and encourage transportation other than motorized vehicles. We have been impressed by the wonderful trail system in the Teton area and this seems a needed and logical one to complete.

Alternative D is a great solution!

Correspondence Text

Topic Question 1:

Obviously one single alternative does not incorporate all of the issues we believe are beneficial for the Moose-Wilson Corridor, but a combination of issues from several alternatives.

Traffic Management - Alternative A and B. Alternative Bs action of providing traveler alerts before entrances to inform visitors of traffic congestion, full parking lots, and potential wait times, and give them the opportunity to choose an alternate route before entering the corridor is a good idea. BUT, not at the cost of additional waiting time at the entrance stations.

Currently, we often see waiting times at the Granite Canyon Entrance Station so long that over 30 cars extend past other roadways and blocking motorists attempting to enter the roadway.

We like the idea of having electronic signs prior to the payment window offering information on the road and parking lots capacity. Also, allow cars more room to pull off to pull around the entrance station if they decide not to enter the park due to congestion or closures.

Adding another fee kiosk specifically for motorists with existing passes would also help alleviate congestion at the entrance station.

Alternative A for the rest of the actions. Traffic speeds on the road are adequate, they do not need to be reduced.

Physical Characteristics - Alternative A. Even though paving the existing unpaved section would be

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

beneficial, we worry about the additional traffic speeds it would create. The current unpaved road is very effectively in controlling traffic speed through areas where there are several trail crossings.

Road Realignment - Alternative B. Realigning the road at the North end to intersect with the Chapel of Transfiguration makes sense so the park can collect fees from automobiles entering the Moose-Wilson road from the North.

We have no strong opinions on the action to realign the road between the Sawmill Ponds and Death Canyon other than the benefit of additional pullouts and less congestion due to bear sightings in this area.

Turnouts and Parking - Alternative D. The more turnouts the better to help alleviate congestions and motor vehicles stopping in the middle of the road. However, adding additional parking at either end of the road is not desirable. It will only add more people to an already crowded area.

Bicycle Use - Alternative A - As much as we love bicycle pathways, we just dont think this corridor is the right place for them We feel very uncomfortable to have over 3000 trees destroyed in this pristine historical wooded area. With perhaps only 5% o park users potentially using the bicycle paths, we just dont see the benefit.

Bicycle advocates will argue safety and the need to complete their valley loop. To counter this, safety becomes more of an issue with bicyclists in this area with potential wildlife and horseback rider conflicts. This is one unique area of the park where horseback riding is available without other use conflicts such as hikers and bicyclists. It would be a shame to have that historical use destroyed.

Currently, without designated pathways, bicyclists are poaching trails off the road. With pathways, this poaching will become even more prevalent. Bicycling is the least controllable method of transportation existing in the park. Bicyclists will have the tendency to venture off the pathway in to other areas of the park as there are several trails leading away from this corridor into other sensitive areas.

Commercial Activity - Alternative A even though wildlife viewing trips on the road causes additional congestion due to often stopping and driving at extreme slow speeds.

The park has identified multiple goals including Scenery, Cultural History and Resources, Natural Soundscapes and Acoustics, and Visitor Experience. Historical horseback riding in this corridor meets all these goals with better outcomes than any other method of transportation.

Continuing horseback riding in this corridor area is very important. It is one of the most unique areas of the park that allows this activity without causing any conflicts with other parks goals. It has also been an activity that has been historically used in this area for over 90 years with minimal conflicts and requiring minimal park management.

Death Canyon - Preferably Alternative C or, as an alternative choice, Alternative D. The addition of 60 parking lots seems excessive, but we are not sure how how much of an addition over the current capacity this is. It would be nice to know.

Winter Access and Use - Alternative C - We like the road being un-groomed and natural and plowed road ending at Sawmill Ponds rather than Murrie Ranch road access.

Visitor Use and Experience - Alternative C even though we like Alternative A goal to have park staff

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

continue to actively manage visitor use and congestion associated with presence of wildlife. Wouldnt mind additional restrooms as described in Alternative D.

Topic Question 2:

Traffic Management - The adaptive Strategy in Alternative B is a horrible idea. It would create more problems than necessary. We do not agree that Moose-Wilson road is used primarily as a way to get to visitor destinations. I would imagine most vehicle traffic is traveling from one end to the other of Moose-Wilson Road. Having the gate will not encourage drivers to only use the road to get to a destination within the corridor, but would instead infuriate those who had planned on driving from one end to the other.

We do not like the Adaptive Strategy in Alternative C . It will potentially cause huge lines at the entrance stations which are already suffering long lines.

We also do not like Alternative C action of closing the road 2 days a week. Travelers cannot plan ahead to know which days they will be able to access this corridor. It needs to be continuously open.

Reservation system as an Adaptive Strategy in Alternative D sounds horrible and implementation would be a nightmare.

Turnouts and Parking - Alternative B action of adding additional parking at either end of the road. It will only add more people to an already crowded area.

Commercial Activity - In all Alternatives B, and C, we are not sure why commercial horseback riding on the Sawmill Ponds trails would be phased out. Is this due to parking spaces? If so, is parking allowed somewhere else?

Why just phase out commercial use rather than other uses? How is commercial use conflicting with the goals for this corridor?

The park stipulates as a goal, "Scenic vistas and features provide visitors with opportunities to view wildlife and be immersed in the intimate natural settings of the corridor which are not diminished by development and continue to foster a sense of discovery." You would think horseback riding would be the perfect choice for immersing visitors in this intimate natural setting.

In addition, the park states, "Protect and maintain cultural resources as important links to the human history of the Moose- Wilson corridor, including historical and archeological sites, cultural landscapes, and ethnographic resources." If access to these cultural resources that have historical value such as Whitegrass Ranch, Sky Ranch, and Trail Ranch are closed off, how is this goal achievable.

This area has always had a historical use for horseback riding. The community is beginning to feel, the park no longer wishes this use and is slowly taking it away in favor of more bicycle use. Though this may not be the park's intention, through recent changes, it is what the public perceives.

Alternative D. Allowing additional traffic on the road through road-based would seem to exasperate the traffic problem without offering significant enhancements to the public's enjoyment of this corridor.

Death Canyon - Not Alternative B - The parking lot would be too far from current trail access.

Winter Access and Use - Alternative D - Having to create an improved parking area north of Death

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

Canyon Road Junction seems excessive to facilitate the unplowed section of Moose-Wilson Road. It seems counter productive in meeting the park's goals for this corridor.

Topic Question 3:

As mentioned earlier, we often see waiting times at the Granite Canyon Entrance Station so long that over 30 cars extend past other roadways and blocking motorists attempting to enter the roadway.

It would be beneficial to add another fee kiosk to allow motorists with existing passes to quickly get through the line (similar to other fee stations in the park). This would help tremendously with the congestion at the South Entrance Station.

Also, allow vehicles who, due to being notified of congestion on the road or closures, to easily turn around and avoid waiting in line.

Topic Question 1:

Alternative D is best as it gives visitors the option to explore the park by bike or foot, which is a lower impact alternative than forcing everyone into cars, while still enabling visitors to enjoy all that the park has to offer.

Topic Question 2:

All of the other alternatives fail because they either keep people in their cars, or will result in reduced access to the park, neither of which is desirable.

Topic Question 1:

Alternative D is the only option that will achieve the goal of (a) making the Moose-Wilson Road fully accessible to all in a manner that is safe for park visitors who want to leave their vehicles (b) improving the environmental footprint of the Park by encouraging a reduction in the use of motor vehicles.

Topic Question 2:

Anything less than a dedicated pathway running the full length of the Moose-Wilson Road will fail to achieve what should be the goal of the Park to reduce dependence on motor vehicles in a manner that ensures full accessibility and the public's safety.

Topic Question 3:

No

Topic Question 4:

For me, the construction of a pathway on the Moose-Wilson Road is literally a matter of life and death. Fifteen years ago, my daughter Gabriella, lost her life in Grand Teton National Park because there was no pathway to protect her from the motor vehicles on the road. Bicycling or walking in the park should never be threatened by the use of motor vehicles. Reducing dependence on motor vehicles as a means enjoying the Park, and increasing accessibility for all visitors, should be a fundamental policy goal of Grand Teton and the NPS. Adopting Alternative D and building the Moose-Wilson pathway without delay is one more necessary step toward achieving these goals.

Topic Question 1:
Alternative D is terrific because it is:

- * Best for the environment
- * Best for the visitor experience
- * Best for keeping the same Character of the road - SLOW, NARROW
- * Best for reducing traffic - encouraging active transportation that doesn't involve a car
- * Best for getting people out of their cars and experiencing the environment responsibly

Topic Question 2:
Mainly I want to ensure pedestrian and bike travel are safe and possible.

Comments: Thanks for soliciting public input and keeping biking in mind!

Topic Question 1:

I like D the best - I like the new road segments. I enjoy parking at the existing trailhead location for an easy walk to Phelps Lake overlook. A very good place to take guests. I think rerouting the road near the beaver dam is a good idea. And I think a separate bike path will get lots of use by many visitors and residents, me included. I use the road for winter cross country skiing often and I use the parking areas at both ends of the road in winter. I have always found a parking space, but it does get crowded on weekends.

Topic Question 2:

I am not very happy with the idea of reservations during peak times, and hope that never comes to pass.

Topic Question 3:

how about two roads - one way in opposite directions - for the section around the wetlands?

Topic Question 4:

I like the idea of keeping the feeling of the Moose- Wilson road. It is one of my favorite roads, and the quality of travel on it is like a trip back in time -a winding road, slow going, lots to see. It is disconcerting to meet a car going too fast in the opposite direction.

Topic Question 1:

I support Alternative D in the Moose-Wilson Road scoping project. I have been a resident of Teton County for 25 years and have long awaited this progressive and innovative alternative. A separate pedestrian and cycling pathway that will connect the loop to Jackson will be one of the highlights of our community and offer safe passage for those who wish to enjoy the Park. I applaud the NPS for this wonderful concept and will lend my personal and business support to its rapid adoption.

Topic Question 2:

Topic Question 1:

Alternative D will allow bicyclists to enjoy the park in a safe manner while saving fossil fuels. It will allow visitors to bike safely to the Laurence Rockefeller Preserve, which would help alleviate the parking problems there. GTNP should encourage, not discourage, visitors to enjoy the park by bicycle or on foot rather than by vehicle.

Topic Question 2:

Road closures would be confusing and would lead to visitors driving to the road, only to be turned back - a waste of both time and fossil fuels. Road closures would eliminate an alternate route from Moose to Wilson or Jackson should there be a disruption in traffic on Highway 89 (e.g. due to an accident, earthquake or other disaster). The lack of any alternate route could be a safety issue.

Comments: Thank you.

Topic Question 1:

None of these. You have presented "packaged" plans, each of which has some good features and some bad features.

Comments: Some aspects of your plans are good. Some are not. None of the "packaged" plans is completely good. Instead, please consider various aspects separately.

GOOD concepts that I would like to see implemented:

1. Add a paved bike path along the entire road.
2. Pave the road section that is currently not paved.
3. Do not restrict travel in any way.

BAD concepts:

1. Do NOT add an additional entrance station at the Moose end of the road. This idea is even more preposterous than your having added the one at the Teton Village end several years ago. It serves NO purpose whatsoever. You do not collect any additional entrance fees that otherwise would have been missed. The entrance stations should not be used as an information booth - - that's what the Moose Visitor Center is for. And then there's the construction costs and the staffing costs - - all for nothing. Spend your money better elsewhere.
2. Do NOT restrict traffic flow in any way.
 - a) Do NOT close the road on any days.
 - b) Do NOT restrict traffic to any limited number of vehicles
 - c) Do NOT make the road one-way.

Summary:

1. Keep a fully-operational, paved road open at all times, regardless whether it's the current road or a newly-located road.
2. Make a fully operational, paved pathway.

Topic Question 1:
option c close the road 2 days per week to accommodate bikes and pedestrian traffic. Keep the road as it has been for years and this will not disrupt wildlife migrations.

Topic Question 2:
plan A, B and D are more disruptive to the wildlife

Topic Question 4:
sometimes the worst thing that can occur is changing what has worked for decades. The road has always been a partial dirt road and thus makes traffic slow down to at some times " a crawl" . This only helps wildlife as cars are not speeding through many sections of the moose-wilson road. If the entire stretch is paved or "straightened out" by relocating the road then wildlife will negatively be impacted. This road is a treasure as it is... keep it the same, but limit the days it can be used and enjoyed by residents and tourists alike.

Alternative D is Best:

Keeps the road's narrow, slow, rural character
Enhances wildlife habitat and connectivity with road realignment
Encourages safe access for cyclists and pedestrians along a separate pathway
Uses current technology, permitted commercial activities and pathways to reduce car traffic, deepen visitor experiences and reduce environmental impacts
The Other Alternatives are Inferior:

Road closures cause an imbalance of traffic flow, idling lines and erratic visitor experiences with negative impacts to the environment and the public
Without a separate pathway, the Moose-Wilson road cannot be enjoyed safely outside of a car

Topic Question 1:
Alternative D should be implemented!

- This alternative incorporates the use of a separate pathway. Without a pathway, it is not possible to enjoy the beauty of the area outside of a car. A pathway will encourage users to park and use non-motorized transportation, thus, decreasing congestion on the roadway. Currently, pedestrians or cyclist must traverse the existing narrow road which is very dangerous.

In addition, a pathway segment would tie Moose and the Village together. This would complete a world class pathway system loop, where a pathway user can travel from Jackson north to the park along hwy 89 then return to Jackson via the Moose-Wilson road and Village Pathway. This would be a rare privilege and the attraction to tourist and locals should not be under estimated.

- This alternative keeps the vehicle speeds slow and maintains a narrow road, which helps preserve the rural feel of the area. Slower traffic will decrease wildlife/vehicle accidents.

- This alternative is best for the environment. By routing the new road away from the wetland, less wildlife disturbance will occur.

Comments: Dear Park Service,

Thank you for the opportunity to comment. We live in an amazing place and it is a privilege to be able to comment and be part of the process.

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

Please implement Alternative D which includes a separate pedestrian pathway. Construction of a separate pathway is forward thinking and the pathway will be enjoyed by future generations.

Sincerely,

Michael Piker

Topic Question 1:

Alternative D is the best. The road realignment is a critical component because it moves the road out of the paths that wildlife use to get water. This alternative maintains the existing character of the road while providing an important separate, but adjacent, safe route for walkers and bicyclists.

Topic Question 2:

I am surprised and dismayed by the notion of intermittent closures of the road to motorists in Plans B and C and the reservation system anticipated in Plan D. While these may look good on paper, they will be an ongoing problem for the Park staff as long as they persist. They may well be enough of a problem to cause attempts at intervention by Wyoming legislators. As a long time student of political science, I am amazed that the Park would seriously consider using so much of its political capital on these options.

Topic Question 3:

No. There are good elements in all the options.

Topic Question 4:

Choose a course which is simple and clear and which does not evoke daily ongoing discontent on the part of both tourist and local park visitors.

Topic Question 1:

Moose Wilson has had a lot of use. It is a significant part of the Park. The measures outlined in Alt D seem to produce the best outcomes for the park, the wildlife visitors and Jackson residents. It is the most expensive, I hope all will help to see it implemented.

Although, I do not see the need to build another entrance station at the Moose end of the road. OR relocating the existing Moose entrance station.

Topic Question 2:

I was happy to read that the closing of the road was taken off the table. Also making it one way was taken off the table. Thank-you

Topic Question 1:

I support Alternative A with elements of alternative D included. I have been a heavy user in many capacities of the Moose Wilson Rd over the last 24 years. I believe the best way to control the road is to leave it unpaved and rough. Limiting access through reservations, segment closures, or one way travel is confusing and aggravating to everyone and will do little to protect or preserve wildlife, riparian areas, or the cultural/historic nature of the area. I do believe the road should be re-routed at the ponds, but that it should be designed, surfaced to demand slow speeds. R-v traffic, trailers etc... should continue to be discouraged,

As a cyclist I prefer to ride on the road, traffic is slow enough along the road that I don't worry. However as a family man traveling by bike I would prefer a separate pathway. The road is no place for my six year old or my cruiser with an infant trailer in tow. I think we could encourage bicycle travel as viable alternative along the road with a well designed pathway and no fee for bike/pedestrian travel. Connecting Teton Village to the park via pathway is a no-brainer!

Topic Question 2:

As a professional designer/ planner, I believe the simplest plan is the best. Access to the park should not be rerouted for west bank tourists or residents. Increasing traffic on Spring Gulch or Broadway is not a solution. Therefore reservations, one ways, or segment closures are unrealistic. Frankly the current road seems fine to me. Traffic doesn't seem that bad compared to my first experiences on the road. Keep it bumpy, windy and slow. Post signs that states that traffic frequently stops. Be prepared for delays...

Topic Question 3:

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

The motorized vehicle experience along the road is usually one of frustration due to the sense of constant traffic. However as any cyclist will tell you car traffic forms in "swarms" as one car travels too slow, backing up a few behind before using a turn out to let the rest pass who remain in their cluster at a higher rate of speed until the potholes break them up, or a "moose jam" stop them all at the ponds. The space in between the "swarms" is very peaceful for those of us on our bikes. I would verbally warn drivers to be prepared for slow travel and to use turnouts when traffic forms behind. The ranger in the station can do the best to control the road.

Topic Question 4:

In 1996 I used the Moose Wilson road as a business commuter. Traveling in the early morning to meet my car pool at Dornan's every day, I would frequently travel in great excess of the speed limit. I'm not proud. I was in my twenties and felt too much ownership of the road. It's worth noting that I was frequently passed by other commuters traveling in even greater excess of speed! I am now ashamed of my youthful habits.

That early morning time is essentially free of most tourist vehicles but full of wildlife. I would support simply closing the gate until 8 am. Let the workers, and airport commuters travel the main roads. The rest of the day keep it slow with bumpy, windy dirt roads. I support upgrading the winter usage of the area with groomed nordic track on the road.

Comments: I support keeping the road where it is with a modification at the ponds to avoid traffic jams and the destruction of the riparian areas.

I support keeping the road as it elsewhere, encouraging slow travel, and use of traffic pullouts.

I support a fee-free pathway, removed from the road, connecting Teton Village to Moose. The pathway should be encouraged at Teton Village hotels as a viable alternative for travelers to the park.

I support early morning closures of the road to motorized vehicles to discourage the high speed uses of commuting for work or to the airport. Open the road at 8.

I support a fee station in place for travelers heading south from Moose.

I support the fee station ranger providing important information on how to use the road to reduce impact on wildlife and to keep tempers in check. Like the "announcement" on the tram at Teton Village. It should be short but inform visitors of the sensitivity of the corridor and remind locals that it is not a highway.

Topic Question 1:
I strongly support alternative D. Bikes and hikers should be encouraged and protected; this is the plan that best accomplishes those objectives.

Topic Question 2:
Closing the road to traffic addresses a problem that does not exist. The slow, scenic wilderness experience the road offers is a key feature of our community. The problem that should be addressed is how to open the experience to hikers and bikes in a safe way.

Topic Question 3:
Alternative D, as presented, would work well.

Topic Question 4:
Safety and access should be priorities. Only alternative D provides those.

Topic Question 1:

1. Multiuse pathway
2. Realignment of road southwest of beaver ponds.
3. More roadside parking.
4. Realignment of White Grass Rd.

Opportunity to ride a bike from Teton Village or Dornan's/Moose could help alleviate traffic during peak times. Adequate parking provided at Granite Canyon and Moose entrances for those wishing to bike/run/walk along trail would be great. I don't like reservations; queuing lanes would be preferred, but idling cars could be a problem.

Topic Question 2:

1. Reservation system during peak periods.

Part of the enjoyment of GTNP is the ability to find serendipitous joy. Hard to do when one must plan ahead for a reservation. A late October afternoon might suddenly be a chance to see a black bear feasting on chokecherries, but if I hadn't planned or been able to schedule that time, I might miss out. Queuing might be more frustrating but with adequate parking, one might be convinced that a relatively short bike ride would get one out of the queue and into the park.

Topic Question 1:

I support Option D - bike path and retina Moose-Wilson road as is.
Best for the environment, for enhancing visitor experience, for allowing wildlife to thrive in this area, for keeping the road SLOW & NARROW
Best for reducing traffic by encouraging active, quiet transportation, for safely enjoying the Park on foot or bike

Winter closure as at present (Granite to Death Canyon trailheads) is recommended, too. Would love to see LSR Preserve open in winter.

Topic Question 2:

Widening the road would increase thru -traffic and speed, and encourage more vehicular traffic. Would threaten wildlife and their homes.

Topic Question 3:

Consider placing the bike/pedestrian path along the western dike of Snake River. This area is already wide enough for a bike path, offers graded flat surface, offers excellent visitor experience, and distances bikes and walkers from the busier wetlands adjacent to the road. Access is close from the GTNP south entrance.

Topic Question 4:

Thank you for engaging the community in an open process..

Correspondence Text

Topic Question 1:

I strongly support alternative D. It best achieves the dual objectives of providing access to our National Park, while at the same time protecting wild life habitat and preserving the natural character of the forest. For reasons of safety, and to allow citizens access to their National Park, the roadway should remain open both ways and maintained with a good, safe surface, which can still be rural in character. The separated pathway would best accommodate motorists, cyclists and hikers alike, and be much safer for all. It would also reduce vehicle traffic and be a wonderful amenity for the Park and a natural extension of the existing pathway from Moose to Jenny Lake. From personal experience I know that people come to GTNP just to ride and hike the existing pathway. Connecting the two pathways would attract additional visitors and thereby expose them to the wonders of the park at no expense to the overall purposes of the Park.

Topic Question 2:

Efforts to keep people out of the park by making the existing roadway inconvenient (one way only, limiting the hours of use etc.), unsafe for lack of maintenance, or eliminating it entirely are misguided. Additionally, the absence of a separated pathway will force motorists and bikers to share a road which is, and should remain, rural in character. It's unnecessarily unsafe and inconvenient for both.

Topic Question 4:

Maintaining the Natural characteristics of the Park and allowing the public access to the Park which exists on the strength of its tax dollars is a delicate process. The existing road has been there from day one of the Park's existence, so better and safer maintenance of the road, and providing cyclists and hikers with a safe and enjoyable way to use this existing roadway will in no way decrease the wildlife and natural attributes of the park. This is particularly true if the road is rerouted to avoid the beaver pond area.

Topic Question 1:

Dear David;
Thanks for the opportunity to comment on the Moose-Wilson Road.

I favor Alternative D. Second choice Alt. A

I like:

Rerouting the Death Canyon Road to White Grass. (drier)
Rerouting to East of Beaver Ponds to old road/airstrip. (fearful of new impacts)
New multi-use pathway. (fearful of new impacts)
Rerouting North end of road. (fearful of new impacts)
Paving dirt section. (fearful of new impacts)
Peak time, peak season maximums.

Topic Question 2:

I don't like:

Any (further) Reduction of Winter access. Please plow to Death Canyon or new White Grass parking area.
2 days of Bicycle traffic. Not enough demand yet. Or Peak season only.
Too much commercial traffic and impeding traffic in peak season.

Topic Question 3:

Winter management and Summer (peak season) management.

JHMR should partner with GTNP especially in Winter, grooming.

Comments: Thanks!

Topic Question 1:

Alternative D is terrific because it is:

â—¼Best for the environment

â—¼Best for enhancing visitor experience

â—¼Best for keeping the road SLOW & NARROW

â—¼Best for reducing traffic by encouraging active transportation and traffic flow technology

â—¼Best for safely enjoying the Park on foot or bike

Topic Question 4:

Having a separate pathway is the only logical option. Save lives, save wildlife, increase the value of everyone's park experience.

Quit studying it and build it. I'm getting older and want to enjoy it while I can still ride and walk. Waited too many years for the existing pathways to be built and watched two people die in the process.

Topic Question 1:
Management Plan Alternative D. The creation of a multiuse pathway will provide a means to get out of a motor vehicle and have a more personable, enjoyable, mutisensory experience with the Park.

Topic Question 1:

D achieves the what is best for the environment while making for a good visitor experience while in the park.

Best for enjoying the Park on foot or bike.

Topic Question 2:

Going with a one way alternative will over time create a environment that will drive more development not less due to additional pressure applied due to growth in park attendance.

Topic Question 3:

No. The clock is ticking. Complete this study and act on the information that you have developed and received from outside sources.

Topic Question 4:

Thank you for the opportunity to have input on this issue. We use the park weekly. We greatly appreciate the work that goes on to provide the very best opportunity for all, including the animals.

Topic Question 1:

Of these options I'd vote for Alternative D (b/c it includes a separate pathway). HOWEVER it is ridiculous for us to continue to pretend that 60,000 people don't LIVE here in the summer, and that millions of people don't visit year round. Jackson Hole is long past being a [primarily rural] summer resort; ignoring reality helps NOTHING. The Moose Wilson Road should have PAVED TWO WAY YEAR ROUND ACCESS with separate pathway - - PERIOD (many people believe this but are too intimidated to say it).

Topic Question 2:

Topic Question 1:

Please implement Alternative D's strategies that would promote active transportation over single occupancy motor vehicles. The strategies should provide safety measures for cyclists and hikers using the corridor. It would keep the corridor narrow and appropriate for the natural beauty of the route, minimizing impacts to natural resources. It would also allow visitors a stellar way to experience the best attributes that the Park has to offer, in a safe manner, not stuck inside a car.

Topic Question 2:

Insisting visitors experience the Park inside a private car simply detracts from the character of the natural surroundings, is unhealthy for the environment, causes traffic congestion.

Topic Question 3:

Signage and printed comments on maps or brochures explaining the strategies that provide for safe bicycle travel would give motorists the reasoning that may not get otherwise. i.e. a comment that says the Park supports wildlife viewing and active transportation...Please share the road...

Topic Question 4:

Other Parks that stress active transportation and public transit are definitely moving in the right direction for the future of National Parks!

Topic Question 1:

Alternative D because it includes a separate pathway and balances resource protection, park values and visitor experience. Alternative D will enhance wildlife habitat and connectivity through road realignment, manage peak traffic flow with technology and allow for safe non-motorized access along a separate pathway.

Topic Question 2:

The Other Alternatives are Inferior:

Road closures cause an imbalance of traffic flow, idling lines and erratic visitor experiences with negative impacts to the environment and the public

Without a separate pathway, the Moose-Wilson road cannot be enjoyed safely outside of a car

Topic Question 4:

Alternative D is terrific because it is:

Best for the environment

Best for enhancing visitor experience

Best for keeping the road SLOW & NARROW

Best for reducing traffic by encouraging active transportation and traffic flow technology

Best for safely enjoying the Park on foot or bike

Keeps the road's narrow, slow, rural character

Enhances wildlife habitat and connectivity with road realignment

Encourages safe access for cyclists and pedestrians along a separate pathway

Uses current technology, permitted commercial activities and pathways to reduce car traffic, deepen visitor experiences and reduce environmental impacts

Comments: The recent bike path from town along the elk refuge up to Jenny Lake is amazing. This provides an excellent method for visitors to enjoy the park OUTSIDE their vehicles. It encourages alternate methods of transportation, is wheel chair accessible, and give folks a safer way to enjoy the park by bike. It also increases user activity to the areas of the park that have already been developed. It increases tourism and benefits local businesses. Linking the Teton Village bike path to the current network in the park will be a huge benefit to everyone.

Topic Question 1:

Most of my experience driving the Moose. Wilson Rd- -comes from visiting every summer. Since I live in CA I'm accustomed to traffic. But people need to be smart. Don't drive so slow that your causing a HUGE chain of cars behind you. But don't drive so fast that you can't stop if a moose steps out in front of you.

Is there a way to create a thruway of that locals and folks like myself are trying to go from one place to another- -we aren't being slowed down by other tourists who have zero idea of where they are.

Topic Question 2:

Is having a local thruway a possibility? Your vehicle has a tag that clears you- -kinda like Fast Pass out here. No tag, you have to pay a premium. Think of the thruway as a commute lane.

While traffic will slow for animals in the road there should be as little stopping as possible, by having locals on this road who are use to seeing these wonderful animals they won't be as tempted to stop and cause a moose jam.

Topic Question 4:

Please see section 1 and 2.

Topic Question 1:

I would like to see Alternative D carried forward because it balances the needs of the park and visitors.

Topic Question 2:

I do not support the other alternatives because of the cost, increased danger for pedestrians, and possibility of closure of the pathways. It seems that the pathways have worked well and let park visitors experience the park in its true form of nature. When pedestrians and bikes have to share the road with cars it increases the risk of accident and injury and limits the ability of people to explore nature outside of a car.

Topic Question 3:

Strategy D is best because it keeps the character of the park and lets people experience. The National Parks were founded in part so people could experience nature at its finest. The pathways allow people who want to ride bikes or walk as well as cars to see the park. It doesn't make sense to only have one mode of transportation for people to enjoy the park.

Topic Question 4:

One of the highlights of my summer was renting bikes with family and riding on the pathways. We were able to hitch baby trailers to some of the bikes and let the youngest family members join us for the most beautiful day and park experience. The sky was blue and mountains stunning as we rode on the pathways. We saw and heard different birds and animals, and enjoyed the landscape and views. Being on a bikes let us stop and hike trails at different time points, and also let us cover more area than we would have been able on foot. Further, it allowed us to exercise and enjoy the fresh air. There were times that we did have

to share the road with cars and each of those times was slightly anxiety causing as we were at the mercy of the cars and driver's attention. When bikes and cars have to share roads there unfortunately be accidents, especially when cars speed or do not pay attention to the road as they are looking at animals. We wish that the Park Service would build more pathways as we look forward to spending time in the Park for many more years.

Topic Question 1:

Of the alternatives presented, alternative C would be my choice. I believe maintaining the existing ROW without significant construction would be best where the disturbance is least. Reducing primarily the auto traffic should be considered, allowing for walking and bicycling.

Topic Question 2:

Relocating the road, paving the unimproved section. The costs and environmental impacts associated with these would not be worth the benefits, in my opinion.

Topic Question 3:

Would it be possible to close the road to through auto traffic? Or change the road to one-way traffic for all users. Or Alternative C with reduced vehicles more than 2 days per week, such as 4.

Topic Question 1:

Essentially, plan D. An alternative route for bicyclists will be safer for all, and decrease the amount of car traffic on that road.

Topic Question 2:

Do NOT periodically (either daily or at certain hours) close the road in either direction. No matter how you try to publicize this, it will cause confusion and anger and ultimately aggravate the tourists upon which we are dependent.

Topic Question 3:

There is an already constructed levy somewhat parallel to the Moose Wilson Road. If we could use this to build a bike path, we would do two things: We would save money on the cost of constructing a separate pathway. Also, we would not have to disturb habitat surrounding the present road.

Topic Question 4:

Please support the many bicyclists in the valley. They don't pollute, they truly enjoy the exercise and fresh air, and they are less dangerous than cars.

Topic Question 1:

Traffic management - the character of the corridor should be preserved by improving alignments and encouraging active transportation while accommodating and managing motorized travel.

Topic Question 2:

Shared roadway and day restrictions on type of transportation do not achieve the purpose of the plan. They both create inconvenience, possible conflict, and antagonism.

Comments: Alternative D is the best alternative. It builds on an emerging world class active transportation system in Grand Teton and the Teton Valley while providing the best management options for keeping the corridor accessible for motorized travel.

Topic Question 1:

I would prefer to see "business as usual" and maintain the uniqueness and wildness of the Moose-Wilson road as is. The unpaved surface keeps travel at a minimum. The unpaved surface keeps cars moving at a slow speed to watch for wildlife. This area is not big enough to support a bike path.

Topic Question 2:

The need for an intact wildlife corridor is crucial in this area. A plan to break up this corridor with pavement is not following the Park Service philosophy and is destructive to wildlife. I do not understand why bikers need additional biking opportunities. This would also create more congestion at trail heads and necessitate additional parking lots. This is not in the best interest of the wildlife. The potential for a biker interacting with a bear has a high probability if they are moving quickly and quietly on this road in any capacity.

Topic Question 4:

I am very concerned about special interests groups only serving their needs rather than the park preserving and protecting our wildlife.

Correspondence Text

Topic Question 1:

I far prefer Plan B. Mainly because it limits through traffic which is what most of the traffic is. This alone would make it more bike friendly which is important as it creates a loop with the pathways along highway 89 north of town and the coming 22 pathway. That pathway from Town to Moose of course is limited by the elk use of the Refuge and the loop may not exist very long in the offseason. I do like the idea of bike only periods as Taggart to Jenny lake is a biking tradition during our Spring Break. When limiting through travel I do question what "peak use" would be defined as, 4th of July and Pioneer's Weekend or June 15th to August 15th. Summer is a long very busy with a broad, flat, peak period.

Limiting vehicle size and commercial trips is important to keep this area of the park, a quiet area with more solitude.

Topic Question 2:

Alternative A. Traffic and poor road alignment are errors of the past and Alternative A does not address them. Alternative A is the "everything is fine" alternative. If everything was fine this discussion would not be happening.

Topic Question 3:

We don't need every area to be like Jenny Lake, crowded and built up.

The Village Road Gate should be unmanned when through traffic is not allowed and The north end of the

Moose Wilson Road moved back to the south of the Moose Gates. Manning gates for this little section of the park is not necessary when traffic is kept to a respectful amount. This would also reduce waits on the main inner park road at its gate.

Topic Question 4:

Grizzly Bears are not new along that road, it's just that nobody else was around when I saw them there 20 years ago.

Comments: It seems like the Alternatives are either maintain, limit or expand. There are some good ideas in some that could belong with others.

Correspondence Text

Topic Question 1:

I prefer the Alternative B plan because this plan restricts the through traffic and will allow the pristine environment to be enjoyed by visitors and locals at a slower pace. It's a less invasive plan to implement and would cause less destruction of the delicate habitat and wildlife.

I currently find traveling the road very upsetting and dangerous due to the through traffic trying to speed through on a road which was never intended for this purpose. I have also had great difficulty maneuvering safely past bicycles who are also traveling the road.

Topic Question 2:

I believe bicycle traffic should be restricted completely. There is a great danger to visitors with sudden encounters with wildlife and a danger to them from passing traffic on the narrow road. I love the other bike paths in the park but would not bike this road. I think adding an additional bike path would be very destructive to the habitat and to the wildlife and there are numerous other outlets for biking in the area. The costs are just too great from implementation and building of the bike path, danger to public safety, and impacts to this fragile area.

Topic Question 3:

I would suggest having one parking lot at LSR with alternative B accessible from either Moose or the village. Having two parking lots increases man power and frustration for a visitor when they might see an available spot from the other side.

Topic Question 4:

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

I appreciate all the time and effort put forth with this PEPC. The Moose Wilson Road is such a special place which deserves special attention and protection.

Topic Question 1:

I like the realignment of the road around the beaver ponds but want to make sure pedestrian access is still available to beaver ponds.

The changing of parking areas for the Death Canyon Trailhead is a positive change, whichever alternative is chosen. I just hope there will not be a lot of grading and tree removal. It has to be done carefully.

It is probably a good idea to change the entrance station to capture more entrance fees. But do we really need two entrance stations to access the park? Perhaps we just need more lanes and personnel at one station.

All the strategies for limiting traffic are interesting and worth considering. Probably the most practical alternative would be limiting traffic to the corridor by queing up as was suggested. Closing it two days a week would not limit traffic on other days.

Topic Question 2:

Please no pathway north of LRP....too wildlife sensitive for bikes to be traveling in that area.

Lets not pave any more of this road. It will only encourage more cars and encourage people to use the roadway as a thoroughfare on off peak hours.

Whitegrass road should remain closed That is elk habitat in the fall and we should protect the wildlife as a

first priority..

I don't think closing the road earlier in the fall or at Sawmill Ponds would achieve anything significant. I'm a photographer and love to photograph in the beaver pond area before the road opens in the spring and after it closes in the spring.

Topic Question 3:

Close the road completely and use trams like they use in Yosemite.

Comments: I would hope that protection of wildlife is the most important priority- -higher than pathways and improving the road. We have a treasure in our wildlife and we need to protect it all all cost.

Topic Question 1:

A gate at the LSR is a good idea. But, it should be closed at all times except for emergencies.

Topic Question 2:

a separate bike path is a bad idea. It consumes more of thhe Park's fragile resources. A bike path will also conflict with wildlife values.

Topic Question 4:

The north half of the Moose/Wilson Road is a very special part of the park and should somehow be protected from the possibility of creeping incrementalism.

I fear that if road closures are imposed by various criteria, the Park will be put under tremendous pressures in the future to change their criteria to suit various interests.

Comments: We have plenty of separate bike paths already. This sensitive area of the park needs protection! It is a special place for visitors to view wildlife which is THE high point of the Grand Teton experience for most people.

Topic Question 1:

The open house staffed by NPS operatives with explanatory maps, alternatives and other information is excellent. The ability to ask questions and get answers is superlative. I am particularly looking forward to addressing your cultural resources staff.

Topic Question 2:

I have no opinion overall. I know you have to have a "No Action" alternative but hope and expect GTNP will not choose this.

Topic Question 3:

Management of cultural resources pursuant to the NHPA and 36 CFR 800. The natural and/or cultural landscape along the road.

Topic Question 4:

GTNP will have to survey and evaluate any and all cultural resources in the Areas of Potential Effects for the various alternatives. An evaluation for National Register of Historic Places of those sites, locales and landscapes potentially affected will be a necessary element of this EIS process. The Alliance for Historic Wyoming is particularly interested in identifying and appropriately managing cultural landscapes. We trust NPS won't let us down in this regard. GTNP is also involved in the Colter Bay interpretive project, the Jenny Lake work, as well as other efforts within GTNP. Cultural resources concerns seem to have become either bogged down or assigned a diminished priority on these projects. We trust this won't happen with the Moose/Wilson Road project.

Comments: In participation with both the Colter Bay project and specifically management of the Vernon Collection, GTNP has been less than proactive in openly managing and returning these items, donated by the Rockefellers with the specific requirement to display the collection in Teton Park. A 5 to 10 year wait for this process is unacceptable and was not the stated goal during EA preparation. As a member of the Society for American Archaeology's Repatriation Committee (2014-2016). I was disheartened to learn that GTNP repatriated (without public opportunity to comment or object) objects from the Vernon Collection to an eastern tribe. No element of the Native American Graves Protection and Repatriation Act (NAGPRA) provides for this. Such activity cannot be tolerated in the future.

With regards to the Jenny Lake project, the Alliance was disheartened to hear that one minority group was strongly recommending that regulations at 36 CFR 800 be obfuscated and disregarded. Specifically, the Shoshone/Bannock indicated that archaeological materials not be evaluated, surveys and/or requisite test excavations and mitigative treatments not be performed. As NPS/GTNP is aware, the Wyoming State Historic Preservation Office found considerable fault with this. While it may be seen by GTNP and NPS overall, as an "easy way out" not to perform legally mandated and required archaeological and cultural resource investigations, such an approach is unacceptable to not only the Alliance for Historic Wyoming, but the Wyoming Association of Professional Archaeologists.

As a personal comment, I wish to point out that the twenty-first century NPS and GTNP will need to react to an increasing national and international community. The tremendous resources of Teton Park belong to this national, dare I say, international community, not to any one minority. Visitor uses are changing, multi-lingual visitors abound and an increasing non-motorized public is emerging. It is a great challenge to GTNP to attempt to accommodate this changing visitor presence. Personally, I feel that non-motorized uses (hiking, biking) potentially have less overall impacts than mega-roads, paved wide and providing overall access. OHV use, seen as a very destructive activity, should be carefully controlled, discouraged or prohibited..

I like this system! It works very well! Susan McPartland was very helpful.

Topic Question 1:

I feel that the protection of critical wildlife habitat, especially in the wetland portions of the road, is best served by Alt B. The proposed road segment that would pass Sawmill Ponds should be aligned as much as possible with the power line corridor, minimizing the impact on trees and berry shrubs; the addition of or 3 pull outs on the edge of the bench with signage to respect the quiet of the forest will reduce crowding when a moose or great gray owl are present below. The roadway.

Topic Question 2:

Adding a paved bike path; the limited use it would get doesn't justify that additional disturbance to animals, which are often more leery of a human on a bike than proximity to cars.

Topic Question 3:

Yes! Find a sponsor to donate construction of a raised wooden viewing platform & boardwalk allowing safe viewing of bears, beaver, moose, and elk along the east edge of the wetland. Add interpretive signage for beaver and wetland birds. Allow beaver to do their thing;
Remove the beaver- deceiver as soon as possible.

Don't succumb to pressure from the local biking crowd; the wildlife need their habitat a lot more than we need our exercise in that area!

Topic Question 4:

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

Alt. B shows three pullouts in the sage meadow just north of the Death Canyon turn off. These are not looking directly out over a water body, so they seem extraneous to me. Also, the southern edge of that meadow where it meets the aspen stand is an important grazing area for elk, so perhaps one pullout with a 4 ft. rock retaining wall would give the elk some added security.

I strongly encourage the implementation of a frequent shuttle bus service (buses to be powered by natural gas) from the south entrance that would also give departing visitors connectivity to a second airport shuttle, based at the moose visitor center. Without some involvement of a mass transit system, we will be missing the boat!

Comments: No separate bike path.

Topic Question 1:

Alternative D keeping the road rural in nature while moving the north section makes a lot of sense. A seperated pathway is the best approach even it was positioned close to the road. Encouraging visitors to enjoy the park without the need to be in a car would have less effect on the enviroment.

Topic Question 2:

Alternative C which restricts car use a couple days a week would cause confusion and would be disruptive to public enjoyment of the park. Crowds would take care of themselves by keeping the roadway narrow and winding. A seperated pathway would add a safety element currently missing.

Topic Question 3:

enhance alternative D by having it intersection to the north remaining similar to how it is now.
Eliminating the need for another entry station.

Topic Question 4:

Encouraging now motorize vehicle access to the park while keeping it managed to a maintained pathway is stong statement and should be embraced in future thinking.

Topic Question 1:

Alternative D. It feels like the best of all worlds so to speak, and a solution that could possibly please all points of view. It also feels like it is the least polemical.

Topic Question 2:

Alternative A - doing nothing - is clearly the least effective, or we wouldn't be in the situation we're in right? Equally, as it relates to future growth, if nothing is done now, we'll be forced into this very same situation at some future point in time, So why just kick the can down the road?

Topic Question 4:

Whatever the solution, reducing motor vehicle traffic on the MW road now or in future is imperative. And at the same time, extending the pathway. The two are inextricably linked - one will reduce the other and so forth.

Comments: The idea of taking reservations is fool hearty. It will lead to abuse as every other reservation system does, favor particular segments of the population, and reminds me of the old metaphor of rearranging deck chairs on the Titanic.

Topic Question 1:

alternative 4 is teh best solution for many reasons.

A seperate multuse pathway for the entire length of the road is a minimum requirement. the safety and experiential aspects it would add to this area would make it a jewel for all visitors. why cant the park service see the value of pathways to get people out of their cars, particularly in an area that is always going to be full of visitors.

embrace the demand and make the experience completely unique.

the existing road should be upgraded with parking and pull out areas added. it is a park for all the people not just the people who happen to know about this section.

Topic Question 4:

keep the multiuse pathway
keep traffic flowing both ways
allow for crowds if you have to, but plan for the future

Topic Question 1:

Alternative D has the fewest "problems" with accommodating the interests of Park visitors (including my use of resources along the Moose-Wilson corridor) while managing the impact of traffic on the area.

Alternative A (do nothing) is also a good choice if peak traffic access limits are imposed.

Adequate parking at trail heads must be a priority.

Topic Question 2:

Moving trail head parking from its existing locations and adding hiking distance is NOT a good idea for visitors not altitude acclimated.

You have data that includes peak trail head parking counts. Design the trail head parking and overflow to accommodate the demand. A note on the Granite Canyon parking: I have frequently continued north to other trail heads because that lot is full, i.e., the peak use figure does not reflect true potential demand.

Closing the Moose Wilson road on September 30 is arbitrary. I have enjoyed hiking from Granite Canyon and other trail heads into mid-October depending on weather.

Even though the Rockefeller Center is closed, open the parking lot for hikers whenever the Moose-Wilson road is open for traffic.

Topic Question 3:

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

There is no mention of mitigating the commuting traffic via the Moose-Wilson corridor. This traffic, outside of peak hours, is often aggressive with frequent passing of slower vehicles.

Topic Question 4:

My comments reflect the viewpoint of a part-time Wilson WY resident for more then 30 years.

Topic Question 1:

In favor of Alt D, which provides a separate bike path on the Moose-Wilson Road. I am commenting as a cyclist, who rides 60-70 miles per week, much of it in the park; a supporter of Friends of the Pathways, and as a volunteer for the last four years on the Pathway Patrol (my assignment is Saturday mornings). I support a separate pathway because: it enhances the park's reputation as a "cycling destination" by groups from the region; it is the safest way for people of all ages to view GTNP; pathways add significantly to the quality of life in Jackson. As a pathway volunteer, I have talked with hundreds of users from kids to seniors all of whom are impressed and quite appreciative of a cycling venue that is not hampered by parallel and cross traffic. Children - - from those with training wheels on - - ride regularly in a safe surface that may not be available to them anywhere. Seniors, of which I am one, appreciate the safety of the trail. A trail connecting the main entrance with the Granite entrance only enhances the attractiveness of the park as a good place to bicycle. I live near the Gros Ventre intersection, where I can connect with the trail system and go to Jackson or all the way north through the park - - that is real quality of life. All of these comments, of course, have not dealt with the health benefits of bicycle riding.

Topic Question 3:

It would please me greatly if the cycling community were welcomed and included as a partner to the process. At this point the idea of separate pathways feels like a late addition that has been made placate a constituency.

Topic Question 1:

Separate multi-use path encourages people to get out of their cars and provides safety for walkers, bikers. Doesn't need to be widely separated, could be adjacent to road. Good to realign road to move it away from intense wildlife area to reduce hoards of people getting too close to wildlife. Do not pave southern end - paving it would just encourage more traffic and higher speeds. Monitoring and controlling amount of traffic on road a good way to reduce vehicular impact (pollution, noise, danger to wildlife). A gate at the LSR that could be closed at high traffic times would help to reduce traffic. A reservation system for the road and for the LSR (maybe also for parking at Death Canyon trailhead) would reduce the amount of cars idling while waiting for parking space, and also would reduce frustration of people waiting for parking spaces. Reducing the numbers of commercial "safari" vehicles would also help reduce the traffic and reduce impact on wildlife.

Topic Question 2:

Paving southern end of MW road would encourage more traffic, increase speeds, and be detrimental to wildlife. A permanent gate at the LSR would anger visitors and locals.

Topic Question 3:

Consider having some kind of public transportation shuttles that would reduce the number of vehicles, such as in use in Zion, Yosemite, not to replace automobiles but to supplement. Perhaps these could be open-air and could have an educational aspect (maybe rangers could provide interpretation along the way and at stops).

Topic Question 4:

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

A bike path could greatly enhance the visitor experience, as we have already seen in the new pathway from town all the way to Jenny Lake. Many users who previously might have been in their cars are getting out on the bikes to see the park and to get exercise. What a perfect way for families with children to experience the park. Bikes are much less disruptive, less noisy, and less polluting than automobiles.

Topic Question 1:

1. Paved bike path. It would create an alternative to driving to the LSR preserve and other trailheads as well as destinations north. Right now I drive with my road bike to Moose in order to bike in the park. A bike path would connect two of the most popular tourist destinations...Teton Village and Moose/Jenny Lake, taking pressure off the road.
2. Of the Death Canyon trailhead alternatives, C is best. Improve the road/parking area and maintain access near the current location.
3. Pave the unpaved section and add pullouts.

Topic Question 2:

Gating the road at the LSR Preserve during peak times would be very inconvenient for Westbank residents.

Closing the road two days per week would be very inconvenient for Westbank residents. Bike path would be much better.

Topic Question 3:

Public transit/shuttle option along Moose-Wilson Road. The START Green Line already has 17 round-trips per day along the southern portion of Moose-Wilson Road. A partnership between the NPS and Town of Jackson could extend some of those trips to serve Granite Canyon Trailhead, LSR Preserve and the Craig Thomas Discovery Center. Grand Teton is lagging behind other parks in offering innovative

public transit.

Topic Question 1:

Alternative A on the whole would achieve the Goals stated by the Park & would be my preference. Preserving "as is" would have the least impact on wildlife, have least disturbance on landscape features, & maintain an authentic experience for the traveler.

Signage at entry points indicating traffic congestion, speed limits, or other necessary alerts would not alter the interior experience on the road.

Topic Question 2:

Alternative D is a most dismal choice. Addition of pathways, groomed trails, commercial groups, more paving, would dramatically alter the impact of the travelers' experience in regard to natural features, wildlife encounters. The addition of more bikers, walkers, groups, commercial vehicles would not enhance a potential solitary experience & would create an added burden in regard to enforcement (I.e. Staying on trails, harassing wildlife, speed limits, etc.)

The cost of creating new turnouts, paving, reworking roadways, additional paths seems a bit ludicrous in view of budgets that seem to adversely hit the Park Service.

Topic Question 4:

I like to see balance of experiences offered by the Park.

Jenny Lake area is like a wild/urban wonder, yet it seems to be able to excite visitors with what the Park has to offer: trails, views, food, stores. Then there are more back country opportunities. The Moose-

Wilson Road feels like a vestige of the past...or at least it can when one is forced to navigate narrow roads, gravel, pot holes, smells of unaltered wetlands, anticipation of wildlife sightings, etc. For those in need of more expedient travel there's the Rockefeller Highway. It can have the feel of why people come to the Valley, often staying. The irony, then come the requests for 'upgrades'. In this case, pathways, smooth roads, faster travel, guided & directed experiences.

