"Conflicts" mentioned in the document are unclear. I have observed more of a cooperative spirit than division between non-dog owners and dog owners

since the 2005 ruling. In 2004, or thereabouts, the whole dog off-leash ticketing scenario was beyond unpleasant. You could cut the tension in the air. My sense is that owners and their off-leash dogs at Crissy Field blend well with other user groups and add value to the overall recreational feel at Crissy Field.(SUGGESTION: Would like more clarity on "conflicts?". More transparency. Education for dog owners, joggers, kids and park employees alike could work well here.)

RECREATION

Having places where I can take LONG walks with my dog allows me to get the exercise I need while also meeting my dog's needs. Without access to the small amount of land in the GGNRA we currently have, I am concerned that many dogs and dog owners will not have sufficient opportunity to exercise and recreate.

The Golden Gate National RECREATION Area was created with the fundamental purpose of providing open space for recreation (including dog walking as a form of recreation) to serve the metropolitan Bay Area. GGNRA parks are not remote wilderness areas, like Yellowstone or Yosemite, therefore they should not be governed by NPS's management policies.

SOCIALIZING

When you have a dog, it's easier for people to start a conversation. Strangers who would otherwise have little reason to speak to one another will stop and chat when dogs are present. I have made countless friends, and joined various groups, and learned about events, by having a dog. Tourists have approached my dog to get their "dog fix". Parents often ask, "is your dog friendly? Do you mind if 'Johnny' pets your dog?". Kids love to interact with my dog. I never could have imagined the enormous social benefits and sense of community from owning a dog; It's important to me and I value it greatly.

If my dog is leashed and we encounter another leashed dog, conversations rarely occur. With few exceptions, my dog when on-leash becomes protective of me, so it's best to pass by the other leashed dog quickly. The sad truth is, the social aspect of dog walking will be lost if leashes are required. And dog walking in San Francisco is enormously popular; one third of the population of San Francisco owns a dog.

MUST BE REMOVED FROM THE DOCUMENT

The compliance-based management strategy is very disturbing to me. Target the people not walking their dogs responsibly but leave the vast majority of

us alone.

CONCLUSION

In my thirty plus years of recreating around San Francisco, I have NEVER witnessed a major dog incident at Crissy Field or anywhere on GGNRA land. I have looked at The Dog Management Plan and studied the proposed changes for Crissy Field. I believe the CURRENT off-leash policy perfectly meets the recreational and social needs of both dogs and people. The Preferred Alternative fails because the amount of off-leash area is too small given the size of the population it serves and there is no technical or scientific basis to change your current dog management policy.

I have faith that you will revise the final Dog Management Plan, and greatly enhance a much needed off-leash dog walking recreational experience. Rather than defaulting to NPS rules, San Francisco has an opportunity to be even better, to break new ground, and lead the nation, with fresh solutions (including education, signage and environmental barriers) for a peaceful co-existence between people and dogs and the natural environment.

Sincerely,

Amanda Bryan

RE: GGNRA Draft Dog Management Plan/EIS Support for Alternative D with additional comments attached

Dear Superintendent Dean:

Thank you for the opportunity to comment on the Draft Dog Management Plan/EIS.

San Francisco Tomorrow, an urban environmental organization, supports GGNRA in their effort to better serve their Mission and to enhance the urban park experience for a diverse and increasing number of park users.

While we support Alternative D, we strongly urge you modify your stated goals. These suggested modifications would increase your ability to enforce concepts you have proposed, better protect your important historic, cultural and natural resources, and increase the overall visitor experience.

San Francisco Tomorrow urges the National Park Service to modify Alternative D and include the following: : ? require all off-leash areas be enclosed to protect park users, wildlife and other dogs; ? limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats; ? provide more trails that are free of dogs (currently, only 1 trail in San Francisco will be available for those who do not wish to interact with dogs); ? limit dog walkers in the park to 3 dogs and to not permit commercial dog walking; and ? implement compliance-based adaptive management that requires at least 95% of dog walkers to comply with the new regulations.

Sincerely yours, Jennifer Clary, President Will you want to live in San Francisco ' tomorrow? 41 Sutter Street, Suite 1579 . Sae Francisco CA 94104-4903 . Recyded Paper

Correspondence: Dear Superintendent Dean:

I am a senior and a home owner in San Francisco. I was introduced to Fort Funston even before moving to San Francisco in 1998, and thus have had the pleasure of walking in the GGNRA both with and without dogs for nearly two decades. At present, I walk with my dog Lily (she is a rescue and is, in dog years, way more senior than I) We walk primarily at Fort Funston and Crissy Field.

The Enabling Legislation

The significance attached to recreation is stated in the title and intent of virtually every document related to the transfer and use of the lands which provide the basis of the GGNRA, and memorialized in the naming of the lands themselves, the Golden Gate National Recreation Area. When Congress established the GGNRA, it was as a:

new national urban recreation area which will concentrate on serving the outdoor recreation needs of the people of the metropolitan region [with the objective] to expand to the maximum extent possible the outdoor recreation opportunities available in this region.(emphasis added) (H.R. Rep. No. 1391, 92nd Congress, 2nd Session [1972])

The use of the GGNRA for off-leash recreation was addressed specifically during the hearings before the U.S. House of Representatives, and dog-walking was an enumerated activity in the US. House Report (H.R. Rep. No. 1391, p. 4854, cited in a letter from Edwin J. Sayers, President, SF/SPCA to Superintendent Brian O'Neill, GGNRA, Aug. 16, 2000). The importance and legitimacy of off-leash recreation was reconfirmed by the GGNRA Advisory Committee in 1979.

Recreation and Exercise

The importance of recreation has not lessened in the intervening years. Rather, it has increased. From the White House to local initiatives, improving health and fitness is a high priority in an increasingly obese and unfit population. The National Park Service itself has introduced the Healthy Parks, Healthy People program, which was the subject of a well-publicized conference here in the GGNRA in April. Thus, the GGNRA should be and could be in the forefront of one of the most important initiatives to improve health in a national context, by highlighting and showcasing people exercising with their dogs in the GGNRA.

The people walking dogs in the GGNRA are engaging in a form of exercise now recognized as a compelling and effective route to better health. Research has shown that walking with a dog is likely to result in lengthier and more frequent walks than walking with another person or with a group (See, e.g., Marcus, 2008; and Brown and Rhodes, 2006.)' The health benefits of walking with one's dog in the GGNRA, widely noted by those who visit with their dogs, and those who come to see and walk with the dogs, are ignored by the Dog Management Plan.

The severe truncation of space and opportunity reflected in the GGNRA "preferred alternative" sends the wrong message regarding exercise, and

regarding off-leash recreation.

The GGNRA is failing to capitalize on the opportunity to recognize and support the value of walking one's dog as a means of maintaining fitness and improving health in an incremental, continuous and positive manner. With its present Pet Policy, the GGNRA is on the cutting edge of demonstrating and providing a venue for lifelong recreation and a multi-generational healthy life style. The GGNRA should be a model for healthy exercise in an urban setting, positive treatment of pets, and the creation of community in an urban context. This is a model to be replicated, not destroyed.

Community and Safety

As a senior and a woman, I applaud the GGNRA for providing what is at present a safe place to walk with one's dog. The GGNRA abuts a city of 800,000 people, and yet walking in Fort Funston, for example, is walking among fiends. Many others, both with dogs and without, walk in the off-leash areas, enjoying the neutral and very beautiful space (and often challenging weather conditions!), and creating community in this urban recreation area. In a culturally diverse social environment, as varied as the urban setting around us, a shared enjoyment of dogs and of nature creates friendships and new acquaintances. In a time of increasing alienation and focus on individual pursuits and technology, what a treasure areas such as Fort Funston and Crissy Field are!

Walking off-leash provides additional physical safety. Lily and I are not being pulled by each other, and thus there is less stress on and danger to our joints and our bodies. It is also a safe place to walk because the dogs have the space to meet or to avoid each other. And there is no issue of leash aggression because the dogs are off-leash.

However, the planned reduction of space which will corral the dogs and their owners into a tenth of the one percent of land now available, and the requirement to walk dogs only on-leash on trails will create a dangerous situation for both owners and dogs.² In a recreational use survey of Fort Funston carried out in 2000, it was noted that Fort Funston alone accommodates more than five percent of GGNRA visitors, but comprises less than 0.3 percent of GGNRA acreage.³ The reduction of space and access proposed by the Dog Management Plan is unnecessary and untenable, will lay the foundation for negative behavior and territoriality, and will destroy what is now a viable, valuable, and beloved national recreational resource.

Baseline data was not collected, and hypotheticals stand in for hard data

It is unacceptable that the Dog Management Plan, costing nearly a million

dollars and purporting to justify major changes to traditional off-leash recreation, lacks the most rudimentary baseline data. According to the Plan, "Visitation data on local visitors walking their dogs off-leash in the park are not available..." (Vol. 1, p. 23). Why not? And if not, then this plan, with its profound consequences to off-leash dog walking, is premature, for it is not predicated on even the most basic of demographic data. Similarly, access must not be removed on the series of hypothetical consequences run up the Dog Management Plan flagpole, to see who will salute them ("dogs "can potentially trample... vegetation..." (Vol. 1, p. 14); "dogs can be carriers of exotic plant seeds..." (Vol 1, p. 15), etc. Hypotheticals are not data, and dogs (and their owners) must not be blamed and exiled for "possible" or "potential" problems. This is unscientific and unfair. And it is disingenuous to roll out a list of every endangered or threatened species in the GGNRA, in order to slam off-leash exercise, which is presently permitted only in a minimal space and primarily in the most urbanized and heavily used areas of the GGNRA. Fort Funston, with Nike silos in the parking lot and gun batteries on, and fallen from, the cliffs, is not pristine wilderness.

Impact on the City

Surprisingly, the Dog Management Plan states that, "potential impacts on social and economic conditions [in San Francisco] would be highly unlikely to exceed a "negligible" threshold, and are therefore eliminated from detailed consideration..." (Vol. 1, p. 23). This is wrong, and has already been proven wrong. The effect on city parks and on continued ability to recreate on the limited open space in the urban Bay Area will be both profound and deleterious.

This was already graphically demonstrated by the half-day closure of Fort Funston on March 11, 2011, the day of the expected tsunami from Japan. On that Friday morning, Stern Grove in San Francisco was overrun by cars and by hundreds of people and dogs, as dog owners and walkers sought other sites for their daily recreation.⁴

The GGNRA comprises a large part of the recreational land in San Francisco; any plan proposing change in off-leash access must recognize and reflect the impact of such change in San Francisco itself, and must be considered in conjunction with the City.

Remove the Poison Pill

The "Compliance-based Management Strategy" is a poison pill, designed to permit arbitrarily and unilaterally ending off-leash recreation, without public input or objection. This is unjust. It is also unjust because those who are irresponsible, or who are deemed to be irresponsible, would decide the fate of off-leash dog-walking in the GGNRA. An equivalent situation would be

that if a sufficient number of drunk drivers were apprehended on the roads, the roads would be closed to all traffic.

The "Compliance-based Management Strategy" also works in only one direction: towards less off-leash space. There is no positive reinforcement, only punishment.

The GGNRA already has policies and penalties for those who break the laws. Use the law and punish the offenders. Do not punish the innocent for the faults of the guilty, and do not destroy a loved and valuable institution because some irresponsible people do not follow the rules.

The Solution

The solution is already partially in place. Retain the off-leash areas recognized in the 1979 Pet Policy. Reinforce and retain the benefits ' in exercise, in community, and in safe and healthy use of shared resources ' of the authorized and mandated use of GGNRA land for traditional recreation.

In addition, given the demonstrated importance and value of off-leash recreation in the Bay Area, and the clear need for healthy exercise in the population in general, designate and create new off-leash areas and trails in the new lands being added to the GGNRA.

Increase education about off-leash etiquette; work with the many groups that have already proved their commitment to both the GGNRA and off-leash activity; and reap the harvest of enlightened administration, good stewardship, and demonstrated respect for both the history of the GGNRA and for its future. Off-leash dog-walking is an established activity. The active and devoted group of GGNRA visitors who walk with their dogs respect the land, value the resources, and cherish the experience of walking in these small corners of the GGNRA.

Sincerely, Dr. Renee Ilene Pittin

Correspondence: RE: Dog Management Plan

Dear Superintendent Dean:

I am hiker, a birder, and a dog lover.

Although I love dogs (I am a dog person), I do not enjoy walking on trails where there is dog poop or dogs running wild.

Once unleashed, a dog goes where he/she will. I live along the estuary in Alameda and have problems with unleashed dogs and their waste in my yard.

The parks are everyone's yard and should be enjoyable for all, not just dog owners. In the Oakland Hills, there are often six or more dogs with a dog-walker. They take over the trails and force humans make way to accommodate them. Elders have difficulty in avoiding over-enthusiastic dogs.

I strongly urge that the parks be kept for people first, with fenced enclosures for dogs.

Thank you.

Correspondence: Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation.

Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.

Exclude speculative, exaggerated, biased, or misleading statements and studies.

Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).

Enable professional dog walking and align any professional dog walking rules with county or city regulations.

Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

These are my personal comments and observations regarding this plan: (here's where you fill in your own personal story and what you've seen when you've been out at the GGNRA)

Sincerely,

Darin Lyssl Colusa, CA 95932

Correspondence: Dear Superintendent Dean,

I am a 60-year-old native San Franciscan. I raised my family here. Now I hike extensively with my dogs all over the Bay Area, but most regularly at Ft. Funston. My family and I have enjoyed the close proximity of the open space and natural beauty for all of our lives.

I am vehemently opposed to the proposed Draft Dog Management Plan. The original deed which granted the land to the GGNRA stipulated that existing recreational activities be maintained. The 1979 Pet Management Plan confirmed it. In an urban area like San Francisco, this is crucial.

Allow me to introduce you to my neighbor, Martine. Martine is near 75 years old, originally from the Basque region of Spain, but has lived and worked in S.F. for decades. About three years ago, he had a near brush with death involving his heart. He recovered, lost 40 Ibs, and regained his strength. His recovery is directly related to walking his dog, Capone. Currently, he is a regular at Fort Funston. He walks, not on the paved path, but across the dunes! He uses a cane and his dog romps at his side. He is as hale and hearty as any 75 year old you'd like to see! This is what an urban recreation area is supposed to accomplish!

And we won't even get started on my own battle with cancer... NEPA specifically states that any policy regarding recreation must consider the impact on the human condition. This factor must absolutely be considered in any plan for the future. The Preferred Alternative Plan doesn't even come close. A story like Martine's must influence any final decision. You may rest assured there are many more like it.

I look forward to an adjustment in the final proposal. Sincerely,

Victoria Lansdown Cc: Senator Dianne Feinstein, U.S. Senate

Nancy Pelosi, 8th Congressional District of California House Minority leader, U.S. House of Congress

Ken Salazar, Secretary of Interior

Correspondence Type: Letter

Correspondence: Dear Superintendent Dean:

My name is Laurie Berk. I have lived in San Francisco for about 19 years and, in that time, have enjoyed walking, running and playing with my dogs Casey (1992-2004) and Kylie (2005 ' present) in the GGNRA. In particular, I visit Crissy Field on almost a daily basis and I enjoy hiking in various places, including the trails above Rodeo Beach, with my dog. On occasion I have visited Baker Beach, Ocean Beach and Muir Beach, among other places within the recreation area. Being in natural spaces, and having those spaces preserved and available for recreation, is important to me. In the past, I have been a member of the Sierra Club, the Audubon Society and the World Wildlife Fund, have volunteered within the GGNRA, including participating in beach clean-ups, and consider myself a birder, environmentalist and responsible citizen. I am also the mother of two girls, now ages 18 and 16, and, along with my husband and dog, we enjoy the GGRNA as a family.

In addition to being a responsible citizen who picks up after her dog, keeps my dog under voice control or on-leash where required, and out of restricted areas, I also clean up litter on the beach and hiking trails as I am using them. Over the years I have also notified the park service about injured or dead wild animals and birds and about people I have observed failing to observe regulations, such as staying out of fenced dunes and berms at Crissy Field. I have also helped provide and distribute bags to be used to pick up after dogs and have educated other park users about park policies, regulations and issues relating to dogs in the GGNRA.

As a responsible and involved citizen, I have followed and participated in various meetings and comment periods over the years relating to recreation with dogs in the GGNRA, including the planning process for the renovation of Crissy Field. Combined with my use of the GGNRA on almost a daily basis, I believe that I am fairly well informed and have personal experience relating to many of the issues addressed in the GGRNA's Draft Dog Management Plan /Draft Environmental Impact Statement (the "Plan/DEIS"). As such, I do not agree with the analysis or conclusions

reached in the Plan/DEIS and believe that they are biased against recreation with dogs in the GGRNA, not based on sound science or adequately disclosed information, and not based on long-term monitoring of the conditions at each site. I believe that with some minor tweaking and better management, the current 1979 Pet Policy would serve all interests and interest groups well into the future.

In my view, the focus in the DEIS only on the presence of dogs and only on the sites specified in the Plan/DEIS (rather than the GGRNA as a whole) inevitably leads to the (what I believe are erroneous) conclusions in the Plan/DEIS that dogs may have a negative impact on the sites. However, the proof is missing from the Plan/DEIS that these negative impacts actually exist, and those conclusions are unsupported. In fact, there are many factors that may negatively impact the natural resources or lead to conflicts within the GGRNA, including the presence of people on foot, on bicycles, on horseback and in cars, predatory wild animals and pests, non-native and invasive plants, litter and pollution, and the wind, rain and tides, to name a few. To the extent that natural resources are threatened, it is very unclear that dogs create the singular impact that poses any threat.

Additionally, the degree to which an impact is negative is maximized when one looks at very specific sites. If one looks at the GGRNA as a whole, however, and not merely at specific sites comprising the less than 1% of acreage where people may enjoy recreation with their dogs under current policy, any impact is minimized. In my experience, the natural resources I see in the GGRNA have not been diminished over the years that I have enjoyed being in the GGRNA with my dogs. In fact, the natural resources at Crissy Field in particular have been enhanced over those years through plantings and management of specific areas, and natural vegetation appears to be thriving, despite the heavy presence of people enjoying the space with their dogs.

It seems patently unfair to divide up the existing specific sites for dog recreation into anything less than what exists under current policy, as the 1979 Pet Policy surely was a negotiated plan, the end result of which only small, discreet areas of the GGRNA is available for recreation with dogs. Why should just those previously determined sites be the only areas under consideration? I understand that the GGRNA includes 60 miles of waterfront between Marin and San Francisco Counties and that only about 8 miles of it in total, and less than 1% of all GGRNA acreage, is included in the 1979 Pet Policy. If restrictions from the current policy are to be imposed on any of these sites, and the GGRNA is truly interested in "doing what is fair" as you have stated over and over in the media, the Plan/DEIS should provide for at least an equal amount of space for dog recreation in other areas of the GGRNA.

Further, many other actions, other than significantly restricting access with dogs, can be taken to ameliorate any negative impacts. These include accurate and informative signage, public education, proper enforcement (of all GGRNA rules, including prohibitions against littering and humans not staying on paths and out of protected areas), and the installation and maintenance of barriers around protected areas. I believe the GGRNA has exacerbated the potential for conflicts and rule violations relating to dogs in the GGRNA by not making the rules clear, by not maintaining barriers on protected areas, by acting without proper process, by allowing large scale and often improperly managed events in the GGRNA, and by failing to adequately enforce the rules and regulations. In addition, the GGRNA has encouraged an increased use of the areas covered by the 1979 Pet Policy by people, for example, by allowing the placement of the "temporary" Crissy Field Center at the beach and allowing food service there in addition to allowing various events, thereby increasing the usage of the GGRNA but not increasing enforcement, so that natural resources have a greater tendency to be negatively impacted. The expansion of picnicking areas near the East Beach of Crissy Field that is currently ongoing is likely also to increase the use of the area by people who would prefer to not be around dogs. At the very least, it is clear that there has been plenty of opportunity for the GGRNA to take actions, other than restricting access with dogs, to ameliorate the impacts that are enumerated in the Plan/DEIS, but the GGRNA has failed to take such action in any meaningful way. There seems to be a patent unwillingness of the GGRNA to manage the situation in a way that preserves the integrity of the 1979 Pet Policy. Now the attempt to manage the situation, as provided in the preferred alternatives, is to restrict or remove dogs from the equation, but that is unnecessary and unacceptable.

Having the community of people with dogs who use and advocate for the use of the GGRNA with their dogs characterized, in effect, as rogues in the Plan/DEIS is offensive and not based on facts. Most of the controversy over the presence of dogs in the GGRNA has been created by the unilateral actions of the GGRNA in rescinding the pet policy in 2001, its failure to manage the areas consistent with making the policy work, and hostility on the part of GGRNA staff in dealing with people in dogs. My personal experiences have included having a ranger on horseback at Crissy Field threaten to shoot my dog if I did not put him on leash because the ranger's horse was agitated by my dog (although my dog was not antagonizing the horse and was under my voice control), and being threatened with arrest by another screaming park policeman if I did not leash my under-voice control dog as I entered the beach, without any explanation. (I then saw that there was a distressed sea lion on the beach about 100 yards away and I immediately left the beach with my dog.) What I see day in and day out in the GGRNA is a diverse group of people with dogs acting respectfully and responsibly. It is true that there are people who don't act that way, and they should be fined for infractions; they are not the majority and the population

of people as a whole who use the GGNRA for recreation with their dogs should not be punished for the bad actions of a few ' no more than access would be closed to people because a few litter or otherwise don't follow regulations.

To be sure, many areas covered by the 1979 Pet Policy are popular with various user groups. In my experience, those groups generally co-exist well in the park. At Crissy Field, the few conflicts I have observed have occurred on the rare "beach day" when it is warm, sunny and not too windy, typically on a weekend day. On most other days, however, people with dogs tend to be the majority and, on bad weather days, often the only users of the area. With today's technology, I'd like to see the GGNRA try something along the lines of our Bay Area "spare the air days" where notice would be posted on those "beach days" online as well as at the East Beach of Crissy Field that would make the East Beach a dog-free zone for particular hours that day, such as from 10 am to 5 pm. Another alternative to consider is to restrict access to dogs on the East Beach of Crissy Field on weekends during specified hours, such as from 11 to 4 pm. These alternatives allow for all user groups to enjoy the space as they like it. With posted explanations of the policy, education and enforcement, I believe that conflicts would effectively be eliminated. Concerns expressed in the Plan/DEIS about the effects of pollution and disease in connection with dogs are not supported with facts or any scientific proof, and I challenge the GGNRA to provide evidence of these factors as impacts on the sites.

My use of the spaces in the GGNRA under the 1979 Pet Policy are extremely important to me as I try to stay healthy, both mentally and physically, and exercise responsibility for the health and well being of my dog. My daily visits to the parks are opportunities for peace and reflection and provide me with a treasured start my day. I have many friends who I know through my visits to the park. The ability to be in the open, allowing my dog to chase a ball and run into the water or to run at a faster pace than me, leaves me with a great sense of satisfaction and cannot be replicated elsewhere in the vicinity. Over the years, these recreational values have already been restricted, especially with the development of Crissy Field area and the lagoon and limits on access along the beach, so that I cannot enjoy running the same distances as I previously did with my dog off-leash, running at her own pace. Recreation with dogs should be acknowledged as a value in the Plan/DEIS by including a section that evaluates the benefits of such recreation. Some of the specific issues that I have with the Plan/DEIS, and the ways the Plan/DEIS should be modified to address these issues are as follows:

1. The GGRNA is an urban recreation area.

The DEIS and Plan do not acknowledge or recognize that the GGRNA is,

first of all, a recreation area, and second of all, in an urban setting. However, my understanding of the reason the GGNRA was created was to preserve the space for recreation purposes (including dog walking) to serve the Bay Area. The GGNRA is not a Yosemite or Yellowstone Park. The DEIS specifies that the quality of the urban environment is not significant to the study and is therefore excluded from consideration, but the reality is that the GGNRA is integral to the urban experience in the Bay Area and must be taken in to consideration. This is part of the "human environment" that should be covered in the DEIS. These facts, that the GGNRA is a recreation area and is in an urban setting, distinguishes the GGNRA from other spaces managed by the National Park Service, and the NPS's "fear" of setting precedence by continuing to allow recreation with dogs in the GGNRA is unfounded. The Plan/DEIS should include an evaluation of the benefits of recreation, including the physical, mental and social aspects of dog walking and what impact would occur to those benefits if severe restrictions are put into place.

2. Recreation and Natural Resources: Not mutually exclusive

The analysis and conclusions reached in the Plan/DEIS often present recreation and the protection of natural resources as an "either-or", or mutually exclusive values. This is a fallacy. The Plan/DEIS should recognize that people care about both values and that the natural resources can be protected and preserved at the same time that recreation, including dog walking, occurs. In fact, the presence of people in the GGNRA with their dogs may often enhance the natural resource protection by serving as eyes and ears against issues that arise and by being good stewards of the environment, including picking up litter and reporting injured animals, broken barriers and misuse of protected areas. In addition, there is no proof or evidence presented in the DEIS that dog walking under the 1979 Pet Policy has led to a serious degradation of natural resources. The Plan/DEIS should be modified to acknowledge that outdoor recreation is as important a resource as natural resource management within the GGNRA.

3. Improve Signage, Education and Enforcement relating to regulations and policies in the GGNRA.

The DEIS should include in its alternatives something along the lines of improving signage, education and enforcement relating to the current policies and regulations in the GGNRA, including dog walking policies. For instance, at Crissy Field there are no signs in the eastern parking lot area or along the beach or promenade that indicate that dogs may be off leash under voice control or what specific areas are included in that policy. Instead, the signs indicate that one must "obey all posted rules", but posted rules relating to dogs are few and far between and don't delineate where dog walking ' on or off leash ' may take place, other than prohibitions at the West Beach

boundaries. Near the West Beach Wildlife Protection Area, one sign says that dogs must be on leash in the "Snowy Plover Protection Area", without specifying that there is currently a 45 day period of time when dogs are allowed off leash under voice control. (That sign also states that one "MUST...recreate on the wet sand away from the upper parts of the beach...", but my understanding is that was a suggestion that was made (by Crissy Field Dog Group), but it is not part of the regulations in effect.) Further, a sign along the bridge over the lagoon indicates that Crissy Field is a resting area for the protected Western Snowy Plover, without specifying that the West Beach is preserved for that purpose (the sign makes it sound as though the threatened birds are trying to rest everywhere in the Crissy area.) In the headlands above Rodeo Beach, the signs do not include any indication that dogs are permitted, although there is signage relating to bicycles and horses. As a result, conflict occurs, people may unwittingly violate the policies, and people who may not want to deal with dogs don't have any information as to where they may go without dealing with off leash dogs (such as the West Beach area of Crissy Field). With respect to education and enforcement, people (including those without dogs) often don't understand the impact they may have by not staying on trails or by entering protected areas of vegetation, but once they understand the consequences (both to the natural resources and to themselves if they could receive a fine), they often will change their behavior. The GGRNA should be doing things now to make the current status work and the Plan/DEIS should include action plans relating to improved signage, education and enforcement.

4. Impact of "no action" is not properly or adequately analyzed.

The DEIS does not, but should, include a baseline of current conditions from which impacts can then be measured. Rather, it is compliance-based, without adequately assessing the impact or consequences of non-compliance. There is an assumption that non-compliance exists and has a negative impact, yet there is very little that is being done to make the current status work. Additionally, it is unclear how reliable the statistics are that are quoted in the Plan/DEIS about non-compliance, such as the one relating to off leash dogs in the restricted West Beach area of Crissy Field; were the stated observations made right after the restricted area was created and before there was adequate signage to notify people of the rule and before it was clear that the restriction was properly put into place? What are the statistics now that there is a fence and better (although not great) signage? I personally have not seen anyone with a dog failing to comply with the rules for the West Beach area since the fence was erected on the east end of that area. This relates to the previous point: education and enforcement are powerful tools which can solve many of the "issues" raised in the Plan/DEIS without severely restricting the current valued ability to enjoy the GGRNA

with a dog.

In addition, the ROLA compliance outlined in the preferred alternatives in the Plan feel draconian where the "baby is thrown out with the bath." There is no indication of how compliance would be measured and by what standards or who would measure it, and the consequences of non-compliance (for which there is not necessarily any or significant negative impact on natural resources) are rigid and biased. Change the Plan/DEIS to instead provide for management of areas driven by an adaptive management policy that assesses the impacts of non-compliance and provides regulation based on the impacts, with the ability to reinstate dog walking policies as previously enjoyed in areas where they may be restricted because of negative impacts if those impacts can be remedied. The current ROLA regulations in the Plan should be thoroughly revised to add clarity and allow for such flexibility and fairness to responsible citizens with dogs.

5. Conclusions that dog walking is the cause of negative impacts on natural resources in the GGNRA are unsupported.

With few exceptions, there is little documentation in the DEIS to support the conclusion that the natural tendencies of dogs harm natural resources and therefore have negative impact in the specified sites and therefore should be subject to severe restrictions. At the very least, other impacts must be considered, including the impact of other park visitors. There should be an analysis of a variety of uses regarding the impact on the quality of natural resources. I personally have observed and reported people climbing into fenced off vegetation areas at Crissy Field to take photos and to get better views during events, as well as children playing in the areas, running up and down the dunes. I have also observed people hiking off of the trails in the areas above Rodeo Beach and people on bicycles where they are not allowed. In addition, I have observed and reported large amounts of garbage and litter left behind after events, or not immediately picked up at the conclusion of the events, so that birds and other wildlife have foraged in the garbage, possibly ingesting harmful items. The dunes and fencing along the beach at Crissy Field are regularly impacted by the wind and tides. It is common for the park police horses to leave deposits along the trails in the park. I am really curious as to how the proposals for the America's Cup event (which I support) will impact the area and how that environmental analysis compares to the DEIS. All of these other impacts (and not just the ones I have listed as examples) must be evaluated as well before negative impacts are merely attributed to the presence of dogs.

6. Limitations on areas for recreating with dogs from the current policy is likely to exacerbate rather than ameliorate conflicts and the impact of usage in the smaller spaces.

While the DEIS reasons that "conflicts will likely escalate if not addressed in a comprehensive plan/EIS", the preferred alternatives in the Plan/DEIS are likely to lead to that escalation as the same population is forced into smaller areas and closer proximity. In any event, the environmental impact of that result has not been, and should be, addressed in the DEIS. In addition, the impact on areas surrounding the GGNRA, including city and county parks and open spaces should be considered.

7. Visitor Experience Should be Inclusive of Recreation with Dogs

The Plan/DEIS seems to focus on the "visitor experience" as one for people who don't want to be around dogs. However, not only are there people who go to the park with their dogs but there are people who go there without dogs to be around and enjoy interacting or observing the dogs. Usually the dogs are animated and happy in play and a great reminder that simple pleasures such as being outside in a beautiful setting is a treasure. I have met many people who have commented about my dog with joy at seeing her "smile", being a "good girl", or just because they think she is pretty or looks like she is having fun. It gives those people a wonderful visitor experience and that experience should be analyzed and acknowledged in the Plan/DEIS as well.

8. Diversity and Variety of People with Dogs in the GGNRA

The Plan/DEIS suggests that minorities don't visit the park or don't fully enjoy the park because of the presence of dogs, and that seniors, the handicapped and families with small children are threatened and intimidated by the presence of dogs. These suggestions are based on "studies" and "telephone surveys." The reality, however, is that many of the people with dogs in the GGNRA represent and include minority groups, seniors, the handicapped and families with small children. In particular, I often see families with young children and their dog playing and picnicking at the East Beach area of Crissy Field. The preferred alternatives in many of the sites would have a more negative impact on many in those groups as the restrictions to access with dogs would make recreation that much more difficult or impossible. For instance, if a family with small children or a person with a walker has to walk to the Central Beach at Crissy Field before allowing their dog off-leash, many of those people will not be able to enjoy a beach experience with their dog because they will not have access. Somehow the Plan/DEIS overlooks these people in its assessment of the situation. The Plan/DEIS should be revised to analyze the impact of severe restrictions on dog access on these park visitors.

9. Lack of Scientific Support for and Problem with other Limitations Provided in Preferred Alternatives for Crissy Field and Marin Headlands

Trails/Rodeo Beach

I also strongly disagree with other limitations that would be placed on dog access at Crissy Field and Rodeo Beach in particular. The additional limits on access in the grassy area, East Beach, West Beach and the paths to the Central Beach at Crissy Field, as well as in the Marin Headlands, especially along Wolf Ridge, are untenable and don't appear to be based on or supported by sound science or any long-term monitoring of the sites. How is it that walking a dog on leash along Wolf Ridge has a more negative impact than people walking along the trail, assuming regulations (such as picking up after a pet and not harassing wildlife) are followed? The Plan/DEIS needs to be revised to include real science-based information taken from long-term monitoring of the sites that is conclusive regarding negative impacts before restrictions on recreation with dogs are suggested or imposed. In addition, the limitations placed on the grassy area of Crissy Field in connection with events needs should not be open ended. As written, the GGNRA could potentially always have events planned in the area and the grassy field can, effectively, always be off limits to people with dogs. There should be limits placed on the number and frequency of the events if they are to cause limits on access with dogs.

In conclusion, based on my experiences and my reading of the Plan/DEIS, I support Alternative A, the No Action alternative. I also support the inclusion of "New Lands" areas for recreation with dogs as they are added to the GGRNA. Some tweaking of the No Action alternative may be helpful, including a prohibition of off-leash dogs during specified hours on the East Beach area of Crissy Field, as outlined previously in this letter, but basically the 1979 Pet Policy should continue to be the guide for dog management throughout the GGNRA. The reasonable solution for dealing with the issues raised in the Plan/DEIS is to educate the public, provide clear signage and to enforce the rules and regulations.

The Plan/DEIS is biased against the No Action Alternative and variations on that alternative. In my years of experience in the GGRNA, the 1979 Pet Policy ' which focuses on less than 1% of the acreage within the GGRNA - has been working with a few minor exceptions that can be addressed in ways other than severely limiting access to the GGRNA with dogs, namely, by better management. The Plan/DEIS does not provide site-specific information that these areas are negatively impacted by or are inappropriate for continued dog walking. Dog walking recreation in the GGRNA is important to me, my family and thousands of others and should continue to be permitted into the future at least as extensively as permitted under current policy.

Correspondence Type: Letter
Correspondence: Dear Superintendent Dean,

I am writing as a 16-year resident of San Francisco (first the Outer Richmond, now the Outer Sunset). I'm also a passionate fan of national parks: my college thesis focused on William Kent, who donated the land for Muir Woods, and I estimate that I've visited at least three quarters of the national parks in the western United States. Living on the western edge of San Francisco, I'm a huge fan of and a very regular visitor to the GGNRA, from Fort Funston to Ocean Beach to Land's End to Crissy Field.

I am also a dog owner, which is why I am writing this letter. Off-leash exercise and socialization is essential for a dog's well-being. It's also essential for my well-being. I regularly run at Ocean Beach and Crissy Field with my dog. I greatly value the 1% of the GGNRA where dogs are allowed to run off-leash, and I am greatly troubled that the 1% may be in danger of vanishing. Specifically, I am concerned by the Draft Dog Management Plan/Draft Environmental Impact Statement for the GGNRA. The GGNRA's current preferred alternative places draconian restrictions, and in many cases completely eliminates, off-leash dog walking in many areas within the GGNRA. These alterations to the 1979 Pet Policy do not seem to me to be based on sound science, nor to provide a workable balance of public uses within an urban national recreation area.

I am particularly troubled by these aspects of the draft environmental statement: Lack of specificity. The plan assumes that negative impacts could occur from dogs but does not document actual negative impacts at specific GGNRA locations.

Unwarranted assumptions. The impact statement assumes that off-leash dogs harm shorebirds and stranded marine mammals but does not document specific negative impacts at specific sites. Ignoring the importance of

recreational use of the GGNRA. From its establishment, the GGNRA was charged with maintaining and protecting recreation as one of its four outstanding values. The environmental impact statement does not take recreation into account.

Bias against the No Action alternative. There are many areas in the GGNRA where the existing 1979 Pet Policy has been working. But the draft environmental impact statement mostly ignores the No Action alternative.

I am very cognizant of the fact that dog owners who use the GGNRA need to be good citizens. They need to have their dogs under voice and sight control at all times. They need to clean up after their dogs. They need to make sure their dogs do not bother other GGNRA users and they need to keep their dogs out of environmentally sensitive dune and vegetative areas.

But in turn the GGNRA must accommodate the reasonable needs of dog-owning recreation area users. Currently only one percent of GGNRA lands is open to off-leash recreation for dogs (and their human companions). To reduce that percentage further would be to disenfranchise a large part of the GGNRA's constituency, and thus undermine the very purpose of establishing an urban national recreational area. Yours,

Peter Fish

Correspondence: Dear Superintendent Dean,

I strongly oppose the GGNRA's draft Dog Management Plan!

I strongly disagree with and do not support any of the alternatives that have been proposed! I strongly disagree with the compliance based management proposal!

As I sit here writing my "substantive" comment, I am looking at the 2000+ page draft Dog Management Plan. How do you expect the average person--and that's me!--to read this? Seriously. I tried...I really tried. I found so many things in this document that upset me...I had to stop. I could feel my blood pressure going up and I was getting frustrated and angry. Just the opposite of how I feel when I walk with my dogs off-leash (and under voice

control) at Fort Funston! Strange how that works.

I am one of many, who simply want to be able to continue to responsibly walk my dogs off leash as I have since the early 1980s at Ft. Funston.

Ft. Funston makes up less than 1% of the entire GGNRA. That means that over 99% of the GGNRA is available to other citizens who do not have dogs or who do not want to interact with dogs or dog people! The draft Dog Management Plan, as I understand it, intends to take away 90% of the 1%! That is unacceptable!

I know you don't want to hear any of this...you've made that very clear. I have attended meetings for years about off-leash dog recreation, including the meeting in the Presidio, in the rain. I signed up to speak and was never allowed to do so.

The fight to preserve off-leash dog recreation has gone on so long that my first group of dogs have grown old and died. My next generation of dogs have also grown old and died. I now have a third generation of dogs that I walk off-leash at Fort Funston. I too have grown old over these years and now am in my 60s. If I have to, I will advocate for a 4th generation of dogs and our ability to enjoy off-leash dog recreation within the GGNRA.

Here are some of my comments on this plan: You say you have to manage all "National Parks" alike. I don't believe that is true.

What other national park/national recreation area is within a city's limits that has a population of around 800,000 people and limited open space? I believe you do have the discretion to manage the GGNRA differently from Yellowstone or Yosemite.

It is my understanding that there is a mandate which requires the GGNRA to support recreation and mixed-use activities. I could find nothing in this plan which takes into consideration the great negative impact to the quality of life for those of us who live in the Bay Area and have Traditionally pursued off-leash recreation in the GGNRA.

I truly feel you are trying to keep people out of the GGNRA. One way to do that is to target a large group of GGNRA user--people and their dogs. Obviously dogs do not drive themselves to Ft. Funston, San Mateo, Marin or Crissy Field! We go to these urban recreational areas because we want to walk with our dogs off-leash (and under voice control).

I believe your plan is to make it so difficult and unpleasant to bring our dogs to these areas, that 've'll just stop coming. You've killed two birds with one stone-- you get rid of the dogs and the people. Ft. Funston essentially

becomes,deserted. After all, it's not the most hospitable place in the GGNRA.--extreme weather sees to that!

Once the people and dogs are banished, I expect that the drug dealers, criminals, homeless, etc. will return. When people and their dogs start regularly going to areas like the GGNRA, they become a much safer environment for everyone. When I started walking at Ft. Funston in the 80s...it wasn't that safe. As a single woman, I often was fearful--with good reason. Today I can safely walk in these areas--because more of us are walking there with our dogs. I didn't see the issue of personal safety within the GGNRA addressed anywhere in the Dog Management Plan.

As I said above, I have walked at Ft. Funston and Crissy Field since the early 1980s. I could not find any evidence in this report to back-up statements that dogs negatively impact wildlife or plants within the GGNRA. The 2000+ page report keeps using words like, "dogs might, dogs could, dogs could potentially" and so on. I've never seen so many "might-haves". I tried counting them, but eventually gave up because there were so many! I couldn't find an actual incident report anywhere in the dog management plan.

In over 30 years walking my dogs in the GGNRA, I personally have never seen a dog injure or kill a bird or other mammal. Just the opposite is true--wildlife in an urban environment are used to dogs. We have existed together for years. The Marine Mammal Center has said that they like it when people are walking their dogs on the beach, because we find the injured and stranded marine mammals!

Why haven't the fences and signs in the Bank Swallow protected areas at Ft. Funston been repaired? Perhaps that would have been a better use of the \$800,000.00 dollars allocated for the 2000+ page draft Dog Management Plan.

This report also does not address the important social communities that have developed over the years around recreational dog walking. We Watch out for each other, especially senior citizens and their dogs. I moved to San Francisco in the 70s. When I got a dog and started walking at Fort Funston I soon developed friendships that continue to this day. This is a huge benefit of off-leash dog walking in the GGNRA! The draft Dog Management Plan is written as though none of this is important or matters. A community of people will be destroyed.

I truly feel this is discrimination against a select GGNRA user group. People and their dogs are targeted by so-called environmental groups--whether they are native plant people, bird people, etc. We walk with our dogs in the GGNRA every day. We're highly visible, so it's become easy to blame dogs

for pretty much everything from erosion (forget about Mother Nature or just plain human impact) to dead birds found on the beach (no evidence it was a dog...but, we'll blame the dog anyway!). There are no credible scientific studies that support these allegations! I am asking the Park Service to recognize that off-leash dog-walking is a legitimate form of recreation.

I am asking the Park Service to recognize that off-leash dog recreation deserves more space within the GGNRA lands to continue this long tradition--not less space!

I support the original 1979 Pet Policy. I do not support any of the proposed alternatives or compliance based management! Jean Kind CA 94116

Correspondence: Superintendant Dean '

I and most of the people I know (including dog owners) are very supportive of the efforts of the GGNRA to address this issue and are disappointed by the actions of groups such as the "San Francisco Dog Owners Group", "Ocean Beach Dog" and others.

I/we pray the GGNRA takes into consideration that the dog owners groups are bombarding dog owners with reminders to have input for the Dog Management Plan.

I feel that this is input is not balanced since there are so many people who have not had the time or had dozens (and I am not exaggerating) of reminders to address the dog management issue. Wildlife organizations (and I belong to several) have paled in the effort to encourage members to have input to the GGNRA on this issue. Please try to be balanced on this issue and take into consideration that you have so much input from dog owners because of so many dog owners groups are putting so much effort into getting owners to influence the GGNRA on this.

Attached is the *latest* email I received this morning. One of the many that I and others have been getting over and over.

Pleas note that the "San Francisco Dog Owners Group" refers to the dog management plan as "draconian", see attached.

(This is a nearly a duplicate to what I submitted on-line to the GGNRA site)

Correspondence Type: Letter

Correspondence: Dear Superintendent Dean,

My name is Amy Murata, age 36, I am a dog owner and a voting resident of District 5. I returned to my native California from 13 years living on the East Coast. I specifically chose to live and pay taxes in San Francisco because of the incredible lifestyle our beautiful city affords us. The most attractive feature of our city is the ability to share it with our canine companions. The ability to enjoy the Golden Gate National Recreation. Area (GGNRA) areas OFF-LEASH with my six month old. Boxer, Olive , is a key feature of the extremely high quality of life that me and other responsible dog owners in San Francisco enjoy. Olive, like the overwhelming majority of other dogs who enjoy the GGNRA off-leash is completely under voice control and serves as San Francisco's best advertisement for the great lifestyle in San Francisco.

I have wanted to get my own dog for over 10 years and I held off on doing so because I wanted to ensure that I lived in an environment in which my dog and I could thrive. I waited until I moved to San Francisco because the high quality of life offered by the off leash areas of the GGNRA and San Mateo County. My dog visits Fort Funston seven days a week and she also visits Crissy Field, Alamo Square, Buena Vista Park, and Duboce Park on a regular basis.

I'd like to take this opportunity make a few points in opposition to the Draft Environmental Impact Statement (DEIS) for a new Dog Management Plan as it is currently written. Of note, the DEIS is comprised of a shocking number of assumptions which are not supported by facts or evidence. Many of the impacts are simply assumptions of things that "could" or "may" happen. These are not fact-based examples. The overwhelming number of dog owners and dog walkers are extremely responsible for the actions of the dogs within their care and I have never witnessed an incident in which a dog owner/walker has ever caused harm or negatively impacted another fellow citizen's GGNRA experience. As a citizen, I would hope that a decision that would impact so many people and dogs would be based in facts. With regard to safety of other citizens who share GGNRA with other dog owners/walkers like myself, I would just like to highlight a misleading and flawed statement in the DEIS which erroneously suggests that eliminating off-leash areas within the GGNRA/San Mateo County would increase public safety. In fact, the data provided by GGNRA states that dogs account

for only 2% of serious safety incidents involved dogs. Of note, the vast majority of serious incidents involved people only, no dogs. If non-serious safety incidents are included, dogs accounted for only 7% of the incidents in the GGNRA.

Finally, I would like to say that a compliance-based Management Strategy cannot be part of any plan for the GGNRA.. Doing so would punish responsible dog owners like me and other voting dog owners for the bad actions of a few irresponsible owners. Further, I am also strongly opposed to Preferred Alternative because of its restrictive nature. There is no justification offered in the DEIS for major changes. I fully support the formalization of the 1979 Pet Policy AND off-lease access in San Mateo County AND on new lands acquired by the GGNRA.

We vote, own homes/businesses, pay taxes, and take responsible care of our dogs. Respectfully,

Amy K. Murata

Correspondence Type: Letter
Correspondence: Good Day!

The proposal is outrageous! It appears to be a government mandate not supported by the people!

I am a senior citizen, long-time federal and state tax payer, and a dog owner. I recreate with my dogs virtually every day at one of the numerous off-leash dog areas; almost every day we're either at Ocean Beach, Baker Beach, Fort Funston or Crissy Field. As a San Francisco resident since 1985, I feel very fortunate to live within 15-20 minutes of all these areas! These outings are important not only to my health and well-being but to the health and well-being of my dogs.

The Bay-area is paradise on earth. In terms of San Francisco specifically, it has many recreation areas for everyone to enjoy'it is NOT a pristine wilderness area. Fort Funston, for example, was once the property of the city of San Francisco and was given to GGNRA for more efficient management'it was NOT the intention to prohibit use by off-leash dogs and their people!

I wish I could believe that the environmental impact study will be objective, unfortunately I don't. I do not believe that off-leash dogs have a negative impact on either wildlife or the environment. Humans and the environment itself are likely to have a greatest negative impact on wildlife and the environment.

I was an on-staff dog trainer for the San Francisco SPCA for 12 years; I know for certain that restricting off-leash access for dogs will not only have a major impact on dog behavior it will have a major negative impact on local dog parks. I live just 1-1/2 blocks from Duboce Park and prefer not to take my dogs there because I feel now it's often overcrowded'limiting off-leash access will only make this and other neighborhood parks worse. Dog surrenders to shelters will go up as dog behavior issues increase as a result of neighborhood dog park over-crowding

Like the majority of dog owners I know, I respect property, the rights of folks who may be wary of dogs, wildlife (I socialized both of my dogs to horses because we were likely to encounter them on trails) and the environment (my dogs may dig at the beach, but are not allow my dogs to dig in grassy areas). I would prefer to see rules such as dogs with reliable recalls are given a certificate giving them permission to be off-leash. My dogs are trained to come when called even under the most distracting conditions. Although I am a dog trainer reliable recalls are easily achieved by any dog owner.

My individual opposition to the proposed restrictions is confirmed by San Francisco's Board of supervisors, the San Francisco SPCA, San Francisco's Animal Care and control and of course, every dog advocacy group in the area.

While I am a law abiding citizen with respect for my government, I also believe the government should not out rule the will of the people. If, in fact, the environmental study conclusively shows that as a result of being off-leash, dogs (alone) negatively affect wildlife and the environment I would be more than willing to work with GGNRA (on a gratis basis) to establish requirements/rules for owners who would like the privilege to walk their dogs off-leash.

Respectfully,

Shirley Donovan

Correspondence: Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation.

Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.

Exclude speculative, exaggerated, biased, or misleading statements and studies.

Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).

Enable professional dog walking and align any professional dog walking rules with county or city regulations.

Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

These are my personal comments and observations regarding this plan: (here's where you fill in your own personal story and what you've seen when you've been out at the GGNRA)

Sincerely,

Katherine Casassa San Francisco, CA 94107

Correspondence: Dear Superintendent Dean,

My name is Margaret Ryder, age 67, former City College instructor, now retired. I have lived in San Francisco for 40 years, and have owned my home in the West of Twin Peaks Area for over 30 years. Since owning my home, I have had a number of active and well behaved and well trained dogs. Being a responsible dog guardian, I have always kept my dogs under voice control and in my sight when walking them in any area where they are off leash. At Fort Funston, where I walk my three dogs frequently, I have always cleaned up after them, and kept them from passing into the fenced off areas.

ENVIRONMENTAL CONCERNS VS OFF-LEASH DOG AREAS

At Fort Funston , to the south of the large parking area, considerable areas have been replanted, and there the newly planted and developing areas are clearly indicated with environmental barriers. I find this very attractive, easy to see and respect. I applaud the work of those who have done this planting. As a concerned environmentalist, and a member of Sierra Club of many years, I am delighted to see this work which enhances and area and allows visitors to see sections of native planting take hold.

I might mention that at other areas of Fort Funston a number of years ago, fenced off areas (with dunes and iceplant) were fairly clearly marked, but currently the fences and signs are in poor enough shape as to be quite unnoticeable. Newcomers to the area can be excused for not "seeing" which areas to keep out of. I consider these folks to be uneducated rather than

irresponsible. Better fencing and better signage indicating the current off-leash areas is clearly called for to maintain and protect the environment.

EXERCISE AREA

I have trouble with the GGNRA's preferred alternative plan in that it severely limits and affects the off leash dog walking area at Fort Funston.

SAFETY

From the maps I have seen, the preferred alternative off leash area is bound by the large and always busy parking lot , steep cliffs and one paved walkway and one sanded path. Most of the day there are many dogs and walkers in that area now, but most of them are on their way heading to or from a longer walk. I am concerned that, if the number of dogs allowed to play off leash in that area, and that area only, increases hugely (as it will), the cliffs and the parking lot become major safety concerns. Furthermore, the sever crowding together of exercise-needing and excited canines becomes a safety issue too for both dogs and people. I feel that the DEIS has failed to analyze the impact of restricting the off-leash area at Fort Funston.

RECREATION and SOCIAL FACTORS for people

The GGNRA site at Fort Funston allows me and so many other urban residents the recreation that we need. Having increasing mobility problems, I try to walk frequently and purposefully as often as I can, and the hike from the Fort Funston parking area to the on-leash-from-here sign to the north (I don't know the name of that area; there is a lovely bench where one can fully relax for awhile and enjoy the view) makes a perfect distance. I do know, however, that I would not want to take that walk with two or three of my dogs on leash. I have large dogs, and at 10 1/2, 9, and 2 1/2 years old, their walking paces and needs are very different, and walking two or three of them on leash for a distance would be quite uncomfortable for me. (Fortunately, they are tired enough at the end of a walk to come to me happily and we walk on leash back to the car.) Also, my dogs actually need more vigorous exercise than I can give them on leash. The current availability of paved trail and off-leash running at Fort Funston perfectly accommodates the recreational needs of citizens of people like myself, and allows us to keep ourselves and our wonderful companions healthy and exercised. There is another social aspect to Draft Dog Management Plan that disturbs me. Our daily walks, necessitated by our dogs' need for exercise, also allow us to get out of our homes and socialize with others. One can, of course, avoid "chatting" with others, but at the same time and if one wants, it is always easy to begin conversations with other dog walkers. Always pleasant, often informative, never awkward....such encounters, even brief ones, help one feel less alone, less isolated. Indeed, most of the friends and

acquaintances that I have made since retiring have been made while pursuing canine activities. I treasure this aspect of my frequent dog walks. I trust I speak for many, many other SF residents that I meet daily.

What is true is that conversations are rarely if ever started between folks who have dogs on leash. For one thing, one doesn't know why a leash is being used. Is the dog aggressive? Is the untrained? Is the dog getting used to a new owner? Will dogs get defensive or protective? Will dogs tangle up if they are near? There are so many possibilities that folks with dogs are far less likely to approach others when there are leashes at work.

In May of this year, I attended an Open House put on by the GGNRA (at San Francisco State University), and had an opportunity to observe the plans for changes at Fort Funston. The allowable off-leash area currently available at Fort Funston perfectly meets the recreational and social needs of people and dogs alike. I feel that the "preferred alternative" choice that I learned of failed, seriously, to accurately analyze the need for residents of this urban area.

I trust that the GGNRA, in developing a general management plan, will take into consideration and respect the specific character and situation of the Fort Funston Area. I fully support Alternative A, the No Action alternative of the DEIS, as it relates to Fort Funston.

Respectfully,

Margaret Ryder

Correspondence: Re my response to the proposed dog management plans at the Presidio and other parks.

I am a volunteer park steward in the Presidio. I volunteer at the Presidio Park Stewards program, the Native Plant nursery at the Presidio and the Presidio tree volunteer program.

I am also the owner of an eleven year old black lab named Felicity. I take hikes with my dog regularly in open space areas on the peninsula and elsewhere.

I have volunteered at the presidio regularly since my retirement from State Service in January 1999.

I was a licensing program analyst and I graduated from Santa Clara law school.

As a volunteer at the presidio I have seen many professional dog walkers with up to six dogs sometimes more. One time I counted 10 dogs with one walker who were walking off leash. I recommend that the professional dog walkers need some form of regulation or licensing. There needs to be a place where we can all walk our dogs in a safe place that is fenced but the dogs are free to run off leash.

At the same time I believe that all dog owners and dog walkers have to respect our Natural Resources. We all must remember that this in a National Park area we are talking about. There are many biological sensitive areas and native plant sensitive areas that dogs need to be controlled in. There is a real conflict developing with the staff at the National Park and Presidio Trust and the dog walker community. I recommend that a standard be established doggie clean up bags need to be provided free of charge at locations where dogs are welcome. I also recommend that staff and volunteers receive training in the dog policy. There will need to be enforcement of the dog policy when it takes effect.

Dogs are not appropriate for the Crissy field wetland area. Dogs need restriction at the Baker Beach area. I agree that it is appropriate in the Southern portion of Baker beach that dogs are allowed to run off leash as long as they are trained to be friendly to humans and are under voice control. This can be a fun area I'm thinking of the dog beach area at Carmel, California. The area north of the sand ladder on Baker beach dogs should be on leash only.

Re Muir Beach I have walked on guided walks on the Muir Beach trail which goes up the hill toward Muir Woods State Park. I have also been on a guided tour of the Tennessee Valley project. I recognize the importance of

the frog habitat and nesting area for birds and the future Salmon and possibly steel head trout areas near the wetland adjacent to Muir Beach. Given these sensitive areas I recommend that dogs be restricted to on leash only at Muir Beach. I recognize that this is a major change for the use at Muir Beach but the change has been taking place for years. Muir Beach is transforming to a wonderful Natural Gem and we must respect the sensitive nature of it. I do not think it is appropriate for dogs to run off leash at Muir beach because they will disrupt the shorebird population and frog population that I suspect will return.

Respectfully Submitted. John E. Shea

Regarding the Dog Management Plan/Draft Environmental Impact
Statement for the GGNRA

Dear Superintendent Dean:

I am writing about the draft Dog Management Plan and Environmental Impact Statement (DEIS) for the Golden Gate National Recreation Area. I love the GGNRA, but I'm concerned about the impact of dog-related recreation on the wildlife, habitats, and other park users at the park.

Please improve the plan to make it safer for wildlife. Here are some of the ideas I'd like to see in the plan:

1. All "Regulated Off-leash areas" should be fenced, at least in areas where fences do not pose risks to wildlife and habitats. (In this case they should be well marked to provide a clear boundary for off-leash activities.) Fences provide more security for all park users. This is a National Park. People come from all over the world to visit the park Some of these users don't wish to interact with dogs. It would also help dog owners be aware of how to comply with Park rules.
2. The Park Service's proposed requirement of 75% compliance is too low. The Park Service should require a minimum of 95% compliance or should initiate measures to improve compliance.
- 3.

Commercial dog-walking should not be permitted in the GGNRA. As I understand it, such a commercial activity is against the law in National Parks. It is also very disturbing to wildlife. 4. At least some trails in San Francisco should be entirely closed to dogs. Under the current plan, nearly every trail in San Francisco is open to at least on-leash dogs, meaning no trails are available for people who prefer to enjoy the outdoors without interacting with dogs. Again, people from all over the world use this park, and some won't want to interact with dogs. We want visitors from other countries to be pleased with the park. 5. I love dogs. While dogs are important parts of our families and communities, they have a significant negative impact on thousands of other animals and plants that rely on the park to survive. They also have a negative impact on human visitors. The parks should be maintained to be safe and accessible for all users and to protect their natural and cultural resources for future generations.

Thank you for considering my input. Please do adopt measures that will help visitors enjoy the Park's features and will protect the GGNRA's irreplaceable resources for current visitors and for future generations. John and Jean Maurer

Correspondence: May 14, 2011

Dear Superintendent Dean,

I am in agreement with a large number of Marin resident who want to keep Muir Beach dog friendly. We implore you to consider our interests and the efforts we are making in expressing our thoughtful ideas on this matter, rather than disregarding us, as is so often the case with GGNRA proposals. We live here and an important part of our recreation as well as our dogs' involves allowing them the access set forth in the plan below which can also be viewed at: keepmuirbeachdogfriendly.com Please read it and give it your earnest attention and consideration. A Plan for Everyone In response to the NPS Dog Management Preferred Plan, we propose the following alternative plan:

- Muir Beach: Adoption of Map 5A which allows continued off-leash beach access for dogs
- Trails: Adoption of Map 7A, which maintains the dog-friendly Coastal Fire Road and Trail adjacent to Muir Beach. In addition: - we request an additional dog-friendly access of the Coyote Ridge Trail to Miwok Fire Road which would allow hikers with dogs to cross from Muir Beach into Mill Valley.
- A dog litter bag dispenser and waste receptacle

placed at the footbridge entrance to the area. Like many dog-friendly parks throughout the Bay Area, this is an effective way to encourage dog owners to pick up after their pets. - Increased signage and education efforts provided by NPS so that all visitors to these areas are aware of current rules and regulations

Specifically: - a large sign at the footbridge entry to the beach which clearly defines beach rules for all visitors. - signs placed at the lagoon and creek areas which forbid swimming, trampling on vegetation or disturbing wildlife in these areas Unlike an outright ban of one segment of the population, as is proposed in the NPS Preferred Alternative D, these efforts serve to educate and inform all visitors to the area, representing a true spirit of stewardship for the land. Additionally, these efforts will negate the need for costly reinforcement of new regulations.

Correspondence: Dear Mr. Deon,

I am writing to protest the proposed restrictions on dogs and humans in the GGNRA. The Bay Area is a model for enlightened co-use of our natural resources. The availability of nearby areas for the tax paying dog owners to exercise their animals and maintain a healthy lifestyle is necessary for a balanced society. Dogs have been living with humans as helpers and companions for countless generations. To deprive this natural pairing of the opportunity to enjoy nature together would be a mistake with unforeseen consequences.

Correspondence: Dear Mr. Dean,

Re: the Draft Environmental Impact Statement (Plan/DEIS) for Dog Management in GGNRA

I live close to and have enjoyed the GGNRA in San Mateo County. I rarely get in debates about dog-walking uses of the places I used to enjoy walking; I just don't go there any more.

As a member of the usually silent majority, I would like to reclaim public

lands for the use of a wider range of people than what one currently sees.

On a human scale, it should be possible to walk with frail people or young children and not be threatened by large untrained dogs or their anti-social owners. It should be possible to walk along the beach or path and be unmolested.

From a physical resources point of view, it should be possible to prevent adverse impacts to coastal scrub, chaparral, and grassland plants and wildlife from uncontrolled destructive behavior by dogs. I would welcome any alternative by the GGNRA which keeps unleashed dogs away from park lands, and allows a minimal number of leashed animals on limited trails. Please record my support for Alternative D of the proposed plans.

Thank you. Sincerely, Elizabeth A. DeJamatt

Correspondence: Dear Mr. Dean,

I am writing this letter in response to the GGNRA dog management plan.

I am excited that we have land available for all to enjoy and recreate. Also, knowing that it will not be built upon and saved for future generations is commendable. I do thank all involved for that, however, the taking over of the many open spaces, now has restriction imposed by the rules of government. The rules do not allow for the recreation of all, because some of us like to walk, hike and run with our dogs off leash.

In the areas where parks are adjacent to neighborhoods and especially those with large populations of people like San Francisco and neighboring towns, our rights are being taken away. Where are we going to let our dogs roam through the waters of the beaches and bay? Where do we let them socialize with other dogs? Where do we go to let them sniff the great outdoors off leash? I am sorry some of the tiny dog parks created is not satisfactory. (There is one in San Mateo with only dirt, no trees, bushes or grass, very unattractive.)

We must not take away the off leash at Crissy Field, and Fort Funston. Maybe we can compromise and have a set time of the day where off leash is allowed. I know there are areas in Santa Cruz that have parks and beaches with times allowed for off leash. At Mori Point, I understand due to the endangered species, but what about at the top of the mountain and towards

the Rockaway hills, let's make that an off leash area.

It is not OK, to just take over land with out the consideration of the people living right next door. We are not a nation of dictators. The population is just going to increase. Pretty soon at this rate, I see all of us living in a bubble. Great, we have all this beautiful land, but can't use it. We must begin to think of Co-existence.

Please consider my comments, thank you for your time.

Sincerely,

Michelle Pitt and Dale Pitt

Correspondence Type: Letter
Correspondence: Dear Frank Dean,

My name is Sara Shaw, and I am a volunteer with the National Park Service at Mori Point. I have come several times to work on the trails, including planting native plants and weeding invasive species. I was one of the 2000 volunteers who planted native species on the hillsides as part of the National Day of Service on Martin Luther King Day a few years ago.

Today I came back to Mori Point to enjoy the fruits of all our collective labors. I was appalled to see that the few people who were in the park were people with dogs and all except one person had their dog or dogs off leash. I arrived at the entrance to Mori Point at the Fairway Drive trail, and it reeked of dog feces. There was no visual evidence of dog feces, but the excrement must be hidden among the plants.

I am writing you today in defense of whatever measures the NPS will do to support the immediate withdrawal of dogs from the area. I have worked hard right along with the National Park Service to restore Mori Point to its former beauty, and I am proud of the progress so far as seen by the beautiful wildflowers at the top of the Bootleggers staircase. There were beautiful birdsongs coming from the trees and I greatly enjoyed hearing them sing. Then suddenly a dog barked from on top of the hill; which disturbed my solitude.

I know there have been negative comments published in the Pacifica Tribune regarding the dog policy, but the "dog people" act as if they own the place, and they have the audacity to let their dogs go into the plants. When

we are told to stay on the trails, I believe that includes dogs. I am supportive of dogs ON LEASH, but only as a secondary appeal to the dog owners.

I understand the issue that they feel they need a place to let their dogs roam around and be dogs. Dogs are allowed on the beach at Pacifica State Beach. But, the dogs are out of control, and have prohibited the Western Plover from reproducing in Pacifica State Beach. I am also a volunteer at Pacifica State Beach, and hope that something can be done to control the dogs there too.

In closing, I am hoping that you will prohibit dogs from entering the Golden Gate Park National Recreation Area. National Parks, county parks and state parks do not allow dogs and I feel that dogs should not be allowed at Mori Point either. Thank you for the opportunity to submit my comment.

Sincerely,

Sara Shaw Pacifica, CA 94044

Correspondence: I am aware that we are supposed to address the "off leash report" by page and paragraph. However I am sure that this has been done by many people, people who have gone through the 2000+ page report and that they have pointed out every error, misjudgement and misconception.

I would like to put a human and canine face on this issue. No one is saying there are not problems with dogs being off leash but I think the few problems do not justify punishing the majority, and I feel Sebastian and I are part of that majority and this is our story.

Sebastian was adopted through Norcal Golden Retriever Rescue almost 7 years ago..He was a 5 year old who was turned over the the Peninsula Humane Society with the request that he be put down because of bad health. At the time his weight was close to 130 lbs. When we got him he could barely walk a city block. I would walk him to the end of the block and then home. Eventually we walked to the neighborhood park and home. Then we would play ball in the park -yes- off leash which we were not supposed to do. But the weight wasn't coming off.

Then a friend introduced me to Fort Funston. I took Sebastian there but with some hesitation because the thought of so many dogs made me uneasy. It

was wonderful. Dogs and people were extremely friendly.

We started walking from the parking lot to the water fountain. Then we increased our walk to the beach access. Then to the end of the path. Then from the parking lot to the end of the path twice!

The weight melted off Sebastian. He was proudly walking, ball in mouth and within a years time he was down to just a little over 80 lbs.

For almost 7 years we have walked at Fort Funston almost everyday- rain or shine. Only the really heavy winds with the flying sand stops us. Since I retired 5 years ago we often walk there twice a day.

We have seen problems, this cannot be denied by life without problems is an impossible dream. The majority of problems are people related. There is the occasional dog fight but those are usually a lot of noise.

Yes dogs do run in the fenced areas but in all fairness the fences are almost non-existing. And in reality the area is sand dunes. The majority of the damage to the plants is done by sand.

Sorry, I got off subject. It is my hope that Sebastian and I can continue to walk at Fort Funston until he can no longer walk. We still walk everyday, and still somedays twice a day when I am not committed to my volunteer jobs in the AM.

We meet every afternoon with our "pack" - a small poodle mix about 5 lbs, a jack russell about 20 lbs, a mix breed about 50 lbs, a Golden mix about 75 lbs, a lab about 90 lbs and on the Weekends + holidays a Bernese Mountain Dog, 117 lbs! Occasionally other dogs join us as we walk.

During our walks we have seen many dogs chase birds. The birds, in all honesty, seem to be playing with the dogs. I have never see a dog catch a bird. We did see a bird caught in a tree and reported it using the yellow phone in the parking lot. We also seen dogs digging to try and get gophers but we've also seen people grab them and pull them away.

If Fort Funston changes, if the off leash areas are limited I think many problems will be generated.

We are in a heavily populated urban area. Dogs are a very popular family pet and we think of them as family members. It is important that they are exercised and like children, if they are not given release to their energy problems start. Children who are not allowed to play and release their energy cause problems - so do dogs.

If areas are limited at Fort Funston I think the "damage" that dogs do will seem minor to those caused by people without dogs. It is a fact that on weekends groups of younger people, without dogs, use Fort Funston for parties. Evidence of broken glass support this. Many Sundays + Mondays I have walked with a bag to put broken beer bottle pieces. Less people + dogs more parties - we are in an urban area with easy access.

If I were homeless Fort Funston would be a great place to live, even with the dogs. With out people and dogs - wow! Yes, you'd have Park Rangers there but the homeless are very good at finding niches, ask people who have walk at Fort Funston for a long time and you will hear stories about homeless camps. You think dogs cause environmental problems think of the problems of us humans can do camping, without permission or supervision.

What can be done to make Fort Funston remain the same? Could the areas that are supposed to be fenced be maintained better? Can the off leash areas be as they are now?

I would be willing to pay a parking fee or a use fee. I already pick up after my dog as well as pick up after those that don't. I think that for an urban park Fort Funston is one of the cleanest parks I've ever been in, thanks to people walking their dogs.

I would support limiting the number of dogs professional dog walkers are allowed to bring to the park. Most dog walkers are great but there are those that take advantage. Even I avoid the peak professional dog walking times. Again, a use fee would be good.

In conclusion, let me ask that you and some of your staff come out to Fort Funston some evening - around 5 PM - and take a walk. See for yourselves the great community that Fort Funston really is. It really is an amazing place. All races, all breeds, hang gliders, bike riders, children, and yes, birds and even bunnies, all co existing and having fun, which is why we call it, Fort Fun.

Thank you and I hope to see you at Fort Fun

Correspondence: Dear Superintendent Dean:

My name is Eileen Cohen. I reside in Berkeley, Alameda County. For many years I have supported numerous environmental organizations, including NRDC, the World Wildlife Fund, Defenders of Wildlife, Save the Bay, Ocean Conservancy, and the Sierra Club. I have enjoyed walking my dogs at Fort Funston many times over the years.

As a long-time environmentalist and dog owner, I strongly believe that multi-use open space that includes off-leash dog walking is compatible with all other recreational uses and with the preservation of habitat and wildlife within the GGNRA.

All users'including, of course, people without dogs'clearly have some impact on the GGNRA. But in the Draft Environmental Impact Statement, the National Park Service inappropriately singles out dogs. Its conclusions are not based on sound science or long-term monitoring of site-specific conditions.

Any impacts that dogs may have can be effectively mitigated through better signage, creating environmental barriers, and education of park users. The GGNRA should partner with community, animal welfare, and conservation organizations on programs that could eliminate perceived problems and contribute much-needed resources.

Please remember that the GGNRA was created to provide open space for recreation (including dog walking) for the metropolitan Bay Area. The existing 1979 Pet Policy has served the community extremely well for more than 30 years. I strongly support Alternative A, the No Action alternative, in the GGNRA and the "New Lands" areas (such as Cattle Hill, Sweeny Ridge, Mori Point, Pedro Point and Milagra Ridge and Rancho Corral deTierra in San Mateo county).

Respectfully, Eileen Cohen

Correspondence: I am a GGNRA user, dog owner and past elected Director of the East Bay Regional Park District (EBRPD), and the Mendocino Land Trust. I have been directly involved in all aspects of the people, dog, wildlife issue in

California. The following is my summery view on how GGNRA should proceed.

Public support for the governmental infrastructure that manages a system is the first priority. In making decisions, the order of importance places people first. People will support with tax revenues what are closest and dearest to them. In my county, 2/3 of family units have dogs. Where beaches are closest to urban centers, dogs should be allowed off-leash. The fact of beach use by people and their dogs (on or off-leash) makes a bird refuge in or near the same space a bad idea. On the other hand in the far reaches, dog and people prohibition makes sense. Buffers between areas is desirable. A fence, is not my idea of an open space buffer.

In other words, balance is a must. In the EBRPD where there is an elected Board of Directors, and places like Carmel, balance, separation, and tax payer satisfaction has been achieved. Contrast Carmel or EBRPD policy with the California State Park system which is constrained by an administrative law adopted decades ago, and administrated basically by State law inforcement officers. The State bans dogs everywhere leashed or otherwise. From personal experience there are few if any ways to influence the State system. As a result of fines for using public parks and beaches, the State system has lost public support. The end result is that the fined park users are petitioning their elected officials to reduce or better yet, eliminate funding for the State Park System! And it's happening.

Balance in park use is a function of government. It is important and necessary. Times are tough economically and politically! GGNRA in my opinion is at risk in both areas. While I truly love and admire those that advocate for the unrepresented wildlife, the place for wild life must be in the wilds, and near wilds. The compromise is for off leash dog use on the urban beach.

The "greater public good" was decided long ago when the coastal urban areas were developed. Restricting people from Off-leash dog use on urban beaches is 1) wrongly attempting to undo the impacts of the "greater public good" , and 2) Does not benefit either GGNRA or the wildlife in the broader picture.

Lynn (Leonardo) Bowers Past Director EBRPD

Correspondence Type: Letter
Correspondence: Dear Superintendent Dean:

I am writing in response to the Golden Gate National Recreation Area's Draft Environmental Impact Statement (DEIS) regarding the Dog Management Plan. I do not support any of the alternatives presented, other than the "no action" alternative. Following are my reasons for this position.

First, let me say I am an avid environmentalist. I have spent my entire career in conservation, working for an organization whose mission is the preservation and enhancement of California's coastal resources, as well as the promotion of public access consistent with that goal. Having been in this position for many years, I have experienced what can happen when human and resource needs are not adequately balanced. As much as I would have liked to have seen public access closed in particularly sensitive areas of the coast (never in urban areas), I am very aware that such an act would create a situation in which ordinary citizens would be forced to become outlaws, and would therefore not work.

In addition to my career experience, I also served as an alternate on the negotiated rulemaking committee regarding this issue. After hearing passionate testimony at committee hearings, as well as on numerous other occasions, from dog owners who only wish to responsibly walk their dogs in a small portion of GGNRA lands, I am appalled that a decision was made to further restrict dog walking on lands that currently allow off-leash recreation in less than one percent of total recreation area acreage.

We are all aware that wildlife habitat in urban settings has been decimated by the dense populations of humans that live there. Greatly altered drainages, invasive plants, impermeable surfaces, and air and water pollution are only a few of the destructive consequences resulting from hundreds of thousands of people living within, or close to, natural lands. To claim that off-leash dogs are the problem, when the sheer fact of such large numbers of humans in one place is the basic cause of environmental degradation in urban parklands, is not supported by fact. The DEIS reveals no definitive studies that establish dogs as a major negative impact to urban parklands.

I have seen throughout my long career that people should be encouraged to live in cities, not discouraged. If they cannot enjoy the activities, recreational or otherwise, that make their lives meaningful in cities, they will be pushed into outlying areas where habitats are much more pristine. The hugely negative environmental consequences of such growth in formerly rural areas have been well documented.

Many years ago, the City of San Francisco transferred valuable recreational lands to GGNRA with the understanding that the lands would be managed to meet the recreational needs of the City's residents. At that time, the City

maintained a policy allowing off-leash dog walking in certain portions of these lands. With the exception of the "no-action" alternative, all of the alternatives presented by the DEIS are in violation of the City's original policies and intentions. The result has been a grassroots movement to return GGNRA lands to the City of San Francisco.

More specifically, I present the following points in response to the dog management DEIS: 1. Any further restriction of dogs on GGNRA lands is not supported by science. Reports in the DEIS of negative impacts from off-leash dogs are anecdotal at best, or are based on assumptions, not fact. I see no definitive evidence of scientifically sound research studies supporting the conclusions. 2. The DEIS does not address the impact of alternatives on historic recreational uses. Dog walking (both on and off leash) on a portion of GGNRA lands, albeit a very small portion, has been enjoyed by hundreds of thousands of people for decades., and was intended to continue when the City of San Francisco transferred lands to federal ownership. 3. The DEIS does not address the impact on City of San Francisco owned parks that will inevitably occur when many more people visit those parks to exercise their dogs once restrictions on GGNRA lands are implemented. 4. The information sessions on the DEIS held by GGNRA were inadequate. With an issue this controversial, public hearings where people can testify openly are essential. The information sessions served little purpose other than to present the DEIS as a done deal, and to promote the agenda of the National Park Service. 5. In addition to public comments provided after the release of the DEIS, all public testimony provided on this issue during the ten to twelve years prior to the release of the DEIS should be considered in developing alternatives. 6. Lands within the GGNRA that allow both leashed and off-leash dogs should be expanded, not reduced, to meet the needs of the ever-growing dog-owning community. 7. If GGNRA cannot provide adequate open space for the recreational needs of the people of San Francisco, including dog walking, then the agency's lands should be transferred back to the City.

Thank you.

Correspondence: Dear Superintendent Dean,

My name is Rena Bransten and I have lived in two different homes along

the Presidio Wall on Pacific Avenue for fifty years. I am 78 years old.

I have always had dogs that I walk at least once a day in the Presidio early in the morning: 6:30 a.m. on weekdays; a little later on weekends. Currently I own two pugs in their middle years. I have always cleaned up after my dogs and also cleaned up after other dogs, as I am very delighted to live near and have access to this beautiful park area. I have always supported environmental issues and instructions as well.

I am writing to suggest that alternatives to the proposed dog management plan be considered. I see a lot of dog-walkers and have rarely seen destructive behavior on the part of dogs while they are being walked. Much more in evidence is unattractive behavior on the part of humans, possibly without dogs, who throw trash everywhere except garbage cans.

I feel the community of dog-walkers and owners is a very constructive group particularly in an urban environment where there aren't as many opportunities to share thoughts. My feeling about the current proposal is that the attitude toward dog owners is adversarial and dismissive. I don't think a lot of time has gone into addressing the problem or possible solutions that might better suit all parties. Respectively,

Rena Bransten

Correspondence: Re: Draft Dog Management Plan/Draft Environmental Impact Statement

Dear Superintendent Dean,

My name is Maida Thomas and am a native San Franciscan and 86 year old senior. I have been enjoying the GGNRA for my entire life, much of the time with my family including the family dogs. I have also been a long time environmentalist and a contributor and member of many environmentalist organizations including the Sierra Club and the World Wildlife Fund. I believe that it is important to protect the environment and also the quality of life for those of us living in this beautiful area.

The human animal bond is very important to me. As a responsible dog guardian, I keep My dog under voice and sight control, clean up after her and keep her out of the Fenced dunes and vegetative areas. It is important for my dog walking friends and me that areas like Fort Funston and Crissy

Fields remain open for off leash dog

walking access. I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site specific conditions.

As presented in the DEIS, the proposed dog management plan eliminates dog-walking (On and off leash) access for all new lands (additions to the GGNRA sometime in the future) within San Mateo county lands. The GGNRA's mission applies equally to new lands as existing lands and it is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands.

I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, but other options (besides restricting dog walking access) should be considered first. For example, it is not clear where dogs are allowed. I think the GGNRA should provide better signage and create environmental barriers, such as the vegetative barriers surrounding the tidal marsh at Crissy Field or the restored dunes at Fort Funston.

As a responsible dog guardian and advocate for animals, I know it is crucial that our dogs are well behaved and trained in order to peacefully co-exist in an urban environment and adequate exercise and socialization is essential for a well-behaved dog. Having places where I can take long walks with my dog allows me to get the exercise I need while also meeting my dog's needs. Without access to the small amount of land in the GGNRA we currently have, I am very concerned that many dog and dog guardians will not have sufficient opportunity to exercise and recreate.

Some areas within the GGNRA also serve as a place of solitude for me and provide me with a very important peace and safe outdoor space and experience within the San Francisco Bay Area, a large metropolitan area.

Some specific problems with the DEIS include the following points. Please revise the DEIS to correct these errors.

This DEIS and Plan doesn't recognize that environmental values include both recreation and nature. In many places, the DEIS treats the environment and recreation as opposing values, i.e., that recreation only harms natural resources. The document doesn't acknowledge that people care about both and that people with dogs are often also good stewards of our environment.

The draft plan has the effect of punishing many people because a very small number are uneducated, insensitive, or irresponsible and because the current signage of off leash areas is unclear. The reasonable response to this problem is to educate visitors, improve signage and help park visitors follow the rules and learn how to respect the environment, not to ban the rest of us with dogs from the GGNRA. I wish that the DEIS would include an alternative along these lines.

The proposed "compliance-based" approach should be modified to create a baseline of current conditions, then measure impacts rather than compliance. It should include a robust public educational component and an objective, long-term monitoring program designed and carried out with the community. The GGNRA should develop partnerships with community, animal welfare, and conservation organizations to make this work. These partner groups could bring additional resources to limited federal resources. GGNRA should be a partner with the City of San Francisco and other communities, not an adversary.

The DEIS doesn't recognize that many areas of the GGNRA are located in or next to urban neighborhoods. The DEIS excludes the quality of the urban environment from its scope, saying it's not significant. The reality is that the GGNRA provides much needed open space in a major urban area. This omission is disconcerting because the fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) to serve the metropolitan Bay Area. The dynamic interrelationship between GGNRA and our neighborhoods is exactly the human environment that the EIS is required to study, but failed to do so.

The DEIS notes some studies and general tendencies of dogs to harm natural resources, but with few exceptions, there is little documented site-specific impacts to support the restrictions of the preferred alternatives. Further, there is insufficient documentation that considers other impacts ' other park visitors that disturb and impair the natural resources, other wildlife, Mother Nature, boot camps, bicyclists, huge crowd attracting events such as Fleet Week, festivals and Walk-a-thons. The proposed broad limitations in the DEIS are without site-specific science that demonstrates that problems with the quality of GGNRA's natural resources are actually attributable to dogs and not to other factors. The DEIS needs to provide full disclosure to the public and decision makers. If dog related disturbances are having a significant negative effect on wildlife, for example, the DEIS needs to provide site-specific scientific evidence as documentation and undertake a scientific evaluation as to whether people or other factors are also causing or contributing to the problem noted. If they are, GGNRA needs to provide an analysis that considers whether people should also be restricted from these areas. We need this documentation in order to comment meaningfully on the draft plan and DEIS. The science needs to be sound and the consequences

need to be fully and fairly disclosed for everyone ' so that an informed decision can be made.

And lastly, I support Alternative A, the No Action alternative and would also include the "New Lands" areas (such as Cattle Hill, Sweeny Ridge, Mori Point, Pedro Point and Milagra Ridge and Rancho Corral de Tierra) in San Mateo county.

The DEIS is biased against and does not take a hard look at the No Action alternative or variations on that alternative. There are many areas in the GGNRA where the existing 1979 Pet Policy has been working, and where sensitive species are not present and visitor conflicts do not occur or are very infrequent. In addition, the DEIS does not provide site specific information that these areas are inappropriate for continued dog walking.

Respectfully, Maida Thomas Carmel Valley, Ca 94549 CC: Representative Nancy Pelosi, 8th Congressional District of California, House Minority Leader, U.S. House of Representatives Ken Salazar, Secretary of Interior Jon Jarvis, National Park Service Director

Correspondence Type: Letter

Correspondence: Dear Superintendent Dean,

I have been a resident of Daly City for over 27 years. For the past 15 years I have been enjoying the opportunity to walk my dog off-leash in the GGNRA areas, in particular, at Fort Funston. Prior to getting a dog, I had never visited the'GG-NRA areas. Since I became a dog owner, walking my dog in the GGNRA areas that allow off-leash dogs has become a daily activity for me. The opportunity for walking my dog in these areas has become central to maintaining my quality of life and is our main form of recreation, exercise, and socialization. I am writing to you as it is very important to me and many of my friends and family to continue to have access to walk with our dogs in areas like Ft. Funston and Crissy Field within the GGNRA.

I strongly object to the GGNRA's preferred alternative to restrict or eliminate off leash dog walking in many areas of the GGNRA. It is not based on solid scientific evidence or objective monitoring and observation of the dog walking areas. I have a degree in Biology and I have had 15 years of closely monitoring these areas as I spend time there and my observations do not concur with those in the DEIS. I don't agree with the assumption that it is dogs and their owners that must be removed or restricted from the areas

we have access to in order to meet the GGNRA's objectives to: . Preserve and protect natural and cultural resources and natural processes . Provide a variety of visitor experiences Improve visitor and employee safety . Reduce user conflicts . Maintain park resources and values for future generations

I am a responsible dog owner who has taken every effort to make sure that when I am with my dog at Fort Funston, I have voice-control over my dog, I clean up after her, we obey the access restrictions to certain fragile habitat areas, and I am aware of other people who are walking through the area who may not be comfortable with a dog coming up to them. In my experience, it is very rare to encounter anyone who has a problem with dogs using these off-leash spaces. In fact the opposite is true, there have been a number of times when I have met someone without a dog at Fort Funston who is delighted to be in the midst of dogs having fun, running, and playing. There have been people that ask me for an opportunity to pet my dog as they can't have a dog themselves but still love the opportunity to interact with well behaved dogs. It brings a smile to their face, and I have the opportunity to positively impact their experience with dogs in these beautiful spaces.

I would like to see the GGNRA employ options other than restricting access to the GGNRA resources to dogs in order to meet their objectives. Over the years of my nearly daily visits to Ft. Funston, I have seen dog owners take more effort than many other visitors to the area to preserve and protect the areas we visit. Dog owners know we are fortunate to have access to these beautiful spaces near a large city like San Francisco and we work together to make sure that these spaces will be available in the future for others like us who love to spend time with nature, family, and our dogs. There is a strong community of dog owners that use these spaces and these groups would welcome the opportunity to work with the GGNRA to preserve our precious spaces. I'm a member of the Ft. Funston Dog Walkers, SFDOG, and Crissy Field Dog Group. As a member of these groups, I receive news alert emails and reminders to be aware of swallows and other wildlife or native plants when walking. I work together with other members to do monthly clean-ups at Ft. Funston. We value these areas, respect the environment and want to do all we can to preserve this space for future generations. I have seen little in the way of cooperative work between the GGNRA and the dog-owner groups and feel this is a missed opportunity for the GGNRA. These groups are loyal supporters of the areas they visit and want to protect and preserve them. The goals of the dog owner groups are in alignment with the objectives stated in the Dog Management Plan.

There is little evidence presented in the DEIS of the impact on dogs in these areas. Can the impact of dogs be clearly distinguished from the impact of human visitors (adults and children) or the forces of nature? In 15 years of observation, I have noticed more impact on the environment by wind and rain than by the visitors and dogs. Regular dog-walking visitors to Ft.

Funston are aware of the instability of the bluffs after a rainy period. The GGNRA has done little to protect the safety of new, inexperienced visitors to this area ' a few well placed signs would do a great deal to protect visitors and prevent the need to call for rangers to rescue folks that venture too close to the bluffs edge. Signage in general is a mechanism for public education and awareness that GGNRA should investigate as a way to reach their objectives without changing current access to areas. Change of the public starts with education. Signs posted along the walking paths could increase awareness of the public to the wildlife and vegetation that needs protection in the areas. This would allow the public to continue to enjoy these areas and dog owners to become more aware and take steps to control their dogs as needed to protect those sensitive environments. Most of my fellow dog walkers and I heed the few signs that are placed in these areas because we value the environment and feel it is our responsibility as visitors to these wonderful areas to do our part to preserve them. Of course, there will always be a small minority of people who feel the signs and rules don't apply to them. Should the majority of dog owners be denied access to these valuable resources in our SF area because of the behavior of a few irresponsible people? With increased public awareness and education, those who are ignorant of the rules may be encouraged to act in a more responsible manner.

Of the alternatives proposed in the Dog Management Plan/DEIS, I support Alternative A, the no action alternative. I would like the NPS to change to support Alternative A as their preferred alternative. I believe there is a great opportunity to leverage the commitment and sincere desire of the dog owner community to work together to increase public education and awareness to meet the objectives of the GGNRA without removing or limiting the spaces available for dog walking in the GGNRA areas. My primary reason for requesting the change to Alternative A is the need for additional science-based observation, long term monitoring, and public outreach before taking steps that will remove the opportunity of a large part of the public from using and enjoying the recreational areas we love within the GGNRA.

Sincerely,

Laurie Macomber Daly City, CA 94014

Re: Draft Dog Management Plan/Draft Environmental Impact Statement

Dear Superintendent Dean,

My husband and I are native Californians with long ties to the Bay Area. We are both committed conservationists; my husband helped draft the Endangered Species Act during his years in the U.S. Congress, and he co-chaired the first Earth Day.

We must go on record as strongly disagreeing with the GGNRA's current "preferred alternative" in the DEIS. As the responsible owners of five dogs, we are very dismayed with the significant restrictions on, and elimination of, off-leash dog walking in many areas in the GGNRA. It is our opinion that the proposed regulations making changes to the long-standing 1979 Pet Policy are not fact-based. We do not see well-documented, scientific, monitoring-based facts that can accurately allocate blame specifically to dogs in a site-specific manner that differentiates, for instance, the significant impact of large events, bicyclists, boot camps, homeless people, teenagers, impacts of other species, weather events, etc.

For many people, the companionship of dogs is essential to their well-being, and the healing capabilities of dogs, for instance to veterans, is science-based and well-founded. Yet the new proposed regulations seem clearly anti-dog, and do not serve the public well. Additionally, it seems unreasonable to eliminate ALL dog walking on any new land additions to the GGNRA. Such decisions should be based on monitoring data and be site-specific. As they are now proposed, such sweeping exclusions are arbitrary.

We have hiked in the GGNRA and visited Crissy Field many, many times. We have rarely seen dogs stray into restricted areas- actually, children, teens, and homeless people are more likely errant in this regard. We have never seen any dog be aggressive to any human. There is the occasional very minor dog skirmish, which in our experience has never been more than a vocalization or body posture, which are totally normal and no cause for restrictions such as the ones you are proposing in the so-called preferred

alternative.

Since 99% of the GGNRA land is already off-limits to dogs and their humans, the restrictions are truly objectionable. This document presents an "either-or" approach to the conservation of natural habitat and recreational uses. In fact, the vast majority of dog owners are good land stewards who understand the necessity of protecting natural resources. The "preferred alternative" dismisses the responsible majority of dog owners in order to attempt to eliminate a tiny minority of irresponsible ones. A far better approach is to provide clear signage that educates the public on areas of concern. Enlisting the animal welfare, conservationist and dog-owning communities in such an effort could create goodwill and be a constructive way to make the current rules more clear.

Education and cooperation are always more effective in increasing compliance than prohibition and regulatory heavy-handedness.

Frankly, the document as a whole has an almost adversarial feel to the very nature of the many communities the GGNRA was designed to serve, and sets itself apart from those communities. Because the Draft Environmental Study did not include in its scope the GGNRA's impacts on the urban world to which it is in many areas adjacent, it fails to embrace an essential part of what makes it unique: that it is the wild sibling to a dense, urban world. Yet that urban world is filled with lovers of the GGNRA- dog owners amongst them. The GGNRA's DEIS and "preferred alternative" seems to miss a world of opportunity in creating communities of interest with those affected by it. This includes the City itself, whose parks will see much greater pressure if the GGNRA further restricts recreational use in the manner it proposes. Where alliances could be built, the proposed "preferred alternative" creates alienation. There appears to be a significant bias against the No Action option. We support Alternative A, with site-specific, monitoring-based analysis on any new land additions to the GGNRA.

Type:

Correspondence: Dear Superintendent Dean:

My wife and I are San Francisco residents since 1966. Our sons were raised in the City. Throughout, we have always had two dogs, which are/were an integral part of our family.

We are writing to express our opposition to the Draft Dog Management Plan for the Golden Gate National Recreation Area (GGNRA).

We live across the street from Douglass Park, an off-leash dog play area. We are concerned that an unintended consequence of GGNRA's Dog Management Plan will be the over-utilization of San Francisco Parks, particularly the designated off-leash dog play areas. With the implementation of the restrictions, dog owners will go more to the City designated off-leash sites to avoid the expected hassle in the GGNRA. We have already experienced a substantial increase in dog use at our park. Although, in our 45 years of dog ownership, we have not seen a dog attack a person in any of the parks we utilized, we are concerned that over use of a dog off-leash area could lead to overaggressive behavior in dogs that could result in potential danger to people in and around the parks.

We exercise our dogs at Douglass Park in the morning and in a variety of San Francisco off-leash parks and GGNRA sites in late afternoon. We do not use Douglass Park in the afternoon because it has limited space and is so very crowded with dog walkers. If use by off-leash voice-controlled dogs is drastically restricted at Ocean Beach, the dog play area at Stern Grove, an area we utilize, will be very adversely impacted. Such an event happened recently when the tsunami warning closed Ocean Beach for several days. The use of the dog off-leash area at Stern Grove more than quadrupled during that time. San Francisco has a procedure in several parks that GGNRA may want to implement. The sites have a children-only area and a dog off-leash play area. The children's area is fenced, preventing access by dogs. Rather than fencing in dogs to protect the environment, GGNRA should investigate fencing off fragile habitats to protect them from encroachment.

Golden Gate National Recreation Area is uniquely situated in an urban environment, not in a more remote area like a national park is. GGNRA does not fit the usual mold for the operation and restrictions for a national park, and its use must take into consideration activities more geared to people in the San Francisco Bay Area. Nearly one-quarter of San Francisco residents own dogs. We have two ourselves. Areas like Fort Funston and Ocean Beach, within the GGNRA's boundaries provide much needed opportunities for people to exercise their dogs off-leash. We strongly support the continuation of this policy. We, therefore, request the

formalization of the 1979 Pet Policy and, further, expansion of access to off-leash areas in San Mateo County.

There are studies too numerous to mention that show exercise is very important for a healthy body. People have many excuses for not exercising, but one built in need to exercise is to have a dog. Both Fort Funston and Ocean Beach provide the expanse of space for a long walk/jog/run as part of exercising a dog. Restrictions on the size of the off-leash areas will restrict the people's ability to exercise their bodies. This is very important, especially in an urban environment where space is limited.

Compliance-based Management Strategy cannot be part of any plan because it can change the status of areas automatically and permanently without public comment or need by GGNRA to prove that the off-leash policy is not working adequately by its subjective standards. We urgently request that the draft Dog Management Plan not be considered and the GGNRA retain the status quo for dogs off leash at their sites as assumed by the City of San Francisco when it turned over land for GGNRA. Sincerely, Charles J Roberts

Correspondence Type: Letter
Correspondence: Dear Frank and Howard,

It has been a pleasure working with both of you on important projects spearheaded by the Golden Gate Parks Conservancy and the Golden Gate National Recreation Area. In the last year, we made significant progress specifically on two initiatives'Foodfor the Parks and Park Prescriptions, and we have had fun at the same time.

Please allow me to share my thoughts with you on another topic dear to my heart and currently front and center for the Golden Gate National Recreation Area'the Draft Dog Management Plan. My request is that you choose Alternative A, the No Action alternative. I also request that you include the "New Lands" areas (such as Cattle Hill, Sweeney Ridge, Mori Point, Pedro Point, Milagra Ridge, and Rancho Corral de Tierra) in San Mateo County.

This request stems from the fact that I am an avid environmentalist, a dog owner, and a dog lover. I have worked as a conservation professional for 20

years, and I understand the challenges of balancing human needs with environmental protection. This task is particularly hard in our beautiful, urban setting that has a higher proportion of people and dogs than most National Parks. I understand how complex this issue is because your decision will impact the health of people, the environment, and domestic animals. I am hopeful that it is possible to find a way that we all can coexist today and in the future.

I know it is crucial that our dogs are well behaved and trained. Additionally, adequate exercise and socialization are essential for a well-behaved dog. Having places where I can take long walks with my dog allows me to get the exercise I need while also meeting my dog's needs. In fact, this reminds me of Dr. Daphne Miller's suggestion that one way to improve the health of people is to get veterinarians to write prescriptions for dog owners and their dogs to take walks. Just as Golden Gate wants to facilitate healthy activities for people, we need to make dog walking easy as well. Some people will prioritize the need to keep their dogs healthy while ignoring suggestions from their own doctors. Without access to the small amount of land in the GGN'RA we currently have, I am very concerned that many dogs and dog guardians will not have sufficient opportunity to exercise and recreate.

It is also a priority for me that the final plan includes corridors from parking areas to off-leash areas. The preferred plan requires that dogs be on leash in order to reach the off-leash areas. It is essential to have some locations that allow dogs to release energy at the beginning of the walk (when they need it most). It also seems to me that there are many areas in the GGNRA where the existing 1979 Pet Policy has been working, and where sensitive species are not present and visitor conflicts do not occur or are very infrequent.

The GGNRA could develop partnerships with community, animal welfare, and conservation organizations to make this work. These partner groups could bring additional resources to limited federal resources. For example, in partnership with dog-associated businesses, perhaps it would be possible to create an annual permit system that includes modest education requirements in order for regular off-leash dog use. I could see that something like this could generate revenue for the National Park Service or the Golden Gate Parks Conservancy.

The draft plan has the effect of punishing many people simply because a very small number might need education or are insensitive and irresponsible. It is also possible that we could improve the current signage of off-leash areas. A possible response to this problem is to educate visitors, improve signage, and help park visitors follow the rules and learn how to respect the environment.. Thank you for letting me express my support for Alternative A, the No Action alternative. I also hope that the final plan would also include the "New Lands" areas (such as. Cattle Hill, Sweeney

Ridge, Mori Point, Pedro Point, Milagra Ridge, and Rancho Corral de Tierra) in San Mateo County.

Thank you for your hard work on this issue. I am impressed with the care and consideration you have given to this important and highly emotional issue.

Respectfully, Patty Debenham Ph.D. San Francisco, CA 94115

Correspondence: Dear Superintendent Dean:

My husband and I have lived in San Francisco since we were married in 1966 and we raised our sons in the City. In addition, we have had nearly 100 foster children since 1975. Throughout, we have always had one dog, more often two dogs. Children relate very well to the dogs, joining us in exercising our dogs. At the present time, we have a 7 year old female rescue Collie and a 6 1/2 year old Australian Shepherd, which we exercise twice daily.

We live across the street from Douglass Park, an off-leash dog play area. We are concerned that an unintended consequence of GGNRA's Dog Management Plan will be the over-utilization of San Francisco parks, particularly the designated off-leash dog play areas. We have already experienced a substantial increase in dog use at our park. We exercise our dogs at Douglass Park in the morning and in a variety of San Francisco off-leash parks and GGNRA sites in late afternoon. We do not use Douglass Park in the afternoon because it is so very crowded with dog walkers.

While our house has a fenced backyard, it is not designed for exercising dogs. Heather, our Collie, exercises by chasing a ball. She also socializes with other dogs. If she were restricted to on-leash, Heather would be unable to exercise.

As a senior citizen with a disability, 76 with Parkinson's Disease, I have been instructed by my primary care physician and my neurologist to exercise daily. Exercising with our off-leash voice controlled dogs is ideal. I tend not to approach people I do not know, particularly individual males,

unless they have a dog with them. Personally, I prefer not to approach a person holding a dog on leash because I cannot always judge the dog's temperament. Also, many dogs are more combative when on leash. Rather than fence in dogs to protect the environment, fragile habitats need to be fenced off to protect them from encroachment. Douglass Park, for example, is separated into areas for off-leash dog play and for children's play and tennis/basketball courts. This makes good sense.

Golden Gate National Recreation Area (GGNRA) is an urban recreation area, not a national park. We consider ourselves to be active environmentalists. Among the organizations to which we contribute are: American Rivers, the California Academy of Sciences, California State Parks Foundation, Defenders of Wildlife, Earthjustice, Environmental Defense Fund (EDF), Environmental Law Program, Friends of Upper Douglass, Galapagos Conservancy, National Park Foundation, National Parks Conservation Association, National Wildlife Federation, Natural Wildlife Federation, National Resources Defense Council, Neighborhood Parks Council, Rainforest Alliance, San Francisco Dog Owners Group, San Francisco Parks Trust, San Francisco SPCA, San Francisco Zoological Society, Sierra Club, The Marine Mammal Center, The Nature Conservancy, The Ocean Conservancy, the Sierra Club Foundation, the Wilderness Society, the Yosemite Fund, Wildlife Land Trust and the World Wildlife Fund (WWF). Support for some of these organization goes back 20 years or more. the California Academy of Sciences, Earthjustice, EDF, Sierra Club, the Wilderness Society and WWF are examples.

We respectfully urge you to support formalization of the 1979 Pet Policy and the addition of off-leash access in new lands as well. Compliance-based Management Strategy cannot be part of any plan because it can change the status of areas automatically and permanently.

Sincerely, Gail P.Roberts cc: Jon Jaris, Director, National Park Service Secretary Ken Salazar, Department of the Interior Representative Nancy Pelosi, House Minority Leader

Correspondence: Dear Mr. Dean:

This is to express my opposition to the proposed preferred Alternative D for the Rancho Corral de Tierra lands (here-in-after "Rancho") stated in the Dog Management Plan/ Draft Environmental Impact Statement (DMP/DEIS) for Golden Gate National Recreation Area (GGNRA). While much of Rancho

land is relatively unused open space and should remain in its present state the decision to exclude all dogs from this land is arbitrary and without merit given the past and present use of these lands. I refer to those trails leading from the end of Coral Reef in El Granada and lands generally located north and west of Farrallone View Elementary School, in Montara. Specifically, the lands adjacent to Farallone View School are bounded on the west by the former Farallone View Cutoff and the Old San Pedro Mountain Road, on the north by McNee Ranch State Park and on the east and south by the Caltrans right-of-way for the proposed Devil's Slide Bypass and the subdivided portion of Montara which abuts Rancho property (map enclosed).

I relocated to Montara in 1983 when my wife was transferred by the National Park Service to head the then Maritime Unit of GGNRA. Over the intervening 28 years, almost every day, I and my neighbors, have walked our dogs on the roads and trails that crisscross this land. In Montara this land has been used for agricultural purposes since the Spanish first settled San Francisco. Cattle and later dairy cows grazed this land for almost two centuries. Portions of this area of Rancho subsequently were converted into food and floral cropland. The remains of the Old San Pedro Mountain Road bisect this part of the Rancho property and provide access to McNee Ranch State Park where dogs are allowed. Furthermore, it is my understanding that a significant portion of this land was acquired by Caltrans for its proposed Devil's Slide Bypass and is still owned by that state agency which does not ban dogs. While this part of Rancho remains open space it is clearly not pristine unused land. In addition to local dog walkers this area is used by rescue dog groups to train their dogs for search and rescue missions. The trails throughout this area are shared with equestrians, mountain bikers, birders, hikers and people just out for a stroll, admiring the ocean views and spectacular sunsets. To change the current and past use of this area to "No dog walking allowed unless opened by GGNRA Compendium" as stated in the preferred Alternative D of the DMP/DEIS would be an unacceptable slap in the face of all of us environmentalists who supported the Peninsula Open Space Trust's acquisition of Rancho and urged Congressman Lantos to broker the deal which will result in Rancho becoming part of GGNRA. I request that you continue to allow dog walking in this area, on leash on trails and off leash on the open fields and areas east of the old Farallone View Cut-off. With respect to the rest of Rancho it seems most appropriate to allow a continuation of dog walking on leash which is consistent with current San Mateo County requirements.

It is unfortunate that the residents of the San Mateo Mid-Coast Area were not invited to participate in the public scoping process when the DMP/DEIS was initiated. If we had been, NPS would have known of our interests and use of Rancho lands at the earliest stage of the development of the DMP/DEIS and I am confident your planners would have proposed an

alternative for the use of these lands more appropriate with their past and present use.

Your assistance in preventing the banning of all dogs from Rancho lands will be gratefully appreciated.

Sincerely, Louis S. Wall

Correspondence Type: Letter

Correspondence: Dear Mr. Dean:

I am writing to express strong opposition to the GGNRA draft dog management plan, for a number of reasons.

1. Insufficient data to iustify a significant land use change For decades recreation has been balanced with resource protection, and the dog community has had access to a minute fraction of the space, as set out in the 1979 Pet Policy, most of that access in areas where there is also a high concentration of human activity.

The DEIS offers no definitive evidence, rather only speculation, to document dog impacts that would support the proposed significant restriction in space for off-leash recreation. Likewise, there is no plan in place to evaluate the effects (or lack thereof) of the proposed drastic changes on the environment within the affected areas once the plan goes into effect.

The DEIS lists as impacts things that "might" or "could" happen, not documented impacts. The GGNRA monitors from 2000 to 2006 observed very few dogs in the closed area around the Bank Swallow colony. No dogs were observed collapsing a Bank Swallow burrow, flushing a swallow, or causing a landslide in the Bank Swallow colony, yet digging, flushing, and landslides are listed in the DEIS as potential impacts, and this is used to justify a significant land use change that will adversely affect tens of thousands of people and pets.

The DEIS also does not contain any studies comparing the relative impacts of natural predators and humans with that of dogs. Significant land use

changes are therefore proposed based on essentially confounded data.

Further, an EIS is required to examine the human environment. Federal NEPA rules define this as "The human environment shall be interpreted comprehensively to include the natural and physical environment and the relationship of people with that environment." [emphasis mine]

<http://cea.hss.doe.govinepairs/ceq/1508.htm#1508.14> The draft EIS contains no substantive analysis of the adverse impacts to recreation or the humans who enjoy it. In fact, the plan dismisses this by stating that "The quality of urban areas is not a significant factor in determining a dog management plan." There is no consideration of the effects on human health (physical and mental) and human communities that would be caused if off-leash hiking is drastically restricted. This decision will affect the everyday lives of tens of thousands of people.

There has been no substantive analysis of the effects of the proposed changes on city parklands. For this reason among others, the San Francisco Board of Supervisors voted 10 to 1 in favor of a resolution opposing the dog management plan. 2. Public process has been inadequate There needs to be an adequate public hearing on this issue, where people can testify openly in a public forum, with tools in place for recording the hearing and producing a transcript. Instead, the NPS provided "information" sessions with no opportunity for public testimony and no recordings made of the meetings.

The January 23, 2001 Citizens Advisory Commission hearing drew 1000+ people, including 9 of 11 members of the San Francisco Board of Supervisors, to speak out against the proposed vote to recommend rescinding of the 1979 Pet Policy. That is a reflection of the strength of public sentiment opposing the removal of off-leash access in GGNRA.

Attempts to evade and dilute that public sentiment ' with a slightly more gradual approach to slashing off-leash access and use of a process without open public testimony/recording of the proceedings ' do not change the fact that public sentiment is strong on this issue and merits consideration. I would like to request an adequate public hearing and also that all public testimony on this issue during the 10 to 12 years prior to the DEIS should be considered.

3. Compliance-based management component allows for significant land use changes with no public process

I strongly object to the compliance-based management provision in the DEIS. This allows for further ' significant ' land use changes without any public process, based not on evidence of damage to the environment caused by the non-compliance, but based only on whether or not there has been

compliance.

Mr. Dean, you acknowledged in the Board of Supervisors Land Use Committee hearing on April 22 that the compliance-based management provision could possibly lead to an eventual ban on off-leash dog walking in the GGNRA. From the transcript:

SUPERVISOR WIENER: And then, the next step is if there would not be 75% or higher compliance, could it then go to a ban on dogs in that particular area?

SUPERINTENDENT DEAN: Potentially, yes, if it was a, if it was a leashed area that, that was problematic, it would, the next level would be no dogs.

SUPERVISOR WIENER: So if this plan is approved, we could in the future have a situation where parts or potentially all of GGNRA would be totally off limits to dogs.

SUPERINTENDENT DEAN: That would be a worst-case scenario.. And this significant land use change would occur without any public process. 4. Visitor Experience The DEIS focuses on visitors who do not want to be around off-leash dogs. First, there are many places where people can go if they do not want to encounter off-leash dogs, far, far more than the number of places that allow off-leash dogs. Second, consideration should also be given to people without dogs who are either neutral or positive toward encountering dogs in the parks.

I encounter non-dog owners on my walks all the time who clearly enjoy interacting with dogs and in fact many times I've had people come up and ask me if they can pet my dog. Many tell me that they love dogs or their kids love dogs, but they cannot have one of their own, and they therefore love come to places like Fort Funston to interact with them. Any assessment of visitor experience must include non dog owners who are neutral or positively inclined toward being around off-leash dogs.

People who have a positive experience in the park are not motivated to call the Park Service and report their positive experience.

5. Safety Issues The DEIS claims a major safety problem with dogs in the GGNRA. Where is the documentation for that claim? The Park Service's own data, obtained through FOIA requests, reveals that only '2% of serious incidents involved dogs; the vast majority involved people.

6. Recreation in the GGNRA

Overall, recreation within GGNRA has been de-valued by the Park Service,

as evidenced by attempts to change the name of the park within Congress such that the very word "Recreation" would have been removed. This is in conflict with the intent of those who drafted the enabling legislation that created this urban park as well as promises made to the city of San Francisco when the land was transferred, to honor traditional recreational activities.

Specific to dog-walking, the DEIS mandates no dogs at all on future lands acquired by the GGNRA. This, to me, indicates an inclination to eliminate dog-walking altogether and to de-value recreation overall. This runs counter to the vision of those who drafted the enabling legislation and those who spoke out at Congressional hearings on the need for recreational open space prior to creation of the GGNRA.

6. General Comments I am a 60-year-old woman and I visit Fort Funston several times a week with my dog off leash under good voice control. She enjoys off-leash play, exercise, and socialization, all factors known to make dogs better citizens, and I greatly enjoy the exercise, socialization with a diverse and wonderful group of people, and the joy of watching dogs run and play off leash. The health benefits of such interaction for both humans (especially those of us who are aging) and for dogs are well documented in the annals of human medicine and canine behavioral science.

The communities that evolve around dog walking are like pure gold, especially in the often otherwise impersonal environment of a city. The atmosphere at Fort Funston is magical with its diverse mix of people with and without dogs of all ages, all enjoying fresh air, community, and connection. If access to GGNRA is severely restricted to an even smaller fraction of space, the concentration of people/dogs in those smaller areas would raise the likelihood of incidents. This is another aspect of the proposed changes that has not been addressed. Communities would be destroyed as people feel forced to go elsewhere with their dogs.

For example, the Preferred Alternative would allow off-leash dogs only on the dunes adjacent the parking lot at FF, and on part of the beach. Many elderly and/or mobility impaired individuals cannot make it down the steep access trails to the beach, and thus would be left only with access to that small dune area, which is difficult to navigate, for off-leash recreation. If a person wants to stay close to their off-leash dog (eg, in order to clean up after them), he/she would have to clamber over that difficult-to-navigate terrain, which will be far more crowded with people and dogs, thus increasing the likelihood of being jostled or knocked down.

Mr. Dean, I have been a lifelong supporter of valid environmental issues. Many in the dog community have been long-term members of environmental groups. Love of pets is often emblematic of a larger love for life in all its many forms. I heartily applaud those who fought to preserve the

land within GGNRA from development in the early 1970s. I also applaud their vision in recognizing, and writing into the enabling legislation, the need for recreational open space in this densely populated urban area, balanced with resource protection.

I think the crucial issue lies in defining the balance between recreation and resource protection. Those who seek to eliminate dogs from the equation, or to relegate them to an unworkably tiny segment of the space (with no scientific justification) represent an extreme view that is, sadly, turning people off to the otherwise valuable environmental movement. Cities must remain livable in order to stem the tide of suburban sprawl, a true threat to more pristine habitat. Slashing a tiny fraction of access to an even tinier fraction in this urban parkland, which adversely affects the lives of tens of thousands of city dwellers, is not a rational balance.

Dogs have been the close companions of humans for over 10,000 years (some historians place the date of domestication far earlier). People have enjoyed off-leash hikes with dogs for millennia. That certainly constitutes a historical and cultural value.

The dog community is asking for nothing unreasonable here, merely access to a fraction of space in urban parkland.

With good trail management, better enforcement of existing rules, and more educational rather than punitive efforts, recreation and resource protection can be optimized.

Summary points: 1. I support formalization of the 1979 Pet Policy plus provisions for off-leash access in the lands acquired by the GGNRA subsequent to 1979 and on into the future. 2. The DEIS does not provide definitive evidence for further restricting off-leash access. Reports of impacts are based on speculation, not fact. Relative impacts of other sources of disturbance (humans, natural predators) need to be studied as well, and comparative analyses made. 3. Potential impacts of any proposed changes on the human community and on city parklands need to be studied in-depth. 4. There needs to be an adequate public hearing where people can testify openly, with the proceedings recorded and transcribed. 5. Misleading information about safety issues needs to be corrected. 6. In addition to comments on the current DEIS, all public testimony on this issue over the last decade should be considered.

Lastly, I would like to see dog walking treated with respect as the popular, community-building, healthy, historically and culturally valued recreational activity that it is, rather than as an intrusion on open space, to be maybe grudgingly allowed in an ever decreasing fraction of space, rather than welcomed. It is an activity that is in fact consistent with the Park Service's

own Healthy Parks Healthy People campaign. And it has been a part of human culture for millennia. Thank you for your consideration of these comments. Sincerely, Vicki Tiernan San Francisco, CA 94117 ccs:

Correspondence Type: Letter
Correspondence: Dear Mr. Dean,

I am writing to strongly protest the efforts of the GGNRA in restricting dogs from running off a leash on GGNRA lands. First I would like to establish why the GGNRA was created: Congress created the GGNRA in 1972 to: "to provide public access along the waterfront and to expand the maximum extent possible the outdoor recreation opportunities available to the region." The proposed dog ban appears to be in direct opposition to that mandate.

1. Dogs are important companions to many people in our city and dog walkers are custodians of the land. They walk on it, love it and look after it, picking up trash, reporting dead animals, and any other problems. Dog owners are law-abiding citizens who by their presence on the GGNRA lands discourage crime of all kinds. It is in the interest of anyone who cares about open space to work together - with dog owners, including, believe it or not, bird lovers in protecting our waterfronts. The beaches are largely deserted except for people and their dogs with the exception of weekends and then only when the weather is fine... rare in San Francisco!

2. The complaints from the Audubon Society and the Park Service that dogs are somehow a threat to the coastal areas is ridiculous and vastly overblown. Any instances of dogs harming birds are very rare and unusual, this can be addressed by proper dog training. As for disturbing the nesting sights this can be addressed through education and signage.

3. Plants should not take precedence over people in urban areas but live alongside people. We must not forget that we are a city and the same standards of preservation do not apply, as they would in a national park in the middle of nowhere...there must be balance between people and plants.

4. The GGNRA does not appear to be interested in making dog owners responsible for the behavior of their dogs and insisting that off leash dogs are well trained. Would you really rather take the easy path and just legislate against off leash dogs?

I would rather see signs asking dog owners to always be respectful of the other users of the beach and not allow their dogs into the areas where the shore birds nest, an education campaign perhaps. Even a license system for owners to have their dogs off leash where they have to prove that the dog is properly trained (rather like a drivers license) might be a solution.

Another idea is to limit the amount of dogs' one person can take to the GGNRA. I can see the problems when you have 10 dogs per person! These people are running a business; perhaps they should be treated as such. The rest of us are people who love the outdoors and love to walk in nature and we choose to do it with our faithful companions. We are the GGNRA's greatest allies. Surely personal responsibility with freedom is better for our society than yet more restrictions and legislation!

This proposed plan is discriminating against one type of person, namely a dog owner; even the coyote has more rights in the Presidio.

Dogs provide so much love and support to humans in so many ways; they need places to run free. A tired dog is a well-behaved dog!

Thank you for your kind consideration,

Yours truly,

Carol Newton Boone

Correspondence Type: Letter
Correspondence: Dear Mr. Dean, May 27, 2011

My name is Anne Stanton Malone. My family and I have lived in San Francisco for the past sixteen years and we currently reside at 80 Cragmont Avenue in San Francisco. Having come here from New York City ' we were thrilled to find a city that combined city life with the great outdoors.

That is why I am writing to express my opposition to the proposed GGNRA restrictions on off-leash dog walking I adamantly oppose the Preferred Alternative for the DEIS! It is too restrictive and there is no justification for

these major changes.

I support formalization of 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that GGNRA acquires in the future. Let me tell you why.

It is not always easy to raise a family in San Francisco ' the costs are high, the schools less than perfect. The fact that culture and recreation are at our doorstep makes a huge difference, and for us has been a major reason to stay when so many families have left.

As homeowners and dog lovers, we spend many of our weekends at Chrissy Field, at Fort Funston, in Golden Gate Park. My daughter, husband, and I find enormous peace, fun and happiness walking and playing in these parks, playing ball and watching our dogs have a chance to run by our sides off leash. Under voice control - of course - but free to walk and run unencumbered by a leash. It fuels our mental and physical health ' and frankly keeps us living in the City. In sixteen years, I have never experienced dogs behaving badly, scaring children or birds, or fighting with each other.

We live in a dense urban area' not a pristine wilderness. The DEIS is written as if the Bay Area and its residents don't exist just outside its boundaries. You are ignoring the impact on us - the residents ' and on area resources if these severe restrictions go into effect.

With this in mind, I want to remind you that the GGNRA has a recreation mandate ' it is a value that should be celebrated and preserved. Instead, the proposed dog management plan and the DEIS treat recreation as an adverse impact. How can the GGNRA uphold its mandate and support this plan?

Furthermore, a compliance based management strategy cannot be part of any plan. It changes the status of areas automatically and permanently - without having to provide evidence, and without a chance for public comment! It is simply wrong. As a parent, a working mother, and a dog owner and lover I respectfully request that you DO NOT CHANGE THE GGNRA OFF LEASH POLICY.

To do so would hurt families, our parks, and our communities. Sincerely yours,

Anne Stanton Malone San Francisco, CA 94116

Correspondence Letter

Type:

Correspondence: Dear Superintendent Dean,

My name is Yuci Yang. I live in San Francisco and do not own a dog. I do love dogs. I am writing to you to share my disappointment with the GGNRA proposals to severely restrict access to the GGNRA lands to people with dogs. I came to the US from China in 1987 and became a US citizen in 1994. The Bay Area is a great place to live because of the diversity of people and how freely everyone interacts. This is especially true when I visit Crissy Field with my husband and family. We love watching the dogs run and play.

I have reviewed the maps you have presented and am very concerned that your proposed alternative where dogs are restricted to a very small area of Crissy Field is unfair to people who own dogs and takes away my enjoyment of the whole experience knowing that some people are restricted to a certain area while I can walk anywhere. I also sometimes walk the dogs of my friends as I enjoy being with the dogs and especially enjoy the social interaction that I have with others when I have a dog with me. For some reason, people with dogs are friendlier.

Further, my husband is disabled and cannot walk far. Your proposed alternative allows dogs in areas that are far away from the parking and restrooms. If you adopt this alternative we will not be able to go to Crissy Field any longer when we are walking our friend's dogs.

The human animal bond is very important to me. I live in a small apartment that does not allow dogs. Walking with my friends' dogs is the only way for me to enjoy the exercising with a dog and is much better exercise than walking alone. I understand that your study says that dogs are ruining the plants and harming the birds. I can tell you from my experience that this is not true. People with dogs keep their dogs under voice command and away from the fenced off areas. I have however seen children and hikers walking through the fenced off areas and do not understand why they do not read the signs.

The newspaper has reported that you are proposing to change the 1979 Pet Policy that was an agreement between the GGNRA and the City. There is no need to change it as the existing arrangements work very well and people with and without dogs are very happy and enjoy Crissy Field peacefully. I understand that you are proposing cutting off dogs completely from new GGNRA areas in San Mateo County. My daughter and her husband are thinking about living in San Mateo and want a dog. It does not make sense to allow these new parks to be open to some people but not for those with dogs. It is important for the health all family members that each family

member, including the family dog, be able to recreate and exercise together on public lands.

I believe that the current arrangement (Existing Alternative) is a good one and should not be changed in any way. I also think you should allow for equal access to park lands for people with dogs and without dogs and that dogs under voice control should be able to run free. San Francisco is a wonderful place because of the freedoms and diversity we enjoy and the ability to exercise in our beautiful parks. Please don't discriminate against people with dogs.

Thank you for considering my comments. Yuci Yang

Correspondence Type: Letter
Correspondence: Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan.

Recently I heard the catch phrase "don't people have the right to have an experience that doesn't include dogs at the GGNRA"

And I was thinking that I could say that all day long about a lot of things.

Don't I have a right to go to the planetarium at the museum and not hear a baby cry, or a toddler talking loud. I paid my \$20 dollars, and it is not even recommended that children of this age be in the planetarium. But you know I understand that families are driving miles to come to this museum, and they don't have a place to park their babies and toddlers while the older children and the adults go to the planetarium. So, I am ok with it.

Now I could list for you many, many things that I feel that I have a right to have an experience without being bothered by someone else, but I acquiesce

on these things. I acquiesce because I live in an urban area with lots of people. A civilization, a society, and when you do this you must make sacrifices for the benefit of others.

Dogs are a part of american culture.

When I visit the GGNRA with my dogs, probably eighty percent of the times I visit some child or adult comes up to me and asks me about my dogs and asks me if they can pet my dogs. There is joy on their faces when they interact with my dogs.

Also, I notice many people watching my dog run if she runs. She is part greyhound and it is a beautiful sight when she runs. And I see people talk about it, and point it out when they see it. THEY LIKE SEEING IT!

Last weekend, I was at Rodeo beach. I didn't have my dogs with me, but I enjoyed so much seeing other dogs running on the beach. It just seems like a natural part of going to a beach. So, I would tell you, and these people who say they have a right to have an experience that doesn't include dogs in the GGNRA, to just move to a place where the dogs are not around. It would be the same thing I do when I encounter a loud and obnoxious child or adult. I just move on down the way, and I don't let it bother my day.

Sincerely

Deborah Riat San Francisco, Ca 94121

Correspondence ID: 4565 **Project:** 11759 **Document:** 38106
Received: May,31,2011 00:00:00
Correspondence Type: Letter
Correspondence: Dear Mr. Dean,

I am a relatively new dog owner. I adopted my first dog just over a year ago on May 11, 2010. My second dog was adopted in September 2010. I did not realize until I became a pet owner, what a wonderfully dog-friendly city I've lived in for the past 22 years, and how unfriendly most of the Bay Area cities are to dogs. To have an expansive, beautiful place with gorgeous views like Crissy Field available to my dogs and me - heaven! - I am incredibly dismayed that it may be taken away for dog owners.

Fenced in dog-parks are a depressing option for dog owners and dogs alike. Besides being aesthetically displeasing, fenced-in dog parks simply do not provide enough room for dogs to flat-out run and explore, activities, which are crucial to the physical and mental well-being of dogs. just as humans

find a rich, varied environment more stimulating and engaging, the same is true of dogs.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

- Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation.
- Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.
- Exclude speculative, exaggerated, biased, or misleading statements and studies.
- Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).
- Enable professional dog walking and align any professional dog walking rules with county or city regulations.
- Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

Sincerely,

Sun Lee San Francisco, CA 94122

Correspondence Letter

Type:

Correspondence: In June of 2008 I was bitten on the leg by an off leash dog at Mountain Lake Park. It was on the trail on the backside of the lake and there were over 12 dogs in the trail at this particular time (not uncommon there). Once the first dog closed in it got very scary. Legal experts encouraged me to file a lawsuit, which in retrospect I should have done. Despite the fact that I reported it to Park Police, they did not respond to the incident. Authorities appeared exacerbated and overwhelmed with the extent of the dog complaints and aside from taking a report, had essentially no recourse. Officer Floyd of the US Park Police admitted there was no support from above, and therefore could not enforce dog rules in the National Park. The only advice I got from the Park Police was that I should go walk somewhere else where there were fewer dogs.

Since that time I have been cornered, barked at, growled at and chased by off leash dogs in the Presidio at least ten times. Walking quietly apparently scares some dogs, according to their owners. Other times dog walkers tell me their dogs are just playing. I have been forced to defend myself from oncoming off leash dogs on several occasions, after which I nearly averted potentially serious altercations with professional dog walkers and/or dog owners. Most of the time dog walkers insisted it was my fault because I was scared. Rarely did they apologize or discipline their animals. As a lifelong resident of San Francisco and user of the Presidio I want to express my support for Alternative D in the DEIS. Additionally I want to support an option for no dogs at Baker beach. All the other beaches allow dogs and that does not allow park visitors a beach walking experience free of dogs.

Elsewhere in the GGNRA I am most concerned about dogs on remote trails in the Marin headlands. On many occasions I have spotted dogs in the distance through binoculars running through remote grasslands and scrub chasing rabbits and deer. Of more concern however are dog impacts on the rarer and more vulnerable bobcats, grey foxes, badgers and long-tailed weasels. While dogs are supposed to be on leash or under voice control, many dog owners use the remote trail locations as a chance to ignore the law and let their dogs run wild. Even if Park Rangers were to enforce dog laws, there is essentially no enforcement presence of any kind over these miles of remote trails.

As a bird expert and naturalist I can attest that these disruptions by chasing absolutely have a negative impact on these last remaining, often isolated populations of native wildlife. I have seen dogs chase down and capture young animals on several occasions, usually wounding and killing them. Dog impacts are most acute during the spring and summer breeding season when the trails get the most use.

Main points:

Biology and Ecology Facts on dogs and wildlife:

- Domestic dogs have been bred for strong hunting instincts and are hardwired to hunt Domestic dogs are far more aware of, better at seeking out and better at catching wildlife than their human counterparts

Voice control is least effective in the cases where it matters most, in the cases when a dog is: scared by a child, person or fighting with another dog or animal chasing or hunting wildlife too noisy/far away to hear it

Political and Human points:

-Voice control itself is a major disruption to park visitors. Owners are often in constant contact with running dogs, yelling names and commands that disrupt the natural sounds and peace of the landscape.

- Areas that are favorite dog walking areas become primarily just that, dog walking areas. This discourages other more quiet and passive forms of recreation, compromising the area's ecology and the visitor's ability to enjoy the natural resources of the park.

-As it stands dogs are given a pass to do what humans are not allowed to do in the park. Humans are not allowed to hunt or harass wildlife in the GGNRA.

Dogs can be seen chasing and harassing native wild fauna in the National Park any day of the week, however citations are rarely issued and there is essentially no enforcement.

Correspondence Type: Letter

Correspondence: Dear Mr. Dean,

My name is Pavla Sim. I am a resident of Mill Valley, Marin County, California. I have lived in this area for 17 years. After spending 20+ years in the high technology industry I built a successful dog walking and pet care business in Mill Valley. I am certified as a dog walker. I diligently clean up after dogs and keep them out of areas where they are not supposed to be. I work hard to make sure that dogs under my control do not harass people, other dogs and wildlife. My husband, Leonard Hand, and I deeply care about the environment. In 2009-010, my husband was the Treasurer of the

Environmental Forum of Marin, an educational and training not-for-profit organization.

I have reviewed portions of the Draft Dog Management Plan relevant to Marin County. I oppose some of its conclusions, the solutions documented in the Preferred Alternatives and the Compliance Management Plan. The Draft Dog Management Plan is not based on factual observations; rather it relies on spotty research, conjectures, invalid assumptions and misleading conclusions. The plan does not address the impact of the Alternatives on the health and wellness of people, dogs and the community. Everything - the soil, the grasses, the butterflies and the moles seem to be more important than dogs and their owners in this Draft Plan. Furthermore, there appears to be a pervasive lack of knowledge and understanding of dogs. Rather than providing justification for greater restrictions in access to people with dogs, the writers of this document seem to be justifying why dogs should be allowed in the GGNRA at all. The GGNRA is not a typical National State Park which needs to be made consistent with all the other state parks in the country. The GGNRA was designed to be an urban recreation area. Since the percentage of land where dogs are currently allowed is tiny relative to the total GGNRA, there is plenty of other pristine land untouched by dogs where soil, plants and wildlife can thrive. I believe that with good management and education, recreation and conservation can continue to coexist in the GGNRA.

The following comments are with regards to the Alta Trail, Orchard Fire Road and Pacheco Fire Road: It is true that this area is visited by many commercial dog walkers, some of whom walk many dogs off leash at the same time. I believe that it is reasonable to cap the number of off-leash dogs per person but turning this area into on-leash only with a maximum of 3 dogs (or 6 dogs with a permit) per dog walker is too drastic and erpunative. What is the goal? Getting rid of commercial dog walkers on the fire roads between Marin City and Oakwood Valley?

There are approximately 65,000 dogs in Marin County and 200-250 commercial dog walkers. If there was no need for dog walkers, there would be fewer commercial dog walkers in the county.

Commercial dog walkers who walk dogs on the Alta Orchard and Pacheco Fire Roads will not change their business model from walking 5-12 off-leash dogs at a time to walking 6-dogs on leash with a permit. No one walks, six medium to large size dogs, on leash at the same time for a whole hour. All those leashes tangle and can become hazardous to the dogs and to the walker especially if the dogs start to play or all pull at the same time. Unless the Preferred Alternative is something the commercial dog walkers can comply and live with (and stay in business), they will continue to walk dogs as per their existing business model in Marin City. If they are fined by

GGNRA rangers, they will start walking dogs in areas where there are fewer or no rangers, such as the pristine GGNRA areas which are currently free of dogs or in other places in Marin where there is minimal enforcement. They will do whatever they need to do. This is their livelihood!

With regards to the Adjacent Parks section, the Remington Dog Park has a limit of 3 dogs per dog walker, so this is not a viable alternative to the GGNRA land and should not be even be mentioned. No dog park should be listed as an alternative adjacent park, since you cannot take dogs hiking in a dog park. Many of the 26 parks within a 5-mile radius listed are small neighborhood parks with leash laws and playgrounds full of toddlers. It is misleading to list them as alternatives to GGNRA. The only viable alternative is Marin County Open Space. These areas cannot accommodate all the dog walkers currently walking on GGNRA land without becoming overcrowded. In summary, changing the fire roads from Marin City to Oakwood Valley to leash-only access will have a huge detrimental impact on other hiking areas in the county especially in Southern Marin.

I recommend limiting the number of off-leash dogs on the Alta Trail, Orchard Fire Road and Pacheco Fire Road to 6-8 per dog walker. To increase public awareness and cooperation I suggest clear signage at the entrances to GGNRA land and in sensitive habitat areas. Signs at the start of a trail head/fire road need to inform the public that dogs must stay on fire roads. I suggest utilizing low fencing in areas that are particularly at risk of damage, as is currently the practice. I also believe that the delivery of educational training programs designed for dog walkers, private and commercial, in partnership with the Marin Humane Society and the San Francisco SPCA, would help GGNRA to get more cooperation from the dog walking public, without requiring drastic restrictions of access as proposed.

GGNRA should continue to enable professional dog walking due to the need for these services in Marin. In these times of high unemployment, commercial dog walking translates into jobs. The annual permit fee needs to be reasonable and should be published for review with the revised Draft Dog Management Plan.

Compliance-based management needs to be eliminated from the proposal. The public is entitled to the opportunity to review and input to any additional restrictions proposed by the GGNRA in the future.

Correspondence:

Dear Superintendent Dean:

I am a senior citizen and have lived in the Sunset District of San Francisco for 45 years. For the past 40 years, I have been jogging at Ocean Beach and Fort Funston several times each week, sometimes with a dog and sometimes without. In the 1970's I took my children to these beaches.

I am opposed to the "preferred alternative" in the above-referenced plan because I do not believe there are problems severe enough to warrant excluding a whole group of people from these areas which are so vital to our recreational needs in San Francisco.

You call Alternative A, the "no action" alternative, but this does not have to be the case. In all the other alternatives, you predict less impact from dogs assuming compliance with the regulations, but Alternative A assumes non-compliance. This makes the comparison between alternatives illogical and invalid. I would suggest implementing Alternative A with better enforcement of existing regulations, more education, and better signs. As for those people who would prefer not to see dogs, they already have the vast majority of the GGNRA.

At Ocean Beach and possibly Crissy Field, the Snowy Plover areas could be fenced. This would keep people as well as dogs from disturbing the birds. At Fort Funston signs could be placed near the cliffs to warn people away as those who are not familiar with the area are not aware of the steep cliffs. I would also suggest moving the trail to the beach sand ladder farther away from the hang glider takeoff point.

Ocean Beach and Fort Funston are cold, windy, and foggy most of the year. There really are not that many people, except for dog walkers, occasional joggers, fisherman, and surfers who frequent these beaches. Except for a few sunny weekend days, the general public does not go to these beaches. And, as you state in the DEIS, neither of these areas is pristine wilderness so why not allow off-leash recreation there? This may be a better alternative than restricting these areas, which will encourage people and their dogs to go to more sensitive areas. I am also concerned about your plans for

compliance. In Chapter 2, page 230, you say that "the enforcement of violations is not uniform. This is partly due to the size of the park and the inability of law enforcement staff to be in many different areas at once". If this is true now, you will not be able to enforce the new rules, which will be more strict and presumably require more staff to adequately enforce. The solution to this problem is not more rules but consistent enforcement of existing ones.

Your compliance management plan, in which regulations in an area can become more strict with no public comment if compliance of 75% is not reached, is seriously flawed. The DEIS does not state how compliance will be measured, and it only goes one way from less to more strict. It also assumes that compliance will result in less environmental degradation, an assumption that has not been proven. If less environmental degradation is the goal, then the results of regulations need to be evaluated in that light of the change in condition of the area. There may be some areas that will need to be closed off to people and dogs. Others may do well and regulations can be loosened. If you decide to do compliance by numbers, then a certain percentage of compliance should be a trigger for looser regulations as well as stricter.

And lastly, additions to the GGN'RA should be evaluated individually for the suitability of all types of recreation. To do otherwise does not serve the public well.

Very truly yours,

Joanne Scott

Correspondence: Superintendant Dean,

My name is Michael Garibaldi, I live in Pacifica, and I have been walking my dog at Fort Funston 2 or 3 times a week for the last four years. I am writing to support Alternative A of the GGNRA Dog Plan to keep the current off leash situation.

The Golden Gate National Recreation Area was established to preserve urban recreation uses. There is no type of urban recreation more endangered

than walking your dog off leash. When I moved to Pacifica in 1989, I could walk my dog at the local County Park. Now, dogs are not allowed. I could walk my dog off leash at Sweeney Ridge; now, dogs must be leashed and that is threatened. Without Fort Funston, there will be no place left within a reasonable driving distance that I can go to simply walk a trail with my dog! The Preferred Plan for dogs at Fort Funston is nothing more than a dog park. If that limited area north of the parking lot is used by the same number of people and dogs that currently use the entire Fort Funston area then all the vegetation will be destroyed leaving sand blowing worse than it does now. Also, that many dogs and people in a limited area will cause more conflict.

One of the biggest complaints about dogs is their effect on the Snowy Plover, but at Fort Funston, the Snowy Plover roosts in the cliffs only at certain times of the year. Dogs can't reach those areas to threaten the birds. Dogs are blamed for digging at the base of the cliffs causing the cliffs to collapse. Historically, the cliffs have been extremely unstable and have often collapsed due to the ocean and the weather, not because of dogs. Regarding other birds, after decades of dog walking the 2006 Beach Watch Report (pg 286) rated Fort Funston as having a high shorebird abundance and diversity.

The section entitled "Environmental Justice" claims that based on the Northern Arizona University phone survey this dog issue is only a concern of the white, middle to upper class. The conclusion that non-white are against dogs completely misstates the actual data. The data shows that all the races included in the survey had similar responses toward dogs. If you go to Fort Funston you would see a diverse group of people that mirrors San Francisco walking their dogs. All races, nationalities and languages are represented at Fort Funston. Also, instead of explaining that dogs are allowed in less than 1% of the GGNRA, the survey questions imply that dogs are allowed throughout the GGNRA. And I would guess that most of the people surveyed had no idea what occurs at the GGNRA regarding dogs and their only information comes from newspaper articles like the S.F. Examiner with its sensational and ridiculous headlines calling Fort Funston a "War Zone". The Dog Plan did not give numbers concerning who actually uses and enjoys Fort Funston. I would guess that 90% to 95% of the people that use the park are dog walkers. We enjoy Fort Funston even though it's usually cold, windy and not very inviting. It's not Yosemite or Yellowstone National Parks and shouldn't be held to the same preservation standards. Yet, I have seen many San Francisco guide books mention Fort Funston not because of its natural beauty, but because of its uniqueness as an urban dog friendly area.

The report claims that dog problems at the GGNRA are costly and take up staff time. After 4 years, the only time I have seen park employees at Fort Funston is the ranger in his truck emptying the garbage cans. I am sure that

the cost involving dog issues is miniscule compared to the Park Police presence ever Friday and Saturday night at Ocean Beach.

Please take into account the long history of dog walking at Fort Funston and the unique opportunity we have in San Francisco to safely walk our Clogs in an urban environment. I fully support Alternative A of the GGNRA Dog Plan.

Sincerely, Michael Pacifica, CA 94044

Correspondence Type: Letter
Correspondence: Dear Mr. Dean,

As a dog owner and one who frequently walk my dog off leash, I am concerned about the proposed GGNRA Dog Management Plan as it could potentially restrict my ability to walk my dog off leash. For many years I have enjoyed walking my dog in many of the Bay Area National Parks. On these walks I encounter responsible dog owners that keep their dogs under their control and are sensitive to their environment. What I especially like is watch my dog Tucker run freely and be able to interact with other dogs and be happy. It is very important for dogs to socialize and I can't think of a better way for them to get this socialization then by running freely and playing with other dogs. Currently off leash activity is restricted to less than 1% of the parks land. This proposal will drastically reduce the land available for off leash recreation. The plan is difficult enough in San Francisco and Marin Counties, where areas like Fort Funston and Muir Beach will be restricted or off limits to off leash dogs. Worse, the plan leaves San Mateo with no GGNRA land that permits off leash use. As I see the plan the rules are very heavy handed and does not engaged the community to find solutions. The proposal indicates that if noncompliance is observed that the areas management would be changed to the next more restrictive level of dog management. In this case the regulated off leash areas would be changed to on leash dog walking areas and on leash dog walking areas would be changed to dog walking areas. This change would be permanent. This approach unnecessarily punishes responsible dog owners for poor behavior by a small minority. Further the idea that no area could ever be changed to less restrictive rules such as when compliance is good and environment protection needs are reduced, is one sided and unfair.

I recognize there are people whom we'd like to be more responsible with their dogs. But they are few in number, incidents involving dogs in GGNRA are less than 4% of all incidents in the park. Penalizing all dog owners for

the behavior of a truly small minority is not the right approach.

I understand this proposal was written to protect the environment and provide a safe environment for all people to enjoy the park. However I believe a better solution is we work hard to educate and encourage responsible dog ownership. Some examples of this would be community's volunteers to stock dog poop bags and regularly host trail clean up days. Also work with the SPCA to provide low cost and free dog training classes. I believe this collaborative approach is best and viable alternative to simply closing areas to dogs or placing new restrictions. The proposal also ignores the needs of dog owners with limited transportation options or with special needs. People should have the ability to walk dogs off leash in areas close to their homes. This proposed plan would limit access to an entire class of people who have few other options and depend on the current off leash areas to keep their dogs exercised and healthy.

The Bay Area to this day is a dog friendly environment and is not known for certain restrictions against dogs. There are those people out there that do not like dogs and think this is a good solution and should be done. But I say no, don't put restriction on dogs because all they want to do is get outside and play. Making an owner put a leash on their dog is pretty much saying, don't share those moments a dog and owner should as they play together and bond. We have all grown relationships to our pets and when they're not happy we aren't happy and I know the smile I put on my dog is when I put on my shoes and go open that door and he just knows where we are going and he can't wait. My dog loves the parks and playing games where he gets to run free and chases things and has have fun in his own little world. Dogs sometimes do get themselves in trouble but never too much trouble. They like to dig and play in the mud and I say don't put nice flowers where you know a dog will be. Dogs can't be forced to stay on a leash everywhere they go, it is unnecessary and cruel. Some dogs, like little dogs can stay inside all day and get one or two walks a day and be fine but for a big dog they need more exercise than that and be able to stretch their legs and run. There is no reason for the GGNRA Dog Management Plan to continue any longer and should be dropped to secure dog's health and freedom to life.

Sincerely,

Zack Perry

Type:

Correspondence: Dear Mr. Dean:

I am a 64-year-old San Francisco native, and have lived in my home in Forest Hill Extension since 1984. I am an independent writer and historian, my wife is a retired social worker, and we have both been active in the Sierra Club, for which we have led hikes since the late 1970s.

For the past thirty years my wife and I have regularly taken our dogs to Fort Funston (and occasionally to Crissy Field) for off-leash dog walking, an activity which has given both our dogs and ourselves much needed exercise and has enabled us to socially interact with a wide variety of fellow off-leash dog walkers, including men and women of various backgrounds, ethnicities, and ages. We have especially noticed that many young children take pleasure in seeing well-socialized dogs run free. As we are concerned with the environment and the rights of other users, we have kept our dogs under voice control and have always picked up their feces. Over the years, we have seen very few bad incidents, and those (mostly dog-on-dog) which have occurred should, in my opinion, be best addressed by education and by penalizing individual irresponsible dog guardians.

Based on my experience, I strongly disagree with the GGNRA's current preferred alternative, which would seriously restrict and eliminate off-leash dog walking in much of Fort Funston and other portions of the GGNRA, and lead to overcrowding in city parks. Although I greatly value the environment and the necessity of preserving the wilderness, I believe that recreational needs should also be given weight, especially in the GGNRA. Fort Funston and Crissy Field are not remote, pristine areas like Yosemite or Yellowstone; they are surrounded by a heavily populated urban area, and the importance of recreation is indicated by the very name of the Golden Gate National Recreation Area. I also oppose the "Compliance-based" management strategy, which would potentially end off-leash access while giving the people no chance to comment on the change. This policy would also punish a multitude of responsible dog guardians and their dogs for the misdeeds of a few. It would be like closing a children's' playground because of the anti-social behavior of a few playground bullies.

I support instead a modified Alternative A (the "No Action Alternative" formalizing the 1979 Pet Policy) and would include the "New Lands" areas in San Mateo County. The present plan should be modified to provide clearer rules and education and outreach as part of the program.

Thank you for your consideration.

Sincerely Randall E. Ham

Correspondence: Dear Superintendent Dean,

My name is Jane Shepard. I am a senior and have lived in San Francisco for 39 yrs. When our children were young they wanted a dog. It is difficult enough trying to raise children in a dense urban area, so I took them to Fort Funston where they could play with other people's dogs. We got our first dog in 1995 and have been walking a dog at Fort Funston nearly daily ever since. Frequently I take our friends' children to Fort Funston, with our dog, so that all of us will get enough exercise.

I strongly believe that multi-use open space that includes off-leash dog walking is compatible with all other recreational uses and with the preservation of habitat and wildlife within the GGNRA. We have taught our children that with every trip nature (any place other than our home) we need to leave the area in better condition than when we arrived, so we always pick up litter we find.

I oppose all alternatives in the DEIS and am offended that you call it an "environmental impact statement" when it has been publicly stated numerous times that no science was used and it does not study the impact of implementing any of the alternatives. You need to start over and do it right. For example, it says to use the dog play area at Lake Merced instead. That area has been turned into a native plant garden and is no longer available for dogs and their guardians.

The original '79 Pet Policy was carefully negotiated by all of the stakeholders of the GGNRA including environmental groups (e.g., Sierra Club, Audubon) and a representative cross section of recreational users of the park lands including dog walkers and sought to seek a balance between the various users/activities which historically occurred in the GGNRA properties.

The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents. The DEIS says that increased visitors to Fort Funston necessitates new restrictions, yet on NPS website, your own charts show that is not true. In fact, during the years of the heaviest visitors in the '90s,

the bank swallow population was also the highest.

The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal.

It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option.

Sincerely,

Jane Shepard

Correspondence: Dear Superintendent Dean,

My name is Mary Barnsdale. I live in El Cerrito, in Contra Costa County. For many years I have supported numerous environmental organizations, including NRDC, the Marine Mammal Center, the World Wildlife Fund, Save the Bay, Baykeepers, and the Sierra Club. I occasionally take my dog to Ocean Beach, Fort Funston, and Crissy Field.

As a long-time environmentalist and dog owner, I strongly believe that multi-use open space that includes off-leash dog walking is compatible with all other recreational uses and with the preservation of habitat and wildlife

within the GGNRA.

All users clearly have some impact on the GGNRA. Even the presence of people watching birds from a distance inevitably has some effects. But in the Draft Environmental Impact Statement the National Park Service inappropriately singles out dogs. Its conclusions are not based upon sound science nor long-term monitoring of site-specific conditions.

Please note that any impact that dogs may have can be effectively mitigated through better signage, creating environmental barriers, and education of park users. The GGNRA should partner with community, animal welfare, and conservation organizations on programs that could eliminate perceived problems and contribute much-needed resources.

Please remember that the GGNRA was created to provide open space for recreation (including dog walking) for the metropolitan Bay Area. The existing 1979 Pet Policy has served the community extremely well for more than 30 years. I strongly support Alternative A, the No Action alternative, in the GGNRA and the "New Lands" areas (such as Cattle Hill, Sweeny Ridge, Mori Point, Pedro Point and Milagra Ridge and Rancho Corral deTierra in San Mateo county).

Respectfully, Mary Barnsdale

Correspondence: Who do people rely on to help the blind? Who helps the deaf? Who helps people with a disability? Who rescues lost people? Who sniffs out bombs? Who do they send to hospitals to cheer up and help the sick? Who is man's best friend? Dogs. And this is their reward? Keeping them cooped up on leash? I believe that dogs SHOULD be allowed off leash in more places at the Golden Gate National Recreation Area. Golden Gate National Recreation is not a protected wilderness and people have plenty of other dog-free outdoor areas to enjoy. It is a fun and healthy experience to walk your dog, and limiting access to outdoor areas for dogs and their owners is not fair!

The Golden Gate National Recreation Area (GGNRA) was established by Congress so people could use it for fun and exercise. It is not a protected

wilderness. If some off leash space is taken away to protect wildlife, then other equally good off leash outdoor spaces should be substituted. People harm wildlife more than dogs. Dogs poop, but they don't eat Cheetos or drink juice boxes and leave them lying on the ground. If the goal is to protect wildlife, then focus on preventing the things that actually harm wildlife. Rangers should fine people who litter or who don't clean up after their dogs. All dog owners and dogs shouldn't be punished for things some people do.

People who are not comfortable with dogs have plenty of other spaces to go where dogs are not allowed. There are 80,500 acres in GGNRA and dogs are allowed off leash in 1% of those acres. Ninety percent of this 1 % will be taken away if the plan is carried out. Dogs don't have a lot of spaces already and now would have even less. If people are not exposed to dogs off leash they will grow to be afraid of them and this shouldn't happen. Encountering dogs on the trail is a great way for people to gain comfort with them.

To walk or run your dog is a healthy experience for a lot of people. Many studies show that being with dogs help people be happier. I don't need a study to know that! There is a reason that people send dogs to hospitals, they cheer up the sick and help them. There is a reason people use dogs to help the blind and deaf, they make their lives easier. There is a reason the military has 2,700 dogs in combat, they save soldiers' lives. With all the things dogs do to make our lives happier, easier and safer, shouldn't we at least try to make their lives happier?

I strongly believe that dogs SHOULD be allowed off leash. I know my dog, Shasta, needs to be off leash. I know I love going on a hike or to the beach with her because I love to just be able to play with her. Who is man's best friend? DOGS!

Correspondence: Dear Mr. Dean:

Re: Draft Environmental Impact Statement for Dog Management (DEIS) ' with an emphasis on Fort Funston

I am writing to oppose the GGNRA dog management plan and all action alternatives that further reduce or ban dogs in open spaces. The "Preferred Alternative" is just too restrictive. There is no justification in the DEIS for these changes and the "compliance- based management strategy" will punish everyone for the irresponsible actions of a few. In fact, crowding dogs and

their owners in such small areas will cause conflict, triggering your poison-pill scenario. If the DMV took this approach, no one would be allowed to drive!

Since the researchers didn't interview the people actually using the areas affected, let me tell you about myself I am a 66 year-old woman, still working full-time. I am one of the authors of the Bernal History Project's San Francisco's Bernal Heights, published by Arcadia Press a couple of years ago and I volunteer for the Market Street Railway Archive. I also am a student of canine behavior. For almost 20 years, under the auspices of the SPCA's Animal-Assisted-Therapy (AAT) Program, I have shared my dogs with people in San Francisco's mental wards, hospitals and nursing homes.

Even though I live across town, I have visited Fort Funston with my dogs almost every single day that I didn't have to go to work since 1989. Frankly, because I now suffer from arthritis and need new knees, if it wasn't for my two dogs, I'd rarely go outside. Without such a large, unleashed area like Fort Funston, my very active dogs wouldn't have gotten the exercise or socialization necessary for them to grow into well-behaved, obedient AAT dogs, who have earned the "Canine Good Citizen" awards. And, yes, they truly are under voice control at Fort Funston. My husband and I don't walk anywhere that we can't take our dogs. That cuts out almost of the open space in California! It seems ironic that when the National Park Service is pushing a "Healthy People, Healthy Parks" initiative, the GGNRA is doing its best to curtail our one form of exercise ' walking our dogs off leash. Culture and Sense of Community The Preferred Alternative would mean the end of a wonderful community at Fort Funston. It is the most ethnically, socially and economically diverse group of people I have ever seen anywhere, let alone known. When you go often enough, the regulars become your friends. They notice when you're missing and check up on you. They care that you're all right. I have made many very good friends there.

Most people at Fort Funston seem to be able to leave their life behind for an hour or so and be in the moment, just like their dogs. The dogs' joy at play is contagious. One young friend with an autistic son confided that her life is hell, and that her walk at the fort is the only happy time of her day. As an AAT volunteer, I well know dogs can promote healing. While I recovered from a cancer operation, I spent many days sitting below Joey Hill, reading and watching my dogs playing close by. Very sadly the GGNRA has since prohibited people near that dune.

I take every one of my out-of-town visitors to Fort Funston and, without exception, they are amazed at how well the dogs get along, and they always want to return on their next visit. Most dog owners there are responsible, and we work at promoting good canine and human behavior. Our Fort Funston Dog Walkers Group sponsors a monthly park pick-up morning. A

lot of people without dogs bring their children just to get their "doggie fix." So I don't understand your comment that the situation there is "unmanageable." You haven't visited the Fort Funston that I know. Things have been working just fine out there under the 1979 dog policy.

Interestingly enough, San Francisco didn't even make the post office's list of the 30 cities with the most dog bites recently. It's not because it's California, since there were seven cities in our state listed. It's because our dogs are better socialized because of off-leash activities.

Bad Science There are a couple of men who fly their beautiful macaws at Fort Funston some weekends. I once asked if they weren't afraid of the dogs catching the birds. The owner laughed and said, no, the birds will just lift up.

Your own data showed that of 5,700 dogs observed, only 29 deliberately chased birds. That only 1/2 of one percent! That percentage would be a lot higher for the hawks and ravens, which actually kill prey. All the speculation about dog impacts in the DEIR--rather than substantive evidence and measurement--reminds me of the recent NPS embarrassment over the Drakes Bay Oyster Company. Even the Interior Department determined the "scientific study" was biased, improper and mistake-ridden. Considering the contentious history of dog walking in the GGNRA, it seems--like with most consultants--the DEIR ones came up with the conclusions you desired.

Impact on San Francisco Nowhere is mentioned any impact on our already under-funded city parks. It doesn't take a professional to realize that many dog owners will quickly abandon the at best small and crowded areas allocated under the plan. Many of those dogs will wind up elsewhere, just like they did on tsunami Friday, March 11th. It wasn't only Stern Grove. We couldn't find a parking space near Bernal Hill!

No one looked at canine behaviors resulting from curtailing off-leash activities, either. My wonderful AAT dog Winston was hyperactive when we adopted from ACC. He'd been given up by a family who loved and trained him well, but they weren't able to give him the time or space to run that energy off at full tilt for a hour or two every day until he matured. So more dogs will be given up. Less dogs will be socialized. And San Francisco will join that postal service list of cities with a lot of dog bites. I realize that this is not the concern of the federal government, but some consideration should be shown to the very city that actually gave you the land! The GGNRA should be a friendly neighbor. Urban Park

Fort Funston is an urban park, not the pristine wilderness the NPS is used to managing. Several times a year old explosives are found and detonated on this very contaminated former military base. It's only about a block away

from a densely populated city. The GGNRA shouldn't treat it like a wilderness park, where hunting dogs just might be the only legal dogs. Fort Funston is a place for people to decompress and regroup for the stresses of big city life during a serious recession. Even Congress stipulated that the uniform management mandate "shall not be exercised in derogation of the values and purposes for which these various areas have been established." Recreational Mandate When the lands were given to you, the GGNRA was mandated to maintain the historic recreational uses, which included off-leash dog walking. It is obvious that the attempt a couple of years ago to remove "recreation" from the name was a tactic to undercut the protections for recreation contained in the enabling legislation.

Enhancements Yes, it is true that more people than ever are walking their dogs at Fort Funston, especially on the weekends. Currently the GGNRA allows off-leash recreation on less than 1% of their land. Because of its popularity, off-leash areas need to be increased not reduced. There also needs to be a provision for portions of future lands (such as all those acres in San Mateo being added) to be allocated to off-leash recreation.

If the GGNRA really believes there's a problem, they should find much less expensive and restrictive solutions, e.g., better signage, fences or shrubbery to more clearly delineate the off-limit zones, as well as an education program, perhaps with local dog groups.

It would also really help to publicize areas as being off-leash. It would let people know up front that if they go to this portion of the GGNRA, e.g., Fort Funston, they will encounter dogs there. If they don't want to be around dogs, unlike us, they have the other 99% of the GGNRA to visit! The GGNRA has so much acreage, why can't we be good neighbors and share just some of that acreage with nature, people and dogs?

Very truly yours

Sheila Mahoney

Correspondence: Dear Mr. Dean:

I live in San Francisco and have been enjoying the GGNRA since the early 1970's, both with my dogs, particularly at Ft. Funston and Crissy Field, and in the Marin headlands, where I usually take longer hikes without my dogs. I am a Senior Citizen now. I am a Sierra Club member and hike leader, including leading canine hikes. I am also a birdwatcher who has enjoyed observing birds in Central America and Africa as well as at home in the Bay Area. I am a supporter of foundations for Pt. Reyes and many other environmental groups, which included the Golden Gate National Parks Conservancy until I felt excluded by the Conservancy.

I do not agree with the current GGNRA preferred alternative. I support a modified Alternative A (the No Action alternative), and think that new land areas in San Mateo county should be assessed on a site by site basis, with an effort made to find areas for on leash use, and hopefully some for off leash use as well. I also don't think there should be elimination of all dogs if there are problems with non-compliance, since that can be addressed without punishing the responsible majority of people with dogs, such as by more education and monitoring, and enlisting the use of the dog community to help with these things.

I believe that the DEIS has failed to evaluate impacts on the human environment. The parts of the GGNRA within San Francisco need to be evaluated and preserved as a heavily used urban area. San Francisco gave up all of its ocean beaches to the GGNRA, but beaches are important for everyone: people with dogs, children, picnickers, horse riders, kite fliers.... Scientific evidence hasn't shown that the snowy plover needs all of the beaches of San Francisco to survive, and there are lots of beaches for the snowy plover in less populated areas. And people are an endangered species in the urban environment too - there are so many stressors - and dogs have been shown to benefit people in many ways, for mental and physical health. And healthy dogs need to get lots of exercise, which requires running. I myself as a Senior citizen keep mentally and physically alert through the sport of dog agility, which requires a very fit dog. In the past I've been able to enjoy the cultural benefits of urban living while still being able to keep myself and my dog physically fit by lots of walking and running, and I think San Francisco is a very special city because we have had this wonderful lifestyle, and I hope it can continue. I believe that the GGNRA should live up to the founding agreements made with San Francisco that the people of the Bay Area would continue to be able to use the GGNRA lands for recreation, including dog walking. Through the years I have seen changes in usage and in erosion of the cliffs (a natural process, but one that I believe does require safety measures). But I believe it is unjust for the GGNRA to avoid dealing with these problems by choosing what is probably the largest user group to eliminate. Costs are certainly an issue in this economically

hard-pressed time, so I would suggest ways to have the users contribute more directly to the GGNRA, in addition to our Federal taxes. I have participated with the Ft. Funston Dog Walkers in clean up days which helps educate people as well as helps make up for some peoples carelessness. I would like to contribute again to the Conservancy, and would suggest more reaching out to dog owners with educational activities. I would also suggest raising money by considering areas where parking would need to be paid for, such as on top of the bluff at Ft. Funston. There could be free parking for handicapped people who wouldn't have the option of parking less conveniently and walking along the beach, and there could be a yearly parking pass. And there should be a few short term free parking sites, to allow people a chance to stop and look at the great view from the viewing platform adjacent to the parking lot Commercial dog walking has increased drastically and has led to Ft. Funston being overcrowded at times, though I still feel safer with the dog walkers there than at times with hardly anyone there. I would suggest a permit system, such as is used in the East Bay Regional Parks. It might also be advisable to limit the numbers of dog walkers at a time by having the walkers get time slots, perhaps by lottery.

I think some of the problems at Ft. Funston are from lack of active management. A long time ago I had heard that areas would be cordoned off for restoration and then re-opened, but I haven't seen this happening. I also think there should be a formal policy that only well-socialized dogs should be off leash in the crowded areas of the GGNRA, such as Ft. Funston and Crissy Field. There should be more outreach to educate people, by signs but also by education days. San Bruno Dog Obedience School has a great program for all types of dogs and might be interested in doing outreach about the need for obedience training . And for the unsocialized people whose dogs create problems for us all, these people should be investigated when there are complaints and kept from coming to the GGNRA with off leash dogs.

Thank you for the chance to share my observations and suggestions.

Sincerely, Linda Wilford San Francisco, CA 94116-3.426

Correspondence Type: Letter
Correspondence: Dear Mr. Dean

I am writing to express my concerns regarding your proposed closure of most of the areas currently available for off-leash dog-walking at Fort Funston. I have read through the Draft Dog Management Plan and I also

attended the Open House at Fort Mason on March 2011.

I have been walking my dog at Fort Funston for the last 15 years and am very familiar both with the terrain and with Fort Funston's history with regard to off-leash dog-walking over that period of time. Although I regret GGNRA's proposed dog-walking restrictions in many of the areas covered by the Management Plan, I am limiting my comments to the restrictions proposed for Fort Funston because I believe that they cannot be justified by GGNRA's own research or objectives and will result in significant hardship for San Francisco's dog-owners.

Of the available alternatives, I believe that the NPS should adopt Alternative A (no action) with regard to Fort Funston because it does the most to preserve off-leash areas for dogs. In my opinion, Alternative E is misleadingly titled as providing "Most Dog-Walking Access" because in fact the areas open to dog-walking would be less than those under Alternative A. I urge the NPS to clarify this point to the public and to take the possibility of confusion into consideration when reviewing public support for Alternative E.

Principal Reasons for Favoring Alternative A

1. Importance of preserving Off-Leash Areas for Dogs. Other than the horse, it is difficult to imagine another species that has had as lasting and beneficial a relationship with humans than the dog. It's important that the NPS balance many factors when considering the appropriate use of lands under its purview. However, just as the NPS takes into consideration threats to endangered species, it is entirely appropriate that the NPS also consider our species' obligation to provide adequate exercise for a species whose ongoing contributions to humankind cannot be over-stated. The fact is that requiring dogs to get virtually all of their exercise at the end of a 6' long leash is simply cruel. Dogs cannot get their natural exercise needs fulfilled walking at the pace of a human. The opportunities for off-leash exercise for dogs are already extremely limited in San Francisco and elsewhere and will become more so if the NPS management plan is enacted. Fort Funston has long been one of the few areas in San Francisco where dogs can enjoy off-leash exercise with relatively few negative impacts to the environment and disruption to other users. It should be managed in a way that will allow it to continue to fulfill this important purpose. Indeed, this is a cultural resource in its own right and deserves protection.

2. Absence of Critical Habitat Protection. At the open house held at Fort Mason, one of the senior rangers confirmed that there were few, if any endangered flora at Fort Funston because of decades of urban and natural degradation beginning with the area's use as a military complex. I have also not seen anything in the NPS Report that suggests otherwise, other than

declaratory general statements that there would be some adverse impacts. Yet, the NPS's preferred solution would close the entire area to off-leash dog walking.

As for fauna, where bank swallows or other birds nest on a seasonal basis, the NPS has a reasonable solution that adequately balances competing interests by simply closing those affected areas on a temporary basis to off-leash dogs or, if necessary, to any dog-walking activity.

3. Closure will simply lead to concentrated degradation in areas that remain open. The extremely limited opportunities for dog-walking in non-urban outdoor spaces in San Francisco will guarantee Fort Funston's continued use as a dog-walking area by area locals, regardless of which management plan is adopted. The NPS's preferred plan, in which off-leash dog-walking areas are restricted to the beach and to one area adjacent to the parking lot, will simply concentrate that usage to a much smaller area, thus magnifying both environmental impacts ' to the extent that there are any ' and the likelihood of conflict between dogs and people.

4. Closure violates one of the four outstanding values to be protected by the GGNRA in the 1972 enabling legislation. It is important to recall that the GGNRA, including Fort Funston, was originally intended as an urban recreation area. It should not be viewed in the same category as other non-urban National Parks covered by the NPS. As an urban outdoor recreation area, it fulfills an important function in allowing urban dogs and their urban human owners a rare opportunity to get out and stretch their respective legs. That function should not be jeopardized or restricted, absent compelling reasons to do so ' reasons which the NPS has not shown with regard to Fort Funston.

Ve truly yours, Misha Weidman

Correspondence: Dear Frank '

As you know, I participated in the discussions in 1978-79 that lead to altering the rules for dogs in GGNRA. I also chaired the large public meeting 10 years ago at the Golden Gate Club in which the Advisory Commission recommended the Rule-Making process.

I have been to most of the 21 areas described in the Draft EIS. I have been through the Draft EIS, and heard a presentation by your staff on the issues. I

have been in touch with 15 former Advisory Commission members regarding this subject.

After what I think is due consideration, I have concluded:

I favor Alternative D.

Yes, I well know that compromise is often a good thing. And I signed on to the recent statement from 16 members of that former Advisory Commission, advocating accommodation. But I cannot advocate that GGNRA chisel on its core mission, to preserve the resources for future generations. After all, that is what National Parks are for. Historically, that is why GGNRA was established.

Two parts of my background contribute to my opinion.

First, I am a runner/jogger. As such I get accosted by dogs several times a week. I have been severely scratched, knocked down, and bitten. In each case, it was by a friendly dog under voice "control". I am now completing my 75th year, and I take a blood thinner. Being knocked down is a scary prospect.

Second, I was raised on a farm in a valley where most everybody had dogs. We did. But the ethic was strong that one did not keep a dog on a property that was too small. It was unacceptable for a dog to have to use the property of others on which to run, and that included the public's property. The ethic was an accommodation to the neighbors, but also best for the dogs to have room to run.

There was then an organization which enforced that ethic, called the Society for the Prevention of Cruelty to Animals ("SPCA"). If a dog was being housed on property that was too small for proper exercise, the SPCA would call on the owner, and help swap the larger dog for a smaller one. It was done to preserve the health and happiness of the animals. Two runs a day are not enough for a dog kept in an apartment. I have often wished that San Francisco had such an organization.

Dog owners have no trouble voicing their wants, but in San Francisco there has been no voice speaking for the well-being of the dogs.

In my opinion, the dog issue is a social issue, which NPS should not be called upon to solve. But I do sense that the movement for more dogs, and bigger dogs, is starting to swing the other way. I now see fewer dogs, and dogs of more modest size in all areas outside of San Francisco.

Bottom line- I think GGNRA should be governed by the same regulation as

all other NPS units.

Thank you, Frank, for your consideration of the above.

Rich

Correspondence Type: Letter

Correspondence: Dear Superintendent Dean,

My name is Alan Michels, I live in the Cow Hollow neighborhood of San Francisco. I have been a resident there since 1992. From 1971 -1992 I lived in Marin County.

I have had dogs all my life. I've always carried a deep respect and concern for wildlife and the preservation of natural areas. I take my dogs weekly to Crissy Field, Lands End, Fort Funston, Sweeney Ridge and occasionally I go to Muir Beach. As a responsible dog guardian, I keep my dogs under voice and sight control at all times, clean up after them and keep my dog out of the fenced dunes and vegetative areas. It is crucial for my dog walking friends and me that areas like Crissy Field, Lands End, Fort Funston, Sweeney Ridge, the Marin Headlands and Muir Beach remain open for off leash dog walking access.

I do not agree with the GGNRA's current preferred alternatives as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The rationale provided in the DEIS to allow for a change in the current 1979 Pet Policy doesn't appear to be based upon sound science and long-term monitoring of site specific conditions.