In order for a balance to be achieved, I think we can savor the primitive as in the Road...we have Jackson Lake Lodge & everything in between. That balance is for us & I think it would help preserve the goals for wildlife, landscape, & our history.

Topic Question 1:

I believe Plan D., is the best as it offers a separate path for bikes therefore enhancing the experience for bikes and lessing the chance of accidents involving motorist and bikes.

Topic Question 2:

The plans without a bike path are without merit.

Topic Question 4:

Finding a way to reduce the motorist speed through this corridor is critical. Regardless of the plan there must be a 25 mile per hour speed limit that is heavily enforced. Cameras could be placed along the corridor and violators could be ticketed at the gates as those motorist exit.

Topic Question 1:

It seems obvious to me as I read the numbers of increased cars on the Moose-Wilson, that the perfect solution would be a bike path. If you build it, they will come... The road can be located just adjacent to the bike path, allowing all those who want to view this beautiful stretch an option of driving or biking. I realize that excavation here will destroy some trees and a small portion of habitat. But the road is usually closed in the summer anyway with tourists gawking and totally blocking the road. A bike path makes perfect sense to me.

Topic Question 1:

- 1.Manage traffic volumes. Too much traffic keeps people from enjoying the scenery and atmosphere and is detrimental to wildlife, both large and small. (But more on this below)
- 2.Move road away from wetlands. Viewing them is secondary. Preserving them is primary.
- 3.Improve parking, turnouts, and restrooms. The would enhance the visitors' experience.
- 4.Prohibit taxis and commercial use other than park-approved shuttle services. No taxis. This road is a park resource. Not a thoroughfare.
- 5.Relocate Death Canyon trailhead to a site near White Grass Ranch. Enlarge parking there and provide maps and restrooms. This is a level, less wildlife-used area and thus better for a parking lot than further up the existing "road." (It would also provide access to Huckleberry Ridge -if the bears are not eating the berries first.
- 6.Interpretive media and programs at key visitor areas is good because it helps people understand and it concentrates visitor use to areas where it is least damaging. (Hopefully) (More on this below)

Topic Question 2:

- 1.No bike path here. No "multi use" path. Use the bike paths in other parts of the park. Bike paths are Good -but not here. It is NOT good to tear up this valuable habitat to make a bike (multi-use) path here. Habitat and scenery are key here.
- 2.Do not "improve" the road beyond maybe better grading. Do not widen. (except for parking and turnouts) Do not pave additional sections. It is not good to make the road conducive to more use as a thoroughfare. Because the key thing is to hold this area as a park resource. Not a thoroughfare. Those are opposing priorities.
- 3.I'm not so sure that bicycle use of the road after an early closure is a good idea. Nor grooming a ski trail

in winter. There should be more studies of wildlife use first. It's very important to protect moose habitat because they are in define.

also, it's probably not necessary to go to the expense of grooming because the trail might get packed out by use.

4. Also not sure about restricting traffic flow by numbers of cars.

For one thing, "peak use" is not well defined. For another, while I totally sympathize that this is a good way to reduce use of the road -which is, indeed, necessary, I worry that not being able to plan will frustrate and irritate visitors and cause a lot of hard feelings and complaints. (see below for an alternative)

Topic Question 3:

Totally close the road between Saw Mill Ponds and the Death Canyon Road. Either take the road out all together. Or if the park needs it for some real reason for their own use, then put up formidable barricades. That stretch is some of the most vulnerable. It includes the wet lands and a lot of the choke cherry and hawthorn and service berry that the bears are using in late summer and autumn. It is a good area not to have the road.

I realize that means the people coming down from the north cannot access the Laurance Rockefeller Preserve not Death Canyon trails directly. But that's life. We do not owe them every convenience. We owe them access to the things that are first preserved. They can drive around. AND it salves the wounds of Teton Village who could then say that they have access to a special part of the park. And if people have driven around to get there, maybe they will use Teton village as a staging area and thus increase their business.

I really do think this would be far less annoying to people planning on using the road and then finding out that they cannot because too many other cars are there already.

ALSO

I see no mention of Joy Creek in the proposals. Joy Creek is just as miraculous and beautiful in it's own way as Jenny Lake is. While I would certainly hate to see it over used or prostituted, it might be good to have some parking there and a little bit of geological explanation. Same with a couple of the big boulders scattered in the woods.

Topic Question 4:

This discussion of the use of the Moose Wilson corridor is an excellent teachable moment. A great opportunity to explain to folks the difference between Grand Teton Park and Central Park.

No one is entitled to seeing a moose or a bear. No one is entitled to a beautiful sunset. Such wonders might be partially earned by vigilance and respect, but even then, the sight of a wild bear is a free gift from the universe. It CANNOT BE STAGED. It should not be staged. That's why they closed the Yellowstone dumps.

We need to dwell on what the word 'wild' means. And that while it cannot be ordered not expected, that's the very thing that makes it so special and valuable.

This is what rangers need to answer when people ask where they can see a moose or a bear. One can point out areas that have frequent -but still unpredictable- wildlife use, but the very rarity and unplanned nature of the event should be emphasized as the value of it.

Comments: People have told me that the Teewinot magazine/newsletter which is handed out at the park entrance gates, directs visitors to the Moose Wilson Road to "see bears." THIS IS TOTALLY INAPPROPRIATE.

For one thing, it is not accurate. There are almost never bears in view from the Moose-Wilson corridor except when the berries are on. And that's when the park closes that section of the road to prevent unhappy bear-human interaction.

In the second place, it is not appropriate information. We really do need to help visitors understand that wildlife does not stand around waiting to be viewed. We need to help people understand what a gift the "wild" in "wildlife" is. (I guess I have belabored this point above. But please, please give it some thought.)

I do thank you all very much for providing this and other opportunities for people to provide input. I realize you cannot please everyone. And that, ultimately, you must do what you believe is best, popular or not. But I thank you very much for allowing us to try to inform your thinking and to give you input on what is important to us. These public comment opportunities must certainly entail a lot of work for park personnel. You all have been unflaggingly courteous about it. I really appreciate it. Once again: Thank you.

Topic Question 1:

I think a separate pathway is important because I believe the natural resource is best appreciated and protected by those who visit on foot or by bike.

I am not in favor of promoting motorized traffic through this wildlife and ecosystem-sensitive area. I think the Park does not do enough to mitigate damaging motor vehicle parking impacts and driver behavior problems. I believe the road should be moved away from wetland and sensitive areas.

Topic Question 3:

Moose Wilson Rd is already closed most of the year due to snow. I am not opposed to seeing to close year round but allowing NP bus traffic (similar to what is being done in Zion NP). This would still allow visitor access but greatly reduce the problems with parking.

Topic Question 4:

close Moose Wilson road to through traffic. Create a pathway. Move the road away from eco-sensitive areas. Create a NP bus system similar to Zion NP to provide access to the LSR Preserve and trailheads.

Comments: More needs to be done to protect the resource. The abuses that occur on Moose Wilson road are horrific. From poaching trails with bicycles and dogs, to the poor driving and parking behaviors of tourists, to the endless moose and bear jams where people are mere inches away from the animals, the current state of affairs is unacceptable.

Not just on Moose Wilson, but also around String Lake. It is a travesty. Not enough is done to control these abuses.

Topic Question 1:

1. The gravel section of the road should be paved, as suggested in Alternative B. This section of the road as presently maintained is a disgrace for the Park, and the County. The gravel surface just does not and will not hold up to the amount of traffic, and hasn't since I have been in Teton Village (1972).
2. I believe re-routing of the road as proposed in Alternative B is a good idea. It would keep traffic away from the marsh/pond area where animals tend to gather, and which currently is a site of traffic problems due to people stopping cars to look at animals.
3. A new separate multi-use pathway as described in Alternative D is an excellent proposal. Currently bikers on the West Bank who want to visit the Park on bicycles have to go through town. A path suitable for bikes would create a wonderful loop (TV to Moose to Town to TV), all safely on bike paths. Currently the gravel section of the road cannot be used by road bikes because of the terrible condition of the surface, and the paved section of the road is too narrow for combined bike/auto traffic to occur safely. As a compromise for those who oppose a separate pathway, at least the road could be widened enough to allow a one way bike lane on each side of the road, to allow bikers to use the road more safely.

Topic Question 2:

1. Management of traffic volumes on the MW road as proposed in Alternatives C and D by timed sequencing or a reservation system would be a nightmare! Removal of the MW road as a dependably available two way route to and from the West Bank would undoubtedly increase pressure for construction of a N bridge. Furthermore, this would not be a workable solution for the many tourists who visit the area.
2. Closing the MW road to motor vehicles on Sept 30 is not a reasonable idea. October is a beautiful month, and an excellent time for fishing on the Snake River. Closing the road on Sept 30 would make it

much less convenient for West Bank residents to access the Snake in the Park for fishing . The road should be left open to motor vehicles as long as it is not covered with snow.

Topic Question 3:

1. In my view, the best long term solution is keeping the road as is (Alternative A), but building a new year-round road with parallel bike path along the southern boundary of the park, connecting to a new N bridge across the Snake River, and then connecting with Highway 26/89/91. This would remove the majority of traffic pressure on the MW road, and would provide an alternative year-round route N and E for residents of the West Bank, with less impact on the Park. I would guess that the vast majority of drivers using the Moose-Village road are doing so for travel purposes, rather than for in Park sight-seeing or animal watching. A quicker and safer route would therefore siphon off the majority of Moose-Teton Village road users. With this plan, the existing gravel section of the road beyond the granite canyon parking area could be closed to motor vehicle traffic, which would further protect this sensitive area of the Park.

Topic Question 4:

What is being discussed is really the Teton Village-Moose road, not the Moose-Wilson Corridor. I would suggest that in the future the road be referred to as the Moose-Village road.

Topic Question 1:

Alternative D looks to be the only option that creates a separate bike and walking path .
It is not clear to me if 'D' would preserve existing winter car access to the Death Canyon intersection. I would like this to continue.

Topic Question 2:

A,B & C do not have separate dedicated bike path

Topic Question 3:

I would support paving the existing roadway and closing it to private motor vehicles from June 1st through Labor Day. Park shuttle busses would run back and forth along the corridor.
Bicycles and walkers would be permitted year round. Shuttle busses would have bike racks.
I would like winter car access to the Death Canyon intersection.

Topic Question 4:

I support a dedicated separate bike path OR keeping the existing roadway with private vehicles not allowed from June 1st through Labor Day. Shuttle busses with bike racks could take visitors back and forth between Moose and Teton Village. Bus fare could be say \$2 per ride.

Bicycles and walkers would be permitted on the roadway.

I am a dedicated winter user of the ski terrain above the White Grass Ranch. I would like winter car access

to the Death Canyon intersection to continue.

Comments: Thanks for reading.

Topic Question 1:

1.First, we agree that the Moose-Wilson Road is a unique feature in the park with outstanding opportunities for visitor enrichment and personal discovery. And it is widely recognized that the road itself is eligible for national historic register listing. With its narrow, winding and only partially paved surface it's an excellent example of an early American road once common throughout the country and now found in diminishing numbers mostly in rural areas and parks like Grand Tetons NP.

It also traverses important wildlife habitats, including wetlands, forest, meadow and sagebrush flats. As the preliminary alternatives noted, this combination allows visitors an opportunity to experience a more primitive America, with excellent opportunities to observe wildlife, enjoy natural quiet, and embark on a personal journey of discovery.

We have noted the results of the recently released Moose-Wilson Corridor Use Level...Technical Report, Summer/Fall 2013 and understand the need to undertake a major planning effort to address the increasing traffic levels experienced on the Moose-Wilson Road over the past decades. This issue of traffic level and congestion and best strategies to reduce this congestion is at the heart of the planning objective for this road.

The alternative ideas that we feel make a significant and long term positive contribution to the overall goals of the park in both preserving park resources and values and providing opportunities for primary visitor experiences includes the overall goal of reducing traffic numbers and congestion along the road, and improving the access and parking to the Death Canyon Trail Head. We liked the vision that describes the Moose-Wilson Road as a destination feature, and a place where visitors can experience wildlife in a primitive and inspiring location.

Use of a shuttle system to move visitors to the variety of turnouts and trailheads along the corridor is a

positive idea and deserves serious consideration. Shuttle systems are well known in a number of parks and have achieved goals in reducing congestion. A shuttle system could reduce traffic congestion, contribute to visitor's appreciation of the wildlife and scenic values of this corridor, and it could provide better opportunities and less conflict for bicycle users on the road. The idea of stopping through traffic at the LSR Preserve was also a positive idea that would achieve a reduction in congestion. Limiting traffic entry at certain high use periods was also appropriate and would be helpful, although we thought this idea might be more difficult to manage. For the bicycling community, the idea of two days a week for bikes and pedestrians only was also an interesting idea that we could support.

We felt the alternatives addressing parking congestion and access to Death Canyon was positive and would support an alternative that addressed this issue.

We would also support the alternative that eliminates plowing and grooming any length of the Moose-Wilson Road during the winter.

We also like the idea of including more welcoming wayside exhibit features at new and redesigned pull outs.

Topic Question 2:

2. Our strongest opposition in these preliminary alternatives is for the proposed separated and paved bicycle path. We would argue that there is no compelling reason to construct a new, separate, paved pathway along the roadway. The pathway is a facility promoted by a small, articulate, politically capable group that represents a very small user group. Use on the pathway along the Moose-Wilson Road would be primarily recreational. The Park Service organic act and supporting laws direct the service to protect the wildlife and the natural and cultural resources of the park. There is no mandate to provide recreational opportunities to a small user group. Nor do we believe a separate pathway would even marginally reduce traffic congestion on the main roadway. A separate bike path is simply the desire of a small, vocal user group wanting another recreational resource for their own enjoyment. It has little if any relation to park values, preservation of park wildlife, scenic, geologic or historic values. We also worry that bicyclists may have a greater impact and disturbance on wildlife than those viewing wildlife from a car window. There is also the concern of more frequent and vulnerable contacts with grizzly bears now using the corridor more frequently than in the past. And of course, a paved pathway contributes to the fragmentation of habitat. The overall impacts of a new separate paved bike path would not be small. The actual amount of habitat paved over would be considerable, equal as one writer stated, to a parking lot several times larger than the current Smiths Grocery Store parking lot. How could this impact be justified for this small user group. Effects from the bike path would extend outward from the path, and certainly all of the terrain between the pathway and the roadway would become essentially unusable for most of the park's large animals. And most important, this major impact to a fragile and sensitive wildlife habitat would be for the benefit of a very small user group that, according to the corridor use level technical report is only between 2-3% at most. All of these questions argue against building a new bike path along this road corridor. Building it would run counter to the stated goals of this EIS to maintain and restore the park's habitats and ecosystems along this corridor, allow natural process to continue and in general maintain the natural and historic setting of this area of the park.

We also do not think there is strong enough justification to realign the roadway to a new route east of the beaver ponds, and in the northern section to shorten the road and create a four way intersection at the Chapel of Transfiguration. The Moose-Wilson Road is eligible for the national register. We don't believe it is a viable proposition to make significant changes in the road's alignment given its historic character and its potential listing on the historic register. We would like to see hard scientific data supporting the value to wildlife habitat of a relocation of the road east of the beaver ponds. As for the northern realignment, this appears to be an idea more for operational convenience than any resource or visitor need. We don't think that justifies changing the road alignment, as attractive as it appears. Overall, we don't see how an

alternative that makes major alignment changes is compatible with the national register character of the road. As any of us who have worked in national parks understand, national park sites are not convenient places. They are messy, they have a long natural and human history, and to say we value those histories on the one hand and then propose to alter them to suit our administrative or operational needs is contradictory, and counter to the spirit and value of these places.

Topic Question 3:

3. The preliminary plans mention the possibility of a shuttle bus system. We think this is perhaps the easiest and cleanest solution to the traffic congestion issue. It would also be more conducive to bicycle use along the road, removing the need for a separate pathway. Bicyclists could be accommodated by striping the paved sections of the road, as is the case with the inner road along Jenny Lake. Another option would be to make the Moose-Wilson Road a one-way road, preferably from the north to the south. We could see compromising with access allowed from the south to the Granite Canyon Trailhead parking area, but in general, one-way traffic should go north to south. Even if it were to run south to north, it would still probably significantly reduce the traffic congestion on the road. A one-way road should curtail the use of the road as a transportation corridor for the purpose of commuting to the Jackson Hole Airport or local work sites. We know this would also create inconvenience for people wishing to use the Moose-Wilson for wildlife viewing, and access to Death Canyon, and LSR, but like the historic register comments above, parks were not designed for public convenience. A one-way road should greatly reduce traffic and congestion on the road which would go a great distance in achieving the park goals of resource protection and visitor enjoyment. The park, of course, already has an example of a successful one-way road along Jenny Lake. We recognize the Jenny Lake Road has alternatives easily reached, as opposed to a one way direction for the Moose-Wilson Road. But making the corridor one-way truly makes the Moose-Wilson Road a park destination, not both a destination and a transportation corridor.

Topic Question 4:

It appears to us the heart of the growing congestion arises from the major developments within Teton Village and along the Village Road. Teton County, by approving the large scale developments along the village road, has insured a significant growth in traffic accessing the park through the Moose-Wilson Road. This development has also probably made necessary a four lane highway between the village and the town of Wilson. This development threatens the very qualities the county and all of the other boosters in Jackson Hole claim they wish to preserve.

We also believe this development will increase pressure to build a more direct access from the Village to the Jackson Hole Airport. Realigning the Moose-Wilson Road could easily increase the pressure to build a bridge over the Snake River through the park.

And as these kinds of projects usually play out, the federal government will be asked to do the building. As tax payers, as well as former park rangers, we would resent federal tax dollars going to support a small, wealthy community along the Village Road that feel they need fast and convenient access to the airport at the expense of a world class national park. We believe it is important for the park's future to avoid building new infrastructure along the Moose-Wilson Road or making significant changes to the character of the historic road.

Overall, we are pleased that these preliminary alternatives do not include any widening or straightening of the road in order to accommodate a higher volume of traffic. We believe the fundamental issue is maintaining the Moose-Wilson Road as a primitive, historic road, with access to a special area of the park, with possibilities for inspiring views, wildlife encounters, and visitor experiences of personal discovery, as opposed to it being a transportation corridor for residents of Teton Village and the expanding developments along the Teton Village Road.

Finally, we appreciate the hard work that has gone into the scoping and development of the current

published alternatives. We look forward to the opportunity to comment on future alternatives as they are developed and published.

Comments: Park Rangers for Our Lands is a group of former National Park Service Rangers interested in land use issues that impact the resources and values of the units of our national park system. Most of us have enjoyed long careers with the National Park Service, and while we have left the service we have not lost our passion for America's most treasured landscapes.

Our organization has members residing in Utah, Colorado, New Mexico, Arizona, California and Washington D.C.

Topic Question 1:

Preservation of wildlife habitat. The expectations of park visitors, have been for too long ,been coupled with an ability to rely on they're own private automobiles for access through critical wildlife zones of habitation.

Topic Question 2:

Physics 101: Mass of vehicle, velocity of vehicle, volume of vehicles. A formula when compounded by third variable trumps any attempt to preserve a safe, hospitable environment for less formidable varieties of life.

Topic Question 3:

Perhaps a reconfigure of route from sawmill ponds to LSR, larger parking facilities at LSR and Granite, and simply closing off the remaining route to all motorized vehicles; creating a sanctuary for both the native four legged inhabitants and peaceful, restorative respite for the two legged invasive exotics.

Topic Question 4:

Perhaps we could accomodate bicycles along this route as well.

Topic Question 1:
Alternative D with a separate pathway.

Topic Question 2:
Closures

Topic Question 3:
A viable bus system with connections throughout GTNP. This alternative is more ecological, reduces traffic, insures safer viewing in moving vehicles by reducing drivers, reduces parking needs and complements a pathway for those less able to enjoy a full out of vehicle experience.

Topic Question 4:
A separated pathway is necessary for the safety of those choosing environmentally friendly alternative transportation. Alternative D includes this needed access and also reroutes the Moose-Wilson road away from important wetland and wildlife habitat.

Topic Question 1:

I think Alternative "D" best addresses the problems associated with the Moose-Wilson Road, such as congestion, wildlife habitat preservation, and safe walking/biking. A separate pathway is definitely needed. Grooming in Winter is also a good idea.

Topic Question 2:

Strategy A is unacceptable; B still has biking on the same road with the cars; C doesn't address the wildlife habitat preservation

Topic Question 3:

No, I think strategy D is a good overall plan

Topic Question 4:

I appreciate the opportunity to comment, as a part-time resident who uses the Moose-Wilson Road all the time in the summer, and the Granite Canyon trailhead in the winter.

Topic Question 4:

It would be OK with me to improve the north end of the road as proposed. Leave the unpaved part of the road unpaved, as is, regardless of the proposed bicycle path, which if it happens at all should not be paved either! There is no reason why bicycles cannot be used on dirt roads, we do not have to pave the universe for them. Country roads do not need to be straightened for bicycles, a couple of mirrors on trees, and the lowering of speed limits, would solve the problem. And if this path is ever approved it should not be cut so it is in the meadows! Ugly, harassing to animals, scary to horses and disruptive to migration paths.

There already is a perfect bicycle path to the park along the highway, complete with amenities such as a tunnel, crosswalks etc. How much of this do we "need?"

Comments: I attended the open meeting regarding the Moose Wilson Road management plan. In talking with Superintendent Vela I learned that the four alternative plans are basically suggestion groups. I take this to mean that an individual who wishes to comment on the plans does not have to support any particular plan and that I can support any of the suggestions that have been proposed in part or in full. This does not seem clear to the general public, and Pathways has been lobbying via email for plan "D." I think Pathways is way too powerful in this community, and their funding seems unlimited. Not fair to those of us who have other thoughts and interests. And not appropriate to "lobby" and pressure the public in this way!

I support ALL of plan "D" EXCEPT for the proposed bicycle path. And I have a few comments regarding proposed use of the road. I believe that if there is absolutely NO commercial traffic allowed on the road the danger to bicycles, animals and hikers would be greatly reduced. And the lobbying for a bicycle path

would be a moot point.

If the speed limit on the road was reduced to 15 mph and PATROLLED bicycle riders would be much safer. If we have to live with a bicycle path it should NOT be sited in the meadow but rather to the side of the road, perhaps along the old JY fence line. The road should be improved, the potholes filled, but the road should NOT be paved in the area that is currently unpaved, nor should any bicycle path that goes along the Moose Wilson Road be paved.

Any consideration of "tours" is a commercial use. If tours are allowed there should be restrictions on size of groups, to under 10, as horse travel is restricted on the trails, for obvious conservation oriented reasons. Any use of the road for a bicycle race should be prohibited.

Topic Question 1:
Option D.

I applaud the Park Service for opening up this project for discussion with the public.
Traffic congestion on the Moose-Wilson road continues to grow. The traffic jams of cars stopping in the road to view wildlife are dangerous for people, oncoming cars and the wildlife they are viewing. A separate bike path would allow people on foot and bike to travel with out danger of getting hit by vehicles. Provide winter access (northern winter parking)at Death Cyn Road junction.
Maintaining narrow winding slow speed character of the road. Realignment of road to protect wetlands habitat. Provide turnouts in strategic areas. No commercial traffic. Limiting road/vehicle based tours in a way that reduces traffic congestion; by numbers allowed and scheduling times when those with permits can use the corridor.

Topic Question 2:

- A- doing nothing to the Moose-Wilson corridor accomplishes nothing. Has no bike/pedestrian path
- B-Has no bike/pedestrian path
- C- Has no bike/pedestrian path

Topic Question 4:

Consideration of a shuttle bus system during peak traffic times such as June to Labor Day.

Topic Question 1:

The most important value to consider is preservation of the natural resources for future generations of Americans to enjoy & appreciate. The best strategy for achieving this preservation is to significantly reduce the use/traffic on the Moose Wilson corridor and insure that all users go there primarily to visit destinations within the corridor. Alternative B would accomplish this better than the other alternatives. However, I feel all the action alternatives are unduly complicated. I would propose a one-way road with some rather straightforward restrictions that should be applied to all users equally. I outline my thoughts on this in the comments section below.

Topic Question 2:

Most of the strategies in Alternatives C & D would, in my view, do an inadequate to poor job of achieving the purpose of preservation of the natural resources for future generations.

Topic Question 3:

One-way use of the road has not been presented & I think it would address most of the congestion/traffic/multi-use issues that need to be considered.

Topic Question 4:

See below.

Comments: The Moose-Wilson corridor represents an extraordinary concentration of rare natural resources. The corridor's geology, ecology, flora, fauna and its spectacular scenery and serenity are not equaled anywhere else in the park. I believe we have an obligation to protect and preserve these resources

for many future generations of Americans to come. These resources represent not only our heritage; they also provide an opportunity to teach all Americans about the natural world and its relevance to the mental, physical and spiritual health of humanity.

With these values as my basic premise I propose that making Moose-Wilson a One-Way corridor would be a solution that addresses most, if not all, of the issues that have been raised. To me it seems the best option for the following reasons:

1. It would immediately reduce all traffic (vehicular and other) by 50%. For sustainability reasons this reduction is essential.
2. It would emphasize the road's natural & scenic value & it would de-emphasize it as a traffic corridor - something that really no park road should be.
3. It would be safer for BOTH cars and bicycles as each could have their designated lane with no hazard from oncoming traffic. An appropriately slow speed limit would need to be strictly enforced.
4. It would require all travelers on the road to go past BOTH Teton Village and Jackson - thereby bringing business to both communities.
5. It would complete the "loop" that the Pathways advocates have so strenuously sought.
6. It would involve very minimal disruption/alteration to the existing road & hence less impact on wildlife, less cost, etc.

If a One-Way road is given serious consideration there remain questions about wetlands protection, trailhead access, occasional road closures, etc. But it seems to me that the One-Way road alternative is the simplest approach, it addresses most of the issues of overuse, and it is fair to all interest groups because all users would have equal, one way access.

Topic Question 1:

I have re-read the alternatives A-D and ask that you consider another option: a one-way road. Although I understand this would be very unpopular with many people - at least initially - it seems to me the best option for the following reasons:

1. It would immediately reduce vehicular traffic by 50% -for sustainability this reduction is essential.
2. It would emphasize the roads ecological & scenic value & de-emphasize it as a traffic corridor - which no park road should really be.
3. It would be safer for BOTH cars and bikes as each could have their designated lane with no hazard from oncoming traffic.
4. It would necessitate that all travelers go past BOTH Teton Village & Jackson - thereby bringing business to both communities.
5. It would involve very minimal disruption/alteration to the existing road & hence less impact on wildlife, less cost, etc.
6. It would complete the loop that the Pathways advocates have so strenuously sought.

Topic Question 1:

Alternative B, in my opinion as a 25-yr. resident of Moose and user of the Moose-Wilson road, is by far the best alternative, especially, because 1) it reconfigures the north section in a very effective way, 2)it does not redesign but merely improves (by paving) the south section, and 3) it also provides the most fair and efficient way to control volume-related congestion while still allowing visitors coming from the north or from the south access to the LSR.

Topic Question 2:

Alternative D - by putting in an entirely new bike path - does the most damage to the park. Paving over 8.5 acres of pristine park just to serve a special interest group is not in any way consistent with the goal statements and desired conditions put forth in your Management Plan.

Topic Question 4:

Thank you for doing such a thoroughly good job with your preliminary alternatives.

Topic Question 1:

First, my husband and I are 24 years fulltime residents of Teton County, who live a few miles south of Moose. We're frequent users of the Moose/Wilson road and the LSR Preserve. I fully support Strategy B, because the wildlife desperately needs the north portion of the road to be realigned away from the wetlands where moose and bears abound. It's vital that through traffic is restricted during peak hours: the additional parking at the LSR Preserve & gate is an excellent idea. This will prevent drivers from both directions from using Moose/Wilson as a speedway to get to either Teton Village or GTNP's Moose entrance. People can drive through town or Spring Gulch. Good idea to restrict commercial use of the road, including taxis and tour buses.

Topic Question 2:

(Caps intended!) UNDER NO CIRCUMSTANCES SHOULD WE DESTROY TREES AND HABITAT TO PAVE A PATHWAY FOR BICYCLISTS!! We should focus on the National Park's mission to preserve GTNP for future generations. How can an additional 8.6 acres of pavement benefit habitat and wildlife? Also, it's a myth that bicyclists do not disturb wildlife. We live on the elk and moose migration corridor and every spring and fall, we watch those critters scatter when bikes peddle by as well as cars.

Topic Question 3:

If we truly valued preserving habitat and protecting wildlife, we would stop all drive-through traffic on the road, including bicyclists. Drivers/bicyclists from Teton Village and from Moose would end their journeys at the 2 parking lots proposed for the LSR Preserve in Alternative B.

This will never happen given the economics and special-interest groups in JH.

Topic Question 4:

I would suggest an addition to Alternative B; that is, the Park considers closing the road to vehicles one-day-a-week so pedestrians and bicyclists can enjoy the road without cars. This is an option stated in Alternative C.

Comments: I'm very grateful to GTNP for its thorough analysis and explanation of each Alternative. Clearly, tremendous effort and thought went into this report. Thank you for letting us review them and give our input. It's too bad that our Congressional delegation chose to stridently comment on rumors. No wonder nothing is getting done in DC.

Topic Question 1:

Plan B would work if traffic were limited to one way south in the months of July and August. In-holders could be admitted by south gate personnel or by a key card-operated lift gate. Retractable tire busters would be required in the south gate southbound lane and fencing on either side of the gate might be required.

Topic Question 2:

Limiting vehicle numbers per unit time would be a difficult job at best. Closing the road to vehicular traffic on weekends (inferred) would be tough on out-of-state visitors.

Topic Question 4:

See below

Comments: We initially opposed plans for an entrance station, believing it would generate more traffic and were somewhat appeased by assurances that large vehicles would not be allowed on the road. Traffic has increased greatly. Large vehicles are not allowed to go north, but nothing keeps them from coming south.

We oppose a new, separate bicycle path and feel strongly that more roads or pathways should not be made through this wonderful wilderness. (One of the signatories to this letter would ban bicycles entirely on this road as many of these people appear to believe that they are immune to rules of the road and they endanger their lives and those of others.)

The idea that days or hours be set aside for north or southbound traffic is just not feasible for those of us who would like access to our homes during those "off" times. There is but one lane at the south entrance and if people are lined up for access, we and our guests would be held up, perhaps for hours. Maybe you should consider moving the park entrance gate to the Granite Canyon trailhead and let the traffic jam commence there. After all, Jack Neckels said you could move the gate if it didn't work out in its present position.

Topic Question 1:

I don't find any alternative that would limit two-way traffic for locals attractive so I would lean to the "do nothing" option as being preferable to any option that would restrict Teton County registered vehicle traffic.

Topic Question 4:

My priorities for the corridor are:

1. Pave the existing unpaved section.
2. Improve the road to Death Canyon trailhead, and keep the trailhead in more or less the same location. Moving it back one mile would significantly impact a great first hike for toddlers. Combining the road with White Grass road would make sense.
3. I am an avid road cyclist but see no need for a separate path - if the main road is paved. The road could be widened slightly, and the speed limit needs to be strictly enforced. Moving the road east the ponds on the north end seems OK as does moving the north junction to Chapel Road.

Topic Question 3:

in the northern section where the road is next to the wetlands, I would reroute the through road to the east so it goes through the sage in a straighter line, but I would keep the existing dirt road as a wildlife viewing road with a 15 mph speed limit that is enforced.

the park has only a few wildlife hot spots for people to have their dream come true and see moose and bear. this is the best one. it would be sacrificing one of the main purposes of the park - to let me have a thrilling experience of the wild - to the God of traffic. that would really be a tragedy.

if traffic calming requires destroying wild areas and destroying the parks single best wildlife viewing area, then the park should not take on the job of calming traffic.

Topic Question 4:

a bus shuttle to Jenny Lake.

Topic Question 4:
See Comments Below

Comments: Comments 9/1/14

I would like to see every one of the goals amended to state: Preserve, restore and improve the natural resources within the corridor. Maintaining resources at the current level is not aspirational enough - we can do better. We need to consider who/what benefits from any changes made to the corridor. We need to truly evaluate our human impacts within the corridor over the last 75 years. Instead of thinking of ways to accommodate the increasing number of humans and their desired uses within the corridor, we need to focus on limiting human impacts which means limiting the numbers of humans and permitted uses. Resident growth of the Jackson Hole area in the last 30 years and the impacts of tripling the full time resident population, has contributed more than anything to the increased human impacts on the corridor. Local business and commuter needs should be the lowest priority when considering the future of this

national treasure. The Blue Ridge Parkway in North Carolina is a prime example of limitations on commercial and commuting traffic access in an area that is far more populated than Jackson Hole. Please look at what is/is not working in our other national parks.

Any approved Management plan should include all of the next eight items:

1. Include education via signage at trailhead kiosks that restrict all human-caused noise/voice levels, including any emulating from electronic devices, which interfere with the natural soundscapes. My worst park experiences have been related to visitor noise impacts. I really do not know when I will want to float the Oxbow again after a large "multi-family group floatilla" screamed their way from the Dam to Pacific Creek. Somehow blaring music and constant cell phone ringing is not conducive to taking in the beauty and tranquility of GTNP.
2. Provide electronic traveler alert signs to inform visitors of traffic congestion, full parking lots and potential wait times and give possible opportunities to choose an alternative route before entering the corridor or one lane limited roadways. The Death Canyon access road is of most concern.
3. Close the entire corridor to vehicle and bicycle road and pathway access from 9pm - 6am (dusk to dawn). The NPS would have the authority and flexibility to restrict corridor access anytime to protect any park resource. Most of the wildlife moves around during these hours and are very difficult to see. Wildlife does not need to be stressed with nighttime encounters.
4. All new and improved roads will be constructed to emulate the slow speed, narrow winding character of the present Park roads. The entire Moose - Wilson main road will be a paved road. The negatives of dust, noise, swerving vehicles to avoid ruts, and closures due to maintenance on the gravel roads far outweighs any benefit from slowing down traffic. There are other ways to deal with speed control issues.
5. All commercial traffic, including taxis, will be prohibited within the corridor with the exception of: permitted licensed operators limited to a specific number of resourced - focused, road - based commercial trips that provide a broad array of interpretive topics.
6. All parking areas within the corridor with more than 20 spaces will have restrooms. The addition of restrooms in other areas of GTNP has been a very appreciated and necessary improvement! With the increase of use Moose-Wilson needs these!
7. Commercial horseback riding, all hiking, snowshoeing, and guided skiing in the Sawmill pond area will be phased out. The area around Sawmill Pond is such a sensitive wetlands, wildlife abounds there! Every time I pass by here and see someone venturing across/around "the pond" I look to see what might be "flushed out".
8. Winter maintenance and trail grooming will end between Sawmill Ponds Overlook and Granite Canyon trailhead. Being a backcountry skier, I feel that the same area can be accessed without the plowing and maintenance of this section. A new route to the Valley trail from the Sawmill Ponds area may need to be established.

I believe Alternative D is the plan that meets most of the goals outlined on page provided all of the 8 points above and the following are incorporated into D.

â€¢ Do not incorporate a new Multi-use pathway along the Main Moose Wilson road. The disturbance and increase in development takes away the flavor of the corridor. I do not like the area of the pathway leaving the roadside (basically around the hilly, curving section) and creating a new, impediment to migrating wildlife. Too much additional pavement will be added for how many users? I am an avid cyclist and have ridden Moose Wilson countless times over 40 years. In its present state, this is an advanced ride, not for an inexperienced, novice rider let alone a family with small children. To make this road more accessible to the relative small numbers of cyclists for more human development impacts is not justified. The true beauty of the corridor can truly only be experienced when you get out of car; or, off the bike and walk-hike!

â€¢ A maximum number of vehicles per day for the corridor need to be established. Upon a certain percentage of days per year (when the road is open) where the maximum numbers are exceeded, this will trigger a required transit plan implementation with the eventual elimination of all other vehicles. It is

important that this is part of this new plan. If not, then when the transit only solution is needed for managing the corridor, then the delays in implementing a "new plan" will again take many years. I am not fond of reservations for a daily activity verses a multi-day activity like a backpacking trip or Grand Canyon trip. This sounds too difficult to manage.

Thank you for considering my comments. I look forward to participating in the future solutions for the Moose-Wilson corridor.

Sincerely,
Gail Jensen

Topic Question 1:
ALTERNATIVE (A)

The NPS has made an issue of the wildlife movement in this area by closing some horse and hiking trails and other access to the area ALL season to protect the elk...and during the SPRING to protect the wolves and their pups and the grizzlies and their cubs. ANY ACCESS TO PEDESTRIAN AND BIKES IS CONTRADICTIONARY TO THIS CAUSE.

Since the area is restricted in width wildlife movement is concentrated unlike other pathways in the park...and two legged humans are on the lower end of the foodchain so a safety issue exists here...especially since cougars are now also present.

Topic Question 2:

(B), (C), and (D) for reasons stated in Question 1...PLUS the issue of thousands of trees to be removed.

Topic Question 3:

NO

Topic Question 4:

Alternative (A) is not a perfect solution because it does not solve the increasing traffic issue but the

condition of the road itself is a limiting factor. The notes in question (1) strongly outweigh the arguments for change.

Comments: We live just south of the Poker Flats toll station and have used the road for many years to access the park and the chapel. We have wonderful wildlife in our area including: elk, moose, wolves, coyotes, cougars, black bears and grizzly bears. The current road is not disruptive to their habitat a but a pathway in this sensitive area could be. We do not use the road for routine trips to the airport as the alternative is faster with less traffic and much smoother and less damaging to the car.

Let me explain my interest in the Moose Wilson corridor. I am not a resident of Wilson or Wyoming. I have been coming to this area for the past 4 summers from FL & hope to return next year as well, I rent a small condo in Wilson for 4 mos. I come here for the weather, wildlife, scenery & wildflowers. I have made NUMEROUS trips on MW road in the many mos I have been here. Most often I am looking for & at the wildlife, occasionally it is the shortest route if I am headed to Moran Junction & beyond. Even when it is not my main objective if I see wildlife I am always ready to stop & enjoy. I have reviewed the four plans & find that neither one has all the answers if taken as a whole.

What I would like to see is 1. Pave the unpaved section. After the rains of this summer that section is as bad as I have ever seen it & I probably won't drive on it again in the next month before I depart the area. The holes are so wide & deep you could lose a VW in some of them. I don't want to ruin my car. 2. I oppose the bike path, there are plenty of places for bikers, let's not destroy this sensitive area any more to cater to a few. 3. I do support rerouting the most northern section of the road along the berm to emerge north of the park entrance station in Moose. 4. Lower the speed limit. 5. Have a few more "pull outs" so we can pull over when viewing wildlife. 6. Might I also suggest, in the short term, that the vegetation along the edge of the roadway be cut back a couple feet to improve drivers' vision going around some of the sharper curves.

Any improvements should be in the best interest of the wildlife we are here to enjoy & admire without unduly limiting access to the people that come here for that purpose.

Cece English

Topic Question 1:
Alternative A.

Topic Question 2:

I have been coming to the R Lazy S with family and friends for over 10 years. Please prevent the bike path and allow commercial horseback riding from Saw Mill ponds. This amazing area has been open to horseback riding forever and should be Grandfathered in! This is so unique and amazing for us to be able to ride and enjoy the scenery and wild life in a safe environment. I come from the Aspen Colorado area and we feel so blessed to be able to enjoy riding through all the historical ranches while at the beautiful R Lazy S Ranch. I don't believe there is enough bikers to even warrant this change!

My wife and I have been coming out to Wyoming for the last 14 consecutive years. One of the reasons we come is to escape the activities of the large city. We believe that there are few enough untouched ares in the continental US and that great care should be taken to protect and preserve them for the benefit and enjoyment of future generations.

The construction of a bicycle trail through the Moose - Wilson Road will significantly impact the natural environment. It is not needed and should not be constructed.

The prohibition of reduction of horseback riding (whether private or commercial) through parts of Teton National Park will negatively impact the enjoyment of many; this is the primary purpose of our visits to this area.

Topic Question 1:

I prefer the strategies presented in Alternative B, with the exception of paving the presently unpaved portion of the road. I also think that the winter trailhead on the north end should be at the Death Canyon Trailhead junction. These strategies would best protect habitat and wildlife, and would enable visitors to continue to enjoy the corridor for its resource values and for recreation that is compatible with those values.

An unpaved section of road will continue to provide visitors with a slow, back country road experience and discourage use by those who just want a relatively quick drive from point A to point B.

A winter trailhead at the Death Canyon Trailhead junction as opposed to one at Sawmill Ponds or the Murie Ranch road junction will divert use away from the restored area, and will continue to provide access to high quality, one-day back country skiing and ski mountaineering opportunities.

Topic Question 2:

Creating a separate pathway would not achieve the goals and desired conditions for the fundamental resources and values identified within the corridor. On the contrary, it would degrade park values. Thousands of trees would be cut and the width of the corridor would be significantly increased, creating a greater impact on wildlife, and diminishing the visitor experience of travelling on a narrow, scenic road.

Topic Question 3:

Public enjoyment and appreciation of the historic White Grass Ranch should be encouraged. Motorized

access should be provided for disabled persons and for those participating in authorized functions. This might be accomplished by limited use of the White Grass Road. If that is not feasible or desirable, consideration should be given to improving the existing Death Canyon Trailhead road as far as the ranch and creating a new parking area there instead of at the White Grass Road junction, as in Alternative C.

Topic Question 4:

I prefer that the unpaved portion of the road remain unpaved. However, if it came down to a choice between paving that section or constructing a pathway, I would prefer the former.

Adaptive management of traffic and public use will be necessary in order to fine tune the strategies.

Correspondence Text

Topic Question 1:

Adding a pathway should be a high priority. Step out of the office in Moran on any summer day and see how many folks use the Jenny Lake pathway - it's simply amazing! The same is true for the pathway along WY 390 - - connecting these assets is a no-brainer!

Topic Question 2:

Reducing and limiting traffic flow is a very big mistake. The last thing we need is a reservation system to drive down the road. I can't imagine that ANY Teton County WY residents are in favor of this decision.

It's bad enough that reserving camp sites is so difficult during peak summer months. It seems strange that one would need to also reserve the right to drive down the road. This change will make me use the park less often.

Gates and closures are bad solutions to traffic management. Instead, inspire and enable more 10-30 percent of visitors to use bikes, feet or transit.

Topic Question 3:

Why does the plan not include public transit?

Topic Question 4:

Gates and closures (Alternatives B and C) don't work. Gates and closures shift or increase the number of vehicle trips area wide. For visitors and locals alike under Alternatives B or C to get from the Westbank to Moose and back will be a 50-mile round-trip instead of 7 direct miles that could be experienced on foot,

bike, transit or vehicle. Instead, we can help the National Park Service by innovating real solutions that are good for the environment - like multi-modal transportation and smart transit. Think about all of the visitors in Teton Village that will have to drive around.

The negative impact of shifted or increased traffic is bad for the environment and bad for wildlife that lives outside the corridor, especially along area roads like 390, 22 and 89, which will inevitably see more traffic and potential wildlife collisions from cars re-routing from road closures to get to the Park's entrance in Moose. The Moose-Wilson Road has no wildlife fatalities because it is wonderfully slow, narrow and rural - and should be kept that way with fewer cars, smart visitor transit and a pathway.

Correspondence Text

Topic Question 1:

D. Bike paths provide a safer alternative means of green (human-powered) travel. Despite impacts on wildlife, there are many miles away from roads for wildlife to roam.
Death Canyon Parking - current or White Grass location. Maintain closer access to mountain trails. It's already a long way up into Death Canyon, and there's already a road in place here. Let's keep it so that more people can enjoy the park and reach more of its special places.

Topic Question 2:

Bad Idea traffic management - two days off or hourly pulses,...very hokey. Bound to aggravate visitors and locals alike. If keeping part of the road dirt is what it takes to limit traffic, fine. But don't implement something that park employees are going to loathe explaining. Reservations?...will give the public a bad vibe.

Topic Question 3:

Include an access trail from White Grass Parking area to Valley Trail going North.

Topic Question 4:

Ensure that winter grooming is available along the Moose Wilson Road.
Groomed XC skiing would allow more people to appreciate and use the park, and grow the number of people who can appreciate and protect Park values.

Comments: I favor:

- Winter Grooming
- Bike Path
- Death Canyon Trailhead in/near current location
- Convenient parking during spring for ski access around/beyond Phelps Lake. It's somewhat ridiculous and contrived that when LSR is shut down, and no one is around, that you can't park roadside and head up to Open Canyon without having to park a couple of extra hundred yards away.
- Create more pullouts for slow traffic

Our ranch and horseback riding experiences for the past 14 years at the R Lazy S Ranch have been one of the highlights of our year. We appreciate and treasure our rides through some of the most beautiful countryside in Grand Teton National Park. We have ridden the Moose-Wilson corridor every year, and it includes most of the riding trails we love.

We respectfully suggest you prevent bicycle paths in that area since it would require the destruction of thousands of trees plus potentially create conflicts between wildlife and horseback riders. There seems to be a very small percentage of bikers compared with the horseback riders from all the neighboring ranches.

We would also like to see the continuation of commercial horseback riding from Sawmill Ponds. The rides through the Whitegrass Ranch area are very special to many of us.

Thank you for your consideration,

Cherie and Larry Day
Alamo, California

Topic Question 1:
Alternative D. It's the best for the environment. This option allows for a separate path for people enjoying the space outside the car. It also is best for keeping the road slow and narrow and not disturbing wildlife

Question 1: Which strategies in the preliminary alternatives do you think should be carried forward to best achieve the purpose and address the need for the plan? Why do you think they should be carried forward?

Limit motorized access. Leave things the way they are and allow only bikes, foot traffic.

Question 2: Which strategies in the preliminary alternatives do you think would not achieve the purpose and address the need for the plan? Why do you think they should not be carried forward?

The NPS has no obligation to appease the Teton Village, private enterprise boosters! Your mission is to preserve and protect wildlife. You are under No obligation to make everything more accessible to the average visitor. either close the road to motor vehicles, or at most make it one-way.

Question 3: Are there other strategies that should be included in the preliminary alternatives that are not already presented? If so, which strategies and why should they be considered?

I'm disappointed that closing the road to motor vehicles wasn't proposed as an alternative. It was mentioned by many folks in their initial written comments. Why was it not presented?

Question 4: What other comments or suggestions do you have?

We need to be able to project into the future. The way Americans live w/ vehicular access to virtually everything is not going to last. If this corridor existed in Europe, there would be much more radical alternatives presented b/c that culture understands and appreciates just how RARE this area is. Someday America will be forced to join the rest of the world. The NPS ought to have enough forward thinkers to help speed this process! Park values and visitor convenience are directly at odds. What would the Muries do?

Question #1. Which strategies in the preliminary alternatives do you think should be carried forward to best achieve the purpose and address the need for the plan? Why do you think they should be carried forward?

Alternative A - no action
But add lots of speed bumps to cut down on unnecessary traffic.

Question # 2. Which strategies in the preliminary alternatives do you think would not achieve the purpose and address the need for the plan? Why do you think they should not be carried forward?

Alt. D should be taken off the table - too much impact.

Question # 3. Are there other strategies that should be included in the preliminary alternatives that are not already presented? If so, which strategies and why should they be considered?
(other side)

Question # 4. What other comments or suggestions do you have?

Question #1. Which strategies in the preliminary alternatives do you think should be carried forward to best achieve the purpose and address the need for the plan? Why do you think they should be carried forward?

*PLAN A. no action. seems to achieve the goals set forth by the Park of Plan B for traffic management

- The only deviation might be signage at N & S entrances regarding enforced speed limits, traffic congestion or wildlife on the road. Driver could decide whether or not to proceed.
- This gem of a road is about the only remaining relic of the past. Once changed, no turning back.

Question # 2. Which strategies in the preliminary alternatives do you think would not achieve the purpose and address the need for the plan? Why do you think they should not be carried forward?

PLAN D - - A disaster NO!

A bike pathway is not needed. From personal experience, bikers have not shown to be good stewards of others rights. A sense of entitlement to go wherever. a myriad of options for biking adventure available now.

Commercial access - - Alltrans, Photo groups, taxis. Again, from personal experience traveling the road, I have been passed by speeding vehicles on a mission, specifically All Trans.

Question # 3. Are there other strategies that should be included in the preliminary alternatives that are not already presented? If so, which strategies and why should they be considered?

Question # 4. What other comments or suggestions do you have?

In regard to groomed x-c trails. Part of the adventure is setting ones own path. No grooming needed here!

Question #1. Which strategies in the preliminary alternatives do you think should be carried forward to best achieve the purpose and address the need for the plan? Why do you think they should be carried forward?

D is possible & I'm happy w/ A.

Question # 2. Which strategies in the preliminary alternatives do you think would not achieve the purpose and address the need for the plan? Why do you think they should not be carried forward?

C. I really dislike C the most. If tourists are here, over the two days road closed to thru traffic, they miss out.

B. Don't like B because it is a beautiful corridor & couldn't see whole thing - if gate is closed too much a real problem - esp. if don't know when.

Question # 3. Are there other strategies that should be included in the preliminary alternatives that are not already presented? If so, which strategies and why should they be considered?

if airport traffic is a problem in the AM, don't open road until 7 or 7:30 beyond LRP.

Question # 4. What other comments or suggestions do you have?

Correspondence Text

Question #1. Which strategies in the preliminary alternatives do you think should be carried forward to best achieve the purpose and address the need for the plan? Why do you think they should be carried forward?

Carry forward: A - (no action always important)

B - limiting through traffic is vital to addressing the constantly growing traffic in the corridor.

Question # 2. Which strategies in the preliminary alternatives do you think would not achieve the purpose and address the need for the plan? Why do you think they should not be carried forward?

(Do not carry forward)

Option D is the worst in terms of wildlife & habitat impact & should NOT be carried forward. Bike use is a teeny, tiny portion of use & creation of separate pathways would bring a new use & users into conflict w/ moose, deer, grizzlies, etc.

Question # 3. Are there other strategies that should be included in the preliminary alternatives that are not already presented? If so, which strategies and why should they be considered?

- Through traffic 1-way only?

- Cutting of traffic completely @ LSR, with 2-way from each side at the gate. (No through traffic except for emergency & park service). This would limit short cuts to airport, speeding & reduce overall traffic impact more permanently.

Question # 4. What other comments or suggestions do you have?

The goals should be to protect wildlife, habitat & reduce traffic & conflict with wildlife. This is a very special portion of the park that should be seen as a national treasure. - - Not a backyard playground for special interests & commercial development @ Teton Village.

Thank you for allowing an opportunity to shape alternatives earlier in the EIS process than usual.

Question #1. Which strategies in the preliminary alternatives do you think should be carried forward to best achieve the purpose and address the need for the plan? Why do you think they should be carried forward?

Reduce traffic speed AND enforce it. Allow NO through traffic. Using the Moose-Wilson corridor as a commuter route is in direct conflict with the mission of the National Park. Use design elements to discourage speeding & off road driving & parking. Speed bumps might be really good device to discourage speeding.

Question # 2. Which strategies in the preliminary alternatives do you think would not achieve the purpose and address the need for the plan? Why do you think they should not be carried forward?

I think a separate bike path would be too disruptive, contribute to habitat fragmentation, increase amount of pavement. I question the need for additional bike path opportunity in the Valley.
I'm concerned that all the proposed construction would in itself be harmful to habitat preservation & wildlife capability to thrive.

Question # 3. Are there other strategies that should be included in the preliminary alternatives that are not already presented? If so, which strategies and why should they be considered?

Consider one way traffic to LSR preserve from both North and South.

Question # 4. What other comments or suggestions do you have?

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

This is a park - the mission is to preserve wildlife habitat & make possible for visitors to observe & experience intimate contact with the natural world and the creatures that live in it.

If we mess with it sufficiently, it can have unintended consequences that can discourage the possibilities for healthy wildlife eco-system profoundly.

A visitor experience in the park w/o a healthy & varied wildlife population is not what the Park is for.

Topic Question 2:

I almost never complete such public comments, but am concerned here. My family and I have spent much time in the area and consider the area under consideration to be a national treasure. Two things:

1. Please don't put a bike path on the Moose-Wilson road. So few park users ride bikes on a proportion basis. We are concerned people who explore the park on horseback. I say this as a bike rider myself - - it destroys so much pristine wooded area.
2. Please don't close commercial horseback riding on the Sawmill Pond Trails! This is the sole means by which my family has seen the area. Seeing the park by horseback is truly unique.

Topic Question 4:

See above! But especially - - please don't close the Sawmill Pond Trails to (commercial) horseback riding.

Topic Question 2:

It came to my attention that you were considering adding a bike trail and limiting commercial horseback riding in parts of the moose-wilson corridor. I was disappointed about the bike riding, but shocked about the horseback riding. I can imagine, I suppose, that it would be enticing to offer a bike path along the road. It's certainly scenic and beautiful. However, with only 3% o park users potentially using the trail I'm not sure it justifies the loss of more that 3000 trees. Also, to be honest, people in that area are dumb enough in their cars, getting out and stopping traffic to take pics of moose and bears. Do we really want to increase he potential for wildlife/human contact and idiocy? Lastly, what about the horses on and around the trail. Horses hate bikes and to me, horses are much more important in this area. There's plenty of bike trails in Jackson, let's leave this are to the horses. It's historic, it's the way it's always been, and it seems like it's just very "Jackson Hole" to priorities horses over bikes. Let the bikers go a different way.

Next, you're considering eliminating horseback riding along the Sawmill Pond Trails. Really!? This is one of the most unique areas of the park and has been used historically for over 90 years. I remember as a kid one of my most fond memories was riding through Whitegrass Ranch and now this will be inaccessible. I just don't get it. It's been fine for years, why change it now. Dude ranching and horseback riding are part of Jacksons history and culture and this moose-wilson road area with it's beautiful trails and trees and wildlife is it's Gem. Eliminating commercial horseback riding anywhere in this area will prevent scores of youngsters and curious wildlife lovers from experiencing the grandeur of the park in the most unique of ways on horseback.

Topic Question 2:

A bicycle path on the Moose Wilson road is unwise. First of all it would destroy thousands of trees in a pristine wooded area. Second, it increases the potential for wildlife and horseback conflicts. I would not like to meet a moose just after it has been spooked by a bicycle. Third, only 3% of park users are on the current bike path. The cost benefit ratio of the bike path seems heavily weighted to cost. In a time of budget shortage for the NPS, I think the funds could be put to better use elsewhere.

Closing commercial horseback riding on the Sawmill Pond Trails is also unwise.

It is a unique area of the park which allows horseback riding without causing conflicts with other park goals. Commercial horseback riding has been going on in this area of the park for over ninety years with minimal conflicts and minimal requirement of park management. It is unclear why the park is considering eliminating commercial horseback riding on these trails. The trails in this area are unique and safe. The trails are used to access the Whitegrass Ranch, Sky Ranch and Trail Ranch, all historical dude ranches in the park. Trail rides to these old ranches help tell the story of the Teton Mountains, Teton National Park and the history of humans in the area and their relationship to wildlife.

Topic Question 4:

Trail riding in Teton National Park is a great pleasure and it is why I come back to the area year, after year, after year. I have seen wildlife on horseback that I probably would not have seen on foot and certainly not on a bike. As a life long Easterner, I have been able to see animals that I would not have had the chance to see outside of a zoo. Bison, moose, elk, bear, wolves, owls, osprey and eagles are just some of the wildlife I have seen while in the park on horseback. In addition there is a serenity that comes with riding through the woods on horseback, the way that generations have done before you. No phones, no computers, no

TV, no machines, just you and the Great Outdoors. The building of a bike path and closing trails to horses would limit or alter this experience for generations to come, and that is a shame.

Topic Question 1:

I support Alternative D as the preferred option. It will encourage Park visitors to get out of their cars and experience GTNP in an intimate way. It will also provide safe access to families on bikes, disabled people in wheelchairs and other visitors, while potentially reducing vehicular traffic on the Moose-Wilson Road.

Topic Question 2:

While Alternative D is an inclusive option, Alternatives B and C are exclusive. Gates, closures and diverting traffic to other outlets in the valley are all impractical, exclusive solutions. Furthermore, wildlife don't exist in GTNP, they live throughout the valley; shifting traffic burdens to other thoroughfares will only further endanger wildlife.

Topic Question 3:

Any proposed alternative should include a pathway.

Topic Question 4:

As a former valley resident, I'll defer to a visitor's perspective on this issue. After all, this is a national resource, not just the backyard of passionate valley residents.

Building the Moose-Wilson pathway will enable park visitors - hikers, bikers, families with children and the disabled - to get out of their cars and enjoy the beauty of the park separated from one of the most heavily travelled motor vehicle routes in Grand Teton. This vital transportation alternative will not only achieve the level of safety that cyclists and pedestrians deserve. It will also enhance visitors' experiences and appreciation of the park, and surely reduce motor vehicle impact on the park

environment. - - David Axelrad, in a letter to the JH News & Guide dated January 15, 2014

Topic Question 1:

Option D- -best balanced approach -keeps cyclists off the road and gives visitors another way to see this area.

Topic Question 2:

excessive reliance on road closure to manage traffic. Give people a choice if it is too busy- -they can walk or ride the path.

Topic Question 3:

Don't think the path has to be within 50 feet of the road.

Topic Question 4:

Would have to post warning signs about wildlife on the path as you do on the hiking trails. Carry bear spray- -etc...

Topic Question 2:

*No bicycle pathway on the Moose-Wilson Road

It would destroy over 3000 trees in a very pristine historical wooded area.

Increases the potential for wildlife and horseback rider conflicts.

With only 3% of park users currently using the bicycle paths, we just don't see the benefit of such a large and disturbing project.

*Do not close commercial horseback riding on the Sawmill Pond Trails

It is one of the most unique areas of the park that allows this activity without causing any conflicts with other parks goals. It has also been an activity that has been historically used in this area for over 90 years with minimal conflicts and requiring minimal park management.

Why is the park attempting to eliminate historical horseback trails that have been previously approved for commercial use?

This area offers access to unique and safe horseback riding trails unavailable in other parts of the park. These trails are used to access the historical Whitegrass Ranch area, along with Sky Ranch and Trail Ranch.

By taking interpretive rides through these historical ranches, we help reach a park's goal to protect and maintain cultural resources as important links to the human history of the Moose-Wilson corridor, including historical and archeological sites, cultural landscapes, and ethnographic resources.

Comments: My husband and I and our family have been returning to Jackson Hole yearly since 1988, sometimes twice a year, from Pennsylvania. Teton Park is a gem and we have noticed increased traffic over the last few decades as people discover what we love.

We have been guests at the R Lazy S those years and have enjoyed many rides throughout the valley. The R Lazy S has been in existence for many decades and has been a supporter of the Park and a good neighbor...

We are greatly distressed to learn that the Park Service has decided in 2 of their 4 proposed plans to consider banning commercial use horseback riding in the Sawmill Pond area which has become a personal favorite of ours. There is nothing more peaceful than riding through the tall stands of trees just south of WhiteGrass to the MoosePond overlook. We do not run into hikers, bikers, just an occasional moose or elk...I see absolutely no benefit to denying horseback riders access to this area. Conversely, it would greatly diminish the experience. We love riding across Trail Ranch, White Grass, Windy Point. It's the one ride we MUST do at the ranch...I can tell you in the years of riding there, we have never run into other riders. It's not heavily used, which makes it heavenly.

Over the years, as Teton Park has become more popular, some areas where we have ridden, are no longer horse friendly...Years ago we took a four lakes ride, starting at Leigh, Jenny, then to Taggert, Bradley...But running into hikers on those trails altered our rides...It was no longer feasible to do them.

Many of the travelers to Teton Park are from the East Coast, where we don't have open spaces and big sky and access to this terrain...Our time out West is something we cherish. It renews our spirit so that we can return to the grind. I understand the need for planning, but banning horseback riding in that area is a BAD idea...Let it be...

As for Bikers along the Moose Wilson Rd...Again, not a good idea..There are adequate numbers of bike trails in the valley that this one corridor isn't needed...There are hikers that may be alarmed by bikers, and the speed and the surprise element of bikers is enough to alarm elk, deer or other animals, putting them into danger's way along the road. The speed of the bikers would increase anxiety in the wildlife population, which might alter their behavior, reproduction... So, no bikes, please....

I sincerely hope you read and listen to what I, and I hope others, are telling you, and that you don't do something that is irreversible that will negatively impact the experience that we have enjoyed the last almost 3 decades...If it isn't broken...don't try to fix it...

Topic Question 1:

Alternative D because it reduces overall traffic in a way that is essential to preserving the Moose-Wilson corridor's unique values, benefits area wildlife with fewer cars, and encourages diverse access for safely enjoying the corridor outside of the car.

Gates and closures are bad solutions to traffic management. Instead, inspire and enable a shift of 10-30 percent of visitors to use bikes, walking or transit.

Alternative D enhances the visitor experience in an environmentally responsible way - providing public access with reduced traffic impacts to wildlife, smart public transit and greater safety for the non-vehicular public on a needed pathway.

Topic Question 2:

Gates and closures shift or increase the number of motor vehicle trips area wide. For visitors and locals alike under Alternatives B or C to get from the Westbank to Moose and back will be a 50-mile round-trip instead of 7 direct miles that could be experienced on foot, bike, transit or vehicle. Instead, we can help the National Park Service by innovating real solutions that a good for the environment - like multi-modal transportation and smart transit.

The negative impact of shifted or increased traffic is bad for the environment and bad for wildlifethat lives outside the corridor, especially along area highways, including the main National Park route, which will

inevitably see more traffic and wildlife collisions from cars re-routing from road closures to get to the Park's entrance in Moose. The Moose-Wilson Road has no wildlife fatalities because it is wonderfully slow, narrow and rural - and should be kept that way with fewer cars, smart visitor transit and a pathway.

Topic Question 4:

A separate Moose-Wilson pathway is a safety need, not a want, and it is imperative for the Preferred Alternative. It can be placed in an environmentally sensitive way to minimize impacts and close a dangerous gap, which will be even more apparent when the pathway from Jackson to Teton Village is complete by 2015.

Please add public transit and commit the National Park Service to a community partnership as a way to reduce traffic congestion even more in the future.

No action (Alternative A) is not the right solution because it does nothing to help wildlife by reducing traffic levels or manage traffic flow with adaptive strategies.

Decreasing the increased traffic volumes for the long term is the Park's objective and that is possible only with Alternative D, which uses thoughtful, safer ways to get people out of vehicles and into the outdoors.

Topic Question 1:

I think that bicycle paths in the Sawmill area are a huge mistake. They are a distraction to drivers, but , more importantly to take away trees and the beauty of seeing horses on the trail, will change the the landscape. Part of the beauty of that area is that it hasn't been changed or altered too much

Topic Question 2:

No bicylcle paths..same as the above

Comments: My group that travels to a dude ranch in that area every July, felt like we found the perfect spot. We had been to many other ranches over the years. When we found the one in your area, we felt like we had found a second home. We come to have beautiful rides and enjoy the beauty of the Teton area. Please don't ruin it by giving a small percentage of people bike paths. I work at a recovery room in Orange county. I cannot tell you how many bike riders are admitted to trauma every week. They swerve out of their lanes and get seriously injured. They also distract drivers. Please..Keep the horse trails and do not cater to such a small group..thank you. Carol Meade

Topic Question 1:

D or B appear to be a solution that works. I am intrigued that a bike option is being proposed in light of the wildlife intrusion/management. I would think that D without a bike option would accomplish the goals. (I am a bike rider and while a connection thru M-W Road would be nice it is somewhat absurd to have bicyclists intermingling with 'dangerous' wildlife on a regular basis. We can't always get what we want....)

Topic Question 2:

A. because you (NPS) say you must do "something" to alleviate the issues at hand (wildlife, traffic, etc.) and C because it is too exclusionary.

Topic Question 3:

As stated, I like D but would not include a bicycle option.

Topic Question 1:
I prefer alternative D as the best balance of the stated project goals.

Topic Question 2:
Alternative A - the do nothing alternative does not address any of the current issues and at best defers the problems even though the pressures, particularly related to traffic volume continue to increase.

Alternative B - I fundamentally disagree with improving road conditions for the purpose of limiting motor vehicle impact. Motor vehicles inevitably travel at the speed the road supports and paving the Southern stretches of the Moose-Wilson corridor will only encourage more vehicle use and faster vehicle speeds through this sensitive corridor. I also disagree with a time varying gating policy as this creates a random road access policy. It is one thing to limit speeds such that the road retains its rustic nature and facilitates park and wildlife viewing but using time varying gating which to any individual user is random will force visitors and locals alike to turn around at either the Northern or Southern gates at seemingly random times only to journey all the way around and through Jackson. From a big picture environmental protection point of view this just increases fossil fuel use, carbon footprint and vehicle traffic on both the roads leading to the randomly closed corridor and county roads as motorists must backtrack after learning of closures.

Alternative C has similar concerns to B

Topic Question 3:

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

If a suitable and safe two way corridor plan cannot be created I would support one way traffic. Ideally traveling from North to South to discourage the use of the Moose-Wilson road as a short cut to the airport for visitors running late would retain vehicle access and reduce issues with heavy traffic from both directions simultaneously. A North to South one way orientation would preserve the character of the road as a park facility and allow closure of one entrance station as another is planned to open reducing maintenance and manpower costs.

I support a multi-use human powered path through the corridor though personally I believe the current road is safe for cyclists but I am more traffic tolerant (and dirt road tolerant) than many riders. I would strongly support use of the existing Snake River dike and portions of the circumference road within the LSR center as a multi-use human powered travel path as the dike is an entirely man-made structure built and maintained via taxpayer dollars. In terms of environmental impact a multi-use path on such an artificial structure makes more sense to me than felling trees to widen a road or build a path.

I would support a single Northern entrance station rather than two separate stations. Ideally such a single park entrance station would be located East of the Snake River bridge such that visitors with lengthy questions can simply be pointed towards the new visitor center as opposed to the current configuration where visitors with questions have already passed the visitors center. Building, maintaining, and staffing dual entrance stations in Moose is not very efficient.

Topic Question 4:

- Whether shared with motor vehicles or separated I would strongly support maintaining human powered access to the Moose-Wilson road for bicycles and other non-motorized users. The park took a great leap of faith with the current path to Jenny Lake and the current use of that path is a great statement about how visitors will get out of their cars and experience the park under their own power when given a safe option to do so. Grand Teton could take a lead in this area and finally begin moving the national parks away from the motor vehicle dominant policies of past decades. The Tetons have always been a park where active involvement in the landscape whether via mountaineering, river rafting, horseback riding or hiking are key. Please continue this positive trend by creating solutions to the Moose-Wilson road that involve human powered travel.

Topic Question 1:

Alternative B - - with some tweaks: The "Visitation Experience" goal is "to provide meaningful opportunities to experience and enjoy the rustic charm... of the NW corridor."

That includes experience on horseback. However, the disingenuous premise in all four NPS alternatives is that all horseback riding in Poker Flats is commercial. In fact, non-commercial, recreational riding actually exceeds the commercial rides. We appreciate that the Park will grade the Poker Flats parking area, but it should accommodate more than six trailers. There should also be trailer parking at White Grass.

Topic Question 2:

Leaving the southernmost 1.8 miles unpaved would be a big mistake. It costs the Park more to grade the potholes three or four times every season, especially after big rains, than to pave it once and be done with it. The apparent main reason for NOT paving it is to minimize traffic. That obviously is a faulty premise since the data indicate a substantial increase in traffic over the last decade. Part of the traffic problem will be obviated by realignment of the north end of the road to intersect with the Chapel Rd. Southbound traffic will have to have Park passes. The problem with Alternative C is that the Plan leaves unanswered the question of which two days? Both bikers and horseback riders will want Saturday; so Plan C, while reducing traffic, will create a tension between bikers and horsemen between whom we have spent years building an alliance in the Bridger-Teton Forest.

Plan A leaves in place all of the current problems (axle-busting, unpaved road in the southernmost 1.8 miles; free access for non-pass holders going south; minimal and unmaintained parking for horsemen at Poker Flats and at White Grass.

Topic Question 4:

To reiterate part of the answer to Question No. 1:

- ~ Make the Poker Flats large enough to accommodate at least 10 horse trailers;
- ~ Don't keep reducing the number of horse trails in the M-W area (premised, falsely on the notion that all of the riding is commercial);
- ~ Create horse trailer parking at White Grass;
- ~ PLEASE pave the southernmost 1.8 miles of the M-W road.
- ~ Realignment at the north end is an excellent strategy.

Comments: Thank you, NPS planners, for composing four lucid plans and for expressing them both in writing and on readable maps. They are all helpful and intelligent, and they model imaginative thinking in attempting to carry out the very reasonable, articulated goals.

I know that my colleagues in the Back Country Horsemen are as grateful as I am for the opportunity to comment.

We are aware that GTNP is a National Park; yet we who live in Teton County are also citizens of the nation and are frequent and avid users of the Park. Other than the week-long guests of the R Lazy S Ranch (horseback riders) and the many out-of-state motorists who use the M-W Road as a shortcut from Moose to the Village during their brief stays, we who live in the Valley, and our out-of-town guests, are the ones who do most of the riding, hiking, biking, skiing, snowshoeing, and observing wildlife in the M-W area of GTNP.

Topic Question 1:

I think that keeping the Parks as natural and limiting any kind of "mechanical intrusions is important.

Topic Question 2:

experiences horseback riding in the park:

" No bicycle pathway on the Moose-Wilson Road

o It would destroy over 3000 trees in a very pristine historical wooded area.

o Increases the potential for wildlife and horseback rider conflicts.

o With only 3% opark users currently using the bicycle paths, we just dont see the benefit of such a large and disturbing project.

" Do not close commercial horseback riding on the Sawmill Pond Trails

o It is one of the most unique areas of the park that allows this activity without causing any conflicts with other parks goals. It has also been an activity that has been historically used in this area for over 90 years with minimal conflicts and requiring minimal park management.

o Why is the park attempting to eliminate historical horseback trails that have been previously approved for commercial use?

o This area offers access to unique and safe horseback riding trails unavailable in other parts of the park.

o These trails are used to access the historical Whitegrass Ranch area, along with Sky Ranch and Trail Ranch.

By taking interpretive rides through these historical ranches, we help reach a parks goal to Protect and maintain cultural resources as important links to the human history of the Moose- Wilson corridor, including historical and archeological sites, cultural landscapes, and ethnographic resources.

Topic Question 4:

Keep the parks for walking, and riding, and non motor vehicles in the trails areas. Nature is for those willing to respect it, not the motor viewer.

Comments: At the age of 69, I discovered the beauty of the National Parks. Listening to the sounds of nature is hard to find in the city. If Bikers either riding or motoring are around, they are way to competitive and not interested in the beauty of silence and the sounds of the park.

Please allow us to not destroy that last bastion of peace and tranquility that we have. Once it is gone, it is irretrievable.

Correspondence Text

Topic Question 1:

Alternative A is the only strategy that should be carried forward to meet the needs of all visitors to the area. It allows access to the corridor at all times during the specified months.

Topic Question 2:

Alternatives B,C,D which involve restricting traffic in some manner are unacceptable. Visitors to the park who would not know in advance about possible closure of the road would be turned away and would miss an important area of the park. They would probably be upset about not being able to access the area without a reservation or only on certain days when they might not be in the area. We use the Moose-Wilson corridor almost daily during our annual stay in the Jackson area. Driving from the Aspens or Teton Village, it is the most convenient way to access the park. Trying to plan a return from a hike to only go through the corridor at a specified time, or to have to make a reservation would be ridiculously unwieldy and inconvenient. Further, restricting motor vehicle traffic would force more vehicles to drive through town, which is already too crowded. Also, there is absolutely no need to have pedestrian access. For those who want to hike, there are many other wonderful trails. There is no purpose in walking the length of the corridor and back again. Plus you would need even more parking at each entrance.

Topic Question 3:

I would favor Alternative A, but add some improvement and possible widening of the road. If you allow bicycles, they should be on a separate multi-use pathway, not sharing a narrow winding road with motor vehicles, which creates a safety hazard for everyone. Pull-outs for wildlife viewing are nice, but it may be difficult to identify exactly where to locate them. This is not as critical as having full time access to the corridor with motor vehicles. Toilet facilities at Granite Canyon would be nice also with a larger parking

lot. But again, I would sacrifice that to have unrestricted access to the full length of the road at all times.

Topic Question 4:

I know you are looking at many factors, but please consider those residents and visitors who live or stay near the Granite Canyon entrance who would be terribly inconvenienced at having to drive all the way around through town to access the park, or to have to make a reservation. I am totally opposed to a reservation system which would become burdensome for park staff (and would probably require hiring more staff or outsourcing). Reservation systems can become inaccessible or not function properly, and only cause a great deal of frustration for those trying to use them. (Just ask anyone who has ever tried to make a reservation to stay at Phantom Ranch in the Grand Canyon!) And please consider the short term visitors to the park who may not have advance information about road closures or the need for a reservation. You would have many upset and angry people, who should be out enjoying the LSR preserve or trying to spot wildlife instead of getting upset with the NPS because they can't access the Moose-Wilson Corridor.

Topic Question 1:

It seems best to go with Alternative A to avoid the problems presented by each of the other alternatives.

Topic Question 2:

Alternatives B,C,D are encumbered by the restrictions on traffic at certain times fo the day; not knowing what those times are in advance. If you hike in the park in the morning and find you can't get back to the area of the Aspens, Teton Pines, Teton Village and Wilson conveniently, you will simply direct more traffice through the town of Jackson, causing even more traffic congestion and pollution. Closing down for two days a week would not allow people to enjoy the park conveniently if they are only here for a short time.

Topic Question 3:

Providing a bike lane would be advisable for safety reasons, but do not restrict access for vehicle traffic to the reasons mentioned above.

Topic Question 4:

The road improvements could be very simple and still utilize Alternative A by simply filling and grading the unpaved portion of the road more frequently.

Topic Question 1:
Option D because it gives non-motorized travel an option which does not exist now (safely).

Topic Question 2:
Closures (B&C) would make for increased pollution of our air with cars forced to turn around and/or idle.

Topic Question 3:
I would favor speed bumps on the motorized section.

Topic Question 4:
I do not like Option A as I think that doing nothing does not address future growth which will happen. I also do not think that the current state of the road is safe for non-motorized travel, tourists who stop on the road and for wildlife because of unsafe driving.

Topic Question 1:

Alternative B allows for the least change while addressing the congestion and need for traffic pull outs. There are enough bike paths a new one along this corridor would impact the wildlife for the benefit of too few users.

Topic Question 2:

C & D would increase commercial traffic and create an intrusive bike path that we do not need. Especially when you take in the fact that the road is available for use by bicycles during the off season when clear of snow and ice. The increased parking at the Death Canyon/White Grass trail head would turn Phelps lake into a congested party beach, disrupt the bears and wildlife that currently inhabit the area and greatly increase the use of the jumping rock on the lake.

Topic Question 3:

" No bicycle pathway on the Moose-Wilson Road
o It would destroy over 3000 trees in a very pristine historical wooded area.
o Increases the potential for wildlife and horseback rider conflicts.
o With only 3% o park users currently using the bicycle paths, we just dont see the benefit of such a large and disturbing project.
" Do not close commercial horseback riding on the Sawmill Pond Trails
o It is one of the most unique areas of the park that allows this activity without causing any conflicts with other parks goals. It has also been an activity that has been historically used in this area for over 90 years with minimal conflicts and requiring minimal park management.

Topic Question 1:

I am in favor of option "D". I believe the longer term health of our National Forests and National Parks is highly dependent upon voluntary donations from the general public. To ensure the growing number of donors needed to offset the reduction in government funding, we need to capture the minds and hearts of our youth and young adults. To do this I favor any and all plans which with limited impact allow our children and young adults to experience the beauty, majesty, and wildlife within our National Parks and Forests. Option "D" seems to provide the most direct, low impact and highly enjoyable experience for all participants. By getting these future donors out of their cars and onto a safe bike/walking/wheel chair accessible path, we can instill the love of nature into future generations and help to ensure the longer term preservation of these natural wonders.

Topic Question 2:

Any project which does not improve the quality of the existing road is a mistake. As it is currently configured, the dirt portion of the road a hazard to both motorists and cyclists. As it has substantial traffic, it seems to be growing wider and rougher and detracts from any enjoyment of the beautiful scenery and wildlife. As stated in my answer to question #1, above, I have a great concern, our parks and forests are going to suffer as federal funding is continually reduced. This lack of investment and maintenance capital, will damage our wild and beautiful places. By providing a easy and enjoyable access, we can help to minimize the impact on the environment, while ensuring the public generosity needed to maintain our natural wonders.

Topic Question 3:

It is vitally important to design and build points of access which get the general public out of their cars and

into at least a small portion of the wilderness. The Moose Wilson Road corridor is already a valuable access point from which to enjoy GTNP. The JD Rockefeller Preserve has greatly increased the "out of car" use of the M-W Corridor and further improvements which make it even easier and more attractive for "out of car" experiences should be considered.

Topic Question 4:

I believe this comment process is an excellent approach to improving access and enhancing the quality of experiences along the Moose Wilson road corridor

Comments:

Topic Question 1:

Further research on reducing traffic as mentioned in alternatives B, C, and D should be conducted. The traffic issue is a major one for the Moose-Wilson corridor. This area is a special place of GTNP and should be managed to minimize human impacts on the abundant wildlife and flora of the area.

Topic Question 2:

A and C don't plan to re-route the road away from sensitive wetland habitat. I think that this is an important issue that should be addressed. Riparian habitats are important for everything from valuable wildlife habitat (I have seen countless moose, beavers, great blue herons, great grey owl, and many other birds using the area), to important ecosystem processes (nutrient cycling, erosion control, water issues). Also, plans A and C allow taxis to use the Moose Wilson corridor as a viable route for either picking people up from or transporting people from the village to destinations (ie airport). This has been a consistent nuisance while trying to enjoy the flora and fauna of the MW corridor. Because time means money to the taxi drivers, they tend to speed and also pressure other drivers through tail riding etc. This corridor is not intended to be a "quick" route from the village to the highway and should be managed accordingly.

Topic Question 3:

Additional alternatives to public transportation to visit the Moose Wilson corridor are warranted. Perhaps, encouraging people to park at the visitor center and then walk or bike to the areas would be a good idea (especially to the close popular areas, such as the overlook). And/or a shuttle service (hourly or several times a day) out of the visitor center that highlights the history, wildlife and flora of the area would allow visitors to see the Moose Wilson corridor while limiting the number of personal vehicles.

Topic Question 4:

As a resident of Teton County, the Moose Wilson Corridor is one of my favorite areas to visit to access hiking trails and to view wildlife/flora of the GYE. However, the traffic that uses the road as a thoroughfare from the Village to the highway is extremely annoying. Taxis and other folks driving the road simply as a route are oftentimes speeding and rudely drive to discourage other people from driving appropriate speeds through the park. I have seen a car rolled over on the road this summer, which is indicative of the speeds some people reach while on the road. This is not only annoying, but also a major threat to the wildlife that use the area. Moose, bears, elk, mule deer, beavers, muskrats, great grey owls etc. are some of the amazing wildlife that use the area and call the Moose Wilson Corridor home and ensuring their safety and ability to exist in GTNP are absolutely critical to upholding the vision of the national park system, as well as influential people of the area (Muries, Rockefellers etc.). Also, not sure if the park can do anything about it, but I have been told by several visitors staying in Teton Village that their navigation systems on their phones direct them through the Moose Wilson Road from the airport. This must add an exorbitant amount of traffic through the corridor that is absolutely unnecessary! The navigation systems should be taking tourists through the main highways.

Topic Question 1:

For the most part I think that Alternative D is the best alternative. It provides the greatest degree of both winter and summer access to the greatest variety of transportation. I especially like the emphasis on bikes, on limiting commercial operators and winter grooming of the unplowed road.

Topic Question 2:

I think the idea of having a reservation system and limiting cars going into the Moose-Wilson corridor is a terrible idea. There have been many studies on highways that show that this type of 'pacing' never actually works to reduce traffic. It will just move the backup from in places on the corridor to the entrance points on the corridor eg the entrances into GTNP. Having a reservation system will simply create greater backups at park entrance and will also inconvenience those who are headed into the park to access Granite Canyon. Pacing to limit traffic never works and simply moves back up or creates a back up when one does not exist. This also requires considerably more man power.

Topic Question 3:

I think that it is very important to maintain good access or at least equivalent access to this corridor in the winter. Access to Granite Canyon TH and Death Canyon TH is very important to maintain for safety concerns to back country skiers.

Another thought is to look at what may happen if the entire corridor was plowed in the winter time

Topic Question 4:

Serious consideration should be given to plowing the entire corridor in the winter and grooming the multi use pathway for use by cross country skiers.

Topic Question 1:

My first choice among the 4 preliminary alternatives is B. My second choice would be D. B: emphasis on the corridor as a visitor destination in GTNP is absolutely necessary & obvious; curtailing vehicular and pedestrian/bicycle traffic for wildlife seasonal use reasons at "certain peak periods" is important; re-aligning the paved road at the north end from Saw Mill Pond through open flatter terrain to connect with the inner park road beyond the Park entrance station makes sense. D: I support a separated bike/pedestrian pathway, especially from Moose to LSR Preserve.

Topic Question 2:

D: I do not like the proposed hourly vehicle limits and use of a reservation system to limit vehicular traffic jams. I do not think these measures would work and would anger park visitors. A: The condition of the corridor from Poker Flats/Teton Village Park entrance station to the paved section at the old JY Ranch entrance is terrible, my family just drove on it Labor Day, we had to detour all over the dirt road to avoid deep potholes. "No action" as the strategy here is unacceptable! I think this section needs to be paved. Vehicles will not be speeding on such a narrow, winding, tree-lined road.

Topic Question 4:

My personal use of the proposed Separated bike/pedestrian pathway on the Moose-Wilson Road would mostly be with my family including my disabled adult son. Ever since the Park pathway opened we have visited the Park most week-ends to walk on different sections of the current pathway from Dornan's to Jenny Lake. We walk slowly, usually 2 miles roundtrip. My son is severely autistic and non-verbal, but he expresses great joy in these outings.

Topic Question 3:
See comments below

Topic Question 4:
See comments below

Comments: Moose Wilson Road Comments

After reviewing the alternatives that the Park Service has developed I have the following comments to make regarding the Moose Wilson Road issue.

1. I have been struck by the complete absence of one alternative which I find has not been considered and which would have seemed to be the first logical alternative. That alternative would have been to consider leaving the road as it is (like Alternative "A") and simply add a detached bike pathway. It is my recollection that the genesis of the original issue was about the bike path that was incorporated into the transportation plan and approved. Then somehow it all morphed into radical plans to do all sorts of other things from one way traffic to limits on trips.

2. The second observation I have is that the alternatives do not seem to acknowledge that this road is not a destination in and of itself but rather a very important utility that provides access to important resources in the Park. These resources, among other things, are the trailheads to Granite Canyon and Death Canyon, The Rockefeller Preserve and the Murie Cabin site. All of these resources are of the highest importance to the public that is entitled to enjoy the Park experience. Using the road in an unfettered manner is essential to that experience.

3. I do not believe the Park Service has considered the impact that closing the road and/ or making it one way would have on the Park visitor, particularly those staying in Teton Village. There are 3,000 visitor beds within 200 feet of the entry to the Park at Teton Village. Most of these visitors will travel into the Park via the Moose Wilson road to enjoy their National Park. If it were a one way road, consider the circumstances of a visitor who might like to visit Phelps Lake: They would have to drive to Jackson, then north to Moose and then down the road to the Death Canyon trailhead. Does that make any sense? You would have increased traffic on the State and Federal roads. You would have increased air pollution, which would add to global warming. Would that be good for the animals in the Park? Why have these impacts not been considered? This just flies in the face of all the environmental efforts that are currently being made.

4. Then consider the visitor who comes from, say Des Moines, and only has a day or so in the area but has heard about the wonderful hike up Death Canyon. He arrives at the ranger station in Teton Village or Moose only to find that the road is closed except for bikers and pedestrians or possibly has been limited out. This member of the tax paying public now has needlessly been denied the enjoyment of the Park. This is not going to be a rare event but will be an ongoing frustration to the public that wants to enjoy the Park and also for those that will have to enforce some ill-conceived plan. Put simply, it is a public relations' nightmare.

Finally, I would suggest that an Alternative "E" be added that would state that the road be upgraded to some level, realigned where necessary to avoid wetlands and sensitive habitat, and a bike/pedestrian trail be built as a detached element. I see absolutely no necessity in limiting the traffic since this road should be managed by speed limits that would discourage simple through traffic yet allow reasonable and fair access to the Park amenities.

Thank you for the opportunity to comment on this subject.

Topic Question 1:

Commercial horse-back riding should be allowed to continue in the Sawmill Ponds area. This low-impact activity achieves its goal of providing a valuable western experience AND appreciation of wildlife and the natural beauty of the area.

Topic Question 2:

Do not build a bike path here. This would cut down 3000 trees! And biking is not in and of itself low-impact. Nor does it foster an appreciation of wildlife and natural beauty.

Topic Question 4:

People come to this area to get a unique and wild experience. Few areas offer such high-quality horseback riding - - believe me I know!

Topic Question 1:
*see comments

Comments: Access to the Death Canyon Trailhead should not be restricted in the winter months. This is a popular destination for backcountry skiers and hikers. The ability to enjoy these areas in the winter is important to the local community and helps to foster the conservation ethic that is such an integral part of this community and certainly benefits the National Park. For the relative few that wish to enjoy access to Death Canyon in the winter, it is wrong to restrict access and is not in line with the goals and purpose of the National Park.

Topic Question 1:

To my family, Moose-Wilson is a special place which offers the opportunity to view wildlife and magnificent scenery in a relatively natural environment. We support a modified alternative A to protect this opportunity. If the Moose entrance ranger station were moved to the intersection with M-W road, the traffic could be culled (large size vehicles, for example) and limited/managed as suggested in the other 3 alternatives.

Topic Question 2:

We are firmly against paving the unpaved section of the road as we believe the corridor's value is in its naturalness and feel that paving that section will only serve to increase speed and traffic. We also are firmly against the addition of a pathway for cyclists. There are abundant places to bike in the valley and reducing natural space/adding more pavement on M-W ruins a unique spot. In our experience elsewhere in the park, cyclists do not want to share pathways with hikers; so, there would be a loss of natural quality to satisfy only one group.

Topic Question 3:

Moving the ranger entrance station from its current location in Moose to the intersection with M-W corridor instead of reconfiguring the M-W road would be an easier way to control the Moose end of the road.

Comments: The M-W corridor is special to our family all times of the year: snowshoeing during the winter and hiking/driving to enjoy the quiet when the road is open. We birdwatch and enjoy photographing wildlife and flowers. Along M-W, there is always the opportunity to experience wonder -

in the geology, in the diversity of the flowers and birds and animals. More pavement will detract from that opportunity. If the park attempts this modified version of alternative A, the cost is low, and there is minimal disruption- -far better than changing things and then realizing there was a better way.

Thank you for the opportunity to comment.

Topic Question 1:

Alternatives B and D relocate the road N of Death Canyon access. This protects the pond areas.

B also has a single entrance station, which is good.

B removes the 1 mile of old road to the whitegrass trailhead (good).

D has a separate pathway for bicycle access along the entire road. This is important.

Topic Question 2:

A and C keep the current road by the moose ponds. This road should be entirely removed.

C and D have 2 separate entrance stations at Moose, which does not make any sense when 1 station would do.

Comments: In summary, I would recommend everything in B, plus the additional pathway in D.

Topic Question 1:

Alternative D should be carried forward, however the proposed reservation system to use the road should be deleted. The reservation system is too cumbersome to use and would impede spontaneity with regard to exploring and enjoying nature.

Topic Question 2:

The following will NOT achieve the purpose for the plan

1. Closing the road
2. Reservation system to use the road
3. Limiting bicycle use to when the roads are clear (For example, snow bikes should be allowed when snow is on the ground)

Topic Question 3:

In addition to the paved bicycle pathway, a dirt single track path for mountain biking should be created. Bicycles are non-polluting, clean, quiet, eco friendly, healthy ways for us and our children to enjoy nature. Unlike horses they don't eat the vegetation nor leave feces on the trail. HELP US GET OUT OF OUR CARS SO THAT WE CAN ENJOY NATURE. Hiking could be permitted on both pathways.

Topic Question 4:

In addition to the paved bicycle pathway, a dirt single track path for mountain biking should be created. Bicycles are non-polluting, clean, quiet, eco friendly, healthy ways for us and our children to enjoy nature. Unlike horses they don't eat the vegetation nor leave feces on the trail. HELP US GET OUT OF OUR

CARS SO THAT WE CAN ENJOY NATURE. Hiking could be permitted on both pathways.

Comments: Please do not close the road to through traffic as it would be a terrible loss for the community as we love to drive the road and enjoy nature. Additionally, we really need to be able to enjoy this area on a paved bicycle and un-paved single track mountain biking trail so that we can get out of our cars as often as possible. Thank you for listening to us.

Topic Question 1:

Alternative D is the best alternative moving forward. It is the most environmental long term as it creates the lowest overall emissions in the region and encouraging guests to experience the park outside their cars, Which also makes it the safest alternative by having a pathway for non motorized use to travel. All is achieved without limiting access to any user group.

Topic Question 2:

B and C with gates and closure times limit access. When open roads will be busier and a lesser experience. When closed, traffic and emissions increase overall in surrounding region.

Doing Nothing (A) doesn't address existing wildlife and safety issues. Parts of road are in need of repair, pull outs for viewing to avoid traffic jams, etc. Only experienced cyclists ride the road and it still feels dangerous. connecting our pathway from the Village to Moose is important.

Topic Question 3:

To reduce traffic in general, working with a transit company during high season to shuttle guests to spots makes sense. (Like Zion) Reducing parking issues and overall emissions.

Topic Question 1:
Please limit traffic on the Moose-Wilson road. The primary (and only) goal should be to protect the scenic and habitat values of this corridor. Motorists have plenty of other roads to use to get where they need to go in Jackson Hole. I am a resident and have benefited much from using that road, but I would prefer to protect wildlife values and never use that road again.

Topic Question 2:
Improving the Moose-Wilson road so it eases traffic pressures on other valley roads would be wrong to do. Protect our wildlife and protect tourism. If the valley is ruined, tourists won't come and spend their money here.

Topic Question 4:
Close the Moose=Wilson Rd. to all vehicles, including non-motorized, and limit the number of people who can access the road in a 24-hour period.

Topic Question 1:

I think there bicycle pathways should not be placed on the Moose-Wilson Road.

It would destroy over 3000 trees in a very pristine historical wooded area. Destroying trees takes away a place for birds and is nt good for the environment.

Increases the potential for wildlife and horseback rider conflicts.

With only 3% o park users currently using the bicycle paths, I just dont see the benefit of such a large and disturbing project.

Topic Question 2:

Work with the Lazy R Ranch on alternative for horseback trail riding.

Correspondence Text

As a visitor to the Grand Teton National Park I was very concerned to hear about the possibility of changes within the park regarding horseback riding among other things. The plan as I understand it for a bicycle pathway on Moose-Wilson Road would not only destroy over 3,000 trees in the park but would cause two activities to be merged in a way that would not be beneficial to either. Only about 3% of park users currently use the bicycle paths, so we do not see the benefit of such a large and disturbing project.

Closing the commercial horseback riding on the Sawmill Pond Trails would seriously limit visitors from seeing some of the most unique areas of the park. This area has been used for horseback riding for over 90 years with only minimal conflicts and require minimal park management.

Riding on these trails access the historical Whitegrass Ranch area as well as the Sky Ranch and Trail ranch. By taking interpretive rides through these historical ranches, we can help reach a park's goal to "Protect and maintain cultural resources as important links as to the human history of the Moose-Wilson corridor, including historical and archeological sites, cultural landscapes, and ethnographic resources."

Thank you so much for taking the time to read my comments and I am sure that the right decision will be reached and the park will continue to welcome guests for many years to come.

Topic Question 1:

I strongly favor Alternative D as it provides the multi use pathway which we so desperately need. If this pathway is created we would establish one of the great cycling venues in the world and create an entire new dynamic for people to visit the Park. By having a pathway that would have an entire loop from Jackson north to Antelope Flats, over to Jenny Lake and then back to the existing pathway at the Teton Village entrance would be both unique and extraordinary. This would make GTNP an even more special place than it already is and in a very positive way.

Topic Question 2:

Alternatives B and C do not address the need for access by bicyclists which is an enormous oversight. Doing nothing is a default option but we need to recognize the opportunity for what it is.

Topic Question 3:

I would prefer that the road be moved eastward from its existing location out into the sagebrush where it is less intrusive. This could start in the Granite Canyon area, continue behind the LSR and then reconnect with the proposed realignment to the north. This should include a multi use pathway and then you would have confronted all of the divers interests that feel so strongly about this road.

Comments: Please be openminded and thoughtful about this as an opportunity and not a problem which is not the attitude that has prevailed to date. This is an extraordinary opportunity for GTNP. Realign the road in a less environmentally intrusive area, permit vehicular traffic on a fully paved artery, provide a multi use pathway and you will have achieved an enlightened solution to an emotionally charged issue.

Correspondence Text

Topic Question 1:

I greatly appreciate the limited development in this corridor and urge the maintenance of such a natural, rural aspect to the area this corridor serves. The priority of this corridor should include park visitation, and that kept consistent with park values, and every effort must be made to limit commercial use of the corridor, keeping this from being a country road serving interests beyond the park's. I support Alternative B regarding Death Canyon trailhead which minimizes visitor impacts while allowing sufficient opportunity for visitation. Allowing visitors to explore as freely as possible with a sense of solitude and opportunities quietly to see on one's own are what now characterize the area and should be pursued to protect that sort of experience for the future.

Topic Question 2:

Alternatives A and C are inadequate regarding altering the road to protect wetland habitat. This road is not appropriate for winter grooming. Commercial traffic should be restricted to that which directly serves visitor activity in the park, park purposes must govern commercial involvement.

Topic Question 3:

I support considering a one-way strategy for this corridor. Timely road closures, including at night seems appropriate for a road that serves park goals, and patterns of closure, I think, could readily be understood by visitors planning their time in the park.

Topic Question 4:

I urge a priority of protecting wildlife in the development of this plan. Auto speed should be regulated with that priority in mind. I have observed speeders frequently on that road, so I know that remains a

serious concern.

Comments: This summer my family experienced seeing Glacier Park through use of their public transport, and that was for us quite a positive experience that I think could be a model for the Tetons. Interpretative tours and a shuttle service could both protect the Park and provide a high quality visitor experience. This summer we also saw a grizzly family along side the road south of Coulter Bay and north of Jackson Lake Lodge. I hope that sort of opportunity can long be maintained in our national parks, but I know continued vigilance and a willingness to adapt policies to new challenges must characterize both park management and our visiting public. We must all be open to change how we encounter the parks, under the guidance of the primary goal of preservation. This is particularly the case given the effects of a changing climate. I look to park leadership to help me know how best to visit the park, how best to govern my own impacts, and I do so in hope that together we can work both to allow wonderful park experiences while keeping this great heritage so that my grandchildren can look forward to seeing so much like I have seen long past the time in which I was able to visit.

Topic Question 1:

I Think that Alternative D should be carried forward. It reduces overall traffic which will preserve the Moose-Wilson corridor. Inspiring and enabling visitors to enjoy the park via bicycle, foot or public transportation is the best option.

Topic Question 2:

Gate closures (Atl B & C) won't work. This will only sift the the number of vehicles to other areas. Keep the road open and slow.

Topic Question 3:

A separate pathway is a safety need, not a want, and it is the imperative for the Preferred Alternative. No action (Alternative A) is not the right solution because it does nothing to help wildlife by reducing traffic levels or manage traffic flow with adaptive strategies.

Topic Question 4:

Decreasing the increased traffic volumes for the long term is the Park's objective and that is possible only with Alternative D, which uses thoughtful, safer ways to get people out of vehicles and into the outdoors.

Correspondence Text

Topic Question 1:

I support Alternative D as a preferred, positive option because it reduces overall traffic in a way that is essential to preserving the Moose-Wilson corridor's unique values, benefits area wildlife with fewer cars, and encourages diverse access for safely enjoying the corridor outside of the car. Gates and closures are bad solutions to traffic management. Instead, inspire and enable a shift of 10-30 percent of visitors to use bikes, walking or transit.

Park values are best protected under Alternative D, which recognizes that wildlife and park visitors can be thoughtfully managed together, the essence of National Park visitation. Under Alternative D, visitors experience this part of Grand Teton National Park in a way that is respectful of natural resources, informative, inspiring, and safe.

Alternative D enhances the visitor experience in an environmentally responsible way - providing public access with reduced traffic impacts to wildlife, smart public transit and greater safety for the non-vehicular public on a needed pathway.

Topic Question 2:

Gates and closures (Alternatives B and C) don't work. Gates and closures shift or increase the number of motor vehicle trips area wide. For visitors and locals alike under Alternatives B or C to get from the Westbank to Moose and back will be a 50-mile round-trip instead of 7 direct miles that could be experienced on foot, bike, transit or vehicle. Instead, the National Park Service should implement real solutions that a good for the environment - like multi-modal transportation and smart transit.

The negative impact of shifted or increased traffic is bad for the environment and bad for wildlifethat lives

outside the corridor, especially along area highways, including the main National Park route, which will inevitably see more traffic and wildlife collisions from cars re-routing from road closures to get to the Park's entrance in Moose. The Moose-Wilson Road has no wildlife fatalities because it is wonderfully slow, narrow and rural - and should be kept that way with fewer cars, smart visitor transit and a pathway.

Topic Question 3:

A separate Moose-Wilson pathway is a safety need, not a want, and it is imperative for the Preferred Alternative. It can be placed in an environmentally sensitive way to minimize impacts and close a dangerous gap, which will be even more apparent when the pathway from Jackson to Teton Village is complete by 2015.

Please add public transit and commit the National Park Service to a community partnership as a way to reduce traffic congestion even more in the future.

No action (Alternative A) is not the right solution because it does nothing to help wildlife by reducing traffic levels or manage traffic flow with adaptive strategies.

Decreasing the increased traffic volumes for the long term is the Park's objective and that is possible only with Alternative D, which uses thoughtful, safer ways to get people out of vehicles and into the outdoors. Alternative D will help make meaningful traffic reductions and adaptations so that wildlife can thrive and visitors can have access to their national park.

Topic Question 1:

We support Alternative D as a preferred, positive option because it reduces overall traffic in a way that is essential to preserving the Moose-Wilson corridor's unique values, benefits area wildlife with fewer cars, and encourages diverse access for safely enjoying the corridor outside of the car. Gates and closures are bad solutions to traffic management. Instead, inspire and enable a shift of 10-30 percent of visitors to use bikes, walking or transit.

Park values are best protected under Alternative D, which recognizes that wildlife and park visitors can be thoughtfully managed together, the essence of National Park visitation. Under Alternative D, visitors experience this part of Grand Teton National Park in a way that is respectful of natural resources, informative, inspiring, and safe.

Alternative D enhances the visitor experience in an environmentally responsible way - providing public access with reduced traffic impacts to wildlife, smart public transit and greater safety for the non-vehicular public on a needed pathway.