The Department of the Interior deemed a recent study by the National Park Service on the environmental impact of an oyster farm near Point Reyes to be biased, mistake ridden and lacking basis. It seems the '2400 page "study" of canine impact to GGNRA has been slanted in a similar manner to meet a predetermined agenda.

As presented in the draft EIS, the proposed dog management plan eliminates dog-walking (on and off leash) access for all new lands. The GGNRA's mission applies equally to new lands as well as existing lands and it is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands. I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas. I am a donor to the Natural Resources Defense

Council, as well as PETA. Responsible dog guardians as myself sometimes find it difficult to know what areas to avoid. I think the GGNRA should provide better signage and create environmental barriers, such as the vegetative barriers surrounding the tidal marsh at Crissy Field.

As a responsible dog guardian and advocate for animals, I know it is crucial that our dogs are well behaved and trained in order to peacefully co-exist in an urban environment. Without a doubt, having off leash areas for dogs to socialize and exercise is the foundation to a happy and well-adjusted dog. Without access to the small amount of land in the GGNRA we currently have, I am very concerned that many dogs and dog guardians will not have ample opportunity to exercise and recreate.

Having a place where my dog can play, exercise and socialize with other dogs keeps my dog happier and calmer. As a responsible dog guardian, I know it is important that my dog remain well behaved and trained in an urban setting and getting plenty of exercise and socialization is the foundation to a well adjusted dog. Some areas within the GGNRA also serve as a place of solitude for me and provide me with a very important peaceful and safe outdoor space and experience within the San Francisco Bay Area, a large metropolitan area.

Some specific problems with the DEIS include the following points. Please revise the DEIS to correct these errors.

This draft EIS and Plan doesn't recognize that environmental values include both recreation and nature. In many places, the draft EIS treats the environment and recreation as opposing values, i.e., that recreation only harms natural resources. The document doesn't acknowledge that people care about both and that people with dogs can be- and most of us are, good stewards of our environment. The draft plan has the effect of punishing many people because a very small number are uneducated, insensitive, or irresponsible and because the current signage of off leash areas is unclear. The reasonable response to this largely perceived problem is to educate visitors, improve signage and help park visitors follow the rules and learn how to respect the environment, not to ban the rest of us with dogs from the GGNRA. The draft EIS should include an alternative along these lines. The proposed "compliance-based" approach has potential to work, if it is improved to include a robust public educational component and an objective, long-term monitoring program designed and carried out with the community. The GGNRA should develop partnerships with community, animal welfare, and conservation organizations to make this work. These partner groups could bring additional resources to limited federal resources. GGNRA should be a partner with the City of San Francisco and other communities, not an adversary.

The draft EIS also doesn't seem to recognize that many areas of the GGNRA are located in or next to neighborhoods in San Mateo and San Francisco Counties. The draft EIS excludes the quality of the urban environment from its scope, saying it's not significant but the reality is that the GGNRA provides much needed open space in a major urban area. This omission is concerning because the fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) to serve the metropolitan Bay Area. The "human environment" that the EIS is required to study is exactly the dynamic interrelationship between GGNRA and our neighborhoods.

The draft EIS notes some studies and general tendencies of dogs to harm natural resources, but with few exceptions, there is little documented site-specific information that supports the specific bans on off leash dog walking areas. Further, there is also insufficient documentation that considers all the other park visitors that disturb and could also impair the natural resources, be they other wildlife, mother nature, families and children, large groups of tourists trampling in the wildlife protection area at Crissy Field, boot camps, bicyclists, huge crowd attracting events such as Fleet Week, festivals and Walk-a-thons. The proposed broad new limitations are without site-specific science that demonstrates that problems with the quality of GGNRA's natural resources are actually attributable to dogs and not to other factors. Lets not kid ourselves. Degradation to the environment has been caused mainly by the human species. The draft EIS needs to provide full disclosure to the public and decision makers. If dog-related disturbances are having a significant negative effect on wildlife, for example, the draft EIS needs to provide site-specific scientific evidence as documentation and undertake a scientific evaluation as to whether people or other factors are also causing or contributing to the problem noted. If they are, GGNRA needs to provide an analysis that considers whether people should also be restricted from these areas. People need to know this information to be able to comment meaningfully on the draft plan and EIS. The science needs to be sound and the consequences need to be fully and fairly disclosed for everyone ' so that an informed decision can be made.

And lastly, after much consideration, I support a modified Alternative A, the No Action alternative. Alternative A should be modified to include appropriate areas for dog walking on "New Lands", Cattle Hill, Mod Point, Milagra Ridge and Sweeny Ridge, and on Pedro Point Headlands which is about to become part of the GGNRA. If this is not possible, due to defining the No Action Alternative, as the 1979 Pet Policy, then Alternative C should be modified to resemble Alternative A with the inclusion of "New Lands", Cattle Hill, Milagra Ridge, Sweeny Ridge and Pedro Point Headlands as described above.

The draft EIS is biased against and does not take a hard look at the No

Action alternative or variations on that alternative. There are many areas in the GGNRA where the existing 1979 Pet Policy has been working, and where sensitive species are not present and visitor conflicts do not occur or are very infrequent. In addition, the DEIS does not provide site-specific information that these areas are inappropriate for continued dog walking.

Sincerely, Alan Michels San Francisco, CA 94123

Correspondence: Dear Superintendent Dean,

This is the third letter I have written about the Dog Management Plan. My concern is: who will be reviewing the submitted comments and who will make the decisions affecting the final plan.

Since the science of your draft has been repeatedly called into question, I believe an independent panel should review and assess the comments so that there will be some credibility for the final selected alternative. This draft plan is so contentious that an independent outside group is necessary for community acceptance.

Thank you.

Sincerely,

Sally Cancelmo

Correspondence Type: Letter

Correspondence: Dear Superintendent Dean,

My name is Mary Fergus and I am a twenty three year old lover of dogs. My family has always had a loving and loyal dog, even before I was born. As I understand it, my parents were considering having children; the story then goes that my mother decided to test my father with the responsibility of a dog. I suppose he passed because about a year later they had me.

My dog Sophie was a wonderful liver spotted Dalmatian. She was as loyal as they get, and we grew up together kind of like sisters. She was such an

important part of my life. I remember being able to go to Crissy Field and Alta Plaza and play with her off leash. It was such an integral part of my childhood and something I hope to share with my children.

Since Sophie, my family has had two more dogs. A chocolate lab named Grizelda (quite possibly the love of my life), and a goofy fellow Italian Spinone named Raphaelo. We got Grizzly about a year before Sophie died. Some of the best memories I have with my dad and my childhood, were going to Crissy field in the morning with my two dogs and my father. We would go at about 5am when the air temperature is below 50 degrees and the water temperature is always around there. My dad, the young puppy, and I would go swimming while my loyal dog Sophie would sit watch on the beach. Further restrictions on off leash policies would not have allowed me to have that unique experience with my dad and my two best friends.

Now our second dog Grizelda is getting a little bit older, and has an aforementioned companion, Rafaelo. Rafaelo is such a happy young dog and loves to greet every one and every thing he sees. But he is a massive dog; though he probably has the intimidation factor of a Chihuahua, the reality is he is very large and needs lots of exercise. He is a growing boy and brings joy to my family and everyone he meets. New off leash policies would prevent him from being able to frolic happy and free with all of his puppy friends.

To keep a dog and his owners happy and healthy, the dog must have access to off leash walking. For me and my dog walking friends, going to Crissy Field is a necessary part of our day. We love the place and so do our dogs.

Instead of taking away off leash areas, I think the GGNRA should consider adding new areas, and providing better signage and environmental barriers like the ones at Crissy Field. The draft Dog Management Plan and the Draft Environmental Impact Statement does not evaluate the value of these recreational activities and does not adequately consider alternatives such as environmental barriers and providing better signage and education to the public.

Moreover, there is inadequate consideration of the impact of restricting off leash dogs on east beach at Crissy Field on the families that gather there for recreation. Both of my children grew up sharing Crissy Field east beach with their first dog. During many months of the year central beach is not safe because of the high tides. The proposal does not adequately investigate the impact on families of having to use Central Beach year round rather than east beach. There is also no science based explanation for moving off leash dogs off east beach. Please evaluate these alternatives and impacts. Major urban areas such as San Francisco need more places to recreate with dogs

off leash, not fewer.

The GGNRA was created with the purpose of providing recreational opportunities for people. This includes off leash walking at sites like Crissy Field. The citizens of San Francisco benefit greatly from these opportunities. Please do not restrict off leash walking on these sites.

Respectfully, Mary Fergus San Francisco, California 94115 CC:

Correspondence: Re: Comments on Draft Dog Management Plan/Draft Environmental Impact Statement

Dear General Superintendent Dean:

In 1973, the San Francisco ballot measure F to transfer city lands to the GGNRA included an endorsement from Mayor Joseph Alioto, Congressman Phillip Burton, Congressman William Mailliard, along with 69 other notable individuals including Dianne Feinstein, In!-ir L. Burton, Willie Brown and a wide range of organizations, that read:

"The GGNRA is a national urban park established in 1972 by congress to preserve 34,000 acres of land and water in San Francisco and Marin for recreational use by all citizens." "Support national recreation area on your doorstep!"

I believed these leaders who clearly stated the GGNRA would be "for recreation use by all citizens," and I voted for the transfer of city land the NPS. Other voters agreed and the measure passed with 75% approval. Now I regret this vote, since the NPS is proposing to restrict recreation on land once owned by the city and used for recreation when the city controlled it. Ceding city land to the Park Service was supposed to add recreational opportunities for San Franciscans, not subtract opportunities from active use

Adding insult to injury is the inadequate GGNRA DEIS that fails to analyze the potential impacts on neighboring city parks of the DEIS' alternatives that propose severe restricti(n:E; to recreation on NPS land. As a user of my

local park, Stern Grove, and an advocate to:- more open space in San Francisco, I strongly object to the failure of the NPS to examine how the preferred alternatives will impact the use of local parks by the dog community, and what the consequences will be of that increased use on the visitor's experiences and city maintenance costs.

People and dogs will not just disappear because the NPS limits the off-leash use on GGNRA land, nor should the city have to absorb all this activity into our city system. I do not own a dog, but I do support the rights of all dog owners to use both the locally and nationally owned open spaces in San Francisco to exercise their dogs and to have an adequate amount of space for off-leash recreation. The GGNRA must propose a more relevant active recreation policy that appropriately addresses the needs of all park users in San Francisco, without undue burden on the city to compensate for an overly restrictive NPS policy, that was based on a seriously deficient DEIR.

In light of this failure, I request the following actions be done:

1. Require the GGNRA DEIR to complete a comprehensive assessment of all the impacts of any GGNRA recreation policy on San Francisco, including quantifying the current baseline uses and number of users in all city parks and open spaces, and analyzing the potential impacts on these areas if recreational dog walkers are not allowed to use GGNRA sites. Impacts include, but are not limited to, analyzing increased volume of users in all city parks because of NPS proposed policies, and quantifying increased costs to maintain city areas.
2. Until the analysis of city park impacts is completed with the appropriate new alternatives derived from this work, the only acceptable preferred alternative is A, "no change," to protect neighborhood parks.
3. Rather than constricting off-leash areas in the GGNRA, I support increasing appropriate active recreation including new off-leash areas in San Mateo County. Thank you for considering these comments.

Sincerely, Nancy Wuerfel Cc: Senator Dianne Feinstein Representative Nancy Pelosi Ken Salazar, Secretary of Interior Jon Jarvis, National Park Service Director Edwin M. Lee, Mayor, San Francisco Mark Buell, President, Recreation and Park Commission Fort Funston Dog Walkers (FFDW) San Francisco Dog Owners Group (SFD OG)

Correspondence Type: Letter

Correspondence: Dear Superintendent Dean,

GGNRA/DEIS made no good faith attempt to analyze potential impacts on neighboring parks if recreational dog walkers are displaced from GGNRA sites. The DEIS repeats, "An increase in visitation in nearby parks is not likely..." in many instances where an increase in visitation to nearby parks is assured. Consider, as only one example of many, Alternative C, the Preferred Alternative for Fort Funston. Most of the off-leash area at Fort Funston will disappear under this alternative. The many people who visit this heavily used park will not fit into the small areas remaining. Yet GGNRA doesn't acknowledge they will go elsewhere, and says, "An increase in visitation in nearby parks is not likely." (DEIS p 1530) This allows the unsubstantiated conclusion that the Preferred Alternative will have, "No indirect impacts in adjacent parks."

GGNRA/DEIS made no attempt to quantify the number of visitors who will be displaced under the various alternatives. The DEIS acknowledges that Fort Funston is "heavily used by dog walkers," (DEIS p 1530) without providing any useful data. No attempt is made to determine how many of these people will go elsewhere under Alternatives B, C, D, or E (the alternatives significantly restricting dog walkers). At minimum, an attempt must be made to determine a) how many people typically visit Fort Funston, b) how many people can be accommodated in the areas remaining open to off leash dog walking under each alternative, and c) how many people will be forced to go elsewhere to walk off leash under the various alternatives. The DEIS merely claims that Alternatives C, D, and E would not result in increased visitation in nearby parks. This is arbitrary and capricious since it is not based on any evidence.

GGNRA/DEIS analysis of potential impacts on neighboring parks is so casual that the study hasn't attempted to find out where people will go when displaced from GGNRA sites. The authors of the DEIS identify Lake Merced as the off-leash park nearest Fort Funston. In fact, the off-leash area at Lake Merced is seldom used because it requires a long walk from the parking lot, along a busy, dangerous street to get there. People displaced from Fort Funston generally go to Stern Grove/Pine Lake. This was demonstrated when Fort Funston was temporarily closed for the tsunami alert on Friday, March 11, 2011. The gardener responsible for Stern Grove reported that more than 200 dogs were in the off leash area that day, when the peak count of dogs in that area is 60 and that on weekends. The parking lot was full, with cars circling the neighborhood looking for parking. (West Portal Monthly, March 2011) The experience at Stern Grove/Pine Lake on March 11, 2011 is a preview of the results of drastically curtailing off leash recreation at Fort Funston.

The Stern Grove off leash area is limited in size. Crowding from displaced

dog walkers, as demonstrated on March 11, 2011, will have rapid and severe adverse impact on the park itself, particularly trampling the turf. Further, Stern Grove/Pine Lake contains a San Francisco Recreation and Park Department "Natural Area," in which native plants have been laboriously restored. Crowding with additional dogs and people will have an adverse impact on that Natural Area. Crowding will also have an adverse impact on the experience of visitors to Stern Grove/Pine Lake, both those with dogs and those without.

Displacement of people from Fort Funston to Stern Grove/Pine Lake is just one example of the DEIS failure to adequately analyze the impacts of various alternatives on neighboring parks. Natural Areas exist throughout San Francisco's city parks. There are 43 acres of official off leash area (Dog Play Areas) in San Francisco parks; 80% of that acreage is in or adjacent to a designated Natural Area. (NAP Draft Management Plan) Displaced dog walkers will have an adverse impact on Natural Areas and restoration efforts throughout the City. The DEIS has analyzed none of these impacts.

By treating the question of impacts on neighboring parks so casually, GGNR/DEIS badly underestimates the number of people who will be displaced by their alternatives, gets the location of those impacts wrong, and thus hasn't analyzed the impacts on neighboring parks from the various alternatives.

Because GGNRA/DEIS has no evidence guiding their evaluations of whether their alternatives will displace people to neighboring parks, they give contradictory answers to the same question. When discussing potential impacts to Lessingia on page 1311, the Preferred Alternative (C) at Fort Funston "may cause some of the dog walkers to visit other locations." People will go elsewhere but there will be no adverse impact because there is no Lessingia at Lake Merced. But when discussing potential impacts on visitor experience in nearby parks on page 1530, exactly the same Preferred Alternative (C) at Fort Funston leads to, "An increase in visitation in nearby parks is not likely." Here GGNRA needs to claim dog walkers would not go elsewhere in order to claim there would be no adverse impact on visitor experience at Lake Merced. There is real irony here. DEIS/GGNRA claims off leash dogs will have adverse impacts on Lessingia at Fort Funston, where there is no Lessingia and no record that Lessingia was ever there. But the same off leash dogs, if displaced to Lake Merced, will have no adverse impacts on Lessingia even though Lessingia definitely grew at Lake Merced historically, and likely grew specifically in the off leash area at Lake Merced (on "The Mesa"). (USFWS 2003, p25-27, Figure 1 p 5)

Only Alternative A, no change, will have no adverse impact on parks near Fort Funston. Again, Fort Funston is just one example of the failure to analyze impacts on neighboring parks. The DEIS is equally casual about the

other sites in the GGNRA.

If you add some off leash recreation to the GGNRA sites in San Mateo County to Alternative A, No Action, you will have a truly preferred alternative.

Sincerely,

Keith McAllister Oakland, CA 94611

Correspondence Type: Letter

Correspondence: Dear Superintendent Dean,

I write in support of adopting a Dog Management Plan for the GGNRA.

My interests in the GGNRA are as a San Francisco resident, a frequent park visitor and a volunteer participating in wildlife monitoring and stewardship activities. I enjoy the park for the unique opportunities to experience the natural and cultural resources and I appreciate the values of our National Park System.

I concur with the assessment that the natural and cultural resources and park visitor experiences have been, and continue to be, negatively impacted by the presence of substantial quantities of domestic dogs, both on-leash and off-leash, within the GGNRA. On many occasions my own park experiences have been negatively affected by the presence of dogs. I have had personal conflicts with dogs and their owners/guardians as well as being witness to conflicts between dogs and wildlife. While I am supportive of many aspects of the Preferred Alternative, I have the following comments to offer: Baker Beach ' The Preferred Alternative for Baker Beach is problematic for several reasons. Splitting the beach into leash-only and no-dog areas will lead to confusion, non-compliance, visitor conflict and continued management problems. Furthermore, allowing dogs near the creek outlet, an area often used by shorebirds, will increase the potential for wildlife conflicts. As a means of eliminating these problems and of creating more opportunities for visitors to enjoy dog-free National Park experiences, I suggest designating the entire Baker Beach area as a dog-free zone.

Lands End ' I support the Preferred Alternative with the following changes: no commercial dog walking, one dog per visitor, compliance rate of 95% or greater, and establishment of a simple and effective reporting system.

Sutro Heights Park' I support the Preferred Alternative with the following changes: no commercial dog walking, one dog per visitor, compliance rate of 95% or greater, and establishment of a simple and effective reporting system.

Ocean Beach ' I support the Preferred Alternative for Ocean Beach. To improve upon the Preferred Alternative, I suggest using symbolic fencing and adequate signage to delineate the south border of the ROLA. A simple post and cable fence could be placed along the border from the sea wall to the plover sculpture. A well defined border will help to reduce compliance problems and visitor conflict.

Additionally, I suggest changing the name "Snowy Plover Protection Area" to "Wildlife Protection Area". A designation of Wildlife Protection Area would be inclusive of all wildlife species that use the beach habitat area.

Ft. Funston ' I support the Preferred Alternative for Ft. Funston. To improve upon the Preferred Alternative, I suggest installing a fence, with access gates and adequate signage, along the border of the ROLA north of the main lot. A borderline fence will clearly delineate the boundary of the ROLA and will minimize compliance problems and visitor conflict. Signs should be posted clearly identifying the area as an off-leash dog play area and stating the voice and sight control rules.

Additionally, I suggest aggressively restoring the coastal scrub habitat throughout Ft. Funston. Plant and animal species, as well as park visitors, have been displaced from Ft. Funston over time as dog play activities have increased. A proactive effort must be made to bring back the visitors who are interested in proper stewardship of this area of the park. General Comments Commercial dog walking should not be allowed. Commercial dog walking does not relate to the purpose and mission of the National Parks. Commercial dog walking provides no service or benefit to park users, has negative impacts on park resources and park visitors, and serves only for the capital gain of private enterprises at the expense of the American public.

Commercial dog walking will require additional annual expenditures for administering and overseeing a permitting process, additional law enforcement, additional resource maintenance and additional public relations.

The DEIS estimates that over 1000 dogs will be commercially walked within the GGNRA daily (p. 63 p. 276). Commercial dog walkers, with up

to six dogs, will negatively impact the experience of park visitors on trails and in other areas of the park. If permitted, commercial dog walking activity will increase within the GGNRA and will displace park visitors, of all legitimate user groups, from areas of the park. Commercial dog walkers will dominate the ROLAs, displacing other park visitors. Commercial dog walking vehicles will occupy parking spaces resulting in fewer spaces available for park visitors. If allowed, commercial dog walking operations will have a dominant presence in some areas of the park thus affecting the overall character and ambiance of those areas.

Currently, commercial dog walking is not permitted within the GGNRA or any other National Park unit and there is no justifiable reason to do so. The NPS is well within the scope of its management directives to not allow commercial dog walking and I support this position.

Park visitors should be limited to one dog per visitor. On trails, visitors with more than one dog have a wider space requirement and have the potential to impact other park visitors by impeding their progress along the trail. In ROLAs, it is not practical to allow voice control of more than one dog per person. With few exceptions, dog handlers are not capable of managing more than one off-leash dog at a time.

The proposed compliance percentage of 75% is too low. Given that many hundreds of dogs are walked within the GGNRA daily, a 25% non-compliance tolerance would create a situation where park resources are significantly negatively impacted. The expectation should be that non-compliance is a rare occurrence and the compliance strategy should reflect that in its standard. The standard of compliance should be the same as for any other park rule or law. An acceptable rate of compliance is somewhere near 100%. A simple and effective reporting system should be established. The dog management plan should include a means by which park visitors can easily and effectively report non-compliant behavior. Park visitors are sometimes reluctant to report observed violations due to the time involved in making the report. A public reporting system should be incorporated into the plan that will be user friendly and workable. Such a system should require only a few moments of time and be an effective documentation of the violation.

The plan does not provide an adequate amount of hiking trails and picnic areas where visitors can enjoy a dog-free, National Park quality experience. Within San Francisco, the plan provides no significant area where park visitors can spend the day hiking and/or picnicking in a dog free environment. A solution to this problem would be to designate all of the coastal bluff areas, from the Golden Gate Bridge to and including Baker Beach, as a dog-free zone.

Sites Specific Comments Ft. Mason ' I support the Preferred Alternative with the following changes: no commercial dog walking, one dog per visitor, compliance rate of 95% or greater, and establishment of a simple and effective reporting system.

Crissy Field WPA ' The DEIS indicates that the east boundary fence will be relocated 200 feet eastward at a position 900 feet from the NOAA pier (p. 60). The language of the plan should allow the National Park Service flexibility in determining the exact location of the fence and consideration should be given to the visual penetration effect as well as the geographical conditions of the immediate area.

Under the preferred alternative, off-leash dog activity directly adjacent to the east boundary fence will pose a visual threat that will penetrate into the Wildlife Protection Area, effectively rendering a portion of the eastern WPA as non-viable habitat during daytime use hours. Given this concern, the fence should be placed a reasonable distance eastward, beyond the actual 900 foot border line, to allow for an adequate buffer zone.

Additionally, the geography of the area of fence placement is somewhat complicated by non-uniform conditions which include a variety of substrates, varying elevations, several lobes of fenced dune habitat areas, and a variety of pedestrian pathways. Consideration should be given to all of these conditions and fence placement should be such that will accommodate ease of pedestrian traffic flow while maintaining adequate protection of the WPA.

When installed, the fence should extend to the water at extreme low tide. Crissy Central Beach ' The Central Beach ROLA should be fenced and gated. Fences at the west and east ends should extend to the water at extreme low tide. Adequate buffer zones (-300ft) should be included beyond the west and east boundary fences to protect the WPA and the lagoon outlet from the influences of excessive dog play activity. Access points from the promenade should be gated. Signs should be posted clearly identifying the area as an off-leash dog play area and stating the voice and sight control rules.

Crissy East Beach ' Fencing should be installed to protect the lagoon outlet zone. Outlet areas from bodies of water into bays or oceans are of high habitat value. The outlet zone should be included as part of the protected lagoon area and similarly fenced.

Crissy East of the Lagoon ' The Freshwater Swale should be designated on the area maps as a no dog zone.

Crissy Promenade ' I support the Preferred Alternative with the following

changes: no commercial dog walking, one dog per visitor, compliance rate of 95% or greater, and establishment of a simple and effective reporting system.

Crissy Airfield ' The foot paths that cross the airfield are multi-use trails and should be designated as on-leash areas. Allowing off-leash dogs on the airfield trails will lead to user conflicts. The airfield ROLA should have some type of physical barrier along the boundaries. A physical barrier will clearly define the ROLA area. Clearly defined boundaries will maximize compliance and minimize conflict. Consider a movable barrier that can be set up and taken down as needed. Signs should be posted clearly identifying the area as an off-leash dog play area and stating the voice and sight control rules.

The eastern portion of the airfield should be a no-dog area. The Crissy airfield attracts a wide variety of grassland bird species, including rare vagrants, and is a popular venue for wildlife viewing.

Ft. Point ' I support the Preferred Alternative with the following changes: no commercial dog walking, one dog per visitor, compliance rate of 95% or greater, and establishment of a simple and effective reporting system.

Correspondence Type: Letter
Correspondence: Dear Mr. Dean,

I've been in the Bay Area since 1993, and my husband, Marc Weibel, is a life-long Bay Area resident who has lived in San Francisco since 1990. We have lived in the Sunnyside neighborhood in San Francisco since 2007. We are current members of several local environmental organizations, including the Golden Gate Audubon Society, WildCare, and the Marine Mammal Center, as well as national organizations such as the Nature Conservancy and the Ocean Conservancy. We have contributed to the Golden Gate National Parks Conservancy and California Audubon, and have participated in California Coastal Clean Up Day. We participate on the local birdwatching e-mail list, SFBirds, on Yahoo Groups. In short, we appreciate our local natural environment, and we love birds.

We are also dog owners ' our current dog is a rescue from Northern California Family Dog Rescue, and our previous dog came from the Milo Foundation.

I am writing to comment on the proposed changes to the rules concerning

dogs in the GGNRA. Since Ocean Beach is our main destination within the GGNRA, I will restrict my comments to the proposal for that area.

We visit Ocean Beach from one to three times each week, usually walking along the beach between Sloat Boulevard and Judah Street. As birdwatchers, we enjoy seeing the Snowy Plovers and other shorebirds. As responsible dog owners, we always keep our dog on leash, pick up waste, and do not disturb the wildlife. We treasure our ability to visit this unique location with our dog, and we respect other people, wildlife, and the law.

We are very disappointed that the GGNRA prefers Alternative C, which would prohibit dogs from Ocean Beach south of Stairwell 21.

We support the year-round leash law proposed in Alternative E, which would protect the habitat and migrating shorebirds, and allow responsible dog owners to continue to use Ocean Beach.

1. Safety As a woman who often walks alone with her dog, I find Ocean Beach invaluable. To me, it is a singular location in the city of San Francisco not only due to its beauty, but because the 3.5 mile round trip between Sloat and Judah is flat, free of traffic, and where, with my dog, I feel safe to walk alone. Losing the ability to walk on Ocean Beach with my dog would be an immeasurable loss to me. Without my dog, I would not feel free to walk Ocean Beach.

Not only does my own dog make me feel safer, but other people walking dogs makes me feel safer. The stretch of Ocean Beach between Sloat and Judah is little used, and without the people with dogs, there would hardly be anyone left. I would feel too removed from civilization to feel safe walking alone.

Many who use this part of Ocean Beach are dog owners, and I've noticed that many are women walking alone with their dogs, like me. I did not see anything in the EIS that considered who the current users are and who would be affected by the ban of dogs from Ocean Beach, so I wanted to provide this data point. Restriction to the Coastal Trail, as proposed in Alternative C, is not a comparable experience. The trail's proximity to 35 mph traffic, the occasional camper in the dunes, and its distance from shore and shorebirds, makes it less safe, beautiful, and peaceful.

2. Enforcement Whichever alternative is chosen must be enforced. Without enforcement, I predict that those who disobey the dog laws will continue to do so. If the preferred Alternative C is selected, only those of us who obey laws will end up being punished, and none of the goals of the new rules will be achieved. In the years that I have been visiting Ocean Beach, I have only seen park rangers on the beach once -- January 10, 2010. (It was such a

notable event that I wrote it down.) If there were more enforcement, I wonder if we would need to be having this discussion now.

3. "No-Dog Experience" The EIS describes surveys that asked people whether they support off-leash dogs or not. I did not see any questions asking whether people wanted a dog-free experience, yet the GGNRA is making policy decisions based on this position. I saw no data to support the claim that this desire exists within the community.

Even given that some people don't like dogs, Ocean Beach is wide and open enough that no one need interact with a unwanted dog, except perhaps during a very high tide. Many people do enjoy dogs. We do not allow our dog to approach strangers, but strangers often approach us to meet our dog. (It happened even more often with our previous dog, Prunella, who was in a dog wheelchair. She was very popular.) We love seeing dogs on the beach, especially during the years when we didn't have one of our own. We love the chance meetings we have with our fellow San Franciscans and their dogs, and the people we meet appear to feel similarly. I feel that Ocean Beach without dogs would be a very different, less friendly place indeed.

4. Share Ocean Beach While I see some dog owners like myself who comply with the law, of course there are many who do not. While I do not approach every non-complying owner, I am happy to have had one friendly, positive conversation with one that resulted in her leashing her dog. It gave me hope that increased education (along with enforcement) can result in everyone sharing the beach ' people, wildlife, and dogs.

We love Ocean Beach ' it's where my husband asked me to marry him. Our wedding party was at the Beach Chalet. Afterwards, we had a bonfire ' in one of the approved fire pits, of course ' so that we could celebrate with our dog. We hope to always visit Ocean Beach, and always to be welcomed with our dog.

This past winter, we were birding Crissy Field, and saw banners in the Warming Hut that promoted "parks for all forever." These banners saddened me because I felt that GGNRA's "all" did not include us. I hope the alternative that the GGNRA chooses takes into consideration the needs of all its users, including responsible dog owners.

We hope you will choose Alternative E. Please continue to allow dogs on leash on Ocean Beach.

Thank you for reading my comments.

Sincerely, Christine Martinez Begle

Correspondence Type: Letter

Correspondence: Dear Superintendent Dean,

My husband (64) and I (67) have owned our small (lot is 25 x 100 ft.) home in the Glen Park/Bernal neighborhood of SF for 30+ years. 2 years ago we adopted a rescue dog for companionship and exercise. Because of our ages we initially looked for an older dog, but fell in love with Penny (now 3, a 60 lb. Chow/Shepherd mix, see pix) at the SPCA pet fair and embarked on a new, demanding and immensely satisfying relationship.

Over the past two years we've spent countless hours exploring San Francisco with Penny, but our favorite spot has been Fort Funston because of the dog-friendly environment where we can go for long walks together and she can socialize with other dogs and humans off-leash. Twice a week she goes there in a play group with a dog-walker (I quite often tag along because it's so much fun watching them play together ' Penny's best friend is a year-old Weimie she's known since he was 2 months old), and 2 - 3 times a week she goes there with Mark or me; other days we go to city parks for her daily 2 mile walk. For a year and a half we went to A Better Way for Dogs and learned voice control and how to work with her on and off leash, and we've worked hard to be responsible dog-owners. As long-time environmentalists (I'm a Sierra Club member) we also try to be responsible stewards of the natural world (we used to go to Ocean Beach to do clean-up in the `80's ' young people thought we were weird!), so we keep a close eye on her when we're out there, and have worked hard to exercise voice control when she's off-leash.

I've attended 2 NPS meetings as well as the SF Supervisors meeting to learn about the Draft Proposals for the GGNRA and have been utterly dismayed at the extreme reductions in on/off,leash recreation outlined for dogs and their guardians. After studying the Fort Funston ROLA proposals it seems clear that no dog behaviorists were included as DEIS advisors, because neither the on or off-leash areas have any shade!!! Also, as a senior, I'd risk injury trying to get Penny to the beach (which as you know is often unusable because of high tides or bad weather) on- leash, and because the trails would be crowded Penny would be anxious, esp. on-leash, and more likely to be aggressive (evincing possible "leash rage"). The ROLA proposed next to the parking lot is completely inadequate for the number of dogs using Fort Fun and an invitation to non,compliance which under the current proposal would eventually result in dogs being banned entirely. The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for

recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents, or to evaluate the impact on local parks of such a drastic change in existing policies..

The recent brochure I got in the mail from the Golden Gate Conservancy was headed "Parks for all Forever" ' unfortunately as dog-owners we feel excluded from this generous vision by the DEIS. Having read quite a bit about NPS dog policies, it seems clear that our dog, and therefore we, are not welcome in the national park system, with very few exceptions, most of them a thousand or more miles away. Obviously there are areas where dogs shouldn't go, for endangered species preservation or their own well-being. However, in general, we don't understand why the policy doesn't allow leashed dogs wherever humans are allowed, and why there are not many more ROLAs in the NPS as a whole. Since some 15% of Americans own dogs, it does not seem unreasonable that 1% of Parklands would be set aside to allow access for them too, and to this end we think:

- 1) The National Park Service should treat the GGNRA as a model for developing more enlightened dog policies throughout the park system, which could be co-ordinated with the "Let's Move" efforts which our First Lady Michelle Obama is so actively involved in, encouraging families to get outside with their dogs, educating them about dog behavior, and providing room for off-leash recreation (you can't play catch when your dog is leashed!)..
- 2) Hire dog behaviorists to improve the existing models Fort Funston, Crissy Field and other important GGNRA dog recreation areas including the New Lands. Point Isabel Regional Shoreline is a sophisticated model of multi-recreational use which could be drawn upon and then used throughout the park system. Consider experimenting with a "green" approach to dog waste, providing compost stations like those coming into use in Canada, or biodegradable bags which could then be composted instead of going to landfills.
- 3) Signage and fencing or other barriers for areas closed to the public and/or dogs should be abundant and educative.
- 4) Remove the "poison pill" plan with regard to compliance.
- 5) Require all dogs using the GGNRA to display a current license together with contact information in case of emergency and to be under voice control when off-leash.

6) Set up a low-cost automated permit system for dogs (\$1 - \$2 a day per dog) which will help defray any extra maintenance costs.

7) At Ocean Beach either: retain and expand existing snowy plover protections to include human disruption as well as heavy equipment, kite flying, beach fires and other known factors affecting the bird population. Where feasible create plover-friendly areas including oyster shells for cover. Or, recognize that Ocean Beach may never become a nesting area because of the heavy human presence there. Is it true that only 7 plovers have been sighted in the annual counts since the dog ban was instituted? Maybe GGNRA plover restoration efforts should be concentrated elsewhere instead of closing off 2 V2 miles of a beach much needed for human recreation, with dogs welcome on-leash and off in a larger designated ROLA..

After much thought, I support Alternative A, the No Action alternative, and retaining the existing 1979 policy with changes as outlined above. It's especially important that the New Lands policy be changed to include respect for existing uses of the lands including on and off-leash dog-walking. I see many dog-walkers at Fort Funston who drive up from San Mateo County because there are so few off-leash areas there, and the New Lands proposal would exacerbate this situation. State and county parks in San Mateo have extremely restrictive dog policies ' perhaps an enlightened NPS policy would have a trickle-down effect in this regard.

It's important to remember that dogs have important well-documented roles to play in providing companionship, exercise and protection (I feel much safer hiking now that I have a dog) for their humans.

Other changes we would support:

Pit-bulls (and other breeds specified in local ordinances) must be neutered or on-leash. Owners/walkers must have a leash for each dog and a bag for feces pickup.

Dogs may be off-leash during daylight hours only

Dog caregivers must leash excitable dogs within 50' (? not sure how far) of horses, hang-gliders, and other stimuli known by the owner to cause prolonged barking or aggression. When sharing paths with young children and bicyclists, owners must leash their dog and/or withdraw a safe distance to reduce other users anxieties. Owners are expected to act as good-will-toward-dogs-ambassadors, recognizing that many people have a high level of anxiety about dogs. Inappropriate or aggressive behaviors which caregivers don't take immediate steps to control should be reported and may result in the dog and its caregiver losing access privileges.

Those reporting such behavior can call a hotline and give an incident report describing the dog, its care-giver, time/place and vehicle license number if known, as well as a brief description of the problem. If urgent they should call 911.

No off-leash dogs in or within 25' of parking lots.

We hope that you and the Park Service can find ways to reconcile the many conflicting interests surrounding this issue, and develop a more humane and sensible approach to the problem which will continue to welcome us and our dog in the GGNRA.

Sincerely, Judith D. Kucera and Mark Hein,

cc The Honorable Nancy Pelosi, Secretary Ken Salazar, Mr. Jon Jarvis, NPS Director

Correspondence: I would like to add my name to the list of dog owners who are asking you to leave the areas now available to voice controlled, unleashed dogs,as is.

There is known evidence that a socialized dog is a better dog. The effects of constant leash control is damaging to the animal if it is not allowed to run or play without it. The dogs that are given the freedom and joy of being off leash are healthier and happier. Their owners are too.

The areas that you are proposing to close to these dogs and dog owners are the last bits of land that have given us joy. If you restrict use to the limited areas you propose you will find an over population of dog owners and dogs crowding the little space because it will be the only land open to unleashed dogs. It may cause more chaos and complaints of another sort than the ones you hear at present. And what will you do then? Ban all dogs from being off leash forever in the GGNRA?

I understand that we are not the only users of the GGNRA. I have heard that non-dog owners do not appreciate a cavorting dog but is that enough reason to change the present land use? I have heard that one reason for the proposed change is to avoid injury to park personnel who have to help dog owners find their lost pets. I have also heard the reason the restrictions are proposed is because dogs damage the plantings and land. Really? Don't we humans do the most damage? Are you going to ban us? And aren't park

personnel also risking injury when they look for a lost child?

Please leave the use of the land as is.

Sincerely, Christa Wulle, PHD

Correspondence: Dear Mr. Dean,

When my 3 children begged me to get a puppy 2 years ago, it took me a considerable time to decide with a main consideration how can we give him the best life while I have 3 young children of my own. We adopted Khai jiew a few months later. He is my first dog.

I immediately looked into where to take him out for a daily run since he is a herding dog. I know he needs his off-leash run for at least 30-60 min a day. I took him to Fort Funston and felt in love with the park. I often cannot take him to city parks where there are a lot of people laying down for some sun. If dogs like him do not have access to off-leash area, they will cause more behavior problems including barking and biting, which we do not want to have in the metropolitan area. When I heard about proposed restriction off-leash dog walking, I do need to stand up for all dogs even though I am often shy, a typical immigrant Asian woman, when it comes to speaking up. Please consider the following comments and requests.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off-leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions.

It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option.

The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal.

The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents.

After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program.

Thank you for your consideration.

Sincerely, Angkana Kurutach San Francisco, CA 94115

Correspondence Type: Letter

Correspondence: Dear Superintendent Dean and members of the committee developing the Dog Management Plan:

The purpose of this letter is to express my concerns about the proposed Dog Management plan alternatives. I am a tax paying citizen of the United States and City and County of San Francisco. I have a dog and I use the GGNRA with my dog for healthful exercise and recreation. The DEIS serves to inappropriately limit the rights of the tax paying public.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off-leash dog walking areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions.

It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I want

to protect the GGNRA's natural resources, I believe options other than restricting dog-walking access should be considered first. I favor an approach that truly balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such alternatives as a reasonable option.

The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and is not based on any documented impacts of non-compliance, just the mere fact that non-compliance occurs. Because it will change the status of areas from off- to on-leash or on-leash to "no dogs allowed" automatically and permanently if non-compliance is alleged, it will deny the public the chance to comment on these major changes when they occur. That violates the law that requires public comment when a change is either significant or highly controversial, as these changes would clearly be. It must be removed.

There are, however, some improvements that a modification could address for the positive, specifically as they relate to Crissy Field:

1. The crushed gravel promenade from the parking lots west past the grassy meadow is of particular concern. There are dogs on and off leash, bicycles, runners, pedestrians, children learning to ride bikes, etc. Surely you have seen on weekends it is a mob scene and recipe for accidents. Leashing dogs in this area and eliminating bicycles would certainly cut down on the risk of injuries to all users of the promenade.
2. Enacting the 1979 Pet Policy would return the west beach to a leash free environment all year round providing more areas to ease the density of dogs rather than commit them to smaller confines as proposed by GGNRA.
3. Professional dog walkers should be limited to a manageable number of dogs per person. Some are extremely conscientious and keep the dogs engaged. But there are also the dog walkers who meet up with other dog walkers and stand around and chat while 15 to 20 dogs run wild around

The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents.

I uphold my responsibility to manage my dog under voice control and on

leash. I believe it is incumbent on all dog guardians and handlers to do the same and maintain peaceful existence at all GGNRA sites. I do not feel it is appropriate for GGNRA to arbitrarily take away citizens rights as indicated in the draft plan. There are times in the day that the majority of people using Crissy Field and other beaches in the GGNRA are people who are with their dogs. Removing dogs from the beach will overburden the city parks and other GGNRA sites and negatively affect the health of the people and dogs in San Francisco. The exercise that we humans receive exercising our dogs at the beach positively contributes to our overall sense of well being and physical condition.

After careful consideration, I support a modified Alternative A (the "No Action alternative) that codifies the 1979 Pet Policy as it was originally written (there is no evidence in the DEIS to support the closures of beach access because of the presence of snowy plovers), and that includes off- and on-leash access on GGNRA lands in San Mateo and on new lands that become part of the GGNRA, especially those areas in both that have traditionally had dog walking. Ms. Barbara Wong 94102-4352 San Francisco;

Correspondence Type: Letter
Correspondence: Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The

Park Service should revise the dog management plan to:

? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation.

? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.

Exclude speculative, exaggerated, biased, or misleading statements and studies. ? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).

? Enable professional dog walking and align any professional dog walking rules with county or city regulations.

? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

28% of households have a dog. I do not have a dog. I am an amateur birder. I support dogs off leash in these areas.

Sincerely, Edmund L. Merrill

Correspondence: Dear Superintendent Dean,

A committee of the National Academy of Sciences recently evaluated the work of National Park Service scientists regarding oyster culture in Drakes Bay. NAS reported in a news release, May 5, 2009, that, National Park Service scientists, "selectively presented, overinterpreted, or misrepresented the available scientific information," and, "exaggerate[ed] the negative and overlook[ed] potentially beneficial effects." The GGNRA/DEIS in a similar manner selectively presents, overinterprets, and misrepresents the available scientific information regarding recreational dog walking, and exaggerates the negative and overlooks the beneficial effects of off leash recreation in the GGNRA.

The DEIS uses many literature citations to make the case that dogs have serious adverse impacts on wildlife and the environment in the GGNRA. Indeed the list of references in the DEIS is 27 pages long. Unfortunately,

when closely examined, there is very little evidence behind most of the claims of adverse impact. There is little site-specific documentation of harm caused specifically by dogs. And there is no documentation or quantification of harm caused by all other park visitors. So, dog-caused problems cannot be evaluated in context. The DEIS is selective in what literature it cites, in a manner prejudicial to people who use the GGNRA for recreation with their dogs. Further the citations are selected and presented to mislead the reader. I list below a few of the misleading literature citations.

Misleading Literature Citations in the DEIS

Page 414 1. DEIS: Discussing geologic resources at Fort Funston. "Dogs walking or running through dune areas ... accelerate the natural sand migration process (NPS 2010b)."

The citation is simply wrong. NPS 2010b is Golden Gate National Recreation Area: Environmental Impact Statement for the Extension of Historic Streetcar Service. NPS 2010b says nothing about dunes at Fort Funston or elsewhere, nor anything about dogs; NPS 2010b discusses the area around Fort Mason, which is about as far from Fort Funston as you can get and still be in San Francisco. There are no dunes there.

Further, a citation to a document that is 31 MB long requires page number or other locator. Otherwise it is not a real citation; it's virtually impossible to check. Fortunately, there is a pdf version of NPS 2010b available online which is searchable. Searching for the words "Fort Funston," "dunes," and "dogs," demonstrates conclusively that 2010b contains nothing about dogs or dune migration at Fort Funston.

The false citation to NPS 2010b is made in support of a totally fabricated piece of pseudo-science. There is no evidence that dogs accelerate dune migration at Fort Funston. GGNRA staff just made that up. It is easy to observe dune migration at Fort Funston. The most dramatic dune migration over the last ten years can be seen in the restricted areas with very little dog (or human) traffic.

2. DEIS: Still discussing Fort Funston. "Nutrient addition to soils is at high levels at this site due to the high number of dogs at the site. Major impacts on soil chemistry would be expected at this site due to nutrient input from dog waste and urine."

This quote cries out for a literature citation, but there is none. GGNRA has presented no evidence of any kind that supports the claim of significant alteration of soil chemistry at Fort Funston due to dogs. GGNRA was repeatedly asked during Negotiated Rulemaking for evidence to support this claim, but none was provided. It is clear no such evidence exists; GGNRA

staff just speculate. That's not science. And it's misleading to state that nutrient input from dog waste is significant when there is no supporting evidence to cite.

Page 461 DEIS: "A substudy of the San Francisco Sewage Master Plan determined that bacterial contamination of waters off Ocean Beach was significant due to dog waste deposited along the shoreline (NPS 1999, 21)"

This is a very misleading reference to a nonexistent document. NPS 1999 is not "a substudy of the San Francisco Sewage Master Plan;" NPS 1999 is Natural Resources Section, Resources Management Plan, Golden Gate National Recreation Area, December 1999. It is likely that no such substudy of the San Francisco Sewage Master Plan exists. During Negotiate Rulemaking in 2007, I challenged GGNRA's claim to dog waste contamination at Ocean Beach, writing, "Unless the substudy that made this claim can be presented for examination, this claim should be stricken from the Attributes Table." The NPS reply was, "[I] put in a call to SF PUC Water Quality Bureau and others to try track down substudy; so far no luck ' they are not aware of any such study. We may have to strike this from Attributes table if neither we nor city can locate. (SES)" It is now 2011. No substudy has been produced, but GGNRA continues to make the claim and refer to the nonexistent document, with a citation to make it appear that the claim comes from a real document.

Not only is there no evidence of significant dog fecal contamination of Ocean Beach, there is good evidence that the dog fecal contamination doesn't exist there. SFPUC monitoring of San Francisco beaches for e. coli and enterococcus bacteria from January 1 to March 17, 2007 showed that off leash beaches do not have higher fecal contamination than beaches that do not allow dogs. China Beach (no dogs) and Aquatic Park (no dogs) had higher bacterial counts than Ocean Beach and the off leash section of Baker Beach. Baker Beach at the Lobos Creek outlet had consistently higher counts than other sites. The creek is fenced and no dogs are allowed in Lobos Creek Valley adjacent to the creek. (This early 2007 reporting period was around the time the GGNRA claim of dog fecal contamination showed up in the Attribute Table for Fort Funston.)

SFPUC monitoring of e. coli and enterococcus bacteria at San Francisco beaches continues, and up-to-date data is available on the SFPUC website. The April 19, 2011 data show Ocean Beach is still extraordinarily clean: most readings are the lowest reportable category'less than 10 bacteria per 100mL. No reading at Ocean Beach is higher than 10. The bacterial counts at "no dogs" beaches remain high, including Aquatic Park and Baker Beach at the Lobos Creek outlet.

GGNRA/DEIS had up-to-date, accurate data on bacterial contamination at

Ocean Beach available. Any member of the public can go to the SFPUC website. Instead of using the real data, GGNRA/DEIS made up evidence from an alleged pre-1999 document that does not exist.

Page 1115 1. DEIS: "It has been suggested by several sources that dogs, 'particularly while off leash, increase the radius of human recreational influence or disturbance beyond what it would be in the absence of a dog' (Sime 1999, 8.4; Miller et al. 2001)"

Miller et al. does say, "if recreationists allow their dogs to roam freely off of a trail, the 'area-of-disturbance' increases, because the dog is no longer on-trail," but this doesn't come from any evidence in their study. By lifting this one quote from Miller et al., and not sharing with their readers the main thrust of the paper, the DEIS has turned Miller et al. upside-down. The real content of Miller et al. , which comes from their research data, is, "...in grasslands for vesper sparrows (*Poocetes gramineus*) and western meadowlarks (*Sturnella neglecta*), the smallest area of influence and shortest flush distance and distance moved resulted from the dog-alone treatment, and these responses were greater for the pedestrian-alone and dog-on-leash treatments." and, "for American robins (*Turdus migratorius*), the area of influence, flush distance, and distance moved did not generally differ between the pedestrian-alone and dog-on-leash treatments." (Emphasis added)

In other words, Miller et al. says dogs disturbed the birds less than people with dogs or people alone, and robins were disturbed as much by people alone as by people with dogs. DEIS does not report what Miller et al. actually says about dogs disturbing wildlife.

The quote beginning "particularly while off leash..." does come from Sime 1999, but Sime offers no studies or citations to support her claim.

So, Sime offers no evidence whatsoever; Miller conducts field studies with real dogs and real birds. DEIS chooses to accept Sime, and misrepresent Miller.

2. DEIS: "'At some level, domestic dogs still maintain instincts to hunt and/or chase' (Sime 1999, 8.2)"

This is quoted from the abstract to Sime 1999, before specific studies are discussed. Sime offers no studies, citations, or evidence in the body of the study to support the statement.

3. DEIS: "...dog presence in and of itself may be an agent of disturbance or stress to wildlife' (Sime 1999, 8.3)"

Note the "may" in the quote. Again, Sime offers no studies, citations or evidence behind the statement, which comes from the introduction, before specific studies are discussed.

4. DEIS: "...and animals that are prey of wild canids may perceive dogs as predators and may be subject to nonlethal, fear-based alterations in physiology, activity, and habitat use (Miller, et al. 2001)"

This statement is not in Miller et al. This appears to be a falsified citation. However, with two "may"s in the sentence, it would be hard for the sentence to be definitively false in any case. Non-falsifiable statements are not scientific.

5. DEIS: "Generally, potential impacts on wildlife as a result of interactions with domestic dogs could be broadly classified as falling into three categories: harassment, injury, or death. Harassment is the disruption of normal maintenance activities, such as feeding, resting, grooming, and can include disrupting, alarming, or even chasing wildlife.... If dogs chase or pursue wildlife, injuries to wildlife could be sustained directly or indirectly as a result of accidents that occur during the chase rather than through direct contact with the dog."

DEIS provides no citation for this statement, but it is lifted directly from Sime 1999, p 8.4, without attribution. The direct quote from Sime 1999 reads:

"Potential impacts of domestic dogs on wildlife could be broadly classified as harassment, injury, or death. Harassment is the disruption of normal maintenance activities, such as feeding, bedding, or grooming. It can take the form of disrupting, alarming, or even chasing. If dogs chase or pursue wildlife, injuries could be sustained directly or indirectly as a result of accidents that occur during the chase itself rather than direct contact with the dog."

This is called PLAGIARISM, and is not generally accepted in the scientific world.

6. DEIS: "Authors of many wildlife disturbance studies concluded that dogs with people, dogs on leash, or loose dogs all provoked the most pronounced disturbance reactions from their study animals' (Sime 1999, 8.2)"

Sime says this in her abstract, but, again, her paper offers no studies, citations, or evidence to support the statement. The specific studies she discusses in Sime 1999 do not make such a claim.

7. DEIS: "Dogs can disrupt habitat use, cause displacement responses, and

injure or kill birds' Sime 1999, 8.10)"

The cherry-picked quote is accurate, but misrepresents the content of Sime 1999, pages 8.10-8.11. The literature cited by Sime shows no bird injured or killed by a dog.

Here are the studies discussed in Sime 1999, pages 8.10-8.11:

a) Hansen and Grant (1991) state that "pedestrians generated the most negative responses" by birds, but Sime jumps into that same sentence with her speculation that "presence of dogs may (emphasis added) intensify bird responses to pedestrians."

b) Burger (1986) studied effects of human activity on shorebirds. People walking accounted for 43% and 50% of disturbances in two bays studied, followed by fishermen, airplanes, and then dogs.

c) Hoopes (1993) studied human-related disturbances of piping plovers: pedestrians 86%, pets (not just dogs) 7%, vehicles 5%, kites 2%. Ten observed chick mortalities were caused by cat, herring gull, human handling, and off-road vehicle'none by dogs.

d) Yalden and Yalden (1990) studied nesting golden plovers. Adult plovers spent 11% of the day responding to people, but disturbance by dogs is not quantified.

e) Keller (1991) lists dogs as disturbers of eider ducklings (after fishing and people walking, and not ranked against windsurfing and boating) but doesn't quantify the dogs' effect.

f) Baydack (1986) disturbed lekking sharp-tailed grouse with various treatments. Females were displaced by all disturbances, including parked vehicles and snow fencing. Males were flushed only by humans and leashed dogs. He does not compare humans alone to humans with dogs. g) Patterson (1952) found that humans flushed sage grouse on a lek (dogs not involved.)

h) Ingold et al. found that nesting ptarmigan in Switzerland slowed their heart rate when approached by a hiker.

Most of these studies do not feature dogs. Contrary to the citation, in none of the studies were birds injured or killed by dogs.

8. DEIS: "Birds usually are more sensitive to dogs approaching than to human beings (Andrusiak 2003)."

In this case GGNRA/DEIS is actually citing itself. Hatch(GGNRA) said

dogs disturb Western Snowy Plovers more than people; Lafferty cited Hatch; Andrusiak cited Lafferty; GGNRA/DEIS now cites Andrusiak. Full circle. Andrusiak does not claim to have any evidence that birds are more sensitive to dogs than to people.

9. DEIS: "Dogs disturbing foraging birds may diminish the birds' foraging time and can result in a loss of energy required to migrate, significantly affecting the birds' survival during migration (Andrusiak 2003)."

DEIS blatantly misrepresents Andrusiak. Andrusiak actually categorizes the statement, "Dog disturbance (excluding other sources of disturbance) to overwintering or migrating birds affects their survival and/or reproductive success," as, "Unknown/no data." (Andrusiak 2003, Table 8) Of course the sentence quoted from DEIS, can't be falsified, since it contains "may" and "can result." That is: The sentence has no scientific content. Still, DEIS completely misrepresents Andrusiak, attributing to her a statement she does not make.

10. DEIS: "A study (note singular) by Forrest ... showed dogs have no impacts on diversity or abundance of birds and small mammals... Still, some studies (note plural) have shown that 'local wildlife does not become habituated to continued disturbance' by dogs (Banks and Bryant 2007, 612)"

A clearcut demonstration of prejudice against dogs by the authors of DEIS. They cite one study showing no impacts and one that (maybe, but not clearly) shows impacts. They then present it as one vs. more than one. But it's still just one of each.

Page 1263

1. DEIS: "During the monthly bird surveys at Fort Funston, dogs were recorded in restricted areas and on many occasions, both dogs and humans were observed inside the restricted areas (USGS 2004)"

USGS 2004 (Wildlife Response to Habitat Restoration in Fort Funston, Golden Gate National Recreation Area, California) does say this. But the "restricted areas" in USGS 2004 are not the bank swallow protection area discussed on p 1263 of the DEIS, where the citation appears. They are not the restricted area displayed on DEIS Map 16-A. USGS 2004 is talking about the restricted area(s) covering most of the northern end of Fort Funston, the native-plant-restoration restricted areas. The restricted areas at Fort Funston changed radically between USGS 2004 and DEIS (2011). Compare Figure 2 in USGS 2004 with Map 16-A in DEIS to see the radically different restricted areas. The USGS 2004 restricted area is not shown on DEIS maps. DEIS deliberately confuses the two different

"restricted areas."

GGNRA may claim only the citation is incorrect; they meant to say NPS 2007e (Bank Swallow Monitoring at Fort Funston, Golden Gate National Recreation Area 1993-2006). That's still wrong. The data set (BS data public) that underlies Table 2 in NPS 2007e says that in many years no dogs were seen in the bank swallow restricted areas, with a total of three (3) for the six years 2001,2006. No justification for "on many occasions."

Page 1302

1. DEIS: "...heavy off-leash dog use increases deterioration of native dune communities (USGS 2004)"

This quote from USGS 2004 comes from the pre-study general introduction to the paper, not from the study itself. USGS 2004 offers no evidence of effects of off-leash dog use on dune communities, and cites no sources on this subject.

2. DEIS: "...intensive trampling of vegetation by dogs weakens vegetation in a similar manner as trampling by humans (Sime 1999)."

DEIS simply misquotes Sime. What Sime actually says, page 8.9, is: "Sensitive alpine environments...summer growing seasons are so short, physical disturbance by dogs (through digging or bed-making) could damage vegetation..." Only sensitive alpine environments are mentioned, and trampling is not mentioned, neither by dogs nor by humans. It's pretty obvious that trampling can damage vegetation, but DEIS thinks it necessary to construct a phony literature citation to make the point.

Note that USGS 2004 makes the same erroneous citation of Sime 1999 that DEIS does. It appears that DEIS has copied the quote from USGS 2004, but presents it as a citation from Sime 1999, without actually checking Sime 1999. Such sloppy scholarship would not be acceptable in the scientific world. GGNRA/DEIS misrepresents the sources it cites. GGNRA/DEIS also selects in a misleading way which sources to include in its analysis, and omits relevant data in its possession. For example, the DEIS discusses bank swallows at Fort Funston on page 1263, claiming dogs disturb the swallows. The DEIS cites USGS 2004 and NPS 2007e, neither of which documents dogs disturbing the swallows. GGNRA/DEIS omits their own study which documents that dogs at Fort Funston do not disturb the bank swallows. 1994-95 Bank Swallow Annual Report, Nola Chow, 1996 was written by a GGNRA researcher as a report for the GGNRA. But it is not cited and does not appear in the 27 page list of references in the DEIS. Ms. Chow's research is "an inconvenient truth" that GGNRA deliberately omits.

I could go on, but I will stop now. Without such abuse of "science," including many misleading literature citations and selective reporting of data, the DEIS could not make its case for unmanageable adverse impacts caused by dogs. GGNRA should go back to the beginning:

a) Examine actual conditions on the ground at the specific GGNRA sites, b) Realistically analyze which adverse conditions are actually caused by dogs and dog walkers, and c) Examine what mitigation actions are appropriate. Until then GGNRA/DEIS has not analyzed Alternative A, No Action. The GGNRA/DEIS decision against Alternative A remains arbitrary and capricious, not based on evidence. Add some off leash areas in GGNRA sites in San Mateo County to Alternative A, No Action. Then with real analysis, the supplemented Alternative A, will emerge as the preferred alternative.

Sincerely,

Keith McAllister Oakland, CA 94611

Received: May,31,2011 00:00:00
Correspondence Type: Letter
Correspondence: May 26, 2011 Superintendent Dean,

Demographic I have been walking with my dogs at Fort Funston for about 15 years. I walk a couple times a week. My dogs are small Chihuahua terrier mixes. When I had larger dogs, I used to walk daily. I also take my dogs on leashed walks everyday in a well- landscaped neighborhood. Why do I bother to drive to Fort Funston when I have my own large enclosed yard & pleasant neighborhood streets? I enjoy the ocean view, the great horned owl, the dragonflies, the yellow tree lupine and other wildflowers, and most of all, the community of other Fort Funston visitors.

I grew up in San Francisco and am very familiar with its natural history, more so than many of the "environmentalists" who are fighting to drastically reduce or even ban off-leash recreation at Fort Funston. I grew up studying insects and later did my doctoral thesis on fly vision. Until a few months ago, I was a long-time member of several environmental groups such as the Sierra Club, Audubon, Nature Conservancy. I take many measures to reduce my environmental footprint. However, I have become reluctant to call

myself an environmentalist because of the radical environmentalists who seem intent on removing people from the parks. I have decided to not renew my membership to some groups, based on their local chapter's opposition to off-leash recreation in the GGNRA. I strongly believe people, recreation, and off-leash recreation are appropriate for Fort Funston, Crissy Field, Baker Beach, Lands End, etc. as well as similar sites in Marin County and San Mateo County, i.e. the small 1% of the GGNRA that has traditionally been off-leash. I support the "Parks to the People" motto of the GGNRA.

The GGNRA and some off-leash opponents state that seniors, ethnic minorities and others are uncomfortable around off-leash dogs. I bet some are, just like some white people are uncomfortable around dogs. However, although I'm not quite a senior (will be 60 next year), I am Asian-American and I frequent Fort Funston specifically because of the off-leash opportunities. It is important to weigh the opinions of the ethnic "minorities" who actually go to the park to enjoy off-leash.

The National Parks have a reputation of being unwelcoming to non-white ethnic groups. It would be a challenge to find a recreation that is more diverse than off-leash dog walking. Fort Funston has a better mix of Asians, Black Americans, Pacific Islanders, East Indian, etc. than you are likely to find elsewhere in the parks. Off-leash recreation is a success story in terms of the National Parks being welcoming to ethnic minorities.

Essential points about the DEIS

1) I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off-leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions. 2) It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option.

3) The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make

the plan work, not assume an adversarial relationship with failure the goal.

4) The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents.

5) After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program.

Additional points

1) Off-leash recreation should NOT be held to a higher standard than other forms of recreation. All activities in the park have some environmental impact, whether it is visitor conflict in the picnic areas, drownings or fatal falls at the shoreline, drunkenness, trampling of vegetation at Crissy Field during Fleet Week, fuel consumed by boats ferrying tourists to popular NPS attractions like Alcatraz, etc. Good park management can mitigate these impacts. However, the GGNRA seems to have zero tolerance for any sign of off-leash dog incidents. The bad behavior of a few bad apples is used as justification to eliminate an entire class of well-behaved recreational visitors.

q Incident reports indicate that dogs and dog owners are generally very well behaved. The percentage of incidents involving dogs is very small considering the number of dogs in the park. 111 Off-leash recreation is being held to a higher standard when measuring "effect on wildlife." The DEIS indicates that protection of wildlife is a rationale for restrictions on off-leash recreation. Note that there is no scientific data indicating that dogs per se have caused harm to the snowy plovers, bank swallows, or other wildlife. This is in spite of the park and others who have been diligently LOOKING for evidence of damage, and in spite of the fact that wildlife and off-leash dogs have successfully co-existed for over three decades in the GGNRA. The turn of a plover's head, a movement or lack of movement (!), is considered by the GGNRA to be an "effect." In other national parks, when judging the appropriateness of a recreation, e.g. hunting, an effect is measured by whether the recreation affects the POPULATION count.

2) GGNRA Spokesperson Levitt was repeatedly quoted by the press stating, "The GGNRA is the only national park that allows off-leash dogs." This is a

false statement, and also reflect the lack of research & knowledge of the park staff There are about a dozen other national parks that allow off-leash dogs. These are parks with hunting, i.e. recreational visitors bring dogs to help them find animals and kill them. Off-leash recreation in the GGNRA is very harmless and humane compared to off-leash dogs with hunters.

Additionally, this misinformation sets the expectation that there really shouldn't be any off-leash dogs in the GGNRA. This expectation can increase visitor conflict, or increase the hopes of radical environmentalists that off-leash will be banned, rather than accepting the reality that there were off-leash dogs on these lands when the GGNRA accepted them, and there are off-leash dogs now.

3) The preferred alternative for Fort Funston is a poorly chosen site. The preferred alternative for Fort Funston confines off-leash recreation to the coldest and windiest area. We jokingly referred to this as the "tundra," and trudge through it to get to the protected areas, out of the cold near the trees or on the protected side of the hills. The most protected area, i.e. where it is comfortable to walk even during rain showers, is the horse trail on the eastern side, where the preferred alternative would completely ban dogs. The current status of off-leash should be maintained, since it allows a variety of landscapes and experiences.

4) The preferred alternative for Fort Funston restricts recreation from the northern end of the beach. The justification for this is unclear. Yes there are shorebirds there, but shorebirds and dogs have co-existed there for decades. Yes there are bank swallows there, but again, there is no evidence that dogs have harmed the bank swallows or the nesting sites (which are on sheer cliffs).

5) The DEIS has little or no scientific basis on which to restrict current off-leash recreation. I agree with other citizens have written letters with detailed analysis of how scientific studies were inappropriately applied to the GGNRA, misinterpreted, and how there is a lack of site-specific peer-reviewed studies demonstrating harm to wildlife or other natural resources in the GGNRA. The Department of the Interior has called for adherence to a policy of ethical scientific conduct. The DEIS has failed to meet that standard.

6) The evaluation of public comment and the DEIS needs to be done by an independent, neutral party. NPS staff is not neutral, having advocated for years against off-leash recreation. Their bias is reflected in the flawed DEIS interpretation of scientific studies. An independent body, with no conflict of interest, needs to do the evaluation. Additionally, there needs to be transparency in the process, with the public having timely access to any

information.

Suggestions for management of off-leash recreation

1) Enforcement of the existing regulations. There are already regulations against pet litter, aggressive behavior, etc. I have rarely seen a ranger on the trails at Fort Funston, and never seen anyone get a citation for dog litter. It's almost as if the GGNRA has intentionally let misbehavior occur so that they will have an excuse to get rid of dogs.

2) Rather than restrictions to protect potentially sensitive areas, consider landscape management. For example, create natural barriers by planting a border of coyote bush. The south end of Fort Funston has introduced coyote bush (the higher, shrub-like variety) which effectively discourages dogs and visitors from entering some areas.

3) Provide better website information, and signage at the park. ? Inform people there is off-leash dog recreation at specific parks. Although dogs are prominent at Fort Funston, one would never know that by reading the NPS website on Fort Funston. Based on the website information, a dog-phobic person would be unpleasantly surprised when he arrived at Fort Funston. By setting realistic expectations, visitor conflicts could be reduced. ? Post prominent signs to inform dog owners what behaviors are expected at the park. For some people, getting a dog and bringing it to the park is their adult re-introduction to the parks. As they enter the park they need to know that digging, chasing wildlife, etc. are not allowed.

4) Hire staff that is knowledgeable about dogs and urban recreation, and staff that has the expectation that visitors will bring dogs to the GGNRA. The GGNRA biologist Daphne Hatch has publicly stated that Ocean Beach would be a beautiful habitat without the people. That statement epitomizes the perception of staff that joined the National Park Service to work in the wilderness. The San Francisco Bay Area is not a wilderness, nor was the GGNRA established to create a wilderness. The belief that the GGNRA is a Yellowstone Park can color the perception of NPS staff. The city of San Francisco has a bigger population than the whole state of Wyoming. There are people here, lots of them. And many of them have dogs.

q For example, if one believes that national parks shouldn't have any off-leash dogs, then even providing a miniscule area for off-leash dog is considered to be a major compromise. The DEIS preferred alternative has taken the tiny 1% and cut it even smaller. The NPS perhaps feels they are giving us something. In truth they are taking away off-leash recreation that existed prior to the establishment of the GGNRA.

q During the Negotiated Rulemaking, members of the committee went on a

field trip to view the sites. At Ocean Beach, we watched as a visitor with a dog walked in the vicinity of a snowy plover. They didn't disturb the plover. Then a group of equestrians rode right through the area, and circled back in vicinity of the plover. We all watched in amazement, but the park ranger Eric LaSalle, Chris Powell and Daphne Hatch said nothing. About an hour later we were talking about the incident, and Daphne Hatch started saying, "when the dog disturbed the plover..." I corrected her by reminding her it was the horse, not the dog, that disturbed the plover. I think her slip of tongue illustrated how she perceived dogs, i.e. her memory was reconstructed to confirm her belief that dogs were harmful to wildlife and that they shouldn't be at Ocean Beach.

5) Institute a program where each dog owner is required to demonstrate her/his knowledge commitment to protecting natural resources, and skill in managing the dog off-leash, before being allowed off-leash recreation. "Voice control" should have a behavioral measurement, e.g. the owners hand on the dog's collar within one minute (this would require good recall, or a slow dog, or a fast-running owner). This would be analogous to the requirement for hang-gliding at Fort Funston, or requirement for obtaining a driver's license before being allowed on the road.

Thank you for your consideration. Karin Hu San Francisco, CA 94127

Correspondence Type: Letter
Correspondence: Dear Mr. Dean,

I am writing to strongly protest the efforts of the GGNRA in restricting dogs from running off a leash on GGNRA lands. First I would like to establish why the GGNRA was created: Congress created the GGNRA in 1972 to: "to provide public access along the waterfront and to expand the maximum extent possible the outdoor recreation opportunities available to the region." The proposed dog ban appears to be in direct opposition to that mandate.

1. Dogs are important companions to many people in our city and dog walkers are custodians of the land. They walk on it, love it and look after it, picking up trash, reporting dead animals, and any other problems. Dog owners are law-abiding citizens who by their presence on the GGNRA lands discourage crime of all kinds. It is in the interest of anyone who cares about open space to work together - with dog owners, including, believe it or not, bird lovers in protecting our waterfronts. The beaches are largely deserted except for people and their dogs with the exception of weekends

and then only when the weather is fine:.. rare in San Francisco!

2. The complaints from the Audubon Society and the Park Service that dogs are somehow a threat to the coastal areas is ridiculous and vastly overblown. Any instances of dogs harming birds are very rare and unusual, this can be addressed by proper dog training. As for disturbing the nesting sights this can be addressed through education and signage.

Plants should not take precedence over people in urban areas but live alongside people. We must not forget that we are a city and the same standards of preservation do not apply, as they would in a national park in the middle of nowhere...there must be balance between people and plants.

3. The GGNRA does not appear to be interested in making dog owners responsible for the behavior of their dogs and insisting that off leash dogs are well trained. Would you really rather take the easy path and just legislate against off leash dogs? I would rather see signs asking dog owners to always be respectful of the other users of the beach and not allow their dogs into the areas where the shore birds nest, an education campaign perhaps. Even a license system for owners to have their dogs off leash where they have to prove that the dog is properly trained (rather like a drivers license) might be a solution. Another idea is to limit the amount of dogs' one person can take to the GGNRA. I can see the problems when you have 10 dogs per person! These people are running a business; perhaps they should be treated as such. The rest of us are people who love the outdoors and love to walk in nature and we choose to do it with our faithful companions. We are the GGNRA's greatest allies. Surely personal responsibility with freedom is better for our society than yet more restrictions and legislation!

This proposed plan is discriminating against one type of person, namely a dog owner; even the coyote has more rights in the Presidio.

Dogs provide so much love and support to humans in so many ways; they need places to run free. A tired dog is a well-behaved dog!

Thank you for your kind consideration, Yours truly, Vivien MacDonald

Correspondence Type: Letter
Correspondence: As a lifelong dog owner and environmentalist, I am strongly opposed to reducing dog access within GGNRA. I strongly urge you to keep these things in mind when drawing up a new policy:

1. It's not possible to maintain a park in an urban environment as a pristine wilderness; the goal should be to balance recreational activities with environmental protections.
2. Changes to policy should be based on clearly documented evidence of impact directly by dogs. (The proposal seems to be based on a dislike of dogs, rather than honest scientific facts).
3. Dog owners make up a significant percentage of the population in this dense urban area and therefore deserve access to a significant percentage of parkland. I would argue that dogs should be given access to a larger percentage of GGNRA than is the case today. I think the goal should be to maximize, not minimize, access.

Dogs and humans have coexisted for millennia. I believe that we co-evolved together, and that neither species would be the same today if it weren't for the other. People get a lot of emotional and physical benefits to dog ownership and I think that your policy should be to nurture this relationship.

As a woman who often hikes alone, I feel safer on the trails when I have my dog with me. You would be limiting my access to the outdoors if you further restricted my ability to walk with my dog.

I support the enforcement of responsible dog ownership. Most dog owners take the time to train their dogs and clean up after them; those that don't should be ticketed. This should certainly include owners who allow their dogs to chase or otherwise harass wildlife.

I urge you to shelve this excessively lengthy document and start over, this time involving more public representation, including that of responsible dog owners.

Sincerely, Deborah Hill

Correspondence Type: Letter
Correspondence: Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. The plan as proposed fails the fundamental goal of presenting a balanced evaluation of the criteria. In its evaluation of information and analyses the proposal and proposed options all assume that the goal is to reduce the existing off leash

and on leash dog access to the recreation area.

There are numerous examples of this one sided approach to the analysis. First, not one preferred option increases the allowed off leash land whereas there are many instances of the preferred option reducing both the off leash and on-leash access. Second, should the preferred option be put forth and fail (e.g. result in greater damage to the natural environment), there is not one proposed remedy that reverses the change to return to the current off-leash area. Instead, the proposed remedies all call for further restrictions.

Furthermore, this one sided approach is applied regardless of the actual status of the environment or area. The preferred option is either a further restriction to existing access, a reduction of access, or the complete elimination of access. This approach is applied regardless of the type of land in question., For instance, there are numerous developed areas with mowed lawns, picnic tables, and with no wildlife present. These areas include Ft Miley which has reduced access but is a manicured lawn, Ft. Baker which has a large lawn within a circular road surrounded by a luxury hotel, and Ft. Mason's great lawn which is a mowed and manicured lawn.

As a San Francisco resident I have frequented these areas, as well as other areas within the GGNRA for more than 15 years ' most of this time prior to ever owning a dog. In that time, I have yet to have or witness a conflict between a dog (or the dog's owner) and another patron of the GGNRA. An approach that serves to unreasonably apply a one directional approach to solving problems or issues inherently fails the standards that underlie the approach for drafting the DEIS. The only conclusion is that the proposed plan needs to be re-done to incorporate the balanced approach it purports to have. It needs to fairly evaluate options to address documents problems and issues and propose remedies that alleviate issues rather than blanket proposals to reduce or eliminate one of the main activities people engage in within the Recreation Area ' enjoying the GGNRA with their dogs.

Sincerely,

John Jankowski

Correspondence Type: Letter
Correspondence: Dear Mr. Dean,

I am a San Francisco resident and dog owner who has significant concerns with the DEIS. The draft EIS for the GGNRA's dog plan fails to make a

persuasive argument for the need to modify or change the existing policies. The analysis is flawed and poor, which is best exemplified by the analysis of the very few instances of negative incidents during 2007-2008. Table 9 documents the number of incidents across areas. There are firm numbers of incidents but no hard data for the number of visitors to each of the areas. Consequently no reliable conclusion can be drawn about the rate or incidence of issues and problems.

Usage listed for area is frequently moderate or high, yet many of these areas have no more than a handful of incidents. For a park receiving at the low end of the estimated range of 12.5 million visits, the total number of incidents based on Table 9 comes to 1,823 incidents spaced over a two year period, with more than 80% of those incidents (1,683 of the incidents) for leash law violations. That rate of violation comes to less than 0.01% of the minimum expected visitation to the GGNRA. To phrase the rate in slightly different terms, this means less than one incident for every 10,000 visits to the GGNRA. Taken further, and eliminating the leash law violations and focusing only on excrement, bit/attack, and rescue situations, the total number of incidents comes to 140 spread over two years. That rate comes to a documented incident rate of 0.0011%. That corresponds to approximately 1 incident per 100,000 visits to the GGNRA.

Now, I will admit my analysis has a flaw. It takes the numbers for two years of incidents and the estimated low attendance for only one year. As a result my numbers grossly overstate the number and rate of incidents per visit to the GGNRA. The appropriate analysis would result in an estimated, non-leash infraction incident per 200,000 visits to the GGNRA. Based on the data, the residents and locals within San Francisco and the environs of the GGNRA should be commended for their well-mannered and socialized animals. Also on the face of it, the preferred plan proposes changes to solve a problem that does not exist.

The GGNRA should return to the analysis and compare the number of incidents to a typical urban environment. In the unlikely event that the incident rate in the GGNRA is greater than a typical urban environment, then some action may be warranted. In fact, given the exceedingly low rate of issues given the recreation area's usage, an expansion of on-leash and off-leash usage should be strongly considered. From the DEIS, it appears that any options in that direction were discounted without any analysis at all. Thank you,

John Jankowski

Correspondence: Dear Mr. Dean,

I am writing to make my feelings known about GGNRA's plans regarding dog walking. As a resident of the Bay Area since 1967, I have enjoyed wonderful walks in our parks, most notably Fort Funston when I first moved here and more recently, Milagra Ridge and Mori Point. I always share these walks with my various dog family members throughout the years. I am quite distressed that you plan to disallow not only off leash, but on leash as well.

Please don't eliminate the joy of 'man and dog' walking the beautiful hills of the GGNRA. Honestly, I can't believe this is even happening. Dog parks are fine for off leash activity, but nothing can match the thrill of nature-walking (responsibly, of course) with my little dog on leash-- out in the fresh air, with the Pacific Ocean to guide us. Bliss! Please consider the dedicated dog owners who treasure and respect our natural environment.

Thank you.

Morning Nichols

Correspondence: Re: Draft Dog Management Plan, Draft Environmental Impact Statement

Dear Superintendent Dean,

My name is James B. Frame, age 67, former employee of the Municipal Railway, City of San Francisco, now retired. I have lived in San Francisco for 46 years, and have owned my home in the northwest Bernal Heights for over 27 years. Since owning my home, I have had a number of active and well behaved and well trained dogs. Being a responsible dog guardian, I have always kept my dogs under voice control and in my sight when walking them in any area where they are off leash. At Fort Funston, where I walk my two dogs every day, I have always cleaned up after them, and kept them from passing into the fenced off areas.

The human animal bond is very important to me. It is important for my dog walking friends and me that areas like Fort Funston remain open for off leash dog-walking access.

At Fort Funston, considerable areas have been replanted, and there the

newly planted and developing areas are clearly indicated with environmental barriers. I find this very attractive, easy to see and respect. I applaud the work of those who have done this planting. As a concerned environmentalist of many years, I am delighted to see this work. It enhances the area and allows visitors to see sections of native planting take hold.

I might mention that at other areas of Fort Funston a number of years ago, fenced off areas (with dunes and ice-plant) were fairly clearly marked, but currently the fences and signs are in poor enough shape as to be quite unnoticeable. Removal of the ice-plant ground cover, which was put in by the Army prior to World War II has resulted in wind-blown sand drifts that are constantly shifting, covering trails and fencing. Newcomers to the area may be excused for not noticing which areas to keep out of. I consider these folks to be uneducated rather than irresponsible. Better fencing and signage indicating the current off-leash areas is clearly called for to maintain and protect the environment.

I do not agree with the GGNRA's current preferred alternative. It significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site specific conditions.

As presented in the Draft Environmental Impact Study (DEIS), the proposed dog management plan eliminates dog-walking on and off leash access for all new lands (additions to the GGNRA sometime in the future) within newly-acquired 4,000 acres of San Mateo County. The GGNRA's mission applies to new lands as well as existing lands, and it is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands.

I am concerned about the long-term preservation of the GGNRA's natural resources, and I want to protect these important natural areas. Other options (besides restricting dog-walking access) should be considered first, however. I know it is crucial that our dogs be well-behaved and trained in order to peacefully co-exist in an urban environment. Adequate exercise and socialization is essential for a well-behaved dog. Having places where I can take long walks with my dog allows me to get the exercise I need while also meeting my dog's needs. Without access to the small amount of land in the GGNRA to which we currently have access, I am concerned that many dog and dog guardians will not have sufficient opportunity to exercise and socialize their animal companions.

Having increasing mobility problems, I try to walk frequently and purposefully as often as I can, and the hike from the Fort Funston parking area to the on-leash-from-here sign to the north makes an adequate distance. I would not want to take that walk having to control two dogs on leash.

Their walking paces and needs are markedly different, and walking two on leash for that distance would be very uncomfortable for me. The dogs actually need more vigorous exercise than I can give them on leash. The current availability of paved trail and off-leash running at Fort Funston accommodates the recreational needs of citizens like myself quite well.

From maps I have seen, the so-called "preferred alternative off leash area" is bound by the large and always busy parking lot, steep cliffs and one paved walkway and one sanded path. Most of the day there are many dogs and walkers in that area now, but most of them are on their way heading to or from a longer walk. I am concerned that the number of dogs allowed to play off leash only in that area would increase, and the cliffs and the parking lot would become major safety concerns. Furthermore, the severe crowding together of exercise-needing and excited canines becomes a safety issue for both dogs and people as well. I feel that the DEIS has failed to analyze the impact of restricting the off-leash area at Fort Funston.

Another social aspect to Draft Dog Management Plan disturbs me. Our daily walks, necessitated by our dogs' need for exercise, allow us to get out of our homes and socialize with others. One has the option of avoiding socializing with others, but if one wants, it is always easy to begin conversations with other dog walkers. I am able to interact with people of diverse social classes and ethnic backgrounds, avoiding the isolation that often comes with urban existence. Indeed, many of the friends and acquaintances I have made since retiring have been made while pursuing this activity. I treasure this aspect of my frequent dog walks. I trust I speak for the other residents of San Francisco and San Mateo County that I meet daily.

Conversations are rarely if ever started between people who have dogs on leash. If the makers of the draft had any experience with dogs at all, they would know that leashes create tension in restricted areas. Dogs on leash become protective of their space and their human companions. For one thing, one doesn't know why a leash is being used. Is the dog aggressive? Is the dog untrained? Is the dog getting used to a new owner? Will dogs get defensive or protective? Will dogs tangle up if they are near? There are so many possibilities that people with dogs are far less likely to approach others when there are leashes involved.

Some areas within the GGNRA also serve as a place of solitude for me and provide me with a very important calm and safe outdoor space within the San Francisco metropolitan area. In an Open House put on by the GGNRA (at San Francisco State University), the public had an opportunity to observe the plans for changes at Fort Funston. The allowable off-leash area currently available at Fort Funston meets the recreational and social needs of people and dogs alike quite well. I feel that the "preferred alternative" choice that I learned of seriously failed to accurately analyze the recreational needs of

residents of this urban area.

I trust that the GGNRA, in developing a general management plan, will take into consideration and respect the specific character and situation of the Fort Funston Area. I fully support Alternative A'the No Action alternative of the DEIS, as it relates to Fort Funston. This DEIS and Plan does not recognize that environmental values include both recreation and nature. In many places, the DEIS treats the environment and recreation as opposing values, i.e., that recreation only harms natural resources. The document does not acknowledge that people care about both and that people with dogs are often also good stewards of our environment.

The draft plan has the effect of punishing people because of a very small number of uneducated, insensitive or irresponsible individuals. A reasonable response to this problem might be to educate visitors, improve signage and help park visitors follow the rules and learn how to respect the environment, not to ban the rest of us with dogs from the GGNRA.

The proposed "compliance-based" approach should be modified to create a baseline of current conditions, then measure impacts rather than compliance. It should include a robust public educational component and an objective, long-term monitoring program designed and carried out with the community. The GGNRA should develop partnerships with community, animal welfare, and conservation organizations to make this work. These groups could bring additional resources to limited federal resources. GGNRA should be a partner with the City of San Francisco, which, after all, donated much of the land to the GGNRA in the first place, not an adversary.

The people who put together this Draft Environmental Impact Study do not seem to realize that many areas of the GGNRA are located in or next to urban neighborhoods. The study excludes the quality of the urban environment from its scope, saying it is not significant. The Golden Gate National Recreation Area provides much needed open space in a major urban area. This omission is disconcerting because the fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog-walking as a form of recreation) to serve the metropolitan Bay Area. The dynamic interrelationship between GGNRA and our neighborhoods is exactly the human environment that the EIS is required to study, but failed to do so.

The DEIS notes some studies and general tendencies of dogs to harm natural resources, but with few exceptions, there is little documented site-specific impacts to support the restrictions of the preferred alternatives. One argument against off-leash dog-walking I have heard is the adverse effect on wildlife in the area. I have seen statements that the dogs disturb the nesting of bank swallows at Fort Funston. I don't understand this, having

experienced the co-existence of domestic dogs and the swallows for over 20 years. Indeed, the sightings of the swallows actually diminished for a short time after the ice- plants were taken out and before the native plants became established. I can only guess that somehow the plants were harboring the insects that the birds consume as food. Now that the native plants have established themselves, life goes on as before. The birds do not seem to be bothered by dogs. Their biggest problem seems to be the hawks and other air-borne raptors. Of course, this is only something I have noticed on my walks at the fort. It does not seem to be mentioned in the two-volume Study that has cost us taxpayers a five-figure sum. There is insufficient documentation that considers other impacts ? other park visitors that litter, disturb and impair the natural resources, other wildlife, such as hawks, coyotes and cougars, boot camps, bicyclists, huge crowd attracting events such as Fleet Week, festivals and charity marathons. The proposed broad limitations in the DEIS are without site-specific science that demonstrates that problems with the quality of GGNRA's natural resources are actually attributable to dogs and not to other factors. The DEIS needs to provide full disclosure to the public and decision makers. If dog-related disturbances are having a significant negative effect on wildlife, for example, the DEIS needs to provide site-specific scientific evidence as documentation and undertake a scientific evaluation as to whether people or other factors are also causing or contributing to the problem noted. If they are, GGNRA needs to provide an analysis that considers whether people should also be restricted from these areas. We need this documentation in order to comment meaningfully on the draft plan and DEIS. The science needs to be sound and the consequences need to be fully and fairly disclosed for everyone ' so that an informed decision can be made.

Lastly, there is an issue of crime. Fort Funston is adjacent to the city of San Francisco, which, lamentably, has a big crime problem. Excluding dog-walking from a large area will put users of Fort Funston at increased risk of falling victim to violent crime, such as assaults of various kinds and robbery. It has been my experience that the presence of dogs is a deterrent to many forms of crime. After much consideration, I support Alternative A, the No Action alternative and would also include the Newly-acquired areas (such as Cattle Hill, Sweeny Ridge, Mori Point, Pedro Point and Milagra Ridge and Rancho Corral de Tierra) in San Mateo County.

The DEIS shows a bias against the No Action alternative or variations on that alternative. There are other areas in the GGNRA such as Ocean Beach, where the existing 1979 Pet Policy has been working and where sensitive species are not present and visitor conflicts do not occur or are very infrequent. In addition, the DEIS does not provide site-specific information that these areas are inappropriate for continued dog walking.

Respectfully, James B. Frame San Francisco, California, 94110

Correspondence: As a resident of San Francisco who has partnered with the GGNRA and the Parks Conservancy in the past (Red & White Fleet and Blue & Gold Fleet Alcatraz tours), I am writing to express my concern and dismay over the proposed Draft Environmental Impact Statement (DEIS) for Dog Management in GGNRA.

For nearly a dozen years I have walked my two beagles off-leash at Fort Funston and occasionally at Chrissy Field. It is a vital part of our recreation and exercise. The "preferred alternative" of the DEIS will make it nearly impossible for us to continue to enjoy the GGNRA open space in the way mandated by your own mission, "to provide for the maintenance of needed recreational open space" for the people of the Bay Area. Congress stated that the purpose of the creation of the park was to "assure the preservation of open space ... to provide public access along the waterfront, and to expand to the maximum extent possible the outdoor recreation opportunities available to the region." Walking my dogs at Fort Funston and other GGNRA areas is definitely my outdoor recreation opportunity.

In particular I object to two of the points in the DEIS:

1) There is no justification for the so-called "preferred alternative". Over thirty-years ago the Pet Policy PLUS was written particularly with Fort Funston in mind, if! recall correctly. That policy should be formalized and adhered to.

2) The poison pill Compliance Based Management Strategy must be stricken. It punishes the vast majority of dog owners for the sins of the few without any review, public comment nor proof of damage to the area.

Many parts of the GGNRA were given into the Park Service's custody with the full understanding that those areas continue to be open for off-leash recreation. I appeal to you to uphold your promises of the past and let dog owners and their dogs continue to use the very small percentage of GGNRA

land that we have traditionally used over the last two centuries.

Sincerely, Dirk Burns

Correspondence: Dear Mr. Dean,

I am writing to express my displeasure with the GGNRA's DEIS on dog usage. I am a San Francisco resident who frequents many areas within the GGNRA, and as a result, am keenly aware of how the draft fails to accurately assess the impact of dogs on the areas covered with in the draft report.

Rather than an exhaustive list, I want to point to one factor that the report identified as an important 'natural' resource to protect ' soundscapes. The report found the topic to be important enough that it warranted its own subsection on Visitor Use section of the document (page 281). Barking is specifically called out as something that disrupts the soundscape, yet the areas addressed in the DEIS with dog usage all fit the following criteria:

? They are frequented by visitors ? They currently are subject to some sort of use with dogs

In any of the areas that fit that criteria, a change to the dog regulations fails spectacularly to address the primary degradation in the natural soundscapes.

Fort Funston faces a reduced off leash area to a ROLA next to the parking lot and the beach. However, the areas eliminated along the paved trails get the constant noise of both the traffic on Skyline Boulevard and the constant return of gunfire from two gun ranges immediately outside of the GGNRA.

Crissy Field in San Francisco abuts a heavily trafficked park road. It also gets the constant traffic noise from Doyle Drive (or the construction thereof), and it gets the shipping noises and fog horns from the bay. The changes hardly serve any improvement with these areas.

Ocean Beach runs along the great highway with its constant vehicle traffic which is only abated by special events such as the Bay to Breakers. This event is hardly known for its natural soundscapes.

Fort Baker is now home not only to traffic on the roads, but also Cavallo

Point resort. This activity is hardly one that creates a 'natural' soundscape.

These are but a few examples of how the DEIS fails to recognize the GGNRA's unique urban environs. As a result the analysis fails to accurately address impacts to the areas affected. The report should be redone with an analysis that focuses on the actual causes for environmental degradation (in this case sound), rather than making sweeping and inaccurate assumptions that is somehow due to dogs and barking.

The conclusion that I have to arrive at is that the Park Service is attempting to somehow impose a vision of 'natural' protection within the entirety of the GGNRA. While this vision may be consistent with remote locations with little development, the GGNRA in general, and the areas specifically addressed within the DEIS are heavily urbanized in most cases and an integral part of the surrounding towns and cities. A DEIS such as this report that fails to properly account for the true factors impacting the environment clearly cannot be relied upon to make substantive changes to policy. Thank you,

John Jankowski

Correspondence: Dear Mr. Dean:

Enclosed please find my comments on the proposed Dog Management Plan/Environmental Impact Statement.

For your information, I am a 10 year resident of Montara, California. Montara is the community most closely impacted by GGNRA decisions with respect to the northern end of Rancho Corral de Tierra ' a part of the lands about to be transferred to the GGNRA. I am a dog owner, a member of the Montara Dog Walkers, a professional dog trainer, and a retired attorney. My comments are my own .

General Comments: 1) The GGNRA's Dog Management Plan/EIS fails to offer any actual justification for the proposed changes to current dog walking usages. The document is full of statements concerning possibilities: "could affect"; "might impact". Possibilities are not certainties, nor are they even probabilities. Nowhere in the EIS is site-specific data showing certainty of impact offered for any site where additional restrictions are intended.

2) In stating that "additional ROLAs will not be considered", the GGNRA violates the court ordered procedures in US v. Barton. The GGNRA again seeks to ban historical recreational uses without public input. "Regulated Off-Leash Areas" should be considered like any other recreational pursuit, and decisions based on the merits of a given area based upon objective criteria - including historical uses.

3) The GGNRA bases its proposed decisions on National Park Service regulations to a large extent. The GGNRA is NOT a "wilderness park". It is an urban recreation area. As such it has not only specific authorization to allow dogwalking, but a mandate to do so. Congress specifically included dogwalking in the recreational uses authorized in the GGNRA. NPS regulations may not override clear Congressional intent.

4) The statements offered in support of the GGNRA's stance do not necessarily reflect the full findings of the studies and surveys cited in the body of the report. They should not, therefore, be taken as scientific evidence or even as statements of fact.

For example, statements under "Water Quality" (pg. 64 of the DMP/EIS) state that dogs may bring rabies and parvovirus into the area. This is clearly true. However - removing the dogs does not reduce the risk! Rabies is more common in mammalian wildlife - including bats, coyotes, foxes, and raccoons than in domestic dogs, who are generally vaccinated. Parvovirus is endemic. It can be transported into an area on the soles of shoes or on bicycle tires. (Consider the experience of the original wolf pack on Ile Royale.) Thus, the statement is misleading with respect to the impact of dogs on wildlife disease and water quality. Similarly, giardia is already endemic in GGNRA waters. Under "Visitor Safety and Experience", the incidence of dogbites is discussed. Special attention is given to findings that children and the elderly are the primary victims. No mention is made of the study's finding that most dogbites occur in the home or its immediate surroundings and in the context of confinement or entrapment in small spaces' circumstances far from the currently designated ROLAs. 5) The survey questions cited on page 69 of the DMP/EIS raise issues of survey design and fairness. It does not appear that the questions sought to differentiate between use areas - i.e. persons were not asked if they approved of off-leash dog-walking at Crissy Field or Fort Funston. Rather, they were asked hypothetical questions which may well have been, as a result, misleading. (Would responses have been different, e.g., if respondents in Marin were asked if they objected to off-leash dog-walking at Fort Funston in San Francisco?)

6) None of the "data" offered in support of the GGNRA's position is specifically relevant to the "New Lands", as defined in the DMP/EIS.

7) The "New Lands" definition itself is designed to obfuscate the issues by amalgamating areas which have neither environment, ecology, history, or recreational uses in common - i.e. portions of Marin and coastal San Mateo County.

8) The proposed additional restrictions on dog-walking have a foreseeable negative environmental impact. The current areas spread dog walking out over a reasonably large area for the current dog population. Crowding the dogs and their people into an inadequate area will definitely create environmental issues, health issues and increased instances of conflict between dogs and between dogs and people. Thus the GGNRA proposes to create a certain adverse environmental impact in order to prevent possible minor adverse impacts in the future. If anything, the DMP/EIS is itself a violation of the GGNRA's mission.

Comments Specific to Rancho Corral de Tierra (hereinafter "Rancho")in San Mateo County:

9) Two specific areas of the Rancho tract have historically been used as off-leash dogwalking areas. Area One is a tract bounded on the north by the Rancho stables and cultivated fields, on the west by the wetlands mandated as a part of the Devil's Slide Tunnel Project, and on the south and east by the unincorporated community of Montara. Area Two is the area accessed through Princeton-by-the-Sea a development within El Granada) and extending south and north behind that community. Maps of these areas have been submitted by other persons making comments. These areas represent less than 5% of the Rancho lands. 10) The GGNRA "preferred alternative" is to ban dogs from Areas One and Two, along with the remaining areas of Rancho. This decision was reached without any input whatsoever from local dogwalkers. This decision was also reached without any supporting data as to current uses or environmental evaluations whatsoever. This is an abuse of GGNRA's rule-making powers.

11) The lack of consultation with local dogwalkers contrasts starkly with the deference accorded horseback riders using the same areas. Horseback riders were consulted early in the transfer process, and their comments acted upon before any decisions were made as to the stable areas and riding trails. The contrast strongly suggests a decision to avoid consultation with area dogwalkers. This is an intentional violation of the law as interpreted by US v. Barton.

12) The proposed ban ignores the GGNRA's stated intent of balancing uses on a county-by-county basis. Off-leash walking in areas historically used for that purpose is to be permitted in San Francisco and Marin counties, but not in San Mateo County.

13) Areas One and Two of Rancho constitute ideal locations for ROLAs under any objective criteria. The area is not pristine wilderness. Environmental impacts are minimal - the dogs have been in these areas for the past forty years. The ecosystem has adapted. The area is open so that dogwalkers may see and avoid any situations with the potential for conflict. The use is historical. The majority of users are dogwalkers.

14) The GGNRA plan does not explore alternatives that meet the needs of all recreational users. There are other areas within the Rancho where dogwalking is not a traditional use that are easily accessed. Specifically, the tract can be easily accessed from the southern end of Etheldore in Moss Beach and/or Park Street in Montara. These access points are also much less disruptive to the local community than the GGNRA's current proposal to place a large parking lot in the middle of a crowded residential neighborhood, and next door to an elementary school.

Thus, the needs of visitors who prefer not to encounter dogs can easily be met.

Correspondence Type: Letter

Correspondence: Dear Mr. Dean,

I am writing to provide my comment on the GGNRA's draft plan for dog management. I am a San Francisco resident who has been using multiple areas within the GGNRA for more than a decade. I have enjoyed the GGNRA's areas including Chrissy Field, Ocean Beach, Ft. Baker, Rodeo Beach, Stinson Beach, Ft. Funston, and other areas. During this usage, I have never observed nor experienced negative issues with dogs on-leash or off-leash. This includes more years using the GGNRA as a non-dog owner than time spent as a dog owner.

The GGNRA's plan fails to correctly assess impacts to the community for the reduction or elimination of off leash space. Two examples include the following:

Ft. Funston: The DEIS gives examples of frequent use by dog walkers with up to "10 or 12 dogs off leash." I frequent Ft. Funston regularly on the weekends when the overwhelming usage is by owners with their dog or dogs (I have yet to see any owner with more than three dogs or a dog walker with more than six dogs visiting the area). In fact the usage I observe on my visits is more people visiting Ft. Funston with their dogs than all other uses of the area combined. Furthermore, the plan's documented alternative area

for off leash recreation is Lake Merced. Lake Merced does not have any off leash designated areas ' a clear error in the DEIS. There is no other alternative close to Ft. Funston for off leash recreation.

Crissy Field: The closest alternative for off leash use to Crissy field is Mountain Lake Park. This area is in fact off leash but the off leash area is much smaller than the reduction of off leash space on the airfield at Crissy Field, let alone the full area removed from off leash use at Crissy Field. It is not a viable alternative to use with no parking, small area and lack of grass to Crissy Field.

The elimination of off leash areas in these locations will result in significant crowding in the remaining off leash areas at both Ft. Funston and Crissy Field. This crowding can only serve to create conditions for negative dog on dog and dog on person interactions ' which is exactly what the actions taken in the DEIS purport to try and solve. On top of creating crowding issues within the reduced areas within the GGNRA, the situation will create a situation where owners will take their dogs to alternative locations within San Francisco. As someone who uses multiple dog parks within San Francisco in addition to the GGNRA lands, I can assure you that these alternative areas are already at capacity. The actions to reduce the areas available within the GGNRA will have a dramatic and immediate negative impact within those areas. This impact will likely be extreme in areas such as Pine Lake Park (which is already seeing signs of use beyond capacity), Lafayette Park (which frequently has dogs outside of the designated off leash areas due to the number of dogs present at any given time), Alta Plaza (also frequently has dogs outside of the designated areas due to the number of dogs present), and the Esprit Park (again, enough dogs regularly to be at or beyond capacity).

Consequently the plan needs significant revisions to accurately take into account the impact that the changes will have on the surrounding areas of San Francisco, Marin and San Mateo. I am sure that the Park Service typically does not do this sort of analysis, but the GGNRA by its very nature is an urban recreation area that integrally mixes with the surrounding cities. As such the DEIS needs to be unique for the service in actually taking into account the impacts outside its borders. Anything short of that level of analysis will do a major disservice to the vast majority of the users of the GGNRA and the residents in the areas immediately abutting the GGNRA.

Sincerely, John Jankowski San Francisco CA 94105

Correspondence Letter

Type:

Correspondence: As a long-time resident in the Bay Area who has had four dogs over a period of more than thirty years, I am alarmed at the unreasonable restrictions that are being considered for off-leash areas in the Golden Gate National Recreation Area.

I think the word Recreation in the title of the GGNRA says it all. This is not a national wildlife refuge, it is not a wilderness area, it is not a conservation project. It is an urban open space that has been preserved for the enjoyment, recreation, and general well-being of the people who live and work in the Bay Area, and by implication, for their dogs, who need to be able to exercise and run free at least some places where they are not in danger of being run over by cars, trucks or buses.

Over the years, my dogs and I, and my immediate family, have enjoyed outings to Ft. Funston literally thousands of times, as well as excursions to Crissy Field and Ocean Beach. In addition, many of the dogs who are taken to these places by dog-walkers belong to owners who are unable to take them themselves, including the elderly, the disabled, and those whose schedules do not allow the time. The impact on these owners would be enormous should the restrictions that are proposed in the "Preferred Alternative" be adopted.

As for the environmental impact of off-leash dogs in these areas, I have seen almost no evidence of any destructive effect; I have, on the other hand, seen considerable evidence of destructive behavior by people without dogs, such as sliding down the dunes in restricted areas where no one is supposed to go.

I would urge you to opt for a policy that is considerably less restrictive on dogs in general and on off-leash dogwalking in particular than the Preferred Alternative, which is so harsh as to amount to cruel and inhumane. The vast majority of San Franciscans, I am convinced, would not wish to see dogs banned from the few open areas where they have for so long been allowed to enjoy their lives in off-leash running and play, nor to subject their owners to the hardship of seeing these precious privileges taken away.

Sincerely, Peter A. Betcher

Correspondence Type: Letter

Correspondence: Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not

based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation.

Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. Exclude speculative, exaggerated, biased, or misleading statements and studies.

Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).

Enable professional dog walking and align any professional dog walking rules with county or city regulations.

Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

These are my personal comments and observations regarding this plan:
(here's where you fill in your own personal story and what you've seen when you've been out at the GGNRA)

Sincerely, Kim Lyss Colusa, CA 95932

ID:**Received:** May,27,2011 00:00:00**Correspondence** Letter**Type:****Correspondence:** Dear Superintendent Dean, I believe that multi-use open space that includes off-leash dog walking is compatible with all other recreational uses and with the preservation of habitat and wildlife within the GGNRA. The GGNRA is intended for the entire community. Only 1 % of the GGNRA is open to off-leash dog walking, that is a minimal amount for something that is so important to so many people.

I have never seen any problems with wildlife and dogs in all my years of walking in the parks. While I am sure some problems do occur is the impact any more severe than cyclists, children, festival goers, Fleet Week Crowds, hikers, children and horses?

I believe the decision to ban off-leash dogs is not based on sound science and is patently unfair to a significant part of the community. Singling out dogs when there are so many other users that have just as much or more impact is discriminatory. Dogs don't leave trash, humans do.

There is an impact from all users in recreation areas. That is the nature of the beast. I don't believe well-behaved dogs have any more impact than the thousands of people who annually visit the GGNRA. Sensitive areas are already restricted from dogs. It is not necessary to remove the small area that is left to Off-leash dog walkers.

I strongly support Alternative A, the No Action Alternative, in the GGNRA and the "New Lands" area (such as Cattle Hill, Sweeny Ridge, Mori Point, Pedro Point, Milagra Ridge and Rancho Corral de Tierra in San Mateo County).

Sincerely, Susan Wilder

Correspondence 4606 **Project:** 11759 **Document:** 38106**ID:****Received:** May,17,2011 00:00:00**Correspondence** Letter**Type:****Correspondence:** Dear Superintendent Dean,

GGNRA/DEIS has made no good faith effort to analyze Alternative A, No Action. GGNRA pretends that Alternative A means that no management actions can be taken, specifically no management actions to mitigate adverse impacts identified in Alternative A. The logic seems to be: Adverse impacts have been identified in Alternative A; therefore, we must go to a different

alternative. In fact, many adverse impacts of dog walking that are described under Alternative A can be mitigated by management actions that do not substantially reduce the area available for off leash dog walking. I will list only a few examples.

Mitigate Adverse Impacts in Alternative A without banning off leash dogs.

1. Western Snowy Plover at Crissy Field.

Western Snowy Plover Monitoring at the Crissy Field Wildlife Protection Area of the Presidio of San Francisco and the Relative Impact of Human Disturbance 2006/2007. Golden Gate Audubon, San Francisco, California (Zlatunich, M. 2007) shows off leash dog disturbances of snowy plovers at Crissy Field dropped from 2.35 per survey hour to 0.62 per survey hour after minimal "outreach and education." Signs were posted at the WPA and a brochure was passed out on-site for one week, November 3 ' 11, 2006. That minimal effort produced a dramatic decline in disturbances of the plovers by off leash dogs. Ongoing outreach and education at the Crissy Field WPA (as well as on Ocean Beach) could alleviate a great deal of the claimed adverse impact by off leash dogs on WSP. The DEIS makes no attempt to evaluate the effectiveness of such mitigation when considering Alternative A.

The drastic restrictions on off leash recreation proposed for Ocean Beach would also be unnecessary if reasonable management were implemented there.

2. Bank Swallows at Fort Funston

Signage on the bluffs above and on the beach below the bank swallow colony is effective mitigation against potential adverse impacts from off leash dogs and people. Protection from cliff collapse, which means keeping people and dogs off the cliffs, is the one effort the swallows need from people.

When I began monitoring the breeding colony in 2001, I posted my own signs on the beach below the colony, informing people of the presence of the breeding birds and asking them to stay off the cliff. The GGNRA ranger who discovered my signs was angry, and immediately removed them. But GGNRA had done nothing to keep people off the cliff below the colony. After taking my signs down, the ranger posted official GGNRA signs. Both my signs and the GGNRA signs were effective in keeping people from climbing the cliff below the colony.

In 2005 I photographed visitors (without dogs) perched on the cliff edge directly above active bank swallow burrows. These visitors had no way of

knowing the swallows were there; they had passed no signs on their walk into the area. In response to my photos GGNRA installed signs on the dunes above the colony, informing people of the presence of the breeding colony and asking them to stay away from the cliff edge. I didn't see any people on the cliff edge for the rest of my monitoring of the colony that year. If GGNRA had posted signs on their own initiative, at the beginning of the bank swallow breeding season, that potential adverse impact could have been avoided.

I visited Fort Funston Saturday, May 14, 2011. The bank swallows were there, busily digging burrows and commuting to Lake Merced and back. But there was no indication from GGNRA that the swallows were there no signs asking people to stay off the cliff edges or away from the cliffs beneath active burrows. If GGNRA really thinks people and/or their dogs have an adverse impact on the nesting swallows, they could make some effort to mitigate that impact by informing visitors of the nesting colony. But, as in previous years, GGNRA made no such effort.

Signage doesn't generally produce 100% compliance, but in the case of the bank swallow colony it has been effective for years. The observation of a very few dogs in the bank swallow protection area is not evidence that such measures don't work.

3. Post-and-cable fencing is also effective in keeping people and dogs out of sensitive areas, without banning them from the general area. The authors of USGS 2004 published the results of their wildlife monitoring at Fort Funston in a refereed scientific journal in 2009. ("Wildlife Response to Coastal Dune Habitat Restoration in San Francisco, California" by Russell, Shulzitski and Setty, Ecological Restoration, Vol. 27, No. 4, 2009). They weren't specifically studying dogs, but they noted the presence of dogs and made the following observation: "Although a small number of visitors and their pets continued to use the restricted areas, the measures [post-and-cable fences] were successful for the most part." That is, post-and-cable fencing is effective even in such a heavily used area as Fort Funston. It is an effective way of managing sites throughout the GGNRA, while retaining off leash recreation.

GGNRA staff often claim post-and-cable fencing is not effective because they can document people and/or dogs inside fenced areas. Again, 100% compliance is not a reasonable criterion for "effective." It's the mitigation of the adverse impact that is important. The 12-acre restricted and restored area at Fort Funston is thriving behind post-and-cable fencing, in proximity to large numbers of off leash dogs.

4. Post-and-cable fencing would be even more effective if augmented by

accurate and credible signage.

The signage at Fort Funston has never been accurate or credible: a) Areas are signed as "bank swallow habitat" that swallows don't use, b) Areas are signed as "wildlife study area" for years after the study has been completed, c) Areas are signed as "habitat restoration area" for years, without any restoration occurring, d) Signs said "dogs must be on leash" during Negotiated Rulemaking, when everyone knew off leash was legal, e) etc. Regular visitors to Fort Funston could easily see that the content of GGNRA signs was not true.

Incorrect signage produces cynicism in park visitors, and leads to non-compliance. Accurate signage is a management tool GGNRA could use at many sites, mitigating potential adverse impacts.

5. San Francisco *Lessingia* at Fort Funston

DEIS claims Alternative A presents "long-term moderate adverse impacts" to San Francisco *Lessingia* at Fort Funston. (p 1302-1303) This is bizarre since there is no *Lessingia* at Fort Funston, and it's not clear there ever was. The USFWS Recovery Plan for Coastal Plants of the San Francisco Peninsula discusses *Lessingia* but doesn't show *Lessingia* historically at Fort Funston, although some was found near Lake Merced (USFWS 2003, p25-27, and Figure 1, p 50. DEIS bases the claim of adverse impact on the potential to introduce *Lessingia* at Fort Funston, saying "unrestricted dog use at the site would preclude the reintroduction(sic) of this species by NPS" (p1302) DEIS also states "dogs could also access restoration areas, despite fencing in place," citing USGS 2004. Dogs could access the area despite fencing, but USGS 2004 credits the fencing with "discouraging the majority of visitors and dogs," although it "did not ... eliminate all foot traffic or use by dogs." The authors of USGS 2004 said in their published version of the same study that although "a small number of visitors and their pets continued to use the restricted areas, the measures were successful for the most part." Off leash dogs do not prevent the introduction of *Lessingia* to the 12-acre habitat restoration area at Fort Funston. As shown in #3 above, post-and-cable fencing is effective mitigation of any adverse impact; the fencing already reduces foot traffic below a level harmful to *Lessingia*. The native plant restoration in the 12-acre habitat restoration area is thriving. Foot traffic in the restricted area could be further reduced by clear rules, accurate signage and enforcement. The DEIS assumption that complete absence of foot traffic (100% compliance) is a prerequisite for *Lessingia* is not supported by science. The USFWS 2003 describes *Lessingia* as appropriate to "disturbed dune deposits" and notes "...plant size and fecundity appear to increase markedly at edges of vegetation gaps, such as footpath margins, where potential competition is reduced." (USFWS 2003, p

38)

[There is real irony here. DEIS/GGNRA claims off leash dogs will have adverse impacts on Lessingia at Fort Funston, where there is no Lessingia and no record that Lessingia was ever there. But the same off leash dogs, if displaced to Lake Merced, will have no adverse impacts on Lessingia (DEIS p 1304) even though Lessingia definitely grew at Lake Merced historically, and specifically grew in the off leash area at Lake Merced ("The Mesa"). (USFWS 2003, p25-27, and Figure 1, p 5)]

I have offered a few instances where reasonable management of GGNRA sites would mitigate adverse impacts claimed for Alternative A in the DEIS. I'm sure other people will present additional examples. But it's the responsibility of GGNRA/DEIS to identify and analyze mitigation actions for the adverse impacts they claim. Otherwise they have not truly analyzed Alternative A.

If GGNRA would add to Alternative A reasonable off leash areas in the GGNRA sites in San Mateo County, while mitigating problems they find with Alternative A, they would have a truly preferred alternative.

Sincerely,

Keith McAllister Oakland, CA 94611

Correspondence: Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan.

If you are going to start taking away dog/dog owner's rights because of irrational fears about dogs and dog bites. Please consider irrational fears about men. I feel that most people fear attacks by men much more than they fear attacks by dogs. Attacks by men would include murder, rape, mugging, assault with or without a weapon. In my time spent in the GGNRA, my fear of men, and the crimes they commit is much greater than my fear of dogs, or my fear of attacks by dogs.

Concerning your statements about the disposal of dog waste: Why is your focus only on dog waste? Shouldn't you be concerned with men spitting? In the time i have spent in the GGNRA I have been much more concerned with stepping in large spit wads deposited in the walking paths by men. I have not much been concerned with dog waste as I haven't seen it that frequently and especially not on the walking paths. I frequently see men spitting on the paths. Yet I do not see any signs in the GGNRA lands prohibiting spitting in the pathways or on the land. I am concerned with the transmission of human disease here.

Environmental concerns in the GGNRA: On many occasions i have seen men off trail and climbing up the fragile vegetation on the steep hillside ascending from Mile Rock Beach to the Land's End Trail. These men are doing constant damage to the fragile vegetation in this area by engaging in this behavior.

Dangerous behavior in GGNRA: Many times on Ocean Beach I have nearly been run over by some sort of wheeled vehicle being pulled by a kite. This vehicle has always contained a man, and only a man.

Also, I have been walking in Sutro Park many times where broken glass is all over the pavement area because empty alcoholic beverage bottles have been hurled from the tower area overlooking the ocean to the pavement area below. This broken glass is dangerous. I have witnessed men, and only men throwing these bottles down to the pavement on more than one occasion, and I have almost been hit by these flying bottles.

For these reasons I am respectfully requesting that you address all of your concerns in your summary and put forth a plan calling for men to be disallowed in the GGNRA.

Sirs, if the concept of terminating your rights to enjoy the GGNRA because of the criminal or irresponsible behavior of a few men is disturbing to you, then I think you should consider how frustrating and disturbing your plans to diminish the rights of families with dog(s), based on the behavior of a few, is to those persons. Correspondence: Mr. Dean,

I have lived on Stinson Beach for 25 years. The NPS part of the beach is nice and clean. The shore birds are relaxed and able to feed. You can take a nap on the beach or go fishing without being disturbed. No dogs are allowed there.

The county beach (where I live) is filthy. You must watch your step so as not to step in dog poop. I will not walk barefoot at night and you must use a flashlight to avoid dog poop. Visitors are more likely to use the dog poop

pick up bags that are now provided, but many bags full of poop are now left on the beach (and my door step). Usually it is the locals (my neighbors) who bring their dogs to the beach to 'do their business' and refuse to pick up the poop. It seems they feel it is 'natural' for their dogs to poop on the beach and I have heard things like 'oh the ocean washes it away...' and 'whar do you expect on a beach?'

I heard that some kids for e.coli (or something) from playing in the sand

Also, when the dogs are not pooping or running over your towel, they are chasig the shore birds.

I have seen a dog maul my neighbors cat to death. I have seen kids get bit by dogs. I see dog fights all the time. I pick up dog poop EVERYDAY.

A little girl got her face severly biten by a dog while she was playing on the beach.

IF the rules were enforces, perhaps things would be better, but peopoe ignore common courtesy when it come to their dogs doing as they please.

There is nothing quite as nice as a park that is dog free.

A trip to any dog park is visual proof how detrimental dogs are to the environment.

I ask you to keep dogs out of the parks and enforce existing laws where they are allowed.

Why arent dog owners satisfied with existing dog parks and why dont they work to improve the grounds at dog parks? Because dog parks as so trashed that is is not a nice place to bring your dog. Please dont let our parks get trashed any further by allowing dogs into the beautiful GGNRA.

Thank you, Sincerely,

Dino Colombo

Correspondence: Dear Superintendent Dean,

My name is Chris Cara, I'm in my sixties. I am 5 generation San Franciscan

from North Beach. I bring my 11 year old dalmation, Cariotta, to Chinzey Field once a week. My dog brings a great life to me and my friends. Seeing her run puts not only a smile on my face but also others. I've taken serious responsibility having dogs all my life. I've worked hard with my dog to have her follow my commands and never do I leave home without the proper bag to clean up after her. I watch to see if she goes into areas where the environment is protected by signs or fences.

Maybe the GGNRA could add more areas for the off-leash dogs if better environmental signage barriers so we all can enjoy what was created for recreation.

Respectfully, Christopher Cara

Correspondence: Dear Superintendent Dean,

My name is Gregory Cuti, age 40. I have lived in the Bay Area for nearly 18 years now. I currently own a home in Redwood City, where I live with my wife and 6 year old dog. One of our favorite weekend activities is to go hiking and running on the dunes at Fort Funston. When we first discovered Fort Funston, we were thrilled to be able to share such a beautiful park with our dog. With so many visitors, it has always amazed me how respectful everyone is to one another. I believe this park is the model for how shared open space can be enjoyed by different types of visitors (hikers, bikers, runners, hang gliders, dogs, etc).

I have trouble with the GGNRA's preferred alternative plan in that it severely limits and affects the off leash dog walking area at Fort Funston. From the maps I have seen, the preferred alternative. off leash area is bound by the large and always busy parking lot, steep cliffs and one paved walkway and one sanded path. I am concerned that if the number of dogs allowed playing off leash in that area dramatically increases, the cliffs and the parking lot become major safety concerns. Additionally, limiting off-leash access to the beach and large sand dunes greatly diminishes the "fun factor" for me, my wife, and my dog. It is my opinion that the DEIS has failed to truly analyze the impact of restricting the off-leash area at Fort Funston.

I feel that the "preferred alternative" actually makes the park less fun and less safe. I trust that the GGNRA, in developing a general management plan, will take into consideration and respect the speCific character and situation

of the Fort Funston Area. I fully support Alternative A, the No Action alternative of the DE IS, as it relates to Fort Funston.

Respectfully, Gregory Cuti

Correspondence: Dear Mr. Deon,

I am writing to protest the proposed restrictions on dogs and humans in the GGNRA. The Bay Area is a model for enlightened co-use of our natural resources. The availability of nearby areas for the tax paying dog owners to exercise their animals and maintain a healthy lifestyle is necessary for a balanced society. Dogs have been living with humans as helpers and companions for countless generations. To deprive this natural pairing of the opportunity to enjoy nature together would be a mistake with unforeseen consequences.

Sincerely, Michael Myers

Dear Mr. Dean

Please consult canine professionals- they will tell you that dog parks, which these rules essentially will force upon dog owners, are terrible places to socialize most dogs. Furthermore, most dog owners I know are extremely responsible. As a society, we should agree to be harder on those breaking rules as opposed to punishing all who have dogs as companions. I value the off-leash areas more than anything else about the Bay Area. And I would like to point out that most areas are no dogs allowed or on-leash.

Thanks for your time!

-Michael Myers

Correspondence Type: Letter
Correspondence: Dear Superintendent Dean:

I am an almost everyday user of Fort Funston and I will direct my comments to that particular site. I have reviewed the DEIS as it pertains to Fort

Funston. The "preferred alternative" described in the DEIS will greatly negatively impact my use of Fort Funston which will affect both my physical and mental health. Much of the information upon which the "preferred alternative" is based appears to be inaccurate and/or incomplete information.

1. Safety - The DEIS does not contain any user site survey of Fort Funston. Per statements of NPS public spokesman Howard Levitt, no user site survey of Fort Funston has been conducted by, or on behalf of the NPS. Throughout the DEIS reference is made to safety issues related to dog bites. The only actual data in the DEIS pertaining to dog bites is the Law Enforcement Data (Appendix G) which reflects for Fort Funston "4 bite/attack" which is useless information without a site survey of users to determine if the reported incidents are statistically relevant. Nor does the data include a description of the severity of any incident (i.e., skin broken, medical attention required, etc.) I also note the category "10 haz cond/pet rescue" is noted to include "cases of simple assault, case of injured person, case threats" which appear to include actions of persons, not dogs. Again, without a site survey of use, these numbers are meaningless. In short, there is no statistical data as to the daily number of visitors, the daily number of dogs, and what the Fort Funston visitors are or are not doing (i.e., walking dogs, walking, hang gliding, flying radio controlled airplanes, practicing cliff rescue, watching the ocean, etc.)

As you know, the topography of Fort Funston is remote and hilly which does not provide very clear sight lines of users. In addition the cliff area is almost vertical and eroding. In my almost daily visits to Fort Funston, I have rarely seen any NPS law enforcement patrol. Because of the lack of observable active patrol/monitoring of the area by the NPS, the only reason I feel safe walking in Fort Funston is because I am accompanied by my dog under voice control. This includes the area of the parking lot as I exit and enter my car. Fort Funston is contiguous to the urban area of San Francisco/Daly City and within walking distance to Lake Merced which contains numerous homeless encampments. Based on the lack of any significant NPS patrol presence in Fort Funston, coupled with its natural terrain and proximity to San Francisco and Daly City, if I am denied the deterrent effect/protection afforded by the company of my dog, I fear for my personal safety which would preclude my ability to use Fort Funston.

Under the current status (Alternative A), I do not fear for my personal safety and am able to utilize the recreational aspects of Fort Funston for my physical and mental health due to the personal protection afforded to me by my dog under voice control. The DEIS does not address the issue of personal safety which will occur under the "preferred alternative", nor does it address any mitigation of the increased personal safety issue on the part of

NPS to institute constant and effective safety patrols within Fort Funston.

The DEIS does not include any discussion of the inherent danger of the beach at Fort Funston due to the extreme undertow and riptide conditions present throughout the year. All native San Franciscans understand the very significant danger presented at this stretch of coastline. Any use of the beach should, for public safety, be restricted from swimming

The DEIS does not include any discussion of the safety concerns of having children at Fort Funston due to the irregular/remote/hilly topography, the very dangerous cliff area (constantly eroding from wind and rain and often not visible due to fog) and the dangerous beach.

The "preferred alternative" will create a dangerous situation for humans and dogs by limiting off leash to the area immediately adjacent to the north side of the parking lot. This area is far too small to accommodate the large number of daily walkers and dogs which will result in injury. There is no information in the DEIS as to how this specific amount of Fort Funston was allocated for off leash in the "preferred alternative". No data in the DEIS supports this allocation of limited space to off leash activities (beach off leash discussed below). Without supporting statistical and verifiable data, the basis of this allocation appears to be arbitrary.

2. Soundscape - The DEIS does not include relevant information related to the soundscape at Fort Funston and cites dog barking as an issue. As an almost daily user of Fort Funston, it is my experience is that there is little dog barking, and what dog barking does occur primarily occurs inside vehicles in the parking lot. Changing the current off leash to the "preferred alternative" will not decrease dog barking. In fact, the change to the "preferred alternative" will result in the increase of dog barking in other parts of Fort Funston as the "preferred alternative" off leash areas are too small to accommodate the amount of users (for which NPS has not conducted any accurate statistical site survey of users), and dogs restrained on leashes in other parts of the Fort are much more apt to bark than when they are off leash.

No reference is made in the DEIS to the constant noise from the very heavy use of Hwy 1-Skyline Blvd by cars, trucks and buses. This can be heard in all parts of Fort Funston with the exception of the beach.

No reference is made in the DEIS to the gunshot noise of the Pacific Rod & Gun Club range adjacent to Fort Funston which can be heard through all areas of the Fort, excluding the beach area.

No reference is made to the noise from the SF Police Gun Range adjacent to the Fort Funston, that seemingly is operated 24/7 and can be heard through

all parts of the Fort, excluding the beach.

No reference is made in the DEIS to the noise made by the hang gliders.

No reference is made in the DEIS to the noise made by model airplanes.

No reference is made in the DEIS to the noise generated by the significant number of SFO passenger jet takeoffs over Fort Funston and / or parallel to the beach and in climb out prior to turning eastbound (depending on SFO flight rules then being utilized.)

3. Bank Swallows/Native Species/Habitat Protection - The DEIS claims that off leash dogs are interfering with the nest of the Bank Swallows which are located on the cliffs at the beach. While every once in a while an errant dog falls over the cliffs by accident, this is unusual experience and not done to interfere with a bird. People climb the cliffs and also fall over them but the DEIS does not include any analysis of the effect of the human interference with Bank Swallows or other native inhabitants. In addition, no statistical data is provided pertaining to the large number of cliff rescues by the Police, Sheriff, Fire Department, Coast Guard. There must be data available because the various departments are frequently present on site practicing and / or rescuing.

The DEIS fails to address the effect of the large invasion of the non-native crows/ravens at Fort Funston on the native species of birds and animals. There is not a seagull to be found at Fort Funston. The crows/ravens have invaded the cliff areas, have driven off other birds and appear to eat everything and anything. They show no fear of dogs or humans. The DEIS fails to address the destructive effect these birds are having on the native birds and animals of Fort Funston. The DEIS fails to discuss the clear lack of understandable notice, in both signage and fences, o habitat protection areas at Fort Funston. It just is not present.

4. Dog Feces - The users I have observed at Fort Funston have been quite proactive in collecting and disposing of dog feces. Although not mentioned in the DEIS, the NPS "poop patrol" collects the feces approximately every 1.5 - 2 hours from the various waste disposal sites. Therefore, the NPS must have records of the volume of dog feces which is collected and disposed of correctly.

The "preferred alternative" will not change the amount of dog feces or make any change in the percentage of persons who comply with the feces pick-up requirements. Whether a dog in on leash or off leash will not change the amount of dog feces. There is no statistical data contained in the DEIS that there is any real dog feces issue affecting Fort Funston.

5. Diversity/Discrimination Against Seniors and Disabled- The DEIS claims under the Environmental Justice section that Hispanic and Asian users of the GGNRA cited dogs as a problem. There is no data in the DEIS for Fort Funston. Obviously the writers of the DEIS are not users of Fort Funston as there is a very diverse population utilizing this property.

In addition to ethnic diversity, Fort Funston users demonstrate a vast array of sex, age and economic levels. Many seniors utilize Fort Funston. Many disabled persons utilize Fort Funston.

The "preferred alternative" will be detrimental to seniors and disabled persons who utilize Fort Funston. Many seniors and physically disabled persons who utilize Fort Funston do not want to walk through sand. The off leash areas described in the DEIS require the owner to walk through the sand near the parking lot in order to monitor/voice control their pet, or climb down to the beach to access an off leash area. Many senior and disabled persons are unable to make the trek to and from the beach on the sand ladder. The descent to the beach is both arduous and dangerous as the steps are large and uneven. It is easy to lose one's balance. The "preferred alternative" requires that the dog remain leashed while the descent and ascent is made. This is dangerous for both the owner and the animal as any misstep by either can result in very serious injury.

Further many senior or disabled persons want to have the dogs under voice control as it allows them not to have to exert any physical strength with the upper extremities. Many middle aged women suffer from degenerative rotator cuffs which preclude walking a dog on leash. Other disabled or seniors have balance issues. Voice control allows the dog owner to have the availability of both arms to aid in their balance and protect themselves if an accidental stumble should occur. The "preferred alternative" would deprive seniors and disabled persons from the ability to avoid physical injury. 6. Water Discharge/Erosion of Cliffs/Toxic Substances - The DEIS fails to address the pre-existing sewer lines of San Francisco and Daly City which go under Fort Funston and discharge into the ocean. The DEIS does not address the effect on the environment of the sewer lines and the huge excavation which was performed in the last year to update these sewer lines and attempt to stabilize the cliffs which had receded 75 feet in the last 30 years due to the effects of nature (not dogs).

The DEIS fails to address the toxic substances which remain at Fort Funston due to the occupation of the site by Coast Artillery in World War II and the subsequent use as an Army Nike missile site. There is no reference to the leaching of these toxic substances and their effect on the environment. While it is true that a certain amount of mitigation of hydraulic fluid from Nike missile handling equipment still remaining on the site and still underground has been done, the very personnel performing the mitigation

for the Federal government indicated they don't really know what else is underground, where all the equipment is actually located, what the current condition of that equipment is, and, last but not least, where it will leak next. The DEIS also fails to address unexploded ordinance which continues to still be discovered at Fort Funston. The DEIS also fails to address the exploded ordinance (lead) mixed into the soil throughout the site and still being discovered by even the most casual observer.

7. Soil & Geology - The DEIS does not discuss the effect on soil by use of humans at Fort Funston.

8. Vegetation - The DEIS does not address the effect of the shifting sand due to nature (wind, water) as affecting vegetation, or the extent vegetation has been loss due to excavation at Fort Funston. (What I have overheard are group leaders giving lectures to student groups stating that the major cause of the erosion is "running dogs.")

9. Wildlife - The DEIS does not have data to support conclusions/assumptions.

10. San Francisco Lessingia - The DEIS does not contain data to support conclusions. Personal observations are that fencing is completely inadequate at site and signage is non-existent.

11. Visitor Use & Experience - The DEIS does not have data to support conclusions of "preferred alternative". This "preferred alternative" will result in major adverse cumulative impacts for myself and many other users of Fort Funston. In that NPS has not performed a site survey at Fort Funston, it is amazing that the DEIS can support the "preferred alternative" when the user population has never been surveyed.

Conclusion - As a fifth generation San Franciscan, a disabled person and a constant user of Fort Funston, I object to the conclusions of the DEIS as they lack viable quantitative and scientific basis. Site specific information is lacking for Fort Funston. If the NPS proceeds with the "preferred alternative" the NPS will be depriving thousands of people recreational use of Fort Funston. In the legal world, the DEIS would commonly be referred to as "spaghetti" - throw it all on the wall and see what sticks - a great way to try and confuse (and take advantage of) unsophisticated jurors; in this instance unsophisticated users of the area. I would expect a higher level of conduct and professionalism from the NPS.

If it is the intent of the NPS that Fort Funston remain an abandoned army base, it will be accomplished under the 'preferred alternative'. In addition, the poison pill included in the DEIS which automatically allows the NPS to

allow no voice control dogs is an insult to every citizen.

May I suggest that the NPS spend its limited resources on improving the GGNRA, not destroying it's peaceful use. Otherwise, it seems as though the NPS budget requires far closer scrutiny.

Very truly yours, Joanne M. Mahoney

Correspondence: Dear Superintendent Dean,

I am Andy Yang. I live in San Francisco. I do not own a dog. I do love dogs. I am writing to you to share my disappointment with the GGNRA proposals to severely restrict access to the GGNRA lands to people with dogs. I came to the US from China in 1987 and became a US a citizen in 1994. I am disabled from a stroke however the the Bay Area is a great place to live because of the many accommodations that public spaces make for people with disabilities. I love visiting Crissy Field and watching the dogs play. I usually sit on the benches near the parking lot at the east end of Crissy Field. Sometimes we bring a friend's dog with us and I watch as my wife plays with the dog near the water.

I have reviewed the maps you have presented and am very concerned that your proposed alternative where dogs are restricted to a very small area of Crissy Field is unfair to people who own dogs and unfair to those of us who cannot walk to those areas where you are telling the dogs to go. These areas are a significant distance from the parking lot and I would not be able to participate with my family in playing with and watching the dogs.. This would take away my enjoyment of Crissy Field. I have also noticed that when I am with a friend with a dog or we have with us a dog that a friend has let us take out people are much friendlier to me and do not notice my disability but talk to me about the dog. I makes me feel like I am part of the community. I think that people with dogs are friendlier and nicer in general.

I have noticed that people with dogs keep their dogs under voice command and away from the fenced off areas. They are also very careful to make sure that their dogs do not jump on me.

The dogs and the dogs' owners make Crissy Field better. I do not know why you want to punish the dog people by making them stay in one small area. This makes no sense and makes it very hard on those people with disabilities to participate in walks and other activities with their friends who have dogs. I hope you will reconsider your proposals and leave everything the way it is now. Thank you Respectfully,

Andy Yang CC: Representative Nancy Pelosi, 8' Congressional District of California, House Minority Leader, U.S. House of Representatives Ken Salazar, Secretary of Interior Jon Jarvis, National Park Service Director Crissy Field Dog Group

Correspondence: Dear Superintendant Dean

My name is Michael Hill, I am a registered nurse and I work at San Francisco General Hospital. I am an alumnus of the University of San Francisco, and a member of the Alpha Sigma Nu Jesuit Scholars, as well as a member of the San Francisco Bicycle Coalition. I am also a dog owner and an enthusiastic lover of open spaces and coastal beauty. I am writing this letter because I am very concerned that the GGNRA is about to embark on a plan to limit dog recreation at Crissy Field, Ocean Beach, and Fort Funston, a misguided plan that will irreparably harm the happiness and health of all San Franciscans and their pets for years to come.

Although my dogs are now 12 and 10 years old and do not often put a paw in the bay or ocean waters these days, throughout their lives Ocean Beach, Fort Funston, and Crissy Field have been their playgrounds. Besides being able to socialize with other dogs and their owners, being able to visit these spots with my dogs has taught me an abiding love and respect for the beauty of Northern California. That is why I am also a member of the Sierra Club and other environmental groups. I do not subscribe to the

I have read over some of the lengthy draft, gone to several community meetings that discuss the proposed changes, and have talked to my supervisor, Scott Weiner, about what I can do as a citizen to see that the GGNRA modifies its proposed plans to limit off-leash access. I am sure that your office has received a large volume of responses from people like me,

citizens that have spent years, perhaps decades, hiking, romping, and swimming with our dogs at these coastal areas. We have come together as a community to protest these proposed changes that would curtail our freedoms. And we also question the assumptions that underlie the need for these changes.

It is my understanding that the GGNRA has overestimated the impact of dogs upon these environments. Therefore, I would like to see more rigorous studies that concretely and unequivocally confirm these assumptions. Also, exactly how many incidents of dog attacks have there been in these locations over the years? My friends and I have consistently frequented all of these off-leash areas, and the number of occasions when a dog has menaced a wild animal or another visitor to the beach is minimal. The vast number of people and dogs that visit these areas pick up their litter, are well-behaved, and generally leave the seaside as clean and safe as they have found it. According to the GGNRA data, dogs account for only 2% of serious safety incidents.

There are many other steps that can be taken to protect coastal areas, short of completely banning off-leash recreation. Since it is GGNRA's mandate to provide "recreation," I feel it is your responsibility to live up to your name and take the necessary steps to not only protect the environment, but also to ensure our enjoyment of these beautiful areas. Signage, low-lying fences that are well maintained, and public education are what is essential, to preserve these areas, not draconian legislation.

Your office can be certain that, should these proposed changes actually take effect, there will be a sizeable "pushback" from citizens such as myself.
Michael Hill

Correspondence: I have just reread the Sunday Profile in the April Chronicle as well as the Cindy Buchman article in Pet Pages re the ongoing discussion re dog walking in public areas.

I am in my 80's and have stopped walking to Crissy Field because I am so fearful of dogs due to a childhood dreadful encounter. Dogs have taken over the city - I can no longer walk near my street at Aquatic Park because dogs do their business where children play (or used to) in the sand. Dogs are there w/o leashes. A few steps from my door a woman was holding on to her dog while it was having a B.M.

-Dog leashes are so long a child would be mauled before the mutt can be restricted (or an adult)

-I came to S.F. in 1945. Things have changed. I want to leave. People think more of their mutts, which they treat as family, then they do of tax-paying citizens who now can only walk the street by looking down to avoid stepping in dog waste.

-Bicycles also have taken over. I was recently run into by a cyclist on a rainy day because he was on the sidewalk.

* Please, Mr. Dean, keep people with dogs away from Crissy Field, Fort Point and all places where dogs have taken over and we can no longer visit.

-Because of the Sterling Davis Law I have a dog living next door to me - a so-called comfort dog, altho the owner works all day and has had it since it was a pup. I am a prisoner in my own apartment, as a result. Bless you.

Correspondence: Don't Change the law for Fort Funston

Dear Super Intandent Frank Dean,

Hi I'm Hannah, and I'm 10 years old. First of all the dogs are natural so I don't get why people are saying that they're distroying Fort Funston. I walk at Fort Funston with my dog Gertrude. We always pick up her poop or number 2, and sometimes we pick up other peoples dog poop. I think sometimes people are trying to pick up their dogs poop, but they miss when their dogs or the dogs that ghey get paid to walk. One time I saw a dog going number 2, or poop, I told the dog walker that the dog he was walking went number 2. I've had many wonderful experiences at Fort Funston, my dog Gertrude likes sticks and when she gets big ones, and she can't get it up, this could go on YouTube, she whines while she digs to pick up the sticks from under. This is a great park, but it could be more patrolled if you needed to with park rangers just to keep a watch. It's such a great place, why leave all the dogs chained up with leashes?

From Hannah DeGroot, 4th grade, SF,CA

P.S. Thanks for reading I hope you didn't think my letter was a waste of time. I hope you would like to walk your dog there. I love it, and many other people do too. Hope you can read my handwriting. Thanks!

Correspondence Type: Letter

Correspondence: Dear Superintendent Dean,

The GGNRA DEIS for a Dog Management Plan does not consider the impact that restrictions of off-leash access and resulting overcrowding in city parks will have on dog health and behavior. The DEIS contains no information on the benefits of off-leash play for dogs in terms of their physical and mental health and behavior. Dog behaviorists nearly universally view off-leash play as critical for well-exercised and well-socialized dogs. The severe restrictions on off-leash access proposed in the Preferred Alternative will likely decrease the amount of aerobic exercise many dogs receive, as it becomes more problematic for their owners to provide them with the level of exercise they currently get at Fort Funston, Ocean Beach and other locations in the GGNRA. The restrictions will also seriously interfere with the socialization of dogs both to other dogs and to people in general, as they lose access to places that allow them to interact freely and without crowding. The net result of this loss of off-leash space is likely to increase problem behaviors observed in many of those dogs who lose access to off-leash areas.

If the severe restrictions proposed in the Preferred Alternative go through, many people who currently walk their dogs off-leash in the GGNRA will instead move to the much smaller city parks. The nearly tenfold increase in dogs observed in Stem Grove mid-morning on Tsunami Friday (March 11, 2011, when the GGNRA closed Fort Funston and Ocean Beach because of the threat of a tsunami from the earthquake in Japan, as reported in the March 2011 issue of the West Portal Monthly) is indicative of the increases in visitor usage in city parks likely to occur if the severe restrictions in the Preferred Alternative go into effect. Off-leash areas in city parks are significantly smaller in area than those currently available in the GGNRA. Putting thousands more people and dogs into much smaller areas will inevitably lead to problems caused by overcrowding. This will result in more behavior problems in dogs forced to endure the overcrowding day in and day out.

Problem dog behaviors are one of the primary reasons given when owners surrender dogs to shelters. It is likely that the restrictions on off-leash access and overcrowding that come from the GGNRA's Preferred Alternative will therefore result in an increase in surrenders to city shelters. Because dog rescue groups are already overwhelmed with the existing demand for placements out of shelters, it is likely that they will have difficulty finding

homes for the additional shelter dogs that result from the GGNRA's plan. Thus, there will likely be an increase in dogs in the city shelter at any one time. This increase will have an economic (supplies and staff resources) impact on city shelters, and an emotional impact on shelter staff as potentially adoptable dogs are euthanized at city shelters because there are too many dogs in the shelter or because they fall through the cracks of the rescue system.

On March 10, 2011, the San Francisco Commission of Animal Control and Welfare, of which I am the Chair, held a hearing on the GGNRA DEIS and its potential impacts on dog behavior and city shelters. We heard testimony from invited speakers that included dog behaviorists and trainers, as well as leaders of established dog rescue groups and shelter directors (the SF/SPCA and SF Animal Care and Control). The testimony supported what I have said in this letter. The Commission advises the Board of Supervisors on animal issues. At the March 10 meeting, the Commission voted 5-2 to recommend that the San Francisco Board of Supervisors oppose the DEIS Preferred Alternative because it did not consider impacts on dog behavior and possible increases in surrenders to city shelters.

I have attached a transcript of the GGNRA discussion for that meeting, including the public comment that followed the invited speakers. This is provided not as an attempt to submit public comments about the DEIS on behalf of these individuals, but rather to educate GGNRA staff and comment reviewers on this issue by providing the expert testimony of dog behaviorists, trainers, heads of dog rescue groups, shelter directors, and dog owners about the benefits of off-leash play for dogs and the impacts that the loss of off-leash space in the GGNRA will likely have on dog health and behavior and on city shelters. I have also attached letters sent to the Commission of Animal Control and Welfare Commission, as well as to the Land Use Committee of the Board of Supervisors by nationally recognized local dog behaviorists about these issues. Again, these letters are not intended to be considered as a submission of the individual's public comment on the DEIS, but rather are intended to educate GGNRA staff and the comment reviewers about the benefits to dogs of off-leash play and potential impacts on dogs if off-leash access is severely restricted in the GGNRA, as provided by nationally recognized expert dog behaviorists.

The impacts on both dogs' health and behavior, and on city shelters and rescue groups were not considered in the DEIS, and the document is therefore incomplete. As a result, any analysis of alternatives that did not include these impacts cannot be accepted. The GGNRA must go back and include analysis of these impacts before any dog management plan can go forward.

Sincerely, Sally Stephens

San Francisco, CA 94116

Correspondence Type: Letter

Correspondence: Dear Superintendent Dean,

I closely monitored the bank swallow colony at Fort Funston for five successive nesting seasons, 2001-2005. This involved 90 monitoring sessions of an hour or more each. I recorded each individual burrow on maps, noted which burrows were occupied on each of the 90 days, and tried to identify how many young were fledged from each burrow. My records are at least as comprehensive and accurate as those kept by GGNRA staff. I tell you all this to communicate: The bank swallows at Fort Funston are very important to me. I would never do anything to compromise their welfare, nor would I willingly allow others to harm them. So I do not make the following comments lightly.

Dogs have no impact on the bank swallows at Fort Funston.

The GGNRA/DEIS used deeply flawed "science" to justify removing off leash dogs from most of Fort Funston in its Preferred Alternative. The DEIS claims (table, page 1265) that allowing off leash dogs to remain would have "long term minor to moderate adverse impacts" on the bank swallows because "continuing impacts from dogs and/or humans would include digging at or collapsing the burrows, flushing birds from nests, and causing active sloughing and landslides that may block or crush burrows." In fact, there is no evidence that dogs have any impact on the bank swallow colony at Fort Funston and, specifically, no evidence that they dig at or collapse burrows, flush birds, or cause landslides that crush burrows.

The DEIS cites two sources for its claim of adverse impacts: Bank Swallow Monitoring at Fort Funston, Golden Gate National Recreation Area 1993-2006. Golden Gate National Recreation Area, San Francisco, CA. (NPS 2007e), and Wildlife Response to Habitat Restoration in Fort Funston, Golden Gate National Recreation Area, California, Final Report prepared for the NPS. November 2004. (USGS 2004) Neither study documents any

impact on the bank swallows. USGS 2004 offers no evidence of any disturbance to bank swallows. When USGS 2004 says, "dogs were recorded in restricted areas," the restricted areas are not the bank swallow protection area, but rather the 12-acre native plant restoration area in the dunes inland from the bank swallow colony, together with other restricted areas that together make up most of the north end of Fort Funston. The DEIS describes the restrictions around the bank swallow colony, on the beach below and the bluff tops above, and then cites USGS 2004 to say dogs were in "restricted areas," falsely implying that this is the bank swallow restricted area (p 1263, and Map 16-A). Compare Figure 2 in USGS 2004 with Map 16-A in DEIS to see the radically different "restricted areas." USGS 2004 does not report any dogs in the bank swallow restricted area. In fact, the study didn't observe any bank swallows at all, in either the native, plant-restored protected area or the bank swallow protected area.

When the authors of USGS 2004 prepared a version of the same study for publication in a refereed scientific journal ("Wildlife Response to Coastal Dune Habitat Restoration in San Francisco, California" by Russell, Shulzitski and Setty, *Ecological Restoration*, Vol. 27, No. 4, 2009), they made only one passing mention of dogs: "Although a small number of visitors and their pets continued to use the restricted areas, the measures [post-and-cable fences] were successful for the most part." In either version, USGS 2004 contributes no evidence of any impact of dogs on bank swallows.

The DEIS relies mainly on NPS 2007e for the false claim that dogs have an adverse impact on the bank swallows at Fort Funston. The data document for NPS 2007e ("BS_data_public.xls" provided by GGNRA during Negotiated Rulemaking) reports that monitors observed a few dogs (none in some years, a total of three (3) for the years 2001-2006) in the "closed area" around the bank swallows. That's all the evidence there is, the mere presence of a few dogs. The final paragraph of the NPS 2007e consists of alleged "disturbance events" that are unconnected to the report's data and a long list of "potential impacts." Most of the "disturbance events" and "potential impacts" have nothing to do with dogs. Collapsing burrows, flushing swallows from nests, and causing landslides are "potential impacts," not observed events. From "potential impacts" in NPS 2007e, DEIS leaps to "Dogs could likely (emphasis added) dig at or collapse burrows..." (p. 1263) How something that could potentially happen became likely to happen is not explained. Then the DEIS escalates "potential impact" and "could likely" into a "continuing impact." (p.1265) Again, how something that might happen became something that will continue to happen is not explained. Note that, still, no one has seen a dog collapse a bank swallow burrow, flush a swallow, or cause a landslide in the bank swallow colony at Fort Funston.

Daphne Hatch is the author of NPS 2007e. She participated in construction

of the Attribute Tables for the NEPA analysis in preparation for the DEIS. Ms. Hatch wrote during Negotiated Rulemaking in 2007, while discussing the attributes at Fort Funston (after the 1993-2006 bank swallow monitoring was complete), "No documentation of loss of nests or young to people or dogs that I am aware of..."

It is significant that adverse impacts of dogs on swallows have not been observed because people have been out there looking for them. A GGNRA researcher closely monitored the bank swallow colony in 1994 and 1995 and wrote an official report. (1994-95 Bank Swallow Annual Report, Nola Chow, 1996) Chow observed that there were dogs present, and noted they did not disturb the swallows. She also listed a number of things the GGNRA should do to protect the bank swallow colony, but doesn't mention the dogs. Chow's monitoring is part of NPS 2007e, but her report isn't included in the twenty-seven page bibliography attached to the DEIS. Chow's observations of dogs with no impact on swallows are not reported in either the DEIS or in 2007e. The entire 1993-2006 GGNRA bank swallow monitoring project hasn't documented any dog-caused burrow collapses, swallows flushed from nests by dogs, nor any dog-caused landslides crushing burrows.

We should not be surprised that dogs have no impact on the bank swallows. Barrett Garrison is recognized as a bank swallow expert by GGNRA; he has two listings in the DEIS list of references. Garrison says in Bank Swallow, "Bank Swallows appear relatively insensitive to moderate levels of human-induced disturbance." Garrison lists documented land uses around Bank Swallow colonies: hydroelectric power generation, irrigation, recreational boating, commercial agriculture, vehicular and pedestrian traffic, and livestock grazing. They nest in active quarries and in busy road cuts. Garrison says, "These land uses appear relatively benign as long as the integrity of the nesting bank remains," and, "... are unlikely to have substantive adverse impacts to Bank Swallows."

The bank swallows nest in burrows in the cliff faces above the beach at Fort Funston, and fly directly from the burrows to feed over Lake Merced to the east. They return directly to the cliff face burrows. During 90+ hours of sitting on the beach beneath the bank swallow colony I saw many dogs on the beach. But I didn't see a single dog that showed awareness that the swallows were present. People who do not go specifically looking for the swallows don't notice them either. The swallows don't interact with, or react to, people or dogs.

Speculation of what might happen, which runs counter to years of experience with what actually does happen, is not science. And such groundless speculation should not be used to eliminate recreational dog walking at Fort Funston, nor elsewhere in the GGNRA.

A committee of the National Academy of Sciences recently evaluated the work of National Park Service scientists regarding oyster culture in Drakes Bay. NAS reported in a news release, May 5, 2009, that, National Park Service scientists, "selectively presented, overinterpreted, or misrepresented the available scientific information," and, "exaggerate[ed] the negative and overlook[ed] potentially beneficial effects." Likewise, GGNRA/DEIS selectively presents, overinterprets, and misrepresents the available scientific information when they claim dogs have an adverse impact on bank swallows at Fort Funston.

All of the unsubstantiated, incorrect references to adverse impacts of dogs on bank swallows must be removed from the DEIS. There are other unsubstantiated statements of adverse impacts at Fort Funston contained in the DEIS which I will cover in other comments. When all statements without supporting evidence are removed, Alternative A must be re-evaluated. Only when the unsupported speculations are removed can Alternative A be properly evaluated.

Add some off leash areas in the GGNRA sites in San Mateo to Alternative A and you will have a really preferred alternative.

Sincerely, Keith McAllister Oakland, CA 94611

Correspondence: Re: Draft Dog Management Plan/Draft Environmental Impact Statement

Dear Superintendent Dean,

GGNRA/DEIS casually dismisses the major adverse impact on those people who will lose an important recreational resource under the various alternatives. Off leash recreation in the GGNRA is a major recreational resource, and it can't be ignored in an EIS. The adverse impacts on thousands of current GGNRA visitors who will lose a crucial recreational activity at most sites under most alternatives must be identified, analyzed, and evaluated.

RECREATION

GGNRA/DEIS's disregard for the thousands of visitors who use GGNRA sites for dog walking recreation is most pronounced in discussions of "visitor use and experience." There is no discussion at all of recreation as a resource to be preserved. GGNRA/DEIS does not acknowledge that thousands of people use the Golden Gate National Recreation Area daily for legitimate outdoor recreation when they walk with their dogs off leash. Losing that recreation would be a major adverse impact on a huge group of GGNRA visitors.

GGNRA claims the adverse impact on dog walking visitors of losing most of the off leash area at Fort Funston (Preferred Alternative, p 1530) would be "minor." At the same time, the impact on those who oppose dog walking would be "minor to moderate adverse," even though off leash dogs would be banned from most of Fort Funston, and all dogs banned from half the beach. These impacts are rated with no attempt to determine the sizes of the groups affected. Thousands of visitors would lose their off leash recreation, which is a major adverse impact to them. The number of people who visit Fort Funston and are adversely impacted by the presence of dogs is not determined. The number of people who would visit Fort Funston if the dogs were not there is not determined.

The claim that there are many people who would visit Fort Funston if dogs were not there is not only unsupported by evidence, it is counter-indicated by the other restored dune scrub sites in San Francisco. The Point Lobos Reserve and Parcel 4 (Balboa and Great Highway) have virtually no visitors. It is a myth that there are large numbers of potential visitors who want to look at native plants and dune scrub, but avoid Fort Funston because of the dogs there.

When the ability to take a real walk at Fort Funston with an off leash dog is replaced with the opportunity to watch that dog play in a ROLA, people lose real recreation. GGNRA/DEIS does not seem to realize that it is people's recreation that is at issue. Walking with one's dog is the recreation; watching that dog play in a ROLA is not the same thing at all. GGNRA/DEIS does not acknowledge or evaluate the lost recreation. That is arbitrary and capricious.

GGNRA/DEIS weighs the desire of some people not to see dogs (even though they can continue to hike, picnic, fly kites, ride bikes, watch birds, ride horses, hang glide, etc.) more heavily than the impact on people who will lose outright their recreational activity. This is pure prejudice on the part of GGNRA staff that dog walkers are not legitimate recreational visitors, but all the other visitors are legitimate. This prejudice is arbitrary and capricious.

HUMAN HEALTH and SAFETY The impact on the health of dog walking

park visitors who lose this recreational activity is not even acknowledged in the numerous discussions of "human health and safety." Walking with off leash dogs is the only regular, active, outdoor recreation many of us seniors get. Only adverse impacts on visitors and staff from the presence of dogs are considered (and exaggerated) in the DEIS. The benefits to health and safety that visitors (especially seniors) get from exercise and community are not discussed, quantified, or included in DEIS analysis.

The evidence for the health benefits to seniors from walking with a dog is too over-whelming for GGNRA/DEIS to ignore if alternatives are to be genuinely evaluated. From The Journal of Physical Activity and Health, Vol 8, Issue 3, March 2010: Researchers Reeves, Rafferty, et al. studied 5902 adults in Michigan and found the odds of doing long term physical activity were 69% higher for dog walkers than non dog walkers. They found that among dog owners who took their pets for regular walks, 60 percent met federal criteria for regular moderate or vigorous exercise. About a third of those without dogs got that much exercise. From the American Journal of Public Health, Jan 2008: Researchers Cutt, Giles-Corti, et al. found "the adjusted odds of achieving sufficient physical activity and walking were 57% and 77% higher among dog owners compared with those not owning dogs." The New York Times of March 14, 2011 reported several other studies that reached the same conclusion. A study of 41,500 Californians found that people who owned dogs were 60% more likely to walk for leisure than those with a cat or no pet at all. This meant an extra 19 minutes a week, on average, of walking for the dog owners. In another study, seniors in an assisted-living facility improved walking speed by 28% if they walked with a dog but only 4% if they walked with a human companion. The impact on human, especially senior, health of losing their traditional recreational opportunities in GGNRA is a serious matter. Watching a dog play in a restricted ROLA is not active exercise with the same health benefits as walking with that dog. It is arbitrary and capricious for GGNRA/DEIS to dismiss the issue entirely without any evaluation.

The presence of off leash dogs at GGNRA sites is claimed to have a "moderate adverse" impact on health and safety (e.g. Alternative A at Fort Funston), but if those dogs are displaced to a non-GGNRA site, the impact is "negligible to minor adverse." (e.g. Alternative C in Marin Headlands) It's because GGNRA/DEIS doesn't quantify and evaluate the claimed adverse impacts, that the same condition can have different impacts on two different pages of the DEIS.

Only Alternative A, no change, avoids sacrificing the recreational resources and health benefits that so many GGNRA sites provide to so many visitors. If off leash recreation is also provided in GGNRA sites in San Mateo County, a truly preferred alternative would be created.

Sincerely, Keith McAllister Oakland, CA 94611

Correspondence Type: Letter

Correspondence: Dear Superintendent Dean:

I am an almost everyday user of Fort Funston. Accordingly, my comments are limited to Fort Funston even though I did thoroughly peruse the entirety of your 2,000 + page report. I should note at the onset that your report can best be described as all fluff with little if any substance or critical statistical and analytical data capable of verification or authentication. The "preferred alternative" described in the DEIS will negatively impact my use of Fort Funston and impact my physical and mental health. Much of the information upon which the "preferred alternative" is based appears to be inaccurate and/or incomplete information.

Safety - The DEIS does not contain any user site survey of Fort Funston. NPS public spokesman Howard Levitt publicly state4d in my presence at an NPS community meeting that no user site survey of Fort. Funston has been conducted by, or on behalf of, the NPS. The DEIS repeatedly refers to safety issues related to dog bites. The only actual data in the DEIS pertaining to dog bites is the Law Enforcement Data (Appendix G) which reflects for Fort Funston "4 bite/attack" which is useless information without a site survey of users to determine if the reported incidents are statistically relevant. Nor does the data include a description of the severity of any incident (i.e., skin broken, medical attention required, etc.) The category " 10 haz coed/pet rescue" is noted to include "cases of simple assault, case of injured person, case threats" which appear to include actions of persons, not dogs. What exactly is being reported? Such a broad sweeping reference without inclusive analysis is legally meaningless and appears to be puffery by NPS. In fact, the entire report is replete with adjectives and adverbs but without meaningful data One could say that the entire compilation reads like a conclusion was reached and staff was then directed to support it. Interesting. There simply is no statistical data as to the daily number of visitors, the daily number of dogs, and what the Fort Funston visitors are or are not doing (i.e., walking dogs, walking, hang gliding, flying radio controlled airplanes, practicing cliff rescue, watching the ocean, etc.) While I have not done a survey, I would be willing to state that the categories just listed cover

90+% of those who visit Fort Funston.

The DEIS does not include any discussion of the inherent danger of the beach at Fort Funston due to the extreme undertow and riptide conditions present throughout the year. All native San Franciscans understand the very significant danger presented at this stretch of coastline. Any use of the beach should, for public safety, be restricted from swimming.

The DEIS does not include any discussion of the safety concerns of having children at Fort Funston due to the irregular/remote/hilly topography, the very dangerous cliff area (constantly eroding from wind and rain and often not visible due to fog) and the dangerous beach.

The "preferred alternative" will create a dangerous situation for humans and dogs by limiting off leash to the area immediately adjacent to the north side of the parking lot. This area is far too small to accommodate the large number of daily walkers and dogs which will result in injury. There is no information in the DEIS as to how this specific amount of Fort Funston was allocated for off leash in the "preferred alternative". No data in the DEIS supports this allocation of limited space to off leash activities (beach off leash discussed below). Without supporting statistical and verifiable data, the basis of this allocation appears to be arbitrary.

2. Soundscape -

The DEIS does not include relevant information related to the soundscape at Fort Funston and cites dog barking as an issue. As an almost daily user of Fort Funston, it is my experience is that there is very little dog barking, and what dog barking does occur primarily occurs inside vehicles in the parking lot. Changing the current off leash to the "preferred alternative" will not decrease dog barking. In fact, the change to the "preferred alternative" will result in the increase of dog barking in other parts of Fort Funston as the "preferred alternative" off leash areas are too small to accommodate the amount of users (for which NPS has not conducted any accurate statistical site survey of users), and dogs restrained on leashes in other parts of the Fort are much more apt to bark than when they are off leash.

No reference is made in the DEIS to the constant noise from the very heavy use of Hwy 1-Skyline Blvd by cars, trucks and buses. This can be heard in all parts of Fort Funston with the exception of the beach. No reference is made in the DEIS to the gunshot noise of the Pacific Rod & Gun Club range adjacent to Fort Funston which can be heard through all areas of the Fort, excluding the beach area. No reference is made to the noise from the SF Police Gun Range adjacent to the Fort Funston, that seemingly is operated 24/7 and can be heard through all parts of the Fort, excluding the beach. No reference is made in the DEIS to the noise made by the hang gliders. No

reference is made in the DEIS to the noise made by model airplanes. No reference is made in the DEIS to the noise generated by the significant number of SFO passenger jet takeoffs over Fort Funston and / or parallel to the beach and in climb out prior to turning eastbound (depending on SFO flight rules then being utilized.)

Bank Swallows/Native Species/Habitat Protection -

The DEIS claims that off leash dogs are interfering with the nest of the Bank Swallows which are located on the cliffs at the beach. While every once in a while an errant dog falls over the cliffs by accident, this is unusual experience and not done to interfere with a bird. In fact, I have never seen a dog anywhere near the cliffs paying the least bit of attention to any bird. People climb the cliffs and also fall over them but the DEIS does not include any analysis of the effect of the human interference with Bank Swallows or other native inhabitants. In addition, no statistical data is provided pertaining to the large number of cliff rescues by the Police, Sheriff, Fire Department, Coast Guard. There must be data available because the various departments are frequently present on site practicing and / or rescuing.

The DEIS fails to address the effect of the large invasion of the non-native crows/ravens at Fort Funston on the native species of birds and animals. Look around. There is not a seagull to be found at Fort Funston. The seagulls were previously at the Fort. Now they are at Lake Merced. I doubt the hanggliders drove them off. I doubt the dogs drove them off. However, the crows/ravens have invaded the cliff areas, have driven off most all of the other birds and appear to eat everything and anything. They show no fear of dogs or humans. The DEIS fails to address the destructive effect these birds are having on the native birds and animals of Fort Funston.

Dog Feces -

The users I have observed at Fort Funston have been quite proactive in collecting and disposing of dog feces. Although not mentioned in the DEIS, the NPS "poop patrol" collects the feces approximately every 1.5 - 2 hours from the various waste disposal sites. Therefore, the NPS must have records of the volume of dog feces which is collected and disposed of correctly. In addition there are volunteer clean up the entire area throughout the year programs. Those volunteers pick up all kinds of things from dog feces to litter in general.

Also, the "preferred alternative" will not change the amount of dog feces or make any change in the percentage of persons who comply with the feces pick-up requirements. Whether a dog in on leash or off leash will not change the amount of dog feces. There is no statistical data contained in the DEIS

that there is any real dog feces issue affecting Fort Funston.

Diversity/Discrimination Against Seniors and Disabled-

The DEIS claims under the Environmental Justice section that Hispanic and Asian users of the GGNRA cited dogs as a problem. There is no data in the DEIS for Fort Funston. Obviously the writers of the DEIS are not users of Fort Funston as there is a very diverse population utilizing this property. There are Caucasians, African Americans, Chinese, Japanese, Filipinos, etc. all present on a daily basis. In addition to ethnic diversity, Fort Funston users demonstrate a vast array of sex, age and economic levels. Many seniors utilize Fort Funston. Many disabled persons utilize Fort Funston. The "preferred alternative" will be detrimental to seniors and disabled persons who utilize Fort Funston. Many seniors and physically disabled persons who utilize Fort Funston do not want to walk through sand. The off leash areas described in the DEIS require the owner to walk through the sand near the parking lot in order to monitor/voice control their pet, or climb down to the beach to access an off leash area. Many senior and disabled persons are unable to make the trek to and from the beach on the sand ladder. The descent to the beach is both arduous and dangerous as the steps are large and uneven. It is easy to lose one's balance. The "preferred alternative" requires that the dog remain leashed while the descent and ascent is made. This is dangerous for both the owner and the animal as any misstep by either can result in very serious injury.

Further many senior or disabled persons want dogs under voice control as it allows them not to have to exert any physical strength with the upper extremities. Many middle aged women suffer from degenerative rotator cuffs which preclude walking a dog on leash. Other disabled or seniors have balance issues. Voice control allows the dog owner to have the availability of both arms to aid in their balance and protect themselves if an accidental stumble should occur. The "preferred alternative" would deprive seniors and disabled persons from the ability to avoid physical injury.

Water Discharge/Erosion of Cliffs/Toxic Substances -

The DEIS fails to address the pre-existing sewer lines of San Francisco and Daly City which go under Fort Funston and discharge into the ocean. The DEIS does not address the effect on the environment of the sewer lines and the huge excavation which was performed in the last year to update these sewer lines and attempt to stabilize the cliffs which had receded 75 feet in the last 30 years due to the effects of nature (not dogs).

The DEIS fails to address the toxic substances which remain at Fort Funston due to the occupation of the site by Coast Artillery in World War II and the subsequent use as an Army Nike missile site. There is no reference to the

leaching of these toxic substances and their effect on the environment. While it is true that a certain amount of mitigation of hydraulic fluid from Nike missile handling equipment still remaining on the site and still underground has been done, the very personnel performing the mitigation for the Federal government indicated they don't really know what else is underground, where all the equipment is actually located, what the current condition of that equipment is, and, last but not least, where it will leak next. The DEIS also fails to address unexploded ordinance which continues to still be discovered at Fort Funston. The DEIS also fails to address the exploded ordinance (lead) mixed into the soil throughout the site and still being discovered by even the most casual observer.

Vegetation -

The DEIS does not address the effect of the shifting sand due to nature water) as affecting vegetation, or the extent vegetation has been lost due to excavation at Fort Funston. (What I have overheard are group leaders giving lectures to student groups stating that the major cause of the erosion is "running dogs.")

Wildlife -

The DEIS does not have data to support conclusions/assumptions. What wildlife? I assume you conclude the dogs are again the cause.

Visitor Use & Experience -

The DEIS does not have data to support conclusions of "preferred alternative". This "preferred alternative" will result in major adverse cumulative impacts for myself and many other users of Fort Funston. In that NPS has not performed a site survey at Fort Funston, it is amazing that the DEIS can support the "preferred alternative" when the user population has never been surveyed.

Conclusion -

The National Park Service is operating a recreational area, not a park. Comply with the directives that created the GGNRA in the first place. I object to the conclusions of the DEIS as they lack any viable quantitative and scientific basis. There simply is no substance to your report. Site specific information is lacking for Fort Funston. If the NPS proceeds with the "preferred alternative" the NPS will be depriving thousands of people recreational use of Fort Funston. I would expect a higher level of conduct and professionalism from the NPS.

If it is the intent of the NPS that Fort Funston remain an abandoned army

base, it will be accomplished under the 'preferred alternative". In addition, the poison pill included in the DEIS which automatically allows the NPS to allow no voice control dogs is an insult to every citizen. Why don't you more appropriately utilize funding because in the alternative Congress must consider NPS reductions since NPS does not appear to spend taxpayer dollars in the best interest of those using Fort Funston.

Very truly yours, Thomas A Bogott Washington, D.C. 20510 Senator Barbara Boxer 112 Hart Senate Office Bldg. Washington, D.C. 20510 Congresswoman Nancy Pelosi 235 Cannon House Office Bldg. Correspondence Type: Letter

Correspondence: Dear Superintendent Dean,

I am writing to voice my opinion regarding the dog management proposal for the GGNRA. I am Chinese-American, a resident of San Francisco and former lab researcher in the UC system for 35 years. Although retired from UC, I currently work part time for a private dental practice. As an active "older" person, I also volunteer for the California Academy of Sciences as well as dog/cat rescue organizations in San Francisco. I have been a frequent volunteer dog walker for the last 6 years, and the caretaker of my cat for the last 10 years. I also have a great appreciation for nature and have participated in hikes and bicycle rides in the Bay Area through Sierra Club, etc.