Topic Question 2:

Gates and closures (Alternatives B and C) don't work. Gates and closures shift or increase the number of motor vehicle trips area wide. For visitors and locals alike under Alternatives B or C to get from the Westbank to Moose and back will be a 50-mile round-trip instead of 7 direct miles that could be experienced on foot, bike, transit or vehicle. Instead, we can help the National Park Service by innovating real solutions that are good for the environment - like multi-modal transportation and smart transit.

The negative impact of shifted or increased traffic is bad for the environment and bad for wildlife that lives

outside the corridor, especially along area highways, including the main National Park route, which will inevitably see more traffic and wildlife collisions from cars re-routing from road closures to get to the Park's entrance in Moose. The Moose-Wilson Road has no wildlife fatalities because it is wonderfully slow, narrow and rural - and should be kept that way with fewer cars, smart visitor transit and a pathway.

Topic Question 3:

A separate Moose-Wilson pathway is a safety need, not a want, and it is imperative for the Preferred Alternative. It can be placed in an environmentally sensitive way to minimize impacts and close a dangerous gap, which will be even more apparent when the pathway from Jackson to Teton Village is complete by 2015.

Please add public transit and commit the National Park Service to a community partnership as a way to reduce traffic congestion even more in the future.

No action (Alternative A) is not the right solution because it does nothing to help wildlife by reducing traffic levels or manage traffic flow with adaptive strategies.

Decreasing the increased traffic volumes for the long term is the Park's objective and that is possible only with Alternative D, which uses thoughtful, safer ways to get people out of vehicles and into the outdoors. Ask for Alternative D to help make meaningful traffic reductions and adaptations so that wildlife can thrive and visitors can have access to their national park.

Topic Question 4:

We need bike only paths in our National Parks. It is a nice way to visit the parks without additional vehicle congestion.

Topic Question 1:

I support Alt. D, with a separate bike pathway. Getting people out of cars, onto a complete and safe bike path system, not only reduces car traffic but also improves the visitor experience and protects wildlife.

Topic Question 1:

I believe alternative D is the best solution. It reduces car traffic by allowing for more alternative ways to safely travel the corridor. It also allows for a more interactive experience for our tourists, increasing the options for the way visitors interact with our park.

Topic Question 2:

Alternatives B and C are not viable alternatives for locals and visitors alike. Closing the road and using gates only serve to take vehicles from this area and put them on other roads. Visitors and locals will then have to travel further distances in order to use the Moose-Wilson Road area, or be forced to travel out of their way and use more time and resources to get from one point to another. There may be short term gains for the closure area, but there will be much harsher impacts for the surrounding environment.

Topic Question 3:

As a fairly frequent user of the Moose-Wilson Road to get to some of my favorite hiking paths and as a bicyclist, I advocate for a separate pathway. This is a glaring omission in our area pathways, and will continue to see increased use by bicyclists who come to our area to visit Grand Teton National Park as well as by those of us who live here. If it is the NPS' desire to decrease traffic in the area, alternative D is the only responsible way to do this. It is the alternative that supports getting people out of their cars.

Topic Question 4:

I don't know if there are less sensitive (in terms of wildlife and physical environment) paths that could be explored as separation of road and pathway. I would also support moving the road or path as long as the

link between Teton Village and the Park is a constant.

Topic Question 1:

Alternative D contains the best balance of conservation and safety. We need a separate and SAFE pathway so that visitors and locals can enjoy the park outside of their car. This pathway would benefit pedestrians, strollers, wheelchairs, and cyclists, and it would cut down on vehicle traffic by giving people another way to access the park. We have a prime success story just to the north on the Jenny Lake pathway. It is pretty incredible to see how many people are enjoying that pathway every day, it's working! Please don't let this opportunity slip by. It is a matter of park enjoyment and SAFETY. How many more accidents have to happen on the park roads before we make a positive change? What would Gabriella Axlerad say? Please build the pathway.

The winter plowing plan included in Alternative D is also superior to the other plans because it maintains the current plowing policies, allowing backcountry skiers to access peaks in the southern part of the range.

The Death Canyon parking plan in Alternative D is fantastic. That is certainly a congested area, and cars end up parking all over the place and trampling the vegetation.

Topic Question 2:

Closures are NOT the answer. They will result in more driving and more traffic/congestion in town because people will end up driving 40 miles out of their way.

Topic Question 3:

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

The pathway should be separate from the road.

Topic Question 4:

Thank you for your consideration on this matter, and for listening to our comments. Thank you for including a pathway in your list of alternatives.

Topic Question 1:

I believe that strategy D would best achieve the goal to protect the park's fundamental environmental resources and values. It provides the best solution to open up alternative transportation in the park, while precluding auto traffic closures which would likely cause vehicles to just reroute to the open sections, as well as the hassles of having to make reservations for a visit.

Topic Question 2:

The road closures in Alternatives B and C would likely just result in increasing the total miles traveled by vehicles in the area, thus would have higher environmental impact and possibilities for detrimental impact on wildlife, namely collision fatalities.

Topic Question 3:

Within strategy D, it specifically precludes bicycle access when snow or ice is present. I believe this clause should be eliminated or revised. There are new bike technologies that are becoming quite popular of late, namely fat-tire all-terrain, "snow bikes" that could well utilize snow-covered trails in much the same way as cross-country skis and snowshoes.

Topic Question 4:

The alternative transportation route in strategy D aligns quite well with the planned pathway from Jackson to Teton Village to be completed by 2015

Topic Question 1:

Alternative D will provide the best solution. Creating a better pedestrian pathway will help reduce traffic in the park, while at the same time increasing tourism. Cyclists much of the time are better tourists in the park as they understand the fragility of the wilderness.

Topic Question 3:

I believe that more pedestrian pathways is always a great idea. We need to help people recreate in a safe, sustainable, way that keeps the wilderness wild and also allows people to appreciate it.

I agree w the comments submitted by the Alliance. I would like to reiterate the need for alternative transportation along the road & within the Park itself. Having visited Zion NP recently I was amazed at how well their transport system works. We could do the same in Grand Teton, & at the very least on the MW corridor.

More analysis of the studies is needed to make sure we are heading in the right direction. The road needs to be accessible to all types of transport, but must balance the wildlife issues.

Topic Question 1:

Alternative D is the best start. Provides a safe alternative for non-vehicle visitors.

Topic Question 2:

Alternative A does not address the problem. Alternatives B and C create more problems than they solve, masking the real issue which is too many vehicles using the road as a thoroughfare.

Topic Question 3:

A North Bridge that would siphon off traffic to the airport and Hwy 89 and should be considered as a strategy.

Topic Question 4:

Some parks such as Zion, Denali, Yosemite offer shuttles, pathways and limit or strongly encourage visitors to park their vehicles while touring the park. We have an opportunity here to learn from them.

Topic Question 2:

Limiting commercial horseback riding from Sawmill Ponds could serve a crushing blow to tourism and visitors who visit Jackson Hole for the relaxing activity of horseback riding through the Park. We have vacationed in JH every year with family for over 35 years and trips through Sawmill Ponds area to Whitegrass and Sky Ranch afford us the opportunity to absorb the natural beauty and peacefulness that exists in that part of the Park. We are cognizant of the critical importance of maintaining the beauty of that location...and do all that we can to follow all rules of the Park when, peacefully, riding our horses to and from. Please do not take away that most enjoyable recreational activity by limiting access by responsible horseback riders to the Sawmill Pond Trails. Also, do not put bike paths on Moose Wilson which could endanger the lives of the Park animals by reducing the number of trees that would be cut to accommodate the paths. They need all the tree enclosure possible for safety, foraging, and roaming.

Comments: Since our first visit to Jackson Hole 35 years ago with our, then, children aged 8, 13 and 15...we have made it a point to return every year for a number of weeks every summer...and on two occasions, the winter as well. Our children are now grown and still attempt to return whenever possible to the serenity and beauty of the Tetons, the Snake River, the trees and the animals...and all that encompasses the beauty that is Jackson Hole. We had our entire family (with grandchildren) in Jackson Hole last year to celebrate our 50th wedding anniversary. We have seen much growth in the area...but always in good taste and in keeping with the surroundings. Our enjoyment comes from wandering through the Park...sometimes on foot, but usually on horseback. The horses are quiet observers of the serenity and peace that one experiences in the Park...and we could never be a part of the Sawmill Pond Trails if it were not for the ability to ride on horseback through the area. We look forward to continuing this activity for many more years.

Topic Question 1:

I support Alternative D as a preferred, positive option because it reduces overall traffic in a way that is essential to preserving the Moose-Wilson corridor's unique values, benefits area wildlife with fewer cars, and encourages diverse access for safely enjoying the corridor outside of the car. Gates and closures are bad solutions to traffic management. Instead, inspire and enable a shift of 10-30 percent of visitors to use bikes, walking or transit.

Park values are best protected under Alternative D, which recognizes that wildlife and park visitors can be thoughtfully managed together, the essence of National Park visitation. Under Alternative D, visitors experience this part of Grand Teton National Park in a way that is respectful of natural resources, informative, inspiring, and safe.

Alternative D enhances the visitor experience in an environmentally responsible way - providing public access with reduced traffic impacts to wildlife, smart public transit and greater safety for the non-vehicular public on a needed pathway.

Topic Question 2:

Gates and closures (Alternatives B and C) don't work. Gates and closures shift or increase the number of motor vehicle trips area wide. For visitors and locals alike under Alternatives B or C to get from the Westbank to Moose and back will be a 50-mile round-trip instead of 7 direct miles that could be experienced on foot, bike, transit or vehicle. Instead, we can help the National Park Service by innovating real solutions that a good for the environment - like multi-modal transportation and smart transit.

The negative impact of shifted or increased traffic is bad for the environment and bad for wildlife that lives outside the corridor, especially along area highways, including the main National Park route, which will inevitably see more traffic and wildlife collisions from cars re-routing from road closures to get to the Park's entrance in Moose. The Moose-Wilson Road has no wildlife fatalities because it is wonderfully slow, narrow and rural - and should be kept that way with fewer cars, smart visitor transit and a pathway.

Topic Question 3:

Gates and closures (Alternatives B and C) don't work. Gates and closures shift or increase the number of motor vehicle trips area wide. For visitors and locals alike under Alternatives B or C to get from the Westbank to Moose and back will be a 50-mile round-trip instead of 7 direct miles that could be experienced on foot, bike, transit or vehicle. Instead, we can help the National Park Service by innovating real solutions that a good for the environment - like multi-modal transportation and smart transit.

The negative impact of shifted or increased traffic is bad for the environment and bad for wildlife that lives outside the corridor, especially along area highways, including the main National Park route, which will inevitably see more traffic and wildlife collisions from cars re-routing from road closures to get to the Park's entrance in Moose. The Moose-Wilson Road has no wildlife fatalities because it is wonderfully slow, narrow and rural - and should be kept that way with fewer cars, smart visitor transit and a pathway.

Topic Question 1:

I guide bicycle tours in the Tetons and just last month, rode through Moose & Wilson on my way over the pass. This section has high traffic with an inadequate shoulder. I recommend Option D, a separate paved pathway. There is room along the roadway for a separate path that would connect with bike routes coming from Jackson and the one over Teton Pass.

Topic Question 2:

I am not impressed with alternatives B & C because gates and closures will increase traffic on some routes and create a longer ride or drive from Moose to Westbank. Alternative A is not a choice because it does nothing. The trail gap along the Moose-Wilson corridor must be filled.

Topic Question 4:

I am so sorry to see that destruction of the wildlands is being done to accommodate bicylists. I have seen the damage the mountain bikers do and it is almost as bad as the 4-wheelers, only slower. The bicycles allow hundreds to get out into the far reaches of the wildlands, quick and easy. I have seen trees that have been crashed into - bark torn and branches cracked and hanging. I have been on my horse when bicyclists come rushing from above us, flying over obstacles and scarin the bejeebers out of all of us. They laugh and fly off. Teh damage they do to the topsoil and create trails through brush and over rocks cause runoff that is unintended. When they ride during the wet season, the damage is incredible. Building trails for them is not what they want - they want to make trails, and they do.

Comments: I'd like to encourage the park system to retain the wildness, resist development of any sort, except where minimally needed. There is nor eason to accommodate 4-wheelers or bicyclists over and above the trails that are already in existence. We want to keep our remoteness, not allow it to be invaded. Thank you.

Topic Question 1:

Of the proposed alternatives, "D" is my preferred option since it retains the spirit of the park, yet removes human powered folks from the busy road ways. Having a dedicated bicycle-friendly path will encourage family use, further spreading the love of the park system to the next generation.

Topic Question 2:

Gates and closures (B and C) are not an acceptable option as it doesn't eliminate motor vehicle use, but rather directs that traffic to other area. Whereas D would actually get people out of cars.

Topic Question 3:

Something to keep in mind is that this is not a 'want' but a 'need' to increase the overall safety of visitor and wildlife throughout the park. Option D is the natural continuation of the jackson-to-teton pathway. Finally, Option A should be off the table since it doesn't include adaptive strategies to alleviate the traffic, and in all honesty, will not reduce traffic.

Topic Question 4:

As a father of young children & avid cyclist, my wife and I have been forced to avoid parks that are not bicycle friendly/safe. However, having a dedicated pathway plays into family and trip planning.

Topic Question 1:

Let me commend the GTNP for undertaking this process and recognizing the need to improve the Moose Wilson Rd for the better protection of wildlife and improved user experience.

Alternative D is far superior to the other alternatives.

First, it re-aligns the north section of the road improving wildlife habitat. Re-alignment of the northern sections of the road is absolutely necessary to support a bike path.

Second, it is the only option with a bike bath. The Bike bath is critically important. Without it, the Moose Wilson Rd, will continue to serve as little Yellowstone, were 99% o visitors are driving in their cars, pulling over to look at wildlife from their cars (while idling), and causing bear/moose/elk jams. Biking the Moose Wilson in its current state is completely unsafe. Alternative C's two days a week of access serves little purpose but to aggravate both user groups, and there's still a significant safety issue for bikes on the unpaved southern section, even without cars.

Finally, the traffic management approach in Alternative D is the most palatable of the lot.

Topic Question 2:

Alternatives A is simply stalling for more time. It would be my distant 2nd choice. The Park needs to 'own' the fact that establishing the LSR Preserve has made the current state of affairs untenable. LSR is wonderful, but it creates ever increasing user traffic, all by car, via a poorly routed and maintained road.

Alternative B and C will inevitably result in a North Bridge over the Snake between the Village and the airport. Daily and consistent access to GTNP (North of LSR) from the West Bank and Teton Village is

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

mandatory for the user experience - not only in the Moose Wilson Corridor but in the entirety of GTNP and the Greater Yellowstone Eco. Both of these options result in large numbers of vehicles driving down the Village Rd and looping through town to access GTNP above LSR. It's simply lots more gas burned and CO2 emitted to access the park. It increases traffic on roads that are already jammed during 'peak' hours. The economics of this make a North Bridge inevitable, without a consistent reliable through way to GTNP from the West Bank. It's myopic and grossly irresponsible to fail to consider the impact beyond Moose Wilson Rd, of no through access.

Topic Question 3:

Fundamentally, you are trying to fit a square peg in a round hole. The routing of configuration of the Moose Wilson Rd constrains all 4 Alternatives. There's no way to make that twisting, narrow road to support the needs/mission of the Park. The needs are too great, the traffic volumes too high, and the user groups too diverse. As much as we would like, we cannot make that road work for the future. All the current Alternative inflict significant pain on current stakeholders, pain that will only grow over time and result in foreseeable, but unintended consequences.

Why reroute just the norther Section? You should consider rerouting the entire Rd to the East, with a bike path. Rerouting is a far better solution for all stakeholders (including wildlife) and provides a much brighter future. The existing north and south sections would make nice one-way loops (akin to the Jenny Lake one-way drive). They could be accessed from LSR and return to the "new" Moose Wilson Rd to the East. Or you could shut them entirely, restore the original Moose Wilson sections back to their natural habitat.

Topic Question 1:

I am in favor of the two road re-routes particularly because the north road entering into the park at the Chapel intersection is more efficient and the routing away from the springs and berry hillside is less intrusive to the wildlife. I favor leaving the road in its present winding and narrow character that is slower, not for commuting, and safer for both wildlife and visitors.

Although I favor bicycle paths that have been built in the more open areas of the Park, I would oppose them on Moose-Wilson Rd, as they would add another use, more pavement, and more maintenance that would be detrimental to wildlife. I really want to put the welfare of the wildlife highest on the goals of the road use. There are many other areas better for commuting, park access, and scenic viewing. Let's leave this area more pristine.

The Death Canyon road would be better closed to the White Grass Ranch intersection with parking for a limited number of cars.

I favor the 2 roundabouts to facilitate necessary closures. They do work to keep traffic slower but moving. Thank you for providing this opportunity for my input.

Statia Taylor

Topic Question 1:

I am a strong proponent of Option A. I do not believe that improving the road or adding the bike path are necessary or advisable. My family and I have returned to the R Lazy S ranch each year for the last 15 years to enjoy the relative wildness of the Moose Wilson Corridor, and to ride horses in the part in a respectful fashion.

Topic Question 2:

I think Options B-D will degrade the corridor to such a degree that severe economic damages would be done to the ranch that we love, and I fear that the historic dude ranch experience that has been a part of the park for a century will be lost. Making the changes of Options B-D will not, in my opinion, bring any new visitors to Jackson Hole or to Grand Teton National Park. There are already bountiful opportunities for bike riding, and there are ample broad paved roads for motor touring.

Topic Question 3:

None additional

Topic Question 4:

Please leave the corridor as untouched as possible. The park is full of "broad paved places" and we need to protect the wilder corners from overuse and development. It would be a tragedy.

Topic Question 1:

Alternative D is Best.

Keep the road the same narrow, slow, rural character

Too much traffic is bad because it detracts from the historical, cultural, resource values

Bikes, transit and pedestrians reduce traffic

Use technology, transit and pathways to reduce cars while enabling quality visitor experiences

Peak traffic is reduced by transit, pathways and technology

Topic Question 2:

The other Alternatives are Bad. Closure is wrong because it causes an imbalance of traffic flow, idling lines and erratic visitor experiences causing huge negative impacts environmentally and to the visitor experience

Other alternatives are costly to the NPS in the long run - without providing multimodal transportation gives the NPS more management options for diffusing traffic in order to preserve the park

Without a pathway, the visitor will be in danger Wildlife and pathways are proven to work well together

Topic Question 4:

Alternative D is good because it is:

1. Best for the environment
2. Best for the visitor experience
3. Best for keeping the same Character of the road - SLOW, NARROW
4. Best for reducing traffic - encouraging active transportation that doesn't involve a car
5. Best for getting people out of their cars and experiencing the environment responsibly

Comments: I congratulate the Park Service for seeing the positive vision of active transportation. I have been down this road many times and I truly value being able to visit and get out of my car. Please let us and future generations experience active transportation. Please, please do not close this access!

Thank you,
George Dykes

Topic Question 2:

" No bicycle pathway on the Moose-Wilson Road

- o It would destroy over 3000 trees in a very pristine historical wooded area.
- o Increases the potential for wildlife and horseback rider conflicts.
- o With only 3% o park users currently using the bicycle paths, we just dont see the benefit of such a large and disturbing project.

" Do not close commercial horseback riding on the Sawmill Pond Trails

- o It is one of the most unique areas of the park that allows this activity without causing any conflicts with other parks goals. It has also been an activity that has been historically used in this area for over 90 years with minimal conflicts and requiring minimal park management.
- o Why is the park attempting to eliminate historical horseback trails that have been previously approved for commercial use?
- o This area offers access to unique and safe horseback riding trails unavailable in other parts of the park.
- o These trails are used to access the historical Whitegrass Ranch area, along with Sky Ranch and Trail Ranch.

By taking interpretive rides through these historical ranches, we help reach a parks goal to Protect and maintain cultural resources as important links to the human history of the Moose- Wilson corridor, including historical and archeological sites, cultural landscapes, and ethnographic resources.

Topic Question 4:

Wyoming is one of the last great frontiers in America, and Grand Teton National Park is the rare open range land with beautiful vistas available to the lucky public who visit annually. Wyoming is also closely

associated with the cowboy, and for years, guest ranches have been a key part of visitors' experience. All of the Dude Ranches, and especially R Lazy S, are key stewards, highly respectful of the environment and trails, and they educate their guests about preserving and protecting the environment. Closing Sawmill Pond Trails to horseback riding would severely impact R Lazy S and potentially other ranches, so much to the point that a leading dude ranch may have to close. There already is an existing fantastic bike trail in Grand Teton available for biker's use. I strongly advocate avoiding the expense / environmental damage of adding a bike trail. Preserve and protect the environment, and preserve and protect the Dude Ranchers of Wyoming.

Topic Question 1:

Plan D - responds to the public desire for: 1] a full pathway and 2]a southern entry to the park. It fulfills the parks pledge to have a pathway to LSR. The reservation system of D should be removed. Times of legitimate wildlife conflict should be managed.

Topic Question 2:

Plan A does not protect the sensitive wetland portion. And has no pathway.
Plan B has no pathway.
Plan C similar to A

Topic Question 3:

Yes:

Plan D should be expanded to have the pathway moved eastward to the flat sagebrush old road/ horse trail location. This requires less impact to a new pathway being next to the existing dirt road in this section, which requires major tree removal and excessive cost. The north road alignment in alternative B makes the most sense[why two stations] and is the least costly.

Topic Question 4:

The proposed Adaptive Strategy is not acceptable. Occasional shut downs for wildlife conflicts is ok.

Comments: America wishes to see their parks not just in their cars, but on foot, in their wheel chairs or on their bikes. A meandering pathway similar to what is in place from Moose to Jenny Lake is what America

wants today. Parks need to adjust to their customers. Protecting Americas asset can still be maintained

Dear Planning Team,

I am the Supervisory VUA at the Granite Entrance Station. I was the first person employed by the park to staff this entrance station in January 2001. I believe that my experience at Granite Entrance gives me some expertise to address the various alternatives proposed for the Moose-Wilson Road aka corridor. I enjoy my job and enjoy meeting the thousands of people who come through the entrance each year on their way to experience the grandeur of the park.

There are some factors that the park has no control over that influence the problems currently being experienced on the Moose-Wilson Road. First, the transportation network in the Town of Jackson and the surrounding area is inadequate during the summer season. Both locals and visitors face delays as they try to navigate what is basically a one route road to get them through town and into the park. Second, the Teton Village Complex aka Jackson Hole Ski Resort has experienced a large volume of growth in the last several years. New hotels have been added, existing hotels enlarged, a golf course built, and many new homes added both in the village and along highway 390. Third, most of the hotels and visitor accommodations in the area tell their guests to take the Moose-Wilson Road to see wildlife. One of the questions we constantly hear is " Have there been any sightings of animals on the road?" Fourth, there is a lack of political will to build a bridge over the Snake River on the north portion of Highway 390. I will now address issues that the park can control in the proposed alternatives.

Alternative A

Alternative A is unacceptable. Why would the park spend two million dollars to study a problem that

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

Alternative A defines as a non-problem? Moose-Wilson experiences at various times human v human conflicts caused by impatient locals becoming annoyed with visitors driving slowly to enjoy the area and perhaps see wildlife. Each fall as the berries ripen, we have human v animal conflicts as bears return to feast on abundant sources of food. The unpaved portion of the road is a maintenance nightmare that requires closing of the road for grading and treatment with mag water. That work is expensive and the results are short lived. And Alternatives A-D, make no mention of the Granite Canyon trailhead. That trailhead is used extensively in the summer and to a lesser extent during the winter snow sports season. To do nothing would be wrong!

Alternative B

Alternative B proposes to manage traffic on the Moose-Wilson by providing traveler alerts about the road and closing segments of the road at selected high use periods. Our experience with traveler alerts on highway 390 is that many people ignore or fail to notice them. Recreational vehicles (RVs) and vehicles pulling trailers are already prohibited. There are several signs warning of these restrictions and yet everyday we turn folks around who just didn't see the signs or felt that their driving skills or the size of their trailer should allow them to proceed. The author of alternative B seems to assume that visitors to the park know about all of the park's features and that minds are never changed about what to see or do. Paving the unpaved portion of the road is good.

The idea of building a road that connects to the Teton Park Road at the Chapel of the Transfiguration Road needs to be reconsidered. A road that requires left hand turns on to the park road at the base of Windy Point Hill would create hazardous conditions that might only be mitigated by the installation of traffic lights. Death Canyon gets attention with a moved restroom and other improvements. Granite Canyon with no restroom is neglected once again. At least install a vault toilet at Granite.

Commercial traffic is not a big issue on the Moose-Wilson. Oversized vehicles such as buses and trucks are not allowed. Pickup trucks used for business with drivers having a valid park pass are permitted to use the road. Taxi cabs use the road and the visitors in the cab are charged an entrance fee. Eliminating taxis might reduce the overall vehicle load by 20 vehicles a day. CUA tour groups enter the park in the early morning or evening. Most are in 15 passenger vans or SUV type vehicles. All pay to enter the park.

Alternative C

This alternative is a disaster in the making. And, what is the justification for imposing an arbitrary limitation on the number of vehicles allowed on the road. The park cannot point to a large number of serious accidents, animal deaths, or other reasons for its attempt to limit traffic. The Granite Entrance has maximum park entrance between the hours of 0900 and Noon. After those hours, traffic flows at a fairly even pace before our early evening rush to begin the search for animals. The park service may not like it, but the Moose-Wilson is viewed as a connector road between highway 390 and the Town of Moose by both visitors and locals.

The idea of queuing traffic to use the Moose-Wilson is unacceptable. During our peak time of entrance, we may have more than 30 cars waiting in line to enter the park. Where are the queuing lanes going to be installed. How are wait times going to be established? Who is going to be hired to oversee this great queuing adventure?

The vast majority of traffic on the Moose-Wilson is composed of families driving automobiles. We have a few bike riders each day, minimal joggers, and almost no hikers using the road. There is no justification

for closing the road only for bikes and walkers two days each week.

Alternative D

This alternative has several ideas that are impractical. We have a road with a high use for perhaps two months each year. July and August is really the busiest time for the Moose-Wilson. When the berries are ripe and there is vehicle v bear conflict, the difficulty of controlling traffic makes it appear that there is more road use than there really is. It takes lots of resources to protect the bears and control vehicle movement. Last year, the park stopped vehicles and yet allowed bicycles and walkers to use the road.

The idea of a reservation system for the Moose-Wilson should be rejected out of hand. Who would handle the reservation system? Would VUA personnel be required to look at a computer to see if someone had a reservation and for what time? It is hard enough to deal with park entrance fees without needing to look at additional sources to see who might be allowed into the park? What do you tell people with valid park passes seeking to use the road without a reservation? Is the park service interested in maintaining good relationships with local citizens and visitors on tight schedules?

The idea of building a pathway along the Moose-Wilson should be rejected. To build a pathway will require significant destruction of the environment. What impact will a road, a forest, and then a pathway within 50 feet of the road have on the wildlife? Does the park service believe that every portion of the park must be accessible by bicycle? Why not consider the banning of bicycles from the Moose-Wilson?

Alternatives B, C, and D all suggest that visitors could select alternative routes in place of travel on the Moose-Wilson. There is one alternative route available for visitors wishing to see Grand Teton National Park and that is traveling back through Jackson. The park service could request Teton County to consider the paving of Spring Gulch Road to improve access to highway 89 at Gros Ventre junction. Visitors not wishing to see this park can travel through Idaho and arrive at West Yellowstone.

Summary

1. None of the proposed alternative will solve the issues of the Moose-Wilson. A blend of alternatives B,C, and D could be helpful.
2. The unpaved portion of the Moose-Wilson should be paved. Maintenance costs for maintaining the unpaved portion are too high and the results too short lived. Closing the road for 48 hours during the busy season upsets both visitors and locals.
3. Maintain the ban on buses, large trucks, RVs and trailers. Consider banning pick up trucks with camper shells installed.
4. People with valid park passes have an expectation of using the road when they desire. Do not attempt to implement a reservation system, queuing, or selective road closures.
5. Coordinate the placement of the Moose Entrance Station and the location of the Moose-Wilson road junction with the Teton Park Road.
6. Do not build a pathway along the Moose-Wilson. Not all parts of the park require bicycle access. Environmental damage too great for the proposed benefit for a few bike riders.

7. Warning signs are easily missed or ignored by visitors. Do not rely on signs to solve problems.

8. Consider making improvements at Death and Granite Canyons.

Thanks for considering my comments.

Jim Kleine

Dear Rangers,

I urge you to preserve the historic Moose-Wilson Road that many of us treasure as a choice place to view moose, bears and beavers. My suggestion is that we make the road a one way road in the section that runs by the ponds, for that is a bit dangerous at times.

My idea is to make use of the road the homesteaders had starting at the Saw Miff Ponds running south along the bench. This would provide a second scenic drive with a lot of room for pull-outs so people could enjoy the beautiful views below. Many people are not aware of this area because they do not take the time to park their cars and walk. This road loops back to the original road after a short distance, but it would take some pressure off of the most dangerous place to have traffic jams.

Thank you for hosting the open house on August 28th and for the opportunity to express our opinions.

Sincerely,

[REDACTED]

Dear Superintendent Vela,

I would be appalled if any changes were made to the dirt portion of the Moose-Wilson road. This is a protected area within the national park. The riparian section of the road is a wonderful and most common spot to see the Great Gray Owl for people in the park. There have already been numbers of road killed moose and other wildlife at the slow speeds on the road already. Widening the road would jeopardize other game/wildlife as well. A separate bike path would be devastating to the area as well.

Please be assured that we are not in favor of any changes to the present road travel. Perhaps better traffic monitoring would be in order. One direction for an hour, then the other for an hour, as simple as stop lights with a schedule posted for folks to plan their auto tour. Just an idea but a paved, wider road with bike path is not acceptable.

Sincerely,
Bob and Suzanne Hargis
Riverton Wyoming

To: Moose-Wilson Planning Team

As a resident of Jackson and a frequent visitor to GTNP I write to express some of my concerns and thoughts about the Moose-Wilson corridor.

This section of the park is the most at risk for over use and degradation, fragmentation and loss of it natural beauty and wildlife. There is no doubt that traffic along the corridor will continue to increase as will the desire to enjoy what it offers. As a cyclist as well as a hiker, kayaker and animal viewer in the park I am particularly concerned.

The Pathways organization is a well funded lobby pushing very hard for a separate bike path through the corridor. I am completely opposed to this idea. I think it is essential that we do not loose any of the natural habitat through any further paving or alternate roads. To my knowledge only 1% of the traffic through M-W is via bikes. That minority should be respected but not at the expense of the Park mission to conserve the scenery and the natural wildlife therein. We can provide for enjoyment of all and at the same time not impair the environment for future generation of visitors and wildlife.

I am wondering if it wouldnt be possible to maintain the road as it currently is without any further paving or extension by providing park-sponsored transit and remove individual vehicles from the road from the Rockefeller Center to the Murie Center where it currently becomes most congested. This would reduce traffic, enable people to enjoy the scenery and wildlife, and also provide a place for bicyclists to travel. This has been successfully done in the Grand Canyon, Zion and Denali. Driving to the Rockefeller Center could remain as it currently is from the S. entrance near the Village.

I think foremost it is important to remember in developing any plan that the Moose Wilson Corridor is not designed to be or should it be a major transit route. This is a vital part of Teton National Park and as such we all have an obligation to protect it.

I thank you for taking my thoughts into consideration.

Respectfully,

Emily Ambler

Re: Moose-Wilson Planning Team

Dear Grand Teton National Park:

After recently expressing our concerns with park administration, including the superintendent, at the Open House on August 28, 2014, we were encouraged by their interest in our thoughts and by their desire to gain a better understanding of horses in the park. They seemed dedicated to retaining and respecting the culture and history of the park which includes dude ranching activities, an activity that should be protected and celebrated.

In our conversation, they asked that we offer additional information in regards to the park's goal of phasing out horseback riding on the Sawmill Ponds trails and possibly other trails in the Moose Wilson corridor. If the Sawmill Pond trails were to be closed, it would prevent us from taking interpretive rides into the historical Whitegrass Ranch area, along with Sky Ranch and Trail Ranch.

These trails were previously approved for our use by park employee's Pete Armington and Jim Springer in the 80's. They reviewed these trails with us and gave us permission to use them. These trails have been in use by horseback riders for over 80 years by old and current dude ranches without creating any conflicts with other park's goals and requiring minimal park management.

We appreciate the use of these trails since it offers us access to unique and safe horseback riding trails unavailable in other parts of the park. Over the years, our ability to ride on other trails in the park has diminished. We can no longer take rides up Death Canyon, Bradley Taggart Lake, Paintbrush Canyon,

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

or Cascade Canyon due to the increase in hiker traffic and ultimately conflicts with horses. This is why the trail system in the Moose-Wilson corridor has become so valuable to us and our guests.

Currently when we take rides up to Whitegrass once a week, we use a minimal amount of current trails. A map showing the trails we use is attached.

Our guests appreciate the ability to access this area and learn from us the life of earlier dude ranch operations, fulfilling the park's goal of protecting and maintaining cultural resources such as the human history of this corridor.

What better way to fulfill the goals and desired conditions of scenery, cultural history and natural soundscapes and acoustics and self discovery than by horseback riding through these regions of the corridor. Why take these opportunities for visitors away? Horseback riding in this region is not creating additional park resource or management problems, but the trails continue to stay in excellent condition for over 80 years and are used minimally once a week during 4 months of the year by the R Lazy S Ranch.

Please don't continue the perceived track of eliminating horseback trails while creating additional bicycle pathways. We, and all our visitors would hate to see this historical use disappear.

Kelly and Nancy Stirn
R Lazy S Ranch

Topic Question 2:

a bike path requiring removal of thousands of trees for a few months of bike use is not very sensible. The Jackson area is well bike-pathed, this beautiful spot doesn't need more asphalt. Not to mention it will either drive away the wildlife many use the road to see, or worse yet, close-up conflicts with bikers and said wildlife. Let's leave things as they are.

Blocking horse trails in the Sawmill Pond area is another ill-thought out idea. The heritage of the area is unique, why is everyone so eager to eliminate riding? It's a huge part of why many of us return year after year to the area. That area has great trails where there are few hikers, a great "wilderness" experience. Please leave it to enjoy with our equine companions.

Topic Question 1:

Please complete the 7 mile gap in the 30 mile grand loop around Grand Teton National Park for a complete, safe pathway system. Please implement Alternative D. So many people would love to bicycle or walk in our national parks, if it were safer. Please make it easier for us!!

Topic Question 2:

Gates and closures (Alternatives B and C) don't work. Gates and closures shift or increase the number of motor vehicle trips area wide. For visitors and locals alike under Alternatives B or C to get from the Westbank to Moose and back will be a 50-mile round-trip instead of 7 direct miles that could be experienced on foot, bike, transit or vehicle. Instead, we can help the National Park Service by innovating real solutions that a good for the environment - like multi-modal transportation and smart transit.

The negative impact of shifted or increased traffic is bad for the environment and bad for wildlife that lives outside the corridor, especially along area highways, including the main National Park route, which will inevitably see more traffic and wildlife collisions from cars re-routing from road closures to get to the Park's entrance in Moose. The Moose-Wilson Road has no wildlife fatalities because it is wonderfully slow, narrow and rural - and should be kept that way with fewer cars, smart visitor transit and a pathway.

Topic Question 3:

A separate Moose-Wilson pathway is a safety need, not a want, and it is imperative for the Preferred Alternative. It can be placed in an environmentally sensitive way to minimize impacts and close a dangerous gap, which will be even more apparent when the pathway from Jackson to Teton Village is complete by 2015.

Please add public transit and commit the National Park Service to a community partnership as a way to reduce traffic congestion even more in the future.

No action (Alternative A) is not the right solution because it does nothing to help wildlife by reducing traffic levels or manage traffic flow with adaptive strategies.

Decreasing the increased traffic volumes for the long term is the Park's objective and that is possible only with Alternative D, which uses thoughtful, safer ways to get people out of vehicles and into the outdoors. Ask for Alternative D to help make meaningful traffic reductions and adaptations so that wildlife can thrive and visitors can have access to their national park.

Topic Question 4:

I suggest you create bicycle pathways in ALL national parks.

Topic Question 1:
Having a business related to tourism and choosing to live near the GT national park PROVIDE TO ANGLES TO SHARE perspective from 1. As owner of apex real estate and property. Management I can tell you the increased amount if visitors who come for cycling. What an beautiful clean and healthy way to travel and see the park from the fresh air of your bike. As a father of young children and having been hot by a car on hwy 89 near elk refuge 3 years ago. I can attest for the need for safer routes.

Topic Question 2:

The pathway described in Alternate D is disturbing in that it would require considerable clearing of natural ground and vegetation that might disturb natural wildlife with its presence may present an obstacle to natural wildlife movement. Bicycles and Pedestrian traffic don't mix very well. I'd rather mix Horse traffic and Pedestrian traffic if I were the guy on foot.

Not sure why Alternate B & C remove commercial horseback riding on sawmill road. It would seem Horseback tours would allow for safer activity in relation to the increase of bear activity and would be of less impact on the natural environment since the trails are already used by wildlife and do not require upkeep. Horseback access is also available when the trails are wet or dry which would allow almost certain access for those of us that have specific travel plans that cannot be altered. That is also a reason that the closing of certain trails a couple days a week will be difficult to plan a vacation around, especially if there is bad weather during the time of the vacation.

Topic Question 3:

I would include horseback riding in all efforts to make the park accessible to all visitors. It allows folks that can't make the walk into the park on foot the only method to see the real beauty of the area and it helps ensure the safety of the visitor by being in a group, often with an experienced guide, on a big animal larger than most bears. The environmental impact is no more than an Antelope herd using the same trail

Topic Question 1:
Alternative D.

Comments: I am 66 years old and retired and I love cycling (road). I look for opportunities where there are cycling events or cycling paths where I can plan and ride on my own. This always means several over nite stays in a hotel as well as meals, not to mention the \$\$\$ my wife spends while shopping while I am on the bike there are literally thousands of other cyclist like me. I think any area that has the opportunity to promote paved bicycle paths (especially in scenic and natural vacation areas) should maximize their efforts. In time this will be an economic boost. With such paths the community can promote cycling events which will always bring "out of towners" to hotels and restaurants and gas stations.

Topic Question 1:

Alternative D. I like the idea of having a separate pathway away from the road and I think it's important to keep the road accessible to vehicles everyday, all day, in both directions.

Topic Question 2:

A,B, and C. They are all non-starters, and don't solve existing problems. One way traffic, no. Closed road, no. Doing nothing, no.

Topic Question 3:

Keep the pathway near the existing road for safety reasons and minimal disruption to wildlife.

Topic Question 4:

Make sure engineering is done efficiently and correctly the first time around so typical pathway cost overruns do not occur.

Topic Question 1:
Alternative D is the best solution. The road is overcrowded with cars, providing a path will encourage people to ride a bike or walk instead of driving. Leaving the road unpaved and managing the traffic will minimize auto use and further encourage walking or riding a bike. It is imperative to keep Death Canyon accessible in the winter.

Topic Question 2:
Paving the road only encourages people to use there automobiles to access this part of the park. People should be encouraged to get out of their cars.

Topic Question 2:

I do not believe that a bikeway thru the Moose-Wilson Road is needed nor appropriate for that area. I do use bike paths for cycling. For the past 11 years I have experienced this area on horseback, thanks to the R Lazy S ranch. I can't put into words what a unique experience this is and continues to be. To destroy tress and disturb the wildlife is so uncalled for especially as such a small percentage of the park visitors utilize the bike paths. Government money could certainly be spent elsewhere. I also strongly support that commercial horseback riding continue within the park. I am somewhat of a senior citizen and have traveled. My experience of riding along these trails ranks as one of the top experiences during my lifetime. Each time I go I am able to be an observer of nature that has not been affected by mankind. I do not normally ride horses so the trails within the park give me a unique opportunity to do so, Unfortunately, this type of place is becoming more scare as the government tries to "improve" what is already there. Please, do not move forward with the Moose-Wilson bike path. And continue to allow commercial horseback riding within the parks.

Topic Question 1:

I belief Teton Park should maintain the status quo and not upset the "apple cart".

Topic Question 2:

Please dispense with the plan to build a bike path along Moose-Wilson road. The park has an abundance of bike trails. Bringing additional bicycle traffic into the area will mean the destruction of trees, habitat and increased conflict between wildlife, man and riding horses.

Please do not limit horse trail access to Sawmill Pond. These trails and areas have a historical connection to the ranches of Jackson Hole who bring visitors to experience the park in ways others do not. This area offers access to unique and safe horseback riding trails unavailable in other parts of the park.

Topic Question 3:

Holding the status quo of the park and its relationship to current users is the necessary and correct strategy. The park facilitates an abundant economic engine that fuels the economy of ranchers and other stake holders.

Topic Question 4:

Thank you for your time

Robert Thomas

Topic Question 4:

My family and I have collectively been coming to Jackson Hole for, collectively, more than 50 years. We stay at a dude ranch where we enjoy horseback riding on the trails. I do not see a need for a change for the following reasons:

No bicycle pathway on the Moose-Wilson Road

It would destroy over 3000 trees in a very pristine historical wooded area.

Increases the potential for wildlife and horseback rider conflicts.

With only 3% of park users currently using the bicycle paths, we just don't see the benefit of such a large and disturbing project.

Do not close commercial horseback riding on the Sawmill Pond Trails

It is one of the most unique areas of the park that allows this activity without causing any conflicts with other parks goals. It has also been an activity that has been historically used in this area for over 90 years with minimal conflicts and requiring minimal park management.

Why is the park attempting to eliminate historical horseback trails that have been previously approved for commercial use?

This area offers access to unique and safe horseback riding trails unavailable in other parts of the park.

These trails are used to access the historical Whitegrass Ranch area, along with Sky Ranch and Trail Ranch.

By taking interpretive rides through these historical ranches, we help reach a parks goal to Protect and maintain cultural resources as important links to the human history of the Moose- Wilson corridor, including historical and archeological sites, cultural landscapes, and ethnographic resources.

Thank you for your consideration.

Topic Question 1:
There should be a separate bike/pedestrian path adjacent to the Wilson/Moose road.

Topic Question 2:
Keeping things the same is not a good alternative.

Comments: I rode the Wilson/Moose road during the third week of August this year. It was a beautiful ride. EXCEPT.... The gravel section was very rough and the traffic was less than courteous about sharing the road. At one point several vehicles came within a hair's breath of our riders as they tried to keep going with two vehicles with oncoming traffic and a cyclist. It is too narrow. Most courteous drivers would allow one vehicle to pass the cyclist and then the other vehicle would go, but this did not happen - numerous times.

Superintendent David Vela
Grand Teton National Park
P.O. Drawer 170
Moose, WY 83012

Dear Sir:

We thought the meeting with park planners on August 28, was a welcome opportunity to talk with them and see how they approached the Moose-Wilson task. The young man we talked with believed it was a problem of achieving a balance between public use and wildlife.

If this were true, we might agree with the planners but it is not. From the earliest days of the National Park Service the agency's marching orders from the Secretary of Interior (Franklin K. Lane) insisted that the national parks must be maintained absolutely unimpaired for the benefit of future generations. Every activity of the Service is subordinate to the duties imposed upon it to faithfully preserve the parks for posterity in essentially their natural state.

Relocating roads to restore natural habitats benefits wildlife but building bike paths and encouraging two-way travel, as proposed in some of these alternatives, does not.

In light of the broad national interest in this issue, we believe you should extend the comment period to at least mid November, 2014.

Sincerely,

John and Edna Good

Topic Question 1:

There were a number of strategies in alternative B and D that I felt should be carried forward. Alternative 1, no change, should not be chosen. The strategies I think will best meet the goals are:

1. Realign the road to avoid the sensitive wetlands area. This is critical for the protection of wildlife and sensitive plants.
2. Move the parking for the Death Canyon Trailhead as close to the Moose Wilson road as possible (alternative B). The heavy traffic on the current dirt road is unnecessary. Move the parking lot close to the main corridor, and visitors can enjoy an extra mile of hiking through a beautiful area. There are shorter hikes from the Lawrence Rockefeller Preserve for visitors that are not able to complete the longer hike.
3. Pave the unpaved section of the Moose Wilson corridor. While the unpaved section slows down traffic, it creates a lot of dust, and dust abatement has consequences for the environment. If making the corridor more accessible for travelers on foot or bike (and I think this should be a primary goal), the road needs to be paved. The unpaved road is unsafe for cyclists and the dust makes bicycle travel unenjoyable.
4. Separate foot path. This would be amazing. The more people we have enjoying the park on foot or bicycle, the less traffic we have through the park.
5. Setting limits on vehicular travel. Either limiting days or limiting numbers works for me. I could see this taking a lot of resources, or becoming too competitive among tour groups, but something needs to happen.
6. Groom the road for xc skiing in winter. I guide xc ski tours from Granite Canyon through Jackson Hole Mountain Resort. Most of my clients have never xc skied before. While a more advanced skier can break trail and ski on ungroomed areas, this is EXTREMELY difficult for a beginner. To keep access to the park available to non-skiers or beginner skiers in the winter (which is the majority of people visiting from outside of Jackson), we need a groomed road where visitors can learn how to ski before trying more

difficult trails. Without a groomed path, winter access will be limited to local skiers.

Topic Question 2:

I think alternatives that don't involve moving the wetlands section of the road should be thrown out. I also think alternatives that involve improving the road access to the Death Canyon trailhead create unnecessary roads in the park. The trail should be extended, and parking should be along the main corridor.

Topic Question 1:

Alternative D with a separate bike/ped pathway is by far the best option. This is an extraordinary corridor which would benefit greatly by having more people experience it in a safe non-motorized way. The addition of the pathway will encourage more people to get out of their cars which is good for everyone and the environment.

Topic Question 2:

Simply closing the corridor would be a mistake and not help in the over goal of decreasing the damage caused by motor vehicle traffic in the region

Topic Question 3:

Whenever possible, include safe and inviting bike/ped facilities to encourage more people to get out of their cars.

Correspondence Text

Topic Question 1:

I support Alternative D as a preferred, positive option because it reduces overall traffic in a way that is essential to preserving the Moose-Wilson corridor's unique values, benefits area wildlife with fewer cars, and encourages diverse access for safely enjoying the corridor outside of the car.

Gates and closures are bad solutions to traffic management. Instead, inspire and enable more 10-30 percent of visitors to use bikes, feet or transit.

Park values are best protected under Alternative D, which recognizes that wildlife and park visitors can be thoughtfully managed together, the essence of National Park visitation. Under Alternative D, visitors experience this part of Grand Teton National Park in a way that is respectful of natural resources, informative, inspiring, and safe.

Alternative D enhances the visitor experience in an environmentally responsible way - providing public access with reduced traffic impacts to wildlife, smart public transit and greater safety for the non-vehicular public on a needed pathway.

Topic Question 2:

Gates and closures (Alternatives B and C) don't work. Gates and closures shift or increase the number of vehicle trips area wide. For visitors and locals alike under Alternatives B or C to get from the Westbank to Moose and back will be a 50-mile round-trip instead of 7 direct miles that could be experienced on foot, bike, transit or vehicle. Instead, we can help the National Park Service by innovating real solutions that a good for the environment - like multi-modal transportation and smart transit.

The negative impact of shifted or increased traffic is bad for the environment and bad for wildlife that lives outside the corridor, especially along area roads like 390, 22 and 89, which will inevitably see more

traffic and potential wildlife collisions from cars re-routing from road closures to get to the Park's entrance in Moose. The Moose-Wilson Road has no wildlife fatalities because it is wonderfully slow, narrow and rural - and should be kept that way with fewer cars, smart visitor transit and a pathway.

Topic Question 3:

A separate Moose-Wilson pathway is a safety need, not a want, an imperative in any Alternative. It can be placed in an environmentally sensitive way to minimize impacts and close a dangerous gap, which will be even more apparent when the pathway from Jackson to Teton Village is complete by 2015.

Please add more public transit and partnerships as a way to reduce traffic congestion even more in the future.

No action (Alternative A) is not the right solution because it does nothing to help wildlife by reducing traffic levels or manage traffic flow with adaptive strategies.

Decreasing the increased traffic volumes for the long term is the Park's objective and that is possible only with Alternative D, which uses thoughtful, safer ways to get people out of vehicles and into the outdoors.

Topic Question 4:

Alternative D is the best solution to help make meaningful traffic reductions and adaptations so that wildlife can thrive and visitors can have access to their national park.

Topic Question 1:

I like the idea in Alternative B for the Death Canyon Trailhead - why not pull the road end back? I do not see it addressed in the latest email

Topic Question 2:

Reservations and restricted use sounds difficult to manage and frustrating for users

Topic Question 3:

Public transit should be included. Why not? All these people that need to get from the Village to the Park - what are they doing and where are they going? Also, I think many people just like to drive the road to look for animals - maybe have a bus that drives back and forth and stops at each turn out during peak times. Not sure how LSR handles non-driving people - parking there is controlled, I assume, to control the crowds on the trails. So that would have to be addressed.

Topic Question 4:

Bikers not in road (many prefer road to pathway). Bikers follow speed limits.

Topic Question 1:

I believe the strategies needed to be carried forward to best achieve the purpose of the Moose Wilson Road should be Alternative D. In order to create a safe environment for the users of the road, both motorist and non motorists alike, there needs to be open access with a path for non motorized users. Biking and walking are becoming ever more popular ways to see and utilize our parks. This is made evident by the enormous use of the paths already in the park. We should encourage that with a safe way to get to the other existing pathways. Currently that road is totally unsafe for both motorized and non motorized uses and sharing of the road will only lead to accidents and deaths between the two different users. Why try and halt that by not moving forward with continued access and adding more ways in which to see the park?

Topic Question 2:

Any of the alternatives are terrible ideas. To close the road, to restrict access, to stem the amount of traffic will severely impair use of the park. The park is for the people to use, and to restrict access unnecessarily seems counterintuitive.

Topic Question 3:

Paving the existing road & creating a path should be the way in which the park proceeds.

Topic Question 4:

It is my opinion that our parks should adapt and change to the current environment and needs of it's users. If folks want continued access like they have enjoyed historically & should continue to enjoy, then that is the way the park should go forward. If there is a movement for more active participation through

biking, walking and hiking, then the park should not try and go backwards and not allow safe passage.

Topic Question 1:

I support Alternative D for a lot of reason. It reduces traffic in a way that is thoroughly in keeping with preserving the Moose-Wilson corridor's unique values, helps area wildlife by allowing for fewer cars, and encourages diverse access for safely enjoying the corridor outside of the car. Gates and closures don't seem a realistic solution to traffic management - - they are draconian and behind the times. We should be encourage the true owners of the park - - the visitors - - to use bikes, feet or transit, and make it easy for them.

Park values are best protected under Alternative D, which recognizes that wildlife and park visitors can be thoughtfully managed together, the essence of National Park visitation. Under Alternative D, visitors experience this part of Grand Teton National Park in a way that is respectful of natural resources, informative, inspiring, and safe.

Alternative D enhances the visitor experience in an environmentally responsible way - providing public access with reduced traffic impacts to wildlife, smart public transit and greater safety for the non-vehicular public on a needed pathway.

Topic Question 2:

Gates and closures (Alternatives B and C) are a terrible idea and don't work. Gates and closures shift or increase the number of vehicle trips throughout the area. For visitors and locals alike under Alternatives B or C to get from the Westbank to Moose and back will be a 50-mile round-trip instead of 7 direct miles

that could be experienced on foot, bike, transit or vehicle. Instead, we can help the National Park Service by innovating real solutions that a good for the environment - like multi-modal transportation and smart transit.

The negative impact of shifted or increased traffic is bad for the environment and bad for wildlife that lives outside the corridor, especially along area roads like 390, 22 and 89, which will inevitably see more traffic and potential wildlife collisions from cars re-routing from road closures to get to the Park's entrance in Moose. The Moose-Wilson Road has no wildlife fatalities because it is wonderfully slow, narrow and rural - and should be kept that way with fewer cars, smart visitor transit and a pathway.

Topic Question 3:

A separate Moose-Wilson pathway is a safety need. Period. It's not a "good for." It can be placed in an environmentally sensitive way to minimize impacts and close a dangerous gap, which will be even more apparent when the pathway from Jackson to Teton Village is complete by 2015.

Please add more public transit and partnerships as a way to reduce traffic congestion even more in the future.

No action (Alternative A) is not the right solution because it does nothing to help wildlife by reducing traffic levels or manage traffic flow with adaptive strategies.

Decreasing the increased traffic volumes for the long term is the Park's objective and that is possible only with Alternative D, which uses thoughtful, safer ways to get people out of vehicles and into the outdoors. Ask for Alternative D to help make meaningful traffic reductions and adaptations so that wildlife can thrive and visitors can have access to their national park.

Topic Question 4:

The Park needs to keep looking to the future and understand how people want to experience their Park. Alternatives B and C smack of arrogance that the Park Service knows what's best for people and Park - - and it seems like their solution is to have fewer people or cause them inconvenience / put their safety at risk.

Topic Question 2:

I am most concerned about bicycle paths along the Moose Wilson Road. The Jackson Hole area and Teton Mountains have a long history of horseback riding.

The ranches in the area and the guest ranches have supported this area and made sure it would stay as beautiful for all to enjoy.

Our entire family began to visit the Whitegrass Ranch as guests and our children grew up enjoying and appreciating being able to discover the beauty of the West and the Tetons on horseback. We continue to return every summer and Fall, to ride. We are concerned that this bicycle path will limit riding in areas around Whitegrass and Moose Pond. We have brought grandchildren out to ride where their parents, as children, rode and jumped from The Rock at Phelps Lake. Please retain the history and the ability for the people to have a taste of the Mountains from horseback. The History is long!!

Topic Question 1:

We support Alternative D as a preferred, positive option because it reduces overall traffic in a way that is essential to preserving the Moose-Wilson corridor's unique values while decreasing the number of cars, which is a great benefit to the local area wildlife. It also would encourage diverse access for people to safely enjoy the corridor and the outdoors outside of a car.

We don't see gates and closures as an adequate solution to traffic management, when there is an opportunity to, instead, inspire and enable a shift of 10-30 percent of visitors to use bikes, walking or transit to experience all that the park has to offer.

Park values are best protected under Alternative D, which recognizes that wildlife and park visitors can be thoughtfully managed together, which is the essence of National Park visitation. Under Alternative D, visitors experience this part of Grand Teton National Park in a way that is respectful of natural resources, informative, inspiring, and safe.

Alternative D enhances the visitor experience in an environmentally responsible way by providing public access with reduced traffic impacts to wildlife, smart public transit and greater safety for the non-vehicular public on a needed pathway.

In addition to the implications it would have on the environment within the park, this safety and increased ridership will also have an impact on the recreational economy in surrounding communities. PeopleForBikes represents bicycle retailers and suppliers throughout the country, and the economic

benefits to local areas that allow responsible access to bicycles and pedestrians are strong.

Topic Question 2:

Gates and closures (Alternatives B and C) don't work, they simply shift or increase the number of motor vehicle trips area-wide. For visitors and locals alike, under Alternatives B or C to get from the Westbank to Moose and back will be a 50-mile round-trip instead of 7 direct miles that could be experienced on foot, bike, transit, or vehicle. Instead, we can help the National Park Service by innovating real solutions that are good for the environment - like multi-modal transportation and smart transit.

The negative impact of shifted or increased traffic is bad for the environment and bad for wildlife that lives outside the corridor, especially along area highways, including the main National Park route, which will inevitably see more traffic and wildlife collisions from cars re-routing from road closures to get to the Park's entrance in Moose. The Moose-Wilson Road has no wildlife fatalities because it is wonderfully slow, narrow and rural - and should be kept that way with fewer cars, smart visitor transit and a pathway.

Topic Question 3:

A separate Moose-Wilson pathway is a safety need, not a want, and it is imperative for the Preferred Alternative. It can be placed in an environmentally sensitive way to minimize impacts and close a dangerous gap, which will be even more apparent when the pathway from Jackson to Teton Village is complete by 2015.

Please add public transit and commit the National Park Service to a community partnership as a way to reduce traffic congestion even more in the future.

No action (Alternative A) is not the right solution because it does nothing to help wildlife by reducing traffic levels or manage traffic flow with adaptive strategies.

Decreasing the increased traffic volumes for the long term is the Park's objective and that is possible only with Alternative D, which uses thoughtful, safer ways to get people out of their vehicles and into the outdoors.

Topic Question 4:

We ask for Alternative D to help make meaningful traffic reductions and adaptations so that wildlife can thrive and visitors can have access to their national park.

Comments: Thank you for the opportunity to comment on the Grand Teton National Park Moose-Wilson Road and Pathway. From our answers to the above questions, it is clear that we favor a multi-modal approach to the Moose-Wilson Road and Pathway, because we know that diverse access has positive environmental, experiential and economic outcomes.

PeopleForBikes is an organization with 850,000 members and is dedicated to improving each bike ride across the United States. We see better, shared access to Grand Teton National Park as a way that more people-both local folks and visitors-can experience the beauty and wonder of the outdoors. By opening access, eschewing gates and closures, and building a pathway, we will be able to shift the mode share so that more people are exploring the park by bike, on foot and with transit.

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

Additionally, access and trail infrastructure supports the local economies. As an organization that represents an array of bicycle businesses, including retailers, suppliers and manufacturers, we know that increased access has a positive effect on the communities that surround good bicycle and pedestrian facilities. We represent 1,300 bicycle suppliers and retailers nationwide, of which five are in Wyoming, five are in Idaho, and five are in Montana. All bicycle tourism and recreational businesses in the area would benefit greatly from increased access and a pathway in the park.

We hope that you will take our comments into consideration when you are making your decision and we ask that you look to us as a resource should you have any questions regarding bicycle access and pathways. Thank you for your consideration and the opportunity to comment on this and we hope that you will move forward with Alternative D.

Topic Question 1:

I am in favor of creating a bike path/ pedestrian walkway along the Moose Wilson Road, and also closing it to vehicular traffic two days a week. I would also like to see the unpaved portion be paved to correct the constant, dangerous potholes that we are all forced to contend with.

The last three times I have been on the road, drivers were being forced to go right down the middle, and weave constantly in order to avoid the deep potholes everywhere. someone is going to get badly hurt if it isn't fixed. The temporary grading that they do every summer does not even last a week, and in my opinion is a complete waste of taxpayer dollars. It also is not safe for bikers and pedestrians.

Topic Question 2:

I do not think the road should be closed, as it would force everyone on the west bank to have to go all of the way through town and around to get into the park, and traffic congestion in town is already a nightmare. it would only make it worse.

I do not think the road should be diverted completely, as it would probably be cost prohibitive.

Topic Question 3:

I would suggest definitely doing a bike path, leaving the road open, but restricting it for quiet, bike and pedestrian use only 2-3 days per week.

Topic Question 4:

I would increase enforcement of illegal parking in the road for those who leave their vehicles abandoned

in the road while they wander around looking at moose. They should be ticketed.

I would also suggest creating a parking area by the entrance to the Park, where those wishing to could leave their cars, and walk in to enjoy the road, instead of illegally parking their cars in the middle of the road and causing back ups and congestion.

Topic Question 1:

All of the proposed strategies in the preliminary alternatives appear to meet the purpose and need of the corridor plan. I think a thorough analyses of how the different strategies would impact the natural resources & wildlife will allow us to make more informed choices about how we protect park resources.

Topic Question 2:

I believe the most critical management issue confronting the corridor is the increasing human impact in the area, mostly from vehicle traffic. The park must minimize any additional impacts on the corridor by maximizing the use of existing assets so that traffic is reduced.

Topic Question 3:

Again, traffic is the single biggest human impact on the Moose-Wilson Corridor. I think the park should think about more aggressive ways to reduce vehicle traffic flow through the corridor. Maybe by redesigning and re-engineering the road in a manner that would physically limit vehicle speeds to under 15 mph it might discourage transportation related trips through the corridor. Also, maybe the park could explore additional public transit opportunities, like using some type of interpretive tour/transit system that allows people to learn about and experience the corridor while not having to drive a vehicle. I think this would be especially helpful during the high season.

Topic Question 4:

I recognize and appreciate the challenge facing the park in meeting the demands of diverse interests. The park must manage the corridor to meet its stated and legal mandate: protect critical park resources (especially the wildlife) while also making it easy and safe for people to visit and experience this unique

corridor with minimal impacts to park resources. The Moose-Wilson Road is not a county transportation corridor. It is not the park's job to manage county transportation needs.

Comments: Thank you for the opportunity to comment on Grand Teton National Park's Moose-Wilson Corridor Comprehensive Management Plan preliminary alternatives.

I have lived here for 25 years. My husband and I love visiting the MWC, and we do so every mid to late September or early October especially to hear the elk bugle. We have been honored to see elk, moose, black & grizzly bears, owls, woodpeckers to name just a few. We also like to visit the corridor at that time of year because there is not much traffic.

My main concerns are these:

- 1) Please, more than anything else the safety of the wildlife must come first.
- 2) Please do not change the road in any way if it will negatively effect the wildlife.
- 3) Please do change the road only if it's in regards to slowing cars down. The worst offenders of going way to fast through the corridor are county 22 drivers.
- 4) This road is not, nor should it be a transportation corridor. This road should only take drivers on a leisurely drive so that they get to experience all of the beauty this corridor has to offer.
- 5) I am also concerned about a dedicated bike path through the corridor because of the potential human-animal conflict. I also feel that the biking community has quite a bit of pathways in other beautiful areas of the valley.
- 6) I think that an interpretive type of transit would work well in the high season summer months. People from out of the area could then relax and look for wildlife, and not try to look and drive at the same time. I have seen many accidents almost happen, as well as some road rage because of this.

Again, thank you for this opportunity to comment. I wish you all the best in making your decision.

Topic Question 1:

Option D should be carried forward. Just the shorter distance alone reduces the environmental impact of the project. The shorter run coupled with multi-modal transit reduces the amount of vehicles and the air/noise pollution created by them. Natural gas or L.P. mass transit vehicles offer another clean air option. Having a pathway for hikers and bicyclists just makes good sense. Those who would opt to bicycle or walk the pathway should have a safe (if not buffered) trail. It would serve to protect them and also provide safe lanes for unimpeded traffic. As time goes by, more people can/will be encouraged to use alternative modes of transportation for their recreational needs.

Topic Question 2:

Plan A - Doing nothing is not an option if you are truly concerned about the preservation of the National Parks.
Plans B & C seem like viable options however, the longer route created by closures and fencing will tend to keep vehicles on the road for a longer time thus consuming more fuels and creating more exhausts which adversely effect wildlife and their habitat. Compared to Option D, these don't seem to make sense either. I hope planners will find intelligent, forward looking/thinking ways to develop a long-term, sustainable byway which inspires the public to visit and use eco-friendly modes of transportation.

Topic Question 3:

I'm a hiker/bicyclist. The idea that there will be a pathway to get from one end to the next - free of vehicle traffic appeals to me. I can walk the trail, have lunch, and take a (modestly priced) eco-friendly bus or trolley back to the starting point. I can opt to ride my bike round trip or one-way taking multi-modal transit back to the start point (again, modestly priced). Make the Moose/Wilson road and pathway a self-

sustaining project that both locals and visitors to the park will use and appreciate.

Topic Question 4:

Please take your time and work intelligently to come up with a plan that is both safe and sustainable for all parties concerned. Thank you for the opportunity to comment on the project.

Topic Question 1:

Relocation of the north end of the Moose-Wilson Road to bypass the Moose entrance station as shown in Alternative B.

Adding a multiuse pathway which parallels the Moose-Wilson Road as shown in Alternative D.

Replacing the Moose entrance station as shown in Alternative B.

Realignment of the Moose-Wilson Road to the east as shown in Alternatives B and D. Utilizing the White Grass Road to access the Death Canyon trailhead as shown in Alternative D.

A new, larger Death Canyon parking area as shown in Alternatives C and D with restrooms as shown in Alternative D.

New roadside parking areas with wildlife viewing areas and improvement of the Sawmill Ponds parking area as shown in Alternative D and alluded to in Alternatives B, C, and D as pullouts.

New Restroom at Granite Canyon trailhead as shown in Alternative D.

Topic Question 2:

Alternative A is a non-starter it does nothing to resolve the current conflicts along the Moose-Wilson Road. This would be no better than putting lipstick on a pig.

In Alternative B the concept of dead-end roads terminating at the Laurance S. Rockefeller Preserve and the idea of a reservation system for accessing the Moose-Wilson Road (Alternative D). These approaches will create more confusion and ill will for the park which will detract from visitor experience.

Alternatives C and D show a new entrance station at the north end of the Moose-Wilson Road. Dollars spent on this would be much better spent on other improvements to the Moose-Wilson Road. Furthermore, visitors entering the park at Granite Canyon would still be forced to go through a second entrance station (Moose) in order to travel north on the Teton Park Road.

Alternative C would do little to resolve conflicts on the northern half of the Moose-Wilson Road.

Topic Question 3:

In addition to the realignment of the northern half of the Moose-Wilson Road, realign the southern half to bypass the Laurance S. Rockefeller Preserve. This rerouting might follow the proposed alignment of the multiuse pathway (Alternative D) but I would prefer to see it start further south at the north end of Poker Flats. This would make the Granite Canyon trailhead a destination area with a lot more flexibility for expanding parking, as well as, adding restrooms. This would enhance visitor experience at the Laurance S. Rockefeller Preserve since hikers would no longer have to cross the Moose-Wilson Road and would not hear vehicular traffic once they leave the parking lot which would now be accessed from the south (or east).

Topic Question 4:

Go back to the drawing board and put the best concepts together in "Alternative E"!

Designing the new road alignments for low speeds is very desirable but it won't work unless there is more aggressive enforcement. Once, in Yellowstone, I was passed by a car doing 60 to 70 miles an hour. Fortunately, a park ranger caught the speeder. On another occasion, I was driving north of Granite Canyon on the unpaved section of Moose-Wilson, doing 10 to 15 miles per hour, when a pickup left the roadway to pass me and at least four other vehicles - - he was not caught!

Comments: Several of the points I've made have been discussed many times in the past. However, these issues seemed to have been pushed aside/marginalized in the the current reassessment of the Moose-Wilson corridor. Is this willful ignorance or simply a lack of institutional memory?

Topic Question 1:

1. Relocate and replace Moose entrance station- -one location to serve both Park Moose and Moose Wilson Road (Alt. B); retain Granite Ck. Entrance Station as currently exists.
2. Improve road south providing for low-speed two-way traffic from Moose to Rockefeller Preserve only, retaining current alignment to reduce disturbance area (Alt C). Do not provide for or allow large RVs.
3. From Rockefeller Preserve south to Granite Creek keep road primitive: gravel surface but do not widen or realign; restrict hours of use to one-way north until 12 noon; south only from 12-noon until 9pm; closed daily 9pm-6am (essentially limiting thru traffic).
4. Improve parking but limit parking areas to Granite Creek, White Grass Junction, Sawmill Ponds. Minimize size and disturbance areas as proposed.
5. Minimize turn outs (Alt C).
6. Provide one connector only to White Grass and Death Canyon (Alt D).
7. Minimize disturbances and impacts, restoration of abandoned sites and roadways should be a priority.

Topic Question 2:

1. DO NOT locate bicycle (multiple-use pathway) trail along road. It would increase disturbance area and forever reduce and conflict with wildlife habitat.
2. Do Not drastically reengineer road alignments, surface area, etc.- - impacts aesthetics and wildlife habitat.
3. You don't need two entrance stations at Moose, one will do.

Topic Question 3:

Limits (one-way traffic on a section)for the daytime use of the route to thru-traffic and limit the size of recreation vehicles (see above).

Public transportation (small bus) - - morning and evening if need exists for commuters (with stops at trail heads and Rockefeller Preserve). This scheduled small bus would run from Craig Thomas Center to Rockefeller Preserve, South Granite Entrance,and return. The idea would be to LIMIT traffic use and congestion and preserve aesthetic experience, habitat, and natural features.

Topic Question 4:

The first priority should be to design and limit improvements to minimize impacts to aesthetics and protect wildlife habitat and use.

Improvements that encourage more and higher-speed traffic, through traffic, and commuters, etc. should not be considered.

This should remain a "quiet" section of the Park, emphasizing trail head access, site viewing and interpretation (Rockfellar Preserve, White Grass, Murie Center), wildlife and natural habitat preservation. It should NOT become a through short-cut hiway for commuters, a designed urban bicycle path, or a drive-through area for motorized recreation.

I'm a cyclist but I feel a "multi-use pathway" for this area is contrary to NP objectives for protecting habitat and natural features. There are plenty of cycling opportunities already.

Topic Question 1:

Alternative D as a preferred, positive option because it reduces overall traffic in a way that is essential to preserving the Moose-Wilson corridor's unique values, benefits area wildlife with fewer cars, and encourages diverse access for safely enjoying the corridor outside of the car. Instead, inspire and enable a shift of 10-30 percent of visitors to use bikes, walking or transit.

Topic Question 2:

Gates and closures (Alternatives B and C) don't work. Gates and closures shift or increase the number of motor vehicle trips area wide. Increased traffic increasing congestion and pollution. In addition, increased traffic is a serious threat to wildlife - road kill. Many people visit the park to see wildlife. The park is home to many animal species and to preserve that their home needs to be protected and more corridors are needed for those animals that migrate.

Topic Question 3:

A separate Moose-Wilson pathway is a safety need, not a want, and it is imperative for the Preferred Alternative. It can be placed in an environmentally sensitive way to minimize impacts and close a dangerous gap, which will be even more apparent when the pathway from Jackson to Teton Village is complete by 2015.

Please add public transit and commit the National Park Service to a community partnership as a way to reduce traffic congestion even more in the future.

Comments: National Parks are home to wildlife and that should be the basis for transportation decisions in the parks.

Topic Question 1:

I agree with strategies that try to protect the current nature and use of the park in most respects. I support improvements to the road that pave it but do not enlarge it and support a few more road turnouts because driving on the road now can be dangerous when people don't have a place to pull over and see wildlife (tho I recognize that not all wildlife will appear right at the turnouts, of course, but it still could help). I also like that the parking is reasonably limited at the Rockefeller Center and understand that due to the nature of that gift you may not be able to increase that some but it seems that the area could support more hikers and other guests so would like some increase there if possible.

Topic Question 2:

I generally support bike paths and like the path now that goes out quite far from town along the road. But we also should consider the reasonably anticipated use vs. the damage from extending it. I have heard that thousands of trees would be cut down to extend it and, as someone who uses the park mostly on horseback, am concerned about the intersection of horses and bikers (bikers often spook horses). I also understand that there aren't huge numbers of bikers who are expected to ride out that far and so think that, here, the balance should go in favor of the horses who have used the park historically and respectfully (and don't need or want pavement that is not nearly as eco-friendly as the horse trails). The dude ranches are an important and more unique use of the park than bike riders and so I request that their needs be paramount here (after those of the wild animals in the park, of course).

Topic Question 4:

Thank you for your many ideas and for taking the comments of the public and other interested parties to heart.

Comments: I have donated to the National Parks for years and so, again, appreciate the chance to comment and the work that you do protecting the parks. Thank you.

Topic Question 1:
I strongly urge you to focus on Protecting wildlife and wildlife habitat in the Moose-Wilson corridor while making it easy and safe for people to visit this unique area on foot, bicycle, or public transit.

The Moose-Wilson corridor is a special place to visit in Grand Teton National Park because of its rich wildlife habitat and abundant recreational opportunities. The National Park Service must continue to work hard to develop management options for the Moose-Wilson corridor that provide appropriate opportunities for visitors to use, experience, and enjoy the area while protecting the park's nationally significant resources.

Topic Question 4:
Protect Our Public lands, waters, wildlife, health , ecosystem balance & future, for all present & future generations of all species!
Thank you
Lydai Garvey Public health Nurse

Topic Question 1:

I do not think that any of the preliminary alternatives should be adopted.

Topic Question 2:

I do not think that any of the preliminary alternatives should be adopted.

Topic Question 3:

I do not think that any of the preliminary alternatives should be adopted.

Topic Question 4:

I believe that the road should be one-way. This was the plan that the Park came up with in 2012 after much consideration. It was the right thing to do then and it is the right thing to do now. It was only after the public outcry as well as the pressure from Mike Enzi and Cynthia Lummis that the Park decided not to adopt the one-way plan. You are not in the business of doing what is popular. Your business is to "protect the land for future generations". You must - please - protect us from ourselves. A long time ago the Park had to make a similar decision regarding the road along Jenny Lake. The area was being destroyed from overuse and the road was rerouted and part of it was made one-way. People will eventually adjust. The one-way option will reduce use of the corridor without the need for continued regulation at the gate - an expensive and potentially volatile situation that would exist with the current preliminary alternatives. The one-way option would not require the Park to invest in the building of additional infrastructure. It would not cause any further destruction of the environment. Please consider the one-way option as a viable alternative. It was your first choice as a solution. It is the best choice for now and for the future.

Topic Question 1:

I support:

1. Keeping two way access to vehicles without the need for reservations and without any full day closures in order for most flexibility in visiting the park and to preserve the important ability to go in and out of the same park entrance for a visit.
2. Paving the unpaved section of the road. I do not see a down side.
3. Moving the road to the flats if this is better for wildlife.
4. Adding a bike path and some pullouts to improve safety for all.

Topic Question 2:

1. Full day closures to vehicles or making the road one way will impede one's ability to frequent and enjoy the park, also causing confusion and possible long lines of idling cars which does not help the environment. For those who live, work or who are visiting the area and staying to the west of town, requiring them to drive to Moose to enter the park on certain days or if they either did not know to make a reservation or are unable to do so again promotes unnecessary driving with a detrimental impact on the environment and the additional consumption of gasoline in addition to the inconvenience caused. A one way system causes the same problems.

Topic Question 4:

As a resident of Jackson for the past eight years and frequent user of the Moose-Wilson Road in order to access Granite Canyon, Death Canyon and the LHR Preserve, I have not had persistent problems with traffic on the Moose Wilson Road. Indeed, I often access the road between 8 and 12 noon in the summer

months and very infrequently encounter any traffic problems, if at all. If there are issues it generally is in the unpaved section due to the very uneven nature of the road. Just paving that section would have a positive impact on traffic flow.

Topic Question 1:

Please carry forward two main elements of Alternative B, especially the idea that the Moose-Wilson corridor be considered a visitor destination and the realignment of two segments at the north end.

Topic Question 2:

Alternative D should not be carried forward. The paved multiuse pathway would do unacceptable damage to the values of the park.

The principal elements of Alternative C should not be carried forward, specifically the idea of closing the road to vehicles on certain days of the week. Many visitors have only a day to see this part of the park, after traveling many hours from their homes. They would be terribly disappointed to find it closed.

Comments: We have the following comments on the Moose-Wilson corridor preliminary alternatives. I visited Grand Teton National Park and Moose some years ago as one of the hosts to an international group of visitors. Our guests, from Switzerland, greatly enjoyed the park and kept lifelong memories of that trip. Nothing should be done that would degrade the park's values or make it less natural. We oppose Alternative A (No Action) because the existing corridor and road are not capable of handling the traffic you already have on this route.

We like some aspects of Alternative B, especially the idea that the Moose-Wilson corridor should be considered primarily as a destination for visitors, implying that the natural values of the area should receive full protection. We like the idea of considering "directional" or one-way vehicle traffic if that would deter the use of this route by through-drivers who are not coming to visit the park. We also like the use of shuttle vehicles as a means of reducing traffic. Shuttles have worked well near us in Harpers Ferry

National Historical Park, and we have ridden the shuttle at Zion National Park.

Alternative C contemplates closure to vehicles two days per week. We doubt this would be workable. It could evoke confusion and hostility among the public, to the detriment of the park.

We are very much opposed to Alternative D, which envisions building a completely new paved route 7.1 miles long through natural forest that is critical habitat for grizzly bear. It also involves increasing winter uses dependent on more use of motorized equipment, including grooming a road for skiing, "snow bikes," and commercially guided ski and snowshoe tours. We favor protection of the existing uses for backcountry Nordic skiing and snowshoeing, which are more consistent with the values of the park. We favor the realignment of two places in the northern part of the road to move it out of the riparian zone. This will provide a space for people to see wildlife from a distance, without imposing as many impacts on their habitat.

We oppose the multiuse paved pathway idea, but we favor use of the existing unpaved surface by cyclists. This has worked well at C&O Canal National Historical Park, where the unpaved towpath is part of the historical setting, and it is appreciated and used by hundreds of cyclists every week.

Thank you for considering our thoughts.

Correspondence Text

Topic Question 1:

Work to achieve and maintain the seven fundamental goals and desired conditions stated in the park's plan for the Moose-Wilson Corridor. First and foremost protect the park's natural and cultural resources. Do not negatively impact this critically important wildlife habitat with increased human development or increased human activities. Make the Moose-Wilson Corridor a destination for park visitors and not a corridor for commuters and others using the road as a short cut. Accordingly work to reduce vehicle traffic by implementing traffic management tools such as one way directional traffic only (south to north) or no thru traffic such as round trips to LSR from south and return and/or round trips to LSR from Moose and return. Find ways to introduce visitor shuttles to reduce numbers of individual cars. Stage shuttles at Moose near park's primary visitor center and/or consider adding a visitor parking lot near the park's southwest entrance station.

Maintain rural, slow, nature of road on southern portion. Do not pave southern portion of road. Realign northern portion of the road to get it out of riparian and wildlife rich area, while maintaining rural character. Relocate northern terminus trailhead away from the current Murie Ranch road area and restore the entire former northern road area to a natural state.

Keep road unplowed, ungroomed throughout the late fall, winter and early spring months as it is now. The road is accessible to those who want a more backcountry experience and where they can cross-country ski, snowshoe and walk, depending on snow conditions.

Do not add additional hardened or paved turn outs with the exception of to the north end realigned road area. The park should apply design solutions to roadside parking to reduce impacts from off-road

parking.

Move Death Canyon trailhead as long as existing road is rehabilitated to a trail width beyond the new trail head and parking area.

Recommend the park prohibit commercial taxis from using this road. Implement a cap on the number of commercial road tours (wildlife viewing) and use permits or possibly contracts to regulate and manage the growing numbers of commercial tours and other commercially guided activities on this road.

Continue to allow cyclists to travel on the existing roadway as they do now. It is not the park's responsibility to build a new, intrusive paved infrastructure to accommodate a narrowly focused local group who simply prefers the separated pathways without regard for the park's extraordinary resources or the visitation by thousands of long distance visitors who seek out this corridor for wildlife viewing and hiking.

Do not remove vegetation and trees to accommodate new human activities.

Protect this entire corridor, its natural and cultural resources.

Carry forward the vision Mr. Laurance Rockefeller had when he chose to donate his private JY Ranch to the NPS. In so doing, he stipulated that the numbers of visitors needed to be kept low and provide more contemplative experiences in this fragile corridor. He capped the number of cars that could park adjacent to the JY lands in his early planning efforts for the transition to those lands coming onto the ownership of the NPS. In a ceremony in May 2001, when he announced he would donate the JY to Grand Teton National Park, then Vice President Cheney spoke at the ceremony and pledged the United States Government would honor Laurence Rockefeller's wishes precisely. Vice President Cheney's remarks and commitment are part of the official public record.

Topic Question 2:

Do not construct a separated paved pathway in this highly sensitive area of the park. Do not fragment or destroy critical wildlife habitat for all manner of species from moose, to beavers to grizzly bears and a multitude of other wildlife and birds. A separated pathway would have unacceptable impacts to park resources and values. Further, a separated pathway more than 50 feet from the existing road would result in even more direct habitat loss than if the pathway were immediately adjacent to the road. I recommend shared use of the road by bicycles and transit and reduced vehicle traffic. This would negate the need for any separate/parallel corridor.

Do not pave the road. Do not plow the road in the winter. Do not groom the road in the winter. Do not introduce commercially guided services such as guided winter activities including cross country skiing, snowshoeing or hiking or more commercial vehicle tours.

Prohibit commercial taxis using the road as a short cut to transport clients.

Do not add new hardened or paved pullouts with the exception of along the proposed north realignment.

The No action alternative does not adequately protect park resources as traffic must be reduced.

Do not consider a reservation system/vehicles per hour, and or closing the road to vehicles two days a

week. These are complex and challenging techniques to manage, are unpredictable, provide no certainty to the general park visitor as to what they may be able to experience during their visit, and could lend themselves to being manipulated by special interests and/or commercial entities.

Do not leave the winter trailhead at the north end of the current road once the north portion is realigned. The park missed this error in sections of alternatives presented and showed trailhead in present location even after road realignment.

Topic Question 3:

Introduce NPS managed shuttles with the potential of interpretive messages provided on the shuttle (whether with a person or through digital means.)

Experiment with one way vehicle traffic only beginning in May 2015 as the park had planned on doing in 2012. Do so with enough advance public notice that visitors would know what to expect.

This would inform the park and the visiting public how such a long term traffic management tool might work.

Topic Question 4:

While it is very hard in modern times to achieve an outcome without succumbing to intense political pressure, please try. The outcomes for the Moose-Wilson Corridor EIS will be far reaching, nationally precedent setting and will either carry forward the mission of the National Park Service as mandated by Congress or if the NPS succumbs to political pressures, this fragile and spectacular portion of Grand Teton National Park and the Greater Yellowstone Ecosystem will be forever lost. It is too bad the wildlife can't protest what is being heavily promoted by Friends of Pathways. The life sustaining grizzly bear habitat and presence of grizzly bears in this corridor should be enough to stop further habitat fragmentation and advancing human development. The bears and moose, and beavers and birds and all the other creatures great and small are depending on us humans to stop wrecking their homes.

Comments: Dear National Park Service Officials:

Please remember your legislative mandate- "The service thus established shall promote and regulate the use of the Federal areas known as national parks, monuments, and reservations hereinafter specified by such means and measures as conform to the fundamental purpose of the said parks, monuments, and reservations, which purpose is to conserve the scenery and the natural and historic objects and the wild life therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations."

1916 Act of Congress establishing the National Park Service.

You cannot leave the Moose-Wilson Corridor in the southwest portion of Grand Teton National Park unimpaired for future generations if you cave to the pressures to construct a separated paved pathway for a local narrow minded special interest group with powerful political connections.

Please protect this incomparable corridor, among some of the most endangered lands in the Greater Yellowstone Ecosystem.

Thank you.

Topic Question 2:

The strategies that should not be carried forward include the addition of bike paths and the phasing out of horseback riding trails on the Sawmill Pond trails. These changes would alter the native environment, increase potentially dangerous human/animal contact and add new limitations while perhaps leading to the extinction of an opportunity for future generations to appreciate the experience of observing wildlife in it's natural habitat on horseback. This most certainly would affect changes for the dude ranch "way of life" in the area as well.

Topic Question 4:

Comment: Our families have looked forward to our "reconnecting" time at the R Lazy S Ranch for the past 25 years. The "dude ranch" experience does not describe the depth with which we have all benefitted from our week or two each summer. This now includes the benefits and memories valued by children and grandchildren. It has offered us a chance to "reconnect" without electronics, learn to quietly sit back and observe wildlife, leave a less obtrusive "footprint", and appreciate multigenerational activities (reflective trail rides, tubing, baseball, swinging on the front porch). We have also benefitted from making lasting friendships with people from all over the country who return for this experience.

By continuing to alter the opportunities for variety at the ranch, many long term benefits may be overlooked.

Comments: In reference to the long term benefits that are being overlooked, I am thinking back to comments one of my children made a number of years ago. After coming to the ranch for a number of years she attended a college in Colorado (beginning her movement West). She learned her love of nature from many horseback rides in the Tetons. She worked in the summers at Dear Hill, a wilderness

experience for young students. When asked if she wasn't just taking "rich kids" out into the wilderness, her response was, "If I can teach those kids how to respect and love the wilderness, they will be the generations of the future who will be able to make sure it is respected, and protect it". I would argue that the "dude ranch" experience provides that long term effect as well. Please do not endanger this experience.

Topic Question 1:

I support Alternative D as the preferred and positive option as it reduces overall traffic which is essential to preserving the Moose-Wilson corridors unique values, benefits area wildlife with fewer cars, and encourages diverse access for safely enjoying the corridor outside of the car.

Gates and closures are not the solution to traffic management. Instead, inspire and enable more 10-30% ovisitors to use bikes, feet, or transit.

Topic Question 2:

I don't believe gates and closures (Alternatives B and C) will work. These simply shift or increase the number of vehicle trips area wide. For visitors and locals alike under Alternatives B or C to get from the Westbank to Moose and back will be a 50-mile round-trip instead of 7 direct miles that could be experienced on foot, bike, transit or vehicle. Instead, we can help the National Park Service by innovating real solutions that are good for the environment - like multi-modal transportation and smart transit.

Topic Question 3:

A separate Moose-Wilson pathway is a safety NEED, not a want, an imperative in any Alternative. It can be placed in an environmentally sensitive way to minimize impacts and close a dangerous gap, which will be even more apparent when the pathway from Jackson to Teton Village is complete by 2015.

Please add more public transit and partnerships as a way to reduce traffic congestion even more in the future.

No action (Alternative A) is not the right solution because it does nothing to help wildlife by reducing traffic levels or manage traffic flow with adaptive strategies.

Topic Question 4:

As an avid cyclist and hiker who has used the Moose-Wilson Road to access some of the most meaningful hikes in the Park (on my bike), I strongly urge you to continue implementing the original 2007 plan. The work you have completed on the rest of the trail system is an inspiring example to other parks and cities of just how valuable creating multi-transportational means is - - you can make such a difference. Please do. Thank you.

Topic Question 1:
There is no one plan I like.

Topic Question 2:
Alternative D should not be used

Comments: I wish to thank you for this opportunity to add my comments to the Moose-Wilson corridor. Improvements is always a good signed that nothing is perfect. My first concern is the amount of traffic being used. There is taxis and delivery trucks from the Airport using Moose-William corridor more convenient thruway to transport people and goods to Teton village. This must stop!

Any improvements made on this corridor should first start with a full scientific study on the effect it will have on the wildlife and the water. As a reminder what happened at Jackson hole Airport and the costly cleanup that's still going on. The Forest Service has only one chance in improving this corridor and everything should be done to be as close to 100% aossible. As to moving the road or strangling and adding a bicycle paths to this corridor, should not be considered. Improvements of such will take away the unique beauty of this corridor brings. The snake like roads slows traffic down and protects wildlife when crossing the road.

As to improving the drainage. I don't know or I have never seen any damage to the road system caused by melting snow or rain fall. That does not mean it will never happen. Only the Forest Service has that information. By not improving Moose-Wilson corridor conditions and slowing traffic speed will take care of itself. Is 100% wg. I feel I don't have enough information to make this determination. I believe Forest

Service should make this information available. Because the Forest Service is asking for public opinion. Keeping Moose-Wilson corridor wild should be the main concern of the Forest Service.

Topic Question 1:

I support most of the "on-the-ground strategies that are represented in Alternative B. These strategies include: relocation of Moose entrance station, rehabilitation of the abandon road section (north) and new road alignment away from Sawmill Ponds, modifications proposed for the Death Canyon Trailhead with the exception that the new parking lot being designed only for 30 vehicles rather than 60 (will address in Question 3 section), retain LSR parking lot as is and retain Granite Canyon Trailhead Parking as is and finally improve the unpaved section to a higher quality gravel road.

Topic Question 2:

1) I am apposed to a separate multi-use pathway because it will greatly change the eco-system of the corridor, A new pathway will conflict and result in a serious safety issue for people and wildlife (moose, grizzly and black bears) and will require the modification of hundreds of acres of natural vegetation, trees and important wildlife habitat that will create, in the end, two parrallel paved roads running through the heart of this entire corridor. A new entrance station on north end of Moose/Wilson should not be built (will address in Question 3 section). 2) I oppose paving the final unpaved section of the Moose/Wilson Road. 3) Strategies involving limiting traffic at peak periods will not be needed with my proposal (detailed in Question 3 section). 4) Pull-outs should be reduced by 50% fom those shown on Alternative B (will address in Question 3 section).

Topic Question 3:

YES! My proposal is to institute a free modern, efficient and environmentally (natural gas etc.), shuttle bus system that would begin in the vicinity of the Craig Thomas Visitor Center parking area (north end of Moose/Wilson Road and terminate in the vicinity of the south entrance station (parking area would have

to be built in this location). Shuttle busses would operate seven days a week beginning May 15th to October 15th annually. Busses would run beginning at 8am to 7pm daily. Public vehicles would still be able to drive to and from the Granite Canyon Trailhead anytime. Public vehicles would be permitted to drive the entire Moose/Wilson road through the corridor from 7:30 pm to 7:30am daily throughout the annual season of use.

Topic Question 4:

The shuttle bus alternative is now widely used in many other national parks faced with rising traffic issues. In many places it has been a great success and a solution that the public has clearly accepted. This shuttle bus system would allow the public to move easily through the entire corridor and be able to relax and safely enjoy the scenery and wildlife viewing. This system would also facilitate the public with reaching the LSR, Death Canyon TH, Granite Canyon TH and both ends of the corridor. Moving forward a shuttle bus system could connect the visitor center location to the Jenny Lake area making traveling between Teton Village and Jenny Lake a seamless and relaxing way to enjoy the south end of the park and reduce the use of thousands of vehicles in the same area, on a daily basis. With little traffic along the corridor throughout day light hours bicycles may still use the existing corridor and safety will be much increased with only shuttle busses utilizing the corridor road (during times of increased (fall) grizzly bear activity the corridor may be closed to bicycling when necessary to protect the public and wildlife).

Comments: Please do not bend to local public and political pressures to develop Grand Teton National Park into a "County Park". The national parks are for the benefit and enjoyment of all americans and protecting what relatively small areas of wild places and areas where wildlife such as moose and grizzly bears can not only exist but thrive are far too few in today's world. Please consider utilizing a free public transit system to solve the growing traffic and public use issues for the Moose/Wilson Road Corridor. I truly believe that if this method is used the majority of the public both, now and especially in the future will commend your vision and wisdom in responsibly protecting this valuable section of Grand Teton National Park.

Topic Question 1:

1. All suggestions concerning Death Canyon improvements contained in Plan D should be adopted. Preserves environment & does not change existing trailhead (we especially enjoy Death Canyon trail as a day hike, but adding extra distance can limit access to the over age 50 crowd).
2. "Define & delineate existing turnouts & parking areas", & add "design features to prevent stopping outside turnouts" in Plan C seems like good idea to avoid environmental damage.
3. Maintaining, but improving unpaved section seems best to preserve current character of road.
4. Improve Sawmill Ponds parking.
5. Exclude commercial vehicles except resource focused.

Topic Question 2:

1. NO MULTI-USE PATHWAY!!!!!!!!!!!!!!!!!!!!!!!!!!!!!! The current pathways recently constructed throughout the park are world class. There's absolutely no need to disturb the environment adding more.
2. No relocation of road. Seems like to much disruption unless all other alternatives to reduce traffic fail.
3. No closure or one way traffic. An alternative route to & from from Teton Village area & Moose needs to be seriously explored. Maybe commuters are causing some of the problem.
4. No added restroom needed at entrance to Death Canyon Rd. Don't need add'l environmental impact.
5. No restroom needed Granite Canyon. Don't need impact.

Topic Question 3:

Need north entrance station that's low profile (no queuing, interpretation, parking, & have small turnaround).

Topic Question 4:

We've been visiting the park for 30 years & stay in Moose. Use of Moose Wilson Rd is a large part of our park experience, whether it be just a slow drive, or a visit to the trailheads. Limiting access would in any way would be very disappointing.

Topic Question 1:
Strategy B

Comments: Safety is paramount for cyclists, motorists and pedestrians. I believe Alternative B is the best compromise and will eliminate the poor conditions of the road bed most of the time by paving it and making it a more enjoyable drive. Providing adequate turn out space is essential

Topic Question 1:
I am sending this as an addendum to the comments I submitted earlier today.
Please summary comment at end

Topic Question 2:
Please summary comment at end

Topic Question 3:
Please summary comment at end

Topic Question 4:
Please summary comment at end

Comments: On Sunday, 9-7-14, I chose to take a short walk southward on the paved separated pathway adjacent to Spring Gulch Road and across the street from Jackson Hole Golf & Tennis Clubhouse and golf course. I happen to be disabled and was walking slowly with my cane just enjoying the late fall afternoon and the golden aspen trees along this route heading southward and walking on the right side (western side) of pathway not in middle. I was somewhat opposite the JHG&T employee housing units when all of a sudden an elite cyclist going super fast northward almost ran into me. I gasped, reflexively threw my hands out, dropped my cane, as he veered around me and didn't even stop. This area of the pathway has quite a lot of trees still with foliage and some curves in the pathway where trees block views near curved areas. The cyclist came upon me so suddenly and so SILENTLY. I did not hear him or see him until he almost crashed into me. I am an observant person and keenly aware of my surroundings.

I did not have in ear buds and the area was otherwise quiet. This underscored for me what it would be like for bears, moose, elk and other wildlife who might be grazing or ambling in the vicinity of a hypothetical separated paved pathway within the Moose-Wilson Corridor. Or for that matter for a casual walker like me who might be so suddenly surprised, possibly hit and injured.

Please keep the various scientific studies in mind that have verified how silently and at break-neck speed a road cyclist on a paved surface can come upon a bear or other animal and surprise them, run into them or provoke a defensive attack. I feel fortunate not to have been hit by this speeding cyclist. I hope park wildlife will not be subject to this type of reckless human activity in a heavily treed and winding corridor that is first and foremost their home. Thank you.

Topic Question 1:

Improve the road itself but do not widen it.

Limit cars per hour and provide parking for those who are waiting.

Topic Question 2:

Limiting car traffic two days a week is not equitable.

Some visitors cannot plan to arrive on a day when cars are allowed.

Do not make a new bike path.

There is no need to disrupt the vegetation or wildlife.

Topic Question 3:

Money saved by not altering the roadway or building a bike path can be used to pay a ranger to monitor the road at peak times.

Including the evening when recently there have been tourists out of their cars getting too close to the bears.

Topic Question 4:

I have travelled the road by car and bicycle for more than forty years and believe it can still function for both.

Bike travel is safe because cars are not going very fast.

Topic Question 1:

I believe option d is the best of the 4 defined options as it provides for:

- * a major portion of the road relocated away from the constriction wetlands between the sawmill ponds and Death canyon road
- * provides for a multi use bike path which provides connectivity with the Teton village and Moose bike paths - a unique and exceptional recreational opportunity
- * addresses the Death Canyon road issue
- * proposes a workable solution to car flow on the road

Topic Question 2:

As is option A creates a deteriorating situation which only gets worse over time in terms of traffic flow, quality of infrastructure and safety to visitors and wildlife

Topic Question 3:

An option to relocate the entire road from Granite Canyon thru the sage brush and/or along the existing levee east of the current road and either convert the current road to a bike path or co locate a bike path with the new road would better address traffic flow as the road could be 2 way> this would be similar to what was done with the Jenny lake to Signal Mt section of the Teton Park road more than 20 years ago

Topic Question 4:

As a 40 year visitor to the Park and frequent use of Park and the Moose - Wilson and the Death Canyon and LSR facilities, I have seen how much potential safe use a bike path would provide and observed the deteriorating condition of the existing road and safety issues.

I support a approach that is comprehensive and long term in its design and implementation

Topic Question 2:

Please do not move forward with the bike pathways on Moose-Wilson road. Only 3% of the park users currently use the bicycle paths. I believe the paths would destroy more wildlife, trees and resources than people who would enjoy them. Also, I totally disagree with the plan to close commercial horseback riding on the Sawmill Pond trails. It has been an activity that requires minimal input from park management with very few "downsides." We have visited the Grand Tetons the last two years. It is the first time that my children have ever been on a horse and the opportunity to learn about the history of that area is invaluable. The rest of our trip was spent in a car gazing afar at the beautiful wildlife. This was a wonderful chance to interact with nature in a unique area of the park.

Topic Question 4:

We could choose to go anywhere on our summer vacations but we have chosen the last few years to go to the Grand Teton because of their beauty and the opportunity to interact with nature. The Sawmill trails were used to access the historical Whitegrass Ranch area, along with Sky Ranch and Trail Ranch. Riding in this area does not conflict with any other goals set by the park. Please reconsider this. This area has been available for commercial horseback riding for years, and ending it now would be a travesty.

Topic Question 1:

We support Alternate D as a preferred, positive option because it reduces overall traffic in a way that is essential to preserving the Moose-Wilson corridor's unique values, benefits area wildlife with fewer cars and encourages diverse access for safely enjoying the corridor outside of the car.

Topic Question 2:

Gates and closures (Alternatives B and C) don't work. Gates and closures shift or increase the number of motor vehicle trips area wide. For visitors and locals alike, under Alt B or C, to get from the Westbank to Moose and back will be a 50-mile round trip instead of 7 direct miles that could be experienced on foot, bike, transit or vehicle.

Topic Question 1:
None of the 4 mentioned

Topic Question 2:
All include too much human intrusion on wildlife.

Topic Question 3:
Strategies that deal with a more friendly attitude to the needs of wildlife.

Topic Question 4:
Do not pave any of the gravel parts of the Moose-Wilson Road. Wildlife doesn't like pavement, and it is unnecessary. The gravel road helps to keep the speed of vehicles down. If the road were paved, vehicles would go considerably faster.

Comments: I am one of the many people who has been up and down the Moose-Wilson Road and it is obvious that the area is sought after by wildlife. The humans largely disrespect the wildlife, and one of the biggest things that I see is the crowding of animals to take pictures or to just get close. I am sure that these people know they should not get so close to a Moose or a Black Bear for instance. I don't want any more of the land along the road converted into something that pleases humans but not wildlife. There are miles and miles of hiking trails, bike trails, roads, already in the park and in the surrounding area. New trails are being created as I write this. The park is not under the control of one group of people, one town, one county or one state. This is a NATIONAL park. I am very much in favor of a decision that is very wildlife friendly. If that means putting a limit on traffic, closing the road- -whatever it takes. The wildlife need all

the room possible. They are the ones who call this park home and are struggling to survive.

Topic Question 1:
Alternative # 1. Only because an option to simply pave the dirt section and that is all has not been presented to the public.

Topic Question 2:
All of them

Topic Question 3:
Simply pave the dirt section, that is all. This will reduce maintenance costs and increase visitor satisfaction. All data clearly shows that the existing paved section allows for safe motorized traffic with little or no resource damage or wildlife fatalities. If a pedestrian / bicycle access is deemed necessary, created a dirt pathway adjacent to the roadway. All pathways do not need to be paved just as all roadways do not need to be paved.

Topic Question 4:
Allow for comment on this proposal to the public for a more fair and inclusive review.

Topic Question 2:

It seems as though creating the bike paths will necessitate destruction of trees to create space as well as increasing bike traffic will inevitably cause more wildlife-human conflict.

Comments: I have been trail riding in the park for over 20 years, it is an amazingly unique and non-invasive way to view this amazing place and it would be so heartbreaking to see this disappear. How are we supposed to protect incredible parks such as this if there is no safe way to view and appreciate these places from horseback?

Topic Question 1:

I prefer Alternative A - No Action. The other alternatives appear to improve the road, inviting more use, and yet restrict use.