I have never avoided the GGNRA or other dog populated areas for fear of off-leash dogs, contrary to the statements espoused in the DEIS. I have walked dogs at Fort Funston and only had positive experiences. Off-leash dogs provide a unique means of meeting & socializing with others who share similar interests. There is always a diverse group of people walking at Fort Funston: families, seniors, minorities, disabled, etc. Off-leash activity is essential to the health of our city for a myriad of reasons. The benefits of human-animal interactions should not be undervalued.

Regarding the proposed GGNRA changes, I oppose the Preferred Alternative because it is overly restrictive and punitive to responsible dog walkers and their dogs. I would like to see the Park Service revise the dog management plan to formalize the existing GGNRA dog policy (aka the

1979 Pet Policy) plus provide for balanced off-leash areas in San Mateo County and new lands and remove any proposed rules to reduce or ban dog recreation based only on violations. Compliance-based management strategy cannot be part of any plan. The actions of the few irresponsible dog walkers should not jeopardize the status of the overwhelming majority of walkers with off leash dogs.

I would like a revised plan to measure the impact of dog recreation on the health and well-being of people and the impacts of any changes to adjacent lands and communities. I would like to see disadvantaged groups and others able to provide unfiltered comments on their preferences and barriers to using the GGNRA. I also believe the GGNRA should provide better signage and that a revised plan should include awareness programs. A revised DEIS should exclude speculative, exaggerated, or misleading statements and provide site-specific need for actions and dismissals of suggested alternatives. Objective standards need to be applied to any recreational activities.

The GGNRA should develop a new alternative, the A+ Alternative, which will better balance the recreational needs of the Bay Area with protection of natural resources.

Thank you for your time.

Jennie Chin

Correspondence: Dear Superintendent Dean,

My name is Barbara Joy Davis. I live in Alameda in Alameda County. I am a senior citizen. I frequently visit Ocean Beach.

I strongly believe that multi-use open space that includes off-leash dog walking is compatible with all other recreational uses and with the preservation of habitat and wildlife within the GGNRA.

All users (including cyclists, hikers, people with kites and Frisbees, picnickers, festival-goers, the Fleet Week crowds, and even wildlife) clearly have some impact on the GGNRA. In the Draft Environmental Impact Statement the National Park Service inappropriately singles out dogs. Its conclusions are not based upon sound science nor long-term monitoring of

site-specific conditions.

Any impact that dogs may have can be effectively mitigated through better signage, creating environmental barriers, and education of park users. The GGNRA should partner with community, animal welfare, and conservation organizations on programs that could eliminate perceived problems and contribute much-needed resources.

The GGNRA was created to provide open space for recreation (including dog walking) for the metropolitan Bay Area. The existing 1979 Pet Policy has served the community extremely well for more than 30 years. I strongly support Alternative A, the No Action alternative, in the GGNRA and the "New Lands" areas (such as Cattle Hill, Sweeny Ridge, Mori Point, Pedro Point and Milagra Ridge and Rancho Corral de Tierra in San Mateo County).

Respectfully, Barbara Joy Davis

Correspondence Type: Letter

Correspondence: I've been nipped in the butt by one of two off leash German shepherd dogs on the lower hillside of Milagra Ridge. This was a dog whose owner was calling him back as he charged the thirty feet to me. He was not responding to her voice control. It's as if someone is pointing a loaded gun at you to have a dog which can spring into action with or without command. I wouldn't say it was a viscous attack but I had bruise points where the teeth hit but no punctures.

On Pacifica's ocean front levee I had to dance for a smaller dog as it was circling around and biting at my shins. It was almost comical because the dog had a leash attached and the owner was scrambling around trying to pick it up where it was dragging on the ground. The couple had two dogs and both were yelling at their barking biting dog. Another observer, as well as myself, told them to get the dog off. The dog's teeth only caught my cuff.

A most intimidating encounter was with "Chico". The tiny dog charged out in front of his masters as he came at my ankles yip yipping, as a Chihuahua does, and made several approaches and raised a ruckus as we were passing. But most surprising was that J had to watch my backside because he even launched another charge run fifteen feet back at me. This couple also had two dogs off leash and we were in the GGNRA posted area of Mori Point.

I've seen a mother in the oceanfront picniC area have to scramble across her

picnic blanket to protect her youngster from a gamboling labrador which was not on leash. Then I heard the thoughtless remark by the owner, "he's friendly". A large dog can do damage to you by bumping into you. Just ask my wife who needed knee surgery after a friendly dog bump. Additionally, I know people whose dog;s were mauled and seriously damaged by another dog. They were unable to make a case against the offending dog's owner because their own dog was not on leash.

Older people, older couples and set-in-their ways youngsters who believe that suburbia and a/l open park lands are their dog's unrestricted domain, have to accept the new reality of many people and wildlife sharing the same space. Dog owners are a minority group and dogs don't have civil rights equal to citizens.

Until recently we had a pet cattle dog but opted to leash him when it became an enforced county law. I think I knew him well enough to not trust him in all drcumstances. My dog was not a factor in any of these incidents I mentioned as he was not along with me when they happened. I am for leashing dogs on city streets, on beaches and in parks including GGNRA lands.

I also think that along with a dog and cat's licensing, there should be a waste management fee for the processing of feces and litter, whether flushed down the toilet or thrown in the garbage,.can/based on animal size and paid to the licensor. But don't get me started.

Sincerely, John Meria

Dear Superintendent Dean,

Thank you for the opportunity to comment on this important document, the Golden Gate National Recreation Area's (GGNRA) Draft Environmental Impact Statement/Draft Dog Management Plan (Draft Plan/DEIS).

You will be receiving much of the information included (in black type-face) in this document from other members of the Eco-Dog Coalition.

Eco-Dog was formed under the auspices of the San Francisco SPCA. It is an

umbrella organization of groups in San Mateo, San Francisco and Marin Counties that represent environmentalists who exercise with their dogs in the GGNRA. We advocate for responsible and respectful use of the GGNRA lands, and for consideration of other users. We have been working together in Eco-Dog for the past year preparing for our response to the GGNRA Draft Plan/DEIS.

Since, most of us do not have the technical knowledge required to address the numerous nuances of NEPA law, much of the more technical information in this letter was prepared for Eco-Dog by Ken Weiner, a NEPA attorney, and Tetra Tech, an environmental consulting firm.

We are writing this letter as representatives of Marin Unleashed. Our specific concerns are with the GGNRA lands in Marin County. We have included our lay comments in blue type-face.

Introduction

The GGNRA plays a critical role in providing a home for many natural and cultural treasures, and, because of its proximity to a dense, urban environment, it provides special recreational opportunities to city dwellers. Recreation is called out in the 1972 GGNRA enabling legislation as one of the four outstanding values to be maintained and protected. In doing so, the enabling legislation recognized that the achievement of these outstanding values is not mutually exclusive. Our organization supports the National Park Service (NPS) in its mission to protect the GGNRA's important natural, cultural, and recreational values but, through this letter, we challenge the NPS work with its constituents to find solutions that are designed to protect all of the park's values and broaden opportunities to enjoy its diverse resources sustainably.

Our comments are described in two main sections: (1) Recommended Alternative, which describes our thoughts on how the NPS could balance the GGNRA's myriad resources and opportunities; and (2) Quality of Information in the Draft Plan/DEIS, which describes our thoughts on how the information in the Draft Plan/DEIS could be improved in order to support a better outcome for all interests involved.

Marin County Exclusion

As representatives of human's with dogs in Marin, we have an additional comment about the process used by the National Park Service to include public involvement on dog management in the GGNRA.

The Regulated Negotiated Dog Management Rule Making Committee (Reg. Neg. Committee) was formed in response to the 9th District Court Ruling

requiring public notice and involvement in the formation of dog management rules for the GGNRA. When the Federal Register came out announcing the formation of the Reg. Neg. Committee, the list of proposed stakeholders did not include anyone from Marin County representing those of us who walk our dogs in the GGNRA in Marin. We addressed this omission to Superintendent O'Neil with a request for inclusion; we were denied a seat at the table.

We also requested inclusion through our local elected officials. We were still denied membership on the Reg. Neg. Committee. We were instead begrudgingly offered one seat on the Reg. Neg. Technical Sub-committee.

We contend that this exclusion resulted in excluding many of the GGNRA areas in Marin County from discussion during the Reg. Neg. Committee process and from the Draft Plan/DEIS. The Reg. Neg. Committee never discussed the 1979 on-leash areas in Marin, nor did it discuss most of the off-leash areas. Few of the areas that were included in the 1979 Pet Policy for Marin are found in the Draft Plan/DEIS preferred alternatives for Marin.

There were only three Marin areas that were discussed during the entire Reg. Neg. Committee process: Rodeo Beach, Muir Beach, and Oakwood Valley. Our representative on the Technical Sub-committee attempted to introduce a discussion of Alta Avenue, the most regularly used area in the GGNRA in Marin by humans with dogs, and was told that discussion would not be allowed and should not be brought up again.

The Draft Plan/DEIS claims that the Reg. Neg. Committee had formed consensus on one area: Oakwood Valley. This is not true, there was no consensus on any area at anytime during the Reg. Neg. Committee process. Oakwood Valley came up during the last two Reg. Neg. Committee meetings. By that time it was clear to one and all that the two 'sides' would never reach agreement on anything.

When Oakwood Valley came up for discussion, the 'anti-dog' side said they could live with a double-gated dog run on the western portion of the Oakwood Valley fire road. The 'pro-dog' side said (with sarcasm), "and let's fence it, too". That resulted in a claim in the Draft Plan/DEIS that consensus was reached, it was not. We implore you, please do not put a fenced and double-gated dog-run at Oakwood Valley, it would be an expensive travesty.

Recommended "Hybrid" Alternative

First, we have a suggestion that is applicable no matter what rules the NPS adopts:

The most important aspect of dog management (as with every management issue) is clear communication, e.g. signs, brochures, websites, and maps all provide, the same information in a clear concise manner. To date, this has not been the case with dog management in the GGNRA. Much of the conflict between humans about dogs in the GGNRA is a direct result of conflicting rules, and of the public's versus the Park Rangers' and Park Police's understanding of these rules. There are many trail signs in the Headlands that say 'no dogs' or 'dogs on-leash' in direct conflict with the Headlands map that correctly represents the current rules (the 1979 Pet Policy). It is no wonder if there have been resulting conflicts between GGNRA visitors, and with Park Staff.

We have two proposals:

1) Allow access into the GGNRA in Marin to humans with dogs from the communities that border the GGNRA; allow access to humans with dogs on the fire roads that run around the borders of the GGNRA with the neighboring communities, e.g. Sausalito, Marin City, Tam Valley, Homestead Valley, Mill Valley, Muir Beach.

We propose on-leash access on these fire roads, with the exception of Alta Trail (a fire road) between Donahue Ave. and Orchard Fire Road. Please see 2 below for this area.

2) Retain the 1979 Pet Policy (Alternative A) in the following areas: Rodeo Beach (north and south ends), Muir Beach, Homestead Valley, Alta Trail between Donahue Ave and Orchard Fire Road, Julian Fire Road between Mc Cullough Road and the Historic Firing Range, and the Old Bunker Loop near Rodeo Beach.

Further information on this alternative is included in Appendix A. Quality of Information in the Draft Plan/DEIS

Before jumping into the technical evaluation of the Draft Plan/DEIS done by Mr. Weiner and Tetra Tech, we would like to point out one discrepancy and one omission discernible to a lay person:

1) The summary of the Preferred Alternative for the Marin Headlands Trails on page 105 of the Draft Plan/DEIS and the Preferred Alternative Map of the Marin Headlands Trails disagree; the former includes the Julian Fire Road from 101 to Rodeo Beach on-leash, the latter does not.

2) The Draft Plan/DEIS Maps do not include the northern portion of the Headlands, i.e. the portion that includes County View Road and the Miwok Trail above Tennessee Valley. Both of these fire roads are included in the 1979 Pet Policy for on-leash dog use; the Draft Plan/DEIS seems to have

excluded them from consideration (as did the Reg. Neg. Committee meetings). My organization's major concerns with the quality of information in the Draft Plan/DEIS include:

1. Omission of relevant impacts and impact analyses o Recreation (also see Appendix B) o Other impacts
2. Insufficient information needed to draw logical conclusions and evaluate alternatives: o Unclear enforcement data (also see Appendix C) o Lack of and inconsistent site-specific, scientific data on baseline conditions (also see Appendices D, E, and F) o Reliance on undocumented assumptions o Flawed evaluation of No Action alternative o Resultant flawed alternatives analysis
3. Improper treatment of new lands 4. Lack of specificity in proposed action

These concerns are described in detail below and several are outlined further in the attached appendices. At the end of each section, we have provided recommended changes that we request you make to the EIS and the proposed action in order to move forward with a plan that is protective of all of the GGNRA's myriad resources and values.

1. Omission of Relevant impacts and Impact Analyses

Recreation

Congress' original intent when it established the GGNRA is stated in the bill reports for the 1972 legislation 'that GGNRA, "will ensure its continuity as open space for the use and enjoyment of present and future generations of city-dwellers" [House Report No. 92-1391, Sept. 12, 1972]. [emphasis added]. Similarly, as stated in the first section of Public Law 92-589, Congress established GGNRA to preserve for public use and enjoyment areas of Marin and San Francisco County possessing "outstanding natural, historic, scenic and recreational values" and to "provide for needed recreational open space necessary to urban environment and planning" and to protect the scenic and natural character of the area from incompatible development.

Dog walking was well-known and recognized by Congress as part of this public use and enjoyment. Both the Senate and House reports comment that the proposed area:

"will satisfy the interests of those who choose to fly kites, sunbathe, walk their dogs, or just idly watch the action along the bay." [emphasis added]

The official legislative history notes:

"This legislation will, if enacted, capitalize on the availability of this important, unequalled resource in the San Francisco region by establishing a new national urban recreation area which will concentrate on serving the outdoor recreation needs of the people of the metropolitan region. As an urban recreation area, it must relate to the desires and interests of the people, but it must, at the same time, be managed in a manner which will protect it for future generations." [emphasis added]

These were also the City's understandings in transferring lands to GGNRA. As you may know, GGNRA has a mission statement which states:

"The mission of the Golden Gate National Recreation Area is the preservation, unimpaired, of the natural and cultural resources, and scenic and recreation values, of the park for present and future generations to enjoy." [emphasis added] The Draft Plan/DEIS not only fails to disclose and evaluate the impacts of the alternatives on recreational resources in the context of an urban environment, it dismisses the quality of the urban environment entirely on page 22 where it states, "the quality of urban areas is not a significant factor in determining a dog management plan." As recognized in its enabling legislation, one of the most important aspects of the GGNRA is the sharp contrast between its undeveloped open spaces and the adjacent developed urban environment. The GGNRA's open space and recreational opportunities are intended to provide refuge and relief for nearby urban dwellers.

The impacts on the GGNRA's open space and recreational opportunities should have been evaluated fully in the Draft Plan/DEIS, especially since a NEPA analysis is not limited to the natural environment. According to NEPA, An EIS is required to analyze the human environment. The federal NEPA rules define the human environment and its scope in an EIS as follows:

"Human environment shall be interpreted comprehensively to include the natural and physical environment and the relationship of people with that environment."

When an EIS is prepared and human and natural/ physical environmental effects are interrelated, the EIS should discuss all of these effects on the human environment.

*Recommendation. Any significant limitations on recreational uses proposed by NPS needs to be properly examined, as it impairs a fundamental value that must be preserved under GGNRA's charter. The Draft Plan/DEIS should be revised to include a stand-alone analysis of

impacts on recreation resources in order to fully consider the potentially significant effects that the proposed action and action alternatives could have on these elements of the human environment. The section should give context to the important role played by the GGNRA in terms of its proximity to a dense, urban environment and the special opportunities it affords to nearby populations. It should describe existing recreational uses of the GGNRA and other parklands in the project vicinity, the impacts of the proposed action on recreation resources and urban quality (including direct, indirect and cumulative impacts), and the mitigation that the NPS will commit to in order to avoid such impacts.

Although the analysis of impacts on recreation resources could potentially be integrated into the existing Visitor Use and Experience section, it is strongly suggested that it be incorporated into the draft EIS in a separate chapter. The rationale for this request is because the topic of "Visitor Use and Experience" is too limiting to encompass the broader range of recreation impacts that could potentially occur with implementation of the proposed action, including degradation of established recreational activities and facilities in GGNRA and nearby lands. A suggested annotated outline of the stand-alone recreation resources section is presented in Appendix B for your consideration.

Other impacts

The Draft Plan/DEIS assumes but does not provide the required rigorous analysis that resource conditions result solely from dog use of the sites, discounting the contribution from other visitors and recreational users. The Draft Plan/DEIS does not address the contribution of other impactful activities, including special events, to the resource conditions and existing impacts at each of the GGNRA sites. The level of site use from a single special event is likely equivalent to the level of regular use that occurs over weeks, months or longer. These special events include the annual Fleet Week at Crissy Field and the future impact of America's Cup on GGNRA lands.

*Recommendation. To address this deficiency, the GGNRA should study the contribution that all visitors make to existing resource conditions and potential impacts. This information is obtainable and essential to a reasoned choice among alternatives. The preferred alternative should then be re-evaluated and modified to address only the issues that specifically result from dog use at each of the sites. The NPS should then pursue a comprehensive approach to managing all these uses to the benefit of the full ranges of GGNRA resources and values.

2. Insufficient Information Needed to Draw Logical Conclusions and

Evaluate Alternatives

In many places, the Draft Plan/DEIS does not provide any data on actual impacts by dogs in areas being proposed for new dog walking restrictions. In places where data are provided, the Draft Plan/DEIS makes undocumented assumptions that there are unacceptable impacts and that dogs are the culprits. For example, in the Western snowy plover sections of Chapters 3 and 4, the Draft Plan/DEIS explains that people, as well as dogs, who traverse dune areas disturb shorebirds. Monitoring surveys observed 48 off-leash dogs chasing birds over a period of 12 years. However, in this case the birds continue to return to the area each year. Therefore, there might or might not be a problem 'the Draft Plan/DEIS does not provide substantive data to help the reader decide. If there is a problem, the Draft Plan/DEIS doesn't provide logical conclusions as to whether access should be limited for people, for dogs, or both.

The Draft Plan/DEIS is, in some respects, comprised of about 20 plans and EISs, because it examines each GGNRA unit. We can appreciate how difficult this is for GGNRA and the NPS to accomplish. But NEPA guidance and case law have consistently explained that difficulty does not excuse lack of adequate data and study in an EIS. And the bulk or size of an EIS does not equate to its adequacy. In many places, as described in more detail below, the Draft Plan/DEIS lack any description of actual site specific impacts on which decisions on dog-walking restrictions are being proposed. In other places, the Draft Plan/DEIS assumes species are present in areas where there is no record of their presence. In other places, there is inconsistent information about the presence of species.

Unclear enforcement data

Many of the findings in the Draft Plan/DEIS are founded on a reference included in the document as Appendix G, "Law Enforcement Data" (NPS 2008c). This reference document is critically deficient in substantiating statements made in the characterization of existing conditions and in the analysis of the environmental consequences. Per NEPA, "Agencies shall insure the professional integrity, including scientific integrity, of the discussions and analyses in environmental impact statements (CFR 1502.24)." Additional detail on this issue can be found in Appendix C.

*Recommendation. The Draft Plan/DEIS should be revised to provide clear evidence in the record to support all of its findings. The NPS needs to ensure the professional integrity, including scientific integrity, of the analysis and findings contained within its Draft Plan/DEIS. Detailed recommendations on how to revise the enforcement data in the Draft Plan/DEIS, and the ensuing impacts and alternatives analysis, are listed in Appendix B.

Lack of and inconsistent site-specific, scientific data on baseline conditions

The Draft Plan/DEIS does not address site-specific resources and the condition/health of those resources. This lack of information results in a vague baseline against which to assess the magnitude of impacts associated with implementing the proposed action and alternatives. With such a vague baseline, it's also difficult to assess the need to change existing dog management strategies.

Select examples:

- a. The affected environment section mentions California Native Plant Society (CNPS)-listed species as having the potential to occur within the GGNRA but no data are provided as to where/if they are actually present.
- b. While some special-status species descriptions suggest a nexus between dog activity and the species and/or their habitat (tidewater goby, California red-legged frog), other species descriptions do not (San Francisco garter snake, Coho salmon), and there is a consistent lack of detail describing the existing interaction, if any, between the species and dog activity.
- c. There are inconsistencies regarding the presence of species in the text and in Table 8 in the Special-Status Species affected environment, the information in Appendix H, and the impact analyses in Chapter 4.
- d. In Table 8 on page 246, the GGNRA Location column contains the location for plants that do not exist there according to the text.
- e. For a number of the analyses of Alternatives B-E, the Draft Plan/DEIS states that the area of impact is currently undisturbed. This is not the case, as dogs and humans are currently allowed in those areas.
- f. Additional examples are provided in "Soils and Geology," "Water Quality," and "Biology."

*Recommendation. To address this deficiency, the Draft Plan/DEIS should provide site-by-site assessments of the conditions of the GGNRA resources and values at each of the 21 sites. The selected preferred alternative for each site should then be re-assessed and modified to address only those site-specific issues and to employ adaptive management (proposed adaptive management techniques are provided at the end of this letter) to ensure the goal of protecting those resources and values is achieved.

Reliance on undocumented assumptions

The Draft Plan/DEIS assumes, but fails to demonstrate, the "cause and

effect" relationships without site-specific supporting information. For instance, the Draft Plan/DEIS assumes but does not demonstrate that where dogs are present within GGNRA sites, there is a disturbance of natural resources. The Draft Plan/DEIS also assumes but does not demonstrate that the disturbance of resources is attributable to dogs (versus other factors). These assumptions result in flawed conclusions that the mere presence of dogs is equivalent to adverse resource impacts. The findings of an EIS must be based on scientific accuracy and clear evidence in the record. This Draft Plan/DEIS is significantly flawed in that it does not rely on adequate evidence for the conclusions it draws, and in that it fails to clarify its methodology for drawing those conclusions.

Select examples:

- a. The text from Chapter 3 provides data on the western snowy plover, but beyond providing numbers of observations, the Draft Plan/DEIS does not provide evidence that dogs chasing the birds are likely to impact the survival of the species taking all relevant factors into account (see paragraph 1, page 799).
- b. The Draft Plan/DEIS presents no information supporting the finding that dogs are currently impacting shorebirds and marine mammals. Therefore, there is no scientific rationale for prohibiting dogs from beach areas under Alternative D to "protect shorebirds and stranded marine mammals," as stated on page 151.
- c. The Soils and Geology section (page 225) includes the following statements: "Dogs and dog walkers that do not stay on designated trails and venture off trail create social trails that become denuded of vegetation and result in increased soil compaction." and "Soil compaction is common along social trails that have been created by ' and are heavily used by ' bikers, hikers, runners, and dog walkers." The baseline for comparison throughout the Draft Plan/DEIS should not be an environment in which it is assumed that there is no impact unless dogs are present, but one in which the impact of dogs is added to the impact of humans. At about 200 pounds per adult, the force that a human exerts on the soil one foot at a time would have a significantly greater impact on soil compaction in a picnic area than the force exerted by even a large 70- pound dog distributing its weight on four paws. The failure to acknowledge that human use has more impact on soils and geology in this regard, compared to dog use, uncritically loads the analysis in favor of restrictions on dogs. While there may be areas in which impacts from dogs are unacceptable, the same criterion holds for impacts from humans, and in most of these areas, dogs and humans are already excluded.
- d. The Soils and Geology section (page 112) on Homestead Valley

concludes that, under the No Action Alternative, there would be long-term adverse impacts from "soil compaction, erosion, and nutrient addition...", in areas off the trail since dogs would be under voice control," while under other alternatives it is concluded that the impacts would be negligible because dogs would be under physical restraint. This is an unsubstantiated assumption in support of the underlying bias of the analysis. The analysis does not attempt to connect intensity of use and impact and seems to be based solely on the incorrect assumption that humans and wildlife would have no impact on off-trail areas, and that all impacts can be attributed to dogs.

Recommendation To address this deficiency, the NPS should re-evaluate untested, assumed linkages and re-define the existing and potential impacts that specifically result from dog use at each of the GGNRA sites. The preferred alternative for each site should then be re-assessed and modified to address only those site-specific impacts and issues.

Flawed evaluation of No Action alternative

The impacts of the No Action alternative are substantially overstated because the Draft Plan/DEIS determines individual areas of compliance with existing dog management strategies without sufficient supporting data and assumes that noncompliance results in adverse impacts. This unsupported logic both overstates the degree of additional management required to address the resource issues, but also misrepresents the relative impacts of the four action alternatives; for example, the public is assumed to comply with management strategies under an action alternative, whereas the public is found to be noncompliant with those same management strategies under the No Action alternative.

Select examples:

a. For many sites, including Stinson Beach, Crissy Field, Baker Beach and Bluffs, Mori Point, Oakwood Valley, and Muir Beach, analysis of Alternative A acknowledges noncompliance, while the other alternatives assume full compliance with dog restrictions. In some cases, the management strategy is the same, with the only difference between Alternative A and the preferred alternative being the assumption of compliance.

b. On page 109 (Table 5, Stinson Beach, Soils and Geology) under Alternative A, the second bullet identifies long-term, minor, adverse impacts in areas outside parking lots and picnic areas. These impacts are not repeated under the other alternatives despite the fact that, except for Alternative D, the management strategies under all of the alternatives are identical for Stinson Beach. Each of the statements in the first bullet, except

for Alternative A, No Action, includes the clause "assuming compliance." At least for the soils and geology evaluation, the analysis seems to take it for granted that the No Action Alternative is inferior. Both of these are examples of biasing the analysis against No Action.

c. On pages 1147-1158, mission blue butterfly, Fort Baker and Milagra Ridge ' as with many examples in the Wildlife section, here Alternative A assumes noncompliance with leash laws (minor, adverse impacts) and the preferred alternative assumes compliance (negligible to minor, adverse impacts, with habitat restoration programs). d. On pages 1219-1240, San Francisco garter snake, Mori Point, Milagra Ridge, Cattle Hill, Pedro Point ' as with many examples in the Wildlife section, here Alternative A assumes noncompliance with leash laws (minor, adverse impacts) while the preferred alternative assumes compliance (negligible). The text states (page 1230) that there is no documentation. that the current level of compliance with on-leash laws (No Action Alternative) is impacting this species. e. In the Water Quality section, the impact analysis for Alternatives B through E assumes compliance with the management strategies. However, the impact analysis for Alternative A does not make this same assumption.

*Recommendation. To address this deficiency, the NPS should re-evaluate unsupported assumptions and the analysis of the No Action alternative to ensure the methodology used for it is consistent with the methodology used for the action alternatives. The No Action alternative is a continuation of the current GGNRA management plan and policies ' not a continuation of existing conditions. The current plan and supporting documents include policies for good public information and education on GGNRA resources and partnerships with the community. The No Action alternative can and should include improved education and compliance measures (including accurate signage about voice control areas) to implement these current plan policies (which are also policies in the proposed GGNRA updated general management plan), including dog owner training, to raise the level of compliance.

Resultant flawed alternatives analysis

As described above in this section, the Draft Plan/DEIS assumes but does not provide the required rigorous analysis to enable the reader to draw logical conclusions about impacts and alternatives. The Draft Plan/DEIS does not provide adequate information on which to "study, develop, and describe appropriate alternatives to recommended courses of action in any proposal which involves unresolved conflicts concerning alternative uses of resources" (as required by NEPA Section 102(2)(E); 40 CFR "1501.2 and 1502.1 and corresponding DOI and NPS implementing guidance), or to allow meaningful evaluation on the alternatives including reasonable mitigation measures, as required by NEPA (e.g., 40 CFR "1502.14(b)and

1508.25(b) and corresponding DOI and NPS implementing guidance). This issue in the Draft Plan/DEIS results in a bias in the evaluation of alternatives, contrary to NEPA's requirement that "Environmental Impact Statements shall serve as the means of assessing the environmental impact of proposed agency actions, rather than justifying decisions already made" (40 CFR '1502.2(g)).

Select examples: a. The impacts of the No Action Alternative are substantially overstated because the Draft Plan/DEIS assumes that noncompliance results in adverse impacts. This both overstates the degree of management required to address the resource issues, but also misrepresents the relative impacts of the four action alternatives; for example, the public is assumed to comply with management strategies under an action alternative, whereas the public is found to be noncompliant with those same management strategies under the No Action Alternative.

b. On page 1264, bank swallow as with the western snowy plover, current impacts are considered minor to moderate based on occasional to frequent perceptible disturbances to the species from dogs; however, the description of Alternative A mentions only that dogs have been seen in the bluff area. There is no apparent nexus between dog activity and actual impact to bank swallows ' is the presence of a dog in the bluff area assumed to disturb the colony? Have the birds been observed flushing from nests, or have crushed burrows been found? The language here suggests these impacts are possible, but that they haven't actually occurred.

c. In Chapter 2, starting on page 99, the discussion of the environmentally preferable alternative should be revised to reflect the value of recreational resources. Because the draft EIS does not recognize recreational resources as an environmental resource, the analysis of the environmentally preferable alternative is flawed. It fails to consider the range of resources afforded by the GGNRA that could be affected by the action alternatives. Recreation is called out in the GGNRA enabling legislation as one of the four outstanding values to be maintained and protected. In doing so, the enabling legislation recognizes that the achievement of these outstanding values is not mutually exclusive.

*Recommendation. To address this deficiency, the NPS should re-evaluate unsupported assumptions and the analysis of the alternatives to ensure the methodology used for it is consistent and based on site specific scientific data. And, since protection of the environment includes protection of established recreational opportunities and facilities on GGNRA lands and nearby parklands, the draft EIS should consider such resources as part of its selection of the environmentally preferable alternative. Under NEPA, the environmentally preferable alternative is one that would employ environmental design and adaptive management techniques to preserve all

of the outstanding values of the GGNRA.

3. Improper Treatment of New Lands

The proposed action to close new lands to dog walking access conflicts with the GGNRA Enabling Legislation (PC 92-589) and with National Park Service Management Policies (2006) for determining uses and land protection plans. GGNRA is required to consider new lands in the same way that it considers uses and land protection measures on lands within GGNRA. The unprecedented "Closed until open" proposal would violate GGNRA's statutory obligation to preserve and maintain recreational uses, violate sound land planning with the community, and violate NEPA by prejudging alternatives before site-specific public and environmental review. There is no basis for treating new lands differently than existing lands under NPS regulations and policies. Furthermore, there is no such policy in the existing GGNRA General Management Plan and Compendium.

The Draft Plan/DEIS notes (p. 36), the enabling legislation states GGNRA's purpose as follows (emphasis added):

"In order to preserve for public use and enjoyment certain areas of Marin and San Francisco counties, California, possessing outstanding natural, historic, scenic, and recreational values and in order to provide for the maintenance of needed recreational open space necessary to urban environment and planning, the Golden Gate National Recreation Area is hereby established."

The phrases "preserve for public use and enjoyment" and "maintenance of needed recreational open space" set out a high standard for management actions that would limit or restrict this fundamental value and resource of the GGNRA. The words "preserve" and "maintain" mean the continuation of uses, recognizing that uses may be regulated to protect the other fundamental values of the GGNRA.

NPS management policies expressly reflect this emphasis on continuing uses, measured by the yardstick of the unit's enabling legislation. Section 1.4.3.1 states:

In determining whether or how to allow the use, park managers must consider the congressional or presidential interest, as expressed in the enabling legislation or proclamation, that the use or uses continue.

When new lands become part of GGNRA, the recreational uses existing at the time of acquisition should be allowed to continue unless GGNRA determines, through the public land planning and NEPA process, that unacceptable impairment would occur (as explained in Chapter 1 and

Appendix C of the Draft Plan/DEIS).

Section 3.3 of the NPS management policies make clear that protective measures are to be integrated in to the planning process -- "Planning for the protection of park lands will be integrated into the planning process for park management" -- not predetermined in advance of site specific the public planning and environmental review process.

In preparing land protection plans, Section 3.3 requires: "A thorough review of a park's authorizing statutes and complete legislative history will be conducted as part of the land protection planning process."

Section 3.3 states that land protection plans should determine what "means of protection are available to achieve the purposes for which the unit was created." As noted above, recreational use is one of the basic purposes for which GGNRA was created. Dog walking was contemplated as a traditional use in GGNRA and was plainly discussed in both the Senate and House bill reports, basic legislative history documents.

In the Introduction to land protection, the NPS management policies state (chapter 3, emphasis added):

The National Park Service will use all available authorities to protect lands and resources within units of the national park system, and the Park Service will seek to acquire nonfederal lands and interests in land that have been identified for acquisition as promptly as possible. For lands not in federal ownership, both those that have been identified for acquisition and other nonfederally owned lands within a park unit's authorized boundaries, the Service will cooperate with federal agencies; tribal, state, and local governments; nonprofit organizations; and property owners to provide appropriate protection measures.

To fulfill this obligation, GGNRA needs to cooperate with these entities, including nonprofit community groups and property owners adjoining GGNRA, to protect recreational resources. As Management Policy 1.4.3.1 directs:

Where there is strong public interest in a particular use, opportunities for civic engagement and cooperative conservation should be factored into the decision-making process.

GGNRA is aware of the strong public interest in dog walking access, and of the interest of San Francisco and Marin Counties and responsible community and nonprofit organizations in cooperative conservation. It is entirely inappropriate and contrary to these management policies to close new lands to dog walking access without first providing opportunities for

this civic engagement and for cooperative conservation efforts.

In conclusion, there is no basis in existing law or adopted policy for the NPS and the GGNRA dog management plan to summarily reject and fail to preserve and maintain an important recreational use on new lands that is allowed on existing lands, particularly in advance of sound environmental review and land use planning. This Plan and Draft Plan/DEIS do not provide this review and planning, because by definition, new lands have not yet been fully studied, acquired or subject to the level of site specific review required of this EIS.

For reasons noted above, it is inaccurate wrong to treat dog walking as the establishment of a "new use" in GGNRA, which would be the result of the proposed policy. We understand GGNRA's desire to create a presumption against continuing this use, however, there is no factual, legal, or management policy basis for this approach.

*Recommendation. The preferred alternative should be revised to make clear that new lands will be treated the same as any other GGNRA lands and follow the same NPS management policies. Recreational uses should be allowed to continue except as may be regulated through site-specific public land planning processes and associated environmental review. 4. Lack of Specificity in Proposed Action

The description of Elements Common to Action Alternatives (pages 63-67 in the Draft Plan/DEIS) describes the proposed 75% compliance standard and secondary management response, but does not provide details of the monitoring plan or other elements of an adaptive management plan on which the management response would be based. The draft Plan/Draft Plan/DEIS does not propose an adaptive management component that meets applicable guidance and that can be meaningfully reviewed, as called for in NEPA procedures and current Council for Environmental Quality (CEQ) mitigation and monitoring guidance (January 2011), including but not limited to pages 9-11 and pages 13 and 19 (on the role of the public in the design and review of results).

Select examples:

- a. The Draft Plan/Draft Plan/DEIS states (page 1725) that "the compliance-based management strategy is an important and effective tool to manage uncertainty when proposing new action" and "has been created" to assure successful implementation and long-term sustainability. However, the detailed description of this critical element has not been conveyed and is not included in the document (as noted on page 64).
- b. The Draft Plan/DEIS doesn't establish how or why a special-status species

that has been sharing habitat with dogs for decades will experience an actual, likely benefit from stricter dog management, given other factors affecting the species.

c. Where management actions that limit recreational access are proposed or under serious consideration, the Draft Plan/DEIS should also disclose whether access will be limited for people as well as dogs. The evaluation of significance under NEPA requires consideration of context and intensity. Meaningful public comment on proposed management measures is not possible without full disclosure of the impacts to all users and potential management measures. *Recommendation. To address this deficiency, the NPS should fully disclose the details of the proposed action. It should describe how it will monitor compliance and resources and values at specific sites because the management measures are specific to GGNRA sites. In addition to assessing the condition of these resources and values, monitoring should also focus on determining the contribution to those conditions from other users and factors, including other human users and natural processes. This should be implemented as part of each alternative. Only through this objective monitoring approach can the GGNRA demonstrate that it has addressed the purpose and need on which the Dog Management Plan is based. Existing or proposed management strategies should be modified based on the objective monitoring results. Although it could be appropriate to use properly measured rates of compliance as an indicator, the draft Plan and Draft Plan/DEIS does not provide adequate information about the compliance-based program. To ensure objectivity, this monitoring should be conducted by an independent qualified third party with the results discussed with interested groups and made publicly available as part of a defined and technically-sound adaptive management program. Additional recommendations on management actions that should be considered by the NPS are provided below. Concluding Comments

A final comment, we humans who live with dogs, and find our lives enriched by their company, are not by definition foes of the environment. In particular, we are dues paying members of numerous environmental organizations and also support domestic animal rights organizations. We live with our canine friends, and are strong advocates for the preservation of our natural resources, and are protective of our environment.

We argue that the preservation of the environment in the GGNRA is enhanced by those of us who visit with our dogs, not destroyed by it. The usage of the GGNRA is an integral part of our lives with our dogs, we are passionate in our protection of both.

Sincerely, Jane Woodman and Sonja Hanson for Marin Unleashed

Hybrid Alternative

1) We request the NPS consider an Alternative that would allow dogs on-leash on the fire roads that run out of the GGNRA and/or border the boundaries between the GGNRA and the communities that are adjacent to the GGNRA. The fire roads and the two trails listed below would allow a person with a dog on-leash to walk in the GGNRA in Marin from the southern end of Sausalito on the fire roads that are near the eastern boundary of the GGNRA north to Marin City and Tam Valley, and then to walk west along the fire roads near the northern boundary of the GGNRA to Muir Beach.

? The GGNRA shares a border with Sausalito, Mill Valley, Muir Beach and unincorporated Marin County land including Marin City and Tam Valley. The fire roads that connect the GGNRA to these communities and the fire roads that run near the boundaries of the GGNRA with these communities should be accessible to the public walking with their dogs on-leash. ? The fire roads that lead from the neighboring communities into the GGNRA and run adjacent to them are, from Muir Beach in the north to Sausalito in the south: ? Coastal Trail from Muir Beach to Coastal Fire Road to Coyote Ridge Trail (a fire road) to Miwok Trail (a fire road). ? Miwok Trail from Highway 1 to Coyote Ridge Trail. ? Miwok Trail from Tennessee Valley Road to Coyote Ridge Trail. ? Marin Drive from Tam Valley to the Miwok Trail. ? County View Road from Tam Valley to the Miwok Trail. ? Tennessee Valley Road (or the adjacent Rhubarb Trail (Marin County trail)) to Oakwood Valley Fire Road. ? Oakwood Valley Fire Road from Tennessee Valley Road to Alta Trail (a fire road). ? Alta Trail from Donahue Avenue in Marin City to Rodeo Valley Trail. ? Pacheco Fire Road from Marin City to Alta Trail. ? Orchard Fire Road from Marin City to Alta Trail. ? Rodeo Avenue from Highway 101 to Alta Trail.

? We are requesting on-leash access to two trails because they provide access to 2 of the fire roads listed above:

? The Morning Sun Trail that was built to provide access from Sausalito to the GGNRA Headlands; it goes from the Spencer Ave bus-pad on the west side of 101 up to Alta Trail. ? The SCA trail that runs parallel to Wolfback

Ridge Road and about 20 feet below it. This trail connects Alta Trail with the fire road (this one is un-named) that goes over the 101 tunnel and then back into Sausalito (it comes out on Hecht Avenue).

The fire roads listed above are 12 feet wide on average, providing plenty of room for multiple use. Dogs on a 6 foot leash will not be causing damage to wildlife or native habitat, or disturbing other users. These fire roads are all adjacent to the freeway and/or the communities of Southern Marin. They are not in the heart of the Headlands. They can all be accessed from outside the GGNRA reducing auto traffic into the GGNRA.

There has been little or no discussion of on-leash access for dogs in the GGNRA, the focus of concern has been off-leash / voice control use. For those of us who hike long distances with our dogs, on-leash access is important. As the Baby Boomers age, having a dog along on-leash on a long hike is an issue of safety and ensures that we will continue to exercise. 2) Retain the 1979 Pet Policy (Alternative A) for all of Rodeo Beach, keeping both the north and south ends, for off-leash use.

? To address concerns regarding dogs interfering with other beach users, we think 'timed' use makes sense, i.e. during days and/or hours that there are many visitors to the beach, dogs should not be allowed. The NPS argues that this is too difficult to enforce. We do not understand this logic. Timed-use is in practice many places; common sense tells us it requires less, rather than more enforcement.

? Most of the year the weather at Rodeo Beach is cold and windy, and often foggy. As a result there are few visitors to Rodeo Beach other than surfers, people with their dogs, and staff and children from the Headlands Institute. May through October (when there are warm days), there are more visitors, but even then before 10 am and after 3 pm there are few visitors other than surfers and people with their dogs.

? For humans that want a no-dog experience at the beach there are many other beaches from which to choose. Between the Golden Gate Bridge and the Sonoma County line the only public beaches that currently allow off-leash dogs are Rodeo Beach and Muir Beach. Upton Beach is part of Marin County Parks and Open Space and allows dogs on-leash. There are 3 short stretches of beach at the Pt Reyes National Seashore that allow dogs on-leash. Dillon's Beach at the very northern end of the County is a private beach that allows dogs on-leash. That's it for the dogs on ocean beaches in Marin.

? Rodeo Beach (not Rodeo Lagoon) has little to no bird activity (confirmed in the Draft Plan/DEIS) as it is very steep and provides no nutrients for birds . The Marine Mammal Center (TMCC) has stated that dogs are not a threat

to stranded marine mammals: "seals and sea lions have the potential to strand anywhere in California, but this does not mean that sites cannot be set aside for dogs off-leash. Furthermore, public walking their dogs can be an important arm of the stranding response—they can notify TMMC, and help with setting up a barrier around the stranded animal, as they are likely to be among the first people to spot a stranded animal." (Frances Gulland, Director of Veterinary Science, The Marine Mammal Center)

3) Retain the 1979 Pet Policy (Alternative A) for Muir Beach, keeping off-leash/voice control access. We leave it to the Muir Beach Community to address the specific concerns and mitigations for dogs on Muir Beach.

4) Retain the 1979 Pet Policy (Alternative A) on Alta Trail from Donahue Avenue in Marin City to Orchard Fire Road, and on Pacheco Fire Road from Marin City to Alta, and on Orchard Fire Road from Marin City to Alta, allowing dogs off-leash/under voice control.

? This stretch of Alta Trail (a fire road) is on top of the ridge and is approximately 1 mile long. On the east side of the fire road you look down onto Marin City and Highway 101. On the west side of the fire road you look down onto Tennessee Valley. ? This is the most used stretch of fire road in the GGNRA in Marin. There are dozens of humans with their dogs every day at this location. There are also hikers and bike riders, and an occasional horseback rider. The first quarter of a mile runs through private property that provides county easement into the GGNRA. ? This fire road is in use by vehicles from PG&E, MMWD, Park Conservancy volunteers, and GGNRA staff. This is not pristine wilderness, but it is much loved and used by many Marin residents. ? Our understanding is that the Mission Blue Butterfly habitat that is being planted along Alta is the main argument against dogs off-leash on Alta Trail. We have never seen a Mission Blue Butterfly along Alta Trail, but we suppose if enough Lupine is planted they may come. There are many other areas in the thousands of Headland acres that Lupine could be planted to create Mission Blue Butterfly habitat where the Mission Blues might also come. There is no evidence that the presence of dogs displaces Mission Blue Butterflies. 5) Retain the 1979 Pet Policy (Alternative A) for the section of Julian Fire Road between McCullough Road and the Historic Firing Range. This is a one mile section of fire road that runs above Fort Barry housing. This section of the road is built into the side of a steep hill with heavy scrub on either side, restricting humans and dogs to the fire road. The road is frequently used by both humans with dogs and bike riders; there is room to accommodate both.

6) Retain the 1979 Pet Policy (Alternative A) for Old Bunker Road loop. This is a wide paved fire road frequently used by hikers with and without dogs. There are a few bike riders, but not many and there is plenty of room on this road for everyone. The road circles up from the entrance to the

Marine Mammal Center, runs above Fort Cronkite, around the water tank, and Battery Townsley and then back down to Rodeo Beach.

? The Old Bunker Road loop road is an alternative to Rodeo Beach for hikers with dogs on warm sunny days.

7) Retain the 1979 Pet Policy (Alternative A) in Homestead Valley, allowing dogs off-leash/under voice control. This portion of the GGNRA is in the middle of the Homestead Valley neighborhood of Mill Valley. The community has been walking with their dogs in this area for years, and there is no evidence that the presence of off-leash dogs in this area has damaged habitat or native species. Enforcement in this area would be, to put it succinctly, a nightmare.

Appendix B

Recreation Resources ' Suggested Annotated Outline

Affected Environment

Resource Definition. Urban recreation resources include public and private lands and facilities accessible to the general public in an urban environment. The recreational resources considered in this Draft Plan/DEIS should include GGNRA lands and facilities. As a part of the region of influence, the Draft Plan/DEIS should also describe and consider local recreation resources, which are generally considered within about 10-15 miles, or 30 minutes travel time, from the GGNRA lands that are the subject of the proposed action.

Project Setting. This section would describe the existing recreational lands and opportunities available to the diverse group of visitors of the GGNRA. Examples of such opportunities include dog walking, hiking, running, biking, picnicking, surfing, windsurfing, kite boarding, kite flying, etc. It would also describe the facilities available to park users, including restrooms, visitor centers, water fountains (for humans and dogs), cafes, and trails, including ADA-accessible trails. This section would also describe the local recreational resources within the region of influence, including city, county, and state parks, open space, and other recreation resources. The EIS should characterize the recreation opportunities available within the region of influence, and in particular the dog recreational opportunities available. To the extent feasible, the section would quantify the current acreage of land dedicated to the various recreational opportunities, both with the GGNRA and within the region of influence. The section would also include a summary of the history of the original recreational purpose and mission of the GGNRA and related acquired lands. All of this information is necessary to establish a reasonable baseline to enable a comprehensive analysis of

changes from baseline conditions.

Regulatory Setting. This section would describe relevant policies and regulations related to recreation, and specifically relevant to dog recreation. The EIS should describe for both GGNRA and local parklands within the region of influence. Some of this information needed in this section is provided elsewhere in the document, but should be provided here. Any city, county, or state recreational plans or policies should be described in this section.

Environmental Consequences

Significance Criteria. Impacts to recreation resources could be considered significant if they result in a decline in the quality of existing recreational opportunities or in the quantity of available recreational lands/facilities.

Alternatives Analysis. This section should describe and evaluate the direct impacts of each alternative on existing recreational uses of the GGNRA and the surrounding urban environment for all types of park users, including impacts that substantially impair or diminish the features, attributes, or activities currently available to local residents. The impact analysis should consider the context and intensity of the proposed action, giving due consideration to the unique characteristics of the GGNRA, including its proximity to a dense, urban environment. The analysis should consider the ways that city and suburban dwellers use and need recreation areas. For example, many people, including seniors and children, rely on the GGNRA for access to unique recreational areas to walk and exercise themselves and their dogs as well participate in special events. Many urban residents are only able to have a dog and provide it an adequate quality of life because of the nearby recreation resources that the GGNRA provides. This connection between the GGNRA and the human environment needs to be disclosed. The analysis should consider the potentially adverse direct impacts of proposed action related to the loss of established recreational opportunities and how that loss would affect city dwellers and other park users who traditionally exercise themselves and their dogs in the GGNRA. Such impacts could include decreased health of these people and their dogs.

The section should also describe and evaluate the indirect impacts of the alternatives on areas in close proximity to the GGNRA, including indirect impacts that substantially impair or diminish the features, attributes, or activities currently available to nearby parkland visitors. Although the Visitor Use and Experience analysis provides some information on indirect impacts on nearby parkland, it fails to provide a detailed evaluation of the potential for an increase in visitor use of nearby recreational facilities. Such an increase in visitor use could lead to a decrease in visitor enjoyment of those areas, an increase in enforcement issues, and/or other related environmental effects. In addition, the Visitor Use and Experience analysis

related to indirect effects on nearby parklands fails to provide a reasoned explanation for its conclusions. For example, on page 1412, the draft EIS states that the impacts on nearby parks under Alternative D, which prohibits dogs in the parking and picnic areas at Stinson Beach are negligible and "minor." Given that dogs would no longer be allowed in these areas under this alternative, it is unclear how the EIS authors determined this impact to be negligible and "minor" without a rational explanation for this conclusion. Not allowing dogs in areas where dogs were they were allowed previously would indeed affect the use of adjacent recreation areas and the EIS needs to disclose this impact. Thus, the recreation resources section of the draft EIS should consider impacts related to the loss of recreational opportunities and access to nearby recreational facilities with detailed explanations for all conclusions.

This section should also evaluate the cumulative loss of established recreational opportunities and access to recreational facilities, especially within the context of a dense urban environment. The analysis should consider the contribution of the alternatives to this impact, both directly and indirectly. The list of cumulative projects should include a comprehensive list of past, present, and future actions that could affect recreational opportunities, including on- and off-leash dog walking, in the vicinity of the GGNRA. For example, this list should include the proposed San Francisco Natural Areas Management Plan, which includes the closure of up to 20 acres of land within San Francisco to dog walking. Coupled with the proposed action, these actions constitute a major, adverse cumulative impact on dog walking opportunities in a dense, urban area, requiring mitigation.

For significant adverse effects, the NPS should commit to mitigation of major adverse impacts. For example, the NPS should consider alternatives that employ environmental design principles to manage access to and use of recreational trails in a manner that avoids conflicts among competing uses. Environmental design is one key alternative way to meet the purpose and need of the GGNRA as it would allow the NPS to recognize that the GGNRA is an urban recreation area that serves a different needs and purposes than other NPS lands.

Appendix C Additional Comments Related to Appendix G, "Law Enforcement Data" Many of the findings in the Draft Plan/DEIS are founded on a reference included in the document as Appendix G, "Law Enforcement Data" (NPS 2008c). This reference document is critically deficient in substantiating statements made in the characterization of existing conditions and in the analysis of the environmental consequences. Per NEPA, "Agencies shall insure the professional integrity, including scientific integrity, of the discussions and analyses in environmental impact statements (CFR 1502.24)." The findings of an EIS must be based on scientific accuracy and clear evidence in the record. This Draft Plan/DEIS is

significantly flawed in that it does not rely on adequate evidence for the conclusions it draws, and in that it fails to clarify its methodology for drawing those conclusions. The Appendix G reference document consists of a two-page summary of the numbers of incidents for two years (2007 and 2008), organized by incident type and location. The document does not provide rationale for why it chose those two years as being representative of existing conditions. The reference document is lacking in terms of only providing a very limited number of years of data. Moreover, it is inadequate in that it only contains numbers. Thus, Appendix G fails to provide any details or context for the incidents; nor does it contain any source documentation or records of communication. For example, the table shows how many "leash-law" violations occurred in a given area of the park per year, but does not provide the context of specifically where the incidents occurred, or provide context in terms of how many visitors visit the park, or otherwise provide a method to assess the significance of the number of incidents. In the instance of "bite/attack" or "disturbing wildlife" incidents, no details regarding the nature of the incident, its severity, or where it occurred are provided. Any material incorporated by reference into an EIS should not only be cited but also summarized. The Draft Plan/DEIS fails to summarize the data provided in Appendix G, nor does it attempt to clarify the methodology for how it drew its conclusions based on the data presented. Appendix G also noted that the violations recorded for the incidents of concern (i.e. bite/attack, closed area, disturbing wildlife, and hazardous condition/pet rescue violation types) appear very low, especially in consideration of the assumed large number (estimates of this should be provided in the Draft Plan/DEIS) of dog-walking visitors that visit the park each year. Given the relatively low numbers of serious violations recorded, it is difficult to understand how the NPS can support its findings that major dog conflicts exist in the GGNRA. NEPA further requires that, "When an agency is evaluating reasonably foreseeable significant adverse effects on the human environment in an environmental impact statement and there is incomplete or unavailable information, the agency shall always make clear that such information is lacking (CFR 1502.22)." When information is incomplete or unavailable, the agency must obtain the information, unless the cost to obtain the information is unreasonable. In that case, the EIS must state that the information is incomplete or unavailable and identify the relevance of the unavailable information to the evaluation. The Draft Plan/DEIS does not acknowledge the incompleteness of the data provided, or in any way factor in the limits of the available data to the findings made. Appendix G is used as the basis for numerous claims throughout the document, as well as to support findings of adverse impacts. Appendix G is referenced 48 times in the document, in Chapters 1, 3, and 4. Resources topics relying on Appendix G for findings of issues with existing conditions and/or adverse impacts in the environmental consequences section include Visitor Use & Experience, Health & Safety, Park Operations, Special Status Species, Wildlife, and Vegetation. In the following paragraphs are some

examples of how this source document is misused, and as a result, the document's findings are flawed.

Correspondence: Dear Mr. Dean,

My name is Stella Malone and I'm 8 years old. I live at 8 Cragmont Avenue in San Francisco.

My parents and I just LOVE to go down Crissy Field and Fort Funston a lot. I always go there with my two dogs.

We love to take them off leash and watch them run catch balls and play in the water.

What if you were a dog and there was a law that you couldnt go off leash? How would you feel?

Please do not change the rules!

From: Stella Malone

Correspondence Type: Letter

Correspondence: Dear Superintendent Dean,

I have been walking dogs as a professional dog walker at Crissy Field since 1990. I believe I was the first and only dog walker to receive a permit from the GGNRA in 1995-1996 and 1996-1997 (see attached).

In my many years at Crissy Field, I have treated and cared for the park as I would my own backyard. I filled all the bag dispensers daily for seven years. For several years I purchased plastic bags myself to fill the dog containers because I believe that dog owners may be lazy about bringing bags but are responsible enough to pick up after their dogs if bags are available. This has proved to be true. Crissy is remarkably clean for the number of dogs who use the park daily.

I have picked up hundreds of pounds of trash and every dog poop I see even

if my dogs did not leave them, filled in countless holes on the beach dug by both dogs and humans. I have tried to ensure that my dogs and I are examples of good behavior.

I have lobbied my fellow dogs owners for responsible dog behavior as a member and an officer of the Crissy Field Dog Group. In that capacity, I met on numerous occasions with Superintendent Brian O'Neill about dog management. On a daily basis I inform people about the rules for the Wildlife Protection Area. I do not ever see rangers providing this necessary education and I feel I contribute as a professional where you do not have the personnel to do so.

Though professional dog walkers are often vilified, most walkers I know at Crissy Field keep excellent control of their packs, clean up more trash and poop than their dogs create, keep their dogs leashed on the path and in the parking lots, and work to avoid groups of children, picnickers and the elderly until their dogs are in a safe, clear area. Dog walkers provide necessary services such as cleanup and education, for free, that the Park Service cannot afford to provide.

Permitting As a professional for over 20 years, I am bonded and insured and am very experienced at my job. I do not believe that I should be required to take a beginner course at the cost of \$675 over the course of 12 weeks to receive a permit. I urge you to amend that rule for longtime professionals. At the very least, require those of us with many years in the business to take a short review course from accredited training groups. Otherwise, you penalize those of us most experienced and committed to our profession and risk replacing us with newer entrees to dog walking.

I believe it is important for professional walkers to have permits and I hope that the cost of the permit will be reasonable. As a solo operation, would like to dispel the notion, heard from various rangers, that professional dog walkers have high income and can afford high permit fees. I do not take large numbers of dogs on my walks, and do not make a lot of money. Please take the small businesses into account when determining your fees otherwise, as stated above, the larger businesses with the less experienced personnel will take over.

I am well known at Crissy Field from my long tenure walking in the park and my contributions to upkeep and education. I ask that you acknowledge the importance of good professionals as an asset to off leash dog walking in the GGNRA.

Thank you. Sally Cancelmo

Received: May,31,2011 00:00:00

Correspondence Type: Letter

Correspondence: Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation.

? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.

? Exclude speculative, exaggerated, biased, or misleading statements and studies.

? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).

? Enable professional dog walking and align any professional dog walking rules with county or city regulations.

? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public Input.

Respectfully, Michael S. Caine

Correspondence Type: Letter
Correspondence: Dear Superintendent Dean :

This letter is to provide written comment to the GGNRA DEIS. I am a long time San Francisco resident and live in the Presidio Heights neighborhood of San Francisco. I live in a condominium with my dog. As we have no backyard, the Presidio and the GGNRA parklands are our backyard. Professionally I work in the renewable energy field and personally I contribute my time and financial resources to causes that support the environment, wildlife and the human animal bond. My dog has her Good Canine Citizenship certification and she is an animal assisted therapy dog with the SF/SPCA and Delta Society programs and visits people in the local hospitals and nursing homes. She and I do our best to contribute to the community and to make the beaches and GGNRA lands a better, safer, cleaner and happy place for all visitors. Unfortunately, we now find that the GGNRA is about to take away our primary source of recreation, solitude, urban escape and joy.

I do not agree with the GGNRA's current preferred alternatives as they significantly restrict and eliminate off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science, the appropriate considerations for an urban recreation area or long-term monitoring of site-specific conditions.

Amazingly, there are major areas of impact that the DEIS is required to study that it did not. The law is clear that the DEIS must look at impacts to not only the natural environment, but also to the human environment (health and community), and the urban environment (the surrounding areas). These studies are conspicuously absent from the DEIS making it a grossly biased document and, by default, its recommendations of Preferred Alternatives are highly flawed.

I walk my dog several times a week at Fort Funston, Baker Beach and Crissy Field. Simple observation gleaned over several hundred walks over the past 15 years suggests a few conclusions that are inconsistent with the DEIS. First, the vast majority of dogs and people walking dogs stay on the

designated areas and, when on the beach, stay close to the water's edge. ? Second, dogs and the people with the dogs make these areas safer and friendlier. I have personally not seen any serious incidents between dogs or dogs and people. I feel safer when walking deserted beaches and trails with a dog by side and with other dogs and their guardians also on the trails. ? Third, people with and without dogs benefit from the joy and fun and socializing that the dogs bring to the park. Walking your dog is a highly social and healthy activity. ' Fourth, dog owners are deeply committed to the natural environment. They observe the signs (unlike families and children), leave the beach and grass areas cleaner than when they arrived, and sponsor periodic beach and park cleanup activities. ' Fifth, these park lands, Crissy Field in particular, have only gotten better in the last so years despite the increase in local and tourist use, including dog related activity. ? Sixth, people with dogs, without dogs, on bikes, in red flyer wagons, on scooters, in wheelchairs, hang gliders, surfers, wind sailers, and electronic airplane enthusiasts (despite the intense noise pollution they introduce to the quiet of the beaches and dunes), etc..., all enjoy the diversity of each other's company and participation of activities in the GGNRA. And they do so peacefully and with a sense of community and appreciation for our amazing shared natural resource.

Why did I not see any of this in your DEIS ? Why did I not see any mention of the toll that the beaches and dunes take on event days such as Fleet Week or the various marathons and walk-a-thons that bring thousands of people to the beaches? There is also the everyday disregard of the signs and postings by families and hikers. I make note of this because the dog guardians, after being under assault from the GGNRA for the past zo years, and due to the educational efforts of the organized dog walking groups such as Crissy Field Dog Group and Fort Funston Dog Walking Group, are particularly respectful of the signs and regulations. The DEIS notes some studies and general tendencies of dogs to harm natural resources, but with few exceptions, there is little documented site-specific impacts to substantiate these claims and support the suggested restrictions of the preferred alternatives. The proposed broad limitations in the DEIS are without site-specific science that demonstrates that problems with the quality of GGNRA's natural resources are actually attributable to dogs and not to other factors. I call your attention to the attached exhibit. These families, children, hikers, kite flyers, football throwers are all treading where the signs say not to tread or have crossed fences to reach off-limits areas. After years of dog walking, on and off leash, n the GGNRA I can confidently say that dogs are really not causing the problems that the DEIS attributes to them. The DEIS is highly biased and blames dogs for problems that are either caused by general park use or overall natural trends. For example, there is no hard evidence offered that dogs create a singular burden on the park resources and habitats. The 36 threatened and endangered species that exist within the park system are not endangered by conditions here, specifically by dogs in

the GGNRA as the report would have you believe, but rather by their population numbers worldwide. In fact, the small number of sites currently open to recreation with dogs (as defined by the 1979 Pet Policy) include no critical habitats or nesting areas for either the Snowy Plover or bank swallow. It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe options besides restricting dog-walking access should be considered. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option.

The proposed "compliance-based" approach is of particular concern and is set up to fail. It cannot be a part of the plan. It punishes many for the perceived transgressions of a few, even if the transgressions might be due to lack of GGNRA educational efforts or signage. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal.

The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The Plan doesn't recognize that environmental values include both recreation and nature. In many places, the DEIS treats the environment and recreation as opposing values, i.e., that recreation only harms natural resources. The document doesn't acknowledge that people care about both and that people with dogs are often also good stewards of our environment. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents. A healthy community exercises and socializes together in its parks and open spaces. Cutting off access for a very large group of people and restricting comingling of diverse groups is not only discriminatory but it also represents a giant step backwards and is highly inconsistent with the values and culture of the Bay Area. The dynamic interrelationship between GGNRA and our neighborhoods is exactly the human environment that the EIS is required to study, but failed to do so. After careful consideration and review of the many alternatives, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative

barriers, and education and outreach as part of the overall program. As part of a modified No Action Alternative I do support the proposal for leash requirements in all parking areas. This will enhance safety in these often highly trafficked areas.

The DEIS is biased against and does not take a hard look at the No Action Alternative or variations on that alternative. There are many areas in the GGNRA where the existing 1979 Pet Policy has been working, and where sensitive species are not present and visitor conflicts do not occur or are very infrequent and most often NOT related to dogs but to wind surfers or gliders or organized events. In addition, the DEIS does not provide site-specific information or conclusive evidence that these areas are inappropriate for continued dog walking. As such, the Existing Alternatives ' Alternative A should be slightly modified to provide for safety and access, adopted and monitored and enforced with community input and cooperation.

Respectfully, Kathryn E. Coffey San Francisco, CA 94118 CC:
Representative Nancy Pelosi, 8th Congressional District of California,
House Minority Leader, U.S. House of Representatives Ken Salazar,
Secretary of Interior Jon Jarvis, National Park Service Director Crissy Field

Correspondence: Dear Mr. Dean:

I am a person from the country of Myanmar and I have moved to the US to study at San Francisco State University as a scientist I study birds. I go to Chrissy Field, Tomales bay and Fort Cronkhite to look at the seabirds and other birds. There are dogs there that scare the birds by running after them. I am also nervous at these places because I am also afraid of dogs. We do not have many dogs in my country and they frighten me. I hope you will protect the birds. Thank you Mr. Dean

Hazel Thwin

Correspondence ID: 4632 **Project:** 11759 **Document:** 38106
Received: May,27,2011 00:00:00
Correspondence Type: Letter
Correspondence: In Chapter 1, background information and a preliminary discussion of in the current dog issues is provided. In this section, the document indirectly

references Appendix G (the citations are not provided, but the statements are in line with those made in later sections of the document relying on Appendix G). For example, on page 5 the document states, "At the same time, the number of conflicts between park users with and without dogs began to rise, as did the fear of dogs and dog bites or attacks." No reference for this statement is provided; therefore, it can only be inferred that it is based on the only referenced material that characterizes dog incidents ' Appendix G. The statement erroneously implies that there was a rise in the number of conflicts and attacks; however such a conclusion could not possibly be drawn from the two years of data presented in Appendix G. Moreover, Appendix G indicates that a majority of "incidents" are leash law violations, and comparatively, there were relatively small numbers of bites/attacks recorded. Lastly, no source documentation in the Draft Plan/DEIS substantiates that the "fear of dogs and dog bites or attacks" is on the rise.

On pages 19-20, in the Employee, Visitor, and Dog Health and Safety section, the document recounts data provided in Appendix G (though does not cite it), and characterizes dogs as a major health and safety issue in the GGNRA. For example, "At GGNRA, reported incidents of encounters with unruly/aggressive dogs include instances of visitors being knocked down, intimidated, and bitten by dogs. In 2007/2008 a total of 52 violations were given for dog bites or attacks at the GGNRA park sites as recorded by GGNRA LE and U.S. Park Police." The Draft Plan/DEIS characterizes dog attacks as a significant issue. However, the number of violations provided is aggregate over a two-year period, and cumulative over all the areas of the GGNRA. It would be much more appropriate to assess the issue on a site-by-site basis. Further, as noted before, no methodology on which to base the significance of these numbers is provided, or context (i.e. number of incidents relative to the number of visitors per year).

On pages 229-230, the document states, "In addition to vegetation and wildlife management activities, the park collects data regarding the frequency of disturbance to wildlife and habitats at GGNRA sites. Wildlife species and their habitats are currently being affected by dogs at this park, which has been documented by reports taken and warnings and citations issued (all referenced to as incidents) related to dogs in closed areas and disturbing wildlife at GGNRA (appendix G)." The conclusion that wildlife and habitats are "currently being affected by dogs at this park" cannot soundly be based on the numbers provided in Appendix G. Appendix G does not provide evidence of what type of disturbances have occurred, or the level of significance that the documented disturbance actually has. Again, a methodology for how the document drew its conclusions based on the data presented must be presented.

On page 242, the document states, "Off-leash dogs have frequently been

observed in Redwood Creek and Redwood Lagoon despite these closures (NPS 2008c (appendix G))." This statement (and other similar statements made in the Draft Plan/DEIS) is based on subjective opinions and untested assumptions. The statement that off-leash dogs have frequently been observed in these areas is unsupported by the evidence in Appendix G. Further, the word "frequently" is broad and vague and not meaningful in this context given that the data in Appendix G is only based on a years' worth of observation in 2007 and unsupported by records of communication. There is no methodology provided on which to base the significance of the data presented.

On page 253, the document finds that, "Both on- and off-leash dogs are routinely brought into the WPA by park visitors..." This statement is not referenced, but later in the paragraph the document does cite the warnings and citations included in Appendix G. Again "routinely" is a subjective qualification, and no methodology for determining the level of significance of the data provided is clarified.

Similarly, on page 254, the Draft Plan/DEIS states, "However, despite education and enforcement efforts, current compliance with the 2008 seasonal protection rule remains low, as described in the "Vegetation and Wildlife" section and the "Visitor Use and Experience" section under "Visitor Use by Dog Owners" (NPS 2008c (appendix G)). The Draft Plan/DEIS fails to provide the reader with a means of distinguishing between scientific evidence and subjective opinion. Contrary to the cited statement, no violations of the Ocean Beach SPPA are listed in Appendix G for 2007 and only 2 violations were cited in 2008. For Crissy Field, 17 violations were cited in 2007 and no violations in 2008. The NPS provides no basis for determining that this constitutes "low" compliance. The Draft Plan/DEIS must provide the reader with a methodology for determining the significance of the data.

On page 250, the Draft Plan/DEIS states, "However, these closures are not always followed; a citation was issued for a dog in the creek in 2006 (NPS 2008c (appendix G))." This statement is inaccurate/unsubstantiated since the data in Appendix G is from 2007.

On page 496, the Draft Plan/DEIS states, "Dogs are currently prohibited in the tidal marsh at Crissy Field. Despite protection of restored tidal marshes by installed fences, dogs under voice control have been documented as gaining access to the tidal marsh through the tidal inlet that allows exchange of water between the tidal marsh and San Francisco Bay (Appendix G)." Appendix G provides no documentation of dogs in this specific area. Source documentation, containing details of incidents, must be provided to support such claims. Further, the discussion continues to imply that incident of dogs going into this area is a significant issue, and this is further unsubstantiated.

The document needs to include appropriate analysis of the data to determine that a dog going into this area is a regular enough occurrence that it is determined to be a substantial issue. This consideration of the data has not been provided, and as such, the analysis is subjective, and the conclusions unfounded.

On page 568, the Draft Plan/DEIS states, "In addition, 17 incidents of dogs in closed areas were recorded in 2007/2008 (Appendix G)...In the restored dune areas, the shifting sand buries the fences, and dogs have accessed dune areas; there are also sparsely vegetated foredunes that have formed in the WPA that are frequently trampled by dogs." Again, Appendix G contains no details of the dog violations in the WPA. There is no evidence provided for the conclusion that dogs "frequently" trample the dunes. There is no evidence provided that any of the 17 incidents over the two-year period involved dune trampling. Moreover, even if there were evidence provided to that effect, 17 incidents in two years could not be considered "frequent." Again, methodology for interpreting the data and determining the significance of the data needs to be provided. Without this, the findings made are purely subjective claims.

On page 1631, the Draft Plan/DEIS states, "Due to the history of citations and warnings given for visitors neglecting the current regulations, confrontations between visitors and staff would be expected due to the restriction of all dogs from the site. It is anticipated that confrontations would be intense, which would place staff at a greater risk of injury. Due to the history of noncompliance and confrontation at this site, impacts on park staff during the initial education and enforcement period would be short term, moderate, and adverse." This quote is another example of how the Draft Plan/DEIS subjectively mischaracterizes the data presented in Appendix G. The conclusions make a presumption of significant confrontations, which is not at all evident from the data provided. Moreover, it mischaracterizes noncompliance as a significant issue, without providing any rationale on how that determination was made. The document makes inaccurate and unsubstantiated conclusions based on information presented in Appendix G.

The examples above are not an exhaustive list of all instances where Appendix G is misused, but a sampling of the types of errors that were found in the document's reliance on Appendix G. In conclusion, Appendix G does not provide substantial evidence for many of the claims it makes, and as such, the analysis of environmental consequences is flawed. The NPS should revise the Draft Plan/DEIS and its findings in the following ways:

? Provide details for incidents in Appendix G (specific location, nature of incident) and source data. ? Where the first reference to Appendix G is made, the document should not only reference but also summarize the data

contained therein. ? Clarify why 2007/2008 years were chosen. ? Provide data for a broader range of years. ? Provide methodology for interpreting/determining the significance of the data. The NPS should provide thresholds for analyzing the incident date, by type, and by GGNRA site. The NPS should clarify what number of incidents is considered acceptable or unacceptable, again, by site and by incident type. The NPS should describe their rationale for determining proposed thresholds (i.e. in context of number of visitors per year to each site). By providing a methodology for analyzing the data shown, the EIS will be able to properly describe the significance of the data, and use the data to support (or not support) its findings. ? Provide clear evidence in the record to support all of its findings. The NPS needs to ensure the professional integrity, including scientific integrity, of the analysis and findings contained within its Draft Plan/DEIS. ? Review all instances where Appendix G is referenced in the Draft Plan/DEIS and make revisions to ensure the findings are based on clear evidence in the record. Revisions to the methodology, the analysis, and the findings, as noted above, should be to be corrected throughout the entire document, wherever such analysis or conclusions relies on the data in Appendix G. ? The NPS should take all reasonable steps to obtain and disclose the information that the Draft Plan/DEIS is currently lacking. Where there is incomplete or unavailable information, the Draft Plan/DEIS must clarify that the data is lacking, and identify the relevance of the unavailable information to the evaluation, and especially to the analysis of environmental consequences. ? As a result of the revisions to the analysis and findings noted above, the analysis of the alternatives needs to be reassessed where proposed alternatives are not substantiated by clear evidence in the record. Proposed management measure such as closures or significant reductions in access to people with dogs in areas of the GGNRA should be revised. As currently written, the data provided in Appendix G do not support the management measures proposed in the document, and therefore the alternatives need to be modified. Appendix D

Additional Comments Related to Draft Plan/DEIS Analysis of Geology and Soils

Chapter 3: Affected Environment

General:

Table ES-1 lists only areas open to dogs under Alternative A. Although this may simplify the comparison among alternatives (since the closed areas would remain closed under all of the alternatives), it does not clearly portray the existing extent of areas closed to dogs. Not only do the alternatives variously restrict dogs compared to the No Action Alternative, but they also increase restrictions on dogs relative to a baseline that is already restrictive. The Draft Plan/DEIS and Table ES-1 should compare the alternatives in

terms of the area and miles of trails available to dogs under each alternative. This is a less subjective way of presenting the alternatives, and it could be useful in evaluating cumulative and synergistic effects. For example, Alternative C takes other available dog use areas within each county into account, presumably in recognition of the high demand for areas where people can take their dogs, and the desire to avoid over-concentrating dog use in any one area. Presenting the alternatives in terms of available area and trail miles would better allow the reader to appreciate the future impacts relative to current conditions.

Executive Summary, Environmental Consequences, pages xv-xxiii:

Page xv (Stinson Beach). The paragraph states that impacts to physical resources (including soils and geology) would generally range from negligible to long-term, minor adverse for all alternatives. However, dog use at Stinson Beach is limited to the parking lots and picnic areas only, under each of the alternatives. Although "minor" is less than "moderate," and "moderate" is less than "major" or "significant," making the distinction between the impacts of No Action and action suggests that the action alternatives would actually alter the situation, when actually no change in management is proposed. This bias of weighting the analysis in favor of excluding or limiting dogs exists uncritically throughout the Draft Plan/DEIS and should be corrected.

Table 5. Environmental Impact Summary by Alternative, pages 109-211:

Page 109 (Stinson Beach, Soils and Geology). Under Alternative A the second bullet identifies long-term, minor, adverse impacts in areas outside parking lots and picnic areas. These impacts are not repeated under the other alternatives despite the fact that, except for Alternative D, the management strategies under all of the alternatives are identical for Stinson Beach. Furthermore, each of the statements in the first bullet, except for No Action, includes the clause "assuming compliance," conveying the understanding that perhaps compliance can't be assumed under No Action. At least for the soils and geology evaluation, the analysis seems to take it for granted that the No Action Alternative is inferior. Both of these are examples of biasing the analysis against No Action.

In the same table, under Alternative D, in the rationale for a finding of "no impacts," it is concluded that because no dogs would be allowed within the parking lot and picnic area, no soil would be disturbed. This interpretation fails to take into account soil disturbance caused by people using the site, regardless of whether dogs are present. (Continuing this reasoning, and referring to Maps 2A and 2D, the reader might be lead to the conclusion that the impact would be greater under No Action than under Alternative D because dogs would be allowed in the blue-shaded area of Map 2A, whereas

there is no blue-shaded area in Map 2D, when in fact the difference in effects on soils between these alternatives may be so miniscule as to be unnoticeable compared to the impacts of human use regardless of the presence of dogs). The baseline for comparison throughout the Draft Plan/DEIS should not be an environment in which it is assumed that there is no impact unless dogs are present, but one in which the impact of dogs is added to the impact of humans. At about 200 pounds per adult, the force that a human exerts on the soil one foot at a time would have a significantly greater impact on compacting the soil in a picnic area than the force exerted by even a large 70-pound dog distributing its weight on four paws. The failure to acknowledge that human use has more impact on soils and geology in this regard (and acceptable in many areas of a National Park), compared to dog use, unfairly and uncritically biases the analysis in favor of restrictions on dogs. While there may be areas in which impacts from dogs are unacceptable, the same criterion holds for impacts from humans, and in most of these areas, dogs and humans are already excluded. The Draft Plan/DEIS should attempt to provide illumination, rather than justification for a foregone conclusion.

Table 5. Environmental Impact Summary by Alternative, pages 109-211:

Page 112 (Homestead Valley, Soils and Geology). Under the No Action Alternative, it is concluded that there would be long-term adverse impacts from "soil compaction, erosion, and nutrient addition.., in areas off the trail since dogs would be under voice control," while under other alternatives it is concluded that the impacts would be negligible because dogs would be under physical restraint. This is an unsubstantiated assumption in support of the underlying bias of the analysis. The analysis does not connect intensity of use and impact and seems to be based solely on the incorrect assumption that humans and wildlife would have no impact on off-trail areas, and that all impacts can be attributed to dogs. The analysis assumes, without the support of any evidence, that each of the options (off-leash, on-leash, no dogs) must result in a differentiable impact on soils and geology. This in turn requires the use of different adjectives to express the assumed differences. Instead, the impacts of dogs should be evaluated realistically and in context. If no positive basis can be identified for finding a difference between the impacts, then the Draft Plan/DEIS should conclude that the impacts would not differ. In most areas, this is the only realistic conclusion. It should not be assumed that the imposition of more rules will lead to fewer impacts. And yet this is apparently the assumption underlying the soils and geology impact analysis.

Table 5. Environmental Impact Summary by Alternative, pages 109-211:

Page 115 (Alta Trail, Orchard Fire Road and Pacheco Fire Road, Soils and Geology). The same sort of bias exhibited in the analysis of Homestead

Valley and Stinson Beach is exhibited in the analysis of the Alta Trail, and of every other area. The differences among the alternatives are not justified, and have no foundation other than perhaps the apparent editorial preference to break up the monotony of the impact analysis. For the Alta Trail, long-term moderate adverse impacts on geology are identified under the No Action Alternative, apparently in accordance with a general policy that says that dogs under voice control must, by definition, have measurably greater impacts on soils and geology than dogs on-leash, and that there would be no impacts to the environment at all if dogs were excluded from the park altogether. This policy is applied across the board, without reference to location or underlying soils and geological conditions. The possibility that the impacts of all of the alternatives on soils and geology might be indistinguishably small has not been considered. Yet it stands to reason that pedestrians and vehicles using a fire road, not to mention the impacts of natural processes such as wind and water erosion and insects and wildlife, would have a substantially greater impact on the soils and geology than the introduction of dogs that people might bring along with them as companions on their walk. Is there really any reason to expect that allowing dogs off-leash during daylight hours would result in any greater impact than allowing deer and coyotes to roam the area after the gates are closed?

Chapter 3: Affected Environment. Soils and Geology, pages 222-226:

General Comments

1. The Affected Environment discussion is overly general and does not provide a basis for understanding the impact analysis and evaluating the alternatives (40 CFR '1502.15). There is a discussion of plate tectonics, which has no apparent bearing on the relevant issues for dog management. Among the discussion of the complexity of the geologic environment is a statement that "soft formations are highly susceptible to...damage fromdog use." This is a gratuitous statement that does nothing to illuminate an understanding of the issues and serves to illustrate the bias of the analysis to come. This is followed shortly by the statement that "dune systems...are also very susceptible to artificial disturbance..." (read "by dogs"). To the side is a photo of a portion of what appears to be a trail through the sand bluffs at Fort Funston, with numerous tracks. The tracks look chaotic and the message conveyed by the photo and the text is that dogs are impacting this fragile environment. This is propaganda, not science.

This Draft Plan/DEIS is about making a change to rules about dog use. Therefore, in order to be useful in this regard, the Affected Environment discussion must present information about how the environment has been impacted by dogs, and not just by dogs but also by humans. The Draft Plan/DEIS does not present baseline conditions that require a change in the rules. The Affected Environment discussion is silent. Perhaps an aerial

photo of the bluffs at Fort Funston and the adjacent areas would help to provide perspective and tie in the discussion of plate tectonics and landforms. An aerial photo would indicate that these bluffs are undergoing slope failure and rapid erosion on a very large scale, such that the localized contribution from humans and dogs is insignificant. The impacts on geology should be presented fairly and impartially, with an eye toward using the information provided in the Affected Environment section as the foundation for the impact analysis and alternatives comparison. As it is written, the Affected Environment is little more than a catalogue of the soil complexes of Coastal California, which the reader can obtain from the Internet or from browsing through Roadside Geology.

2. The Affected Environment section contains frequent allusions to generalized impacts that can be caused by dogs. For example, under the section headed "Alteration of Park Soils" is the statement at the end of the first paragraph that "Trampling and digging by dogs can lead to accelerated erosion of cliffs and dunes at GGNRA sites, which can also be exacerbated by high visitor traffic." This is an example of a truism. So, too, can and do gophers and rabbits contribute to accelerated erosion of cliffs and dunes, but the GGNRA is not proposing to put gophers and rabbits on leashes. The operational concern in this document is the issue of whether any noticeable change in the overall rate of erosion will occur as a result of a change in the dog management strategy.

Regardless of whether dogs are allowed on the bluff trails to the beach at Fort Funston, the GGNRA is going to have to address the coastal bluffs during a winter storm or as sea levels rise and erode the toe of the slope. One look at the aerial photo might put the notion of maintaining stasis into budgetary perspective. Instead of presenting truisms, the Affected Environment should provide the reader with information that would help dog walkers understand that taking an alternative route to the beach would have some beneficial effect on soils and geology. In fact, non-native Americans have been impacting the coastal dunes and bluffs for more than a hundred years. Perhaps, from a geological perspective, it is no coincidence that there is a broad, sandy beach below Fort Funston. Is the beach broader, or less broad, as a result of dogs accompanying their owners on the trails to the beach? The Affected Environment should discuss and put into perspective the impacts that past uses have actually had and not leave off stating that the sand is soft.

3. The discussion of soils is especially generalized in the Affected Environment section. However, it suggests that within some of the sites there are specific areas underlain by fragile or vulnerable soils that could be impacted by uses, including dogs. In order to be useful, maps are needed that would indicate the areas of these vulnerable soils, as well as the areas with steep slopes that are prone to accelerated erosion. This information

would also help to support the discussion of vegetation and perhaps other sections of the Draft Plan/DEIS. The soils maps should indicate the trails. If possible, areas of existing impacts should be portrayed. Maps would not only give the reader the ability to locate the vulnerable areas relative to use areas, but also to understand the size of these areas relative to the size of the areas where change in management is proposed. Areas of serpentine soils should be specifically shown on the maps, because they are called out in the text.

4. Rare Soils at Golden Gate National Recreation Areas, paragraph 2, page 225. The text indicates that serpentine soils can be found at certain locations that are listed. This suggests that these are the only locations where serpentine soils are found, and that should be clarified. The locations listed are Muir Beach, Crissy Field, Baker Beach, and Lands End. Showing these areas on a map would be helpful. In addition, it would be helpful to elaborate on which current dog use areas are specifically affected and why. At Muir Beach, for example, the serpentine soils are outside the study area. The Draft Plan/DEIS should discuss serpentine soils at Muir Beach and other sites only if the information is directly relevant to the study area and the impact analysis.

At Crissy Field, the text says that serpentine soils are adjacent to Marine Drive. Marine Drive is labeled on Map 11-A (Fort Point) but not on Map 10-A (Crissy Field). If the area of serpentine soils is limited to the vicinity of Marine Drive at Crissy Field, then this is important information that should be presented graphically in the Draft Plan/DEIS. Later, the EIS states that the preferred alternative for Crissy Field is Alternative C, which does not appear to provide any additional protection for the area of serpentine soils than does Alternative A. The Affected Environment section should provide enough information for the reader to understand why this should be the case, rather than implying that the presence of serpentine soils is always a reason for altering the dog management strategy. This information needs to be site specific, not generic background, so that alternative management measures can be developed and adequately evaluated.

At Baker Beach, the text says that serpentine soils are located on the coastal bluffs between Baker Beach and the Golden Gate Bridge. Looking at Map 12-A, it appears that this might be the area containing the trail to Battery Crosby. Under the preferred alternative (Alternative D), this trail would be closed to dogs. Presumably the closure to dogs is related to the environment supported by these soils. The Draft Plan/DEIS should provide some discussion of the nature of the actual impacts associated with dog use that may have occurred in this area. In the Impacts discussion (p. 376-377) there is no mention of any existing impacts by dogs, and the proposed closure seems to be to prevent future impacts rather than to correct existing ones. Given the mention of these soils in the Affected Environment section, it

would be helpful to clarify this. Furthermore, the title of the reference cited, Recovery Plan for Coastal Plants of the Northern San Francisco Peninsula (USFWS 2003), suggests that some evaluation of this area may have been done prior to that time, which could be described in the Affected Environment section.

The text says that serpentine soils are present at the western end of the Lands End site, near Fort Miley. Given that Fort Miley is large, understanding more precisely where these soils are might greatly assist in understanding the selection of the preferred alternative (Alternative D). The vegetation community's map (Map 22) is at a scale that is not helpful in this regard. As with Baker Beach, the Impacts analysis (page 391) does not indicate that there are currently any impacts from dogs, and the preferred alternative seems to have been selected in order to prevent future impacts rather than to correct existing ones. This should be clarified in the Affected Environment section.

5. Alteration of Park Soils (page 225)

The second paragraph makes the assertion that:

"Dogs and dog walkers that do not stay on designated trails and venture off trail create social trails that become denuded of vegetation and result in increased soil compaction. This has occurred at Homestead Valley, Alta Trail/Orchard and Pacheco fire roads, Oakwood Valley, Marin Headlands, Baker Beach, Lands End, Fort Funston, Mori Point, Sweeney Ridge/Cattle Hill, and Pedro Point Headlands." This is an important assertion and is presumably supported by observation. Yet no citations to report more specific information than the list of sites are presented. The area included within the areas mentioned above is quite large, and the subject is compaction of soils. It seems possible that the threshold for inclusion on this list is that dogs or dog walkers have created a social trail within one of these sites. It would greatly assist in understanding the need for the proposed changes in dog management if more specific information were provided. Furthermore, the sentence preceding the one about dogs and dog walkers says that "Soil compaction is common along social trails that have been created by ' and are heavily used by ' bikers, hikers, runners, and dog walkers."

Based on the information presented, it is not at all obvious that the solution to the problem of social trails would be to change the rules affecting dogs. Somehow, the image of a group of dogs creating a social trail that results in soil compaction and vegetation loss seems less compelling than the image of runners, bikers, and hikers creating social trails that become visible and continue to be used by subsequent runners, bikers, and hikers. The Draft Plan/DEIS doesn't describe where dogs actually fit into this process, and

how restrictions on dogs would reduce the use of social trails by runners, bikers, and hikers. The problem is that the assertion is just an assertion. Environmental impact statements are required to be supported by evidence that agencies have made the necessary environmental analyses (40 CFR "1500.2(b) and 1502.1)

In theory, it sounds reasonable that dogs contribute to soil compaction. But there is no evidence that restrictions on dogs would reduce these impacts, and that management restrictions that target runners, bikers, and hikers to prevent them from creating or using unauthorized social trails wouldn't be vastly more effective in preventing impacts than restricting dogs. More specificity is needed to enable the reader to understand and meaningfully comment on the impact analysis and alternatives. It is possible that agency and public reviewers may alter whatever pre-conceived notions they may have in regard to the causes of soil compaction and vegetation loss, the creation of social trails, the extent of the problem, and the relative benefits of restricting dogs, or they may propose better alternatives for addressing documented impact, which is a fundamental purpose of the NEPA process. "The information must be of high quality. Accurate scientific analysis, expert agency comments, and public scrutiny are essential to implementing NEPA." (NEPA Rules - Purpose - 40 CFR '1500.3).

The third paragraph cites a publication of the Connecticut River Coastal Conservation District (CRCCD 2009) in regard to dog waste as a source of nutrients in soil. Current CRCCD publications do identify dog waste as a significant source of nutrients to water bodies, and suggest that picking up the waste will alleviate or prevent the problem. However, it does not appear that the CRCCD publications currently available are concerned with the contribution of nutrients to soils as a problem that could alter the fertility of soils. Furthermore, while the theory that dog urine might increase soil salinity seems vaguely possible, the idea that it would have a significant impact in areas adjacent to the coast that daily receive aerosol droplets of sea water seems unlikely. Certainly, it seems likely that serpentine soils would require more intensive fertilization by dogs than currently occurs in order to justify a lengthy paragraph on this subject in the EIS. The previous comment regarding illustrating the areas containing serpentine soils applies to this issue as well. Based on the information provided, it does not appear that intensive dog use occurs in the small areas containing serpentine soils. Unless better supported or more focused on the specific areas where it may occur, the discussion of impacts of dog use on soil chemistry should be abandoned, and replaced with more substantive discussions of the Affected Environment.

Chapter 4: Environmental Consequences. Soils and Geology, pages 291-458: General Comments 6. Study Area (page 291) The study area is defined as "the area that could be impacted by dog management activities..."

Presumably, this means the entire area within the green line boundaries shown on the maps. However, in practice, the focus of the analysis should be on the specific areas affected by the alternatives, where impacts from dogs may change. In most cases, this is small percentage of the total park areas. Contrary to the statement in this paragraph, the individual study areas have not been described in detail in Chapter 3. It would be helpful to clarify that the alternatives would alter management in selected portions of the study area, and as indicated in earlier comments, to quantify those areas in terms of acres and miles of trails affected by management.

7. Duration of Impact (page 291)

As described, the duration of impact does not seem to apply to the No Action Alternative. While this may seem like a small matter, it appears to be based on the unstated assumption or bias that the No Action Alternative is not feasible. It may be accurate to state that the existing conditions will continue during the education and enforcement period of an adaptive management plan. However, the assumption that impacts will become long-term (described as persisting for the next 20 years) is also not supported, given the lack of specific information on the Affected Environment and Environmental Consequences sections, as explained in these comments.

8. Assessment Methodology (pages 291-292)

This section explains that professional judgment was relied upon in determining impacts, due to lack of site-specific scientific data regarding effects of dogs on soils within the GGNRA. However, in the last paragraph it is asserted, as an example of processes that would occur as a result of various management activities, that heavy dog use can interrupt natural dune processes and accelerate coastal bluff erosion. The choice of words (would, can), the degree to which professional judgment is involved versus knowledge of the impacts that dogs do have versus those that they can have, and the lack of quantitative analysis overall, is confusing. Even the reference to lack of site-specific scientific data is unspecific in its scope. Although there are degrees of reliability of data, methods can be found to do a better job of quantifying the existing impacts of dogs.

For example, on a busy weekend day, it should be possible to observe and report on the areas of intense human and dog use. It should be possible to overlay maps of soils, outcrops, slopes and slope failures, and relate those to the areas selected for evaluation of different alternatives. Some, if not all, of the areas of damage could be identified and mapped, rather than relying on broad statements about the types of impacts that are possible. These methods should be attempted, and a more sophisticated methodology designed than strict reliance on "professional judgment" that appears to be the foundation for the impact analysis. Because this information is essential

to a reasoned choice among alternatives and is obtainable without exorbitant cost, it is required to be included in the EIS (40 CFR '1502.22(a)).

9. Impact Thresholds (page 292)

The impact thresholds are critical to the outcome of the analysis, and the impact thresholds described in this section provide a great deal of leeway to the analyst. In the first paragraph, a beneficial impact is defined as "a positive change in the condition or appearance of the resource." Presumably, an adverse impact would be a negative change in condition or appearance. However, no further explanation is provided as to how appearance of soils and geologic resources should be considered. The photo of the footprints in the sand on the bluffs (page 222) at Fort Funston provides an ominous clue as to how the appearance of the resource might influence the analysis. As discussed in an earlier comment, the photo is used to illustrate the soft sandy "soils" on the bluffs, which are obviously easily eroded by hikers, dogs, rodents, and reptiles. If appearance is a threshold criterion, then more footprints, however short-lived, could easily be equated with greater adverse impact. If appearance of soils is to be used as a threshold criterion then a great deal of discipline must be exercised by the analyst to avoid any tendency to associate footprints in sand with an adverse impact on soils and geology. It would be preferable to avoid the appearance criterion altogether, and to provide a more thoughtful definition of what exactly constitutes a "change in condition" of soils (whether adverse or beneficial).

Later the section explains that changes are to be evaluated in comparison to the "current condition" of the resource. Since the current condition of the resource has not been discussed or defined in Chapter 3, this change would presumably be observed during the monitoring period described under the preceding discussion of the Duration of Impact, in which it is stated that "it is expected that compliance with the dog walking regulations and associated adverse impacts would improve gradually..." As noted in comments on other sections, compliance should be part of every alternative and is not a basis for discounting Alternative A.

Considering that baseline conditions have not been quantified in Chapter 3 for any of the sites, have barely been discussed, and where discussed, have been discussed in a general, impressionistic, and broadly theoretical way (relying on suspect concepts such as the alleged adverse effects of dog urine on the salinity of poorly-defined areas of serpentine soil in a coastal marine environment, based on a brochure misapplied to this project that was prepared by a Connecticut agency to encourage visitors to pick up their dog's waste), this section does not critically evaluate available data and is not supported by evidence that the necessary analysis has been prepared.

As revealed in the subsequent section (Potential Soil Impacts Common to

All Alternatives), three types of impacts on soils and geology are identified, (although they all seem to be related to soils, so the addition of "and geology" is superfluous from this point forward). These are: soil disturbance; soil compaction and erosion; and soil function. Given that these are to be the attributes by which soils and geology are evaluated and the alternatives are to be compared, it would be helpful if these attributes were defined, preferably within the discussion of Impact Thresholds. It would also be useful to see, in the Affected Environment section of the EIS, a discussion of the current condition of soils in the study area based on these attributes and particularly as they might relate to patterns of past dog use. It is also necessary so the reader can understand the impact attributable to dogs or other factors, so that the appropriate alternatives can be developed that are actually related to the impacts, and management measures can be evaluated for their likely effectiveness.

As discussed below, lack of a definition or bounds on what constitutes adverse soil disturbance is a weakness of the analysis, which might either be rectified by carefully defining the term, or by avoiding its use altogether due to its inherent vagueness.

Soil compaction and soil erosion are distinct processes, though their causes and secondary effects may overlap. This might become clearer if each were defined. To conclude that in general, a decrease in soil erosion would be considered beneficial is far too simplistic. Under natural conditions, erosion is essential and inevitable on every surface exposed to weathering. Like wind and rain, rates of erosion can vary widely over time, as well as by material and location. For example, areas with rapid natural rates of erosion, such as the bluffs at Fort Funston, tend to support fast-growing, resilient vegetation. There are hollows and landings within the bluffs that are stable enough to support trees, but most exposed slopes fail so frequently that trees cannot become established on them. To simply assert that a decrease in erosion at Fort Funston would be a beneficial impact is not meaningful. The Impact Thresholds discussion should provide greater clarity. This level of specificity is also needed to consider, for example, why off leash dog access is prohibited even on an inland trail.

Soil function is a potentially broad category, which certainly needs to be defined for the average reader, and might be conceived to include every attribute of soil. Soil has many functions, among which is to supply material that eventually becomes beaches. Among the important ecosystem functions of soil are supporting plant growth, providing habitat for an incredible variety of fauna, retaining moisture, and breaking down organic waste. Under natural conditions, because of their textures and locations, different soils support these functions to different degrees. Therefore, the impact that any particular use, such as dog use, may have on these soil functions depends on the characteristics of the particular soil as well as on the nature

of the use.

10. Potential Soil Impacts Common to All Alternatives (pages 292-293) It is not entirely clear what this section is intended to accomplish, and it would be helpful if there were a brief introduction in this section to explain what it is for.

11. Cumulative Impacts to Soils that are Common to All Alternatives (pages 292-293) As with the preceding section, the purpose and direction of the cumulative impacts common to all alternatives discussion is unclear and unfocused. It does not discuss the cumulative effect of redistribution of dog use throughout the region in response to increased restrictions on dog use and changes in demographic patterns of dog ownership, which is perhaps the most important adverse cumulative effect.

As the document mentions, but fails to evaluate, impacts of dogs on soils is a function of the intensity of use. The discussion here should not ignore the concern of many readers of the Draft Plan/DEIS that a region-wide decrease in areas available for dog use accompanied by a higher demand for such areas, would concentrate dog use into increasingly smaller areas, resulting in greater intensity of use in those areas. This impact warrants discussion in the "common to all" section.

This may also be an appropriate place in the document to discuss the cumulative effects of the compliance-based management strategy, since the compliance-based management strategy is an integral part of the project alternatives. Increased restrictions and closure of areas due to noncompliance would further concentrate dog use in other areas, either within the GGNRA or outside the GGNRA. The Draft Plan/DEIS fails to address conditions that would result if, as a result of noncompliance, dog use is concentrated elsewhere.

12. Compliance-Based Management Strategy (pages 295-296)

The compliance-based management strategy discussion is part of the project description and should be fully described there. Although it is useful to reiterate the components of the strategy in the resource impacts section, the section here does not adequately focus on impacts on soils and geology. As explained in this section, the strategy would lead to increased restrictions on dog use if noncompliance exceeds threshold criteria measured by observation of noncompliance. 13. Marin County Sites ' Stinson Beach (pages 296-302) The following comments on the Impact discussion for the Stinson Beach area are generally applicable to all sites.

Alternative A: No Action (page 296).

The text states that there is low compliance with the no dog walking restriction on the beach and refers to Table 9 (page 271) as support for this assertion. The information provided in Table 9 and its accompanying text could just as easily be interpreted to support the opposite view, however, that compliance is exceptionally high given the intensity of use. It is unclear what effect on compliance the use of the adjacent beaches might have. (The text accompanying Table 9 incorrectly identifies the Marin County beach adjacent to Stinson Beach - called Upton Beach - as allowing dogs off-leash. Dogs are allowed on this beach on-leash.) According to its website, dogs are not allowed on the beach adjacent to the southeast of Stinson Beach (within Mt. Tamalpais State Park). However, this short stretch of beach is poorly accessible except from Stinson Beach or Upton Beach.

Under the compliance-based management strategy, future dog use might become more restricted if noncompliance is incorrectly or inappropriately assessed, possibly leading ultimately to imposition of restrictions like those under Alternative D. Even though, based on the impact analysis, the impacts on soils and geology would not drive decision-making at Stinson Beach; more thoughtful analysis would improve the impacts discussion, especially in relation to cumulative impacts.

Alternative A: No Action ' Cumulative Impacts and Indirect Impacts on Adjacent Parks (pages 296-298).

The cumulative impact analysis over-simplifies when concluding that because long-term and ongoing restoration and enhancement efforts, etc., would be beneficial to soils and geology, that the cumulative impacts on soils and geology would be low. Instead, the cumulative analysis should also consider the potential for concentration of effects within smaller areas, especially in the event that noncompliance monitoring leads to greater restrictions being imposed on dog use at Stinson Beach and other areas.

In the Indirect Impacts section, the text identifies 33 parks within a 10-mile radius, and 3 within a 5-mile radius, making it seem as though there are numerous alternative sites for dog users. However, this is an oversimplification of the actual situation. The only park on the coast and within the watershed is Mt. Tamalpais State Park. A summary description of the dog use areas at Mt. Tamalpais State Park, from a website called DogFriendly.com, provides the following information:

"While dogs are not allowed on most of the trails, they are allowed on the Old Stage Road. This path is about .5 to .75 miles and leads to the Marin Municipal Water District Land, which allows dogs on their trails. Dogs must be leashed on both the state park and the water district lands." While this is certainly an option for some dog owners, it does not appear to provide anything at all comparable to the capacity or experience offered at Stinson

Beach, and cannot be considered a reasonable alternative to Stinson Beach for most people with dogs. Therefore, although the cumulative impact section provides some mention of other areas, it does not provide a rigorous analysis of likely effects. Suppose, for example, that all of the people who are not able to walk their dogs on the weekend at Stinson Beach were to walk their dogs along the Old Stage Road at Mt. Tamalpais State Park. Very likely, the negligible impacts that currently apply to Stinson Beach would become significant impacts on the Old Stage Road. Furthermore, the management of these impacts would be transferred from federal to state responsibility. In this regard, the Mt. Tamalpais web site provides this warning:

ATTENTION Service Reductions in Effect 12/1/2010 - 6/30/2011:
California State Parks is facing an unprecedented budget reduction and you may experience service reductions during your visit. We hope that our loyal visitors understand and appreciate the severe budget reductions that have occurred and help us minimize the cost impacts to the system.

Because it is unlikely that Mt. Tamalpais State Park could accommodate these visitors, and also unlikely that visitors would substitute Mt. Tamalpais for Stinson Beach, the demand would be distributed somewhere else. A more realistic discussion of the role of Stinson Beach and other parks in meeting the demand for dog use opportunities is needed. Furthermore, the analysis of the indirect impacts on adjacent parks arbitrarily chooses to limit the range of other available dog use areas to parks. Instead, the discussion should include all public lands, and especially public lands within a similar area and environment, since those are the types of areas that visitors will be more likely to substitute if access is substantially reduced in given GGNRA units.

14. Marin County Sites ' Homestead Valley (pages 301-307)

Alternative A: No Action (page 301)

The Homestead Valley impact analysis is the first unit in this section that presents a discussion comparing impacts of No Action (which allows off-leash use) with the action alternatives, (none of which now allow off-leash use). The text states that "Even though this site has low visitor use and low numbers of citations and incident reports related to dog activities, soil compaction and nutrient addition and possible erosion from dogs is assumed to be currently happening along the fire road/trails and in off-trail areas throughout the site." This statement indicates that no evidence of impacts of dog use is needed in order to conclude that the No Action Alternative has adverse impacts on soils and geology.

Similar conclusions reflect a bias at many of the other sites discussed. The

discussion of the No Action Alternative is based on little or no data (as indicated by the lack of data provided in Chapter 3). The facts that are presented indicate that there is no justification for a change in management to protect soils and geology.

Alternatives B and C and E all describe compaction of soils within a strip 6 feet adjacent to the Homestead Fire Road as an impact on soils. Given the low use of the area, the low level of risk from some slight amount of compaction that may occur adjacent to a fire road, and the fact that the 6-foot strip assumes that the dogs walk directly alongside the owner, who walks at the extreme edge of the fire road, the extreme precision of this analysis is notably inconsistent with the general lack of specificity and precision presented in the discussion of the Affected Environment. Presenting the impact analysis in such precise terms gives the misleading impression that the analysis is more accurate and more certain than it is. This generally applies to fine distinctions made between the impacts of the alternatives. At the level of accuracy possible with the information available, "no impact," "negligible impact," and "minor impact" should probably all be considered synonyms with respect to soils and geology.

Appendix E

Additional Comments Related Draft Plan/DEIS Analysis of Water Quality

Chapter 3: Affected Environment

1. General ' the Draft Plan/DEIS should include a map that shows both the locations all bodies of water discussed in the water quality sections and dog areas categorized by currently allowed activities. Add a "Marin County Sites Map", "San Francisco County Sites Map", and "San Mateo County Sites Map" showing both water resources for those areas and existing dog areas categorized by currently allowed activities.
2. General ' there seems to be a lack of historical or current information connecting dog use of the parks to resulting changes to water quality. The Draft Plan/DEIS should provide site-specific information documenting this connection. For instance, the Stafford and Home report cited on page 227 attributes high bacteria and nutrient levels to five sources, in addition to dogs. At the bottom page 227, the Draft Plan/DEIS asserts that the eastern third of Crissy Airfield "receives a moderate to high level of use by off leash dogs and has substantial amounts of pet waste", but there is no reference to support this claim. There is no site-specific analysis linking the presence of waste to documented water quality issues at this site and no objective monitoring data that supports a moderate to high use of off leash dog use in this area.
3. General ' the water quality section in Chapter 4 discusses each of the 21

sites individually. The Draft Plan/DEIS should follow a similar format in Chapter 3. For example, provide a description and characterization of the water resources for each of the 21 sites.

Chapter 4: Environmental Consequences

1. General ' the Draft Plan/DEIS should be clear under all of the analyses for Alternative A that the impacts would not be new, but rather a continuation of existing/ongoing impacts due to the existing approach to implementing the current GGNRA general management plan.

2. General ' The Draft Plan/DEIS should also be clear in this and other sections that the impact analysis presented for Alternative A is different than the consequences of the No Action alternative were GGNRA to implement an education and adaptive management program under its current plan and policies, which GGNRA could choose to do. The No Action alternative for a management plan is not the same as a "do nothing" alternative. GGNRA can choose to implement its existing plan is a more effective way to meet the purpose and need for the proposal.

3. General ' when impacts are the same across various alternatives for a particular site, the Draft Plan/DEIS should be revised so that the Conclusion Tables contain identical statements.

4. General ' the Conclusion Tables should be grouped together for each site. This would make comparing the various alternatives for each site easier and make the tables more useful.

5. Page 459, last paragraph, states "Impact at the most would be negligible; therefore, impacts to seeps and springs from dogs are not discussed further." If impacts to seeps/springs are not discussed further because the impacts are negligible, then why are there so many discussions in subsequent pages about negligible impacts involving other types of water resources? The Draft Plan/DEIS should be made more consistent by not discussing any negligible impacts in subsequent pages of the water quality section.

6. Page 460, Assessment Methodology'the Draft Plan/DEIS should make an assumption under Assessment Methodology that the public would comply with park/dog regulations and requirements, then remove all of the "assuming compliance" (and similar) statements in the subsequent pages of the water quality section. Also, the Draft Plan/DEIS should provide examples of park/dog regulations and requirements, such as being on leash or properly disposing of dog waste.

7. Page 460, Assessment Methodology'the Draft Plan/DEIS should describe

how impacts are analyzed qualitatively.

8. Page 468, Paragraph 1' is it possible for the increased use at adjacent parks to be concentrated at one adjacent park? Would "impacts on water quality in adjacent lands" still not be "expected to be higher than current conditions" if increased use was concentrated in a particular adjacent park? This comment should be addressed in all instances in the water quality section where this could occur.

Other Minor Corrections

9. Page 461, last two paragraphs ' the paragraphs beginning with "Dogs were determined..." and "A sub study..." seem more like paragraphs that belong in the affected environment section.

10. Page 462, Paragraph 3 ' delete "a" from "...from a many different sources."

11. Page 462, Paragraph 6 'the Draft Plan/DEIS should provide citation(s) for information in the paragraph beginning with "Potentially adverse impacts..."

12. Page 465, Paragraph 5 'the Draft Plan/DEIS should provide citation(s) for information in paragraph beginning with "Oil spills have..." This comment applies to all instances in the water quality section where this information appears.

13. Page 468-470, preferred alternative discussion ' this discussion seems unnecessary as it just repeats previously provided information. This comment applies to all instances in this water quality section where the preferred alternative discussion just repeats previously provided information.

Appendix F

Additional Comments Related to Draft Plan/DEIS Analysis of Biological Resources

Chapter 3: Affected Environment

General:

1. As stated in Chapter 1, use of GGNRA lands by humans and dogs occurred well before the GGNRA was established in 1972. This historical activity should have been considered as part of the Affected Environment. Many sections lack a description or quantification of baseline conditions of

biological resources from long term use by people and dogs, or current impacts are assumed but no data or rationale are given (specific comments follow below). Without this baseline information, the impact conclusions in Chapter 4 and the basis for selection of the preferred alternative are not supported.

2. The affected environment section mentions California Native Plant Society (CNPS)-listed species as having the potential to occur within the GGNRA but without specific data as to where/if they are actually present, this claim is unsupported.

3. There are inconsistencies among the text and Table 8 in the special-status species affected environment, the information in Appendix H, and the impact analyses in Chapter 4. Examples include:

- o Presidio's manzanita. Table 8 states that it is documented within the GGNRA and the impact analysis states that it is found at Baker Beach, however Baker Beach is not identified in Appendix H as having potential habitat for this species.
- o San Francisco lessingia. This species is listed in Appendix H as having potential habitat within a number of San Mateo sites. Fort Funston and Baker Beach are not listed under San Francisco sites as having potential habitat; however, these two sites are the only two considered in the impact analysis of this species in Chapter 4.
- o Hickman's potentilla. There has been no documentation of this species within GGNRA. The table lists this species as having potential habitat at 5 sites within San Mateo County; however, the impact analysis in Chapter 4 is only for Mori Point and Pedro Point. What is the justification that these two were the only ones considered if habitat exists at many sites?
- o California seablite. Appendix H identifies this species as having potential habitat at Crissy Field and Land's End (which is missing from the table Key) and that this species has been documented within the GGNRA. The impact analysis in Chapter 4, only talks about Crissy Field and that reintroduction of the species has failed twice, so species is not currently present within the GGNRA.

4. Table 8, Affected Environment: GGNRA Location column contains the location for plants that do not exist there according to the text:

o Lessingia ' does not occur at Fort Funston
o California seablite ' does not occur at Crissy Field
o Hickman's potentilla ' does not occur at Mori Point or Pedro Point

Also, the GGNRA location column in Table 8 does not indicate whether the species have been documented at these sites or just that potential habitat is present.

5. For wildlife species that are assumed to be impacted by dogs, the Draft Plan/DEIS fails to establish the level of impact the species are already

experiencing, apart from other factors that may be causing disturbances or population decline (within and outside of the GGNRA). This would include issues such as loss of breeding and foraging habitat, predation, climate change, etc. The Draft Plan/DEIS does not indicate how or why a special-status species that has been sharing habitat with dogs for decades will experience a quantifiable benefit from stricter dog management, given other factors affecting the species. For this reason, there is no support for the selected alternatives in terms of actual, foreseeable benefits to wildlife populations. Without this type of information, most impact conclusions in Chapter 4 are not supported. The western snowy plover section of Chapter 3 is a good example.

a. Additional comments on western snowy plover text from Chapter 3: The Draft Plan/DEIS does not adequately describe how dogs chasing the birds can impact the survival of the species. Birds may take flight readily and expend energy, experiencing some short-term disturbance, but there is no evidence of the GGNRA western snowy plover populations being directly impacted by dog activity in the long-term. The data provided in the Draft Plan/DEIS suggests a stable plover population; therefore, the selected alternatives would not be expected to differ from the No Action Alternative (see paragraph 1, page 799).

- Monitoring surveys from 1994-2006 observed 48 off-leash dogs chasing western snowy plovers, which is a relatively low number of events over a 12-year period. As stated above, this information suggests snowy plover populations will not experience significant beneficial impacts from the preferred alternatives, and that the No Action Alternative does not significantly impair natural values.

- The numbers of snowy plovers fluctuated between 1994-2006 "based on a variety of factors", but the presence of dogs on the beach has not prevented the birds from using their preferred resting areas at Crissy Field or their off-site nesting sites; therefore, there are no documented impacts to the population from a "chasing" incident.

The above analysis is not presented to suggest that a wildlife protection area at Crissy Field would be inappropriate to protect resting habitat from people as well as dogs. It is also not presented to suggest that only areas used by endangered species are worthy of protection. It is well documented in public material that Crissy Field Dog Group, Eco-Dog, and other groups have been and are active in educational efforts with the public, conservation organizations and GGNRA to respect snowy plover protected areas. For example, in 2006, the Crissy Field Dog Group participated in the Western Plover Community Outreach Program with the GGNRA and the Golden Gate Audubon Society in developing a brochure and other educational materials to make the public aware and protect the plovers' habitat at Crissy

Field and Ocean Beach. To this day, the Crissy Field Dog Group continues to inform their members and the public about protecting the snowy plover.

The comment is directed toward an example of scientifically unsupported assertions that the Draft Plan/DEIS as a justification for management actions. These become particularly critical when they are used as the basis for large closures of beaches and other areas where access has been allowed for the past 20-40 years without documented impairment of species.

Correspondence: Frank Dean General Superintendent, GGNRA Building 201, Fort Mason San Francisco, CA 94123-0022 RE: Dog Management Plan/Draft Environmental Impact Statement

Dear Superintendent Dean:

I like dogs, though mine has died and not been replaced. I live near and enjoy the GGNRA.

I strongly encourage you to improve the plan by implementing the following steps:

1. All "Regulated Off-leash Areas" should be fenced, at least in areas where fences do not pose risks to wildlife and habitats. Fences provide more security for all park users and create clearer boundaries so that dog owners are aware of how to comply with park rules.
2. At least some trails in San Francisco should be closed to dogs. Some trails need to be available for people who fear or are allergic to dogs.
3. For millennia dogs have coexisted with mankind and other species. However wild species require more protection than in the past) So balance must be sought to be safe for all while guarding natural and cultural resources for future enjoyment.

I wish you wisdom as you strive to adopt the best measures to protect the National Parks.

Correspondence ID: 4634 **Project:** 11759 **Document:** 38106
Received: May,27,2011 00:00:00
Correspondence Type: Letter
Correspondence: Dear Superintendent Dean:

For over twenty years, I have lived in San Francisco, and for the last nine of them I have shared my home, and my city, with my Bernese Mountain Dog. Crissy Field in particular has been a spot where my dog and I visit many times each week, generally in the early morning hours, to enjoy walks, both on and off leash. I am a retired senior citizen and member of the gay community. Like many residents of San Francisco, I live in a condominium with no yard available for exercising my dog. Therefore, these outings to Crissy Field provide an important recreational opportunity for both me and my dog. In particular, it is one of the few areas where off leash walks and play with other dogs is possible to supplement our daily neighborhood on leash walks.

For the reasons set forth in the balance of this letter, I am opposed to the Preferred Alternative proposed by the GGNRA for management of dogs in the GGNRA. Furthermore, I believe that the Draft Environmental Impact Statement is fatally flawed and therefore cannot be used to support the Preferred Alternative or, indeed, any of the changes proposed by the GGNRA.

Specific Problems With DEIS

1. The DEIS throughout shows a preference for treating the GGNRA like a wilderness national park that should be subject to regulations as close as possible to those used in such parks, i.e., no dogs allowed at all, or only dogs on leash in very limited areas. For example, it states that "a dog management policy inconsistent with NPS regulations and increased use of the park for dog recreation have resulted in controversy, litigation, and compromised visitor and employee safety, affecting visitor experience and resulting in resource degradation." This broad statement is unsupported by any evidence. As reported in the DEIS, problems with dogs represent a tiny fraction of the total incidents and citations issued by the GGNRA over the past decade. Of those, the majority were for so-called leash law violations or for being in a closed area, and did not reflect any safety issues between dogs and other park visitors. Over one third of the incidents were based on reports from the public, not on incidents actually observed by park service personnel, making their reliability questionable.

2. The DEIS is full of impacts on wildlife and other park visitors that "could" occur, but there is little evidence that these impacts actually do occur. If such impacts were occurring, then the past decade of scrutiny of dog related activities in the GGNRA should have produced evidence of them. The lack of evidence indicates that such impacts do not occur, and there is no reason to believe that they will occur in the future. In any event, a management policy that so dramatically changes current uses should not be

based on possibilities and suppositions.

3. The DEIS fails to consider less restrictive alternatives that would take into account actual usage patterns of various GGNRA venues. For example, it would prohibit offleash dogs at all times from the East Beach of Crissy Field. Perhaps this is because this area, closest to the parking lot, is most accessible for those who wish to sit on the beach, picnic, play with their children, and so forth. Fine. But I frequently visit Crissy Field between 6:30 and 8:30 a.m. year round. At this time of day, there are some joggers on the pathways, but virtually no one on the beach itself, other than other dog walkers. Why should a restriction that, for the sake of argument, might make sense during afternoon hours during San Francisco's warm weather periods be imposed 24 hours a day, 365 days a year? Such a policy is inconsistent with the GGNRA's mandate which calls for the "maintenance of needed recreational open space." Off-leash dog walking was one of the traditional recreational uses taking place in the GGNRA when it was created, and the DEIS should take into account alternatives that maximize the opportunity to preserve such traditional uses.

4. The claim that "environmental justice" requires severe restrictions on offleash dogs is not supported by the studies cited in the DEIS. A DEIS cited 2007 San Francisco State study claims that all Latinos and Asians surveyed said that dogs were a problem. However, the study was not about the "ethnic minority visitor use experience at the GGNRA" as claimed in the DEIS, but was actually intended to address ways to improve connecting people to the parks. In any event, the SF State study involved only 100 people who were largely unfamiliar with the GGNRA. My own observation is that people of all ethnic and national origin backgrounds and their dogs enjoy offleash experiences at Crissy Field which the proposed changes will deny to them.

5. The DEIS fails to take into account the impact the Preferred Alternative would have on surrounding areas. As a dog owner, I know that there are few opportunities for off leash recreation in San Francisco parks. The extreme reduction in off leash space in the GGNRA will force dog owners to crowd into existing city park space which is already in short supply. The DEIS omits any serious consideration of this impact.

6. In assessing dog impacts on natural resources, the DEIS refers to studies that note general tendencies of dogs to create adverse impacts, but there is scant site specific evidence. There is also inadequate documentation of other sources of adverse impacts on natural resources, such as other park visitors, wildlife, storms, bicyclists, etc. The assumption appears to be that any negative impacts should be attributed to dogs and not to other factors. 7. The DEIS includes a "compliance based management strategy." Under this scheme, compliance with the Preferred Alternative restrictions will be

monitored. If the GGNRA determines that there is an insufficient level of compliance, then it may unilaterally impose the next most restrictive level of usage. This procedure is grossly unfair in a number of ways. First, it is one sided in that it allows a revision of policy to a more restrictive level for non-compliance, but not to a less restrictive level if compliance is good and impacts are less than anticipated. Second, rather than focus on compliance through education, clear signage, and so forth, it uses only an enforcement and punishment strategy. Third, it punishes the many for the transgressions of a few. Finally, it places enormous power in the hands of the GGNRA by permitting it to make such changes without any opportunity for public input or review. At the very least, it creates a path by which the GGNRA can move toward its preferred solutions on its own without the public process that it has been required by the courts to pursue thus far.

8. ' Perhaps most troubling is the fact that at no point in the DEIS is the No Action alternative seriously considered. The current usage of the GGNRA has been in effect since 1979. It seems inconceivable to me that there is no place within this vast area where dogs and their people could continue to enjoy this urban treasure just as they have up until now. The failure of the DEIS to explore such possibilities is further evidence that it is fatally flawed. Thank you for your consideration of these comments.

Very truly yours, Howard P. James

Correspondence: b. Additional comments on mission blue butterfly text from Chapter 3: the text is not consistent with Table 8 'text states that the species is found in Alta Trail and Tennessee Valley, but these are not listed in the table.

- There is no clear nexus between dogs and the mission blue butterfly habitat and host plant, and there is no evidence given of damage to the host plant from dogs. Because the area is fenced "but does not physically exclude dogs", the current and historic use of the area by does not appear to be detrimental to the mission blue butterfly or its habitat/host plant, therefore selection of the No Action Alternative is supported.

- Mission blue butterfly habitat is "very near" closed social trails that are still used by visitors and dogs; however, there are no data to suggest alteration of the habitat. Because these trails are closed and their use by dogs is not quantified, the species' habitat does not appear to be impacted by dog use, and the No Action Alternative does not significantly impair natural values.

c. Additional comments on tidewater goby, Coho salmon, steelhead trout, California red-legged frog from Chapter 3: For each species it is indicated that the habitat areas are essentially closed to dogs, but that "these closures are not always followed". Presumably the use of these areas is rare. Because dog use of the habitat areas is not quantified, there does not appear to be a nexus between dog use and these wildlife habitat areas, therefore the No Action Alternative does not significantly impair natural values.

d. Additional comments on bank swallow from Chapter 3: The nesting colony is well monitored and closed to visitor access, and the nature of reported disturbances is unclear ("Fort Funston has moderate to high visitor use, and in 2007-2008 there were two pet citations, warnings, and reports taken related to wildlife disturbance at the site."). This small number of incidents over a two-year period does not appear to have affected bank swallow populations; therefore, the No Action Alternative does not significantly impair natural values, and no benefits from the draft preferred alternative are anticipated.

Vegetation and Wildlife, pages 228-244:

1. Pages 229-230, Paragraphs 4/5 and Table 6. The number of warnings/citations/reports does not mean there on any potential impacts to wildlife. The raw data provided in the table raise many questions: What type of interaction between a dog and wildlife constitutes "disturbing wildlife"? How do incidents reported in closed areas necessarily "affect" vegetation and wildlife? Is the nature of the disturbance reflected in the difference between a warning, citation, and report filing? For example, 3 citations and 6 reports of dog disturbance in a park do not suggest any major adverse

effect on wildlife populations, habitats, or individuals.

Considering the raw data here and in Appendix G, there appear to be very few incidents of dogs disturbing wildlife over a two-year period, even assuming not all incidents are reported. Furthermore, the Draft Plan/DEIS suggests that a lack of law enforcement contributes to the number of incidents of dogs disturbing wildlife (and therefore has impacts to wildlife). A wildlife disturbance incident is not "high quality information" (as required by NEPA) and cannot be assumed to impair natural values when the actual effects of the disturbance are unknown. It is not likely the species experienced any long-term impacts from these few incidents over a two-year period, nor is there any specific evidence to suggest even short-term impacts. There is also no evidence that the absence of law enforcement increases the likelihood of wildlife disturbance or harm.

The presence of humans and predators also typically "disturb" wildlife, as this term is used in the Draft Plan/DEIS. For example, shorebirds typically take flight when a human or a hawk or eagle is in their vicinity. This section of the Draft Plan/DEIS does not distinguish or evaluate relevant factors and impacts, but simply asserts that disturbance by dogs is causing unacceptable impairment of GGNRA's natural values. This assertion is then used as a basis for closing areas to access by dogs, which, given the lack of a thorough impact analysis, might or might not be an appropriate management measure. If people are disturbing the species, and this disturbance is resulting in an unacceptable impact that is impairing natural values, these impacts need to be fully disclosed to understand the consequences of the alternatives.

2. Pages 233-234. Part of the rationale for prohibiting dogs from beach areas under Alternative D is to "protect shorebirds and stranded marine mammals", but there is no information given here to support that dogs are currently impacting shorebirds and marine mammals; therefore, the No Action Alternative does not significantly impair natural values. Chapter 1 "Dogs and Wildlife" does not report any interactions between marine mammals and dogs.

Special-Status Species, pages 244-256: 1. General. Descriptions of critical habitat are missing for some special-status species that have critical habitat in the GGNRA and inconsistent in the level of detail provided regarding critical habitat among all species descriptions. For this reason, there is no clear nexus between dogs and critical habitat, and the preferred alternatives are not supported.

2. General. Some species descriptions suggest a nexus between dog activity and the species and/or their habitat (tidewater goby, California red-legged frog), but other species descriptions do not (San Francisco garter snake,

Coho salmon). Where there is likely to be none, it is not stated. Where there is no nexus, the draft preferred alternative is not supported in terms of direct benefits to these species. Even where a nexus is suggested, there is no evidence of impact to these populations; therefore, the draft preferred alternative does not appear to provide a quantifiable benefit to the species and the No Action Alternative does not significantly impair natural values.

3. Page 245, Paragraph 3. States that "marine mammals are not expected to be affected by dogs", but that stranded marine mammals "may provide an opportunity for contact" with dogs. Given the relatively low number of marine mammal strandings within GGNRA over nine years (as shown in Table 7), it is not rational to assume a nexus between stranded marine mammals and dogs. There is no evidence of a harmful interaction between a stranded marine mammal and a dog. In fact, dog owners are often the first to notify authorities when marine mammals become stranded.

Chapter 4 ' Environmental Consequences

General:

1. On page 30, in Chapter 1, under "Safety of Off-Leash Dogs", studies are cited where data indicated off-leash dogs do not travel far from their owners or trail, and if they did it was a short time and the dogs were rarely seen chasing other dogs, disturbing wildlife and vegetation, or entering bodies of water. In addition, a survey was cited where both dog owners and non-dog owners believed that humans are more disruptive than dogs. This contradicts many of the impact conclusions made for vegetation, wildlife, and special-status species. The conclusions drawn in the impact analysis are not adequately supported by documented evidence of damage to resources (that can be attributed to dogs) in the GGNRA.

2. General habitat types and which sites they occur in are described in the affected environment section; however, the document lacks a map of the specific location of each habitat types within each site relative to existing and proposed dog use areas and trails. The impact assessments in Chapter 4 are divided up by habitat type, yet all of the actual impact assessments identify impacts on "vegetation" with no indication of whether or not a particular habitat type occurs within the area of discussion (LODs and ROLAs). Without documentation of the specific location of vegetation types relative to dog use areas, conclusions of impacts on these resources are not adequately supported. For example in the wetlands section the Draft Plan/DEIS describes impacts to vegetation along trails within six feet on either side; however, there is no evidence to support the claim that wetlands actually exist adjacent to the trails. In those instances, the wetlands impact analysis is inaccurate.

3. The analysis of the impacts to vegetation lacks empirical evidence of the current impacts caused by dogs. Information is given as to usage and the number of violations but does not site specifics about damage caused by dogs as a result of these violations. Without evidence of the occurrence of impacts caused dogs, impact conclusions made are not adequately supported.

4. For a number of the analyses of Alternatives B-E, the Draft Plan/DEIS states that the area of impact is previously undisturbed. These claims are false as dogs are currently allowed in those areas and dog use would continue under Alternative A, the No Action Alternative.

5. The impacts addressed in Alternatives B-E are assessed based on the assumption of compliance. Alternative A is not assessed this way. For example, if dogs are required to be on leash under Alternative A, the impacts are assessed based on impacts caused by dogs which are off-leash and noncompliant. Alternatives B-E then assesses impacts based on the assumption of compliance and therefore the impacts are reduced even though the leash-law regulation is the same under all alternatives. Assessing impacts based on identical regulations with different assumptions is inaccurate. There is no information given as to why compliance under Alternatives B-E cannot be done under Alternative A. The current GGNRA management plan identifies public education of GGNRA resources as important and could be accomplished under Alternative A.

Introduction (pages 289-290):

1. The compliance-based management strategy assumes that noncompliance is causing negative impacts on GGNRA resources. As commented in Chapter 3, this assumption is not supported by adequate data from GGNRA sites. This strategy (page 290, paragraph 2) "is designed to return impacts to a level that assumes compliance" and "provide beneficial impacts where dog walking is reduced or eliminated". There has been no baseline given to quantify a "level that assumes compliance"; therefore, any potential impacts from dogs cannot be measured or used as a basis for selecting alternatives.

2. The Draft Plan/DEIS states that dogs and humans have been active in these lands for at least the past 40 years (pre-1970s), and that visitation has been consistent over the past 20 years, and will likely remain consistent in the next 20 years. Page 290, paragraph 5, also notes that visitation is not expected to increase over the next 20 years, and that this is "similar how it has been operating over the previous 20 years. Therefore increased visitation should not result in cumulative impacts to GGNRA resources." The basis for assuming that resources have been negatively impacted over the past 20 years and will therefore benefit over the next 20 years with substantially less

access for people with dogs has not been established.

Vegetation:

1. Page 545, Paragraph 2 'the EIS includes no discussion of what "additional actions" would potentially have adverse impacts on vegetation and what types of impacts. Text also states that "mitigation for these projects would reduce the potential for impacts." However, there is no discussion as to what kind of mitigation would occur and how it would reduce impacts. Therefore, no measure of a quantifiable reduction of impacts can be determined by mitigation efforts. For projects outside of GGNRA, it is assumed that mitigation would be applied. There is no evidence to support this assumption. More specific information is needed to adequately assess and comment on impacts. This comment applies to this same text where it is repeated in the cumulative impact analysis throughout the section and the wildlife and special-status species sections.

2. Page 546, Alternatives B & C ' dog walking restrictions are the same as in Alternative A. There are no data that supports a change in the level of impact as a result of these alternatives.

3. Page 584, Alternative B ' states that the rocky intertidal plant communities have not been previously disturbed. This is inconsistent with Alternative, A which states that dogs could access the rocky intertidal areas. The inconsistency of the baseline level of disturbance prevents an accurate conclusion as to the potential for impacts caused by dogs.

4. Page 597, Cumulative Impacts, paragraph 3 this paragraph does not make sense, The text states that adverse impacts from dogs combined with beneficial actions balance out resulting in negligible impacts. Cumulative impacts should be revised to indicate they would not be long term, major and adverse.

5. Page 605, Alternative A, paragraph 1, states that dogs can affect the rocky intertidal vegetation. No evidence has been provided to support that dogs are presently having adverse impacts on this vegetation.

6. Pages 607-08 and 666-667, Alternatives B & C 'these alternatives mention the Polywog Path and ponds. There is no discussion of the significance of this path or the ponds or the potential impacts of these areas under Alternative A so the impact conclusions relative to the baseline are not clearly presented.

7. Page 619, Alternative A, states that physical damage and nutrient addition from dogs is assumed to be currently happening; however, there are no data presented that supports this claim. Other impacts described seem overstated

considering low visitor use. Because current conditions have not been adequately established, there are no quantifiable changes expected from the Preferred Alternative over the No Action Alternative.

8. Page 632, Paragraph 2, states that dogs would impact coastal scrub, chaparral and grassland vegetation. There is no evidence provided to support the occurrence of this under existing conditions and therefore, no quantifiable benefit expected from the preferred alternative over the No Action Alternative.

9. Page 634, Alternative C, paragraph 1 ' There is no evidence that dogs confined to a ROLA increase impacts to adjacent habitat. Without establishing the current level of impacts from dogs in ROLAs, no quantifiable change can be expected from the preferred alternative over the No Action Alternative.

10. Page 645, Alternative A, paragraph 1' "...viable plant communities exist." Data are lacking as to the type of plant communities that exist in the areas adjacent to the trails and fire roads in order to clearly describe suggested impacts. 11. Page 658, Alternative A, paragraph 1, states that several threatened and endangered plants grow in serpentine soils. There are no data to support the presence of these species at this site. This information is needed to clearly describe suggested impacts.

12. Page 698, Wetlands and Aquatic Habitats, General Comment ' many of the impacts to wetlands are based on six-foot corridors adjacent to trails. There is no mention of where exactly wetlands are located within each site and whether or not they occur within six feet of the trails. Each impact just says "vegetation adjacent to trails" which is not specific to wetlands or aquatic communities in which this section is solely addressing. Without evidence of the exact locations of wetlands and aquatic habitats within each site, no assessments can be made as to the level of impacts of the preferred alternative over the No Action Alternative.

13. Page 740, Native Hardwood Forests, General Comment ' impacts to this habitat by dogs would vary by maturity of the trees. All impacts seem to just state "vegetation" which does not clearly describe suggested impacts.

14. Page 740, Alternative A ' Data are needed as to the maturity of the trees in order to assess the level of impacts caused by dogs under all alternatives. Dogs would not be able to trample mature trees.

15. Pages 769-774, Alternatives B-E, states that riparian vegetation along trails would be impacted. There is no evidence to indicate that riparian vegetation occurs along trails and therefore, no quantifiable changes in impacts can be expected from the preferred alternative over the No Action

Alternative.

Wildlife (pages 791-1108):

1. General. It is assumed throughout the analysis that marine mammals and shorebirds would suffer negative impacts from off-leash dogs and that birds would suffer negative impacts from on-leash dogs. There is no evidence to support this assumption. As noted in comments above, a disturbance is not the same as an impact. NEPA defines "effect" or "impact" as requiring a likely causal consequence (40 CFR '1508.8). Under NPS and GGNRA policy, as explained in the Draft Plan/DEIS (page 35), the impact would likely need to impair the natural values afforded protection under applicable plans or policies. Under NEPA, the significance of that impact needs to take into account context and intensity (50 CFR '1508.27). Because current conditions have not been adequately established, there are no quantifiable changes expected from the preferred alternative over the No Action Alternative.

2. General. For preferred alternatives in coastal areas that allow dogs on leashes, it is stated that on-leash dogs could still disturb shorebirds by barking or presence; however, the impacts are determined to be negligible. In other sections, it is suggested that barking and presence of off-leash dogs would result in minor to adverse moderate impacts. Again, because the potential level of disturbance has not been clearly established, there is no basis for assuming the presence of dogs will have significant adverse consequences relative to other factors (such as people or predators) or to quantify changes expected from the preferred alternative over the No Action Alternative.

3. General. In some areas, the difference between the No Action Alternative and preferred alternative is off-leash and on-leash use. Long-term minor to moderate impacts are expected for off-leash dogs, and long-term minor impacts are expected from on-leash dogs, although the difference in disturbance to wildlife between on- and off-leash dogs under voice control has not been established. Physical damage to nests and habitat and wildlife chasing is cited as a moderate adverse impact; however, the level of current damage is not known. The data presented in Appendix G further indicate limited interactions over time. This is noted for: o Homestead Valley, Alta Trail, Oakwood Valley, Marin Headlands, Fort Baker, Baker Beach and Bluffs, Lands End, Mori Point, Milagra Ridge, Pedro Point coastal scrub, chaparral, and grassland habitats. o Fort Baker forest habitat o Marin Headlands outside of LOD area, riparian habitat o Fort Miley, other coniferous community

4. Throughout the analysis, Alternative A (No Action) assumes noncompliance, while the other alternatives assume full compliance with

dog restrictions (which leads to a "long-term minor adverse impacts" conclusion for Alternative A and a "negligible" conclusion for the preferred alternative). In some cases, the only difference between Alternative A and the preferred alternative is the assumption of compliance. When proposed dog management is the same for a given area under two or more alternatives, the impacts should also be the same. Many of the differences in impacts are based on assumed compliance under the action alternatives; however, as noted above, an unbiased comparison would assume compliance for all alternatives. This is noted for: o Stinson Beach (coastal) o Crissy Field (outside of ROLA - coastal and wetland) o Baker Beach and Bluffs (outside of ROLA - coastal) o Mori Point (coastal and wetland) o Oakwood Valley (outside of ROLA - forest) o Muir Beach (riparian)

5. Page 794, Duration of Impact (same comment for page 1112 of Special-Status Species) "The assumption that "all natural resources" will experience short-term impacts during the education and enforcement period, regardless of the alternative chosen, is not supported. It may be accurate to state that the existing conditions will continue during the education and enforcement period of an adaptive management plan. The section goes on to note it is "expected that compliance...and associated adverse impacts would improve gradually and impacts on wildlife would then become long-term." This expectation is not supported by the information provided in Chapter 3. There are little data or descriptions of current adverse impacts; therefore, there is no baseline provided that would indicate improvement under the preferred alternative. The assumption that impacts will become long-term (described as persisting for the next 20 years) is also not supported, given the lack of adequate, quantifiable baseline conditions.

6. Pages 796-797, Impacts Common to All Alternatives ' prey species are adapted to fleeing from predators, whether dogs or any other. Although the Draft Plan/DEIS labels this as harassment (based on a definition in the Endangered Species Act, which does not appear to be the appropriate standard), it would nevertheless not be expected to impact the species. Even if a species avoids near-trail areas because it has adapted to the presence of dogs (a potential predator), it does not mean that species is experiencing an adverse impact. The Draft Plan/DEIS states that "actual direct injury or mortality to wildlife by dogs (on or off leash) is rare," so any potential long-term, adverse impact from this "harassment" is not expected. The studies currently cited are not supportive of the preferred alternative ' it is not unusual for a rodent (marmot) or bird to react to a predator.

7. Page 797, Paragraph 3 ' a study is cited concluding that "off-leash dogs have no impact on the diversity or abundance of birds and small mammals because these species are fairly tolerant of...human activity," which indicates the No Action Alternative would not significantly impair natural values. o The results of the study by Shulzitski and Russell (2004), is cited

in support of dog restrictions; however, this study appears to be biased. The restricted area was restored with native vegetation, while the unrestricted area was not restored. Wildlife was more abundant in the restored area, but this may have been due to the re-planted native vegetation there is no evidence to suggest that restricting dogs caused an increase in abundance. The observation of a dog barking at a fox (whose behavior remained unchanged) at Fort Funston supports the argument that wildlife in GGNRA are acclimated to dog presence and that the No Action Alternative would not significantly impair natural values.

8. Page 800, Paragraph 2 ' "When compliance is assumed, management alternatives that would prohibit dogs from accessing wildlife habitats would eliminate disturbance to wildlife from dogs..." The Draft Plan/DEIS states that GGNRA visitors sometimes access restricted areas, but these occasions are not quantified, nor is the baseline conditions in these areas provided. There is no evidence to suggest wildlife would experience benefits from prohibition associated with the selected alternative. Although compliance should be assumed for all alternatives, there will likely be some non-compliance by a various visitors, with or without dogs. Because perfect compliance cannot be assumed, and because the current conditions are not known, it cannot be concluded that the alternatives would provide a benefit to wildlife over the No Action Alternative.

o "Prohibiting dogs from areas also prevents habitat degradation and loss of species that are sensitive to the presence of dogs" ' this has not been supported in the text. Loss of species from dogs in the GGNRA has not been presented. While the Draft Plan/DEIS presents a few studies that suggest certain species are "sensitive" to dog presence, it presents other studies that found little or no sensitivity to dog presence; therefore, the preferred alternative is not supported.

9. Page 802, Compliance-Based Management Strategy o Because some noncompliance is already occurring, it is unclear why supposed impacts would increase and potentially become "major adverse" if noncompliance continues, especially given the relatively stable visitor level in recent and projected years. Again, the baseline conditions, including 40 years of use by people with their dogs, have not been established and any impacts stemming from noncompliance have not been outlined; therefore, there is not adequate support to conclude major adverse impacts. o There is no description of how or if newly restricted areas would be monitored for a change in natural resources. Because the baseline conditions have not been established, changes in management based on noncompliance should be approached with care.

10. Page 809, Alternative A ' it is unclear how shorebirds, gulls, terns, and marine mammals would experience moderate adverse impacts from dogs, or

how "occasional to frequent disturbances would occur", given the documented low shorebird abundance, and no historic incidence of dogs affecting marine mammals at Muir Beach. See prior comment on marine mammals (page 245).

11. Page 812, Alternative D ' it is unclear how species will benefit from total exclusion, because it hasn't been established that species are currently being negatively impacted on Muir Beach. There would likely be "no change".

12. Pages 825-826, Alternative A ' the rationale for the "long-term minor adverse impacts" conclusion does not mention mission blue butterfly habitat; however, for the preferred alternative, beneficial impacts are assumed because dogs would no longer be allowed on Battery Yates Trail (near mission blue butterfly habitat).

13. Pages 856-857, Alternative A ' the snowy plover resting areas have been monitored since 1996 with no evidence to suggest that preferred habitat use has changed (the snowy plover section of Chapter 3 states that birds continue to use the same two resting areas), or that roosting and foraging behavior is being adversely affected by dogs, yet this is given as rationale for long-term moderate to major adverse impacts.

14. Page 971, Alternative A, states that on-leash dog walking is currently allowed at Sweeney Ridge. There is no baseline condition given to quantify any supposed impacts currently occurring at Sweeney Ridge that would lead to a "no impact, beneficial change" under the preferred alternative (prohibiting dogs from Sweeney Ridge).

15. Pages 995-1001, Muir Beach Lagoon ' this analysis seems to apply only to the lagoon area for Alternative A, which is already restricted. Noncompliance is assumed and minor to moderate adverse impacts are cited for Alternative A. The preferred alternative (deemed negligible impact) prohibits dogs "from the Muir Beach site"(is this also referring to the lagoon area only?) and the only difference between these two alternatives is the assumption of compliance. See first bullet under Comment 11 regarding noncompliance; the preferred alternative is not supported simply by assuming compliance.

Special-Status Species (pages 1109-1291):

1. General. Suitable habitat for the plant species discussed in this section occurs at other sites which were not analyzed in this section. The Draft Plan/DEIS lacks a discussion as to specifically why certain sites were chosen over others for analysis.

2. General. The microhabitats of the special-status plant species are very

specific. The Draft Plan/DEIS lacks information delineating the location of the potential habitat within each site. This is necessary to establish a baseline for the current level of impacts by dogs in these areas and accurately assess the potential impacts based on the alternatives. This information is essential and capable of being obtained.

3. Page 1112, Assessment Methodology ' analysis of vegetation changes does not account for aquatic critical habitat loss. Was loss of critical habitat for aquatic species measured?

4. Pages 1117-1123, San Bruno elfin butterfly ' here, Alternative A and the preferred alternative do not differ (on-leash, negligible impact). The impact of Alternative A appears to assume compliance with leash law, and it is stated that "historical use of this area shows no indication that the host plant or butterfly is being affected by dogs;" therefore, the No Action Alternative would not significantly impair natural values.

5. Page 1124, paragraph 2, mission blue butterfly, cites localized, perceptible damage to habitat on trail beds, roads, and adjacent areas "as a result of damage to the vegetation from dogs", but there is no description of how this was assessed. These areas are used by hikers, runners, naturalists, bikers ' how is damage from dogs isolated from these other potential sources? The preferred alternative expects negligible/beneficial impacts by eliminating use of social trails by dogs, but it does not appear that continued human use was considered in this conclusion (same comment applies to conclusions for other analyzed mission blue butterfly areas: Oakwood Valley, Marin Headlands). As stated previously, baseline conditions on these trails have not been adequately established; therefore the negligible/beneficial impacts cited under the preferred alternative are not supported.

6. Pages 1147-1158, mission blue butterfly, Fort Baker and Milagra Ridge ' as with many examples in the Wildlife section, here Alternative A assumes noncompliance with leash laws (minor, adverse impacts) and the preferred alternative assumes compliance (negligible to minor, adverse impacts, with habitat restoration programs). This section should be revised to assume the same level of compliance. See previous comments regarding noncompliance.

7. Pages 1165-1172, tidewater goby ' Alternative A states that Rodeo Lake is currently closed to dogs, and the lagoon is closed to dogs and humans. The proposed fence "will deter but not physically exclude dogs". It is explained that dogs in voice-controlled areas are not very well controlled and have been observed in the lagoon. Impacts range from negligible to long-term, moderate adverse. Under the preferred alternative, Rodeo Lagoon would remain closed and dogs are still able to access the area; compliance

with leash restrictions and ROLAs is assumed. The impacts under the preferred alternative are expected to be negligible ' again, this conclusion seems merely based on an assumption of compliance, when the level of use and potential for noncompliance is the same as under the No Action Alternative. This section should be revised to assume the same level of compliance. See previous comments regarding noncompliance.

8. Pages 1172-1191, Coho salmon and steelhead trout ' as with many examples in the Wildlife section, here Alternative A assumes noncompliance with leash laws (minor, adverse impacts) while the preferred alternative assumes compliance (negligible impacts). This section should be revised to assume the same level of compliance. See previous comments regarding noncompliance.

9. Pages 1191-1219, California red-legged frog, Muir Beach, Marin Headlands, Mori Point, Cattle Hill, Pedro Point ' as with many examples in the Wildlife section, here Alternative A assumes noncompliance with leash laws (minor, adverse impacts) while the preferred alternative assumes compliance (negligible). This section should be revised to assume the same level of compliance. See previous comments regarding noncompliance.

10. Pages 1219-1240, San Francisco garter snake, Mori Point, Milagra Ridge, Cattle Hill, Pedro Point'as with many examples in the Wildlife section, here Alternative A assumes noncompliance with leash laws (minor, adverse impacts) while the preferred alternative assumes compliance (negligible). The text states (page 1230) that there is no documentation that the current level of compliance with on- leash laws (No Action Alternative) is impacting this species. This section should be revised to assume the same level of compliance. See previous comments regarding noncompliance.

11. Page 1240, western snowy plover ' states that walkers who traverse the beach area currently impact plovers. As described in Comment 6, it is difficult to distinguish between dog and human activity. The basis of the impacts conclusion is based on the assumption that dogs currently impact snowy plovers at Crissy Field, but there is no evidence to support that removing dogs from the area will result in a change in the plover population. The preferred alternative assumes compliance and negligible impacts by closing the site to dogs. This section should be revised to assume the same level of compliance. See previous comments regarding noncompliance. There are data provided of observations of dogs chasing birds, but no correlation between these events and impacts to the species (see prior comments on Chapter 3). These observations have been made since 1996, but the plovers' use of preferred habitat does not appear to be limited. There is no obvious nexus between dog chasing and loss of species or habitat, therefore the "moderate adverse impacts" under the No Action Alternative

are not substantiated.

12. Page 1264, bank swallow ' as with the Western snowy plover, current impacts are considered minor to moderate based on occasional to frequent perceptible disturbances to the species from dogs; however, the description of Alternative A mentions only that dogs have been seen in the bluff area. There is no apparent nexus between dog activity and actual short-term or long-term impact to bank swallows.

13. Page 1277 ' This is contradictory ' there is no evidence that the spotted owl exists at the site; however, impacts are deemed adverse under the No Action Alternative. If it is because potential habitat exists, then it seems (page 1282) that no change would occur under the preferred alternative, in which dogs remain leashed. This section should be revised to assume the same level of compliance. See previous comments regarding noncompliance.

14. Page 1291 ' according to the table in Appendix H, suitable habitat for the listed plant species exists at many sites. There is no discussion of what rationale was used to determine which sites were considered in this analysis.

15. Page 1292, 2nd paragraph ' there is no evidence of dogs currently accessing the dune scrub vegetation presented to support the impact conclusion. Without adequately establishing a baseline for current impacts, no quantifiable changes in impacts can be expected from the preferred alternative over the No Action Alternative.

16. Page 1296, Alternative D, states that impacts to lessingia adjacent to the trails in the LOD area would occur in areas that "have not been previously disturbed." However these areas are currently open to dogs, therefore any impacts from dog use would already be occurring. Therefore, the level of impact is misrepresented. Similar statements occur throughout this section including pages 1305, 1316, and 1323.

17. Page 1306, Alternative C, conclusion table, states "if potential San Francisco lessingia habitat is located in the LOD area." Locations of the potential habitat should already be known, and impacts should be based on whether or not potential habitat is actually present. Without data supporting the location of lessingia habitat, no conclusions can be made regarding the potential impacts.

18. Page 1311, Paragraph 1, states that the greatest benefit to the species would occur if the Daly City genotype is reintroduced at Fort Funston. There is no evidence given that the implementation of this is expected. This would be relevant to the proposed management of the area and concern for

potential impacts.

19. Page 1312, Alternative A, states that the widening of the Coastal Trail would increase impacts to Presidio manzanita. This is inconsistent with the cumulative impacts on page 1313, which states that the trail realignment would avoid the manzanita and provide long-term protection.

20. Page 1325, Paragraphs 1 and 2 these two paragraphs are inconsistent with each other. Paragraph 1 state impacts to Marin dwarf-flax adjacent to the trails would be long term, minor and adverse. In paragraph 2, it states that the plant exists in soil outcrops that are inaccessible and that physically restraining dogs would protect the habitat and restored population.

21. Page 1329-1332, Alternatives B-E ' dogs are prohibited from Crissy Marsh under the No Action Alternative as well. dogs are prohibited from the marsh under all alternatives, impacts should be the same. This section should be revised to assume the same level of compliance. See previous comments regarding noncompliance.

22. Page 1333, Hickman's Pontentilla ' No justification is given as to why only Mori Point and Pedro Point were the only two sites analyzed if no mapped occurrences have been recorded there and potential habitat exists at other sites as well (per the affected environment and Appendix H).

23. Page 1336-37, Alternative C, conclusion table 'the rationale for impacts in the LOD area should be the same as the other Alternative B impacts, based on the text discussion.

24. Page 1342, Alternative C, conclusion table the rationale for impacts in the LOD area should be the same as the other Alternative B impacts, based on the text discussion.

Correspondence Type: Letter

Correspondence: Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead it relies on speculations, exaggerations and misleading statements. It reaches conclusions that are not supported by either science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not pristine wilderness areas like

Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded. Much of the land in the GGNRA has been donated, do you think that these gifts were only to people without dogs.

This plan disregards the health and well-being of people, dogs and the community. It arbitrarily excludes the tens of thousands of Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others. I have lived in Pacifica for 45 years and have walked my dogs at Ft. Funston, all the beaches in Pacifica, as well as Sweeney Ridge, Mori's Point and Montara Mt., to have these places taken away is simply too awful to accept. Dog walking is mine and many of my senior friends' primary sources of exercise.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of health dog recreation. The Park Service should revise the dog management plan to:

? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation, especially in areas that have been used by dog walkers for decades. We are taxpaying citizens and we should certainly have rights and privileges along with the non-dog owners.

? Provide for off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. Petition the State and Counties to allot a portion of their park land to dogs and their owners. I have hiked in the state and San Mateo County parks for more than a year, and logging more than 400 miles in areas that were virtually deserted of all people. There is plenty of space that could be shared with the dogs and their owners, if not in the parks on the fire roads. Thus, if there were more space allotted to dogs and their owners, the density of dogs in any specific area would be lessened and consequently less supposed incidents.

? Exclude speculative exaggerated, biased, or misleading statements and studies.

? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g. hikers, equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). In the parks it is humans who are littering and violating the landscape (no dogs allowed).

? In reference to the threatened birds at Fort Funston, the dogs chase away

the ravens and crows that are always on the cliffs over the beach. These birds are the worst predators of the plovers and bank swallows, they feed on other birds' eggs and babies.

Sincerely, Rosalie P. Leavitt

Correspondence: GGNRA General Superintendent

Dear Frank Dean,

For the past two yeras I have walked my neighbors dogs in Montata on Poss Property, now GGNRA. It has been a wonderful experience for the dogs and myself. The people I have met on the property are responsibe pet owners, most of whom had rescued their dogs from shelters. There are litter cans and bags available on the property donated by local neighborhoods which I understand fought hard to keep this property from development. I propose to reserve a portion of this property for dog owners and their pets to enjoy. It would be a sad injustive to restrict this recreation.

Karla Smutz

Correspondence: Dear Superintendent Dean,

My reaction to receiving the Draft Dog Management Plan was overwhelming sadness. We were promised a "Section 7" to legalize off-leash recreation in the Golden Gate National Recreation Area, something that should have been done correctly when the 1979 Pet Policy was adopted. The Park Service insists that all the areas under its jurisdiction must be managed in exactly the same way, but Golden Gate National Recreation Area was established in order to provide recreation to an urban population. When the GGNRA was in the planning stages, many San Franciscans were hesitant: why should we give up all of our beaches to the Park Service? They will try to turn the land into a National Park! "Oh, no, this is something entirely different," we were reassured. Off-leash recreation is a favorite activity for thousands of people in the Bay Area. The Park Service take on this? Too many people are participating in this recreation, so we

must limit the areas where it is allowed. Basic economic principles teach us that when demand increases, so does supply! The Draft Dog Management Plan should be looking at additional areas to permit off-leash access, not reduce it!

I can't believe this is the Management Plan that Brian O'Neill envisioned. I think he truly recognized offleash recreation as legitimate recreation and was honestly seeking a Plan that was inclusive.

I will concentrate on Fort Funston, since that is the primary area that I walk in nearly every day. I first visited Fort Funston on October 1, 1961, the first day it was open to the public after it was turned over to the City of San Francisco from the US Army. I rode my bike, camera in hand and have Kodachrome slides from that day. (October 29, 1961 was the first official "open house"-I was there that day as well). I went off to college & didn't live in the Bay Area again until 1969. When the GGNRA was established in 1972, we were delighted. Fort Funston was where we went every week-end (often also heading for Marin Headlands as well with our two children (born 1972 & 1974) and always our Taffy dog {1967-1984}). In the mid-70's, I was always amazed at how many people at Fort Funston seemed to know each other. It wasn't until 1995 when I retired that I was able to visit Fort Funston with my standard poodle Liza on a daily basis. When Liza unexpectedly died, I was overwhelmed with the sympathy extended by my new Fort Funston friends. Keli Poodle joined our family soon after, and for 12 years she and I were at Fort Funston nearly every day. She and I both made lifelong friends we walked from the parking lot to the last bench or down to the beach. By the time Keli joined our family, there were some other reasons to walk: doctor's orders! I have asthma; walking is one of the best "treatments". I have arthritis in both thumbs, making holding a leash for extended time very uncomfortable. My husband Bob walks with a cane ... and actually walks very little (but will walk not at all if the dogs are forbidden from the Sunset Trail), so dogs are my primary walking partners. I now have Jorja and Guinness, two standard poodles. Walking with them on-leash is tedious. Walking with them (and watching them play together as well as interact with lots of other dogs) off-leash is a joy. It is something I look forward to every day. Would I walk every day (as I have been instructed to do ...) if I didn't have dog coaches? Probably not. There are rainy days, windy days, cold days, foggy days, busy days; there are lots of reasons to not go. But when four big brown eyes are looking at me, it is pretty hard to say "we are not going today" to them!

Fort Funston has been described as Mecca for dogs. Indeed, people from all over the Bay Area drive to Fort Funston to enjoy a real walk with their dogs. They do not come to watch their dogs play in an ice plant patch (incidentally, the ice plant will not last two months if the Park Service succeeds in corralling all the off-leash play into an area that no one plays in

now.) Park Service representatives have stated that "we want the people who aren't coming now to come." Why? Fort Funston is at capacity now and probably over capacity on nice week-end days. The Forest Service learned a long time ago that dispersing recreational use over a larger area (or areas) reduces impact. If the Sneath Lane entrance to Sweeney Ridge were available for off-leash walking, that would probably divert some of the Fort Funston use to San Mateo County (a notoriously dog unfriendly county). The New Lands in San Mateo County (where people have walked dogs off-leash for decades) need to be considered for off-leash recreation. The rationale that adjacent San Francisco Water District Lands don't allow dogs is hardly a reason to forbid off-leash recreation. The San Francisco Zoo is close to Fort Funston; the Zoo doesn't allow dogs; therefore, dogs shouldn't be at Fort Funston. Doesn't make much sense, does it?

I served on the committee that was supposedly charged with "negotiated rulemaking". I agreed that there might have to be compromises, as did the representatives of all the other dog friendly groups. Apparently, that requirement (compromises) was not a requirement for many of the other folks that served on this committee. I went to each and every area that the GGNRA manages. I walked/hiked. I photographed each area. I assumed we'd be talking about specific areas and how they were being used currently and how to manage them better. I thought we might be able to discuss access (Milagra Ridge, for example, is basically a neighborhood park because the parking is extremely limited & the access without an automobile is difficult). We suggested discussing timed use (successful in a number of areas). We were told that timed use was too difficult for people to understand! We suggested a tag system, similar to one being used by Boulder Open Space in Colorado (with people actually going to Boulder to investigate the use). That, too, was dismissed. So, in two years almost nothing was accomplished. I was disappointed in the facilitators and disgusted that a few people made sure that nothing was ever really discussed. And yet the Park Service managed to come up with a huge plan that is NOT a result of any negotiated rulemaking.

I would like to see "no action" for all of the GGNRA lands ... codifying the 1979 Pet Policy (and not stating that it is not valid; a federal judge has declared that it is indeed valid). I want to see off-leash areas (and on-leash trails) in all the areas in San Mateo County, including the New Lands that are being added to the GGNRA.

After working on off-leash dog politics for nearly 20 years, I was so disappointed by the Draft EIS/Dog Management Plan that I became physically ill. Reading through the Park Service proposals and finding nothing positive about off-leash recreation (or even on-leash walking!) was sickening. Walking every day and meeting other dog walkers, most of whom are not only responsible dog owners, but also avid environmentalists

and discussing the obvious disregard the Park Service has for a big percentage of the GGNRA visitors has been an eye opener. I am very proud of the off-leash community. People with new energy have stepped up to the plate. People have spent thousands of hours crafting thoughtful responses to the Draft EIS/Dog Management Plan. I trust that the Park Service will be as diligent in really examining the comments that so many people have worked so hard to produce. These are people who are out in the GGNRA every day and want a plan that is fair, a plan that can succeed, a plan that balances preservation and recreation. In reading the Plan, it looked as if it were written mostly by people who'd never actually set foot in the areas they were proposing either banning dogs or allowing them (e.g.: the area between the parking lot and surrounded by trails at Fort Funston being proposed for the only off-leash access. It is an area that no one plays in now! People walk across it to get to the trail from the parking lot!). I've written a thousand letters in my head, but found that the anxiety that went along with contemplating the draconian changes that the Park Service has proposed made it impossible to actually continue to participate in a meaningful way with groups that are working very hard to make proposals that will work.

Thank you for your attention to this matter! What a time to assume the role of Superintendent!

Sincerely, Anne Farrow

Overview

This is my public comment related specifically to San Mateo County for the 2011 GGNRA Draft Dog Management Plan. This document includes site specific analysis and suggestions for each on the San Mateo County sites plus general analysis and suggestions. I am opposed to ALL of the DEIS "ACTION alternatives" that would reduce or eliminate dog recreation at any site and any compliance rules that could ban dogs based on regulatory violations alone and not require public comment.

We, GGNRA dog people, are living the National Park Service's Healthy Parks Healthy People US philosophy which First Lady Michelle Obama's emphasizes in her "Let's Move" initiative. The Park Service in their own words emphasizes why active, moving dog recreation is so critical to the Bay Area's health and well-being. I fully agree with the Park Service statement: "The fundamental value of nature as integral to our health as a species is one of the precepts underlying the establishment of the national park system. As

Director Jarvis pointed out in a recent speech at the Harvard School of Public Health, the connections between personal health and parks have been evident since public parks were conceived in the 17th century. A growing body of research has documented the significant health benefits of time spent in nature and exercising outdoors. While certainly not a panacea, parks have the potential to play a major role in addressing the nation's current health crisis reflected in the alarming increase in heart disease, diabetes, and obesity."

With the DEIS, the Park Service is ignoring the benefits of dogs encouraging people (including local families, seniors and minorities) to get out twice a day in the parks with our canine companions. Instead of demonizing our family dogs, the Park Service should be commending the Bay Area dog people and using them as a role model for other communities on how to encourage healthy, active living and getting out daily for long walks in the park and connecting with nature and our community.

Certainly the long trails in San Mateo County are well suited to daily exercise. However, San Mateo County has been denied voice control options in traditional off-leash recreation areas without any environmental impact study to evaluate the effects on public health and safety. Both San Francisco and Marin have proven that voice-control dog recreation is safe and healthy for an urban population, and San Mateo County should be provide the same privileges in our local urban recreation areas instead of having to drive to San Francisco or Alameda county to legally enjoy this daily recreational activity. In addition, providing legal voice-control areas would reduce the unnecessary citations and law enforcement efforts and more equally disperse the high visitation at Fort Funston and Stern Grove caused by San Mateo County residents.

Note that San Mateo County GGNRA sites are not normally crowded and have high visibility for approaching pedestrians, equestrians, and bicyclists; this enables easier management of voice-control dogs and minimizes any potential conflicts. In summary my suggestions is to honor the "1979 Pet Policy" and add additional voice-control areas for lands added after 1979. The revised policy needs to be formally incorporate into the NPS regulations and illuminate any question about it's acceptability. In addition, I specifically suggest:

? Encourage people to walk with their dogs and get healthy and safe exercise and enjoyment ? Eliminate the compliance-based management strategy ? Regulate professional dog walking using best practice guidance provided by entities such as the SFSPCA and Marin Humane Society and local dog walking regulations ? Provide voice-control dog walking options in San Mateo County sites and new lands ? Improve safety measures such as poison oak removal on trail beds, signage, etc. ? Improve feces collection with signage, bags, and an awareness campaign ? Monitor Park Service success in

regards to the recreational value and to sound land use management ? Provide awareness/training programs in conjunction with organizations such as the humane societies to improve both recreation and safety The Park Service Should Encourage Not Discourage Responsible Walking with Dogs

The relatively high illegal voice-control dog walking in San Mateo County GGNRA sites and the high usage of Fort Funston by San Mateo residents is representative of the high desire for such recreational opportunities in the county. Instead of trying to suppress responsible on-leash and voice-control dog walking, the Park Service should embrace it as a way to encourage healthy exercise, community building, and responsible dog ownership. Instead of spending money on increased law enforcement and litigation that is alienating a large group of people that love the outdoors and nature and will discourage visitors with dogs, the Park Service should become the national leader in studying the true impact of dog recreation on nature and on other park users and how to best manage the adverse impacts and maximize the benefits, particularly the public health and safety benefits. As the only park in the National Park System that allows any dog recreation, other than hunting with dogs, the GGNRA is uniquely positioned to provide a great service to the US and the world in providing real insights on the impacts and management of dog recreation. I believe this DEIS process represents a unique opportunity for the Park Service to demonstrate that they are indeed listening to the public comments and to build a stronger relationship with the community.

The Compliance-Based Management Strategy Must Go

A dog management plan should not come with a built-in nuclear option, which is what this is. It immediately undermines any belief that the Park Service is working with the public to design programs that meet the needs of the public and instead gives the Park Service a heavy-handed way to exclude the public without due process. It would allow even a few bad players to be used to destroy our traditional recreational use of the area. It circumvents the legal requirement that management changes that are either significant or controversial must have a public process before they can be made. Critical information about how compliance will be determined - by volunteers biased against dogs? by surveillance cameras? - is not included in the DEIS. San Mateo County is Unfriendly to People with Dogs - particularly those that enjoy voice control hiking and play

Consolidated Suggested Balanced Dog Recreation Plan for San Mateo County

Park Unit: Mori Point Voice Control: All other trails On Leash: On the trails surrounding the frog ponds and along city traffic routes No Dogs: No Dogs

None

Nearby San Pedro Valley Park does not allow any dogs. The adjacent Sharp Park and Rockaway Beach trails all have a high concentration of voice control dogs and all these areas have traditionally been under voice control. So it would be difficult for someone to get a no dog experience even if these trails were designated as no dog.

Milagra

There is no scientific evidence indicating that dog recreation, on-leash or by voice-control, has any significant impact on visitors or the natural environment. I'm simply designating this as on-leash to provide for balanced recreation for the few people that desire to avoid dog interaction.

-None, except consider a two hour morning and two hour evening time window to meet the needs of local residents -All on-leash -None Notch Trail, Sawyer Camp Trail and San Bruno Mountain are all in the nearby area and do not allow dogs. The park trail system criss-cross and there is little advantage to designating no dog trails as dog would still be nearby and crossing a fearful person's path.

Sweeney Ridge

Allows balanced areas for dog recreation plus one trail for no dogs even though overall visitation on the "no dog" trail will probably be less because of not allowing dogs. While there is no evidence of dogs impacting the Mission Blue Butterfly, Notch Trail includes the habitat for the butterfly so even remote impacts are eliminated. -Trails from Sneath Lane entrance to Fassler entrance and dirt trails south of that path (plus Cattle Hill and road to the Nike Missile Site) -Trail from the Shell Dance Nursery to the Nike Missile Site -Notch Trail

Note that on the Bay side nearby Sawyer Camp Trail and San Bruno Mountain do not allow any dogs. On the Coast side nearby San Pedro Valley does not allow dogs. I doubt there is a significant number of visitors that are truly afraid of dogs that will visit Sweeney Ridge because of the large, wild predators in the park New lands - e.g., Rancho Corral de Tierra

Provide dog recreation based on traditional usage, recreational demand and sound land management practices that achieve the GGNRA mandate. In addition to providing voice control, also provide designated recreational play areas, if feasible, to allow for fetch and other dog sports Note almost all the open spaces on the coast do not currently allow dogs and, if they do, the dogs must be on leash. This increases the need for the GGNRA to provide voice-

control and dog play areas for dog recreation.

Pedro Point I am not as familiar with Pedro Point and the local needs so my suggestion is tentative and purely based on trying to provide balanced areas for voice-control, no dogs, and leashed dogs. -None -Any connecting routes through the park -Most of Pedro Point except as defined

Mori Point Analysis and Suggestions

Overall Assessment

All adverse impacts shown for Mori Point for the "No Action" alternative need to be changed to no impact or negligible. There is no reasonable justification for reducing dog activity on Mori Point since there is no scientific evidence or even reasonable correlations that dogs are more than negligibly impacting the park and particularly not the protected California Red-Legged Frog or the San Francisco Garter Snake.

I oppose all of the DEIS "action alternatives" as they represent "hoarding" by marginalizing the recreational mandate for the GGNRA and the recreational needs of an urban population and future generations. I support adding voice-control trails, one no dog trail, and adding other more inclusive solutions to improve dog recreation at Mori Point as defined below. Note that Sharp Park to the north and the Rock Quarry to the south are both heavy dog use areas, with many dogs off-leash. Access for dogs from the Pacifica residences must be maintained from the northeast as well. This is not a location that anyone with a significant fear of dogs would frequent.

Recommended Changes to the "No Action" Current Dog Management Plan

Establish voice control trail access for Mori Point Suggested Balanced Option

Voice-Control Allowed: All trails except for near frog ponds and along city traffic

On-leash Only: All trails near frog ponds and along city traffic

No Dogs: ? Enclosed pond areas ? Upper Mori Trail

Logic behind trail selection:

There is a high recreational demand for voice-control dog recreation as evidenced by the traditional usage and by the high rate of non-compliance with leash laws both on GGNRA and Pacifica park areas. Requiring leashes in certain areas provides areas for those that don't want any interaction with dogs and encourages voice-control dogs to use other trails. I assume the anti-

dog-recreation people are most interested in the conservation areas around the ponds, so those are the areas selected for leash control plus the upper Mori Point trail would reduce any dog interactions with the dispersal areas from the pond. It is most importantly to provide an active path over the hill for those that want to walk or jog with their dogs using voice control from the north to south. It is also important to provide at least an on-leash path directly from the residential area to Sharp Park and Mori Point.

Benefits: 1) See Voice Control Benefits for San Mateo County 2) Mori Point is in large residential areas that are most likely to use the trails on a daily basis and to invest the time and effort in socializing, exercising, and training their dogs as well as benefit the most community camaraderie in the parks. I keep hearing people say that they purchased a house in the area because it seems like a good place to have dogs.

Comments:

1) On the other hand, the traditional use of Mori Point was for voice-control dog recreation and the current leash law violations support that there is a high demand for voice-control dog recreation. People are forced to drive to the San Francisco or to the East Bay to enjoy legal off-leash dog trails. Formal voice control rules need to be established for Mori Point to support this recreational need.

2) Considering this is likely the highest visitation park in San Mateo County, there is no reasonable justification for deeming that dog recreation has more than a negligible impact and attributing all general visitation issues to dog recreation. The biggest issue at Mori Point is the erosion caused by off-trail climbing of the hill. I have never seen a dog going up that hill but have seen several people climbing to the top of the hill. Dogs would not be going up that hill unless accompanied by a person and would not be causing the same level of damage as the heavier hikers with hiking boots. 3) There is no reasonable justification for denying San Mateo County to have voice control areas.

? The DEIS provides no scientific evidence that dogs are causing more than negligible environmental adverse impacts on Mod Point, particularly that dogs impact protected species such SF Garter Snake or the California Red-Legged Frog. Please see discussion below regarding these species. ? Per my FOIA to the Park Service, there is no GGNRA testing or inventories to provide any evidence that dog negatively impact the Mod Point natural environment so the only available indication is anecdotal observations and that doesn't indicate any adverse impacts from dogs. ? Other than 130 leash law violations from 2001 to 2010, there were almost no dog-related law enforcement issues on Mod Point; no wildlife disturbance, just 2 dog "bite/attacks", one cliff rescue ('04) and one "pet" related complaint. Mod

Point was traditionally and continues to have high voice-control use. All available information supports that our companion dogs, either on-leash or by voice control, have a negligible impact on wildlife in this park. ? The DEIS on page 273 is understating the dog visitation at Mod Point, as with other parks, by stating that visitors with dogs moderate (10-30%). Based on my experience, at least 1 in 3 visitors is accompanied by a dog on Mod Point but it varies by day and time. Note that based on the GGNRA visitorship methodology they are ignoring San Mateo County site visits and the "Visitor Use" measurement based on crowding provides little insight on the number of people that rely on this park for daily exercise and enjoyment. ? Per the response to my FOIA request, there was never an environmental impact study conducted to justify removing or changing traditional voice-control access for Mod Point when it was acquired by the GGNRA. ? I'm not able to determine the area that dogs potentially impact because I don't know the park acreage but I assume it is comparable to Sweeney at an estimated 0.5% of the park area. There is no evidence that dogs are more than negligibly impacting this park's natural environment, particularly not cumulatively that will impact future generations. In the last five years of actively hiking on Mod Point a few times a month my observations are:

a. Never seen any problem interactions between dogs and none between dogs and people. In addition, I have never seen a dog off the trail beds more than 10 feet and rarely see them off the trail because people and dogs are actively moving forward. b. Potentially disturbing sensitive seedlings in the bare ground native plant restorations right on the trail beds is the biggest potential impact from dog recreation under the current plan. Before banning or requiring leashes, the Park Service should use temporary barriers or seedling protections that would be effective in a wilderness setting with large mammals such as deer, elk, coyotes, and bears. I've only casually observed these restoration project but I expect last year's lack of rainfall, slope, and ground preparation/nutrients are a bigger issue than a rare dog walking in the beds right next to the trail. All my life, I've seen dogs in gardens and yards and never observed trampling damages just some caused by active digging, which I've never seen at Mod Point. c. Visitors are pretty disbursed on Mod Point so it is relatively easy for one to call and prevent voice- controlled dogs from interacting with pedestrians and on-leash dogs. I've never seen a horse or evidence of horse activity at Mod Point so that is virtually a non-issue. Visibility is good and trails are not made for high speeds so bicycles are also virtually a non-issue. d. The vegetation shows no signs of trampling, digging, social trails, or bare spots caused by dogs. e. Dogs have no impact on the wildlife at Mod Point and the adjacent open spaces, which are surrounded by residences, Highway 1, a shopping center and the ocean. The Park Service would have to actively re-establish deer or other large mammals in zoo like condition in a relatively small space. Coyotes have been spotted in this high visitation park but aren't normal residents. Birds, based on the park soundscapes, are certainly prolific in the park as are reptiles and small

mammals. Per the response to my FOIA, no inventory or monitoring of wildlife has been performed for Mori Point to provide any evidence of wildlife impacts. f. Also, see below for sections on San Francisco Garter Snake, California Red-Legged Frog, Soil/Vegetation, and Wildlife regarding the lack of evidence that dog recreation is causing any credible impact.

? The GGNRA has not conducted any testing to comprehensively evaluate the recreational barriers and needs of people. However, logically, Mod Point is not a place that people that are afraid or dislike of dogs are likely to go or want to go regularly because of the high use of surrounding Spark Park and the Rock Quarry for off-leash dogs. While it is likely that people choose to live in the adjacent neighborhoods because of the availability of nearby dog recreation; it is much less likely that people with intense dog fears/dislikes would choose this neighborhood and actively use Mod Point for hiking.

? Install bigger signs and conduct a campaign (similar to leave no trace) to encourage irresponsible people with dogs to pick up. See Leave No Dog Trace below. Mod Point in general has more litter, including dog litter, than other San Mateo County park trails. I assume this is because of the higher usage and would benefit the most from an active campaign.

? Install bigger signs at ALL entrances and trail junctions indicating dog rules for the specific area. See Dog Rule Trail Communication below.

? Implement voice-control awareness/training programs, in cooperation with organizations like the SPCA, to help minimize the few dog issues. Note that, if necessary, reasonable fees should be charged for the programs but there should also be options for low income individuals. See Awareness/Training Programs below.

? Monitor park visitation, conduct visitor surveys, and implement land use practices to evaluate how successful the GGNRA is in maintaining the Recreation and land management mandate at Mod Point. See Monitoring Success Related to Park Mandate below. Sweeney Ridge/Cattle Hill Analysis and Suggestions Overall Assessment

All adverse impacts shown for Sweeney Ridge for the "No Action" alternative need to be changed to no impact or negligible. There is no reasonable justification for reducing dog activity on Sweeney Ridge or the adjacent Cattle Hill that is supported by scientific evidence or even reasonable correlations. Note Sweeney Ridge/Cattle Hill is a wildlife haven after decades of dog recreation and not a trail system that most people that fear dogs would choose considering that mountain lions and bobcats live in this haven.

I oppose all of the DEIS "action alternatives" as they represent "hoarding" by

marginalize the recreational mandate for the GGNRA and the recreational needs of an urban population and future generations. Other than the Mission Blue Butterflies habitat near the Notch Trail entrance, which is miles from the other trails, there is no evidence that protected species even exist in this park. For the Mission Blue Butterfly, there is no reasonable correlation that dog recreation would have any more than negligible impact on the habitat, particularly since the habitats is fenced. I support adding voice-control trails and adding other solutions to improve dog recreation at Sweeney Ridge/Cattle Hill.

Recommended Changes to the "No Action" Current Dog Management Plan

? Establish voice control trail access from Bay side to the Coast side
Suggested Balanced Options

Voice-Control Allowed: Trails from Sneath Lane entrance to Fassler entrance and dirt trails south of that path (plus Cattle Hill and road to the Nike Missile Site) - If this is not possible due to the SF Watershed Easement agreement then Sweeney Ridge should remain an on-leash trail and Notch Trail should become a voice control option.

On-leash Only: Trail from the Shell Dance Nursery to the Nike Missile Site

No Dogs: Notch Trail - If this is not possible for Sweeney Ridge to have voice-control due to the SF Watershed Easement agreement then Notch Trail should become a voice control option.

Logic behind trail selection:

Allows balanced areas for dog recreation plus one trail for no dogs even though overall visitation on the "no dog" trail will probably be less because of not allowing dogs. Even though there is no evidence of dogs impacting the Mission Blue Butterfly, Notch Trail also includes the habitat for the butterfly so even remote impacts are completely eliminated by designating this as a no dog trail.

Benefits: 1) See Voice Control Benefits for San Mateo County 2) Voice Control entrances are in large residential areas that are most likely to use the trails on a daily basis and to invest the time and effort in socializing, exercising, and training their dogs as well as benefit the most community camaraderie in the parks.

Comments: 1) All adverse impacts shown for Sweeney Ridge for the "No Action" alternative need to be changed to no impact or negligible. There is no reasonable justification for reducing dog activity on Sweeney Ridge that is

supported by scientific evidence or even reasonable correlations.

2) The DEIS "Preferred Alternative" ignores that the Sweeney Ridge Sneath Lane entrance is the only Bay-side entrance in San Mateo County to the GGNRA for people with dogs. The Sneath Lane trail is a fire road with several maintenance trucks a day and surrounding by dense vegetation and steep sides where even a poorly behaved dog has little opportunity to go off-road. There is no even remote justification to exclude dog recreation from Sneath Lane.

3) The traditional use of Sweeney Ridge was for voice-control dog recreation and the current leash law violations support that there is a high demand for voice-control dog recreation. People are forced to drive to the San Francisco or to the East Bay to enjoy legal off-leash dog trails.

4) Considering the negligible impact of hikers, with or without dogs, on just an estimated 0.5% of the Sweeney Ridge/Cattle Hill area and the extreme conservation of the huge SF Peninsula Watershed with a similar natural environment, there is no reasonable justification for constraining dogs to the roads and not allowing them, along with their people, to go on the trails in this park. All of the DEIS "action alternatives" represent "conservation hoarding" by marginalize the recreational mandate for the GGNRA and the recreational needs of an urban population and future generations.

5) There is no reasonable justification for denying San Mateo County to have voice control areas. ? The DEIS provides no scientific evidence that dogs are causing more than negligible environmental adverse impacts on Sweeney, particularly that dogs impact protected species such as the Mission Blue Butterfly, SF Garter Snake, or the California Red-Legged Frog. Please see discussion below regarding these species. ? Per my FOIA to the Park Service, there is no GGNRA testing or inventories to provide any evidence that dog negatively impact the Sweeney Ridge natural environment so the only available indication is observation and that doesn't indicate any adverse impacts from dogs. ? Other than leash law violations from 2001 to 2010, there is almost no dog-related law enforcement issues on Sweeney; this includes no wildlife disturbance, no "bite/attacks", and no dog related complaints ? Sweeney Ridge was traditionally and continues to have high voice-control use, and after 30 years is still a "wildlife haven" even per rangers in the 2007 to 2008 ranger tickets. There is no visible evidence of natural environment adverse impacts from dog activity. Even per the rangers, the area is rich with wildlife such as deer, birds, deer, bunnies, bobcats, and mountain lions. Based on personal observation, the wildlife has habituated to the current recreational activities, including voice control dogs. Also, there is no scientific evidence to the contrary. ? There was never an environmental impact study conducted to justify removing or changing traditional voice-control access for Sweeney Ridge when it was acquired by the GGNRA. The

environmental impact study didn't even mention dog recreation so the voice-control rules should remain the same of the traditional use. ? Based on a rough estimate, the trails and trail bed that currently allowed to dogs represents about 0.5% of the 23,000 acre Sweeney Ridge that borders on the huge SF Peninsula Watershed. There is no evidence that dogs are more than negligibly impacting this park, particularly not cumulatively that will impact future generations. a. In five years of actively hiking on Sweeney Ridge almost daily, I've only seen one dog, a new rescue, that took off into the dense scrub and have never seen any more than negligible problems between dogs and none between dogs and people. Per the law enforcement data from 2001 to 2010, there was only one search and rescue and no wildlife disturbances reported. All available information supports that our companion dogs, either on-leash or by voice control, have a negligible impact on wildlife in this park. b. On all Bay-side roads and trails, the vegetation is dense and poison oak filled and the roads/trails cuts up the hill which makes off-road dog travel risk almost zero. There is no visible evidence that dogs impact wildlife, vegetation or soil , other than a few dog feces that routinely gets picked up by another dog owner. My family and others pick it up on a routine basis, and I estimate about 5% of dog owners are negligent and would benefit from a poop collection campaign. c. On the Coast-side roads and trails, the vegetation is less dense but dogs rarely leave the trail bed and only for a short distance. There is no visible evidence that dogs impact wildlife, vegetation or soil; other than a few nuisance dog feces that generally get picked up by another dog owner. There is no evidence that dog feces or urine has degraded the soil on Sweeney during the past 30 years and claims are purely speculative. d. This is not a high visitation park so it is relatively easy for one to call and prevent voice-controlled dogs from interacting with pedestrians and on-leash dogs. The biggest risk is bicyclists that pick-up speed coming down the hill that has sharp turns but that is just as big a problem for hikers, children, and other bicyclists as for dogs. I've never seen a horse on Sweeney Ridge and only a few horse piles off the Fassler entrance so that is virtually a non-issue. Particularly on the trail from Fassler, where horses seem more common, there is high visibility so people have great opportunity to call their dog and avoid any possibility of a conflict. e. The DEIS on page 271 is understating the dog visitation at Sweeney Ridge, as with other parks, by stating that visitors with dogs is low (<10%) to moderate (10-30%). Based on my experience at the Fassler, Sneath Lane, and Shell dance entrances, at least 1 in 3 visitors is accompanied by a dog but it varies by day and time. Note that based on the GGNRA visitorship methodology they are ignoring San Mateo County site visits and the "Visitor Use" measurement based on crowding provides little insight on the number of people that rely on this park for daily exercise and enjoyment. f. The vegetation shows no signs of trampling, digging, social trails, or bare spots caused by dogs off the roads and trails. Dogs may cause some negligible additional disturbances along the trail beds but there is nothing that can be identified as being specific to dog activity. It is highly unlikely that the few inconsequential paths cut off the

main trails are caused by dogs and not by hikers, ranger activity, or equestrians. The GGNRA has complete no scientific studies to support any conclusions that dogs cause any impacts on the soil or vegetation, and it isn't reasonable to consider these impacts more than inconsequential. g. Claims of dogs impacting the migratory paths of wildlife are purely speculations and not based on any scientific evidence particularly considering that these trails and roads are actively used by park trucks, water trucks, hikers, bicyclists, etc. Deer and mountain lions cross highways and co-exist in lands with other animals and predators; a dog accompanying a hiker is unlikely to cause anymore delay than a lone hiker, particularly considering that few people or dogs are on these trails in the early morning, night, and at dusk. The plethora of wildlife on Sweeney and the adjacent watershed areas provides no evidence that wildlife are being impeded. If anything the dense foliage on the Bay side, likely caused by suppressed fire management, impedes wildlife movement and limits suitable habitat for ground birds such as quail. h. See below for sections on San Francisco Garter Snake, California Red-Legged Frog, Mission Blue Butterfly, Soil/Vegetation, and Wildlife regarding the lack of evidence that dog recreation is causing any credible impact.

? The GGNRA has not conducted any testing to comprehensively evaluate the recreational barriers and needs of people. However, logically, Sweeney Ridge is not a place that people that are afraid of dogs are likely to ' go or want to go regularly. They would perceive Sweeney Ridge as a truly a natural, high-risk setting with only a dirty portable toilet on top, and it is home to mountain lions, bobcats, and coyotes. Few people that are afraid of a dog are going to venture deep onto these trails with no amenities when there are so many nearby trails with little chance of any big animal sightings such as Mori Point, Sawyers Camp Trail, and San Bruno Mountain. They also have cleaner bathrooms and facilities.

? Install downhill pedestrian warning signs on the Sneath Lane trail that warn drivers and bicyclists to slow down around curves Benefit: Make drivers and bicyclists more cautious about picking up speed, particularly in blind curves, where they could hit a hiker, child, dog, bike, car, etc.

? Also provided holders so that people can provide feces bags to encourage other people to collect feces. See Leave No Dog Trace below.

? Install bigger signs and conduct a campaign (similar to leave no trace) to encourage irresponsible people with dogs to pick up the feces (particularly at Sneath Lane where there are no signs). See Leave No Dog Trace below.

? Install bigger signs at all entrances and trail junctions indicating dog rules for the specific area. See Dog Rule Trail Communication below.

? Routinely have trail maintenance volunteers or crews remove poison oak

near the trail beds. See Poison Oak Safety Issue below.

? implement a dog voice-control awareness/training programs, in cooperation with organizations like the SPCA, to help minimize the few dog issues. Note that, if necessary, reasonable fees should be charged for the programs but there should also be options for low income individuals. See Awareness/Training Programs below.

? Monitor park visitation, conduct visitor surveys, and implement land use practices to evaluate how successful the GGNRA is in maintaining the Recreation and land management mandate at Sweeney Ridge. See Monitoring Success Related to Park Mandate below.

? Work with the City of San Bruno or other responsible entities to address the on-going dumping and car vandalism problem at the Sneath Lane entrance. a. We've been going to the Sneath Lane entrance almost daily for 5 years. It seems like at least 3 or 4 times a year there is broken windshield glass covering the parking area. In addition to the property damage, it is a safety issue for all people, including those with dogs, and for dogs. Once I slid on the glass and sliced my hand and knee during the fall, and dogs are also likely to get the glass fragments in their paws. These injuries were far worse than almost all of the dog "bite/attack" injures described in the 2007-2008 ranger tickets and are a much greater risk to public safety on Sweeney than companion dogs. Particularly since there were no reported dog bites on Sweeney and that almost all "bite attacks" were non-injuries or minor scrapes or bruises in other SF and Marin parks; also, the CDC declared the US canine-rabies free.

Milagra Ridge Analysis and Suggestions

Overall Assessment

All adverse impacts shown for Milagra Ridge for the "No Action" alternative need to be changed to no impact or negligible. There is no reasonable justification for reducing dog activity on Milagra Ridge that is supported by scientific evidence or even reasonable correlations.

I oppose all of the DEIS "action alternatives" as they represent "conservation hoarding" by marginalize the recreational mandate for the GGNRA and the recreational needs of an urban population and future generations. I support adding voice-control trails and adding other solutions to improve dog recreation at Milagra.

Recommended Changes to the "No Action" Current Dog Management Plan

Allow voice control trail access Suggested Balanced Options

Voice-Control Allowed: All trails, due to the nature of the trail system there is no reasonable method to create separate areas On-leash Only: None.

No Dogs: None

Logic behind trail selection:

There is no evidence of dogs impacting the Mission Blue Butterfly (MBB) or its habitat; therefore, dogs should be allowed on all trails, as they are today, unless scientific studies provide substantial evidence that dogs are causing significant harm to the MBB species.

Benefits: 1) See Voice Control Benefits for San Mateo County 2) Milagra Ridge is adjacent to apartment complexes and several housing residences are nearby 3) The scenic San Andreas Fault trail system and San Bruno Mountain trail systems do not allow dogs

Comments: 1) Traditional use of Milagra Ridge was for voice-control dog recreation and the current leash law violations support that there is a high demand for voice-control dog recreation. People are forced to drive to the San Francisco or to the East Bay to enjoy legal off-leash dog trails.

2) There is no reasonable justification for denying San Mateo County resident voice control areas. The DEIS provides no scientific evidence that dogs are causing more than negligible environmental adverse impacts on Milagra Ridge, particularly that dogs impact protected species such as the Mission Blue Butterfly, SF Garter Snake, or the California Red-Legged Frog. Please see discussion below regarding these species.

3) Per my FOIA to the Park Service, there is no GGNRA testing or inventories to provide any evidence that dog negatively impact the Milagra Ridge natural environment so the only available indication is observation and that doesn't indicate any adverse impacts from dogs.

4) Other than 65 leash law violations from 2001 to 2010, there were almost no dog-related law enforcement issues on Milagra Ridge; this includes no wildlife disturbance, 1 "bite/attacks", and 2 other unspecified "per incidents. These do not represent a significant impact on the environment or other park users.

5) Milagra Ridge was traditionally and continues to have high voice-control use. There was never an environmental impact study conducted to justify removing or changing traditional voice-control access for Milagra Ridge

when it was acquired by the GGNRA.

6) The DEIS on page 273 is understating the dog visitation at Milagra Ridge, as with other parks, by stating that visitors with dogs is low (<10%) to moderate (10-30%). Based on my experience at least 1 in 3 visitors is accompanied by a dog but it varies by day and time. Note that based on the GGNRA visitorship methodology, the Park Service is ignoring San Mateo County site visits and the "Visitor Use" measurement based on crowding provides little insight on the number of people that rely on this park for daily exercise and enjoyment.

7) I'm not able to determine the area that dogs potentially impact because I don't know the park acreage but I assume it is comparable to Sweeney Ridge at an estimated 0.5% of the park area. There is no evidence that dogs are more than negligibly impacting this park's natural environment, particularly not cumulatively, that will impact future generations. In the last five years of actively hiking on Milagra Ridge a few times a year and more closely observing the park over the past few months:

- Most trails are enclosed by cable fencing and the vegetation is poison oak filled which makes off-road dog travel risk almost zero. There is no visible evidence that dogs impact wildlife, vegetation or soil; other than a few nuisance dog feces that generally gets picked up by another dog owner. There is no evidence that off-path dog travel creates bare patches, dog feces or urine has damaged the soil or vegetation on Milagra Ridge. The claims are purely speculative and not supported by observable evidence or scientific evidence.
- This is not a crowded park so it is relatively easy for one to call and prevent voice-controlled dogs from interacting with pedestrians and on-leash dogs. I've never seen a horse on Milagra Ridge, and it isn't a likely destination for equestrians.
- The vegetation shows no signs of trampling, digging, social trails, or bare spots caused by dogs. Dogs may cause some negligible disturbances along the trail beds but there is nothing that can be identified as being specific to dog activity. It is highly unlikely that the few inconsequential paths cut off the main trails are caused by dogs and not by hikers and ranger activity. The only visible trampling I've seen seems to be trampling that appeared to be caused by volunteers or rangers marking native plant specimens with flags or removing invasive plants.
- See below for sections on San Francisco Garter Snake, California Red-Legged Frog, Mission Blue Butterfly, Soil/Vegetation, and Wildlife regarding the lack of evidence that dog recreation is causing any credible impact. ? The GGNRA has not conducted any testing to comprehensively evaluate the recreational barriers and needs of people. However, logically, Milagra Ridge is not a place that people that are afraid of dogs are likely to go or want to go regularly, with or without dog recreation. They would perceive Milagra Ridge as a truly a natural, high-risk setting with only a dirty portable toilet. It is also home to at least bobcats and coyotes. Few people that are afraid of a dog are going to venture deep onto these trails with no amenities when there are so many

nearby trails with little chance of any big animal sightings such as Mori Point, Sawyers Camp Trail, and San Bruno Mountain. They also have cleaner bathrooms and facilities. ? Also provided holders so that people can provide feces bags to encourage other people to collect feces. See Leave No Dog Trace below. ? Install bigger signs and conduct a campaign (similar to leave no trace) to encourage irresponsible people with dogs to pick up the feces (particularly at Sneath Lane where there are no signs). See Leave No Dog Trace below. ? Install bigger signs at all entrances and trail junctions indicating dog rules for the specific area. See Dog Rule Trail Communication below. Milagra Ridge actually has the best educational signage I've seen on the GGNRA trails systems (e.g., large and spread throughout the park) that I've seen and the style should be a model for other parks to consider. ? Routinely have trail maintenance volunteers or crews remove poison oak near the trail beds. See Poison Oak Safety Issue below. Milagra Ridge foot trails often have poison oak branches/leaves hanging into the pathway. These are a danger to people and particularly any child that is walking on the path. There is also a high likelihood that a dog will brush against the leaves/branch and the resin will be transferred to people. ? Implement a dog voice-control awareness/training programs, in cooperation with organizations like the SPCA, to help minimize the few dog issues. Note that, if necessary, reasonable fees should be charged for the programs but there should also be options for low income individuals. See Awareness/Training Programs below. ? Monitor park visitation, conduct visitor surveys, and implement land use practices to evaluate how successful the GGNRA is in maintaining the Recreation and land management mandate at Sweeney Ridge. See Monitoring Success Related to Park Mandate below.

Pedro Point Analysis

Overall Assessment

All adverse impacts shown for Pedro Point for the "No Action" alternative need to be changed to no impact or negligible. There is no reasonable justification for reducing dog activity on Pedro Point that is supported by scientific evidence or even reasonable correlations.

I am not highly familiar with Pedro Point and have only hiked there once several years ago. I believe Pedro Point may be a reasonable site for "No Dog" other than connector trails through the park. However, these would need to be determined based on the needs of the local residents. There is no justification for excluding dogs based on natural environment or protected species impacts provided in the DEIS. Please see the discussion of San Francisco Garter Snake, California Red-Legged Frog, Hickman's potentilla, Soil/Vegetation, and Wildlife below. This small park area is enclosed by highway 1, the ocean, and residences, no large mammals are unlikely to even enter the area and there is no evidence that voice-controlled or leash

controlled dogs would impact the wildlife populations any more than at other low visitation, trail areas. As for the protected species, there is no evidence that dogs would impact the species that don't even currently exist at the site even if they did exist. In particular, the Hickman's potentilla has never been known to exist at this site and is non-native to the area and should be removed from the impact statements completely.

Similar signage, training, and awareness programs should be implemented for Pedro Point as for other GGNRA park trail systems. General Non-Site Specific Suggestions & Comments

Recreation Mandate

According to the GGNRA enabling legislation, recreation is a mandate of the GGNRA and needs to be enabled for an urban population. Based on the 2002 Population Survey performed by the GGNRA, walking dogs is a high value recreational activity enjoyed by 15% of Bay Area Residents which is some 450,000 people based on the 2008 US Census Data. In addition, at least 1 in 3 people have dogs in America so there is an even greater opportunity to encourage people to enjoy this healthy and safe recreational activity. All indications are that walking a dog is one of the most in demand recreational activities in the GGRNA, particularly in urban communities bordering on the GGNRA lands; and the Park Service has provided no evidence that dog walking is not one of the most in demand recreational activities in the GGNRA. In addition, tourists that travel with their dog need opportunities to enjoy the outdoors with their dogs.

The GGNRA in the DEIS and in public presentation about the plan has treated people with dogs as a nuisance instead of an important group of recreational users of the park. The Park Service continues to imply to the public that dog recreation is illegal even though two federal judges have upheld the 1979 Pet Policy and the Park Service has the ability to amend their regulations to be more directly tolerant to dog recreation activities. Their pet regulations are arbitrarily defined by the Park Service and are not laws but Park Service written regulation. At this point after review all the evidence available to me, the Park Service leadership seems highly biased against dog recreation and is pushing their personal biases to marginalize recreation by providing exaggerated, misleading, and speculative evidence instead of unbiased scientific evidence. The Park Service is attempting to do "conservation hoarding" and exclude necessary urban recreation for which this park was established.

Biased DEIS Representations

As an example of a biased representations that demonstrates the Park Service's intolerance for dog recreation, several impact statements for wildlife

in the coastal scrub areas are rated as moderate and imply that dogs are preventing healthy wildlife populations without any scientific basis for the moderate or even minor ratings. The law enforcement data doesn't indicate a single wildlife disturbance in the San Mateo County parks in 10 years and even if there were that seems inconsequential in the big picture of the GGNRA enabling legislation or real wildlife conservation.

The Park Service is trying to marginalize or eliminate low impact dog recreation when more than 60 other parks in the National Park system allow hunting because of their enabling legislation as shown in the attached: Example of Enabling Legislation Allowing Hunting - A significant wildlife disturbance and >60 National Park Service Ran Parks Allow Hunting In addition, fishing and equestrians are allowed in National Parks units including the GGNRA, snowmobiling is allowed in Yellowstone, and off-road vehicles in some other parks. All have a much greater impact, particularly my individual recreational user, than walking a dog. In Yellowstone, the Park Service conducted extensive research on the impacts of snowmobiles while only conducting almost no unbiased studies regarding dog recreation in the GGNRA, even though the proposed dog management plan impacts hundreds of thousands of people's daily lives and undermines the recreational mandate of the park.

In addition, the National Park Service itself is currently studying the effects of habituation as outlined in this article on the Perspectives on Human Dimensions of Wildlife Habituation:
http://www2.dnrcornell.edu/wtolerance/documents/workshop_report.pdf

There is no reason to assume that wildlife is any less likely to habituate to dog recreation than other human activities, particularly after all these decades, and in fact, some minor dog interaction may be beneficial if wildlife are dissuaded from directly approaching humans. In fact, some people feel safer because a mountain lion or another person is less likely to attack them if they are accompanied by a dog and there is less potential for serious conflicts. The primary premise in the DEIS is that dogs are natural predators but the DEIS fails to mention that humans are also natural predators that wildlife would naturally avoid at some level. Fortunately, wildlife in these areas have had tens of thousands of years to adapt to human and canine activity and the current level of activity has been maintained for decades in San Mateo County without readily apparent impacts on overall wildlife populations.

Most parks in the National Park System allow fishing and some allow off-roading. All these activities fundamentally have a much greater impact on wildlife and vegetation than people walking with companion dogs that rarely even disturb wildlife or leave the trail beds. The DEIS also ignores that people passing wildlife flush the wildlife off the trail so the companion dog interactions just cause the wildlife to leave the trail sooner. In total, all the

dogs in the parks for a day probably have less of an impact than a single hunter or a single grizzly bear (native but now extinct in California) would have on the 80,000 acres in a day. Any more than negligible impact statement for wildlife from walking with a dog are completely exaggerated and taken out of context and demonstrates extreme biases. There seems to be no justification for this DEIS other than extreme prejudice against people with dogs by the Park Service that has manipulate and misrepresented information to achieve their desired goal of excluding people with dogs. The 25 percent compliance rule in and of itself demonstrates that the Park Service is intent on excluding all people with dogs over the next few years instead of working to resolve any real issues.

Benefits of Voice Control Areas for San Mateo County GGNRA Park Areas

1) Provides the NPS with an aid for the Healthy Parks Healthy People initiative since dogs encourage people to exercise more often and for longer distances plus facilitates healthy social interactions.

2) Encourages and provides for a high demand recreational activity that is healthy and encourages the at least 1 in 3 people with dogs, particularly those in the nearby neighborhoods, to take long daily walks in the outdoors. All these benefits contribute equally to children, seniors, people with disabilities, all incomes, all ethnic groups, etc. One of the greatest benefits of exercising in the GGNRA is that it is available to all; no matter their social-economic position and the GGNRA is one of the greatest benefits of living in the Bay Area.

3) San Mateo County has no reasonable voice control hiking options: a. Esplanade is not a reasonable substitute because it is not easily assessable by families or people with disabilities and does not offer a trail experience plus it seems more dangerous than other beaches in the area (aka the small beach area with no place to escape, riptides, etc.) I was only recently able to find Esplanade Beach and understand why it is not a beach that many people would want to frequent. Pulgas Ridge only has a small play area about 1/3 mile long in the middle of the longer on-leash trail system. In addition Pulgas Ridge is far from people on the San Mateo coast and northern part of the county and is not a reasonable location for daily exercise for these people. b. Fenced city dog parks (dog parks) are not trails and are not a substitute for an outdoor experience with a voice-controlled dog. Comparing dog parks to hiking trails is the equivalent of saying people don't need access to GGNRA hiking trails because there are children's playgrounds in city parks. All are important to our community but none are substitute for the other. Fenced city dog parks are an excellent resource but do not encourage adequate daily exercise for most people. In addition, Ella, like a child on a playground with other children, got a great workout playing with other dogs in dog parks when she was a puppy and adolescent. Now, she just stands around, particularly

since she isn't highly motivated by fetch. Hiking trails get both the people and the dogs moving. In addition, dog parks are too intense for many dogs that need more space to be comfortable and to avoid confrontations. 4) People receive mental health benefits (e.g., stress relief) from empathetically watching the joyful activities of their canine companions, from playing with their dog, and from socializing with others.

5) Facilitates the recreational experience for people with disabilities and families with small children that may have difficulty managing a leash along with other needs (e.g., a stroller, wheelchair, balancing, etc.)

6) Enables people to continue using dogs as a social facilitator since dogs, like small children, help bridge social barriers and often spark social exchanges that don't happen in the absence of a dog or some other social bridge

7) For most dogs (aka those without significant behavioral problems), leashes impede healthy social interactions and increase leash reactivity problems. If a dog is super motivated to meet other dogs and is constantly suppressed or given leash corrections, these frustrating interactions and corrections can lead to negative associations and real aggression. In addition, restraining a pulling-frustrated dog on a leash causes a body language that is associated with an aggressive stance and creates a dog-dog communication problem. Encouraging regular dog-dog greetings with friendly dogs helps create and maintain friendly dogs with good social skills and positive associations.

8) Voice-controlled dogs are more likely to be able to meet and greet which means that their people are more likely to have healthy social interactions, instead of actively avoiding each other on the trails. In my local neighborhood dogs don't meet and greet. Instead there is an elaborate crossing of streets to avoid each other because dogs either don't have social skills or you don't know that they do.

9) Facilitates people responsibly exercising, socializing, and training their canine companion which reduces dog behavior problems, makes for healthier and happier dogs, increases the human/canine bond, etc. All make for dogs that are safer when in public spaces, when at home (particularly around new babies, children and the elderly), if they escape onto the street, if they are abandoned in a shelter, etc.

10) Intensifies the canine/human bond because of the shared enjoyable experiences which reduces the abandonment of dogs to shelters or the inhumane treatment of dogs.

11) Provides remote areas that facilitate the training of dogs with behavioral

issues and/or training needs.

12) Legally allows people to participate in this highly enjoyable recreational activity without having to incur the personal costs and environmental costs of driving to San Francisco, the East Bay, or to places like the Tahoe National Forest.

13) Disperses the current high concentration of dogs recreation in legal off-leash places like Fort Funston to more balance the recreational impacts on the 80,000 acres and city parks.

14) Eliminates virtually all law enforcement activities related to dogs and improves relations with the dog community. Designating voice-control areas will reduce law enforcement costs and efforts that are currently wasted by the suppressive regulations that don't address the high demand for voice control dog-walking recreation

15) Provides local legal outlets that will encourage off-leash people to walk on these trails instead of the on-leash/no dog trails; therefore, people that dislike or are afraid of dogs will have even less negative encounters if they truly appreciate and self-select to use the "no dog" or on-leash trails

Visitor Experience & Public Health and Safety

Please see my public comment regarding Public Health and Safety.

Poison Oak Safety Issue ? Routinely have trail maintenance volunteers or crews remove poison oak near the trail beds

Benefit: Reduces the number of serious poison oak related rashes that people experience. I've personally had several experiences with brushing up against poison oak over the past 15 years that have severely incapacitated me for about a week. These poison oak incidents are far worse than all the 2007 or 2008 dog "bite/attacks" in the PDF except for the motorcycle/dog accident. Even if the dogs stay on the trail, they can brush against the poison oak and transfer the resin to people, even if the person avoided the branch.

Leave No Dog Trace

? Install bigger signs and conduct a campaign (similar to leave no trace) to encourage irresponsible people with dogs to pick up the feces (particularly at Sneath Lane where there are no signs). Also provided holders so that people can provide feces bags to encourage other people to collect feces.

Benefit: Helps educate the remaining dog owners that they shouldn't leave the

feces, even in the wilderness.

Dog Rule Trail Communication ? Install bigger signs at all entrances and trail junctions indicating dog rules for the specific area Benefit: Helps educate the remaining dog owners that they shouldn't leave the feces, even in the wilderness.

Monitoring Success Related to Park Mandate and Science Based Information

? Monitor park visitation, conduct visitor surveys, and implement land use practices to evaluate how successful the GGNRA is in maintaining the Recreation and land management mandate at San Mateo County Park Units. The GGNRA does not track visitation for San Mateo County nor evaluate performance related to achieving the GGNRA mandate of recreation or sound land management. The enabling legislation states "shall utilize the resources in a manner which will provide for recreation and educational opportunities consistent with sound principles of land use planning and management."

? The Park Service in the GGNRA is not using sound land use practices to evaluate the natural environment to provide a scientific basis for managing recreational activities and ensuring that the park is maintained for the current and future generations. Based on the Park Service response to my FOIA request, the GGNRA has not conducted monitoring of these park units since the 1990s. Instead of relying on science, the Park Service is relying on dogma and personal biases to guide management plans that are detrimental to the recreational values of the park. The need for scientific monitoring is supported by the enabling legislation and the following NPS Policies 2006 excerpts:

4.1 "The Service will reduce such uncertainty by facilitating and building a science-based understanding of park resources and the nature and extent of the impacts involved."

4.1.1 "Similarly, planning for park operations, development, and management activities that might affect natural resources will be guided by high-quality, scientifically acceptable information, data, and impact assessment. Where existing information is inadequate, the collection of new information and data may be required before decision-making. Long term research or monitoring may also be necessary to correctly understand the effects of management actions on natural resources whose function and significance are not clearly understood."

2.3.1.4 Decisions documented in general management plans and other planning products, including environmental analyses and documentation, will be based on current scientific and scholarly understanding of park ecosystems and cultural contexts and the socioeconomic environment both internal and

external to the park. The collection and analysis of information about park resources will be a continuous process that will help ensure that decisions are consistent with park purposes.

? The park service is not monitoring the state of maintaining the recreational values for present and future generations. o Based on Park Service response to my FOIA request, the park service is not conducting routine recreational surveys to evaluate visitor or recreational user satisfaction with the GGNRA experience nor other surveys to help identify recreation current usage and the populations needs or barriers o For many of the sites, the GGNRA is not monitoring visitation on any level to determine whether the recreation value is being maintained , improved or degraded; and the park service is not showing how their management decisions for each site impact the recreation value for the current and future generations o Using the 2002 population survey and self-reported visitation plus the visitation counting methodology that ignores many entry points, the GGNRA is significantly understating current and yearly visitation and thus is not accurately reflecting the impact of management decisions on maintaining the recreation values for current and future generations o Not that visitation records baselines need to be established to determine whether how dog management plans impact overall park usage and site specific usage. For example, if a "no dog" area experiences a significant increase in visitorship due to the new policy and the area is overcrowded and yet other "voice-control" areas are underutilized or vice versa then the Park Service should re-evaluate the trail distribution in an attempt to maximize the number of people enjoying the parks and getting daily exercise

? The monitoring of recreational value and environmental impacts should be used to adjust the land use and management strategies (e.g., awareness, signage, barriers, etc.) for each park site. For example, if the "no dog" trails have an increase in visitorship due to "no dogs" then perhaps additional "no dog" trails should be added or vice versa.

Additional Notes on Natural Resource Monitoring Value:

Why is it significant that other Recreation Areas perform annual monitoring of resources and the GGNRA does not? Why is monitoring so important? As stated in an NPS publication, "Monitoring the Condition of Natural Resources in US National Parks" (http://science.nature.nps.gov/im/monitor/docs/Monitoring_Park_Condition.pdf) the purpose of monitoring is as follows: The overall purpose of natural resource monitoring in parks is to develop scientifically sound information on the current status and long term trends in the composition, structure, and function of park ecosystems, and to determine how well current management practices are sustaining those ecosystems. Use of monitoring information will increase confidence in manager's decisions and improve their ability to

manage park resources, and will allow managers to confront and mitigate threats to the park and operate more effectively in legal and political arenas. Additionally, a review of NPS online resources reveals that there is an entire infrastructure set up to guide and facilitate NPS properties in their monitoring duties, "Vital Signs Monitoring" (<http://science.nature.nps.gov/im/monitor/index.cfm>)

Correspondence ID: 4641 **Project:** 11759 **Document:** 38106

Received: May,27,2011 00:00:00

Correspondence Type: Letter

Correspondence: Dear Supervisor Dean,

Thank you for allowing public comment on GGNRA's Dog Management Plan and Draft Environmental Impact Statement. I respectfully submit that the plan is misguided and out of touch with how dog owners currently use GGNRA's lands. It is far too restrictive. Dogs are a much more integral part of the public's use of our park systems than they use to be, back when the original Pet Policy was instated.

I believe dogs should be allowed on the majority of trails throughout the various GGNRA parks. If they are on a leash, and the owners clean up after them, their impact on the environment should be minimal. If an area is so sensitive that an on-leash dog walking through it would damage it, then humans should probably be kept out of these areas as well. And, I understand that horses have been grandfathered in to GGNRA usage, but these large animals are far more destructive to the environment than dogs are. They damage the trails as well and are, rarely cleaned up after, making a hiker's trail experience much less pleasant than it would be had a horse not passed through there beforehand. It seems quite hypocritical to me to allow horses throughout the GGNRA system and to restrict dogs to just a few trails. (I also support off-leash areas, such as Fort Funston, and feel there should be no restrictions on leash length for leashed dogs.)

The new plan is especially restrictive for the trails on Mori Point, Sweeney Ridge, and Pedro Point, all where I live, in Pacifica. They are so restrictive as to keep people from enjoying the best parts of these three parks. You could not reach Mori Point itself with your dog, nor could you enjoy the views from Sweeney Ridge or Pedro Point. In fact, for the latter two parks, it would not be worth visiting with your dog, since you could not access the best parts. This is a shame, since they are all beautiful parks, with very nice trails on which to take a dog for a walk.

I live in Pedro Point in Pacifica, and my husband and I currently use the Pedro Point Headlands to walk our dog almost every day. We have a

neighborhood trail that connects with our property, so we can access the headlands from our front door. If the new plan is adopted, there will be only a short bit of trail where dogs can be walked (not long enough for a good dog "walk"). This trail is right along the highway and has no parking area associated with it. The main attraction of our headlands is the spectacular view, but this trail comes nowhere near the view—all you can see from it is the highway! If dogs are banned from the rest of the headlands, Pedro Point residents will likely be forced to use their cars to take their dogs somewhere else to walk them, not a good development for the earth.

The Pedro Point Headlands have been severely damaged through years of heavy motorcycle use and are now undergoing habitat restoration. We consider ourselves stewards in this on-going important project and help to keep an eye on it through our daily walks. Motorcyclists are still invading the area, and we try to talk to them to let them know that they are no longer allowed on the headlands. We also report them to the people in charge of the restoration, as they have requested, so they can have a record of what is occurring on the headlands. If dogs are severely restricted on the headlands, we will no longer be able to provide this service, as we will have to take our dog elsewhere to get her a decent walk.

This is especially sad for us, because, when we first considered buying our house, we walked up in the headlands and immediately said, "What a great place to walk a dog!" It definitely weighed in our decision to buy in this location, and we did adopt a shelter dog six months after moving in. We knew that the GGNRA was going to take over the headlands eventually but felt no worries because we knew it had pretty friendly dog policies. Unfortunately, that no longer seems to be the case. I hope that, with this public input, you may re-think your new policy and retain your dog-friendly approach.

Sincerely, Dianne K. Seaborg

Correspondence Type: Letter
Correspondence: Dear Mr. Dean,

I am writing to comment on the Draft Dog Management Plan/Environmental Impact Statement. I am a veterinarian as well as a dog owner and trainer. The stated objectives of the EIS are those we can all support. The question is how best to meet these objectives for those with a variety of priorities. I have attached a proposal that will address both the concerns stated in the EIS as well as those of the public who want to continue to enjoy the

outdoors in the company of their companion dogs.

Dogs are an essential part of the urban lifestyle we enjoy in the Bay Area. More than a third of Bay Area residents have dogs. Being able to experience outdoor areas designated for public use with our dogs is vital for many of us. Our dogs are not only companions, they provide confidence and security when hiking in isolated areas, much the same as hiking with a human companion ' a second set of eyes and ears.

Behavior issues are one of the common reasons dogs are surrendered to animal shelters. Lack of adequate exercise and socialization can result in destructive behaviors at home. Inadequate access to opportunities for outdoor exercise could well result in an increase in numbers of dogs being surrendered to shelters. Are we then trading one human and animal welfare problem for another? A positive attitude toward companion dogs is not universally held. I attended the NPS open house March 9 in Pacifica, where I had a discussion with Park Ranger, Daphne, who commented that some park visitors did not want to even see a dog on the trails. To Daphne this seemed to be a credible objection. It should be apparent that no policy will satisfy all concerns and that this level of dog aversion falls outside of any reasonable goal.

In my practice I see a wide variety of dogs and their guardians ("owners") who exhibit an even wider range of expectations for their dog's behavior. It is not so different from what is seen when observing parenting styles and expectations. Some folks have a passive approach to managing their dog and may be unaware that it is possible for them to exert any control over their dog's behavior. For them, a leash physically restricts the dog's access to their immediate vicinity and maintains an acceptable level of "control". Others that have invested time and effort in training are able to exert excellent voice control over their dogs. This range of expectation for dog behavior and owner responsibility makes a "one size fits all" approach to dog control unsuitable.

There are several issues consistently listed as negative consequences of dogs in our parks. Eliminating these most common complaints would satisfy the objectives of the EIS. 1) dog waste ' this is simply addressed by owners picking up their dog feces. I would point out that it is not uncommon to find feces on the trail from non-domestic species (foxes, skunks, raccoons) that are often mistaken for domestic dog deposits. 2) Dog impact on wildlife and vegetation 3) Dog-dog and dog-human interactions

Note that many of the areas used by dogs are also used by bicycles and horses, all of which have an even greater potential for these same negative consequences. In the EIS, this is mentioned only peripherally but deserves

greater attention as a means to attain the stated objectives.

Items 2 and 3 above are simply managed by keeping dogs on the trails, under control, either on leash or under voice control as currently allowed. Most difficulties arise when dogs are off leash and the owner does not have true control ("control" is defined as being able to consistently call your dog to your side even when there is something they would rather do). Unfortunately few dog owners have this level of voice control. When hiking, I myself, am often frustrated by the need to intercede when another dog approaches while the owner makes futile attempts to call their dog.

Training to achieve this level of control is possible but does not come easily; without it, dogs should remain on leash. Enforcing leash restrictions where they currently exist would address nearly all of the dog-related concerns. For those areas where dogs are currently allowed off leash, I would argue that we need a better means of identifying those individuals who understand the concept of voice control. I have attached such a proposal at the end of this document.

All of the GGNRA "preferred alternatives" would significantly reduce access by dogs, both on and off leash. Reducing access in this way is a simplistic approach to complex problem. If there are not enough personnel to enforce the current areas where leashes are required, enforcing areas where dogs are not allowed will be equally difficult. Restricting the number of accessible areas will only increase the pressure and negative consequences on the areas where access is allowed. This may result in a future justification for banning dogs from the parks altogether. In particular, the Compliance Based Management Strategy allowing further (and arbitrary) restriction without additional public comment is in contradiction to the spirit and intention of the outdoor areas maintained by the GGNRA. The proposal that all new GGNRA lands will have no off-leash access is another blanket approach to the problem. At a minimum, these portions of the proposed plan must be eliminated.

I urge you to consider the attached plan to allow permitted off leash dog access within selected areas of GGNRA. I would be happy to discuss details of this further and to help in any way to facilitate such an arrangement.

Sincerely, Cynthia S. Cook, DVM, PhD Diplomate, American College of Veterinary Ophthalmologists Past President, San Francisco Veterinary Medical Association Past President, Peninsula Veterinary Medical Association Proposal for Permitted Off Leash Dog Access Within Selected Areas of GGNRA 1. Individuals would obtain an annual permit that would allow them to have up to three dogs off leash in the areas of GGNRA where ROLA is currently allowed. 2. Obtaining a permit would require demonstration of acceptable voice control for at least one dog and payment

of an annual fee (\$100 suggested). This fee would offset the permitting process as well as support the trail maintenance in GGNRA. 3. Demonstration of acceptable voice control would require that the applicant be able to call their dog away from two leashed stranger dogs before contact has occurred. This "test" could be performed by licensed pet dog trainers or other professionals designated by GGNRA. 4. Those individuals who have obtained an off leash permit would be required, when accompanied by their off-leash dogs, to wear a nylon vest issued by GGNRA. This vest would have a large identification number that could be noted by others on the trails. 5. An infraction of off-leash rules (unwanted dog or human interaction, not picking up after their dog) would be grounds for a significant fine and/or suspension of the permit. Note that infractions could be reported by anyone on the trail, not requiring the presence of a Park Ranger. This policy would have a number of positive consequences, including: 1. Continued access by those individuals able to demonstrate standards of responsible dog ownership 2. Ability to hold permitted individuals accountable for their dog's behavior without the need for patrolling by Rangers. 3. Encouraging awareness, training and control of dogs by those wishing to obtain a permit 4. Financial support for trails and park maintenance by those who actively use the parks and who have a vested interest in their welfare.

Correspondence Type: Letter
Correspondence: Dear Mr. Dean:

I have heard from a few people that the GGNRA will hear all of our comments during this time period and will basically toss out all opinions and go ahead do whatever it wants to do. I am still an optimist and believe (hopefully not foolishly) that we live in a democratic society and that our voices are heard and that we will be listened to.

I know that a lot of the Golden Gate National Recreational Area's land is secluded and away from large cities, but the areas in question (Fort Funston, Ocean Beach, Baker Beach, Crissy Field) are all part of a cosmopolitan area and need to be addressed as such. In San Francisco alone, it is estimated that there are nearly 200,000 dogs. I have had the pleasure, for the last 13 years, of being able to care for dogs (and cats) in the city of San Francisco. During that time I have learned very much about training and working with animals. One of the conclusions that I have come to in all my years doing this is that the single most important thing you can do for your dog is to socialize them with other dogs, people, children, etc. But especially other dogs. Dogs are

teachers. The elder dogs teach the young ones how to behave in a pack.

That's the problem with the preferred proposal by the Golden Gate National Recreation Area (GGNRA), which wants to drastically limit the areas where people can bring their dogs. Currently less than 1 percent of the parkland is now available for off-leash activity, yet the proposal would not only reduce that space but could forbid even leashed dogs in some places people love to visit. Any new lands added to GGNRA, under this proposal, would prohibit dog walking (even leashed) by default, unless a specific exception was made.

Neighborliness works better than drawing up battle lines. It's not a question of pet owners vs. non-pet owners, hikers vs. walkers, or any other oversimplified interest group. Our shared space is exactly that'shared. There's room for everybody, within reason, and within balance.

Census data show that there are more dogs than children in San Francisco, but again, it's never either/or. This city has always recognized and embraced animal companionship. For many of our citizens, their pet companions are family. After all, this is the city of St. Francis.

The GGNRA Draft Dog Management Plan, released in January, is a major departure from the established, balanced use of parklands that's prevailed here for forty years. Vastly reducing the off-leash areas in GGNRA would harm the quality of life of tens of thousands of dog guardians and, of course, the behavioral health of their dogs.

Dogs get the same benefits as people from playing outside. Companionship and exercise shape both dogs and owners into healthier, better urbanites.

The San Francisco Board of Supervisors understood the need for dog guardians to enjoy the outdoors with their companions when they made land available to the GGNRA, and cited it specifically. So the Draft Plan's claim that "the quality of urban areas is not a significant factor in determining a dog management plan" violates the spirit under which the GGNRA was created. I also fear that restricting dog-friendly spaces would discourage dog adoptions, not only subverting our animal-welfare goals but also threatening the ability of shelters such as the San Francisco SPCA to continue rescuing dogs.

I strongly object to the "Compliance-Based Management Strategy" as there will always be people who break the rules, but there is no need to punish the people who follow the rules.

One of my favorite areas to walk the dogs - of which I take only six or seven at a time - would be Fort Funston. This is one of the few areas in which the

dogs are now allowed to run and play off leash, but with the new ruling, the area allowed for dogs to play off leash is around the parking lot. Is that what the GGNRA really considers to be a safe area for dogs? With all of the cars coming into the parking lot, the risk of bodily injury to dogs (and people) would be much higher. Fort Funston is wild and full of sand dunes. What possible harm could dogs do to that area? I know that some objections have been made stating that certain bird life may be threatened, of which there is not sufficient data.

I know that some time ago the "naturalists" started digging up the ice plants - some at the Fort and more along the Great Highway. Now the Great Highway is closed so often when high winds occur because of this. The "naturalists" believe that we should bring California back to its native plants. I don't object to native plants, but don't tear out the plants (and trees) that are already growing here. Just because they're not indigenous, does not mean they should be torn down. Trees, especially, house many wild animals, so to tear them down just because they are not indigenous, seems pointless.

One of the things that makes San Francisco so great is all of the off leash dog walking areas. If anything, dogs need more off leash areas, not less. They can out-run and out-walk us 100 times over. They definitely need areas that are conducive to running, playing and getting all of their energy out. It makes for a much more well adjusted dog.

Please, please reconsider your management strategy, and leave the off leash areas just as they are. are

Linda Sherwood San Francisco, CA 94121

Correspondence Type: Letter
Correspondence: Dear Superintendent Dean:

My name is Nina Lescher and I have been a Bay Area resident for 16 years. I currently own a home in Marin County, and consider myself very lucky to be able to have The Golden Gate National Recreation Area in my backyard. I have been an avid fan of Crissy Field for years, primarily because all sorts of people come there to stroll, picnic, windsurf, kite surf, jog, and play

Frisbee or football. Many people come to let their dogs run off leash and play. I haven't been a dog owner for very long, but I have always been really proud of the Bay Area for being conscientious enough to preserve places where people, off leash dogs, and nature could come together. I have traveled a lot and rarely found this anywhere else, and I believe the overall happiness and well being of Bay Area residents is so high because we have places like Crissy Field and Fort Funston where dogs, people and nature co-exist. Now that I own a dog, he and I visit Crissy Field, Fort Funston, Marin Headlands, Rodeo Beach, Muir Beach, Oakwood Valley and Homestead Valley a minimum of 1-2 times a week.

So that is why I am writing to voice my disapproval of the Draft Dog Management Plan and request that it be entirely rejected, or that Alternative A be selected for all sites. The current Preferred Alternative Plan is so severely restricted that it is unacceptable. The available data concerning environmental impact is insufficient. As an avid environmentalist, I am very supportive of the work the GGNRA has done to curtail erosion and protect plant and wildlife in the parks. I make sure that neither I nor my dog goes into areas that have been fenced off and designated (with signage) for replanting or environmental protection. In my experience, all dog-owners I've come across in GGNRA areas have very effectively used voice control to keep their dogs off these areas.

The GGNRA signage that informs visitors of the environmental work that's going on, and the alert to keep off those specific areas, shows everyone that we are a strong community working together to keep these areas beautiful for all. This is one reason why the Compliance Based Management strategy should be eliminated. It severely undermines the flow of communication between the public and the GGNRA, something that has been working effectively and can continue to get better. Ultimately, the Compliance Based Management strategy damages the collaborative relationship that makes the GGNRA a wonderful place.

Lastly, if the GGNRA is going to continue being one of California's-if not this nation's ideal recreational area, a new plan must be proposed that builds on what is already working so well for so many people. Since a new plan is not currently in place, Alternative A is the best plan. There are a huge number of dog owners in the Bay Area who depend on the GGNRA for off-leash dog recreation, and the number is only growing. Limiting their access to less than 1% not only makes the GGNRA a less desirable place to go, it diminishes the Bay Area as a whole as a desirable place to live. Dog owners would have one less reason to put up with the high cost of living if their wonderful places to recreate are taken away. Returning to the 1979 Pet Policy, which had been working so well for so many years, appears to be the best solution for our active outdoor community. I do hope you'll consider returning to that as a template going forward. Let us not forget that the

GGNRA's original mission, outlined in the legislation that created it, was "to provide for the maintenance of needed recreational open space."

Regards, Nina Lescher

Correspondence: Dear Superintendent Dean,

My name is Ellice Sperber, age 56. I am a retired American Sign Language Interpreter for the Deaf and Deaf-Blind. I have served on the Board of Directors of Recording for the Blind and Dyslexic and The International Dyslexia Association. I currently am a Trustee at Gateway High School in San Francisco, a Board member of Parents Education Network in San Francisco and on the Advisory Board of The International Dyslexia Association. I have lived in San Francisco for 33 years and have owned a home in Forest Hill for 25 years and a home in Pacific Heights for one year. I have had dogs since buying my home in Forest Hill 25 years ago - all of my dogs have been well-trained and well-behaved. A part of being a good dog guardian does include proper exercise for dogs, which includes off-leash exercise under voice control. I have spent many years walking daily at Fort Funston with my dogs under voice control, keeping them out of fenced areas (even as boundaries changed) and I always have cleaned up after them. Recently, we find ourselves walking at Crissy Field with more regularity than at Fort Funston - the exercise for the dog and myself is just too important and we have been so happy over the years to have access to these areas for our exercise and recreation.

I am very concerned with the GGNRA's Preferred Alternative plan as it severely limits and affects the off leash dog walking areas at both Crissy Field and at Fort Funston. The Preferred Alternative slashes off-leash areas by nearly 90% - including areas that have traditionally been off-leash, voice control areas - including Fort Funston and the East Beach at Crissy Field. The Preferred Alternative is too restrictive. There is no justification in the DEIS for major changes in access and upon that basis I oppose it. Concerns as outlined in the plan are overstated and based upon a set of "what-Us." The 1996 GGNRA study that specifically found and stated that dogs did not disturb the bank swallows was not even included in the DEIS. I would support a formalization of the 1979 Pet Policy with the addition of simple management tools such as better signs, education programs, and low-lying vegetative barriers at cliffs.

I also oppose the Compliance-Based Management Strategy in its entirety.

Any restrictions should be based on actual documented impacts from dogs. The CBMS will not require any evidence of impacts, just the mere fact of non-compliance and poses as a strategy to completely end off-leash areas in the GGNRA. This is no way to work together within an established community and culture.

As an urban dweller, I have lovingly visited the GGNRA on a regular basis with my children and my dogs. We have sought these lands for recreation - as the name GGNRA implies it is to be used. My children, now college-age, visit the GGNRA when they are home visiting with our dog. It is a part of their lives (as well as mine); it is an important part of our lifestyle. The city is a crowded place to live and we renew our bodies and minds by taking these walks. Our dogs also are well behaved as a result of getting proper exercise that only can be gotten off-leash, getting out and smelling the natural world, and socializing with other dogs.

The DEIS treats the GGNRA as if it is a pristine National Park - however - the GGNRA is an urban recreation area. I have made some of my closest friendships within the dog community at Fort Funston. Lasting friendships that have continued for years throughout the lives of many dogs, miscarriages, pregnancies, deaths and graduations. For me, the GGNRA provided a community that I could go to daily at the same time and walk with the same people (and our dogs). Every day, I had a community where I could share my struggles and be heard and listen to other's struggles and offer my support. This is what life should be like. The GGNRA areas in San Francisco are communities with a culture based upon a shared recreational activity - off-leash dog walking. This culture provides our community with places to exercise our dogs, while enhancing the social, physical, emotional and spiritual aspects of being human. The openness of the lands of the GGNRA offer what few city parks are able to - and the mass numbers of dogs and people who would need to use city parks if they were unable to utilize GGNRA lands would be unbearable.

For these reasons among others, I strongly oppose the Compliance-Based Management Strategy and the Preferred Alternative proposed in the DEIS. Let's find a better management plan and learn to share this 1% of GGNRA urban land more thoughtfully.

Respectfully, Ellice Sperber

Correspondence: Dear Superintendent Dean,

My name is Andrea Patterson. I have lived in San Francisco for over 30 years. While I have always loved the city I wasn't aware of how many beautiful places there were to go walking until 15 years ago when I got a dog. Despite a back problem that is so severe doctor's are amazed I'm walking at all have become an avid hiker. I hike all over the Bay Area. Many of my favorite spots are part of the GGNRA and in danger of being severely restricted: the Oakwood trail and Muir Beach in Marin, Mori Point, Crissy Field and Fort Funston. Having access to these places is a major reason I stay in San Francisco despite the huge expense of living here. During all this time I have not seen any evidence of dogs damaging the environment, harming wild life or threatening people. The DEIS claims all of the above but provides no evidence to support their claim. Speaking specifically of Fort Funston which I visit almost daily, I think it would be a good idea to alternate the closed off areas. This would allow heavily used areas to be restored while not impacting the amount of space needed to accommodate so many visitors.

Re Fort Funston: The preferred alternative off leash area is unsafe (bounded by the busy parking lot and dangerous cliffs) and far too restrictive for the number of dogs and people that frequent Fort Funston. As stated earlier I come to Fort Funston to walk, not to stand around. I can do that at any of the fenced in dog play areas in the city. Re: the 75% compliance that is mentioned in the DEIS. How will the 75% compliance be determined? This alternative is setting us up for failure.

San Francisco is known world wide for a being a city of tolerance. Fort Funston is a prime example of this. People of all ages, races and varied socio-economic backgrounds are out enjoying each other's company, most having the common bond of loving nature and dogs. This is a huge success. The GGNRA should be proud of it's accomplishments here. I hope the GGNRA will consider the devastating effect the restrictions would have on people using their RECREATION areas. I would like to express my full support for the "No action alternative".

Sincerely, Andrea Patterson

Correspondence Type: Letter
Correspondence: Dear Superintendent Dean,

I was born and raised in San Francisco, and I have chosen to make the Bay Area my lifetime home. Since the age of 12, I have always had dogs in my

life. The GGNRA is a central part of being a dog owner in the Bay Area. Being able to take my dog for a walk or a hike in the parklands is of great importance to me.

I am deeply saddened by the GGNRA's current proposal for the parks, as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) are not based upon sound science or long-term monitoring of site-specific conditions. As a responsible dog owner, I keep my dog under voice and sight control, clean up after him, and keep him out of restricted areas. It is important that areas like Crissy Field remain open for off leash dog walking access.

As a long-time volunteer in the parks and former employee of the Parks Conservancy, I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, but other options besides restricting dog-walking access should be considered first. For example, it is not clear where dogs are allowed. I think the GGNRA should provide better signage and create more environmental barriers where necessary, such as the vegetative barriers surrounding the tidal marsh at Crissy Field.

Over the past 10 years of regular visits to Crissy Field, I have seen very few incidents of dogs going beyond the fences that enclose the dunes or the marsh, and even fewer incidents of dog aggression. I have never seen a dog be aggressive to an adult or a child. With the many dogs that are there on weekdays, and the hundreds that are there on weekends, I think that is quite remarkable, and certainly does not justify the restrictions being put forth in the GGNRA's preferred alternative.

Please review the following problems with the proposal and revise the DEIS to correct these errors:

This DEIS and Plan doesn't recognize that environmental values include both recreation and nature. In many places, the DEIS treats the environment and recreation as opposing values, i.e., that recreation only harms natural resources. The document doesn't acknowledge that people care about both and that people with dogs are often also good stewards of our environment.

The draft plan has the effect of punishing many people because a very small number are uneducated, insensitive, or irresponsible and because the current signage of off leash areas is unclear. The reasonable response to this problem is to educate visitors, improve signage and help park visitors follow the rules and learn how to respect the environment, not to ban the rest of us with dogs from the GGNRA. I wish that the DEIS would include an

alternative along these lines.

The proposed "compliance-based" approach should be modified to create a baseline of current conditions, then measure impacts rather than compliance. It should include a robust public educational component and an objective, long-term monitoring program designed and carried out with the community. The GGNRA should develop partnerships with community, animal welfare, and conservation organizations to make this work. These partner groups could bring additional resources to limited federal resources. GGNRA should be a partner with the City of San Francisco and other communities, not an adversary.

I am also concerned that the DEIS doesn't take into account the potential effect of restricting off-leash dog walking on San Francisco's public parks, which could see a huge influx of dogs as a result. The GGNRA cannot do its planning without thinking of other neighboring recreation areas, such as the public parks, particularly in this time of limited resources.

The DEIS doesn't recognize that many areas of the GGNRA are located in or next to urban neighborhoods. The DEIS excludes the quality of the urban environment from its scope, saying it's not significant. The reality is that the GGNRA provides much needed open space in a major urban area. This omission is disconcerting because the fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) to serve the metropolitan Bay Area. The dynamic interrelationship between GGNRA and our neighborhoods is exactly the human environment that the EIS is required to study, but failed to do so.

The DEIS notes some studies and general tendencies of dogs to harm natural resources, but with few exceptions, there is little documented site-specific impacts to support the restrictions of the preferred alternatives. Further, there is insufficient documentation that considers other impacts - other park visitors that disturb and impair the natural resources, other wildlife, Mother Nature, boot camps, bicyclists, huge crowd attracting events such as Fleet Week, festivals and Walk-a-thons. The proposed broad limitations in the DEIS are without site-specific science that demonstrates that problems with the quality of GGNRA's natural resources are actually attributable to dogs and not to other factors.

The DEIS needs to provide full disclosure to the public and decision makers. If dog-related disturbances are having a significant negative effect on wildlife, for example, the DEIS needs to provide site-specific scientific evidence as documentation and undertake a scientific evaluation as to whether people or other factors are also causing or contributing to the problem noted. If they are, GGNRA needs to provide an analysis that considers whether people should also be restricted from these areas. We

need this documentation in order to comment meaningfully on the draft plan and DEIS. The science needs to be sound and the consequences need to be fully and fairly disclosed for everyone - so that an informed decision can be made.

The DEIS is biased against and does not take a hard look at the No Action alternative or variations on that alternative. There are many areas in the GGNRA where the existing 1979 Pet Policy has been working, and where sensitive species are not present and visitor conflicts do not occur or are very infrequent. In addition, the DEIS does not provide site-specific information that these areas are inappropriate for continued dog walking. I urge you to support Alternative A with individual consideration for any new lands, for the sake of the health and recreation not only of thousands of Bay Area residents and their canine companions, but for everyone who enjoys the GGNRA. Thank you for your time and consideration of the above information.

Sincereley, Morgan Cosby

Received: May,31,2011 00:00:00
Correspondence Type: Letter
Correspondence: Dear Superintendent Dean,

I have lived in the San Francisco Bay Area for more than 30 years. I consider myself to be a strong environmentalist, an animal (especially dog) entheuaiast and and educator. I am a member of the Association of Pet Dog Trainers, Mariu County Veterinary Association and the Prissy Field Dog Group. My past included being / serving as President for the Mariu County chapter of the National Organization for Women, President of the Bicycle Trails Council of Mariu and a member of the Mariu County Human Right Commission.

The human-animal bond is extremely important to me, especially that between my dog, Kara and I. I consider myself to be a very responsible dog guardian and frequently educate others, including my students and clients, both directly and by example. My dog, Kara as all my previous dogs, is under voice control. Both she and I respect others (human or animal) as well as sensitive areas.

Respectfully, I disagree with the GGNRA's current prefereed alternative for many reasons. I will not go into all of these here as that would be a very long letter. The GGNRA preferred alternative is without due cause overly

restrictive, and eliminated off-leash dog access in many areas of GGNRA.

The DEIS does not acknowledge the recreational values that need to be preserved for future generations. Phil Burton made clear that he wanted an urban park/area that would provide for the recreational needs of all user groups. As stated in the GGNRA mission statement, "The mission of the GGNRA is the preservation, unimpaired, of the natural and cultural resources, and scenic and recreational values, of the part for present and future generations to enjoy' Any significant limitation on recreational uses should be properly, carefully and objectively examined.

The EIS fails to provide long-term monitoring data that dog activities actually threaten GGNRA lands. The document needs to modify its conclusions based on scientific evidence. If there are indeed problems, be it with dogs and their people or other user groups, solutions such as educational programs and increased/better signage should be considered.

At the open meeting in April at Tam High, Mill Valley I introduced myself to you and many of your staff. As I did in the 1980s and 1990s around the mountain bike issue, I would be happy to help with educational efforts. All users need to be embraced and educated, not alienated and polarized from each other.

After research, consideration and reflection I strongly support Alternative A, the no action alternative. The DEIS is biased against and does not take a hard look at the no action alternative. There are many areas of GGNRA where existing 1979 Pet Policy has been working. I look forward to working with you and your staff on a fair and unbiased alternative.

Respectfully,

Angela DiMeglia, M.S.

| Correspondence: | My family and I agree that the lands and ecosystems inherited by us are our responsibility to protect. Not limiting human activities that harm is irresponsible. In the case of our Golden Gate National Park/Recreation Areas, that means limiting usage to prevent damage. Therefore, it is right and our responsibility to limit areas where people are allowed to let their dogs run off-leash. Legally re the National Park guidelines, this actually means NO off-leash dogs, | | | | |

San Francisco Bay Area citizens have in the past given dog guardians wide latitude in behavior--which a majority have consistently and horrifically abused. Just in the past few years we have caused the near extirpation of Snowy Plovers in the GGNRA, extirpated California quail in the Presidio, the near extirpation of foxes on the Presidio and on and on not even mentioning the erosion and destruction of native plants via dog digging and running. Observational surveys bear out that a majority percentage of the dog guardians (so-called in many instances) have abused the privilege given to them. It is now time to stop their irresponsible and egotistical behavior and say NO MORE,

I did not serve my country for 20 years in one of the areas in question (the Presidio of San Francisco) to allow our lands and ecosystems to be destroyed because we were afraid to take a stand. I wholeheartedly applaud our Park Service for recognizing the problem and solving it, at least partially; by their new laws restricting where people can take dogs off leash.

This has never been a dog problem. It is a homo sapien problem-- homo sapiens who egotistically and selfishly consider themselves more important than anything else and above responsibility to the commons. I would go so far as to say that their attitudinal and ego issues influence their behaviors to an extent that they are actually using their dogs as a means of manifesting their disdain for others and for our society--a form of projection in medical terms.

Having worked as a volunteer and being a fairly frequent park visitor, I have had many opportunities to observe people-with-dogs behavior. In fact, in the area where I volunteer I conducted a survey over several months in 2008, a survey in which visitor behavior with dogs was recorded, in this No off-leash area, over 60% of the dogs were off-leash. In fact, often for as long as 20 minutes the so-called "guardians" didn't even know where their dogs were. So much for the alleged "voice control"--does not work too well when the dog cannot even be seen! When the signs were pointed out to the visitors, about half the time the reaction was of either silence or angry outburst. Sometimes showing the people recent dog digging or explaining how dog behavior is so destructive was effective. This speaks to the simple ignorance of the public. The general public only sees dog romping; they do not in any way understand the ultimate negative effects upon ecosystems and the landscape. This shows an enormous void in the knowledge base or perceptual understanding of the general public--they do not know and cannot see. Many dog guardians really do want to be responsible, but have not the barest understanding what to do, not do.

To be effective now and in the long run, our Park Service must address the huge issue of public education which should go along with restrictions on

people letting their dogs run helter-skelter. Run "helter-skelter" they do, and this is a safety issue. In 2006, an elderly relative would no longer walk at Ocean Beach because he had been knocked down by a dog. We went to Golden Gate Park, but he was scared there too. We went to Crissy Field once, but the situation was even worse with dogs running loose all over. I, myself, was almost knocked down by a dog in a local park. Running dogs off-leash in leash-only areas is irresponsible and should be prosecuted as a crime.

Thank you, Park Service, for taking responsibility and limiting the opportunities for unknowing of proudly-irresponsible people to abuse/destroy out ecosystems and landscapes

Correspondence Type: Letter

Correspondence: A subsection of the aforementioned web site (Program Goals) discusses the goals of park monitoring: "Natural resource monitoring provides site-specific information needed to understand and identify change in complex, variable, and imperfectly understood natural systems and to determine whether observed changes are within natural levels of variability or may be indicators of unwanted human influences. Thus, monitoring provides a basis for understanding and identifying meaningful change in natural systems characterized by complexity, variability, and surprises. Monitoring data help to define the normal limits of natural variation in park resources and provide a basis for understanding observed changes; monitoring results may also be used to determine what constitutes impairment and to identify the need to initiate or change management practices."

Awareness/Training Programs

? Implement a dog voice-control awareness/training programs, in cooperation with organizations like the SPCA, to help minimize the few dog issues. Note that, if necessary, reasonable fees should be charged for the programs but there should also be options for low income individuals. b. Educate people on the rules regarding areas that allow dogs and what the rules are c. Create common etiquette and rules of the road for these more natural parks: i. Controlling voice control dogs to not allow unsolicited dog encounters with pedestrians, bikes, horses, leashed dogs ii. Not throwing objects off the trail to encourage fetch games that may damage vegetation iii. Not encouraging dogs to go off the trail iv. Preventing dogs from harassing wildlife or digging d. Training programs in cooperation with leading dog organizations v. Dog play/recall/trail training and awareness/rules vi. Dog desensitization/management for horse encounters

vii. Knowing what is appropriate recreation for their particular dog e. Encourage people to train for voice-control with their dogs at parks like Fort Funston, before attempting to hike under voice control on trails or high mixed use f. Educate and encourage disadvantaged groups to use their dogs to facilitate daily exercise, family activities, and community engagement and to also socialize, exercise, and train their dogs to make them healthier and safer for the community g. Use these forum to encourage sound stewardship and to encourage people with dogs to volunteer to improve the parks Protected Species/Natural Environment Non-Site Specific Suggestions & Comments

San Francisco Garter Snake

There is no evidence other than speculation that dogs have had or will have any impact on the San Francisco Garter Snake, particularly in comparison to other park activities such as the park service using vehicles for plant restoration or patrols or bicyclists. According to the US Fish & Game 5 year summary and evaluation report at http://ecos.fws.gov/docs/five_year_review/doc774.pdf , dogs are not mentioned nor listed as even a remote threat unlike cars and bicycles have been known to kill individuals. Real impacts were issues such as 1) loss of open spaces to construction, 2) loss of grasslands (due to stopping grazing and fire suppression that allows for denser vegetation growth), and 3) illegal specimen collection.

Based on the URS for San Mateo County, the SF Garter Snake has never even been documented at Sweeney Ridge, Milagra Ridge or Pedro Point and only in one location on Rancho Corral de Tierra. Just having suitable habitat is certainly not reasonable justification to even list as a potential issue and certainly not to rate as a minor adverse impact. While individuals exist at Mori Point, there is no evidence to list dog recreation as a minor adverse impact there either. Even if dogs were under voice control in these areas, there is no credible link between voice-controlled dogs and the garter snake, particularly in comparison to other common activities like the Park Service use of vehicles, water trucks on Sneath Lane, or bicycles.

California Red Legged Frog

There is no evidence other than speculation that dogs have had or will have any impact on the California Red Legged Frog population, particularly in comparison to other park activities such as the park service using vehicles for plant restoration on Mori Point or patrols or bicyclists. According to the US Fish & Game recovery plan, dogs are not a listed as a threat to the frog. The ponds are enclosed at Mori Point so it is only a rare anecdotal dog that enters the ponds and that is not likely to have any more than a negligible impact on the population at Mori Point. As for frogs on dispersed habitats,

the DEIS provides no evidence of dogs interacting with or harming any of the frogs in the GGNRA.

Based on the URS for San Mateo County, the California Red Legged Frog has never even been documented at areas of Sweeney Ridge, Milagra Ridge or Pedro Point that allow dog access and only in a few locations on Rancho Corral de Tierra. Just having suitable habitat is certainly not reasonable justification to even list as a potential issue and certainly not to rate as a minor adverse impact. While individuals exist at Mori Point, there is no evidence to list dog recreation as a moderate adverse impact there either particularly considering the ponds are enclosed. Even if dogs were under voice control in these areas, there is no credible link between voice-controlled dogs and the frogs, particularly in comparison to other common activities like the Park Service use of vehicles or bicycles.

Hicknian's potentilla - Federally and state endangered

There is no evidence other than speculation that the Park Service that dogs would prevent the establishment of this plant at these locations with the "no action" alternative. However, these plants do not exist in the park currently, and there is no evidence they ever existed in the park or that the Park Service would ever be successful in propagating these plants from Monterey County to these non-native locations in San Mateo County. It is disingenuous to include this plant in the DEIS at all since it is not native to the area, and it should be removed from both the Mori Point and the Pedro Point impact statements. Mission Blue Butterfly

There is no evidence other than speculation that decades of dog recreations has had or will have any impact on the Mission Blue Butterfly population. Dogs aren't listed as a threat on any on the US Fish & Game or GGNRA literature or the monitoring literature on the Mission Blue Butterflies such as the Mission Blue Butterfly Monitoring in the Golden Gate National Recreation Area by Susie Bennett on the sfnp.org website. The butterflies decline at GGNRA sites is linked a fungal pathogen that killed 80% of the host plant and then it could not be re-established because of lack of natural disturbances including elk grazing and grass fires. The overall population decline is due to habitat lost to development not due to dog recreation.

There is no credible justification for rating dog recreation as Minor adverse impact at Sweeney Ridge or Milagra, particularly considering that 1) dogs are not allow on Notch Trail where the host plants exist on Sweeney Ridge and 2) there is no evidence that even off-road travel by a dog would harm the plants. Even if trampling existed, the DEIS does not document the extent and if it does exist it is mostly likely due to hikers or Park Service activities not dogs.

The same is true for all the DEIS rating above negligible. Just because the Mission Blue Butterfly exists at these sites does not mean there is any impact from dogs. If the park service wants to be extra cautious the Park Service should install simple cable barrier which have been quite effective in keeping people and dogs on the path. However, the lupines on Milagra Ridge seem the most prolific where there has been some soil disturbance, probably by hikers. From talking with a ranger testing the lupines reaction to soil disturbances at Milagra Ridge, the only real impact from dogs would be if the dog was actively digging up the adult lupines and that would take deliberate intent for an owner to allow and the increased regulations are unlikely to stop someone that wants to deliberately destroy the plants. There is not even anecdotal evidence that dogs have dug or impacted the lupine population or the butterfly. Unless scientifically justified, these ratings should all be changed to negligible for the "no action" alternative and should not be used as a justification for reducing or banning dog recreation.

Alta Trail, Orchard Fire Road and Pacheco Fire Road-Moderate Fort Baker-Minor Marin Headlands Trails-Moderate Milagra Ridge-Minor Oakwood Valley-Moderate Sweeney Ridge-Minor

Soil/Vegetation

There is no credible evidence that dogs are causing more than negligible measurable damages to the soil/vegetation at any site in San Mateo County that has a significant impact. Based on my personal observations, the only social trails and erosion are at Mori Point from people going off trail, up to the scenic top. I've never even seen dogs on the social trails at the site, and they would only go up those trails if accompanied by a person. I've only seen people climbing to the top of the hill, and there are few signs to deter people from going up those social trails nor a Park Service trail to the peak. The existence of these social trails, straight up the hill, gives the appearance of being the trail to the scenic top.

The Park Service has provided no scientific evidence that dog urine or feces is impacting the soil at any of these sites or that compaction is occurring, and there is no visible evidence that isn't attributable to just people alone. Certainly, the vegetation is healthy except for some of the native plant projects on the site that seem to be lack for rain fall. Certainly, Sweeney and Milagra show no signs of dogs causing any visible impact on the soil or vegetation. At Milagra, I mainly see trampling from volunteers/rangers marking native plants occurrences. The DEIS provides no scientific measurements and no evidence that current dog activity will impact soil or vegetation incrementally and impact future generations enjoyment of the park. In addition, I requested evidence supporting the impacts in a FOIA and the Park Service did not provide any evidence. The park service can address any perceived problems with the native plant projects by using barriers or

plant guards that would be required for a wilderness area. In the wilderness, animals such as wild canine and deer would destroy the native plant restoration seedlings immediately. The Park Service should use similar techniques on the Mori Point areas that are immediately adjacent to the paths, plus supplement with adequate water and nutrients. Certainly the native plants appear to be healthier this year perhaps due to the increased rainfall.

All adverse impacts for the "No Action Alternative" should be changed to "Negligible" unless there is actual measurable evidence that the dogs have had impacts on the soil or vegetation over the decades and those impacts are incremental more than negligible wear and tear that is not accumulating. In addition, dogs stay near the trail beds and at most an estimated impact of 0.5% of the soil and vegetation at any of the sites. Certainly dogs are relatively small, distribute their weight on four paws, and don't create new social trails along the San Mateo trails system due to the random and infrequent nature of any off-trail activity. If the Park Service, speculates that dog recreation is creating a greater impact, the Park Service should conduct scientific studies to justify that position before claiming more than negligible impacts.

It may seem trite but Grizzly Bears once roamed these lands and one 350 pound Grizzly Bear probably had more of an impact on vegetation and soil than all of the dogs off the trail beds in San Mateo County. Vegetation and soil can easily withstand a few relatively small, four pawed dogs randomly off the trail bed for short periods of time. However, most dogs stay on the trails and I never see owners encouraging dogs to go off the trail, particularly considering that poison oak is an issue at most sites and people are actively hiking or jogging. The Park Service is creating imaginary impacts and showing little understanding of significant impacts on vegetation or soil that are truly detrimental of nature. All impacts in the DEIS related to soil and vegetation should be changed to negligible for San Mateo County unless compelling scientific evidence supports a different rating.

Coastal Wildlife

The DEIS provides no GGNRA measurements showing any impact of dog recreation and according to the response to my FOIA request there have been no wildlife inventories or monitoring since the 1990s. Obviously, the Park Service is not overly concerned that wildlife is declining in these areas. However, I know that there are some inventories and monitoring (e.g., raptors, Mission Blue Butterfly, Northern Spotted Owl, etc.) that the Park Service did not provide, which brings into question the credibility of the Park Service. The Park Service provided no evidence of even a single wildlife disturbance by a dog in San Mateo County from 2001 to 2010. Even though I see some wildlife flushing occur just like with any human activity (e.g., ranger patrols, hiking, bicycling, equestrian, etc.), there is no evidence that these inconsequential and rare disturbances have any more than insignificant impact on the wildlife populations in these parks particularly in comparison to other visitors without dogs. Rabbits, ground squirrels, and birds are the most common animals along the trail bed and they flush off the trail or beach when a person, horse, bicycle, or vehicle passes. There is no scientific evidence that provides more than speculative evidence that dogs on-leash or off-leash have any significant impact on these wildlife above that of a hiker without a dog. In almost 50 years of living on a farm and regularly visiting parks, I've never seen a dog catch wildlife but I'm sure it happens on extremely rare occasions. Even if a dog once in a while catches a bird somewhere in the GGNRA, that is inconsequential in comparison to other activities that the Park Service sanctions such as fishing and hunting and inconsequential in comparison to the 80,000 acres and natural attrition and wildlife interactions.

Any disturbances are further minimized in the coastal scrub/chaparral areas by the denseness of the vegetation and the poison oak, which encourages owners to keep their dogs on the trail bed. All DEIS impact statements and justifications should be modified to indicate negligible impacts on from dog

recreation on wildlife unless studies in the GGNRA provide evidence that adverse effects are more than speculative and negligible for these recreation areas.

Excerpts from the San Francisco Garter Snake S-Year Review 2006, US Fish & Wildlife Service http://ecos.iws.gov/docs/fiye_year_review/doc774.pdf

Pg 17

Increased growth in the human population has also put greater pressure on land managers to provide recreational opportunities. Most recreational activities like hiking and jogging are not a threat to the SFGS. However, off-road vehicles (OHVs) and bicycle activity at the West of Bayshore site have killed snakes and degraded the habitat (Larsen 1994). OHVs have been used at Mori Point as well, which has led to the erosion and degradation of upland habitat for the species (D. Fong, pers. comm.). Unfortunately, efforts to limit OHV trespass on protected public and private land is difficult without adequate enforcement and regulation.

Pg 20 The amount of illegal collection of the SFGS and its effect on the species is not clear. Several factors are believed to have contributed to a decline of these illegal activities at the West of Bayshore site in recent years. However, employees with the California State Parks continue to believe that unauthorized take remains a threat to the species (P. Keel pers. comm., J Kerbavaz pers. comm.).

Pg 25 One of the greatest threats to the SFGS is the reduction of habitat quality resulting from the elimination of disturbance events throughout the Peninsula. Primarily, this is based on changes in management that encourage seral ecosystems. Other factors affecting the continued existence of SFGS include the increased presence of invasive species which can compete for resources with SFGS or hunt individual SFGS directly. Finally, lower level threats include reservoir topology and hydrology, vehicular strikes, hybridization with the RSGS, and interspecific competition with congeners (other *Thamnophis* species and subspecies). However, due to a continuing lack of accurate population estimates, the overall impacts of these events on the species remain unknown.

The persistence of seral ecosystems in protected regions of the Peninsula threatens the SFGS (H. McQuillen, pers. comm.; S. Larsen, pers. comm.). Dynamic grass-dominated uplands provide for, and are potentially maintained by, burrowing rodents (Stromberg and Griffin 1996) which create tunnel systems used by SFGS for hibernacula during the winter

months (Larsen 1994, McGinnis et. al. 1987). The loss in recent years of ecological disturbance throughout the majority of San Mateo County has made it possible for brush species to dominate former grasslands, potentially precluding burrowing animals. Fire suppression has allowed for the domination of these woody species across the coastal landscape, limiting the extent of grasslands which were likely important movement corridors for populations of SFCTS in their migrations between aquatic habitats (D. Hankins, in litt. 2006). Additionally, the loss of traditional grazing practices on public lands has allowed for the accumulation of dense brush-dominated canopies across the remaining grasslands which may decrease habitat suitability for the Several State and Federal laws currently protect the SFGS and its habitat. Despite these protections illegal collection may be continuing in California state parks and other easily accessed areas. To minimize these unauthorized collections, the Service should encourage additional law enforcement at sensitive sites.

Example of Enabling Legislation Allowing Hunting - A significant wildlife disturbance <http://www.nps.gov/chic/planyourvisit/hunting.htm>

Hunting is a permitted use under the enabling legislation for Chickasaw National Recreation Area (P.L. 94-235, '3). The legislation also provides for the designation of zones and periods when no hunting is permitted for reasons of public safety, administration, wildlife management, or public use and enjoyment.

A variety of game including quail, turkey, squirrel, rabbit, dove, ducks, geese, and deer may be found here. However, due to the small size of the area and heavy hunting pressure, success is limited. Trapping is prohibited. All deer and turkey taken within the Chickasaw National Recreation Area must be checked-in at the nearest certified Oklahoma Game Check Station. . >60 National Park Service Ran Parks Allow Hunting <http://www.nps.gov/findapark/index.htm>

Highlights of Relevant Personal Background ? Lived in the Bay Area for 17 years and am an avid outdoors and nature lover that has frequented many National Parks, National Forests, and most of the parks in the Bay Area. Before Ella, a dog, joined the family, I visited National Park Service parks including Yosemite, Yellowstone/Grand Tetons, Lassen, Glacier, Grand Canyon, Redwood, Point Reyes, Pinnacles, Zion, Bryce, Death Valley, Canyonlands, Channel Islands, Denali, Dinosaur, Sequoia/Kings Canyon, Mesa Verde, Muir Woods, Natural Bridge, Padre Island, Rocky Mountain, and SF Maritime. Since Ella joined the family, we have not been to a park, other than the GGNRA, that is managed by the National Park Service because dogs are not allowed beyond the main park corridor (e.g. the campgrounds and parking lot and superficial trails). Not being able to visit the National Parks is one of the hardest things about having a dog as a part

of the family. ? Frequent the GGNRA dog-friendly sites almost daily for 5 years since Ella, an Aussie, joined our family with most GGNRA visits to Sweeney Ridge, Mori Point, Fort Funston, and Milagra Ridge. Before getting Ella, Sweeney Ridge was the only one of these GGNRA sites that I had visited more than once in 12 years in the Bay Area. Instead we tried to always go to new open spaces during our weekend hikes with Sweeney Ridge and Sawyer Camp / San Andreas / Canada Road trails being standard hikes/runs/bike that we did 4 or 5 times a month. We also had gym memberships which we no longer have since we can't exercise Ella and go to the gym. We find hiking so much more rewarding with Ella; we interact with so many more people because having a dog, like having a small child, facilitates social interactions that rarely happened without a dog ? Spent the past four months canvassing the GGNRA and other dog-friendly locations talking to people with dogs and raising awareness of the GGNRA plan. This included many discussions regarding the experiences and needs of people with dogs ? Co-author of the SaveOffLeashDogs Call to Action weekly email regarding the GGNRA dog management plan and active member of the SaveOffLeash coalition with primary responsibility for grass roots organizing for San Mateo County, SFDog, and Ocean Beach Dog ? Member of the Peninsula Australian Shepherd Club, the Australian Shepherd Club of America, Ace Dog Sports, and the Bay Team (an agility organization) ? Over 20 years of experience as an auditor in public accounting firms and corporations and a Masters in Accounting Information Systems and a Bachelors in Agricultural Economics/Accounting ? Graduate of the SF SPCA Dog Training Academy, a six week intensive program taught by Dr. Jean Donaldson, a nationally recognized dog behaviorist ? SFSPCA volunteer trainer responsible for addressing more significant behavioral issues such as reactivity, fear, rude behaviors, and puppy socialization ? Grew up on a farm with a virtual zoo of animals related to this plan including dogs, horses, mules, deer, quail, geese, and ducks and in a rural areas with significant wildlife populations ? Read the 2200 Page DEIS and visited all but 3 of the 21 sites included in the plan plus visited the new lands at Rancho Corral de Tierra in Montara ? Analyzed the 2001 to 2010 GGNRA Law Enforcement Access data headers and the 2007 to 2008 pet-related cases in the PDFs ? Reviewed the available GGNRA inventories and monitoring reports provided by the GGNRA related to a Freedom of Information Act request ? Rely on the GGNRA for daily walks to help prevent morbid obesity, diabetes, heart disease, and breast cancer , which is prevalent in my family as well as stress relief ? Rely on GGNRA to responsibly care for Ella, our dog, and for ensuring that she is a healthy and safe dog for the community and for those visiting our home ? Committed environmental advocate for addressing real issues that make the world a healthier and happier place for all our interconnected beings. Member of the Sierra Club

Correspondence Letter

Type:

Correspondence: Dear Superintendent Dean:

I had not realized, at the SFSU open house, that it was you who spoke with me as I entered. Having seen your picture in the Chronicle, I now appreciate even more the openness and graciousness with which you treated me. Thank you for taking that approach to this sensitive issue.

I am a parent. Our family has been introduced to the GGNRA because, about 16 months ago, we took ownership of a beautiful, smart, playful, and energetic Australian shepherd puppy. Prior to that, we rarely went to Crissy Field and, in 16 years, had visited Ft. Funston twice. Now, we visit Ft. Funston at least twice each weekend, sometime three or four times and, during the summer, multiple times during the week.

Because we have a dog, we have begun to enjoy the GGNRA (even areas with no off-leash access like Sweeney Ridge). We urge you to protect the access dogs have in Funston, Ocean Beach, and Lands End. 'There should be no net reduction in those areas. I don't see how our family's recreation ' or that of the many other users we meet there ' can be served by further limiting dog access.

I believe that you serve the city, the peninsula, and much of the greater bay area by continuing to maintain the current freedom that dogs and owners have in those parks (and would make things even better for all by enforcing the restrictions at Ocean Beach). I understand that the challenges at Crissy Field are complicated and wish you the best in resolving them.

I do believe there are things we could do to make things work better for the breadth of GGNRA visitors and do so without reducing access. Here are some suggestions:

? Offer special licensing for off-leash access. I understand that having dogs off-leash creates unique demands for the National Park Service. I am looking for ways to help you deal with them. One way to help fund the extra training, maintenance, and effort it puts on your organization is to have dog owners like me pay for it. I would happily pay a subscription fee to let my dog play off leash at Funston.

? Require special training for off-leash dogs. At the listening session, I heard horse riders share concerns about dogs who bark at horses and owners who don't deal with it. Similarly, dog owners with well trained dogs repeatedly have expressed concerns about untrained or the (extremely few) overly

aggressive dogs. Why not insist dogs pass an approved certification program, showing that they are trained to deal with the complications presented in places like Funston. Owners of misbehaving dogs would be either fined for not going through the process or be required to have their dogs recertified before again being allowed to play off leash. This would benefit owners, dogs, GGNRA, and all other users.

? Create a fund for supporting dogs in the GGNRA. I tried to donate money, a substantial amount for me, to the Golden Gate Conservancy to help deal with the impact of dogs. They have funds for bicycling and for hiking trails. With all the hubub over dogs, I thought they would want to help you guys deal with that, too. No go. They couldn't take the money and assure me that it would be directed in ways that reduce clog impact on your organization_ With all of the bay area dog owners who LOVE Funston, Crissy Field, and the fun their dogs, my bet is that we could help the GGNRA face many of the challenges effectively. I know this isn't your turf. Still, I would happily volunteer to help get it going. I know that the GGNRA is trying to protect the parks for all of its visitors and for future visitors, too. But, Funston and sections of the other parks have a special role in the recreation of a large number of bay area residents. I think we can find a way to support the breadth of interests while protecting the relatively small areas that dogs and their families have for off-leash recreation. Other changes my family could easily support:

? Enforce the rules that exist. If dogs are not supposed to be off-leash on. Ocean Beach, fine owners who let their dogs play that way. It seems to me that many of the concerns expressed by non-owners comes from not being able to get away from dogs. Enforcing those rules will lead to greater adherence to them and less complaining overall.

e Arrange access in Crissy Field and The Presidio so there is a net-zero reduction in off-leash space. In neighborhood. SF parks, I have had dogs steal food from my toddler or trample on my picnic. I understand the frustration that causes in a multi-use space like Crissy. If you choose to reduce the space for off-leash clogs, move it somewhere else which is less multi-use, like into the nearby Presidio. There are wonderful areas there which are not nearly as heavily trafficked.

o Replace post/bam fences with others that will keep dogs out. At Funston, I rarely see dogs in the areas designated for wildlife and plant protection. But, the few which do make it in seem to have become a hot button, Just putting fences up which dogs cannot walk through will address this.

I have lived in many cities. Funston is the most successful urban park I have seen. It receives gobs of love and care and the greatest commitment from those who go there, despite its remote location and questionable weather.

Dog owners join the monthly clean up efforts and routinely pick up the messes left by others in their community. They visit in any weather. The joy per acre is higher there than at any park I have visited. The effect of restricting dogs in the preferred option is so great that it will, I believe, slash the number of visitors. The preferred option Nv 1 1 result in less people enjoying Funston and, consequently, hurt the mission of the GGNRA. I recommend we find ways to protect the access dogs have their while reducing the burden on the NPS. I would be happy to help retain that success.

Gary Beberman. San ancisco, CA 94114

Correspondence Type: Letter

Correspondence: Dear Superintendent Dean,

I am writing as a concerned citizen regarding the DEIS. I am involved in the Welfare Commission in SF. Another Commissioner and I attended the subcommittee hearing a few weeks ago in which Supervisor Weiner's resolution was adopted that SF reject to the preferred alternative. We gave a brief presentation showing the underused SF dogs parks rejecting claims that restricting NPS lands would lead to overcrowding.

I strongly encourage you to improve the plan by including the following steps:

1. All Regulated off-leash areas" should be fenced, as much as is reasonable and doable considering wildlife and habitats. Fences work well in DPA in SF parks. Dog walkers respect the fences. They provide more security for all park users and create clearer boundaries so dog walkers comply with park rules.
2. Commercial dog-walking should not be permitted in the GGNRA. This is a commercial activity in the park and the NPS cannot legally permit it.
3. Under the current plan, nearly every trail in SF is open to at least on-leash dogs. No trails are available for people who prefer to enjoy the outdoors without interacting with dogs. Some trails in SF should be entirely closed to dogs.
4. The NPS has tried to comply with the process that it is charged with that is to maintain safe and accessible access to all users and to protect the natural and cultural resources for future generations. Dog groups motivate

their members to speak up about their "rights" to continue walking their dogs as they please based on baseless exaggerated statistics created by their groups. They also believe, by numbers, they will get their way as they did with the Supervisors. Environmental groups have not been nearly as vocal and impassioned.

5. The dog groups have defined what is being proposed as being extreme and actually harmful to the well being of dogs by making ridiculous claims that loss of areas to run will lead to behavior problems, increased surrenders to shelters and, eventually, euthanasia. SF needs to use its own resources and not that Of the Federal government to exercise their citizen's dogs. Less than half of the dogs at Fort Funston are from SF based on petitioning I did there on a political campaign, Prop 2.

6. I have not heard mention of the A.D.A., in the DEIS. Off-leash dogs impact disabled people's ability to enjoy the Parks as well.

Thank you for this opportunity to comment on the Dog Management Plan, I support and encourage you to adopt the measures that will protect the National Park's resources for everyone, not just dogs and their owners. They will quickly get used to the changes and the Parks will be the better for it.
Thank yOu, Philip Bernie

Correspondence Type: Letter

Correspondence: I am a senior, a San Franciscan, a dog guardian, a hiker, an environmentalist, a five-year docent at the Academy of Sciences, and a yearly financial contributor to many environmental organizations, including the Audubon Society. I AM COMPLETELY OPPOSED TO ANY CHANGES IN RULES FOR DOGS IN THE GGNRA. LET DOGS RUN OFF -LEASH IN ALL THE AREAS WHERE THEY ARE CURRENTLY ALLOWED.

I love taking my 10 112 year old well-socialized 85-pound dog to Fort Funston. We both enjoy the views, the feeling of the salt air, the exercise and the camaraderie with both humans and canines at the beach. To me, there is no more beautiful sight in the world than healthy, happy dogs playing in a beautiful environment.

Like many dogs, mine is better behaved off the leash than she is on the leash. This is a well-documented phenomenon. At Fort Funston when she is off-leash, she is usually attached to my leg by invisible velcro, unless she

has gone off to sniff a tree to catch up on the news.

My dog adores children and will let a child do anything to her. As a small child, I was bitten by a dog, because no one told me not to go up to strange dogs and demonstrate my affection by hugging them. Whenever I have my dog, I use her to teach children how to meet a dog. Both the children and their parents are delighted, and children who had been a little fearful of a big dog smile with glee.

I always take poop bags with me and always clean up after my dog. I carry an extra bag in case someone has forgotten theirs. Dog guardians and professional dog walkers are good stewards of the land. They not only pick up after their own dogs, but after other people's dogs and after inconsiderate and thoughtless humans. The detritus I see at Fort Funston and other parts of the GGNRA is not biological dog waste, but the waste left by humans, the kind that is nonbiodegradable and potentially very dangerous: plastic pop bottles; beer cans; used condoms; used needles; etc. The biggest impact on any land is not dogs, but homo sapiens, when a

"Dog" people look out for one another, for their dogs, and for any human who might be hurt, scared, or lost. Any time there is a negative discussion among dogs, everyone rushes in to help and the altercation ends.

I can't imagine anyone using Fort Funston for anything but the recreational uses it currently has: dog walking, bicycling, and hang gliding. It is very often cold and foggy, with sand swirling into one's nose and eyes. The dunes are too unforgiving. This is not a place where one would choose to picnic or to play softball, regardless of whether or not there were dogs here. Any argument to the contrary is simply a straw man.

There would be a lot fewer people in all areas of the GGNRA if dogs had to be on leashes, except in very limited areas. Like many others, I would be very reluctant to walk in Fort Funston or other more isolated parts of the GGNRA if there were no dogs and dog people there.

Like Buena Vista Park in San Francisco they would become havens for illicit public sex and drug dealing, with its concomitant violence. Dogs keep us safe. Thugs don't want to be in areas where dogs run free, because dogs sense their malicious intent and protect not only their individual people, but all others peacefully walking in the park. I personally witnessed this in a San Francisco dog park when what turned out to be a very strange man entered the park. Without our realizing it, an Australian Shepherd herded the dogs and people into a circle. Then a normally sweet and placid German Shepherd planted himself in front of the "herd" and barked. The man left.

These are my personal reasons for wanting things to stay as they are. There

are many fallacies, poor methodology, and lack of evidence in your document. (at least in the Executive Summary, since I couldn't bring myself to read any further.)

1. AGE DISCRIMINATION AND VIOLATION OF ADA I am 69 years old and had knee surgery 10 years ago. It is difficult, if not impossible, for me to go down to the beach and then back up again. Therefore, I could not walk my dog off-leash in Fort Funston under the proposed plan. For me and those similarly affected, this is both age discrimination and a violation under the Americans With Disabilities Act. ADA requires that the entity involved do what is reasonable to mitigate the barrier. There is a very simple answer at Fort Funston: allow all people, regardless of age or disability to walk their dogs off-leash on the paths above the beach.

Even if the Federal Government is not covered under Federal Law, what a public relations nightmare. Seniors can be very cranky if we are abused and we have the time, ability, and desire to publicize a public wrong. I believe that there is already a class action lawsuit on the basis of disability pending. You can thwart it now, by not changing anything.

2. FEAR OF DOGS "Since the 1990s, the San Francisco Bay Area population and overall use of GGNRA park sites have increased, as have the number of private and commercial dog walkers. At the same time, the number of conflicts between park users with and without [ita!. Author's] dogs began to rise, as did the fear of dogs and dog bites and attacks." (p.iii) This trope is repeated many times within the document, along with the argument that San Francisco is a diverse community with different cultures. My answers are:

a. There is no evidence.

b. Fear is not an event. As I noted above, people are often afraid because they have never been socialized to dogs, and don't understand them. The way to overcome such fear is to have good encounters with dogs.

c. I am fearful of boys and young men playing with balls. I grew up in the Midwest and was hit in the head with snowballs containing ice. I am constantly afraid I will be hit. Young ball players are not supervised. I am also afraid of congregations of drunken high school and college students. Much of the crime in the country is committed by young men of that age. But I do not argue that these activities and people should be banned because of my fear. The argument that there is a diverse population is politically correct, but specious. This is still a country based on Western European beliefs and culture. (For example, there is now a move to ban shark fin soup, because it is cruel to the shark, although people of many cultures find it a delicacy.) There are parts of the world where cows wander the streets

because of religious views. We would not permit that here. The fact that someone's country of origin does not value dogs should not affect American policy, any more than the low regard that many countries have of women should affect American policy and law.

d. The more people who use a facility the more interactions, both good and bad, there will be, as you indicate above.

3. PURPOSE OF THE GGNRA "The purpose of the GGNRA is to offer national park experiences to a large and urban population while preserving and interpreting its outstanding natural, historic, scenic, and recreational values." (p. 5)

a. You have not proven that off-leash dog walking is inconsistent with this mission statement. In fact, there rarely are any other people in the park other than those walking dogs, bicycling, flying kites, or hang gliding.

b. Those of us who are guardians to dogs are a large percentage of this urban population. Our chosen recreational activity is walking with our dogs offleash. Therefore, since you are so concerned with providing access to all demographics of the population, logically, the rules must provide for our recreation, as well as that of others who choose to recreate in another fashion.

4. TELEPHONE SURVEY AND INFORMATION DERIVED FROM IT
As reported in the executive summary (p. 9 ff.), your telephone survey of 400 households in Alameda, Marin, San Francisco, and San Mateo counties is seriously flawed:

a. Too small a sample: If we assume that there are approximately four million people in those counties, then the sample number represents .0001 of the population, far too small a sample from which to draw conclusions.

b. There is no mention of criteria for inclusion in the sample. It is too small a sample to use simply random selection.

c. There is no mention of the margin of error. It sounds as though the questions were slanted to elicit the response that you wanted, i.e, that people were opposed to off-leash dog walking. Was there a pre-test to ensure that you were not contaminating the sample. All who design and employer surveys need to be aware of Heisinger's theory.

5. PROTECTION OF NATIVE SPECIES 'a. The snowy plover is an endangered species. However, it does not nest throughout the GGNRA. Specifically, it does not nest anywhere in the sand dunes of Fort Funston. Your solution is illogical. By forcing visitors who want to walk their dogs

off-leash to do so at the shoreline, by your own assessment, you are endangering the very shore birds you want to protect. If the dogs could be walked off-leash on the path around the cliffs, there would be practically no shore birds to disturb.

b. You are also concerned with predation. However, you cite no specific evidence to show that dogs have anything to do with killing or disturbing the few bird species other than corvidae or raptors live on the dunes above Ft. Funston.

c. The only predation I know of comes from raptors and corvidae. This is part of nature. The disturbing interaction I see on the paths above Fort Funston is the corvidae teasing dogs, sometimes even luring them down the cliffs.

d. In addition, most people who love dogs also love birds and they are the first people to call for help when a bird or other animal is in distress.

e. If you are concerned about habit degradation, look to people. Children adore chasing birds and aren't stopped by parents. Adolescent or young men find are oblivious to their environment and find chasing helpless animals entertaining. Besides, hunting is allowed in National Parks. This is considered healthy recreation. Its sole purpose is to stalk and kill defenseless animals, including birds. Why is hunting not detrimental to birds when there is a direct correlation between hunting and death of native species?

f. You also mention on P. 16 that [reos swallows on the coastal bluffs of Fort Funston]. "Park staff have observed dogs in the 12-acre Habitat Protection closed to Public Access and on many occasions, dogs and humans [italics mine] were observed within the Habitat Protection Area." How, then, can you attribute any degradation to the flora and fauna to the dogs when it is obvious from your own observation that humans disturb the protected area? Also, how many dogs on how many occasions. You cite no real evidence that the very presence of dogs causes harm to the cliff swallows. This is one of many instances of the logical fallacy of "Post hoc; ergo propter hoc" contained in this document.

6. DANGERS OF DOG WASTE The EIS frequently mentions dog waste and the diseases that it can potentially carry.

a. At least one part of a National Park, the Five Brooks section of Point Reyes, permits horses and they produce a lot more and larger waste than dogs. No one picks it up and the National Park Service is not concerned about possible diseases it may carry.

b. Children play in the water at Crissy Field and along Ocean Beach. In

swimming pools, children are not allowed in the water while they are wearing diapers, but there is no such restriction on the waters of the Bay. (Even so, there is no real protection; I was at a deluxe hotel in Hawaii where they closed the pool because a child had had a bowel movement in the pool. At least, they quarantined and treated it.) I have seen small children, encouraged by parents, relieve themselves in the water at Crissy Field. No one is concerned that this contaminates the water, both for other humans and for other animals that share the same water. And diseases carried by humans are far more likely to affect humans than diseases carried by dogs.

c. The San Francisco Chronicle of May 26, 2011 has carries an article by Peter Fimrite entitled "Where Not to Go in the Water at Bay Beaches. The article condenses the findings by the environmental group Heal the Bay at the 68 beaches it monitored in San Francisco, San Mateo, Alameda, Contra Costa, and Marin Counties. Ten beaches were labeled "best, including Ocean Beach at both Balboa and Sloat Blvd, where off leash dogs are allowed. Among the most contaminated was Baker Beach, (part of the GGNRA) where off leash dogs are not allowed. If one accepts the methodology and conclusions of the report, then the logical deduction is that dogs and their waste do not affect the overall water quality at a beach!

7. PROTECTION AGAINST NON-NATIVE PLANTS The EIS expresses concern that dogs can carry rare and exotic seeds (page 15)

a. Humans can also carry seeds or parts of plants. That is why automobiles entering California are stopped and screened for agricultural products and why all people entering the United States must declare any biological material they are carrying and why they and their bags can be searched by the Department of Agriculture. That is also why visitors leaving or entering the Rainforest at the Academy of Sciences must undergo decontamination.

8. NOISE-Concern that the sounds of barking dogs upsets people's wilderness experience.

a. The GGNRA parks that are within urban San Francisco are not really wilderness. The sounds of traffic, gun practice, electronic devices, and other nonwilderness sounds make this a specious argument.

b. To many, barking can't possibly be more offensive than the sounds of people yelling and screaming in the GGNRA or playing awful music at earsplitting volume. Young people today have no sense of personal space or privacy. Wherever they can get reception, they are on their phones, subjecting all to the intimate details of their lives.

c. I have been deep into the woods at Point Reyes, listening only to the birds and the sounds of my own footsteps when my ears were assaulted by people

whose only means of communication is screaming. If it's wrong for dogs to make noise, it's much worse for people, who have the capacity to know better

9.EROSION OF SAND DUNES On the western edge of San Francisco, there is little that dogs can do that could possibly compete with the forces of nature, which constantly erode and resculpt the sand dunes. One can see examples of this all along the beach in places where there are no dogs. It is part of the cycle of life and this erosion happens all over the world. It is because of erosion that paleontologists are able to find ancient fossils. It has always happened and it always will happen. Blaming erosion on dogs demonstrates either an ignorance of geology or a bias.

10. IMPACT OF RESTRICTIONS ON OFF-LEASH DOG WALKING ON SAN FRANCISCO AND SUBURBAN DOG PARKS "Because the San Francisco Bay Area is so urbanized, dog owners may have only minimal options for exercising their dogs outdoors." (17) You recognize the lack of good alternatives in your own report. The GGNRA is not like other National Parks. It is in the middle of a dense urban area. If people could not walk their dogs off-leash in the GGNRA, the pressure on city parks would be immense. Problems between dogs often result from overcrowding in enclosed spaces, just as they do with humans and other animals.

a. On the day of the Japanese tsunami when all beaches were closed as a precautionary measure, the increased use of San Francisco City dog parks was well documented. For all of these reasons, I again urge you to leave off-leash dog walking as it currently is.

Sincerely, Linda Blondis

Correspondence Type: Letter
Correspondence: Dear Superintendent Dean,

My name is Diana Helander. I have lived in San Francisco for over 20 years, and have owned and lived in the Western Addition, Duboce Park, and now in Lower Nob Hill. Throughout much of this time, I've been a dog owner, and have had several rescued, well behaved and trained dogs who have always been under voice control and in my sight when walking them off leash. Currently, my dog visits Fort Funston and Crissy Field 4-5 times every week. I always clean up after him, and always prevent him from entering restricted areas.

With the assistance of appropriate (and expanded) signage at both Fort Funston and Crissy Field, I believe every dog owner can be a responsible visitor to the GGNRA sites, and given the chance, the majority already are. On my walks with my dog, I see responsible owners picking up after their dogs, and making sure their dogs are well behaved. It's also wonderful to have the chance to socialize with other dog owners, and I'm frequently asked by children if they can pet my dog (a friendly beagle). Their delight when interacting with him is palpable.

I'm opposed to the GGNRA's preferred alternative plan in that it severely limits and affects the off-leash dog walking area at Fort Funston and Crissy Field. The proposed restrictions ' particularly at Fort Funston ' have the potential to create a safety issue for dogs and people, and I believe DEIS has not adequately analyzed the impact of restricting the off-leash area at Fort Funston. Introducing a non-compliance measure which doesn't have to be documented has the potential of permanently ending off-leash access means the majority of those with dogs are penalized for the actions of a very few.

These areas are urban recreation areas, and as such, different regulations need to be applied to allow urban residents to enjoy their surroundings. This is not a wilderness area, nor should it be treated as one. I certainly support environmental conservation, and enjoy being in nature. Walking my dog is one of the primary ways in which I can enjoy the great outdoors while getting some exercise: to be able to do so at Fort Funston and Crissy Field is one of the joys of living in San Francisco. Unfortunately, the "preferred alternative" is not really an alternative for dog owners, but an even tighter restriction on the regulations which already exist and work well, and which have allowed me and my dogs such wonderful moments over the last 20+ years.

I would hope that the GGNRA, in developing a general management plan, will carefully consider the needs of urban residents. I fully support Alternative A, the No Action alternative of the DEIS, as it relates to Fort Funston and Crissy Field. Sincerely, Diana Helander San Francisco CA 94109 Cc: Secretary Ken Salazar, Department of the Interior Christine Lehnertz, Regional Director, National Park Service, Pacific West Region Jon Jarvis, Director National Park Service Nancy Pelosi, Member, U.S. House of Representatives Diane Feinstein, U.S. Senator State Senator Leland Yee State Senator Mark Leno email cc: Mayor Ed Lee Distric 6 Supervisor, Jane Kim fortfunstondog.org sfdog.org crissyfielddog

Correspondence Type: Letter

Correspondence: Dear General Superintendent Dean,

There is little if any chance that one letter could persuade a mind all ready made up, but I will attempt to at least give you my perspective on the Dog Management Plan as presented by the Golden Gate Recreation Area 2011. I have spoken to you personally at the public meetings in San Francisco and Pacifica; I have spoken to a few of your wonderful Rangers and volunteer workers. I want now to just list some of the main issues regarding Fort Funston specifically, because I feel that that recreational area has the best chance of remaining largely a mixed use/regulated off leash district, even within the confines of restoration, recovery and regulations.

According to the Executive Summary the following points address your Purpose for Taking Action:

A: Preserve and protect natural and cultural resources and natural processes The U.S. Fish and Wildlife Service, Recovery Plan for Coastal Plants of the Northern San Francisco Peninsula Region 1 of 2003 set out a very ambitious plan to bring back some threatened species of plants. I have enclosed there map of the Fort Funston area and would like to point out that the goals of the recovery seem achievable even if the main areas of the Fort are left for dog walking, roaming and off leash recreation. The goal is to bring back 75 acres of the Lessingia at Fort Funston which is an enormous amount! As I see it the restoration could take place in all areas minus the M (Ig) section and there would be plenty of room left for the dogs and their people!

Why can't there be this compromise? Page ix of this report gives an estimated \$23 million dollar cost for this project (includes Fort Baker and other areas as well), but wow, who's money is that anyway? The GGNRA is also given an ultimatum on page 45 of this report to "adequately regulate trampling impacts" on the dune and control adverse vegetation (read ice plant), in order to help the lessingia, thus the push to get rid of the dogs! The dogs love the ice plant, and the ice plant loves the dogs ' no money required. The area that stretches from the parking lot to the beach access cliff/path is a wonderful, rough and craggy place for the dogs to romp and socialize. The numerous paths that have been made by all of us and the dogs are natural outcomes of a perfect symbiotic relationship between the users of this property and the land itself. No one else uses this land as often as us dog walkers. Why try to make it into something that it is not, and that by way of a huge monetary cost? With a few minor improvements, the "paved" raised walkway to the drinking fountain and over to the north side, perhaps an upgrade to the bathrooms, and Fort Funston would be just fine. We do not need the wonderful, yet manicured, facelift that Crissy Field underwent 9 or 10 years ago. Some things are better left alone, this is nature after all.

B: Provide a variety of visitor experiences In the wonderfully diverse Bay

Area we are blessed with a multitude of outdoor experiences. We have oceans and parks, lakes, islands, wetlands, tidal pools, all within reach of anyone looking to touch nature. Some of these areas are easily accessible through an extensive well landscaped almost pristine network of paths and designated trails. Many of these trails and paths have been cultivated to an extent that would make a professional manicurist jealous. All evidence of "nature" is left for the imagination, yet it is an experience that affords the visitor lovely vistas, photo spots and the fresh air of the bay. The variety of visitor experiences is not very varied. Fort Funston and many of the dog areas under your jurisdiction are an exception, at least as they stand now. They are not fussy areas. You cannot go there in your "good" shoes, or fancy clothes. They are natural, for however messy they are, they are pristine examples of the natural ability of the wind, sea, sand and plant life to survive. And, the dogs (with their people) ask for nothing more. No fancy flowers or walkways or plaques or lattes or picnic baskets. Just backpacks, parkas, Frisbees and balls please. Take that away and what type of variety of visitor experiences are we talking about?

"Healthy Park Healthy People US 2011"

In April the National Parks Service held an impressive three-day event at the beautiful Cavallo Point Resort in Sausalito. Superintendent Dean was among the guests. Topics ranged from healthy convenience foods to health insurance and "connecting parks and people. NPS Director Jon Jarvis was a key speaker and had much to say about the need for Americans to get out and recreate in the National Parks that our country is so proud of. No one spoke of dogs not being allowed on National Park Lands, no one spoke of the fact that many people walk and run with their dogs as part of their fitness regimes and to many older seniors this is their only companion to help them get outdoors and socialize with other dog owners. The health insurance groups are now even giving reimbursements for NPS admissions to subscribers in order to entice the public to get out to the parks.

We, the dog walkers of the Bay Area, go to the parks daily, in all types of weather, with raingear or windbreakers. We don't need enticements we just need the use of the land!! Please let us continue to use the land, especially at Fort Funston, as freely as we can.

The April issue of Sunset magazine (Sunset April 2011 p.16) had a small article on the subject mentioned above, about a new program called Park Prescriptions. It cites the Golden Gate Institute as bringing together parks, doctors, and insurance companies to tackle obesity and try to get more people outdoors. What a great and novel idea! I would just like to bring your attention to the photo that Sunset chose to accompany this article (see enclosed). It is a picture of four happy humans hiking along a path WITH a very happy looking collie walking with them off-leash!! Nature itself is

augmented when enjoyed with loved ones ' two-legged or four-legged or both! I suppose Sunset magazine does not know of the prohibition on dogs in most state and almost all Federal parks! Please help change this policy by keeping as much of the territories in the GGNRA that are currently being used for off-lease recreation intact!! The percentage of land is miniscule, less than one percent of all your lands.

Practically every table in your Dog management plan/Environmental Impact Statement mentions the issue of adjacent dog parks provided by San Francisco or other municipalities. The insinuation is that off leash areas in the GGNRA are simply redundant and unnecessary because cities provide areas for dogs to play off-leash and that should mitigate any loss of lands in the GGNRA. This is profoundly inaccurate and a very confused assumption. Take the Fort Funston proposal which states that the nearest off leash area is provided by the City of San Francisco at Lake Merced. Have you ever seen the area at Lake Merced? Have you ever looked at Fort Funston? There really is no comparison. Fort Funston is loved by hundreds of dog enthusiasts who come from every region in the bay area. You may not understand how proud we are of this park. It could be a very impressive step for the National Park Service to grant this type of use on just this tiny wisp of land on the very edge of our great nation! Please work magic to keep it as it is now!

C & D: Improve visitor and employee safety/Reduce user conflict I have enclosed a copy of my preferred alternative for Fort Funston. The yellow areas would remain as a regulated off-leash dog area. The GGNRA Conservancy could cultivate and gentrify the rest. The California Lessingia could make a comeback on the lands to the north of the dog area and to the south of the GGNRA territory. The barn swallow would nest in the dunes to the north and south of the off leash area as well, and they already have adapted for the most part, according to your own report (see page 1263, in the special-status species section). The Northern Arizona University survey done in 2001-02, cites that more than half (56%) of the respondents either had never been to Fort Funston or not even sure if they had been there. Not many people actually go out of their way to visit this place. It is off the beaten path, it is usually in fog or bad weather, lots of wind. It is not your typical picnic area or a bring the kids and build sand castles beach area. It is rugged, it is gritty and it is perfect for dogs!

"I don't believe the current situation is tenable," commented Superintendent Dean, "we are looking for a balance not a ban." I understand and agree with Mr. Dean. I understand that the Park Service has one concept and the GGNRA Conservancy has another and the USFWS has again one more concept of how these lands should be "managed". There must be a balance, a compromise given somehow. We, the dog walkers, have nothing to offer. We are not a huge lobby, we have no real money, cannot influence

politicians. The environmental groups like the Sierra Club and Mid-Peninsula Regional Park District and the East-Bay Regional parks district, all have enormous coffers. They hold enormous amounts of power and land in the Bay Area. It is right and good that those lands are set aside free from development and preserved for nature. The people who walk their dogs off leash on GGNRA lands are only asking for less than one-percent of the total GGNRA lands to be left for the primary purpose of recreating and exercising with their dogs. Please!

The issue of user conflicts at Fort Funston can be best mitigated by clear signage and self regulation on the part of the dog owners and the general public. Your report does not reflect any major conflict or safety problem at Fort Funston. The number of incidents is very low compared to the hundreds of dogs and their people that go out there on a weekly basis. Education is key here, to educate visitors as to what they may encounter is important: i.e. cliffs (don't fall off or let your child or dog go that way), Dogs: you will encounter dogs off leash in this area, so if you don't like dogs stay on the sunset trail or perhaps go to another area, also be aware of the dogs, even dog walkers get knocked down from time to time, so we all have to be vigilant; and keep aggressive dogs on leash or away entirely, no one likes a nasty dog (big or little!). The GGNRA Conservancy group has a website that is very misleading when it comes to Fort Funston. The website depicts this park as a great place for a long stroll or beach picnic with the kids. In actuality, the terrain and weather out there limits most users to a one or two hour visit. The website should be fair and truthful, it needs to let the public know that this is a great place for dogs, be proud of this and just call it what it is. What is the National Park Service afraid of? Dogs are supposed to be man's best friend; we need to share with our friends!

E: Maintain park resources and values for future generations Maintaining the park resources as they are today, with a generous off leash area is not the same thing as management of the dog issue. The first would only require vigilance on all are parts to clean-up after ourselves, help with coastal clean-up days and keeping our dogs under voice control at all times. Management means that you want to control and confine the current situation, manage things along a predetermined vision of a model view of what "parks" should look like. Please do not allow the "look but don't touch" mentalities ruin our interaction with nature.

In closing I can only reiterate my plea to keep most of Fort Funston a sanctioned designated Off-Leash Dog area. With the help of signage and education, the general public will come to know this as a wonderful haven for dog lovers and their best friends. Some sort of permit system for the professional dog walkers would be advisable to assure the safety of all the dogs, with a maximum of 6 dogs per walker. All dog owners quickly realize that recall and obedience are absolutely necessary whenever you bring a dog

somewhere off leash, that is just responsible dog-ownership anyway! Clean-up days at all these areas already exist and the dog walking community is always eager to assist. We are nature lovers, dogs are part of nature and taking them out unfettered is sublime.

Please live up to your Mission Statement and show adaptability and flexibility in keeping Fort Funston, and most of the other GGNRA areas under question, as free for the dogs as possible, so that the public (ALL the public) can enjoy recreation on our publically owned park lands. What better gift, what better values are there to give our future generations ' our children and our dogs' puppies as well?

Thank you, Kathleen Klestoff, resident of San Francisco for 30 years, companion to Zelda, our 4-year old Border Collie, who loves Fort Funston, Ocean Beach, Baker Beach and her Frisbees and balls. Crissy Fields is too cultivated and orderly for her, but terrific for many other dogs. See, even in the dog community there needs to be a place for all the different tastes.

Correspondence: Dear Sir,

I cannot agree more with the enclosed article written by Cindy Beckman and would like to submit some personal views.

The people walking with their dogs that we see early every morning are every bit as environmentally conscious and appreciative of their surroundings as the theoreticians that drew up the proposed regulations. There are a number of us who sweep the beach each morning for unwanted debris. This consists of anything from non-dangerous, but unsightly pieces of styrofoam to more lethal objects like hypodermic syringes. We have also assisted in the reporting and protection of injured or sick sea lions and birds. In all the years we have enjoyed these walks, we have never seen one instance of dogs interfering with people walking on their own. On the contrary, the ones we meet all seem happy to greet us and our dogs

Please be aware of the irreparable damage that will be caused to the quality of life of those of us who frequent the recreation area on a daily basis, for whom these off- leash walks have become such an important part of our lives.

Sincerely Peter Blumberg

Correspondence: Dear Superintendent Dean,

As a long time environmentalist, taxpayer and dog owner, I am very disappointed with the GGNRA draft dog management plan. The document makes assumptions about the impacts dogs have on the environment, but provides absolutely no scientific evidence of those adverse impacts.

I have been visiting GGNRA lands, including Oakwood Valley and Muir Beach, for decades. I now see more wildlife, including bobcats, coyotes, rabbits and deer than I have ever seen before. There have even been reports of mountain lions. Using your weak criteria, one could just as legitimately make the opposite argument that the environment has only improved as the number of dogs has increased.

The document makes wild assumptions that there are negative impacts on the environment due to dogs. There are no studies showing that things are worse today than they were yesterday or even ten years ago. Without a baseline study there is no foundation for these policy changes. I have attached photos of Oakwood Valley to visually demonstrate that flowers and plants are thriving on and near the dog trails. And, more astonishingly, the draft plan assumes all of the alleged negative impacts have been caused by dogs, not humans. Where's the evidence? The document fails to provide long term monitoring data to support its claims that dog activities threaten the parklands. The document's conclusions must be modified based on scientific evidence.

For example, the draft plan says dogs need to be banned to protect stranded marine mammals and shorebirds. There is no documentation or evidence indicating that dogs have ever interfered or caused any harm to those protected species. In fact, I would argue that humans without dogs have caused much more harm to the environment and wildlife, from trampling plants and grass by holding huge festivals to the subsequent littering. Where is there a comparison of exclusively human impacts and exclusively dog impacts? Perhaps, humans should be banned.

And furthermore, I think you need to re-evaluate the no action alternative. In evaluating this alternative, the dog draft document again, makes assumptions that there will be negative impacts because dog owners will not comply with voice control and other regulations. The fact is, this alternative could include improved management, education, better signage and enforcement. Dog owners, for the most part, are good stewards of the

environment. We are the ones out there every day, walking the trails, taking in the beauty, and making sure our environment is not deteriorating. We need to be embraced and utilized not ostracized and made to feel like criminals.

We live in a suburban area that's surrounded by GGNRA land. People have been walking their dogs on these lands for centuries. If the GGNRA decides to further limit dog walking as recreation, what few surrounding parks and trails that allow off-leash activities will become overcrowded and ruined. More trails are needed not less.

I walk my well-behaved black lab every day on the Oakwood Valley trail and have done so for years. I drop my children off at school and literally walk to the trail, reducing my carbon footprint and keeping both my dog and myself in shape. Closing off trails to any user group with the country facing such high obesity rates is down right negligent.

And finally, I would like to voice my support for Alternative A, the no action alternative and would also include more lands for people to recreate with their dogs including areas such as Cattle Hill, Sweeny Ridge, Mori Point and Milagra Ridge to name a few. Sincerely, Cassandra Fimrite Mill Valley, CA 94941 Cc: Representative Nancy Pelosi, 8th Congressional District of California, House Minority Leader, US House of Representatives Ken Salazar, Secretary of Interior Jon Jarvis, National Park Service Director

Ps- Dear Representative Pelosi, please help us save our parklands from becoming off limits to this important user group- dog owners! We care and we vote!

Correspondence Type: Letter
Correspondence: Dear Mr. Dean,

Having been born and raised in San Francisco many years ago, I can remember Crissy Field as an airfield. As a matter of fact, my first flights were in a Ford Tri-Motor which took off and landed there. However, that's history.

Most recently, I have enjoyed walking our dachshunds both along the walks, and on the beach. To be truthful, I walked, and they ran, but they were always under voice control. To both of us it was a real treat and we looked forward to our visits. Sadly, our last dog, Lucy, died about a year ago, SO I miss our outings. In all the years only twice did I see a dog or its owner

misbehave, and even then the dog was brought under control quickly. I noticed that everyone I saw picked up anything-left by the pet.

It is my understanding that in National Parks, dogs must be "leashed". However, the Presidio is the first of such parks in an urban setting, and therefore in my opinion, some rules and regulations should be changed to adapt to the new situation. I don't propose that dogs be allowed to run wild throughout the park, but certain areas such as Crissy Field should be open for the dogs and their masters, or mistress, to use without restrictions.

I should also add that my wife and I have had a house at Stinson Beach for 49 years. Our dogs, and those of other owners, have always loved playing on the sand, and it was a joy for us, and for them. Here again, someone was always with them.

Certain areas demand that a dog be leashed, but I worry that too many regulations are both unnecessary, and uncalled for. I understand that it is said that some things being considered have not been studied enough or simply don't, or should not, apply to this situation. I must admit that I have not read every word, nor do I intend to. What I do suggest is that dogs have rights within reason, and common sense should prevail.

Very truly yours, Charles F. Lowrey

Correspondence: Re: GGNRA Pet Management Plan ' Comment on DEIS

Dear Superintendent Dean:

I oppose the Preferred Alternative described in the DEIS and urge your to take no action to deviate from the existing pet management policy. Continue to apply the 1979 Pet Policy with the interim changes. If you deviate from the current management practice at all, I suggest that you reconsider the seasonal leash restrictions at Ocean Beach and reopen public access to some of the closed areas at Fort Funston.

As to Ocean Beach, I have long thought that it would be appropriate to have some small area where there are no dogs at all to accommodate park visitors who want a beach experience but are fearful of dogs. I think the far north most part of Ocean Beach near the Cliff House would be the logical place to have an off limits area of around 100 yards. That would accommodate the interest without breaking up the continuity of the cherished experience of

taking a long hike or run on the remainder of the beach.

My personal observation over the years of the large area of Ocean Beach covered by the current Snowy Plover seasonal limitation leads me to suspect that the limitation has not provided the hoped for benefit in attracting additional Snowy Plovers to the area. At this point I suggest that the current limitation be lifted unless there is reliable evidence of having achieved some positive results. Certainly, the GGNRA should not adopt the proposal of new much greater limitations without some scientific evidence supporting the presumption of a future benefit.

As to Fort Funston, I believe the 2001 closures there have not lent significant benefit to the environment or safety. The Park Service has not achieved the planned native plant restoration goals and is not anticipated to do so for decades. On the other side, the closures have led to a substantial loss of key recreation access to a unique recreational asset ' the only big sand dune in the Bay Area. I used to watch kids play there, and confess to the joy of rolling down the hill myself in foolish middle age exuberance. It is now just a fenced off vacant sand dune area standing as a daily frustration and visible monument to Park Service deviation from the recreational access mandate of the park. The proposed further limitation in the Preferred Alternative renders it a plan that simply can't work. Over-concentrating the off leash use in a smaller area will create conflict problems. Please consider the enclosed comment letter written by my elderly mother to Brian O'Neill during the prior GGNRA closure effort at Fort Funston. The comments precisely hit on some of the unique recreational access assets of Fort Funston. She speaks of the park users "happily ambling along the trails ' all talking with one another companionably ' like a small town." She notes that "It is a pleasure each time I go to Fort Funston to see the wonderful closeness of people to their animals and the pleasure of the owners, the dogs and the observers to whom the situation brings happy memories." Now, eleven years later, that 81 year old lady is in her 90's, and I would hope that I could continue to take her to Fort Funston to let her share the joy of the happy companionship she finds in the park. That, in my view, is necessary component of your efforts to achieve the recreational mandate of the recreation area as a gateway urban park.

Please also consider the enclosed photo sheet of images I took at Crissy Field on Labor Day in 2002. These images reflect the displacement and movement of park users after the dog walking use limitations were placed on the West Beach area. The top two rows of photos are of a congested East Beach full of users including families with dogs. The bottom row shows the nearly empty West Beach where dogs were banned in favor of a hope to attract additional bird wildlife. While I appreciate the incentive and noble effort to attract wildlife to some areas, and enjoy seeing the progress in the lagoon area of Crissy Field, I believe pushing such goals over beach access

results in a substantial improper deviation from the recreational mandate. For that reason I oppose the portions of the Preferred Alternative that further limit off leash access at Crissy Field. I note that the FONSI for the Crissy Field development concluded that there was no significant impact in maintaining the 1979 Pet Policy off leash areas and was based on a condition that any limitation in off leash access would only be made after a public hearing before the Advisory Committee. That FONSI conclusion appears inconsistent with the DEIS.

The DEIS seems to be agenda driven rather than a product of unbiased evaluation, fails to consider the impact on other areas of the GGNRA and on San Francisco parks, fails to consider the enormous cost and difficulty the changes will effect on the GGNRA, fails to consider the impact of driving away a large user group and the resulting deviation from the mandate, fails to consider the psychological and social impact of taking away an key quality of life component, does not appear to have scientific basis for the presumptions upon which the analysis is based and fails to consider potential alternative locations for off leash access.

The easiest and best choice is for the Park Service to shelve the current DEIS and proposed changes and instead continue the current management practice. No change is required.

Sincerely, John Keating

Correspondence Type: Letter
Correspondence: Overview The NPS claims our dogs are a significant public safety risk even though in reality there is virtually no impact on safety and the DEIS small incident counts aren't even supported by the real GGNRA data. The GGNRA law enforcement data shows only 1% of the park's safety incidents relate to dogs; this is in contrast to 15% of the Bay Area enjoying the park with our dogs, often on a daily basis. For the subset of "bite/attacks" incidents, most are nuisance type incidents involving scratches, bumps, or no injury at all and only a few required medical attention. The Park Service is ignores the major public health and safety benefits of around of the Bay Area exercising, playing, relaxing and socializing with their dogs in the GGNRA. The DEIS also ignores the benefit of responsibly caring for our canine companions and the safety benefits of a well-exercised, social dog. The DEIS also assume that the adverse health and safety impacts will not be simply transferred and amplified to other locations in the Bay Area or into the remaining areas in the GGNRA that allow dogs. The Park Service has misrepresented the "No Action" GGNRA dog-related safety risks in DEIS

justification, the DEIS narratives, in the DEIS impact statements, in public forums, and in the media; this compromises the public's ability to provide meaningful comment on the DEIS. In public forums, the Park Service personnel have demonized dogs and their people with their exaggerated claims that the dogs are a significant safety risk that justifies reducing dog recreation in the GGNRA. This representation is simply not supported by the facts. These misrepresentation can only inflame the irrational fear and dislike that a few people have for all dogs, even friendly family dogs like most of those in the GGNRA; and divides instead of uniting people and in the end discourages all people with or without dogs from going to the GGNRA. The DEIS needs to comprehensively measure and evaluate public health and safety benefits as well as real adverse impacts instead of simply presenting every imaginable bad thing that could remotely occur no matter how remote the likelihood of the event occurring. The DEIS also needs to use an assessment methodology that is more objective and not the DEIS subjective and arbitrary methodology that has allowed for such misuse of power. The assessment methodology should use the same standards as would apply to any activity, whether that is conservation or education or bicycling or hiking or walking with a dog. Based on these unreasonable assessment standards used in this DEIS, the Park Service should not allow anyone to enter the GGNRA because they could catch a deadly disease, encounter an aggressive person or be an aggressive person, or step on a plant. Based on the standards used in this assessment, just the remote possibility is enough for claims of significant adverse impacts. I recommend the following for the revised GGNRA dog management plan:

- ? Determine and provide actual measurements of the existing visitation counts and usage
- ? Comprehensively evaluate and incorporate the public health benefits from dog recreation
- ? Comprehensively evaluate and incorporate the public safety benefits from dog recreation
- ? Determine the scale and type of reductions in GGNRA dog recreation and determine whether other acceptable options are available (e.g., adjacent lands)
- ? Eliminate all exaggerations, misleading statements, and "hypothetical" statements and define a assessment methodology that would be applicable to any recreational activity
- ? Monitor Park Service success in regards to the recreational value and to sound land use management

- ? Proactively work to reduce the existing issues with programs such as the following:
 - o Work with city and county law enforcement vicious and dangerous dog units to develop mechanisms for tracking, reporting and prosecuting owners that have truly vicious or dangerous dogs
 - o Develop dog etiquette, awareness, and other programs with the local humane societies to reduce any existing conflicts (e.g., leash gets the right of way, horse-dog desensitization programs) and to improve the health, safety and recreation value of the GGNRA
 - o Improve safety measures such as poison oak removal on trail beds, signage, etc.
 - o Improve feces collection with signage, bags, and an awareness campaign
 - o Signage, physical barriers or other deterrents

to help prevent cliff incidents and entry into closed areas o Providing adequate voice-control areas so as to encourage people to use those areas and free other areas for anyone that has an overwhelming dislike or fear dogs o Provide special compensations for people with disabilities by allowing them to have well- behaved, voice control dogs on any trail that allows on-leash dogs The Public "Health" Benefits of Dog Recreation

The public health benefits from dog recreation need to be comprehensively evaluated in the revised GGNRA dog management plan.

Benefits of Exercise and Relaxation

The excerpt below from the GGNRA website explains why recreation, including dog recreation, is such an important Public Health benefit, particularly in dense urban areas.

The fundamental value of nature as integral to our health as a species is one of the precepts underlying the establishment of the national park system. As Director Jarvis pointed out in a recent speech at the Harvard School of Public Health, the connections between personal health and parks have been evident since public parks were conceived in the 17th century. A growing body of research has documented the significant health benefits of time spent in nature and exercising outdoors. While certainly not a panacea, parks have the potential to play a major role in addressing the nation's current health crisis reflected in the alarming increase in heart disease, diabetes, and obesity.

In recent years, examples of parks being utilized as places of health and wellness by medical practitioners have begun to appear throughout the National Park System, as well as in state, regional and local parks. From the "Medical Mile" in Little Rock, Arkansas, facilitated by the NPS Rivers and Trails Conservation Assistance Program, to a "Park Prescription" partnership between Porter Health and Indiana Dunes National Lakeshore, to the Children & Nature Network, to the new health-based messaging of the East Bay Regional Park District in the San Francisco Bay Area, medical professionals and parks are beginning to team up for mutual benefit. In September 2010, Director Jarvis established the National Park Service Health Promotion Committee, chaired by Captain Charles Higgins, Director of the NPS Office of Public Health. This committee has planned and organized the Healthy Parks Healthy People US meeting at Golden Gate, and is tasked with helping shape the follow-up to the meeting, and helping explore new opportunities to link the NPS mission to the health of the nation. The NPS Health Promotion Committee has created a web page with information and resources on Healthy Parks Healthy People US. Visit the site at

[www.nps.gov/public health/hp/hphp.htm](http://www.nps.gov/public%20health/hp/hphp.htm)

Forty years ago, Congress and the visionaries for our "recreation area" understood this when they mandated this park "in order to provide for the maintenance of needed recreational open space necessary to urban environment and planning." For people with dogs, the GGNRA is even more critical because so few parks allow dogs and extensive communities have developed in the parks. Proponents of excluding people with dogs from the GGNRA, propose that fenced city dog parks, city streets, or backyards are a substitute for long walks in the outdoors. They miss the point that people and dogs need to MOVE. Such arguments are on par with saying that people don't need these recreation areas at all because there are a few city playgrounds. Yes, city playgrounds are important to small children and the community but they are not a substitute for long walks and communing with nature.

Dogs encourage people of all demographics to get out and MOVE in the outdoors everyday instead of sitting and represent a tremendous opportunity to encourage the 1 in 3 people with dogs to become healthier. Per the 2002 Population Survey, 15% of Bay Area residents already responsibly walk and enjoy the GGNRA with our canine companions and should be the role model for other communities instead of being demonized and exclude from areas that people with dogs have gone since before the creation of the park. Dogs are a catalyst for all people, whether a child, senior, person with a disability, minority to get out in the parks. A trip to Fort Funston on any pretty weekend or evening shows children abound in the park, and the park is full of groups of seniors and people with disabilities walking every morning and evening with their off-leash canine companions. Dogs have a tremendous ability to bridge social barriers and encourage social interactions between other dog people and dog admirers.

2002 Population Survey Indicators Regarding the Impact of Dogs on Healthy Visitation

The "2002 Public Opinion Research Telephone Survey Regarding Golden Gate National Recreation Area Pet Management Issues" was a survey with a sample 1600 people equally divided between Alameda, Marin, San Francisco, and San Mateo County. The visitorship data doesn't support the need for harsh dog restrictions and exclusion. In my opinion, the both the GGNRA population survey and the ranger offenses/incident records consistently support that GGNRA off-leash dogs misbehave infrequently with park visitors.

Overall Park Visitation

It is likely that the GGNRA is grossly understating the overall park visitation

for local residents since the survey averages by county along with 2008 US Census Data indicates 63 million local visits per year with about 26% being visitors with dogs. The average visits self-reported per person in the survey were Alameda 6, Marin 31, San Francisco 48, and San Mateo 11. Overall 15% of the Bay Area population uses the GGNRA for walking our dogs with Alameda 9%, Marin 22%, SF 15%, and San Mateo 13%.

Types of Negative Dog Interactions Reported

There are some public nuisance misbehaviors but they don't significantly impact most park visitors and are probably on par with equestrians, fisherman, bicyclists, sun bathers, disc players, high-energy teenagers, joggers, YMCA sports participants, etc. but those recreational activities weren't evaluated in the population survey.

When asked to explain how off-leash dogs distracted from their experience, fifteen people mentioned poop which is a problem with irresponsible dog owners not the dog behavior. Seventeen people state actual problem events caused by dog misbehavior and none represent a compelling public safety or health risk nor any indication that these events occur on a regular basis: ? splatter sand (2), ? sniff food, ? ate picnic, ? chase bike, ? run at (2), ? knocked child down, ? ran over towel, ? running at, ? jump on (2), ? knock over kite, ? ran rampant, ? disturb other people, ? dog bit off-leash dog (likely both were off-leash) and bleed, ? another off-leash dog interacted negatively with his on-leash dog

San Francisco, with the most off-leash areas and experience, is supportive of off-leash dog recreation:

? Off-leash Support: 54% of San Francisco county supports allowing off-leash dog walking in GGNRA sites

This is impressive considering San Francisco has the most off-leash recreation areas and experience and uses the GGNRA the most and yet is overall the most supportive of off-leash. In comparison, only 41% of all four counties support allowing off-leash dog walking in GGNRA sites. Initially, San Francisco was 57% supportive before they were read the statement: "The mission of the Golden Gate National Recreation Area is the preservation, unimpaired, of the natural and cultural resources, and scenic and recreation values, of the park for present and future generations to enjoy."

? Fear Reduction: 11% of people indicated fear of dogs with the highest being in Alameda (14%) and San Mateo (13%) and the lowest in San Francisco (10%). This 28% reduction of fear from Alameda/San Mateo to San Francisco County supports the hypothesis that more positive exposures

to dogs reduces fear of dogs and/or dogs in SF are safer than in other counties resulting in fewer negative experiences. The data also doesn't indicate that people that fear dogs are not going to the GGNRA locations with dogs. The people that had visited the location in the past 12 months and indicated some level of fear of dogs as a percent of all visitors for the location was: 8%-China Beach (no dogs), 6%-Baker Beach, and 9%-Crissy Field, 10%-Fort Funston, and 10%-Sweeney Ridge (on-leash). Unfortunately, the survey doesn't directly ask people whether dogs change their visitation and, if so, how. I was particularly surprised at the high percentage for Fort Funston.

? Visitation Increases: Owning a dog in San Francisco County increased the number of GGNRA visits per year from 39 to 90, a 131% increase in visits. Visitors with dogs from San Francisco, with an average 27,000 visits per day, visit the GGNRA almost 3 times more on average than the other three counties and represent about 49% of the visits with dogs. Overall San Francisco represents 52% of all GGNRA visits for the four counties. Overall, the average days visited by dog owners over others increased from 21 to 33, a 58% increase.

? Based on those self-identifying themselves as Hispanic, owning a dog (41 visits) resulted in a 130% increase in yearly visits to the GGNRA over people that do not own a dog (18 visits). This was for all four counties.

A large majority of Bay Area residents don't support reducing on-leash sites
? 69% of all four counties oppose reducing the GGNRA sites that allow on-leash dog walking

Note: The three GGNRA park units in San Mateo County only allow on-leash dog walking and because of the compliance rule, these parks will likely soon ban all dogs. Mori Point and Milagra Ridge would initially ban dogs from more than 60% of trails, and the 23,000 acre Sweeney Ridge will ban dogs 100%. For the past 10 years, there have been virtually no GGNRA law enforcement violations, other than leash law violations, and the DEIS presents nothing other than "hypothetical" natural resource impact from dog visitation. San Mateo County residents are heavy users of San Francisco off-leash parks and that will significantly increase if the GGNRA dog management plan passes.

The Public "Safety" Benefit of Dog Recreation

The public safety benefits from dog recreation need to be comprehensively evaluated in the revised GGNRA dog management plan. Well exercised and socialized dogs are a benefit to the community.

Experts in animal behavior such as those at the San Francisco SPCA,

<http://www.sfspca.org/about-us/positions/position-statement-GGNRA> , the Marin Humane Society, <http://www.marinhumanesociety.org/current/dogwalkingrules.html>, and Ian Dunbar http://saveoffleash.files.wordpress.com/2011/04/ian_dunbar_statement.pdf all support voice-control dog recreation. Exaggerated and Misrepresented Public Health Safety Adverse Impacts

The public health and safety adverse impacts from dog recreation need to be comprehensively evaluated instead just listing every imaginable bad thing, no matter how remote the likelihood of an occurrence.

What the Law Enforcement Data Says about Human Injury and Death Risk

Considering the DEIS statistics, the actual GGNRA law enforcement records, the advice of leading dog behaviorists, my own personal experience, and common sense; there is no compelling argument that a few and far between human injuries, mainly nuisance level injuries on the trails and beaches, even comes close to representing a significant public safety issue; particularly since the US is canine rabies free per the Center for Disease Control and Prevention (CDC). Please see http://www.cdc.gov/news/2007/09/canine_rabies.html.

I agree that many nuisance type dog incidents probably aren't reported to the Park Service; most outdoors people and others in the park wouldn't consider them significant. Even a routine falls on the sidewalk or a stubbed toe is a more serious injury than most of the reported dog "bite/attacks". Based on the ranger descriptions with a few "nipping" incidents, I expect many of these non-dog owners reporting the incidents were worried about the risk of rabies more than the actual nick or scrap. Dog owners also probably aren't reporting all the incidents regarding getting a laceration when separating two dogs that are misbehaving, which sometimes results in people needing stitches. These incidents are rare but are on less significant than spraining an ankle when jogging on trails; it's a minor cost of enjoying our favorite recreational activity and responsibly caring for ourselves and our canine companions.

I expect any serious "vicious" or truly dangerous dog encounters or major injury incidents were reported; and those were even rarer in the ranger descriptions on the incidents. The law enforcement data actually shows that GGNRA dogs, particularly the dogs in off-leash areas, are well-mannered probably because of being well socialized and exercised and are far safer than their human counterparts. One of the best quotes that I've heard on the trail is:

"My dog is not off-leash because he is well-mannered; My dog is well-

mannered because he is off-leash".

The actual law enforcement data actually highlights the benefits of the designated and encouraging off-leash areas in the GGNRA. When looking at the details of the dog-incidents, the most serious human injury incidents related to an on-leash reactive dog that got loose and a dog on the side of a high-speed road. If any of the DEIS action alternatives are implemented, the likely result is more of these type incidents since people will be forced to walk dogs more often near traffic and people will have less encouragement and opportunity to properly socialize and exercise their dogs. The most serious bite incident on a human in 2007 and 2008 was from a reactive, on-leash dog. The owner was juggling the leashes and the dog broke loose from the Ocean Beach dunes and got in a fight with an off-leash dog on the tideline. The other owners hand was injured when separating the dogs, and he required a paramedic; per the ranger descriptions that was the only dog that the GGNRA reported to the SFPD dog unit. To me, that case just highlights how important it is to socialize our dogs (like GGNRA dog people do) and, if they are not social, to responsibly manage, exercise, and desensitize them. The other serious human injury was a dog on Quarry Road that was hit by a motorcyclist, requiring immediate medical attention for both the person and the dog.

When it comes to Public Health and Safety, the Park Service should be making the more compelling argument related to the public health and safety benefits of an estimated 450,000 people exercising and enjoying these parks with their dogs and that off-leash and on-leash exercise and socialization is critical for making dogs safe and healthy members of the community. Instead of being condemned by the Park Service, the 1979 Pet Policy should be the role model for other urban parks including the GGNRA new lands acquired after 1979 that have been denied off-leash recreation.

Most Dog "Bite/Attacks" are Nuisance Type Incidents or Minor Injuries '
Living is not without Risk

The Park Service provided PDFs of Ranger and USPP detailed cases for dog-related incidents/offenses (Ranger/USPP Details) based on a Freedom of Information Request by Brent Platter. The years provided included 2007 and 2008 and are at <http://www.nps.gov/goga/siteindex.htm> and the incidents for 2007 are obviously incomplete. In the DEIS on 285, the Park Service states what they have been implying to the public and the media and which is not supported by the DEIS or any of the actual law enforcement data:

"High numbers of incidents occur because of the large number of people that use the site at one time and the high number of dogs off-leash at the site, or non-compliance with the NPS leash regulation that remains applicable to the

many GGNRA sites."

As explained below this is a highly exaggerated statement that demonstrates the Park Service bias and demonization of dogs and people that enjoy recreation with dogs. The Park Service analysis seems to ignore that living is not without risk and that includes recreation. Considering that the 2002 Population survey indicates that 15% of Bay Area residents enjoy recreation in this recreation area park with their canine companions, even without delving into the details, 27 dog "bite/attacks" per year is not a "high" incident rate particularly considering the high visitation for many of these parks. Unlike claimed, virtually all of the injury incidents occurred while people were complying with the leash regulations with the exception of a dog that got in traffic and two incidents that occurred in the parking lot. Two other incidents related to tied-out dogs. Unfortunately, all recreation activities have risks but walking and playing with a dog is one of the safest active recreation activities available. Encouraging San Mateo County people to drive all the way to San Francisco for off-leash recreation, probably result in a more serious safety risk just by increasing the risks of a lethal accident on the highway.

After 5 years of being in the GGNRA almost daily with a dog, I've had 100,000s of happy dog interactions, and I'm certainly more concerned about poison oak, a bee sting, or tripping than any of the friendly GGNRA dog. My biggest dog worry is keeping my dog away from the few dogs lunging and barking on leash at my dog.

Based on the 2007 and 2008 Ranger/USPP Details, I found the following accounts of actual human injuries and other animal and safety related incidents for the two years that should represent all of the "bite/attack" and hazardous condition incidents:

16 Trails/Beach Human with Injuries 2 non-owners that were nipped by OFF-leash dogs resulting in minor welts or scraps (1 jogger and 1 beach goer) 2 non-owners hikers that were nipped by ON-leash dogs resulting in minor welts or scraps 5 non-owners bumped either from OFF-leash playing dogs or dogs jumping up on them (3 children, 1 bicycle, and one adult on the beach) 5 dog owners with bite wound or lacerations from separating dogs with some requiring stitches 1 fisherman with a minor thumb puncture caused by a fish hook when baiting the line and a dog run into the fishing line 1 horse incidents with a rider thrown 1 NPS maintenance person that was bit on the knee and showed redness but no broken skin (unattended/tied up dog on a 20 foot lead)

3 Non-Trail/Beach Human Injuries

1 motorcyclists was injured from hitting a loose dog in traffic on Quarry

Road 1 child was bite on the lip by a tied up dog at a business 1 skateboarder had a puncture wound/bruise on the arm from an on leash dog that lunged at a passing skateboard on the sidewalk

32 Other Animal and Safety Incidents

1 horse and buggy incident on the Ocean Beach with the horse having puncture bites on the nose 7 dog-dog interactions resulting in non-lethal injuries (1 grab/shake and 6 with scraps or lacerations) 1 dog cliff fall with serious injuries requiring aid being carried up from the beach (Fort Funston) 5 dog cliff rescues from dogs stranded on cliffs with no injuries (1 Sutro Baths, 1 Fort Point, 3 Fort Funston) 1 dog barking at a Park Service policeman on a horse 1 dog charging and grabbing the boot of a Park Service policeman (Illegal camping by a Washington resident with an outstanding warrant) 9 incidents of dog owners complaining about inappropriate dog-dog interactions (no injuries) 3 complaints about people not liking dog interactions (no physical contact with a dog) 4 stray dogs friendly dogs with no indication of aggressive or fearful behavior

DEIS "Action Alternatives" Increase and Shift Public Safety Risk

Note that the DEIS "Preferred Alternative" and other "Action Alternatives" will not eliminate most of these incidents and may actually increase the safety incidents even in the GGNRA by concentrating more dogs and people in an even smaller area. The only way the DEIS Preferred Alternative, in comparison to the "1979 Pet Policy", would reduce these incidents in the GGNRA is if people with dogs choose to not go to the GGNRA to walk with their dogs and the recreational value of the GGNRA is diminished. If people choose not to go to the GGNRA and choose to continue living in the Bay Area, their dismal options include:

? Continuing to responsibly exercise and socialize their dog, which means the public safety risks is merely shifted from the larger GGNRA sites to more concentrated and less appropriate urban streets, urban parks, other more distant regional parks, or other, unauthorized, urban areas.

? Become unmotivated to provide responsible daily exercise and socialization, which means the community will not have the safety benefit of this exercise and socialization for dogs. This will lead to: o more frustrated and unsocialized dogs (e.g., backyard barking, escaping from backyards, lunging/barking when on leash, jumping on people, etc.) o more fearful, vicious and dangerous dogs in people's homes, in backyards, on city streets, or as strays o more babies and children receiving serious injuries from unsocialized and frustrated dogs o more new born infants entering homes with family dogs completely unsocialized to babies o more stigmatization of

dogs because of irresponsible dog owner care

? Abandoning or euthanizing their dogs, which not only impacts the dogs, but also the health and well-being of people and the community

In my opinion, keeping an unsocialized and frustrated dog in a home is not humane and is the equivalent of keeping a loaded gun. Only euthanizing dogs or people choosing not to have dogs would truly reduce the overall public safety risk related to dog ownership. In my opinion that is an extreme and unnecessary alternative considering the benefits people and the community receive from our canine companions, particularly considering the overall low safety risk related to responsible dog ownership.

The 2001 to 2010 GGNRA Law Enforcement Records (Ranger/USPP Headers) list all of the reported incidents/offenses (incidents) with the ranger or USPP officer's brief description of the incident. The Ranger/USPP Headers do not indicate a significant number of safety-related incidents from dog recreation. I summarized and categorized the Ranger/USPP Headers, and found that between 1 and 2 percent of GGNRA safety-related incidents were dog-related. These incidents include incidents at all GGNRA sites not just the sites covered by the DEIS plan. These counts seem insignificant considering some 15% or 450,000 people in the Bay Area enjoy walking their dogs in the GGNRA (estimated from the 2002 Population Survey and 2008 US Census Report) and the nuisance type severity of most dog-related incidents. The level of severity for most other incidents is unclear from the Ranger/USPP Headers; however, it is reasonable to assume that the overall severity of other incident categories is much greater and include more life threatening injuries and even death. Some highlights of the counts of some other safety related categories for 2007 to 2008 includes: 11 Bicycle & Motor Vehicle Accidents 66 Bicycle Injuries 272 Other Accidents 156 Assaults 18 Deaths 13 Suicide Attempts or Suicides 53 Domestic Disputes 531 Other Injuries What the Law Enforcement Data Says about Dog injury and Death Risk

In looking at the 2001 to 2010 Ranger/USPP Headers, I only saw one case of a dog death reported in the Ranger/USPP Headers, which indicates the death risk is low for dogs. Even though these death incidents almost never happen, there needs to be a standard process and legal mechanism, which will help prevent repeat incidents and ensure the risk is accurately presented. In the detailed 2007-2008 Ranger/USPP Details of dog-related ranger/USPP tickets, there were two cases where the bite incidents were reported to the ACC/SFPD. In the Ranger/USPP Details, only 7 other dog-dog incidents reported any injury to a dog in the two years.

Mechanisms for identifying and Making individuals Accountable for Serious

injuries

A woman, at the Supervisor's meeting, that was injured while riding indicated that the GGNRA does not have mechanisms for identifying and holding the owners accountable for any serious injuries caused by their dog. The GGNRA should work with the SF Animal Care and Control and the San Francisco Police Department and other local law enforcement agencies to develop procedures for dealing with such incidents within San Francisco and also within other counties. Most dog "bite/attacks" are more nuisance type incidents but there are more serious incidents that require more comprehensive procedures particularly to deter repeat offenders.

Park Service Misrepresents Dog-Related Safety Risk

In addition to these broad claims, Park Service cannot substantiate even the low number of incidents in the DEIS. Please see Appendix 3: e-mails Supporting Park Service Inability to Support DEIS Law Enforcement Counts in my public comment regarding Environmental Injustice. I attempted to verify the counts using the Ranger/USPP Details and the Ranger/USPP Headers and neither provided support for the dog "bite/attacks" counts, particularly the 17 reported for Stinson Beach in 2007 on page 272 of the DEIS. There is no evidence of any "bite/attacks" at Stinson Beach during 2007 or 2008, and yet this one DEIS number represents 32% of the total DEIS count (53) for all of 2007 and 2008 dog "bite/attacks". Overall, I was only able to find 51 incidents that seem to qualify as a "bite/attack" or hazardous condition versus the 119 shown in the DEIS. In addition, the DEIS shows that "bite/attack" and hazardous condition incidents dropped 45% from 77 in 2007 to 42 in 2008 without any apparent reason. I requested the schedule of the Ranger/USPP Details that substantiated the counts and was told there is no schedule, which indicates either a lack of professional care or deliberate manipulation of the data.

I was unable to review every single word of the Ranger/USPP Details for Stinson Beach area closed to pet PDFs but suspect the 334 Area Closed to Pets incidents for 2007 are also inflated since the Ranger/USPP Headers only indicates 51 incidents. The 334 for Stinson Beach is 64% of the total 518 Area Closed to Pets incidents on page 230 of the DEIS. Overall, the DEIS is showing 2008 counts for all locations to be 42% less than 2007 without there being any reason for such significant changes.

Also note that the Park Service file containing the 2008 Ranger/USPP Details contains almost 880 pages. While there are many duplicate pages the number of pages seems reasonable. The Park Service file with the 2007 Ranger/USPP Details contains only 93 pages but is supposed to represent 42% more incidents. While there are many duplicate pages in the 2008 file the number of pages seems reasonable. In addition, I only found 15

Ranger/USPP Details for 2007 Ocean Beach leash law violations in comparison to the 240 indicated by the Ranger/USPP Headers.

GGNRA Area : Crissy Field 385 Tennessee Valley 151 Fort Funston 122 Mori Point 105 Sweeney Ridge 84 Stinson 74 Other 758 Ocean Beach Grand Total 572 Dog Related Incidents 2251

Almost all these incidents relate to Failure to Leash and Area Closed to Pets violations that have little to do with public safety concerns.

Purely Subjective Adverse Impact Statements Leads to Abuse Eliminate all exaggerations, misleading statements, and "hypothetical" statements and define a assessment methodology that would be applicable to any recreational activity.

Incomplete Impact Scope

The public health and safety impact statement should be changed to "Beneficial" for all GGNRA sites for the "No Action" alternative and public health and safety should be considered a major justification for honoring the 1979 Pet Policy and adding addition off-leash areas in San Mateo County in the revised GGNRA dog management plan.

The Assessment Methodology for Public Health and Safety provides no standard other than Park Service judgment and how many "potential" problems could occur. The entire DEIS Public Health and Safety section, like the rest of the DEIS, reads like a "Witch Hunt" with all these horrible things attributed to dogs without their being any evidence that the events are occurring in the GGNRA, just like the way witches were prosecuted by Salem courts in the 17th century. This section is designed to create unnecessary paranoia instead of reasonably showing the risks and the effect of those risks.

Without any real standards for impacts, the Park Service could arbitrarily eliminate all recreation and all people from the GGNRA. Just because something can happened doesn't mean it is likely to or that it is a significant safety or health risks. The dogs have been in the parks for decades and only rarely is there a significant injury, and there is no evidence that dogs are transmitting diseases to humans or the wildlife in the parks. On the other hand dog recreation provide systemic health and safety benefits that are ignored in the DEIS.

Safety in the Park In particular, there is no public health and safety epidemic related to dog feces or dog pathogens. Even in the unlikely event that people contract these diseases the odds of serious medical issues is negligible and certainly not any more severe than pathogens from other sources, such as

wildlife droppings and city street run-offs, in the GGNRA. Per the Park Service response to my FOIA request, the Park Service has no evidence of pathogen transmission in the GGNRA and is purely relying on listing of possible dog related diseases. Certainly, the 1 in 3 families in America with dogs, do not deem these to be significant risks that would cause them to not associate with dogs.

The Park Service has merely compiled a list of all the harmful things that could happen in regards to dogs and shown the low Law Enforcement numbers to show the severity of actual dog related incidents. Based on these standards all human activity in the GGNRA could be deemed a significant Public Health and Safety risk because just entering the park one could come up with 1000 of potential things that could happen. Certainly, the list of potential life threatening diseases transmitted from one person to another, violence from one person to another, or accidents that could occur and are far more significant than any risks regarding dog interaction. In fact, the law enforcement data above only shows that dogs are a minor, if not negligible, risk in comparison to the GGNRA accidents and violence associated with other human activities.

Exercise and Mental Well-Being Benefits In addition, these standards completely ignore the beneficial impact of walking with a dog and enjoying the park. Note that it is highly unlikely the few people that fear or dislike dogs are reducing their exercise in the outdoors to offset the increase in people with dogs exercising in the parks. People with dogs have far fewer options and few can afford to go to a fenced dog park and then go for a long walk somewhere else. Unfortunately, the GGNRA has not conducted any real studies of recreation needs or barriers to scientifically comprehensively model the expected impact on visitation and exercise levels.

Safety Benefits from Responsible Dog Care The impact statements and analysis ignore the safety benefits of a well exercised and socialized dog.

Safety Benefits from Local Recreation Having open space available close to home reduces the need for car travel and reduces the risk of accidents and pollution.

Adjacent Areas or Concentration The impact statements ignore impact of these any safety risks being transferred to people's homes, city streets, city parks, and other locations. Unless people euthanize their dogs and stop getting dogs, the dogs aren't going away so any risk to the community is only going to be transferred to other locations that will now have a greater concentration of dogs. The DEIS also talks about the issues being caused by a high concentration of dogs but is proposing with this plan to further concentrated the off-leash and on-leash dogs in smaller areas but is not

accounting for this in their impact analysis.

Subjective Public Health and Safety Criteria Excerpt from DEIS Page 1592

ASSESSMENT METHODOLOGY

The analysis of effects on human health and safety considered conflicts between dogs and various user groups of the park. The presence of dog waste at park sites was also included in the analysis. Impacts on both park visitors and park employees were analyzed quantitatively using the palls LE database on pet-related citations, warnings, and reports taken in 2007-2008, which is summarized in table 9. Qualitative analysis considered the LE database along with information from relevant studies, personal communication, and professional judgment to predict risks in human health and safety over the next 20 years.

IMPACT THRESHOLDS

Health and safety impacts were determined by examining the potential effects of dog walking activities on the health and safety of park visitor and staff within a park site. The intensity of each adverse impact is judged as having a minor, moderate, or major effect. A beneficial impact would be a positive change in the condition or appearance of the resource. Negligible impacts are neither adverse nor beneficial, nor long-term or short-term. No impacts to the health and safety of park visitors and staff may also be applicable for some alternatives and sites if dogs are prohibited. The following impact thresholds were established to describe the effects to the health and safety of park visitors and staff under the various alternatives being considered:

Beneficial A beneficial impact is a beneficial change from the current condition and is a relative indicator of progress compared to the no action alternative. In general, a beneficial impact would be a decrease in the number of dog-related confrontations, injuries, and illnesses.

Negligible The health and safety of both park visitors and park employees would not be affected, or the effects would be at such low levels of detection that no appreciable effect on human health or safety would be measurable.