Topic Question 2:

I am against the bicycle pathway because of the cost, the environmental impact construction would cause, and the potential for human-wildlife encounters as bicyclists speed along the path.

The re-routing of the northern end of the road does not seem like such a bad idea, because it would protect fragile habitat.

I am not opposed to paving the southern end of the road.

I am opposed to use restrictions as mentioned, limiting daily usage or engaging in a sign-up system.

I am opposed to changing anything about the Laurence S. Rockefeller Preserve.

Topic Question 4:

I do not agree with any of the proposals. As a regular user of the Moose Wilson road, I have three suggestions.

- 1) Reduce the speed limit and enforce the speed limit vigorously. My experience is that commuters and Taxis, as well as tourists who don't know the risk to wildlife, speed through the corridor recklessly. This is a narrow winding road, with an abundance of wildlife traffic and lots of drivers actively looking for wildlife (not focused on driving). The speed limit should be 20mph and actively enforced.
- 2) Create more pullouts. The recent practice of blocking off pullout space makes no sense. Slower traffic needs places to pull off the road to let others pass. Wildlife viewers need places to pull off the road so they aren't blocking traffic. Instead of building a new road and new pathway, create more turnouts. This would be immeasurably lower impact on the environment and wildlife.
- 3) Move the intersection with the Teton Park Road behind the entrance gate. The road is gated at one end and not the other?

Topic Question 1:
Unable to access this info - problem with the URL

Topic Question 2:
As above

Topic Question 3:
As above

Topic Question 4:
I would like to see this corridor remain as it is, but would like to have some better use planning. First of all, protecting the wildlife - though temporary, the process of paving would be a huge impact. Is this measure being considered because of cost of future maintenance (maintaining pavement vs. grading)? I would simply like to see that certain sized vehicles not be allowed on this road. Even if it's paved, or there WAS a bike path, it is still so narrow that it is not safe, and oversized vehicles diminish others enjoyment of this area. It' the natural topography of this corridor. Granted there was once no road there at all, but bigger is not better. If anyone chooses to ride their bike here, they are making their own decision knowing there are other safer places to go for a ride. Not allowing extra large vehicles on this road would be safer for bikes also. If ther was a bike path added, I would like to see it be right alongside the existing road, to not take away from the beautiful woods.

Topic Question 2:

1. No to the bike path along Moose-Wilson road corridor. The cost-benefit ratio on this proposal is not good enough to justify the immense negative impact on the corridor. This corridor is unique and wonderful. There are no other roads in this area where so much wildlife can be accessed and seen from a car. This road allows those with impaired ability to get out into nature to actually get up close and personal with all the wildlife that resides in the area. By widening the corridor, and destroying and disturbing the land adjacent to the road; you would be pushing all wildlife further into the wilderness. Our family has been coming to Jackson and Teton Village for many years, and I don't think I have ever driven this road without seeing something of interest. Please don't destroy the corridor.

2. Please do not close commercial horse back riding on the Sawmill Ponds Trail. We have been Dude Ranching in Teton Village since my wife was child. We now take our children every summer. As a "dude" I can say that there is nothing better than riding through the Park and having access to the wonderful and beautiful trails that are there. This past summer was, in fact, the first time that I rode up to the old White Grass Ranch. It is amazing to see and feel the history of these old ranches. Being in the Park on horse back is a wonderful way to experience and imagine the old west, the way it was meant to be seen. We love it, and fear the negative impact that closures to riding in the park would have on our favorite ranch, R-Lazy-S. Without the park, and the variety of trails available right from the ranch, I don't see how they would make a go of it. Dude ranching is an important and historical activity for the Teton region. It exposes and entrances people from all over the country and the world to the majesty of the Tetons and the culture and history of the area. These resources have to be protected, but they must also be accessible for responsible uses.

Correspondence Text

Topic Question 1:

1st and primary is the reduction of vehicle speed. I believe the cost hire of an additional employee ranger/type would more than be paid from the speeding ticket fees. I do not travel that road without vehicles speeding toward me and even passing me at ridiculous and this is in prime habitat areas/beaver ponds. Stop the excessive speed. That can be accomplished now. I do not agree in diverting the road to the chapel. I believe the road can be one-way. This would be ideal. It can be monitored with a traffic light. Vehicles can be prepared to stop a while and enjoy the park while waiting for the opportunity to drive the road at a snails pace. Of course it would be two lane and slow between Murie Center and LSR. Do not change he parking or roads or parking area for death canyon trail head or white grass.

Topic Question 2:

I do not agree with grooming the road for snow removal in the winter. Closing the road October 31 is key for wildlife. I do not agree with disrupting the wildlife further by taking out trees or widening roads or turn outs. It is an amazing gift to travel the road, slow down enjoy in and for the most part stay in your vehicle and respect the wildlife. Do not pave additional portions. This adds speed.

Topic Question 3:

No loaded guns on this road. No pedestrian traffic at all in certain areas, moose ponds et

Topic Question 4:

Do not change the road other than to slow cars down, reduce pedestrian traffic and provide one way traffic on certain portions of the road. I would like to see the DEIS published. I cannot find it on line.

Comments: Many park visitors see bear on the road in this portion of the park. Do not destroy this bear habitat which is so fragile to changes in road and trail disruption.

i bike more than i ride horses. when i do ride a horse i do it in your beautiful state. i dont see the necessity of such an extensive project with so much natural destruction and the negative effect it will have on visitors , wildlife and plant life. it's rather easy for bicyclist to ride just about anywhere but much more difficult for horseback riders to find quality riding areas. Please don't let this go through.

Topic Question 1:

Traffic Management along Moose- Wilson Road

Alternative B and C - Provide traveler alerts before entrances to inform visitors of traffic congestion, full parking lots, and potential wait times, and give them the opportunity to choose an alternate route before entering the corridor.

Physical Characteristics of Moose- Wilson Road

Alternative B - The existing, unpaved section of Moose-Wilson Road would be paved.

Moose- Wilson Road Realignment

Alternative C - Existing road segments adjacent to wetlands would be reconstructed to correct drainage issues and improve road conditions.

Turnouts and Parking

Alternative B - Establish an adequate number of strategically located turnouts to allow for visitor parking while reducing resource impacts.

Alternative B - Apply design solutions to roadside parking that would reduce resource impacts from parking off-road.

Some additional turnouts may be beneficial given the 6,130 sq meters of user-created parking areas on the Moose Wilson Road. However, from personal experience in GTNP and Yellowstone NP, visitors will not necessarily use pullouts when they stop to see wildlife unless the pullout is very close to the wildlife. In all likelihood vehicles will stop on in the road at the point where an animal is seen.

Bicycle Use

Alternative B and C - During seasonal periods when the road is closed to motor vehicles, bicycles would be permitted to use the road when it is free of snow and ice

Alternative D - Construct a multiuse pathway parallel to Moose-Wilson Road.

Whilst this is a wonderful idea, exacting cost benefit analysis should be conducted to evaluate the economic feasibility and opportunity costs of constructing and maintaining a pathway.

Commercial Activity

Alternative B - All other commercial traffic, including taxis, would be prohibited.

Death Canyon

Alternative C - The Death Canyon trailhead would be relocated to a site near White Grass Ranch, approximately 0.4 mile from its current location. A parking lot would be provided for 60 vehicles, serving both the trailhead and visitors to White Grass Ranch. The abandoned section of the trailhead access road would be converted to a trail. The remaining unpaved portion of Death Canyon Road would be improved to a single lane, gravel surface with turnouts for passing.

I prefer Alternative C to Alternative B. Alternative C addresses the needs of parking at Death Canyon Trailhead with fewer changes to existing trails. The hike up to Phelps Lake Overlook is a popular hike for families including older people and children. Alternative B, which adds a mile to the hike, may discourage those visitors.

Expansion of the Death Canyon parking area is needed to accommodate the relatively large number of vehicles parked in visitor-created parking areas, at times more than double the number of vehicles as in the existing designated trailhead parking area.

Winter Access and Use

Alternative A - The unplowed section of Moose-Wilson Road would continue to extend from the Death Canyon Road junction to Granite Canyon Trailhead.

Alternative D - Enhance winter recreational opportunities (i.e., cross-country skiing) by improving parking and seeking a partner to groom the unplowed section of Moose-Wilson Road. Northern winter parking would occur at an improved parking area north of the Death Canyon Road junction

Visitor Use and Experience/Education and Interpretation

Alternative C - In keeping with the goal of self-discovery in this alternative, "minimal low-impact interpretive media would be provided. Very few interpretive signs and structures would be installed on the landscape. Pre-visit information and electronic media to prepare visitors for self-discovery prior to entering the corridor would be the focus.

Alternative D - Provide additional restrooms at Granite Canyon trailhead parking area and at the new "winter" parking area north of the Death Canyon Road junction to manage human waste during the winter.

Topic Question 2:

Traffic Management along Moose- Wilson Road

Alternative B - Adaptive Strategy: "installing a gate to prevent through-traffic at certain established peak hours during the peak season, thereby encouraging use of the road only as a means for visiting destinations within the corridor at those times.

According to the Utah State University interdisciplinary study of usage of the Moose Wilson Corridor, the majority of vehicle users (54%) drive all the way along the road without stopping. The road is itself a destination and the drive along it a visitor experience enjoyed by many. Preventing through traffic will

prevent visitors from experiencing the entire road as a destination.

Alternative C - Close Moose-Wilson Road to motor vehicles two days per week to provide dedicated pedestrian- and bicycle-only access,

According to the Utah State University interdisciplinary study of usage of the Moose Wilson Corridor only 5% of parking visitors hike well beyond the parking area. Visitors on foot walk or hike from the trailheads and not along the road. This pattern of usage does not justify closing the road to vehicles 2 days a week for the use of pedestrians. Additionally, people do not want to walk along the road, they want to walk on trails. Equally, bicycles represent only 2-3% of the total road usage, this level of usage does not justify closing the road to vehicles 2 days a week for the use of cyclists.

Alternative D - Adaptive Strategy: Manage traffic volumes on Moose-Wilson Road by establishing a reservation system. Visitors without reservations would be accommodated on a space available, first-come, first-served basis.

A reservation system seems too bureaucratic a visitor experience for a natural and un-spoilt environment such as GTNP.

Moose- Wilson Road Realignment

Alternative B and D - The 0.6-mile section of roadway between Murie Ranch Road and the base of the hill near Sawmill Ponds would be abandoned and a new segment would be constructed to intersect with Teton Park Road at its junction with the Chapel of the Transfiguration Road.

There seems to be insufficient reason to abandon this section of the road. The steepness of the hill acts to slow vehicles down and adds to the variety and interest of the road. Rather than abandoning the road and going to the expense of constructing a new road, turnouts could be added at the base of the hill and the top of the hill to alleviate congestion associated with the presence of wildlife.

Alternative B and D - The segment between Sawmill Ponds Overlook and the Death Canyon Road junction would be realigned to the east of the beaver ponds to restore wetland functions and habitat connectivity

Why go to the expense of realigning this segment of the road if it can be reconstructed as in Alternative C? Existing road segments adjacent to wetlands would be reconstructed to correct drainage issues and improve road conditions.

Turnouts and Parking

Alternative D - Improve parking/turnout facilities and add additional parking or turnouts in strategic areas.

According to the Utah State University interdisciplinary study of usage of the Moose Wilson Corridor, the majority of vehicle users do not stop, spending less than 30 minutes in the corridor. As such, additional new parking areas do not seem warranted. However, additional turnouts do seem warranted.

Commercial Activity

Alternative D - Expansion of commercial activity in the Moose Wilson Corridor will detract from the current visitor enjoyment of the natural environment.

Visitor Use and Experience/Education and Interpretation

Alternative D - interpretive media and programs would be made available at key visitor gathering areas in the corridor.

I am in favor of keeping the visitor experience one of self-discovery, limiting interpretive media and programs to entrance stations and to pre-visit information and online media.

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

Topic Question 3:

Expand the use of Wildlife Brigade type of volunteers and staff to manage road safety and alleviate congestion when animals are seen.

Comments: The Moose-Wilson Road is a treasure and the drive from one end to the other a unique experience. In addition to preserving the beauty and integrity of destinations accessed from the Moose-Wilson Road, the experience of driving the entire length of the road itself needs to be preserved.

Topic Question 1:

We support Alternative D as a preferred, positive option because it reduces overall traffic in a way that is essential to preserving the Moose-Wilson corridor's unique values, benefits area wildlife with fewer cars, and encourages diverse access for safely enjoying the corridor outside of the car.

Gates and closures are bad solutions to traffic management. Instead, inspire and enable more 10-30 percent of visitors to use bikes, feet or transit.

Park values are best protected under Alternative D, which recognizes that wildlife and park visitors can be thoughtfully managed together, the essence of National Park visitation. Under Alternative D, visitors experience this part of Grand Teton National Park in a way that is respectful of natural resources, informative, inspiring, and safe.

Alternative D enhances the visitor experience in an environmentally responsible way - providing public access with reduced traffic impacts to wildlife, smart public transit and greater safety for the non-vehicular public on a needed pathway.

Topic Question 2:

Gates and closures (Alternatives B and C) don't work. Gates and closures shift or increase the number of vehicle trips area wide. For visitors and locals alike under Alternatives B or C to get from the Westbank to Moose and back will be a 50-mile round-trip instead of 7 direct miles that could be experienced on foot, bike, transit or vehicle. Instead, we can help the National Park Service by innovating real solutions that a good for the environment - like multi-modal transportation and smart transit.

The negative impact of shifted or increased traffic is bad for the environment and bad for wildlife that lives outside the corridor, especially along area roads like 390, 22 and 89, which will inevitably see more traffic and potential wildlife collisions from cars re-routing from road closures to get to the Park's entrance in Moose. The Moose-Wilson Road has no wildlife fatalities because it is wonderfully slow, narrow and rural - and should be kept that way with fewer cars, smart visitor transit and a pathway.

No action (Alternative A) is not the right solution because it does nothing to help wildlife by reducing traffic levels or manage traffic flow with adaptive strategies.

Topic Question 3:

A separate Moose-Wilson pathway is a safety need, not a want, an imperative in any Alternative. It can be placed in an environmentally sensitive way to minimize impacts and close a dangerous gap, which will be even more apparent when the pathway from Jackson to Teton Village is complete by 2015.

Please add more public transit and partnerships as a way to reduce traffic congestion even more in the future.

Decreasing the increased traffic volumes for the long term is the Park's objective and that is possible only with Alternative D, which uses thoughtful, safer ways to get people out of vehicles and into the outdoors.

Alternative D will help make meaningful traffic reductions and adaptations so that wildlife can thrive and visitors can have access to their national park.

Topic Question 4:

Decreasing the increased traffic volumes for the long term is the Park's objective and that is possible only with Alternative D, which uses thoughtful, safer ways to get people out of vehicles and into the outdoors.

Alternative D will help make meaningful traffic reductions and adaptations so that wildlife can thrive and visitors can have access to their national park.

Topic Question 1:

I would like to see additional time for input and commentary beyond the one month period ending mid September. This is a huge incremental change in road width.

Topic Question 2:

as above. The scope may be a convenience or a human-centric improvement, but we are guests in the park, the wildlife are the reason the park needs protection

Topic Question 3:

fewer private vehicles, more shuttle use

Topic Question 4:

please rethink this. Please allow at least through mid-November for commentary and addl input/study. The damage could be irrevocable. The Park should be about the wildlife not ease of access

Topic Question 1:
I think the best alternative is NO ACTION- -see below for clarification.

Topic Question 2:
Don't see the need for pathway there. . .if there is room for a bike path, there is room to create pullouts so that wildlife viewing doesn't clog the road. I don't think you should widen the road because people already go too fast as it is, and I think you should lower the speed limit to 20 and have more enforcement of the speed limit. Then it would also be safer for bikers. There are existing pullouts that have had logs put across them, and I think this is wrong. It sends the wrong message- -don't stop and enjoy wildlife- -speed as fast as you can go and stop for nothing- -not for animals, hikers, bikers. I don't see closing the road for certain uses on certain days- -too confusing. The \$ spent on creating a bike path could be spent merely creating or updating the turnouts, and it would certainly cost a ton less \$ and cause a lot less disruption.

Topic Question 3:
I think the essential problem is an incompatibility between getting Teton Village people to the airport in a hurry, especially

in those taxis I see speeding like mad, and the slower paced, more peaceful wildlife viewing activities that many others use that road for. It is known to be a wildlife viewing treasure, and people go there for that. I do not think it is the concern of a National Park to ensure that people in fancy, expensive accommodations in Teton Village get to an airport! They can go the longer way and still get there, or they could build a road/bridge across the Snake river. That way, if one bridge washed out, people would have another route across the Snake River. That is all Teton Village's concern for their economy, not the concern of the Park! Plus they add wear and tear on the road- -are they paying for your road through the Park? I think not. People come to the Park hungry to see wildlife, which they can't see at home- - otherwise why come?

Topic Question 4:

Make the road wildlife watcher friendly- -that seems in character for the values of a National Park. It affords plenty of viewer education opportunities. Put the \$ into widening and providing pullouts and paying naturalists to educate people on what they are seeing. Not just indoors in the visitor center, but outdoors, first hand experience. The \$ doesn't need to go to widening roads so more people can go faster and see less. The road killed animals will go up, and the value of the visitor experience will go down. This is an incredible, beautiful national Park.

Also, you have an aging population who can't necessarily bicycle or hike long distances in and along the MW road- - everyone isn't young and agile. I can't see penalizing those people by saying well, you have to hike in or bike in. That's age discrimination. Park visitors come in all ages, and some are physically handicapped. They would love to see the wildlife but need to travel by car.

Topic Question 1:

I think that alternative D addresses the Park's issues and concerns the best, and addresses the local and national communities' issues.

Balancing the need to preserve Park directives for wildlife, for low impact access through the corridor, and the unique values of the corridor are best addressed in Alternative D.

Adding access to the park through alternative means of transportation - bicycling and walking along a dedicated pathway, realigning the road away from sensitive habitat, and retaining management strategies to deal with traffic all make sense.

Additionally, i believe that using your management techniques to integrate transit makes sense.

Topic Question 2:

Trying to manage road closures, whether daily, or alternating will be a nightmare. Better to manage traffic through car counts or transit, plus pathway access.

Comments: The Moose Wilson corridor can remain a unique place within the park: provide alternative ways to experience this place by forward thinking on transportation issues. Management tools enabled by technology, plus safe, enjoyable access on pathways means less cars, less dust, less impact on environment in the corridor.

I would like to share my support to PREVENT bicycle paths. I would like to share my support for allowing commercial horseback riding from Sawmill Ponds to continue. Our family spent a week at R Lazy S ranch for a week in August of 2014. It was the greatest vacation we ever had. Your national parks that we used for trails, had the most beautiful effect on our entire family. This untouched area should stay untouched. Please let the bicycles ride on the trails that they have and let the horses stay on the trails that they have. Please don't mess this up.

Topic Question 1:

Strategies that mitigate the high demand to travel on the Moose-Wilson Road are preferred. Use of the road should be as a park facility and by prior reservation. Parallel examples would be the Washington Monument or Washington State Ferries in the summer time. The reservation system would limit the number per hour on the road and protect the visitor experience. Many parks national parks or monuments need advance reservation systems to manage demand. This roadway experience through GTNP is no different.

Topic Question 3:

I would like to see consideration of rubber tired, zero emission trains to carry people rather than private autos.

Comments: Please recognize that Teton County and it's residence do not own this park roadway, nor do they have any priority for it's use simply due to their proximity to the road. It is a National Park and we all own the park through the U.S. National Park System. The suggested advance reservation permit system should eliminate local commuter traffic except for permitted access to trail heads. Locals should be viewed the same as any other visitor.

Topic Question 1:

I prefer resetting the Moose road and have an accompanying bike path

The current road is best for wildlife viewing but the mix of cars creates chaos at bear or moose jams. Leave the old road for walking or biking and make a new road to get to Moose and the Park in a less contorted way.

Topic Question 3:

Please -no mater what- pave the first part of the road. It is a travesty to pay to enter the park and then choake on dust while dodging huge potholes while trying to avoid on coming cars.

Topic Question 4:

Please put a bike path in some where to connect Teton Village with Moose. It is the missing link in the wonderful bike system around Jackson.

Comments:

pave the road!

Create a bike path!

Topic Question 1:

I as resident of Jackson, a cyclist, hiker, environmentalist, and conservationist, I see the most important piece of this plan is to introduce a paved pathway to the Moose Wilson corridor. I believe this could be achieved through a number of methods and feel that it takes precedence over any motorized use within the region. This could be achieved by eliminating motor vehicle use on the road and paving it for hikers and bikers or by adding a new pathway adjacent to the existing road. This plan will allow for residents and visitors alike to experience the natural beauty of the corridor while having little impact on the wildlife within the area. This type of pathway will become celebrated within the park system nationally and will be a great addition to Jackson Hole. I believe it should be carried forward for the safety of the road users, the protection of the environment, and the economic and social prosperity of Jackson Hole. I would also support any other plan that includes a paved pathway; however, my preference is to limit traffic in the corridor to cycling and hiking.

Topic Question 2:

I question the need for two way vehicular traffic on a paved road in the corridor. I believe the amount of traffic that paving the road will result and the alternatives proposed for limiting traffic are not worth the cost of altering the current situation. I would prefer to see the status quo remain over increased traffic in the region. Should this be considered, it is essential for a paved pathway to be considered.

Topic Question 3:

Consider keeping the road as is and adding a paved pathway. This strategy would preserve the natural beauty of the area and allow for safe bike travel in the park. The other paved pathways make GTNP one of the gems within the park system for bikers.

Topic Question 4:

It seems crazy to me that the National Park Service does not support more paved pathways within the system. This type of use should be promoted and exemplified in order to support the health and well being of the country.

Yellowstone should have the foresight to add some paved pathways and encourage environmentally friendly modes of transportation. You should also consider allowing fat bikes (Snow bikes) on groomed roads in GTNP and Yellowstone, it is truly ridiculous that it is not allowed when snowmobiles are in Yellowstone, and skate skiing is in GTNP.

Topic Question 2:

No bicycle pathway on the Moose-Wilson Road

It would destroy over 3000 trees in a very pristine historical wooded area.

Increases the potential for wildlife and horseback rider conflicts.

With only 3% of park users currently using the bicycle paths, we just don't see the benefit of such a large and disturbing project.

Do not close commercial horseback riding on the Sawmill Pond Trails

It is one of the most unique areas of the park that allows this activity without causing any conflicts with other parks goals. It has also been an activity that has been historically used in this area for over 90 years with minimal conflicts and requiring minimal park management.

Why is the park attempting to eliminate historical horseback trails that have been previously approved for commercial use?

This area offers access to unique and safe horseback riding trails unavailable in other parts of the park. These trails are used to access the historical Whitegrass Ranch area, along with Sky Ranch and Trail Ranch.

By taking interpretive rides through these historical ranches, we help reach a park's goal to protect and maintain cultural resources as important links to the human history of the Moose-Wilson corridor, including historical and archeological sites, cultural landscapes, and ethnographic resources.

Correspondence Text

Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is

owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Topic Question 1:

I support Alternative D as a preferred, positive option because it reduces overall traffic in a way that is essential to preserving the Moose-Wilson corridor's unique values, benefits area wildlife with fewer cars, and encourages diverse access for safely enjoying the corridor outside of the car.

I think gates and closures are bad solutions to traffic management. Instead, I think we should inspire and enable 10-30 percent more of the visitors to use bikes, feet or transit.

Topic Question 2:

I think that gates and closures (Alternatives B and C) don't work. Gates and closures shift or increase the number of vehicle trips area wide. Under Alternatives B or C will make the Westbank to Moose and back a 50-mile round-trip journey instead of 7 direct miles that could be experienced on foot, bike, transit or vehicle. Instead, I think we can help the National Park Service by innovating real solutions that a good for the environment - like multi-modal transportation and smart transit.

Topic Question 3:

A separate Moose-Wilson pathway is a safety need, not a want, an imperative in any Alternative. It can be placed in an environmentally sensitive way to minimize impacts and close a dangerous gap, which will be even more apparent when the pathway from Jackson to Teton Village is complete by 2015.

Topic Question 4:

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

Please add more public transit and partnerships as a way to reduce traffic congestion even more in the future. No action (Alternative A) is not the right solution because it does nothing to help wildlife by reducing traffic levels or manage traffic flow with adaptive strategies.

Topic Question 2:

No bicycle pathway on the Moose-Wilson Road

A bike path on the Moose-Wilson Road would be detrimental to the area's environment and the public's subsequent enjoyment of that environment. It would destroy over 3000 trees in a very pristine historical wooded area and is dangerous for cyclists given the high density of wildlife in the area. The path would harm the entire population (animal and human) while benefiting a tiny fraction of that population who cycle. The large project would be a huge burden on the entire ecosystem and the local economy, while benefiting a very few.

Increases the potential for wildlife and horseback rider conflicts.

Horseback riding, as it utilizes existing animal trails and does not require heavy equipment for construction nor permanent asphalt disrupting the natural environment, should be encouraged as an alternative. The Sawmill Pond Trails, for instance, can be accessed by horseback without harming the animal population. For almost a century, horseback riding has proven beneficial to the park.

Topic Question 1:

We fully support two of the three key elements presented in Alternative B. In particular, the concept that the Moose-Wilson corridor should be mainly a visitor destination seems consistent with sustained achievement of the goals and desired future conditions set forth at the beginning of the plan. We don't believe that achievement of these goals and desired future conditions can be established and sustained if the corridor continues as a two-way through road during peak season. We fully support the proposal to realign two segments of the northern portion of the road to address congestion associated with the presence of wildlife, etc.

While we appreciate the position of others that the unpaved section of the road should remain unpaved, we also see merit to paving it. There are many reasons for our opposition to the multiuse trail proposed in Alternative D; however, providing opportunities to ride bicycles in this corridor is not among them. It seems logical to us that our comments should also reflect support for bicycle enthusiasts.

We also support the proposal in Alternative B that winter maintenance of Moose-Wilson Road would end at the Murie Ranch access road junction, and winter use would be limited to skiing, snowshoeing, and walking, without grooming.

Topic Question 2:

This planning process is based on multiple and strong indications that the identified goals and desired future conditions for the Moose-Wilson corridor cannot be achieved without change. Accordingly, the

No Action Alternative A should not be carried forward.

The key elements of Alternative C should not be carried forward. In fact, these key elements seem limited to traffic management. The proposal to close a portion of the road to vehicles two days a week certainly has merit, and some visitors would benefit from the opportunity to hike or ride a bicycle along this corridor absent vehicles. However, such closures would inevitably deny many visitors access to this part of the park should their visit be limited to the two days it was closed to vehicles. The plan does not present a rationale that such closures would do more than temporarily reduce impact to wildlife or other natural or cultural resources. The proposal to limit the number of vehicles entering the corridor would likewise create unequal opportunities for visitors. And, based upon our experience, it would be an extraordinary communications and management challenge to implement effectively. At best, such a proposal would seem no more than an interim placeholder until a long-term strategy is established to control traffic.

Alternative D should not be carried forward. While Key element #1 - Realignment to address congestion associated with the presence of wildlife is among those we support in Alternative B (see comments in next section), the two remaining key elements - construction of a paved separated multiuse pathway and hourly limits on vehicles - cannot be supported. In particular, we strongly oppose the proposal to construct a paved multiuse pathway; it would result in significant harm to the cultural and natural resource values of this portion of the park. The development and visitor use described in this alternative violates the basic premise of the planning process, which is that operational changes should be compatible with the goals and desired future conditions that are described at the outset of the document.

Most of the nearly 1,050 members of CNPSR began their careers with NPS near the end of an era when park managers were scrambling to accommodate most traditional and many emerging types of visitor activities in parks. It was during our careers that all of us, from decision makers to field rangers, came to understand that lines had to be drawn so that park resources would not be impaired, and in some circumstances could be restored. In many parks, tough decisions were made to reduce the footprint of past and often inappropriate development and to set limits on many forms of public use. Alternative D represents to us a reversal in this evolution toward preservation that so many of us tried to achieve; it seems the antithesis of where the Park and NPS should be going as we plan a celebration of the first 100 years of the NPS.

Topic Question 3:

It seems clear that a principal impetus of this planning process is to find long-term solutions to the growing challenge of vehicle congestion in this corridor, and two traffic management strategies are presented. As noted above, we believe that the proposal to seasonally block through traffic by placing a gate at the appropriate location along this route will significantly reduce congestion, is feasible, and should be further evaluated. The alternative proposal, which would essentially place an hourly limit on vehicle access to the corridor during peak use periods does not seem feasible to us.

However, there are other traffic management strategies that have been implemented with substantial success in many park areas throughout the National Park System. In particular, we suggest that the potential for limiting vehicle travel to one-way be evaluated. If feasible, such an approach might substantially mitigate congestion and achieve the stated goals and desired future conditions. We also suggest that the potential for some form of a shuttle system be explored. Each of these management strategies requires considerable analysis, planning, and management, and obviously must be designed to meet local conditions. But both have a strong record of success in many sites in many park areas.

Topic Question 4:

In our February 6, 2014 comments submitted during the scoping process we wrote that "CNPSR has determined that Grand Teton National Park's initiation of planning for the future of the Moose-Wilson corridor is precisely the type of issue that warrants our organization's close attention because of its National Park System-wide implications and its ability to raise the public's awareness of the values and purposes of the National Park System." As mentioned above, we appreciate that all topics addressed in this document are important. However, we have chosen to focus mainly on the two that best reflect the reasons we have engaged in this planning process.

Traffic management has long been nationally prominent, and many park areas have found ways to mitigate high profile challenges posed by too many cars in key places. Ideas and various models are implemented and evaluated nationally, and sometimes internationally; mistakes are made, and lessons are learned. We urge that, as this process moves forward, the full menu of possibilities to achieve the goals and desired future conditions set forth in the plan will be fully evaluated in the context of improved traffic management.

The other issue with national implications is the proposal to construct a separate multiuse path in the corridor. Decisions about such construction go to the heart of what our national park system will be in the future. Will it lean toward supporting more and more varied recreational uses, even if it means significant harm to park resources; or will it set a tone for our next century with a determination that resources will not be impaired?

Re: Comments on Moose-Wilson Corridor Preliminary Alternatives

Dear Moose-Wilson Planning Team:

We appreciate the opportunity to offer comments from the Coalition of National Park Service Retirees (CNPSR) regarding the Preliminary Alternatives for the Moose-Wilson Corridor Comprehensive Management Plan. CNPSR is a volunteer membership organization comprised of almost 1,050 former and retired National Park Service employees. Collectively we have over 30,000 years of experience working in and managing the nation's national parks.

Before addressing the topic questions set forth in the Preliminary Alternatives Newsletter, we applaud the National Park Service for developing and presenting a clear set of goals and desired future conditions for the Moose-Wilson corridor. They effectively fulfill the essential step of defining the future for this corridor. Moreover, these goals and desired future conditions seem fully consistent with the laws and policies of the National Park Service. They also reflect the central theme of our comments during the scoping period, and will serve as the context for our comments on the preliminary alternatives.

Our comments will focus mainly on the "Key Elements" that appear to identify the most significant

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

management actions contained in each alternative. Other proposals involving commercial activity, visitor use/interpretation, turnouts and specific trailhead design, winter use, etc. are certainly important. However, and as set forth in the alternatives, the actions proposed related to these activities are consistent with key elements. We may comment further on some of these issues when the Draft Environmental Impact Statement (DEIS) is issued.

TOPIC QUESTIONS:

1. Which strategies in the preliminary alternatives do you think should be carried forward to best achieve the purpose and address the need for the plan? Why do you think they should be carried forward?

We fully support two of the three key elements presented in Alternative B. In particular, the concept that the Moose-Wilson corridor should be mainly a visitor destination seems consistent with sustained achievement of the goals and desired future conditions set forth at the beginning of the plan. We don't believe that achievement of these goals and desired future conditions can be established and sustained if the corridor continues as a two-way through road during peak season. We fully support the proposal to realign two segments of the northern portion of the road to address congestion associated with the presence of wildlife, etc.

While we appreciate the position of others that the unpaved section of the road should remain unpaved, we also see merit to paving it. There are many reasons for our opposition to the multiuse trail proposed in Alternative D; however, providing opportunities to ride bicycles in this corridor is not among them. It seems logical to us that our comments should also reflect support for bicycle enthusiasts.

We also support the proposal in Alternative B that winter maintenance of Moose-Wilson Road would end at the Murie Ranch access road junction, and winter use would be limited to skiing, snowshoeing, and walking, without grooming.

2. Which strategies in the preliminary alternatives do you think would not achieve and address the need for the plan? Why do you think they should not be carried forward?

This planning process is based on multiple and strong indications that the identified goals and desired future conditions for the Moose-Wilson corridor cannot be achieved without change. Accordingly, the No Action Alternative A should not be carried forward.

The key elements of Alternative C should not be carried forward. In fact, these key elements seem limited to traffic management. The proposal to close a portion of the road to vehicles two days a week certainly has merit, and some visitors would benefit from the opportunity to hike or ride a bicycle along this corridor absent vehicles. However, such closures would inevitably deny many visitors access to this part of the park should their visit be limited to the two days it was closed to vehicles. The plan does not present a rationale that such closures would do more than temporarily reduce impact to wildlife or other natural or cultural resources. The proposal to limit the number of vehicles entering the corridor would likewise create unequal opportunities for visitors. And, based upon our experience, it would be an extraordinary communications and management challenge to implement effectively. At best, such a proposal would seem no more than an interim placeholder until a long-term strategy is established to control traffic.

Alternative D should not be carried forward. While Key element #1 - Realignment to address congestion associated with the presence of wildlife is among those we support in Alternative B (see comments in next section), the two remaining key elements - construction of a paved separated multiuse pathway and

hourly limits on vehicles - cannot be supported. In particular, we strongly oppose the proposal to construct a paved multiuse pathway; it would result in significant harm to the cultural and natural resource values of this portion of the park. The development and visitor use described in this alternative violates the basic premise of the planning process, which is that operational changes should be compatible with the goals and desired future conditions that are described at the outset of the document.

Most of the nearly 1,050 members of CNPSR began their careers with NPS near the end of an era when park managers were scrambling to accommodate most traditional and many emerging types of visitor activities in parks. It was during our careers that all of us, from decision makers to field rangers, came to understand that lines had to be drawn so that park resources would not be impaired, and in some circumstances could be restored. In many parks, tough decisions were made to reduce the footprint of past and often inappropriate development and to set limits on many forms of public use. Alternative D represents to us a reversal in this evolution toward preservation that so many of us tried to achieve; it seems the antithesis of where the Park and NPS should be going as we plan a celebration of the first 100 years of the NPS.

3. Are there other strategies that should be included in the preliminary alternatives that are not already presented? If so, which strategies and why should they be considered?

It seems clear that a principal impetus of this planning process is to find long-term solutions to the growing challenge of vehicle congestion in this corridor, and two traffic management strategies are presented. As noted above, we believe that the proposal to seasonally block through traffic by placing a gate at the appropriate location along this route will significantly reduce congestion, is feasible, and should be further evaluated. The alternative proposal, which would essentially place an hourly limit on vehicle access to the corridor during peak use periods does not seem feasible to us.

However, there are other traffic management strategies that have been implemented with substantial success in many park areas throughout the National Park System. In particular, we suggest that the potential for limiting vehicle travel to one-way be evaluated. If feasible, such an approach might substantially mitigate congestion and achieve the stated goals and desired future conditions. We also suggest that the potential for some form of a shuttle system be explored. Each of these management strategies requires considerable analysis, planning, and management, and obviously must be designed to meet local conditions. But both have a strong record of success in many sites in many park areas.

4. What other comments or suggestions do you have?

In our February 6, 2014 comments submitted during the scoping process we wrote that "CNPSR has determined that Grand Teton National Park's initiation of planning for the future of the Moose-Wilson corridor is precisely the type of issue that warrants our organization's close attention because of its National Park System-wide implications and its ability to raise the public's awareness of the values and purposes of the National Park System." As mentioned above, we appreciate that all topics addressed in this document are important. However, we have chosen to focus mainly on the two that best reflect the reasons we have engaged in this planning process.

Traffic management has long been nationally prominent, and many park areas have found ways to mitigate high profile challenges posed by too many cars in key places. Ideas and various models are implemented and evaluated nationally, and sometimes internationally; mistakes are made, and lessons are learned. We urge that, as this process moves forward, the full menu of possibilities to achieve the goals and desired future conditions set forth in the plan will be fully evaluated in the context of improved traffic

management.

The other issue with national implications is the proposal to construct a separate multiuse path in the corridor. Decisions about such construction go to the heart of what our national park system will be in the future. Will it lean toward supporting more and more varied recreational uses, even if it means significant harm to park resources; or will it set a tone for our next century with a determination that resources will not be impaired?

Thank you for your consideration of our comments.

Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States.

Thank you.

We appreciate your efforts to support park protection around the country. Grand Teton National Park is a special and beautiful place and your action will really make a difference in how the park will manage a critical road corridor in the future.

Sincerely,

Elaine Priday

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is

owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Topic Question 1:

Maintain road as only a scenic, slow, gravel road for folks willing to take their time and really get the park experience

Comments: Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Topic Question 1:

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route.

Topic Question 2:

The strategies that route traffic away from this area. I've been there and seen moose, beavers and even an elk. I'd really like to be able to take my son to see them too.

Topic Question 1:
Protect wildlife from human activity.

Topic Question 2:
The goal of the Park is to protect wildlife, not build roads and structures for humans. Humans have plenty of roads and structures elsewhere.

Topic Question 3:
No more roads or structures. Leave the Park as natural as possible.

Comments: Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of

alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States.

Thank you.

We appreciate your efforts to support park protection around the country. Grand Teton National Park is a special and beautiful place and your action will really make a difference in how the park will manage a critical road corridor in the future.

Sincerely,
Anastasia Hopkinson

Topic Question 1:
We have to save the planet, Because if we don't they will be no life either from plants or animals.

Topic Question 2:
We have to tell Washington to start thinking what they are doing and some of it is wrong. For example the wolves,bison and even the wild mustangs they are in trouble.

Topic Question 4:
We have to help and make sure the planet is safe. We even have to save the animals from Africa and Asia too. They are in danger right now.

Topic Question 4:
Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Dear Superintendent Vela,

I grew up in Colorado near the Rockies, where often I enjoyed the beautiful mountain environment. It was a gift from God to be able to visit the mountains and see wildlife and the remarkable landscape. To this day I miss the Rockies and all such wilderness areas. So, I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. Topic Question 1:

I think the most important consideration is the lack of habitat for wildlife in an increasingly mechanized era.

Back off on development & allow space for wildlife.

Topic Question 2:

Stop building roads & allow land to go back to bush.

Topic Question 3:

We are increasingly giving way to over building & lack of wild spaces. Allow the parks to become a real antidote to that.

Topic Question 4:

Stop allowing commercial activities such as fracking, logging, & road building in natural areas & allow them to continue to support the original life that belongs there.

Comments: Stop spending money to industrialize our parks & allow them to go 'back to nature' as they were intended to be.

Correspondence Text

Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is

owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Topic Question 1:

I am going to answer each question the same. You state in your email to me that you "have" to allow more development, so which strategy is the best. YOUR JOB is to PROTECT the parks, not cave to special interests. YOUR JOB is ensure that the parks, wildlife, plant life, and eco-systems remain healthy and intact for future generations. Your current attitude of "we have to cave" is preposterous and does not correlate to YOUR JOB to protect the parks. At the rate you are going, with our "we must comply with development" interests, every year, there won't be anything left in another 50 years, maybe sooner, or at least nothing worth going to see. Duh, that's their long range plan. Please put your responsibilities to the parks and the wildlife and plant life within FIRST, and ignore the special interests. Why do I even need to say this?

I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is

owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Topic Question 1:
See #4.

Topic Question 2:
See #4.

Topic Question 3:
See #4.

Topic Question 4:

"No more cars in national parks. Let the people walk. Or ride horses, bicycles, mules, wild pigs- - anything- -but keep the automobiles and the motorcycles and all their motorized relatives out. We have agreed not to drive our automobiles into cathedrals, concert halls, art museums, legislative assemblies, private bedrooms and the other sanctums of our culture; we should treat our national parks with the same deference, for they, too, are holy places. An increasingly pagan and hedonistic people (thank God!), we are learning finally that the forests and mountains and desert canyons are holier than our churches. Therefore let us behave accordingly."
~ Edward Abbey

Comments: Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. Topic Question 1:
Alt. D

I like the road realignment and pulling traffic back from critical habitats and providing a greater buffer and, hopefully, better sight distances. Separating transportation uses on this popular road with great distractions is a great idea. Improving visitor services to actually accommodate the increase of visitors and to provide better services at the LSRP is also a very good idea. Not paving the unpaved section of road, but improving drainage management and mtce are wonderful concepts. I'd like to see the whole thing gravel if it weren't for the maintenance headache and environmental impacts that would cause. Gravel slows traffic and discourages casual travel.

I do not agree with the quota system or reservations. Designing the road for the traffic volume and separating cycling and automotive traffic will improve traffic flow and reduce conflicts. Quotas and road closures are not easy to manage nor are they consistent with the park experience in GTNP. You'd just piss off thousands of potential advocates every year.

Topic Question 2:

Alt A. The use patterns have changed and that needs to be addressed.

Alt B. Pave the road? Really? Also would like to see White Grass Rd. access to historic district maintained.

Alt. C. I do not like the idea of road closures or traffic limits. I hate crowds, but don't think road closures are the way to go. Spacing traffic out only works if nobody stops.

Topic Question 3:

I really don't have the background with your planning process to offer any valid, new input.

Topic Question 4:

Great idea from From Alt. B for self-regulating visitor behavior.

"Provide traveler alerts before entrances to inform visitors of traffic congestion, full parking lots, and potential wait times, and give them the opportunity to choose an alternate route before entering the corridor."

Comments: I would like to thank you for seeing this areas challenges and looking for ways to improve them for the park resources and visitors alike. Change needs to happen to protect wildlife and the park.

Good luck, look forward to seeing what you decide to do!

I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is

owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Topic Question 1:

Increased traffic through pristine areas are always detrimental to the wildlife and the solitude of the area. I agree that limited use of shuttles or other form of mass transit/ viewing or tourist vehicles would be more acceptable than allowing an increased traffic pattern emerge in the vicinity however, other forms of transportation, foot traffic, bicycles, horses, would be preferable to motorized vehicles. Winter traffic also needs to be held to a minimum if the desire is to maintain the equilibrium and grandeur of the area. Animals and wildlife are not appreciative of the added noise and pollutants.

Topic Question 2:

Any traffic plan which includes the increase of motorized traffic through this corridor should not be carried forward. We have so few places in this country that are as pristine as the Tetons nor as solitary. Any plan which compromises these qualities should not be moved forward.

Comments: Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

I remember years ago the first time I visited the Moose-Wilson road. What a joy, it was quiet and peaceful.

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

Most of the drivers obeyed the speed limits and there were fewer vehicles than there are now. So much has changed in the last several years, my favorite peaceful small road now seems like a freeway, with cars, trucks, etc. speeding through the area with no concern for anything or anybody. Something needs to happen to stop the madness and I don't mean creating a bigger and faster road through the pristine area known as the Moose-Wilson Road!

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Topic Question 4:

Do not implement strategies or give in to special interests which degrade the very values park visitors hold dear: the chance to experience serenity and quiet and an opportunity to experience a wide variety of wildlife that live nowhere else but the Greater Yellowstone region. It is vital that you vigorously protect the area's unique wildlife, biology, and cultural history. I strongly support the protection of the rare wildlife, unique cultural history, and quiet recreational opportunities along the Moose-Wilson corridor. Preserve these for all generations to enjoy.

Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is

owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Topic Question 1:

Doing everything to protect the Moose-Wilson corridor. If this includes keeping currently unpaved portions unpaved for the future, or making it one-way, I strongly agree. I also support pullouts, though not necessarily as many as in Alternative B. Definitely not as many as in Alternative D.

I support, at a minimum, a "staging" system for vehicles as listed in Alternative C. I am at least open to a reservation system, as mentioned in Alternative D. Especially if this is adopted, an NPS-operated bus system should also be in place.

I am disappointed that NPS-owned bus service is not being considered as part of reducing congestion, especially on the "road closure days" listed as part of Alternative C. I do not know why it is not listed on all four alternatives. And, I do not favor a private bus service.

On Death Canyon, I think changes should be as minimal as possible, short of more serious work that may need to be done for actual restoration/reversion efforts.

Topic Question 2:

If shuttle buses are to be allowed, as noted as a possibility on Alt. C, they should be NPS buses, as at Yosemite, Zion and elsewhere. They should NOT be private ones. A private bus will not have the same devotion to the park.

Taxis, mentioned in Alt. C, should not be allowed. Period. End of story. That would defeat everything else in the plan.

Topic Question 3:

If shuttle buses are to be allowed, as noted as a possibility on Alt. C, they should be NPS buses, as at Yosemite, Zion and elsewhere. They should NOT be private ones.

Topic Question 4:

Turnouts/pullovers are good if done as minimally as possible. Alt C is best on this.

Topic Question 1:

I believe Alternative B best addresses the broader issue that national parks are facing, which is a destructive favoring of access over conservation. When traffic jams and road-killed wildlife are the standout features of our most beloved national parks, it signals a strong need for change!

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States.

Comments: Unfortunately, Grand Tetons is still on my bucket list. I was supposed to visit this summer of 2014, but unavoidable circumstances have delayed our trip. Please do what is right and just first for the animals and birds that are residents of this wonderful park and then for the visitors. Commercial usage should be last on the list of changes and accomodations. If what is done in the park causes changes in the beauty of what God has created in the land and wildlife, why should visitors want to come?

Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is

owned by, cherished, and enjoyed by people from across the United States.

Thank you.

We appreciate your efforts to support park protection around the country. Grand Teton National Park is a special and beautiful place and your action will really make a difference in how the park will manage a critical road corridor in the future.

Sincerely,

Topic Question 1:

I think the low-speed, winding, gravel roads help preserve the historic character, as well as the scenic value of the area. Who can help but marvel at the views when going at a leisurely pace through such grandeur?

Topic Question 2:

I think one of the primary goals for the NPS should be preserving the wild life of the area. When I visited the Grand Tetons, one of my primary hopes was to see a moose. Sadly, I did not.

Topic Question 3:

Seasonal closures of certain roads assist the preservation of the land and of the wildlife.

Topic Question 4:

The Grand Tetons is truly one of the gems of the National Park Service. Please help keep it that way!

Topic Question 1:

My primary interest is in protecting the natural habitats of the wild animals. After a;;, this is THEIR home, not ours. And, the best way to protect their environment is to LEAVE IT ALONE. Stop encroaching on it. Humans need to understand that animals do not exist for our pleasure or entertainment. We still can enjoy the parks if we stay on the perimeters.

Topic Question 2:

Simple, as I stated above. Keep humans on the perimeter of the park, far away from the homes of the various wild species. Building closer and closer to the animals' habitat should not be done because of the reasons I've stated already.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is

owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is

owned by, cherished, and enjoyed by people from across the United States.

Thank you.

I won't answer the questions above, but I urge you to do all that you can to help save Wildlife. It's ridiculous that these creatures are threatened by man and there's always excuses as to why "we" have more rights, which causes these animals to be killed at will.

It's sickening and I'm tired of the rich destroying our country.

I don't think there needs to be a commuter type road through the national park, people should be driving slow and enjoying the wildlife. It seems like in California there are even some seasonal closures to some of the roads in the national parks and then when the roads are reopened in the spring, it's a treat.

Correspondence Text

Dear Superintendent Vela,

I am a biologist, mother and grandmother. I care about the increasingly small precious wild areas of this planet. That we DO need them is clear to me. That we share this planet with many animals and plants that we are putting at great danger if not outright extinction. What we lose when we do that is incalculable.

I am deeply concerned about the Moose Wilson Road Corridor inside Grand Teton National Park. I love our remaining wild places and want them to stay protected and wild. One way to do this is to keep the roads through it functioning with a low-speed gravel road which will contribute to keeping the character of the road which is its specific scenic aspects through this unique area. I absolutely must not become a busy traffic route. That kills the silence and the animals and plants within must suffer considerable damage.

The number of vehicles must be controlled. Why should commuters be allowed or commercial traffic? The road should be safe fro the pedestrian and cyclist. Limit the number of shuttles allowed. I, myself, am now using a walker but gladly give up my using this road in the name of preserving the environment. Let someone make a good video for me me enjoy and I will.

How about closing the road during winter? Let the wildlife be undisturbed by we humans. And by all means, avoid development of presently undisturbed areas. It is sad to admit but I think of developers as DESTROYERS of the tiny amount of protected space.

Grand Teton is there for the people who live locally but it is also land owned and loved and enjoyed by

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

the citizens of the USA.

Thank you.

Topic Question 1:

Keeping the park a low/speed/traffic area, by limiting development and by creating a unique 'within' park transportation system. Our parks are one of fewer and fewer remaining areas where wildlife can flourish. Increasing development, improving roads all will erode the fragile nature of our parks, and with it the wildlife.

Topic Question 2:

Excessive development of such wildlands is not necessary, and should be limited to the bare minimum required for the operation of the park.

Topic Question 4:

I was impressed with the transportation system at Denali National Park, which allowed visitors to see much of the park, without overly impacting the wildlife. A shuttle system which keeps personal vehicles out is much to be desired. An electric vehicle system would be ideal, but would need a unique solution for charging stations further within.

Comments: Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic

and wildlife values of this special area. It exemplifies what nature is, and must be maintained.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is

owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Anita Clemmer

Topic Question 4:

Keep it wild. That said, you've blocked most of the parking along the road....so, it's hard to enjoy this area anyway.