Adverse Minor. Effects on the health and safety of both park visitors and park employees would be detectable but would not be large enough to be quantified.

Moderate. Effects would be readily apparent and would result in substantial, noticeable effects on the health and safety of both park visitors and park employees on a local scale. Revision of park policies could be required to

ensure human health and safety.

Major. Effects would be readily apparent and long term and would result in substantial, noticeable effects on human health and safety for both park visitors and park employees on a regional scale. Revision of path policies would be required to ensure human health and safety.

The adverse impact statements claimed in the DEIS are arbitrary and subjective, even if one doesn't consider the cumulative impacts on Public Safety (e.g., dog behavior, other adjacent lands, health benefits, responsible dog guardianship, etc.) with not clear explanation for the differences (e.g., number of past incidents, number of visitors, etc.) Below is a table showing the highest level impact claimed in the DEIS in Table 5. For example, there seems no justification for listing Milagra Ridge and Pedro Point as Minor while Sweeney Ridge and Mori Point are negligible. In fact, even using the questionable numbers on page 271, no location other than Stinson Beach and Fort Funston have more than ten combined dog "bite/attacks" and hazardous condition incidents. In reality, only Fort Funston and Ocean Beach, with more than 2,000 average daily visits, had any serious incidents in 2007 or 2008 on the trails or on the beach.

Subjective Visitor Experience Criteria

Excerpt from DEIS Page 1402, on the Assessment Methodology for Visitor Experience:

IMPACT THRESHOLDS

Visitor Use and Experience impacts were determined by examining the potential effects of dog walking activities on the visitor's experience within a park site. The intensity of each adverse impact is judged as having a minor, moderate, or major effect. A beneficial impact would be a positive change to visitor experience. Negligible impacts are neither adverse nor beneficial, nor long-term or short-term. No impacts to visitor use and experience may also be applicable for some alternatives and sites if dogs are prohibited. The following impact thresholds were established to describe the relative changes in visitor use and visitor experience under the various alternatives being considered:

Beneficial A beneficial impact would be a positive change to a visitor use or experience at a park site. Individuals participating in that use or experience in other local or regional areas could return to or begin using the park due to the markedly improved visitor experience as a result of implemented dog management. A beneficial impact is a beneficial change from the current condition and is a relative indicator of progress compared to the no action alternative. Negligible Visitors would be unaware of impacts associated with

proposed changes. There would be no noticeable change in visitor use and experience or in any defined indicators of visitor satisfaction or behavior. Defined indicators that may impact visitor satisfaction include greater safety concerns, additional user conflicts, and additional dog-related incidents such as dog bites or dogs chasing or jumping on visitors.

Adverse Minor. Changes in visitor use and experience would be slight and detectable, but would not appreciably limit or enhance any critical characteristics of the visitor experience. Critical characteristics of the visitor experience include overall visitor satisfaction, visitor safety, and recreation opportunities. Other park areas would remain available for similar visitor uses and experiences. Visitor satisfaction would remain stable.

Moderate. A few critical characteristics of the existing visitor experience would decrease. The number of visitors engaging in a specific use would be altered, resulting in a noticeable change in visitor satisfaction. Other park areas would remain available for similar visitor uses and experiences; however, some visitors participating in that use or experience might be required to pursue their choice in other available local or regional areas.

Major. Multiple critical characteristics of the existing visitor experience would deteriorate, or become unavailable and/or the number of visitors engaging in a use would be greatly altered, resulting in a noticeable change in visitor satisfaction. A limited number of park areas would be available for similar visitor uses and experiences; thus, large numbers of visitors participating in that use or visitor experience would be required to pursue their choice in other available local or regional areas. The Assessment Methodology is arbitrary and based on judgment without any objective measurement criteria. There were not objective studies done to determine the significance of dog recreation visitation or the experience by those that dislike or fear dogs. In addition, the introductory statement below says that visitor surveys were conducted but the Park Service could not provide a single visitor survey as requested in my FOIA.

Excerpt from DEIS Page 1402, on the Assessment Methodology:

Visitor use and experience can be measured by the indicator visitor satisfaction. Visitor satisfaction is measured by visitor satisfaction surveys distributed at various sites throughout the park. The potential for change in visitor experience was evaluated by identifying projected increases or decreases in on-leash and voice-control dog walking and other visitor uses per alternative, and determining whether these projected changes would affect the desired visitor experience and result in greater safety concerns or additional user conflicts.

The Visitor Experience needs to be based on more than arbitrary conclusion

that dog have a significant impact on a substantial number of people that fear of dislike dogs. I don't golf, play tennis, ride horses, play basketball, use the GGNRA gym but I'd expect any plans to close those GGNRA facilities would be based on a valid argument that the those areas would benefit a greater number of people with the alternative plan and not be simply that there are people that don't use this particular facility. For example, I'm any outdoors person that had lived in the Bay Area for about 10 years but I'm pretty sure I only stopped at Fort Funston at most once before I got a dog. With our without the dogs, Fort Funston is not a major destination for most people without dogs. Certainly Fort Funston is a cultural landmark or mecca for the dog community.

Appendix 3: Highlights of Relevant Personal Background ? Lived in the Bay Area for 17 years and am an avid outdoors and nature lover that has frequented many National Parks, National Forests, and most of the parks in the Bay Area. Before Ella, a dog, joined the family, I visited National Park Service parks including Yosemite, Yellowstone/Grand Tetons, Lassen, Glacier, Grand Canyon, Redwood, Point Reyes, Pinnacles, Zion, Bryce, Death Valley, Canyonlands, Channel Islands, Denali, Dinasauro, Sequoia/Kings Canyon, Mesa Verde, Muir Woods, Natural Bridge, Padre Island, Rocky Mountain, and SF Maritime. Since Ella joined the family, we have not been to a park, other than the GGNRA, that is managed by the National Park Service because dogs are not allowed beyond the main park corridor (e.g. the campgrounds and parking lot and superficial trails). Not being able to visit the National Parks is one of the hardest things about having a dog as a part of the family. ? Frequent the GGNRA dog-friendly sites almost daily for 5 years since Ella, an Aussie, joined our family with most GGNRA visits to Sweeney Ridge, Mori Point, Fort Funston, and Milagra Ridge. Before getting Ella, Sweeney Ridge was the only one of these GGNRA sites that I had visited more than once in 12 years in the Bay Area. Instead we tried to always go to new open spaces during our weekend hikes with Sweeney Ridge and Sawyer Camp / San Andreas / Canada Road trails being standard hikes/runs/bike that we did 4 or 5 times a month. We also had gym memberships which we no longer have since we can't exercise Ella and go to the gym. We find hiking so much more rewarding with Ella; we interact with so many more people because having a dog, like having a small child, facilitates social interactions that rarely happened without a dog ? Spent the past four months canvassing the GGNRA and other dog-friendly locations talking to people with dogs and raising awareness of the GGNRA plan. This included many discussions regarding the experiences and needs of people with dogs ? Co-author of the SaveOffLeashDogs Call to Action weekly email regarding the GGNRA dog management plan and active member of the SaveOffleash coalition with primary responsibility for grass roots organizing for San Mateo County, SFDog, and Ocean Beach Dog ? Member of the Peninsula Australian Shepherd Club, the Australian Shepherd Club of America, Ace Dog Sports, and the Bay Team (an agility

organization) ? Over 20 years of experience as an auditor in public accounting firms and corporations and a Masters in Accounting Information Systems and a Bachelors in Agricultural Economics/Accounting ? Graduate of the SF SPCA Dog Training Academy, a six week intensive program taught by Dr. Jean Donaldson, a nationally recognized dog behaviorist ? SFSPCA volunteer trainer responsible for addressing more significant behavioral issues such as reactivity, fear, rude behaviors, and puppy socialization ? Grew up on a farm with a virtual zoo of animals related to this plan including dogs, horses, mules, deer, quail, geese, and ducks and in a rural areas with significant wildlife populations ? Read the 2200 Page DEIS and visited all but 3 of the 21 sites included in the plan plus visited the new lands at Rancho Corral de Tierra in Montara ? Analyzed the 2001 to 2010 GGNRA Law Enforcement Access data headers and the 2007 to 2008 pet-related cases in the PDFs ? Reviewed the available GGNRA inventories and monitoring reports provided by the GGNRA related to a Freedom of Information Act request ? Rely on the GGNRA for daily walks to help prevent morbid obesity, diabetes, heart disease, and breast cancer , which is prevalent in my family as well as stress relief ? Rely on GGNRA to responsibly care for Ella, our dog, and for ensuring that she is a healthy and safe dog for the community and for those visiting our home ? Committed environmental advocate for addressing real issues that make the world a healthier and happier place for all our interconnected beings. Member of the Sierra Club

Correspondence Type: Letter
Correspondence: Dear Superintendent Dean,

My name is Melinda Rosenberg and I live in the SOMA neighborhood in San Francisco. My dog Bianca and I enjoy the GGNRA, specifically Fort Funston and Crissy Fields, 2-3 times a week. Because I live in a small studio apartment it is important to me and Bianca to be able to enjoy all that the GGNRA have to offer. From the day I brought Bianca home I start training her to respond by sight and voice when not on her leash, I am a responsible dog owner and never allow Bianca to go into restricted areas. The wildlife and vegetation in these wonderful parks are very important to both of us therefor I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, but other options (besides restricting dog- walking access) should be considered first. For example, it is not clear where dogs are allowed. I think the GGNRA should provide better signage and create environmental barriers, such as the vegetative barriers surrounding the tidal marsh at Crissy Field or the

restored dunes at Fort Funston.

As a responsible pet owner and advocate for animals, I know it is crucial that our dogs are well behaved and trained in order to peacefully co-exist in an urban environment and adequate exercise and socialization is essential for a well-behaved dog. Having places where I can take long walks with Bianca allows me to get the exercise I need while also meeting my dog's needs. Without access to the small amount of land in the GGNRA we currently have, I am very concerned that many dog and dog guardians will not have sufficient opportunity to exercise and recreate.

The DEIS doesn't recognize that many areas of the GGNRA are located in or next to urban neighborhoods. The DEIS excludes the quality of the urban environment from its scope, saying it's not significant. The reality is that the GGNRA provides much needed open space in a major urban area. This omission is disconcerting because the fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) to serve the metropolitan Bay Area. The dynamic interrelationship between GGNRA and our neighborhoods is exactly the human environment that the EIS is required to study, but failed to do so.

The DEIS notes some studies and general tendencies of dogs to harm natural resources, but with few exceptions, there is little documented site-specific impacts to support the restrictions of the preferred alternatives. Further, there is insufficient documentation that considers other impacts -other park visitors that disturb and impair the natural resources, other wildlife, Mother Nature, boot camps, bicyclists, huge crowd attracting events such as Fleet Week, festivals and Walk-a-thons. The proposed broad limitations in the DEIS are without site-specific science that demonstrates that problems with the quality of GGNRA's natural resources are actually attributable to dogs and not to other factors.

The DEIS needs to provide full disclosure to the public and decision makers. If dog- related disturbances are having a Significant negative effect on wildlife, for example, the DEIS needs to provide site-specific scientific evidence as documentation and undertake a scientific evaluation as to whether people or other factors are also causing or contributing to the problem noted. If they are, GGNRA needs to provide an analysis that considers whether people should also be restricted from these areas. We need this documentation in order to comment meaningfully on the draft plan and DEIS. The science needs to be sound and the consequences need to be fully and fairly disclosed for everyone - so that an informed decision can be made.

1979 Pet Policy has been working, and where sensitive species are not present and visitor conflicts do not occur or are very infrequent. In addition,

the DEIS does not provide site- specific information that these areas are inappropriate for continued dog walking.

Sincerely, Melinda Rosenberg

Correspondence Type: Letter
Correspondence: Dear Superintendent Dean,

My name is Isabelle Beekman. In my sixties, I have lived in Pacific Heights for twenty five years. My fabulous spinone Raphaelo goes to Crissy Field every day of the week with my family or his dog walker.

Having a dog is such a wonderful way of life. Raphaelo is a puppy; he rings joy to many people with his goofiness and joie de vivre. To watch him running down the beach after his squeaky toy, or diving into the waves is an incredible mood lifting experience and a de-stressor.

In my family, we take the responsibilities of owning a dog very seriously. Raphaelo and I have taken three back to back dog training classes. Moreover, he has worked one on one with a professional dog trainer. I am proud to say his recall is excellent as is his ability to stay and heel. A dog carrying bag is always part of our gear with poop bags, treats and toys. In addition to picking up after Raphaelo, we also pick up garbage, dead birds and anything else we can manage to protect the environment. We keep Raphaelo out of the fenced areas, as protecting the snowy plover is important to us. As I understand it, the same birds have returned year after year, not feeling threatened by the running dogs.

To keep a dog and his owners happy and healthy, the dog must have access to off leash walking. For me and my dog walking friends, going to Crissy Field is a necessary part of our day. We love the place and so do our dogs.

Instead of taking away off leash areas, I think the GGNRA should consider adding new areas, and providing better signage and environmental barriers like the ones at Crissy Field. The draft Dog Management Plan and the Draft Environmental Impact Statement does not evaluate the value of these recreational activities and does not adequately consider alternatives such as environmental barriers and providing better signage and education to the public.

Moreover, there is inadequate consideration of the impact of restricting off leash dogs on east beach at Crissy Field on the families that gather there for

recreation. Both of my children grew up sharing Crissy Field east beach with their first dog. During many months of the year central beach is not safe because of the high tides. The proposal does not adequately investigate the impact on families of having to use Central Beach year round rather than east beach. There is also no science based explanation for moving off leash dogs off east beach. Please evaluate these alternatives and impacts. Major urban areas such as San Francisco need more places to recreate with dogs off leash, not fewer.

The GGNRA was created with the purpose of providing recreational opportunities for people. This includes off leash walking at sites like Crissy Field. The citizens of San Francisco benefit greatly from these opportunities. Please do not restrict off leash walking on these sites.

Respectfully, Isabelle Beekman

Correspondence Type: Letter
Correspondence: Dear Superintendent Dean,

My name is Eunice Lee and I am writing to you as a concerned San Francisco resident regarding the proposed changes to the current GGNRA off-leash dog areas. I regularly take my dog Elle to Chrissy Field in the Marina District where we currently reside, and we also frequent the wonderful off-leash areas of Ocean Beach and Fort Funston. As a responsible dog owner, I believe it is important for my dog to be able to run and play with other dogs in open, natural spaces. I believe it is equally important to keep my dog under my control at all times, to keep her out of protected wilderness areas, and to clean up after her. In my experience, the vast majority of other dog owners that I have encountered in these GGNRA areas are likewise mindful of their dogs and respectful of their surroundings.

For the following three reasons, I do not agree with the GGNRA's proposal of eliminating many off-leash dog walking areas. First, while I am concerned about the long-term preservation of the GGNRA's natural resources, actual impacts from dogs at GGNRA sites must be shown before such drastic remedial measures are implemented. Currently, the DEIS is woefully lacking in actual documentation of its assumptions regarding negative resource impacts from dogs in specified GGNRA areas. For example, at some sites, the DEIS would prohibit dogs from beach areas in order to protect shorebirds and stranded marine mammals, yet the DEIS is devoid of studies or statistics documenting the actual impact on shorebird or marine mammal caused by dogs at these sites. Specifically, the DEIS must

assess and modify the selected alternative for each GGNRA site based on site-specific issues. Alleged impacts should be evaluated, and each GGNRA site should be assessed individually to determine the proper alternatives based on documented-not merely asserted--effects.

Second, in addition to the benefits to the dogs themselves, it is equally as important for the welfare of dog owners in this city to be allowed to utilize these areas with their pets. Without access to the already limited amount of land in the GGNRA we currently have, I am very concerned that once their dogs are restricted, many dog guardians will not have sufficient opportunity to exercise and recreate. The DEIS fails to recognize the fact that areas within the GGNRA serve as much needed safe outdoor space to the residents of the San Francisco Bay Area, an otherwise bustling metropolis. In fact, many areas of the GGNRA are located in or next to urban neighborhoods, but the DEIS refuses to factor the quality of the urban environment in its analysis and instead disputes its significance. This omission is disconcerting because the fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) to serve the Bay Area. The dynamic interrelationship between GGNRA and our neighborhoods is exactly the human environment that the DEIS is required to study, but fails to do.

Finally, the DEIS as drafted would have one believe that any recreation (including dog walking) harms natural resources. This ignores the fact that people with dogs are often very conscientious about the environment. In fact, the off-leash places I frequent with my dog are much cleaner than places where people, not dogs, run rampant. There is vastly less loitering, crime and litter in these dog-friendly places. To the extent there are those dog owners who are less conscientious than the rest, the draft plan has the effect of punishing the vast majority of the environmentally conscious and respectful dog owners for the failings of a few. The more appropriate solution should be to educate visitors, improve signage, and punish actual violators-and not put a blanket ban the rest of the residents with dogs from the GGNRA.

Sincerely, Eunice Lee

Correspondence Type: Letter
Correspondence: Dear Mr. Dean:

We were part of the original group that established the Crissy Field Dog Group at Joan Booth's house over 10 years ago. We helped organize the

protest at the Golden Gate Club around 2001 including notifying the NPS police of the anticipated large turnout. Nearly all of the original CFDG members are no longer involved in the organization, partially because the many public meetings stretching over 8 years were so unproductive, but mainly because the very small group of CFDG's current leaders won't listen to reasonable compromises. Their insistence that the Promenade should be a ROLA defies all logic. Most of us would like to see the East Beach open in the early morning, particularly for the adjacent residents during the week; however, we understand this could be a management issue. An informal survey of weekend dog walkers, including a lot of former CFDG members, support the above position.

We want to be sure that NPS will partner with the CFDG to guarantee that the preferred alternative will never be rescinded. You must agree that dog litter at Crissy Field has been greatly reduced in the last 10 years, partially because of the pickup bags provided by CFDG at numerous locations. Most CFDG members even clean up after the dogs of tourists or inconsiderate local dog owners.

The draft EIS indicates there will be a huge increase in the budget for policing dogs. Hopefully this is not a subterfuge to achieve Yosemite standards of no dogs. Many years ago I worked on the planning for a police/fire station at 35 Keyes in the Presidio and I know first hand the efforts of police leaders to create huge many layered bureaucratic organizations with lots of policemen. We would hope that you would instruct officers to talk to offenders and only issue tickets as a last resort to repeat offenders. Signage needs to indicate an enforceable standard for "voice control" such as 30 or 60 seconds. If the NPS wants the off leash area to be successful for us dog owners I would hope that tickets would only be issued on very rare occasions and the rules be loosely enforced, especially at the Central Beach and early mornings or late afternoons at the East Beach.

We need clear well placed signage to make the preferred alternative work. Wherever parking is available there must be signs. Signs at the lagoon bridge would be effective.

At the many paths which access the Central Beach we need signage indicating this area is reserved for off-leash dogs. The signage plan should be coordinated with CFDG and offered to the public for review.

Again, thanks for coming up with a reasonable preferred alternative for dog management at Crissy Field.

Yours very truly, Bill and Ursula Moffett

Correspondence Letter

Type:

Correspondence: Dear Superintendent Dean:

On behalf of the National Parks Conservation Association and its more than 340,000 members across the country and more than 49,000 members in California, I am writing to submit comments on the Golden Gate National Recreation Area's (GGNRA) dog accommodation management plan (DEIS).

The GGNRA is considered by many to be one of our country's boldest park experiments: setting aside highly-prized land to provide a national park experience near a heavily urbanized area. The park is home to more endangered and threatened species than any other park in the continental U.S.--more than Yellowstone, Yosemite, and Sequoia & Kings Canyon combined. It is a world-class repository and it boasts the second-largest archival and museum collection in the National Park System, which tells the cultural and historical story of the area.

Typically, recreational activities in our national parks are subject to management actions guided by park policies. This is done for several reasons, including fulfilling the resource protection goals of the park, complying with park regulations, and providing a visitor experience consistent with law and policy. For example, inappropriate activities such as motor vehicle use on GGNRA beaches were banned as they conflicted with park policies and values. However, the GGNRA has failed to regulate and bring law and order to the recreational activity of dog-walking. Unfortunately, the current reality is that there is limited, if not no ability to regulate and enforce this recreational use that is known to disturb wildlife like western snowy plovers and harass other park users, such as horseback riders and picnickers.

The current status-quo fails to provide equity to park users, as there are limited areas in the GGNRA, San Francisco specifically, where one can have a dog-free experience. Currently, if a family would like to have a dog-free beach experience in GGNRA, only one beach in the GGNRA, the small China Beach, allows for it. Additionally, other user groups, such as those with service dogs, have stated their concerns with off-leash dog use. One survey from Guide Dog Users, Inc. concluded that 89% of guide dog users report off-leash dogs interference with the guide-owner team and 42% report physical attacks on the guide-and-owner team.

For the reasons of wildlife protection, equity in park access, and the unfortunate current status of no law, order and enforcement, we support the NPS in its efforts to regulate and accommodate recreational doE., walking.

We believe that "Alternative D" is most consistent with law and policy, and best aligned with national park values. We do not support the GGNRA's "preferred alternative" and believe that implementing such an alternative will not resolve the current management problems that exist.

The following are over-arching comments for dog-walking within GGNRA:

The park's mission is to protect the natural and cultural resources, and allow recreation that will not undermine them. Alternative D best reflects this mission.

2. The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals by offering more than one trail and more beach areas free from dog recreation.

Require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs. See letter from ASPCA.

4. Limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

5. Provide more trails that are free of dogs (currently only 1 trail in San Francisco will be available for those who do not wish to interact with dogs).

6. The NPS should not permit commercial dog-walking as such a use does not appear to be permissible under law and policy guidelines. Additionally, commercial dog walking (with each walker having up to six dogs) will negatively impact park resources and visitors, will not provide public service or benefit to visitors, and is contrary to guidelines on private, commercial use of national parks.

7. Compliance based management is an efficient and practical way to implement adaptive management and ensure that the NPS is able to adapt based on pet owner behavior.

. The compliance rate should be at least 95%, not 75% as outlined. A 75% means that more violations will be tolerated, thus preventing other dog walkers from observing what the correct rules are. Such a high rate of tolerance works against visitor education of the correct rules. The GGNRA should implement a higher standard of stewardship by aiming for an "A" and not a "C" grade.

9. NPCA supports and agrees with the comments by Save Our Seashore (see attached). Save Our Seashore identifies significant shortfalls with the GGNRA's compliance-based management theory and outlines how it will

need to be improved.

Thank you for this opportunity to provide comments on the DEIS. We thank the NPS for its efforts to improve management of this recreational activity that is negatively impacting wildlife and other park visitors. We look forward to seeing how the NPS addresses our concerns and comments.

Sincerely, Neal Desai Associate Director, Pacific Region National Parks Conservation Association Attached: DEIS comment letter from Save Our Seashore

Correspondence Type: Letter
Correspondence: Dear Mr. Dean -

I have the following comments on the Dog Plan Draft Environmental Impact Statement (DEIS). It is obvious that the people who developed the alternatives for this project have no experience recreating with dogs in the GGNRA. I am a regular user of Fort Funston, Ocean Beach, and a frequent user of Crissy Field and Great Meadow. I also go to Mori Point occasionally. I always bring my dog as he is my motivation to get me out into nature and open spaces. As a result, I am more active and he has been a tremendous benefit to my health and fitness. This plan will severely impact my life without a concomitant environmental benefit. Substantial changes are needed.

This plan seems like a solution in search of a problem. There is simply insufficient information to warrant the limitations that would be imposed on dog recreating. While there may be some impacts to wildlife and visitors who don't like dogs, the data here does not reveal that these are significant problems - i.e. - that dogs specifically are a significant contributor to impacts wildlife are experiencing, or that a significant number of people want to eliminate dogs (only 13% of those surveyed indicated a concern with dogs).

The preferred alternative is extreme and seems to use a sledgehammer to swat a fly. This proposal and the compliance-based management strategy are drastic and overly punitive and will not work in this population setting. Indeed it will backfire and cause social unrest.

Most sadly, this proposal and process has resulted in the loss of my support for the NPS in general, souring a very positive view that I had held towards NPS for decades. Seeing the inaccuracies and downright lies in this

document and what is clearly a political agenda with data cherry-picked and skewed to justify it, I can no longer support the expenditure of tax dollars for the NPS. To the extent it becomes a campaign issue in any campaign, it will translate into how I vote. As an environmentalist, I'm deeply saddened by this loss of trust in your agency. I fear this is a similar case to what occurred for the Point Reyes Oyster DEIS, where the National Academy of Sciences determined the NPS cherry-picked the data to support a viewpoint, defying objective scientific principles. NEPA is clear that EISs are to serve as the means of assessing the environmental impact of proposed agency actions, rather than justifying decisions already made (40 CFR 1502.2(g)). There is entirely too much "decision" and not enough objective "assessment" in this document. My specific comments follow:

Purpose and Need Not Demonstrated The DEIS identifies problems it hopes to address with the plan, but does not provide sufficient data to demonstrate why such radical changes are necessary. The fact that the current policy is inconsistent with NPS Regulations does not provide an adequate reason to make such changes, considering the unique history of these lands, which were provided by the City of San Francisco for recreational and other use. There is no discussion of how this inconsistency could be remedied using policy changes instead. The DEIS states that the Organic Act and its amendments afford the NPS latitude when making resource decisions that balance visitor recreation and resource preservation.(p. 34).

The purpose and need chapter states that user conflicts are also driving the need for action, yet this does not bear out in some of the surveys and public comments NPS has received. Of the comments received for the public comment analysis report, just 13% of them cited feelings of discomfort around or fear of off-leash dogs and felt that they were dangerous to children. A "similar percentage" (i.e. a low percentage) also stated that dogs in general make the park unsafe for visitors (p. 31). Thirteen percent (and a similarly low percentage) is not a large number. Also, the telephone survey NPS conducted of 1,600 people found that the largest proportion of visitors from each county stated that off-leash dogs had neither a positive nor a negative effect on their experience at GGNRA (p. 31). Almost one third who had seen dogs off-leash in GGNRA viewed the experience favorably. These are not numbers that indicate an extreme change in policy is necessary. The draconian restrictions are not commensurate with this small percentage of the population that has problems with dogs.

The DEIS repeatedly states that there is a problem with confusing regulations and that there are undefined and contradictory for dog activities within the park. The DEIS seems to be viewing GGNRA as one park, but the public experience of GGNRA is by park unit. There is simply no need to have uniform rules across so many distinct and diverse park units across a large geographic area. Regardless of this, the preferred alternatives and

other action alternatives surely do not solve this "problem" anyway, as they would make the rules more confusing - for example, the trail designations in Fort Funston offer no rhyme or reason as to why dogs are allowed in some areas and not others. ROLA's are located adjacent to areas of total dog ban. This kind of poor planning shows a lack of understanding of how people interact with the environment, and it will certainly increase confusion in the public.

Alternatives Arbitrary; Alternative Development Process flawed, not disclosed This section beginning on p. 45 is named the "alternative development process" however no process is identified and no rationale is presented for why the alternatives were developed the way they were. No resource protection priorities or use conflict goals were identified for the areas, which is necessary to assess the ability of the alternative to meet the goals in a manner that does not unnecessarily infringe on recreational uses without providing measurable benefit. Much more detail is needed for disclosing the alternatives development rationale and process, especially since no clear logic is apparent in the development of the alternatives - it appears very arbitrary. General themes were used to name the alternatives (e.g. multiple use, most protective, etc.) but no information is provided as to how this theme is accomplished for the particular resources and user conflicts that are occurring in that park unit. The DEIS only states that the internal NEPA team discussed strategies and management goals. It states that there was an internal site-specific analysis (p. 46) that guided the development of alternatives, but this information is not included in the document, so is not available to the public. We are told on page 46 that Chapter 2 provides an overview of how the analysis of data, expert opinion, and best professional judgment was applied to develop management alternatives, but no such overview is included. Chapter 2 simply states that the team's internal discussions resulted in the formation of alternatives presented.

What criteria are used to establish the alternatives' themes and why? The DEIS says a goal in the development of alternatives was that they were consistent with dog management policies on adjacent lands (p. 25). This does not appear to be a necessary criterion - why was it included?

The DEIS states that the GGNRA General Management Plan (GMP) - the blueprint for the next 20 years - is happening now, and the decisions from the dog management planning process will be incorporated into the GMP planning process (p. 37). This makes no sense, as a more detailed description of the resources and the future planning goals for them should influence the development of alternatives for this plan. It is precisely this information that is missing and what makes the alternatives so arbitrary. The two processes should occur concurrently, so that the dog plan can be informed by the goals of resource protection, not later incorporated as

stated. A GMP objective is to "retain opportunities for recreational activities pursued in the park today". The dog plan alternatives severely limit opportunities for dog recreation, so having the dog plan process occur separately is already undermining the GMP objective.

The DEIS states that "after evaluating each alternative against each objective for each site, it was determined that all action alternatives meet the objectives of the plan/EIS" (p. 91). This is clearly not true, as the process for determining this was flawed. This section entitled "How the Alternatives meet the objectives" goes through each alternative and eliminates Beater flexibility for dog walking en masse, i.e. - when a reason was true for one site - it was arbitrarily applied to all sites as a reason to dismiss Alternative A or other reasonable alternatives, from evaluation. The resources at each site are unique to that site - and each site should be evaluated for them. There are ways to meet the objectives and protect the specific resources at each site without such severe restrictions. This is a lazy planning approach and it is unacceptable. A site-specific assessment which discusses the resources in more detail vis-a-vis the objectives is necessary.

Also counterintuitive and irrational is the designation of sites that doesn't consider heaviness of use. Baker beach is designated as light use, and Fort Funston as heavy use, but this does not seem to have been taken into consideration in the formulation of alternatives. Heavier used sites should consider this fact and attempt to provide an access plan that would accommodate the heavier use (i.e. - less restrictions). Providing severe restrictions in heavily used areas would increase conflict, invite noncompliance, and increase health and safety concerns.

Alternatives are the most important part of the DS (they are the "heart of the EIS" according to the Council on Environmental Quality's NEPA regulations (40 CFR 1502.14). The alternatives in the DEIS are arbitrary and were not developed on a sound basis. Information on how the analysis of data, expert opinion, and best professional judgment was applied to develop the alternatives was withheld from the document, and no explanation as to how they meet specific resource management or user conflict goals for the particular site is included. They are overly simplistic and do not differentiate between resources differences at different sites or heaviness' of use, and does not appear to be informed by dog recreationalists as to practicability or safety. Even the "most dog walking access" alternative is still overly restrictive without reason or scientific basis as to why such restrictions are necessary at a given site. Such an explanation should include monitoring data and other evidence that dogs are significantly contributing to resource depletion.

The FEIS should explain, for each management unit, 1) what resources are currently being impacted that require a change from current management to

meet the purpose and need, i.e. what resources are in need of protection/restoration or what specific user conflict is driving a change in management for that unit; 2) what the goals are for that resource and particular user conflict, (3) why those goals are appropriate and how they were determined and 4) how the formulation of the alternative would accomplish those goals. Include a map identifying the locations of resources of concern for each site so that the reader can see how the proposal would accomplish the goals.

Limited Range of Alternatives; Reasonable Alternatives Not Evaluated Not only are the alternatives arbitrary, but there is a limited range of alternatives. The DEIS says the plan examines impacts from a full range of alternatives (p. 11) but this is not true. Many reasonable alternatives were not considered, or they dismissed without sufficient basis.

Mitigated "No Action" Alternative - The DEIS says that the No Action Alternative "A" does not meet the purpose and need (p. 94), but the DEIS does not offer a mitigated No Action alternative that would address the main concerns of the NPS regarding the current condition at the particular sites. It is possible that the real problems that exist could be addressed without making radical changes that only would create new problems. There needs to be a mitigated Alternative A, perhaps an Alternative AI which would represent the existing pet policy plus specific mitigation measures designed to protect the specific resources under threat in specific locations, with those mitigations clearly described and discussed as to their expected effectiveness to address the problems at those locations, unlike the generic approach taken in the DEIS that simply speculates that dogs could be contributing to certain resource issues, without evidence showing dogs are even responsible for contributing to them.

An alternative that evaluates leashed dogs at Ocean Beach. The FEIS should evaluate alternatives in the FEIS that allow leashed dogs at Ocean Beach as no legitimate reason is provided why this alternative is unreasonable. See more below under Ocean Beach comment.

Time and/or seasonal restrictions - The DEIS states that these were considered but dismissed because they create confusion among the public and lead to noncompliance. This is laughable and insulting. Bay Area residents are some of the most educated people in the country and can determine the rules if property posted. Consider these existing rules for Golden Gate Park users of Speckles Pond for model boats. The signs posted at the lake have these instructions (see also from <http://www.sfrnyc.org/website/index.php>):

- Park regulations limit the times for nitro and gasoline fueled Internal Combustion powerboats to Tuesday, Thursday and Saturday mornings, from

10:00 am to 1:00 pm.

- Park regulations also restrict gas-powered boats to operation at the southern section of the lake nearest John F. Kennedy Drive and with a strict noise level ordinance.

- Sailboats commonly run in the afternoons, from 1:00 pm to 4:00 pm every day.

The DEIS does not provide adequate reason why time restrictions are not a reasonable approach to address visitor conflict or to lessen restrictions on dog recreationalists (p. 92). Time restrictions alternatives should have been developed and evaluated. This approach has been used successfully in many areas, and addresses a very large need for dog recreationalists, who generally have recreational needs in the morning and evening hours. They were dismissed because the DEIS says this will add to confusion, but this is not an accurate conclusion. Certainly it is no more confusing that the ROLA delineation area at Fort Funston, which would prohibit dogs on the sunset trail directly adjacent to the ROLA - now that's confusing! The DEIS even states that in their survey of other NPS units - 11 incorporate seasonal restrictions for on-leash dog walking on beaches (p. 25), so clearly these other populations can handle this "confusion". I'm quite sure we can also. The FEIS should develop alternatives(s) that allow additional off-leash/voice control access to areas during certain time periods of the day to reduce impacts to recreationalists.

An alternative that provides more ROLAs was dismissed (p. 92) because it says that it would not meet the purpose which is to preserve and protect natural resources; however no attempt to meet the objectives through additional mitigation measures is considered or discussed. This approach is reasonable and should be included. Fencing is mentioned on page 92 and discussed as if it is not possible because of aesthetics, but stick windrows have been used in parts of Fort Funston and they are aesthetically pleasing. They could be fortified if necessary, and they would not impose negative aesthetic qualities and could also provide cover for small birds. NOT providing more ROLAs would not meet the purpose of the EIS which is to build community support for the plan. An alternative with more ROLAs and specific mitigation measures to preserve and protect natural resources should be evaluated in the FEIS.

Voice and Sight tag program -The DEIS discusses the City of Boulder's Voice and Sight tag program. While it doesn't indicate the success of this program, NPS was aware of this approach and should have considered it during the development of alternatives. The alternatives discussion in the FEIS should explore this as an alternative or explain why is not being

considered.

Preferred Alternative does not meet project Objectives listed on page 2. The preferred alternative clearly does not meet the objectives listed in the DEIS on page 2. One objective is "to minimize conflicts related to dog use", but the preferred alternative would increase conflicts in areas where dogs are allowed. It is well known that dogs that are well exercised have fewer behavioral problems. The severe restrictions on off-leash areas could lead to increased behavior problems. Also, more leashed dogs could increase conflict for some dogs that have leash aggression - a behavior that only occurs when on-leash. It will also increase dog-on-dog conflict as a result of dogs being squeezed into much smaller areas, which would in turn increase impacts to owner health and safety.

The preferred alternative does not meet the project objective of "building community support for the plan to maximize management of dog walking use". The population in which it is most important to build support is the community of dog owners and those with animal companions. There is a strong lack of support among organized dog groups and unaffiliated individuals that I speak with when out and about. This alternative is a disaster and will increase animosity from dog recreationalists. This strong lack of support would not contribute to meeting another project objective of ensuring "a safe and healthy working environment for park staff", Park staff, being the most visible representatives of the NPS, will surely experience the frustrations and animosity of this ill-conceived plan indeed the DEIS states that when GGNRA began citing for noncompliance in the past, "conflicts between dog walkers and park staff increased significantly" (p. 6). Additionally, the compliance-based management strategy is overly punitive, and research studies show that an overly punitive approach causes people to rebel and become defiant. This will not create a safe and healthy working environment for staff. There is already significant anger regarding this plan, which stems from its lack of fairness and reasonableness. It also threatens the ability to adequately care for our animal companions, which for many of us is the strongest bond of love we have. It is more than recreation, and the NPS should understand the primal nature of this bond, comparable to that of mother and child, and how a threat to it might translate into noncompliance, conflict with park rangers, potential for vandalism and other outward expressions of disapproval. The preferred alternative will not ensure "a safe and healthy working environment for park staff", a project objective, and therefore should be dismissed.

Specific Locations: Fort Fronton There is no rhyme or reason for alternative development for Fort Funston. Areas that are accessible literally have use walking in the bushes. Why is the chipped trail designated on-leash and the sunset trail, which borders the ROLA, prohibit dogs entirely? This makes no sense. All ROLA's should be bordered with leashed areas at least (unless

they are fenced, which would be inappropriate for GGNRA and visually offensive), so that the change in rules for the location are gradual. Also, who decided that the water fountain areas would be on-leash? A bunch of dogs with leashes attached would not be able to drink at the same time at the fountains without getting tangled up and presenting a health and safety risk to both dogs and owners. Again, it's obvious that no one that actually walks dogs developed these alternatives.

The two access paths to the beach and ROLA for Fort Funston are designated on leash. Both trails are very steep, one has the sand ladder because it is so steep. Attempting to walk a leashed dog down such steep trails is a serious safety concern. I can barely keep my footing just walking down by myself, but a dog on a leash would pull me off-balance and cause injury. Walking more than one dog on leash would be almost impossible. Both trails down to the beach must be designated off-leash for safety reasons. Again, it's obvious that no one that actually walks dogs at Fort Funston developed these alternatives.

What evidence is there that dogs are damaging Battery Davis? The DEIS implies that dogs are damaging this resource, but this is a laughable assertion with no basis. People are damaging Battery Davis, and the NPS is damaging it by not maintaining it. Graffiti is routinely sprawled across the concrete walls and the concrete is crumbling from the fog and moist conditions and lack of maintenance from NPS. Blaming the dogs for this is ludicrous. The FEIS must provide distinct evidence that dogs are even remotely contributing to any impacts to this resource to justify banning dogs entirely from the trail to the west of it, and leashing dogs on the trail to the east.

Ocean Beach Complete dog ban unnecessarily restrictive. The complete banning of dogs on the vast stretch Ocean Beach (except for the ROLA to the far north) is an extreme hardship for those of us that live nearby, and the DEIS simply does not provide sufficient basis that this ban would benefit the snowy plover in any substantial way. The studies cited simply state that some birds are disturbed by people and dogs. Only a very small subset of dogs will even chase birds, and they tend chase the larger ones, like the ubiquitous ravens or gulls by the surf. Unless a dog is walking by the dunes, they would not even see the plovers. Most dog recreationalists, myself included, walk down by the surf.

The ocean beach alternatives are unnecessarily restrictive and no reason is provided as to why. For example, there is no alternative, except the No Action alternative, that proposes access for leashed dogs. Leashed dogs can't chase anything, and this policy would at least allow me to walk to the beach and watch the sunset with my dog (I would have to drive to the ROLA). There is also no reason why the alternatives don't allow for the existing off-

leash/voice control:period of May 15-June 30th when the plovers are not present - which is currently allowed under the emergency regulation.

The DEIS only states that it will simplify enforcement to have a complete ban, but this is hardly a reason to deprive us of enjoyment of the beach with our dogs. As mentioned, and even identified in the EIS, seasonal or time restrictions are not only policy in other NPS units but are being used in other communities. Each alternative for Ocean Beach should allow for this existing off-leash/voice control period of May 15-June 30th. There should be additional alternatives that evaluate leashed dogs at Ocean Beach. No alternatives evaluate this, and this is a substantial oversight as no legitimate reason is provided why these alternatives are unreasonable. The FEIS should evaluate alternatives in the FEIS that allow leashed dogs at Ocean Beach and the off-leash/voice control period of May 15-June 30th should be added to all alternatives.

There is also no reason, from a water quality perspective, to ban all dogs from most of Ocean Beach. Currently dogs are allowed on leash, and off-leash/voice control for 1.5 months). The environmental group "Heal the Bay" just released their top 10 cleanest and dirtiest beaches for water quality. Ocean Beach received a perfect score, both at Balboa Avenue and Sloat Boulevard, and was named to the group's honor roll.

Compliance-based management strategy Alternatives are crafted to almost make compliance impossible (see comments regarding Fort Funston). Yet the compliance based management strategy could result in all dogs being banned from all GGNRA lands except for the few ROLAs if at least 75% compliance is not demonstrated, and this change would be permanent, even if monitoring results show compliance goal was later reached. There is no reason provided as to why this strategy was formulated this way, and it leaves us to conclude that it is really the motive of this plan - to create alternatives so restrictive that compliance is almost impossible, and then to punish us when we don't comply. This policy and plan sets us up to fail - there can be no other interpretation. This is clearly a premeditated strategy, and it is outrageous and a reprehensible way to treat tax-paying citizens.

This policy would also work against meeting the project objective of ensuring "a safe and healthy working environment for park staff". This policy is so overly punitive, that it will surely backfire. Research studies show that overly punitive approaches to noncompliance cause people to rebel and become defiant.

Adaptive management should occur from resource health monitoring, not compliance monitoring. The compliance strategy should directly relate to resource health indicators, because compliance monitoring does not necessarily translate to resource health. Indeed the DEIS gives such sparse

reasoning showing any strong connection between dogs and resource impacts that one can hardly make the stretch to conclude that compliance equals resource health, especially for snowy plover impacts and water quality impacts. Such monitoring efforts will be a waste of tax-payers dollars and will cause unnecessary conflict between users and park staff without the benefit to resource health. This policy is a recipe for disaster. I urge you to remove this policy from the FEIS.

Impact Assessment The impact assessment is poor in design and not based on science. Throughout the document, the impacts are attributed to dogs simply because they are possible. No substantial evidence is provided to demonstrate that the impact is either occurring or occurring in a way that is impacting resources to an extent that justifies action. Two of more egregious examples of this are the impacts to shorebirds, including the snowy plover, and impacts to water quality. In addition, the impact assessment does not consider the heaviness of use at the different sites. Baker beach is designated as light use, and Fort Funston as heavy use. Heavier use areas will receive greater impacts from concentrating users in smaller area than lighter used sites.

Impacts to Shorebirds Dogs are being made scapegoats for impacts to resources that are occurring from a number of factors. The DEIS provides no studies or makes any attempt to quantify or estimate the relative proportion of harassment or mortality attributable to dogs versus various predators at the specific sites. Local bird counts show significant increases in common ravens in SF. This article documents the population explosion as far back as 2002. I have seen a significant increase in ravens at Ocean Beach and Fort Funston. Hang gliders I have spoken with have also noticed this increase. It is very likely that ravens are the real threat to the snowy plover. Ravens predate on plover eggs and NPS's channel islands websites acknowledges the impact they are likely having on the plover there. I have seen Ravens bothering other birds, as they are very gregarious. (I have also seen Ravens bothering my dog!) There needs to be an estimate of the likely contribution of each throat to the snowy plover at each site so that the impacts from dogs is put into perspective. Based on my experience, I find it highly unlikely that dogs are contributing even 5% of the impact at Ocean Beach. You would have a better argument if plovers nested there, but they simply overwinter there, and no clear connection is made - only speculative statements .

I have substantial concerns that the data used to try to justify restricting dogs from beaches due to the snowy plover was cherry-picked and was not objectively collected. I am aware that some studies that were used were conducted by the Audubon Society, a bird advocacy group. These studies clearly are not objective and should not be used in this DEIS. Would you allow advocates of dog recreation to conduct such studies and expect them

to be objective? Additionally, I understand that results from a 2007 study by Meg Warren of U.C. Berkeley that concluded that the plovers are not negatively impacted by dog recreationalists was omitted from the DEIS because the NPS did not agree with the conclusion. This is a clear repeat of the mistakes NPS make in the oyster farm studies. There, the National Academy of Sciences found park service officials exaggerated that operation's negative impact on the environment, and that is clearly what you are doing here. To quote Diane Feinstein on that case, "It is critical to the integrity of the National Park Service and the Department of the Interior that you publicly disavow the practice of selectively misusing and misconstruing science to achieve a desired outcome." NPS must apply that advice 1.0, this Dog Management Plan process.

The DEIS does cite some studies that indicate that dogs do not generally harass wildlife, including birds, but these studies are included in the safety section (p. 30). Here it states that a case study in Boulder Colorado concluded that dogs off-leash "were rarely observed chasing other dogs, disturbing people, chasing wildlife, destroying vegetation, or entering bodies of water." This section also references a study on leash laws and habitat type on avian and small mammal communities in urban parks (Forrest and St. Clair 2006) that concluded that off-leash dogs have no effect on the diversity or abundance of small mammals or birds in urban parks. (p. 30). These studies should be discussed in the impacts to wildlife section, not the safety of off-leash dogs section. These conclusions lend support to the conclusions that dogs are not a real environmental threat for wildlife. The DEIS states that dogs causing actual direct injury to or mortality of wildlife is rare (p. 29).

One of the wildlife studies cited states that "when shorebirds are flushed, it is not solely because of the dogs presence; it has been suggested that dogs extend the zone of human influence when off-leash" (p. 28). If this is the case, then focusing on dogs makes no sense. If the NPS will use this study at all to support conclusions of impact from dogs, it must conduct additional studies that evaluate the extent humans alone are flushing shorebirds, and estimate the frequency and extent that dogs are contributing. Otherwise, this study does not support the severe restrictions in the preferred alternative and other alternatives. If it is determined that humans alone cause statistically similar disturbance, then the NPS needs to evaluate its shorebird protection strategy and alter it to not focus solely on dogs but provide an integrated strategy.

The FWS is designated critical habitat for the snowy plover all over the west coast of California. No SF sites were included in this proposal. The designation of critical habitat to such a large extent will offer additional protections and this cumulatively beneficial effect should be documented in the FEIS and taken into consideration when assessing cumulative impacts

from dogs from the No Action, and other alternatives.

One of the more outrageous assertions in the DEIS is that dogs could disturb bank swallows on the cliff face at Fort Funston. I have seen the swallows come and going from these burrows and since they are on a sheer vertical cliff face, there is no way a dog can get near them, and certainly no way they could disturb them. I have seen stupid people trying to climb them, putting their feet in the burrows. Dogs are harmless to bank swallows and any assertions to the contrary are ludicrous.

Water Quality Impacts from Dog Waste The DEIS does not provide data that demonstrates that dog waste is a significant contributor to water quality impairment. A number of bacterial tracing studies indicate that pet waste is a relatively minor contributor to bacterial pollution in waterways, even where these run close to well-used pet exercise trails. The DEIS references a study of a beach in Long Beach CA that showed no water quality differences in areas with dogs versus those without. Clearly, site-specific studies need to be conducted for the GGNRA beach and other sites for which substantial restrictions are proposed if water quality reasons are to be used to justify such severe restrictions on dog recreationalists. There is no evidence that dogs are contributing to any water quality impairments in the GGNRA in any substantial way. In fact, the environmental group "Heal the Bay" just released their top 10 cleanest and dirtiest beaches for water quality. Ocean Beach received a perfect score, both at Balboa Avenue and Sloat Boulevard, and was named to the group's honor roll. See

Impacts on adjacent parks/transferred impacts The assessment of indirect impacts on adjacent parks is nonexistent. Simply identifying nearby fenced in dog parks is not an impact assessment. For many sections, it states there would be no increase in use of nearby parks, which has no basis. The opposite is true, as was evidenced during the closure of Fort Funston during the Japan Tsunami, where over 200 dogs were present at nearby Stern Grove. Our City-owned parks would experience increases in user conflicts from more crowding in them. The City Recreation and Park Department would be stretched when it is already experiencing budget problems. City law enforcement would have to handle conflict caused by the GGNRA. A detailed impact assessment on all resources must occur for all City-owned parks, especially Golden Gate Park and Stern Grove. Conclusions should be made regarding "possible conflicts between the proposed action and the objectives of ...local land use plans, policies and controls" for these areas receiving transferred impacts, as required under 40 CFR 150216(c).

Impacts on Health and Safety There is insufficient data to show cause for any health and safety concerns due to the presence of dogs in the GGNRA. Just 2% of serious safety incidents involved dogs, and including non-serious incidents, dogs accounted for a mere 7% of incidents. The issue of safety

cannot be used to justify such a drastic change in policy.

There is a serious safety concern with the preferred alternative's proposal to require leashes on the two steep beach access trails. It is hard to get one's footing with a dog pulling you - injury and falls will occur if this policy is implemented. These areas must be changed to off-leash for safety purposes or NPS will be responsible for injuries.

The safety issue identified on p. 20 of wildlife transmitting disease to dogs is a stretch. The potential is remote, and certainly not sufficient cause for such drastic policy change. Also, dog recreationalists assume a certain amount of safety risk being out in nature. You might as well say there is a safety risk in driving to the site - its sure to be higher than these risks.

The DEIS cites health concerns from dog waste (p. 20). Is there any evidence that this has ever occurred? The mere potential for something to occur is not enough to warrant such severe restrictions, there should be some evidence that it has occurred in GGNRA or similar environments. The FEIS should make an attempt to characterize the problem as it pertains to the project sites.

The DEIS uses the fact that dogs and people have to sometimes be rescued as a reason to limit dogs, saying the rescue attempts can cause injuries to park law enforcement (p. 19). It does not discuss an option for allowing a volunteer rescue team to be formed that could be called first, to relieve law enforcement from this obligation. This should be discussed and explored as mitigation in the FEIS. Now that I know that it's such a burden on law enforcement, I will avoid calling them for any assistance I might need when on GGNRA lands. Socioeconomic impacts on small business entrepreneurs not assessed Socioeconomics was dismissed from further analysis however the discussion provided on p. 23 justifying this only looks at more macro-scale impacts on the larger economy and does not evaluate the impacts on the small business community of commercial dog walkers. As a dog owner who must work and be away from home for 11 hours a day; the service that this sector of small businesses provides is invaluable to me and to many others. These commercial dog walkers are business entrepreneurs, many bonded, licensed and with insurance. While they are professionals, they must work hard in order to make a full-time living, and of course have to buy their own health insurance and fund other benefits. The financial impact on this business sector was not assessed, despite the fact that the plan specifically addresses this sector and proposes significant changes to the rules affecting it. Clearly the restrictions on this sector could result in reduced potential to earn income. These effects are significant considering the high cost of living in the Bay Area and the difficult economic climate in general. The FEIS should assess socioeconomic impacts to this small business sector. It should consider environmental impacts that could result

from entrepreneurs forcing to increase trips to comply with the 6 dog limit, and the likelihood that businesses might not be able to sustain themselves and be forced to close. To the extent that these entrepreneurs are low-income, these could be ET impacts. Low income determination must consider that this is a high cost of living area. Mitigation measures to mitigate impacts to these small business entrepreneurs should be discussed and adopted in the FEIS.

Socio-cultural effects not assessed Socio-cultural effects were not assessed in the DEIS and since this plan will so profoundly affect people's lives, this is a serious omission that must be corrected. Dog recreationalists have a distinct community and relationships, as well as individual life practices that may center around their relationship with their dog. The preferred alternative would have serious impacts on a major cultural component of the dog community. The individual's relationship with their dog may also provide substantial meaning to their lives.

The FEIS does not identify the evolution that has occurred regarding the human-dog relationship and without this information, any hope of understanding the nature of impacts on human communities and visitor experience is incomplete. This discussion should focus on the evolution of the human-dog relationship in the U.S. and the importance that humans place on the welfare of their dogs. The advanced place of dogs in society can be seen in the preponderance of current books on the subject. Not just dog training books but books on the significant shared experiences and on understanding dog's experiences (for example, "Inside of a Dog: What Dogs See, Smell, and Know", by Alexandra Horowitz is now and has been 8th on the Bay Area's best seller list for 33 weeks). One can even get a B.S. in canine studies at Bergin University in Sonoma County. The analysis of impacts in the FEIS should acknowledge this culture more fully so that impacts are accurately presented. This evolved human-dog bond also has implications for the issue of conflict of dog walkers with park rangers, which is a project objective and part of the purpose and need for the project.

The importance of the human-dog relationship is demonstrated by one study that was conducted to assess the relative closeness dog owners felt towards their dogs. It asked them to represent their significant relationships pictorially using a Family Life Space Diagram. It revealed that more than 1/3 placed the dog closer to themselves than any other family member and led authors to conclude, along with other studies, that for about a 1/3 of owners, the dog's importance ranks on par with that of the human members of the family. (See: The domestic dog: its evolution, behavior, and interactions with people by James Serpeli). Another indicator of the importance dogs have in our lives is the fact that pet supply stores have not suffered the same economic impacts as other businesses in this challenged economy the last few years. This has been reported in the media on several

occasions, and supports very high value of dog or pet welfare to humans and the priority they place on their pet's welfare.

Another fact to consider is that studies have shown that attachment to pets is highest for people living alone and for couples who do not have children living at home. This factor should be considered in relation to the demographics of the population for the different GGNRA sites when making decisions regarding dog walking restrictions. This impact on the specific population should be thoroughly disclosed. If these studies are correct, then restrictions on dogs would be akin for some people to restrictions of bringing certain family members with them to the park. The decision-maker should be fully aware of this deep dog-human bond when considering the practicability of the decision and the expectation. For achieving the project objective of building community support for the plan (p. 2)

Impacts on Park Operations The DEIS states that managing current dog walking policies in the park requires significant staff time for GGNRA law enforcement, maintenance of heavily used dog walking areas, and responding to visitor concerns/complaints (p. 17), yet the chapter on impacts to park operations shows that the No Action alternative has the least impacts on park operations over the other alternatives. The other alternatives would introduce a police state into our parks, and turn simple law abiding people into criminals simply because they want to be with their full family in outings on our public lands.

Impacts to Visitor Use/Experience The statement on page 18 that "Dog walkers and visitors without dogs often come into conflict" is outrageous and further proves that the people who wrote this DEIS have little to no experience using these areas with dogs. This statement is so counter to my experience that it is laughable - I use GGNRA areas often and incidents of conflict are rare. In fact, the exact opposite is true - there is much joy and happiness shared between me and my dog, and others without them, especially tourists, who often say they miss their dog at home and come to pet mine. I've had people without dogs take pictures of my dog playing on the beach, and play with him when he interacts with them. The FEIS must provide a basis and evidence for such an outrageous statement. "Often come into conflict" is simply not accurate.

In general, the methodology of analyzing visitor experience is flawed. It does not take into account the quality of experience in assessing impacts to dog recreationalists. It's more than just whether "prefer" to walk our dogs, but being able to enjoy NPS lands at all. Dogs are our family members and such wide-scale exclusions is akin to saying people shouldn't bring their children when they go out to the park. Fenced-in dog parks in other locations do not provide me adequate exercise, and severely restrict my experience of nature.

They are not equivalent experiences, and the DEIS presents them as if they were. This needs to be remedied in the FEIS.

The impact assessment to visitor experience must be expanded so that it is made more meaningful. NEPA requires that NPS "identify and develop methods and procedures which will insure that presently unquantified environmental amenities and values may be given appropriate consideration in decision-making along with economic and technical considerations" (42 USC ' 4332 (2) (B)). NPS must discuss the unquantified values. The action alternatives will cause significant impacts to my connection with nature and my environment. I would lose the joy of seeing my dog's natural behavior. I would lose the sense of freedom from walking alongside him as a friend. I would lose the access to nature, being forced into more crowded ROLAs that does not offer a nature experience. I would feel heartbreak at seeing the ROLA become completely degraded as a result of squeezing a large number of dogs into it, as opposed to the dispersed negligible to minor impacts that previously occurred. I would experience stress from having to witness increased dog-on-dog conflict in these compressed areas and possibly from more leashed dogs, due to leash aggression. I would experience extreme hardship from the loss of spiritual renewal from being unable to watch the sunset with my dog on my beach at Ocean Beach. I would experience extreme sadness at the loss of trust in my government, and anxiety in watching my peaceful open spaces turn into a police states, teeming with law enforcement officers.

Air Quality No air quality analysis is included in the DEIS but the significant changes that would result from this plan would cause changes in when and how often people use their cars and how far people drive. The DEIS dismissed from analysis the requirement to evaluate energy consumption, stating that vehicle miles traveled because of dog walking are negligible in the context of regional travel. It is not clear if the DEIS is also translating this conclusion to the analysis of air impacts. The DEIS acknowledges that the alternatives could affect visitation patterns (p. 23). For me it will cause me to drive every morning to walk my dog on the beach where I could previously walk. If I am unable to walk my dog on Ocean Beach, I will have to get into my car and drive to the LOLA to the north unless I have an abundance of time, which is not the case when walking my dog in the morning before work. This will result in 10 additional car trips per week - albeit short ones. But while the trips would be short, the majority of vehicle emissions occur during engine warm-up and represent new emissions under the action alternatives that would not be in the air under the existing conditions. And this is just for me - one person. The hundreds of people affected by this plan necessitate this analysis in the EIS. Some of the restrictions are so severe that it will force people to drive much further to obtain an comparable nature experience. Sites that are more remote that will prohibit dogs entirely, such as Muir beach, will result in even longer vehicle

trips. A discussion of potential air quality impacts from the alternatives should be included. Additionally, the DEIS states that law enforcement will be increased, so the increased emissions from law enforcement vehicles should be estimated and added. Because the local air basin is in nonattainment for air quality standards for certain air pollutants, the FEIS must state whether the general conformity regulations under the Clean Air Act apply.

San Mateo County and New Lands There would be no off-leash areas at all in San Mateo County, and this is especially harsh. San Mateo County has few locations where dogs are allowed, being prohibited from all San Mateo County parks, which would make this impact to recreational resources not only individually significant but cumulatively significant. There should be some ROLA's in San Mateo County. The impact assessment must take a hard look at impacts that would be transferred to other sites.

The DEIS mandates that there will be no dogs, either on- or off-leash on any lands that get added to the GGNRA in the future. even if dog walking has taken place on those lands for decades. Instead, provisions should be in place to grandfather in existing dog access and to offer a public process and comment opportunity for those locations. No impact assessment would have been done on these new lands and such severe restrictions may not be necessary for the protection of resources.

EIS organization The DEIS was poorly organized and made review very difficult. The FEIS should be reformatted so that the information for specific geographic units are all together in one section and not spread out throughout the resource chapters, without even tabs to help locate them. Reviewers will be interested in certain locations over others and organizing the EIS this way will help the public tremendously. The FEIS should discuss each location in a separate section and within that section, have the impacts to the different resources discussed.

Thank you for the opportunity to comment. I hope these comments are taken seriously, remembering that your actions on this plan will affect the reputation of the NPS and its ability to make science-based decisions, not political ones. Any questions can be directed to. Karen Vitulano San Francisco, CA 94122

Correspondence: Overview

According to Wikipedia, Environmental Justice is:

Environmental justice (EJ) is "the fair treatment and meaningful involvement of all people regardless of race, color, sex, national origin, or income with respect to the development, implementation and enforcement of environmental laws, regulations, and policies."⁴¹ In the words of Bunyan Bryant, "Environmental justice is served when people can realize their highest potential."¹³¹

Environmental justice emerged as a concept in the United States in the early 1980s; its proponents generally view the environment as encompassing "where we live, work, and play"

I have a master's degree, over 15 years of experience as an auditor, and was formerly with a major public accounting firm. This 2200-page environmental impact study and plan is the most overwhelming and misleading document I've ever seen and it makes it nearly impossible for the public to provide meaningful comment. In addition, the Park Service is impeding the public comment process by providing misleading statements to the media and the public and by withholding or delaying providing information needed to meaningfully comment on the DEIS. I strongly agree with the more extreme conservationists, "we need to look at evidence" but disagree that suppressive and misrepresented Park Service regulations are a primary justification; therefore I believe public comment is vital to protect the public interests. For over 40 years, dogs have been integral and active part of healthy and safe recreation for a diverse group of people on the GGNRA lands so any changes need to be based on facts and not unsubstantiated "hypotheticals".

My specific concerns regarding environmental injustice include: ? Freedom of Information Act and Unlawful Abuse of Power ? Unsubstantiated Claims are Detrimental to People ? Freedom of Speech Impediments ? Overwhelming and Misleading DEIS and Information Provided to the Public ? Minority Misrepresentations & Non Representation ? Discrimination Against People with Dogs

Freedom of Information Act and Unlawful Abuse of Power

I've been shocked at what feels like deliberate delays in providing real data to citizens. Almost immediately when I became aware of the claims regarding dog incidents, I submitted a Freedom of Information Act request, and the Park Service quickly responded. Then delays started when it was clear that, while a concerned environmentalist and citizen, I was pro-dog. It took two months, a

department of interior appeal, and the threat to go to court before the Park Service provided a simple download from an Access database with the GGNRA Law Enforcement Data. See Appendix 2: Mar30, 2011 Department of Interior Responses to FOIA Appeals & Support.

The Park Service has done the same with my other requests for real GGNRA information on the "hypothetical" adverse impacts and only provided some information after long delays and the rest is still outstanding even though today is the last day to provide public comments. I submitted a second appeal to the Department of Interior on April 25, 2011, and the Park Service was instructed to respond by yesterday but I still have not received a response. See Appendix 1: May 17, 2011 Department of Interior Responses to FOIA Appeals & Support.

Suzanne Valente has had the same issues and never been able to obtain the supporting information for the environmental impacts used to justify the current leash regulations on Ocean Beach for the SPPA. She made the FOIA request for the raw data utilized in the 2006-2007 Daphne Hatch study and the Park Service would not release the data. The raw data for the latest 2009 study by Lynes, and Zlautnich is not a part of the DEIS either

In another case, she was trying to make the fundamental point that the decision to proceed with this DEIS itself is unlawful. The enabling legislation requires the GGNRA to utilize sound principles of land use planning and management. Accepted practice would be illustrated by the Rattlesnake National Recreation Area and Wilderness (RNRAW) which produces an annual monitoring report. The report assesses current recreation trends, needs, and impacts, and thereby serves as a tool for long-term management of the RNRAW. The following is taken from the Introduction of the Report for 2009:

"This is the seventeenth annual monitoring report for the Limits of Acceptable Change (LAC) based Management Direction for the Rattlesnake National Recreation Area (NRA) and Wilderness (RNRAW), which was approved in December 1992. Monitoring is the final step in the LAC planning system. It is an ongoing, continuous process and is instrumental for evaluating management effectiveness and sustainability of resource values and conditions.

The LAC process recognizes that wilderness conditions change. Wilderness areas are dynamic systems with many forces continually affecting the landscape. These forces of change include people and their impacts, fire, insects and disease, invasive species and many others. It defines what conditions are desirable and how to achieve or maintain those conditions. Based on citizen involvement, laws and regulation, it identifies what changes are acceptable rather than attempting to prevent change.

Monitoring is based upon the indicators and standards outlined in the LAC direction. The indicators and their specific standards provide methods of

measurement to effectively monitor factors and area wide issues. Refer to the December, 1992 Limits of Acceptable Change Based Management Direction for the RNRW for a more complete discussion of the LAC process.

The factors monitored during the 2009 field season include: education, use and users, trails and roads, Wilderness characteristics, vegetation, vandalism, wildlife, fire, goals and policies. Refer to Table 1 for a complete description of the factors, indicators and standards for each opportunity class (OC)."

In contrast, in 2006 when this DEIS was announced on the Federal Register, she made a Freedom of Information Act Request to provide the data, documents, and/or Staff Report which substantiated the GGNRA's claim that there was controversy over the dog policy, compromised visitor and employee safety and resource degradation which warranted this DEIS. The GGNRA's response merely stated: "The Staff Report and other documents you seek do not exist at this time". An appeal to the Department of the Interior regarding this FOIA request elicited the following response after several letters: "Since the Department has not made a determination on your appeal within the time limits set in the FOIA, you may seek judicial review under 5 U.S.C. 552(a)(4)(B). However, we hope that you will delay filing the lawsuit so that the Department can thoroughly review the issues in your appeal and make a determination. We appreciate your patience to this point and the Department will make every effort to reach a decision on your appeal as soon as possible." This letter is dated August 8, 2006. There has been no written response as of yet.

The lack of data or any documentation to support the assertions used as justification to proceed with this Environmental Review violates Federal Law as it renders this agency action arbitrary, capricious and an abuse of discretion. Accordingly, this agency action, findings and conclusions should be set aside as prescribed by the Administrative Procedure Act, 5 U.S.C. 706 (2)A.

Unsubstantiated Claims are Detrimental to People

Why is it significant that other Recreation Areas perform annual monitoring of resources and the GGNRA does not? Why is monitoring so important? As stated in an NPS publication, "Monitoring the Condition of Natural Resources in US National Parks"

(http://science.nature.nps.gov/im/monitor/docs/Monitoring_Park_Condition.pdf) the purpose of monitoring is as follows: The overall purpose of natural resource monitoring in parks is to develop scientifically sound information on the current status and long term trends in the composition, structure, and function of park ecosystems, and to determine how well current management practices are sustaining those ecosystems. Use of monitoring information will increase confidence in manager's decisions and improve their ability to manage park resources, and will allow managers to confront and mitigate threats to the park

and operate more effectively in legal and political arenas.

Additionally, a review of NPS online resources reveals that there is an entire infrastructure set up to guide and facilitate NPS properties in their monitoring duties, "Vital Signs Monitoring" (<http://science.nature.nps.gov/im/monitor/index.cfm>)

A subsection of the aforementioned web site (Program Goals) discusses the goals of park monitoring: "Natural resource monitoring provides site-specific information needed to understand and identify change in complex, variable, and imperfectly understood natural systems and to determine whether observed changes are within natural levels of variability or may be indicators of unwanted human influences. Thus, monitoring provides a basis for understanding and identifying meaningful change in natural systems characterized by complexity, variability, and surprises. Monitoring data help to define the normal limits of natural variation in park resources and provide a basis for understanding observed changes; monitoring results may also be used to determine what constitutes impairment and to identify the need to initiate or change management practices."

More recently, the National Parks Omnibus Management Act of 1998 established the framework for fully integrating natural resource monitoring and other science activities into the management processes of the National Park System. The Act charges the Secretary of the Interior to "continually improve the ability of the National Park Service to provide state-of-the-art management, protection, and interpretation of and research on the resources of the National Park System", and to "assure the full and proper utilization of the results of scientific studies for park management decisions." Section 5934 of the Act requires the Secretary of the Interior to develop a program of "inventory and monitoring of National Park System resources to establish baseline information and to provide information on the long-term trends in the condition of National Park System resources."

Clearly, the failure of GGNRA management to conduct any consistent monitoring of the resources of the GGNRA is a violation of Federal law. The more fundamental problem is that this DEIS highlights the fact that GGNRA management is in persistent violation of the enabling legislation for this park property. GGNRA management can provide no monitoring report to substantiate visitor use patterns or conflicts, no documentation of degradation of the Recreation Area resources, as well as no documentation as to whether resource degradation is inevitable or under the control of management prior to proposing these management changes. Consequently, there have been no mitigations to address problems as they arise. In truth, were the GGNRA's claims of degradation of resources even valid (I contend they are not), a case could be made that any degradation of the GGNRA property is due to GGNRA management's failure to adhere to accepted practice regarding land use planning and management. How is it equitable for the GGNRA to abolish recreational

access as a remedy to a problem they cannot document and when they have demonstrably violated the principles of sound land use planning and management?

Freedom of Speech Impediments

The Park Service curtailed Freedom of Speech by not having an open forum during the open houses. I also heard that the rangers were stopping people from distributing flyers because of the following published GGNRA regulations that infringes on the First Amendment rights to Freedom of Speech:

36 CFR-1.6 Activities that Require a Permit 2.51(a) Public assemblies, meetings, gathering, demonstration, parades, and other public expressions of views 2.52) Sale or distribution of printer matter that is not solely for commercial advertising

The GGNRA still maintains these policies even though the D.C. Circuit Court of Appeals has ruled that the National Parks Service's requirement for a permit to conduct any type of expressive activities within the 391 national parks is "overbroad and therefore unconstitutional on its face." (Boardley v U.S. Department of the Interior, C.A.D.C. No. 09-5176, 8/6/10, p. 2) See: http://www.Park_Service.gov/goga/parkmgmt/loader.cfm?csModule=security/gfile&PageID.397206

Publishing a regulation that calls for requiring a permit even for a generic "other expressions of views" is totally against American values.

Overwhelming and Misleading DEIS and Information Provided to the Public

In addition to unnecessarily overwhelming the public with a confusing and misleading 2200-page document printed only in English in a highly ethnically diverse city, other examples of the Park Service impeding the public comment process include:

1. In the media and at open houses, the Park Service continues to exaggerate the "rising" safety incidents and complaints, which aren't supported by the actual data and claims increased visitation, which isn't supported by the data either.

2. Representing to the public that "off-leash" dogs are against the law in National Parks when it is actually only against National Park Service "regulations" that the Park Service has the ability to adapt. I heard one Park Service representative at the open house telling a woman that it was illegal to have dogs off-leash and that is also implied in the DEIS, even though the courts have upheld the validity and legality of the 1979 Pet Policy. In addition, the DEIS preferred alternative clearly allows some off-leash dogs so clearly off-leash dogs can be supported by the Park Service if it so chooses.

3. Clearly the mandate for the GGNRA is "recreation" but the Park Service is attempting to turn the GGNRA into primarily a conservation area without a change in park mandate. In the DEIS the GGNRA uses the purpose statement from the 2008 "draft" foundation statement that does not appear to have been approved and complete the required process; the GGNRA was not created to bring a National Park caliber experience but per the enabling legislation was "in order to provide for the maintenance of needed recreational open space necessary to urban environment and planning". In the 2002 survey they also modified the park purpose statement to minimize the recreational mandate.

Ignoring Public Comment

As an example of the Park Services dismissive attitude toward local residents, in the DEIS on Page 267 they states "In many parts of the Bay Area, GGNRA lands are the backyards of the citizens, and residents have come to expect public lands to be made available for dog walking and other recreational activities". This clearly is not honoring the legislative mandate of the GGNRA which is "in order to provide for the maintenance of needed recreational open space necessary to urban environment and planning". People are not being unreasonable to expect the Park Service to maintain the recreational value of the GGNRA and for the Park Service to not arbitrarily undermine that recreational value.

In regards to dog management, the Park Service is not protecting the interests of regular citizens and needs to stop ignoring the overwhelming and on-going public comments from people with dogs and those opposed to the extreme cuts in dog recreation and degradation of recreational value. Over the past 10 years, the Park Service has summarily dismissed the overwhelming input from the diverse group of Bay Area people, particularly in urban San Francisco, with dogs regarding their need for recreational open space. Seventy-one percent of the people responding to the GGNRA 2003 Advanced Notice of Proposed Rulemaking supported off-leash dog walking. In addition, in the 2002 Population Survey, 69% of respondents from all four counties opposed reducing sites that allow on-leash dog walking, and 54% of San Francisco, with the most off-leash areas and experience, support allowing off-leash dog walking at GGNRA sites. Overall, only 41% of respondents supported the statement regarding off-leash dog walking but the survey question was not easy to understand and seemed designed to support eliminating dog access.

Discrimination Against Those with Dogs

The existing San Francisco model should be the role model for other communities on how to integrate dog recreation for a healthy and vibrant community. On the whole, the GGNRA dogs are well exercised, socialized, and trained, and dog owners are responsibly managing their dogs. While some unfortunate incidents do occur, those incidents are rare and only a few are more than nuisance type incidents. Dogs inspire people to lead healthier lives and to

interact on a daily basis with the community. While some people dislike or are afraid of dogs, there are many parks that don't allow dogs or require the dogs to be on leash. There will always be people that dislike others for whatever reason; however, suppressing dog recreation, particularly off-leash, will only lead to more dogs and people not being socialized to each other and increasing the number of dogs and people with fears.

The Park Service is discriminating against people with dogs by not recognizing dog recreation as a highly demanded recreational activity for the GGNRA. The Park Service represents that the current dog management plan is unsustainable. After reviewing the DEIS, visiting all but 3 of the park units, reviewing the law enforcement data, and the Western Snowy Plover research; the only unsustainable aspect of the current GGNRA dog management plan is the self-inflicted Park Service conflict with the people with dogs over leash laws and areas closed to pets. Instead of addressing that problem, the DEIS plan will only exacerbate these problems within the GGNRA and adjacent lands.

Minority Misrepresentations & Non Representation

It really bothers me that the Park Service and environmental groups are representing these group instead of pro,actively allowing them to speak for themselves. As far as I can tell, no one has made a real attempt to get unbiased public comment from any of these groups, and the Park Service has made it nearly impossible for everyone with the overwhelming and confusing 2200 page document and misleading media presentations.

Some points to consider:

? 2200 pages overwhelms and confuse even the most educated ? no translation into any other language of the plan or any notices or any real attempt to solicit comments from these groups ? no comprehensive evaluation of the benefits or barriers related to dog recreation for disadvantaged groups nor developing programs to maximize recreational opportunities ? cherry-picking and misrepresenting data related to disadvantaged group from the 2002 population survey and 2007 SFSU study to support banning dogs

I'm biased but I see a diverse and inclusive dog community in the GGNRA joined by our mutual love for our dogs. The beauty is we can all share equally in the park no matter what our financial situation. If anything, less advantage groups need increased education about the benefits of dog exercise and socialization and to be encouraged to come out and fully take advantage of their family dog. Ella and I went once a week for about a year to the San Jose juvenile hall for El to play with the inmates - some incarcerated for life - and many were from disadvantaged backgrounds. Those deprived kids, more than most kids, came alive when playing with all our off-leash dogs. The only reason El is a therapy dog is because of off-leash places like Fort Funston. I also think the

disabled and seniors benefit the most from off-leash recreation because of not having to juggle a leash when walking.

I've love hearing and reading everyone's personal stories and comments on the GGNRA but I came across one that tops the list and expresses my own feelings:

"I go to the beach more than I go to parks. Going to the beach is more or less the same as going to the parks for me. The ocean is also a form of nature. When I look at the ocean, I could totally relax and let my imagination run wild. I feel that life in America is truly wonderful when I watch people fishing, jogging, playing and walking their dogs. Sometimes, I would even call my parents in China to tell them that I was at the beach and they could even hear the waves! I lived near the beach in Tsingtao when I was in China, and thus, I was especially happy when I ended up living near the beach here in America." [Chinese female, 44 years old, recent immigrant, San Francisco resident)

This was in the SFSU (Roberts 2007) study <http://wildequity.org/images/4856> that the SF Bay Area Sierra Club and the DEIS (page 31) uses to justify eliminating dogs. The Sierra Club interpreted: "Asian and Latino park users report that they are less likely to visit parks for fear of harm from dogs and because of the presence of dog feces." The report actually talks about barriers and does not measure the significance in any way. It also fails to mention that the discussion groups were skewed towards recent immigrants and to those that have never used the GGNRA. If I was in a discussion group even I'd mention not liking poop on the trails but that doesn't mean I won't go because of poop. Poor transportation and communication, unfamiliarity, unfriendly park employees and visitors, fear of crime, and overly restrictive rules seemed far more of an issue than dogs. Dog barriers certainly tie in with the general discussions about fear of the outdoors and the outdoors being unclean, which positive exposure to the outdoors and dogs could help overcome. The study also talks about how attitudes change from first generation to subsequent generations.

Anyone discussing environmental injustice should look at this study and how the study is not substantial enough to draw any conclusions that dogs are a significant barrier for the general Asian or Hispanic/Latino population or for anyone that doesn't have extreme dog phobias or reactive dogs. Remember that for self-identified Hispanics in the 2002 population survey, dog ownership resulted in significantly more days spent in the GGNRA, just like others with dogs. I just hope these groups self-identify and provide strong representation about how important the GGNRA is to a diverse group of people with dogs. The Park Service should look at the demographics of people responding before drawing conclusions on the diversity of people with dogs which includes children, minorities, people with disabilities, seniors, and others.

Highlights of Relevant Personal Background ? Lived in the Bay Area for 17 years and am an avid outdoors and nature lover that has frequented many

National Parks, National Forests, and most of the parks in the Bay Area. Before Ella, a dog, joined the family, I visited National Park Service parks including Yosemite, Yellowstone/Grand Tetons, Lassen, Glacier, Grand Canyon, Redwood, Point Reyes, Pinnacles, Zion, Bryce, Death Valley, Canyonlands, Channel Islands, Denali, Dinosaur, Sequoia/Kings Canyon, Mesa Verde, Muir Woods, Natural Bridge, Padre Island, Rocky Mountain, and SF Maritime. Since Ella joined the family, we have not been to a park, other than the GGNRA, that is managed by the National Park Service because dogs are not allowed beyond the main park corridor (e.g. the campgrounds and parking lot and superficial trails). Not being able to visit the National Parks is one of the hardest things about having a dog as a part of the family. ? Frequent the GGNRA dog-friendly sites almost daily for 5 years since Ella, an Aussie, joined our family with most GGNRA visits to Sweeney Ridge, Mori Point, Fort Funston, and Milagra Ridge. Before getting Ella, Sweeney Ridge was the only one of these GGNRA sites that I had visited more than once in 12 years in the Bay Area. Instead we tried to always go to new open spaces during our weekend hikes with Sweeney Ridge and Sawyer Camp / San Andreas / Canada Road trails being standard hikes/runs/bike that we did 4 or 5 times a month. We also had gym memberships which we no longer have since we can't exercise Ella and go to the gym. We find hiking so much more rewarding with Ella; we interact with so many more people because having a dog, like having a small child, facilitates social interactions that rarely happened without a dog ? Spent the past four months canvassing the GGNRA and other dog-friendly locations talking to people with dogs and raising awareness of the GGNRA plan. This included many discussions regarding the experiences and needs of people with dogs ? Co-author of the SaveOffleashOogs Call to Action weekly email regarding the GGNRA dog management plan and active member of the SaveOffLeash coalition with primary responsibility for grass roots organizing for San Mateo County, SFDog, and Ocean Beach Dog ? Member of the Peninsula Australian Shepherd Club, the Australian Shepherd Club of America, Ace Dog Sports, and the Bay Team (an agility organization) ? Over 20 years of experience as an auditor in public accounting firms and corporations and a Masters in Accounting Information Systems and a Bachelors in Agricultural Economics/Accounting ? Graduate of the SF SPCA Dog Training Academy, a six week intensive program taught by Dr. Jean Donaldson, a nationally recognized dog behaviorist ? SFSPCA volunteer trainer responsible for addressing more significant behavioral issues such as reactivity, fear, rude behaviors, and puppy socialization ? Grew up on a farm with a virtual zoo of animals related to this plan including dogs, horses, mules, deer, quail, geese, and ducks and in a rural areas with significant wildlife populations ? Read the 2200 Page DEIS and visited all but 3 of the 21 sites included in the plan plus visited the new lands at Rancho Corral de Tierra in Montara ? Analyzed the 2001 to 2010 GGNRA Law Enforcement Access data headers and the 2007 to 2008 pet-related cases in the PDFs ? Reviewed the available GGNRA inventories and monitoring reports provided by the GGNRA related to a Freedom of Information Act request ? Rely on the GGNRA for daily walks to help prevent morbid obesity, diabetes, heart disease, and breast cancer, which is prevalent in my

family as well as stress relief ? Rely on GGNRA to responsibly care for Ella, our dog, and for ensuring that she is a healthy and safe dog for the community and for those visiting our home ? Committed environmental advocate for addressing real issues that make the world a healthier and happier place for all our interconnected beings. Member of the Sierra Club

Correspondence: COMMENTS ON DRAFT DOG MANAGEMENT PLAN Submitted by Charles Pfister The following comments refer to specific page numbers/sections of the Draft Dog Management Plan.

P. 15 ' Wildlife: "Intensive dog use of an area could disrupt its use by wildlife The use of the adjective "intensive" is misleading and meaninglessly vague in this context. Dog use does not have to be intensive, in the sense of total number of dogs present, to disrupt wildlife. Unfortunately, even if most dog owners handle their chkges responsibly, one or two misbehaving dogs can ruin the attempts of the responsible owners to avoid disturbance and completely clear out kilometers of an open beach of shorebirds (see section "P. 797 Wildlife / Birds"). Synergistic impacts (Smit and Visser 1993) may magnify the impacts of a small number of off-leash dogs. At Ocean Beach on a warm day when the beach is crowded with people, a few off-leash dogs may represent a severe disturbance, because few alternative resting areas may be available.

Sandpipers and plovers, types of shorebirds found along sandy beaches and some fields in GGNRA, are known to have relatively high metabolic rates compared with other bird species (Kersten and Piersma 1987) and even short-term (and what might to some casual observers seem occasional and inconsequential) disturbance of feeding and migration behavior could have potentially serious consequences.

Using formulas to estimate energy expenditure by disturbed shorebirds, a shorebird biologist estimated that a certain species of shorebird would lose 25% of its daily energy requirement during migration staging if disturbed 20 times per day (Brian Harrington, Manomet Center for Conservation Science, personal communication, 2002). Goss-Custard et al. (2006) have used models based on an intensively studied population of oystercatchers in the baie de Somme, France to estimate that if the birds are disturbed more than between 1.0 and 1.5 times per hour in good feeding conditions or 0.2 to 0.5 times per hour in poor feeding conditions a reduction in fitness would result.

P. 19 Employee, Visitor, and Dog Health and Safety The total number of

leash law violations recorded by GGNRA and reported in this section is only the tip of the iceberg of orders of magnitude more incidents that actually occurred but were not detected and so should be noted in this section. Over the years, GGNRA has taken a "monkey, no-see" approach to enforcing the leash law and protecting wildlife and visitors from harassment by dogs. The number of violations should be seen in the context of how abysmally ineffective GGNRA has been in enforcing leash laws and protecting wildlife and visitor experience.

GGNRA has not used professional management techniques to protect wildlife and visitors from off-leash dogs. Such techniques would include reviewing enforcement attempts related to outcomes and adjusting methods to attain results; educating GGNRA law enforcement staff about how to recognize harassment of wildlife and visitors; and following up on reports by visitors concerning patterns of disturbance of wildlife and visitors by off-leash dogs. A FOIA request submitted in 2005 related to dog management did not show any evidence of professional management techniques related such as mentioned above. GGNRA also did not respond to dozens of complaints about dangerous situations for visitors related to off-leash dogs and harassment of wildlife by reviewing policies and procedures. Instead, GGNRA was more concerned with appearing to address the issue ' not with securing results. A result of such an approach is the current high rate of non-compliance concerning leash laws.

In a letter to me dated 8/9/2001 in response to my reporting chronic disturbance of shorebirds by off-leash dogs and the lack of protection provided by GGNRA, Superintendent Brian O'Neil invited me to report future incidents of wildlife harassment I observed to park dispatch. He did not offer any suggestion that GGNRA would engage in professional management techniques to address the .problem.

In fact in subsequent years, I frequently jogged on Ocean Beach, and in almost every instance observed multiple incidents of harassment of birds by off-leash dogs and violations of the leash law. Approximately 20 times I reported such harassment, as suggested by O'Neil, and waited at the site of the harassment to determine the outcome of my call. In no case did GGNRA respond soon enough to intervene in the harassment I reported. In no case did my call result in a report or citation being issued documenting the harassment. Most disturbingly, GGNRA did not show any indication of taking any initiative to prevent future instances of harassment of wildlife such as I reported. Some dispatchers seemed uninformed about the current regulations or even that disturbance of wildlife was illegal in GGNRA.

Some of the specific incidents on Ocean Beach included: ? 8/21/2004 5:30 - 6:00 p.m. -- Observed large flock of approximately 500 elegant terns and off-leash dogs ' no evidence of enforcement 6:00 p.m. -- Called in about

dogs. Told by dispatch that three rangers called in sick. 6:55 p.m. Saw terns flushed by two dogs off-leash. Called dispatch again. Was told two rangers had previously responded but found no indication of violations. The rangers were now at a rest stop but would respond again. 7:25 p.m. No evidence of further response.

? 3/21/2007 6:15 ' 6:25 p.m. ' Observed harassment of shorebirds by off-leash dogs and called dispatch. No response. 7:10 p.m. ' No response. Called to find out what happened. No record of explanation.

? 4/9/2007 5:15 p.m. ' Reported harassment of shorebirds by off-leash dogs. Ranger came within a few minutes but did not find harassment. Conversation with dispatcher ' he described how visitors put dogs on leash when they see rangers come and that there is a website with the location of park rangers. No mention of countermeasures. Called a second time because of continued harassment. No record of response.

? 9/21/2007 5:15 ' 6:00 p.m. ' Harassment of shorebirds: visitor throwing ball for dogs in snowy plover area of dunes; several dogs chasing birds along shoreline. No evidence of patrol. 5:44 p.m. ' Reported harassment of birds. 5:58 p.m. ' No response. Called again. Dispatch said ranger was en route.

? 11/3/2007 5:35 p.m. ' Reported golden lab chasing dogs in area Tarval to Ortega, going north. Approximately 100 shorebirds trying to feed at tide line; many off-leash dogs south of this area. 5:45 p.m. ' No response. Called again and spoke with "Vicky" the supervisor; no record of previous call. Will send someone out. No record of further response.

? 11/18/2007 11:15 a.m. -- Reported dogs chasing birds in snowy plover protection area. Dispatcher initially said that dogs off-leash were OK along the water. Gary, acting supervisor then got on the line and claimed what the dispatcher said was a "miscommunication" or "misunderstanding". He claimed that the snowy plover protection area is only the "dry" area of the beach. Excuses for not responding: oil spill, etc, etc. 11:30 a.m. ' I left beach. No response by this time.

? 12/31/2007 11:57 a.m. ' Reported two pit bulls off-leash approaching snowy plover area; chasing birds 12:02 p.m. ' No response. Dispatched stated that ranger had responded and was on the "street side" (i.e., Great Highway) but went up to look over the beach and saw no problem. I never observed the ranger in the area of disturbance.

? 3/7/2008 5:44 p.m. ' Reported several dogs off-leash running up and down the beach. Saw German shepherd chasing birds on tide line and several other dogs off-leash dogs. 5:59 p.m. - No response. Called dispatch, who reported that a ranger had responded by saw nothing. I never saw any ranger in the

area of the disturbance. ? 3/10/2009 5:07 p.m. ' Reported off-leash dogs chasing shorebirds 5:22 p.m. -- No response. Dispatch gave excuse of drugs and stolen car call at Presidio. Sending someone from Presidio. She will assess the situation. Dispatcher was not aware that my call was in the snowy plover protection area. Dispatch was not aware that dogs chasing shorebirds was not OK outside the snowy plover protection area.

P. 28 Dogs and Wildlife: "While it is generally well known and well documented that the presence of dogs in natural areas can result in disturbance to wildlife, studies reviewed as part of this analysis provide conflicting conclusions."

"Conflicting conclusions" is a misleading characterization. There is no scientific research that contradicts the fact that off-leash dogs frequently represent an intense level of disturbance for the primary type of situation of dogs vs. birds encountered in GGNRA: off-leash dogs disturbing shorebirds and other birds on open sandy beaches. See section "795 ' Wildlife / General Wildlife."

P. 794 -- Wildlife / Impact Thresholds The discussion of adverse impacts does not make sense. If an impact is not outside the "natural range of variability," then it is by definition not detectible. The phrase "natural range of variability" needs to be defined. It is not clear to me why the authors of this section require a park-wide effect to occur for an impact to be categorized as "major." It is not necessary to endanger a regional population of a species for the impact of disturbance in a specific area of GGNRA to be major. For example, any chasing of shorebirds by dogs of more than a few times per day, such as occurs almost daily at Ocean Beach, would be potentially a major disturbance impact in that area.

It should be noted that any dog allowed by its owner to chase birds or other wildlife is a violation of 36 CFR 2.2(a)(2) which prohibits harassment of wildlife. It is true that human visitors engaged in activities such as walking, surfing, fishing, and kite flying disturb wildlife to some extent. However, in almost no case is the disturbance as serious as the disturbance caused by off-leash dogs and the human disturbance is almost never intentional, and therefore does not violate 36 CFR 2.2(a)(2). The analysis of adverse impacts as Written appears to condone illegal activities under 36 CFR 2.2(a)(2) if there is no regional population impact. Harassment of shorebirds at Ocean Beach represents a particularly cruel form of harassment (see section "P. 797 Wildlife / Birds").

A more direct assessment of the impacts on wildlife in each section discussed, such according to criteria suggested by Pomeranz et al. (1988), would be more appropriate.

P.795 - Wildlife/General Wildlife Studies by Bekoff and Meaney (1997) and Forrest and St. Clair (2006) were cited in the Draft as examples of studies that suggest that there is no impact of off-leash dogs on wildlife.

An examination of these studies shows that both have little to no relevance to coastal disturbance issues in GGNRA. Specifically, the bird species included in the impact studies were songbirds and the habitats involved were forests and meadows: In these environments dog walkers traveled primarily along trails and disturbance was thought to occur intermittently (Bekoff and Meaney 1997) only when off-leash dogs left the trails. This disturbance scenario represents levels of disturbance much lower than in areas in GGNRA such as Ocean Beach or Crissy Field, where off-leash dogs potentially travel throughout the entire extent of wildlife habitat and even brief observation reveals that dogs frequently chase birds. In both of these studies available evidence suggested that dogs did not frequently leave the trails, so that in neither study was there any direct evidence that disturbance of birds by off-leash dogs was actually occurring. Therefore, the negative results of these studies may not represent any testing of the hypothesis that off-leash dogs disturb wildlife.

Addition discussion of each study: Bekoff and Meaner (1997) This study is primarily based on a survey of attitudes of visitors to open space areas in Boulder County, CO about dogs ' a survey that by the nature of the questions asked seems specifically intended to find support for allowing off-leash dogs in open spaces. A small part of the study consisted of alleged observation to detect any immediately observable impact on wildlife by dogs.

This part of the study is hopelessly flawed. Observations of dogs were made by an observer following dogs along a trail in various open space areas. Observations were allegedly made about the frequency of dogs disturbing wildlife: various mammals and several bird species (black-billed magpies, robins, dark-eyed juncos, mallard ducks, Steller's jays, and mountain and black-capped chickadees). The definition of disturbance of wildlife was "flushing or chasing." It was not clear whether the observers were qualified to determine whether birds were disturbed by dogs or whether accurate observations could have been made regarding all species of wildlife during the "real-time" observation relied upon to detect disturbance. It should also be noted that disturbance may not be immediately observable in terms of avoidance of dogs by wildlife (see below in this section and under "P. 1250 Special Status Species ' Western Snowy Plover / Ocean Beach"). It should be noted that songbirds are rarely susceptible to harassment or disturbance by dogs. Their habitats, behavior, and the lack of ability of dogs to stalk them make songbirds essentially invulnerable to disturbance by dogs, unless a human trains a dog to locate nests of ground nesting species.

The study authors claim that in 150 hours of observation, no observations

were made of birds being disturbed by dogs. However, the bird species included in the study are unlikely to be disturbed by dogs in their natural habitat, and observations also indicated that dogs rarely left the trail for a significant distance (a result that might also suggest observer effect.) Thus, it is not clear that disturbance of birds was even an issue in the study area.

The authors never specifically define what criterion would be used to determine whether disturbance of wildlife was occurring beyond "flushing or chasing." However, in the Discussion section, the authors suggest that they were using a highly restrictive, almost legalistic definition of disturbance. They claim to have seen only two instances of "earnest chases" of wildlife, in which it was "unambiguously concluded that it was the dog who initiated and maintained the chase." With such a convolutedly restrictive description of what was allowed to be considered disturbance of wildlife, it is no wonder that so few instances of disturbance were documented.

The authors of this study also make the incredible statement that: "All observers noted that dogs off-leash were friendlier than dogs on leash though no data were detailed data were collected on this aspect of behavior." The fact that the observers in this study would hold and even publish such a biased, unsubstantiated and subjective impression about off-leash dogs in an area of concern central to the study indicates that data regarding the disturbance of wildlife by dogs cannot be trusted nor can the authors' interpretation of the results of the study.

The conclusions of the authors regarding mammals have been superseded by a far more sophisticated study of the impact of off-leash dogs on mammals also along trails also in open space areas in Boulder County, CO (Lenth et al. 2008). This study compared various objective indicators of mammal activity along trails in open space areas in which dogs were prohibited vs. areas where dogs were supposed to be under "sight and voice control." The presence of dogs along recreational trails was correlated with altered patterns of habitat utilization by several mammalian species. This study showed how unreliable the methods and results were of the earlier study by Bekoff and Meaney (1997) and that their method of direct observation of dogs "flushing or chasing" wildlife did not detect significant disturbance impacts on mammals.

Forrest and St. Clair (2006) Another study cited, Forrest and St. Clair (2006), compared local diversity and abundance of mammals and birds in open spaces where visitors were required to leash dogs vs. areas where dogs were allowed off-leash. Most of the visitors traveled through the open spaces via trails. The study found that "off-leash dogs have no effect on the diversity or abundance of small mammals or birds in urban parks." However, the study has little relevance to the issues at hand in GGNRA, as the study involved songbirds, not shorebirds, and the habitats in the study were

generally not comparable to GGNRA, especially the open beach area used by shorebirds in GGNRA.

Even if the result of the study that off-leash dogs do not impact birds were potentially relevant to GGNRA, the authors of the study present a long discussion showing why the negative result of their study may not be valid.

? Local diversity and abundance may not be a good indicator of the impact of disturbance on a species. ? The authors indicate that evidence shows that there may have been a high rate of non-compliance of leash laws so that "the functional differences in our leash designation treatments and, consequently, differences in our response variables..." were possibly invalid. ? The authors state that observations made in the field suggest that dogs did not stray far from trails in most habitats, so there may have been little actual disturbance of wildlife over the areas used as treatment locations in the study. Therefore in this scenario: "...dog activity is restricted to such small temporal and spatial scales that its effects are negligible." ? "A third reason that leash designation may not affect birds and small mammals ... is because these communities may already have responded to the presence of wild coyotes."

Thus the result of the study that off-leash dogs do not affect wildlife is dubious, according to the authors themselves.

Citing of these two barely relevant or irrelevant studies in a paragraph beginning with a cursory two sentences with no citations discussing the impacts on wildlife of off-leash dogs presents a bizarrely skewed account of the relevant scientific literature and probable impacts on wildlife of off-leash dogs in GGNRA. These studies are referred to in several occasions in the Draft without the shortcomings and lack of relevance being discussed.

In other sections, the Draft cites some studies that show or infer that dogs represent an especial disturbance to wildlife. Studies not cited of particular relevance to GGNRA that show impacts of dogs or identify dogs as likely factors in general human disturbance of birds in coastal environments include: ? Davidson and Rothwell (1993) ' In a summary of research on the effects of human disturbance on waterfowl and shorebirds during winter and spring and fall migration it was found that on tidal flats, moving people and animals (especially dogs) generally create worse disturbance than sedentary people. ? Kirby et al. (1993) ' At an estuarine beach in Wales, a traditionally important roost for several shorebird species, including black-bellied plover, red knot, sanderling, dunlin, and bar-tailed Godwit, dogs caused 27-72% of total disturbances observed per year. ? Keller (1991) -- At low tide, 70% of disturbances of eider ducklings were caused by dogs with or without people, while people without dogs accounted for 9%. Broods were disturbed by dogs for significantly longer periods than by walkers or anglers and at about twice the distance. ? Pfister et al. (1992) ' Disturbance at a high tide resting area at

a coastal barrier beach displaced shorebirds and seemed to cause long-term declines in abundance. Most disturbance was believed to be caused by pedestrians and off-leash dogs. ? Scott (1989) -- Dog-walkers were the most frequent cause of disturbance of shorebirds at a coastal estuary. ? Smit and Visser (1993) -- A summary of Dutch research from reports not normally accessible to English-speaking scientists concludes that running dogs are very disturbing to shorebirds. ? Thomas et al. (2003) -- Human disturbance reduced the amount of time sanderlings spent foraging on two Central California beaches. The most significant factor was the presence of free running dogs on the beach.

P. 797 Wildlife/Birds In general scientists have not frequently done specific research regarding the impact of dogs on wildlife, since the severity of the disturbance is obvious in many cases. Most of the relevant research exists under more general disturbance topics. The relevance to disturbance by dogs can be inferred from the research results and knowledge of the biology of bird species and the site characteristics in GGNRA.

The literature summary in the Draft is primarily concerned with the general issues of the disturbance dogs may cause to wildlife. The literature review should be extended to focus on specific disturbance and other conservation issues related to GGNRA. For example, dogs are often mentioned as an especially intense form of disturbance in bird disturbance studies in coastal environments (see above in section "P. 795 ' Wildlife / General Wildlife").

It is virtually impossible to quantify the overall impact of a specific factor, such as disturbance by dogs, on shorebird populations because of the enormous difficulty and expense of obtaining the necessary data. Colwell (2010, pp. 284-286) summarizes some studies of behavioral responses of shorebirds to disturbance, indicating that many of the studies focused on measuring foraging responses to disturbance. However, the full implications of ongoing chronic disturbance of shorebirds by dogs such as occurs in GGNRA must be discussed primarily in theoretical terms.

A previous study (Pfister et al. 1990) found that intermittent disturbance along a beach of similar length to Ocean Beach resulted in reductions of shorebird numbers of species using the beach for a high tide roost of up to 50% within a year and probably caused some species to abandon the beach entirely over time. In this study, however, disturbance only occurred at high tide. Therefore, disturbance at Ocean Beach may be far worse, since shorebirds seem obligated to use the zone of maximum disturbance at the tide line for feeding (see below). It should also be pointed out that in the Pfister et al. (1990) study shorebirds had alternative roosting areas within a few miles. This does not appear to be the case at Ocean Beach.

Disturbance of shorebirds may be hard to observe at Ocean Beach, because

once aggressive dogs are present, birds scatter and are not easily observed. For example, on April 8, 2000 during the peak of northbound migration of shorebirds, I walked along the beach south of Sloat Boulevard. I counted approximately 300 large shorebirds (whimbrels; willets; and godwits) intensively feeding at the edge of the surf. At this time there were no dogs on the beach. Within approximately 90 minutes many dogs were on the beach and most of the birds had been dispersed. At this later time an observer would never have known about the earlier assemblage of large shorebirds and would have not realized that such severe disturbance had occurred.

The following is a discussion of various issues related to the impact on shorebirds of off-leash dogs at Ocean Beach.

? Lack' of alternative resting areas

Based on observations I have made at Ocean Beach, it has become clear to me that the vast majority of shorebirds at Ocean Beach remain on site continuously for both feeding and resting and do not "commute" to other parts of San Francisco Bay at various tidal cycles or due to disturbance. I have inferred this fact by comparing counts of shorebirds on consecutive days and by the fact that I have never seen flocks of shorebirds or individuals flushed by disturbance travel in any other direction than along the beach. Because the shorebirds at Ocean Beach do not appear to have alternative roosting areas where they can seek refuge during periods of disturbance, they are subject to the full impact of disturbance with potentially more serious consequences (Colwell 2010, p. 281).

? Shorebirds exposed to intense disturbance while feeding at the tide line.

Shorebirds at Ocean Beach/Fort Funston generally remain along the tide line -- where most dogs are walked by their owners -- for foraging. The primary prey species of most shorebirds appears to be the sand crab, probably *Emerita analoga* (Ricketts et al. 1985; p. 252). Foraging behavior of the sand crab (Ricketts et al. 1985; pp. 252-3) seems to correlate well with the behavior of feeding shorebirds. Specifically, the crab moves up and down the beach to remain in the zone of breaking waves and emerges from sand that has become fluid by water movement in the "wash zone." Thus, the fact that shorebirds congregate at Ocean Beach at the edge of the surf (often jumping into the wash zone) is probably explained by the fact that they are tied to this area in order to forage on sand crabs.

The degree of disturbance by off-leash dogs along the tide line at Ocean Beach/Fort Funston can be catastrophic. When large numbers of shorebirds are present, inevitably off-leash dogs chase the birds up and down the beach. Some persistent dogs will continuously harass and chase flocks of birds for hundreds of meters or more up and down the beach. Given that the

shorebirds are tied to the tide line in order to get their food for survival, it is hard to imagine a more cruel and brutal form of human disturbance of wildlife in nature.

? Narrow beaches increase impact of disturbance

At higher tides shorebirds are forced from preferred feeding areas around Sloat Boulevard; at many mid-tide levels shorebirds there are wedged against the cliffs of Fort Funston and are unable to avoid passing foot traffic. One off-leash or even a leashed dog would be capable of flushing birds from an entire segment of beach under these conditions.

? Areas of cover scoured by storms and sand removal

In the winter, storm surges and high tides sometimes scour the beach in the Snowy Plover area on Ocean Beach. The area where the plovers normally seek refuge among debris at the back of the beach becomes flatter and swept clean of debris. This condition also occurs after sand removal. Under these conditions, western snowy plovers, sanderlings, and other shorebirds and other bird species are exposed to more disturbance from humans and dogs due to lack of cover and protection in resting areas.

? Larger flocks targeted by dogs

Off-leash dogs appear to affect the flock structure of shorebirds. Large flocks of shorebirds are thought to be more vulnerable to disturbance (e.g., Smit and Visser 1993), and my observations over the years indicate that large flocks of shorebirds present tempting targets to off-leash dogs. I have found congregations of up to approximately 300 larger shorebirds (willets, godwits, whimbrels) during both northbound and southbound migration on numerous occasions south of Sloat Boulevard. There have been congregations of up to 500 smaller shorebirds, primarily sanderling, further north between approximately Noriega and Taraval. In addition, this area is used in the fall by terns. In the fall of 1998 I observed approximately 1000 elegant terns in this area resting on the beach.

Flock structure is believed to confer benefits to shorebirds, including increased foraging efficiency, defense from predators, and successful migration strategies (Colwell 2010, pp. 188,193). The disturbance from off-leash dogs tends to break down' the flock structure and scatter shorebirds into small isolated groups.

Although I accept the general concept of the Preferred Alternatives in allowing some portions of the beach area to be used by dog walkers with off-leash dogs, these sections need to be greatly confined so that most of the beach areas do not have off-leash dogs and birds can avoid the sections of

beach disturbed by off-leash dogs.

P. 802 Compliance-Based Management Strategy The 25% compliance rate target is far too low to protect wildlife or visitors. Goss-Custard et al. (2006) have used models based on an intensively studied population of oystercatchers in the baie de Somme, France to estimate that if the birds are disturbed more than between 1.0 and 1.5 times per hour in good feeding conditions or 0.2 to 0.5 times per hour in poor feeding conditions a reduction in fitness would result. As discussed in other sections, just one or two aggressive dogs can wreak havoc in an area of shorebird concentration. Some areas of GGNRA are visited by dozens or even hundreds of dogs per hour. If 25% of these in a controlled area are still off-leash, the character of the area related to wildlife and visitor experience would still be that of an off-leash area.

A 2005 FOIA request did not show that GGNRA had any method of tracking repeat offenders regarding leash law violations or other bad behavior of their dogs. The level of contempt for the law and public safety expressed in various incident reports by dog walkers indicates that any fines for dog-related violations must be severe in order for compliance to be a realistic goal.

In preparing a final Dog Management Plan, NPS should investigate reports that in the past 15 years, GGNRA has transferred rangers who enforced the leash law when complaints about a specific ranger were received from dog walkers who were irritated with the leash law being enforced. The reasons for GGNRA's pathetic performance in protecting wildlife and visitors from off-leash dogs needs to be fully explicated so that in the future "compliance-based management" is credible.

Although I accept the idea of compliance-based management, GGNRA should not completely rely on compliance to assess and implement the DMP. Changing environmental conditions, changing wildlife populations, and changing visitor behavior could undermine various assumption in the DMP. GGNRA should continue to monitor the outcomes of its policies and be able to adjust the DMP related to factors beside the compliance rate.

P.1250 Special Status Species - Western Snowy Plover/ Ocean Beach A number of studies done by GGNRA regarding the western snowy plover are cited but not discussed in detail. These studies are, however, often picked apart by non-scientist off-leash dog advocates, suggesting that the studies have failed to find any evidence of disturbance of western snowy plovers by dogs.

I have previously reviewed a number of these studies as cited in the Draft.

The number of instances of disturbance and harassment of western snowy plovers reported by NPS is small because the sampling method used by NPS: 1) involved observers moving down the beach and surveying an entire segment of the beach and not watching specific flocks of plovers and 2) the sampling method did not attempt to specifically include observation periods when the level of disturbance was mostly likely to be severe, so the periods of peak disturbance, which may be very significant in assessing overall impacts, are not represented in the data.

Regarding: ? Hatch. 2007. Status Report: Western Snowy Plovers and Recent Changes in Human and Dog Use Within the Snowy Plover Management Area at Ocean Beach...."

I reviewed a draft of this report dated 5/14/07. The use of "encounter rates" as a measure of the rate of disturbance is an attempt to use the data set for something it is just not suited for. It is not possible to justify obtaining "encounter rates" from observations made along a transect. Even assuming the observer could perfectly observe all birds and disturbance within a "sector," the study appears to overestimate the time an observer could make observations within a sector. When the observer is half way through a sector, half the sector is behind him/her and events in that portion are no longer observable. Shorebirds, including western snowy plovers, have a patchy distribution on the beach. If within a sector, a major flock is located in the beginning portion of the sector, during most of the observational period, this flock will not be visible to the observer. Thus, while the study suggests that an observer was within a western snowy plover area for 15 hours/year (i.e., "the amount of time window in which observers can actually observe potential impacts to western snowy plovers -- p. 7"), the effective amount of time in which disturbance could actually be observed would be closer to 7.5 hours than 15 hours (given a perfect observer), if one were to accept the concept of "encounter rate." However, the actual number of hours of effective observations of plovers is probably much less, since it is hard to imagine that an observer could accurately observe all disturbances of these small, cryptically-colored birds from distance of more than 100 feet, assuming the observer had already spotted and was carefully watching a bird or flock. The actual number of hours of observation in which useful observations might have been made of western snowy plovers on Ocean Beach could be as low as 2 or 3 hours or less per year in all observations combined. Given all the factors involved in determining the behavior, distribution and abundance of snow plovers, this is a pathetically low number of observational hours from which to draw any conclusions.

The study also failed to adequately survey the beach during the relatively narrow windows of peak northbound and southbound migration of shorebirds, when critical disturbance would be likely to occur. The study failed to take into account differential behavior and distribution of western

snowy plovers based on the amount of dog and pedestrian traffic on the beach (Baye 1995). For example, a few dog walkers with aggressive off-leash dogs could displace plovers from feeding on the front of the beach, yet a survey would not find any disturbance issues, since the plovers would have already been displaced, and there might be few dog vs. plover interactions during the survey.

Because of the sampling method, there is so much variation in such variables as "Dogs Per Hour Chasing Shorebirds (p. 13)" that such variables are not really useful for statistical analysis or even biological interpretation. Median or average values of disturbance rates have little usefulness in assessing disturbance at Ocean Beach. On some dates or times, there are virtually no pedestrians and dogs on the beach; at other times, there may be numerous dogs but because of previous severe disturbance, little interaction between dogs and birds. Averaging data of surveys from these cases with surveys with more intensive dog/bird interactions would tend to obscure the nature of the impact of dogs on birds.

The study found average "Dogs Per Hour Chasing Shorebirds" of between 0.14 and 1.92 (p. 11). I have sought out situations in which disturbance was likely to occur and frequently made observations suggesting rates of over 20-30 disturbance incidents per hour for shorebirds (regarding a specific flock or sector of the beach). In a one-hour observational period in 2006, I observed five disturbance incidents regarding western snowy plover roosting in a mixed flock of other shorebirds, primarily sanderlings. Apparently, in one hour I observed more instances of dogs disturbing western snowy plovers than in the entire five years of this study (p. 11).

NPS apparently uses the correlation between the number of dogs vs. western snowy plover abundance as evidence that dogs impact plovers. Although the conclusion may be somewhat relevant, I think that the weakness of the correlation is more significant than its statistical significance. The correlation is much weaker than found in a similar correlation between a disturbance index and local abundance of various shorebird species (Pfister et al. 1992). Gill et al. (2001) discuss scenarios in which wildlife that exhibit a weak avoidance behavior towards a disturbance may actually be impacted by disturbance more than a species that exhibits strong avoidance behavior. This occurs because a species has no "suitable alternative habitat" and will be forced to remain in a highly disturbed area, regardless of whether its fitness or survival is impacted by disturbance.

"From a population viewpoint, the species most likely to be adversely affected by disturbance are those for which the fitness costs are high but they have little excess habitat to move to ... and are thus constrained to stay in disturbed areas and to suffer the costs in terms of reduced survival or

reproductive success."

I believe that this is the case with western snowy plover at Ocean Beach.

NPS has focused most of its survey and research effort on western snowy plover and hardly mentions other bird species that are harassed and disturbed by dogs. A number of bird species commonly found in GGNRA are listed in the 2007 United States (Yellow) Watch List (a joint project between American Bird Conservancy and the National Audubon Society -- <http://www.abcbirds.org/abcprograms/science/watchlist/index.html>). Such a list includes species that are not yet listed as threatened or endangered but after a conservation analysis are believed to be in greatest need of immediate conservation attention to survive a convergence of environmental challenges, including habitat loss, invasive species, and global warming.

Species on the list that I have observed to be subject to harassment and disturbance by dogs include: Elegant tern, Sanderling Long-billed curlew
Marbled godwit

These species and other birds harassed by dogs should have been discussed in the Draft.

P. 1401 Visitor Experience Use and Experience This section is extremely weak. Lumping all visitor who are against off-leash dogs in GGNRA as "visitors who would prefer not to have dog walking in GGNRA" does not begin to characterize the nature and variety of ways visitor experience can be impaired by dogs and off-leash dog walking in GGRNA and trivializes the intensity to which the presence off-leash dogs may cause feelings of fear and unpleasantness to visitors.

Various subgroups of visitors have extraordinary safety concerns because of off-leash dogs, including: 1) the elderly; 2) visitors with young children; 3) horseback riders and other special users; 4) blind and disabled visitors; 5) various minority groups; and 6) visitors who suffer from fear of dogs because of previous experiences or for other reasons. For many in these groups, an off-leash dog area may represent a flat out "no go" area.

For visitors who do not necessarily have extraordinary safety concerns, the impact on their experience in visiting GGNRA due to dogs, especially off-leash dogs, can also be strong enough to displace them from off-leash areas. Many visitors enjoy the opportunities GGNRA offers to escape the urban environment and experience nature, solitude and even almost wilderness. Off-leash dogs can completely destroy the quality of this experience for many visitors.

A study of visitor experience related to dogs in open space areas in Boulder,

CO (Vaske & Donnelly 2007) indicated that a significant proportion of visitors to open space areas reacted strongly to negative behavior associated with off-leash dog walking . A total of 951 visitors, both dog owners and non-dog owners, completed questionnaires regarding their attitudes towards potentially disruptive behavior by dogs. Those dog behaviors were classified as "direct" and "indirect" and were as follows:

Direct behaviors: ? Dogs jumping on a visitor (60%) ? Dogs pawing a visitor (50%) ? Dogs licking a visitor (35%) ? Dogs sniffing a visitor (23%) ? Dogs approaching uninvited (36%)

Indirect behaviors: ? Owners not picking up after their dogs (79%) ? Dogs causing wildlife to flee (57%) ? Dogs flushing birds (46%) ? Owners repeatedly calling their dogs (31%) ? Dogs off trail (18%) ? Dogs "play" chasing another dog (18%)

Respondents were asked about their attitudes towards experiencing those behaviors in open space area. The percentage for each category listed above indicates the percentage of respondents who felt the behavior was a "moderate" or "extreme" problem if it occurred during visitation.

Additional analysis of the data indicated that for 9 of the 11 behaviors visitors indicated "no tolerance" norms even for only one occurrence of the behavior. Such a result can be interpreted to mean that the given behavior is unacceptable and there is no tolerance for the behavior if encountered by visitors.

The results of the study by Vaske & Donnelly (2007) suggest that the negative behaviors many visitors associate with dogs in natural areas are not simply minor irritants but could potentially spoil the entire experience for the visitor. Such an interpretation is consistent with my own experience that many friends and acquaintances completely avoid areas of intense off-leash dog activity in GGNRA, such as Crissy Field, Fort Funston, and Ocean Beach.

A factor not discussed by NPS in the Draft is how the presence of off-leash dogs affects the carrying capacity of GGNRA. Carrying capacity is the level and type of recreation use that can be accommodated in a park without violating standards for relevant indicator variables (Manning 2007, p. 25). In terms of the indicator of visitor experience, different user groups probably have widely different tolerance levels of the presence of dogs and dogs off-leash. The stratified results of the 2002 Survey regarding such issues as attitudes towards leash laws undoubtedly reflect such differences.

A quantitative study by Arneburger et al. (2004) showed that the presence of off-leash dogs in an urban park made a remarkable difference in the degree

of tolerance of visitors for crowding in the park. The presence of off-leash dogs decreased the tolerance of visitors to social conditions such as crowding. A certain degree of crowding of visitors that might be acceptable with few or no dogs off-leash became unacceptable when many visitors had dogs off-leash. Such a result is intuitively obvious at areas of GGNRA where visitors with off-leash dogs congregate, such as Crissy Field or Ft. Funston. Active off-leash dogs may seem to take up all the space between people and create a greater sense of crowding than would otherwise occur.

Anywhere in GGNRA where large numbers of dog walkers and other visitors congregate, the potential exists for visitor tolerance of crowding to be exceeded due to synergistic impacts of off-leash dogs, social crowding, safety concerns, and many other factors. Although there are no studies specifically addressing the idea of carrying capacity in GGNRA, the results of the 2002 Survey should provide some clues as how certain user groups may be view carrying capacity and be displaced from off-leash dog areas. The idea of a carrying capacity was not discussed by NPS in the Draft at all.

The fact that dog walking, especially off-leash dog walking, in GGNRA potentially excludes many user groups and a large proportion of potential visitors must be explicitly discussed and the ramifications for the mission of the NPS resolved for any alternative allowing off-leash dog walking.

P. 1402/3 -- Visitor Experience / Impact Thresholds The definition of a "major" and "moderate" impact as defined requires consideration of whether other Park areas are available to visitors if a specific area receives an impact. The definition of "major" and "moderate" should only refer to the impact within the area being considered. If off-leash dogs make an area so uncomfortable for a significant proportion of visitors that the visitors are displaced from that area, then the impact is "major" for that area.

If a significant number of visitors do not tolerate dogs in an area where off-leash dogs are present, then my view is that this is a major impact, since a significant number of visitors may be displaced from a specific area. The only way visitors could avoid feeling unsafe or uncomfortable in an area where off-leash dogs are present, would be to have enough space to completely avoid encountering off-leash dogs. This is usually not possible at some of the most popular areas in GGNRA, including Ft. Funston, Ocean Beach, and Crissy Field. It is likely that a significant proportion of potential visitors are displaced from off-leash areas (see below under "P. 1404 Visitor Experience / Visitors Who Do Not Have a Preference about Dog Walking in GGNRA").

P. 1403 -- Visitor Experience / User Groups The designation of three user groups, essential pro-dog, anti-dog, and neutral, is an arbitrary and extremely

oversimplified approach to evaluating visitor experience.

P. 1404 Visitor Experience / Visitors Who Do Not Have a Preference about Dog Walking in GGNRA This section refers to the 2002 Social Research Laboratory survey results that 49% of respondents reported that off-leash dogs had no impact on their experience. The survey results actually are that 49% of respondents who had seen off-leash dogs believed that off-leash dogs had no impact on their experience. This section incorrectly assumes that this results means that these 49% of respondents represent a user group that as "no preference" regarding the presence of off-leash dogs in GGNRA. This assumption is false, because the survey results did not question the respondents as to what their attitudes would be if the respondents had experienced some type of negative behavior associated with off-leash dogs, such as categorized by Vaske & Donnelly (2007). (This false assumption should have been obvious to NPS, as over half of the respondents opposed off-leash dog walking.)

A more rigorous interpretation of the results of the 2002 Social Research Laboratory by reference to the study by Vaske & Donnelly (2007) suggest a more likely characterization of user groups is that the 36% of respondents who "strongly oppose" off-leash dog walking in GGNRA as identified by the survey represent a collection of user groups who have extraordinary safety concerns, general safety concerns, and/or find that many of the negative behaviors of off-leash dogs strongly impact their visitor experience. It is likely that the 17% of respondents who "somewhat oppose" off-leash dog walking have some safety concerns and/or find negative behaviors associated with dogs moderately impact their visitor experience.

It is possibly or even likely that the 36% figure of respondents strongly opposing off-leash dog walking represents an approximation for the proportion of visitors who would likely be displaced from areas where off-leash dog walking occurs and cannot be avoided by visitors.

No doubt that dog owners wishing to walk their dogs just as vehemently want access to off-leash dog walking areas as those who wish to avoid dogs. NPS must recognize that ultimately off-leash dog walking not only diminishes the visitor experience for many but even excludes a large proportion of potential visitors.

P. 1591 Human Health and Safety Although actual attacks involving dogs biting and knocking down visitors to GGNRA may be relatively infrequent, any exposure to off-leash dogs potentially involves considerable risk. Certain user groups, such as the elderly and young children, are known to be particularly vulnerable to serious injury when bitten by a dog. More troubling, it is not possible to predict when and where a serious attack might occur. One study showed that in the case of serious attacks by dogs on a

child, 66% of dogs had never previously bitten a child, and 19% had never bitten any human and 66% of owners had taken their dogs to obedience training classes (Risner et al. 2007). According to Dr. Gail C. Golab, director of the American Veterinary Medical Association's Animal Welfare Division, "Any dog can bite... Even the gentlest dog, if it is physically or mentally unhealthy, is in pain, feels threatened, or is protecting its food or a favorite toy, can bite (quoted in USPS 2011)." When an attack does occur, there is a significant chance of a fatality. One study estimated that a risk of 2 fatalities per 1,000 reported dog bites exists nationwide (Wright 1985).

A dog bite is a common type of injury (Holmquist & Elixhauser 2010). One study found that approximately 1 in 50 patients treated in emergency rooms suffered from a dog bite (Beck et al. 1975). It is estimated that half of all children in the U.S. suffer a dog bite injury by the time they are high school seniors (Dr. Alison Tothy, American Academy of Pediatrics, Illinois Chapter, quoted in USPS 2011). The exposure to risk increases in areas of GGNRA that become crowded in terms of both visitors and dogs. Visitors may have few opportunities to avoid direct encounters with off-leash dogs. In addition groups of dogs such as brought by commercial dog walker or that form when various visitors allow their dogs to congregate increase the safety risk due to aggression characteristic of pack walking and the increased likelihood of social and re-directed aggression .

Visitors to GGNRA who have been bitten by a dog or who recognize the danger of off-leash dogs may well have a fear of dogs that would limit their enjoyment or preclude their visiting an area where off-leash dogs are allowed.

Although few studies seem to exist regarding human psychology and attitudes towards negative behaviors of dogs, NPS needs to recognize that potential safety issues are very real in the minds of visitors and have a significant impact on an individual's psychology and ability to enjoy the visiting experience. Niktina-den Besten (2008) found that the presence of dogs was a significant negative factor in the child's mental map of a neighborhood.

The Draft does not acknowledge that visitors to areas where off-leash dogs are allowed are potentially subjected to unmitigated encounters with large and powerful off-leash dogs. There is little the visitor can do to mitigate exposure to the risk of being charged or attacked by dogs in such cases. Such encounters can be especially frightening in relatively isolated areas with no cover, such as Ocean Beach.

One implication of my analysis of the impacts of dogs on visitor experience and human health and safety is that major areas of GGNRA should provide access to visitors to allow them to experience significant portions of each

area without encountering off-leash dogs. For example, at Fort Funston, visitors should be able to enjoy portions of the bluff and beach and a pathway in between without encountering off-leash dogs.

P. 1595 Human Health and Safety / Park Staff Health and Safety Impacts
The belligerent behavior of some dog walkers towards NPS Staff should not be considered as a factor in the Plan. A user group that resorts to intimidation and violence should not be rewarded with mention in this context. Park staff should be trained and equipped to enforce laws and regulations in the public interest.

Appendix E: Guidelines for ROLAs ' Voice Control
The guidelines for ROLAs require dogs to be under "voice and sight control at all times, meaning that dogwalkers must be able to recall their dog promptly, and shall demonstrate this when required by Law Enforcement personnel." As written, this requirement is meaningless and unenforceable. An individual might be able to demonstrate voice control in one situation, when in a more crowded environment or in a location with a large flock of birds or other tempting wildlife targets, the dog might react completely differently. I suspect that NPS has issued very few citations for 36 CFR 2.34(a)(4) and that such a code would not be an effective tool for insuring that "voice control" guidelines are followed.

In my experience "voice control" has in any case not been a successful or realistic concept. Dogs owners frequently do not consider it necessary to prevent their dogs from engaging in harmful and disruptive behaviors such as categorized by Vaske & Donnelly (2007). When they do show sensitively towards impacts on other visitors, dogs, or wildlife, the owners frequently do not attempt to control the dog until the harmful behavior has already occurred. It does not make any difference if a dog owner can "promptly" recall a dog, if the harmful behavior has already occurred. It does not seem possible that a commercial dog walker or any other park user walking two or more dogs could effectively exercise "voice and sight control at all times" over all his/her dogs.

Furthermore, although relying on the concept of voice control for decades, it does not appear that GGNRA has ever evaluated the effectiveness of voice control. In responding to a FOIA request for records of citations issued related to failure to exercise voice control, GGNRA reported that they had no way of searching their records for that information. Available information suggests that voice control is not effective in protecting wildlife or visitor experience. By proposing an unproven and untested concept of "voice control," NPS would be creating zones where visitor safety and wildlife protection could not be assured. This has essentially been the status quo for most of GGNRA in past years. However, if such areas are formalized and legalized, visitors from vulnerable user groups should be warned not to enter

these areas, as their safety cannot be guaranteed.

A "voice and sight control" regulated area in Boulder County, CO did not prevent disturbance of wildlife (Lenth et al. 2008).

GGNRA should analyze dog citations by zip code to determine whether education is even a feasible method of increasing compliance with restrictions on dog walking. If citations are mostly for dog owners in the media market near GGNRA, it is unlikely that any action but increased enforcement would change compliance rates.

Correspondence Type: Letter

Correspondence: Dear Superintendent Dean,

Thank you for the opportunity to comment on the Dog Management Plan and Draft EIS (Plan). As a native San Franciscan and a volunteer in the GGNRA for over a decade, I know this has been a long and difficult process that included all affected parties (or almost all; volunteers in the GGNRA were not represented as a distinct group). While some of those parties chose not to participate in the process in good faith, it is a plan that I fully support

I understand that those who advocate for unrestricted access for their unleashed dogs are a vocal and emotional minority, nonetheless they are a minority. The Golden Gate National Parks belong to all citizens, not just those with dogs and not just those living in the San Francisco Bay Area. Ideally, the GGNRA would come into compliance with other national parks, but I understand and appreciate that some allowances must be made.

That being said, I fully support the National Park Service (NPS) Preferred Alternative for all areas of the GGNRA. I believe that our national parks are for people's enjoyment and contemplation of our nation's natural wonders.

My specific comments regarding the Plan

? Natural resources staff should not have to deal with unsafe and/or hostile working conditions, namely being bitten, charged or otherwise harassed by dogs running offleash in natural areas, or endure verbal abuse by dog owners. ? Likewise, visitors should not have to deal with dogs running offleash in areas where quiet contemplation is expected. It is frightening to see a charging dog and not know its intention. This is not an enjoyable park experience and not why people visit national parks.

? There should be no trails where dogs are allowed to roam offleash under "voice control" alone. I have personally witnessed many instances where

owners have had to call their dogs three, four, five and more times to get them to return. That is not control

? Professional dog walkers should be required to obtain a use permit. They make a profit off public lands yet do nothing to maintain the areas that they use

? All dogs in the GGNRA should be required to have a current license, although I understand that this requirement may be outside the scope of the Plan.

? Most dogs are well behaved, yet it only takes one to harass wildlife, something that I have witnessed more than once, most recently a dog charging a great blue heron. I do not necessarily fault the dogs ' they are doing what seems natural - but I do blame the dogs' owners who either ignore or are oblivious to this behavior. The people should know better to respect the wildlife that makes the GGNRA its home ? It is quite illuminating that almost all parks and trails in the municipalities surveyed allow dogs only on leash or in designated areas. The Plan allows dogs off leash in more areas than any national park, and more than in most local parks as well, including those in San Francisco.

? The fact that the San Francisco Board of Supervisors does not support the plan should have absolutely no bearing on the decision making process. They have chosen not to educate themselves on the issues and do not speak for the majority of San Franciscans, including me. The fact that the GGNRA is designated as a recreation area means the NPS has a special responsibility to protect water and shore birds.

? Consistent and continual education and enforcement will be necessary for the foreseeable future. I hope that the NPS is committed to this. It will not be a pleasant duty, and I hope that the park staff who will enforce the plan will be fully supported by their supervisors and upper management.

I am concerned that you and other officials have heard only from those opposed to the Plan. I also understand why this may be the case. Public hearings on this issue have been uncivil, with advocates for unrestricted offleash dogs in the GGNRA shouting down or ridiculing those with opposing views. The result is a hostile environment in which many thoughtful individuals may choose not to publicly participate in the process. Should the Plan not be adopted, they will express their views by not visiting or otherwise supporting the GGNRA.

This is not how government should work. Those who shout the loudest should not inevitably get their way. I understand that emotions run high in this vocal minority of individuals. However, that does not excuse the

embarrassing denial of democracy.

The Plan allows more access to dogs off leash than any other national park in the country. It puts reasonable restrictions on professional dog walkers who make a profit off public lands. It preserves our natural lands and protects wildlife. It protects visitors and park employees, some of whom have been bitten, charged or otherwise harassed by dogs off leash and, I might add, by their owners_ It also protects dogs by ensuring that everyone follows the same rules.

The GGNRA belongs to all citizens, not just those with dogs living in the San Francisco Bay Area. Everyone deserves a place where they can enjoy the quiet respite that a national park provides, especially in an urban area. No other national park allows unrestricted access to dogs off leash. Neither should the GGNRA.

Thank you, Sharon Tsiu San Francisco, CA 94121

Indirect Impacts in Adjacent Parks

No page reference provided ' reference to "no impact to adjacent parks" is

found throughout the DEIS.

The DEIS completely fails to adequately assess impacts to adjacent parks, and fails to identify what "adjacent" means in this context. Adjacent to the GGNRA? Or adjacent to the people impacted by the alternative?

People come from all over the Bay Area to walk their dogs at Fort Funston and Ocean Beach. Impact on adjacent parks might include a number of different cities and counties, not just San Francisco.

By Park Service estimates in 2000, over 750,000 people visit Fort Funston each year. By our own analysis, between 74% and 96% of visitors are accompanied by a dog (lower numbers in areas adjacent to the parking lots; higher numbers further along the trails ' which reinforces our conclusion that dog owners want a recreational experience ' we want to hike with our dogs).

(Refer to Park Service documents Proposed Habitat Protection Closure, Fort Funston, Golden Gate National Recreation Area. July 17, 2000, and the National Park Service Survey Conducted at Fort Funston in August 1999).

Using 2000 Fort Funston visitor counts, assuming that 75% of the visits are with dogs, and assuming that under an alternative that drastically restricts off-leash areas, 50% of the visitors will use more convenient local parks ' this means that there will be an additional 280,000 visits to local parks each year. Not insignificant!

Site-specific estimates are needed for 1/number of current visitors, 2/number of visitors who are accompanied by a dog, 3/where these visitors live, and 4/ an estimate of how many existing visitors would use their local parks under each alternative.

Based on this data, each alternative needs to be updated to include an accurate assessment of impacts to adjacent parks.

The survey done at Fort Funston in 2000 by Karin Hu, PhD is attached for reference. (This survey has been submitted in two previous comment periods ' during the 12 acre closure comment in 2000 and during the ANPR comment in 2002).

Impact on bank swallows from dogs Appendix C "Bank Swallows" (C-19)
P1265 P1266 P1267 P1268

The document contains numerous references to the possibility of a negative impact by dogs to bank swallows. There is no documentation that negative impacts have actually occurred and some of the possible impacts are physically impossible (unless dogs learn to scale vertical cliffs, it is unlikely

a dog will ever disturb a bank swallow burrow). The document moves from "could" have a negative impact, to taking measures to prevent the impact (an impact that has never been observed). The bank swallow recovery program mentions many things needed to improve habitat and increase numbers; nowhere in this literature are dogs mentioned as a real or potential problem.

The DEIS also assumes that all impacts by dogs & dog owners are negative. In fact, it was a dog owner who pointed out the problem of visitors climbing the cliffs and disturbing the nests, and this same person alerted Dan Murphy of Golden Gate Audubon Society of the problem. As a result, official Park Service signs were erected to keep people 50' away from the cliffs when the bank swallows are present.

In Barrett A. Garrison's "California Partners in Flight Riparian Bird Conservation Plan" he states:

Bank Swallows appear relatively insensitive to moderate levels of human-induced disturbance. In California, colonies occur on banks under actively farmed irrigated row crops and orchards. Several colonies occur in coastal locations at public seashores where human activity can be substantial. (Emphasis added)

and,

A wide variety of land uses occur around Bank Swallow colonies including hydroelectric power generation, irrigation water conveyance, recreational boating, commercial agriculture, vehicular and pedestrian traffic, and domestic livestock grazing. These land uses appear relatively benign as long as the integrity of the nesting bank remains. (Emphasis added)

(Barrett Garrison is a world-renowned bank swallow (*Riparia riparia*) expert and is listed as a reference in the DEIS bibliography.)

Given that there is no observed or measured evidence in the DEIS that dogs harm bank swallows or bank swallow habitat, it is unnecessary to mitigate this in the proposed alternative. Sadly, we've observed Ravens, Kestrels and hawks feasting on the bank swallow colony, especially when the youngsters are taking their first flights. This is also the only documented "take" by Bank Swallow observers (Golden Gate Audubon Society).

(It is more likely that having dogs in the cliff areas kept these predators away in the past than it is that dogs scale the cliff face to harm the birds.)

On page 1265, the DEIS refers to Bank Swallow colony impacts due to cliff rescues of dogs. Again, this is a hypothetical impact. The majority of dog rescues occurs some distance from the Bank Swallow colony and could have

no impact. This is another situation where something that is hypothetically possible becomes something that has to be mitigated. Because Alternative A is the current state, it is not necessary to include hypothetical impacts in the impact analysis; measure what is actually occurring under this management plan.

Impact on Lessingia recovery

P1302

As described in the "Preferred Alternative" section of this comment, off-leash or leashed dog access to the coastal dune habitat is essentially non-existent. Due to the fencing & vegetative barriers, dogs & their owners rarely enter this habitat. (In truth, if there were already a "no-dog" rule in this habitat and if the measure of success was greater than 75% compliance, these areas would be considered a success.

The DEIS is incorrect in stating that Alternative A would possibly result in continued long-term impacts to the San Francisco Lessingia (which does not actually exist at Fort Funston in any case). It is expected that the Park Service will continue to build vegetative barriers to keep all active recreation out of areas deemed to be "sensitive". We've seen that these barriers are very effective, and there is every reason to believe that they will continue to be effective.

Because Alternative A is the current state, it is not necessary to include hypothetical impacts in the impact analysis; measure what is actually occurring under this management plan.

Preferred alternative:

We believe that a successful dog management plan is one that allows the greatest variety of experiences at an area, without undue harm to cultural or natural resources. If the dog management plan is perceived to be unfair to dog walkers, or perceived to do harm to the environment, it will not be accepted by park users or manageable by the GGNRA.

From the beginning of the dog management controversy (at the inception of the GGNRA when off-leash walking was initially banned) and at every meeting with the Park Service (including almost 2 years of negotiated rulemaking), dog owners have tried to make it clear that we want a recreational experience. Dog play areas (small, fenced areas where owners drink coffee while they watch their dogs play) are not what we have asked for. Dog owners are asking for recreational opportunities; places to hike; the opportunity to be in nature ' with their well- behaved dogs. This interest is

100% aligned with the new "Healthy Parks Healthy People US" initiative.

Rather than create rules that seem punitive to the current user-base at Fort Funston, the Park Service has other options that can achieve ' and have achieved ' their goals. As an example, if the existing rule was "no dogs" in the bluff areas (all of the acreage west of the Coast Trail), and the success measure was over 75% compliance, we could mark this as a success right now. Why?

Where post and cable fencing is erected, very few park users or dogs go 10' to 15' beyond the trail edge. Vegetative barriers are even more effective as a barrier to use, and when used in combination with post and cable fencing, almost no people or dogs enter the area.

There are many areas at Fort Funston that are, in effect, "no-dog" areas because of the fencing and vegetative boundaries that have been erected in the last 20 years. Because of this, although the "no action" alternative map shows that almost 100% of Fort Funston is off-leash, the reality of use is quite different.

One of the failures of the DEIS Preferred Alternative for Fort Funston is that it is not based on actual usage or existing conditions. The assessment of impact appears to be based on what might happen if off-leash areas are not restricted further. The missed opportunity for the GGNRA and for those of us who would like to propose a realistic alternative based on impacts ' is that we don't have to imagine what the impact of Alternative A would be. You could have measured what it is, and modifications to the current plan would then be based on improving this baseline.

Another failure is that the Preferred Alternative does not appear to have been created by someone who understands the climate & visitor experiences at Fort Funston. For example, the ROLA proposed in the preferred alternative C is the coldest, windiest and least desirable part of Fort Funston. It is nicknamed "the tundra" because even when the sun is out, this part of the Fort can be freezing and people move through it as quickly as possible. It is also adjacent to the Sunset Trail which is often used by visitors without dogs who want to take a leisurely stroll along the cliffs. One of the advantages of Fort Funston is its size and the dispersion of off-leash activity. If all the off-leash dogs were concentrated in a small area, adjacent to a popular visitor trail, the potential for conflict increases dramatically.

Recommendations:

The first set of recommendations is not specific to Fort Funston:

? Use recreational "best practices" rather than rules to control user behavior.

For example, install post and cable fencing and / or vegetative barriers where the Park Service wants to discourage off-leash activity. ? Require all dog walkers to carry a leash and a bag for each dog. (This insures that they have the means to control and clean up after their dogs.) ? Require that all dogs are licensed. (This creates outreach opportunities for local agencies to offer more training or to create an off-leash "tag" program). ? Work with local non-profit or governmental agencies to create education & outreach programs to define & train on "voice control" standards. ? Rigorously enforce existing regulations regarding resource impacts ' dogs digging, dogs chasing wildlife, owners not cleaning up after their dogs. ? Create a recreational committee made up of governmental agencies and/or local non,profits that can provide a buffer for the GGNRA in dealing with recreational & resource issues, and that can provide guidance to the GGNRA on implementing changes in the best interest of all GGNRA users and values.

Recommendations specific to Fort Funston:

? Move the water fountain currently adjacent to the hang glider launching pad over to the Sunset Trail head. The water fountain attracts many dogs and creates potential conflicts with the hang gliders. ? Install signage (describing the danger), low fencing and/ or vegetative barriers along the cliffs where most of the dog / owner rescues occur. Survey of Fort Funston Recreational Use

Karin Hu, Ph.D., September 2000

Introduction

Fort Funston is a part of the Golden Gate National Recreation Area located in San Francisco. The National Park Service indicates that Fort Funston is used extensively by "beachcombers, walkers, hang gliders, paragliders and horseback riders, and other recreational users," with approximately 750,000 visitors annually {1}. This study examines the recreational use of Fort Funston.

Abstract

During August 2000, recreational use of Fort Funston was measured. Twenty observation periods, lasting 45-55 minutes each, were completed on weekdays and weekends between 8:00 a.m. and 6:00 p.m. A total of 1629 adult recreational users was counted, averaging 81 recreational users per observation period. The results showed that an average of 87 percent of the parties of recreational users was accompanied by a dog.

Several directions for future studies are discussed below, including

examining whether the presence of dogs increases park safety; accessibility for disabled and senior park users; recreational use during winter months; and the need for more off-leash GGNRA areas to prevent overcrowding. Fort Funston currently accommodates more than 5 percent of GGNRA visitors, but comprises less than 0.3 percent of GGNRA acreage.

Method

During the month of August 2000, twenty observation periods were completed. The researchers traveled a circuit that began in the parking lot, followed the Wood Chip trail to the north end of the paved Coastal Trail, and returned via the Sunset Trail to the viewing platform, hang gliders launch area, and parking lot. The researchers counted every park user observed from these areas. Recreational users were tabulated individually and in parties. If two or more recreational users appeared to have arrived in one car, they were considered to be one party, e.g., a woman and man with two children would be one party. The samples were taken between August 1-August 31, included each day of the week at least twice, and each hour from 8:00 a.m. to 6:00 p.m. at least once. The duration of each observation period was approximately 45.55 minutes.

Results

A total of 1629 adult recreational users were counted, comprising an estimated 1175 parties. The average number of recreational users per each observation period was approximately 81, ranging from 35 to 211 people. Women comprised 55 percent of the adult users, men 45 percent. The majority of recreational users were walkers who brought one or more dogs to accompany them. The percentage of parties accompanied by a dog averaged 87 percent with a range of 74-96 percent per observation period. If the count was limited to park trails (i.e., all areas north of the parking lot, and excluding the viewing platform, hang gliders launch area, and south fields), the percentage of parties accompanied by a dog increased to 91 percent, with a range from 81-100 percent per observation period.

The remaining recreational users who were not accompanied by a dog were engaged in activities such as hang gliding, playing on the sand dunes, sifting on the benches, walking, jogging, flying model airplanes, kite-flying, sight-seeing, or riding bikes or scooters.

Discussion

The results show that dog walking is an important recreational activity at Fort Funston. These findings are consistent with the survey conducted by the National Park Service (NPS) at Fort Funston in August 1999 (2). In that study, Fort Funston visitors were asked two questions: "A) In your opinion,

what is the special significance of this park (e.g., a unique feature of geology, a particular aspect of history, etc.); and B) Is there anything else you would like to tell us about your visit?" Although "dogs" were not specifically mentioned in the questions, the NPS Survey found that 74 percent of the 118 respondents included "dogs" in their answers, identifying dogs as a special, positive significance at Fort Funston, regardless of whether the respondent was a dog owner. Only 1.6 percent of the respondents had critical comments about unleashed dogs.

This study found that recreational users accompanied by a dog always comprised at least 74 percent of the park visitors. This may be due to for several reasons: (1) Fort Funston offers a recreational space in a densely populated city where an estimated 38 percent of households has a dog, and (2) beginning in 1996, the National Park Service has eliminated recreation with off-leash dogs at Lands End, Fort Miley, Mann Headlands, the Presidio, and parts of Ocean Beach. These closures have led to a high concentration of dog-walkers at Fort Funston.

Why do people visit Fort Funston? Although Fort Funston offers spectacular views, hang-gliding, and native plant volunteer opportunities (on Saturdays), there are few other attractions for visitors, e.g., the weather is often windy, cold and damp, benches and picnic tables are rare, and the bathrooms are lacking in number and cleanliness (at least 10 percent of the respondents in the NPS Survey commented on this).

On the other hand, visitors with dogs are highly motivated to come to Fort Funston, some on a daily basis, regardless of shortcomings, for several reasons: walking with a canine "best friend" increases physical and mental fitness for both the human and dog, a community of other dog walkers offers positive social interactions, the high-density of park users and the presence of dogs offers a level of personal safety, there exists an opportunity to enjoy a spectacular coastal park, and Fort Funston is a clean, safe park, resulting from the efforts of the Park Rangers and other members of the park community.

Although it might seem surprising that the majority of park users at Fort Funston engage in one activity, i.e., walking with a dog, there are comparable majority users in other parks. For example, the Palo Alto Baylands has birders, Edgewood Park has wildflower enthusiasts, Alcatraz Island has sightseers, and the Presidio Golf Course has golfers.

The results of this study suggest several directions for future studies. First, approximately 55 percent of the recreational users were women, most of them were solitary, accompanied only by a dog. Given the perception that a woman going to a park alone puts her personal safety at risk, one might study whether the presence of dogs increases personal safety. Being

accompanied by a dog might offer some protection. In addition, the presence of off-leash dogs, which can play among the shrubs and forests, probably makes a park less attractive to vagrants, sexual predators, drunks, etc. In other GGNRA parks, for example Milagra Ridge or Presidio Hill, there are fewer park users and no off-leash dogs. Would a solitary woman feel safe going to these GGNRA sites?

Second, the NPS should study the demographics of Fort Funston recreational users to see if citizen needs are being addressed. Casual observation indicates that there are a high number of disabled and senior recreational walkers. Is this comparable to what is seen at other GGNRA parks? Is there accessibility for these users at Fort Funston?

A third study might look at park use during the winter months. Dog walking is a year-round activity. People with dogs are seen at Fort Funston even when the weather is cold or rainy. This study was conducted in August, when the climate is mild, families have vacation time, and tourism is high. If extrapolated to an annual figure, the results of this study probably underestimate the percentage of recreational users with a dog. During the cold, damp winter months, perhaps the only visitors to Fort Funston are those with dogs.

Last, a study should look at the feasibility of opening more GGNRA areas to recreational users with off-leash dogs, i.e., making the GGNRA more amenable to the needs of recreational users. Currently Fort Funston accommodates approximately 5.3 percent of GGNRA visitors, but comprises less than 0.3 percent of GGNRA acreage. Although the presence of many park users offers a degree of safety and community, overcrowding could lead to strained resources and increased maintenance costs.

It is hoped that the results of this study will contribute toward building a scientific foundation upon which park policies can be based.

MAY 27, 2011

Enclosed please find two recent Letters to the Editor, both published letters in Marin periodicals.

1.) "Dogs are healthful Too" Marin Independent Journal4j16j2011 2.) "Dogs and Recreation" Marin Magazine, April 2011

Please include both letters to the Editor and this cover letter as Comment Submissions for the DEIS Dog Management Plan.

1. The National Park Service Director, Jon Jarvis, came to Marin recently to unveil a new agenda calling for open space to help nurture the nation's physical and mental health. Mr. Jarvis has made his bias against dogs now well-known in our Park while on a radio show in SF.

2. An article in Marin Magazine in response to an environmentalist's claim that Dog's do harm to the GGNRA.

I should have also mentioned in my response to Marin Magazine that no scientific study has been performed by the NPS to prove that humans with their dog companions do anymore harm to our Parks than any other recreational user group.

In addition I am a dues paying member of:

Marin Audubon The Sierra Club Natural Resources Defense Council Marin Agricultural Land Trust MarinWatch

I strongly urge the GGNRA to change their public opinion wherein the NPS in The Draft EIS treats the environment and recreation as having opposing values.

Respectfully Submitted,

Jane Woodman

Sausalito, Ca 94965

Opinion, Marin Independent Journal Saturday April 16, 2011

RECREATION,

Dogs are healthful, too

On the front page of the IJ, Jon Jarvis, National Park Service Director announced: "I have come to Marin to push a new agenda calling for open space to help nurture the nation's physical and mental health along with 100 professionals all meeting to discuss ways to promote healthier lifestyles and help lower health care costs by tapping open space an elixir. Personal access to the natural world plays a vital role in our physical and emotional well-being."

Two years ago, then-House Majority Leader Nancy Pelosi sponsored a bill to remove the word "recreation" from the Golden Gate National Recreation Area.

The legislation that created the park, obviously called for recreation. A coalition of GGNRA users offered strong public opposition to the bill and it died.

Drastic changes are now proposed for GGNRA's 1979 pet policy.

The park service proposed to severely limit the park areas (now 1 percent) in the 75,000 acres of the GGNRA for walking dogs on- and off-leash dog.

Our dogs get us out for hikes, trail and beach walks -- and keep us healthy.

Director Jarvis says there are even proven medical studies that show it is healthy to get out in our park.

Just so I get this right: The park service is unveiling this "health initiative" at the exact same time it is pursuing severe limitations to the areas for hiking and walking with one's dog companions.

I'm confused.

Jane Woodman, SAUSALITO, REPRESENTATIVE OF ECO-DOG.ORG

Marin Magazine, April 2011

Dogs and recreation You might have made note at the beginning of "Treasure Hunt" by Eve Pell (March 2011) that the article was timed with the current efforts of the Golden Gate National Recreational Area (GGNRA) to drastically change the 1979 Pet Policy.

In fact, the National Park Service would make it a federal crime to walk your companion dogs on- or off-leash in the 1 percent of the thousands of acreage now allowed by the current law. However, the enabling legislation that created the GGNRA specified that along with the protection of wildlife and plant species, the roads and trails and beaches were meant to be shared by all recreational users.

Dog owners have not demonstrated for more areas in which to walk our dogs, only for what we have enjoyed historically (even though the populations of both humans and dogs have notably increased since 1979). In fact, north from the Golden Gate Bridge to the Sonoma County border, no dogs are allowed on the publicly owned beaches with the exception of Rodeo and Muir Beach currently allowing for dogs off leash. In the GGNRA-proposed plan, Muir Beach will ban all dogs - thus leaving a portion of Rodeo Beach for off-leash walking in all of Marin County.

There are few trails and fire roads in the Marin Headlands currently where it is legal to hike with dogs, and the intent of the GGNRA is to now abolish those as well. Mount Tamalpias is state owned and allows no dogs on any trail except on the Old Stage Coach Road for a short .5- to .75-mile on-leash walk to connect with the Marin Municipal Water District Fire Road, where dogs are allowable on-leash only.

The article portrayed dogs as the bad guys in the environmental discussion; however, the science does not prove that dogs have damaged the 1 percent they have had access to for those 34 years. Responsible dog owners not only pick up after themselves and their dogs but also remove debris left behind by walkers, runners and bike riders.

Received: May,27,2011 00:00:00
Correspondence Type: Letter
Correspondence: Introduction

The legacy of Golden Gate National Recreation Area (GGNRA) management is one of duplicity, broken promises, and broken laws. This DEIS as a means to modify recreational usage is no exception. This DEIS is not a good faith effort by the NPSjGGNRA to resolve conflict, but a thinly veiled ploy to eliminate off-leash recreation from the GGNRA entirely. The

conflict is actually one of legislative intent: the GGNRAjNPS desire to manage this Golden Gate National Recreation Area as a National Park, while the enabling legislation and the will of the people assert the management should reflect the unique requirement we have for recreational access (as mandated by Congress) here in the GGNRA.

With respect to this 2400 page DEIS, the Federal Register states: "This plan will promote the following objectives: preserve and protect natural and cultural resources and natural processes, provide a variety of visitor experiences, improve visitor and employee safety, reduce user conflicts, and maintain GGNRA resources and values for future generations." There is no mention of recreation or its value in this Recreation Area. With the addition of a "Compliance-based Management Strategy" the GGNRA has cleared the way to incrementally eliminate the presence of dogs in the GGNRA.

This is a long-standing battle we have waged; the GGNRA takes away recreational access, and the citizens turn to the Federal Court to have access reinstated. It has been a colossal waste of time and money, and a hardship for the citizens because not only are we battling for our right to access; we are also paying for both sides of the debate. I intend to review the objectives and content of this DEIS and the history of the management of the GGNRA. At its conclusion I think you will agree there are only three possible resolutions to this situation. San Francisco City and County will be required to formally take back those properties they can, or Congress will be required to implement a Section Seven Special Regulation (over the objections of DOIjNPSjGGNRA) to ensure recreational access as was originally intended when this National Recreation Area was created. The third option would be to transfer the GGNRA to another Federal agency such as the Forest Service, where sound principles of land use and planning are actually implemented as a part of their management policy. Should these properties remain under the management of NPSjGGNRA, there must be strict oversight by Congress to ensure sound principles of land use planning and management are implemented permanently as they have not been implemented up until now.

This Agency Action Is Unlawful

Before examining the contents of this DEIS, I must make the fundamental point that the decision to proceed with this DEIS itself is unlawful. The enabling legislation requires the GGNRA to utilize sound principles of land use planning and management. Accepted practice would be illustrated by the Rattlesnake National Recreation Area and Wilderness (RNRA W) which produces an annual monitoring report. The report assesses current recreation trends, needs, and impacts, and thereby serves as a tool for long-term management of the RNRAW. The following is taken from the Introduction of the Report for 2009:

"This is the seventeenth annual monitoring report for the Limits of Acceptable Change (LAC) based Management Direction for the Rattlesnake National Recreation Area (NRA) and Wilderness (RNRA W), which was approved in December 1992. Monitoring is the final step in the LAC planning system. It is an ongoing, continuous process and is instrumental for evaluating management effectiveness and sustainability of resource values and conditions.

The LAC process recognizes that wilderness conditions change. Wilderness areas are dynamic systems with many forces continually affecting the landscape. These forces of change include people and their impacts, fire, insects and disease, invasive species and many others. It defines what conditions are desirable and how to achieve or maintain those conditions. Based on citizen involvement, laws and regulation, it identifies what changes are acceptable rather than attempting to prevent change.

Monitoring is based upon the indicators and standards outlined in the LAC direction. The indicators and their specific standards provide methods of measurement to effectively monitor factors and area wide issues. Refer to the December, 1992 Limits of Acceptable Change Based Management Direction for the RNRA W for a more complete discussion of the LAC process.

The factors monitored during the 2009 field season include: education, use and users, trails and roads, Wilderness characteristics, vegetation, vandalism, wildlife, fire, goals and policies. Refer to Table 1 for a complete description of the factors, indicators and standards for each opportunity class (OC)."

In contrast, in 2006 when this DEIS was announced on the Federal Register, I made a Freedom of Information Act Request to provide the data, documents, and/or Staff Report which substantiated the GGNRA's claim that there was controversy over the dog policy, compromised visitor and employee safety and resource degradation which warranted this DEIS. The GGNRA's response merely stated: "The Staff Report and other documents you seek do not exist at this time". An appeal to the Department of the Interior regarding this FOIA request elicited the following response after several letters: "Since the Department has not made a determination on your appeal within the time limits set in the FOIA, you may seek judicial review under 5 U.S.C. 552(a)(4)(B). However, we hope that you will delay filing the lawsuit so that the Department can thoroughly review the issues in your appeal and make a determination. We appreciate your patience to this point and the Department will make every effort to reach a decision on your appeal as soon as possible." This letter is dated August 8, 2006. There has been no written response as of yet.

The lack of data or any documentation to support the assertions used as

justification to proceed with this Environmental Review violates Federal Law as it renders this agency action arbitrary, capricious and an abuse of discretion. Accordingly, this agency action, findings and conclusions should be set aside as prescribed by the Administrative Procedure Act, 5 U.S.C. 706 (2)A.

Why is it significant that other Recreation Areas perform annual monitoring of resources and the GGNRA does not? Why is monitoring so important? As stated in an NPS publication, "Monitoring the Condition of Natural Resources in US National Parks" ([http://science.nature.nps.govlim/monitor/docs/Monitoring Park Condition. pdf](http://science.nature.nps.govlim/monitor/docs/Monitoring_Park_Condition.pdf)) the purpose of monitoring is as follows:

The overall purpose of natural resource monitoring in parks is to develop scientifically sound information on the current status and long term trends in the composition, structure, and function of park ecosystems, and to determine how well current management practices are sustaining those ecosystems. Use of monitoring information will increase confidence in manager's decisions and improve their ability to manage park resources, and will allow managers to confront and mitigate threats to the park and operate more effectively in legal and political arenas.

Additionally, a review of NPS online resources reveals that there is an entire infrastructure set up to guide and facilitate NPS properties in their monitoring duties, "Vital Signs Monitoring" (<http://science.nature.nps.govlim/monitorindex.cfm>)

A subsection of the aforementioned web site (Program Goals) discusses the goals of park monitoring: "Natural resource monitoring provides site-specific information needed to understand and identify change in complex, variable, and imperfectly understood natural systems and to determine whether observed changes are within natural levels of variability or may be indicators of unwanted human influences. Thus, monitoring provides a basis for understanding and identifying meaningful change in natural systems characterized by complexity, variability, and surprises. Monitoring data help to define the normal limits of natural variation in park resources and provide a basis for understanding observed changes; monitoring results may also be used to determine what constitutes impairment and to identify the need to initiate or change management practices."

As discussed above, it seems impossible that GGNRA management would undertake a management change as proposed in this DEIS without any evidence of monitoring as a means to identify the alleged impairment. Further exploration of the NPS "Vital Signs Monitoring" Resources Online (see <http://science.nature.nps.govlim/monitor/ProgramGoals.cfm>) reveals:

National Park managers are directed by federal law and National Park Service policies and guidance to know the status and trends in the condition of natural resources under their stewardship in order to fulfill the NPS mission of conserving parks unimpaired (see Summary of Laws, Policies, and Guidance).

More recently, the National Parks Omnibus Management Act of 1998 established the framework for fully integrating natural resource monitoring and other science activities into the management processes of the National Park System. The Act charges the Secretary of the Interior to "continually improve the ability of the National Park Service to provide state-of-the-art management, protection, and interpretation of and research on the resources of the National Park System", and to "assure the full and proper utilization of the results of scientific studies for park management decisions." Section 5934 of the Act requires the Secretary of the Interior to develop a program of "inventory and monitoring of National Park System resources to establish baseline information and to provide information on the long-term trends in the condition of National Park System resources. "

Clearly, the failure of GGNRA management to conduct any consistent monitoring of the resources of the GGNRA is a violation of Federal law. The more fundamental problem is that this DEIS highlights the fact that GGNRA management is in persistent violation of the enabling legislation for this park property. GGNRA management can provide no monitoring report to substantiate visitor use patterns or conflicts, no documentation of degradation of the Recreation Area resources, as well as no documentation as to whether resource degradation is inevitable or under the control of management prior to proposing these management changes. Consequently, there have been no mitigations to address problems as they arise. In truth, were the GGNRA's claims of degradation of resources even valid (I contend they are not), a case could be made that any degradation of the GGNRA property is due to GGNRA management's failure to adhere to accepted practice regarding land use planning and management. How is it equitable for the GGNRA to abolish recreational access as a remedy to a problem they cannot document and when they have demonstrably violated the principles of sound land use planning and management?

The fact is the National Park Service has had a shift in ideology, and this new ideology is in direct conflict with the promises the NPS made to citizens to persuade them and their governing bodies to turn over the properties that make up the GGNRA. Had the GGNRA monitored this property conscientiously, their findings would not have justified initiating this DEIS in the first place.

This Agency's Management Is The Source Of Controversy And Conflict

It is the GGNRA's refusal to abide by the enabling legislation for this park that has created controversy and user conflict. I am obligated to go through a chronological history of the GGNRA because the history provided in this DEIS is inaccurate in many respects.

History

The historical backdrop presented in this DEIS could be politely classified as "revisionist". A more accurate description is as follows:

In March 1963, the President's Recreational Advisory Council released "Policy Circular No. 1." In it, the council laid out a new outdoor recreation policy for all agencies, with the key stipulation that all National Recreation sites be accessible at all times for "all-purpose recreational use." To make the point even clearer, it asserted that agency management of National Recreation Areas should be more responsive to recreational demands than to other such considerations as "preserving unique natural or historical resources." (Administrative History of Point Reyes National Seashore) The NPS was left with little choice but to heed these stipulations.

In response, the NPS advisory board decided to create three separate operating units and management goals for traditional NPS natural or Wilderness areas, Historical Monuments, and for the broad category of Recreation Areas. Secretary of the Interior Udall made official the new categories in his July 10, 1964, memorandum to new NPS director George B. Hartzog, Jr. Udall outlined the prescribed management policies for the recreational area category: "Outdoor recreation shall be recognized as the dominant or primary resource management objective." Resource use would emphasize "active participation in outdoor recreation in a pleasing environment." (Administrative History of Point Reyes National Seashore)

In 1970 Secretary of Interior Walter Hickel moved to create the GGNRA "to bring parks to the people", (U.S. Department of Interior News Release, September 14, 1970.) Congress established the GGNRA on October 27, 1972, stating:

"In order to preserve for public use and enjoyment certain areas of Marin and San Francisco Counties, California, possessing outstanding natural, historic, scenic, and recreational values, and in order to provide for the maintenance of needed recreational open space necessary to urban environment and planning, the Golden Gate National Recreation Area (hereinafter referred to as the "recreation area") is hereby established. In the management of the recreation area, the Secretary of the Interior (hereinafter referred to as the "Secretary") shall utilize the resources in a manner which will provide for recreation and educational opportunities consistent with sound principles of land use planning and management. In carrying out the provisions of this

subchapter, the Secretary shall preserve the recreation area, as far as possible, in its natural setting, and protect it from development and uses which would destroy the scenic beauty and natural character of the area ... " (16 U.S.C. Sec. 460bb.)

In addition to a generic statement of purpose as appears in most national park statutes, it is important to note that Congress included two "specific provisions" unique to the GGNRA.

First, the park was established "to provide for the maintenance of needed recreational open space necessary to urban environment and planning."

Second, the GGNRA statute imposes a unique limitation on NPS's discretionary power for "management of the recreation area" by providing that the "Secretary of Interior...shall utilize the resources in a manner which will provide for recreation and educational opportunities consistent with sound principles of land use planning and management. "

While composing a list of enumerated recreational activities contemplated for the new urban park would be virtually impossible, legislative history reveals what Congress meant by "needed recreational open space necessary to urban environment." "It is a well-recognized principle of statutory construction that contemporaneous interpretations of dated legislation are ordinarily given considerable deference when its meaning is later questioned." (National Rifle Association of America v. Potter 628 F. Supp. 903, 911 (D.C. Dist. Col. 1986).) In addition to sun bathing, picnicking, horse riding, swimming, hiking, and fishing, off-leash dog walking was specifically addressed during Congressional hearings. For example, a letter by a seven year old child from San Francisco petitioned the Chairman for a dog park where she could play and socialize her dog: "Dear Congressman Roy Taylor: I want a park so I can play in the park and my sister wants a park too and so my dog can play with another dogs and my Mom wants a park so she could take my dog out to play. I hope you will make a park. Elizabeth Linke." (Hearings Before the Subcommittee on Interior and Insular Affairs, House of Representatives, p. 414.)

Consistent with the trend at the time, Congress explicitly stated the GGNRA was to be a "new national urban recreation area which will concentrate on serving the outdoor recreation needs of the people of the metropolitan region." The GGNRA's mandate was to "expand to the maximum extent possible the outdoor recreation opportunities available in this region." (1-1. R. Rep. No. 1391, 92nd Cong., 2nd Session (1972).)

At the time, all municipal beaches and adjacent city parks considered for inclusion in the park were dedicated to off-leash recreation. (It has been the law of the State of California since its inception in 1850 that the State holds

the tidelands in trust for its citizens. In decisions from both the United States and California Supreme Courts, the uses encompassed by the public trust doctrine have been held to include "general recreational" activities.)

When voting for Charter Section 7.403-1(a) authorizing the transfer of the City parks, the citizens of San Francisco were told that "the transfer of these lands is a technical resolution allowing the City and County of San Francisco to transfer city lands to the Golden Gate National Recreation area ... a national urban park established in 1972 by Congress to preserve 34,000 acres of land and water in San Francisco and Marin for recreational use by all citizens." The first GGNRA Superintendent William J. Whalen made specific promises to San Francisco voters that the new NRA would retain historical recreational access (including off-leash recreation) should they vote to include SF park properties in the GGNRA.

Although the city was interested in having its parks included in the new urban park, it wanted to retain jurisdiction over them; surrendering total control to the federal government was not part of the original deal. San Francisco Mayor Joseph Alioto told the United States House Hearings that the city parks proposed for inclusion in the GGNRA "should remain under the jurisdiction of the San Francisco Recreation and Park Commission" (April 6, 1972). The Department of Interior clearly understood that the "taxpayers of San Francisco had the foresight to preserve these recreational areas and the willingness to pay for their support" and "naturally wish to retain some voice in their operations and administration consistent again with an overall master plan." (February 14, 1972). The San Francisco Recreation and Park Commission adopted Resolution No. 9030 which provides, "[t]hat this Commission, believing that inclusion of these properties is vital to the success of the concept of bringing parks to the people, recommends that they remain under the jurisdiction of the Recreation and Park Commission of the City and County of San Francisco." (May 30, 1972).

Aware that certain unique restrictions were included in the enabling statute requiring the NPS to maintain "recreational open space necessary for urban environment and planning", San Francisco adopted the "technical resolution" authorizing the transfer of City parks for "recreational use by all citizens."

The Board of Supervisors adopted Resolution No. 364-72, which provides:

1. "the City and County of San Francisco desires to maintain and improve the recreation facilities available to the residents of San Francisco on the aforementioned property owned by the City and County of San Francisco located within the Golden Gate National Recreation Area;"
2. "The City and County of San Francisco desires to participate in the

planning, administration and operation of the Golden Gate National Recreation Area;" and

3. "this Board of Supervisors endorse a policy of cooperation and administration and management of the Golden Gate National Recreation Area including the property owned by the City and County of San Francisco located within the Recreation Area. (June 9, 1972)".

Before the transfer occurred, an Agreement/ Memorandum of Understanding (MOU) between San Francisco and the Federal Government gave the City Planning Department jurisdiction to review NPS plans within formally owned City lands after their incorporation into the GGNRA. Department of City Planning memos from the 1970s confirm that the MOU requires that all NPS proposals be submitted to the Department for review.

As minutes of the San Francisco City Planning Commission, dated December 5, 1974 confirm, the resolution to transfer the property was approved on that day because the Commission was told: "the deed transferring jurisdiction over the parcel to the Federal Government would specify that the property should be used for Open Space and Recreational purposes only."

Even as the properties were being secured, the National Park Service was moving in the direction of abolishing the National Recreation, Historical Monuments, and Wilderness Management categories. The General Authorities Act of 1970 began the legal unraveling of the three management categories. Officials in Washington assured field operations that these changes were administrative and "not intended to create significant changes in the management of parks." (Administrative History of Point Reyes National Seashore)

But in reality, the move was being made to reverse the priority of recreation. We shall now track the progression of this move to place "preservation/restoration" over recreation.

Considering his representations to SF voters and elected officials, it seems duplicitous at best that in 1977 the same William J. Whalen (recently promoted to Director status in the NPS) officially dismantled the three-category distinctions which provided different management for National Recreation Area category properties (which included the GGNRA). To answer the obvious question as to how the priority of recreation was still to be honored, it was said the promulgation of new regulations were developed to reflect "the actual Management practices which have become established in park areas, either through legislative requirements or policy decision." (Memo from Associate Director, Management and Operations to Directorate and Field Directorate, 12/22/77).

Congress bolstered NPS Director Whalen's decision to further de-emphasize the Recreational preference in the Redwoods Act of 1978, which included an amendment to the 1970 General Authorities Act declaring the "regulation of the various areas of the National Park System, ... shall be consistent with and founded in the purpose established by the [Organic Act] to the common benefit of all the people of the United States." (Administrative History of Point Reyes National Seashore)

Acting on the promise to the city and the mandate to manage park resources "consistent with sound principles of land use planning and management" for the "maintenance of needed recreational open space necessary to urban environment and planning", NPS developed the 1979 Pet Policy through the auspices of the Citizens Advisory Commission which designated certain areas for voice control in San Francisco and Marin counties. The development of this policy was initiated "because the ordinary guidelines outlined in the Code of Federal Regulations do not really apply in an urban area. People and their animals have been visiting the park for too long to apply an all-inclusive arbitrary policy."

Documents relating to development of the policy leave no question that NPS and not the Citizens Advisory Commission developed the off-leash policy for GGNRA. In October, 1977, Rolf Diamont, GGNRA "Environmental Coordinator" prepared a memo proposing a "Draft Dog Policy for San Francisco Unit." His memo enumerated the following guidelines:

- 1 "No regulation, verbal or written, should be attempted that cannot be reasonably and consistently administered."
- 2 "Dog regulations should be different for different areas of the park reflecting public needs and attitudes as well as urban geography and our capabilities."
- 3 "When we discourage or restrict dogs in any area, whenever possible, an alternative site where dogs are allowed should be suggested."

Each precept is consistent with "sound principles of land use management". To facilitate public review of the proposed policy, the Citizens Advisory Commission established a Pet Policy Committee to conduct hearings on the proposed policy. A briefing memo for the record prepared by the Staff Assistant to General Superintendent dated April 3, 1978 acknowledged that 36 CFR 2.8 leash law was "applicable to all properties of GGNRA". NPS realized a special regulation would have to be prepared. "A deviation from this regulation will require the writing of a special regulation specific to GGNRA". The leash law was not enforced while the new policy was being developed: "Enforcement of the CFR has been non-existent until a dog policy

and possibly a special regulation is established. "

The 1979 Pet Policy was established as the official off-leash recreation policy for the GGNRA as required by the enabling statute and the promise made to the city. NPS issued press releases of the official off-leash policy (Lynn Thompson memo to Coalition For San Francisco Neighborhoods, 10/17/78). Again, NPS told San Francisco this policy was developed because the "[e]xisting federal regulations' were not "a viable situation in an urban area".

By summer of 1979, GGNRA had initiated the process to bring federal regulations into compliance with the enabling legislation and the off-leash policy. A draft special regulation 7.97(b) was submitted to the Western Regional Director NPS for approval. Department of Interior Solicitor Ralph Mihan reviewed the draft proposed regulation and found "the proposed regulation to be legally acceptable", but advised the formal request should include a "authorship statement or a statement of significance" which "must be included within the rulemaking package before its transmittal to Washington." (Ralph Mihan, Solicitor to Western Regional Director, Re: Proposed Rulemaking Golden Gate National Recreation Area (Pets), 7/23/79). The draft proposed regulation in fact contained a statement of significance, the Section Seven Amendment was being proposed "because large portions of land formerly used as pet exercise areas have been included with Golden Gate National Recreation Area." (1/9/80 Regional Director memo to Superintendent GGNRA: Re: Proposed Special Regulation -Pets USPRODo0386-8). The proposed regulation also called for public comment "within 30 days of the publication of this notice in the Federal Register."

Although this 1979 Pet Policy was consistent with the statutory mandate for the GGNRA to provide "needed recreational open space necessary for urban environment" and required by the promise made to San Francisco when city property was donated to the park, officials in Washington D.C did not finalize the Section Seven Special Regulation to bring their regulations into compliance with the enabling statute. Subsequently the 1979 Pet Policy guidelines were incorporated into the 1982 Natural Resources Management Plan as Appendix C. The duplicity lay in the GGNRA's intentional failure to designate the 1979 Pet Policy as a Section Seven Special Regulation-the type of regulation referred to in the Memo dated 12/22/77 referenced above. The significance of this will be apparent in 2001.

Finally, Director William J. Whalen's 1980 NPS Management Policies produced a systemwide change in overall policy and management. The clear directive was preservation first, recreation second."(Administrative History of Point Reyes National Seashore)

If you look at some of the GGNRA's management activities, you have cause

to wonder if the GGNRA really wants us in "their park". For example, in 1989 the GGNRA, under the supervision of Brian O'Neill, signed on to a biosphere habitat program entitled "Man and Biosphere Habitat Programme" ("MAE" or "MAP"). One would be hard pressed to find a philosophy in greater conflict with the recreational priority of the GGNRA than that of Peter Bridgewater, Secretary of the MAB/MAP Programme, who has said, "Earth would be a better place if we had no people." The year of 1989, when the Biosphere program began, saw visitors drop by over 5 million in this Recreation Area that otherwise had shown steady growth in recreation visitors since they started tracking visitors in 1973.

In 1992 Bill Clinton's newly appointed Secretary of the Interior, Bruce Babitt, had a different vision for the National Parks System. A new anti-recreation ideology pervaded Park Service policy. Despite the legislative mandate that sound land use principles be applied "to maintain needed recreational open space necessary for urban environment", NPS summarily closed off in August of 1996:

? over 15 miles off-leash recreational space in San Francisco ? 11 miles of trail in Presidio ? 2.2 miles at Ocean Beach ? Lands End ? Fort Miley

The aforementioned Diamont memo confirms that all closures affected areas used for this recreational activity before the park was established: Ocean Beach, Fort Funston, Sutro Heights Park, Phelan Beach, Lands End, and Baker Beach. Diamont's comments concerning Ocean Beach explain why that closure has been unsuccessful:

"Ocean Beach: no rules should be enforced here. Ocean Beach is too large and too accessible to control dogs. It would be a logistical nightmare for the Park Service to try. Also lifestyles are such on Ocean Beach, that an inflexible NPS here could hurt our improving relations with visitors."

The DEIS states: "Since the 1990S, the San Francisco Bay Area population and overall use of GGNRA park sites have increased, as have the number of private and commercial dog walkers. At the same time, the number of conflicts between park users with and without dogs began to rise, as did the fear of dogs and dog bites or attacks."

With respect to the claim in the DEIS that use of the Recreation Area had increased, two points can be made. First, increased usage over time was anticipated when this National Recreation Area was created. The House Report No 92-1391 made clear that the GGNRA would be confronted with problems in San Francisco that would require careful planning because of the high volume year-round visitation:

"As a national urban recreation area, this new component of the national park

system will be confronted with problems which do not frequently occur at other national park and recreation areas. Great numbers of people can be expected to use the area-particularly those portions located in San Francisco County." (pg. 11)

There is no surprise here. Therefore, abandonment of the principles outlined in the enabling legislation, in an absence of appropriate monitoring of resources, as proposed in this DEIS is not an acceptable management reaction to increased usage of the GGNRA by citizens.

Second, the number of park visitors has NOT increased dramatically over the past 20 years. In fact, in 1987 the GGNRA experienced its greatest number of visitors, coming in at 21,767,176 recreational visitors. According to NPS statistics, in 2010, the total number of recreational visitors was 14,271,503, down about 34% from 1988.

Consider also that in the past 20 years the GGNRA acreage has almost doubled in size, and expanded into San Mateo County. This puts a far larger population in direct proximity to the Recreation Area, yet the visitor numbers are down dramatically. Users of the GGNRA will tell you that this DEIS is just a reflection of the management priorities that Brian O'Neill started with his Biosphere commitment that have systematically denied and discouraged access for the public to this Golden Gate National Recreation Area.

Evidence the issue was really a new ideology is the fact that the GGNRA experimented with changing its name to Golden Gate National Parks (GGNP) in an effort to convince citizens of the Bay Area that the paramount mission of the NPS is to bring the wilderness to the City. On August 28, 2001, the GGNRA Advisory Commission meeting was opened by Chair Rich Bartke as a regular meeting of the Advisory Commission to the National Parks in the Golden Gate Area. Mr. Bartke was asked to correct that reference by a concerned citizen, Michael Goldstein. Mr. Goldstein stated publicly in his comments to the Commission that this was not the first time he had addressed the Commission on this topic and that this practice of omitting the word "recreation" from the Park's name had become a matter of public concern. This runs counter to the intentions of the City of San Francisco and its citizens who had been promised that the GGNRA will remain an urban recreation area.

The DEIS further states: During this period (2001), it was clarified by the Department of Justice, U.S. Attorney, and the Department of the Interior Solicitor Offices that the voice-control policy then in effect at Fort Funston and other locations in the park was contrary to NPS regulations. In a public meeting in January 2001, the Commission acknowledged that the voice control policy was contrary to 36 CFR 2.1s(a)(2), prohibiting off-leash dogs

in national parks, and therefore illegal and unenforceable.

Now we see the significance of the GGNRA/NPS decision to refrain from making the 1979 Pet Policy a Section Seven Special Regulation. By doing so, they were able to exercise "plausible deniability". In reality, this is just one more example of how the GGNRA has dealt in bad faith with the public whom they, in theory, serve.

The public and elected officials were incensed at the GGNRA change in policy. Indeed, in 2001, a Resolution was approved by the San Francisco Board of Supervisors, detailing the history of the relationship between the City, the public and the GGNRA. The Resolution (and its findings) is so significant that it is quoted in full below:

RESOLUTION for S.F. Board of Supervisors Vote [Urging GGNRA to delay leash enforcement - Passed on December 10, 2001]

Resolution requesting the National Park Service to delay enforcing, in the San Francisco parks situated in the GGNRA, 36 C.F.R. 2.15, requiring pets to be on leash in national parks, until the ANPR process has been completed.

WHEREAS, In 1975, the City and County of San Francisco transferred Fort Funston and other City-owned park lands to the federal government to be included in the Golden Gate National Recreation Area (GGNRA), to be administered by the National Park Service (NPS); and,

WHEREAS, The statute creating the GGNRA (16 U.S.C. Section 460bb) specifically states that the GGNRA was established to provide for the maintenance of needed recreational open space necessary to the urban environment and planning and requires that the Secretary of the Interior "utilize the resources in a manner which will provide for recreation and educational opportunities consistent with sound principles of land use planning and management;" and,

WHEREAS, Former Charter section 7.403-1 (a), as approved by the voters, required that the deed transferring any City-owned park lands to the NPS include the restriction that said lands were to be reserved by the Park Service "in perpetuity for recreation or park purposes with a right of reversion upon breach of said restriction;" and,

WHEREAS, When Fort Funston and other City-owned parks were transferred to the federal government, a federal regulation existed requiring all pets to be on leash in federal parks, yet the NPS chose not to enforce this regulation in the San Francisco City parks; and,

WHEREAS, In April 1978, the GGNRA stated its position that "the ordinary

guidelines outlined in the Code of Federal regulations do not really apply in an urban area," and that "people and their animals have been visiting the park for too long to apply an all-inclusive arbitrary policy;" and,

WHEREAS, The Superintendent of the GGNRA in the spirit of this statement developed a draft pet policy and submitted it to the GGNRA Advisory Committee for further review and public hearings; and,

WHEREAS, In September of 1978, after extensive public hearings and public surveys, the Advisory Commission proposed guidelines for a pet policy for the San Francisco Unit of the GGNRA, designating Fort Funston, Lands End, Ocean Beach, Fort Miley, Baker Beach, and Crissy Field for continued off-leash recreation; and,

WHEREAS, On October 6, 1978, GGNRA General Superintendent Lynn Thompson accepted these designations with the following comment: "As you know, the Advisory Commission approved the proposed guidelines for a pet policy in the San Francisco Unit of the GGNRA at their September 27 meeting," and she continued, "We are accepting in total the Commission's recommendations for each of these areas;" and,

WHEREAS, On February 24, 1979, the GGNRA finalized the pet policy for both San Francisco and Marin County, establishing areas where pets could be exercised off-leash; and,

WHEREAS, In 1982, the 1979 Pet Policy was incorporated into the GGNRA Natural Resources Management Plan as Appendix C; and,

WHEREAS, On July 8, 1992, NPS Western Regional Director Stanley Albright assured U.S. Senator John Seymour that "there is no change in the 1979 Pet Policy which provides the visitor of walking one's dog off leash"; and,

WHEREAS, By letter dated July 8, 1992, Western Regional Director Stanley Albright also assured U.S. Senator Cranston that there would be no change in the 1979 Pet Policy; and,

WHEREAS, On February 5, 1999, Pacific Western Regional Director John Reynolds assured U.S. Senator Dianne Feinstein that the "GGNRA has adopted a pet policy that is more liberal than the regulations enforced at other national park sites throughout the United States, where pets are required to be leashed at all times and are, for the most part, excluded from all but developed areas," and the letter continued, "[The] GGNRA " has, with the assistance of the park's Advisory Commission, established a pet policy that allows some opportunity for visitors to enjoy a few designated areas as

voice control areas where pets are allowed off-leash;" and,

WHEREAS, On March 19, 1999, GGNRA Superintendent Brian O'Neill stated to U.S. Congresswoman Nancy Pelosi, the "GGNRA has adopted a pet policy that is more liberal than pet regulations at other national park sites throughout the country ... certain areas of the park have been designated as voice control areas where pets are permitted off-leash;" and,

WHEREAS, In November of 2000, the GGNRA Advisory Committee attempted to revoke the 1979 Pet Policy, but failed due to a point of order; and,

WHEREAS, On January 23, 2001, over 1,500 people attended the GGNRA Advisory Committee meeting to protest revocation of the 1979 Pet Policy, nine San Francisco supervisors spoke, and both Senator Speier and Assemblyman Shelley sent letters to be read by their representatives; and,

WHEREAS, The Advisory Committee recommended that the GGNRA hold meetings with stakeholder groups within the next 120 days to resolve the issue, and to not change leash enforcement for this period; and,

WHEREAS, The Advisory Committee at this meeting did not vote on the Pet Policy; and,

WHEREAS, Rather than hold stakeholder meetings, the GGNRA received permission from Washington for a more formal process called Advance Notice of Proposed Rulemaking (ANPR), but this process has not begun; and,

WHEREAS, In November, 2001, the GGNRA began to aggressively enforce the leash requirement at Fort Funston, sending teams of law enforcement rangers for 2 to 3 hour segments, and issuing tickets for walking dogs off-leash without initiating the ANPR process in good faith with the public; and,

WHEREAS, Off-leash recreational users believe that off-leash recreation is legal at Fort Funston, and they agreed to go through the ANPR process and further rulemaking in order to obtain a special rule for the GGNRA that specifically recognizes that off-leash dog-walking is permissible in certain GGNRA parks; and,

WHEREAS, The Board of Supervisors of the City and County of San Francisco finds that the recent enforcement of 36 C.F.R. 2.15 is in contravention to the representations made to the public at the Citizens Advisory Committee meeting on January 23, 2001; now, therefore, be it

RESOLVED, That the Board of Supervisors of the City and County of San

Francisco hereby requests the National Park Service not to enforce, in the GGNRA parks which were donated to the federal government by the City and County of San Francisco, 36 C.F.R. 2.15, which requires that all pets be on leash in federal parks, until the ANPR process has been satisfactorily completed; and, be it

FURTHER RESOLVED, That the Board of Supervisors of the City and County of San Francisco hereby requests the NPS to advise the Board as to the status of the ANPR process; and, be it

FURTHER RESOLVED, That the Clerk of the Board of Supervisors shall send copies of this resolution to the offices of United States Senator Dianne Feinstein, United States Senator Barbara Boxer, Congresswoman Nancy Pelosi, Congressman Tom Lantos, State Senator John Burton, State Senator Jackie Speier, Assemblywoman Carole Migden, Assemblyman Kevin Shelley, GGNRA Superintendent Brian O'Neill and the National Park Service.

Unfortunately, the GGNRA ignored the Resolution, and in 2002 instituted a ban on off-leash recreation and began ticketing dog guardians for recreating with their dogs off-leash. As mentioned in the Resolution, pressure from the City of San Francisco to take back the management of these properties in the courts, as well as the Federal court confirming other violations of law the GGNRA had been guilty of, caused the GGNRA to invite the public to petition the Federal government for the ability to create a Section Seven Special Regulation for off-leash recreation in the GGNRA (ANPR).

The public submitted thousands upon thousands of requests to the Federal government, and a Federal Panel reviewed the history and legal agreements for the GGNRA. The Federal Panel that reviewed the applicable authorities, policies, planning guidelines, and information on Park setting, natural and cultural resources, and public safety developed the following observation (among others):

"GGNRA parkland is immediately adjacent to San Francisco, one of the most densely populated urban centers in the United States of America, and manages a significant portion of recreational open space in the city. Most residents do not have 'backyards' or access to private open space to exercise their pets off-leash. Residents rely on the close proximity of GGNRA open space for this purpose." (ANPR Decision Documents; Federal Panel Recommendations, supra, Section 3, emphasis added.)

"... [the GGNRA should] clearly distinguish between on-leash, off-leash, and no pet areas to avoid management and public confusion." (Federal Panel Recommendation to the General Superintendent on Proposed Rulemaking for Pet Management at Golden Gate National Recreation Area, Section 4

("Federal Panel Recommendations"). p. 11 (Revised November 7, 2002).
[See
[http://www.nps.gov/goga/pets/anpr/pdf/federal_panel_recommendation.pdf.](http://www.nps.gov/goga/pets/anpr/pdf/federal_panel_recommendation.pdf)]

The Federal Panel concluded in its November 2002 recommendation to the GGNRA it would be appropriate to create a Section Seven Special Regulation to allow off-leash recreation in the GGNRA.

At that time, the GGNRA could have instituted the 1979 Pet Policy as the Section Seven Special Regulation for the GGNRA. Instead, they decided to institute Negotiated Rulemaking (NR) to create a new pet management policy for the GGNRA.

Prior to NR starting, in 2004, a Federal magistrate reviewing tickets issued to dog guardians determined that the 1979 Pet Policy had been illegally rescinded, and re-instated the 1979 Pet Policy as the controlling law for off-leash recreation in the GGNRA

Again, even with the legal protection of a court order, the GGNRA chose not to institute the 1979 Pet Policy as the new Section Seven Special Regulation. Instead, the GGNRA appealed the Federal Court's decision. In 2005 the GGNRA lost their appeal. The 1979 Pet Policy was affirmed as the controlling pet policy in the GGNRA.

Judge Alsup of the Federal Court noted in his decision affirming reinstatement of the 1979 Pet Policy in the GGNRA, his findings regarding the history of pet management in the GGNRA:

"In sum, for more than twenty years, the GGNRA officially designated at least seven sites for off-leash use. This was not accidental. It was a carefully articulated, often studied, promulgation. The responsible GGNRA officials in 1978 and thereafter presumably believed they were acting lawfully. Even now, the government concedes that the GGNRA had full authority at all times to relax the general leash rule at the GGNRA but argues it could have done so, at least after 1983, only via a "special regulation." In other words, the agency allegedly used the "wrong" procedure back in 1978 (and thereafter) even though a "right" procedure to reach the desired result was available and could have been used. The government has not revealed its internal justification for following the "wrong" process.

Whatever it was, the justification was abandoned in 2002 with the two-word explanation that it had been "in error." With this ipse dixit, the NPS wiped away two decades of policy, practice, promulgations, and promises to the public." (United States v. Barley, Order Of Affirmance, supra, p. 5.)

Correspondence Letter

Type:

Correspondence: I have attached four letters to this cover letter to you. Please consider these letters as my comment submittals to the DEIS Dog Management Plan along with this cover letter.

1. April 23, 2007 letter to Supt. Brian O'Neill 2. October 2007 letter to Chris Powell 3. January 5, 2007 letter to Maj. Gerald McCarthy, US Park Police 4. October 9, 2008 letter to The Golden Gate Raptor Observatory

1. and 2. Are representative of the major exclusions to the residents of Marin County in regard to a Dog Management Plan 3. Lack of correct understandingj signage of rules by Park Police and Rangers promotes conflict amongst Park users and enforcement officers 4. Lack of correct information between Park Partners and Park enforcement personnel promotes conflict amongst users

All of the above letters serve as my comment submissions for the DEIS Dog Management Plan.

Respectfully,

Jane Woodman

Sausalito, Ca. 94965

May 27, 2011

April 23, 2007 Brian O'Neill, General Superintendent Golden Gate National Recreation Area Ft. Mason, Building 201 San Francisco, CA 94123

Re: Dog Management Plan and Regulations and EIS for Golden Gate National Recreation Area in Marin County

Dear Mr. O'Neill:

I am writing to you in regard to the need to provide a meaningful opportunity for public involvement on the above referenced subject. As Supervisor McGlashan's appointee for this process, I need to register our joint concern that Marin County has been given too little input in the process, and it affects us deeply. Many members of the public who care for and treasure these extraordinary public lands in Marin County have effectively been excluded from the current process, as have the areas they

have enjoyed for so many decades.

A quarter million people live in Marin County. This letter is being sent on behalf of these residents, and the many other residents of adjoining counties who currently use and have for decades enjoyed the use of the Golden Gate National Recreation Area ("GGNRA") for recreation with our dogs. We are well-aware that this is a difficult subject on which to find consensus.

The National Park Service initiated a commendable integrated negotiating rule-making process and NEPA environmental impact statement (EIS) in an effort to bring diverse interests together to develop a dog management plan for the GGNRA consistent with the 1980 GGNRA General Management Plan's objectives of conservation, diversity of visitor experiences, and other adopted goals.

However, the National Park Service chose to make at least three major exclusions to this process:

~ The rulemaking notice excluded nearly all of the areas currently and historically open to people with their dogs in the GGNRA in Marin County. The attached sheet shows a comparison of the areas allowed under the existing 1979 Pet Policy and the areas excluded from consideration in the notice of negotiated rulemaking.

~ The scope of the EIS as described in the notice of intent to prepare an EIS issued by the National Park Service on February 22, 2006 stated the EIS is for a Dog Management Plan for the Golden Gate National Recreation Area. The notice said the EIS is being prepared to "facilitate informed decision-making" as part of negotiated rulemaking process "to reach consensus" for the management of dogs "within the park" largely because of "intense public interest and debate." The EIS is required to provide adequate analysis of alternatives and impacts for dog management decisions throughout the GGNRA.

~ The people directly affected by removing Marin County areas from the reg-neg/EIS process have been excluded from the Committee table and from meaningful involvement in the Park Service's current study and decision process.

These blanket exclusions seem contrary to the "Good Faith Participation" standards for rulemaking to which the National Park Service has pledged. These exclusions seem inappropriate from a public interest, environmental, and legal basis.

The boundaries of the GGNRA include approximately 76,000 acres. The NPS GGNRA staff manages less than half of these acres. Most of the

GGNRA is managed by other agencies. Of the approximately 30,000 acres managed by the NPS GGNRA, more than half of these acres are in Marin County. Yet, most of the 1979 Pet Policy sites in Marin have been removed from regneg consideration, and there is no seat for Marin County people with dogs at the Committee table. The topic of this rule making is focused on dog "management" and the appropriate tools to allow a diversity of experience without unacceptable impacts. Excluding Marin sites without proper review, and excluding representation from Marin for people with dogs, harms thousands of people and runs counter to an objective, open-minded review.

The continuation of the existing 1980 GGNRA General Management Plan and the 1979 Pet Policy is the 'no action' alternative in the EIS. As the rules and recent court cases make clear, a programmatic or site specific decision by the National Park Service to amend the existing plan and policy and take an action to remove, close or restrict existing access requires environmental review under NEPA. Even if the National Park Service chooses to exclude nearly all of Marin County from the negotiated rule-making process, the EIS is still required to provide adequate analysis of alternatives and their environmental impacts subject to public review so that an informed decision can be made. A conclusory statement in a federal register notice does not pass this test.

NEPA requires fair consideration of all reasonable alternatives and their impacts on the human environment. As the NEPA Rules state in the definition of human environment: "When an environmental impact statement is being prepared and economic or social and natural or physical environmental impacts are interrelated, then the environmental impact statement will discuss all of these effects on the human environment." Among these is the effect on the people and communities that would be excluded from using the GGNRA in Marin County.

Our residents are among those most directly harmed and affected by a decision to remove Marin County areas from consideration. We think the negotiated rule-making process should include these areas, either now or as part of an expanded "reg-neg" process if the current round makes progress. Many of us who live in Marin County or use the GGNRA in Marin County also use other areas and parks in the GGNRA. Our use of these areas, as well as the rules that may be developed in the "reg-neg" process, directly affect us. We think it is reasonable for us to participate in these discussions.

If you disagree, I request the courtesy of meeting and working with your staff and you in a meaningful way to discuss the scope of the EIS on these topics, and the options for fair and impartial consideration in your decision on any dog management plan covering Marin County. Supervisor

McGlashan's staff would also like to be engaged in this discussion.

Respectfully yours,

Jane Woodman Sausalito, CA 94965

Cc: Senator Barbara Boxer Senator Dianne Feinstein Congresswoman Nancy Pelosi Congresswoman Lynn Woolsey Supervisor Charles McGlashan

Chris Powell, GGNRA Good Morning Chris:

I just returned from out of country yesterday, and am trying to catch up on what has transpired in the "dog negotiations" in my absence. I was dismayed to learn that the Technical Subcommittee meeting of October 3rd was cancelled, and that the suggestions going forward to the Full Committee will be coming from the "small groups" that you and the facilitators have appointed. There have been three of the "small group" meetings so far, and another is now scheduled for October 19th. So far these meetings have had no "users with dogs" representative from Marin, and yet the first of these meetings was spent entirely on discussing dogs on Rodeo Beach.

Those present at the meeting discussing Rodeo Beach of September 27th were: Martha, Gary and Linda ("users with dogs" representing sites in the City), Judy Teichman from Marin for the equestrians, Erin Brody from Marin for the Marine Mammal Center, David Robinson, of SF Coleman Advocates for Youth, and finally Gordon Bennett from Marin for the former GGNRA Advisory Committee. Betsy Cutler Bob Panthold, seniors and disabled

Mr. Bennett has appeared at just one Technical Subcommittee meeting(attendance accorded all Full Committee members) during this year and a half Reg Neg process. He has not participated in any of the ongoing discussions, and yet you invited him to participate in the "small group" meeting regarding Marin sites. On the other hand, you did not include me (or my alternate Sonja Hanson in my absence) to attend the "small group" meetings where Marin sites were discussed. You had plenty of representatives from Marin for other user groups, but once again, you shut Marin "users with dogs" out of the discussions.

The meeting of September 28th had a similar composition: Martha, Gary and Linda ("users with dogs" representing sites in the City), Judy Teichman from Marin for the equestrians, Erin Brody from Marin for the Marine Mammal Center, Bob Panthold from San Francisco representing the disabled,

and at this meeting it was Betsy Cutler from Marin representing the former GGRNRA Advisory Committee.

At the meeting of October 3 you had: Martha, Gary and Linda ("users with dogs" representing sites in the City), Stephen Krefting from San Francisco League of Conservation Voters ,Erin Brody from Marin for the Marine Mammal Center, Bob Planthold from San Francisco representing the disabled, and Holly Prohaska from San Mateo representing the equestrians.

In response to my request on September 27th that a thoroughly informed "users with dogs" representative from Marin be included in these "small group" meetings you replied: "check with Betsy Cutler, Gordon Bennett or Judy Teichman" they are the Marin representatives. None of these individuals represent off-leash dog users in Marin County, in fact they all represent other user groups in Marin. Am I missing something here, or are you?

You have excluded representation from Marin "users with dogs" from the very beginning of this process to the Full Committee. Mter much lobbying, we were "thrown a bone" for two seats at the Technical SubCommittee table to be appointed by the Marin Supervisors with Districts adjacent to the large Marin portion of GGNRA lands. Charles McGlashin appointed me as his representative on the Technical SubCommittee. I have attended nearly all Full Committee and Sub Committee meetings in the year and a half and the ones that I was unable to attend, Sonja Hanson attended for me.

My appointment by Marin County Supervisor Charles McGlashan and my attendance (and enormous amount of time expended) for a year and a half at the Technical SubCommittee meetings as the "users with dogs" representative from Marin have been for naught. You have determined that the final discussions and recommendations are to be made by a "small group" of your choosing that excludes a "users with dogs" representative from Marin.

It is clear that the Technical SubCommittee is "dead", and that any proposals going to the Full Committee for their last meeting on October 27th will come from the "small group" meetings. Given that, I am formally requesting inclusion to the "small group" meeting scheduled for October 19th, so that at least one of these "small group" meetings has a "users with dogs" representative from Marin in attendance.

Cordially, Jane Woodman

MAJOR GERALD MCCARTHY UNITED STATES PARK POLICE 1217
RALSTON AVENUE SAN FRANCISCO, CA. 94129 JANUARY 5, 2007

DEAR MAJOR MCCARTHY:

IT APPEARS THAT ONE OF THE REASONS THAT THE PUBLIC AND VARIOUS ENFORCEMENT AGENCIES ARE AT ODDS IN REGARDS TO OFF-LEASH DOG POLICIES IN THE GGNRA (AND AT TIMES VERY UNPLEASANT CONFRONTATIONS ARE RECORDED) IS THAT YOUR OWN ENFORCEMENT PERSONNEL APPEAR TO BE CONFUSED AND EVEN UNAWARE ABOUT THE CURRENT OFF-LEASH LAW IN THE GGNRA. (NOT TO MENTION THIS OFFICER'S TERRIBLE ATTITUDE ACCOMPANYING THE LACK OF KNOWLEDGE OF THE CURRENT LAW)

A LARGE SIGN CORRECTLY REFLECTING THE OFF-LEASH STATUS AT RODEO BEACH IS POSTED ON THE METAL FOOT BRIDGE LEADING TO THE BEACH ITSELF. (JUDGE ALSOP RULING/ 1979 PET POLICY AND THE ONGOING NEGOTIATED RULEMAKING ON THE SAME SUBJECT.)

THERE WAS SOME CONFUSION/CONFLICT WITH SURFERS AND DOG OWNERS THIS PAST HOLIDAY WEEKEND AS A SMALLISH SIGN ON A POST NEAREST THE CLIFF AREA/PARKING AREA OF THE BEACH INCORRECTLY STATES DOGS WERE TO BE ONLEASH ON THE SAME BEACH, INCONSISTENT WITH THE CURRENT LAW AND OTHER SIGNS AT THE SAME SITE.

ON WALKING THERE THIS MORNING I DID SEE THE SMALL (CONFUSING) SIGN FOR MYSELF AND WHEN I HAPPENED UPON A U.S. PARK POLICE OFFICER EXITING HIS CAR INTO THE PRESIDIO FIRE DEPT. AT RODEO BEACH I ASKED HIM IF PERHAPS HE COULD HELP IN GETTING THAT SMALL SIGN REMOVED AND AID IN GETTING A PROPER ONE INSTALLED FOR CONSISTENCY. I WAS GREETED WITH "THERE IS NOWHERE IN A NATIONAL PARK WHERE DOGS CAN BE OFF-LEASH". I VERY (VERY) GENTLY STATED THAT INDEED WE WERE IN THE MIDDLE OF NEGOTIATED RULEMAKING AND THAT THE CURRENT STATUS AT RODEO (AND 8 OTHER LOCATIONS IN MARIN ALONE) ARE OFF-LEASH/UNDER VOICE CONTROL. THIS TIME THE OFFICER'S STEPPED UP RESPONSE TO ME WAS "WHAT IS IT THAT YOU DON'T YOU UNDERSTAND ABOUT THE RULES?".

I TRIED YET AGAIN TO MAKE IT CLEAR THAT I WAS SIMPLY TRYING TO ASK HIS HELP IF POSSIBLE IN GETTING THE SIGNAGE CONSISTENT WITH THE CURRENT RULE POINTING OUT THE LARGE SIGN ACROSS THE STREET FROM WHERE WE STOOD INDICATING OFF-LEASH USE. THIS TIME THE REPLY WAS "WHAT IS IT YOU WANT FROM ME?". HE THEN DASHED

INTO THE FIRE STATION BEHIND A LOCKED DOOR AND DID NOT REAPPEAR. (LEAVING THE DOG IN HIS K-9 U.S. PARK POLICE VEHICLE *LICENSE # 0311 A BARKING HIS HEAD OFF)

I THEN MADE CONTACT A FEW MINUTES LATER WITH A PARK RANGER WHO SAID HE INDEED WOULD SEE TO IT THAT THE IMPROPER SIGN WAS REMOVED AND REPLACED WITH ONE CONSISTENT WITH THE SIGN INSTALLED AT THE FOOTBRIDGE REFLECTING THE CURRENT OFF~LEASH STATUS AS SOON AS POSSIBLE. UPON RETURNING HOME I CALLED THE PARK POLICE DISPATCH TO SEE WHO THE U.S. PARK POLICE OFFICER MIGHT HAVE BEEN SINCE HE STAYED BEHIND A LOCKED DOOR AND DID NOT RETURN. I WAS TOLD THAT THE ONLY K~9 OFFICER ON DUTY TODAY WAS OFFICER NEIL WOO.

SINCERELY, JANE WOODMAN SAUSALITO, CAL. 94965

CC: CONGRESSWOMAN LYNN WOOLSEY MARIN COUNTY SUPERVISOR CHARLES MCGLASHAN GGNRA SUPERINTENDENT BRIAN O'NEILL

To: The Golden Gate Raptor Observatory Date: October 9, 2008 Re: Intolerance in the Headlands

By 7:00 a.m. this morning I was enjoying a glorious morning walkhike on the Miwok Trail and was returning to my car down the old military paved road above Rodeo Beach (trail begins at the gate near the Marine Mammal Center).

The sun had just risen, the cool scent of Fall was in the air and the mist was hanging on the lagoon below. I was in heaven in the Headlands.

With me were my two companion dogs. Both of whom have perfect trail manners (i.e. do not chase wildlife, come when called on one recall and who remain very close to the me, the responsible owner) . In my hand was a biodegradable bag (with waste) which was being removed from the Park by me as well.

Walking down the hill at around 8:15 a.m. I could hear the crunch of gravel and the roar of engines as a caravan of SUV's roared up the abandoned road. (Gee, someone else just might be on that road) In the past all walkers (with or without dogs) and drivers have waved in pleasant acknowledgement and gone their separate ways. The cars to the bird cages, the walkers to the trails.

Not today. The last in the caravan was a car, separated by a distance from the rest. A new white Mercedes wagon screamed to a halt, then backed up,

albeit almost putting themselves in a ditch for the effort, out jumped a man, hand on hip telling me "dogs must be on leashes out here" showing me with his arms outstretched indicating The Headlands in general.

I in response offered that his information was not correct, that indeed the 1979 Pet Policy rules were intact, and that voice-control on leash was the rule for this road as it was for the Miwok Trail above which we had just hiked. He offered that the Park Rangers in residence out at Ft. Cronkhite had told him so. I suggested he check with Chris Powell at the NPS." He then said he would ask the rangers again. I countered with "please ask Chris Powell as the rangers historically have Jiverde information". I am enclosing a current map of the Marin Headlands for your information and my edification, printed with the same funding that you apparently receive from the Golden Gate National Parks Conservancy.

I have not thought to complain about your use of caged wild birds housed on the hillside above the Marine Mammal Center to aid in your banding/observatory efforts. What you do at the Raptor Observatory is on the same 30,000 GGNRA acres shared by the entire of the San FranciscolMarin County for recreation. (The IIR" in GGNRA stands for recreation, as the Enabling Legislation creating it intended). Nature needs to be protected but not at the exclusion of others.

The NPS issues permits for events like weddings with amplified music on Rodeo Beach. There are numerous Park Partners sharing space in Ft. Cronkhite buildings. There is a constant How of loudly exuberant children from the Headlands Institute using the same paved road shared by GGRO. There are dirtroad bicycles, horsehack riders, surfers, a fire station, The Marine Mammal Center, Youth Hostel, Arts Center, YMCA, workforce housing all sharing the same area with their own noise level and attendant activities. All those combined currently prove that the area is already heavily used and shared.

Please inform your 250 volunteer members as well as your staff that well-behaved people and dogs in the GGNRA are currently a part of tolerance and sharing in a increasingly intolerant world.

Correspondence ID: 4674 **Project:** 11759 **Document:** 38106
Received: May,27,2011 00:00:00
Correspondence Type: Letter
Correspondence: The GGNRA continued to flout both recommendations that it solicited from the Federal Panel and the Court decision to reinstate the 1979 Pet Policy as the law governing pet management in the GGNRA. In 2007, Daphne Hatch, Chief of Natural Resources Management and Science for the GGNRA was quoted in the

San Francisco Chronicle as saying: "Ocean Beach without the people is an incredible habitat. But people think of it as a sandbox or their backyard."

While Superintendent O'Neill gratuitously stated that the Court "effectively reinstated the 1979 Pet Policy", the GGNRA refused to acknowledge the reinstatement of the 1979 Pet Policy in the manner prescribed by law, 36 C.F.R. Section 1.7(b). There was no written designation of the reinstated off-leash properties; indeed, the GGNRA used this murky situation to continue to harass and ticket off-leash dog-walkers in areas that were off-leash pursuant to the 1979 Pet Policy and amendments thereto. In addition, the GGNRA, in violation of 36 C.F.R. Section 1.7(a)(4), persisted in ignoring the Court's ruling and misinforming the public. For example, on the NPS website, under the heading, "Dogwalking Information and Regulations", a statement dated June 8, 2005, proclaims: "Due to the recent court ruling, this information is under review and will be revised shortly." A brochure found online at the NPS website entitled, "Enjoying the Park with your Dog", advises readers that, "Where dogs are permitted, Federal law requires that they be on a leash, not to exceed six feet in length, in all units of the National Park System."

In addition, for over a year, GGNRA management refused to change the signage in the Park to reflect the Court's ruling in derogation of 36 C.F.R. Section 1.7(a)(1)(4). For photo documentation of the illegal signage, see <http://oceanbeachdog.home.mindspring.com/id8.html>. This illegal and confusing signage clearly created user conflict and was detrimental to the safety and enjoyment of those visiting the GGNRA.

I would add as an aside at this point, objectives listed in this DEIS were the desire to enhance Visitor experience and Safety, enhanced compliance with Dog Rules, and Park Operations. It should be evident from this point in GGNRA history, that the greatest obstacle to fulfilling these objectives was and still is GGNRA Management itself.

Despite the fact that GGNRA management had been given permission to create a Section Seven Special Regulation for off-leash recreation in the GGNRA; when the Court reinstated the 1979 Pet Policy, the Superintendent refused to make the 1979 Pet Policy a Section Seven Special Regulation. He instead instituted a Negotiated Rulemaking (NR) process that was conducted in bad faith, was unlawful and did not reach consensus. The GGNRA refused to acknowledge the 1979 Pet Policy as the logical starting point for NR. In fact, the 1979 Pet Policy was not listed as a document the NR Committee would be able to refer to within the NR process. The GGNRA continued to cling to their view that the 1979 Pet Policy was an illegitimate document which NEVER had the power of law despite the contrary findings of the Court.

NR required consensus among participants. If consensus was not reached for a Section Seven Special Regulation, the GGNRA was allowed to create a Rule

arbitrarily, as it did when they rescinded the 1979 Pet Policy. In fact, even if the NR did reach consensus, the GGNRA maintained that they were still free to ignore the findings of the NR process and subsequently create its own rule.

The GGNRA selected the participating groups and their representatives. Six of the nineteen groups that participated had submitted a petition to the Federal government asking that ALL off-leash recreation in the GGNRA be banned. These same groups had both publicly and privately stated they saw NR as a means to eliminate off-leash recreation from the GGNRA entirely. Despite protests, they remained on the NR Committee.

I was initially slated to participate in NR as a representative for Ocean Beach DOG (OBDOG). When I discovered the flawed manner in which this process was to be conducted, I complained. Instead of resolving my legitimate complaints about the process, the GGNRA/NPS/DOI threw me off the NR Committee. NR predictably came to an end without consensus, and was a colossal waste of taxpayer money to the tune of over five hundred thousand dollars.

Subsequently, the initiation of the DEIS was announced. The explanation for this might be found in a quote from then Western Regional Director (now NPS Director) Jon Jarvis. At the NPS Centennial Initiative Listening Session (Presidio Officer's Club, San Francisco, Calif., March 22, 2007) Director Jarvis said to me and my husband, and I quote, "I would rather give up those [the GGNRA] properties than have dogs running loose on them." In 2008, the GGNRA supported an attempt by Nancy Pelosi to surreptitiously slip a Park name change (and therefore a change in the governing mandates) from National Recreation Area to National Park through bill H.R. 6305. This action can be construed as an admission that the NPS/GGNRA is aware their actions do not conform to the enabling legislation. Public outcry upon the discovery of this section in HR 6305 forced Nancy Pelosi to withdraw her blatant attempt to circumvent the will of the people and the Federal Court.

Now in 2011, we are presented with this 2400 page DEIS.

Evaluation Of The Actual DEIS

There is no "monitoring of the vital signs" of the GGNRA to support the premise of this DEIS. Further, the failure to complete vital signs monitoring in a competent manner violates Federal law as outlined in the NPS resource "Vital Signs Monitoring".

(<http://science.nature.nps.gov/im/monitor/LawsPolicy.cfm>). A list of laws violated due to the failure to monitor (per this resource) is listed below:

? National Park Service Organic Act ? General Authorities Act of 1970 ?
Redwood National Park Act ? National Environmental Policy Act of 1969 ?

Clean Water Act ? Clean Air Act ? Endangered Species Act of 1973 ?
Environmental Quality Improvement Act of 1970 ? Coastal Zone Management
Act of 1972 ? Marine Protection, Research, and Sanctuaries Act of 1972 ?
National Parks Omnibus Management Act

The failure to complete competent "vital monitoring" results in the following fatal flaws in this DEIS:

1) The Draft Plan/DEIS assumes but does not provide the required rigorous analysis that resource conditions result solely from dog use of the sites, discounting the contribution from other visitors and recreational users. The Draft Plan/DEIS does not address the contribution of other impactful activities, including special events, to the resource conditions and existing impacts at each of the GGNRA sites.

2) In many places, the Draft Plan/DEIS does not provide any data on actual impacts by dogs in areas being proposed for new dog walking restrictions. The words can, may, and could are everywhere in place of hard facts which would have been in evidence had the required "vital monitoring" been done. In places where data are provided, the Draft Plan/DEIS makes undocumented assumptions that there are unacceptable impacts and that dogs are the culprits.

3) The Draft Plan/DEIS assumes species are present in areas where there is no record of their presence. In other places, there is inconsistent information about the presence of species.

4) Many of the findings in the Draft Plan/DEIS are founded on a reference included in the document as Appendix G, "Law Enforcement Data" (NPS 2008c). This reference document is critically deficient in substantiating statements made in the characterization of existing conditions and in the analysis of the environmental consequences. For example, an entry is as follows: "observed a black dog chasing a flock of 14 snowy plovers. I observed the dog chasing the birds from the water to the dunes and up and down the beach for several hundred meters north and south. The dog would charge at the birds and the Plovers would fly away from the dog. Each time the Plovers would attempt to land, the dog would charge directly at them and cause them to take flight again. I watched this happen for continually for eight minutes timed by my watch from 1150 to 1158 hours. Then the dog stopped chasing the Plovers and wandered in the hilly dunes to the north for several minutes. The dog then returned to chasing the Snowy Plovers for a few minutes more ... After the dog ceased chasing the Plovers, they stopped taking flight and started feeding at the water line." Clearly, if this dog was chasing plovers, they would not have returned to feeding at the water line after the chase was over. Plovers feed at the high tide line when the water has already retreated. These were sanderlings, birds that appear almost identical to the plover, are plentiful at Ocean Beach (not threatened or endangered) and can be differentiated by different feeding patterns and different

resting patterns.

5) The affected environment section mentions California Native Plant Society (CNPS)-listed species as having the potential to occur within the GGNRA but no data are provided as to where/if they are actually present.

6) The Draft Plan/DEIS assumes, but fails to demonstrate, the "cause and effect" relationship that where dogs are present within GGNRA sites, there is a disturbance of natural resources or demonstrate that the disturbance of resources is attributable to dogs (versus other factors).

7) The Soils and Geology section (page 225) includes the following statements: "Dogs and dog walkers that do not stay on designated trails and venture offtrail create social trails that become denuded of vegetation and result in increased soil compaction." and "Soil compaction is common along social trails that have been created by -and are heavily used by -bikers, hikers, runners, and dog walkers." The baseline for comparison throughout the Draft Plan/DEIS should not be an environment in which it is assumed that there is no impact unless dogs are present, but one in which the impact of dogs is added to the impact of humans. There is little or no objective measurement of trail degradation in this DEIS. Condition-class systems are commonly used in visitor impact monitoring, and trail incision measures assess erosion but we do not see those measurements in this DEIS. Once again, the "vital sign monitoring" is entirely absent in this DEIS.

8) Because the draft EIS does not recognize recreational resources as an environmental resource, the analysis of the environmentally preferable alternative is flawed. Recreation is identified in the GGNRA enabling legislation as one of the four outstanding values to be maintained and protected. In doing so, the enabling legislation recognizes that the achievement of these outstanding values is not mutually exclusive.

9) When new lands become part of GGNRA, the recreational uses existing at the time of acquisition should be allowed to continue unless GGNRA determines, through the public land planning (vital monitoring) and NEPA process that unacceptable impairment would occur.

10) The Draft Plan/DEIS not only fails to disclose and evaluate the impacts of the alternatives on recreational resources in the context of an urban environment, it dismisses the quality of the urban environment entirely on page 22 where it states, "the quality of urban areas is not a significant factor in determining a dog management plan." As recognized in its enabling legislation, one of the most important aspects of the GGNRA is the sharp contrast between its undeveloped open spaces and the adjacent developed urban environment. The GGNRA's open space and recreational opportunities are intended to provide refuge and relief for nearby urban dwellers. According to NEPA, An EIS is required to analyze the

human environment. The federal NEPA rules define the human environment and its scope in an EIS as follows: "Human environment shall be interpreted comprehensively to include the natural and physical environment and the relationship of people with that environment." When an EIS is prepared and human and natural/physical environmental effects are interrelated, the EIS should discuss all of these effects on the human environment. The flaws listed above will be highlighted by further analysis of the Western Snowy Plover at Ocean Beach and Crissy Field, the Bank Swallow at Fort Funston, Sweeney Ridge, Mori Point, Muir Beach and review of trails in Marin County.

Alleged Protection For The Western Snowy Plover

This DEIS proposes to further restrict dogs at Ocean Beach and Crissy Field based upon an alleged necessity to protect the Western Snowy Plover. The language of the Endangered Species Act contemplates and supports the position that any loss of these recreational areas for such purpose be balanced by scientific proof that such sacrifice will indeed help save the plover from extinction.

The requisite monitoring of the plover (as dictated by NPS regulations) in the GGNRA has not been completed in a manner that would provide scientific proof of a need for restrictions. In fact, even the GGNRA admitted in 1996 that the scientific evidence showed that restriction of off-leash recreation will NOT increase the number of plovers at Ocean Beach. It is more likely that the restriction of off-leash recreation in these areas will negatively impact the plover population.

There was a "study" at Ocean Beach in 1996 by Daphne Hatch, GGNRA Wildlife Biologist, which was more of an inventory assessment, and its conclusions are fatally flawed. I will review that "study" in detail here. The next "study" the GGNRA performed with respect to this "threatened" resource at Ocean Beach was in 2006. Hardly an example of vital signs monitoring that meets the standards described in NPS documents. Restrictions were implemented at both Ocean Beach and Crissy Field, based upon this "study" although the "study" was only conducted at Ocean Beach. Further, without mitigation measures implemented over this 10 year time span, and without coordination of intermittent monitoring, it is impossible to draw any conclusions as to the benefit/detriment of restricting or eliminating dogs within these respective ecosystems. The last "study" of the plover in this DEIS was performed in 2008, and is at Crissy Field only. This "study" will be reviewed within this document, but it is again fatally flawed in many respects.

Is The Western Snowy Plover In Danger Of Extinction?

The best scientific data currently available establishes that the Western Snowy Plover is not threatened or endangered (at risk for extinction) at all.

Significantly, a study commissioned by the US Fish and Wildlife Service (USFWS) and the US Geological Service (USGS) in June of 2000 noted: "Coastal and inland populations of Snowy Plovers in the western United States are currently being managed separately; coastal populations are protected as a Distinct Population Segment under the U.S. Endangered Species Act, while inland populations are not listed. Our study provides no evidence of genetic differentiation between coastal and inland populations." (Emphasis added.) These findings demonstrate that the Western Snowy Plover population is far greater than previously believed, and so large as to no longer qualify the Western Snowy Plover as either threatened or endangered.

Why Is The Western Snowy Plover Still Considered Threatened With Extinction?

The latest decision by the USFWS to continue to keep the Western Snowy Plover (WSP) on the Endangered Species List (ESL) is a clear example of the violation of the Endangered Species' Act's requirement that decisions be "based upon the best scientific and commercial data available". Traditional tenets of science (the scientific method) have been ignored to justify this conclusion.

The scientific method is the process by which scientists, collectively and over time, endeavor to construct an accurate (that is, reliable, consistent and non-arbitrary) representation of the world. In summary, the scientific method attempts to minimize the influence of bias or prejudice in the experimenter when testing a hypothesis or a theory.

The scientific method has four steps

1. Observation and description of a phenomenon or group of phenomena. Based upon monitoring of the movements of the plovers on the west coast (the WSP) and inland plovers, and the perceived decline of the WSP, the USFWS became concerned as they believed the WSP was a species distinct from the large inland population of plovers, and as such required protection from extinction. The Western Snowy Plover was first listed as a threatened species in 1993. Quoting the USFWS (all of their quotes will be italicized):

"The 1993 listing rule stated that the Pacific Coast WSP is "genetically isolated" from the interior breeding populations (58 FR 12864). We based this conclusion on banding and monitoring data, not genetic data. At the time of listing, we assumed the reproductive separation indicated by the banding data, over time, could lead to genetic differentiation. Genetic data/or the western snowy plover was not available in 1993. /I

2. Formulation of a hypothesis to explain the phenomena. The hypothesis, as stated above, was: Because there was little or no breeding observed between the WSP and the inland population of plovers, the WSP was genetically different

than the large population of plovers living inland, and being in decline, the WSP required protection.

3. Use of the hypothesis to predict the existence of other phenomena, or to predict quantitatively the results of new observations.

Should genetic testing be performed, the USFWS expected to see genetic differences between the coastal WSP population and the large inland population, which would confirm the need for protection of the WSP. The USFWS had no genetic data to confirm their hypothesis. However, apparently the ESA allows the USFWS to move to protect a species first, and investigate to be sure, later. There are timelines specified by law as to how long the USFWS has to test their hypothesis, and it does seem they were abused. In the meantime, measures were taken to protect the WSP, which included most notably for the public, restriction of beach access.

4. Performance of experimental tests of the predictions by several independent experimenters and properly performed experiments.

In fact, a study was done many years later funded and approved by the USFWS and the USGS to test the USFWS hypothesis.

"...a master's thesis (Gorman 2000) that did not find evidence of genetic differentiation between the Pacific Coast WSP and western interior snowy plover populations using mitochondrial DNA (mt DNA). tt

The Scientific method concludes: If the experiments bear out the hypothesis it may come to be regarded as a theory or law of nature If the experiments do not bear out the hypothesis, it must be rejected or modified.

So, now that the USFWS hypothesis had been disproved, and the WSP could not be distinguished genetically from the very large inland plover population did the USFWS move to delist the WSP? NO. In fact, they continued to proceed to implement management policies to protect the WSP, further restricting the public's access to beaches on the Western coast. Several entities (City of Morro Bay and Surf Ocean Beach Commission) who were suffering due to those management policies decided to sue the USFWS to force them to re-evaluate this situation.

The announcement to retain the WSP's listing as a threatened species on April 21, 2006 is the USFWS response to this lawsuit. It appears that the USFWS, not wishing to delist the plover, refused to reject their hypothesis or modify their hypothesis that the WSP was genetically different, even though it had been reliably disproved. It is not revealed in the announcement how this came about, but it appears that the USFWS authorized another study in an attempt to refute this first study that disproved their hypothesis. USFWS stalled the court

proceedings, possibly because they were counting upon the results of this second study using another method of DNA testing to substantiate their original hypothesis that the WSP was genetically different from the large inland population. The second study confirmed the results of the first.

"...a more recent study by Funk et al. (2006) includes analysis of microsatellite DNA markers. Funk et al. (2006) found no statistically significant genetic differentiation between Pacific Coast WSP and western interior snowy plover populations using mtDNA and microsatellite DNA markers. "

Did the USFWS at this point acknowledge their hypothesis was incorrect and move to delist the WSP because it is the same creature as the large population of plovers who live inland and whose numbers require no protection from extinction? NO.

Perhaps most telling is the general opinion of Daniel Funk who provided the second DNA study, and whom the USFWS certainly chose to rely upon: " ... it is important to use data from a wide range of criteria-interbreeding, nuclear DNA, behavior, morphology, ecology, etc.-not just mtDNA, when delimiting species boundaries."

This is indeed a disturbing concept, because this indicates Mr. Funk and the USFWS are quite comfortable setting public policy that restricts public access to thousands of miles of beach property based upon their personal definition of a species which may ignore verifiable hard DNA data in deference to intangible and/or incomplete data which is subject to bias. The USFWS chose to rely upon outdated, observational data regarding the lack of interbreeding of the WSP and the larger inland population to conclude that these two populations are separate and distinct and that the WSP should therefore, still be protected.

"In this finding, we rely primarily on the banding and resighting efforts conducted during the period of 1984 through 1993, as this is the period when banding efforts were underway at several areas on the Pacific coast and in the western interior, and nest monitoring studies and breeding season surveys were underway at many locations when banded birds could be detected. Interior populations have not been banded since 1993 (L. Stenzel, in litt. 2005)."

Furthermore, the USFWS ignored yet another fundamental of the Scientific Method in the interpretation of this outdated data. The USFWS recruited four heavily biased researchers in favor of protection of the snowy plover to examine the banding data. All four are associated closely with the Audubon Society or Point Reyes Bird Observatory (PRBO). The Audubon Society formally opposed the delisting of the plover and officials at PRBO are in large part responsible for the initial listing of the plover as threatened. Not surprisingly, their conclusions were as follows:

" ... we conclude that the Pacific Coast WSP is markedly separate from other populations of the subspecies due to behavioral differences and that it, therefore, meets the requirements of our DPS policy for discreteness. Banding studies and resighting efforts demonstrate that during breeding, the Pacific Coast WSP segregates geographically from other members of the subspecies, even those that also winter on the Pacific coast. Although not absolute, this segregation is marked and significant. "... This behavioral difference tends to set Pacific Coast WSP individuals apart from the interior birds with which they may mix during the winter."

The USFWS has chosen to deviate from established scientific method, ignore incontrovertible, tangible, and specific data such as the two DNA studies, and rely instead upon clearly biased assumptions regarding the behavior and breeding of the WSP to justify their decision. The decision requires the USFWS to assume that there is little or no interbreeding between the populations. The decision requires the USFWS to assume that should the coastal plover population be lost, the inland population could not recolonize the coast. Neither of these assumptions has the benefit of reliable, incontrovertible data.

Therefore, since 20% of the plovers have decided they prefer to "hang out" on west coast beaches rather than with the rest of the genetically identical plovers inland, the general public will not be allowed that privilege.

For those unfamiliar with the genetic lexicon, consider how it is the Courts and the medical community determine the father of a child when it is in doubt. DNA tests are the standard test utilized, to the exclusion of all others. It would be a gross injustice for the Court to disregard DNA evidence that confirms the child's father is Mr. A, and instead conclude the child's father is Mr. B simply because the child behaved more like Mr. B.

Decisions made based upon intangibles, and without deference to hard, reliable scientific data are subject to abuse of discretion; and are the antithesis of the established "scientific method" which goes to great lengths to minimize the influence of bias or prejudice in the experimenter when testing an hypothesis or a theory. The Endangered Species Act requires decisions to be based upon science's best evidence, not ideology or politics as it has been in the case of the Western Snowy Plover.

While I and others understand that the GGNRA cannot choose to ignore management of the Western Snowy Plover unless and until the USFWS formally delists the plover, we believe this evidence should temper the decision making when it will result in depriving the public of valuable recreational resources, as expressed in the language of the ESA.

Will Banning Dogs At Ocean Beach Help Protect The Plover From Extinction?

Putting aside the controversy as to whether the Western Snowy Plover is threatened with extinction or not, the United States Fish and Wildlife Service ("USFWS") Draft Recovery Plan for the Western Snowy Plover can answer this question. The Recovery Plan states that the Western Snowy Plover does not nest or breed at the Ocean Beach location. The Draft Recovery Plan also indicates that despite implementation of best management practices, this location (Ocean Beach) holds NO promise for the plover to nest or breed there in the future. (Table B-1, p. B-11.) Conversations with Gary Page of the Point Reyes Bird Observatory (a central contributor to the USFWS Draft Recovery Plan) reveal that this conclusion was drawn primarily because the level of human activity is too high on some California beaches to ever support a breeding population of the plover. This is consistent with the conclusions of a UK study (specifically identified in the new studies section of this comment) which states, "Sites that are highly disturbed are not used by breeding birds, and therefore any increase in disturbance levels on these sites will not alter population size". Thus, the state of the evidence is that the survival or extinction of the Western Snowy Plover population will not be impacted by the management of Ocean Beach.

And in fact, the GGNRA is well aware that the number of plovers on Ocean Beach is not directly related to the number of people or dogs present on the beach. Indeed, the first Hatch Report regarding the WSP and dogs at Ocean Beach concluded: "Factors other than number of people or dogs, possibly beach slope and width, appear to exert greater influence over Snowy Plover numbers on Ocean Beach." (1996 Hatch Report, p. 10, emphasis added.) Further, Daphne Hatch's 1996 study for the GGNRA documented that since the off-leash policy was officially sanctioned in 1979, there has been an increase of more than 100 percent in the number of snowy plovers frequenting Ocean Beach. Even dog "rush hours" don't seem to faze the plovers—at least, GGNRA observers and analysts couldn't find any negative relationship between the number of dogs on the beach at any given time and the number of plovers on the beach at the same time (pg. 10, 13). Faced with this evidence, GGNRA officials twice acknowledged, at a December 16, 1996 "informational meeting" for San Francisco beachgoers, that banning off-leash recreation or banning dogs entirely at Ocean Beach would have NO effect on the number of plovers on Ocean Beach. Despite this finding, the 1996 Hatch report still recommends the restriction of off-leash recreation at Ocean Beach.

The USFWS Declines To List Ocean Beach Or Crissy Field As Critical Habitat For The Western Snowy Plover

As stated before, the fate of the purportedly threatened Western Snowy Plover ("WSP") at Ocean Beach and Crissy Field will have no impact upon the overall survival of the species. Consider that the language of the Endangered Species Act ("ESA") itself states:

"The Secretary (of the Interior) may exclude any area from critical habitat if he

determines that the benefits of such exclusion outweigh the benefits of specifying that area as critical habitat, unless he determines, based upon the best scientific and commercial data available, that the failure to designate such area as critical habitat will result in extinction of the species concerned. "

In concurrence, effective October 31, 2005 and again in 2011, the United States Fish and Wildlife Service ("USFWS") excluded all areas in the City and County of San Francisco as critical habitat for the WSP. In the text of the explanation of their decision in 2005, USFWS made the following findings:

+ Our current designation of critical habitat is different from the 1999 rule in two primary ways. In this designation, we utilized a different methodology for determining essential areas, and we relied upon additional scientific information which was not available in 1999. Thus, this rule, while similar in many respects to that in 1999, is a new designation, and does not designate the same areas. "

With respect to Ocean Beach, the following is stated:

+ We have decided not to include the suggested additional areas because they do not meet our three criteria from the Methods section: They do not support either sizeable nesting populations or wintering populations, nor do they provide unique habitat or facilitate genetic exchange between otherwise widely separated units. Although we do not consider these areas essential for recovery, we do consider them important, and will continue to review projects in these areas that might affect WSP as required by sections 7 and 10 of the Act. "

Allowing humans and off-leash dogs to enjoy Ocean Beach is not a new project; it is an activity that has persisted on Ocean Beach for well over 50 years. The language of the ESA contemplates and supports the position that any loss of these recreational areas be balanced by scientific proof that such sacrifice will indeed help save the WSP from extinction. Clearly, the decision not to include Ocean Beach or Crissy Field as critical habitat demonstrates that such scientific evidence cannot be provided.

Daphne Hatch's 1996 Study Is Fatally Flawed

Because the data do not support a conclusion that restricting off-leash recreation or banning dogs at Ocean Beach will increase the number of plovers, Daphne Hatch chooses to instead focus on the "disturbance" of the plover at Ocean Beach. However, no published study of a breeding bird quantifies the population consequences of disturbance. This is despite the fact that disturbance has been implied as a factor causing population decline for a wide range of species (Birdlife International 2000). Not surprisingly, it is postulated by Ms. Hatch that the energy expended by the plovers to avoid the disturbing dog is detrimental to their overall health and ability to breed, and as expected, no evidence is cited for such a conclusion. It is merely stated in the study, "little research has been

conducted on the energetic effects of disturbance and whether individuals can compensate for this lost energy intake and the increased energy expenditure" (P.13). The NPSjGGNRA must consider the fact that the plover is known to annually migrate over 1,000 kilometers. In proportion to their size, this is the equivalent of a 6-foot human running 290 marathons. Does the energy expended when a plover moves 20 or 30 yards to avoid a roaming dog amount to anything significant?

Common sense would indicate that the "disturbance" issue has been substantially overblown, and no scientific study exists to contradict such common sense.

Out of 5,692 dogs observed during the one-and-a-half-year study by Ms. Hatch, less than one-third of one-percent chased plovers, and none ever caught or harmed one. An even smaller number "inadvertently" disturbed plovers, causing them to walk, run or sometimes fly out of reach. at See 1 below.

On the other hand, Ms. Hatch did not document the more significant matter of the deaths and disturbances of plovers perpetrated by predators such as the gull, raven, and crow. The gull, raven, and crow are documented predators of the plover, while dogs are not. Ravens are black, cousins of the crow, and larger than crows -generally about two feet long. Federal officials, who attribute the soaring numbers of ravens to sharp increases in road-kill and garbage from fast-food restaurants, admit that the population explosion is troubling, given the bird's intelligence.

The Hatch Report is an excellent example as to why scientific studies vary in reliability. Based upon the standards set forth in the scientific community, Ms. Hatch's study qualifies as "junk science", that is, "a publication that has the tone and trappings of science, but is so fundamentally and demonstrably flawed as to lack any serious claim to credibility." Further, this study does not meet the minimum requirements for legitimate "vital monitoring" within the NPS.

The Hatch study is at best an inventory assessment for the Western Snowy plover. When viewed in the context of universally accepted scientific study guidelines, I find there are several reasons for relegating the Hatch Report to "junk science". First, it is merely an observational study. This means its conclusions are not based upon specific, quantifiable measurements, but instead upon observations. Observations alone allow for the participant's natural biases and subjectivity to influence the results. A credible scientific study to determine the success of, for example, a hair growth product, would dictate that the same person would observe the patients at the beginning and end of the treatment to assess the patients' baseline and subsequent hair growth (or lack thereof). This would eliminate the differences inherent in the observations of different people. The evaluator should have no affiliation with any of the manufacturers of the different products tested, and would not know which patient used which

product. This is necessary to eliminate an evaluator's desire (even if it is subconscious) to favor a particular product. In contrast, the evaluators in the Hatch study consisted of several different volunteers; accordingly, there was no consistency as to the observations. Some evaluators may have characterized plover movement as a disturbance; others might have believed the plover moved on its own. Moreover, the volunteers were all bird enthusiasts, and the specific focus of their study was humans and dogs. As a result, the very premise of the study would lead the volunteers to subjectively and/or subconsciously expect and desire to document disturbance of the plover by dogs and their owners.

The effects of other wildlife and other possible interferences with the plover's daily activities were given but brief mention and not factored into the study in any meaningful way. These issues include the following: beach cleaning, off-road vehicles driven at night, activity of specific predators, non-native vegetation, shoreline erosion control projects (bulldozers), the actual width of the beach available to the plover, weather, helicopters, airplanes, bicycles, vehicles used during the day by Park staff, kites, and an oil spill. An evaluator cannot distinguish the reason or reasons why a plover flies away to another spot given the presence of a dog 40 feet away, a raven 50 feet away, and a plane flying overhead. Yet in the Hatch study, it seems clear the dog would be identified as the factor that disturbed the plover. The Hatch study is one that does not compensate for participant bias, and is not able to effectively associate cause and effect because too many variables are unaccounted for. Hence the study is indeed "junk science". Daphne Hatch's conclusions are without merit, and perhaps worse, led to action which may have harmed the plover at Ocean Beach.

These facts raise the other problem with the operative hypothesis in a study concluding that off-leash dogs are detrimental to plovers. Because the Hatch study at Ocean Beach ignores gulls, ravens and crows entirely, there is no data to determine whether the presence of dogs protects the plover from birds of prey. The statistics in Daphne Hatch's own study indicate that during the period prior to this study, the number of plovers at Ocean Beach was increasing, even though there was no requirement for dogs to be on-leash. The maximum Snowy Plover counts for the 1979 to 1985 period ranged from 4 to 16, compared to maximum counts (since 1988) of from 38 to 85 birds (Hatch Report, p. 8). See Figure 2 below.

We believe that it is mischaracterizing the problem to attribute the "disturbance" of the plover exclusively (or even significantly) to off-leash dogs. The data do not support this conclusion. It follows, therefore, that addressing off-leash dogs only will not effectively protect the plover. We maintain, based upon the data, that proper protection of the plover would encompass the effect of humans, predators, and other wildlife as well.

The GGNRA Refuses To Implement Any Other Measures To Protect The

Plover

Leashing of dogs (or the banning of dogs) on a 2.2 mile stretch of Ocean Beach is not a rational, measured response to the plover's seasonal presence on approximately 0.4 miles of Ocean Beach, and it does not address the hazards that both humans and predators present.

Peter Baye (U.S. Fish and Wildlife Service Biologist) noted the presence of the Snowy Plover, which roosts, but does not nest, on Ocean Beach, and made recommendations to the GGNRA for its protection. The plovers are present seasonally and relocate from year to year. Mr. Baye recommended: "Exclosures, in concert with educational signage, have been very effective in areas of concentrated usage where beaches are large (e.g. Cape Cod National Seashore). There are no unique impediments inherent at San Francisco's Ocean Beach which would render these measures infeasible here. They should be implemented at least on an experimental full-scale basis." (Memo to USFWS, 15 March 1995). Rather than establishing these flexible, seasonally rotated exclosures to protect plovers against humans, pets, and wild predators, the NPS chose the fixed and narrow measure of (illegally) banishing off-leash recreation, and now has chosen to ban dogs entirely. Mr. Baye's recommendation of a temporary, seasonal fence to be removed when the plovers leave the area and repositioned when they return could still be adopted. This solution would allow off-leash dogs on Ocean Beach but keep dogs out of the roosting area. Better yet, Mr. Baye's solution would protect the plovers from the predators, campers, runners, children, kite-flyers, etc., who now invade the roosting area under the GGNRA's current and proposed plan in this DEIS. Mr. Baye's recommendation clearly shows that off-leash recreation on Ocean Beach is compatible with protection of the Snowy Plover. The GGNRA has refused to consider the option of constructing a fence to protect the Ocean Beach plovers.

The GGNRA has made no concerted effort to alleviate the activities that are currently prohibited by law, pose a hazard to the plover, and occur in the vicinity of the plover's roosting. Table A, below, summarizes the current GGNRA record of citations for fireworks, littering, camping, and beach fires on the portion of the beach where the snowy plover may roost. On an average Saturday or Sunday morning in the area the plovers roost you will find (by personal report):

? 5 beach fires (3 unattended) ? 7 campsites (2 had fires)

Extrapolating, if only weekend offenders were cited, there should have been 520 citations/year for fires, and 720 citations/year for camping. The GGNRA's dismal record of enforcement is reflected below in Table A. Moreover, it should be pointed out that litter is generally left at camp sites and the sites of beach fires. This litter attracts ravens and other predators to the area where the plovers are potentially roosting. The number of citations for littering is grossly

inadequate. 1

If the GGNRA is unable to utilize enforcement to protect the plover from the public and their activities, it would make a great deal of sense to provide the exclosures as a refuge for the plover as suggested by Mr. Baye.

1 In an article published in The San Francisco Examiner; September 26,2005; by Marisa Lagos; entitled "Residents Irked by Ocean Beach Parties" (please refer to the original online version located at:

<http://www.sfexaminer.com/articles/2005/09/27/news/20050927neOIfIres.txt> or a nonline.printable copy located at:

<http://OceanBeachDOG.home.mindspring.com/GGNRAOceanBeachNonEnforcement.htm>), it is confirmed that the GGNRA's failure to enforce fire and litter policies has led to untold damage in the GGNRA's arbitrarily designated snowy plover habitat at Ocean Beach.

In addition, dead wildlife such as seals, sea lions and birds are not being promptly removed from the beach. The rotting carcasses of these dead creatures are left indefinitely on the beach to attract ravens and other plover predators. Recently, a carcass of a cow washed up on Ocean Beach where it sat for almost a week before officials removed it. The dead body was literally covered with ravens, ripping and eating the dead animal's flesh.

The GGNRA Has No Protocol For The Rescue Of Injured Or Sick Birds Or Mammals In The Park

The response of Federal officials to the oiling of wildlife after the Cosco Busan oil spill was slow and inadequate in the eyes of the citizens who live in the communities affected. However, to those of us who frequently utilize GGNRA properties for recreation, the poor response came as no surprise. Below are my personal notes from my conversation with a GGNRA Wildlife Ecologist regarding my attempted rescue of a bird that morning-sent by email to OBDOG members Thursday September 13, 2007:

Bill Merkle

Dispatch # 415-561-5505

Acknowledges it is unfortunate there are no signs for the public to be advised as to whom to call if a bird, marine mammal or other wildlife is injured or requires assistance.

GGNRA will not necessarily make every attempt to help an injured bird should you bring it to their attention. It will depend upon three factors: 1) type of bird 2) type of injury 3) location of bird

If it is a shorebird (a common bird), they are much less likely to help. He was noncommittal as to what injuries they would address. As to location, if I bring the bird to their personnel, what is that all about? It was explained to me that if the injury occurred in an undeveloped area, then they would be unlikely to rescue the animal or bird. When asked whether Ocean Beach was developed or undeveloped, he said the parking lot would be developed, but the beach would be undeveloped. He went on to explain that in undeveloped (natural) areas, they allow nature to take its course. Disease is a natural process, and predation is a natural process. As for letting nature take its course, what about dogs chasing birds is not natural? I asked how the GGNRA rationalizes that a dog chasing a common shorebird warrants a ticket (we must protect park resources), yet if the same shorebird is brought to them because it is injured, they are satisfied to let it die? I asked then why is it that since they choose (and I believe erroneously) to define dogs as predators of birds, why are they then not considered part of the natural process at the beach and ignored just like every other predator?

He responded that if they received a report that a dog was attacking an injured bird they would most certainly respond. He advised me the GGNRA considers dogs to be an unnatural part of the park as they are associated with human use of the park (which is also by inference an unnatural intrusion into the park areas). Those of us who thought this park was created for our recreational use had better get used to the idea that the Park Service regards us as unwelcome intruders into their "wildlife protection area".

I went on to point out to him that I did not want to hear him defining dogs as predators or complaining about dogs attacking birds as my dog helped me rescue this bird this morning and has done the same numerous other times. My dog has alerted me to hypothermic birds that are still alive, and he won't leave until I pick them up and take them to safety. My dog will chase off ravens that are attacking an injured bird who is unable to effectively defend itself and actively chase those ravens away while I pick up the injured bird. Earlier this year we rescued a grebe, today it was a common shorebird. I told him I cannot just run by when an injured bird is actively being attacked by ravens and is screaming for help. He didn't have a lot to say in this regard.

The GGNRA claims the purpose of limiting the activities of dogs and their guardians is to "protect the resources" of the park. What resources exactly is the GGNRA protecting? The same resources you are content to let die because you don't care to make the effort to transport injured birds to WildCare in San Rafael? When I asked why they would not transport every injured bird brought to them for care, Mr. Merkle indicated the GGNRA preferred to "manage habitats and work on population levels". I am afraid to contemplate exactly what that means, except that the fallow deer in Marin probably have a pretty good idea. Or perhaps it means they want to work on limiting our human population levels in the Park. Or both.

I am disgusted by the hypocrisy of the GGNRA yet again. Their record of park management policy is abysmal. They neglect to assist injured birds even when they are brought to them, they are slaughtering over a thousand deer in Marin merely because they are non-native.

The proposed rule which sacrifices recreational access to protect the plover cannot be justified when GGNRA management has failed to implement the most basic of plans to ensure their well-being.

In this DEIS the GGNRA mentions their concern for wildlife including marine mammals, especially when they beach themselves to rest or when they are injured and on the beach. The GGNRA seems to be able to count the number of reports of beached mammals they receive, however what they fail to mention is that they have no protocol for the visitor to the GGNRA to follow should they come across a marine mammal on the beach. I personally have made numerous requests to GGNRA management for signs to be placed at the beach which would instruct visitors not to approach the beached mammal and where to call to request assistance for the animal. Many visitors to the GGNRA are not local, some have never been to a beach before, and they require instruction so that they can assist the animal effectively. Oddly enough, the GGNRA has managed to post signs up and down the beach to advise us of recreational restrictions regarding fires, camping and the plover, but they cannot post educational signs to benefit marine mammals.

The GGNRA Condoned Other Disturbances To The Plover

To further compromise the GGNRA's argument that the restriction of off-leash recreation is necessary to protect the plover, the GGNRA has taken the plover's alleged summer hiatus as an opportunity to begin bulldozing of the "Plover Protection Area". In October of 2005, when United States Fish and Wildlife Service (USFWS) declined to designate Ocean Beach as critical habitat for the plover they stated the following:

"Although we do not consider these areas [Ocean Beach and Crissy Field] essential for recovery, we do consider them important, and will continue to review projects in these areas that might affect wSP as required by sections 7 and 10 of the Act." The USFWS is previously on the record as stating, "Activities that may adversely affect plovers include sand deposition or spreading, beach cleaning, construction of breakwaters and jetties, dune stabilization/restoration using native and nonnative vegetation or fencing, beach leveling and off-road vehicles driven in nesting areas or at night."

Ocean Beach Plover Protection Area (July 31, 2007)

The picture above was taken during the period when dogs are restricted at Ocean Beach due to the presence of the plover. When OBD OG principals first observed

the bulldozers in the Plover Protection Area below, we made a Freedom of Information Act Request of the GGNRA, to determine the purpose of the bulldozing, as well as determine whether USFWS had approved this drastic action. The GGNRA responded to our request, but failed to answer our questions about the bulldozing. We were later advised verbally that there was no correspondence with USFWS to obtain approval for bulldozing, as the plover was not then present. Internal GGNRA records show the GGNRA bargained with USFWS in 1996, sacrificing our off-leash recreational opportunities in order to get USFWS to agree to allow bulldozing in this same area of Ocean Beach. The ESA is very clear that it is not permissible to modify the habitat of an endangered or threatened species when they are not present, but expected to return. One example would be the prohibition of the removal of trees that hold an eagle's nest, even when the eagle is not present or utilizing the nest.

We understand the GGNRA is modifying the beach in this area to minimize the effects of erosion and the drifting of sand on to the Promenade and Great Highway. The GGNRA has refused to acknowledge in any significant fashion that erosion and the progressive collapse of the shoreline limits the areas where the plover can roost and forage, as well as the quality of food source for the plover at Ocean Beach. The narrowing beach puts the plover in closer and closer proximity to all users of the beach, thereby increasing the disturbance to the plovers. These conditions will progress despite the GGNRA's move to ban dogs entirely.

We agree the GGNRA needs to deal with erosion at Ocean Beach. However, it seems unlikely that the GGNRA will admit the obvious: the erosion itself and the GGNRA activities designed to deal with erosion adversely affect the plover to a much greater degree than four dogs who allegedly "disturbed" plovers in the last six years. The restriction of off-leash recreation or the banning of dogs entirely to purportedly protect the plover is a complete ruse.

The photos above were taken during the time period when the dogs are restricted because the GGNRA claims the plover is present. We see the condition of the plover habitat after the GGNRA has bulldozed to minimize the effects of drifting sand and erosion. The dunes that remain are there because they do have a little beach grass to help hold them together. The tides have run up and behind the dunes that the GGNRA claims the plover inhabits. Note the excessive debris, the graffiti and the remnants of a Christmas tree in this so-called "habitat". Considering the plover resides on elevated dunes of dry sand, preferably without vegetation, it is quite apparent as to why Ocean Beach is not suitable plover habitat. It also underscores the absurdity of the claim in this DEIS that dogs digging have some responsibility for the undermining of sand dunes at Ocean Beach.

GGNRA personnel routinely drive off-road vehicles through the plover habitat in order to enforce the leash law at Ocean Beach. Certainly the GGNRA's

"solution" is far more dangerous to the plover than the perceived "problem" (pictures of this activity on file).

In 2006, the Fourth Annual Ocean Beach Turkey Trot was an event sanctioned by the GGNRA (and SFRPD) for 1000 participants. Certainly the GGNRA recognized there would be additional participants who had not officially registered. I and other members of Ocean Beach DOG who witnessed the race estimated 1500 participants. The course for the race was charted directly through the Snowy Plover Protection Area. This was also during a time period where the GGNRA declared an "emergency" warranting the restriction of off-leash recreation in this same area in order to minimize "disturbance" to the plover. The GGNRA, by granting permits for the Ocean Beach Turkey Trot, established that their ban of off-leash recreation is arbitrary, capricious and discriminatory- therefore unlawful.

The 2006 GGNRA Status Report For The Western Snowy Plover Is Fatally Flawed

This is the second report Daphne Hatch (Chief of Natural Resource Management and Science for the Golden Gate National Recreation Area) has produced for the GGNRA to justify the closure of most of Ocean Beach to off-leash recreation due to the transient presence of the Western Snowy Plover (WSP). The first was produced in 1996. The second report, dated November 2, 2006, is the subject of this analysis. Reading Ms. Hatch's report brings to mind an article I recently read from the Journal of the American Dental Association October 2006 Special Supplement. The article was entitled, "Challenges in Interpreting Study Results-The conflict between appearance and reality". It seems that the GGNRA and Ms. Hatch have endeavored to manipulate the data so as to reach a predetermined outcome. Their conclusions falsely give the reader the appearance that the threat to the WSP from off-leash dogs is great. The reality is there is no credible threat to the WSP from off-leash dogs within the GGNRA.

Bias: The 2006 Hatch report presents itself as an "observational study". Observational studies have the least reliability of any type of scientific study because their results can be distorted by many factors. The first of those factors is bias. Bias generally stated is a "systematic error in the design, conduct, or analysis of a study that results in a mistaken estimate of an exposure's effect on the risk a subject faces". Bias is the basis of our skepticism of research to determine the efficacy of a medication when the research is conducted by a clinician who stands to gain financially if the medication is shown to be effective.

Ms. Hatch clearly has an ideological bias against people and their dogs recreating in any manner at Ocean Beach. She was quoted on September 7, 2005 in the S.F. Chronicle as saying, "Ocean Beach without the people is an incredible

habitat. But people think of it as a sandbox or their backyard". This is an incredible admission from a high ranking GGNRA official considering the enabling legislation of the GGNRA.

Design: Daphne Hatch's bias is apparent in the design of this study. The objective of this study is to prove her assumption that the present management which allows off-leash dog use of Ocean Beach and Crissy Field is inadequate to protect the WSP from harassment/disturbance and other detrimental effects of chasing by dogs. We learn nothing about the relative harassment/ disturbance of the plover from any other source in this study. If plovers are harassed/ disturbed 50 times in 5.5 hours by ravens, and one time in that same time period by a dog, is the harassment/disturbance by the dog even relevant? A comparative study model would have been more informative with respect to actually determining what management actions, if any, should be taken to protect the plover from harassment/disturbance in general. Frankly, this comparative study should have been undertaken in 1993 when the WSP was first listed as a threatened species, before the decision was made (and later reversed by the Federal Court) to require the leashing of dogs to protect the plover. However, it could have been undertaken at any time. A comparative study is designed to remove one variable in a situation at a time, and observe the change, if any. An initial period of observation would document the presence of predators (ravens) and their numbers, as well as the frequency of harassment/disturbance from all sources absent any management action. Next, the predators (ravens) being the most serious source of potential disturbance/harassment are removed as much as possible. Rather than killing all the ravens, the GGNRA could have begun a campaign to reduce and remove litter at the beach as a conservative method to reduce the number of ravens. This would entail aggressive ticketing of those who are observed leaving litter at the beach, and resources would be deployed to clear the beach of litter and dead wildlife daily. No one would be adversely affected, and in fact most beachgoers would welcome a cleaner, safer beach. Indirectly, the lack of litter/foodstuff for the ravens would have been expected to reduce their numbers. After the new management practice has been implemented for a reasonable period of time, a second period of observation is conducted. In this second data collection period, we could assess whether the litter reduction has reduced the number of ravens, and has the reduction in ravens reduced the frequency of harassment; disturbance to the WSP. If the ravens are not reduced, or the frequency of harassment/ disturbance is still unacceptable, the next management measure is implemented. Enclosure fencing could have been placed in the areas where the WSP is observed roosting. This would serve to provide some protection for the WSP from the ravens and any other predators, as well as humans and dogs. Education of the public to give the enclosure fencing a wide berth would be appropriate. After a reasonable period of implementation, a third period of observation would be conducted to determine what effect, if any, this latest management method had upon the frequency of harassment; disturbance of the WSP. There also should be the implementation of an aggressive ticketing policy for all dog owners whose dogs

were observed chasing plovers at some point within this process. All of these management measures should have been implemented and assessed for their effectiveness in reducing the frequency of WSP harassment/disturbances before a leash restriction or banning dogs was even considered. This would have been consistent with the mandate to maintain recreational opportunities in the GGNRA.

Conduct: This study exhibits bias in its conduct as well. Clearly, the participants who performed the surveys either had a pre-existing bias to construe the activity of dogs as harassment, or the training provided by Daphne Hatch and her staff created that bias in the participants. Most likely it is a combination of both, as those individuals who volunteered to do these surveys are identified as Golden Gate Audubon Society members. (We should point out that the Golden Gate Audubon Society is on the record as opposing any off-leash recreation in the GGNRA). Ms. Hatch, in her introduction, spells out the definition of harassment per the Endangered Species Act (ESA). Harassment is "an intentional or negligent act or omission which creates the likelihood of injury to wildlife by annoying it to such an extent as to significantly disrupt normal behavioral patterns which include, but are not limited to, breeding, feeding or sheltering". Ms. Hatch seems to use the terms harassment and disturbance interchangeably in this report, so we will generally refer to it as harassment/disturbance.

Harassment/ disturbances are not well defined in the portion of the study where they are enumerated for Ocean Beach. However, in the Crissy Field portion, there is more description provided for the harassment/disturbances observed. In one case, harassment;disturbance of a plover by a dog was described as "alert posture -stood up and increased vigilance" (in other words, the plover lifted his head up and looked around). Compare this "disturbance" that was classified by a volunteer and the authors of this study as an incident of harassment to the definition of harassment as provided by the ESA. They are clearly inconsistent. In this study, the authors and participants classified activity as harassment/disturbance that does NOT meet the definition of harassment provided by the ESA. This is a classic example of examiner bias in the conduct of this study. This is more precisely identified as "misclassification" and serves to invalidate the data collected and conclusions drawn in this study.

Analysis: Analysis of this data is compromised because the data itself is in question. Another factor that makes analysis of this data practically impossible is "confounding" in the design of this study. In this case, "confounding" refers to the fact that this study is not designed to isolate the effect of each component of the beach environment that can affect the plover adversely. For example, an off-leash dog is running at the waterline with its owner and they are some 20 feet from a plover. There is additionally a raven 30 feet and closing from the plover. The plover flushes, and it is recorded as a "disturbance". How is it apparent to the observer whether the dog, the owner or the raven was the source of the disturbance? Practically, it could be any combination of all three. Based upon the premise of this study, it is reasonable to assume the disturbance/harassment

would be attributed to the off-leash dog. Is that legitimate? There does not appear to be any attempt made to isolate all other activities within the Park that may adversely affect the plover-they are merely given mention. These would include: Beach patrols in vehicles on the beach, equestrian use of the beach, people walking or jogging, kite flying, littering which attracts predators, the predators (usually ravens) themselves, and removal of kelp or driftwood which are sources of food. No mention is even made of bonfires, camping, litter such as cigarette butts, or the shadows surfboards cast.

Received: May,27,2011 00:00:00

Correspondence Type: Letter

Correspondence: Perhaps the most egregious omission in this report is that there is no mention made of beach width. The beach width at Ocean Beach has been decreasing due to erosion. Daphne Hatch's 1996 report concluded on page 10: "Factors other than the number of people or dogs, possibly beach slope and width, appear to exert greater influence over Snowy Plover numbers on Ocean Beach". The GGNRA is quite aware that the number of plovers on Ocean Beach is not directly related to the number of people or dogs present on the beach. However, in this 2006 Daphne Hatch report there is some discussion on page 8 that the plover numbers have leveled off since 2003, and have never matched the level they reached of 85 in 1994. Concurrently, this report discusses repeatedly that since the reinstatement of off-leash recreation, the number of dogs at Ocean Beach has increased dramatically. The report directly asserts the increase in dogs at Ocean Beach is responsible for a greater number of plover disturbances and it is inferred indirectly responsible for the diminished number of plovers. Had Daphne Hatch been intellectually honest, she might have drawn the following conclusion from this data and a study she cites in this report, "Disturbance to wintering western snowy plovers", by K.D. Lafferty. This Lafferty report states "The distance between human activity and the roost peaked at about 30 meters and relatively few people or dogs beyond this distance disturbed plovers" ... presumably because a narrow beach increased the potential overlap between beach users and snowy plovers". Ocean Beach suffers from serious erosion, and hence the beach width has narrowed dramatically, especially during high tides. It could more reasonably be concluded that the narrowed beach width is directly responsible for both the lower plover numbers and the increased frequency of perceived harassment/disturbance of the plover, not the greater number of dogs or their activities on or off of a leash. The narrowed beach width has both eliminated much of the potential habitat for the WSP at Ocean Beach (this is consistent with USFWS critical habitat designation in 2005), and forced all occupants of the beach into closer proximity to the plover, thereby perhaps causing greater harassment/disturbance levels (especially if you construe lifting your head

and looking around as a disturbance). How great are the harassment/disturbance levels really? The way the data is presented in this report is misleading. To put the data in its' simplest form, in 2004 when dogs were required to be on-leash at Ocean Beach, one dog was observed harassing/disturbing a plover in 5.5 hours of observation on weekdays, and one dog was observed harassing/disturbing a plover every 2.5 hours on the weekends. In 2005, when dogs were legally allowed off-leash on Ocean Beach, (and there were many more dogs present) 1 dog harassed/disturbed a plover in 2.4 hours of observation on weekdays, and fewer than 2 dogs harassed/disturbed a plover every hour on weekends. Is this really significant? This report gives us no data regarding the rate of disturbance from any other source, however, the number of ravens far exceeds the number of dogs out at Ocean Beach, and it can easily be postulated the harassment/disturbances due to dogs are dwarfed by the number of harassment/disturbances from the plover's natural predator, the raven.

It is difficult for me to do further analysis of the data, because the GGNRA has illegally withheld the raw data from me. In April of 2006, I requested, by means of a Freedom of Information Act request, all of the data/reports/Environmental Assessments the GGNRA had to substantiate their claim that there were resources in the Park that required protection. The GGNRA responded in writing that such data did not exist. Based upon the representations made in the November 2, 2006 Memorandum from Daphne Hatch and GGNRA Head Ranger Yvette Ruan, the last of the data for this report was collected in February and March of 2006. The data could and legally should have been provided to me in April of 2006. I subsequently appealed this FOIA request to the DOI, and it has not been acted upon despite the fact that the time allowed by law for response has long since expired. The DOI tells me I can sue them for it.

Conclusion: Rational analysis of the situation would suggest that the GGNRA is really not trying to solve a problem. The GGNRA is merely interested in restricting dogs to leashes or banning dogs entirely throughout the GGNRA. Additionally, when taking into account Ms. Hatch's above comments to the S.F. Chronicle in 2005, one must question the future of both humans and dogs in the GGNRA. Taking into account the data regarding the numbers of dogs chasing either shorebirds or plovers in context of the frequency of the behavior over time, it seems ticketing of the miniscule number of offenders would be appropriate rather than punishing all for the transgressions of a very few. It is a bit like forcing all cyclists in the GGNRA to ride with training wheels because a very few speed through the park.

If GGNRA management complains that they do not have the resources to adequately police Ocean Beach then it provides an appropriate reason to move for reversion of this property. I remind you again of Rolf Diamont's

(GGNRA Environmental Coordinator circa 1975) conclusions when the GGNRA had just accepted possession of Ocean Beach from the City of San Francisco-"Ocean Beach: no rules should be enforced here. Ocean Beach is too large and too accessible to control dogs. It would be a logistical nightmare for the Park Service to try".

The Hatch report does not meet the criteria for a valid scientific study. It is more appropriately classified as "junk science" - "a publication that has the tone and trappings of science, but is so fundamentally and demonstrably flawed as to lack any serious claim to credibility". Junk science should never be used as the basis for establishing public policy.

The GGNRA Ignores Scientific Studies That Do Not Serve Their Purposes

1) Our first example would be a U.C. Berkeley Environmental Sciences study presented by Megan Warren on May 7, 2007 that concludes within the GGNRA that the feeding of the Western Snowy Plover does not appear to be negatively affected by human and pet recreation. This is highly significant. Because the WSP does not breed at Ocean Beach or Crissy Field, its primary essential activity is foraging and feeding. If human and pet recreation does not negatively affect those activities, there is no need to restrict recreation in these areas. The abstract is as follows:

Recreation Disturbance Does Not Change Feeding Behavior of the Western Snowy Plover

Abstract The Western Snowy Plover (*Charadrius alexandrinus nivosus*) is a small shorebird that has many scattered wintering populations along the Pacific Coast of the United States, including several in the Bay Area. This species has been listed as threatened since 1993 under the federal Endangered Species Act of 1973. For this study I measured disturbance rates, types, plover responses and feeding time in three different sites in the San Francisco Bay Area to explore the link between recreation disturbance and feeding behavior. I predicted that as frequency of disturbance increased, the birds would spend less time actively foraging and more time alert. However, data showed no significant relationship between feeding behavior and direct disturbance by human recreators. Instead, I now predict that recreation has a more indirect effect on the western snowy plover feeding behavior. Future research should focus on indirect effects of recreation, such as habitat disturbance and food source quality.

2) Our second example is a study, "Predicting the population consequences of human disturbance for Ringed Plovers *Charadrius hiaticula*: a game theory approach" by Durwyn Liley and William J. Sutherland. This study originates from the School of Biological Sciences, University of East Anglia, Norwich, Norfolk NR4 7TJ, UK. This study clarifies the following

three pertinent facts:

? Sites that are highly disturbed are not used by breeding birds, and therefore any increase in disturbance levels on these sites will not alter population size ? No published study of a breeding bird quantifies the population consequences of disturbance. This is despite the fact that disturbance has been implied as a factor causing population decline for a wide range of species. ? We think of individuals [birds] as deciding not to breed rather than being prevented from doing so. Such individuals 'queue' for good quality territories rather than adopting a poor quality territory (such as Ocean Beach).

3) The third study originates from the School of Biological Sciences, University of East Anglia, Norwich, Norfolk NR41fJ, UK., and was authored by Jennifer A. Gill, published in *Ibis* (2007) 149(SuPPI. 1),9-14. It is entitled, "Approaches to measuring the effects of human disturbance on birds".

This study clarifies a concept that helps to explain the apparent inconsistency of plover behavior at Ocean Beach and Crissy Field. On one hand, Ocean Beach is a highly disturbed, poor quality beach area (in large part due to erosion). Crissy Field is another highly disturbed beach environment at which the plover does NOT feed or breed (per the first study listed here). The GGNRA maintains that the plover is highly susceptible to disturbance by humans and off-leash dogs. This is why the proposed Rule has been promulgated. However, one must ask the question: if the plover is highly disturbed by human and canine off-leash recreation, and the plover does not feed at Crissy Field, why are any plovers there at all? Likewise, although the food source may be a bit better at Ocean Beach, why would the plover choose to roost there and endure the disturbance?

This study opines, "The principal way in which human presence can impact upon wildlife is by altering the ability of animals to exploit important resources. This can operate either through directly restricting access to resources such as food supplies, nesting sites or roosting sites, or by altering the actual or perceived quality of these sites. Direct restriction of access to resources can occur through animals avoiding areas where humans are present. Changes in the quality of sites as a result of human presence could occur, for example, if predators were attracted to areas with humans, or if the presence of humans reduced the presence of prey species."

For the plovers observed roosting at Ocean Beach and Crissy Field, humans and off-leash dogs are not restricting their access to resources because the plovers are indeed there. The second alternative is that humans and off-leash dogs are altering the actual or perceived quality of these sites. The most logical conclusion is the presence of humans and their off-leash dogs

reduces the presence and/or activity of prey species. This theory has been brought up by others such as the SF SPCA (Objections to the Federal Government's Ban on Off-leash Dogs at Ocean Beach, Jan. 9, 1997, page 4), but was summarily dismissed by the GGNRA wildlife biologists. It is disturbing that the subsequent 2006 Hatch study at Ocean Beach intentionally ignores gulls, ravens and crows entirely, so there is no data available that might confirm the presence of off-leash dogs may protect the plover from birds of prey.

However, the statistics in Daphne Hatch's own 1996 study support this theory. During the period prior to this study, the number of plovers at Ocean Beach was increasing, even though there was no requirement for dogs to be on-leash. The maximum Snowy Plover counts for the 1979 to 1985 period ranged from 4 to 16, compared to maximum counts (since 1988) of from 38 to 85 birds (Hatch Report, p. 8).

This UK study also evaluates the methodology of studies like the 2006 Hatch study, which attempt to assess the distribution or behaviour of animals in the presence or absence of disturbance. "A limitation of these types of approaches is that the numbers of animals that would use these sites in the absence of disturbance is generally not known. For example, if the sites with higher levels of disturbance also have lower levels of resource availability (e.g. food or nest-sites) or higher risk of predation, then removing the source of disturbance may have no effect on the numbers of animals in the area."

In actuality, because it is acknowledged by the GGNRA that removal of off-leash dogs or banning will not increase the number of plovers at Ocean Beach, the question becomes, will the restriction of dogs decrease the number of plovers at Ocean Beach? There is evidence to confirm this is probable, as a similar scenario which involved the Bank Swallow has already occurred in the GGNRA--in an area directly adjacent to Ocean Beach, i.e., Fort Funston. This will be discussed in a subsequent section devoted to Fort Funston.

4) The fourth study was peer-reviewed and accepted on November 12, 1999, and published in *Biological Conservation* 97 (2001) 265-268. The authors are Jennifer A. Gill, Ken Norris and William J. Sutherland. The study is entitled "Why behavioural responses may not reflect the population consequences of human disturbance".

The authors contend, "The effect of human disturbance on animals is frequently measured in terms of changes in behaviour response to human presence. The magnitude of these changes in behavior is then often used as a measure of the relative susceptibility of species to disturbance; for example, species that show strong avoidance of human presence are often considered

to be in greater need of protection from disturbance than those which do not ... By contrast, species which do not avoid disturbed areas are often considered as requiring little or no protection from disturbance...From a conservation perspective, human disturbance of wildlife is important only if it affects survival or fecundity and hence causes a population to decline."

What becomes clear after reading this study is that in the GGNRA, Daphne Hatch is defining avoidance behavior and what constitutes a "disturbance" in a very different manner than do other researchers. (This is consistent with my criticism of the 2006 Hatch study). According to this study, avoidance behavior or moving constitutes an activity where the plover actually leaves the site. The 5, 10 or 20 foot flight Daphne Hatch is utilizing as her most severe evidence of disturbance may be relevant in breeding/nesting areas, where movement of that scale can take a plover away from its nest and eggs. In the circumstance where plovers are roosting in an area, this is not classified by other researchers as a "disturbance". From the perspective of these authors, the plovers roosting at Ocean Beach and Crissy Field require little or no protection from disturbance because they stay at these sites.

The Latest Study Of The Western Snowy Plover In This DEIS Is Fatally Flawed

This DEIS relies in large part upon a study by Matthew Zlatunich and Michael Lynes of the Golden Gate Audubon Society. This new study, like the Warren study, was conducted in cooperation with the GGNRA. As noted previously, this 2011 DEIS again fails to mention a 2007 study by Warren that found plovers' feeding was not negatively impacted by recreational activities of humans and dogs. This is critically important because the plover does not nest or breed at Ocean Beach or Crissy Field; its' primary activity here is feeding and foraging for food. Instead of acknowledging the Warren study, the new Zlatunich-Lynes study was conducted in 2009/2010 at Crissy Field in San Francisco. This study exhibits many of the scientific shortcomings noted in previous studies:

? This study was merely an observational study ? The observational collection of data was performed by Audubon volunteers who had a bias-the GGAS has publicly advocated the banning of dogs to protect the plover ? This study made no attempt to ascertain comparative effects on the plover. There is no discussion of the disturbance level perpetrated by other sources, even though they tell us that data was collected ? Raw data is not provided to the reader ? The analysis appears to be biased because it is based upon incomplete data. For example, the level of disturbance is not categorized in the analysis even though we are told they were categorized in their collection. ? Assumptions are made in this analysis without supporting explanation. For example, they decided to assign the disturbance to an on-

leash dog if he was closer to the plover than his guardian. This ignores the possibility the disturbance was due to the number of bodies, e.g. two people walking would disturb a plover to the same extent as a leashed dog and a person.

To clarify the issue of comparative disturbance, it seems odd that although known predators of the plover are acknowledged to be at Crissy Field, no attempt is made to analyze the disturbance they create for the plover. The Common Raven and American Crow are present, yet ignored in the analysis. Beyond this, the California Gull is noted as being present. This is of interest because a recent study using surveillance cameras at plover nesting sites in San Francisco Bay documented California Gulls as being responsible for 25% of all predation of plover nests. (Robinson-Nilsen, Caitlin¹, Jill Bluso Demers¹, Cheryl Strong², and Scott Demers³; ¹ San Francisco Bay Bird Observatory, crobinson@stbbo.org; ² U. S. Fish and Wildlife Service, Don Edwards San Francisco Bay National Wildlife Refuge; ³ HT Harvey and Associates DETERMINING THE EFFECTS OF HABITAT ENHANCEMENTS AND PREDATORS FOR WESTERN SNOWY PLOVER). California Gulls are new to some of these areas—could the decline in the number of plovers at Crissy Field be related to an increase in the presence of California Gulls? This study makes no attempt to ascertain if there is any such correlation.

The Zlatunich-Lynes study notes the number of plovers has been steadily declining since 2005/2006 records. They choose to rely upon previous conclusions that the greatest disturbance impact to wildlife within the Wildlife Protection Area at Crissy Field is caused by dogs, joggers and walkers. The data from this study showed the number of dogs and humans in the plover area spiked in 2008/2009, and declined dramatically in 2009/2010. The number of plovers continued to decline, despite the reduction in recreational disturbance in 2009/2010. This could lead one to conclude that there is no correlation between the number of dogs and people and the number of plovers present. There is no discussion of this possibility in the data analysis of this study.

The Zlatunich-Lynes study is without merit because it deliberately misleads the reader about the GGNRA's legal obligations to protect the plover. Ocean Beach and Crissy Field are not designated as critical habitat by the USFWS. Therefore, the GGNRA is obligated only to prevent the harassment or taking of the plover within its boundaries. Appendix B contains the legal definition of a disturbance which would constitute harassment and be a violation of the law: "If the observer witnesses a blatant violation of the law, such as a dog owner knowingly and without regard allowing his dog to harass wildlife, the observer shall make note on the comment sheet and shall, upon completion of the survey, file a wildlife harassment report at the park police station..." There is no indication in this study analysis that any observer EVER

witnessed this type of harassment of a plover during their observations.

Alternatively, the Zlatunich-Lynes study records "disturbances" which they define as minor, moderate and major-none of which rise to the level of the legal and accepted definition of harassment that is utilized by USFWS and other studies. For example, the Zlatunich-Lynes study states: "a minor disturbance will cause a resting bird to stand". A clear thinking individual can conclude that a minor "disturbance" as defined by this study is really no disturbance at all. Worse yet, when analyzing the number of "disturbances" observed, there is no acknowledgement as to how many of these "disturbances" are actually minor, moderate or major based upon these authors' criteria. It is entirely possible (and I believe probable) that each of the disturbances recorded and utilized to justify the restriction of recreation were merely minor "disturbances". This would be consistent with the conclusions of other studies including the following which states: "... snowy plovers in other areas have become habituated to relatively constant and non-threatening human trail use." (Trulio, Lynne¹, Caitlin Robinson-Nilsen², Jana Sokale³ and Kevin Lafferty⁴ San Jose State University; Lynne.Trulio@sjsu.edu; ²San Francisco Bay Bird Observatory; ³Sokale Environmental Planning; ⁴Western Ecological Research Center, US Geological Survey NESTING SNOWY PLOVER RESPONSE TO NEW TRAIL USE.)

In summary, the Zlatunich-Lynes study and its recommendations are flawed, dishonest and biased. The DEIS advocates recreational restrictions based upon this study. Clearly, the failure in this study to find any violation of the law with respect to the protection of the plover, and the omission of studies that contradict the need for recreational restrictions should render this aspect of the DEIS invalid and discredit the conclusion that recreational restrictions must be implemented to protect the plover in the GGNRA.

The Western Snowy Plover At Crissy Field

This DEIS proposes to ban dogs from large areas of Crissy Field to protect the Western Snowy Plover. It is especially disturbing to note the lack of "vital signs monitoring" in this location because there was a full evaluation of the potential environmental impacts of canine recreation when the renovation of Crissy Field was first proposed. This was a perfect opportunity to obtain a baseline monitoring survey and follow through annually to monitor the effects of the originally permitted levels of recreational activity. Instead, you will see that the citizens were advised the recreational interests would be compatible with the renovation just until the renovation was completed. Then off-leash recreation was banned without environmental study. The recent study relied upon within this DEIS has been reviewed in the Ocean Beach section, but it fails entirely to meet

standards the NPS sets forth for "vital signs monitoring" .

"The 1988 Crissy Field Site Improvement Assessment evolved from concepts present in the 1980 General Management Plan. The Crissy Field plan recommends native planting, preservation and enhancement of the site's natural qualities, and preservation of views of the bay while recognizing the needs of existing and future visitors." (Final General Management Plan, Amended Environmental Impact Statement, Presidio of San Francisco, July 1994, p. 5.)

Public concern over the impact of the plan on recreation surfaced in 1994. Wind surfers and dog-walkers were concerned that the new Crissy Field proposals did not address future use of the area for these recreational activities. On November 28, 1994, the Crissy Field project team met with representatives of boardsailors and Rich Avanzino, then President of the SF SPCA, to discuss "the direction [they] were going." (USPRODoo684.)

Meanwhile, the GGNP A encountered problems obtaining donations for the project because of these concerns. Toby Rosenblatt was responsible for raising funds on behalf of the GGNP A for the restoration project. He became alarmed in 1994 upon discovering that NPS officials were not honoring the "voice control" 1979 Pet Policy established when the City donated Park lands to the GGNRA. In December 1994, Mr. Rosenblatt wrote a letter to Superintendent O'Neill and Presidio Manager Robert Chandler, protesting reports that Rangers and Park Police were approaching people in the Presidio, Crissy Field, Upper Fort Mason and Ocean Beach "telling them about a leash law and enforcing the law." Mr. Rosenblatt disagreed with the change in enforcement and warned "[i]t will raise a very major reaction, as you know, in the community and will seriously impact relations with lots of people". He also noted that the enforcement was impacting fund raising efforts for Crissy Field: "I know that a change which implements such a law will hurt our fund raising efforts for Crissy and elsewhere -in fact that is beginning to happen already." Copies of the letter were sent to Greg Moore, Executive Director GGNPA, and Amy Meyer of the GGNRA Citizens Advisory Committee. (USPRODoo694.)

Nevertheless, the NPS refused to include off-leash recreation in official plans for Crissy Field.

In February 1995, Richard Avanzino met with Superintendent O'Neill, Presidio Manager Chandler and GGNPA Director Moore in order to address concerns "about the continued lack of official acknowledgment and recognition for this vital recreational activity." In a letter summarizing these discussions, Mr. Avanzino noted that the NPS was refusing to provide official recognition because federal regulations require dogs to be leashed, and many NPS staff and powerful environmental groups who want a

wetlands established at Crissy Field are opposed to off-leash dogs. NPS also threatened to retaliate if dogwalkers pushed for official recognition during the planning process: "[I]f we advocate publicly for official recognition and status, our efforts will be frowned on and may well be greeted with retaliatory action." The SF SPCA responded by demanding official recognition: "We want the National Park Service to officially acknowledge and preserve off-leash dog walking as it exists today at Crissy Field. We want this acknowledgment to be reflected in the legal and other documents pertaining to Crissy Field, as well as in the official design plans for the site." Copies of the letter were sent to Senators Feinstein and Boxer and Representatives Pelosi and Lantos. (USPRODoo666-7.)

Public pressure continued to build. On March 28, 1995, a public debate over the issue of a wetlands and its potential impact on off-leash dog-walking was held at the Commonwealth Club. A flyer for the lecture, entitled "Wetlands at Crissy Field -Is this a Good Idea?" identified the speaker as James F. Kirkham, Advisory Partner, Pillsbury Madison & Sutro, Native San Franciscan and Outdoorsman." Summarizing the issue up for debate, the flyer noted: "this habitat could include up to half of the entire acreage of Crissy Field, which could drastically reduce the amount of space left for recreational activities, including off-leash dog exercise." (USPRODoo681.) A few days later, on April 1, 1995, a massive Presidio "dog-in" was held to show support for off-leash dog walking at Crissy Field. (USPRODoo679-80.)

In April 1995, Mr. Avanzino met with Superintendent O'Neill and Citizens Advisory Commission members Amy Meyer, Jacqueline Young, and Trent Orr to discuss the status of the 1979 Pet Policy and the issue of inclusion of officially designated off-leash areas in the Crissy Field Plans. A letter memorializing the meeting indicates the following issues were resolved:

1 The "NPS will again honor the Pet Policy"; 2 "Legal counsel for the NPS has advised" that the Superintendent has "discretionary authority to reinforce through the Compendium mechanism the principles expressed in the Pet Policy"; 3 "This is permitted even though there is some conflict with the Code of Federal Regulations" ; 4 The NPS agreed to include "site-specific plan that clearly delineates off-leash dog walking areas"; 5 The NPS agreed "to public review and participation at the level of the Golden Gate National Recreation Area Advisory Commission of any future changes to the agreed upon off-leash dog walking areas." (Richard Avanzino letter to Brian O'Neill, April 27, 1995.)

To bolster fundraising for wetlands restoration at Crissy Field, the NPS announced (in the San Francisco Chronicle) that it "has no intent to forbid off-leash, even if a large wetlands area is restored along the northern waterfront...all plans either maintain or expand off-leash dog walking.

Under any future scenario, more generous areas of the Presidio's northern waterfront will be available to dogs." (Emphasis added.)

On October 2, 1996, the GGNRA issued a "Finding of No Significant Impact" ("FONSI") for the Crissy Field project. Included in this document were notes about the comments and concerns voiced during the Comment period for the Environmental Assessment ("EA"). The FONSI addressed these concerns as follows: "The Crissy Field Plan ...includes expanded opportunities for off leash dog walking, and the marsh design, as noted in the EA, incorporates features to avoid conflict between other recreational activities, such as off leash dog walking, and wildlife. Section 2.1.2.10 ("Dog Use Areas") provides: "Dog walking is a popular activity at Crissy Field, and both alternatives provide for the continued enjoyment of that activity. An approximately 70 acre area would be available for dog activities. Walking dogs off leash under voice control would be permitted on the Promenade and beach east of the U.S. Coast Guard station, on the restored airfield, and in the East Beach area." Indeed, the Crissy Field Plan Summary confirmed that the proposed plan includes 70 acres for "off-leash dog walking." (Id., p. 10) With respect to protected species, the issue of vegetation was also addressed in the FONSI as follows: "The decision to avoid the introduction of special status species in the restoration was made recognizing the high level of recreational use at Crissy Field anticipated to continue in the future and the concern expressed by many individuals that special status species could cause a change in management of the site that would restrict recreational uses." NPS did in fact replant the federally endangered California sea-blite (*Suaeda californica*) that drowned out during the prolonged inlet closures/non-tidal lagoon flooding phases, and some transplants are thriving. "

Thereafter, the \$35 million in funds were raised, the restoration completed, and subsequently, off-leash recreation was illegally banned at all GGNRA properties, and massive ticketing and harassment of dog walkers commenced. This directly violated the following agreements between the GGNRA and San Francisco: 1975 Memorandum of Understanding; 1979 Pet Policy; 1980 General Plan; 1982 GGNRA Natural Resources Plan; 1995 EIR/or the Crissy Field Plan, and the 1996 Compendium Amendment. The only redress for these actions by the GGNRA was for three citizens to spend ten of thousands of dollars of their own funds to defend themselves in a criminal proceeding challenging the tickets they were illegally issued. The GGNRA was found to have acted illegally when it rescinded the 1979 Pet Policy and began ticketing citizens for engaging in legal activity.

In this DEIS, the presence of these plantings as well as the Western Snowy Plover are utilized to justify the restriction of recreation in the area. The GGNRA has, yet again, violated the mandate under which this Park was created, violated its promises to the City, reneged on the promises made in

the FONSI, and made clear that this DEIS had a predetermined outcome to cutback off-leash recreation or ban dogs in areas used for this purpose before the Park ever existed. The failure of this DEIS to present any credible evidence which would support the restriction of recreation due to the presence of the plover has been discussed in detail in the Ocean Beach section of this comment.

The Bank Swallow At Fort Funston

Beginning in 1991, the GGNRA/NPS began destroying the Fort Funston ecosystem with the premise being protection of the California state-threatened Bank Swallow. The GGNRA/NPS maintained that that recreational activity and "exotic" plants were having a profound negative impact on the Bank Swallow. The GGNRA/NPS never conducted an environmental impact analysis or vital monitoring as required by Federal law before beginning this ecological destruction.

For decades, the Bank Swallow population had been thriving at Fort Funston, with their population increasing steadily even as off-leash dog walking was legally permitted and visitor use increased. In 1982, there were 229 burrows, 417 in 1987, and 550 in 1989--providing anecdotal evidence that dogs and Bank Swallows co-exist and thrive.

In October 1991, the GGNRA/NPS closed approximately seven acres at Fort Funston by moving fences designed to protect the Bank Swallow 75 to 100 feet away from the cliffs in order to construct native plant habitats. (Milestone, J. "Just a Swallow Habitat Restoration Project".) By early 1992, almost four acres were converted to coastal dune and chaparral. At that time, NPS staff began chain sawing twenty-four (24) Monterey Cypress trees lining a trail leading to the beach, and volunteers pulled up erosion-preventing ice plant. Bulldozers were used to level hillocks and bury concrete slabs. In the course of only a few months, volunteers replaced ice plant with 5,000 native plants in the four acre area. The entire seven acre project was designed to take five years to complete with only 75% coverage of plants. The goal of the project was to increase "natural" erosion and create "moving sand" ecology. With the closures at Fort Funston, the GGNRA/NPS embarked on a unilateral course that was illegal under its own management policies, the MOU Agreement with the City, and the GGNRA enabling statute. At Fort Funston, the GGNRA/NPS pursued a strategy of repressing dog-walking each time it expanded its closures. Concomitant with the native plant expansion, Park Rangers began telling dog-walkers, in late 1991 and 1992, to leash their dogs. In May 1992, Mark Scott Hamilton, Chairperson for San Francisco Commission of Animal Control and Welfare, sent a letter to Superintendent O'Neill expressing concern over "NPS Ranger announcements that GGNRA's longstanding 'voice control' policy at Fort Funston was to be changed effective May 1." Mr. Hamilton pointed out that

such action would have serious impact on "overall dog-walking policies within San Francisco's geographic boundaries" and questioned how it could be done without public hearings: "It seems inconsistent with GGNRA's past policies (and perhaps violative of applicable regulatory law) that this change would even be contemplated until after public input hearings."

Public outcry over this action was overwhelming. In response, Western District Director Stanley Albright reassured both u.S. Senator Cranston and Senator Seymour that the GGNRA would continue to abide by the 1979 Pet Policy: "At this time, there is no change in the 1979 Pet Policy which [currently] provides the visitor the privilege of walking one's dog off leash."

Addressing public concern over the closures at a meeting that summer, Head Ranger Jim Milestone, in July 1992, assured citizens that the fences would be in place only one year and the native plants would be compatible with recreational use of the area. (Meeting Minutes of Fort Funston Dog Walkers Association, July 9, 1992.) The next year, GGNRA/NPS expanded the native plant habit an additional three acres beyond the initial seven acre project, again without public review or project approval.

In June 1994, an additional expansion/closure of fifteen acres was proposed without analysis or public hearings. The GGNRA report confirmed that the project was already "expanding into areas beyond our previously agreed to perimeter. Project originally called for removal of all ice plant (a noxious exotic species) from the ten acre Bank Swallow habitat area. This is now complete and new areas outside of Bank Swallow habitat area are now within our grasp." (Project Review Form, Ice Plant Removal, North Tip of Fort Funston, June 1994, emphasis added.) The project goal was to destroy 15 acres of ice plant, using chainsaws to destroy all "exotic" trees and bushes, and using bulldozers where possible. The map attached to this project limited the expansion to the asphalt coastal trail. In fact, this project also was "expanded beyond agreed perimeters" to encompass areas east of the trail, covering the entire Boy Scout Bowl.

In 1995, Rangers began warning dog-walkers at Fort Funston, Crissy Field, and Ocean Beach that they were going to start enforcing the general leash regulation, 36 C.F.R. Section 2.1s(a)(2). At the same time, GGNRA/NPS announced plans to close ten acres adjacent to Battery Davis under the pretext of erosion control. Ranger Jim Milestone admitted to the public at a meeting in March 1995 protesting the proposed closures that this area was very popular with children for playing Lawrence of Arabia on the steep slope. Dogs loved to chase balls and frisbees at the bottom of slope.

Following these closures, by letter dated March 14, 1995, Superintendent O'Neill promised Richard Avanzino, then-President of the San Francisco SPCA, that the habitat was nearing completion and would not expand south.

The GGNRA/NPS also promised that the Battery Davis closure was an approximately 5-year closure during which time it would be revegetated. Signs indicating both areas were closed for native plant revegetation were subsequently placed along the affected areas.

After four years of closures of areas adjacent to the Bank Swallow burrows to off-leash recreation and vegetation revision, in 1995 the number of Bank Swallow burrows plummeted from 924 to 713. A simple review of the scientific literature confirms that Bank Swallows are very tolerant of "human disturbance" at nest sites. Indeed, "many colonies are in human-made sites ... such as sand and gravel quarries and road cuts." (Garrison, B., "Bank Swallow," *The Birds of North America*, No. 414 (1999), at p. 6.) Mr. Garrison is a California Department of Fish and Game

Biologist and an expert on the Bank Swallow. In fact, the only GGNRA/NPS study to evaluate the dramatic drop in numbers of the Bank Swallow concluded that increased predation, not recreational activity, was negatively affecting the birds. (Chow, N., "1994-95 Bank Swallow Annual Report", US04906-32.)

In 1996, the GGNRA/NPS failed to document the colony size, and claims to have lost all data for 1997. In 1998, the number of burrows had dropped to 140, and the GGNRA/NPS closed off the entire slope of coastal bluffs below the hang gliders.

In 1998, the Bank Swallow colony fled the "Bank Swallow Protection Area," to the "exotic" ecology and recreational activity along the south cliffs of Fort Funston. As a general rule of survival, birds leave areas where they are under stress. Despite the obvious devastation to the Bank Swallow colony, the GGNRA/NPS failed to analyze the impact of unleashed dogs on controlling predators of the Bank Swallow. (Hatch Report, p. 85, lines 10-16.) NPS Head Ranger J. Milestone indicated the dogs might have protected the Bank Swallows by impacting the weasel population. (US03944.) Additionally, observations indicate that the very habitat the GGNRA/NPS was destroying was the habitat most suitable for the Fort Funston Bank Swallow. Such observations confirm that ice plant rootlets are used by Bank Swallows to construct nests. (US04062-3?)

In January 2001, the NPS closed twelve additional acres to public use and the Bank Swallow colony again fled further south away from the new closure.

Because of a total failure to study causal effects of various activities on the Bank Swallow, the GGNRA/NPS has no evidence linking recreational activity with the Bank Swallow decline at Fort Funston. Indeed, the best evidence that recreational activity does not impact the Bank Swallow

negatively is the swallows' departure from the fenced off northern cliffs to their present location --an area of continuous recreational activity. The overwhelming evidence indicates that the GGNRA/NPS native plant projects have negatively impacted the Bank Swallow colony.

In fact, NPS documents confirm that Bank Swallow experts do not agree with the NPS/GGNRA contention that the creation of native plant "flyover" habitat is necessary for the Bank Swallows. Notes of a March 16, 2000 phone conversation with Barry Garrison from the California Fish & Game Department, one of the nation's foremost experts on California Bank Swallows, confirm that he "doesn't feel need flyover" (USPR001625) "doesn't necessarily agree that they need a flyover to persist." (USPROD01624). William Shields, Professor of Biology at SUNY, elected fellow of American Ornithologist's Union, leader of SUNY's Conservation Biology concentration (in letter to GGNRA re: closures at Fort Funston, October 2000), reiterates the Bank Swallow's tolerance of human and pet presence and their lack of appreciation for "native plants." "The poor arguments presented in their (GGNRA) plans make little sense to me. The Bank Swallow like other swallows is quite suited to live with humans and their pets" and " ... I do not understand or condone what I believe are their misrepresentations about the needs and safety of the Bank Swallows breeding in the cliffs. ... the notion that the swallows would do better by having more species of insects or even more insects on the shortflyway between their breeding burrows and their main foraging sites at the nearby lake is a major stretch and smacks of special pleading to me."

The GGNRA's dune conversion destroyed the Bank Swallow colony nesting site that the birds had used since 1905.

GGNRA/NPS officials have consistently maintained that after some five years, these "habitat" areas would be reopened for public use. Five years have passed for many of these closures, yet to date, no fences have been removed.

This DEIS contains no "monitoring of vital signs" that could possibly justify the actions taken previously or the actions proposed in the Preferred Alternative at Fort Funston to limit recreation of people and their dogs. The science, limited as it is, would indicate the Bank Swallow would benefit from the entirety of Fort Funston again being accessible for off-leash recreation as it was in the 1979 Pet Policy. Instead, this DEIS moves to further restrict recreation of people and dogs to presumably "protect" the Bank Swallow. A legitimate safety mitigation would be planting a bramble-type shrubbery barrier along the cliffs, so as to deter dogs and small children (neither of whom can read warning signage) from the cliff edge and preclude accidental falls off the cliffs for all park users.

This DEIS Promotes The GGNRA Practice Of Perverting The Endangered Species Act To Restrict Recreation

Historically, one avenue for eliminating access to the public—the recovery of endangered and threatened species—has been extensively utilized by GGNRA management. This explains the GGNRA's repeated treatment of any habitat, no matter how deficient, as critical habitat. An example of this would be the "plover protection areas" at Ocean Beach and Crissy Field. This DEIS proposes to ban dogs at these areas which is a management restriction more severe than is often employed in "critical habitat". Although for a time the GGNRA attempted to mislead the public by calling this area "crucial habitat", the fact of the matter is that term that has no legal significance. What is significant is that these areas are NOT critical habitat, therefore management measures are legally limited to preventing "harassment" of the plover at that location. Banning dogs is a restriction that is not commensurate with the observed activities in these areas with respect to the plovers.

Additionally, in this DEIS, the NPS designates areas as "potential habitat". The NPS treats "potential habitat" (build it and they will come) as if it were "critical habitat" and embraces all legal restrictions that would enure from that status. An example of this would be at Mori Point in Pacifica. At Mori Point the GGNRA chose to remove 2/3 of the property from recreational access in order to create potential habitat for the red-legged frog and San Francisco garter snake. The GGNRA treats this "potential" habitat as if it were "critical" habitat (which it is not) with respect to recreational restrictions.

The GGNRA has also embarked on a mission to create native plant habitats where no habitat previously existed. GGNRA management alleges this is a part of their obligation to "preserve" the park for future enjoyment, however, this is NOT what they are doing. When you read the overview for Fort Funston, it is abundantly clear that they are creating these native plant habitats, and in doing so they are destroying parts of the park that existed long before the GGNRA took control. This process is not preserving anything. Additionally, this is in violation of their authorizing directive, as the establishment of native plant areas requires the exclusion of humans from the site, eliminating all recreational activity in the area. Closures at Fort Funston were conducted without a NEPA required environmental impact analysis with regards to recreation or the Bank Swallows, without proper project approval, and without public hearings in violation of NPS regulations, U. S. Department of Interior management policies, and federal law. The GGNRA has implemented similar closures at Baker Beach, Lobos Creek, and in the Presidio. Concerned citizens were unable to obtain specific vegetative plans for the Presidio. Eventually plans to cut down approximately 4,000 trees in order to plant a native "vinegarweed" came to

light and were opposed vigorously.

Lastly, the GGNRA has utilized this DEIS to ambush recreation in areas where the public agreed to "restoration" to enhance the environment for "sensitive" species with the promise that recreation would be able to co-exist with these species when the project was complete. The conclusion in the Environmental Review for the Redwood Creek/Muir Beach "restoration" stated:

"The preferred alternative will have short-term minor adverse impacts on visitor and resident access to Muir Beach by contributing to traffic congestion. With the implementation of the mitigation measures, the intensity of these adverse effects will be reduced to a minor level. In addition, the overall effect of the project is beneficial and will improve resident/visitor access and recreation opportunities. Implementation of the Preferred Alternative would not impair park visitors or residents."

The project has been completed, and this DEIS now bans dogs from Muir Beach (they were allowed here off-leash before). Residents/visitors do not see the ban as an "improvement of recreation opportunities as previously promised".

GGNRA Usurps Authority Of The State Of California In This DEIS

The GGNRA intends to ban the recreational activities of dogs and their guardians upon the tidelands that are adjacent to GGNRA beaches. These tidelands remain subject to State "public trust" uses and may not have their longstanding recreational usage turned into purely conservation areas without violating State law and the terms of the permit under which the GGNRA manages some of these tidelands. The GGNRA's position that the public trust doctrine goes into "dormancy" while it manages these tidelands is without any legal support. The 1987 permit specifically allows for enforcement of federal regulations on these State-owned tidelands only to the extent they are not inconsistent with State law. The "public trust" doctrine has been significant State law since California's admission into the Union in 1850. The general recreational uses of these tidelands are not subject to federal rulemaking of any type.

Compliance Based Management Strategy

The 2,400 plus page GGRNA Draft Environmental Impact Statement (DEIS) purports to offer its proposed alternative (almost everywhere on leash or no dogs at all) and then several alternatives. However, buried deep within the document is the GGNRA's Compliance-based management Strategy-a poison pill, which itself demonstrates that the alternatives are

illusory -nothing more than a default to the GGNRA's desired change:

"In order to ensure protection of resources from dog walking activities, the dog walking regulations defined in action alternatives B, C, D, and E would be regularly enforced by park law enforcement, and compliance monitored by park staff. A compliance-based management strategy would be implemented to address noncompliance and would apply to all action alternatives. Noncompliance would include dog walking within restricted areas, dog walking under voice and sight control in designated on-leash dog walking areas, and dog walking under voice and sight control outside of established ROLAs.

If noncompliance occurs, impacts to resources have the potential to increase and become short-term minor to major adverse. To prevent these impacts from increasing or occurring outside of the designated dog walking areas the NPS would regularly monitor all sites. When noncompliance is observed in an area, park staff would focus on enforcing the regulations, educating dog walkers, and establishing buffer zones, time and use restrictions, and SUP restrictions. If compliance falls below 75 percent (measured as the Executive Summary xiv Golden Gate National Recreation Area percentage of total dogs / dog walkers observed during the previous 12 months not in compliance with the regulations) the area's management would be changed to the next more restrictive level of dog management. In this case, ROLAs would be changed to on-leash dog walking areas and on-leash dog walking areas would be changed to no dog walking areas.

This change would be permanent. Impacts from noncompliance could reach short-term minor to major adverse, but the compliance-based management strategy is designed to return impacts to a level that assumes compliance, as described in the overall impacts analysis, or provide beneficial impacts where dog walking is reduced or eliminated"

The entire concept of "compliance based management strategy" is one that has never before been utilized in any other National Park or National Recreation Area by the NPS. The Draft Plan/DEIS states (page 1725) that "the compliance-based management strategy is an important and effective tool to manage uncertainty when proposing new action" and "has been created" to assure successful implementation and long-term sustainability. It appears this policy attempts to allow the implementation of future restrictions without public notice and comment. This is unlawful and should never have been included in this DEIS.

It is clear that regardless of whatever alternative is finally selected by the GGNRA, the end game for them is the complete removal of off-leash recreation in the GGNRA as well as the banning of dogs entirely from most, if not all, of the GGNRA. At this point we are once again reminded of the

revealing statement made by now NPS Director Jon Jarvis: "[would rather give up those [the GGNRA] properties than have dogs running loose on them. "

In summary, in recent interviews GGNRA representatives have stated that they are forced to ban dogs entirely in many of the former GGNRA off-leash areas provided by the 1979 Pet Policy because, "We do not have the resources to enforce voice control or on-leash compliance ... ". However, it seems to be no problem for them whatsoever to fund staffing resources, expensive surveillance cameras, etc. when it comes to dispensing their "poison pill".

This DEIS (and GGNRA Policy in General) Punishes The Disabled

The disabled are given no special consideration by the GGNRA/NPS. As stated by San Francisco City Attorney Louise Renne (in a letter dated December 19,2000):

"In addition to receiving numerous complaints regarding the closures at Fort Funston, members of the Board of Supervisors have been contacted by members of the public protesting the removal of pavement from the Sunset Trail, which was closed in November 1999 and reopened in March, 2000. Organizations such as the Golden Gate Senior Services have complained that a major portion of the trail is no longer paved and is therefore inaccessible to persons with limited mobility. We are writing to request a written response from the GGNRA explaining how this diminution of recreational opportunities is consistent with the GGNRA's responsibilities under the Section 504 of the Rehabilitation Act of 1973 (9 U.S.C. 794). Please include in your response a description of the GGNRA's plan to make its programs accessible to persons with disabilities, including those with mobility impairments".

The Sunset Trail is still closed to the public (including those with disabilities), and the Preferred Alternative would restrict more of the trails the disabled might possibly access at Fort Funston to recreate with their dogs.

At Sweeney Ridge in Pacifica stands the Portola Monument, considered to be the most historic site in the GGNRA. When the GGNRA took control of this property, it closed the access road off to cars, thereby preventing the disabled or mobility impaired from accessing this site. The hike from the current parking spot is 2.5 miles to the Monument, with an elevation rise of some 1,000 feet. The GGNRA has made no legitimate effort to remedy this situation, despite complaints from the City Council in Pacifica, and groups representing senior citizens. This DEIS further restricts access to this

portion of the GGNRA.

Perhaps the best indicator as to how badly the GGNRA treats the disabled in this National Recreation Area is the lawsuit brought by Disability Rights Advocates against the GGNRA several years ago. According to the suit, the federal recreation area is discriminating against people with disabilities by systematically excluding them from such areas as restrooms, visitor centers, historic sites, trails, pathways. One of the plaintiffs attorneys explained that at the Marin Headlands, the visitor center has a ramp, "but to a third-party evaluator, it was so steep as to be inaccessible and dangerous. Alcatraz offers a tram, but it only holds two wheelchairs ,they just don't have the capacity. At Muir Woods, one of our plaintiffs has had problems with paved trails. GGNRA hasn't kept the paved trails in a condition that allowed her to use them."

Federal laws since 1973 have obligated Golden Gate National Recreation Area to provide reasonable accommodations for persons with disabilities. Having to hike 2.5 miles to see Portola's Monument may be inconvenient for the average citizen, but it is impossible for an individual with a physical disability. The Sweeney Ridge/Portola Monument situation is a representative example of how when making decisions regarding access the GGNRA always chooses less access. The judge in this litigation sent both parties out to mediation, yet after a time the parties were sent back to the court as there was a complete failure to come to any workable conclusion. Therefore, it cannot be asserted the GGNRA did not recognize the problem- the reality is that the GGNRA has no intention of remedying the problem, unless forced to by the Court. This DEIS is consistent with this pattern of practice.

Environmental Justice

The issue of Environmental Justice, as it is postulated in the DEIS (P.31), is offensive at best. To claim that ethnic minorities are dissuaded from visiting the park because dogs are present is a perversion of the data. None of the 20 or more recommendations in the study about what the GGNRA could do to increase accessibility by minorities includes banning or restricting dogs.

The study was flawed in that it was a small sample of non-randomly selected people who were largely unfamiliar with the GGNRA (only 1/3 had visited at least one GGNRA site in the past year). This creates a situation where you are obtaining opinions about the GGNRA from people who have not experienced the GGNRA to any significant degree. You are likely only measuring their perception of the GGNRA, not what actually occurs there. The responses obtained from this study might be well suited to establishing a public relations campaign for the GGNRA, but not establishing park

policy.

The study itself says the goal of the study is to "realize the park goals of understanding how to improve 'connecting people to the parks' and how best to engage under-represented communities in plans and programs"-it was a public relations survey. What the study overlooks is that dog walking connects all different kinds of people to the parks. Had the subjects in this survey been to Fort Funston or Crissy Field recently they would have seen a wide diversity of people --seniors, kids, disabled people, Asian-Americans, African-Americans, Latinos, Pacific Islanders, all there with dogs. Compare that mix to any other GGNRA park activity (with nowhere near the diversity) and the "we have to restrict dogs to protect ethnic minorities" argument appears misguided and somewhat condescending.

Respondents who did visit the GGNRA express no apparent problem with dogs recreating with people. A quote from P-42 of the SF State study: "I go to the beach ... When I look at the ocean I could totally relax and let my imagination run wild. I feel that life in America is truly wonderful when I watch people fishing, jogging, playing and walking their dogs."

An interesting observation: the GGNRA talks about protecting access for ethnic minorities who don't come to the GGNRA, but hypothetically might come to the park if there were changes. Who will protect access for the ethnic minorities who DO come to the park to enjoy off-leash recreation?

Suffice it to say that Environmental Justice would appear to be a specious argument at best for restricting the access of people with their dogs in the GGNRA.

Protection Of The Cultural Resources

The idea that cultural resources such as buried missile silos at Fort Funston require protection from dogs trampling, digging or urinating is far-fetched at best. I would point out that the larger size and weight of humans would be a greater threat to trample notable sites than would dogs. With respect to missile silos at Fort Funston I would not assume all urine deposited would be that of the canine visitors. The GGNRA still has not installed any permanent bathrooms for the many human visitors at Fort Funston. In fact, it seems the GGNRA has little regard for the enjoyment of these resources.

I would also point out the GGNRA has failed miserably in their restoration efforts for facilities such as the Cliff House which are within the Recreation Area's boundaries. The new facility is quite unaesthetic, and popular restaurants within have been altered and have lost their popularity. I have talked to many visitors who are familiar with the previous incarnations of the Cliff House. They always express their disappointment and/or outrage as

to its boxy appearance with the service entrants in the most visible area. There used to be a line down the hill for the Sunday brunch at the Cliff House, now it is empty. Our cultural resources are in far greater danger from GGNRA management and their "restoration" plans than they are from dogs.

Safety In The GGNRA The DEIS states: "Most of the issues related to the health and safety of park visitors are related to their encounters with unruly/aggressive dogs". The actual Law Enforcement citations were obtained and catalogued by interested dog guardians and the chart below is the result of their careful analysis. As you can see, the incidents involving unruly or aggressive dogs comprise only 2 percent of the total incidents Law Enforcement reported in the GGNRA. Remarkably, these bite/attack incidents only occurred once in every 1.36 million park visits. 93 percent of the time, Law Enforcement was dealing with human-specific incidents. Clearly this issue of park safety for visitors and staff being compromised because dogs are present has been entirely overblown to justify the radical recreation restrictions the GGNRA is promoting in this DEIS.

Another safety issue brought up in the DEIS is dog feces. It is disturbing that the GGNRA brings up a multitude of diseases or health risks associated with dog feces, yet provides no statistics about disease contracted by people from dog feces. It is my understanding the data to support this "potential" risk is nonexistent.

A related topic in this DEIS is the extensive maintenance dog areas require. For example, statistics are provided for the high cost of trash removal at Ocean Beach. As a daily visitor to Ocean Beach, I must point out the vast majority of the trash is not dog-related, but people-related. I have not as yet seen groups of dogs huddled around beach fires drinking and eating for hours, or groups of dogs enjoying a beach picnic. It is unfair to allocate excessive maintenance costs for trash removal to dogs. At Fort Funston, the complaint is that they must empty trash more often because it is heavy due to the large volume of dog feces. It seems dogs, and their guardians cannot win in this DEIS. On one hand, they are accused of failing to pick up dog feces, and on the other hand the GGNRA complains the trash receptacles are heavy because of all the dog feces in the trash!

In reality, the safety issue with respect to dogs is a disingenuous argument at best. GGNRA management has sacrificed safety of the public repeatedly when safety comes into conflict with their "restoration" agenda. For example, the GGNRA was happy to spend over a million dollars at Mori Point to construct a bridge so that frogs could migrate from their current habitat on property outside the GGNRA to the "potential habitat" the GGNRA had spent another million dollars to create at Mori Point. Previous to the construction of the bridge, the frogs would have been required to cross the emergency access road for Sharp Park and Mori Point. In building

this bridge, the GGNRA destroyed the original access road. Consequently, there is no direct way for emergency vehicles to get out to these popular public properties should there be an emergency.

With respect to management in the GGNRA, their high cost discretionary projects (e.g., the \$12 million spent by the GGNRA to create the new Giacomini Wetlands in Marin, the aforementioned bridge to nowhere at Mori Point always take precedence over everything else most notably public safety. Budget cuts enforced by the GGNRA in spring 2008 cost nearby Presidio Fire Station NO.2 the use of their ambulance, and could have made the difference between life and death for a woman found hypothermic at Rodeo beach by a maintenance worker.

Correspondence: Water Quality In The GGNRA

It is interesting to review the water quality findings in this DEIS. Although it is asserted dog feces are a significant component in water bacterial contamination, once again the DEIS is short on facts and misleading as well. The DEIS refers to a substudy of the San Francisco Sewage Master Plan which determined that bacterial contamination of waters off Ocean Beach was significant due to dog fecal matter deposited along the shoreline (NPS 1999, 21). The difficulty with this reference is that it cannot be located. It does not exist.

What I find much more relevant is the Annual Report by Heal the Bay. This year's report just came out and Ocean Beach receives an A+ ranking at Balboa Avenue year-round excepting a B ranking during wet weather. At Lincoln Avenue there is an A or A+ ranking year-round excepting a B ranking during wet weather. At Sloat, the ranking is an A or A+ all year-round in wet or dry weather. Clearly dog feces are not creating a problem at Ocean Beach. Further, the 2010 Heal the Bay report acknowledged that in the summer nearly all beaches had a clean bill of health. But in the winter, when heavy rains cause untreated sewage to flow into the bay and ocean, bacteria hit perilous levels in some areas. Deb Self, Director of San Francisco Baykeeper said, "We have a massive, rampant problem with human waste." Among the worst offenders is Baker Beach, where raw sewage leaking from old pipes and overflowing storm drains flows into Lobos Creek and forms a pool at the south end of the beach.

Clearly, most dog guardians are picking up their dogs' feces, and the relatively few instances where people fail to pick up after their dog, while

not excused, do not constitute a threat to our water quality.

Effect Upon Surrounding Parks

This DEIS fails to meet NEPA requirements by omitting an analysis of the effects of the proposed change on park properties in the cities and counties where the GGNRA now owns large swaths of recreational resources. However, when reading the DEIS, it seems pretty clear what the effect would be. From the DEIS itself: "High numbers of incidents occur because of the large number of people that use the site at one time, and the high number of dogs off-leash at the site." Certainly the GGNRA would acknowledge that this is precisely what will happen to parks outside the GGNRA should they close down 90% of the GGNRA's off-leash acreage as the Preferred Alternative would do. This is an unacceptable outcome.

I would also point out that the City and County of San Francisco has an ordinance (San Francisco City and County Health Code; Article I; Section 41.12; Paragraph (c); Subparagraph 5) that, among other things, requires dog guardians to provide their dogs with adequate exercise to maintain muscle mass and appropriate weight. Therefore, the issue of whether or not to exercise dogs when access has become severely restricted is not optional. Dog guardians will be forced to do what they have to in order to comply with San Francisco law.

This Agency Action Will Not Resolve Litigation

In recent history, litigation has been the only recourse the taxpayers have had to combat this abuse of power by the NPS/GGNRA. And, in fact, the NPS/GGNRA was forced to reinstate off-leash recreation in the GGNRA following a Federal Court order in 2005. Should the NPS/GGNRA proceed with any of the alternatives propagated in this DEIS, litigation to have this DEIS declared unlawful; or litigation by San Francisco to take back some of these properties will become a necessity.

Duty To' Preserve -This Agency Is Responsible For Resource Degradation

The greatest threat to the long term health of the GGNRA properties is the failure of GGNRA management to implement and use effectively a "Vital Signs Monitoring" program. Ecosystem changes GGNRA management has made until now to "preserve the resources" of the Park would not have been approved had a "Vital Signs Monitoring" program been utilized. The NPS / GGNRA has destroyed large areas of the Park in an attempt to remake the Park environment in the vision of a nativist ideology. These actions are in direct violation of the enabling legislation for this National Recreation Area. The DEIS' Preferred Alternative proposes additional changes purported to protect wildlife from harassment. The data indicates the unintended

consequences of ecological changes GGNRA management has implemented without the benefit of "Vital Signs Monitoring" have proven to be a far greater danger to wildlife than dogs. The scientific data presented in this DEIS does not adequately support the Dog management changes GGNRA management has made subsequent to the 1979 Pet Policy, or the changes they seek to make in any alternative proposed.

Conclusion

The only conclusion one can possibly draw from the evidence produced in this comment is that this DEIS along with its preferred alternatives and the compliance based management strategy are not based upon science or data, but rather the product of a predetermined outcome. I would expect no less from an agency whose top authority, Director Jon Jarvis, is on the record as stating, "I would rather give up those [the GGNRA] properties than have dogs running loose on them. "

After consulting with several knowledgeable legal resources, it is my opinion that this DEIS is unlawful, biased and so badly flawed, it must be thrown out. The GGNRA still has the ability to codify the original 1979 Pet Policy as a Section Seven Special Regulation. New lands should maintain the historical use upon inclusion and "vital signs monitoring" should be implemented to determine whether subsequent changes must be made to protect resources. Should the GGNRA fail to heed these recommendations, San Francisco City and County could remedy their issues by formally taking back their affected properties by enforcing their contractual reversionary clause. Unfortunately, this would be of little assistance to Marin and San Mateo counties. Therefore, it would be likely that those counties would pursue Congress to implement a Section Seven Special Regulation to ensure recreational access as was originally intended when this National Recreation Area was created. The third option would be to transfer the GGNRA to another Federal agency such as the Forest Service, where sound principles of land use and planning are a part of their management policy. Should these properties remain under the management of NPSjGGNRA, there must be strict oversight by Congress. Proper safeguards must be put in place to ensure that the sound principles of land use planning and management are adhered to by the GGNRA on a permanently basis.

Correspondence: Introduction

The legacy of Golden Gate National Recreation Area (GGNRA)

management is one of duplicity, broken promises, and broken laws. This DEIS as a means to modify recreational usage is no exception. This DEIS is not a good faith effort by the NPSjGGNRA to resolve conflict, but a thinly veiled ploy to eliminate off-leash recreation from the GGNRA entirely. The conflict is actually one of legislative intent: the GGNRAjNPS desire to manage this Golden Gate National Recreation Area as a National Park, while the enabling legislation and the will of the people assert the management should reflect the unique requirement we have for recreational access (as mandated by Congress) here in the GGNRA.

With respect to this 2400 page DEIS, the Federal Register states: "This plan will promote the following objectives: preserve and protect natural and cultural resources and natural processes, provide a variety of visitor experiences, improve visitor and employee safety, reduce user conflicts, and maintain GGNRA resources and values for future generations." There is no mention of recreation or its value in this Recreation Area. With the addition of a "Compliance-based Management Strategy" the GGNRA has cleared the way to incrementally eliminate the presence of dogs in the GGNRA.

This is a long-standing battle we have waged; the GGNRA takes away recreational access, and the citizens turn to the Federal Court to have access reinstated. It has been a colossal waste of time and money, and a hardship for the citizens because not only are we battling for our right to access; we are also paying for both sides of the debate. I intend to review the objectives and content of this DEIS and the history of the management of the GGNRA. At its conclusion I think you will agree there are only three possible resolutions to this situation. San Francisco City and County will be required to formally take back those properties they can, or Congress will be required to implement a Section Seven Special Regulation (over the objections of DOIjNPSjGGNRA) to ensure recreational access as was originally intended when this National Recreation Area was created. The third option would be to transfer the GGNRA to another Federal agency such as the Forest Service, where sound principles of land use and planning are actually implemented as a part of their management policy. Should these properties remain under the management of NPSjGGNRA, there must be strict oversight by Congress to ensure sound principles of land use planning and management are implemented permanently as they have not been implemented up until now.

This Agency Action Is Unlawful

Before examining the contents of this DEIS, I must make the fundamental point that the decision to proceed with this DEIS itself is unlawful. The enabling legislation requires the GGNRA to utilize sound principles of land use planning and management. Accepted practice would be illustrated by the Rattlesnake National Recreation Area and Wilderness (RNRA W) which produces an annual monitoring report. The report assesses current recreation

trends, needs, and impacts, and thereby serves as a tool for long-term management of the RNRAW. The following is taken from the Introduction of the Report for 2009:

"This is the seventeenth annual monitoring report for the Limits of Acceptable Change (LAC) based Management Direction for the Rattlesnake National Recreation Area (NRA) and Wilderness (RNRA W), which was approved in December 1992. Monitoring is the final step in the LAC planning system. It is an ongoing, continuous process and is instrumental for evaluating management effectiveness and sustainability of resource values and conditions.

The LAC process recognizes that wilderness conditions change. Wilderness areas are dynamic systems with many forces continually affecting the landscape. These forces of change include people and their impacts, fire, insects and disease, invasive species and many others. It defines what conditions are desirable and how to achieve or maintain those conditions. Based on citizen involvement, laws and regulation, it identifies what changes are acceptable rather than attempting to prevent change.

Monitoring is based upon the indicators and standards outlined in the LAC direction. The indicators and their specific standards provide methods of measurement to effectively monitor factors and area wide issues. Refer to the December, 1992 Limits of Acceptable Change Based Management Direction for the RNRA W for a more complete discussion of the LAC process.

The factors monitored during the 2009 field season include: education, use and users, trails and roads, Wilderness characteristics, vegetation, vandalism, wildlife, fire, goals and policies. Refer to Table 1 for a complete description of the factors, indicators and standards for each opportunity class (OC)."

In contrast, in 2006 when this DEIS was announced on the Federal Register, I made a Freedom of Information Act Request to provide the data, documents, and/or Staff Report which substantiated the GGNRA's claim that there was controversy over the dog policy, compromised visitor and employee safety and resource degradation which warranted this DEIS. The GGNRA's response merely stated: "The Staff Report and other documents you seek do not exist at this time". An appeal to the Department of the Interior regarding this FOIA request elicited the following response after several letters: "Since the Department has not made a determination on your appeal within the time limits set in the FOIA, you may seek judicial review under 5 U.S.C. 552(a)(4)(B). However, we hope that you will delay filing the lawsuit so that the Department can thoroughly review the issues in your appeal and make a determination. We appreciate your patience to this point and the Department will make every effort to reach a decision on your appeal

as soon as possible." This letter is dated August 8, 2006. There has been no written response as of yet.

The lack of data or any documentation to support the assertions used as justification to proceed with this Environmental Review violates Federal Law as it renders this agency action arbitrary, capricious and an abuse of discretion. Accordingly, this agency action, findings and conclusions should be set aside as prescribed by the Administrative Procedure Act, 5 U.S.C. 706 (2)A.

Why is it significant that other Recreation Areas perform annual monitoring of resources and the GGNRA does not? Why is monitoring so important? As stated in an NPS publication, "Monitoring the Condition of Natural Resources in US National Parks" ([http://science.nature.nps.gov/lim/monitor/docs/Monitoring Park Condition. pdf](http://science.nature.nps.gov/lim/monitor/docs/Monitoring_Park_Condition.pdf)) the purpose of monitoring is as follows:

The overall purpose of natural resource monitoring in parks is to develop scientifically sound information on the current status and long term trends in the composition, structure, and function of park ecosystems, and to determine how well current management practices are sustaining those ecosystems. Use of monitoring information will increase confidence in manager's decisions and improve their ability to manage park resources, and will allow managers to confront and mitigate threats to the park and operate more effectively in legal and political arenas.

Additionally, a review of NPS online resources reveals that there is an entire infrastructure set up to guide and facilitate NPS properties in their monitoring duties, "Vital Signs Monitoring" (<http://science.nature.nps.gov/lim/monitor/index.cfm>)

A subsection of the aforementioned web site (Program Goals) discusses the goals of park monitoring: "Natural resource monitoring provides site-specific information needed to understand and identify change in complex, variable, and imperfectly understood natural systems and to determine whether observed changes are within natural levels of variability or may be indicators of unwanted human influences. Thus, monitoring provides a basis for understanding and identifying meaningful change in natural systems characterized by complexity, variability, and surprises. Monitoring data help to define the normal limits of natural variation in park resources and provide a basis for understanding observed changes; monitoring results may also be used to determine what constitutes impairment and to identify the need to initiate or change management practices."

As discussed above, it seems impossible that GGNRA management would undertake a management change as proposed in this DEIS without any

evidence of monitoring as a means to identify the alleged impairment. Further exploration of the NPS "Vital Signs Monitoring" Resources Online (see <http://science.nature.nps.gov/lim/monitor/ProgramGoals.cfm>) reveals:

National Park managers are directed by federal law and National Park Service policies and guidance to know the status and trends in the condition of natural resources under their stewardship in order to fulfill the NPS mission of conserving parks unimpaired (see Summary of Laws, Policies, and Guidance).

More recently, the National Parks Omnibus Management Act of 1998 established the framework for fully integrating natural resource monitoring and other science activities into the management processes of the National Park System. The Act charges the Secretary of the Interior to "continually improve the ability of the National Park Service to provide state-of-the-art management, protection, and interpretation of and research on the resources of the National Park System", and to "assure the full and proper utilization of the results of scientific studies for park management decisions." Section 5934 of the Act requires the Secretary of the Interior to develop a program of "inventory and monitoring of National Park System resources to establish baseline information and to provide information on the long-term trends in the condition of National Park System resources."

Clearly, the failure of GGNRA management to conduct any consistent monitoring of the resources of the GGNRA is a violation of Federal law. The more fundamental problem is that this DEIS highlights the fact that GGNRA management is in persistent violation of the enabling legislation for this park property. GGNRA management can provide no monitoring report to substantiate visitor use patterns or conflicts, no documentation of degradation of the Recreation Area resources, as well as no documentation as to whether resource degradation is inevitable or under the control of management prior to proposing these management changes. Consequently, there have been no mitigations to address problems as they arise. In truth, were the GGNRA's claims of degradation of resources even valid (I contend they are not), a case could be made that any degradation of the GGNRA property is due to GGNRA management's failure to adhere to accepted practice regarding land use planning and management. How is it equitable for the GGNRA to abolish recreational access as a remedy to a problem they cannot document and when they have demonstrably violated the principles of sound land use planning and management?

The fact is the National Park Service has had a shift in ideology, and this new ideology is in direct conflict with the promises the NPS made to citizens to persuade them and their governing bodies to turn over the properties that make up the GGNRA. Had the GGNRA monitored this property conscientiously, their findings would not have justified initiating this DEIS

in the first place.

This Agency's Management Is The Source Of Controversy And Conflict

It is the GGNRA's refusal to abide by the enabling legislation for this park that has created controversy and user conflict. I am obligated to go through a chronological history of the GGNRA because the history provided in this DEIS is inaccurate in many respects.

History

The historical backdrop presented in this DEIS could be politely classified as "revisionist". A more accurate description is as follows:

In March 1963, the President's Recreational Advisory Council released "Policy Circular No. 1." In it, the council laid out a new outdoor recreation policy for all agencies, with the key stipulation that all National Recreation sites be accessible at all times for "all-purpose recreational use." To make the point even clearer, it asserted that agency management of National Recreation Areas should be more responsive to recreational demands than to other such considerations as "preserving unique natural or historical resources." (Administrative History of Point Reyes National Seashore) The NPS was left with little choice but to heed these stipulations.

In response, the NPS advisory board decided to create three separate operating units and management goals for traditional NPS natural or Wilderness areas, Historical Monuments, and for the broad category of Recreation Areas. Secretary of the Interior Udall made official the new categories in his July 10, 1964, memorandum to new NPS director George B. Hartzog, Jr. Udall outlined the prescribed management policies for the recreational area category: "Outdoor recreation shall be recognized as the dominant or primary resource management objective." Resource use would emphasize "active participation in outdoor recreation in a pleasing environment." (Administrative History of Point Reyes National Seashore)

In 1970 Secretary of Interior Walter Hickel moved to create the GGNRA "to bring parks to the people", (U.S. Department of Interior News Release, September 14, 1970.) Congress established the GGNRA on October 27, 1972, stating:

"In order to preserve for public use and enjoyment certain areas of Marin and San Francisco Counties, California, possessing outstanding natural, historic, scenic, and recreational values, and in order to provide for the maintenance of needed recreational open space necessary to urban environment and planning, the Golden Gate National Recreation Area (hereinafter referred to as the "recreation area") is hereby established. In the management of the

recreation area, the Secretary of the Interior (hereinafter referred to as the "Secretary") shall utilize the resources in a manner which will provide for recreation and educational opportunities consistent with sound principles of land use planning and management. In carrying out the provisions of this subchapter, the Secretary shall preserve the recreation area, as far as possible, in its natural setting, and protect it from development and uses which would destroy the scenic beauty and natural character of the area ... " (16 U.S.C. Sec. 460bb.)

In addition to a generic statement of purpose as appears in most national park statutes, it is important to note that Congress included two "specific provisions" unique to the GGNRA.

First, the park was established "to provide for the maintenance of needed recreational open space necessary to urban environment and planning."

Second, the GGNRA statute imposes a unique limitation on NPS's discretionary power for "management of the recreation area" by providing that the "Secretary of Interior...shall utilize the resources in a manner which will provide for recreation and educational opportunities consistent with sound principles of land use planning and management. "

While composing a list of enumerated recreational activities contemplated for the new urban park would be virtually impossible, legislative history reveals what Congress meant by "needed recreational open space necessary to urban environment." "It is a well-recognized principle of statutory construction that contemporaneous interpretations of dated legislation are ordinarily given considerable deference when its meaning is later questioned." (National Rifle Association of America v. Potter 628 F. Supp. 903, 911 (D.C. Dist. Col. 1986).) In addition to sun bathing, picnicking, horse riding, swimming, hiking, and fishing, offleash dog walking was specifically addressed during Congressional hearings. For example, a letter by a seven year old child from San Francisco petitioned the Chairman for a dog park where she could play and socialize her dog: "Dear Congressman Roy Taylor: I want a park so I can play in the park and my sister wants a park too and so my dog can play with another dogs and my Mom wants a park so she could take my dog out to play. I hope you will make a park. Elizabeth Linke." (Hearings Before the Subcommittee on Interior and Insular Affairs, House of Representatives, p. 414.)

Consistent with the trend at the time, Congress explicitly stated the GGNRA was to be a "new national urban recreation area which will concentrate on serving the outdoor recreation needs of the people of the metropolitan region." The GGNRA's mandate was to "expand to the maximum extent possible the outdoor recreation opportunities available in this region." (1-1. R. Rep. No.

1391, 92nd Cong., 2nd Session (1972).)

At the time, all municipal beaches and adjacent city parks considered for inclusion in the park were dedicated to off-leash recreation. (It has been the law of the State of California since its inception in 1850 that the State holds the tidelands in trust for its citizens. In decisions from both the United States and California Supreme Courts, the uses encompassed by the public trust doctrine have been held to include "general recreational" activities.)

When voting for Charter Section 7.403-1(a) authorizing the transfer of the City parks, the citizens of San Francisco were told that "the transfer of these lands is a technical resolution allowing the City and County of San Francisco to transfer city lands to the Golden Gate National Recreation area ... a national urban park established in 1972 by Congress to preserve 34,000 acres of land and water in San Francisco and Marin for recreational use by all citizens." The first GGNRA Superintendent William J. Whalen made specific promises to San Francisco voters that the new NRA would retain historical recreational access (including off-leash recreation) should they vote to include SF park properties in the GGNRA.

Although the city was interested in having its parks included in the new urban park, it wanted to retain jurisdiction over them; surrendering total control to the federal government was not part of the original deal. San Francisco Mayor Joseph Alioto told the United States House Hearings that the city parks proposed for inclusion in the GGNRA "should remain under the jurisdiction of the San Francisco Recreation and Park Commission" (April 6, 1972). The Department of Interior clearly understood that the "taxpayers of San Francisco had the foresight to preserve these recreational areas and the willingness to pay for their support" and "naturally wish to retain some voice in their operations and administration consistent again with an overall master plan." (February 14, 1972). The San Francisco Recreation and Park Commission adopted Resolution No. 9030 which provides, "[t]hat this Commission, believing that inclusion of these properties is vital to the success of the concept of bringing parks to the people, recommends that they remain under the jurisdiction of the Recreation and Park Commission of the City and County of San Francisco." (May 30, 1972).

Aware that certain unique restrictions were included in the enabling statute requiring the NPS to maintain "recreational open space necessary for urban environment and planning", San Francisco adopted the "technical resolution" authorizing the transfer of City parks for "recreational use by all citizens."

The Board of Supervisors adopted Resolution No. 364-72, which provides:

1. "the City and County of San Francisco desires to maintain and improve

the recreation facilities available to the residents of San Francisco on the aforementioned property owned by the City and County of San Francisco located within the Golden Gate National Recreation Area;"

2. "The City and County of San Francisco desires to participate in the planning, administration and operation of the Golden Gate National Recreation Area;" and

3. "this Board of Supervisors endorse a policy of cooperation and administration and management of the Golden Gate National Recreation Area including the property owned by the City and County of San Francisco located within the Recreation Area. (June 9, 1972)".

Before the transfer occurred, an Agreement/ Memorandum of Understanding (MOU) between San Francisco and the Federal Government gave the City Planning Department jurisdiction to review NPS plans within formally owned City lands after their incorporation into the GGNRA. Department of City Planning memos from the 1970s confirm that the MOU requires that all NPS proposals be submitted to the Department for review.

As minutes of the San Francisco City Planning Commission, dated December 5, 1974 confirm, the resolution to transfer the property was approved on that day because the Commission was told: "the deed transferring jurisdiction over the parcel to the Federal Government would specify that the property should be used for Open Space and Recreational purposes only."

Even as the properties were being secured, the National Park Service was moving in the direction of abolishing the National Recreation, Historical Monuments, and Wilderness Management categories. The General Authorities Act of 1970 began the legal unraveling of the three management categories. Officials in Washington assured field operations that these changes were administrative and "not intended to create significant changes in the management of parks." (Administrative History of Point Reyes National Seashore)

But in reality, the move was being made to reverse the priority of recreation. We shall now track the progression of this move to place "preservation/restoration" over recreation.

Considering his representations to SF voters and elected officials, it seems duplicitous at best that in 1977 the same William J. Whalen (recently promoted to Director status in the NPS) officially dismantled the three-category distinctions which provided different management for National Recreation Area category properties (which included the GGNRA). To answer the obvious question as to how the priority of recreation was still to be honored, it was said the promulgation of new regulations were developed

to reflect "the actual Management practices which have become established in park areas, either through legislative requirements or policy decision." (Memo from Associate Director, Management and Operations to Directorate and Field Directorate, 12/22/77).

Congress bolstered NPS Director Whalen's decision to further de-emphasize the Recreational preference in the Redwoods Act of 1978, which included an amendment to the 1970 General Authorities Act declaring the "regulation of the various areas of the National Park System, ... shall be consistent with and founded in the purpose established by the [Organic Act] to the common benefit of all the people of the United States." (Administrative History of Point Reyes National Seashore)

Acting on the promise to the city and the mandate to manage park resources "consistent with sound principles of land use planning and management" for the "maintenance of needed recreational open space necessary to urban environment and planning", NPS developed the 1979 Pet Policy through the auspices of the Citizens Advisory Commission which designated certain areas for voice control in San Francisco and Marin counties. The development of this policy was initiated "because the ordinary guidelines outlined in the Code of Federal Regulations do not really apply in an urban area. People and their animals have been visiting the park for too long to apply an all-inclusive arbitrary policy."

Documents relating to development of the policy leave no question that NPS and not the Citizens Advisory Commission developed the off-leash policy for GGNRA. In October, 1977, Rolf Diamont, GGNRA "Environmental Coordinator" prepared a memo proposing a "Draft Dog Policy for San Francisco Unit." His memo enumerated the following guidelines:

1 "No regulation, verbal or written, should be attempted that cannot be reasonably and consistently administered."

2 "Dog regulations should be different for different areas of the park reflecting public needs and attitudes as well as urban geography and our capabilities."

3 "When we discourage or restrict dogs in any area, whenever possible, an alternative site where dogs are allowed should be suggested."

Each precept is consistent with "sound principles of land use management". To facilitate public review of the proposed policy, the Citizens Advisory Commission established a Pet Policy Committee to conduct hearings on the proposed policy. A briefing memo for the record prepared by the Staff Assistant to General Superintendent dated April 3, 1978 acknowledged that 36 CFR 2.8 leash law was "applicable to all properties of GGNRA". NPS

realized a special regulation would have to be prepared. "A deviation from this regulation will require the writing of a special regulation specific to GGNRA". The leash law was not enforced while the new policy was being developed: "Enforcement of the CFR has been non-existent until a dog policy and possibly a special regulation is established. "

The 1979 Pet Policy was established as the official off-leash recreation policy for the GGNRA as required by the enabling statute and the promise made to the city. NPS issued press releases of the official off-leash policy (Lynn Thompson memo to Coalition For San Francisco Neighborhoods, 10/17/78). Again, NPS told San Francisco this policy was developed because the "[e]xisting federal regulations' were not "a viable situation in an urban area".

By summer of 1979, GGNRA had initiated the process to bring federal regulations into compliance with the enabling legislation and the off-leash policy. A draft special regulation 7.97(b) was submitted to the Western Regional Director NPS for approval. Department of Interior Solicitor Ralph Mihan reviewed the draft proposed regulation and found "the proposed regulation to be legally acceptable", but advised the formal request should include a "authorship statement or a statement of significance" which "must be included within the rulemaking package before its transmittal to Washington." (Ralph Mihan, Solicitor to Western Regional Director, Re: Proposed Rulemaking Golden Gate National Recreation Area (Pets), 7/23/79). The draft proposed regulation in fact contained a statement of significance, the Section Seven Amendment was being proposed "because large portions of land formerly used as pet exercise areas have been included with Golden Gate National Recreation Area." (1/9/80 Regional Director memo to Superintendent GGNRA: Re: Proposed Special Regulation -Pets USPRODo0386-8). The proposed regulation also called for public comment "within 30 days of the publication of this notice in the Federal Register."

Although this 1979 Pet Policy was consistent with the statutory mandate for the GGNRA to provide "needed recreational open space necessary for urban environment" and required by the promise made to San Francisco when city property was donated to the park, officials in Washington D.C did not finalize the Section Seven Special Regulation to bring their regulations into compliance with the enabling statute. Subsequently the 1979 Pet Policy guidelines were incorporated into the 1982 Natural Resources Management Plan as Appendix C. The duplicity lay in the GGNRA's intentional failure to designate the 1979 Pet Policy as a Section Seven Special Regulation-the type of regulation referred to in the Memo dated 12/22/77 referenced above. The significance of this will be apparent in 2001.

Finally, Director William J. Whalen's 1980 NPS Management Policies produced a systemwide change in overall policy and management. The clear

directive was preservation first, recreation second." (Administrative History of Point Reyes National Seashore)

If you look at some of the GGNRA's management activities, you have cause to wonder if the GGNRA really wants us in "their park". For example, in 1989 the GGNRA, under the supervision of Brian O'Neill, signed on to a biosphere habitat program entitled "Man and Biosphere Habitat Programme" ("MAE" or "MAP"). One would be hard pressed to find a philosophy in greater conflict with the recreational priority of the GGNRA than that of Peter Bridgewater, Secretary of the MAB/MAP Programme, who has said, "Earth would be a better place if we had no people." The year of 1989, when the Biosphere program began, saw visitors drop by over 5 million in this Recreation Area that otherwise had shown steady growth in recreation visitors since they started tracking visitors in 1973.

In 1992 Bill Clinton's newly appointed Secretary of the Interior, Bruce Babitt, had a different vision for the National Parks System. A new anti-recreation ideology pervaded Park Service policy. Despite the legislative mandate that sound land use principles be applied "to maintain needed recreational open space necessary for urban environment", NPS summarily closed off in August of 1996:

? over 15 miles off-leash recreational space in San Francisco ? 11 miles of trail in Presidio ? 2.2 miles at Ocean Beach ? Lands End ? Fort Miley

The aforementioned Diamont memo confirms that all closures affected areas used for this recreational activity before the park was established: Ocean Beach, Fort Funston, Sutro Heights Park, Phelan Beach, Lands End, and Baker Beach. Diamont's comments concerning Ocean Beach explain why that closure has been unsuccessful:

"Ocean Beach: no rules should be enforced here. Ocean Beach is too large and too accessible to control dogs. It would be a logistical nightmare for the Park Service to try. Also lifestyles are such on Ocean Beach, that an inflexible NPS here could hurt our improving relations with visitors."

The DEIS states: "Since the 1990s, the San Francisco Bay Area population and overall use of GGNRA park sites have increased, as have the number of private and commercial dog walkers. At the same time, the number of conflicts between park users with and without dogs began to rise, as did the fear of dogs and dog bites or attacks."