Comments: Dear Superintendent Vela,

I would support the plans and propositions that the Park Rangers create; they know the territory and its features better than anyone else other than geologists familiar with the areas involved, and what must be done to insure the protection of the land and the creature inhabitants.

Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a

more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Topic Question 1:

value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States.

Thank you.

We appreciate your efforts to support park protection around the country. Grand Teton National Park is a special and beautiful place and your action will really make a difference in how the park will manage a critical road corridor in the future.

Topic Question 2:

value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Topic Question 1:

Expansion and enhancement of wildlife corridors and migration routes, especially riparian corridors which link protected public lands. This strategy will maximize the wildlife supporting capacity of the protected lands, and reduce the incidence of conflicts between wildlife and private interests.

Topic Question 2:

Culling of wildlife, and herding of wildlife on a routine basis creates an unsustainable and unbalanced environment, and increases the cost of maintaining the public lands and easements.

Topic Question 3:

Development of a larger scale, longer term plan which encompasses a greater geographical area. The plan should identify and rank public lands in terms of wildlife value, and should also identify lands currently held by private interests which would have high value in terms of linkage of high value public lands, etc. Lower ranking public lands could be used in exchange for high value public lands to create public lands with higher aggregate value in terms of wildlife and wild area preservation and enhancement.

Topic Question 4:

Revise the current charter/strategy of the NPS with a mandate to begin removal of hotels and restaurants from areas of public lands that have high or potentially high wildlife value. Partner with private entities to develop "drive in" amenities at park boundaries, and gradually convert parks to authentic wild areas.

Topic Question 1:

Please make sure that the EIS prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts - Maintaining slow gravel roads would be the most appropriate proposal!!!

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should absolutely be avoided.

Topic Question 2:

Any incursions onto previously protected areas that have not been impacted should be halted - there is so little true wilderness left for these animals.

Topic Question 4:

I am deeply concerned that traffic impacts and calls for increased development could destroy the character of this corridor and the sanctuary for it's animals. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Comments:

Thank you for your efforts to support park protection around the country. Grand Teton National Park is a special and beautiful place and your action will really make a difference in how the park will manage a critical road corridor in the future.

Topic Question 1:

A National Park is just that, not a convenient shortcut or bypass! I am against further damage to any of our National Lands, no road easements, no fracking or drilling, no special perks for special interest groups, NONE!

Topic Question 2:

Have not seen this information to be able to comment on.

Topic Question 3:

Ditto!

Topic Question 4:

See my answer to Question #1.

Comments: We were married in the Alderwood Log Chapel in the meadow in 1982, and the whole park is a precious memory for our now joined families! It, like all of our other treasures, must remain guarded, cared for and treasured. It must not be taken over for commercialization and overrun with drilling, logging, intrusive developments, etc.

Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is

owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Topic Question 1:

Preserve the quiet and solitude of the park as much as possible. Prioritize this road for quiet activities and wildlife viewing. Use traffic management techniques to reduce the number of vehicles, maintain slow speeds, and especially to eliminate commercial and commuter traffic along the road.

Topic Question 2:

Don't allow more or faster traffic. Seasonal and temporary closures to individual car traffic are absolutely OK, for the safety of cyclists and the protection of wildlife.

Topic Question 3:

Encourage visitors to ride in buses, or walk or ride bikes, as much as possible. Develop your shuttle bus plan in more depth, to support the goal of a quieter, more peaceful park.

Topic Question 4:

Above all, don't allow new impact (including no new roads) within the park.

Visitors are coming for a vacation, and to get away from the city. They don't need fast roads or overly embellished camping areas.

Preserve the gift of a slow pace! Keep the gravel roads as gravel. I love the feel they have, as an escape from the ever-encroaching "improvements" of civilization. So-called improvements detract so much from the

natural ambiance of the park.

Comments: I first visited the Tetons in 1954, when my grandpa was camping there, as he did every summer. This is where I fell in love with mountains. Even at the age of 7, I felt like a new person in this setting. I felt something stirring inside me when we walked to view moose in the dusk, and when I saw the sunshine glint on the mountains in the morning.

Now I visit Tetons often, in hopes of recapturing that magic of solitude and connection with nature and wildlife. Last summer, I rode my bike, carrying all my own camping gear, through the Tetons and Yellowstone. The best part of the trip was when I was on the bike path! I've also enjoyed hiking the entire Teton Crest Trail several times. Please protect and encourage these opportunities for slower-paced enjoyment of the park. It brings us closer to nature and allows us to imagine just a little what the land might have been like a century or two ago. That should be on of the key purposes of national parks like the Tetons.

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. Correspondence Text

Dear Superintendent Vela,

We drove from California to Yellowstone and then south. Grand Teton was one of the places we visited on our trip this year. The experience of Grand Teton is quite apparently both highly dependent upon and also sensitive to the north-south vehicle corridor on the eastern flank of the Tetons. This includes the route itself as well as the driving experience and the vantage points near this route through the park. It goes without saying that the wildlife in the area is also very sensitive to and strongly impacted by the corridor.

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. Topic Question 1:

Reduce the number of vehicles traveling on this road by issuing permits to a limited number of vehicles for each 24 hour period. Those not getting permits could buy tickets for energy conserving buses to take them with a return trip option. The number of buses should also be limited.

Topic Question 2:

If nothing is done and the road becomes excessively loaded with vehicles nothing will be accomplished. The number of vehicles must be limited.

Topic Question 3:

Perhaps people could be allowed to hike the route with the option of buying a ticket for bus ride on the return trip.

Topic Question 4:

Due to the ability of people to travel to the parks limits have to be put in place for the number of people who are allowed to drive on park roads.

Comments: The enforcement of these rules has to be backed up by the law enforcement branch of the NPS.

Topic Question 1:

Having just come back from Rocky Mountain National Park where I used the shuttle, I can tell you that the shuttle system ought to be incorporated more into the whole NPS system.

Topic Question 2:

I can't speak to what won't work, but I believe that the intent of the park system is to preserve ecosystems. And that is best achieved, I believe, by not putting harmful things in the path of herds of animals.

Comments: I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a

more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

Topic Question 1:

At some point humans have to stop making it a priority to spread their expansion into wildlife territories. We have selfishly compromised the natural world for far too long. There has to be creative ways to avoid wildlife destruction.

Comments:

Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States.

Thank you.

I went to the Tetons back in 1976 and enjoyed the beauty, quiet and solitude. Young people want that also. Please make sure that these roads are not used commercially and heavy traffic. We have enough noise in our daily lives we do not wish to see or hear it in our parks and especially our beautiful, historic parks. Please make sure you listen to the citizens not special interest groups which only look at the short-term gain not the long-term future generation decisions. Please do it for us! Thanks.

I have visited the Grand Tetons many times and would hate to see the wildlife and the natural habitats for them destroyed by man. My son lives and works in the area and also cherishes his life there. We all need to save our parks for future generations.

sincerely,

Linda Wasserman RN MN BC

Dear Superintendent Vela,

Our parks are among the great assets of this country. I have concerns about the Moose Wilson Road Corridor within Grand Teton National Park.

I have a great appreciation for the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts will cause increased development that could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Topic Question 1:

Whatever keeps this Park area wild and serene and welcoming to wild animals and those of us who love them and their natural home.

Topic Question 2:

Whatever makes the Moose-Wilson Road loud and fast and commercial and uninhabitable by wild creatures and their visitors who seek a wilderness experience.

Topic Question 3:

If possible make this passageway more natural.

Comments: I want the National Park Service goals and criteria met completely in the Moose-Wilson Road Comprehensive Management Plan. Most of our nation has been turned over to commercial interests, to the detriment of our wild legacy and the enjoyment of that legacy by those of us who do not live only to buy and sell. This is a National Park and should be totally respected as such.

Topic Question 1:
Keep all development out of the Park.

Comments: Keep all development out of the Park. Our parks are there to protect the environment, the wildlife and for the people to enjoy in peace and solitude. They are not for commercial exploitation of any kind.

Topic Question 2:
5

Comments: Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grant Teton National Park. As a lover of the national parks, this one in particular, and a strong supporter of the national park system, I GREATLY value the wildlife, scenery and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area. That is why Grand Teton was made into a national park, to preserve nature.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds and to eliminate commercial and commuter traffic along the road. These goals combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States and other parts of the world.

Thank you for your utmost consideration in this matter which is very dear to me.

Topic Question 2:

I don't want to see bicycle paths built. This would destroy too many of the beautiful trees and the habitat they provide. There are many many wonderful alternative bikeriding venues in the area for the small number of park users who ride. Also, I object strongly to discontinuing commercial horseback riding on the Sawmill Pond trails. Hikers and horseback riders have been sharing the trails in harmony throughout the history of the park and the area is uniquely suited for it.

Topic Question 4:

Please, please listen to the dude ranchers in your area and to their concerns about this plan. The Moose-Wilson road is so special just the way it is- -a true taste of the old west, in my opinion. We vacation each summer in Jackson-Hole and spend a week horseback riding on the Sawmill Pond trails and we picked our particular guest ranch 15 years ago precisely because of the rides offered in that exact area. It is unique. Please do not make the planned changes which will make trail rides there a thing lost to history. The ranchers have complied so graciously to the elimination of their right to trailer their horses on the Moose-Wilson Road. This in itself affected the quality of the guests experience, as rides further up into the park now require a much longer trip thru Jackson. Elimination of rides in the Sawmill Pond area will have a major effect on tourism to the area. It will take away the thing that most distinguishes ranches in your area from all the others.

As a climber and hiker, including in the Tetons, I am asking that you protect the Moose-Wilson Road from development. I understand the increase in interest in such a lovely area, but it won't be so lovely if too many people take up residence there. I am for more density is already-occupied areas and for leaving the wild areas alone.

Dear Superintendent Vela,

I am concerned about the future of the Moose Wilson Road Corridor within Grand Teton National Park. The wildlife, scenery, and historic values of this road are immense. Unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

As the Environmental Impact Study begins, please prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States, like me and my family.

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

Thank you.

I appreciate your efforts to support park protection around the country. Grand Teton National Park is a unique and beautiful place. The actions you take will have a large impact on how the park manages a critical road corridor in the future.

Sincerely,
Tara Kamath

Topic Question 4:

Keep in mind the principles of preservation that define the mission statements of our National Parks. The incursion and despoiling of parks by those whose interests are contrary and self-serving should not be considered as any improvements, but rather the opposite.

Comments: Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Wildlife should always be given top priority. It's the human population that is out of control. No other species wreaks havoc and destruction on our wild lands as much as humans. People are losing hope of preserving nature due to uncontrolled greed.

Topic Question 1:

Continue to prevent increased impacts on Grand Teton National Park preserves.

Topic Question 2:

If increased impacts were to be allowed, they could not be reversed if untoward events occur. When natural environments are disturbed or eliminated, remediation and mitigation are not possible.

Topic Question 4:

There are people who believe that humans can rectify any problems that they themselves have created. With respect to the natural world, this belief is delusional. It is highly problematic to try to undo damage that is purposeful or has been allowed to happen. "If only" means that a tragedy has already taken place and there is no going back.

Topic Question 1:

I would like to stand in support of the Park Service's efforts to preserve this corridor not only for the Park and wildlife but also so future generations can enjoy it.

Topic Question 2:

I am not aware of the details of the park service's plan, but trust implicitly that their suggestions

Topic Question 4:

I have been fortunate that I was able to visit the park and stay at Jenny Lake Lodge, where the Elks call well into the night. It is a very special place and once developers get a hold of things, it will never be the same. Please vote to take measures to preserve the tranquility and wildlife.

Comments: Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic

management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Heidi Ludwick

Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Topic Question 4:

Please stop ruining our beautiful National Parks. There is no good reason to change anything about the Moose Wilson Road Corridor. The number of different species that need this road and this area to stay just as they are far outweigh the one species that wants to destroy it for their own use. We very much need the trees and animals. We very much do not need wider roads, higher speeds and more traffic.

Comments: Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the

road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States.

Thank you.

We appreciate your efforts to support park protection around the country. Grand Teton National Park is a special and beautiful place and your action will really make a difference in how the park will manage a critical road corridor in the future.

Sincerely,

Sharon Mader
Grand Teton Program Manager

P.S. See for yourself what's at stake in the Moose-Wilson road corridor in this Park Service video.

I think the best thing for wild life is fewer people being let in to live in this country. Reforming legal immigration is the key. We already have very healthy birthrate, we don't need 2 mil a year more immigrants plus illegals in big numbers. U S has unique habitats to protect and a good set of laws so far to do it. But... all that is not going to help wild life because human needs for space and industrial development will outweigh the needs to protect wild spaces. So get a seat at the table with the President , tell him to change our immigration policy soon before we become as numerous here as China and they have very little to show for when it comes to wild life. please keep my comments anonymous.

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is

owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Topic Question 1:
Wildlife and nature should be the priority over vehicular traffic

Topic Question 2:
caution that priorities default to bigger roads, more traffic, etc.

Topic Question 3:
Hm, many parks are going to buses, instead of private vehicles...

Topic Question 4:
below

Comments: I am a frequent park visitor and the Moose Wilson Road Corridor within the Grand Teton National Park should remain a low-speed road in order to preserve the solitude, scenic and wildlife values of the area.

Please prioritize this road as a quiet park destination and wildlife-viewing area.

thank you -

Topic Question 1:

I prefer Alternative B but like Alternative C definition Death Canyon Road. I also think the unpaved sections of the road should be paved and off road parking or other off road activities should be restricted to designated areas.

Topic Question 2:

Limit commercialization of this section of the road in the park as much as possible, US-189 is a better alternative for commercial activities.

Topic Question 3:

See above comments

Topic Question 4:

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States.

Comments: I have been to Grand Teton park but I have not driven the Moose-Wilson road. I plan on driving the road in June 2015.

I think commercialization should be limited as much as possible on the road to provide the visitor with as much a natural experience as possible.

Topic Question 1:

I feel that first and foremost we need to protect the unique solitude, wildlife habitat, and historic character of the Moose-Wilson road corridor. As a visitor to the area, I would hate to have the wonderful connection to creation that I experienced jeopardized by increased development.

Topic Question 2:

Keep the corridor free of commuter traffic. This is a special site that should be savored, not rushed through. Let commercial traffic bypass the park rather than go through such a bio diverse area.

Topic Question 3:

If shuttles would reduce stress on the park, that would be an excellent way for viewing.

Topic Question 4:

Part of the attraction I have for the Grand Tetons is the viewing of wildlife. Whatever plan is considered must put the welfare of the animals and their habitat in the center of the plan.

Comments:

Since I could not find the strategies, all I can say is that my husband and I have visited the Grand Teton park almost 25 times. We started coming there in 1987. In fact, our spiritual retreat (The Grand Teton Retreat) met there for years at the Jackson Lodge. We walked out of our cabin there and meet a huge male moose munching on the flowers in the flower bed. My husband, 6'1", looked like a shortie next to the haunch of that magnificent animal. We've seen a hundred elk cross the river while we were on rafts early in the morning. We've seen a bald eagle pester an osprey carrying a fish until the osprey dropped it and the eagle swooped down and caught it mid-air. We've hicked the mountain trails in the Tetons, canoed on Jackson Lake, and have taken thousands of pictures. We live in Florida, so this is sacred land for us with the cool weather, the majestic mountains, the deep blue lakes, and the occasional snow the first week of September.

Topic Question 1:

Park managers are developing a plan that will shape the future of this critical landscape, but powerful special-interest groups are trying to force NPS to allow for increased impacts on the Moose-Wilson Road corridor, which could irreparably harm park resources. Please lend your voice to support the protection of the rare wildlife, unique cultural history, and quiet recreational opportunities along the Moose-Wilson corridor.

Topic Question 2:

Save the Moose Corridor!!! Keep Special interest out of the park!!!! The park should be for the American people and the Tourist that come to see the Beauty of the American Park System. It has TO Be Protected for all Generations!!!! Not for special interest who care about their profit!!!!

Topic Question 3:

All Strategies that Involve the Protection of the Park for Centuries to Come!!!! Giving The Wildlife the room and the Space they need to live be a part of Nature as the Earth Intended!!!!!!

Topic Question 4:

Keep All Vehicles Cars, atvs, snowmobiles, bikes-motorcycles and off road bikes out the park. The only wheels should be used by park officals or someone who suffers a disability. The Disable Should and Deserve the Right the Full use of the Parks!!!!!!

Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is

owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Topic Question 1:

I think every effort should be made to preserve the Moose-Wilson corridor. Already it has great encroachment by traffic that has been increasing. A thoughtful plan should be implemented that will prevent further encroachment on this area.

Topic Question 2:

No new development should be considered.

Topic Question 1:

Preserve the slow, quiet nature of this corridor. This should not be a touristy-commercially developed area that would disturb and distract the wildlife and visitors who have come there to experience the wildlife.

Topic Question 2:

Paving of the road would encourage further pass-through traffic, which would disturb and scare away the wildlife, and eventually destroy the purpose of the area. Speeds should be kept slow, there should not be loud engines, there should not be clouds of polluting exhaust from engines, there should not be buildings or parking lots built, so that wildlife and visitors can experience the openness and beauty of this natural area.

Topic Question 4:

Please resist any pressure from special interests to further develop this beautiful natural area.

Correspondence Text

Dear Superintendent Vela,

I write as a member of NPCA to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. I greatly value the wilderness experience available in the national parks and the wilderness solitude that can be found there.

A couple of years ago, my husband and I participated in a Road Scholar program to improve the wildlife corridors that run through the Teton/Jackson Hole area and came to appreciate and understand the underlying factors necessary to maintain wildlife habitat. Increasing traffic and development run counter to those needs.

I fear that higher traffic and calls for increased development along the Moose Wilson highway could destroy the special qualities this road affords visitors. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I hope the plan would use traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. This does not encourage development but will enhance and preserve the unique wilderness experience available to

visitors to the park.

NPS alternatives mention the use of a future small shuttle system, which I would support, and encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States.

Thank you.

I think the primary goal should be to protect the unique solitude, wildlife habitat, and historic character of the Moose-Wilson road corridor. All traffic should be rerouted around the Park and some reasonable distance, say a minimum of 100 miles.

If we are not going to protect the animals that life there, of what use is the Park?

Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is

owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Sincerely,

Jenifer Hartman

Correspondence Text

Dear Superintendent Vela,

As a child and teenager, the iconic photographs of Grand Teton National Park caught my attention and imagination like no other place on earth. Of all the mountain ranges on earth, the Tetons were at the top of my list to visit. Their incredibly rugged peaks, with adjacent glacier-scoured valleys, epitomized to my young mind the idea of wildness and wilderness. It is a place so unique that it ranks as one of the world's top natural attractions, in my opinion.

They are national icons, and deserve the strongest protections possible to ensure that future generations will enjoy them in all their wild, natural splendor...without encroaching development to spoil the wilderness experience. I use the term wilderness in a more generic sense, not in the legal definition of a wilderness area.

My first visit to the Tetons was ill planned: my freshman year of college was at the University of Wyoming in Laramie. Late one night in early December, we decided we'd drive all night and go visit the Tetons and Yellowstone. We didn't have the internet then, to check ahead and ascertain if the parks were open to visitors at that time of year.

When we got there and discovered that all was closed for the winter to car traffic, we didn't care. The mighty Tetons dominated the entire landscape, and I was in Teton heaven. I finally got to see the most beautiful mountains in the world. I shot three rolls of film just photographing the mountain range from different vantage points. It was a trip I shall never forget. Today, nearly 40 years later, I can still remember who was with me, where we stopped, and most importantly, my first glimpses of the massive, rugged

peaks.

Today, I learned about the Moose-Wilson corridor, and the disturbing trends of greatly increased traffic on this roadway...and possible plans to change the entire nature of Moose-Wilson road area. Superintendent Vela, please make your top priority the protection of the unique solitude, wildlife habitat, and historic character of the Moose-Wilson road corridor. It deserves nothing less.

Each incremental encroachment on our valued National treasures can, over time, add up to huge changes that would astound earlier generations who visited and revere the park's beauty. We must make conservation our top priority. Reasonable, appropriate access is the public's right...but any changes in that access that negatively affect the overall experience must be scrutinized very closely.

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Topic Question 1:

Alternative A, less development will keep more people away, gravel roads should discourage mobile homes and trailers, etc...hopefully it could stay a little wild.

Comments: Dear Superintendent Vela,

Comments: Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Mary Olson

Topic Question 1:

Over the past ten years this sensitive and quiet area of Grand Teton National Park has been burdened with greatly increased levels of commuter and commercial traffic, creating high traffic volume along the Moose-Wilson Road corridor and increasing conflicts with wildlife. It's important that the National Park Service doesn't give in to the demands for even more development within this corridor. NPS must put together a plan that best protects park wildlife and its core habitat, visitor solitude, and the unique historic, natural character of this corridor.

Topic Question 2:

Don't allow more development in this area.

Topic Question 4:

Crashes with wildlife kill/injure both animals and humans, so more development isn't good for anyone. Plus, why do humans have a right to take over even more of nature when the animals were there first and thus have a natural right to it?

Correspondence Text

Dear Superintendent Vela,

I love our national parks and the parks system. Every year, I visit Big Bend National Park. I should be writing to you about the Chisos.

But today, I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. The wildlife, scenery, and historic values of this road are spectacular and should in no way be threatened (perhaps destroyed) by unacceptable traffic impacts that would occur immediately and concomitantly with increased development. Critical to the preservation of all that the parks service is designed to protect - - wildlife, scenery, history, in pristine form - - is the preservation of the low-speed, winding, gravel road that inspires the historic character, solitude, scenic beauty, and sense of remoteness that supports a thriving wildlife population in, rather than wildlife flight from, this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage traffic management techniques that reduce the number of vehicles, maintain slow speeds, eliminate commercial and commuter traffic, and send a "coast is clear" safety message to the wildlife of the area. Alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road, are worth considering, as well, as this could enhance safety for pedestrian cyclists within the existing road prism. Additionally, although the NPS alternatives mention a possible shuttle system, I encourage the park service to develop a more definitive plan that outlines in detail how shuttle buses will be used to decrease traffic impacts.

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but when you look at the big picture, at the national and global landscape of things, Grand Teton is a world treasure that is owned by the people of these United States, but cherished by people from all over the world.

Thank you.

Topic Question 1:
The road remaining gravel with curves.

This is a National Park and not a route around a large city.

Topic Question 2:
Paving the road to support more traffic and high speed traffic.

"Build it and they will come" originally mean a baseball field. It is also appropriate for highways. If you make it a paved highway you will soon have highway traffic. Our National Parks roads were not never meant as just another highway to accommodate a magnitude of high speed drivers

Topic Question 3:
There should be no facilities built to support commercial interests nor private interest along this scenic gravel road. A tourist gets on one end of a gravel road, drives slow and gets off at the other end of this scenic route. For those that can not accept that then they need to find another paved route route that is preferably outside the National Park

Topic Question 4:
Park signs that say < Scenic Trail ONLY >
Park signs that say < 15 MPH >
Park signs that say < Watch for falling rocks >
Park signs that say <This road partoled by Rangers >

Park signs that say < Road Closed for repair every Tuesday and Thursday >

Comments: Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Paving the road would be a mistake. The action of paving will require drivers to go faster to see more in a hurry

Paving and posting a speed limit will do nothing but still speed up drivers and , endanger wildlife.

Please do not allow any private or commercial facilities. Even one facility will be a "foot in the door"

This road needs to be listed as < Scenic route Only >

Maybe at the entrance post a sign that says < Maxium speed 15 MPH >

Maybe a sign that says < This Road is paroled by Rangers >

Maybe a sign that says < Speeding tickets go to a Federal Court for judication >

Maybe a Tuesday and Thursday complete Road closure Midnight to Midnight which would encourage local and commercial interests to find another route.

Maybe the only solution to your traffic problem is another route for local and commercial drivers.

Today's public and commercial interests are in such a hurry and their vehicles are built to accommodate high speed. Please do not build a road that accommodates high speed people and vehicles. If you can not post a Ranges along the road maybe several stop lights. Not at intersections but on curves that you make one lane only. I like the idea of telling everyone that the America public is demanding this sensitive and quiet area will no longer be burdened with greatly increased levels of commuter and commercial traffic, which is creating high traffic volume along the corridor and increasing conflicts with wildlife.

Your solution needs to state Moose Wilson Road Corridor within Grand Teton National Park is going to be returned to a place where all citizens can have a once-in-a-lifetime encounters with moose, grizzlies, elk, deer, and beavers often seen just feet from the winding Moose-Wilson Road in the southwestern corner of Grand Teton National Park. This New plan will protect park wildlife and its core habitat, visitor solitude, and the unique historic character of this corridor. It will eventually provide slow shuttle buses so that the public will have a visit to remember their once-in-a-lifetime encounters with moose, grizzlies, elk, deer, and beavers. Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route.

I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how slow shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States.

Thank you.

The role of the National Park Service is to protect our parks including the flora and fauna. It is not to accomodate corporate intersts. Travel restrictrions should be put in place and all commercial traffic except what is required to support Jackson Hole should be required to use other routes. A limited number of passes should be make available per moth or per year just like applying for applying for hunting licenses for certain mammals. Local private vehicles should be required to have a decal in order to use the roadways kind of like an Eazy Pass for tunnels and bridges in the East and elsewhere however with just a nominal fee, for example \$0.25 to \$0.50 each way, to pay for administering the system. Perhaps something like this would be possible for commercial traffic but requiring a more substantial fee for example \$10-\$20 each way for large vehicles and \$5-10 each way for medium size commercial vehicles.

No one should have unfettered access to roadways through National Park Land

Topic Question 1:

These comments address the requests for development within Moose-Wilson corridor of Grand Teton National Park.

Some of the goals the I'd like to see achieved are use of traffic management techniques such as one way roads, slow speed limits, temporary road closures and a shuttle system. National parks are for everyone's enjoyment but that means different things to different people. For some it means use of ATVs-loud, disruptive, smelly vehicles that scare the people and harass wildlife. We encountered problems here in Rocky Mountain National Park with snowmobilers harassing moose, chasing them to the point of exhaustion and ultimately, death.

There needs to be something comprehensive that will protect our wilderness, the wildlife and the pleasures we obtain from them.

Topic Question 2:

I feel any major developments should be forbidden. I know it would bring needed revenue to the park systems but would it be to the detriment of the values we hold for the parks themselves. The wildlife, scenery, and historic values of our parks can't be counted in dollars and cents. Many large corporations are trying (and succeeding) to develop mining or fracking in and around state and national parks. Profiteers. The ordinary citizen, the ones who's taxes pay for the parks and who volunteer in the parks, the ones who use the parks as affordable vacation and recreation options, are crowded out by the corporations waving dollars in their hands. I'll get off my soapbox now. :o) We need to keep some things precious. These are our treasures to pass on to the next generations. A perfect example of the destruction of a treasure, the Badlands of South Dakota. Teddy Roosevelt made mention of them many times in his

life but he wouldn't recognize them now due to the hydraulic fracturing and oil exploration that is going on. Please keep this in mind when considering any development in any future wilderness areas. Once they are gone, they won't come back.

Topic Question 3:

Stricter EPA standards for air and water quality controls. I am not a scientist but I understand the importance of water quality especially. It is a finite resource and we need to more strictly address the pollution that comes with development. I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. As I stated in Ques. 1 we have had moose harassed in the winter where they have used up their last reserves and have died because of snowmobilers. Winter is their most vulnerable time with scarce resources and little energy.

Most importantly, development in areas that have not been previously impacted should be avoided if at all possible.

Topic Question 4:

Grand Teton is a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States.

Comments: This is to Superintendent Vela of the Grand Teton National Park as well as the National Park Service. It repeats several of my answers above, but for protection of the National Parks, and in particular Moose-Wilson, it bears repeating. Thank you.

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States.

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

Thank you.

We appreciate your efforts to support park protection around the country. Grand Teton National Park is a special and beautiful place and your action will really make a difference in how the park will manage a critical road corridor in the future.

Sincerely,
Marian Aument

Topic Question 1:

Maintain the slow speed, winding gravel road. Consider one-way traffic as well as possible use of shuttles in peak periods. There is a need to maintain the relatively rural and pristine character of the area and prevent unacceptable impact to park wildlife movements and populations.

Topic Question 2:

I do not think the road should be upgraded to a paved commuter highway. This will have significant adverse affects on wildlife and associated park values, as well as greatly diminishing the park visitor experience.

Comments: This comments outline my strong concern about the future of the Grand Teton National Park's Moose Wilson Road Corridor. As a long time supporter of the National Park System and a career natural resource manager for the National Park Service, I value the wildlife, scenery, and historic values of the parks and this road corridor in particular. I am concerned that increased development and unacceptable traffic impacts could greatly impact and destroy these qualities. It is critical that the Park Service preserve the historic character, solitude, scenic and wildlife values of this special area by maintaining the existing low-speed, winding gravel road.

As the Environmental Impact Study begins, please ensure that you identify this road as a quiet park destination and wildlife-viewing area, which is not suitable for a busy traffic route. Please eliminate commercial and commuter traffic and use traffic management techniques to reduce the number of vehicles and maintain slow speeds along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the

road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

The outstanding resources and values of Grand Teton are a cherished treasure owned by the American people and, while certainly enjoyed by the residents of the local community, must be preserved for the enjoyment of present and future generations.

Thank you.

I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is

owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Topic Question 1:

Park managers are developing a plan that will shape the future of this critical landscape, but powerful special-interest groups are trying to force NPS to allow for increased impacts on the Moose-Wilson Road corridor. They need to be prevented from causing any increase of impact on Grand Teton's wildlife.

Comments: Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Topic Question 1:

Commercial thru traffic should be re-routed to pass outside the Park . The value of the park Thursday lies in giving visitors access to viewing & enjoying the Tryong, scenery and wildlife, while allowing for local traffic. Heavy commercial trucks have no business here. Our park systems & their highways ate not maintained for their usr

Topic Question 2:

Strategies that increase & encourage heavy commercial use should be discarded. They spell the death of the park, and the qualities for which this land was & is preserved.

Topic Question 3:

Encourage donations to benefit maintenance & minimal upgrades (such as pull outs, wildlife overpasses, rest areas), modelled on some of the systems in use in Alberta Canada. Encourage use of bicycles with seperate (from vehicle traffic) bike lanes, storm shelters & foot/horse trails. Organize shuttle services.

Topic Question 4:

I've said enough - - make The Tetons a model park; not a through expressway.

Topic Question 1:

Please maintain the existing road and keep it low-speed and low traffic. This area provides a unique experience for many people to experience wildlife. Perhaps using a ticket system for certain areas of the park (drivers get an assigned time to pass through the area) would help.

Topic Question 1:
Any strategy that will reduce traffic flow!

Topic Question 2:
Any strategy that will increase traffic flow!

Comments: Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. Such destruction is not acceptable!

It is absolutely critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I strongly encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to completely eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the

road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also very Strongly support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, any development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States. In reality, belongs to all the American People both this and generation to come. It is our obligation to preserve it for our children and their children.

Thank you.

Topic Question 2:
[REDACTED]

Comments: Grand Teton Moose

[Click Here to Send Your Comments!](#)

(This link will take you to the National Park Service's Planning, Environment, & Public Commenting website.)

Take Action

Dear Michelle,

Park visitors may not always remember the name of the road, but they certainly remember their once-in-a-lifetime encounters with moose, grizzlies, elk, deer, and beavers often seen just feet from the winding Moose-Wilson Road in the southwestern corner of Grand Teton National Park.

Over the past ten years, however, this sensitive and quiet area has been burdened with greatly increased levels of commuter and commercial traffic, creating high traffic volume along the corridor and increasing conflicts with wildlife. Now, the National Park Service (NPS) is facing demands for even more development within the road corridor. NPS must put together a plan that best protects park wildlife and

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

its core habitat, visitor solitude, and the unique historic character of this corridor.

Park managers are developing a plan that will shape the future of this critical landscape, but powerful special-interest groups are trying to force NPS to allow for increased impacts on the Moose-Wilson Road corridor, which could irreparably harm park resources. Please lend your voice to support the protection of the rare wildlife, unique cultural history, and quiet recreational opportunities along the Moose-Wilson corridor.

As part of a two-year process to develop the 'Moose-Wilson Road Comprehensive Management Plan', preliminary alternative scenarios were proposed for addressing vehicle, recreational, and pedestrian traffic while still protecting the area's unique wildlife, biology, and cultural history. Your comments will be used to develop their Environmental Impact Study in 2015. Some ideas within the park's proposal will lead to increased protection for park resources, while others will contribute to a decline of the very values park visitors hold dear: the chance to experience serenity and quiet and an opportunity to experience a wide variety of wildlife that live nowhere else but the Greater Yellowstone region.

Take Action: Tell Grand Teton National Park Superintendent David Vela to first and foremost protect the unique solitude, wildlife habitat, and historic character of the Moose-Wilson road corridor.

Here's how to submit your comments to Superintendent Vela.

Step 1: Go to <http://parkplanning.nps.gov/commentForm.cfm?documentID=60898> and carefully follow the form instructions.

Step 2: Please submit your comments by copying and pasting the sample message below into the 'Comments' field of the web form, adding any personal observations or stories that support your comments. Note: Four questions precede the 'Comments' field; those are optional.

Step 3: Once you have completed all of the required fields on the form, click the gray "submit" button at the bottom of the page.

Sample message/comments

Dear Superintendent Vela,

Topic Question 1:
Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Topic Question 2:
The NPS alternatives mention the use of a future small shuttle system. Regarding this, I encourage the

park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

Comments:

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Correspondence Text

Dear Superintendent Vela,

I am a lover of our National Parks. For over 30 years we have camped in Blackwoods Campground in Acadia on Memorial Day weekend, missing only twice. Twenty years ago I had a chance to tour this country visiting 10 National Parks, including Shenandoah, Grand Canyon, Yosemite, and Yellowstone. One of the parks we couldn't fit in was Grand Teton; it is on our bucket list for another grand adventure.

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. Topic Question 1:

Since the Moose Wilson Corridor Road lies within the park, why not do what other parks have done when overcrowding is a problem: limit the number of vehicles that can be on the road at any one time.

To overcome backlash on this, a shuttle (electric if possible) bus system should be put in place to accommodate the increases in visitor demand.

Topic Question 2:

Paving would be a bad thing; it would encourage higher speeds; vehicles would make less warning sound for wildlife; it would bring even more pressure for more traffic.

Comments: The whole point of a park is to allow people and nature to intertwine in a quiet and unhurried way, and to do so in a way that protects the animals from us and vice versa.

If there is a limit to how much interaction by the public allows for this, then the limit must be put in place. Most visitors will understand this if it is explained to them.

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Topic Question 1:

The park's proposal will lead to increased protection for park resources, while others will contribute to a decline of the very values park visitors hold dear: the chance to experience serenity and quiet and an opportunity to experience a wide variety of wildlife that live nowhere else but the Greater Yellowstone region.

The wildlife and the lands they live on are the most important. People's desires for more convenient roads, noisy ATV's etc. should never be considered at the cost of the wildlife and the beautiful lands. It's those wildlife and lands that people from all over the country and in fact the world go to visit the national parks. Keep to the mission of the parks!

Comments: The park's proposal will lead to increased protection for park resources, while others will contribute to a decline of the very values park visitors hold dear: the chance to experience serenity and quiet and an opportunity to experience a wide variety of wildlife that live nowhere else but the Greater Yellowstone region.

Correspondence Text

Dear Superintendent Vela,

I am writing to voice my concerns about the Moose Wilson Corridor within Grand Teton National Park. As a strong supporter of the national park system, I value the wildlife, scenery, and historic values of this road corridor and am concerned about the possible negative traffic impacts from increased development. It is important that the park service maintain the low-speed winding gravel road to preserve the character, scenic and wildlife qualities of this unique area.

Please ensure that as the Environmental Impact Study begins that you have a high priority on ate road as a quiet park destination and wildlife-viewing area, and not a very busy traffic corridor. I suggest the use of traffic management techniques to reduce the number of vehicles, maintain low speeds, and eliminate commercial and commuter traffic on this park road. These goals, along with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of part of the road could allow for safe pedestrian and bicycling use within the existing roadway area. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that defines how the shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures to limit winter disturbance of wildlife and planning alternatives that protect the security of wildlife movement corridors from disturbance by people. An important consideration would be to avoid development in areas that have not been previously impacted.

Grand Teton is certainly an great resource to the residents of the local community, but it is also a landscape that is owned and appreciated by residents from all states. I personally enjoyed visiting and

enjoying the spectacular qualities of this park a few years ago.

Sincerely,

Harvey M. Rubenstein

Topic Question 1:
NPS must put together a plan that best protects park wildlife and its core habitat, visitor solitude, and the unique historic character of this corridor. I support the protection of the rare wildlife, unique cultural history, and quiet recreational opportunities along the Moose-Wilson corridor. You are the best experts to do so.

Topic Question 2:
I think they should!

Topic Question 3:
I don't have any.

Topic Question 4:
None

Comments: Over the past ten years this sensitive and quiet area has been burdened with greatly increased levels of commuter and commercial traffic, creating high traffic volume along the corridor and increasing conflicts with wildlife. This needs to be corrected and wildlife must be protected. Even though you are facing demands for even more development within the road corridor, NPS must put together a plan that best protects park wildlife and its core habitat, visitor solitude, and the unique historic character of this corridor. Even though powerful special-interest groups are trying to force NPS to allow for increased impacts on

the Moose-Wilson Road corridor, which could irreparably harm park resources, yo must reject those efforts and proceed with a plan which will protect park wildlife and its core habitat, visitor solitude, and the unique historic character of this corridor.

Topic Question 4:

I wanted to add a personal experience to the text included below that was provided by the National Parks Conservation Association.

We stayed in Jackson during a family trip to Wyoming a few years ago. Because of a tip from a local waitress, we decided to take a drive on the Moose-Wilson Road to improve our chances to see wildlife. Indeed, there was a moose browsing in a pond along the road. My daughters (as well as my wife and I) were thrilled to get to see this animal, our only "moose sighting" during our two week trip.

I value the NPCA's efforts to protect places such as this and would encourage the Park Service to take their suggestions into account.

Correspondence Text

Dear Superintendent Vela,

I first traveled from my home in coastal Florida to hike and camp in the Tetons via the Moose/Wilson Road in 1970 after completing my military service in the United States Marine Corps. I didn't know how much I needed the space and beauty of that uniquely Wyoming dirt road until I stumbled upon it after breakfast one day at Nora's Fish Creek Inn. To this day, I still need to make that trip, if only in my mind. Slowly traveling that path to redemption lead me to view wildlife like I had never seen before. It also fostered experiences so wonderfully American that the trailhead adventures I had lead me to cherish those memories as I love no others. In its splendor my torn and tattered spirit was rejuvenated for which I remain eternally grateful. I even joined the Park Service as an interpreter for a short time because of that road and the meaning it provided in my life about my place in our wilderness.

Now, it has come to my attention that the future of the Moose Wilson Road Corridor within Grand Teton National Park is in danger of too much love and affection; that is, too much use by vehicles and the desire of private developers.

Like others before me, I ask that you please ensure that as your Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. Like others, I encourage the use of traffic management techniques to reduce the number of vehicles and maintain slow speeds. Especially important, I believe, is the elimination of commercial and commuter traffic along the road; it was not meant for such thoughtless and hurried activities.

I also support the use of seasonal closures and efforts to limit winter disturbance of wildlife. Most

importantly, development in areas that have not been previously impacted should be absolutely avoided.

Not all of us who love the area can live there and the Grand Teton Park environment is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States like me and now, my family. Our wishes should matter as well.

Thank you for your consideration of my request.

Topic Question 1:
Whatever protects the park and the wildlife.

Topic Question 2:
Whatever protects the park and the wildlife.

Topic Question 3:
Whatever protects the park and the wildlife.

Topic Question 4:
Please protect the park and the wildlife.

Comments: Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic

management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Topic Question 1:

It is a good strategy to do little or nothing to change this road. The qualities which are valued by large numbers of visitors and residents of Teton County are obvious. The current state of affairs attracts large numbers of visitors, many of whom, because of physical limitations, may never get to see a natural setting rich in wildlife at such a close viewing distance. Almost any "improvements" will degrade their experience of the natural setting. If the current situation seems too crowded, then some control over the rate at which vehicles enter the corridor could be implemented. Other methods like making the road one-way, or turning it into two dead-end roads, could also be used.

Topic Question 2:

Almost all strategies which involve "development" of infrastructure (road widening, extensive paving, straightening of curves, adding bicycle or passing lanes) will inevitably harm the natural setting, the animals that utilize the area and the experiences of visitors. Bicycle lanes would certainly be harmful because of the amount of destruction of vegetation involved, and the addition of paving and/or clearing. Those of us who enjoy bicycling have recently benefitted by the addition of dozens of miles of pathways in Teton County, many in the Park, and in areas that have superb vistas and which are much safer and less disruptive to animals than a path would be in the Moose-Wilson corridor. Those who do not cycle are sharing the expense of this amenity, and are already having their vistas compromised. Look again at the bridge over the Gros Ventre River a few miles north of Jackson on highway 89. Visitors new to our area may not realize what a charming view of the river used to be there. The number of large animals inhabiting the area, along with reduced visibility make confrontations inevitable. Animals are more severely

disturbed by people on foot or bicycle, because they are already less familiar than vehicles, and because they may appear quietly and suddenly, startling wild animals using the area. And these animals are one of the major reasons why people, especially tourists, wish to see the area remain substantially in its present state

Topic Question 3:

A finding that "surprised" Park officials recently was the short time that many drivers spent getting through the Moose-Wilson corridor. This may mean that some of us are using the route just as a short-cut, or that many drivers have gotten used to driving at higher than optimal speeds because they are habitually busy and under some pressure. One way to deal with this could be to put signs at entrances to the corridor pointing out that this road was designed for low speed travel, and that getting to the other end may take longer than some might wish. Pointing out the danger of large animals in the roadway, might make this more palatable to visitors, many of whom are visiting in the hopes of seeing just those creatures. In this area especially, SPEED KILLS BOTH ANIMALS AND PEOPLE, as those of us who drive here know all too well. It would be advisable to consider any arrangement that would encourage low speeds. Some officials in the past have suggested that modifications like road straightening and removal of rough road are going to increase safety. Experience shows that these "improvements" often have the opposite effect because they encourage increased speed. Adding speed bumps, warning signs before curves, and frequent reminders about animals would all help. Viewing the road this way may convince many drivers that low speeds will make the drive more relaxed and safe, and will reduce the danger to people and animals.

Topic Question 4:

This short drive through prime animal habitat is a rare experience for most people. Its unique attraction means that we should emphasize, in publications and signs, the value of using it as a slow and enjoyable chance to look for animals in their natural setting. Many people can then conclude that the result is more pleasant and relaxing than seeing the route as a challenge to traverse as fast as possible.

Comments: As with deciding to disturb any natural area, once steps are taken to "develop" or "improve" the landscape, much of the natural attractiveness will be gone permanently. Areas like the Moose-Wilson Road are increasingly rare, and for those visitors who are not mobile enough to hike, or bicycle, it is a one-of-a-kind experience. Let's keep it that way.

I camped in the Park a few weeks ago and traveled on the Moose-Wilson Road. This needs to be a slow quiet road with numerous turnouts, and no overhead power lines. The noise from the generator near Colter Bay campground is a problem.

Topic Question 1:

Some ideas within the park's proposal will lead to increased protection for park resources, while others will contribute to a decline of the very values park visitors hold dear: the chance to experience serenity and quiet and an opportunity to experience a wide variety of wildlife that live nowhere else but the Greater Yellowstone region.

Topic Question 2:

Over the past ten years, however, this sensitive and quiet area has been burdened with greatly increased levels of commuter and commercial traffic, creating high traffic volume along the corridor and increasing conflicts with wildlife.

Topic Question 1:

Superintendent David Vela please protect the unique solitude, wildlife habitat, and historic character of the Moose-Wilson road corridor.

Comments: Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Dear Superintendent Vela,

Please slow down. We all get moving too fast. I want to do all that we can to protect our last natural resource areas (Nat'l Parks, Forests, and Wilderness areas)for all future generations. The natural world is an antidote to the ills of technological society.

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance.

Topic Question 2:

Most importantly, development in areas that have not been previously impacted should be avoided. Paving the gravel portion of the road and re-routing any portion of the road would be contrary to this objective. Paving the road and re-routing the road will create destruction of additional natural areas of the park and disruption to wild-life at least in the short term.

Topic Question 4:

I have been to Grand Teton National Park twice in my 70 years. In both instances it was a high-lite of our visit to western Wyoming. I am in favor of very good maintenance with very little change to existing amenities.

Topic Question 1:

O am not familiar enough with the curent proposals to give an answer at this time. However, I believe that any proposal that will continue to limit the impact upon the reigion and wildlife, maintaining the seclusion of the area and safty of the wildlife and environment, would be the best policies and practices. Please try to avoid any development in areas that have not had any or major impacts upon it curently or in the past, and try to limit to the absolute minimums in areas that may have suffered some development in the past. As to traffic control. an alternative rout for traffic should be looked for.

Topic Question 2:

Any proposal that would increas or speed up traffic in the area should be avoded as much as posible. I understand the wishes of locals and businesses to have a shorter and/or faster rout between destinations, but using a senic route through a National Park is not the answer and should not be a consideration.

Topic Question 3:

Perhaps the development of a skyway? This would allow for a greater number of visitors to see and explore the area wile still maintaning the wildness and seclusion and tranquility of the area with minimal impacts on the wildlife and environment. I believe it is important that we find ways to allow everyone, including the infirm and handicaped to be able to access and experiance our parks and wilderness areas, while still maintaining the seclusion and habitate, and this may be a way to acheve such acceses.

Comments: Dear Superintendent Vela,

Topic Question 1:

As part of a two-year process to develop the 'Moose-Wilson Road Comprehensive Management Plan', preliminary alternative scenarios were proposed for addressing vehicle, recreational, and pedestrian traffic while still protecting the area's unique wildlife, biology, and cultural history.

Topic Question 4:

protect the unique solitude, wildlife habitat, and historic character of the Moose-Wilson road corridor.

Comments: In the southwestern corner of Grand Teton National Park, over the past ten years, however, this sensitive and quiet area has been burdened with greatly increased levels of commuter and commercial traffic, creating high traffic volume along the corridor and increasing conflicts with wildlife. Now, the National Park Service (NPS) is facing demands for even more development within the road corridor. NPS must put together a plan that best protects park wildlife and its core habitat, visitor solitude, and the unique historic character of this corridor.

Please take powerful special interests out of the plan, as this is a natural place for preservation.

Topic Question 1:

Leave the road alone except for maintenance issues. It will help ensure slower traffic with much fewer problems.

Topic Question 2:

Do not increase the size, straighten, or otherwise change it.

Comments: Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a

more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Correspondence Text

Dear Superintendent Vela,

I am very concerned about the future of the Moose Wilson Road Corridor within Grand Teton National Park. My family enjoys and loves our country's national parks and I value all that this corridor has to offer, including the wildlife, scenery, and historic values of this road; increased development in this corridor would destroy these same qualities. In order to preserve the historic character, solitude, scenic and wildlife values of this unique area, it is critical that the park service maintain the low-speed, winding, gravel road.

Please, be sure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area. Please, see that traffic management techniques are used to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

The use of seasonal closures, would greatly enhance efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is a gift to the residents of the local community; but it is also landscape that is owned by,

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

Topic Question 1:

Keep as a first priority the preservation of the ecological sensitive of this area. This is a prime area for the habitat of several species necessary for the health of the wild world that is so important to the plants and animals that visitors (with their economic contribution to the region) come to experience. We have a diminishing number of regions in this country that provide the high quality of wilderness necessary for humans & wildlife. Do everything you can with your plans to preserve the treasures we still have.

Topic Question 2:

Providing for increased commercial use at the expense of the wild world is counter productive.

Topic Question 1:

protect fully the animals/birds/reptiles and trees and plants of this site. cut the traffic. reroute it out of this area and into more developed areas. stop all trapping and hunting of animals and let them have peace and tranquility. they are important to all of our lives to the nth degree. they are part of our ecological processes. I realize that this agency itself has become corrupt and infested with wildlife murderers and greed to the nth degree so that anything the general public owns is being deamed and destroyed daily by our federal govt. for money and greed.

Topic Question 2:

we need to weed out of this agency the wildlife murderers, the trappers, the loggers and the profiteers who see every piece of public land as just sitting there waiting for them to reap the benefits of it for their very own wallets. they are legion and they are evil and malicious. chick them out of the mix since they represent no boon for the us public. chuck out the corruption in this agency which is focused on greed killing and logging.

Topic Question 3:

the biggest strategy of all is protection to the nth degree protection of nature full. we need to stop the lices emanating from our corrupt federal agencies which tell us one thing and do the killing and raping of our lands while using fake words to hide the malicioiusness and evil that they are in fact actually doing. the problem is the employees see plans to make wor for themselves. they don't care what the work is, as long as they have jobs for eternity. the end result isn't what counts for these planenrs. they just want to please their corrupt federal bosses.

Topic Question 4:

protect nature to the fullest extent. the best idea is always to make the land wilderness. and then protect wilderness which is also under attack by the evil malicious people in the federal govt and their pals - their "stakeholders". that is what "stakeholders" are - they are there to see what they gcan get ou of the deal. they are not there for the benefit of all the people. they are there to get millions for their own non profits. the non profits in most cases are a big disappointment. they are doing to make themselves rich, niot help this country. they are masquerading. and govt agencies think we don't notice.