With respect to the claim in the DEIS that use of the Recreation Area had increased, two points can be made. First, increased usage over time was anticipated when this National Recreation Area was created. The House Report No 92-1391 made clear that the GGNRA would be confronted with

problems in San Francisco that would require careful planning because of the high volume year-round visitation:

"As a national urban recreation area, this new component of the national park system will be confronted with problems which do not frequently occur at other national park and recreation areas. Great numbers of people can be expected to use the area-particularly those portions located in San Francisco County." (pg. 11)

There is no surprise here. Therefore, abandonment of the principles outlined in the enabling legislation, in an absence of appropriate monitoring of resources, as proposed in this DEIS is not an acceptable management reaction to increased usage of the GGNRA by citizens.

Second, the number of park visitors has NOT increased dramatically over the past 20 years. In fact, in 1987 the GGNRA experienced its greatest number of visitors, coming in at 21,767,176 recreational visitors. According to NPS statistics, in 2010, the total number of recreational visitors was 14,271,503, down about 34% from 1988.

Consider also that in the past 20 years the GGNRA acreage has almost doubled in size, and expanded into San Mateo County. This puts a far larger population in direct proximity to the Recreation Area, yet the visitor numbers are down dramatically. Users of the GGNRA will tell you that this DEIS is just a reflection of the management priorities that Brian O'Neill started with his Biosphere commitment that have systematically denied and discouraged access for the public to this Golden Gate National Recreation Area.

Evidence the issue was really a new ideology is the fact that the GGNRA experimented with changing its name to Golden Gate National Parks (GGNP) in an effort to convince citizens of the Bay Area that the paramount mission of the NPS is to bring the wilderness to the City. On August 28, 2001, the GGNRA Advisory Commission meeting was opened by Chair Rich Bartke as a regular meeting of the Advisory Commission to the National Parks in the Golden Gate Area. Mr. Bartke was asked to correct that reference by a concerned citizen, Michael Goldstein. Mr. Goldstein stated publicly in his comments to the Commission that this was not the first time he had addressed the Commission on this topic and that this practice of omitting the word "recreation" from the Park's name had become a matter of public concern. This runs counter to the intentions of the City of San Francisco and its citizens who had been promised that the GGNRA will remain an urban recreation area.

The DEIS further states: During this period (2001), it was clarified by the Department of Justice, U.S. Attorney, and the Department of the Interior

Solicitor Offices that the voice-control policy then in effect at Fort Funston and other locations in the park was contrary to NPS regulations. In a public meeting in January 2001, the Commission acknowledged that the voice control policy was contrary to 36 CFR 2.1s(a)(2), prohibiting off-leash dogs in national parks, and therefore illegal and unenforceable.

Now we see the significance of the GGNRA/NPS decision to refrain from making the 1979 Pet Policy a Section Seven Special Regulation. By doing so, they were able to exercise "plausible deniability". In reality, this is just one more example of how the GGNRA has dealt in bad faith with the public whom they, in theory, serve.

The public and elected officials were incensed at the GGNRA change in policy. Indeed, in 2001, a Resolution was approved by the San Francisco Board of Supervisors, detailing the history of the relationship between the City, the public and the GGNRA. The Resolution (and its findings) is so significant that it is quoted in full below:

RESOLUTION for S.F. Board of Supervisors Vote [Urging GGNRA to delay leash enforcement - Passed on December 10, 2001]

Resolution requesting the National Park Service to delay enforcing, in the San Francisco parks situated in the GGNRA, 36 C.F.R. 2.15, requiring pets to be on leash in national parks, until the ANPR process has been completed.

WHEREAS, In 1975, the City and County of San Francisco transferred Fort Funston and other City-owned park lands to the federal government to be included in the Golden Gate National Recreation Area (GGNRA), to be administered by the National Park Service (NPS); and,

WHEREAS, The statute creating the GGNRA (16 U.S.C. Section 460bb) specifically states that the GGNRA was established to provide for the maintenance of needed recreational open space necessary to the urban environment and planning and requires that the Secretary of the Interior "utilize the resources in a manner which will provide for recreation and educational opportunities consistent with sound principles of land use planning and management;" and,

WHEREAS, Former Charter section 7.403-1 (a), as approved by the voters, required that the deed transferring any City-owned park lands to the NPS include the restriction that said lands were to be reserved by the Park Service "in perpetuity for recreation or park purposes with a right of reversion upon breach of said restriction;" and,

WHEREAS, When Fort Funston and other City-owned parks were transferred to the federal government, a federal regulation existed requiring

all pets to be on leash in federal parks, yet the NPS chose not to enforce this regulation in the San Francisco City parks; and,

WHEREAS, In April 1978, the GGNRA stated its position that "the ordinary guidelines outlined in the Code of Federal regulations do not really apply in an urban area," and that "people and their animals have been visiting the park for too long to apply an all-inclusive arbitrary policy;" and,

WHEREAS, The Superintendent of the GGNRA in the spirit of this statement developed a draft pet policy and submitted it to the GGNRA Advisory Committee for further review and public hearings; and,

WHEREAS, In September of 1978, after extensive public hearings and public surveys, the Advisory Commission proposed guidelines for a pet policy for the San Francisco Unit of the GGNRA, designating Fort Funston, Lands End, Ocean Beach, Fort Miley, Baker Beach, and Crissy Field for continued off-leash recreation; and,

WHEREAS, On October 6, 1978, GGNRA General Superintendent Lynn Thompson accepted these designations with the following comment: "As you know, the Advisory Commission approved the proposed guidelines for a pet policy in the San Francisco Unit of the GGNRA at their September 27 meeting," and she continued, "We are accepting in total the Commission's recommendations for each of these areas;" and,

WHEREAS, On February 24, 1979, the GGNRA finalized the pet policy for both San Francisco and Marin County, establishing areas where pets could be exercised off-leash; and,

WHEREAS, In 1982, the 1979 Pet Policy was incorporated into the GGNRA Natural Resources Management Plan as Appendix C; and,

WHEREAS, On July 8, 1992, NPS Western Regional Director Stanley Albright assured U.S. Senator John Seymour that "there is no change in the 1979 Pet Policy which provides the visitor of walking one's dog off leash"; and,

WHEREAS, By letter dated July 8, 1992, Western Regional Director Stanley Albright also assured U.S. Senator Cranston that there would be no change in the 1979 Pet Policy; and,

WHEREAS, On February 5, 1999, Pacific Western Regional Director John Reynolds assured U.S. Senator Dianne Feinstein that the "GGNRA has adopted a pet policy that is more liberal than the regulations enforced at other national park sites throughout the United States, where pets are required to be leashed at all times and are, for the most part, excluded from

all but developed areas," and the letter continued, "[The] GGNRA " has, with the assistance of the park's Advisory Commission, established a pet policy that allows some opportunity for visitors to enjoy a few designated areas as voice control areas where pets are allowed off-leash;" and,

WHEREAS, On March 19, 1999, GGNRA Superintendent Brian O'Neill stated to U.S. Congresswoman Nancy Pelosi, the "GGNRA has adopted a pet policy that is more liberal than pet regulations at other national park sites throughout the country ... certain areas of the park have been designated as voice control areas where pets are permitted off-leash;" and,

WHEREAS, In November of 2000, the GGNRA Advisory Committee attempted to revoke the 1979 Pet Policy, but failed due to a point of order; and,

WHEREAS, On January 23, 2001, over 1,500 people attended the GGNRA Advisory Committee meeting to protest revocation of the 1979 Pet Policy, nine San Francisco supervisors spoke, and both Senator Speier and Assemblyman Shelley sent letters to be read by their representatives; and,

WHEREAS, The Advisory Committee recommended that the GGNRA hold meetings with stakeholder groups within the next 120 days to resolve the issue, and to not change leash enforcement for this period; and,

WHEREAS, The Advisory Committee at this meeting did not vote on the Pet Policy; and,

WHEREAS, Rather than hold stakeholder meetings, the GGNRA received permission from Washington for a more formal process called Advance Notice of Proposed Rulemaking (ANPR), but this process has not begun; and,

WHEREAS, In November, 2001, the GGNRA began to aggressively enforce the leash requirement at Fort Funston, sending teams of law enforcement rangers for 2 to 3 hour segments, and issuing tickets for walking dogs off-leash without initiating the ANPR process in good faith with the public; and,

WHEREAS, Off-leash recreational users believe that off-leash recreation is legal at Fort Funston, and they agreed to go through the ANPR process and further rulemaking in order to obtain a special rule for the GGNRA that specifically recognizes that off-leash dog-walking is permissible in certain GGNRA parks; and,

WHEREAS, The Board of Supervisors of the City and County of San Francisco finds that the recent enforcement of 36 C.F.R. 2.15 is in contravention to the representations made to the public at the Citizens

Advisory Committee meeting on January 23, 2001; now, therefore, be it

RESOLVED, That the Board of Supervisors of the City and County of San Francisco hereby requests the National Park Service not to enforce, in the GGNRA parks which were donated to the federal government by the City and County of San Francisco, 36 C.F.R. 2.15, which requires that all pets be on leash in federal parks, until the ANPR process has been satisfactorily completed; and, be it

FURTHER RESOLVED, That the Board of Supervisors of the City and County of San Francisco hereby requests the NPS to advise the Board as to the status of the ANPR process; and, be it

FURTHER RESOLVED, That the Clerk of the Board of Supervisors shall send copies of this resolution to the offices of United States Senator Dianne Feinstein, United States Senator Barbara Boxer, Congresswoman Nancy Pelosi, Congressman Tom Lantos, State Senator John Burton, State Senator Jackie Speier, Assemblywoman Carole Migden, Assemblyman Kevin Shelley, GGNRA Superintendent Brian O'Neill and the National Park Service.

Unfortunately, the GGNRA ignored the Resolution, and in 2002 instituted a ban on off-leash recreation and began ticketing dog guardians for recreating with their dogs off-leash. As mentioned in the Resolution, pressure from the City of San Francisco to take back the management of these properties in the courts, as well as the Federal court confirming other violations of law the GGNRA had been guilty of, caused the GGNRA to invite the public to petition the Federal government for the ability to create a Section Seven Special Regulation for off-leash recreation in the GGNRA (ANPR).

The public submitted thousands upon thousands of requests to the Federal government, and a Federal Panel reviewed the history and legal agreements for the GGNRA. The Federal Panel that reviewed the applicable authorities, policies, planning guidelines, and information on Park setting, natural and cultural resources, and public safety developed the following observation (among others):

"GGNRA parkland is immediately adjacent to San Francisco, one of the most densely populated urban centers in the United States of America, and manages a significant portion of recreational open space in the city. Most residents do not have 'backyards' or access to private open space to exercise their pets off-leash. Residents rely on the close proximity of GGNRA open space for this purpose." (ANPR Decision Documents; Federal Panel Recommendations, supra, Section 3, emphasis added.)

"... [the GGNRA should] clearly distinguish between on-leash, off-leash, and

no pet areas to avoid management and public confusion." (Federal Panel Recommendation to the General Superintendent on Proposed Rulemaking for Pet Management at Golden Gate National Recreation Area, Section 4 ("Federal Panel Recommendations"). p. 11 (Revised November 7, 2002). [See http://www.nps.gov/goga/pets/anpr/pdf/federal_panel_recommendation.pdf.]

The Federal Panel concluded in its November 2002 recommendation to the GGNRA it would be appropriate to create a Section Seven Special Regulation to allow off-leash recreation in the GGNRA.

At that time, the GGNRA could have instituted the 1979 Pet Policy as the Section Seven Special Regulation for the GGNRA. Instead, they decided to institute Negotiated Rulemaking (NR) to create a new pet management policy for the GGNRA.

Prior to NR starting, in 2004, a Federal magistrate reviewing tickets issued to dog guardians determined that the 1979 Pet Policy had been illegally rescinded, and re-instated the 1979 Pet Policy as the controlling law for off-leash recreation in the GGNRA.

Again, even with the legal protection of a court order, the GGNRA chose not to institute the 1979 Pet Policy as the new Section Seven Special Regulation. Instead, the GGNRA appealed the Federal Court's decision. In 2005 the GGNRA lost their appeal. The 1979 Pet Policy was affirmed as the controlling pet policy in the GGNRA.

Judge Alsup of the Federal Court noted in his decision affirming reinstatement of the 1979 Pet Policy in the GGNRA, his findings regarding the history of pet management in the GGNRA:

"In sum, for more than twenty years, the GGNRA officially designated at least seven sites for off-leash use. This was not accidental. It was a carefully articulated, often studied, promulgation. The responsible GGNRA officials in 1978 and thereafter presumably believed they were acting lawfully. Even now, the government concedes that the GGNRA had full authority at all times to relax the general leash rule at the GGNRA but argues it could have done so, at least after 1983, only via a "special regulation." In other words, the agency allegedly used the "wrong" procedure back in 1978 (and thereafter) even though a "right" procedure to reach the desired result was available and could have been used. The government has not revealed its internal justification for following the "wrong" process.

Whatever it was, the justification was abandoned in 2002 with the two-word explanation that it had been "in error." With this ipse dixit, the NPS wiped away two decades of policy, practice, promulgations, and promises to the

public." (United States v. Barley, Order Of Affirmance, supra, p. 5.)

Received: May,27,2011 00:00:00

Correspondence Type: Letter

Correspondence: The GGNRA continued to flout both recommendations that it solicited from the Federal Panel and the Court decision to reinstate the 1979 Pet Policy as the law governing pet management in the GGNRA. In 2007, Daphne Hatch, Chief of Natural Resources Management and Science for the GGNRA was quoted in the San Francisco Chronicle as saying: "Ocean Beach without the people is an incredible habitat. But people think of it as a sandbox or their backyard."

While Superintendent O'Neill gratuitously stated that the Court "effectively reinstated the 1979 Pet Policy", the GGNRA refused to acknowledge the reinstatement of the 1979 Pet Policy in the manner prescribed by law, 36 C.F.R. Section 1.7(b). There was no written designation of the reinstated off-leash properties; indeed, the GGNRA used this murky situation to continue to harass and ticket off-leash dog-walkers in areas that were off-leash pursuant to the 1979 Pet Policy and amendments thereto. In addition, the GGNRA, in violation of 36 C.F.R. Section 1.7(a)(4), persisted in ignoring the Court's ruling and misinforming the public. For example, on the NPS website, under the heading, "Dogwalking Information and Regulations", a statement dated June 8, 2005, proclaims: "Due to the recent court ruling, this information is under review and will be revised shortly." A brochure found online at the NPS website entitled, "Enjoying the Park with your Dog", advises readers that, "Where dogs are permitted, Federal law requires that they be on a leash, not to exceed six feet in length, in all units of the National Park System."

In addition, for over a year, GGNRA management refused to change the signage in the Park to reflect the Court's ruling in derogation of 36 C.F.R. Section 1.7(a)(1)(4). For photo documentation of the illegal signage, see <http://oceanbeachdog.home.mindspring.com/id8.html>. This illegal and confusing signage clearly created user conflict and was detrimental to the safety and enjoyment of those visiting the GGNRA.

I would add as an aside at this point, objectives listed in this DEIS were the desire to enhance Visitor experience and Safety, enhanced compliance with Dog Rules, and Park Operations. It should be evident from this point in GGNRA history, that the greatest obstacle to fulfilling these objectives was and still is GGNRA Management itself.

Despite the fact that GGNRA management had been given permission to create a Section Seven Special Regulation for off-leash recreation in the GGNRA; when the Court reinstated the 1979 Pet Policy, the Superintendent refused to

make the 1979 Pet Policy a Section Seven Special Regulation. He instead instituted a Negotiated Rulemaking (NR) process that was conducted in bad faith, was unlawful and did not reach consensus. The GGNRA refused to acknowledge the 1979 Pet Policy as the logical starting point for NR. In fact, the 1979 Pet Policy was not listed as a document the NR Committee would be able to refer to within the NR process. The GGNRA continued to cling to their view that the 1979 Pet Policy was an illegitimate document which NEVER had the power of law despite the contrary findings of the Court.

NR required consensus among participants. If consensus was not reached for a Section Seven Special Regulation, the GGNRA was allowed to create a Rule arbitrarily, as it did when they rescinded the 1979 Pet Policy. In fact, even if the NR did reach consensus, the GGNRA maintained that they were still free to ignore the findings of the NR process and subsequently create its own rule.

The GGNRA selected the participating groups and their representatives. Six of the nineteen groups that participated had submitted a petition to the Federal government asking that ALL off-leash recreation in the GGNRA be banned. These same groups had both publicly and privately stated they saw NR as a means to eliminate off-leash recreation from the GGNRA entirely. Despite protests, they remained on the NR Committee.

I was initially slated to participate in NR as a representative for Ocean Beach DOG (OBDOG). When I discovered the flawed manner in which this process was to be conducted, I complained. Instead of resolving my legitimate complaints about the process, the GGNRA/NPS/DOI threw me off the NR Committee. NR predictably came to an end without consensus, and was a colossal waste of taxpayer money to the tune of over five hundred thousand dollars.

Subsequently, the initiation of the DEIS was announced. The explanation for this might be found in a quote from then Western Regional Director (now NPS Director) Jon Jarvis. At the NPS Centennial Initiative Listening Session (Presidio Officer's Club, San Francisco, Calif., March 22, 2007) Director Jarvis said to me and my husband, and I quote, "I would rather give up those [the GGNRA] properties than have dogs running loose on them." In 2008, the GGNRA supported an attempt by Nancy Pelosi to surreptitiously slip a Park name change (and therefore a change in the governing mandates) from National Recreation Area to National Park through bill H.R. 6305. This action can be construed as an admission that the NPS/GGNRA is aware their actions do not conform to the enabling legislation. Public outcry upon the discovery of this section in HR 6305 forced Nancy Pelosi to withdraw her blatant attempt to circumvent the will of the people and the Federal Court.

Now in 2011, we are presented with this 2400 page DEIS.

Evaluation Of The Actual DEIS

There is no "monitoring of the vital signs" of the GGNRA to support the premise of this DEIS. Further, the failure to complete vital signs monitoring in a competent manner violates Federal law as outlined in the NPS resource "Vital Signs Monitoring".

(<http://science.nature.nps.gov/im/monitor/LawsPolicy.cfm>). A list of laws violated due to the failure to monitor (per this resource) is listed below:

? National Park Service Organic Act ? General Authorities Act of 1970 ?
Redwood National Park Act ? National Environmental Policy Act of 1969 ?
Clean Water Act ? Clean Air Act ? Endangered Species Act of 1973 ?
Environmental Quality Improvement Act of 1970 ? Coastal Zone Management
Act of 1972 ? Marine Protection, Research, and Sanctuaries Act of 1972 ?
National Parks Omnibus Management Act

The failure to complete competent "vital monitoring" results in the following fatal flaws in this DEIS:

1) The Draft Plan/DEIS assumes but does not provide the required rigorous analysis that resource conditions result solely from dog use of the sites, discounting the contribution from other visitors and recreational users. The Draft Plan/DEIS does not address the contribution of other impactful activities, including special events, to the resource conditions and existing impacts at each of the GGNRA sites.

2) In many places, the Draft Plan/DEIS does not provide any data on actual impacts by dogs in areas being proposed for new dog walking restrictions. The words can, may, and could are everywhere in place of hard facts which would have been in evidence had the required "vital monitoring" been done. In places where data are provided, the Draft Plan/DEIS makes undocumented assumptions that there are unacceptable impacts and that dogs are the culprits.

3) The Draft Plan/DEIS assumes species are present in areas where there is no record of their presence. In other places, there is inconsistent information about the presence of species.

4) Many of the findings in the Draft Plan/DEIS are founded on a reference included in the document as Appendix G, "Law Enforcement Data" (NPS 2008c). This reference document is critically deficient in substantiating statements made in the characterization of existing conditions and in the analysis of the environmental consequences. For example, an entry is as follows: "observed a black dog chasing a flock of 14 snowy plovers. I observed the dog chasing the birds from the water to the dunes and up and down the beach for several hundred meters north and south. The dog would charge at the birds and the Plovers would fly away from the dog. Each time the Plovers would attempt to

land, the dog would charge directly at them and cause them to takeflight again. I watched this happenfor continuallyfor eight minutes timed by my watchfrom 1150 to 1158 hours. Then the dog stopped chasing the Plovers and wandered in the hilly dunes to the northfor several minutes. The dog then returned to chasing the Snowy Ploversfor a few minutes more ... After the dog ceased chasing the Plovers, they stopped taking flight and started feeding at the water line." Clearly, if this dog was chasing plovers, they would not have returned to feeding at the water line after the chase was over. Plovers feed at the high tide line when the water has already retreated. These were sanderlings, birds that appear almost identical to the plover, are plentiful at Ocean Beach (not threatened or endangered) and can be differentiated by different feeding patterns and different resting patterns.

5) The affected environment section mentions California Native Plant Society (CNPS)-listed species as having the potential to occur within the GGNRA but no data are provided as to where/if they are actually present.

6) The Draft Plan/DEIS assumes, but fails to demonstrate, the "cause and effect" relationship that where dogs are present within GGNRA sites, there is a disturbance of natural resources or demonstrate that the disturbance of resources is attributable to dogs (versus other factors).

7) The Soils and Geology section (page 225) includes the following statements: "Dogs and dog walkers that do not stay on designated trails and venture offtrail create social trails that become denuded ofvegetation and result in increased soil compaction." and "Soil compaction is common along social trails that have been created by -and are heavily used by -bikers, hikers, runners, and dog walkers." The baseline for comparison throughout the Draft Plan/DEIS should not be an environment in which it is assumed that there is no impact unless dogs are present, but one in which the impact of dogs is added to the impact of humans. There is little or no objective measurement of trail degradation in this DEIS. Condition-class systems are commonly used in visitor impact monitoring, and trail incision measures assess erosion but we do not see those measurements in this DEIS. Once again, the "vital sign monitoring" is entirely absent in this DEIS.

8) Because the draft EIS does not recognize recreational resources as an environmental resource, the analysis of the environmentally preferable alternative is flawed. Recreation is identified in the GGNRA enabling legislation as one of the four outstanding values to be maintained and protected. In doing so, the enabling legislation recognizes that the achievement of these outstanding values is not mutually exclusive.

9) When new lands become part of GGNRA, the recreational uses existing at the time of acquisition should be allowed to continue unless GGNRA determines, through the public land planning (vital monitoring) and NEPA process that

unacceptable impairment would occur.

10) The Draft Plan/DEIS not only fails to disclose and evaluate the impacts of the alternatives on recreational resources in the context of an urban environment, it dismisses the quality of the urban environment entirely on page 22 where it states, "the quality of urban areas is not a significant factor in determining a dog management plan." As recognized in its enabling legislation, one of the most important aspects of the GGNRA is the sharp contrast between its undeveloped open spaces and the adjacent developed urban environment. The GGNRA's open space and recreational opportunities are intended to provide refuge and relief for nearby urban dwellers. According to NEP A, An EIS is required to analyze the human environment. The federal NEP A rules define the human environment and its scope in an EIS as follows: "Human environment shall be interpreted comprehensively to include the natural and physical environment and the relationship of people with that environment." When an EIS is prepared and human and natural/physical environmental effects are interrelated, the EIS should discuss all of these effects on the human environment. The flaws listed above will be highlighted by further analysis of the Western Snowy Plover at Ocean Beach and Crissy Field, the Bank Swallow at Fort Funston, Sweeney Ridge, Mori Point, Muir Beach and review of trails in Marin County.

Alleged Protection For The Western Snowy Plover

This DEIS proposes to further restrict dogs at Ocean Beach and Crissy Field based upon an alleged necessity to protect the Western Snowy Plover. The language of the Endangered Species Act contemplates and supports the position that any loss of these recreational areas for such purpose be balanced by scientific proof that such sacrifice will indeed help save the plover from extinction.

The requisite monitoring of the plover (as dictated by NPS regulations) in the GGNRA has not been completed in a manner that would provide scientific proof of a need for restrictions. In fact, even the GGNRA admitted in 1996 that the scientific evidence showed that restriction of off-leash recreation will NOT increase the number of plovers at Ocean Beach. It is more likely that the restriction of off-leash recreation in these areas will negatively impact the plover population.

There was a "study" at Ocean Beach in 1996 by Daphne Hatch, GGNRA Wildlife Biologist, which was more of an inventory assessment, and its conclusions are fatally flawed. I will review that "study" in detail here. The next "study" the GGNRA performed with respect to this "threatened" resource at Ocean Beach was in 2006. Hardly an example of vital signs monitoring that meets the standards described in NPS documents. Restrictions were implemented at both Ocean Beach and Crissy Field, based upon this "study" although the "study" was only conducted at Ocean Beach. Further, without

mitigation measures implemented over this 10 year time span, and without coordination of intermittent monitoring, it is impossible to draw any conclusions as to the benefit/detriment of restricting or eliminating dogs within these respective ecosystems. The last "study" of the plover in this DEIS was performed in 2008, and is at Crissy Field only. This "study" will be reviewed within this document, but it is again fatally flawed in many respects.

Is The Western Snowy Plover In Danger Of Extinction?

The best scientific data currently available establishes that the Western Snowy Plover is not threatened or endangered (at risk for extinction) at all. Significantly, a study commissioned by the US Fish and Wildlife Service (USFWS) and the US Geological Service (USGS) in June of 2000 noted: "Coastal and inland populations of Snowy Plovers in the western United States are currently being managed separately; coastal populations are protected as a Distinct Population Segment under the U.S. Endangered Species Act, while inland populations are not listed. Our study provides no evidence of genetic differentiation between coastal and inland populations." (Emphasis added.) These findings demonstrate that the Western Snowy Plover population is far greater than previously believed, and so large as to no longer qualify the Western Snowy Plover as either threatened or endangered.

Why Is The Western Snowy Plover Still Considered Threatened With Extinction?

The latest decision by the USFWS to continue to keep the Western Snowy Plover (WSP) on the Endangered Species List (ESL) is a clear example of the violation of the Endangered Species' Act's requirement that decisions be "based upon the best scientific and commercial data available". Traditional tenets of science (the scientific method) have been ignored to justify this conclusion.

The scientific method is the process by which scientists, collectively and over time, endeavor to construct an accurate (that is, reliable, consistent and non-arbitrary) representation of the world. In summary, the scientific method attempts to minimize the influence of bias or prejudice in the experimenter when testing a hypothesis or a theory.

The scientific method has four steps

1. Observation and description of a phenomenon or group of phenomena. Based upon monitoring of the movements of the plovers on the west coast (the WSP) and inland plovers, and the perceived decline of the WSP, the USFWS became concerned as they believed the WSP was a species distinct from the large inland population of plovers, and as such required protection from extinction. The Western Snowy Plover was first listed as a threatened species in 1993. Quoting

the USFWS (all of their quotes will be italicized):

"The 1993 listing rule stated that the Pacific Coast WSP is "genetically isolated" from the interior breeding populations (58 FR 12864). We based this conclusion on banding and monitoring data, not genetic data. At the time of listing, we assumed the reproductive separation indicated by the banding data, over time, could lead to genetic differentiation. Genetic data or the western snowy plover was not available in 1993. /I

2. Formulation of a hypothesis to explain the phenomena. The hypothesis, as stated above, was: Because there was little or no breeding observed between the WSP and the inland population of plovers, the WSP was genetically different than the large population of plovers living inland, and being in decline, the WSP required protection.

3. Use of the hypothesis to predict the existence of other phenomena, or to predict quantitatively the results of new observations.

Should genetic testing be performed, the USFWS expected to see genetic differences between the coastal WSP population and the large inland population, which would confirm the need for protection of the WSP. The USFWS had no genetic data to confirm their hypothesis. However, apparently the ESA allows the USFWS to move to protect a species first, and investigate to be sure, later. There are timelines specified by law as to how long the USFWS has to test their hypothesis, and it does seem they were abused. In the meantime, measures were taken to protect the WSP, which included most notably for the public, restriction of beach access.

4. Performance of experimental tests of the predictions by several independent experimenters and properly performed experiments.

In fact, a study was done many years later funded and approved by the USFWS and the USGS to test the USFWS hypothesis.

"...a master's thesis (Gorman 2000) that did not find evidence of genetic differentiation between the Pacific Coast WSP and western interior snowy plover populations using mitochondrial DNA (mt DNA). tt

The Scientific method concludes: If the experiments bear out the hypothesis it may come to be regarded as a theory or law of nature If the experiments do not bear out the hypothesis, it must be rejected or modified.

So, now that the USFWS hypothesis had been disproved, and the WSP could not be distinguished genetically from the very large inland plover population did the USFWS move to delist the WSP? NO. In fact, they continued to proceed to implement management policies to protect the WSP, further restricting the

public's access to beaches on the Western coast. Several entities (City of Morro Bay and Surf Ocean Beach Commission) who were suffering due to those management policies decided to sue the USFWS to force them to re-evaluate this situation.

The announcement to retain the WSP's listing as a threatened species on April 21, 2006 is the USFWS response to this lawsuit. It appears that the USFWS, not wishing to delist the plover, refused to reject their hypothesis or modify their hypothesis that the WSP was genetically different, even though it had been reliably disproved. It is not revealed in the announcement how this came about, but it appears that the USFWS authorized another study in an attempt to refute this first study that disproved their hypothesis. USFWS stalled the court proceedings, possibly because they were counting upon the results of this second study using another method of DNA testing to substantiate their original hypothesis that the WSP was genetically different from the large inland population. The second study confirmed the results of the first.

"...a more recent study by Funk et al. (2006) includes analysis of microsatellite DNA markers. Funk et al. (2006) found no statistically significant genetic differentiation between Pacific Coast WSP and western interior snowy plover populations using mtDNA and microsatellite DNA markers. "

Did the USFWS at this point acknowledge their hypothesis was incorrect and move to delist the WSP because it is the same creature as the large population of plovers who live inland and whose numbers require no protection from extinction? NO.

Perhaps most telling is the general opinion of Daniel Funk who provided the second DNA study, and whom the USFWS certainly chose to rely upon: " ... it is important to use data from a wide range of criteria-interbreeding, nuclear DNA, behavior, morphology, ecology, etc.-not just mtDNA, when delimiting species boundaries."

This is indeed a disturbing concept, because this indicates Mr. Funk and the USFWS are quite comfortable setting public policy that restricts public access to thousands of miles of beach property based upon their personal definition of a species which may ignore verifiable hard DNA data in deference to intangible and/or incomplete data which is subject to bias. The USFWS chose to rely upon outdated, observational data regarding the lack of interbreeding of the WSP and the larger inland population to conclude that these two populations are separate and distinct and that the WSP should therefore, still be protected.

"In this finding, we rely primarily on the banding and resighting efforts conducted during the period of 1984 through 1993, as this is the period when banding efforts were underway at several areas on the Pacific coast and in the western interior, and nest monitoring studies and breeding season surveys were

underway at many locations when banded birds could be detected. Interior populations have not been banded since 1993 (L. Stenzel, in litt. 2005)."

Furthermore, the USFWS ignored yet another fundamental of the Scientific Method in the interpretation of this outdated data. The USFWS recruited four heavily biased researchers in favor of protection of the snowy plover to examine the banding data. All four are associated closely with the Audubon Society or Point Reyes Bird Observatory (PRBO). The Audubon Society formally opposed the delisting of the plover and officials at PRBO are in large part responsible for the initial listing of the plover as threatened. Not surprisingly, their conclusions were as follows:

" ... we conclude that the Pacific Coast WSP is markedly separate from other populations of the subspecies due to behavioral differences and that it, therefore, meets the requirements of our DPS policy for discreteness. Banding studies and resighting efforts demonstrate that during breeding, the Pacific Coast WSP segregates geographically from other members of the subspecies, even those that also winter on the Pacific coast. Although not absolute, this segregation is marked and significant. "... This behavioral difference tends to set Pacific Coast WSP individuals apart from the interior birds with which they may mix during the winter."

The USFWS has chosen to deviate from established scientific method, ignore incontrovertible, tangible, and specific data such as the two DNA studies, and rely instead upon clearly biased assumptions regarding the behavior and breeding of the WSP to justify their decision. The decision requires the USFWS to assume that there is little or no interbreeding between the populations. The decision requires the USFWS to assume that should the coastal plover population be lost, the inland population could not recolonize the coast. Neither of these assumptions has the benefit of reliable, incontrovertible data.

Therefore, since 20% of the plovers have decided they prefer to "hang out" on west coast beaches rather than with the rest of the genetically identical plovers inland, the general public will not be allowed that privilege.

For those unfamiliar with the genetic lexicon, consider how it is the Courts and the medical community determine the father of a child when it is in doubt. DNA tests are the standard test utilized, to the exclusion of all others. It would be a gross injustice for the Court to disregard DNA evidence that confirms the child's father is Mr. A, and instead conclude the child's father is Mr. B simply because the child behaved more like Mr. B.

Decisions made based upon intangibles, and without deference to hard, reliable scientific data are subject to abuse of discretion; and are the antithesis of the established "scientific method" which goes to great lengths to minimize the influence of bias or prejudice in the experimenter when testing an hypothesis or a

theory. The Endangered Species Act requires decisions to be based upon science's best evidence, not ideology or politics as it has been in the case of the Western Snowy Plover.

While I and others understand that the GGNRA cannot choose to ignore management of the Western Snowy Plover unless and until the USFWS formally delists the plover, we believe this evidence should temper the decision making when it will result in depriving the public of valuable recreational resources, as expressed in the language of the ESA.

Will Banning Dogs At Ocean Beach Help Protect The Plover From Extinction?

Putting aside the controversy as to whether the Western Snowy Plover is threatened with extinction or not, the United States Fish and Wildlife Service ("USFWS") Draft Recovery Plan for the Western Snowy Plover can answer this question. The Recovery Plan states that the Western Snowy Plover does not nest or breed at the Ocean Beach location. The Draft Recovery Plan also indicates that despite implementation of best management practices, this location (Ocean Beach) holds NO promise for the plover to nest or breed there in the future. (Table B-1, p. B-11.) Conversations with Gary Page of the Point Reyes Bird Observatory (a central contributor to the USFWS Draft Recovery Plan) reveal that this conclusion was drawn primarily because the level of human activity is too high on some California beaches to ever support a breeding population of the plover. This is consistent with the conclusions of a UK study (specifically identified in the new studies section of this comment) which states, "Sites that are highly disturbed are not used by breeding birds, and therefore any increase in disturbance levels on these sites will not alter population size". Thus, the state of the evidence is that the survival or extinction of the Western Snowy Plover population will not be impacted by the management of Ocean Beach.

And in fact, the GGNRA is well aware that the number of plovers on Ocean Beach is not directly related to the number of people or dogs present on the beach. Indeed, the first Hatch Report regarding the WSP and dogs at Ocean Beach concluded: "Factors other than number of people or dogs, possibly beach slope and width, appear to exert greater influence over Snowy Plover numbers on Ocean Beach." (1996 Hatch Report, p. 10, emphasis added.) Further, Daphne Hatch's 1996 study for the GGNRA documented that since the off-leash policy was officially sanctioned in 1979, there has been an increase of more than 100 percent in the number of snowy plovers frequenting Ocean Beach. Even dog "rush hours" don't seem to faze the plovers—at least, GGNRA observers and analysts couldn't find any negative relationship between the number of dogs on the beach at any given time and the number of plovers on the beach at the same time (pg. 10, 13). Faced with this evidence, GGNRA officials twice acknowledged, at a December 16, 1996 "informational meeting" for San Francisco beachgoers, that banning off-leash recreation or banning dogs entirely at Ocean Beach would have NO effect on the number of plovers on Ocean

Beach. Despite this finding, the 1996 Hatch report still recommends the restriction of off-leash recreation at Ocean Beach.

The USFWS Declines To List Ocean Beach Or Crissy Field As Critical Habitat For The Western Snowy Plover

As stated before, the fate of the purportedly threatened Western Snowy Plover ("WSP") at Ocean Beach and Crissy Field will have no impact upon the overall survival of the species. Consider that the language of the Endangered Species Act ("ESA") itself states:

"The Secretary (of the Interior) may exclude any area from critical habitat if he determines that the benefits of such exclusion outweigh the benefits of specifying that area as critical habitat, unless he determines, based upon the best scientific and commercial data available, that the failure to designate such area as critical habitat will result in extinction of the species concerned. "

In concurrence, effective October 31, 2005 and again in 2011, the United States Fish and Wildlife Service ("USFWS") excluded all areas in the City and County of San Francisco as critical habitat for the WSP. In the text of the explanation of their decision in 2005, USFWS made the following findings:

+ Our current designation of critical habitat is different from the 1999 rule in two primary ways. In this designation, we utilized a different methodology for determining essential areas, and we relied upon additional scientific information which was not available in 1999. Thus, this rule, while similar in many respects to that in 1999, is a new designation, and does not designate the same areas. "

With respect to Ocean Beach, the following is stated:

+ We have decided not to include the suggested additional areas because they do not meet our three criteria from the Methods section: They do not support either sizeable nesting populations or wintering populations, nor do they provide unique habitat or facilitate genetic exchange between otherwise widely separated units. Although we do not consider these areas essential for recovery, we do consider them important, and will continue to review projects in these areas that might affect WSP as required by sections 7 and 10 of the Act. "

Allowing humans and off-leash dogs to enjoy Ocean Beach is not a new project; it is an activity that has persisted on Ocean Beach for well over 50 years. The language of the ESA contemplates and supports the position that any loss of these recreational areas be balanced by scientific proof that such sacrifice will indeed help save the WSP from extinction. Clearly, the decision not to include Ocean Beach or Crissy Field as critical habitat demonstrates that such scientific evidence cannot be provided.

Daphne Hatch's 1996 Study Is Fatally Flawed

Because the data do not support a conclusion that restricting off-leash recreation or banning dogs at Ocean Beach will increase the number of plovers, Daphne Hatch chooses to instead focus on the "disturbance" of the plover at Ocean Beach. However, no published study of a breeding bird quantifies the population consequences of disturbance. This is despite the fact that disturbance has been implied as a factor causing population decline for a wide range of species (Birdlife International 2000). Not surprisingly, it is postulated by Ms. Hatch that the energy expended by the plovers to avoid the disturbing dog is detrimental to their overall health and ability to breed, and as expected, no evidence is cited for such a conclusion. It is merely stated in the study, "little research has been conducted on the energetic effects of disturbance and whether individuals can compensate for this lost energy intake and the increased energy expenditure" (P.13). The NPS/JGNRA must consider the fact that the plover is known to annually migrate over 1,000 kilometers. In proportion to their size, this is the equivalent of a 6-foot human running 290 marathons. Does the energy expended when a plover moves 20 or 30 yards to avoid a roaming dog amount to anything significant?

Common sense would indicate that the "disturbance" issue has been substantially overblown, and no scientific study exists to contradict such common sense.

Out of 5,692 dogs observed during the one-and-a-half-year study by Ms. Hatch, less than one-third of one-percent chased plovers, and none ever caught or harmed one. An even smaller number "inadvertently" disturbed plovers, causing them to walk, run or sometimes fly out of reach. at See 1 below.

On the other hand, Ms. Hatch did not document the more significant matter of the deaths and disturbances of plovers perpetrated by predators such as the gull, raven, and crow. The gull, raven, and crow are documented predators of the plover, while dogs are not. Ravens are black, cousins of the crow, and larger than crows -generally about two feet long. Federal officials, who attribute the soaring numbers of ravens to sharp increases in road-kill and garbage from fast-food restaurants, admit that the population explosion is troubling, given the bird's intelligence.

The Hatch Report is an excellent example as to why scientific studies vary in reliability. Based upon the standards set forth in the scientific community, Ms. Hatch's study qualifies as "junk science", that is, "a publication that has the tone and trappings of science, but is so fundamentally and demonstrably flawed as to lack any serious claim to credibility." Further, this study does not meet the minimum requirements for legitimate "vital monitoring" within the NPS.

The Hatch study is at best an inventory assessment for the Western Snowy

plover. When viewed in the context of universally accepted scientific study guidelines, I find there are several reasons for relegating the Hatch Report to "junk science". First, it is merely an observational study. This means its conclusions are not based upon specific, quantifiable measurements, but instead upon observations. Observations alone allow for the participant's natural biases and subjectivity to influence the results. A credible scientific study to determine the success of, for example, a hair growth product, would dictate that the same person would observe the patients at the beginning and end of the treatment to assess the patients' baseline and subsequent hair growth (or lack thereof). This would eliminate the differences inherent in the observations of different people. The evaluator should have no affiliation with any of the manufacturers of the different products tested, and would not know which patient used which product. This is necessary to eliminate an evaluator's desire (even if it is subconscious) to favor a particular product. In contrast, the evaluators in the Hatch study consisted of several different volunteers; accordingly, there was no consistency as to the observations. Some evaluators may have characterized plover movement as a disturbance; others might have believed the plover moved on its own. Moreover, the volunteers were all bird enthusiasts, and the specific focus of their study was humans and dogs. As a result, the very premise of the study would lead the volunteers to subjectively and/or subconsciously expect and desire to document disturbance of the plover by dogs and their owners.

The effects of other wildlife and other possible interferences with the plover's daily activities were given but brief mention and not factored into the study in any meaningful way. These issues include the following: beach cleaning, off-road vehicles driven at night, activity of specific predators, non-native vegetation, shoreline erosion control projects (bulldozers), the actual width of the beach available to the plover, weather, helicopters, airplanes, bicycles, vehicles used during the day by Park staff, kites, and an oil spill. An evaluator cannot distinguish the reason or reasons why a plover flies away to another spot given the presence of a dog 40 feet away, a raven 50 feet away, and a plane flying overhead. Yet in the Hatch study, it seems clear the dog would be identified as the factor that disturbed the plover. The Hatch study is one that does not compensate for participant bias, and is not able to effectively associate cause and effect because too many variables are unaccounted for. Hence the study is indeed "junk science". Daphne Hatch's conclusions are without merit, and perhaps worse, led to action which may have harmed the plover at Ocean Beach.

These facts raise the other problem with the operative hypothesis in a study concluding that off-leash dogs are detrimental to plovers. Because the Hatch study at Ocean Beach ignores gulls, ravens and crows entirely, there is no data to determine whether the presence of dogs protects the plover from birds of prey. The statistics in Daphne Hatch's own study indicate that during the period prior to this study, the number of plovers at Ocean Beach was increasing, even though there was no requirement for dogs to be on-leash. The maximum Snowy

Plover counts for the 1979 to 1985 period ranged from 4 to 16, compared to maximum counts (since 1988) of from 38 to 85 birds (Hatch Report, p. 8). See Figure 2 below.

We believe that it is mischaracterizing the problem to attribute the "disturbance" of the plover exclusively (or even significantly) to off-leash dogs. The data do not support this conclusion. It follows, therefore, that addressing off-leash dogs only will not effectively protect the plover. We maintain, based upon the data, that proper protection of the plover would encompass the effect of humans, predators, and other wildlife as well.

The GGNRA Refuses To Implement Any Other Measures To Protect The Plover

Leashing of dogs (or the banning of dogs) on a 2.2 mile stretch of Ocean Beach is not a rational, measured response to the plover's seasonal presence on approximately 0.4 miles of Ocean Beach, and it does not address the hazards that both humans and predators present.

Peter Baye (U.S. Fish and Wildlife Service Biologist) noted the presence of the Snowy Plover, which roosts, but does not nest, on Ocean Beach, and made recommendations to the GGNRA for its protection. The plovers are present seasonally and relocate from year to year. Mr. Baye recommended: "Exclosures, in concert with educational signage, have been very effective in areas of concentrated usage where beaches are large (e.g. Cape Cod National Seashore). There are no unique impediments inherent at San Francisco's Ocean Beach which would render these measures infeasible here. They should be implemented at least on an experimental full-scale basis." (Memo to USFWS, 15 March 1995). Rather than establishing these flexible, seasonally rotated exclosures to protect plovers against humans, pets, and wild predators, the NPS chose the fixed and narrow measure of (illegally) banishing off-leash recreation, and now has chosen to ban dogs entirely. Mr. Baye's recommendation of a temporary, seasonal fence to be removed when the plovers leave the area and repositioned when they return could still be adopted. This solution would allow off-leash dogs on Ocean Beach but keep dogs out of the roosting area. Better yet, Mr. Baye's solution would protect the plovers from the predators, campers, runners, children, kite-flyers, etc., who now invade the roosting area under the GGNRA's current and proposed plan in this DEIS. Mr. Baye's recommendation clearly shows that off-leash recreation on Ocean Beach is compatible with protection of the Snowy Plover. The GGNRA has refused to consider the option of constructing a fence to protect the Ocean Beach plovers.

The GGNRA has made no concerted effort to alleviate the activities that are currently prohibited by law, pose a hazard to the plover, and occur in the vicinity of the plover's roosting. Table A, below, summarizes the current GGNRA record of citations for fireworks, littering, camping, and beach fires on the portion of

the beach where the snowy plover may roost. On an average Saturday or Sunday morning in the area the plovers roost you will find (by personal report):

? 5 beach fires (3 unattended) ? 7 campsites (2 had fires)

Extrapolating, if only weekend offenders were cited, there should have been 520 citations/year for fires, and 720 citations/year for camping. The GGNRA's dismal record of enforcement is reflected below in Table A. Moreover, it should be pointed out that litter is generally left at camp sites and the sites of beach fires. This litter attracts ravens and other predators to the area where the plovers are potentially roosting. The number of citations for littering is grossly inadequate. 1

If the GGNRA is unable to utilize enforcement to protect the plover from the public and their activities, it would make a great deal of sense to provide the exclosures as a refuge for the plover as suggested by Mr. Baye.

1 In an article published in The San Francisco Examiner; September 26,2005; by Marisa Lagos; entitled "Residents Irked by Ocean Beach Parties" (please refer to the original online version located at:

<http://www.sfexaminer.com/articles/2005/09/27/news/20050927neOIfIres.txt> or a nonline.printable copy located at:

<http://OceanBeachDOG.home.mindspring.com/GGNRAOceanBeachNonEnforcement.htm>), it is confirmed that the GGNRA's failure to enforce fire and litter policies has led to untold damage in the GGNRA's arbitrarily designated snowy plover habitat at Ocean Beach.

In addition, dead wildlife such as seals, sea lions and birds are not being promptly removed from the beach. The rotting carcasses of these dead creatures are left indefinitely on the beach to attract ravens and other plover predators. Recently, a carcass of a cow washed up on Ocean Beach where it sat for almost a week before officials removed it. The dead body was literally covered with ravens, ripping and eating the dead animal's flesh.

The GGNRA Has No Protocol For The Rescue Of Injured Or Sick Birds Or Mammals In The Park

The response of Federal officials to the oiling of wildlife after the Cosco Busan oil spill was slow and inadequate in the eyes of the citizens who live in the communities affected. However, to those of us who frequently utilize GGNRA properties for recreation, the poor response came as no surprise. Below are my personal notes from my conversation with a GGNRA Wildlife Ecologist regarding my attempted rescue of a bird that morning-sent by email to OBDOG members Thursday September 13, 2007:

Bill Merkle

Dispatch # 415-561-5505

Acknowledges it is unfortunate there are no signs for the public to be advised as to whom to call if a bird, marine mammal or other wildlife is injured or requires assistance.

GGNRA will not necessarily make every attempt to help an injured bird should you bring it to their attention. It will depend upon three factors: 1) type of bird 2) type of injury 3) location of bird

If it is a shorebird (a common bird), they are much less likely to help. He was noncommittal as to what injuries they would address. As to location, if I bring the bird to their personnel, what is that all about? It was explained to me that if the injury occurred in an undeveloped area, then they would be unlikely to rescue the animal or bird. When asked whether Ocean Beach was developed or undeveloped, he said the parking lot would be developed, but the beach would be undeveloped. He went on to explain that in undeveloped (natural) areas, they allow nature to take its course. Disease is a natural process, and predation is a natural process. As for letting nature take its course, what about dogs chasing birds is not natural? I asked how the GGNRA rationalizes that a dog chasing a common shorebird warrants a ticket (we must protect park resources), yet if the same shorebird is brought to them because it is injured, they are satisfied to let it die? I asked then why is it that since they choose (and I believe erroneously) to define dogs as predators of birds, why are they then not considered part of the natural process at the beach and ignored just like every other predator?

He responded that if they received a report that a dog was attacking an injured bird they would most certainly respond. He advised me the GGNRA considers dogs to be an unnatural part of the park as they are associated with human use of the park (which is also by inference an unnatural intrusion into the park areas). Those of us who thought this park was created for our recreational use had better get used to the idea that the Park Service regards us as unwelcome intruders into their "wildlife protection area".

I went on to point out to him that I did not want to hear him defining dogs as predators or complaining about dogs attacking birds as my dog helped me rescue this bird this morning and has done the same numerous other times. My dog has alerted me to hypothermic birds that are still alive, and he won't leave until I pick them up and take them to safety. My dog will chase off ravens that are attacking an injured bird who is unable to effectively defend itself and actively chase those ravens away while I pick up the injured bird. Earlier this year we rescued a grebe, today it was a common shorebird. I told him I cannot just run by when an injured bird is actively being attacked by ravens and is screaming

for help. He didn't have a lot to say in this regard.

The GGNRA claims the purpose of limiting the activities of dogs and their guardians is to "protect the resources" of the park. What resources exactly is the GGNRA protecting? The same resources you are content to let die because you don't care to make the effort to transport injured birds to WildCare in San Rafael? When I asked why they would not transport every injured bird brought to them for care, Mr. Merkle indicated the GGNRA preferred to "manage habitats and work on population levels". I am afraid to contemplate exactly what that means, except that the fallow deer in Marin probably have a pretty good idea. Or perhaps it means they want to work on limiting our human population levels in the Park. Or both.

I am disgusted by the hypocrisy of the GGNRA yet again. Their record of park management policy is abysmal. They neglect to assist injured birds even when they are brought to them, they are slaughtering over a thousand deer in Marin merely because they are non-native.

The proposed rule which sacrifices recreational access to protect the plover cannot be justified when GGNRA management has failed to implement the most basic of plans to ensure their well-being.

In this DEIS the GGNRA mentions their concern for wildlife including marine mammals, especially when they beach themselves to rest or when they are injured and on the beach. The GGNRA seems to be able to count the number of reports of beached mammals they receive, however what they fail to mention is that they have no protocol for the visitor to the GGNRA to follow should they come across a marine mammal on the beach. I personally have made numerous requests to GGNRA management for signs to be placed at the beach which would instruct visitors not to approach the beached mammal and where to call to request assistance for the animal. Many visitors to the GGNRA are not local, some have never been to a beach before, and they require instruction so that they can assist the animal effectively. Oddly enough, the GGNRA has managed to post signs up and down the beach to advise us of recreational restrictions regarding fires, camping and the plover, but they cannot post educational signs to benefit marine mammals.

The GGNRA Condoned Other Disturbances To The Plover

To further compromise the GGNRA's argument that the restriction of off-leash recreation is necessary to protect the plover, the GGNRA has taken the plover's alleged summer hiatus as an opportunity to begin bulldozing of the "Plover Protection Area". In October of 2005, when United States Fish and Wildlife Service (USFWS) declined to designate Ocean Beach as critical habitat for the plover they stated the following:

"Although we do not consider these areas [Ocean Beach and Crissy Field] essential for recovery, we do consider them important, and will continue to review projects in these areas that might affect wSP as required by sections 7 and 10 of the Act." The USFWS is previously on the record as stating, "Activities that may adversely affect plovers include sand deposition or spreading, beach cleaning, construction of breakwaters and jetties, dune stabilization/restoration using native and nonnative vegetation or fencing, beach leveling and off-road vehicles driven in nesting areas or at night."

Ocean Beach Plover Protection Area (July 31, 2007)

The picture above was taken during the period when dogs are restricted at Ocean Beach due to the presence of the plover. When OBD OG principals first observed the bulldozers in the Plover Protection Area below, we made a Freedom of Information Act Request of the GGNRA, to determine the purpose of the bulldozing, as well as determine whether USFWS had approved this drastic action. The GGNRA responded to our request, but failed to answer our questions about the bulldozing. We were later advised verbally that there was no correspondence with USFWS to obtain approval for bulldozing, as the plover was not then present. Internal GGNRA records show the GGNRA bargained with USFWS in 1996, sacrificing our off-leash recreational opportunities in order to get USFWS to agree to allow bulldozing in this same area of Ocean Beach. The ESA is very clear that it is not permissible to modify the habitat of an endangered or threatened species when they are not present, but expected to return. One example would be the prohibition of the removal of trees that hold an eagle's nest, even when the eagle is not present or utilizing the nest.

We understand the GGNRA is modifying the beach in this area to minimize the effects of erosion and the drifting of sand on to the Promenade and Great Highway. The GGNRA has refused to acknowledge in any significant fashion that erosion and the progressive collapse of the shoreline limits the areas where the plover can roost and forage, as well as the quality of food source for the plover at Ocean Beach. The narrowing beach puts the plover in closer and closer proximity to all users of the beach, thereby increasing the disturbance to the plovers. These conditions will progress despite the GGNRA's move to ban dogs entirely.

We agree the GGNRA needs to deal with erosion at Ocean Beach. However, it seems unlikely that the GGNRA will admit the obvious: the erosion itself and the GGNRA activities designed to deal with erosion adversely affect the plover to a much greater degree than four dogs who allegedly "disturbed" plovers in the last six years. The restriction of off-leash recreation or the banning of dogs entirely to purportedly protect the plover is a complete ruse.

The photos above were taken during the time period when the dogs are restricted because the GGNRA claims the plover is present. We see the condition of the

plover habitat after the GGNRA has bulldozed to minimize the effects of drifting sand and erosion. The dunes that remain are there because they do have a little beach grass to help hold them together. The tides have run up and behind the dunes that the GGNRA claims the plover inhabits. Note the excessive debris, the graffiti and the remnants of a Christmas tree in this so-called "habitat". Considering the plover resides on elevated dunes of dry sand, preferably without vegetation, it is quite apparent as to why Ocean Beach is not suitable plover habitat. It also underscores the absurdity of the claim in this DEIS that dogs digging have some responsibility for the undermining of sand dunes at Ocean Beach.

GGNRA personnel routinely drive off-road vehicles through the plover habitat in order to enforce the leash law at Ocean Beach. Certainly the GGNRA's "solution" is far more dangerous to the plover than the perceived "problem" (pictures of this activity on file).

In 2006, the Fourth Annual Ocean Beach Turkey Trot was an event sanctioned by the GGNRA (and SFRPD) for 1000 participants. Certainly the GGNRA recognized there would be additional participants who had not officially registered. I and other members of Ocean Beach DOG who witnessed the race estimated 1500 participants. The course for the race was charted directly through the Snowy Plover Protection Area. This was also during a time period where the GGNRA declared an "emergency" warranting the restriction of off-leash recreation in this same area in order to minimize "disturbance" to the plover. The GGNRA, by granting permits for the Ocean Beach Turkey Trot, established that their ban of off-leash recreation is arbitrary, capricious and discriminatory- therefore unlawful.

The 2006 GGNRA Status Report For The Western Snowy Plover Is Fatally Flawed

This is the second report Daphne Hatch (Chief of Natural Resource Management and Science for the Golden Gate National Recreation Area) has produced for the GGNRA to justify the closure of most of Ocean Beach to off-leash recreation due to the transient presence of the Western Snowy Plover (WSP). The first was produced in 1996. The second report, dated November 2, 2006, is the subject of this analysis. Reading Ms. Hatch's report brings to mind an article I recently read from the Journal of the American Dental Association October 2006 Special Supplement. The article was entitled, "Challenges in Interpreting Study Results-The conflict between appearance and reality". It seems that the GGNRA and Ms. Hatch have endeavored to manipulate the data so as to reach a predetermined outcome. Their conclusions falsely give the reader the appearance that the threat to the WSP from off-leash dogs is great. The reality is there is no credible threat to the WSP from off-leash dogs within the GGNRA.

Bias: The 2006 Hatch report presents itself as an "observational study". Observational studies have the least reliability of any type of scientific study because their results can be distorted by many factors. The first of those factors is bias. Bias generally stated is a "systematic error in the design, conduct, or analysis of a study that results in a mistaken estimate of an exposure's effect on the risk a subject faces". Bias is the basis of our skepticism of research to determine the efficacy of a medication when the research is conducted by a clinician who stands to gain financially if the medication is shown to be effective.

Ms. Hatch clearly has an ideological bias against people and their dogs recreating in any manner at Ocean Beach. She was quoted on September 7, 2005 in the S.F. Chronicle as saying, "Ocean Beach without the people is an incredible habitat. But people think of it as a sandbox or their backyard". This is an incredible admission from a high ranking GGNRA official considering the enabling legislation of the GGNRA.

Design: Daphne Hatch's bias is apparent in the design of this study. The objective of this study is to prove her assumption that the present management which allows off-leash dog use of Ocean Beach and Crissy Field is inadequate to protect the WSP from harassment/disturbance and other detrimental effects of chasing by dogs. We learn nothing about the relative harassment/disturbance of the plover from any other source in this study. If plovers are harassed/disturbed 50 times in 5.5 hours by ravens, and one time in that same time period by a dog, is the harassment/disturbance by the dog even relevant? A comparative study model would have been more informative with respect to actually determining what management actions, if any, should be taken to protect the plover from harassment/disturbance in general. Frankly, this comparative study should have been undertaken in 1993 when the WSP was first listed as a threatened species, before the decision was made (and later reversed by the Federal Court) to require the leashing of dogs to protect the plover. However, it could have been undertaken at any time. A comparative study is designed to remove one variable in a situation at a time, and observe the change, if any. An initial period of observation would document the presence of predators (ravens) and their numbers, as well as the frequency of harassment/disturbance from all sources absent any management action. Next, the predators (ravens) being the most serious source of potential disturbance/harassment are removed as much as possible. Rather than killing all the ravens, the GGNRA could have begun a campaign to reduce and remove litter at the beach as a conservative method to reduce the number of ravens. This would entail aggressive ticketing of those who are observed leaving litter at the beach, and resources would be deployed to clear the beach of litter and dead wildlife daily. No one would be adversely affected, and in fact most beachgoers would welcome a cleaner, safer beach. Indirectly, the lack of litter/foodstuff for the ravens would have been expected to reduce their numbers. After the new management practice has been implemented for a reasonable period of time, a second period of observation is

conducted. In this second data collection period, we could assess whether the litter reduction has reduced the number of ravens, and has the reduction in ravens reduced the frequency of harassment; disturbance to the WSP. If the ravens are not reduced, or the frequency of harassment/ disturbance is still unacceptable, the next management measure is implemented. Exclosure fencing could have been placed in the areas where the WSP is observed roosting. This would serve to provide some protection for the WSP from the ravens and any other predators, as well as humans and dogs. Education of the public to give the exclosure fencing a wide berth would be appropriate. After a reasonable period of implementation, a third period of observation would be conducted to determine what effect, if any, this latest management method had upon the frequency of harassment; disturbance of the WSP. There also should be the implementation of an aggressive ticketing policy for all dog owners whose dogs were observed chasing plovers at some point within this process. All of these management measures should have been implemented and assessed for their effectiveness in reducing the frequency of WSP harassment/disturbances before a leash restriction or banning dogs was even considered. This would have been consistent with the mandate to maintain recreational opportunities in the GGNRA.

Conduct: This study exhibits bias in its conduct as well. Clearly, the participants who performed the surveys either had a pre-existing bias to construe the activity of dogs as harassment, or the training provided by Daphne Hatch and her staff created that bias in the participants. Most likely it is a combination of both, as those individuals who volunteered to do these surveys are identified as Golden Gate Audubon Society members. (We should point out that the Golden Gate Audubon Society is on the record as opposing any off-leash recreation in the GGNRA). Ms. Hatch, in her introduction, spells out the definition of harassment per the Endangered Species Act (ESA). Harassment is "an intentional or negligent act or omission which creates the likelihood of injury to wildlife by annoying it to such an extent as to significantly disrupt normal behavioral patterns which include, but are not limited to, breeding, feeding or sheltering". Ms. Hatch seems to use the terms harassment and disturbance interchangeably in this report, so we will generally refer to it as harassment/disturbance. Harassment/ disturbances are not well defined in the portion of the study where they are enumerated for Ocean Beach. However, in the Crissy Field portion, there is more description provided for the harassment/disturbances observed. In one case, harassment; disturbance of a plover by a dog was described as "alert posture -stood up and increased vigilance" (in other words, the plover lifted his head up and looked around). Compare this "disturbance" that was classified by a volunteer and the authors of this study as an incident of harassment to the definition of harassment as provided by the ESA. They are clearly inconsistent. In this study, the authors and participants classified activity as harassment/disturbance that does NOT meet the definition of harassment provided by the ESA. This is a classic example of examiner bias in the conduct of this study. This is more precisely identified as "misclassification" and serves

to invalidate the data collected and conclusions drawn in this study.

Analysis: Analysis of this data is compromised because the data itself is in question. Another factor that makes analysis of this data practically impossible is "confounding" in the design of this study. In this case, "confounding" refers to the fact that this study is not designed to isolate the effect of each component of the beach environment that can affect the plover adversely. For example, an off-leash dog is running at the waterline with its owner and they are some 20 feet from a plover. There is additionally a raven 30 feet and closing from the plover. The plover flushes, and it is recorded as a "disturbance". How is it apparent to the observer whether the dog, the owner or the raven was the source of the disturbance? Practically, it could be any combination of all three. Based upon the premise of this study, it is reasonable to assume the disturbance/harassment would be attributed to the off-leash dog. Is that legitimate? There does not appear to be any attempt made to isolate all other activities within the Park that may adversely affect the plover-they are merely given mention. These would include: Beach patrols in vehicles on the beach, equestrian use of the beach, people walking or jogging, kite flying, littering which attracts predators, the predators (usually ravens) themselves, and removal of kelp or driftwood which are sources of food. No mention is even made of bonfires, camping, litter such as cigarette butts, or the shadows surfboards cast.

Correspondence ID: 4679 **Project:** 11759 **Document:** 38106

Received: May,27,2011 00:00:00

Correspondence Type: Letter

Correspondence: Perhaps the most egregious omission in this report is that there is no mention made of beach width. The beach width at Ocean Beach has been decreasing due to erosion. Daphne Hatch's 1996 report concluded on page 10: "Factors other than the number of people or dogs, possibly beach slope and width, appear to exert greater influence over Snowy Plover numbers on Ocean Beach". The GGNRA is quite aware that the number of plovers on Ocean Beach is not directly related to the number of people or dogs present on the beach. However, in this 2006 Daphne Hatch report there is some discussion on page 8 that the plover numbers have leveled off since 2003, and have never matched the level they reached of 85 in 1994. Concurrently, this report discusses repeatedly that since the reinstatement of off-leash recreation, the number of dogs at Ocean Beach has increased dramatically. The report directly asserts the increase in dogs at Ocean Beach is responsible for a greater number of plover disturbances and it is inferred indirectly responsible for the diminished number of plovers. Had Daphne Hatch been intellectually honest, she might have drawn the following conclusion from this data and a study she cites in this report, "Disturbance to wintering western snowy plovers", by K.D. Lafferty. This Lafferty report states "The distance between human activity and the roost peaked at about

30 meters and relatively few people or dogs beyond this distance disturbed plovers" ... presumably because a narrow beach increased the potential overlap between beach users and snowy plovers". Ocean Beach suffers from serious erosion, and hence the beach width has narrowed dramatically, especially during high tides. It could more reasonably be concluded that the narrowed beach width is directly responsible for both the lower plover numbers and the increased frequency of perceived harassment/disturbance of the plover, not the greater number of dogs or their activities on or off of a leash. The narrowed beach width has both eliminated much of the potential habitat for the WSP at Ocean Beach (this is consistent with USFWS critical habitat designation in 2005), and forced all occupants of the beach into closer proximity to the plover, thereby perhaps causing greater harassment/disturbance levels (especially if you construe lifting your head and looking around as a disturbance).

How great are the harassment/disturbance levels really? The way the data is presented in this report is misleading. To put the data in its' simplest form, in 2004 when dogs were required to be on-leash at Ocean Beach, one dog was observed harassing/disturbing a plover in 5.5 hours of observation on weekdays, and one dog was observed harassing/disturbing a plover every 2.5 hours on the weekends. In 2005, when dogs were legally allowed off-leash on Ocean Beach, (and there were many more dogs present) 1 dog harassed/disturbed a plover in 2.4 hours of observation on weekdays, and fewer than 2 dogs harassed/disturbed a plover every hour on weekends. Is this really significant? This report gives us no data regarding the rate of disturbance from any other source, however, the number of ravens far exceeds the number of dogs out at Ocean Beach, and it can easily be postulated the harassment/disturbances due to dogs are dwarfed by the number of harassment/disturbances from the plover's natural predator, the raven.

It is difficult for me to do further analysis of the data, because the GGNRA has illegally withheld the raw data from me. In April of 2006, I requested, by means of a Freedom of Information Act request, all of the data/reports/Environmental Assessments the GGNRA had to substantiate their claim that there were resources in the Park that required protection. The GGNRA responded in writing that such data did not exist. Based upon the representations made in the November 2, 2006 Memorandum from Daphne Hatch and GGNRA Head Ranger Yvette Ruan, the last of the data for this report was collected in February and March of 2006. The data could and legally should have been provided to me in April of 2006. I subsequently appealed this FOIA request to the DOI, and it has not been acted upon despite the fact that the time allowed by law for response has long since expired. The DOI tells me I can sue them for it.

Conclusion: Rational analysis of the situation would suggest that the

GGNRA is really not trying to solve a problem. The GGNRA is merely interested in restricting dogs to leashes or banning dogs entirely throughout the GGNRA. Additionally, when taking into account Ms. Hatch's above comments to the S.F. Chronicle in 2005, one must question the future of both humans and dogs in the GGNRA. Taking into account the data regarding the numbers of dogs chasing either shorebirds or plovers in context of the frequency of the behavior over time, it seems ticketing of the miniscule number of offenders would be appropriate rather than punishing all for the transgressions of a very few. It is a bit like forcing all cyclists in the GGNRA to ride with training wheels because a very few speed through the park.

If GGNRA management complains that they do not have the resources to adequately police Ocean Beach then it provides an appropriate reason to move for reversion of this property. I remind you again of Rolf Diamont's (GGNRA Environmental Coordinator circa 1975) conclusions when the GGNRA had just accepted possession of Ocean Beach from the City of San Francisco - "Ocean Beach: no rules should be enforced here. Ocean Beach is too large and too accessible to control dogs. It would be a logistical nightmare for the Park Service to try".

The Hatch report does not meet the criteria for a valid scientific study. It is more appropriately classified as "junk science" - "a publication that has the tone and trappings of science, but is so fundamentally and demonstrably flawed as to lack any serious claim to credibility". Junk science should never be used as the basis for establishing public policy.

The GGNRA Ignores Scientific Studies That Do Not Serve Their Purposes

1) Our first example would be a U.C. Berkeley Environmental Sciences study presented by Megan Warren on May 7, 2007 that concludes within the GGNRA that the feeding of the Western Snowy Plover does not appear to be negatively affected by human and pet recreation. This is highly significant. Because the WSP does not breed at Ocean Beach or Crissy Field, its primary essential activity is foraging and feeding. If human and pet recreation does not negatively affect those activities, there is no need to restrict recreation in these areas. The abstract is as follows:

Recreation Disturbance Does Not Change Feeding Behavior of the Western Snowy Plover

Abstract The Western Snowy Plover (*Charadrius alexandrinus nivosus*) is a small shorebird that has many scattered wintering populations along the Pacific Coast of the United States, including several in the Bay Area. This species has been listed as threatened since 1993 under the federal Endangered Species Act of 1973. For this study I measured disturbance

rates, types, plover responses and feeding time in three different sites in the San Francisco Bay Area to explore the link between recreation disturbance and feeding behavior. I predicted that as frequency of disturbance increased, the birds would spend less time actively foraging and more time alert. However, data showed no significant relationship between feeding behavior and direct disturbance by human recreators. Instead, I now predict that recreation has a more indirect effect on the western snowy plover feeding behavior. Future research should focus on indirect effects of recreation, such as habitat disturbance and food source quality.

2) Our second example is a study, "Predicting the population consequences of human disturbance for Ringed Plovers *Charadrius hiaticula*: a game theory approach" by Durwyn Liley and William J. Sutherland. This study originates from the School of Biological Sciences, University of East Anglia, Norwich, Norfolk NR4 7TJ, UK. This study clarifies the following three pertinent facts:

? Sites that are highly disturbed are not used by breeding birds, and therefore any increase in disturbance levels on these sites will not alter population size ? No published study of a breeding bird quantifies the population consequences of disturbance. This is despite the fact that disturbance has been implied as a factor causing population decline for a wide range of species. ? We think of individuals [birds] as deciding not to breed rather than being prevented from doing so. Such individuals 'queue' for good quality territories rather than adopting a poor quality territory (such as Ocean Beach).

3) The third study originates from the School of Biological Sciences, University of East Anglia, Norwich, Norfolk NR41fJ, UK., and was authored by Jennifer A. Gill, published in *Ibis* (2007) 149(Suppl. 1), 9-14. It is entitled, "Approaches to measuring the effects of human disturbance on birds".

This study clarifies a concept that helps to explain the apparent inconsistency of plover behavior at Ocean Beach and Crissy Field. On one hand, Ocean Beach is a highly disturbed, poor quality beach area (in large part due to erosion). Crissy Field is another highly disturbed beach environment at which the plover does NOT feed or breed (per the first study listed here). The GGNRA maintains that the plover is highly susceptible to disturbance by humans and off-leash dogs. This is why the proposed Rule has been promulgated. However, one must ask the question: if the plover is highly disturbed by human and canine off-leash recreation, and the plover does not feed at Crissy Field, why are any plovers there at all? Likewise, although the food source may be a bit better at Ocean Beach, why would the plover choose to roost there and endure the disturbance?

This study opines, "The principal way in which human presence can impact upon wildlife is by altering the ability of animals to exploit important resources. This can operate either through directly restricting access to resources such as food supplies, nesting sites or roosting sites, or by altering the actual or perceived quality of these sites. Direct restriction of access to resources can occur through animals avoiding areas where humans are present. Changes in the quality of sites as a result of human presence could occur, for example, if predators were attracted to areas with humans, or if the presence of humans reduced the presence of prey species."

For the plovers observed roosting at Ocean Beach and Crissy Field, humans and off-leash dogs are not restricting their access to resources because the plovers are indeed there. The second alternative is that humans and off-leash dogs are altering the actual or perceived quality of these sites. The most logical conclusion is the presence of humans and their off-leash dogs reduces the presence and/or activity of prey species. This theory has been brought up by others such as the SF SPCA (Objections to the Federal Government's Ban on Off-leash Dogs at Ocean Beach, Jan. 9, 1997, page 4), but was summarily dismissed by the GGNRA wildlife biologists. It is disturbing that the subsequent 2006 Hatch study at Ocean Beach intentionally ignores gulls, ravens and crows entirely, so there is no data available that might confirm the presence of off-leash dogs may protect the plover from birds of prey.

However, the statistics in Daphne Hatch's own 1996 study support this theory. During the period prior to this study, the number of plovers at Ocean Beach was increasing, even though there was no requirement for dogs to be on-leash. The maximum Snowy Plover counts for the 1979 to 1985 period ranged from 4 to 16, compared to maximum counts (since 1988) of from 38 to 85 birds (Hatch Report, p. 8).

This UK study also evaluates the methodology of studies like the 2006 Hatch study, which attempt to assess the distribution or behaviour of animals in the presence or absence of disturbance. "A limitation of these types of approaches is that the numbers of animals that would use these sites in the absence of disturbance is generally not known. For example, if the sites with higher levels of disturbance also have lower levels of resource availability (e.g. food or nest-sites) or higher risk of predation, then removing the source of disturbance may have no effect on the numbers of animals in the area."

In actuality, because it is acknowledged by the GGNRA that removal of off-leash dogs or banning will not increase the number of plovers at Ocean Beach, the question becomes, will the restriction of dogs decrease the number of plovers at Ocean Beach? There is evidence to confirm this is probable, as a similar scenario which involved the Bank Swallow has

already occurred in the GGNRA--in an area directly adjacent to Ocean Beach, i.e., Fort Funston. This will be discussed in a subsequent section devoted to Fort Funston.

4) The fourth study was peer-reviewed and accepted on November 12, 1999, and published in *Biological Conservation* 97 (2001) 265-268. The authors are Jennifer A. Gill, Ken Norris and William J. Sutherland. The study is entitled "Why behavioural responses may not reflect the population consequences of human disturbance".

The authors contend, "The effect of human disturbance on animals is frequently measured in terms of changes in behaviour response to human presence. The magnitude of these changes in behavior is then often used as a measure of the relative susceptibility of species to disturbance; for example, species that show strong avoidance of human presence are often considered to be in greater need of protection from disturbance than those which do not ... By contrast, species which do not avoid disturbed areas are often considered as requiring little or no protection from disturbance...From a conservation perspective, human disturbance of wildlife is important only if it affects survival or fecundity and hence causes a population to decline."

What becomes clear after reading this study is that in the GGNRA, Daphne Hatch is defining avoidance behavior and what constitutes a "disturbance" in a very different manner than do other researchers. (This is consistent with my criticism of the 2006 Hatch study). According to this study, avoidance behavior or moving constitutes an activity where the plover actually leaves the site. The 5, 10 or 20 foot flight Daphne Hatch is utilizing as her most severe evidence of disturbance may be relevant in breeding/nesting areas, where movement of that scale can take a plover away from its nest and eggs. In the circumstance where plovers are roosting in an area, this is not classified by other researchers as a "disturbance". From the perspective of these authors, the plovers roosting at Ocean Beach and Crissy Field require little or no protection from disturbance because they stay at these sites.

The Latest Study Of The Western Snowy Plover In This DEIS Is Fatally Flawed

This DEIS relies in large part upon a study by Matthew Zlatunich and Michael Lynes of the Golden Gate Audubon Society. This new study, like the Warren study, was conducted in cooperation with the GGNRA. As noted previously, this 2011 DEIS again fails to mention a 2007 study by Warren that found plovers' feeding was not negatively impacted by recreational activities of humans and dogs. This is critically important because the plover does not nest or breed at Ocean Beach or Crissy Field; its' primary activity here is feeding and foraging for food. Instead of acknowledging the Warren

study, the new Zlatunich-Lynes study was conducted in 2009/2010 at Crissy Field in San Francisco. This study exhibits many of the scientific shortcomings noted in previous studies:

? This study was merely an observational study ? The observational collection of data was performed by Audubon volunteers who had a bias-the GGAS has publicly advocated the banning of dogs to protect the plover ? This study made no attempt to ascertain comparative effects on the plover. There is no discussion of the disturbance level perpetrated by other sources, even though they tell us that data was collected ? Raw data is not provided to the reader ? The analysis appears to be biased because it is based upon incomplete data. For example, the level of disturbance is not categorized in the analysis even though we are told they were categorized in their collection. ? Assumptions are made in this analysis without supporting explanation. For example, they decided to assign the disturbance to an on-leash dog if he was closer to the plover than his guardian. This ignores the possibility the disturbance was due to the number of bodies, e.g. two people walking would disturb a plover to the same extent as a leashed dog and a person.

To clarify the issue of comparative disturbance, it seems odd that although known predators of the plover are acknowledged to be at Crissy Field, no attempt is made to analyze the disturbance they create for the plover. The Common Raven and American Crow are present, yet ignored in the analysis. Beyond this, the California Gull is noted as being present. This is of interest because a recent study using surveillance cameras at plover nesting sites in San Francisco Bay documented California Gulls as being responsible for 25% of all predation of plover nests. (Robinson-Nilsen, Caitlin¹, Jill Bluso Demers¹, Cheryl Strong², and Scott Demers³; ¹ San Francisco Bay Bird Observatory, crobinson@stbbo.org; ² U. S. Fish and Wildlife Service, Don Edwards San Francisco Bay National Wildlife Refuge; ³ HT Harvey and Associates DETERMINING THE EFFECTS OF HABITAT ENHANCEMENTS AND PREDATORS FOR WESTERN SNOWY PLOVER). California Gulls are new to some of these areas-could the decline in the number of plovers at Crissy Field be related to an increase in the presence of California Gulls? This study makes no attempt to ascertain if there is any such correlation.

The Zlatunich-Lynes study notes the number of plovers has been steadily declining since 2005/2006 records. They choose to rely upon previous conclusions that the greatest disturbance impact to wildlife within the Wildlife Protection Area at Crissy Field is caused by dogs, joggers and walkers. The data from this study showed the number of dogs and humans in the plover area spiked in 2008/2009, and declined dramatically in 2009/2010. The number of plovers continued to decline, despite the reduction in recreational disturbance in 2009/2010. This could lead one to

conclude that there is no correlation between the number of dogs and people and the number of plovers present. There is no discussion of this possibility in the data analysis of this study.

The Zlatunich-Lynes study is without merit because it deliberately misleads the reader about the GGNRA's legal obligations to protect the plover. Ocean Beach and Crissy Field are not designated as critical habitat by the USFWS. Therefore, the GGNRA is obligated only to prevent the harassment or taking of the plover within its boundaries. Appendix B contains the legal definition of a disturbance which would constitute harassment and be a violation of the law: "If the observer witnesses a blatant violation of the law, such as a dog owner knowingly and without regard allowing his dog to harass wildlife, the observer shall make note on the comment sheet and shall, upon completion of the survey, file a wildlife harassment report at the park police station..." There is no indication in this study analysis that any observer EVER witnessed this type of harassment of a plover during their observations.

Alternatively, the Zlatunich-Lynes study records "disturbances" which they define as minor, moderate and major - none of which rise to the level of the legal and accepted definition of harassment that is utilized by USFWS and other studies. For example, the Zlatunich-Lynes study states: "a minor disturbance will cause a resting bird to stand". A clear thinking individual can conclude that a minor "disturbance" as defined by this study is really no disturbance at all. Worse yet, when analyzing the number of "disturbances" observed, there is no acknowledgement as to how many of these "disturbances" are actually minor, moderate or major based upon these authors' criteria. It is entirely possible (and I believe probable) that each of the disturbances recorded and utilized to justify the restriction of recreation were merely minor "disturbances". This would be consistent with the conclusions of other studies including the following which states: "... snowy plovers in other areas have become habituated to relatively constant and non-threatening human trail use." (Trulio, Lynne¹, Caitlin Robinson-Nilsen², Jana Sokale³ and Kevin Lafferty⁴ San Jose State University; Lynne.Trulio@sjsu.edu; ²San Francisco Bay Bird Observatory; ³Sokale Environmental Planning; ⁴Western Ecological Research Center, US Geological Survey NESTING SNOWY PLOVER RESPONSE TO NEW TRAIL USE.)

In summary, the Zlatunich-Lynes study and its recommendations are flawed, dishonest and biased. The DEIS advocates recreational restrictions based upon this study. Clearly, the failure in this study to find any violation of the law with respect to the protection of the plover, and the omission of studies that contradict the need for recreational restrictions should render this aspect of the DEIS invalid and discredit the conclusion that recreational restrictions must be implemented to protect the plover in the GGNRA.

The Western Snowy Plover At Crissy Field

This DEIS proposes to ban dogs from large areas of Crissy Field to protect the Western Snowy Plover. It is especially disturbing to note the lack of "vital signs monitoring" in this location because there was a full evaluation of the potential environmental impacts of canine recreation when the renovation of Crissy Field was first proposed. This was a perfect opportunity to obtain a baseline monitoring survey and follow through annually to monitor the effects of the originally permitted levels of recreational activity. Instead, you will see that the citizens were advised the recreational interests would be compatible with the renovation just until the renovation was completed. Then off-leash recreation was banned without environmental study. The recent study relied upon within this DEIS has been reviewed in the Ocean Beach section, but it fails entirely to meet standards the NPS sets forth for "vital signs monitoring" .

"The 1988 Crissy Field Site Improvement Assessment evolved from concepts present in the 1980 General Management Plan. The Crissy Field plan recommends native planting, preservation and enhancement of the site's natural qualities, and preservation of views of the bay while recognizing the needs of existing and future visitors." (Final General Management Plan, Amended Environmental Impact Statement, Presidio of San Francisco, July 1994, p. 5.)

Public concern over the impact of the plan on recreation surfaced in 1994. Wind surfers and dog-walkers were concerned that the new Crissy Field proposals did not address future use of the area for these recreational activities. On November 28, 1994, the Crissy Field project team met with representatives of boardsailors and Rich Avanzino, then President of the SF SPCA, to discuss "the direction [they] were going." (USPRODoo684.)

Meanwhile, the GGNP A encountered problems obtaining donations for the project because of these concerns. Toby Rosenblatt was responsible for raising funds on behalf of the GGNP A for the restoration project. He became alarmed in 1994 upon discovering that NPS officials were not honoring the "voice control" 1979 Pet Policy established when the City donated Park lands to the GGNRA. In December 1994, Mr. Rosenblatt wrote a letter to Superintendent O'Neill and Presidio Manager Robert Chandler, protesting reports that Rangers and Park Police were approaching people in the Presidio, Crissy Field, Upper Fort Mason and Ocean Beach "telling them about a leash law and enforcing the law." Mr. Rosenblatt disagreed with the change in enforcement and warned "[i]t will raise a very major reaction, as you know, in the community and will seriously impact relations with lots of people". He also noted that the enforcement was impacting fund raising efforts for Crissy Field: "I know that a change which implements such a law will hurt our fund raising efforts for Crissy and

elsewhere -in fact that is beginning to happen already." Copies of the letter were sent to Greg Moore, Executive Director GGNPA, and Amy Meyer of the GGNRA Citizens Advisory Committee. (USPRODoo694.)

Nevertheless, the NPS refused to include off-leash recreation in official plans for Crissy Field.

In February 1995, Richard Avanzino met with Superintendent O'Neill, Presidio Manager Chandler and GGNPA Director Moore in order to address concerns "about the continued lack of official acknowledgment and recognition for this vital recreational activity." In a letter summarizing these discussions, Mr. Avanzino noted that the NPS was refusing to provide official recognition because federal regulations require dogs to be leashed, and many NPS staff and powerful environmental groups who want a wetlands established at Crissy Field are opposed to off-leash dogs. NPS also threatened to retaliate if dogwalkers pushed for official recognition during the planning process: "[I]f we advocate publicly for official recognition and status, our efforts will be frowned on and may well be greeted with retaliatory action." The SF SPCA responded by demanding official recognition: "We want the National Park Service to officially acknowledge and preserve off-leash dog walking as it exists today at Crissy Field. We want this acknowledgment to be reflected in the legal and other documents pertaining to Crissy Field, as well as in the official design plans for the site." Copies of the letter were sent to Senators Feinstein and Boxer and Representatives Pelosi and Lantos. (USPRODoo666-7.)

Public pressure continued to build. On March 28, 1995, a public debate over the issue of a wetlands and its potential impact on off-leash dog-walking was held at the Commonwealth Club. A flyer for the lecture, entitled "Wetlands at Crissy Field -Is this a Good Idea?" identified the speaker as James F. Kirkham, Advisory Partner, Pillsbury Madison & Sutro, Native San Franciscan and Outdoorsman." Summarizing the issue up for debate, the flyer noted: "this habitat could include up to half of the entire acreage of Crissy Field, which could drastically reduce the amount of space left for recreational activities, including off-leash dog exercise." (USPRODoo681.) A few days later, on April 1, 1995, a massive Presidio "dog-in" was held to show support for off-leash dog walking at Crissy Field. (USPRODoo679-80.)

In April 1995, Mr. Avanzino met with Superintendent O'Neill and Citizens Advisory Commission members Amy Meyer, Jacqueline Young, and Trent Orr to discuss the status of the 1979 Pet Policy and the issue of inclusion of officially designated off-leash areas in the Crissy Field Plans. A letter memorializing the meeting indicates the following issues were resolved:

1 The "NPS will again honor the Pet Policy"; 2 "Legal counsel for the NPS

has advised" that the Superintendent has "discretionary authority to reinforce through the Compendium mechanism the principles expressed in the Pet Policy"; 3 "This is permitted even though there is some conflict with the Code of Federal Regulations" ; 4 The NPS agreed to include "site-specific plan that clearly delineates off-leash dog walking areas"; 5 The NPS agreed "to public review and participation at the level of the Golden Gate National Recreation Area Advisory Commission of any future changes to the agreed upon off-leash dog walking areas." (Richard Avanzino letter to Brian O'Neill, April 27, 1995.)

To bolster fundraising for wetlands restoration at Crissy Field, the NPS announced (in the San Francisco Chronicle) that it "has no intent to forbid off-leash, even if a large wetlands area is restored along the northern waterfront...all plans either maintain or expand off-leash dog walking. Under any future scenario, more generous areas of the Presidio's northern waterfront will be available to dogs." (Emphasis added.)

On October 2, 1996, the GGNRA issued a "Finding of No Significant Impact" ("FONSI!") for the Crissy Field project. Included in this document were notes about the comments and concerns voiced during the Comment period for the Environmental Assessment ("EA"). The FONSI addressed these concerns as follows: "The Crissy Field Plan ...includes expanded opportunities for off leash dog walking, and the marsh design, as noted in the EA, incorporates features to avoid conflict between other recreational activities, such as off leash dog walking, and wildlife. Section 2.1.2.10 ("Dog Use Areas") provides: "Dog walking is a popular activity at Crissy Field, and both alternatives provide for the continued enjoyment of that activity. An approximately 70 acre area would be available for dog activities. Walking dogs off leash under voice control would be permitted on the Promenade and beach east of the U.S. Coast Guard station, on the restored airfield, and in the East Beach area." Indeed, the Crissy Field Plan Summary confirmed that the proposed plan includes 70 acres for "off-leash dog walking." (Id., p. 10) With respect to protected species, the issue of vegetation was also addressed in the FONSI as follows: "The decision to avoid the introduction of special status species in the restoration was made recognizing the high level of recreational use at Crissy Field anticipated to continue in the future and the concern expressed by many individuals that special status species could cause a change in management of the site that would restrict recreational uses." NPS did in fact replant the federally endangered California sea-blite (*Suaeda californica*) that drowned out during the prolonged inlet closures/non-tidal lagoon flooding phases, and some transplants are thriving. "

Thereafter, the \$35 million in funds were raised, the restoration completed, and subsequently, off-leash recreation was illegally banned at all GGNRA properties, and massive ticketing and harassment of dog walkers

commenced. This directly violated the following agreements between the GGNRA and San Francisco: 1975 Memorandum of Understanding; 1979 Pet Policy; 1980 General Plan; 1982 GGNRA Natural Resources Plan; 1995 EIR/or the Crissy Field Plan, and the 1996 Compendium Amendment. The only redress for these actions by the GGNRA was for three citizens to spend ten of thousands of dollars of their own funds to defend themselves in a criminal proceeding challenging the tickets they were illegally issued. The GGNRA was found to have acted illegally when it rescinded the 1979 Pet Policy and began ticketing citizens for engaging in legal activity.

In this DEIS, the presence of these plantings as well as the Western Snowy Plover are utilized to justify the restriction of recreation in the area. The GGNRA has, yet again, violated the mandate under which this Park was created, violated its promises to the City, reneged on the promises made in the FONSI, and made clear that this DEIS had a predetermined outcome to cut back off-leash recreation or ban dogs in areas used for this purpose before the Park ever existed. The failure of this DEIS to present any credible evidence which would support the restriction of recreation due to the presence of the plover has been discussed in detail in the Ocean Beach section of this comment.

The Bank Swallow At Fort Funston

Beginning in 1991, the GGNRA/NPS began destroying the Fort Funston ecosystem with the premise being protection of the California state-threatened Bank Swallow. The GGNRA/NPS maintained that that recreational activity and "exotic" plants were having a profound negative impact on the Bank Swallow. The GGNRA/NPS never conducted an environmental impact analysis or vital monitoring as required by Federal law before beginning this ecological destruction.

For decades, the Bank Swallow population had been thriving at Fort Funston, with their population increasing steadily even as off-leash dog walking was legally permitted and visitor use increased. In 1982, there were 229 burrows, 417 in 1987, and 550 in 1989--providing anecdotal evidence that dogs and Bank Swallows co-exist and thrive.

In October 1991, the GGNRA/NPS closed approximately seven acres at Fort Funston by moving fences designed to protect the Bank Swallow 75 to 100 feet away from the cliffs in order to construct native plant habitats. (Milestone, J. "Just a Swallow Habitat Restoration Project".) By early 1992, almost four acres were converted to coastal dune and chaparral. At that time, NPS staff began chain sawing twenty-four (24) Monterey Cypress trees lining a trail leading to the beach, and volunteers pulled up erosion-preventing ice plant. Bulldozers were used to level hillocks and bury concrete slabs. In the course of only a few months, volunteers replaced ice

plant with 5,000 native plants in the four acre area. The entire seven acre project was designed to take five years to complete with only 75% coverage of plants. The goal of the project was to increase "natural" erosion and create "moving sand" ecology. With the closures at Fort Funston, the GGNRA/NPS embarked on a unilateral course that was illegal under its own management policies, the MOU Agreement with the City, and the GGNRA enabling statute. At Fort Funston, the GGNRA/NPS pursued a strategy of repressing dog-walking each time it expanded its closures. Concomitant with the native plant expansion, Park Rangers began telling dog-walkers, in late 1991 and 1992, to leash their dogs. In May 1992, Mark Scott Hamilton, Chairperson for San Francisco Commission of Animal Control and Welfare, sent a letter to Superintendent O'Neill expressing concern over "NPS Ranger announcements that GGNRA's longstanding 'voice control' policy at Fort Funston was to be changed effective May 1." Mr. Hamilton pointed out that such action would have serious impact on "overall dog-walking policies within San Francisco's geographic boundaries" and questioned how it could be done without public hearings: "It seems inconsistent with GGNRA's past policies (and perhaps violative of applicable regulatory law) that this change would even be contemplated until after public input hearings."

Public outcry over this action was overwhelming. In response, Western District Director Stanley Albright reassured both u.S. Senator Cranston and Senator Seymour that the GGNRA would continue to abide by the 1979 Pet Policy: "At this time, there is no change in the 1979 Pet Policy which [currently] provides the visitor the privilege of walking one's dog off leash."

Addressing public concern over the closures at a meeting that summer, Head Ranger Jim Milestone, in July 1992, assured citizens that the fences would be in place only one year and the native plants would be compatible with recreational use of the area. (Meeting Minutes of Fort Funston Dog Walkers Association, July 9, 1992.) The next year, GGNRA/NPS expanded the native plant habit an additional three acres beyond the initial seven acre project, again without public review or project approval.

In June 1994, an additional expansion/closure of fifteen acres was proposed without analysis or public hearings. The GGNRA report confirmed that the project was already "expanding into areas beyond our previously agreed to perimeter. Project originally called for removal of all ice plant (a noxious exotic species) from the ten acre Bank Swallow habitat area. This is now complete and new areas outside of Bank Swallow habitat area are now within our grasp." (Project Review Form, Ice Plant Removal, North Tip of Fort Funston, June 1994, emphasis added.) The project goal was to destroy 15 acres of ice plant, using chainsaws to destroy all "exotic" trees and bushes, and using bulldozers where possible. The map attached to this project limited the expansion to the asphalt coastal trail. In fact, this project also was "expanded beyond agreed perimeters" to encompass areas east of the

trail, covering the entire Boy Scout Bowl.

In 1995, Rangers began warning dog-walkers at Fort Funston, Crissy Field, and Ocean Beach that they were going to start enforcing the general leash regulation, 36 C.F.R. Section 2.1s(a)(2). At the same time, GGNRA/NPS announced plans to close ten acres adjacent to Battery Davis under the pretext of erosion control. Ranger Jim Milestone admitted to the public at a meeting in March 1995 protesting the proposed closures that this area was very popular with children for playing Lawrence of Arabia on the steep slope. Dogs loved to chase balls and frisbees at the bottom of slope.

Following these closures, by letter dated March 14, 1995, Superintendent O'Neill promised Richard Avanzino, then-President of the San Francisco SPCA, that the habitat was nearing completion and would not expand south. The GGNRA/NPS also promised that the Battery Davis closure was an approximately 5-year closure during which time it would be revegetated. Signs indicating both areas were closed for native plant revegetation were subsequently placed along the affected areas.

After four years of closures of areas adjacent to the Bank Swallow burrows to off-leash recreation and vegetation revision, in 1995 the number of Bank Swallow burrows plummeted from 924 to 713. A simple review of the scientific literature confirms that Bank Swallows are very tolerant of "human disturbance" at nest sites. Indeed, "many colonies are in human-made sites ... such as sand and gravel quarries and road cuts." (Garrison, B., "Bank Swallow," *The Birds of North America*, No. 414 (1999), at p. 6.) Mr. Garrison is a California Department of Fish and Game

Biologist and an expert on the Bank Swallow. In fact, the only GGNRA/NPS study to evaluate the dramatic drop in numbers of the Bank Swallow concluded that increased predation, not recreational activity, was negatively affecting the birds. (Chow, N., "1994-95 Bank Swallow Annual Report", US04906-32.)

In 1996, the GGNRA/NPS failed to document the colony size, and claims to have lost all data for 1997. In 1998, the number of burrows had dropped to 140, and the GGNRA/NPS closed off the entire slope of coastal bluffs below the hang gliders.

In 1998, the Bank Swallow colony fled the "Bank Swallow Protection Area," to the "exotic" ecology and recreational activity along the south cliffs of Fort Funston. As a general rule of survival, birds leave areas where they are under stress. Despite the obvious devastation to the Bank Swallow colony, the GGNRA/NPS failed to analyze the impact of unleashed dogs on controlling predators of the Bank Swallow. (Hatch Report, p. 85, lines 10-16.) NPS Head Ranger J. Milestone indicated the dogs might have protected

the Bank Swallows by impacting the weasel population. (US03944.) Additionally, observations indicate that the very habitat the GGNRA/NPS was destroying was the habitat most suitable for the Fort Funston Bank Swallow. Such observations confirm that ice plant rootlets are used by Bank Swallows to construct nests. (US04062-3?)

In January 2001, the NPS closed twelve additional acres to public use and the Bank Swallow colony again fled further south away from the new closure.

Because of a total failure to study causal effects of various activities on the Bank Swallow, the GGNRA/NPS has no evidence linking recreational activity with the Bank Swallow decline at Fort Funston. Indeed, the best evidence that recreational activity does not impact the Bank Swallow negatively is the swallows' departure from the fenced off northern cliffs to their present location --an area of continuous recreational activity. The overwhelming evidence indicates that the GGNRA/NPS native plant projects have negatively impacted the Bank Swallow colony.

In fact, NPS documents confirm that Bank Swallow experts do not agree with the NPS/GGNRA contention that the creation of native plant "flyover" habitat is necessary for the Bank Swallows. Notes of a March 16, 2000 phone conversation with Barry Garrison from the California Fish & Game Department, one of the nation's foremost experts on California Bank Swallows, confirm that he "doesn't feel need flyover" (USPR001625) "doesn't necessarily agree that they need a flyover to persist." (USPROD01624). William Shields, Professor of Biology at SUNY, elected fellow of American Ornithologist's Union, leader of SUNY's Conservation Biology concentration (in letter to GGNRA re: closures at Fort Funston, October 2000), reiterates the Bank Swallow's tolerance of human and pet presence and their lack of appreciation for "native plants." "The poor arguments presented in their (GGNRA) plans make little sense to me. The Bank Swallow like other swallows is quite suited to live with humans and their pets" and " ... I do not understand or condone what I believe are their misrepresentations about the needs and safety of the Bank Swallows breeding in the cliffs. ... the notion that the swallows would do better by having more species of insects or even more insects on the shortflyway between their breeding burrows and their main foraging sites at the nearby lake is a major stretch and smacks of special pleading to me."

The GGNRA's dune conversion destroyed the Bank Swallow colony nesting site that the birds had used since 1905.

GGNRA/NPS officials have consistently maintained that after some five years, these "habitat" areas would be reopened for public use. Five years have passed for many of these closures, yet to date, no fences have been

removed.

This DEIS contains no "monitoring of vital signs" that could possibly justify the actions taken previously or the actions proposed in the Preferred Alternative at Fort Funston to limit recreation of people and their dogs. The science, limited as it is, would indicate the Bank Swallow would benefit from the entirety of Fort Funston again being accessible for off-leash recreation as it was in the 1979 Pet Policy. Instead, this DEIS moves to further restrict recreation of people and dogs to presumably "protect" the Bank Swallow. A legitimate safety mitigation would be planting a bramble-type shrubbery barrier along the cliffs, so as to deter dogs and small children (neither of whom can read warning signage) from the cliff edge and preclude accidental falls off the cliffs for all park users.

This DEIS Promotes The GGNRA Practice Of Perverting The Endangered Species Act To Restrict Recreation

Historically, one avenue for eliminating access to the public—the recovery of endangered and threatened species—has been extensively utilized by GGNRA management. This explains the GGNRA's repeated treatment of any habitat, no matter how deficient, as critical habitat. An example of this would be the "plover protection areas" at Ocean Beach and Crissy Field. This DEIS proposes to ban dogs at these areas which is a management restriction more severe than is often employed in "critical habitat". Although for a time the GGNRA attempted to mislead the public by calling this area "crucial habitat", the fact of the matter is that term that has no legal significance. What is significant is that these areas are NOT critical habitat, therefore management measures are legally limited to preventing "harassment" of the plover at that location. Banning dogs is a restriction that is not commensurate with the observed activities in these areas with respect to the plovers.

Additionally, in this DEIS, the NPS designates areas as "potential habitat". The NPS treats "potential habitat" (build it and they will come) as if it were "critical habitat" and embraces all legal restrictions that would enure from that status. An example of this would be at Mori Point in Pacifica. At Mori Point the GGNRA chose to remove 2/3 of the property from recreational access in order to create potential habitat for the red-legged frog and San Francisco garter snake. The GGNRA treats this "potential" habitat as if it were "critical" habitat (which it is not) with respect to recreational restrictions.

The GGNRA has also embarked on a mission to create native plant habitats where no habitat previously existed. GGNRA management alleges this is a part of their obligation to "preserve" the park for future enjoyment, however, this is NOT what they are doing. When you read the overview for Fort

Funston, it is abundantly clear that they are creating these native plant habitats, and in doing so they are destroying parts of the park that existed long before the GGNRA took control. This process is not preserving anything. Additionally, this is in violation of their authorizing directive, as the establishment of native plant areas requires the exclusion of humans from the site, eliminating all recreational activity in the area. Closures at Fort Funston were conducted without a NEPA required environmental impact analysis with regards to recreation or the Bank Swallows, without proper project approval, and without public hearings in violation of NPS regulations, U. S. Department of Interior management policies, and federal law. The GGNRA has implemented similar closures at Baker Beach, Lobos Creek, and in the Presidio. Concerned citizens were unable to obtain specific vegetative plans for the Presidio. Eventually plans to cut down approximately 4,000 trees in order to plant a native "vinegarweed" came to light and were opposed vigorously.

Lastly, the GGNRA has utilized this DEIS to ambush recreation in areas where the public agreed to "restoration" to enhance the environment for "sensitive" species with the promise that recreation would be able to co-exist with these species when the project was complete. The conclusion in the Environmental Review for the Redwood Creek/Muir Beach "restoration" stated:

"The preferred alternative will have short-term minor adverse impacts on visitor and resident access to Muir Beach by contributing to traffic congestion. With the implementation of the mitigation measures, the intensity of these adverse effects will be reduced to a minor level. In addition, the overall effect of the project is beneficial and will improve resident/visitor access and recreation opportunities. Implementation of the Preferred Alternative would not impair park visitors or residents."

The project has been completed, and this DEIS now bans dogs from Muir Beach (they were allowed here off-leash before). Residents/visitors do not see the ban as an "improvement of recreation opportunities as previously promised".

GGNRA Usurps Authority Of The State Of California In This DEIS

The GGNRA intends to ban the recreational activities of dogs and their guardians upon the tidelands that are adjacent to GGNRA beaches. These tidelands remain subject to State "public trust" uses and may not have their longstanding recreational usage turned into purely conservation areas without violating State law and the terms of the permit under which the GGNRA manages some of these tidelands. The GGNRA's position that the public trust doctrine goes into "dormancy" while it manages these tidelands is without any legal support. The 1987 permit specifically allows for

enforcement of federal regulations on these State-owned tidelands only to the extent they are not inconsistent with State law. The "public trust" doctrine has been significant State law since California's admission into the Union in 1850. The general recreational uses of these tidelands are not subject to federal rulemaking of any type.

Compliance Based Management Strategy

The 2,400 plus page GGRNA Draft Environmental Impact Statement (DEIS) purports to offer its proposed alternative (almost everywhere on leash or no dogs at all) and then several alternatives. However, buried deep within the document is the GGNRA's Compliance-based management Strategy-a poison pill, which itself demonstrates that the alternatives are illusory -nothing more than a default to the GGNRA's desired change:

"In order to ensure protection of resources from dog walking activities, the dog walking regulations defined in action alternatives B, C, D, and E would be regularly enforced by park law enforcement, and compliance monitored by park staff. A compliance-based management strategy would be implemented to address noncompliance and would apply to all action alternatives. Noncompliance would include dog walking within restricted areas, dog walking under voice and sight control in designated on-leash dog walking areas, and dog walking under voice and sight control outside of established ROLAs.

If noncompliance occurs, impacts to resources have the potential to increase and become short-term minor to major adverse. To prevent these impacts from increasing or occurring outside of the designated dog walking areas the NPS would regularly monitor all sites. When noncompliance is observed in an area, park staff would focus on enforcing the regulations, educating dog walkers, and establishing buffer zones, time and use restrictions, and SUP restrictions. If compliance falls below 75 percent (measured as the Executive Summary xiv Golden Gate National Recreation Area percentage of total dogs / dog walkers observed during the previous 12 months not in compliance with the regulations) the area's management would be changed to the next more restrictive level of dog management. In this case, ROLAs would be changed to on-leash dog walking areas and on-leash dog walking areas would be changed to no dog walking areas.

This change would be permanent. Impacts from noncompliance could reach short-term minor to major adverse, but the compliance-based management strategy is designed to return impacts to a level that assumes compliance, as described in the overall impacts analysis, or provide beneficial impacts where dog walking is reduced or eliminated"

The entire concept of "compliance based management strategy" is one that

has never before been utilized in any other National Park or National Recreation Area by the NPS. The Draft Plan/DEIS states (page 1725) that "the compliance-based management strategy is an important and effective tool to manage uncertainty when proposing new action" and "has been created" to assure successful implementation and long-term sustainability. It appears this policy attempts to allow the implementation of future restrictions without public notice and comment. This is unlawful and should never have been included in this DEIS.

It is clear that regardless of whatever alternative is finally selected by the GGNRA, the end game for them is the complete removal of off-leash recreation in the GGNRA as well as the banning of dogs entirely from most, if not all, of the GGNRA. At this point we are once again reminded of the revealing statement made by now NPS Director Jon Jarvis: "[I would rather give up those [the GGNRA] properties than have dogs running loose on them. "

In summary, in recent interviews GGNRA representatives have stated that they are forced to ban dogs entirely in many of the former GGNRA off-leash areas provided by the 1979 Pet Policy because, "We do not have the resources to enforce voice control or on-leash compliance ... ". However, it seems to be no problem for them whatsoever to fund staffing resources, expensive surveillance cameras, etc. when it comes to dispensing their "poison pill".

This DEIS (and GGNRA Policy in General) Punishes The Disabled

The disabled are given no special consideration by the GGNRA/NPS. As stated by San Francisco City Attorney Louise Renne (in a letter dated December 19, 2000):

"In addition to receiving numerous complaints regarding the closures at Fort Funston, members of the Board of Supervisors have been contacted by members of the public protesting the removal of pavement from the Sunset Trail, which was closed in November 1999 and reopened in March, 2000. Organizations such as the Golden Gate Senior Services have complained that a major portion of the trail is no longer paved and is therefore inaccessible to persons with limited mobility. We are writing to request a written response from the GGNRA explaining how this diminution of recreational opportunities is consistent with the GGNRA's responsibilities under the Section 504 of the Rehabilitation Act of 1973 (9 U.S.C. 794). Please include in your response a description of the GGNRA's plan to make its programs accessible to persons with disabilities, including those with mobility impairments".

The Sunset Trail is still closed to the public (including those with

disabilities), and the Preferred Alternative would restrict more of the trails the disabled might possibly access at Fort Funston to recreate with their dogs.

At Sweeney Ridge in Pacifica stands the Portola Monument, considered to be the most historic site in the GGNRA. When the GGNRA took control of this property, it closed the access road off to cars, thereby preventing the disabled or mobility impaired from accessing this site. The hike from the current parking spot is 2.5 miles to the Monument, with an elevation rise of some 1,000 feet. The GGNRA has made no legitimate effort to remedy this situation, despite complaints from the City Council in Pacifica, and groups representing senior citizens. This DEIS further restricts access to this portion of the GGNRA.

Perhaps the best indicator as to how badly the GGNRA treats the disabled in this National Recreation Area is the lawsuit brought by Disability Rights Advocates against the GGNRA several years ago. According to the suit, the federal recreation area is discriminating against people with disabilities by systematically excluding them from such areas as restrooms, visitor centers, historic sites, trails, pathways. One of the plaintiffs attorneys explained that at the Marin Headlands, the visitor center has a ramp, "but to a third-party evaluator, it was so steep as to be inaccessible and dangerous. Alcatraz offers a tram, but it only holds two wheelchairs ,theyjust don't have the capacity. At Muir Woods, one of our plaintiffs has had problems with paved trails. GGNRA hasn't kept the paved trails in a condition that allowed her to use them."

Federal laws since 1973 have obligated Golden Gate National Recreation Area to provide reasonable accommodations for persons with disabilities. Having to hike 2.5 miles to see Portola's Monument may be inconvenient for the average citizen, but it is impossible for an individual with a physical disability. The Sweeney Ridge/Portola Monument situation is a representative example of how when making decisions regarding access the GGNRA always chooses less access. The judge in this litigation sent both parties out to mediation, yet after a time the parties were sent back to the court as there was a complete failure to come to any workable conclusion. Therefore, it cannot be asserted the GGNRA did not recognize the problem- the reality is that the GGNRA has no intention of remedying the problem, unless forced to by the Court. This DEIS is consistent with this pattern of practice.

Environmental Justice

The issue of Environmental Justice, as it is postulated in the DEIS (P.31), is offensive at best. To claim that ethnic minorities are dissuaded from visiting the park because dogs are present is a perversion of the data. None of the 20

or more recommendations in the study about what the GGNRA could do to increase accessibility by minorities includes banning or restricting dogs.

The study was flawed in that it was a small sample of non-randomly selected people who were largely unfamiliar with the GGNRA (only 1/3 had visited at least one GGNRA site in the past year). This creates a situation where you are obtaining opinions about the GGNRA from people who have not experienced the GGNRA to any significant degree. You are likely only measuring their perception of the GGNRA, not what actually occurs there. The responses obtained from this study might be well suited to establishing a public relations campaign for the GGNRA, but not establishing park policy.

The study itself says the goal of the study is to "realize the park goals of understanding how to improve 'connecting people to the parks' and how best to engage under-represented communities in plans and programs"-it was a public relations survey. What the study overlooks is that dog walking connects all different kinds of people to the parks. Had the subjects in this survey been to Fort Funston or Crissy Field recently they would have seen a wide diversity of people --seniors, kids, disabled people, Asian-Americans, African-Americans, Latinos, Pacific Islanders, all there with dogs. Compare that mix to any other GGNRA park activity (with nowhere near the diversity) and the "we have to restrict dogs to protect ethnic minorities" argument appears misguided and somewhat condescending.

Respondents who did visit the GGNRA express no apparent problem with dogs recreating with people. A quote from P-42 of the SF State study: "I go to the beach ... When I look at the ocean I could totally relax and let my imagination run wild. I feel that life in America is truly wonderful when I watch people fishing, jogging, playing and walking their dogs."

An interesting observation: the GGNRA talks about protecting access for ethnic minorities who don't come to the GGNRA, but hypothetically might come to the park if there were changes. Who will protect access for the ethnic minorities who DO come to the park to enjoy off-leash recreation?

Suffice it to say that Environmental Justice would appear to be a specious argument at best for restricting the access of people with their dogs in the GGNRA.

Protection Of The Cultural Resources

The idea that cultural resources such as buried missile silos at Fort Funston require protection from dogs trampling, digging or urinating is far-fetched at best. I would point out that the larger size and weight of humans would be a greater threat to trample notable sites than would dogs. With respect to

missile silos at Fort Funston I would not assume all urine deposited would be that of the canine visitors. The GGNRA still has not installed any permanent bathrooms for the many human visitors at Fort Funston. In fact, it seems the GGNRA has little regard for the enjoyment of these resources.

I would also point out the GGNRA has failed miserably in their restoration efforts for facilities such as the Cliff House which are within the Recreation Area's boundaries. The new facility is quite unaesthetic, and popular restaurants within have been altered and have lost their popularity. I have talked to many visitors who are familiar with the previous incarnations of the Cliff House. They always express their disappointment and/or outrage as to its boxy appearance with the service entrants in the most visible area. There used to be a line down the hill for the Sunday brunch at the Cliff House, now it is empty. Our cultural resources are in far greater danger from GGNRA management and their "restoration" plans than they are from dogs.

Safety In The GGNRA The DEIS states: "Most of the issues related to the health and safety of park visitors are related to their encounters with unruly/aggressive dogs". The actual Law Enforcement citations were obtained and catalogued by interested dog guardians and the chart below is the result of their careful analysis. As you can see, the incidents involving unruly or aggressive dogs comprise only 2 percent of the total incidents Law Enforcement reported in the GGNRA. Remarkably, these bite/attack incidents only occurred once in every 1.36 million park visits. 93 percent of the time, Law Enforcement was dealing with human-specific incidents. Clearly this issue of park safety for visitors and staff being compromised because dogs are present has been entirely overblown to justify the radical recreation restrictions the GGNRA is promoting in this DEIS.

Another safety issue brought up in the DEIS is dog feces. It is disturbing that the GGNRA brings up a multitude of diseases or health risks associated with dog feces, yet provides no statistics about disease contracted by people from dog feces. It is my understanding the data to support this "potential" risk is nonexistent.

A related topic in this DEIS is the extensive maintenance dog areas require. For example, statistics are provided for the high cost of trash removal at Ocean Beach. As a daily visitor to Ocean Beach, I must point out the vast majority of the trash is not dog-related, but people-related. I have not as yet seen groups of dogs huddled around beach fires drinking and eating for hours, or groups of dogs enjoying a beach picnic. It is unfair to allocate excessive maintenance costs for trash removal to dogs. At Fort Funston, the complaint is that they must empty trash more often because it is heavy due to the large volume of dog feces. It seems dogs, and their guardians cannot win in this DEIS. On one hand, they are accused of failing to pick up dog feces, and on the other hand the GGNRA complains the trash receptacles are

heavy because of all the dog feces in the trash!

In reality, the safety issue with respect to dogs is a disingenuous argument at best. GGNRA management has sacrificed safety of the public repeatedly when safety comes into conflict with their "restoration" agenda. For example, the GGNRA was happy to spend over a million dollars at Mori Point to construct a bridge so that frogs could migrate from their current habitat on property outside the GGNRA to the "potential habitat" the GGNRA had spent another million dollars to create at Mori Point. Previous to the construction of the bridge, the frogs would have been required to cross the emergency access road for Sharp Park and Mori Point. In building this bridge, the GGNRA destroyed the original access road. Consequently, there is no direct way for emergency vehicles to get out to these popular public properties should there be an emergency.

With respect to management in the GGNRA, their high cost discretionary projects (e.g., the \$12 million spent by the GGNRA to create the new Giacomini Wetlands in Marin, the aforementioned bridge to nowhere at Mori Point always take precedence over everything else most notably public safety. Budget cuts enforced by the GGNRA in spring 2008 cost nearby Presidio Fire Station NO.2 the use of their ambulance, and could have made the difference between life and death for a woman found hypothermic at Rodeo beach by a maintenance worker.

Correspondence: Water Quality In The GGNRA

It is interesting to review the water quality findings in this DEIS. Although it is asserted dog feces are a significant component in water bacterial contamination, once again the DEIS is short on facts and misleading as well. The DEIS refers to a substudy of the San Francisco Sewage Master Plan which determined that bacterial contamination of waters off Ocean Beach was significant due to dog fecal matter deposited along the shoreline (NPS 1999, 21). The difficulty with this reference is that it cannot be located. It does not exist.

What I find much more relevant is the Annual Report by Heal the Bay. This year's report just came out and Ocean Beach receives an A+ ranking at Balboa Avenue year-round excepting a B ranking during wet weather. At Lincoln Avenue there is an A or A+ ranking year-round excepting a B ranking during wet weather. At Sloat, the ranking is an A or A+ all year-round in wet or dry weather. Clearly dog feces are not creating a problem at

Ocean Beach. Further, the 2010 Heal the Bay report acknowledged that in the summer nearly all beaches had a clean bill of health. But in the winter, when heavy rains cause untreated sewage to flow into the bay and ocean, bacteria hit perilous levels in some areas. Deb Self, Director of San Francisco Baykeeper said, "We have a massive, rampant problem with human waste." Among the worst offenders is Baker Beach, where raw sewage leaking from old pipes and overflowing storm drains flows into Lobos Creek and forms a pool at the south end of the beach.

Clearly, most dog guardians are picking up their dogs' feces, and the relatively few instances where people fail to pick up after their dog, while not excused, do not constitute a threat to our water quality.

Effect Upon Surrounding Parks

This DEIS fails to meet NEPA requirements by omitting an analysis of the effects of the proposed change on park properties in the cities and counties where the GGNRA now owns large swaths of recreational resources. However, when reading the DEIS, it seems pretty clear what the effect would be. From the DEIS itself: "High numbers of incidents occur because of the large number of people that use the site at one time, and the high number of dogs off-leash at the site.. " Certainly the GGNRA would acknowledge that this is precisely what will happen to parks outside the GGNRA should they close down 90% of the GGNRA's off-leash acreage as the Preferred Alternative would do. This is an unacceptable outcome.

I would also point out that the City and County of San Francisco has an ordinance (San Francisco City and County Health Code; Article I; Section 41.12; Paragraph (c); Subparagraph 5) that, among other things, requires dog guardians to provide their dogs with adequate exercise to maintain muscle mass and appropriate weight. Therefore, the issue of whether or not to exercise dogs when access has become severely restricted is not optional. Dog guardians will be forced to do what they have to in order to comply with San Francisco law.

This Agency Action Will Not Resolve Litigation

In recent history, litigation has been the only recourse the taxpayers have had to combat this abuse of power by the NPS/GGNRA. And, in fact, the NPS/GGNRA was forced to reinstate off-leash recreation in the GGNRA following a Federal Court order in 2005. Should the NPS/GGNRA proceed with any of the alternatives propagated in this DEIS, litigation to have this DEIS declared unlawful; or litigation by San Francisco to take back some of these properties will become a necessity.

Duty To' Preserve -This Agency Is Responsible For Resource Degradation

The greatest threat to the long term health of the GGNRA properties is the failure of GGNRA management to implement and use effectively a "Vital Signs Monitoring" program. Ecosystem changes GGNRA management has made until now to "preserve the resources" of the Park would not have been approved had a "Vital Signs Monitoring" program been utilized. The NPS / GGNRA has destroyed large areas of the Park in an attempt to remake the Park environment in the vision of a nativist ideology. These actions are in direct violation of the enabling legislation for this National Recreation Area. The DEIS' Preferred Alternative proposes additional changes purported to protect wildlife from harassment. The data indicates the unintended consequences of ecological changes GGNRA management has implemented without the benefit of "Vital Signs Monitoring" have proven to be a far greater danger to wildlife than dogs. The scientific data presented in this DEIS does not adequately support the Dog management changes GGNRA management has made subsequent to the 1979 Pet Policy, or the changes they seek to make in any alternative proposed.

Conclusion

The only conclusion one can possibly draw from the evidence produced in this comment is that this DEIS along with its preferred alternatives and the compliance based management strategy are not based upon science or data, but rather the product of a predetermined outcome. I would expect no less from an agency whose top authority, Director Jon Jarvis, is on the record as stating, "I would rather give up those [the GGNRA] properties than have dogs running loose on them. "

After consulting with several knowledgeable legal resources, it is my opinion that this DEIS is unlawful, biased and so badly flawed, it must be thrown out. The GGNRA still has the ability to codify the original 1979 Pet Policy as a Section Seven Special Regulation. New lands should maintain the historical use upon inclusion and "vital signs monitoring" should be implemented to determine whether subsequent changes must be made to protect resources. Should the GGNRA fail to heed these recommendations, San Francisco City and County could remedy their issues by formally taking back their affected properties by enforcing their contractual reversionary clause. Unfortunately, this would be of little assistance to Marin and San Mateo counties. Therefore, it would be likely that those counties would pursue Congress to implement a Section Seven Special Regulation to ensure recreational access as was originally intended when this National Recreation Area was created. The third option would be to transfer the GGNRA to another Federal agency such as the Forest Service, where sound principles of land use and planning are a part of their management policy. Should these properties remain under the management of NPSjGGNRA, there must be

strict oversight by Congress. Proper safeguards must be put in place to ensure that the sound principles of land use planning and management are adhered to by the GGNRA on a permanently basis.

Received: Jun,01,2011 00:00:00
Correspondence Type: Letter
Correspondence: Dear Superintendent Dean:

I am a senior citizen resident of San Francisco who has frequented the park areas at issue for over twenty years. Although I frequently take advantage of access to other units of the National Park system, continued access to the different urban park experience of the GGNRA is very important to me.

I began using these park areas because of the opportunity to walk my dog on leash. That introduction to the park has led to an ongoing experience that is highly important to me and to my quality of life and health. Now that I no longer have a dog to walk, I continue to treasure the urban park opportunity, but believe it would not be the same and will be substantially less attractive and accessible if off leash dog walkers are unreasonably limited.

I do not think it will be safe to walk alone in the Fort Funston or the Ocean Beach areas if dogs are not allowed. Dog walkers seem to constitute the biggest regular park user group, and their absence would decrease the human population so much as to render those urban park areas unsafe except at the busiest times of the week. Dog walkers are out there rain or shine and create a community of users. Like going to a children's playground or church, people seem to act better when in these areas. Dog walking areas tend to be a more polite cooperative social community than do locations without the calming presence of pets. Off leash opportunities add to this park quality.

Consequently, if you limit the dog walking, I think you will end up changing the atmosphere of the beaches and Fort Funston to such an extent that you will end up spending increased money on park police patrols to handle the resulting danger that will move in when the dog walkers are removed. The DEIS does not adequately consider such probable collateral consequences. Also, by concentrating the increasing number of enthusiasts in smaller and smaller areas, you will create conflicts and problems that otherwise can be avoided or minimized. My view is that dog walkers, like other hikers, might in fact have less impact on a given area if the use is dispersed over a larger area. The DEIS does not seem to adequately consider whether the impact is greater or less with concentrated or dispersed use. This factor impacts both the recreational access impact and environmental

impact. The DEIS and other policy considerations should look at this carefully. It is insufficient and absurd just to look at whether the impact will be higher or lower as to a specific area where park use is limited. The question should be what is the overall park impact of the change.

Similarly, the DEIS insufficiently considers the impact of the proposed changes on San Francisco City parks and other parks in the area. The impact will be profound. Any decrease of off leash dog walking access opportunities in the GGNRA should be mitigated with replacement access opportunities at like similar type areas within the GGNRA.

Nor does the DEIS adequately consider the increased enforcement cost and public relations nightmare the GGNRA will face if it makes further dramatic limits to park access. Access has already been curtailed greatly. The GGNRA should carefully consider whether it wishes to take on that battle. Such a choice to create unnecessary conflict is all the more unsound in light of the past difficulties the GGNRA has suffered as a result of the irregularity of the GGNRA's campaign to restrict access.

I do not think it appropriate to deviate significantly from the existing pet policy. It has basically worked well for many years and serves the GGNRA goal and public interest as well as can be expected. I think the Advisory Commission got it right in 1979 when they carefully evaluated where the dog walking could best be accommodated within the entire recreation area and concluded that the designated off leash areas were the locations where such recreational use would have the least adverse environmental impact and the least impact on other recreational activity.

I enclose and incorporate a copy of the April 11, 2002 letter and exhibits I previously sent concerning the suggested changes to the existing off leash recreational access. Please consider those comments as part of my public comment on the current DEIS as the same public policy considerations apply now. Particularly, please consider the more detailed explanation in the letter at page 4 of my comments that regional impact should be considered and the GGNRA should meet its prior commitment to consultation and coordination with local entities consistent with the prior GGNRA promise that:

" As the primary regional source of recreational opportunities, GGNRA/ Point Reyes will be planned and managed as one element of a Bay Area park system. Therefore, regional supply and demand factors must be considered." (GGNRA web site document p. 198: "Consultation and Coordination with Others") The current DEIS does not do so and on that basis alone must be abandoned or reworked. Please carefully consider the more detailed specific comments I made about the recreational needs of San

Francisco and the potential adverse impact thereon.

I think that the greatest real impact of the DEIS Preferred Alternative would be to drive humans out of the park. The DEIS should be honest about that and evaluate whether that is really consistent with the GGNRA enabling legislation and proper management goals. Certainly the impact of decreasing human user access is a much greater factor than whether those humans are accompanied by a canine companion. That bottom line impact should be honestly considered ' does the GGNRA want more or fewer park visitors? The GGNRA should fulfill its mandate as a gateway park.

The DEIS does not appear to reflect consideration of the great amount of public input already submitted on the pet management policy topic. I suggest that you consider the public comments previously made to the Advisory Commission, the conclusions of the National Advisory Panel, the careful comments previously solicited by the GGNRA and the two court decisions concluding that the GGNRA was dead wrong on its analysis of the scope of the need to consider the public and local concerns.

Given the GGNRA's mistakes in the past in this regard, and the possibility that the Court was correct in concluding that the GGNRA was attempting to "railroad through" its agenda and render its preferred plan a "fait accompli" regardless of the public comment, the GGNRA should error on the side of extra caution in carefully evaluating the local concerns and local impact. Protections must be in place to ensure that the analysis is unbiased and transparent.

The proposed change is unnecessary, is bad policy, will lead to bad consequences for the GGNRA in reputation, park quality and user access and will be unreasonably expensive. Don't try to fix something that isn't broken. If anything, off leash access should be increased to the prior 1979 Pet Policy levels. I believe that the access use should be dispersed so that there is less potential for overuse conflict and impact. The DEIS fails to evaluate the environmental and recreational access impact of its prior closures. If the prior changes had negative impact, why repeat the mistake without carefully considering the consequences of the prior closures and use limitations.

The DEIS also is inadequate and non compliant by failing to consider the impact of the change. Instead, the DEIS focuses on the impact of the existing use. The DEIS fails in this way by considering only whether there is impact of a current use that can be reduced in a specific area. If one were to consider the impact of closing down a freeway, it would be absurd to consider only the impact on the specific land covered by the freeway without considering the impact on the nearby streets and surrounding areas and potential increased danger and pollution. I highly recommend, that

access to the Fort Funston area be restored to the scope of access existing prior to the closures in 2000. Those closures needlessly fenced the public out of the areas of the only large sand dune in the Bay Area available for children to play on. Please consider the specific area recommendation I listed on page 5 of my attached April 11, 2002 letter.

When the voters were convinced to transfer Fort Funston, several parks and their entire municipal beach to the National Park Service the voters were promised that their recreational uses would not be limited if they approved the transfer. Please do not break that promise!

Christy A. Cameron

Enclosure incorporated as public comment: April 11, 2002 Christy Cameron correspondence to Superintendent O'Neill with Exhibits A-E Dear Superintendent O'Neill:

It is with a heavy heart that I sit down to write to you once more about the continuing depressing and unnecessary restrictions on recreational access in the Golden Gate National Recreation Area (the "Recreation Area"). In spite of efforts to call it the Golden Gate National Parks, it is not a National Park, it is an urban Recreation Area.

I have a heavy heart because I fear that my efforts will be in vain, that they will not truly be considered by you or your staff. I fear that the ANPR is a "phony" pretense of taking public comment so that you and your staff can pretend that you have to eliminate off leash dog walking in the very small portion of the Recreation Area where dogs have been permitted to run under voice control for 40 or more years, 20 of which were under a Pet Policy adopted by your office.

You are now claiming that the Pet Policy was implemented "in error and was unofficial". This contention is nonsense! It was adopted and implemented because it was exactly the type of existing recreational activity contemplated by the enabling statute mandate to operate the park to provide for the maintenance of "needed recreational open space." (16 USC 460bb) That specific recreational mandate overrides the application of a general regulation, such as 36 CFR 2.15. (See 16 USC 1c) Exhibit A, contains a few of the many letters from the U.S. Department of the Interior including from Regional Directors Reynolds and Albright, acknowledging the 1979 Pet Policy. For instance, your March 19, 1999 letter to Congresswoman Pelosi confirmed the Pet Policy as developed with the Advisory Commission:

"As you are probably aware, GGNRA has adopted a pet policy that is more liberal than pet regulations at other national park sites throughout the country. In all other areas of the national park system, pets are required to be

leashed at all times and are, for the most part, excluded from all but developed areas. GGNRA has, with the assistance of the park's Advisory Commission, established a pet policy that allows some opportunity for visitors to enjoy a few designated areas with their pets under less restrictive circumstances. Certain areas of the park have been designated as voice control areas where pets are permitted off-leash. Other sites are open only to leashed pets, and some portions of the park are completely closed to pets in order to protect sensitive resources. This policy is designed to accommodate the many different user groups within the park as well as to fulfill our mandate to protect natural resource values of the park. We believe our present policy provides a balance between pets in GGNRA and the protection of park resources."

Therefore, it is clear that the Pet Policy was officially adopted and confirmed over the years, not just by the Advisory Commission as the ANPR suggests, but by the Park Service. The Park Service even published a brochure entitled "Enjoying the Park With Your Dog" (circa 2000) which explains "voice control" and lists numerous places where visitors can take their dogs off leash. (See Exhibit B, page 2, Where Can I Take My Dog Off Leash?)

I believe that the 1979 Pet Policy is still operative; it has not been legally revoked. Because of the enormous public outcry and controversy surrounding the Parks Service's efforts to eliminate long standing and historical off leash recreation, revocation of the 1979 Pet Policy would require public notice and comment. (See 36 CFR 1.5(b) and *Fort Funston Dog Walkers v Babbitt*, 96 F. Supp. 2d 1021 (2000 N.D. Calif.)) Regardless of whether the Pet Policy was official or "unofficial" as postured in the ANPR, the established off leash recreational access use was in fact a traditional use pattern. By changing that operative policy and the enforcement pattern the Park Service effects an activity restriction which will result in a significant alteration in the public use pattern of the park area, and is highly controversial. The requirements of public input prior to such a closure are triggered by the fact of the change in use pattern regardless of the status of the policy, As you are well aware, 36 C.F.R. 1.5(b) requires that

... a use or activity restriction or condition, or the termination or relaxation of such, which is of a nature, magnitude and duration that will result in a significant alteration in the public use pattern of the park area, ... or is of a highly controversial nature, shall be published as rulemaking in the FEDERAL REGISTER."

Therefore, the starting point of analysis should be whether the long-standing off leash policy and practice should be changed. It is improper, biased and likely to lead to analysis error if the Park Service is allowed to shift the

burden of persuasion to the public. The law is set up to protect the public from unfair changes. The Park Service has flip flopped the process by claiming that the policy has already changed and then trying to place an unsurmountable burden on the public to convince the agency on whether it should even consider rulemaking to establish a new policy. My own view is that the old policy worked just fine, and that the burden should remain on the government to show why it believes it is so important to create new restrictions on the rights of the people to use their parks.

Frankly, I believe that the Pet Policy was suddenly (after 20 years) discovered to be implemented "in error" and therefore "null and void" in order to retaliate against dog owners for exercising their constitutional right to petition the court and to frustrate their standing in court. That is illegal and outrageous conduct. This retaliation against dog walkers will not go un,noticed by other recreational users and thus has a chilling effect on public participation and the exercise of constitutional rights. I believe that such retaliation for the exercise of constitutional rights is, in itself, a civil rights violation. The retaliatory intent is clear on the face of the ANPR notice. The Park Service was planning to close 10 acres for part of the year and after the pretense of public comment that the Court had ordered, the Park Service closed off 12 acres year round. Despite specific Federal Court findings regarding bias, hostility and efforts to railroad though the closure while attempting to avoid consideration of the concerns of the people effected, the GGNRA allowed the same individuals to continue to work on the issue.

The ANPR document reveals a clear and disturbing bias against off leash dog walking. If one were to read it without ever having spent time at Fort Funston, Ocean Beach, Baker Beach, or Crissy Field, one would think there were no senior citizens, children, disabled, or minorities enjoying the Recreation Area with or without dogs. This is ridiculous and absolutely contrary to reality. The diversity at these areas far surpasses diversity at any other parts of the Recreation Area. All ages and types of people come together and get to know one another. Read the comment letters submitted to you; note the number of senior citizens, disabled, children, and minorities that overwhelmingly want off leash recreation to continue. Contrast that to the elitist, primarily white, native plant fanatics that want to fence out the public for their recreational gardening experiments.

The ANPR raises the same bogus pretense of "threatened birds and native plants" that your office used to fence off much of Fort Funston. I have attached my prior comment letter to address these issues. (Exhibit C) The pseudo science and unsubstantiated conclusions have been repeatedly discredited yet the Park Service continues to reiterate the same nonsense like an old broken record. Dogs and birds (and other wildlife) have co-existed for over at least ten thousand years. Frequently birds chose to follow dogs while hunting for insects. The predators of the bank swallow chicks are

hawks, ravens and kestrels, this has been seen by many Fort Funston visitors and documented by Park Service employees. The removal of the ice plant at Fort Funston (resulting in more mice) has contributed to the overpopulation of hungry and cunning ravens scanning the cliff face for bank swallow chicks. The dogs can't fly - they can't pick off the bank swallow chicks. Even more silly is the Park's Service's contention that the Snowy Plover which does not nest on Ocean Beach or Crissy Field beach nevertheless might have its sex drive affected by dogs. Sheesh! What's the matter with you people? Is this how our tax dollars are spent? The Park Service has not produced any competent evidence that dog activity affects shorebird populations. Yet they are willing to curtail an important recreation activity based on nothing more than a politically favored presumption. The Snowy Plover are not even around for portions of the year. They stop over while passing through in route to nesting areas. Why close off the beach during the seasons when the Plovers are not even around?

Since it is clear that there is bias amongst the GGNRA employees that were previously involved in the improper conduct regarding Fort Funston, the prior inadequate comment review and the biased format of the ANPR notice document, please make sure that none of these individuals are involved in the review of the pet management public comments.

The Park Service committed to consultation and coordination with other local, state and federal agencies and cities and recognized the GGNRA would be the primary regional source of recreational opportunities. San Francisco transferred six of its city parks to the GGNRA ' six city parks San Francisco residents have used for decades for needed urban recreation. Now the residents are told that their land is a National Park and that wildlife and so-called "native plant restoration" is the mandate for the Park Service, not recreation. The document attached as Exhibit D, Consultation and Coordination With Others, was downloaded from the GGNRA website. On page 198 this document notes:

"As the primary regional source of recreational opportunities, GGNRA/Point Reyes will be planned and managed as one element of a Bay Area park system. Therefore, regional supply and demand factors must be considered." (Emphasis added)

San Francisco has, on many occasions in the past two years, voiced its concerns over the changes that the Park Service has made to the recreation areas transferred to it. San Francisco is very concerned about the effect the Park Service's actions are having on San Francisco residents. On December 10, 2001 concerned about the harassment of San Francisco residents by the Park Service, the San Francisco Board of Supervisors passed a resolution requesting that the GGNRA not enforce the leash law until the ANPR

process has been completed. (Exhibit E)

San Francisco is a CITY, a geographically small city although densely populated. Perhaps the Park Service has failed to notice that. Although San Francisco has numerous racoons and skunks, it no longer is home to the grizzly bear or any other bears for that matter. Perhaps the Park Service is planning to re-introduce the grizzly bear to the Recreation Area. The grizzly bears could be re-introduced with the poison oak the Park Service was considering planting as part of its "restoration" efforts. The reintroduction of wildlife, such as bears and wolfs, is in many instances appropriate to a National Park located in wilderness areas far from cities and urban areas. The point is that a one-size-fits-all set of management policies for National Parks and Recreation Areas is not workable. Although I do not believe that the Park Service is intending to review the public comment in a fair and unbiased manner, my good faith answers to your specific request for responses are as follows:

1. The Park Service Dog Policy brochure circa 2000 "Enjoying the Park With Your Dog" (Exhibit B) is a good place to start. However, I would include Land's End and all of Ocean Beach as off leash (voice control); this was permitted by the Pet Policy until approximately 1996; the removal of these areas from the off leash area designation was highly controversial and without pubic comment and therefore illegal. It is my position that the Pet Policy continues to be in force in all areas designated by the brochure and including all of Ocean Beach and Land's End.
2. Ocean Beach, Baker Beach, Fort Funston, Crissy Field, Muir Beach should continue to be off leash areas.
3. Mori Point should continue to be off leash as it has for years prior to acquisition by the GGNRA.
4. Trails in Sweeney Ridge and the Marin Headlands should be considered for both off leash and on leash access.
5. The Sunset Trail at Fort Funston should be re-paved so that disabled, seniors, and others with limited mobility can again enjoy Fort Funston with or without a dog. (The removal of the Sunset Trail and the resulting misery it has caused our seniors and disabled is a DISGRACE to the National Park Service.)

The entire tone of the ANPR indicates that rulemaking will not be the "option chosen by Park Service". The Park Service should not interpret its management policies in such an extreme fashion as to render the Park Service incompetent to manage an urban Recreation Area. If the Park Service remains unwilling or unable to operate an URBAN park

(particularly the portion within the city limits of San Francisco, the highest density outside of New York City) with common sense and an open mind as to urban needs, perhaps then the GGNRA should consider returning the property to the City of San Francisco or transferring it to the Forest Service or the Bureau of Land Management. The Park Service should not create regulations and then interpret its management policies in a manner that has the effect of overriding Congressional intent to create a Recreation Area. Congress intended the GGNRA to be an urban Recreation Area. When Congress intends a federal lands area to be a National Park it calls it a National Park. The Park Services's efforts to manage Recreation Areas with exactly the same emphasis on resource protection rather than recreation that it would use in Yellowstone or Yosemite is not workable and if a reasonable accommodation to recreational needs can not be achieved, the Recreation Area does not belong within the Park Service's jurisdiction.

Correspondence Type: Letter
Correspondence: Dear Mr. Dean,

The Marin Audubon Society appreciates the opportunity to comment on GGNRA's Draft Dog Management Plan/Environmental Impact Statement. Our organization has a long history of working to protect wildlife and wildlife habitat. Knowing that this is a sensitive issue, we have had many discussions and spent considerable time developing our position. Many of our members and Board members are dog owners and like dogs even if they do not own one We visited all relevant sites in Marin County, except for one that we could not find. Generally, we have found the DEIS to be a fairl thorough analysis of the impacts of dogs. We do not however, find that the information and evidence provided as well as the policies and laws support the choice of alternatives that allows dog use and unleashed dogs on many sites.

As discussed below, MAS generally supports Alternative D. the most protective for natural resources. but differs from that alternative for some of the sites. We recommend that all dogs be on-leash in all areas where dogs are allowed in GGNRA, and that some areas be off-leash to dogs to protect resources.

General Limiting dog use is supported by many relevant national policies

and laws. The purpose of GGNRA, as stated in the DEIS, is to offer national park experiences to a large and diverse urban population while preserving and interpreting its outstanding natural, historic, scenic and recreational values. Resource policies and guidelines, also noted in the DEIS, state that the NPS will maintain as part of the natural ecosystems of the parks all plants and animals native to park ecosystems; and will achieve this by "preserving, and restoring...native plants and animal, populations and the communities and ecosystems in which they occur....restoring native plant and animal populations where they have been extirpated by human caused actions,... and minimize human impacts on native plants and animals, populations, communities and ecosystems." The Organic Act of 1916 directs national parks to conserve wildlife unimpaired for future generations which is interpreted to mean that native animal life is to be protected in perpetuity as part of the park ecosystem."

The charge for lands under the NPS system is clear ' protect natural resources. It is not the responsibility of the national park system to provide recreational areas and experiences to special interests are they dog walkers, bikers, birders, or others. Uses that do not harm resources and impact other users are provided for, but uses that harm resources should not be allowed. Users, be they walkers, birders, dog walkers or others should stay on trails and other designated areas to prevent damage to natural resources. To us this means that dogs should be leashed and confined to designated roads/trails.

The DER should discuss the implications of adopting the proposed recommendations on other national parks. What is to prevent diversion from NPS policy at GGNRA creating a precedent for relaxing standards that currently guide dog restrictions in the NPS system? Why should GGNRA be an exception?

In addition, the NPS is bound by a number of federal and state laws that are discussed on pages 1109 to 1112. The DEIS should also include a discussion of the recently released STATE OF THE BIRDS 2011 report. This report is particularly relevant because it covers the status of birds on public lands, reveals that most avian species, except for wetland dependent species, are declining throughout the nation and one of the significant threats identified is the presence of dogs in habitats. Specific habitats addressed in the report that exist at GGNRA are grasslands and coastal beaches. The DEIS should include a discussion of the dogs on GGNRA habitats as part of the nationwide problems resulting in declining species in these habitats.

The cumulative impact on wildlife species should be addressed in a nationwide framework. The discussion should in particular focus on the species and habitats noted in the STATE OF THE BIRDS 2011 report that are present at GGNRA. This discussion should address the perspective of

how impacts that occur from dogs in habitats in this region contribute to the nationwide decline in wildlife populations.

Wildlife Impacts The DEIS chapter on Wildlife presents many studies that document and report on the numerous adverse impacts of dogs on wildlife. Several of the impacts of the construction and use of ROLAS, however, are not identified. While fenced ROLAS may work to confine unleashed dogs (some dogs do jump fences) and keep them from running into and through habitats and affect wildlife, the fences would have adverse impacts to habitats and wildlife that should be addressed. Fences that would be constructed would adversely impact the habitats by blocking movement of wildlife through and between habitats. In addition, construction of the fencing would destroy vegetation that is habitat.

The above impacts on wildlife movement and on vegetation from the construction and use of ROLAS should be addressed in the DEIS.

Dogs going off roads walking into and through habitats adjacent to the roads cause a number of impacts that are addressed in the DEIS. Additional impacts include trampling of vegetation, leaving scents, noise, chasing (and sometimes catching) or otherwise disturbing wildlife. These potential impacts should be discussed.

In addition to upland and beach habitats, dogs using fire roads that cross streams may adversely impact water quality that could impact downstream habitats and be harmful to wildlife.

Adverse impacts to vegetative habitat and wildlife would result from dogs that are allowed to walk in the habitats on their six-foot long leashes using fire roads, and trails if that is permitted. This may be a more narrow area, but vegetation trampling, noise, scents, frightening wildlife will occur. There should be a discussion of these impacts and of mitigation to avoid or minimize the impacts. One of the mitigations should be requiring and educating owners to keep their dogs within the confines of the fire roads by requiring dogs to be kept on the fire road itself, and not enter the adjacent habitats.

The discussion of compliance based management on page 802 mentions the use of buffer zones as one of the methods to deal with non-compliance. Please provide a more complete explanation of what this means.

Monitoring/Management/ Enforcement Based on our experience seeing people violate leash laws and other trail regulations over a period of many years in many locations, we have considerable concern about compliance and enforcement, whatever combination of regulations GGNRA eventually

approves.

The Management Plan includes what is referred to as compliance based management strategy. After adoption of the Management Plan, the Park Service plans a 1 to 3-month period of public education, followed by a 1 to 3-month period of monitoring for compliance. Additional educational methods including, signs, brochures, meetings, etc., would be used. The Park Service expects compliance to gradually improve. If it does not, management would move to the next more restricting scenario, e.g. ROLAS would change to on-leash; then on-leash-requirements would be changed to no dogs.

Outreach and Education is planned to take place first. Discuss the plan and method for educating users, distributing brochures etc. Snowy Plover research in Santa Barbara found that the most effective tool in getting the public to comply with restrictions to protect Snowy Plover was person-to-person request. In Santa Barbara they used volunteers who explained why people should stay off the beach during nesting season. Such a program should be considered for use here. Discuss the possibility of initiating such a program. We believe that enforcement of regulations sends the clearest message of what is expected of people. Clear signage should be installed immediately. The signage should explain what is allowed and is not allowed and why, and information about enforcement measures that would be taken. Interpretive information, particularly where special status species are present and habitat information should be included. Signs should also give information about the GGNRA boundaries. At some of the Marin sites, signs were small, obscure and difficult to find. Once adequate signs are installed citations should be issued immediately.

Clear and uniform signage needs to be installed throughout the park. Users should not be able to get away with claiming ignorance of regulations. The signs should explain the regulations; interpret the reason for them and the resource that is at risk. Signage is so disjointed that users are confused about rules, they are unclear about boundaries. In one location, where there are different jurisdictions we had trouble determining where the ownership boundaries were, and we could not even find one of the sites that lacked signs in Marin.

We assume the monitors and the enforcement staff will be different people. How will the people doing monitoring interact and/or communicate with the enforcement staff? Would the monitors have any enforcement authority? Would they contact enforcement staff if there is a significant problem?

Adequate enforcement is essential to ensure maximum compliance. Explain how the enforcement staff will operate? How will the NPS ensure that

appropriate and needed monitoring and enforcement occurs at all sites?

Include a discussion of how different non-compliance incidents will be categorized. Serious non-compliance incidents, such as dogs attacking wildlife, endangered species or a person, should be weighted more than off-leash dogs, for example.

What if the non-compliance involves directing an owner to put their dog on leash and he/she fail to comply. This should receive higher weight than off-leash offenses on-leash areas where the person responds immediately, for example.

Incidents should be used to determine compliance and non-compliance.

How frequently would monitors be stationed at highly used sites? How frequently would they be at less-frequently used sites? What is the cut off between these categories?

The discussion states "If there is "continued and widespread non-compliance occurring over a long period of time at which point the benefits of allowing the use is outweighed by the administrative burden required to manage the use, draining limited resources.... Explain what the "benefit" that is referred to is?

How frequently would enforcement staff visit each site? Explain the .planned sequence for enforcement. We understand more attention will be paid to known-problem sites and we agree with this approach. However, it is important that all sites be visited regularly. How would monitor data be used to increase enforcement efforts at a problem sites.

Will enforcement staff give citations for all serious infractions, such as attacking a person, another dog, running after and or catching wildlife? After an initial warning would citations be given. on the second infraction?

The Management Plan provides that a compliance rate of 75% would be considered acceptable. This is a major concern. In effect it would be giving license to 25% of users to break the law by not complying. 75% compliance is far too low. It is basically an allowance for the 25% who do not comply, particularly if they are locals and understand exactly what they are doing. We suggest a much lower level of 5%.

Complete records should be kept. of all citations and infractions. If the 5% includes repeat offenders (i.e. people who are from the neighborhood or area who know the rules) they should not be counted as part of the 5%. This would be an allowance to them to disregard regulations.

The DEIS should explain how the NPS arrived at the \$1.5 million estimate for the monitoring and interpretation of data. It seems to us that this could be a significant underestimate. What steps would the park take if the funds are insufficient? What activities would be reduced or eliminated first?

Provide a discussion of the typical fine penalties that are levied for dog infractions. What is the range of fines that are levied? Is there some federal guidance for judges in making these decisions, or are they on their own? Are judges fairly consistent?

What is the means of collecting fine monies? Does the procedure guarantee that the fines are paid and not simply ignored?

Specific Site Recommendations As a baseline, MAS supports the environmentally protective alternative D, with certain exceptions for specific Marin County sites and sites with special- status avian species avian species in. San Francisco. In addition, it is our position that on-leash dogs should be allowed on roads (including fire roads) and parking lots only. We do not support dogs on narrow trails. We oppose the use of ROLAs through natural habitats because of the impacts to those habitats and the wildlife that depend on them.

Allowing dogs on roads and parking lots only, is consistent with regulations in all of the other national parks and recreation areas in the nation, so it will not set a precedent for weakening protections in other areas. This is a position that can be clearly presented to the public, is easily understood and enforced. Most importantly, it is also the safest for wildlife and for other users of the park. Regarding specific areas, N. -e recommend the following: Fort Baker ' Dogs should be kept off the beach and no dogs should be allowed in or near the Mission Blue Butterfly habitat. Leashed dogs are okay on the Bay Trail assuming it is on paved areas, and other paved areas, but not on other trails and the Parade grounds The Bay trail is poorly marked at Ft. Baker.

Homestead Valley ' The existing trail is between Panoramic Highway and a neighborhood street. This is a natural grassland area with a narrow dirt trail. We" recommend that dogs not be allowed in this grassland habitat. The Plan notes that "Neighborhood connecting trails may be designated in the future" but locations are not specified. In accord with our long-time position against the construction of new trails in Marin County, MAS recommends against establishing any new trails including unauthorized trails worn by people. These unauthorized trails should be obliterated.

Oakwood Valley ' This area has a trail and a fire road that begin at Tennessee Valley Rd. and that parallel each other for some distance before connecting with other trails. We recommend that on-leash dogs be allowed

on the fire road only; and no dogs be allowed on the trail. We see no reason to allow dogs on both off these redundant trails. GGNRA recommends a ROLA along the fire road which would be fenced and gated. This would in effect be a dog run, a special use area for dogs. We oppose a ROLA because building a fence would destroy habitat and its existence would impede wildlife moving through the area.

Alta Trail/Orchard Fire Road. We support the preferred alternative for this site; that of not allowing dogs on these trails to protect the Mission Blue Butterfly.

Stinson Beach. We support Alternative D which does not allow dogs at Stinson Beach.

Muir Beach. We support allowing dogs in the parking and picnic areas, but not on the Pacific Way Trail unless this yet-unconstructed trail is the actual road. The DEIS maps show the Pacific Way Trail as to be built and leading from the parking area. The EIS should address where this trail would be located. We could not find a description in the DEIS nor did any of the few staff rangers we met up with on our site visit, know where it would be located. Pacific Way has houses and fairly steep hill on one side and vegetated habitat on the other. We could not see any place where such a trail could go without causing significant environmental impacts. For these reasons, in addition to the fact that we have a long-standing policy against constructing new trails, we do not support constructing a new trail. Marin County has hundreds of miles of trails and does not need any new trails. Furthermore, if GGNRA is considering a trail in this location it should be studied and adequately reviewed in its own environmental document, not slipped through in this large DEIS.

Marin Headlands/ Rodeo Lagoon. Dogs should be allowed on fire roads only, not on the beach. Fencing, similar to that at the Muir Beach parking lot, should still be installed across the entrance to Rodeo Lagoon to keep people out. The fencing is about three feet high and has a gap at the bottom allowing wildlife to pass through or over. Dogs could get over or under also, but the fencing, combined with adequate signage, should convey the message that dogs are not allowed.

With the extensive fire road system throughout the Headlands, (remnants of old military uses) there are miles for dog-walking. On-leash dogs should be allowed on fire roads that are currently open to dog walking. Current prohibitions should be continued on fire roads in order to better protect natural resources.

Fort Funston We are commenting on this San Francisco beach area because of the presence of the bank swallow nesting colony. We urge that dogs and

people be prohibited from accessing the area (above and below the nest site) where bank swallows nest during nesting season.

Ocean Beach We are commenting on this San Francisco segment because of the presence of the endangered Western Snowy Plover. It is clear from the information in the DSEIS, that off-leash dogs are a problem for this endangered species. To protect this species, we recommend that no dogs be allowed on this beach, particularly during nesting season. An intense monitoring program should be implemented and enforcement actions taken to protect this species. It is possible that Snowy Plover could use the area during non-nesting times if there were adequate protections for them.

Conclusion Dogs, loveable companions as they may be, are non-native predators in our natural habitats. They illicit an escape reaction in most wildlife (except perhaps large predators) causing interruption of feeding, foraging, resting, mating, and nesting. They are doing; trample and destroy vegetation, leave droppings and their foreign scents. Keeping dogs on-leash does not prevent all of these impacts, but it would provide the best protection for native wildlife and habitats, except in areas adjacent to trails where dogs can reach on the six-foot leashes. Restricting dogs to the fire roads themselves would mitigate that impact. Even dog owners on our Board admit that few if any dogs can be depended upon to be under voice control under all circumstances, such as the presence of coyotes or deer. GGNRA's primary responsibility is to protect the wildlife and habitat resources on public lands and ensure the safety of the pUblc. Leashed dogs are safest for wildlife and also for other people users, as well as for the dogs themselves.

Thank you for responding to our questions and comments.

Sincerely,

Barbara Salzman, Co-chair Conservation Committee Phil Peterson, Co-chair Conservation Committee

Correspondence Type: Letter
Correspondence: Dear Mr. Dean:

We are very pleased to see the Golden Gate National Recreation Area (GGNRA) is finally addressing the issue of dogs in our national park. The Dog Management Plan (DMP) is comprehensive and specific, and for that we are grateful. Our comments will address general elements of the plan,

and then specific elements of the plan for areas we know best..

Pervasiveness of dogs: Our concern with dogs, particularly off-leash dogs, is that they impact the entire park in any number of ways. Most obviously is their presence everywhere. Other than Alcatraz or Muir Woods, there is not an outdoor space in all of the GGNRA where one can go without encountering dogs. Considering this is a national park it makes it the only one in the entire system where after humans, dogs appear to be the most pervasive animal. The situation is out of control and it needs to change.

Dog litter: Besides their presence, dog related litter is a significant problem. Though many owners pick up their dog's waste, there are those who do not. In fact nobody cleans up urine. The amount of dog urine, combined with feces that is not picked-up or remains after most of it is removed causes heavily used areas like Fort Funston to smell, thus making it unpleasant for visitors who are not dog owners. It also impacts soil chemistry in ways never explained, investigated to our knowledge, or mitigated. We have no idea what the impact on soil chemistry might be, but it would seem that wherever dogs are permitted, an environmental impact report should be developed to deal with that. That study should identify impacts on microorganisms, invertebrates, vertebrates and plants. Since our National Parks are supposed to protect the resource of each park, it seems incumbent on the National Park Service (NPS) to undertake that analysis if dogs are permitted in any part of GGNRA..

Aggressive dogs: The threat to the general public from aggressive dogs is an issue that should be dealt with. When we used Fort Funston during the 1970s and 80s there were far fewer dogs than now. We were able to walk around with our small children, explore and not be accosted by dogs. There is no way we would even consider bringing children to play in the dunes or ruins at Fort Funston now. The threat of dogs is serious and seems even more so because authorities are so reluctant to publicize dog bites, attacks and even clog use there. We hear from friends that they will not bring children there and won't go there themselves. The same is true for Crissy Field. As much as dog owners and commercial dog walkers use both areas, there are many people who have excluded themselves and quietly gone away. That is not what our National Parks should offer the general public. We understand the 2009 and 2010 reports of dog attacks and complaints about dogs damaging the GGNRA landscape were released during the final week of comment for the DMP. Though we have not been able to review them, we urge that the Park Service take those reports into account when weighing the proposed alternatives. Those reports provide tangible evidence that GGNRA must stop the present practice of allowing dogs everywhere, and must act to protect not only the resource, but the general public.

GENERAL COMMENTS Alternative A: No Action (Continuation of

Existing Management). This alternative is completely unacceptable. It simply violates the National Park Service (NPS) mandate to protect the resource that comprises the Golden Gate National Recreation Area. That resource is being consumed by dogs and the people who allow them to run free in virtually every area of the park.

Alternative B: NPS Leash Regulation. This alternative is generally acceptable. It embodies protections for the resources which are enforced in other National Parks. It does appear to allow leashed dogs on some trails and beaches where they might be expected to be restricted in other parks.

Alternative C: Emphasis on Multiple Use Balanced by County. This alternative provides only limited protection for the resource. In as much as it is for the most part the preferred alternative, our general comments will regard it as such. Our general reaction to this preferred alternative is that it is sufficient in the goal of the DMP is to find a middle ground between the current abuse of the resource by dogs and their owners and the mandate of the National Park Service (NPS) to protect the resources under their care for future generations.

Alternative D: Most Protective Based on Resource Protection/Visitor Safety. This alternative is generally acceptable. It embodies some protections for the resources which are enforced in other National Parks. The fact that it permits Regulated Off Leash Areas is very troubling. Permitting access to beaches and some trails does not appear to be consistent with regulations in place in other National Parks. It would appear successful enforcement of this alternative would be labor intensive and costly.

Alternative E: Most Dog Walking Access/Most Management Intensive. The underlying concept is unsustainable. In a time of diminishing resources, there is no way this alternative can be funded or implemented. There is no funding source outside the general funds available to GGNRA. This alternative is not acceptable.

Voice Control: The concept of voice control should be abandoned. It is not defined and it is not enforceable. If it were defined as calling or motioning to a dog, to which the dog responds on the first or second command, it might have meaning, but given the lack of definition it has no meaning, no means of enforcement and therefore no place in this plan.

Regulated Off Leash Areas (ROLA): ROLAs are not a good idea in this or any other National Park. Evidence from San Francisco city parks, such as Sigmund Stern Grove/Pine Lake indicates dog owners, when given a significant part of parkland, will continue to ignore leash restrictions. Given that ROLAs will probably be used as a compromise to give our parklands to

the dog owning public, but they should be strictly enforced with on site staff that is authorized to give citations to anyone with a dog off leash outside We designated area. ROLAs should not be established in any areas where they can impact natural or historic resources. Dog owners should be required to purchase daily use licenses to use ROLAs so they in fact pay for the regulation and use of these special use areas.

Commercial Dog Walking: This practice should be banned. If it is permitted commercial dog walkers should be required to have a license and to pay all fees paid by the general public. They should be limited to 2 dogs at a time. An attached photo shows a dog walker with numerous dogs at Panama Pt., Fort Funston. It is a case of how out of control dog walking is.

Four dogs: The concept that an individual can control 4 dogs at one time in a public space is pretty unrealistic. It would be much more realistic to limit dogs to 2 per dog walker.

75% compliance: The idea of 75% compliance is unrealistic and unacceptable. With current closures to off leash dogs on most of Ocean Beach, we only have less than 30% compliance with leash laws during the period of mid July 2010 and mid May 2011. Success cannot be measured at a level of poor compliance. We believe the Park Service should establish a success goal of 85% for the first year or the area should be closed to dogs all together. The rate for the following years should be at the 95% level for all beaches and other sensitive habitat areas. Compliance might be supplemented by education and warnings, but that has not worked in the past. It is a simple fact that compliance must be enforced with citations on a daily basis until the desired compliance rate is achieved.

Beaches: Beaches are a particular problem since the resource itself is wished clean with tides and storms and impacts are not to be seen. However there are significant impacts to wildlife that use our beaches. The simplest example is illustrated in the attached photo of the dog chasing Willets on Ocean Beach. From birds as common as Willets and Western Gulls, to the Federally listed Western Snowy Plover, dogs have an incredible impact on birds. For that reason dog use of beaches should be highly restricted. Beach areas known for bird roosting should be off limits to dogs. A practice that would be consistent with NPS regulations would be to ban dogs from all beaches in GGNRA. Since that seems unlikely dogs should be limited to a bare minimum of beach areas. No beach should be entirely open to dogs. A compromise might be to limit dogs to no more than some percentage of any given beach. Given the habitat value of beaches, we would think that limitation should be areas adjacent to parking lots with an outside limit of 30% of the entire beach. That at least would allow space for wildlife. It is important to note that many beaches will have little or no wildlife presence during parts of the year. A survey might be appropriate to determine if a

given beach is in fact devoid of wildlife. In that case other criteria might be used to determine what if any dog use might be appropriate.

SPECIFIC COMMENTS FORT FUNSTON Alternatives A, C and E are all unacceptable for reasons mentioned above. Alternative C, the preferred alternative, is much too permissive and will only perpetuate the culture of destroying the resource. Remember this is a dune-based natural resource, so even seemingly benign uses such as the ROLA between the Chip Trial, Sunset Trail and the parking lot will continue to wear away the under') Ing compressed dunes and will continue the destruction of this unique place. Even

Alternatives B and D do nothing to really repair the damage to the Fort Funston resource.

Alternatives B and D offer some level of protection. We much prefer Alternative B. Regardless of the decision on this, access to the Fort Funston bluffs should be restricted. This is the area most critical to one of California's last 3 or 4 coastal Bank Swallow colonies. People with dogs who walk along the edge of the bluff above the colony cause enormous erosion. Even when they don't cause erosion, their presence causes the swallows to fly from the colony. Disturbance from above appears to trigger the birds to briefly abandon the colony. During that time the young birds are vulnerable to predation, and the disturbance just wastes energy needed for successfully rearing their young. Bank Swallows utilize the beach, the bluffs and the dunes above the colony to gather nesting material and sometimes to sun themselves. The presence of dogs interferes with that process and is an impact.

People who allow dogs off leash, regardless of regulations allowing or disallowing that practice, should be held financially accountable for repaying the National Park Service, and the City and County of San Francisco if they are involved in a rescue, the full cost of any dog rescue from the bluffs and they should be fined for not controlling their dog appropriately in the first place. It is critical that the Fort Funston bluffs be preserved for the present and for future generations. In their own right, they are an amazing resource that the National Park Service has never protected, recognized or interpreted for the public. They show us a cross section of San Francisco geology going back thousands of years. The practice of allowing off leash dogs and the public in general the freedom to destroy those bluffs is a violation of the public trust to preserve such resources. We hope at least this resource will be given the protection it needs when this plan is finalized.

Fort Funston was once one of San Francisco's premier birding hot-spots. Of course sea birds can still be viewed from the observation deck and the Bank Swallows cling to their traditional nesting area on the north bluffs. The

uplands at Fort Funston was found to be an amazing birding resource in the 1970s. It reached its peak during fall migration when neotropical migrants were found to land in its groves of trees. Subsequently it was found that large numbers of migrants common to the Pacific Flyway utilized it. Here are a few examples of the losses suffered at Fort Funston:

The islands of trees around Battery Davis, at the Y intersection and along Skyline Blvd formed migrant traps during fall migration. In reality they were groves of trees with an understory of weedy exotic vegetation. But insects adapted to them, and birds benefited from this strange resource. Since dogs were allowed to overwhelm Fort Funston we have lost most of the understory in those groves. Gone with the understory is the food resource and the migratory birds. Few if any birders even bother going to Fort Funston during fall migration any more.

A particularly large area of coffeeberry adjacent to the Y-grove frequently provided food and cover to mixed flocks of birds that numbered about a hundred. The most common birds were American Robin, White-crowned Sparrow and Western Tanager. All benefited from the fruit of those shrubs. The shrub patch was completely obliterated by dogs and people chasing after them.

California Quail, jackrabbits and brush rabbits were once common at Fort Funston. Prior to that area being taken by dog owners, they successfully bred there. I recall watching 2 particular visitors encouraging their dogs to chase the rabbits. Both told me the dogs never caught a rabbit and I have no reason not to believe them. What they and many others apparently did do is chase the rabbits and the ground dwelling quail to the point they could no longer successfully breed. The stressful impacts of 2 dogs probably wouldn't do much, but the stress from tens or even hundreds of dogs on a small population certainly would. Those animals no longer inhabit Fort Funston and for that matter the rest of GGNRA in San Francisco. Since all three species survived the period Fort Funston was an active military base and the period it was vacated and a little used parkland, it seems their demise can most likely be attributed to the onslaught of dogs that destroyed their habitat. That in itself should be reason to ban dogs, or at least require leashed access to paved trails only.

Attached is a copy of "Birching Ocean. Beach and Fort Funston", an article I originally wrote about birding Fort Funston '11, which appeared in several forms in a number of publications. It serves as a historical reference as to how very valuable this once rich resource was.

The beach at Fort Funston is tricky. Given the presence of Bank Swallows, the presence of gulls and shorebirds during much of the year and the difficulty with access, a minimal concession to wildlife would be to restrict

dogs at least from the portion of the beach from Sloat to Panama Pt.

OCEAN BEACH Unlike Fort Funston, Ocean Beach doesn't seem to be particularly damaged by dogs. Still, there are issues that should require dogs to at least be leashed and preferably banned from the beach between Stairwell 21 and Panama Point, south of Sloat Blvd. One impact of dogs along the beach is to people who may not want to share the beach with dogs for health reasons, fear of dogs or any of a number of personal reasons. .From our point of view the primary impact of dogs on the beach is to birds. Of course many off leash dogs chase birds along the shoreline. But even leashed dogs and dogs actually under voice control that do not chase birds do in fact disturb them. The impacts are most noticeable during spring and fall migration when birds not habituated to people or dogs take flight at any disturbance. Dogs are quite clearly seen by birds to be predators, so instead of eating to fuel their migration, the birds spend time and energy avoiding the dogs. If there were only a few dogs, the problem would be negligible. But the impact of perhaps hundreds of dogs each day is pretty significant. Attached is a list of the shorebirds that used the beach between July 2010 and May 2011. The data was gathered as part of a Western Snowy Plover survey that included documenting disturbances to the plovers, and the numbers of dogs on the beach.

During the Western Snowy Plover survey period of mid July 2010 until mid May 2011, I (D. Murphy) gathered data on dogs on the beach. Serious incidents of disturbance to Western Snowy Plovers or to shorebirds were reported to the National Park Service. During that period I visited Ocean Beach 38 times for a total of 50.3 hours. During that time I counted 458 dogs. Only 131 (29%) were leashed. The remaining 327 (71%) were off leash. The average impact per hour was 9.1 dogs with 2.6 leashed and 6.5 off leash. It is unfortunate that the primary focus for wildlife disturbance is limited to Western Snowy Plovers. The impact from dogs falls for a great part on the other birds that utilize the beach. A complete list of those birds is attached. Considering the lack of compliance with leash regulations, it seems foolish to allow dogs on the most sensitive parts of Ocean Beach at any time. If some sort of compromise must be reached, it should be in terms of when disturbances to all shorebirds would be greatest. That can be determined from the sampling in the attachment. Essentially it would be during spring and fall migration. Another period of very heavy use of the beach by birds is during storms. particularly when they are accompanied by high tides. This is a period when the beach narrows and the birds are highly stressed from rising tides, wave action, wind and people and dogs vying for the same narrow stretch of sand open to the birds.

Again we wish to thank the National Park Service for the opportunity to comment on this plan. Our hope is that all of Golden Gate National Recreation Area will be managed according to the standards for resource

protection afforded to natural resources in other units of the National Park System. In cases where there is compromise and dogs are permitted, the resource that is being impacted should be of the lowest possible natural value and it should be the kind of area that can be restored at very limited cost or effort in the future.

Very truly yours, Joan M. Murphy Daniel P. Murphy

Correspondence Type: Letter

Correspondence: Dear Superintendent Dean,

My name is Tszsan Kathy Mok-Reichardt. I live in the District 3 (North Beach/Chinatown) in San Francisco and am of Chinese descent. Since rescuing a shelter dog last year, I go to Fort Funston, Crissy Field and Ocean Beach at least 4 times a week, 2 hours for each visit.