Comments: 1. protect nature - the wildlie nad the trees from the malicioius, evil humans that are out there. the killers of wildile who get joy from laicious killing to put a head on the wall or a rug under their feet take away ALOT FROM THE REST OF US. AND WE ARE IN THE MAJORITY. WHY ARE WE LETTING THIS SMALL GROUPS OF MALICIOUS PERVERTS DO THIS TO US. HUNTERS AND TRAPPERS REPRESENT LESS THAN 1/2 OF ONE PERCENT OF THE PEOPLE IN THIS COUNTRY. WHY ARE THEY MAKING THE RULES AND SILENCING OUR VOICES.

2. PROTECT NATURE. STOP THE ROAD BUILDING AND THE LOGGING THA6T IS MASSIVE AND RAMPANT.

3. PROTECT NATURE FROM THE HIGH USE OF TOXIC CHEMICALS BY OUR FEDEAL AGENCIES WHICH ARE SPRAYING ALL OVER AMERICAN AND THE DRIFT KILLS OUR MONARCHS, AND OUR BATS AND OUR SNAKES, AND ALL SPECIES.

THE TOXIC HEMICALS PROFITEERS ARE LAUGHING WHILE WE ARE ALL DYING FROM THEIR TOXIC WARES. THEY ARE NOT SAFE FOR LIFE ON EARTH . NOT IN ANY WAY. STOP THE MASSIVE USE OF CHEMICALS.

4. PROTECT NATURE. PROTECT THE HOMES OF THE BIRDS AND ANIMALS. THEY KNOW WHERE THEY NEED TO LIVE. YOU CANT CUT DOWN THEIR HOMES AND ASSUME THEY CAN FIND SOMETHING ELSE TO KEEP THEM IN GOOD HEALTH. THEY KNOW WHERE THEY NEED TO LIVE AND THEY HAVE PICKED IT. LEAVE THEM ALONE. CONSIDER THEM SACROSANCT.

I am not able to assess the alternatives, because I don't know well enough what they are. I just visited Yellowstone and Teton park for the first time in 27 years. The scenery is still a beautiful, but the crowds of tourists from all over the world made the experience very different than in 1987. There is too much traffic and noise, the facilities and trails are worn out. If anything, the parks should be accessible to less people at a higher cost per person.

I've been to the Grand Tetons and it was more impressive than Yellowstone and Yosemite. All NP need to be saved and unspoiled. That is why they were made National Parks. It is therefore important to keep industry, big oil and gas, etc outside of the area and make sure the stay unspoiled.

Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area. We must protect this unique and beautiful area for the benefit of our children and their children.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States. Please consider my request and protect this area to the best of your ability.

Thank you.

Topic Question 1:
I am writing about the Moose-Wilson road situation, located in the southwestern corner of Grand Teton National Park. It seems special interest groups are pressuring your office , increasing the impact on this serene landscape , it's animals and people just wanting to enjoy this environment! I ask you to remember the reason you hold the position you do ~~~ do the right thing for the Park and the animals Thank you

Topic Question 1:

First and foremost, please protect the unique solitude, wildlife habitat, and historic character of the Moose-Wilson road corridor.

The Grand Teton National Park has always been one of my personal favorite parks ever since I was a little girl. The wildlife as well as it's stunning beauty were so memorable to me.

Topic Question 2:

Anything that would allow distracting noise, pollution, traffic or things that distract from allowing wildlife their quietude Humans need this as a refuge from the outside world as well.

Topic Question 4:

Please make sure to put a priority on preserving the Tetons as a peaceful place of solitude. It is a gem that must be preserved for future generations.

Topic Question 1:

To best preserve the full experience of this area's tranquility for enjoying and protecting the wildlife and the majestic scenery, it is critical to maintain the low-speed, winding, gravel road. Slow speeds are necessary to truly appreciate the scenic beauty and calm of the area. This road should be designated as a quiet park area rather than a noisy and hurried traffic route.

I concur with the National Parks Conservation Association in encouraging the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

Topic Question 2:

My wife and I will visit Grand Teton National Park next week. We are strong supporters of our National Park system, and we visit at least one National Park every year. Increased development and encroachment would greatly infringe upon the scenery, wildlife, and relaxed atmosphere that continues to draw us back to the parks.

Topic Question 3:

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Topic Question 4:

This will be our first trip to Grand Teton, but we expect it to be one of the highlights of our National Parks' experiences. We are enriched by these resources that are held in trust for all of the people of the United States. Please do all in your power to protect these resources for future generations.

Comments: Thank you for your efforts to support park protection around the country. I hope that the actions you take will have such a profound positive effect that they will become models for the management of critical road corridors in the future.

Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is

owned by, cherished, and enjoyed by people from across the United States.

Topic Question 1:

Restrict traffic by maintaining the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area. I have visited Yellowstone numerous times and have traveled this route, enjoying the lack of traffic jams.

Comments: Dear Superintendent Vela,

Topic Question 1:

I haven't been able to find a document that outlines the strategies in the preliminary alternatives but I certainly feel that unless a major highway runs through this area, definitely commercial and possibly commuter traffic should be taking another route.

Topic Question 2:

No strategy being considered that would accommodate commercial traffic should be considered. Commercial traffic has no place in a National Forest unless an interstate highway runs through it.

Topic Question 3:

I would seriously monitor and restrict ATV use in the park for the benefit not only of the wildlife but those trying to enjoy the peace, quiet and serenity of nature.

Comments: It's important to remember why National Parks were established. First to protect the native wildlife and their natural environment and secondly for people to have a place where they can visit and enjoy that native wildlife in their natural environment.

Adapting that mission statement to accommodate commercial trucks and traffic not servicing the National Parks is destructive to the national park environment and totally unnecessary since they should be using the interstate highways.

As a nature lover and strong supporter of the state and national parks, I would like their pristine nature to be preserved for everyone's benefit. Not become just another commercial, well-traveled road to

somewhere else. Clean air is as important a feature of the national parks as anything else and the air can't stay clean if the park roads are heavily traveled by commuters and commercial vehicles.

I hope you will keep these things in the forefront of your mind as you make your decisions that will affect us all, including the wildlife in the parks.

Topic Question 1:

Making access to Granite Canyon, etc., by trail, cutting down the length of the drivable road would limit human overuse of that area. Some realignment of the road seems advisable though it's been a number of years since I was there.

Topic Question 2:

None of the plans seem to me to restrict vehicle traffic as much as would be desirable.

Topic Question 4:

It has been a long time since I was on that road, and it was little used at that time. I can't tell for sure from the alternatives, but, if commercial vehicles are using the road, I think they should be forbidden completely. If vehicle traffic is now as heavy as it sounds like it has become, a possibility to at least consider would be no access by private vehicles and just allow a limited number of park or concessionaire tour vehicles per day during the busy season.

Comments: I'm not an authority on wildlife management or any of the sciences that would be involved in this decision. However, I love the national parks and the Yellowstone/Grand Teton area most of all. Because I love the parks so much, a part of me hates to see access restricted in any way for all of the people who want to enjoy them. At the same time, I am realistic enough to know that overuse will ultimately destroy their value for all of us. They would no longer be what they were created to be and no longer serve their purpose for the nation. So, please, come up with a restrictive enough alternative that the wildlife in that part of the park are preserved and protected.

Topic Question 1:
Any alternative that facilitate the free, absolutely free movement of wildlife is OK for me. even if that means restrictions to human visitors, so be it. Wildlife is precious and they have the RIGHT OF WAY in any plan consideration. Let's be realistic.

Topic Question 3:
My answer to Question 1 says it all.

Topic Question 4:
Ditto.

Comments: I'm extremely concerned over the general principle that seems to rule any consideration of people being over wildlife. Our unique wildlife is precious and irreplaceable.

Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is

owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Topic Question 1:
09/09/2014

ANSWERS TO QUESTION 1: Which strategies in the preliminary alternatives do you think should be carried forward to best achieve the purpose and address the need for the plan? Why do you think they should be carried forward?

I, Jason Robert Van Pelt approve of a few NPCA ideas for this NPS plan. I approve of a NPS shuttle system to tour the natural, national heritage led by National Park Tour Guides and National Park Law Enforcement Rangers. This will increase tourism and safety. I approve of a bicycle only route to enjoy the natural, national heritage yet the bicycles must be registered and the bicyclists must be with helmets. This will increase physical fitness and decrease pollution. I approve of hikers with leashed dogs being allowed on this National Park Service route. This will increase humanity and decrease vehicular erosion.

Topic Question 2:
09/09/2014

ANSWERS TO QUESTION 2: Which strategies in the preliminary alternatives do you think would not achieve the purpose and address the need for the plan? Why do you think they should not be carried forward?

I, Jason Robert Van Pelt disapprove of some alternatives brought to my attention. I disapprove of a repaved and reconstructed highway route or road through that area. This will increase traffic, pollution, and noise. The fellow equal animals might just leave if that happens. Also, the motor vehicles might decrease the fellow equal animals. I disapprove of closing the route during certain seasons. This will

decrease popularity. The National Park Service NPS should remain open all year round just like The Ice Age National Scenic Trail route of Wisconsin!

Topic Question 3:

09/09/2014

ANSWER TO QUESTION 3: Are there other strategies that should be included in the preliminary alternatives that are not already presented? If so, which strategies and why should they be considered?

I, Jason Robert Van Pelt have a strategy to be considered. I proffer that this NPS route of discussion be turned into a NPS trail entirely. Open to national park enthusiasts on foot. Closed to bicyclists, motor vehicles, and tours shuttled. Of course however law enforcement has jurisdiction to move about as needed. Turn the complete roadway of a route into a large trail segment for The National Park Service NPS. No more emissions and no more vehicular erosions.

Topic Question 4:

We will keep our Badlands good! - National Park Service NPS

God bless America!

Long live Nationalism!

Comments: 09/09/2014

USA INTERFACE: Nationalization

National Excerpts:

Stately Devil's Lake State Park in United State Wisconsin has given Wisconsin state park enthusiasts more than one century. The Devil's Lake State Park area offers many state park trails and just one national trail route. Parks are wonderful with their current ranking, but as a Lions' Share Nationalist (Political identification) I believe national parks extend the most American value in our nation union. Nation union development has nothing to do with political identification. Ice Age National Scenic Trail route can have a "National Railroad Trail" addition (After reconstruction) because there are seldom used train tracks that travel through Devil's Lake State Park. Adopt-A-Trail opportunities are designed for the caretaking of these rail-trails across America. We can recharge a historic President of The United States of America Franklin D. Roosevelts' deal, anew. The initiation of The United States Civilian Conservation Corps CCC by our federal government helped our United State Wisconsin state park system during the great depression in our historic past of The United States of America. Now, here we are during the great recession with unemployment rates that could be swiftly resolved. The Civilian Conservation Corps CCC developed many treasured Wisconsin state parks and only with improvements these cherished parks are able to become Wisconsin national parks. Devil's Lake State Park is natural, united state heritage, but if it becomes natural, national heritage then a new name would be in order. In God we do trust within The United States of America. I, Jason Robert Van Pelt trust in God above and if Devil's Lake State Park is nationalized it could then become Gods' Lake National Park. The east bluff at Devil's Lake State Park has a natural feature called the Devil's Doorway however Gods' Lake National Park could transform the Devil's Doorway into Gods' Window. "Whenever a door closes, God opens a window..." - Holy Tablet. The south bluff is unaltered and begging for attention from our revamped Civilian Conservation Corps CCC, which would be accepting civilians of all genders as fellow equals. The Wisconsin Conservation Corps WCC exists at Devil's Lake State Park. Wisconsin nature enthusiasts will go bluffing at various skill levels with the satisfaction of putting trust in God above. Airborne Turkey Vultures encircle the natural bluffs as the main attraction. Turkey Vultures are very comfortable flying closely above a Wisconsin state park enthusiast, near the edges and while on top of the natural bluffs. The hatched Turkey Vulture nests

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

are right in the middle of raising family, during the month of Gregorian deciduous June. The sculpted CCC worker "The Statue of Conservation" (Petitioned as the honorary statue name) at Devil's Lake State Park is motivational and inspirational. I shall keep prospecting and scouting about America. Stately Governor Nelson State Park offers the Redtail Hawk Trail (Redtail is a trail name portion) 1.03 miles, the Woodland Trail 1.18 miles, the Morningside Trail 2.40 miles, and the Oak Savanna Trail 1.84 miles. Governor Nelson State Park flourishes because of the noteworthy Six Mile Creek. The anchor at Governor Nelson State Park needs to have the recognition of the attraction that it is. Barack Obama a historic President of The United States of America and a Forefather of The United States of America, stated to us all as one nation: "To be the Authors of the next great chapter of our American Story" - Barack Obama. This American Story is formative and ongoing; An American Story of The United States of America with inclusion for all (Anti-Terrorism and Counter-Terrorism). The weekly addresses kept a constant and steady heart rate beating a sense of security. Heart signifies leadership. President and Forefather of The United States of America Barack Obamas' anchor of furtherance, insures that we all will not revert because freedoms' light is still shining. The moving of our one nation under God forward from a historically epic standstill, approaches. "Long May Our Land Be Bright With Freedom's Holy Light" - The United States of America. The United States of America truly became the greatest nation on Earth during this Presidency by the Greatest American of all time Barack Obama, with civility. The "Anchor of Furtherance" (Petitioned as the honorary anchor name) must be decorously remastered (Polishing, recoating, engraving, dedicating). Flying and slender stepping are the vocalized Sandhill Cranes as the main attraction. Governor Nelson State Park has an Earth Day foundation and the capability of becoming nationalized through improvement possibilities. An improvement possibility in particular, is a County Highway M barricade that would block all the debris (Recyclables and non-recyclables) causing pollution. The Wisconsin Conservation Corps WCC is in existence at Governor Nelson State Park and Lake View Hill Park of Capital James Madison. Native plants without invasive plant life and native animals to the region are guidelines to follow. Governor Nelsons' National Park will provide relief to all of the worldwide park enthusiasts and environmentalists who appreciate the distinct natural landscapes of The United States of America. Wisconsin state park enthusiasts will be forever grateful when they are able to become Wisconsin national park enthusiasts. The worldly great place of Waunakee honors our United States of America Military. Village Park with the Village of Waunakee has a Veterans Memorial. There is a commemorative dedication bench at Governor Nelson State Park that includes this piece of history: "The best and most Beautiful things cannot be seen or even touched. They must be felt with the Heart." - Helen Keller. A national North American Bald Eagle lighthouse shining arrows of light across Lake Mendota toward Lady Forward, would spruce up the state or national park of the great Governor Gaylord Anton Nelson. The address of Governor Nelson State Park is 5140 County Hwy. M Waunakee, WI 53597. Governor Nelson State Park (Governor Nelsons' National Park) where Governors and Presidents work together!

Amongst the stately islands of Apostle Islands National Lakeshore is just one needing an immediate improvement. In God we do trust within The United States of America and Devils Island can, might, as well as may become "Gods' Island" (Petitioned as the honorary destination name). United State Wisconsin is willing to contribute Apostle Islands National Lakeshore and the Saint Croix National Scenic Riverway along the border flowing, rapid Saint Croix River of Wisconsin, toward the fate of our one nation. If Nationalist political identification has something to do with nation union development then natural, national heritages would not be sacrificed. Heartland Country threshold is in the heart warming Dairyland being United State Wisconsin. The Great Midwest of The United States of America is known as The Heartland and The Great Plains. United State North Dakota, United State South Dakota, United State Nebraska, United State Kansas, United State Minnesota, United State Iowa, United State Missouri, United State Wisconsin, United State Illinois, United State Michigan, United State Indiana, and United State Ohio are the twelve states being united that make complete The Great Midwest. United State North Dakota, United State South Dakota, United State Nebraska, and United State Kansas generate The Great

Plains. United State Wisconsin and United State Illinois create The Heartland. The borders of United State Wisconsin form and take shape similar to an actual human heart. The Black River Country area consists of Black River Falls and Black River State Forests. The Heartland Country (Reserved empowerment) is Northwestern United State Wisconsin just past Black River Country and Blugold Country, right around the National Lakeshore of Apostle Islands.

By, Jason Robert Van Pelt

Topic Question 1:

Reduce traffic along the the low-speed, winding, gravel road Moose Wilson Road Corridor within Grand Teton National Park. This is critical to preserve the historic character, solitude, scenic and wildlife values of this special area. Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area.

Topic Question 2:

Treating the Moose Wilson Road Corridor as a busy traffic route. That would eventually destroy the scenic and wildlife attributes of this special area.

Topic Question 3:

Alternatives such as a one-way road option, or road closures of all or part of the road should be considered.

Topic Question 4:

I also support efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance such as seasonal closures. Most importantly, development in areas that have not been previously impacted should be avoided.

Comments: Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand

Topic Question 4:

Some of the best moments of my life, when I was a young man, were spent hiking and camping in the Grand Tetons. The beauty and the pristine purity that I found there, are without doubt, among the greatest to be seen on the earth.

I vigorously protest any plans or developments which threaten the quiet and isolation and protection which should be the hallmarks of all our national parks.

Had I known of this sooner, I would have spoken up that much sooner.

Losing any of that natural beauty is a crime against nature.

And a disgrace to this nation.

Topic Question 1:
Protect wildlife and maintain ability for visitors to observe the wildlife. Limit pass- through traffic.

Topic Question 2:
Don't pave the unsaved section. This will just lead to increased and passing-through traffic

Topic Question 3:
Consider shuttle use. Would get more people in with fewer vehicles and the people wouldn't be trying to view while driving. This is most important and the beginning and end of the day when wildlife is more active.

Topic Question 4:
I've been to this part of the park. It was exceptional for the amount and closeness of wildlife. I realize changes are needed because of congestion. I'd say aim for something more sustainable. I'm not sure the current alternatives are much more than a bandaid.
- you could make entrance a ticketed event to control numbers of cars but provide non- car options to enter
- you could have people go in and out on Segways or golf carts.

Topic Question 4:
Grand Teton Moose
[Click Here to Send Your Comments!](#)
(This link will take you to the National Park Service's Planning, Environment, & Public Commenting website.)

Take Action

Dear Bradley,

Park visitors may not always remember the name of the road, but they certainly remember their once-in-a-lifetime encounters with moose, grizzlies, elk, deer, and beavers often seen just feet from the winding Moose-Wilson Road in the southwestern corner of Grand Teton National Park.

Over the past ten years, however, this sensitive and quiet area has been burdened with greatly increased levels of commuter and commercial traffic, creating high traffic volume along the corridor and increasing conflicts with wildlife. Now, the National Park Service (NPS) is facing demands for even more development within the road corridor. NPS must put together a plan that best protects park wildlife and its core habitat, visitor solitude, and the unique historic character of this corridor.

Park managers are developing a plan that will shape the future of this critical landscape, but powerful special-interest groups are trying to force NPS to allow for increased impacts on the Moose-Wilson Road corridor, which could irreparably harm park resources. Please lend your voice to support the protection of the rare wildlife, unique cultural history, and quiet recreational opportunities along the Moose-Wilson corridor.

As part of a two-year process to develop the 'Moose-Wilson Road Comprehensive Management Plan', preliminary alternative scenarios were proposed for addressing vehicle, recreational, and pedestrian traffic while still protecting the area's unique wildlife, biology, and cultural history. Your comments will be used to develop their Environmental Impact Study in 2015. Some ideas within the park's proposal will lead to increased protection for park resources, while others will contribute to a decline of the very values park visitors hold dear: the chance to experience serenity and quiet and an opportunity to experience a wide variety of wildlife that live nowhere else but the Greater Yellowstone region.

Take Action: Tell Grand Teton National Park Superintendent David Vela to first and foremost protect the unique solitude, wildlife habitat, and historic character of the Moose-Wilson road corridor.

Here's how to submit your comments to Superintendent Vela.

Step 1: Go to <http://parkplanning.nps.gov/commentForm.cfm?documentID=60898> and carefully follow the form instructions.

Step 2: Please submit your comments by copying and pasting the sample message below into the 'Comments' field of the web form, adding any personal observations or stories that support your comments. Note: Four questions precede the 'Comments' field; those are optional.

Step 3: Once you have completed all of the required fields on the form, click the gray "submit" button at the bottom of the page.

Sample message/comments

Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Comments: Dear Superintendent Vela,

I have copied the message below from an advocacy website. I believe in everything that they have stated because back in 1999 I had the pleasure of experiencing many moose along the Moose Wilson Road Corridor every day of my 3 day stay at a Grand Teton campsite. I had previously travelled to Maine and Alaska to see moose but did not get that wonderful experience until this corridor. It is one of my most memorable moments to this day! That is and should remain the main focus for this site.

Therefore, I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that

unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Topic Question 1:
THE ONLY STRATEGIES THAT SHOULD BE PUT FORWARD ARE THOSE THAT BETTER PROTECT "ALL" THE WILDLIFE AND ENVIRONMENT THAT HAS AND IS THE REAL PURPOSE OF THE NATIONAL PARK SYSTEM. TOO MANY SPECIAL INTERESTS AND NON THINKING PARK PARTICIPANTS HAVE GAINED CONTROL OF UNIQUE AND SINGULARLY AVAILABLE, IRREPLACEABLE GODLY SPACES FOR THEIR OWN JOYS. WHY AREN'T GOVERNMENT OFFICIALS INTELLIGENT ENOUGH TO "KNOW" THAT THESE AREAS ARE THEME PARKS, DISNEY LANDS, OR WATER WORLDS, SKI LODGES, ETC. THERE NEVER SHOULD A NEED FOR "STRATEGIES" OR "ALTERNATIVE" TO DECIDE THE AMOUNT OF DAMAGE THAT'S DONE TO THE ORIGINAL AND PRIMARY PURPOSE OF THE NATIONAL PARK'S PURPOSE.

Topic Question 2:
NO STRATEGIES SHOULD BE CONSIDERED OR IMPLEMENTED EXCEPT THOSE THAT IMPROVE THE ENVIRONMENTAL CONDITIONS FOR THE WILDLIFE AND ENVIRONMENTAL CONDITIONS CONDUCIVE TO THE HIKING AND PHOTOGRAPHY AND ESPECIALLY THOSE THAT NATURALLY BENEFIT WILDLIFE, NATURAL WATER AND FOLIAGE USED BY ALL FORMS OF LIFE. FIRE THE MORONS WHOSE IGNORANCE AND SALARIES CREATE CONDITIONS THAT MANDATE THESE IDIOTIC "PLANS"!!!!!!

Topic Question 3:
FIRE EVERY UNINTELLIGENT MORON, FINANCIAL INFLUENCE AND IMMORAL POLITICIAN THAT FORCES THIS CONDITION TO EXIST, REQUIRING THIS CONTINUED DEGRADATION OF "OUR" NATIONAL PARKS. EXTINCTION IS FOREVER.

Topic Question 4:
NONE!

Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is

owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States.

Topic Question 4:

The N.P.S. is responsible for the protection of National Parks, their wildlife, and habitats. No improvements should be made that in any way detracts from the park experience for visitors from anywhere in the world, at any National Park. Concerns for local populations needs must be addressed with the absolute minimum, or no effect to a Park. They belong to us all.
FRACKING MUST NOT BE ALLOWED! in any Park.

Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park.

FROM MY PERSONAL EXPERIENCE AS A MEMBER OF THE ZONING BOARD OF APPEALS, I CAN ATTEST TO THE FACT THAT THE MORE DEVELOPMENT THERE IS, THE MORE DEVELOPMENT COMES, AND WITH IT, MORE CARS. THE MORE CARS, THE MORE WILDLIFE SUFFERS.

I LIVE IN A RATHER RURAL AREA WHERE PEOPLE COME AND GO, BUT ON FRIDAY AND SATURDAY (NIGHTS ESPECIALLY) THEY OFTEN GO OUT AND MIGHT HAVE A DRINK. ON SUNDAY MORNING THE ROADS LOOK LIKE A WAR. THE WILDLIFE IS SLAUGHTERED AND LYING BLOODY ON THE TAR. EVEN THE CARRION FEEDERS DON'T STAND MUCH OF A CHANCE.

I CAN REMEMBER VISITING A NATIONAL PARK AT THE CRACK OF DAWN TO SEE BATS FLY OUT OF THERE CAVE. AS I APPROACHED THE PARK WITH NOT A SINGLE CAR OR HOUSE AROUND, I SAW DEAD IN THE ROAD, A COYOTE. YES, THERE ARE PLENTY OF COYOTES, BUT THAT ISN'T THE POINT. THE POINT IS, EVEN DRIVING THROUGH THIS REMOTE AREA WITH THE ONLY DESTINATION THE PARK AND THE CAVE, PEOPLE STILL CAN'T BE TRUSTED TO DRIVE REASONABLY AND WATCH OUT FOR ANIMALS IN THEIR OWN HABITAT.

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is

owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is

owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Topic Question 1:

The alternatives that assure the protection of wildlife and the flora. Speeding through any of this area should not be the goal, so the use of gravel instead of tar is preferable. A well thought out shuttle system is a better alternative than increasing car capacity, but population limits should also be imposed. They certainly are in other sensitive natural areas all over the world, and the Tetons deserve this kind of zealous protection.

Topic Question 2:

Any "improvement" to traffic (road) facilities that could possibly disturb the migration of the elk or other indigenous animals or that would overuse the flora system.

Topic Question 3:

Population control.

Comments: My late husband led climbs up the Grand Teton, so this area is very special to me and our family. We would be distressed, as would he, to hear of plans that in any way would diminish the ruggedness or natural beauty of the Park. Please proceed to assure future generations of the same wilderness experience as closely as you can.

Thanks.

Topic Question 1:

Limit development on the road. Reduce commercial use of the area outside of NPS activities. Seasonal closures of the road and closures to through traffic at peak times

Topic Question 2:

Paving unpaved sections, adding additional paved pullouts, adding a parallel paved passageway.

Topic Question 3:

Reduce commercial activities. Lowering the speed limit on the existing road

Comments: Dear Superintendent Vela,

I am concerned that unacceptable traffic impacts and calls for increased development could disrupt the use of this area as a wildlife corridor. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States. I have visited the park twice in my lifetime and driven this road slowly to enjoy the beauty and wildlife. This has rewarded me with viewing a one year old bear cub high up in a tree that looked unable to support a squirrel much less a bear, a very large bull moose, and being delayed by an industrious beaver who blocked the road by felling a tree. These are not experiences that could ever be enjoyed if this road is paved and commuter traffic rises. Please protect Grand Teton Park to maintain the original intent when the park was founded.

Thank you.

Topic Question 1:

Option D seems best to me. Access that is safe and protective for all plant and animal life!

Topic Question 2:

Complete closure seems unnecessary to me to accomplish the above. However, if the NPS feels the ecosystem along the road is too fragile, I'd like to see them err on the side of protection over access but I don't believe that is necessary.

Comments: Thanks for all your hard work NPS!

Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is

owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Topic Question 4:

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

The pressure from commercial interests such as gas, oil and mining can destroy much of our wilderness and open space, not too mention water resources.

We need to preserve our public lands as places of rest, renewal and sanity for humankind.

Topic Question 1:

Protecting wildlife and the natural landscape should be paramount. Open space and congestion-free areas are dwindling in our country. We should at least do our best to take action in areas of natural parks and lands bordering natural parks.

Comments: Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks, a one time winter resident of Jackson, Wy and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. Topic Question 4:

The powerful, privileged and commercial interests seem to often hold sway over the interests of the less powerful, less privileged less financially fortunate. The latter are the ones who are most reliant on national parks for recreational enjoyment. As I understand the issue, commercial development would greatly diminish the possibility of enjoyment of future wildlife and wilderness experience in the area in question. Many elements of our natural world are irreplaceable. Money speaks with a loud voice. Please hear the voice of the "common man" and the voice of future park visitors as you make your determination.

Topic Question 1:
Reducing traffic, preventing further road development, to protect wildlife and their habitat for future generations

Topic Question 2:
opening or developing roads or increasing traffic even more because it would endanger wildlife and their habitat

Comments: I love our national park system. I have been lucky enough to hike through or view many of them. They are one of our greatest treasures. I ask that you protect the Moose-Wilson Corridor as one of those treasures. Please do not allow increased traffic or development that would endanger the wildlife and the wilderness and thus limit enjoyment of this amazing resource for us and future generations. Thank you.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is

owned by, cherished, and enjoyed by people from across the United States.

Thank you.

We appreciate your efforts to support park protection around the country. Grand Teton National Park is a special and beautiful place and your action will really make a difference in how the park will manage a critical road corridor in the future.

Sincerely,

Sharon Mader
Grand Teton Program Manager

P.S. See for yourself what's at stake in the Moose-Wilson road corridor in this Park Service video.

Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is

owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Topic Question 1:

This is a difficult situation, with many people wishing to use and see the roads and wildlife who need their habitat free of invasion. Wildlife must be put first.

Topic Question 2:

Seasonal closing of roads and/or parks could help keep both the habitat and the plants and animals in healthy condition. Limiting the number of car and people entering would also help.

Topic Question 3:

NA

Topic Question 4:

see below

Topic Question 2:
101 FOREST AVE

Comments: Grand Teton Moose
Click Here to Send Your Comments!
(This link will take you to the National Park Service's Planning, Environment, & Public Commenting website.)

Take Action

Dear Carrie,

Park visitors may not always remember the name of the road, but they certainly remember their once-in-a-lifetime encounters with moose, grizzlies, elk, deer, and beavers often seen just feet from the winding Moose-Wilson Road in the southwestern corner of Grand Teton National Park.

Over the past ten years, however, this sensitive and quiet area has been burdened with greatly increased levels of commuter and commercial traffic, creating high traffic volume along the corridor and increasing conflicts with wildlife. Now, the National Park Service (NPS) is facing demands for even more development within the road corridor. NPS must put together a plan that best protects park wildlife and

its core habitat, visitor solitude, and the unique historic character of this corridor.

Park managers are developing a plan that will shape the future of this critical landscape, but powerful special-interest groups are trying to force NPS to allow for increased impacts on the Moose-Wilson Road corridor, which could irreparably harm park resources. Please lend your voice to support the protection of the rare wildlife, unique cultural history, and quiet recreational opportunities along the Moose-Wilson corridor.

As part of a two-year process to develop the 'Moose-Wilson Road Comprehensive Management Plan', preliminary alternative scenarios were proposed for addressing vehicle, recreational, and pedestrian traffic while still protecting the area's unique wildlife, biology, and cultural history. Your comments will be used to develop their Environmental Impact Study in 2015. Some ideas within the park's proposal will lead to increased protection for park resources, while others will contribute to a decline of the very values park visitors hold dear: the chance to experience serenity and quiet and an opportunity to experience a wide variety of wildlife that live nowhere else but the Greater Yellowstone region.

Take Action: Tell Grand Teton National Park Superintendent David Vela to first and foremost protect the unique solitude, wildlife habitat, and historic character of the Moose-Wilson road corridor.

Here's how to submit your comments to Superintendent Vela.

Step 1: Go to <http://parkplanning.nps.gov/commentForm.cfm?documentID=60898> and carefully follow the form instructions.

Step 2: Please submit your comments by copying and pasting the sample message below into the 'Comments' field of the web form, adding any personal observations or stories that support your comments. Note: Four questions precede the 'Comments' field; those are optional.

Step 3: Once you have completed all of the required fields on the form, click the gray "submit" button at the bottom of the page.

Topic Question 1:

I think traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road would be positive steps. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road would be moving in the right direction.

Topic Question 1:

I support any plan that maintains or extends the natural environment, which means I am in favor of fewer roads, less access for any kind of vehicle and less ease of access for people. I support this approach because we have enough paved and leveled places in this country on which people who think fun always involves speed and noise to have their fun. What we do not have is enough wilderness, where animals and plants exist as they do in nature and where people who want to enjoy such beauties can enjoy them without the interruption of the kind of people who will go only 100 feet from a parking lot.

Topic Question 2:

I oppose any plan or part thereof that destroys any part of the natural environment or puts into the natural environment any road or path that allows any sort of vehicle into any wilderness area. Wild places are only wild places when they are left wild. Alteration for the convenience of the public turns wild places into parks. We have lots of parks already.

Topic Question 3:

The strategy that involves the least human interference is the best strategy.

Topic Question 4:

Making wilderness safe and accessible to humans destroys the wilderness. Don't do it.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States.

Thank you.

We appreciate your efforts to support park protection around the country. Grand Teton National Park is a special and beautiful place and your action will really make a difference in how the park will manage a critical road corridor in the future.

Sincerely,

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is

owned by, cherished, and enjoyed by people from across the United States.

Thank you.

We appreciate your efforts to support park protection around the country. Grand Teton National Park is a special and beautiful place and your action will really make a difference in how the park will manage a critical road corridor in the future.

Sincerely,

Topic Question 1:
this is for all answers. ok? thank you
Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States.

Topic Question 1:

Priority for the Moose-Wilson road should focus on reserving it as a recreational thoroughfare. Thus, efforts should be undertaken to reduce commercial vehicle travel on the Moose-Wilson road.

Topic Question 2:

Any increase in development, or commercial and non-recreational use, of the Moose-Wilson road would frustrate the NPS management imperative and statutory mandate.

Topic Question 3:

As noted steps should be taken to reduce commercial and non-recreational use of the Moose-Wilson road.

Topic Question 4:

Don't compound problems by developing the Moose-Wilson road into a high speed thoroughfare for the speed-obsessed motorists. Speed limits must be kept low and Moose-Wilson road should not be widened or developed. (The speed obsessed are the same people that now make auto travel on the Gallatin Canyon Highway tantamount to taking your life in your hands.) If NPS can successfully preserve and restore the Moose-Wilson road as a recreational artery, then the same attention and effort should be directed at the Gallatin Canyon Highway. In case of Gallatin Canyon Highway this can be easily accomplished by requiring that semi-trucks and other commercial through-traffic use nearby Interstate 15. NPS should also negotiate with Montana authorities to reduce speed limit on the Montana section of the Gallatin Canyon Highway.

Comments: Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. Topic Question 1:

I contacting you regarding the Moose Wilson Road. I am concerned about over development of this corridor.

Topic Question 2:

I do not like the idea of a busy commercial corridor. This would distract from the parks mission to create a quiet wildlife viewing corridor.

Topic Question 3:

Season closures should be considered, and no development should be allowed in undisturbed areas.

Topic Question 4:

Thanks for the opportunity to express my opinions.

As someone who once worked on a trail crew in the Grand Teton National Park, this is an issue that concerns me greatly. In 1952, the park didn't face such problems. Moose was, basically, the ranger station and a single general store that happened to cater to tourists. Up in the mountains where I worked, you could go for days without seeing a single visitor. No longer, I gather. That can be both a blessing and a problem. Parks like the Teton are for people, after all. But they should also be for the wildlife that inhabit what should be largely open and undisturbed spaces. That is something that I hope never changes.

Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is

owned by, cherished, and enjoyed by people from across the United States. I have been there twice and its beauty and peace and quiet stay with me every day. I hope that it will remain that way so that I can enjoy it again when I next venture to the Grand Teton area.

Thank you.

We appreciate your efforts to support park protection around the country. Grand Teton National Park is a special and beautiful place and your action will really make a difference in how the park will manage a critical road corridor in the future.

Sincerely,

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is

owned by, cherished, and enjoyed by people from across the United States.

Thank you.
Angela Black

Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is

owned by, cherished, and enjoyed by people from across the United States.

Thank you.

We appreciate your efforts to support park protection around the country. Grand Teton National Park is a special and beautiful place and your action will really make a difference in how the park will manage a critical road corridor in the future.

Sincerely,

Topic Question 1:

first and foremost protect the unique solitude, wildlife habitat, and historic character of the Moose-Wilson road corridor.

Topic Question 2:

this sensitive and quiet area has been burdened with greatly increased levels of commuter and commercial traffic, creating high traffic volume along the corridor and increasing conflicts with wildlife. the National Park Service (NPS) is facing demands for even more development within the road corridor. NPS must put together a plan that best protects park wildlife and its core habitat, visitor solitude, and the unique historic character of this corridor.

Comments: Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. Topic Question 1:

Since the land belongs to the people and must be protected, I would support a limited number of vehicles on a daily basis; no heavy trucks; no vehicles allowed such as snow mobiles; no vehicles in park after dusk.

Comments: I cannot stress the importance of keeping the land and all of the inhabitants of Grand Teton healthy and protected and able to increase their families. The land is not made for cars, RV's, heavy trucks or any noise creating recreational vehicles. If we continue to allow the present situation to continue, we will have nothing. Please do the job needed to protect.

thank you.

Topic Question 1:

Cut down on current traffic either by using buses to transport people to the park or develop another road to direct busy through traffic.

Topic Question 2:

Increasing the volume of vehicles will defeat any proposal. The volume has doubled over the last ten years. Measures have to be taken to slow down the volume of traffic or allow underpasses for the safe crossing of animals.

Topic Question 4:

We are letting the minority dictate for the majority in our country and it has to stop. There is no reason that through traffic needs to use this roadway. Develop other roads to allow traffic that is not going to the park to go around or bypass. We need to protect our parks and grasslands so future generations may enjoy the outdoors and wilderness.

Comments: Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. Topic Question 1:

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism.

Topic Question 2:

Maintain the park in its current state. There is NO NEED for further development. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts. Use of a bus system should not be an also use to the current traffic. Either have a shuttle or keep the road in its current state.

Topic Question 3:

No further roads are needed.

Topic Question 4:

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided. Those areas that have been developed need to be continuously monitored to ensure minimum impact on the flora and

fauna of the Tetons.

Comments: Grand Teton is a gift to the residents of the local community; but it is more than that it is a landscape that is owned by, cherished, and enjoyed by people from across the United States.

As a visitor several years ago I was enchanted by the beauty of the Grand Tetons and the abundance of wildlife that is protected there. That wildlife NEEDS to be continually protected from exploration for sources of energy and the enormous damage that can result from unrestricted mining, drilling and extraction technologies.

As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is

owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Topic Question 1:
WHY IS THE PARK INDANGER?

Topic Question 4:
I AM NOT SURE ABOUT WHAT PLANS ARE IN PLAY. I AM NOT CLEAR ABOUT WHAT IS REALLY GOING ON
I CAN ONLY SAY I HAVE BEEN TO THE GRAND TETONS AND WAS FOREVER CHANGED BY ITS MAGNIFICENT GRANDURE AND BEAUTY. WE EVEN TOOK A DAY HORSE TRIP THROUGH THE MOUNTAINS AND I WILL NEVER FORGET ITS BEAUTY.
SPECIFICALLY WHAT IS THE MAIN THREAT?

Topic Question 1:

Plans to lessen traffic, not increase it, by means of a one-way road or bicycle/pedestrian route would be my first choices. This allows for a quiet environment for both wildlife viewers and wildlife.

Topic Question 2:

Any widening of the road or plan which supports increased vehicular traffic flow would be detrimental to wildlife and the character of the area.

Topic Question 4:

The national parks are not defined as multi-use public lands like the national forests. Preserving them as national jewels and critical wildlife habitat is the best plan we could have.

Comments: Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of our national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this and other roads and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area. There are many other main transportation arteries that can be used by the general public for roadside viewing.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park

To reduce traffic is easy.

Provide an alternate route that bypasses the area (goes around it) and have a high speed limit.

In sensitive areas have a low speed limit, that way tourists and local will still come and be able to get where they are going, but others will be able to quickly skirt the area.

--

Possibly increase the wildlife area by converting some of the BLM lands nearby to forest and discontinue the leasing of it to ranchers, etc. as the leases expire (run out).

Topic Question 1:

Whatever changes you are planning to make in the Park, please remember that first and foremost the Grand Teton National Park has a combination of rare and unique wildlife that is nowhere else. and a unique cultural history and quiet recreational areas along the Moose-Wilson corridor. The whole area is like a great outdoor living museum. Please do not make any changes that will destroy these special primitive areas. It is as important as preserving the Smithsonian Institute, and any other special things connected to our history. Do not take away the public's right to enjoy them. Thank you. Marion Barry

Topic Question 2:

Heavy equipment and an abundance of workers destroys things and takes away rather than enhances wild places.

Topic Question 4:

Just listen to all concerned and work with the National Park Service. The Park Service knows the Park well.

Topic Question 1:

As a lover of our National Parks, I believe that protection of the landscape, its wild denizens and their habitat is the most important quality for human enjoyment of our Parks. The Moose Wilson Corridor is a road that already serves an enormous population of humans moving through. More development or additions would be too much of a sacrifice. As well other routes that penetrate the Park would have deleterious effect on the quality of the Park. This corridor should not be used for commuting but for one way through traffic only.

Topic Question 2:

From what I gather, there is growing pressure placed on this road and it needs to be funneled to another area. The Park is the most important thing and traffic is secondary. Traffic control plans to minimize traffic should be of top priority. Any plans should first consider the needs of your wildlife. It is the beauty of the land and its wildlife that families want to see. It is so incredibly valuable. Children see tons of cars, traffic, pavement, litter, but rarely see a moose.

Comments: Dear Superintendent Vela,

Topic Question 2:
[REDACTED]

Comments: Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Topic Question 1:

Although nature should be open to everyone, with the sheer numbers of visitors entering our parks daily, we do need to monitor and control how many people are allowed into our public lands on a daily basis! Sadly, we are having this same problem in our city at a local open space hiking area...and it is being "loved to death"! There is a fight going on between our personal freedom to use the park, vs. the damage that is being incurred (so that future citizens may not have a park to go to). So - bottom line - we need to have limits for how many people enter our parks each day, and also small fees are not unreasonable to charge for the basic upkeep and maintenance.

Topic Question 2:

Again...Bottom line: Charge reasonable fees and LIMIT the number of people and vehicles (i.e. busses and personal use) allowed to enter ANY public lands.

Topic Question 3:

I think that this is the bottom line. Parks should be "open" to the public, but w/permits and limitations!

Topic Question 4:

Education! People need to be taught that their mere presence in these open areas can and do cause harm to the vary thing they want to enjoy!

Comments: Thank you for doing this...

Topic Question 1:

NPS must put together a plan that best protects park wildlife and its core habitat, visitor solitude, and the unique historic character of the Moose-Wilson Road.

Greatly increased levels of commuter and commercial traffic, hav created high traffic volume along the corridor and increased conflicts with wildlife. Protecting park wildlife will require a reduction of vehicle traffic. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. The park service should develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

Topic Question 2:

The Park Service should prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. Further development should be discouraged, and commercial and commuter traffic along the road should be reduced, if not eliminated. Anything that encourages such traffic does not address the need for the plan.

Topic Question 3:

You should prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism.

Topic Question 4:
see below:

Topic Question 1:

I've been on that road back in the 80s. If it's as bad as you've indicated, there needs to be a way of limiting the amount of visitors along it. Possibly a toll would discourage some visitors.

Topic Question 2:

I believe making it easier to access it will make it worse.

Topic Question 3:

I can't think of any offhand.

Topic Question 1:

I don't know, haven't thought about it. I just hope there is some brainwork - humane brainwork - on keeping and sustaining as much wildlife and parks we have. Today money is making everyone (corporations) just nuts, and how can we top this poison? How can we balance a healthy economy against the bloated few that only want to get at the expense of Nature? Without Nature, man is sick, emotionally unhealthy. We need as much as we can get EVERYWHERE - in the cities - green, green, green everywhere!

Topic Question 1:

Restricted vehicle access combined with shuttle service to park patrons seems like the most viable and effective solution.

Topic Question 2:

No consideration should be given to any plans which include further development or encroachment in the park.

Topic Question 3:

If those creating the plan keep foremost in their minds the importance of maintaining the parks in the way that nature intended, the danger of special interests influencing the outcome will become non-existent. The choices should become self-evident.

Comments: Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism.

Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts. Perhaps you could model such a shuttle bus system upon the success shown by other parks such as Bryce Canyon in Utah. I would strongly suggest the use of electric vehicles to mitigate the environmental damage caused by gasoline emissions.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided. Truly, rather than exploring options for further development and degradation, we should be pursuing methods of preservation to ensure this majestic location is available for many future generations.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Topic Question 1:

I greatly value the wildlife and scenery and I am concerned that there will be too much traffic along this road. We need to protect the wildlife and the area and the park service needs to maintain the low speed, winding road to preserve this.

Topic Question 2:

Do not develop areas that have not been developed and do not open the road year round as I think these will have negative impact on wildlife.

Topic Question 4:

I support seasonal closures of roads to limit winter disturbances of wildlife. Prioritize this road as a quiet park destination and a wildlife viewing area. Consider a one way option or the use of shuttle buses to decrease traffic impacts.

Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is

owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Topic Question 1:
Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. As a lover of the national parks and a strong supporter of the national park system, I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development could destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route. I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road prism. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses will be used to decrease traffic impacts.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

Grand Teton is certainly a gift to the residents of the local community; but it is also landscape that is owned by, cherished, and enjoyed by people from across the United States.

Thank you.

Topic Question 2:

Topic Question 1:

Any plan that saved the beauty of the scenry, benefits the wild flowers and animals and preserves the majestic beauty of the park

Topic Question 2:

building more roads in the park

Topic Question 3:

Preservation of the majetic beauty of the park and the habitat of the native animals

Topic Question 4:

Keep snowmobilers to a very limited area

Comments: Dear Superintendent Vela,

I enjoy the magestic beauty of the Grand Teton wilderness area and would like to see it preserved, for the scenery, wildlife, and moutain peaks. Most important is not to expand or enhance the Moose-Wilson Road. The increase in vehicle traffic will be an extreme detriment to the habitat and life of the animals such as moose and other game.

Therefore, I urge you as a lover of nature and wildlife for the present and future generations do all that you can to preserve that natural beauty of this treasured national park.

Thanks for all you do in handling the affairs of the park.

Sincerely,

Stan Hoobing

Topic Question 1:
I think the parks should be left as wild as possible.

Topic Question 2:
I don't think there need to be any more roads or buildings. This is a designated wild area. The animals need this space to live, the humans need this space to relax and commune with God and nature.

Topic Question 1:

Road access should be 2-lane and strictly for sightseeing use by park visitors. Any through- or commuter-traffic should be re-routed so that it does not pass through areas where animals are likely to cross the road during the day OR at night.

Topic Question 2:

Any measure which encourages larger numbers of fast-moving vehicles on widened roads should be eliminated.

Topic Question 3:

If there are SMALL areas where roads must be widened and speed limits increased for higher numbers of vehicles, overpasses and underpasses for safe animal passage over/under these roads should be commodious and frequent so traditional animal trails are not disrupted.

Topic Question 4:

National Parks, Refuges and Monuments are intended to preserve unique areas of natural beauty and the accompanying flora and fauna in an undisturbed state. Human activity can be tolerated or encouraged AS LONG AS THE FLORA AND FAUNA ARE LEFT UNDISTURBED. Building a multi-lane, high-speed road through these areas is anathema to the whole idea of preservation.

So few areas are preserved, in contrast to so much of the US being farmed or built on. We owe it to ourselves and future generations to maintain these places in a nearly pristine condition. Commercial development of any kind has NO PLACE!

Topic Question 1:

Limit motorized vehicle entry/traffic throughout the park to not interfere with the majority, if not all, of wildlife's normal migratory and social behavior

Topic Question 2:

Too much motorized traffic (meaning paved roadways, parking, etc. and high volume of the number of vehicles allowed) in general; too much interference both by vehicles and (ignorant) human users with wildlife migratory, feeding and breeding routes and locations.

Topic Question 4:

Balance human attendance (both bodies and vehicles) and activity with wildlife activity in such a way that keeps wildlife wild and healthy, their habitat viable, and human experience natural; NOT AN ATTEMPT AT BECOMING A VIRTUAL INTERACTIVE VIDEO GAME.

Comments: Balance human attendance (both bodies and vehicles) and activity with wildlife activity in such a way that keeps wildlife wild and healthy, their habitat viable, and human experience natural; NOT AN ATTEMPT AT BECOMING A VIRTUAL INTERACTIVE VIDEO GAME.

Topic Question 1:

The strategy of limiting through/commuter traffic at all times is most important in the plan. The strategy of returning portions of the current roadway back to nature with an re-aligned roadway is important.

Topic Question 2:

The strategy of closing the road two days per week would not be helpful unless those two days were SATURDAY AND SUNDAY.

Topic Question 3:

A one-way road option should be considered.

Comments: Dear Superintendent Vela,

I am writing to express my concerns about the future of the Moose Wilson Road Corridor within Grand Teton National Park. I greatly value the wildlife, scenery, and historic values of this road and am concerned that unacceptable traffic impacts and calls for increased development will destroy these qualities. It is critical that the park service maintain the low-speed, winding, gravel road to preserve the historic character, solitude, scenic and wildlife values of this special area.

Please ensure that as the Environmental Impact Study begins, you prioritize this road as a quiet park destination and wildlife-viewing area; not as a busy traffic route.

I encourage the use of traffic management techniques to reduce the number of vehicles, maintain slow

Correspondences - Moose-Wilson Corridor Comprehensive Management Plan - PEPC ID: 48252

speeds, and to eliminate commercial and commuter traffic along the road. These goals, combined with consideration of alternatives such as a one-way road option, or temporary or permanent road closures of all or part of the road could allow for safe pedestrian and bicycling use within the existing road right-of-way. Although the NPS alternatives mention the use of a future small shuttle system, I encourage the park service to develop a more definitive plan that outlines how shuttle buses would be used to decrease traffic impacts, as I do not want to add shuttles on top of increased car traffic.

I also support the use of seasonal closures, efforts to limit winter disturbance of wildlife and planning alternatives that protect wildlife security and movement corridors from human disturbance. Most importantly, development in areas that have not been previously impacted should be avoided.

It must be remembered that Grand Teton Nat. Park is a "National Park", not a local preserve and therefore, the opinions and comments of those throughout the United States must carry the same weight as any comments coming from within Wyoming.

Topic Question 4:
My concern is the encroachment of people, especially people in vehicles which disrupt the natural habitat of these wild animals.. Where is the respect, appreciation and understanding of these creatures who roamed these geographies long before humans arrived? Instead of increasing development along the road corridor, development should scale back and only buses carrying passengers be allowed in specific park areas.