I am writing to oppose the GGNRA's Draft Dog Management Plan because it lacks the scientific data to support its conclusion.

The Draft Plan fails to address the recreation component in the GGNRA enabling legislation which it must maintain and protect. The section focuses on park users who do not want to be around dogs, including minorities, seniors and children.

I myself as a member of the minorities who visit the GGN RA lands 4 days a week do not see the phenomenon described in the Draft Plan. In fact, for the 7 years I have lived in San Francisco, I have never even been to Fort Funston until I rescued my dog, the reason being that there are 99% of GGNRA lands I can go to that are not as windy, cloudy, foggy or cold, and not because I felt intimidated by the presence of off-leash dogs.

If the Park User Experience section of the Draft Plan must include racial data, it must first collect that data, give a thorough analysis before making the generalization that minorities such as Asians and Latinos are afraid of dogs. I find this section of the Draft Plan deficient of data concerning park use by race.

This leads to another error in the report'the Draft Plan is filled with general, undocumented assumptions of negative impacts caused by dogs. These assumptions include "dog traffic can physically move the soil," or "digging on beaches may disturb the soil," without completing the logic that the

presence of dogs leads to resource degradation.

The Plan does not take into account the relative environmental impacts caused by humans, horses, predatory wildlife, shore birds and nonnative invasive species, but instead, without any evidence or scientific proof, claims that dogs have significant impacts on GGNRA lands, thus the Draft Plan. For this reason, I ask that the GGNRA conduct the necessary research and present a relative comparison of impacts of the mentioned park uses before putting forth such a restrictive preferred alternative.

I also strongly oppose the Compliance Management Strategy in all of the alternatives in the Draft Plan. The document assumes noncompliance will automatically lead to resource degradation or negative impacts without factual statements or data that support that assumption. It is illogical to assume that compliance will lead to decrease in resource degradation, or vice versa. Instead of proposing such an extreme plan, GGNRA could analyze and implement its existing management strategy, such as sending out park rangers to the fields to provide education (e.g. hand out leaflets), dog owner training, better signage, temporary closure of certain areas and fencing off of sensitive areas to the endangered shore birds and wildlife. These will not only help to increase awareness of protecting our endangered species, but also serve as a means to curtail the potentiality of noncompliance.

It must also be noted that one-third of San Francisco households have dogs. There are more dogs than children in the city. As a rescue dog owner, my dog is a living proof that off-leash dog walking in an unfenced area has benefited and solved most of the issues for which she was given up to the shelter in the first place. Without these less than 1% of the GGNRA parklands available, my dog will suffer major setbacks in her rehabilitation of behavioral issues.

GGNRA consists of vast lands, and site-specific research and analysis must be performed to give the public information on which areas are being affected, how they are affected, and what the public can do to help. For instance, US Fish and Wildlife does not recognize Ocean Beach and Crissy Field as critical habitats for the snowy plovers. If a meaningful plan is to be implemented, critical habitats must be identified so that everyone can contribute to the cause of saving our endangered species within the GGNRA lands.

I am in support of a modified Alternative A (the "No Action" alternative) that also includes the new lands acquired in the San Mateo County or other lands to be acquired by the GGNRA in the future. The current plan should also be modified to provide clearer rules, more signage, improved vegetative

barriers, education and outreach as part of the overall program.

Thank you for your consideration. Sincerely, Tszsan Kathy Reichardt

Correspondence: Dear Superintendent Dean:

The Marin Conservation League supports the need for GGNRA to provide a clear, enforceable policy to determine the manner and extent of dog use in appropriate areas of the park. The Plan and DENS have been closely reviewed by MCL's Parks and Open Space Committee and their recommendations have been affirmed by the MCL Board.

While we understand the need for consistent policy throughout the park, we have focused our comments on how the various alternatives might apply to seven sites identified in Marin County: Stinson Beach, Homestead Valley west of Mill Valley, Oakwood Valley/Alta Trail, Muir Beach, Rodeo Beach, Marin Headlands, and. Fort Baker.

1. In general, Alternative D, the environmentally preferred alternative, provides the greatest protection for natural resources and safety. At the same time, we recognize that all of the "action" alternatives (i.e., B, C, D, and E) increase restrictions on dog walking, walking over the existing condition. Therefore, we concur with the NPS' selection of the Preferred Alternative "C" for all but one of the seven sites in Marin. The exception is Muir Beach (see Comment 2, below). Alternative C would allow only two off-leash areas (ROLAs) in Marin County - one on Oakwood Valley Fire Road, and the other at Rodeo Beach on the northern portion of the beach.

Alternative C represents an appropriate compromise between protection of the environment and an attempt to accommodate dog walkers'at least as an experiment! The effectiveness of Alternative C in reducing user conflicts and enhancing safety of users and dogs will depend heavily on the combination of responsible observance by dog walkers and enforcement of

regulations by GGNRA. Because neither of these can be assured, adoption of this alternative should be conditioned on establishment of a "sunset" date no later than five years from adoption, for review of the Plan's effectiveness based on systematic monitoring of user compliance (See Comments 4 and 5).

2. We agree that Alternate D, the environmentally preferred as well as NPS preferred alternative for Muir Beach, is appropriate for that site, especially in view of recent habitat restoration at the mouth of Redwood Creek. Dogs would not be allowed on the beach at all. Applied to this environmentally sensitive area, this restriction should minimize the common temptation of dog walkers in an area where dogs are allowed on leash, to choose to ignore the limitation. The NPS can expect strong pressure from the Muir Beach dog community, however, to allow an unfenced ROLA on a portion of the beach, as is proposed in Alternative E.

3. The ROLA proposed for the Oakwood Valley Fire Road will be fenced along the sides, as well as gated at both ends. Hikers will share the fire road with off-leash dogs. We have several concerns about this proposal. First, it is not clear where the fencing would be located - adjacent to the fire road or at some distance? In either case, if fencing is effective to contain dogs it will also interfere with free passage of wildlife across the valley. Second, it is not clear how the proposed ROLA will affect other users - hikers, equestrians, and bikers. Oakwood Valley Fire Road is currently used by all three, and the almost parallel Trail is used by hikers and dog walkers only. It is closed to bikes and not usable by equestrians because of a narrow and unsafe bridge and steps at one end. If the proposed ROLA on Oakwood Valley Fire Road is closed to horses, equestrians will lose access to Oakwood Valley. While this road is not heavily used by horses, it is used by riders from Horse Hill. Also, if the ROLA is closed to bikes, this would force mountain bikers onto Oakwood Trail, making that trail unsafe for hikers. Resolution of these potential problems will require more study.

4. The proposed Compliance-Based Management Strategy will be based primarily on monitoring and recording the behavior of users by observation, but the Plan does not include a detailed monitoring plan. The Draft Plan establishes 75% as an acceptable level of compliance. However, the management response (i.e., changing ROLAs to on-leash areas, and on-leash to "no dogs") would not be implemented unless the compliance rate dropped below 75%. Given the size of GGNRA, the limited number of personnel, and this inexact measure of compliance, it will be difficult to develop an adequate monitoring plan. Implementing the monitoring plan in a way that produces reliable results and is legally defensible will be even more difficult. Particularly in ROLAs, the assessment of compliant "voice control" will require nuanced measures. The Plan and EIS must assure the public that compliance will be consistently monitored by establishing defensible, understandable, easily measured, and enforceable standards and

metrics.

5. Finally, the Compliance-Based Management Strategy proposed by GGNRA needs to be supplemented, from the beginning, by vigorous enforcement efforts that include (a) a visible increase in uniformed law enforcement presence; (b) increased issuance of citations, particularly to aggressive violators; and (c) tracking of repeat offenders. It seems clear that GGNRA plans to minimize issuance of citations "for safety reasons . . .it is assumed by staff that any contact with a dog owner regarding dog walking regulation compliance will be confrontational, and it is the park's goal to reduce the number of these conflicts." (Draft Plan/EIS page 286-287) Nonetheless, we agree with others that enforcement of regulations sends the clearest message to people about what is expected of them. Clear, unambiguous, and prominent signage is most important. Signs that are vandalized need to be replaced quickly and persons caught vandalizing signs should be prosecuted vigorously.

We appreciate the Park's efforts to inform and engage the public in this difficult task, and look forward to your responses.

Sincerely, Nona Dennis Vice President

Correspondence Type: Letter
Correspondence: Dear Superintendent Dean,

On behalf of the Marin Humane Society I am. writing to include our comments on the GGNRA Dog Management Plan and Draft Environmental Impact Statement (DEIS). Thank you to you and your staff for allowing us the opportunity to not only comment on this document, but also to have participated on the Negotiated Rulemaking Committee. Having been a participant on that committee and in charge of dog enforcement activities in Marin County, this issue remains a priority that we are deeply concerned about.

I have worked with the Marin Humane Society (MHS) for over 27 years and have been involved in the enforcement of animal laws within our community for my entire career. We take great pride in the progressive laws and ordinances we helped pass at various levels as well as the proactive strategies we have utilized to deal with animal enforcement issues. Animal enforcement is our business so to speak. We remain one of the few areas in the country that have effectively enforced a County-wide control law, not a

leash law.

While issues involving animals can often be filled with emotions, both good and bad, some things remain the same; people love their animal companions and see them as family members. Dogs go literally everywhere with their human guardians; from animal friendly shopping malls to restaurants, dogs are a part of the community culture in Marin. This dynamic creates unique challenges related to our ability to educate and enforce the laws in many cases. I have learned through my experience here at MHS that good law compliance with animal issues requires us to look at strategies in very unique ways. As an organizational partner to your organization, I hope that we can offer comments on the DEIS that reflect our enforcement expertise, knowledge of our community, and trends that we deal with routinely on responsible pet guardianship and the benefits that dogs promote to a healthy lifestyle.

Chapter 1 ' Purpose and Need for Action: "Purpose for Taking Action"- We respect the need to preserve and protect all of the many valuable resources within the Park as well as providing a safe and varied park experience to users. We would emphasize that values shared by those that walk dogs are an important element that future generations will also regard as such. Since the 1979 pet policy was passed, it has been clear that dog guardians value public places, including trails, as opportunities to recreate with their dogs both off-leash and on-leash. While there appears to be more people that recreate with their dogs in Marin and beyond, our agency has seen a substantial decrease in the number of dog guardians in violation of our local laws since 1979. The draft plan should make note of changing values towards dogs and the important roles they play in human enjoyment.

"Need for Action"- While we believe that the GGNRA is tasked with protection of resources as defined by the NPS Organic Act, we also believe strongly that the dog management plan is unique to NPS regulation. We sometimes hear NPS staff make comments about the fact that "dogs aren't tolerated in other national parks, etc." The fact that the GGNRA has a pet policy is consistent with a larger recreation strategy that we believe makes this park that much more special than any other national park setting by allowing and welcoming dogs in a relatively small portion of the overall GGNRA lands. This "ahead of its time" planning strategy, now decades old, is consistent with the same kind of recreation offerings throughout the Bay Area that promote responsible multi-use access for a variety of users, including those with dogs. While the DEIS focuses on the negative aspects through the use of "conflicts, compromised visitor and employee safety, affecting visitor experience and resulting in resource degradation," we would argue that the need for such a document would share equally with the positive benefits that don't seem to be emphasized here. The draft plan

should also offer the positive user experiences, including those with dogs. -

"Purpose of GGNRA" ' The draft plan makes reference to "offer national park experiences to a large and diverse urban population while preserving and interpreting its outstanding natural, historic, scenic, and recreational values." We would like to emphasize that the GGNRA is in the hub of a large metropolitan urban area within the Bay Area. Many of its boundaries are literally the backyards of many of its more frequent users. Many of these neighbors are very vested in the fact that they can recreate within footsteps instead of miles to have an extraordinary national park experience. This factor emphasizes the special nature of the GGNRA in its relationship to neighboring communities, property boundaries and ease of use to the diverse populations it serves. The draft plan should address the importance of meeting the recreational needs of the users (including those that bring dogs) that are closest to its borders.

"Objectives:" "Visitor Experience and Safety" ' The draft plan should clearly define what a "conflict" relating to dog use refers to.

"Law Enforcement/Compliance with Dog rules, and Park Operations"- The draft plan objective should further define what "maximizing dog walking compliance" refers to. This goal does not appear to be measurable and doesn't provide a process to determine enforcement success. A possible solution would be to clarify what the parameters will be to encourage high compliance or to incorporate envisioned compliance rates as an objective. Improved Park operations and use of staff resources managing dog walking seem to be different parameters. The draft plan should be very clear about what the enforcement goals are and assume that enforcement and staff resources are a part of daily park operations.

"Park Operations"- The draft plan should clearly state what and how the monitoring will be done by the Park. We would like to see this area further defined by clear objectives. The reference to monitoring to be used in future decision making based on estimated outcomes seems harsh and one-sided. This objective should be clearer. The draft plan should also address how it will evaluate commercial dog-walking and what that enforcement policy proposal will be.

"Natural Resources"- The draft plan should further define the objective of "protecting native wildlife and their habitat from detrimental effects of dog use..." Further, referring to detrimental effects of dog use doesn't adequately address what those issues include.

"Cultural Resources"- The draft plan should further define the meaning of "detrimental effects of dog use."

"Education" ' The draft plan should further define how to "build community support for the plan to maximize management of dog walking use."

"Background of Dog Management at GGNIZA"- "Land Use Prior to Park Acquisition"- The draft plan makes reference to the GGNRA being established in 1972 and the practices of off-leash dogs continuing uninterrupted, although park staff recognized and documented issues arising from the practice during the early years of the Park's existence. The draft plan should provide more information and clarity on what these "issues" were as well as providing accurate information on the local community's culture with regard to off-leash access, especially in park boundaries close to neighborhoods. Muir Beach is an example of a community culture where off-leash activities were (and currently remain so) highly valued which resulted in deep political involvement with local animal services responders and county politicians.

"GGNRA Citizen's Advisory Commission and the 1979 Pet Policy"- The Pet Policy was passed by the commission in good faith to honor and work with community concerns about animal issues that were important in that era. Those same issues remain important for park users today. While the draft plan goes into great detail about how the Pet Policy did not abide by the federal regulations regarding dog walking in national parks, such is the nature of policy making. Many laws that are literally on the books are overshadowed by the enforcement strategies or other compelling issues related to those laws. An example of this would be the 2005 partnership agreement to develop protocols for addressing feral cats on Marin County GGNRA lands between MHS and GGNRA.

The draft plan leads a reasonable person to believe that this policy was in fact written by park staff in violation of law. It is noted that current court decisions, as they are referenced to in the draft plan, appear to uphold the ability of the Pet Policy to provide off-leash recreation as it was intended. The draft plan should provide (as an appendix) the case decision of U.S. vs. Barley (N.D. Cal. 2005) for full review by the public. The Pet Policy also makes it clear that existing routes to GGNRA hiking trails from Sausalito would be considered as those areas were made accessible in the future. The draft plan should include any review that was done in follow-up to this recommendation.

Increase in Use of the Park for Dog Walking and Other Recreational Uses"- The draft plan suggests that the number of conflicts between park users with and without dogs began to rise, as did the fear of dogs and dog bites or attacks. The draft plan should specifically give accurate data on what type of conflicts over specific time periods they involve. While fears of dog and dog bites or attacks are valid in many regards, laws and enforcement actions are based on fact, not perceptions. The draft plan should refrain from making

these biased comments and reflect information based on solid factual data.

"Current Management Issues and Impact Topics" - "Expectations and Views of Dog Walkers and Other Visitors" - The information on the data received in public comment analysis reports (NAU 2002a, 1; NAU 2002a, 5; NAU 2002a, 16-17; NAU 2002a, 17-20; NAU 2002a, 9-15; NAU 2002b, 1; and NAU 2002b, 11) appear to be critical documents to help gain better insight into the values people have for off-leash recreation. We recommend that the draft plan refer to these reports and make them available as appendixes. We would also be interested in the demographics of the responders and how many were Larimer County residents/park users. In addition, the benefits to dog walking should be further explored with additional study and data collection on the positive effects that dog walking (both on-leash and off-leash) provides to the physical and mental well-being of their guardians. The draft plan makes reference to over half of the respondents feeling discomfort or fear of off-leash dogs. We would recommend that the plan further address what these fears and discomfort levels were specific to. Our experience with human fears relating to animals is a topic that can be easily addressed through education. Park users will continue to experience fear and discomfort of dogs (and many other animal species) while visiting and this information can be vital to establish protocols to enhance the visitor's experience with animals they may encounter in the park.

"Impacts of Dogs on Natural and Cultural Resources in the Park" - The draft plan selected various topics of concern that only provide generalized impact concerns and most do not refer to data, reports or studies that have specifically addressed the impact dogs have created. This information in general appears biased and unreasonable. The draft plan should make every effort to rely on information that can be factually substantiated before making assumptions about any negative impacts dogs may have on park resources.

"Soils" - The issues reflected in the draft plan on this topic provide no factual basis from specific scientific studies completed. While on its face this may be assumed to be a negative impact, like horse manure on trails, the factual basis for this assumption is unreasonable. I would also like to add that while I was participating in the Negotiated Rulemaking Committee the impact of soils often came up. I repeatedly asked for data and specific scientific evidence of these statements and none was provided. We would request that the draft plan eliminate any comment on negative impact on soils until factual data can be collected that would verify these statements.

"Water Quality" - The draft plan is extraordinarily insufficient in fact on this topic. More importantly, we believe it is dramatically inaccurate and misleading. Our organization is highly knowledgeable about disease

transmission of dogs, especially rabies, parvo and distemper. There are no known studies to our knowledge that claim that these three diseases survive in water and we strongly believe that this statement is incorrect and should be removed. Additionally, we question the accuracy of changing water nutrient levels from dogs. We would recommend that the scientific data and reports used to make this statement be supported in the document. The plan refers to turbidity issues from dogs and this statement does raise concerns on potentially negative issues to certain waterways, but again we urge that these assumptions be substantiated by factual documentation and they should be site specific to each location. Many of the water and wetland areas of the Marin sites can dramatically change through the natural seasonal rainfall process which may also be a factor.

"Vegetation"- The draft plan refers to dogs off-leash without adequate voice control potentially trampling and denuding vegetation that would interfere with native plant species. We believe that this statement is an unsupported assumption and would recommend that the plan incorporate any studies or factual reports that would substantiate this claim.

"Wildlife"- The draft plan offers comments about the effects dogs have on wildlife. This topic area is one of shared concern as our organization often responds and investigates incidents of wildlife harassment by dogs. Of all of the topics under consideration, this is one of significant concern as there are many wild animals that reside in the GGNRA. The draft plan makes reference to "intensive use.- This term should be further defined. The draft plan also assumes that the presence of dogs will disrupt or degrade habitat. We would recommend that if there is valid proof of this finding that it be clearly stated and any studies or reports done are reported.

The draft plan refers to dog-related viruses that can be transmitted through dog feces to marine and terrestrial mammals. The disease examples listed in the draft plan are extremely rare and in fact the diseases spread are even more unlikely without direct physical contact from the infected species. Since the Marin GGNRA lands support a very healthy population of host wildlife species_ the same dangers could also apply to protecting visitor's dogs from disease issues and public safety issues around wildlife (as well as people). We are not aware of any wildlife disease issues in Marin County that have been spread to wildlife from dogs and we would debate this finding.

"Species of Special Concern"- We share the draft plan's concern with ensuring that these species can thrive. The draft plan fails to meet the proof that dogs have created problems for these species. Much of the draft plan language refers to the possibility that dogs "may" negatively impact special species and we would recommend that each site expand on the factual proof of exactly what the current conditions are. Having the facts of each site is

important to be able to appropriately comment on potential solutions. The draft plan makes reference to dogs trampling vegetation along trails that include plants that host endangered butterflies. The draft plan should address specific facts of how dogs have done this impact; we believe that humans, wildlife and other forces of nature may equally share in the impact. It would be important to be able to substantiate how dogs have done this to make management decisions on protecting these species.

"Park Operations"- The draft plan indicates that it requires "significant" staff, time and money to manage dog policy and enforcement activities as well as protecting species in the park. The draft plan should portray this factor in representation to its overall role of a park steward like other land management agencies. These issues come with that role no matter what users frequent the park. We would strongly recommend that the draft plan include the use of peer and volunteer groups to assist in the management and protection of certain areas in the park. This model has been used successfully in a variety of circumstances and it can become a very strong model for building effective community relations and citizen stewardship towards park lands.

"Land Use/Long-term Management of Resources or Land"- The draft plan should identify how to determine that overuse of lands caused by dogs is actually created by dogs and not other sources. The draft plan mentions how the GGNRA policy may impact policy at other levels, including local. We are especially concerned about this insight and would further emphasize that our local policies on dog management in Marin currently blend positively with the community culture and need for responsible off-leash recreational opportunities. To incorporate stricter regulations pertaining to dogs in GGNRA will have an impact on Marin County dog users and will put more pressure on our inconsistent enforcement efforts across our many boundaries. We believe this is a very important element in proper planning of long-term management processes with regards to dog issues and we would strongly recommend that the plan incorporate the impact on neighboring enforcement entities.

"Visitor Use and Experience"- The overall sense of the draft plan seems to portray dogs as a negative by virtue of their virtual presence in the park, the noises they allegedly create, the alleged safety threats they pose, etc. The draft plan seems to greatly lack the clarification that the places that dogs are currently allowed continue to represent an extremely small percentage of GGNRA land space. This is a very important point because it reflects the great value dog users have in accessing the park. The draft plan doesn't, provide factual data that people that do not want to be "exposed- to dogs have thousands of acres of options available to them in the GGNRA, unlike dog users who are extremely limited in their options.

"Employee, Visitor, and Dog Health and Safety"- The draft plan refers to increased conflicts and issues related to safety concerns from unruly and aggressive dogs upon visitors and park staff. The terminology of "aggressive" as it pertains to dogs can be very misleading and not consistent with clear definitions currently being used in animal law enforcement. The draft plan should further refine this definition to be consistent with current applications. We would recommend that the draft plan specifically identify the types of enforcement actions that were done at each specific site, especially those in Marin for which the enforcement actions appear minimal. Having this information relative to these sites will be an effective tool in determining effective enforcement strategies and appropriate allocation of park enforcement and education resources.

The draft plan continues to make references about disease transmission from dogs to wildlife and from wildlife to dogs. These assessments seem to be misinterpreted and suggest that this issue is a common occurrence when the reality may be rare. We are not aware of any reported disease issues from wildlife to dogs in Marin County GGNRA lands or likewise from dogs to wildlife.

Chapter 2 - Alternatives Overall General Comments:

The specific GGNRA sites being examined in Marin County represent a large area of high use by dog guardians. These areas are highly valued among many Marin County residents and have a long history of responsible dog use, both on-leash and under voice control. The Marin sites represent an overall limited amount of space accessible to dogs, considering the total amount of GGNRA lands. Further regulating these areas will have an impact on surrounding enforcement agencies in their jurisdictions. Marin County animal enforcement ordinances are governed by a Joint Powers Agreement with the cities and county. A large consideration of our contractual agreement with the County of Marin is to help ensure uniform animal ordinances, consistent with public needs and balanced public safety. We feel very strongly that providing a safe place to walk, hike and recreate with dogs in Marin both on leash and under voice control is a very important element in the values of our community.

The draft plan refers to a "compliance-based management strategy." We believe that this type of strategy doesn't encourage animal guardians to comply with laws, but in fact penalizes all park users when violations occur. We would highly recommend that the plan focus efforts towards gaining compliance through strategies that are based on penalizing those in noncompliance instead of all users. Our experience with enforcement over many years indicates that dog guardians are more likely to stay in compliance through education, partnerships, peer-supported enforcement and citing those found in violation. Penalties for non-compliance through

court bail schedules can be raised through judicial process and repeat offenders can be fined at substantially higher rates. "

Clear messaging and signage is also a very important component to ensure compliance to dog rules. Many of the areas of Marin GGNRA sites are popular hiking areas that traverse upon many neighboring jurisdiction lands. It would be very helpful to have the plan address how these areas will be properly marked and identified to inform both dog guardians, as well as non-dog users, on the proper rules of the land. This issue has been very confusing in many of the Marin sites.

Commercial dog walking in unincorporated Marin County lands is currently not regulated with the exception of lands under the jurisdiction of Marin County Parks and Open Space. Some of the specific sites in Marin County GGNRA lands are very popular with commercial dog walkers. These areas border unincorporated Marin areas that we enforce. Some of these borders are also in conflict with the rules of Marin County Parks and Open Space as they apply to commercial dog walking. We are concerned about the impacts that commercial dog walking would have on our enforcement activities if these uses are further restricted in other areas of the GGNRA.

Specific Site Comments: Stinson Beach- We recommend that the current status of this site be maintained and we support Alternative A.

We currently have a strong relationship in assisting GGNRA staff with dog and wildlife issues at this site. There are many dog advocates in the neighboring community that are very involved in providing their dogs with voice control on the beach adjoining (Marin County jurisdiction) this site

Homestead Valley- We recommend that the current status of this site be maintained and we support Alternative A.

There are adjoining neighborhoods in the surrounding borders that enjoy recreating with their dogs under voice control in this area. Most of the trails in this area are filled with dense vegetation, forcing most dogs and their guardians to stay on the trails, as we would continue to urge them to do.

Alta Trail/Orcha?d Fire Road/Pacheco Fire Road- We recommend that the current status of this site be maintained and we support Alternative A.

This site is a favorite among many of the GGNRA sites for those seeking voice- control with the dog companions. This area is very popular as a hiking destination and is often utilized in conjunction with the Oakwood Valley Fire Rd. as a looping trail. There are areas of this trail that are very steep with lush thick vegetation. These conditions do not make it favorable for dogs (and their guardians) to go off of the designated trails. As long as

trail users are encouraged and instructed to stay on the trails we don't see the potential for negative impacts.

Oakwood Valley- We recommend that the current status of this site be maintained and we support Alternative A.

This site is a popular area for local neighbors on the Mill Valley side as well as the Marin City to recreate with their dogs under voice control. It is commonly used as a loop trail that joins the Alta Trail. We believe that park users at this site respect the dog control laws as well as keeping their dogs on the designated trails.

Muir beach- We recommend that the current status of this site be maintained and we support Alternative A. It could also be helpful to keep dogs on leash from the parking lot, over the bridge, near the creek and then under voice control at the beach.

This area has a long history of responsible off-leash dog use. It has been, and continues to be, a very popular area with local residents. Historically and politically, this is an area that the community has played a vital role in accepting a stewardship for the special lands and gifts nature has to offer here. While the draft plan goes into extensive detail about the negative impacts dogs "may" have on this site we believe the evidence of proper coexistence has been demonstrated with the ability of this site to host special species, while providing responsible voice control dog recreation.

Rodeo Beach/South Rodeo Beach- We recommend that the current status of this site be maintained and we support Alternative A.

This site is heavily used by many dog guardians throughout the Bay Area and it offers a unique experience to its users. Further limiting this area to dogs would have a dramatically negative effect on the community.

Marin Headlands Trail- We recommend that the current status of this site be maintained and we support Alternative A. We would like to see on-leash access considered on the Tennessee Valley Trail.

Fort Baker- We recommend that the current status of this site be maintained and we support Alternative A. We would like to see segments of voice control on the northern section of East Rd. as well as a segment of the Drown Fire Rd.

Many residents of Sausalito can easily access this area on connecting trails. There is a need to be consistent with neighboring regulations in this area.

Concluding Remarks: Our organization realizes the importance and great

magnitude this dog management plan brings to you and your staff. Finding a balance between a multitude of users, special species, safety and resource protection is a very important process. Equally important, we believe, is the ability to create community relations and partnerships that emphasize the importance of the human-animal bond. This bond, for many, is a life altering experience that leads them to the beautiful spaces of our national parks. the backyards to many Marin County residents. We believe that our community is very well educated in the realm of proper coexistence between responsible dog use in the natural world. Over 80% of our lands in Marin County reflect that value.

An adaptive management plan to the needs of our communities prides itself on the ability to succeed rather than long term failure and penalty. We have found that working through the challenges our communities face, and by partnering with local community groups. our enforcement and educational messages win. We consider our organization an allied partner to the GGNRA, as our long history in working closely has demonstrated. Working to build relations in individual communities is something we value because it helps us remain efficient while building public trust. It has shown to be effective over time in solving animal issues here.

Thank you for the opportunity to provide comment in a variety of ways. We will continue to look forward to being a resource in the area of pet guardianship as well as localized animal enforcement issues. Please feel free to contact me at (415)506-6209 to discuss any issue in more detail or if I can be of further assistance to you. Sincerely,

Captain Cindy Machado Director of Animal Services

Correspondence Type: Letter
Correspondence: Dear Superintendent Frank Dean:

Mann County (the county) applauds the exhaustive effort that Golden Gate National Recreation Area (GGNRA) has undertaken to achieve sometimes conflicting objectives of the GGNRA Draft Dog Management Plan/Environment Management Plan (draft EIS). They are 0 preserve and protect natural and cultural resources and natural- processes; ? provide a variety of visitor experiences; ? improve visitor and employee safety; ? reduce user conflicts; and ? maintain park resources and values for future generations.

Reconciling and finding balance among these objectives about which so

many care so passionately is a herculean task. GGNRA has spent more than six years in a comprehensive public process attempting to learn and to educate on the matters of recreation for dogs and people in a wondrous and fragile natural and cultural setting. While full consensus was not reached on how to achieve the objectives, much was learned by the park and the participants, including those in Marin County.

The Marin Humane Society estimates that there may be as many as 100,000 dogs in this county of 250,000 people. Marin dogs are much loved family members and work-out partners. For this reason, county managers strive to find safe ways to accommodate pets in parks. GGNRA is not the only venue for dog lovers to recreate with their best friends. Marin Municipal Water District and Marin County Parks and Open Space (county parks) properties, about 20,000 acres each, are also well used by Marin dog owners. Both entities share GGNRA's objectives to balance dog use and enjoyment with resource protection and conflicts with other users. Achieving compliance with rules in parks is unusually and surprisingly difficult in Marin. County park rangers report that compliance with dog policies is one of the most time consuming and confounding challenges that they face.

The county has heard from many interested constituents during the GGNRA draft EIS comment period. Comments range from frustration that leashes will not be required on all GGNRA lands, to extreme disappointment that areas now informally off leash will soon be off limits. The county also has heard many comments of support for the preferred alternative, largely because of the process undertaken to choose it. County elected officials and managers have met with the GGNRA superintendent and his staff on several occasions. Points of potential refinement have been discussed and we are confident that some adjustments will be made. Ideas for refinements will be presented in concept in these comments. Both entities have pledged to continue to look for ways to respond to draft EIS public comments over the next year.

Comments presented here strive to acknowledge that while the county and GGNRA share many issues and serve the Marin constituents, GGNRA has different mandates, serves additional regional and national constituents, and has sole jurisdiction over the federal lands that are the subject of the draft EIS. We thank you for this opportunity to comment. The county looks forward to future discussions as the final EIS is crafted.

General Comments Marin County comments are about Marin areas only. However, the county is concerned that restrictions proposed throughout all GGNRA lands will create pressure on county parks by dogs displaced from new GGNRA rules. This was not thoroughly analyzed in the EIS. In conversations between GGNRA and county staff, GGNRA staffers correctly asserted that such an analysis would be very difficult to achieve. How many

dogs currently using Muir Beach will now go to county parks instead? It would be difficult to design a model for a meaningful answer. Nevertheless, none disputes that displacement will occur.

As stated above, the county also understands that compliance with rules about dog use is very difficult to achieve in Marin County. We wonder if compliance concerns drove GGNRA to select a "no dogs" stance in several places where they might have selected "dogs on leash" if it seemed feasible to achieve compliance. Several ideas presented below raise this issue. Other comments suggest ways to mitigate displacement so that GGNRA can, with their land management partners, continue to offer Marin citizens a sufficient number of trail-miles to recreate with their dogs.

An additional recreation outlet for dogs the county is considering is an alternative to dogs on trails. Marin County is learning from thousands of other very successful parks systems across the country that dog parks, if carefully located and designed, and if sufficiently sized, can be much used and much loved assets to communities. They offer a very different experience for both dogs and their owners. While not suggested instead of trails, the county is considering them in addition to trails. GGNRA management has agreed to work with the county to explore the potential for a new dog park site in southern Marin. Area Specific Comments Muir Beach Muir Beach has been the subject of many of the comments the county has heard. People familiar with the costly restoration of Redwood Creek's significant creek and wetlands habitats support the proposal to restrict dog use of the beach. Habitat restoration has been crucial to support coho salmon, red legged frogs and other threatened and endangered species. Restoration of the lagoon and creek were made possible with public money through grants from the federal and state governments.

Many dog owners who use this area love it and have voiced strong objections to the restrictions.

Dogs off leash have long been a natural resource protection issue at Muir Beach. Dogs originate from visitors and from the neighboring community. The county understands importance of the natural resources at Redwood Creek, the lagoon, and the beach, and has no position on the preferred alternative that restricts dog use to parking lots, and on leash. However we believe that dogs currently using this area will move to county parks once new rules are in place.

Stinson Beach The preferred alternative does not constitute a change in existing conditions. It proposes that dogs be restricted to parking lots and be on leash. County owned and managed Upton Beach, adjacent to and north of Stinson Beach, is a designated "dogs allowed" beach. This traditionally has taken pressure off of Stinson Beach. In fact, GGNRA rangers direct dog

owners to Upton when enforcing the federal rule. Upton Beach dog users are adjacent residents, and those who were Stinson Beach bound but were prohibited by dog restrictions. These redirected users park their cars in the GGNRA lot, cross an unsanctioned federal area with their dogs to the county beach.

Managing Upton Beach is a challenge for the county. The county has two ideas to improve management, health and safety, and visitor enjoyment of this area. The county requests that a limited segment (to be determined) on the northernmost edge of Stinson where it abuts Upton be designated for dogs. This would create a sanctioned area on the federal beach near the parking lot, and relieve pressure on the relatively limited area available at Upton. It would acknowledge and accommodate those dogs that GGNRA rangers redirect to the county beach. This also would help mitigate displacement from Muir Beach.

Dog waste on Upton Beach has become a serious health issue. The county does not have adequate staff to patrol, nor does it have the staff to manage dog waste removal. The county and the Stinson Beach community are partnering to solve the problem. The county has installed six dog waste bag dispensers and signs at beach entry points. The local private waste management company has provided six receptacles at those spots and has pledged to empty the receptacles on the regular community pickup. The county requests assistance from GGNRA in restocking the six dispensers weekly. Rodeo Beach The county supports the preferred alternative for Rodeo Beach. It allows dogs off leash on most beach areas, and requires leashes while crossing through the sensitive lagoon area. This area will receive displaced use from Muir Beach. Restricting access on the southernmost portion of beach may be difficult to enforce, and the area may not environmentally distinct. However it will provide a dog free zone for beach users who want an experience free from dogs.

Homestead Valley Homestead Valley is a popular dog walking area. The county has received comments supporting off leash use in the valley. Others who are residents of the valley fear that they will become a destination for dogs displaced from other newly restricted areas. The county requests that both entities' staff examine an additional way to segment the valley to accommodate some off leash use without inviting new out-of-community access through the community.

Oakwood Valley There is much confusion about what the public supports in Oakwood Valley, especially in regard to the ROLA area, i.e., the enclosure. The county urges reexamination of this alternative and the concept of this enclosed area. We urge that some off leash trail use be allowed to continue in the area.

Alta Trail The Alta Trail is well used and much relied upon for residents of Marin City and Sausalito. Its proximity to these communities makes it an important destination for daily exercise for people and pets. Historical use from these populous and topographically constrained areas has had an adverse impact on the natural resources. However, these attributes make this trail a candidate for continued off leash use. Comments to the county about the proposed change to leash- required have been pointed and frequent. The county requests that this trail remain designated off leash to serve these communities.

Marin Headlands New restrictions in the Marin Headlands surely will result in significant impacts of displacement to county parks. The Headlands trails that are currently open to off leash use (as shown in alternative A) constitute the quintessential Marin County trails experience. These trails are beloved by all, including those who recreate with their dogs. The county acknowledges that current impacts to resources warrant management changes. If the same trails depicted as off leash in alternative A were made leash-required, these impacts could be minor. The draft EIS analysis of impacts to the Marin Headlands trails does not conclusively indicate closure of these trails to dogs. It does support requiring leashes. The county wonders if the feasibility of achieving compliance with a leash rule dictated the decision to choose closure of the loop of the Coastal Trail to Wolf Trail to Miwok Trail. We urge GGNRA to give further consideration to adding this loop and the Julian Road (Coastal Trail) extension east to the leash-required inventory. Perhaps additional outreach and rigor of enforcement could help to underscore the importance of reducing resource impacts in this iconic area. Ft. Baker The county supports the preferred alternative for Ft. Baker.

Congratulations on achieving this milestone. We know that GGNRA has several difficult tasks ahead, including addressing the public and agency comments. Thank you for the opportunity to comment. We look forward to continuing discussions about refinements and ways to address public comments while meeting GGNRA's objectives and mandates.

Sincerely,

Linda Dahl Director and General Manager

Correspondence Type: Letter
Correspondence: Dear Superintendent Dean:

I am writing to provide comments on the Draft Dog Management

Plan/DEIS. The members of the GGNRA Liaison Committee of the City of Pacifica discussed this document with GGNRA representatives as well as those citizens who have provided comments to the Committee to understand the context and content of the DEIS with special emphasis on affected lands in Pacifica.

At their regular meeting of May 23, 2011, the City Council held a public hearing, reviewed and deliberated on the comments relating to the Draft Environmental Impact Statement for Dog Management in GGNRA lands within the limits of the City of Pacifica, and voted unanimously to submit the following comments:

Multimedia Approach to Public Education in Pacifica: Despite the considerable publicity surrounding the DEIS and potential dog management rule changes coming, there will always be a subset of the public that will be caught unaware when these changes are implemented. We request the GGNRA employ their skills at outreach and education by adopting a multimedia approach and avail themselves of the many informational options available in Pacifica for outreach (e.g. newspaper, television, web sites, clubs/organizations, meetings etc.).

Rule Compliance and Enforcement Should Include a Tiered Approach: It is our understanding there will be a compliance component including the option to increase overall restrictions at a given site if compliance drops below a defined threshold (e.g. dogs in an on-leash area may become a no dogs allowed area). We also expect that eventually, in the extreme, the possibility will exist of issuing citations to individuals in violation of the regulations. We would hope that such compliance and eventual enforcement actions will include a tiered approach with a sufficient period of informal warnings to ensure all park users are aware of the management changes. We encourage the GGNRA to work with local dog organizations (e.g. POOCH) with regard to prior outreach and education, as well as monitoring efforts, to evaluate compliance once the regulations are implemented.

Clear Signage at Enforcement Transition Zones: There are a number of locations where there is a transition between GGNRA and City- managed lands. Without clear and prominent signage a person walking a dog may suddenly find they are no longer on City property but GGNRA land and in violation of the new regulations. An example of such a transition zone is at the south end of the berm (owned by the City of San Francisco but managed and used by Pacificans) which transitions seamlessly into GGNRA Mori Point land. Therefore we encourage GGNRA to clearly post these transition zones.

Site-Specific Comments The following are comments specific to the "alternatives" presented by the DEIS plan for lands in Pacifica. Map

references refer to maps of the various "alternatives" for each location. In most cases we select a particular map "alternative" modified by the inclusion of certain trails. Our overall rationale for suggesting these changes include: 1) the need for more recreational access on GGNRA lands for on-leash dog walkers in Pacifica including loop trails and access to and from neighborhoods or open space areas exhibiting high visitor volume; 2) the belief that these changes are compatible with maintaining ecosystem integrity; 3) our Committee members' observations that under controlled conditions, on-leash dog access to open space has not always, over the past decades, degraded habitat integrity; and 4) concerns that the site use restrictions proposed in the DEIS will cause negative effects from the pressures for other outdoor dog-related recreation.

Sweeney Ridge: Map 19E should include on-leash access for the Baquiano and Sneath Lane/NPS Easement Trails. We suggest that the thick chaparral on the Baquiano side and the fact that the Sneath Lane/NPS trail is paved would prevent most if not all dogs from accessing the property off the trails (in the event there is non-compliance with the leash law). Proper enforcement of the rules should ensure that few if any violations occur, in which case the environmental effects from site access on this parcel would be minimal.

Milagra Ridge: No Comment.

Mori Point: We suggest that the trails designated on Map 17C as "Tmigtac" and "Polywog" trails be modified to allow on-leash dog access. We believe the likelihood of either the red-legged frog or the San Francisco garter snake being harmed or negatively affected is extremely remote. Furthermore, the "Polywog" trail is an example of where it is important to maintain neighborhood access from Old Mori Point road to Fairway Drive. This trail runs parallel to a long fence line and is clearly not a species migratory corridor.

Pedro Point: Map 20C was lacking detailed trail maps making it difficult to evaluate these options. The GGNRA has access to the publically vetted trails map that was created through a cooperative effort of the Pacifica Land Trust and the National Park Service. We suggest incorporating the trails map from that effort as a starting place for discussion of possible on-leash dog access on Pedro Point. It seems reasonable to assume that as soon as the Devils Slide tunnel is open and the segment of Highway 1 between the two portals is abandoned and turned over to public foot and bicycle access, Pedro Point will become a popular destination. If that is a valid assumption, the public will seek access to the site with their dogs. We suggest adding the proposed trail network from the Pacifica Land Trust grant effort to more definitively establish what forms of dog access might be possible in advance of the actual transfer to the GGNRA (which has been pending for many

years). It seems reasonable to consider on-leash access from the old parking area up the south ridge, north to the middle ridge, and then back to the east via the ridge or the valley trail between those two ridges.

Future Considerations The City Council established the GGNRA Liaison Committee with one of its goals being to promote the economic interests of the City with respect to open space by promoting hiking, bicycle riding, bird watching, and other recreational uses compatible with maintaining park resources. We are concerned that a loss of on-leash dog access on lands within Pacifica might have unwanted economic consequences, as dog walkers will go elsewhere, effectively eliminating the possibility of patronizing Pacifica's restaurants, hotels, or other retail outlets. While this cannot be readily quantified, we wish to express our concerns about this possibility, as it has been the City's long-held desire to see just the opposite occur. Our partnership with the GGNRA has been premised on the mutual benefits that Pacifica and the National Park Service can have from expanded open space. These are benefits that extend to both the human and natural environments. We have expected to see increased visitation, possibly the expansion of a visitor center, and habitat improvements (such as have occurred much to your credit at Mori Point) lead to enhanced economic circumstances in Pacifica. While this remains possible, we encourage you to consider these effects while making final evaluations of the proposed actions in the DEIS.

Last, there is the issue of exploring sites within or adjacent to the City of Pacifica. Many citizens have asked if there could be some place in this vast park, and specifically in or near Pacifica, where the GGNRA can establish an off leash area (e.g. land at Sheldance entrance adjacent to Highway 1). We would like to extend the resources of our City staff and the Liaison Committee to assisting the GGNRA in identifying such a location and how it could be managed in a manner consistent with the other off-leash areas under consideration in the DEIS.

We thank you and your staff for your dedication and hard work. We continue to be grateful for all that you have done and continue to do for the advancement of park lands in and near Pacifica.

Sincerely Mary Ann Nihart Mayor cc: Council Members Pete DeJarnatt, Sue Digre, Jim Vreeland, and Len Stone Paul Jones, Co-Chair, GGNRA Liaison Committee

Correspondence: Dear Mr. Dean:

I write to oppose the GGNRA's draft dog management plan. I hope my story will help you understand the special nature of the GGNRA as an urban recreation area, and why it is important to continue to permit residents to enjoy the GGNRA with our dogs.

I live with my family (two children and a husband and a dog) in San Francisco, and have been a resident here for 32 years. I have been a member of the Golden Gate National Parks Conservancy for at least 20 years. My family has owned a lovely dog, Jake, for the past seven years. This dog is my children's best friend.

Two years ago I was diagnosed with cancer. I spent 9 months in treatment ' three surgeries, three months of chemotherapy, one month of daily radiation treatments. My dog was my constant companion during these very difficult months, keeping me company and comforting me during week after week of debilitating treatments. As often as I could ' often straight from the hospital ' I would go to the beach to walk with my dog. When I was especially ill and unsteady, we'd go to Crissy Field or Ocean Beach, where access to the beach was fairly easy. On stronger days, when I could negotiate the sand ladder, we'd go to my favorite beach at Fort Funston or scramble down the rock pile south of Sloat to walk south towards Pacifica along Phil Burton Beach. When I was finally released by my doctor to run for exercise, my first run was along Ocean Beach with my dog. We were so exhilarated, we ran straight into the ocean at the end of my run and I had my first post-cancer ocean swim ' even though it was February!

There were rarely more than a few people at the beach when Jake the dog and I visited. South of Sloat, on Phil Burton Beach, there were almost no other people on the beach. I never felt that my dog and I were in conflict with other beach users or other beach species. Often I picked up trash along the beach ' I always thought Jake and I had a positive impact, that we were giving back to the beach that was nurturing me into recovery from cancer.

If Jake can't go to the beach anymore, I will need to find other places to walk and run with him, so I won't be able to go to the beach either. We will both miss it terribly.

I tell you this story because, only in an urban recreation area, could a cancer patient go straight from a major medical center to the beach. The beaches in San Francisco are not pristine wilderness ' they are full of old battlements and rock piles to prevent erosion by the waves. My dog is not degrading this environment ' he is enjoying it and helping me, an urban resident ' enjoy it too. Please do not take this away from us.

Thank you for considering my views. Sincerely, Polly V. Marshall

Correspondence Type: Letter

Correspondence: Dear Superintendent Dean:

I am writing to express concerns that I have with the draft rules for dog management at the Golden Gate National Recreation Area (GGNRA) in San Francisco and San Mateo Counties. As you know, when Congress created the GGNRA nearly forty years ago, it intended to not only preserve and support the unique park space but also maintain the historic recreational and educational opportunities that residents of the San Francisco Bay Area had traditionally enjoyed. This park is unique from others in our nation as it is truly an urban space. As you move forward with the proposed rule, I urge you to not only address the concerns that my constituents have raised, but make every effort to protect both the environmental characteristics that are unique to this park and the historic recreational uses that the residents in this region rely on.

As you know, two of the communities in my district, Montara and Moss Beach, border Rancho Corral de Tierra, a wonderful property that spans more than 4,000 acres which many of my constituents visit on a daily basis. For decades, residents of the region have been stewards of the land and truly consider it to be part of their own backyards. The area is regarded as dog friendly, largely because of the numerous trails available for dog walking. I understand that because ownership of the land is only now in the process of being transferred to the GGNRA, the draft dog management rules do not address the region. Therefore, the space will be classified as "new lands" when the proposed rules takes effect and dogs would be prohibited, absent a compendium from you determining otherwise. I urge you to consider all options available for this land after the transfer is complete and reject the default dog prohibition. Further, just as the public has had an opportunity to comment on all property affected by the dog management plan, so too should the residents who frequent this property. Thus far they have been denied the option to contribute to the public process because the land has not been under GGNRA ownership. They must be afforded the chance to actively participate in the process and a solution must be crafted which both protects the unique environmental aspects of the park while preserving recreational usage.

I am also concerned about the severity of the Ocean Beach preferred alternative, As you know, the proposed policy would only permit dogs off leash in the one mile area north of stairwell 21. Dogs will be completely

restricted from the entire beach which is south of this marker ' a 2-mile stretch that many of my constituents regularly visit with their dogs. I appreciate the rationale that the Snowy Plover frequent this area and have been disrupted by the dogs, but ask that you consider all less restrictive means that would still protect this endangered species. Might you designate an area within this zone where birds are not as prevalent which can be set aside for off leash use? Please evaluate this and any other plausible alternatives that would both accommodate the dog walkers who utilize this stretch of beach while protecting the Snowy Plover.

Lastly, many of my constituents regularly visit the Fort Funston beach area with their dogs and are concerned with the preferred alternative restrictions. While I join them in commending the fact that the proposal would maintain the beach area as off leash, I ask that you reexamine the plateau area restrictions. Specifically, commercial dog walkers and non-commercial dog walkers alike have shared with me that they would like the open field area just north of the drinking fountains to remain off leash, rather than prohibited to dogs altogether, as the plan proposes. As you know, dogs would benefit most from the span if they are able to run around off leash and this space has been historically used for that purpose. In addition, many of my constituents are concerned that the preferred alternative would require dogs to be on leash on both beach access trails, and that this could impose a safety risk due to the steep decline. I urge you to reevaluate this proposal so that it is more logistically sound.

The issues that I have raised are certainly not exhaustive of those presented by my constituents but are rather those of greatest concern. I am pleased that you have promised to review and adequately respond to the comments you have received from the public during this period and I expect that my constituents will have their voices heard through that process. Furthermore, I view this as only the first step in what is a very important democratic exercise. To that end, I look forward to reviewing the draft rule later this year, including any revisions extracted from the submitted comments.

As you know, the lands that make up the GGNRA are invaluable to the people of our region. I commend you for taking steps to protect the endangered wildlife and the precious environment. I also thank you for your fair and full consideration of the issues my constituents have raised. All the best, Jackie Speier Member of Congress

Correspondence Type: Letter
Correspondence: Dear Mr. Dean:

The Environmental Protection Agency (EPA) has reviewed the Draft Environmental Impact Statement (EIS) for the above project. Our review and comments are pursuant to the National Environmental Policy Act (NEPA), Council on Environmental Quality (CEQ) regulations (40 CFR Parts 1500-1508), and Section 309 of the Clean Air Act.

The National Park Service (NPS) has developed a Dog Management Plan that is intended to provide clear, enforceable policy regarding the manner and extent of dog use on Golden Gate National Recreation Area (GGNRA) lands. The proposed Plan and Draft EIS describe six alternatives for each of twenty-two locations for the management of dog activities in San Francisco, Marin, and San Mateo Counties, and detail the resources that would be affected at those locations. NPS has identified, for each site, a preferred alternative that is expected to minimize environmental impacts to endangered species such as the snowy plover and mission blue butterfly, decrease disturbance of soils and vegetation, and protect water quality of lagoons, creeks, and wetland habitats.

EPA recognizes and appreciates the need to manage recreational use of GGNRA lands in order to protect sensitive resources, and the difficulty of balancing the often competing goals of conservation and public access. We support the imposition of reasonable restrictions on dogs where necessary and appropriate. From the perspective of protecting resources within the GGNRA, the proposed action has many clear benefits; however, we are concerned that the Draft EIS does not fully address the potential impacts on resources outside of the GGNRA, as well as some impacts, within GGNRA boundaries.

Based on our review, EPA has rated the document Environmental Concerns-Insufficient Information (see enclosed "Summary of EPA Rating Definitions"), We believe that the Draft EIS presents an insufficient analysis of the proposed Plan's indirect impacts on city, county, and State parks, as well as GGNRA lands. Additional analysis should be conducted to identify the locations outside of the subject GGNRA lands that are most likely to receive greater use by current GGNRA users seeking alternate recreational areas for their dogs, and to evaluate the likely impacts of increased use of such alternate areas by such individuals and their dogs. EPA recommends that, in the Final EIS, NPS 1) identify locations of parks that are likely to receive increased visitation, 2) identify the resources at these locations, and 3) discuss more thoroughly the potential induced impacts on these resources.

For most of the GGNRA locations, the Draft EIS identifies at least one city, county or State park that may receive increased visitation as a result of implementing the preferred alternative. These parks appear to have been

selected based primarily on geographic proximity to the GGNRA location. Proximity may not always be the determining factor for where a person will choose to walk his/her dog. In the Final EIS, NPS should include the reasoning used in identifying locations that may experience induced visitation, considering factors such as types of recreation available (trails, roads, off-leash, on-leash), types of habitat and terrain (beach, forest, scrubland, hilly, flat), the availability of water for drinking or water play, the availability of nearby parking, the presence or absence of poison oak, etc., in addition to proximity. Surveys of current GGNRA users with dogs may be useful in identifying the alternate areas most likely to be visited. The Final EIS should identify the parks most likely to receive increased visitation, particularly near high-use GGNRA locations where there would be restrictions or concentrated dog recreation, including Muir Beach, Crissy Field, Baker Beach, Ocean Beach, and Fort Funston.

The Draft EIS does not identify the types of resources that are likely to be adversely affected as a result of indirect impacts. For many of the GGNRA locations, the document states that the types of resources present at the potential alternate parks are unknown. Some of the alternate parks contain water bodies, vegetation, anti/or wildlife that could be affected by increased dog use. Other resources or values that may be affected include visitor experience or human health and safety. EPA encourages NPS to identify more thoroughly those resources on which indirect impacts will occur.

Finally, the Draft EIS does not sufficiently identify and analyze impacts on the resources at locations likely to receive increased visitation. For some GGNRA locations, such as Mori Point for example, the Draft EIS states that water quality (p. 529), vegetation (p. 671), and wildlife (p. 963) at adjacent sites could receive indirect impacts as a result of implementing the preferred alternative, but that any impacts to those resources are expected to be negligible. No information or documentation is provided to support this conclusion for Mori Point, nor for many of the other locations that would experience changes in dog use as a result of implementation of the preferred alternative. The Final EIS should describe the likely impacts on areas expected to receive increased use and explain how they were determined.

Although, on the whole, EPA expects that the proposed action would be beneficial to GGNRA lands and resources, potential adverse impacts are not limited to other parks, but also include some GGNRA lands. For example, the document states that the preferred alternative for Muir Beach "provides 'a no-dog experience on the beach and those visitors looking for a southern Marin beach for dog walking could go to Rodeo Beach" (p. 104). Therefore, it is reasonably foreseeable that Rodeo Beach will experience indirect impacts as a result of restrictions at Muir Beach. The DEIS does not analyze the impacts to Rodeo Beach that would be expected from eliminating dog recreation on Muir Beach, which is a "high on weekends" visitor use area (p.

271), This is particularly notable given that Rodeo lagoon has occurrences of federally-endangered tidewater goby. The DEIS identifies numerous city, municipal, and State parks in the Bay Area that provide opportunities for recreation with dogs; however, many of them are located at substantial distances from GGNRA locations where restrictions would occur. It may not be necessary to fully analyze potential indirect impacts at all of the identified parks. Some city and local parks do not have sensitive resources such as wetlands, coastal dunes, or endangered species, and some city and local parks would not expect increased visitation as a result of the proposed action. Some GGNRA lands are identified as low-use areas and may have negligible displaced impacts. However, a fuller analysis of reasonably foreseeable impacts where they would be most likely to occur should be provided in the Final EIS. Some potential indirect impacts that should be more thoroughly investigated include impacts to water quality, vegetation, wildlife, and park maintenance needs; changes in vehicle miles traveled to access recreational sites; dog waste management; visitor use experience; and increased or concentrated erosion.

EPA encourages NPS to continue to work with cities in Marin, San Francisco, and San Mateo to resolve conflicts, address community concerns, and increase public understanding of the need and basis for the proposed action.

We appreciate the opportunity to review this DEIS. Should you have any questions regarding our comments, please contact me at (415) 972-3521, or contact Stephanie Skophammer, the lead reviewer for the project. Stephanie can be reached at (415) 972-3098 or skophammer.stephanie@epa.gov. Correspondence Type: Letter
Correspondence: Dear Mr. Dean:

Eco-Dog is a coalition of San Francisco Bay Area based organizations which promote the co-existence of responsible off-leash dog recreation with other forms of outdoor recreation. We support the protection of GGNRA's natural resources. This growing coalition is currently comprised of, but not limited to, the San Francisco SPCA, SF PAWS, Crissy Field Dog Group, Fort Funston Dog Walkers, Marin Humane Society, Marin Unleashed, Montara Dog Group, and Pacifica Dog.

We believe that responsible dog ownership is entirely compatible with environmental stewardship. Thousands of guardians and their dogs use the park each day. Most are responsible and keep dogs under control. The community, including dog walking groups and the SF SPCA, has come together to create numerous resources and initiatives to encourage responsible dog guardianship. By encouraging responsible guardianship ' and enforcing the law against the small minority that are irresponsible ' we can protect the GGNRA's environment without the need to overcrowd dog walking into an ever-smaller portion of the Recreation Area.

We agree on the need for clearer rules and compliance with the rules. However, the GGNRA's initial, current proposal in the event of "noncompliance" with its rules needs work and does not engage the community to find solutions. The draft/DEIS proposal indicates that if noncompliance is observed, "...the area's management would be changed to the next more restrictive level of dog management. In this case, ROLAs [regulated off-lead areas] would be changed to on-leash dog walking areas and on-leash dog walking areas would be changed to no dog walking areas. This change would be permanent." This approach unnecessarily punishes responsible dog guardians for poor behavior by a small minority. That no area could ever be changed to less-restrictive rules, such as when compliance is good and environmental protection needs are reduced, is one-sided and unfair.

As the Eco-Dog sponsor, the San Francisco SPCA encourages the GGNRA to develop its draft compliance-based approach into an adequate adaptive management program, as a common element to all alternatives. Eco-Dog has carefully reviewed and used the approach proposed in the draft Plan/DEIS as the starting point for recommending a framework for a compliance-based adaptive management program (enclosed). Eco-Dog and San Francisco SPCA look forward to discussing these recommendations with you, as you develop the final Plan/FEIS. We stand ready to be part of the solution. We ask GGNRA staff to build a conservation partnership with the community for the effective and long-term preservation of dog walking recreation and natural values in the Golden Gate National Recreation Area.

Sincerely, Jennifer Scarlett, D.V.M. Co-President

Correspondence Letter

Type:

Correspondence: Dear Mr. Dean,

Thank you for the opportunity to comment on the Golden Gate National Recreation Areas (GGNRA) Draft Environmental Impact Statement/Draft Dog Management Plan (DEIS).

Overall, I found that the DEIS contains some serious fatal flaws including, but not limited to the following:

1. The DEIS bases its conclusions on conflicting, untested statements and fails to provide evidence to substantiate its conclusions and justify the actions called for under the proposed management plan.
2. The DEIS fails to put the GGNRA into its proper context as an urban recreation area next to a dense metropolitan area. It fails to, evaluate impacts on the "bulban" environment by not evaluating the loss of recreational opportunities afforded by the GGNRA under the proposed action.

These critical errors lead to a flawed alternatives analysis, especially in the selection of the environmentally preferable alternative. Because the alternatives analysis, provides decision-makers with an understanding of the effects of their decisions, this is a very serious flaw in the overall analysis of the proposed action. NEPA is not limited to the natural environment ' a DEIS must consider impacts on both the, human and natural environment. Under NEPA, the human environment shall be interpreted to comprehensively include the natural and physical environment and the relationship of people within that environment. The proposed action is overly restrictive in part because it is based on an illogical, unsubstantiated, and incomplete analysis of impacts,

Additional` details on "these errors" and other serious errors are prOvided below along with my recommendatiOns-to study an alternative that balances the natural, cultuTOL and recreational value of the GGNRA.

Lack of Analysis of Impacts on Recreational Resources ? The DEIS fails to describe how the GGNRA fits within its urban context as a recreation area next to a dense urban environment. It fails to provide the reader with an understanding of the relationship of the GGNRA with the human environment.

? Really, this is about people as much as it is about dogs since every dog that's out there is with someone who is walking and exercising with him or her. People need to recreate more, not less.

? The DEIS should be revised to include a stand-alone "Recreation" section.

This section should describe existing recreational opportunities, the impacts of the proposed plan on recreational opportunities (including indirect and cumulative impacts), and the mitigation that the NPS will commit to in order to avoid such impacts.

The EIS fails to describe and evaluate the direct impacts on existing recreational uses of the GGNRA and, by direct correlation, the impacts on the quality of the surrounding urban environment. Direct impacts are those that would substantially impair or diminish the recreational features, attributes, or activities currently available to GGNRA visitors.

The EIS fails to describe and evaluate the indirect impacts on areas in close proximity to the GGNRA, including indirect impacts that substantially impair or diminish the features, attributes or activities currently available to nearby parkland visitors. The EIS should provide a detailed evaluation of the potential for increases in visitor use of nearby recreational facilities and related impacts.

The EIS fails to evaluate the cumulative loss of recreational opportunities and access to recreational facilities especially within the context of a dense urban environment. The list of cumulative projects should include a comprehensive list of past present and future actions that could affect recreational opportunities.

The EIS fails to provide the reader and decision makers with a current and therefore meaningful understanding of the number type and origin of visitors who recreate in the GGNRA and its vicinity. A recreation use and needs study should be conducted to adequately present the affected environment and determine the environmental consequences.

In chapter 3, Affected Environment (Section on Visitor Use and Experience) the DEIS fails to describe park facilities and existing accessibility to those facilities in the areas where dog walking currently occurs. This section should be revised to describe these facilities including bathrooms and accessibility to trails. In chapter 4, Environmental Consequences section on visitor use and experience, the DEIS fails to describe impact on users especially mobility impaired users of those facilities and currently accessible trails. The DEIS should be revised to describe these impacts and commit to mitigation of such impacts.

Lack of Good Faith Effort to Understand Dog-related Impacts The DEIS fails to disclose the acreage of land currently accessible to dogs (on and off leash) under the no action alternative and the acreage of land that would be accessible with implementation of the action alternatives. Failure to include this information prevents a meaningful evaluation of the impacts of the

action alternatives against the no action alternative.

The EIS fails to disclose the acreage of lands currently used by snowy plovers and how much of that land is accessible to dogs (on and off leash). This information should be provided for the no action alternative and under each of the action alternatives. Failure to include this information prevents a meaningful evaluation of the impacts of the action alternatives and disclosure of how the management actions achieve the Purpose and Need.

The DEIS bases its conclusion on the fact that dogs are the sole culprit of adverse environmental issues in the GGNRA. This is a problem for at least three reasons: 1) There is much scientific controversy over the effects of dogs in natural areas and the DEIS fails to disclose this controversy. Areas of Controversy are required to be disclosed per the CEQ regulations 40 C.F.R. 1502.10-1502.18. The DEIS should discuss other opinions about dog related effects on natural areas, including the Megan Warren report (Megan Warren, "Recreation Disturbance Does Not Change Feeding Behavior of the Western Snowy Plover. UC Berkeley Environmental Science, Senior Research Seminar. May 7, 2007 - attached). This failure demonstrates the bias of the DEIS authors and should be revised to include this information to provide a balanced description of impact to decision makers.

2) The DEIS lacks site specific data to demonstrate the adverse effects are indeed caused by dogs. It should be revised to provide a site by site assessment of the conditions of the GGNRA resources and values at each of the 21 sites. For example, in Chapter 4, Environmental Consequences section on special status species, the DEIS fails to provide adequate scientific evidence connecting dog related activities with impact on snowy plover populations. The DEIS should be revised to include such evidence.

3) The DEIS fails to disclose the competing uses of the GGNRA land and their impacts. Therefore, impacts related to dog activities are not properly put into context. Because the section fails to discuss these competing uses, it inaccurately characterized the affected environment and therefore prevents an informed discussion about the contribution of dog walking to impacts on the visitor experience. The DEIS should be revised to describe the competing uses of GGNRA lands and describe and evaluate the contribution of dog-related activities.

Given the flawed basis upon which the analysis relies, the conclusions in the DEIS are also flawed. The evaluation of alternatives is distorted and inaccurate given the unsubstantiated conclusion about dog effects on natural areas.

Lack of Analysis of Indirect Effects Chapter 3, Affected Environment, and

Chapter 4, Environmental Consequences, are both inadequate in that they fail to discuss nearby local and regional areas where dogs are allowed on- and off-leash and the impacts on these areas due to the proposed implementation of the Dog Management Plan. These areas will experience indirect impacts with implementation of the Dog Management Plan since dog owners and professional dog walkers will increase their use of these areas as soon as the plan is approved. The DEIS should be revised to describe these impacts and commit to mitigation of such impacts. Again, The EIS fails to provide the reader and decision-makers with a current and, therefore, meaningful understanding of the number, type, and origin of visitors who recreate in the GGNRA and its vicinity. A recreation use and needs study should be conducted to adequately present the affected environment and determine the environmental consequences.

Another area of indirect effects is related to the increased amount of traffic that the Bay Area will experience if dog walkers ' private and professional ' need to find alternative areas to give dogs their proper exercise. These indirect effects include traffic, air quality, traffic noise, climate change, etc. These effects need to be studied in the revised EIS..

Improper Dismissal of 'Critical Analyses In the section on Issues and Impact Topics Dismissed from Analysis, the "Natural or Depletable Resource Requirements and Conservation Potential" topic was inappropriately dismissed from the environmental consequences analysis and was inappropriately limited to facility design and development. Since the alternatives will indeed have an appreciable effect on the natural resources of non-GGNRA lands, an adverse effect would occur under this topic that is not discussed in the DEIS. This topic need to be objectively evaluated in the DEIS; it should consider indirect effects on natural, non-GGNRA lands.

In the section on Issues and Impact Topics Dismissed from Analysis, the "Urban Quality and. Design Ofthe Built Environment": topic was inappropriately dismissed , from the environmental consequences analysis. The alternatives will indeed-have an appreciable effect on the quality of the urban environment sicne ther will be an appreciavle loss of urban recreation opportunities.. And, more dogs will receive urban-ohly walks: Therefore, there will be more diogS on city streets and more dogs will suffer from anxiety, leading to aggression issues, without the benefit of access to GGNRA lands. This topic needs to be objectively evaluated in the DEIS; it should consider indirect effects on urban, non-GGNRA lands.

In the section on Issues and Impact Topics Dismissed from Analysis, the "Socioeconomics" topic was inappropriately dismissed from the environmental consequences analysis. The cost-benefit analysis needs to be performed as part of the DEIS to substantiate the claims that plan

implementation would have a negligible socioeconomic effect.

Flawed Alternatives 'AnalySis The range of alternatives is inadequate as it,constrains the possible choice of options available to decision-makers. The NPS should expand its range of reasonable alternatives to include a robust and long7terin,adaptiVe,inanagement plan, a substantial public education program, and natural fencing in appropriate areas. The rejection,' of: from the alternatives (Chapter 2, page 92) is not reasonable. Some.degree of natural barriers/fencing in choice Iodations would, not substantially,affect,the aesthetic landscape Or binder wildlife movement. The ,DEIS fails to include a reasonable range of feasible,alternatiVes: inclusion Of these ideas could accomplish the stated objectives of the NPS while balancing the needs of the users of GGNRA lands. Lack of Documentation/Unsubstantiated Conclusions/Inaccuracies The DEIS fails to profive documentation for the enforcement data presented in the dosument or put the data into context in terms how dog related violatoinis compare to overall violatons. See CHapter 3, page 269 for one example of this issue. Furthur to this point the DEIS does not provide any reasonable evidence that visitation to the park will increse through hteh 20year plan horizon of that such increases will result in more dog realted violations. In chapter 3 , page 269, the DEIS states that "The DEIS is clear that there is no correlation between population growth and annual visitation"

Table 9 - SUMMARY OF VISITOR USE AND PET RELATED CITATIONS, WARNINGS AND REPORTS TAKEN AT GGNRA (including reference to Appendix G, Golden Gate National Recreation Area - Pet related Incident; Law Enforcement adn US Park Police data) Is flawed because :

- 1) 2007-2008 data are too old to characterize the affected environment of 2011
- 2) Table and associated text fails to characterize the extent to shihc NPS has notified the publis about the laws of do walking in GGNRA lands and whether signage on park property were placed appropriatly.
- 3) The data that are based on "best professional judgment (Table endnote "e") are not.cited/documente&with records of communication The DEIS fails to allow for Meaningful debate to Whenitbases its determinations on questions posed to'park staff about their recollections,of violations that took place several years ago without any documentation of these memories or records of communication.
- 4 "Percentage of Visitors Walking Dogs" column is largely based on data fom 2.096 (NPS 2006g). These data are over 5 years old and can hardly be

,applicable to current conditions.

5. Appendix G data upon which Table 9 are largely based are unsubstantiated Appendix G contains: no source documentation.

In Chapter 3, page 279, Telephone survey conducted by Northern Arizona University (2002): ;data from this-2002,, survey are almost 10 years old. The document thus fails to use current data to characterize the affected environment. In addition, in most cases the representative quotes of surveyed visitors presented in the DEIS are negative and inflammatory even though only a small amount of user surveyed (22%) reported off leash dogs detracted from their visitation experience. The other 80% of surveyed visitors were not quoted in the section, demonstrating that the setting is based on the authors bias and subjective opinions against the backdrop of untested and outdated assumptions.

In Chapter 3, page 242 References to Appendix G:

1. "Off-leash dogs have frequently been observed in Redwood Creek and Redwood Lagoon despite these closures (NPS 2008c (appendix G);" Statements like this one are based on subjective opinions and untested assumptions. The statement that off-leash dogs have frequently been observed in these areas is unsupported by the evidence in Appendix G. The word "frequently" is broad and vague and not meaningful in this context given that the data in Appendix G is only based on a years worth of observation in 2007 and unsupported by records of communication
2. "However these closures are not always followed; a citation was issued for a dog in the creek in 2006 (NPS 2008c(Appendix G))." This statement is inaccurate since the data in Appendix G is from 2007
3. "However, despite education and, enforcement efforts, current compliance with the 2008 seasonal protection rule remains low, as described in the "Vegetation and Wildlife" section and the "Visitor Use and Experience" section under "Visitor Use by Dog Owners" (NPS 2008c (appendix G))." The DEIS fails to provide the reader with a way to distinguish between scientific evidence and subjective opinion. Contrary to the cited statement, no violations of the Ocean Beach SPPA are listed in, Appendix G for 2007 and only 2 violations were cited in 2008. For Crissy Field, 17 violations were cited in 2007 and no violations in 2008. On what basis does the NPS determine that this constitutes "low" compliance?

In Chapter 4, pages 1566-1568, the DEIS states:that "Visitation is predicted to. continue to increase over the next 20 years, and it is likely that the number of dog walking noncompliance citations and visitor conflicts would continue to increase even under the no action alternative, resulting in

increasing labor for LE officials related to dog management." No citation is provided for this claim. The DEIS does not provide any evidence that connects increase in park visitation with increases in violations. In Chapter 3, page 269, the DEIS states that, "The DEIS is clear that there is no correlation between population growth and annual visitation." The DEIS bases its conclusions on conflicting, untested statements and fails to provide evidence to substantiate its conclusions.

Flawed and Incomplete Cumulative Analysis In Chapter 4, page 1568 and Appendix K, the DEIS states that "At QGNRA, elevated threat levels require Closures in and around Fort Point, the Coastal Trail, and Fort Baker. These closures may preclude dog Walking in those areas..." Based on this information, the DEIS fails to include a comprehensive list of cumulative projects that could affect dog walking in GGNRA areas. Therefore, the cumulative assessment is inadequate and should be revised to consider all of the past, present and future actions that could affect dog walking in GGNRA areas. Indeed, many actions have been taken over the years to limit the amount of land open to dogs, both on- and off-leash. The NPS state (2002a) that, "...leash restrictions have occurred over the last ten years. ...local dog owners who prefer off leash, recreational use have moved to GGNRA." Similarly, the cumulative impacts analysis should consider future plans to curtail recreational opportunities for dog owners/walkers including the proposed San Francisco Natural Areas Management Plan. The DEIS should be revised to evaluate the cumulative impacts on dog owners/walkers in relation to the cumulative loss of on- and off-leash dog walking opportunities; The DEIS should evaluate how recreational activities for dog owners/walkers have been curtailed over the years and how the proposed Dog Management Plan contributes to this cumulative impact. The DEIS should commit to mitigate these cumulative impacts

Flawed Visitor Use Section In Chapter 4, pages 1401-1562:

1. This section fails to disclose the visitor use and experience from the perspective of the dog owner/walker. The analysis is skewed to only consider the experience of the park users who do not favor dogs in the park.
2. The impact determination related to visitors who prefer dogs under Alternative 1a is flawed. Given that dogs will no longer be allowed in the parking and picnic areas, the DEIS fails to disclose how that impact is determined to be "minor,, which, according to page 1403, constitutes a change in visitor use and experience that "would be slight and detectable, but would not appreciably limit or enhance any critical characteristics of the visitor experience." Not allowing dogs in areas where dogs were allowed previously does not fit into this category of "minor." The DEIS provides no explanation of how it reached this conclusion. The DEIS should be revised to reflect the true impact of this Alternative and explain the rationale for its

conclusions:' 3.The impact determination related to indirect impacts on adjacent parks under this Alternative is flawed. For example, on page 1412, the DEIS states that the impacts on nearby parks under Alternative D, which prohibits dogs in the parking and picnic areas at Stinson Beach to be negligible and "minor." Given that dogs will no longer be allowed in these areas, it is unclear how the DEIS authors determined this impact to be negligible and "minor." The conclusions about impacts on nearby parks in this section are not based on fact or substantial evidence. Not allowing dogs in areas where dogs were allowed previously will absolutely affect the use of adjacent areas and the DEIS does not disclose this impact. The DEIS provides no explanation of how it reached its conclusions. The DEIS should be revised to reflect the true impact on Visitor Use and Experience, explain the rationale for its conclusions, and commit to mitigating all direct, indirect, and cumulative impacts.

4. The impact determination related to visitors who prefer dogs under the alternatives is flawed. Given that dogs will no longer be allowed to walk off-leash, the DEIS fails to disclose how this change in policy or adverse impact is determined to be "minor." The DEIS provides no explanation of how it reached this conclusion. The DEIS should be revised to reflect the true impact of the Alternatives on users of Homestead Valley and explain the rationale for its conclusions. Flawed Human Health and Safety Analysis ? In Chapter 4, pages 1591-1724 The conclusions in the environmental consequences section on Human Health and Safety are flawed because they fail to consider effects on people who rely on dog walking for health benefits. They are also flawed because they fail to consider the effects of reducing access to dog walking areas on seniors and mobility-impaired people who would no longer have the same degree of access to dog walking trails and restroom facilities under the proposed action. The DEIS should be revised to reflect these impacts and commit to mitigation. In addition, the affected environment related to Human Health and Safety is flawed because it fails to present the human health benefits of dog walking and experiencing one's dog run and play off-leash. In addition, the affected environment related to Human Health and Safety is flawed because it fails to present the accessibility requirements of seniors and mobility-impaired park users who walk their dogs in GGNRA lands,

? In Chapter 3, page 286, the DEIS states that, "Most of the issues related to the health and safety of park visitors are related to the nature of their encounters with unruly/aggressive dogs." This statement is not based on facts and its veracity is questionable because its assertions are not documented or cited with scientific evidence or verifiable records of communication.

Other/Miscellaneous Errors In Chapter 3, page 281, the document fails to quantify the degree to which minority and low-income populations use

GGNRA lands. Therefore, the claims that off-leash dog walking adversely affects minority and low-income populations are unsubstantiated. In addition, the authors show their bias against dogs walking by only quoting negative, inflammatory and extreme remarks from those questioned by phone in the survey. Recommendation for Cornproinise Alternative Based on the aforementioned comments, the DEIS does not justify the extremely harsh level of management in the proposed action. The proposed action should be modified to maintain recreational opportunities in a manner that is in keeping with the 1972 enabling legislation of the GGNRA. Some of the management tools could include: ? A long-term adaptive management plan; A substantial public education program; ? Fencing areas using native plants and environmental design principles; Constructing additional trails;for dogs in non-sensitive areas; ? Erosion control measures/best management practices; Limiting off-leash commercial dog walking. to weekdays; and Greater enforcement.

I challenge you to develop a plan that more appropriately uses the tools you have at your disposal to avoid compromising the myriad values of the GGNRA and the ability of its neighbors to enjoy its recreational opportunities.

Thank you for your, consideration of these comments. Regards,

Correspondence Type: Letter

Type:

Correspondence: Dear Superintendent Dean:

Thank you for the opportunity to submit comments to the Draft Dog Management Plan / Environmental Impact Statement (-Draft Plan" and -DEIS-, respectively) released on January 14, 2011. These comments are submitted by the Golden Gate Audubon Society (-GGAS-) on behalf of its approximately 10.000 members and supporters in the San Francisco Bay Area who use and enjoy the Golden Gate National Recreation Area (-GGNRA-) and are concerned about the continuing impacts of dog-related recreation on the natural and historical resources of the park.

There is no doubt that the National Park Service (-NPS-) must enact new regulations to manage dogs and dog-related recreation in the GGNRA. All national parks are national treasures. intended to be used and enjoyed by all visitors, but only to the extent that their natural and cultural values are not permanently impaired. (NPS Organic Act) The GGNRA is a particular treasure, given that it is was created to serve urban residents, many of whom lack the opportunity to travel to more "wild- areas like Yosemite or Yellowstone. Moreover, the GGNRA is home to more endangered species than Yosemite. Sequoia, Death Valley and Kings Canyon National Parks combined, and one of the highest concentrations of sensitive species in the U.S. NPS has attempted to implement the 1979 Pet Policy with education, signage and enforcement, but its efforts have failed. Non-compliance with existing regulations is extremely high and the number of park users, including those bringing dogs, is growing, resulting in greater impacts and more conflicts. The 1979 Pet Policy is both unsustainable and illegal.

Under the Preferred Alternative. the Draft Plan constitutes the largest accommodation of dogs into any national park in the country. This will undoubtedly result in significant, long term impacts on park resources and other park users. Indeed, 36 C.F.R. ' 7.97, which prohibits unleashed dogs in National Parks and restricts leashed dogs to only a few paved areas, was created because NPS recognized that dogs pose risks to park resources, visitors and employees. The wisdom behind 36 C.F.R. ' 7.97 has been supported again and again by an abundance of scientific studies and incident reports, which demonstrate that insufficient dog management in natural areas results in significant negative impacts on the wildlife, plants, and habitats,I a diminished the park experience for other park users and risks for park employees,2 and the exposure to risks of attacks and other hazards for

dogs.'

GGAS is sensitive to the needs and concerns of dog owners and believes that effective dog management can be implemented in the GGNRA without impinging on the socialization or health of dogs in the Bay Area. We are also aware that many dog owners are responsible guardians and that they keep their dogs on leashes when required and pick up after them. Given that the City of San Francisco has more off-leash dog recreation areas than any other city in the United States and given that the GGNRA will continue to welcome dogs into large tracts of its land in San Francisco, we are confident that responsible dog owners will have ample opportunities to recreate with, exercise and socialize their dogs.

GGAS appreciates the effort put into the documents by the National Park Service staff and members of the community that participated in the negotiated rulemaking effort. While we continue to have substantive concerns about the Draft Plan and the DEIS, we believe the document represents a significant step in the right direction to protect the GGNRA's resources for perpetuity.

Our comments begin by addressing overarching concerns with the Draft Plan and DEIS, including: 1) All regulated off-leash areas ("ROLA") must be enclosed. If enclosures are inappropriate in a given area due to biological, cultural, aesthetic or physical limitations in an area, then it should not be designated as a ROLA; 2) The GGNRA should provide more opportunities for visitors to hike in the GGNRA in San Francisco without interacting with dogs. Currently, the Preferred Alternative provides for only a single trail where visitors, including those with small children, may go without being forced to interact with dogs. This is not fair to community members that have a right to enjoy the park without fear or discomfort due to the presence of dogs. 3) The Park Service should not permit commercial dog walking within the GGNRA. The Park Service may only permit commercial activities that further the park visitors' experiences. Commercial dog walking does not further any person's park experience. 4) The 75% compliance-based management threshold is too low. The very low threshold for compliance, essentially, a "C" grade, perpetuates the culture of non-compliance that has persisted in the GGNRA and resulted in the current and ongoing impacts to the park resources and visitors. Dog owners are more likely to comply with new regulations if a culture of compliance is developed by requiring a higher level of compliance. Moreover, allowing at least 25% non-compliance will result in continued negative impacts to park resources. 5) The DEIS fails to establish that "voice control" is a valid method of controlling off-leash dogs. As demonstrated in the Criminal Incident Reports produced by the Park Service's rangers, dogs that are ostensibly under "voice control" do not respond accordingly. GGAS is unconvinced that this is a valid means for protecting park users, wildlife,

habitats and other dogs. Our comments next address the Preferred Alternative and potential variants in San Francisco County. In general, we endorse Alternative D, which is the most environmentally-protective alternative, with the caveat that all ROLAs should be fully enclosed. We have deviated from Alternative D for specific areas in San Francisco where we believe dog-related recreation may be less harmful to the park experience and resources in the hope that a reasonable compromise may develop in the final plan.

While many of our general concerns reach to the Draft Plan as proposed for the whole park, we have restricted our site-specific comments to areas in San Francisco. While our members have concerns about the alternatives and their elements in Marin and San Mateo Counties, we defer to the Marin Audubon Society and the Sequoia Audubon Society, respectively, based on their local expertise and representation of local community members. We join in and support the comments submitted by both groups, as well as comments provided by the San Francisco Bay chapter of the Sierra Club, Nature in the City, the California Native Plant Society, and the Wild Equity Institute. I. GENERAL CONCERNS A. The DEIS Should Better Document the Impacts Dogs Have on Native Wildlife, Plants, and Habitats and on Other Park Users. While the DEIS clearly states that dogs have negative impacts on native wildlife, plants, habitats and on other park users, the Park Service failed to include an adequate and comprehensive reflection of the overwhelming body of evidence demonstrating these impacts. L"3.) Frankly, had the Park Service included a more comprehensive review of the reports and studies documenting the effects of dogs on biological resources, some of the speculation, rumors, and misinformation that arose regarding the DEIS could have been avoided. Perhaps more importantly, local elected officials would have had a better understanding of the need for effective dog management in the GGNRA to protect local citizens, and natural values and better decisions regarding support or opposition for the plan could have been made.

To remedy this deficiency in the DEIS, the Park Service should revise the portions of the DEIS that discuss these impacts to better demonstrate the significant and overwhelming evidence on this point and include citations to all available reports, studies and data on the topic in a comprehensive bibliography. As currently written, the language appears to provide conclusions without support. Specifically, Chapter 1 of the DEIS includes sections on the "Impacts of Dogs on Natural and Cultural Resources in the Park- and "Visitor Use and Experience", but both sections are very sparsely supported by citations to relevant studies, including studies provided by the public during the scoping period. (See DEIS at pp. 13-20)

The DEIS would be greatly improved if the Park Service conducted a year-by-year review of all reports of dogs interacting with wildlife, including all

off-leash within the GGNRA. By failure to clearly demarcate where off-leash activity will be allowed, the GGNRA will perpetuate some of that confusion resulting in the need for continuous education and enforcement efforts.

Fencing or similar physical containment will definitively delineate the ROLA boundaries and effectively eliminate the potential for off-leash dogs to conflict with park visitors and wildlife. The borders of the ROLAs must be clearly defined in a manner that will easily communicate the boundary lines to all park visitors. Well defined off-leash areas provide dog owners with greater certainty as to where on- and off-leash dog activities are appropriate. Moreover, visitors to the GGNRA should have a choice whether or not to interact with off-leash dogs. Many visitors who would prefer not to interact with dogs at all in a national park are, for the most part, forced to accept that inevitability, even under the Preferred Alternative. However, because of the wide range of problems that arise with off-leash dog activity, including unwanted advances by dogs and, possibly, threats or attacks, visitors should be given the option to "opt-out" of interacting with off-leash dogs. A fenced boundary would give all visitors ample notice before entering an off-leash area.

It appears that the Park Service rejected requiring enclosures because of concerns regarding impacts to biological or aesthetic resources. However, the DEIS is woefully incomplete in its analysis of the kinds of enclosures that could be used to establish ROLAs. Fences need not be large or impermeable structures. For example, a "post-and-cable" fence would provide a well-defined boundary for dog owners and other park visitors without creating a barrier that results in impacts to biological resources or aesthetic values. Other, more creative options are available, such as vegetation-based barriers that create habitat, keep with the park's natural aesthetic, and provide the clear boundaries that provide for a safer, better regulated park.

An area should only be considered as a possible ROLA if it can be fully enclosed or otherwise made physically distinct from other portions of the park. If it cannot be enclosed, the area should be considered for another alternative use (on-leash only or no-dog). The Park Service is under no requirement to provide ROLAs. Moreover, dog owners in San Francisco have again and again demonstrated an unwillingness to comply with rules in areas that were not well-defined. Enclosures are necessary to provide dog owners with sufficient warning about where on- and off-leash recreation is appropriate and to provide other park visitors with the assurances and safety they deserve when visiting a park. GGAS provides more specific comments regarding ROLAs proposed in San Francisco in Section III below.

C. The GGNRA Should Not Permit Dog Walkers to Have More than Three

Dogs per Person and Commercial Dog-walking Is Not an Appropriate Activity in the GGNRA.

The DEIS indicates that commercial dog walking would be allowed under alternatives B, C and E. (DEIS, at 63) The allowance for commercial dog walking would come through a special permit allowing any person to bring up to six dogs into the park. First, we do not believe that allowing any person to bring more than three dogs into the park at one time is advisable, regardless of whether they are a commercial dog walker. In any event, it is our belief that commercial dog walking is currently not legal within the GGNRA and furthermore, does not meet the National Park Service criteria for permitting.

Currently, dog management guidelines for the GGNRA are set forth by the 1979 Pet Policy which the DEIS identifies as Alternative A. The 1979 policy provides guidelines for dogs to be within the GGNRA under the supervision of their owners and makes no reference to commercial dog walking. However, commercial dog walking within the GGNRA occurs on a daily basis, and though no permitting process has been established, it is tolerated by the Park Service. This commercial activity has significant negative impacts on the park and is in violation of 36 CFR ' 5.3 which stipulates that non- permitted commercial activity is prohibited on National Park lands. The DEIS states that the National Park Omnibus Management Act of 1998 provides guidance for the issuance of commercial use authorizations and concession contracts. (DEIS, at 39) Title IV Sec. 418 of this act specifies that authorization shall only be granted to commercial ventures that "provide services to visitors to units of the National Park System," Commercial dog walking services do not provide any services for park visitors. Their activities are more closely analogous to timber extraction or mining' essentially. a commercial venture profiting from using (and creating impacts on) park resources. Therefore, the activity does not qualify for authorization and should not be allowed under any alternatives of the DEIS.

GGAS understands that this is an extremely controversial position and that it may seem unfair to many commercial dog walkers that comply with leash requirements, pick up after their charges, and maintain control over their dogs at all times. However, we have seen commercial dog walkers again and again unload very large numbers of dogs at Ft. Funston and in other parts of the GGNRA and essentially letting the dogs roam uncontrolled. These activities seem only to be growing. Not only do these activities result in significant negative impacts on the park, they perpetuate the culture of non-compliance that leads other, more responsible dog owners to conclude that the regulations are not applicable, or at least enforced.

D. The Draft Plan Does Not Include Adequate Enforcement Mechanisms to

Ensure Compliance with New Rules.

Even under the extremely lax 1979 Pet Policy, compliance with leash requirements in the GGNRA has been extremely poor. The failure of the Park Service to regulate its lands mirrors the "culture of non-compliance" that permeates in the City of San Francisco, where city officials have acknowledged that many dog owners fail to comply with leash and pet waste requirements.

Non-compliance with leash requirements is the status quo in the GGNRA, particularly at Ocean Beach and at Crissy Field. Volunteers monitored snowy plovers within the Crissy Field Wildlife Protection Area ("WPA") during the 2006/2007, 2007/2008, 2008/2009 and 2009/2010 snowy plover "wintering" seasons (July through March). In addition to counting all snowy plovers, observers recorded incidences of humans and dogs within the WPA and noted whether disturbances to the snowy plovers or other wildlife occurred.

During the 2006/2007 season, compliance with the leash requirement in the WPA was approximately 29%. During the 2007/2008 season, compliance fell to approximately 27%. Compliance improved to approximately 34% during the 2008/2009 and 2009/2010 seasons. Anecdotal evidence indicates that the non-compliance rate is even higher on Ocean Beach despite the significantly larger population of threatened snowy plovers and other shorebirds that depend on the beach there. Golden Gate Audubon understands that NPS rangers have a wide range of responsibilities and that they are understaffed. However, by failing to police dog walkers within the GGNRA, NPS has contributed to the permanent impairment of the natural resources there. Moreover, it has created a sense of lawlessness and entitlement within the community that promotes even greater non-compliance.

The Draft Plan and DEIS would be greatly improved if it included more specific information about the extent of non-compliance in the GGNRA and in San Francisco. Data on non-compliance with leash (and other pet control) requirements in San Francisco is relevant to the analysis in the DEIS because it demonstrates the culture of non-compliance that exists in San Francisco.

Finally, compliance oversight should be required for as long as dogs are allowed within the GGNRA. We are concerned that the compliance oversight may be of limited duration and that once it is complete, non-compliance will likely escalate (especially if enforcement remains at historic levels). The compliance program should be considered as a cost of allowing dogs in the GGNRA in perpetuity.

E. The Draft Plan Fails to Provide Adequate Opportunities for Dog-free Recreation on Trails in San Francisco. Under the Preferred Alternative, dogs will be allowed on leash on all but one trail in the GGNRA in San Francisco. Therefore, visitors to the park who prefer not to interact with dogs will be restricted to a single trail. In short, the Park Service's overly generous effort to accommodate dog owners means that other users must endure a large number of dogs throughout the GGNRA in San Francisco or simply not visit the park.

The DEIS does not include adequate consideration of users that are less likely to use the park or have their park experiences diminished because of the presence of dogs. GGAS believes that a better study of the impacts of dogs on other park users and potential users would improve the Draft Plan and DEIS and should be conducted and incorporated before the FEIS is produced.

F. The DEIS Does Not Establish that "Voice Control" Is a Valid Method for Controlling Off-leash Dogs in the GGNRA.

Many of the Alternatives, including the Preferred Alternative, rely on "voice control" a means for controlling off-leash dogs. While the DEIS provides a somewhat broad definition of "voice control", it provides no basis or evidence that demonstrates that visitors to the park (or their dogs) have adequate training and discipline for "voice control" to work.

Again, a review of the Criminal Incident Records is informative on this topic. Several Criminal Incident Reports from 2008 demonstrate that again and again, dog owners who let their dog off-leash in the GGNRA cannot control their dogs merely by vocal commands.

Moreover, the DEIS and Draft Plan are fatally flawed by determining that a dog is under "voice control" merely because it comes when called by the owner under casual or non-emergency situations. True "voice control" would require that a dog responds to vocal controls when excited or under duress. For example, a dog would stop when commanded when chasing wildlife, charging a park visitor, or attacking a dog.

The only way to ensure that dog owners visiting the park have the ability to vocally command their dogs is to require permits prior to entering the park. Each dog owner would be required to pass a test ensuring that they can verbally control their dogs to prevent illegal harassment of wildlife, trampling of native plants, or assaults on other park visitors or dogs. In the absence of a license or permit system for dog owners, the Park Service has no way of ensuring that a real "voice control" system will be in place in the ROLAs. At a minimum, the Park Service must acknowledge the limitations

of relying on voice control in the FEIS and final plan.

Finally, the lack of true voice control by most dog owners in the GGNRA bolsters the arguments that: 1) all ROLAs should be enclosed to reduce opportunities for uncontrolled dogs to interact with other park visitors and wildlife; 2) park visitors should be restricted to no more than 3 dogs per person because it is highly unlikely that even a well-trained dog walker can keep voice control over more than 3 dogs at a time; and 3) the 75% compliance requirement set by the Park Service is too low, because that means approximately 25% (or more) off-leash dogs not on voice control will be tolerated in the park, resulting in ongoing impacts to other park visitors, dogs (especially dogs on leash), and wildlife.

G. The DEIS Fails to Address Impacts to Other National Parks as a Result of the Preferred Alternative.

Through the Draft Plan and the Preferred Alternative, the National Park Service is proposing for the first time to accommodate dogs off-leash throughout large portions of a national park unit. The DEIS does not adequately address the impacts to other National Park units. As a conservation organization, Golden Gate Audubon sympathizes with the mission and values of the National Park Service particularly toward protection and preservation of natural resources. As such, we believe that the best protections for natural resources would be to have park rules that are consistent with those of the nationwide system of National Parks.

We are very concerned about the public perception of national park values and the beliefs and behaviors that park visitors will take with them to other units of the National Park System. In recent years, GGAS members have observed an increasing level of on-leash and off-leash dogs on (and off) the trails of other National Parks including Lassen Volcanic National Park and Yosemite National Park. We believe that lax policies of the GGNRA could be contributing to public misperception of the standard nationwide rules pertaining to pets in our National Parks. We also believe that the Park Service has public educational responsibilities to instill park values and proper behavioral practices into the public mindset.

The DEIS should address the public perceptions of National Park values and the potential impacts of the dog management alternatives to the rest of the National Park System.

H. The DEIS Does Not Adequately Explain How or Why the Park Service is Allowing the Continued "Take" of Endangered Species and Other Protected Species by Dog Owners without Permits.

The DEIS acknowledges that harassment of snowy plovers by people or

their dogs constitutes a violation of the federal Endangered Species Act, 16 U.S.C. " 1361 et seq. (See DEIS at 1240 ("Chasing of plovers clearly meets the definition of harassment and take under the ESA of 1973")) The DEIS also acknowledges that harassment of wintering birds may have negative impacts on the overall population of the species and individual survivorship and fecundity.' (k ., citing USFWS. 2007. Recovery Plan for thPacific Coast Population of the Western Snowy Plover, at 65).

The Park Service is a federal agency with responsibility for stewardship over these threatened species and many other species covered by the Endangered Species Act, the Migratory Bird Treat Act, and other applicable laws on park lands. Yet, the Park Service has never explained the legal basis for permitting the ongoing harassment and harm to the snowy plover at Crissy Field and Ocean Beach. Specifically, the DEIS does not explain how the Park Service can knowingly allow dog owners to persistently and perpetually "take" snowy plovers in the GGNRA through harassment.

For example, the DEIS lists several of the impacts that dogs have on snowy plovers. (DEIS at 1240). However, the DEIS never explains why these disturbances do not constitute a "take" of snow,,, plovers under the ESA. Nor does the DEIS explain why the Park Service can perpetuate these illegal takings through the new Dog Management Rule.

IV. SITE-SPECIFIC COMMENTS ON THE PREFERRED ALTERNATIVES FOR SITES WITHIN SAN FRANCISCO COUNTY.

Unless otherwise specified, GGAS endorses Alternative D for sites in San Francisco. We defer to comments provided by the Marin Audubon Society and the Sequoia Audubon Society for recommendations in Marin and San Mateo Counties, respectively. Site- specific recommendations for GGNRA areas in San Francisco are provided below.

A. Fort Mason Golden Gate Audubon supports the Preferred Alternative (Alternative C). This will leave the vast majority of Ft. Mason open to the current on-leash use. We note, however, that while under the current rule Ft. Mason is supposed to be an on-leash dog area, it is effectively an off-leash area due to lack of enforcement.

B. Crissy Field Crissy Field has been one of the most controversial areas for dog managemei It is a very active spot for local visitors and tourists. It is also an important wildlife area, adjacent to the Bay, the Pacific Ocean, and some of the largest woodland and coastal scrub habitat remaining in San Francisco. The DEIS should include a statement that wildlife viewing is an important activity at Crissy Field and that it should be considered in any decision about how dogs will be accommodated. The Park Service must consider all these values'not just the demands of dog owners'in deciding

how to regulate dogs in the area.

Except as discussed below. GGAS endorses Alternative D for Crissy Field. Specifically, GGAS believes that any ROLA established at Crissy Field must be fully enclosed (see Section 1.B above).

1. The DEIS underestimates impacts to snowy plovers from the Preferred Alternative.

The DEIS does not fully describe the significance of the existence of snowy plovers in the Crissy Field area. The following information should be considered:

1) The DEIS states that there is no record of snowy plovers nesting within the GGNRA. However, there are records of bird and egg specimens collected during nesting season. (See Grinnell, J. 1932 and Smithsonian Institution collection data). 2) The DEIS states that snowy plovers have consistently overwintered at Crissy Field since 2005. However, there are no data to suggest that snowy plovers have not been overwintering there prior to 2005. 3) The USFWS Recovery Plan for the Pacific coast Population of the Western Snowy Plover has identified Crissy Field as an expansion site for snowy plovers. (USFWS (2007), at 43-44, 140-141) 4) The Snowy Plover has cultural significance at Crissy Field. The Presidio of San Francisco is the Type Locality of the Snowy Plover, collected by Lt. William Trowbridge (Army Corps of Engineers, U.S. Coastal Survey), on May 8, 1854 (Grinnell, 1932)

2. The DEIS should estimate impacts under the Preferred Alternative under a scenario where dog owners continue to fail to comply with regulations.

The DEIS endorses the Preferred Alternative by concluding that it would have "minor adverse impacts" and "overall negligible impacts" assuming compliance with leash requirements. (DEIS, at 1244-1245) Crissy Field has suffered due to dog owners' unwillingness to comply with leash requirements, even in the Wildlife Protection Area (WPA). (See, e.g. DEIS at 1241 ("Despite education and enforcement efforts, compliance with the...special regulation establishing the seasonal leash restriction remains extremely low")) The DEIS should at least consider the possibility (which history indicates is likely) that compliance with leash requirements will not be achieved. Moreover, given that under the Preferred Alternative the WPA would be closed to dogs, the Park Service has no method for further protecting the site if dog owners refuse to comply with the regulations there. It is impractical to assume that park rangers will be able to patrol the WPA adequately to ensure full compliance with the new rules.

The Preferred Alternative would permit at least 25% of dog owners to

continue to fail to comply with the new regulations. The DEIS does not discuss whether this potentially large number of non-compliant dog owners and dogs will have significant negative impacts on the wildlife, habitat, and other visitors in the area.

2. The Crissy Field Wildlife Protection Area should be off-limits to dogs.

GGAS endorses the Preferred Alternative to the extent that it would disallow dogs in the WPA at all times. We do, however, have concerns about the placement of the east boundary fence. The DEIS states that the east boundary fence will be relocated 200 feet eastward at a position 900 feet from the NOAA pier. (DEIS at 60) We believe that the determination of fence placement should have more flexible parameters and that careful consideration should be given to the visual penetration effect and to the geographical conditions of the immediate area. Under the preferred alternative, off-leash dog activity directly adjacent to the east boundary fence will pose a visual threat that will penetrate into the WPA, effectively rendering a portion of the eastern WPA as non-viable habitat during daytime use hours. Given this concern, the fence should be placed a reasonable distance eastward, beyond the actual 900 foot border line, to allow for an adequate buffer zone. Additionally, the geography of the area of fence placement is somewhat complicated by non-uniform conditions which include a variety of substrates.-varying elevations, several lobes of fenced dune habitat areas. and a variety of pedestrian pathways. Consideration should be given to all of these conditions and fence placement should be such that it will accommodate ease of pedestrian traffic flow while maintaining adequate protection of the WPA.

3. GGAS endorses the Preferred Alternative for the Promenade (East Beach to the Warming Hut) The paved trail along the promenade is an appropriate place for on-leash dog activities at Crissy Field. GGAS remains concerned about undesired human-dog, interactions. especially for joggers and disabled visitors and those with small children, but believes that with proper education and enforcement of leash requirements, the area can successfully accommodate leashed dogs.

4. Any ROLA on the Airfield must be fully enclosed. The Crissy Airfield, a mix of native and non native plant species, is the largest expanse of grassland on GGNRA lands in San Francisco. The airfield is an important area for birds and other wildlife and is used by park visitors for its wildlife viewing opportunities. In recent years, observers have recorded more than forty species of birds using the field, including rare, vagrant species such as Cattle Egret. Red-throated Pipit and Lapland Longspur. The continued use of the Airfield as an off-leash area constitutes an impairment to the natural resources in the area.

However GGAS understands that the Draft Plan and DEIS represents an attempt to balance the competing interests of many groups. Therefore, Golden Gate Audubon does not oppose the creation of a ROLA in the Airfield, but only if the ROLA is full enclosed. Moreover, any enclosure must allow for other park visitors to cross the Airfield without being forced to interact with dogs. We believe it is possible to design the ROLA to be enclosed with post-and-cable (or a similar apparatus to distinctively mark the area) that will not impair the biological or aesthetic value of the Airfield and be removable for special events.

5. GGAS opposes off-leash dog activities on the Central Beach and supports Alternative D to prohibit dogs. GGAS opposes the Preferred Alternative, which could create a ROLA on Central Beach. All of the shoreline beaches at Crissy Field are suitable foraging and roosting habitat for Snowy Plovers and other shorebirds. The US Fish & Wildlife Service, in its Snowy Plover Recovery Plan (pp. 43/44), has identified Crissy Field as a potential expansion site for Snowy Plovers. (USFWS, Recovery Plan for the Western Snowy Plover, at 43-44). Given this anticipated increase in snowy plover population, using the Central Beach as a ROLA will create a high probability of future conflicting beach uses. There is no question that off-leash dogs have a substantial impact on the habitat and wildlife that use the beach.

Moreover, historical use at Central Beach has demonstrated that off-leash activities on Central Beach inevitably lead to off-leash dog disturbances within the WPA. Given that even within the WPA, dog owners have failed to comply with leash requirements almost 66% of the time, despite years of publicity, education, signage and a fence asking dog walkers to put their dogs on leash in the WPA. The DEIS does not contain any evidence- that dog owners will start complying with the new regulations and respect the WPA.

Finally, to the extent that NPS ultimately elects to allow off-leash activities at Central Beach, Golden Gate Audubon recommends (1) that the off-leash area be enclosed by fencing to clearly demarcate the boundaries of the ROLA. (2) that the ROLA be decreased in size to provide adequate buffer zones in relation to the WPA to the west and to the lagoon inlet to the east, and (3) that the Park Service invest in significant education efforts, followed by rigorous enforcement to undo the culture of noncompliance that exists at Crissy Field. 6. GGAS endorses the Preferred Alternative for the trails and grassy areas near East Beach. GGAS endorses the Preferred Alternative to allow on-leash dog activity in these areas as indicated by Map 10P in the DEIS with one caveat: the fresh water swale just east of the lagoon should be identified on the map and marked as a "no dog" area.

C. Fort Point Promenade/Fort Point NHS Trails GGAS endorses the

Preferred Alternative as identified by Map 11P of the DEIS. We note some concern for permitting large number of dogs (more than 3) on the relatively narrow paths in this area and reiterate our position that dog walkers should be limited to a maximum of three dogs per person within the GGNRA.

D. Baker Beach and Bluffs to Golden Gate Bridge Golden Gate Audubon believes that the Preferred Alternative for Baker Beach is not a workable plan. While we support the upland elements of the Preferred Alternative, we have two concerns regarding the beach element of the plan. Firstly, as an area of freshwater flow into the ocean, the mouth of Lobos Creek is a sensitive wildlife area and is the most attractive area of use for birds along this beach. As such, it should be off-limits to dogs and buffered from off-leash dog activity. Secondly, we believe that designating an imaginary line in the sand to distinguish a no-dog area from a leash-only area is not an adequate means of communicating the rule to park users and compliance will be problematic. We believe that the most effective and enforceable choice would be to designate Baker Beach as a no-dog area.

However, should NPS proceed with implementing the Preferred Alternative; Golden Gate Audubon strongly recommends that NPS alter the configuration of the planned leash-only area to adequately protect the Lobos Creek zone. The leash-only area to be shifted to the North Beach as identified on Map 12.

E. Fort Miley Golden Gate Audubon endorses the Preferred Alternative.

F. Lands End Golden Gate Audubon endorses the Preferred Alternative for Lands End.

G. Sutro Heights Park Golden Gate Audubon endorses the Preferred Alternative for Sutro Heights Park as illustrated by Map 14-P. H. Ocean Beach 1. Dogs should be excluded from the Ocean Beach Snowy Plover Protection Area. Golden Gate Audubon endorses the Preferred Alternative to exclude dogs from the Snowy Plover Protection Area (SPPA) and to allow dogs only on-leash on the promenade. We recommend that the designation of Snowy Plover Protection Area be changed to Shorebird (or Wildlife) Protection Area, a term which will more aptly describe the need for year-round protection.

2. GGAS does not endorse the creation of a ROLA north of Stairwell 21. Golden Gate Audubon does not endorse the Preferred Alternative and instead recommends that the GGNRA not allow dogs on Ocean Beach at all. Given historic noncompliance with leash and off-leash regulations and the continuing impact to birds and other natural resources on the beach, dog-related recreation is not an appropriate activity on any beach within the

GGNRA.

GGAS acknowledges that given the extreme political pressures put on the Park Service, it is likely that it will elect to create the ROLA on Ocean Beach. Given that, GGAS strongly urges the Park Service to erect post and cable symbolic fencing with adequate signage along the south boundary of the ROLA from the seawall westward as far as is practical to ensure that dog owners and other visitors know they are entering a ROLA. GGAS also strongly encourages that the area be monitored by rangers given the high likelihood of continuing non-compliance with regulations in the area.

3. GGAS strongly supports the closure of Ocean Beach South of Sloat to dogs. Golden Gate Audubon strongly supports the Preferred Alternative to exclude dogs along Ocean Beach south of Sloat Avenue.

I. The Preferred Alternative Would Fail to Protect the Natural and Aesthetic Resources at Ft. Funston. 1. GGAS opposes the Preferred Alternative to establish a ROLA south of the beach access at Ft. Funston. Golden Gate Audubon strongly opposes the Preferred Alternative, which creates a ROLA south of the beach access. Given the historic noncompliance by dog owners at Ft. Funston and the sensitivity of the habitat, Golden Gate Audubon has concluded that dog related recreation on the Ft. Funston beach is not an appropriate use of the park land. Because dogs should not be accessing the beach at Ft. Funston, Golden Gate Audubon further recommends that NPS not allow dogs on the beach access trails. The presence of dogs on the beach at Ft. Funston will adversely impact shorebirds. Additionally, the presence of dogs on the beach at Ft. Funston will adversely impact park visitors, including equestrians, some of whom have suffered attacks from dogs when riding at or near Ft. Funston.

To the extent that NPS proceeds in allowing a ROLA at Ft. Funston, it must be fenced and fully marked to provide adequate notice to dog owners and other park users about where on- and off-leash dog activities are appropriate.

2. GGAS opposes permitting dog recreation south of the main parking lot. Dog-related recreation on the Ft. Funston beach is not an appropriate use of that park land. There is no need for dogs to be on the beach access trails, especially Sand Ladder Trail. GGAS recommends that this area be designated as a "no-dog" area.

3. GGAS does not oppose the creation of a ROLA north of the main parking lot provided it is fully enclosed. Golden Gate Audubon will not oppose the establishment of a ROLA north of the main lot at Ft. Funston provided (1) that the ROLA is not established on sensitive habitat, (2) that the ROLA is fully enclosed by fencing, and (3) that the ROLA and surrounding areas are

adequately patrolled and leash requirements are enforced.

V. CONCLUSION Thank you for your consideration of our comments. It is our hope that the FEIS will reflect a comprehensive analysis of the impacts that will occur under the selected alternatives and that active education and enforcement is part of ongoing management in the GGNRA for dogs. With a reasonable regulation and adequate enforcement, we believe the GGNRA can continue to accommodate dogs while protection the valuable natural and cultural resources that make the GGNRA an urban national treasure.

If you would like to discuss these issues further, please do not hesitate to contact me at mlynes@goldengateaudubon.org or at (510) 843-6551.

Thank you, Michael Lynes, Conservation Director

Correspondence Type: Letter
Correspondence: Dear Superintendent Dean,

My name is Margaret Bradley, I am a married mother of two young children. We are an outdoors family. We love to hike, bike ,camp, surf and travel. We are active members of the Sierra Club and the Surfrider foundation. We have traveled to more than 50 countries. San Francisco is the best place in the world. One member of our family is our dog Maya. We enjoy bringing her along on as many adventures as we can. We are very fortunate to call San Francisco home. I have always boasted about what an open and tolerant place San Francisco is. People are open and accepting of all types of people and life styles and there is little restriction towards others.

The human animal bond is very important to me. As a responsible dog guardian, I keep Maya under voice and sight control, clean up after her and keep her out of the fenced dunes and vegetative areas. It is important for my dog walking friends and me that areas like Fort Funston remain open for off leash dog walking access.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site specific conditions.

As presented in the DEIS, the proposed dog management plan eliminates

dog-walking (on and off leash) access for all new lands (additions to the GGNRA sometime in the future) within San Mateo county lands. The GGNRA's mission applies equally to new lands as existing lands and it is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands.

I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, but other options (besides restricting dogwalking access) should be considered first. For example, it is not clear where dogs are allowed. I think the GGNRA should provide better signage and create environmental barriers, such as the vegetative barriers surrounding the tidal marsh at Crissy Field or the restored dunes at Fort Funston. As a responsible dog guardian and advocate for animals, I know it is crucial that our dogs are well behaved and trained in order to peacefully co-exist in an urban environment and adequate exercise and socialization is essential for a well-behaved dog. Having places where I can take long walks with Maya which allows me to get the exercise I need while also meeting Maya's needs. Without access to the small amount of land in the GGNRA we currently have, I am very concerned that many dog and dog guardians will not have sufficient opportunity to exercise and recreate. I live in the Sunset and take Maya to Fort Funston daily. I refer to it as our "happy place". I can enjoy the beauty and she can exercise and play with other dogs.

Some areas within the GGNRA also serve as a place of solitude for me and provide me with a very important peace and safe outdoor space and experience within the San Francisco Bay Area, a large metropolitan area.

Some specific problems with the DEIS include the following points. Please revise the DEIS to correct these errors.

This DEIS and Plan doesn't recognize that environmental values include both recreation and nature. In many places, the LEIS treats the environment and recreation as opposing values, i.e., that recreation only harms natural resources. The document doesn't acknowledge that people care about both and that people with dogs are often also good stewards of our environment.

The draft plan has the effect of punishing many people because a very small number are uneducated, insensitive, or irresponsible and because the current signage of off leash areas is unclear. The reasonable response to this problem is to educate visitors, improve signage and help park visitors follow the rules and learn how to respect the environment, not to ban the rest of us with dogs from the GGNRA. I wish that the DEIS would include an alternative along these lines.

The proposed "compliance-based" approach should be modified to create a

baseline of current conditions, then measure impacts rather than compliance. It should include a robust public educational component and an objective, long-term monitoring program designed and carried out with the community. The GGNRA should develop partnerships with community, animal welfare, and conservation organizations to make this work. These partner groups could bring additional resources to limited federal resources. GGNRA should be a partner with the City of San Francisco and other communities, not an adversary.

The DEIS doesn't recognize that many areas of the GGNRA are located in or next to urban neighborhoods. The DEIS excludes the quality of the urban environment from its scope, saying it's not significant. The reality is that the GGNRA provides much needed open space in a major urban area. This omission is disconcerting because the fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) to serve the metropolitan Bay Area. The dynamic interrelationship between GGNRA and our neighborhoods is exactly the human environment that the EIS is required to study, but failed to do so.

The DEIS notes some studies and general tendencies of dogs to harm natural resources, but with few exceptions, there is little documented site-specific impacts to support the restrictions of the preferred alternatives. Further, there is insufficient documentation that considers other impacts - other park visitors that disturb and impair the natural resources, other wildlife, Mother Nature, boot camps, bicyclists, huge crowd attracting events such as Fleet Week, festivals and Walk-a-thons. The proposed broad limitations in the DEIS are without site-specific science that demonstrates that problems with the quality of GGNRA's natural resources are actually attributable to dogs and not to other factors.

The DEIS needs to provide full disclosure to the public and decision makers. If dog-related disturbances are having a significant negative effect on wildlife, for example, the DEIS needs to provide site-specific scientific evidence as documentation and undertake a scientific evaluation as to whether people or other factors are also causing or contributing to the problem. If they are, GGNRA needs to provide an analysis that considers whether people should also be restricted from these areas. We need this documentation in order to comment meaningfully on the draft plan and DEIS. The science needs to be sound and the consequences need to be fully and fairly disclosed for everyone - so that an informed decision can be made.

And lastly, after much consideration, I support Alternative A, the No Action alternative and would also include the "New Lands" areas (such as Cattle Hill, Sweeny Ridge, Mori Point, Pedro Point and Milagra Ridge and Rancho

Corral de Tierra) in Sari Mateo county.

The DEIS is biased against and does not take a hard look at the No Action alternative or variations on that alternative. There are many areas in the GGNRA where the existing 1979 Pet Policy has been working, and where sensitive species are not present and visitor conflicts do not occur or are very infrequent. In addition, the DEIS does not provide site specific information that these areas are inappropriate for continued dog walking.

Respectfully, Margaret Bradley

Re: Golden Gate National Recreation Area Pet Management DEIS Public Comment

Dear Superintendent Dean:

I am submitting documents for inclusion in the DEIS public comment review, as set forth in the table below. The documents and comment overwhelming establish the following central factors for DEIS consideration: ? Any further restriction of off leash recreational access will create significant adverse and highly controversial impact on recreational access and is inconsistent with fulfillment of the GGNRA urban recreation area mandate; ? The preferred alternative simply will not work in that concentrating the off leash use in a smaller area will create conflict problems, is unenforceable and is far too expensive; ? The DEIS fails to adequately consider the full impact of the preferred alternative on park users, on GGNRA park quality and management factors and on San Francisco municipal parks ' the DEIS fails to adequately consider where the current park users will end up after they are displaced, and where to find the best locations for the use or if the migration of the park users will cause environmental impact at areas to which the users are displaced; ? The compliance based management aspect improperly subverts the future rights of the people to public comment rulemaking prior to such changes; and ? The better solution by far is to take no action other than to confirm

continued management consistent with the long standing off leash policy.
Document Submission:

Each of the documents is appropriate for consideration in the context of the specific questions presented by the DEIS. Tabs 1-12 consist of excerpts from transcripts of prior public testimony before the Advisory Commission concerning the wisdom of potential modification of the Pet Policy. This testimony generally concerns the views of members of the public seeking to provide official comment to the NPS on the overall issue addressed in the DEIS concerning pet management in the GGNRA, the historical pattern of successful pet management under the GGNRA's long standing Pet Policy, the context of the new change to that pet management practice, the central issue of the baseline status on which the DEIS and potential rulemaking should be considered, and the unique aspects of Fort Funston and other particular areas warranting continuation as off-leash areas. The testimony was prior official public comment on the issue that has largely been ignored and sidestepped, requiring consideration at this point to avoid impropriety in the DEIS and potential rulemaking process.

Tab 13 contains copies of some of my prior correspondence to the Park Service concerning the pet management policy and rulemaking process, and the question of the appropriate baseline status from which the rulemaking and environmental analysis should proceed. These documents are appropriate for consideration in the DEIS process because they go both to the general issues of pet management in the GGNRA and the specific management of off leash access areas at Fort Funston. The documents also provide analysis of the historical treatment of recreational access, the enabling statute mandate, the pattern of prior off leash access, the promises made that off leash access would continue and specific analysis of the presumptions on which the closures and access changes are proposed. The correspondence in part addresses the prior failure to fully consider the points raised in the rulemaking submissions and the need for such analysis in a fair and unbiased way in making a determination of appropriate scope of recreational access consistent with the enabling statute.

13. Prior Public Comment Submissions:

* 1/23/01 correspondence of John Keating to Superintendent O'Neill seeking reconsideration of the Fort Funston closure decision.

* 2/15/01 correspondence of John Keating to Secretary Norton * 4/6/01 correspondence of John Keating to Secretary Norton

- * 5/10/01 correspondence of John Keating to Secretary Norton
- * 7/3/01 correspondence of John Keating to Superintendent O'Neill
- * 11/9/01 correspondence of John Keating to OMB Administrator John J. Graham regarding changes in pet management and the ANPR., including attached Exhibits A,K
- * 4/12/02 John Keating ANPR public comment

I also seek to incorporate by reference and request consideration of Volume II through Volume VII of the public comment correspondence documents appended to my April 12, 2002 comment on the proposed ANPR process which laid the ground for the current DEIS consideration. Such public comment letters and petitions are appropriate for consideration in that they concern the same issue and were submitted in response to Park Service solicitation for comment in an earlier stage of this process. It is improper to solicit such comment, then largely ignore the specific comments. At the minimum, to avoid divesting the people of the public comment right, it is proper to consider the comments at this stage.

Volume II Tab 12 of the prior submission contained originals of hundreds of detailed and specific comments made by the public regarding pet management and the scope of recreational access at Fort Funston. Particularly, these comments go to the unique high quality social community atmosphere provided by this park area by virtue of the practice of allowing off leash dog walking. A number of these comments evidence the important issue of the unusual degree to which this distinct park area provides an unsurpassed opportunity and attraction to participation by senior, disabled, minority and urban user communities otherwise generally under served by the National Park Service.

Volume II Tabs 13-16 evidenced petitions to the NPS signed by many thousands regarding the issues to be considered by the DEIS when similarly presented by the ANPR.

Volumes III through V (Tabs 17 through 22) contained copies of additional letters regarding the ANPR pet management issues. The originals of these letters were previously sent directly to the National Park Service and/or Department of Interior in response to the initial announcements that an ANPR would be pursued and addressed the current pet management practices issues.

Please also consider Volume VI through VII (Tabs 23 and 24) of the prior submission which contained copies of written ANPR letters and e-mails collected for submission together in bulk and number stamped for ease of

reference by the Park Service during review, and which present public comment on the same issues as are presented by the DEIS. The additional relevant documents assembled in my prior April 12, 2002 submission and incorporated as part of my current comment on the DEIS are described in greater detail as follows:

12 Originals of comment statements by users of Fort Funston regarding views and desires concerning pet management and recreational access closures (March 2000)

13 January 2001 internet petition responding to GGNRA proposal to rescind the Pet Policy, asking for exemption and reconsideration of potential application of general regulation and based on prior assurances from the Park Service that off lead dog walking would not be curtailed supports continuing off lead recreation and lists specific areas currently enjoyed by the signers as off lead areas. (This tab contains a print out from the web site of electronic signatures 01-695 and 4609-5308.)

14. January 2001 internet petition full data print out of the first 5967 signatures and comments

15. Pages from Fort Funston Fall 2000 petition signed by thousands objecting to Fort Funston closure as unnecessary and unreasonably curtailing off lead recreation. The full record of petition signatures was previously submitted to the Park Service and is incorporated by reference for submission as comment in this ANPR consideration.

16. Spring 2002 off lead petition ' print out from petition web site of first and last 225 of 4125 signers on internet petition ' submitted for purposes of allowing Park Service verification of authenticity of full data and excerpted comments being concurrently submitted by the Fort Funston Dog Walkers group.

17. Copies of August 3, 2001 letters previously forwarded to Secretary Norton and Director Mainella and bearing individual comments concerning the changes in pet management in the GGNRA.

18. Copies of additional second set of August 3, 2001 letters previously forwarded to Secretary Norton and Director Mainella asserting that the changes restricting pet recreation in the GGNRA are important to the sender and should not be made without full and fair public hearing.

19. Copies of additional third set of August 3, 2001 letters previously forwarded to Secretary Norton and Director Mainella decrying the deviation from the congressional intent in creating a recreation area by overly emphasizing wildlife enhancement at the expense of recreation, decrying the

process by which the Park Service manipulated the circumstances to deprive the public of a fair hearing and decrying the circumstances of bias of the Park Service employees who continue to be involved in railroading through anti recreation restrictions. 20. Copies of an additional fourth set of August 3, 2001 letters previously forwarded to Secretary Norton calling for compliance with promises made to local governments, calling for compliance with the enabling statute mandate and complaining about the lack of fair process before making dramatic changes restricting pet recreation in the GGNRA.

21. Copies of September 9, 2001 letters previously forwarded to Secretary Norton and Director Mainella and bearing individual comments concerning the changes in pet management in the GGNRA.

22. Copies of September 16, 2001 letters previously forwarded to Secretary Norton and Director Mainella and bearing individual comments concerning the changes in pet management in the GGNRA.

23. Copies of letters, faxes and e-mails received by FFDW and SFDOG for inclusion for consideration in the ANPR, some of which were separately received by the GGNRA and some of which have been forwarded to the user groups to be submitted in mass. Number stamped submissions 10001-10368 and 4/11/02 letter of Christy A. Cameron are included in this tab.

24. Copies of additional letters, faxes and e-mails received by FFDW and SFDOG for inclusion for consideration in the ANPR, some of which were separately received by the GGNRA and some of which have been forwarded to the user groups to be submitted in mass. Number stamped submissions 10401-10821 and 4/12/02 letter of Mildred M. Bolin are included in this tab.

These public comment petitions and letters reflect the broad importance the public gives to the need to form some mechanism to continue allowing off leash dog walking and to insure that the analysis be performed from a fair perspective and in an unbiased manner. If the GGNRA is unable to retrieve the prior comments as appended to my April 12, 2002 submission, kindly advise me as I am willing to scan in and provide either hard copies or a digital copy of the public comment letters.

The Improper Process:

I continue to object to the DEIS process (1) to the extent it is being substituted for the public input comment opportunity required pursuant to 36 CFR 1.5 prior to changing the longstanding GGNRA Pet Policy allowing off leash recreational access, (2) to the extent that it presents a question for comment based on an analysis platform that is inconsistent with the enabling statute recreation mandate and fair evaluation of the proposed

change to the status quo, (3) to the extent that the DEIS document is so incomplete, biased, factually inaccurate, based on ill founded presumptions and limited in scope of areas considered as to unfairly prejudice and limit rather than facilitate full analysis of the pet management question, and (4) to the extent the compliance based management aspect of the plan has the effect of defeating the future right to public comment opportunity pursuant to 36 CFR 1.5.

The public comment on any proposed rule must include a public hearing where oral comments may be presented. Seeing people's faces and hearing the emotion in their voices as they speak on a subject that will have a tremendous impact on an important part of their lives is an important part of democracy. Resolution of this issue is necessary for meaningful public comment at the scoping stage in order to allow informed comment. The process violates 36 CFR 1.5 if there is not public comment on a proposed rule and the current scoping stage process is not procedurally sufficient to satisfy 36 CFR 1.5 requirements.

As part of the current scoping process the GGNRA needs to review and consider all the prior public comment solicited regarding the potential of change to the existing pet management policy, including during the Advanced Notice of Proposed Rulemaking process and the Advisory Committee public hearing on the issue in January 2001.

The GGNRA should consider the massive public comment in response to its prior solicitation for comment on the issue. Fair evaluation of the comment of the will of the people would compel provision of some off-leash areas. Yet, there is a risk that the GGNRA will use the DEIS process to ignore the comment. It would be improper sidestepping of the rulemaking requirements if despite the overwhelming public input, a new decision is made not based on the public input but instead based on back room analysis based on subjective presumption of environmental impact. The GGNRA previously held a public hearing on the issue and after starting to receive the testimony postponed receipt of the remainder of the oral public comment. The GGNRA should entertain all of the postponed public oral comment.

The GGNRA should take wide open public comment when the proposed rule is finally issued after considering the public input as to the DEIS. And, this public comment should be not just whether the public likes the preferred alternative, but rather whether to change from the 1979 Pet Policy to the new proposed rule.

The process is arbitrary and capricious to the extent not allowing consideration of whether off leash recreation can be accommodated in other areas of the GGNRA. Historically, the GGNRA dog management policy analysis has been a comparative analysis of impact of the use in one area as

opposed to potential impact of the same use in alternate areas. It is arbitrary and capricious to shift from a comparative analysis to an analysis of impact of specific areas in the abstract.

In creating the 1979 pet policy, the NPS carefully considered where off leash recreational use could best be accommodated within the GGNRA with the least adverse environmental impact and the least adverse impact on other recreational uses. Any proper analysis 32 years later of the impact of proposed deviation from the prior 1979 analysis conclusions must consider whether the environmental and social circumstances are unchanged such that the designated areas still have the least potential impact of all areas in the GGNRA or whether the recreational use might be relocated to other areas.

Negotiated rulemaking protocols generally call for considering all potential solutions and allowing the public process to paint on a fresh canvas. Although the NPS received objections to the negotiated rulemaking process proceeding based on constrained options, the NPS went forward with the drastically curtailed approach precluding full consideration of the relevant factors. Reliance of such an approach in the face of notice of the clear insufficiency of the approach is arbitrary and capricious and does not satisfy the 36 CFR 1.5 rulemaking requirements. The same procedural impropriety is employed in the current management plan alternatives in the DEIS.

The DEIS process is arbitrary and capricious in deviating from prior analysis and process, requiring clarification before scoping is completed.

(A) The Crissy Field development plan was based on a finding of no significant impact based on an assumption that the additional off leash areas then existing in the dog management plan were to be continued. If the assumption on which the Crissy Field development FONSI relied is arbitrarily removed, or retroactively determined to be false as implied by the DEIS, it is arbitrary and capricious to proceed inconsistently overruling the prior finding without analysis.

(B) After the issuance of the rulemaking on the Fort Funston closure, recreational users requested reconsideration of the ruling. Some of the requests for reconsideration received no response, and therefore are still pending. Director Mainella's eventual response to one of the requests for reconsideration included a promise that the scope of the dog walking at the closed areas would be part of the subject matter considered in the later planned consideration of overall dog walking management in the GGNRA. Director Mainella was correct in concluding that the traditional dog walking use of those areas is indeed a proper subject of consideration concerning the overall dog walking management plan. Recreational users had a right to rely on the representations of the Director. It is arbitrary and capricious to

preclude consideration of those areas in the current DEIS.

(C) It is arbitrary and capricious to fail to consider the social and environmental impact of the creeping closures of dog walking areas initially allowed in the 1979 Pet Policy. Closures of those areas have significant impact on the important impact factor of the concentration of the recreational use in limited areas. Offsetting mitigation replacement areas should be considered as part of any impact analysis, as should the impact of the closures.

The preferred alternative plan adopts an improper hostile compliance based management scheme calling for further limitation if there is not 75% compliance with the change. In essence, the plan replaces the requirement of future rulemaking over any significant change with a plan allowing the GGNRA to make future changes administratively. That switched procedure violates the rulemaking requirement.

Moreover, the plan provides only for adjustment downward, rather than reevaluation as to what best remedies the problem. Hence, the GGNRA is restricting park access to such an extent that the plan is unlikely to work, but if the current plan does not work then will restrict more rather than reevaluate to come up with a new plan. True reevaluation could result in a conclusion that the restrictions don't work and should be loosened rather than tightened. This is sort of like drastically reducing school class size together with a plan that if that doesn't work the class size will be reduced even further, without any consideration of whether a better change might be to increase class size. The DEIS statement is materially false and misleading in mischaracterizing the status of the existing dog management plan. The 1979 Pet Policy was officially ratified and adopted by the GGNRA. Although the DEIS reports that it was later determined that the 1979 Pet Policy was illegal, that is incorrect. That was simply an interpretation posture taken by the solicitor in the course of litigation. That interpretation was rejected by the Court at least twice and held not to be a basis for not continuing to apply the 1979 Pet Policy.

The NPS has received objection and comment repeatedly that it is arbitrary and capricious to move forward with the rulemaking process based on promoting a self serving legal analysis that has previously been ruled against by the Court. Such conduct is misleading to the public. The DEIS is also false and potentially deliberately misleading in suggesting that the Citizen Advisory Commission acknowledged that the policy was illegal and unenforceable. The transcript shows that to be a position taken by one commissioner based on the incorrect legal analysis provided by the NPS. The opposite approach was taken in the motion passed by the Commission ' to take no action on the earlier proposal to rescind the policy as illegal and

invalid.

The DEIS stands the traditional impact analysis requirement on its head in that the DEIS improperly uses impact analysis as a sword to promote deviation from the status quo rather than its traditional function of evaluating the risk of negative impact of a change from the status quo.. It is improper to undermine the court's ruling by requiring environmental analysis even if the GGNRA simply keeps the existing off leash policy. Environmental analysis is only required to the extent some new rule deviates from the current pet policy, and is not required if there is no change.

Similarly, it is improper if the GGNRA reverses the intent of the rulemaking process. There currently is a valid pet management policy allowing off leash dog walking. It would be an improper attempt to sidestep the court's decision if the GGNRA is attempting to say that off leash can remain only if a special regulation is adopted. Rulemaking and environmental analysis is improper and deviates from the controlling law to the extent it is set up to create a new policy from scratch in place of the conducting the required public input rulemaking process on whether to alter the 1979 Pet Policy.

The DEIS scope of discussion should include all areas of the GGNRA. Artificial constraints on the scope of discussion of alternatives are against the public policy of allowing the full consideration of all possibilities in order to balance factors and give the best recommendation.

The scope of the discussion must include all areas designated as off leash under the 1979 Pet Policy. That policy was created after public input hearings and considerations and ultimately designated certain areas for off leash recreation where it was determined that there would be no adverse impact on the environment or other access interests. The Federal Court decision held that the 1979 Pet Policy determination can not be changed without compliance with the public comment rulemaking procedure requirement of 36 CFR 1.5. Any restriction of the scope of discussion such as to preclude consideration of off leash in areas allowed pursuant to the 1979 Pet Policy would lack compliance with the court decision and any resulting proposed rulemaking change would be in contempt of the court. The reality is that for decades pet management in the GGNRA was conducted pursuant to an official Pet Policy that was adopted and implemented by the agency after public input and hearings. The approved policy interpreted and applied the general Park Service wide regulations in the context of the unique circumstances of the recreation area -- an enabling statute mandate to facilitate traditional urban open space recreational access, promises made to the people of the City of San Francisco that the traditional recreational activities would be allowed to continue, a dense urban area and

long preexisting recreational use.

Fair consideration of the off leash issue needs to take into account the reality that the Park Service is seeking to make a significant change to eliminate a current use that is extremely popular. A public input process is required prior to any such highly controversial and significant alteration in the public use pattern of the park areas (36 CFR 1.5). It is unfair for the Park Service to manipulate the presentation so as to evaluate the question as if it were to create an entirely new use.

Additionally, the DEIS document contains posturing, one sided presentation and factual inaccuracies that make the document skewed against resolution in favor of allowing off leash dog walking. Previously, the federal court found that the local park service employees had attempted to railroad through a closure while soliciting one-sided input against off leash recreation and sidetracking consideration of input from dog walkers. In my view, the biased DEIS presentation and the history of action against off leash recreation warrants careful attention to ensuring that the analysis of the options is fairly considered. Those shown to be biased before should not be involved currently.

The general Park Service leash law regulation is not controlling. The pet activity guidelines of 36 CFR 2.15(a)(2) should not be construed as a universal leash law within the confines of the GGNRA. The 1979 Pet Policy as amended and tinkered with and applied up through at least 1999 is a more appropriate application of 36 CFR 2.15(a)(2) together with the enabling statute mandate and management discretion. The Dog Policy brochure previously circulated by the GGNRA is the policy that should be operative. As I do not believe that the long-standing GGNRA Pet Policy has been legally abrogated, I do not believe it is appropriate to assume that a "leash law" is currently in effect. To the extent the DRO-55 and 2001 Management Policies guidelines are construed to interpret the general regulations to strictly apply universally despite a contrary recreation area enabling statute unless a particular recreation activity is specified the new interpretation runs counter to the congressional intent in creating this specific GGNRA recreation area. By improperly construing a general regulation in such a manner as to negate the language of a specific statute the new interpretation of the regulation is illegal as applied to the GGNRA. The Park Service should not continue to go down the path of interpreting its regulations in such an extreme fashion as to render it incompetent to manage a recreation area.

The GGNRA emphasizes "management options . . . consistent with protecting national park resources and assuring visitor safety." That articulation is improper and skews the question in that it ignores the second half of the enabling statute mandate -- maintaining open space recreation

opportunities. The DEIS should properly also highlight the additional language "in a manner which will provide for recreation and educational opportunities" or the language "in order to provide for the maintenance of needed recreational open space," as the park purpose is specified in the enabling statute. (16 U.S.C. 460bb) Comments Concerning Specific Areas:

The general regulation should be adjusted to designate former "voice control" areas for off leash dog walking. At the minimum, the general regulation interpretation should be altered to allow such discretion to superintendents at least in circumstances of recreation areas where off leash recreation has been traditionally allowed. Limitation of the discretion to recreation areas where the discretion is warranted under an equitable grand fathering concept would ease the concern of potential system wide precedent.

All areas identified in the GGNRA Pet Policy brochure as existing in early 2000 as off leash areas should remain off leash. To the extent any of those areas are deemed currently closed to dogs, they should be opened. The Crissy Field beach area between the Coast Guard pier and the rock area that is the current boundary for dog use should be reopened to dogs consistent with the Mitigation Matrix of the Crissy Field NSI finding.

The closure areas at Fort Funston should be reopened for user access including dog walking access absent a well founded showing of significant adverse environmental impact. The traditional off leash area on the Lands End road and path leading along the coastal cliffs should be reopened, subject to closure of certain areas away from the roadway in the event of a well founded showing of adverse environmental impact. The Ocean Beach off leash restrictions from Stairwell 21 to Sloat should be reexamined and remain restricted only if there is analysis showing a substantial basis to believe that the restriction will aid the Snowy Plover population. Any such restriction should be limited to the seasons when and areas where the Snowy Plovers are ordinarily present.

General Comments Concerning Management Changes:

The Park Service ought to decline to engage in further formal rulemaking and continue the status quo of the prior longstanding policy allowing off leash dog walking in certain areas previously determined to have the least potential resource impact.

As summarized below this option is the only reasonably economic and practical alternative, and clearly is the most consistent with the expression of public will. Pursuing a change of the current pet management practices would present uncertainty, create unnecessary expense and management difficulty, foment disharmony between park users and staff, and lead to

great enforcement problems and potential legal complications.

The prior longstanding GGNRA Pet Policy had been adopted after a series of public hearings in the late 1970's. It was a product of careful analysis and reasonable compromise balancing the various recreational and resource protection factors. With occasional adjustments the Pet Policy endured and worked well for decades. It was popular and appropriate in accommodating the preexisting recreational activities and unique circumstances of the park. And, there have been surprisingly few problems. People generally seem to learn how to coexist and work out their competing desires for recreational access. I observed an example of how giving a little freedom goes a long way in helping people to get along. It was a hot and crowded summer week day at Crissy Field ' East Beach. The place was already packed, adults, kids and dogs of all variety romping in the low waves, when four or five vans from a summer camp arrived. The director of the camp and I talked as he was standing at the top of the beach carefully watching his thirty or so children and numerous teenage staff. I asked why he chose this particular area that was so crowded and had so many off leash dogs. The adjoining beach area where dogs are completely banned was much less crowded. Wasn't he worried about conflict between the dogs and his kids? To my surprise he said that actually the presence of so many dogs was one of the main factors that attracted him to that particular beach. It turned out that many of his kids are inner city children without much opportunity for safe and friendly interaction in public areas. This camp director said one of his chief goals is to try to teach the kids how to meet, get along with and play freely with others. He said that the presence of the off leash dogs helps him by providing an opportunity not only to teach the kids how to interact with dogs but also how to quickly make friends and play freely.

On the other hand, the notion that the Park Service could attempt to completely eliminate off leash dog walking on the former San Francisco city beaches is a fantasy. The GGNRA simply does not have the personnel necessary to achieve such a wholesale change in the manner of usage of these popular beach areas. Previously when the GGNRA stated it was changing its policy to end dog walking, the new policy had been enforced only sporadically. On occasions when the Park Service has attempted to enforce the policy doing so has led to difficulties and poor public relations. Moreover, even were the Park Service able to repress the local popular desires to continue dog walking on the San Francisco city beaches, attempting to force the people away from that traditional source of recreational open space access would likely result in migration of dog walking park users from those areas of minimal impact into areas of more natural resource degradation risk.

As a frequent beach walker I have observed examples of such unexpected adverse impact following a unilateral change to longstanding practice.

Certain areas of Ocean Beach had been designated as off leash areas, and other portions designated as on leash where the Park Service had identified a need to avoid the possibility of interaction with Snowy Plovers. There were clear signs at the beach with maps showing exactly where the off leash and on leash areas began and ended. By and large the public obeyed the restrictions. One could watch beach walkers routinely running and playing freely with their dogs off leash while carrying leashes and then stopping to clip on the leashes when getting into the restricted Snowy Plover area.

However, that cooperative compliance ended when the Park Service tore out those clear signs with the maps and replaced them with signs that instructed that dogs must be on leash at all times. As a result we had a situation where the public distrusted and ignored the signs completely and there is no information regarding the special area. I saw off leash dogs in the area where previously they would be leashed due to the identified special protection need. Hence, by adopting a nominal universal policy that is unenforceable and unpopular the Park Service actually had the opposite effect ' increasing the likelihood of off leash dogs in the identified natural resource risk area. If the Park Service cannot possibly achieve enforcement of an overall ban, it should not attempt a partial enforcement that will merely cause migration of park users from areas previously identified as appropriate due to their lower protection need into other areas that have a higher protection need. The unilateral change in policy was as unnecessary as it was improvident. For years the Park Service had interpreted its statutes and regulations such as to allow the recreation area discretion to make such activity accommodations as were generally necessary to fulfill its special urban recreational mandate. In late 2000 during the rush to quickly implement the stricter new management policies, the legal interpretation was flip flopped to suggest that there was no discretion unless the particular activity was specifically articulated in the enabling statute. In light of that changed interpretation local staff declared that the longstanding GGNRA Pet Policy was improper and therefore "void." The analysis for the first twenty years seems more well founded in that it recognized the statutory authority for discretion to make adjustments necessary to fulfill the enabling statute mandate. I think that the abrupt change in legal interpretation in 2000 wrongly resulted in retroactively overruling congressional intent by staff legal interpretation.

The documents produced by the GGNRA in litigation belie the GGNRA's posture denying the validity of the prior official policy allowing off leash dog walking. The GGNRA suggests that the prior policy was merely a recommendation that never was adopted and never went into effect. In fact, the 1979 Pet Policy had been created and approved after public hearings before the Advisory Commission and was thereafter adopted by the GGNRA and identified as its official policy.

The GGNRA Pet Policy allowing some off-leash dog walking remained the official policy for two decades. GGNRA and NPS officials repeatedly confirmed the Pet Policy from 1992,1999 in letters to inquiring members of Congress. Nevertheless, park officials seeking to rescind the Pet Policy without public hearings newly took the position that the Pet Policy was never officially adopted by the GGNRA.

Date: Page No.: D00246-247 Pet Policy as amended up through year 2000.

12/27/99 D00055-56 Acting Superintendent Scott letter to park user discussing the various off-leash areas at Crissy Field and referring to the "voice control policy."

8/18/99 D00011-12 Chief Ranger Yvette Ruan letter to a park user confirming in third paragraph that the GGNRA "has adopted a fairly liberal pet policy that allows the opportunity for visitors to enjoy several designated areas where pets may be off-leash if under voice control."

3/19/99 D01367-70 Superintendent O'Neill letter to Congresswoman Pelosi confirming that the GGNRA had adopted the Pet Policy:

"As you are probably aware, GGNRA has adopted a pet policy that is more liberal than pet regulations at other national park sites throughout the country. In all other areas of the national park system, pets are required to be leashed at all times and are, for the most part, excluded from all but developed areas. GGNRA has, with the assistance of the park's Advisory Commission, established a pet policy that allows some opportunity for visitors to enjoy a few designated areas with their pets under less restrictive circumstances. Certain areas of the park have been designated as voice control areas where pets are permitted off-leash. Other sites are open only to leashed pets, and some portions of the park are completely closed to pets in order to protect sensitive resources. This policy is designed to accommodate the many different user groups within the park as well as to fulfill our mandate to protect natural resource values of the park. We believe our present policy provides a balance between pets in GGNRA and the protection of park resources."

Representative Nancy Pelosi's 3/10/99 inquiry correspondence to Brian O'Neill in the second paragraph had noted that the constituent has requested that "the agreements made previously with the Citizens Advisory Commission be reinstated and respected." The 11/29/98 Constituent correspondence triggering the response of Superintendent O'Neill to Congresswoman Pelosi at the fourth paragraph reflects a concern that the prior policy was being abrogated without public hearings.

2/5/99 D00045-50 Western Region Regional Director John A. Reynolds

letter to Senator Feinstein enclosing correspondence responding to her constituent and confirming that the GGNRA had adopted the Pet Policy and that the GGNRA did "not anticipate any change to GGNRA's pet regulations."

1998 D00248 GGNRA information release explaining that the GGNRA has "designated appropriate areas where dog walking can take place on- or off-leash without negatively impacting the resources or other uses."

12/30/97 D00293-4 Western Region Regional Director John A. Reynolds letter to Senator Feinstein again confirming that the GGNRA adopted the Pet Policy which it established with the assistance of the Advisory Commission (with circulation initials of Brian O'Neill) Date: Page No.:

10/2/96 D00039 Crissy Field Finding of No Significant Impact with a statement regarding off-leash dog use at page 39 that "NPS will enforce voice control and clean up requirements, and will monitor the results of these efforts. This information will be periodically re-evaluated and management adjustments made where necessary, bringing any proposed changes in off leash dog access to the Advisory Commission" and at page 42 concluding that "Proposed changes in off leash dog access will be brought to the attention of the Advisory Commission prior to taking action."
9/16/96 D00461-464 GGNRA question and answer pamphlet concerning locations where off-leash dog walking is allowed.

@1996 D00473-474 Snowy Plover protection area information pamphlet confirming off leash recreation was still allowed on Ocean Beach north of Stairwell 21 and south of Sloat.

7/8/96 D00513-527 Compendium Amendment pursuant to 36 CFR 7 designating and providing maps of specific areas where off leash recreational access is allowed.

1/4/96 D00555-6 South District Ranger James Milestone's Outline of "changes the new pet policy will have from the existing pet policy," the new policy including off-leash recreation and being incorporated by the GGNRA as a compendium amendment.

7/8/92 D00721-722 and 725-6 Letters of Western Region Regional Director Stanley T. Albright to Senators John Seymour and Alan Cranston confirming that as of 1992 "there is no change in the 1979 Pet Policy which provides the visitor the privilege of walking one's dog off leash."

2/24/79 D00479-482 "1979 Pet Policy" as initially adopted by Advisory Commission in September 1978 and accepted by the GGNRA Park

Superintendent in October 1978 and further approved in 1979.

The 1979 Pet Policy was adopted by the Advisory Commission with the specific rationale that the ordinary rules for National Parks are not appropriate for application to the unique circumstances of the urban recreation areas encompassed in the GGNRA. The Pet Policy was consistent and properly implements the specific unique statutory mandate for the GGNRA (16 USC 460 bb), and it is required that the unique statutory mandate for the recreation area controls over the general provisions otherwise applicable to all units of the National Park System. (16 USC 1c). The simplest and best way to resolve the Pet Management discussion would be to return to the analysis that concluded that the Pet Policy as adopted by the GGNRA and its Citizen Advisory Commission was legal and appropriate.

Sincerely, John B. Keating

**MARIN COUNTY KEEP MUIR BEACH DOG FRIENDLY CITIZENS
COMMITTEE RESOLUTION OPPOSING PREFERRED DOG
MANAGEMENT ALTERNATIVES FROM NATIONAL PARK
SERVICE/GOLDEN GATE NATIONAL RECREATION AREA**

WHEREAS: 1 .The National Park Service (NPS) and Golden Gate National Recreation Area (GGNRA) recommend banning dogs from Muir Beach in Preferred Alternative D of the Dog Management Plan. 2. Preferred Alternative 0 would also eliminate dog access to the Coastal Fire Road and Trail adjacent to Muir Beach. 3. The community of Muir Beach was established as a residential community before stewardship of the NPS and has historically and safely allowed responsible off-leash dog use of its beach and surrounding trails.4. The GGNRA was mandated by Congress in 1972 to: "provide for the maintenance of needed recreational open space necessary for urban environment and planning", "to assure the preservation of open spaces" and "to provide public access along the waterfront and to expand the maximum extent possible the outdoor recreation opportunities available to the region. " 5. Preferred alternative 0 states that" off-leash dog walking can occur at a small beach area on county property adjacent to the NPS beach" (commonly known as "Little Beach"). Little Beach is not accessible without crossing the main beach or driving along neighborhood private roads. There is no public parking on Sunset Way or Pacific Way. These single lane local roads are fire lanes. Extra and illegally parked cars would create a hazard by blocking access to emergency vehicles. For those who would arrive on foot via the road, there are no amenities or services for Little Beach. No trash cans. No toilets. Most significantly allowing access only to Little Beach would endanger the health and safety of both humans and animals. Formally stating and implementing such a plan would require appropriate impact studies and input from the surrounding community, the Muir Beach Community Services District, and Muir Beach Volunteer Fire Department. 6. No evidence has been presented which indicates that use by dogs is more harmful to environmentally sensitive areas than use by people, it is unreasonable and invalid to restrict usage of Muir Beach and Coastal Trail to dog owners. 7. There is currently no continuous trail from Muir Beach to Mill Valley that allows access with a dog. 8. NPS proposes spending 900,000 dollars to enforce these preferred unprecedented dog management rules NOW, THEREFORE, BE IT RESOLVED 1. Muir Beach and the Coastal Trails must remain open (as outlined in Alternative A) for multi-use recreational activities for all residents of Marin and surrounding Bay Area counties. 2. In order to protect the newly restored Redwood Creek and lagoon areas with its sensitive habitat and wildlife, signage and

boundary markings must be made clear, understandable and visible. Specifically, a large sign at the footbridge entry to the beach must be added which clearly defines beach rules for all visitors. Additionally, signs and boundary markings must be placed at the lagoon and creek areas which forbid swimming, trampling on vegetation or disturbing wildlife in these areas. NPS must properly enforce rules for all visitors and impose appropriate fines. 3. As is the case in most dog-friendly parks, a dog litter bag dispenser and waste receptacle, along with a signage stating distinctly dog management rules must be placed in prominent locations to encourage responsible dog control and management. 4. Dog-access from Coyote Ridge Trail to Miwok Fire Road must be granted to allow hikers with dogs to cross from Muir Beach into Mill Valley.

ATTEST: Joan Burton Wynn Committee Chair

Dear Mr. Dean,

Thank you for the opportunity to comment on this important document, the Golden Gate National Recreation Area's (GGNRA) Draft Environmental Impact Statement/Draft Dog Management Plan (Draft Plan/DEIS).

Introduction

The Crissy Field Dog Group is a non-profit organization devoted to responsible off leash dog recreation in the San Francisco Bay area for over a decade. We have approximately 600 members distributed throughout California and many other states. We have worked with the GGNRA staff on off leash dog recreation issues throughout this entire period including as a member of the GGNRA Negotiated Rulemaking Committee for dog management. Our work has included working with the Golden Gate Audubon Society and the GGNRA staff on educational outreach for the protection of the Snowy Plover in the Wildlife Protection Area. We have also worked closely with other recreational groups including, the horse community, the windsurfing and the surfing communities as well as other dog groups to promote and facilitate co-existence among all park users and to protect natural resources. We have created sixteen educational videos promoting responsible dog recreation in the GGNRA as well as how to submit substantive comments. We work closely with the San Francisco SPCA and the Marin Humane Society and we are a member of the Eco-dog coalition promoting responsible dog ownership.

The Crissy Field Dog Group retained Kenneth S. Weiner, Esq. of K&L Gates LLP, a nationally recognized expert in the National Environmental Policy Act as well as TetraTech, Inc. independent environmental consultants to provide a review of the 2400 page Draft Plan/DEIS. Their review is

included in the attached appendices.

After all of the time and effort that has been put into the development of a balanced dog management plan, CFDG is extraordinarily disappointed in the quality of the Draft Plan/DEIS. We are quite dismayed by: (1) the litany of undocumented assumptions throughout the Draft Plan/DEIS; (2) the lack of analysis by the GGNRA of the existing conditions; (3) the failure of the GGNRA to adequately explore the impact of application of existing management measures to the no-action alternative; (4) the failure of the GGNRA to acknowledge that the GGNRA is a recreational area in a major metropolitan area; (5) the failure of the GGNRA to address or acknowledge the scoping comments submitted by CFDG in April 2006; and (6) the failure of the GGNRA to include any of the reasonable alternatives suggested by the a coalition of interested parties at the end of the Negotiated Rule Making process (see Appendix K). The Draft Plan/DEIS improperly treats recreation and environmental interests as mutually exclusive rather than recognizing both as important values under the National Environmental Policy Act as well as the enabling legislation for the GGNRA. In fact, the Draft Plan/DEIS does not even include a section addressing the impact on recreational users. (See Appendix B) The Draft Plan/DEIS includes a prohibition on certain recreational uses for all new lands without any justification or analysis. Finally the Draft Plan/DEIS proposes a punitive non-transparent compliance program to be internally administered without any public input with uncertain and undefined parameters. Set forth in the appendices attached, are specific comments on each of these points.

We are also very concerned going forward about the transparency of the review process for these comments, allowed under the National Environmental Policy Act, and the ability of the public to have a dialogue with the GGNRA about how to create a sustainable and balanced dog management plan.

The GGNRA plays a critical role in providing a home for many natural and cultural treasures, and, because of its proximity to a dense, urban environment, it provides special recreational opportunities to city dwellers. Recreation is called out in the 1972 GGNRA enabling legislation as one of the four outstanding values to be maintained and protected. In doing so, the enabling legislation recognized that the achievement of these outstanding values is not mutually exclusive. Our organization supports the National Park Service (NPS) in its mission to protect the GGNRA's important natural, cultural, and recreational values but, through this letter, we challenge the NPS work with its constituents and local communities to find solutions that are designed to protect all of the park's values and broaden opportunities to enjoy its diverse resources sustainably.

Our comments are described in two main sections: (1) Recommended

Alternative, which describes our thoughts on how the NPS could balance the GGNRA's myriad resources and opportunities; and (2) Quality of Information in the Draft Plan/DEIS, which describes our thoughts on how the information in the Draft Plan/DEIS could be improved in order to support a better outcome for all interests involved.

Recommended "Hybrid" Alternative The NPS should consider a hybrid alternative that includes the following three interrelated items with a rational approach to balancing preservation of natural and recreational values:

e Adaptive Management Plan ? Management Actions Recreation Committee

Further information on this alternative is included in Appendix A.

Quality of Information in the Draft Plan/DEIS

My organization's major concerns with the quality of information in the Draft Plan/DEIS include:

1. Improper analysis of environmentally preferred alternative.
2. Omission of relevant impacts and impact analyses o Recreation (also see Appendix B) o Other impacts o 3. Insufficient information needed to draw logical conclusions and evaluate alternatives: o Unclear enforcement data (also see Appendix C) o Lack of and inconsistent site-specific, scientific data on baseline conditions (also see Appendices D, E, and F) o Reliance on undocumented assumptions o Flawed evaluation of No Action alternative o Resultant flawed alternatives analysis
4. Improper treatment of new lands
5. Lack of specificity in proposed action

These concerns are described in detail below and several are outlined further in the attached appendices. At the end of each section, we have provided recommended changes that we request you make to the EIS and the proposed action in order to move forward with a plan that is protective of all of the GGNRA's myriad resources and values.

I. Improper Analysis of Environmentally Preferred Alternative

The Draft Plan/DEIS takes a narrow perspective that the alternative that most preserves natural values only is the environmentally-preferred option. Where you have a national recreation area whose mission is natural, recreational, scenic and cultural values in a great city ' and all of these values are part of NEPA's view of a quality environment ' the environmentally preferred alternative is the alternative that most promotes

all of these core environmental values. Because the Draft Plan/DEIS does not recognize recreational resources as an environmental resource, the analysis of the environmentally preferable alternative is flawed. We point this out because it reflects a bias in the document that systematically does not yet recognize that this plan is for an urban recreation area that needs to 'in the words of GGNRA's own mission: 'preserve natural and recreational values unimpaired.' It fails to consider the range of resources afforded by the GGNRA that could be affected by the action alternatives. Recreation is called out in the GGNRA enabling legislation as one of the four outstanding values to be maintained and protected. In doing so, the enabling legislation recognizes that the achievement of these outstanding values is not mutually exclusive. The environmentally preferable alternative is one that would employ environmental design and adaptive management techniques to preserve all of the outstanding values of the GGNRA. Further detail on this issue can be found under our comments above related to our recommended hybrid alternative.

*Recommendation. In Chapter 2, starting on page 99, the discussion of the environmentally preferable alternative should be revised to reflect the value of recreational resources. Since protection of the environment includes protection of established recreational opportunities and facilities on GGNRA lands and nearby parklands, the Draft Plan/DEIS should consider such resources as part of its selection of the environmentally preferable alternative. Detailed recommendations on how to revise this section of the Draft Plan/DEIS are listed in Appendix A.

2. Omission of Relevant Impacts and Impact Analyze

Recreation Congress' original intent when it established the GGNRA is stated in the bill reports for the 1972 legislation ' that GGNRA, "will ensure its continuity as open space for the use and enjoyment of present and future generations of city-dwellers" [House Report No. 92-1391, Sept. 12, 1972]. [emphasis added]. Similarly, as stated in the first section of Public Law 92-589, Congress established GGNRA to preserve for public use and enjoyment areas of Marin and San Francisco County possessing "outstanding natural, historic, scenic and recreational values" and to "provide for needed recreational open space necessary to urban environment and planning" and to protect the scenic and natural character of the area from incompatible development. Dog walking was well-known and recognized by Congress as part of this public use and enjoyment. Both the Senate and House reports comment that the proposed area:

"will satisfy the interests of those who choose to fly kites, sunbathe, walk their dogs, or just idly watch the action along the bay." [emphasis added]

The official legislative history notes:

"This legislation will, if enacted, capitalize on the availability of this important, unequalled resource in the San Francisco region by establishing a new national urban recreation area which will concentrate on serving the outdoor recreation needs of the people of the metropolitan region. As an urban recreation area, it must relate to the desires and interests of the people, but it must, at the same time, be managed in a manner which will protect it for future generations." [emphasis added]

These were also the City's understandings in transferring lands to GGNRA. As you may know, GGNRA has a mission statement which states:

"The mission of the Golden Gate National Recreation Area is the preservation, unimpaired, of the natural and cultural resources, and scenic and recreation values, of the park for present and future generations to enjoy." [emphasis added]

The Draft Plan/DEIS not only fails to disclose and evaluate the impacts of the alternatives on recreational resources in the context of an urban environment, it dismisses the quality of the urban environment entirely on page 22 where it states, "the quality of urban areas is not a significant factor in determining a dog management plan." As recognized in its enabling legislation, one of the most important aspects of the GGNRA is the sharp contrast between its undeveloped open spaces and the adjacent developed urban environment. The GGNRA's open space and recreational opportunities are intended to provide refuge and relief for nearby urban dwellers.

The impacts on the GGNRA's open space and recreational opportunities should have been evaluated fully in the Draft Plan/DEIS, especially since a NEPA analysis is not limited to the natural environment. According to NEPA, An EIS is required to analyze the human environment. The federal NEPA rules define the human environment and its scope in an EIS as follows:

"Human environment shall be interpreted comprehensively to include the natural and physical environment and the relationship of people with that environment."

When an EIS is prepared and human and natural/ physical environmental effects are interrelated, the EIS should discuss all of these effects on the human environment.

*Recommendation. Any significant limitations on recreational uses

proposed by NPS needs to be properly examined, as it impairs a fundamental value that must be preserved under GGNRA's charter. The Draft Plan/DEIS should be revised to include a stand-alone analysis of impacts on recreation resources in order to fully consider the potentially significant effects that the proposed action and action alternatives could have on these elements of the human environment. The section should give context to the important role played by the GGNRA in terms of its proximity to a dense, urban environment and the special opportunities it affords to nearby populations. It should describe existing recreational uses of the GGNRA and other parklands in the project vicinity, the impacts of the proposed action on recreation resources and urban quality (including direct, indirect and cumulative impacts), and the mitigation that the NPS will commit to in order to avoid such impacts.

Although the analysis of impacts on recreation resources could potentially be integrated into the existing Visitor Use and Experience section, it is strongly suggested that it be incorporated into the draft EIS in a separate chapter. The rationale for this request is because the topic of "Visitor Use and Experience" is too limiting to encompass the broader range of recreation impacts that could potentially occur with implementation of the proposed action, including degradation of established recreational activities and facilities in GGNRA and nearby lands. A suggested annotated outline of the stand-alone recreation resources section is presented in Appendix B for your consideration.

Other impacts

The Draft Plan/DEIS assumes but does not provide the required rigorous analysis that resource conditions result solely from dog use of the sites, discounting the contribution from other visitors and recreational users. The Draft Plan/DEIS does not address the contribution of other impactful activities, including special events, to the resource conditions and existing impacts at each of the GGNRA sites. The level of site use from a single special event is likely equivalent to the level of regular use that occurs over weeks, months or longer. These special events include the annual Fleet Week at Crissy Field and the future impact of America's Cup on GGNRA lands.

*Recommendation. To address this deficiency, the GGNRA should study the contribution that all visitors make to existing resource conditions and potential impacts. This information is obtainable and essential to a reasoned choice among alternatives. The preferred alternative should then be re-evaluated and modified to address only the issues that specifically result from dog use at each of the sites. The NPS should then pursue a comprehensive approach to managing all these uses to the benefit of the full

ranges of GGNRA resources and values.

4. Insufficient Information Needed to Draw Logical Conclusions and Evaluate Alternatives In many places, the Draft Plan/DEIS does not provide any data on actual impacts by dogs in areas being proposed for new dog walking restrictions. In places where data are provided, the Draft Plan/DEIS makes undocumented assumptions that there are unacceptable impacts and that dogs are the culprits. For example, in the Western snowy plover sections of Chapters 3 and 4, the Draft Plan/DEIS explains that people, as well as dogs, who traverse dune areas disturb shorebirds. Monitoring surveys observed 48 off-leash dogs chasing birds over a period of 12 years. However, in this case the birds continue to return to the area each year. Therefore, there might or might not be a problem ' the Draft Plan/DEIS does not provide substantive data to help the reader decide. If there is a problem, the Draft Plan/DEIS doesn't provide logical conclusions as to whether access should be limited for people, for dogs, or both.

The Draft Plan/DEIS is, in some respects, comprised of about 20 plans and EISs, because it examines each GGNRA unit. We can appreciate how difficult this is for GGNRA and the NPS to accomplish. But, NEPA guidance and case law have consistently explained that difficulty does not excuse lack of adequate data and study in an EIS. And the bulk or size of an EIS does not equate to its adequacy. In many places, as described in more detail below, the Draft Plan/DEIS lack any description of actual site specific impacts on which decisions on dog-walking restrictions are being proposed. In other places, the Draft Plan/DEIS assumes species are present in areas where there is no record of their presence. In other places, there is inconsistent information about the presence of species.

Unclear enforcement data Many of the findings in the Draft Plan/DEIS are founded on a reference included in the document as Appendix G, "Law Enforcement Data" (NPS 2008c). This reference document is critically deficient in substantiating statements made in the characterization of existing conditions and in the analysis of the environmental consequences. Per NEPA, "Agencies shall insure the professional integrity, including scientific integrity, of the discussions and analyses in environmental impact statements (CFR 1502.24)." Additional detail on this issue can be found in Appendix C.

*Recommendation. The Draft Plan/DEIS should be revised to provide clear evidence in the record to support all of its findings. The NPS needs to ensure the professional integrity, including scientific integrity, of the analysis and findings contained within its Draft Plan/DEIS. Detailed recommendations on how to revise the enforcement data in the Draft Plan/DEIS, and the ensuing impacts and alternatives analysis, are listed in

Appendix C.

Lack of and inconsistent site-specific scientific data on baseline conditions

The Draft Plan/DEIS does not address site-specific resources and the condition/health of those resources. This lack of information results in a vague baseline against which to assess the magnitude of impacts associated with implementing the proposed action and alternatives. With such a vague baseline, it's also difficult to assess the need to change existing dog management strategies.

Select examples:

a. The affected environment section mentions California Native Plant Society (CNPS)-listed species as having the potential to occur within the GGNRA but no data are provided as to where/if they are actually present. b. While some special-status species descriptions suggest a nexus between dog activity and the species and/or their habitat (tidewater goby, California red-legged frog), other species descriptions do not (San Francisco garter snake, Coho salmon), and there is a consistent lack of detail describing the existing interaction, if any, between the species and dog activity. c. There are inconsistencies regarding the presence of species in the text and in Table 8 in the Special-Status Species affected environment, the information in Appendix H, and the impact analyses in Chapter 4. d. In Table 8 on page 246, the GGNRA Location column contains the location for plants that do not exist there according to the text. e. For a number of the analyses of Alternatives B-E, the Draft Plan/DEIS states that the area of impact is currently undisturbed. This is not the case, as dogs and humans are currently allowed in those areas. Additional examples are provided in Appendix D, "Soils and Geology," Appendix E, "Water Quality," and Appendix F, "Biology."

*Recommendation. To address this deficiency, the Draft Plan/DEIS should provide site-by-site assessments of the conditions of the GGNRA resources and values at each of the 21 sites. The selected preferred alternative for each site should then be re-assessed and modified to address only those site-specific issues and to employ adaptive management (proposed adaptive management techniques are provided at the end of this letter) to ensure the goal of protecting those resources and values is achieved.

Reliance on undocumented assumptions

The Draft Plan/DEIS assumes, but fails to demonstrate, the "cause and effect" relationships without site-specific supporting information. For instance, the Draft Plan/DEIS assumes but does not demonstrate that where dogs are present within GGNRA sites, there is a disturbance of natural

resources. The Draft Plan/DEIS also assumes but does not demonstrate that the disturbance of resources is attributable to dogs (versus other factors). These assumptions result in flawed conclusions that the mere presence of dogs is equivalent to adverse resource impacts. The findings of an EIS must be based on scientific accuracy and clear evidence in the record. This Draft Plan/DEIS is significantly flawed in that it does not rely on adequate evidence for the conclusions it draws, and in that it fails to clarify its methodology for drawing those conclusions.

Select examples:

a. The text from Chapter 3 provides data on the western snowy plover, but beyond providing numbers of observations, the Draft Plan/DEIS does not provide evidence that dogs chasing the birds are likely to impact the survival of the species taking all relevant factors into account (see paragraph 1, page 799). b. The Draft Plan/DEIS presents no information supporting the finding that dogs are currently impacting shorebirds and marine mammals. Therefore, there is no scientific rationale for prohibiting dogs from beach areas under Alternative D to "protect shorebirds and stranded marine mammals," as stated on page 151. c. The Soils and Geology section (page 225) includes the following statements: "Dogs and dog walkers that do not stay on designated trails and venture off trail create social trails that become denuded of vegetation and result in increased soil compaction." and "Soil compaction is common along social trails that have been created by ' and are heavily used by ' bikers, hikers, runners, and dog walkers." The baseline for comparison throughout the Draft Plan/DEIS should not be an environment in which it is assumed that there is no impact unless dogs are present, but one in which the impact of dogs is added to the impact of humans. At about 200 pounds per adult, the force that a human exerts on the soil one foot at a time would have a significantly greater impact on soil compaction in a picnic area than the force exerted by even a large 70-pound dog distributing its weight on four paws. The failure to acknowledge that human use has more impact on soils and geology in this regard, compared to dog use, uncritically loads the analysis in favor of restrictions on dogs. While there may be areas in which impacts from dogs are unacceptable, the same criterion holds for impacts from humans, and in most of these areas, dogs and humans are already excluded. d. The Soils and Geology section (page 112) on Homestead Valley concludes that, under the No Action Alternative, there would be long-term adverse impacts from "soil compaction, erosion, and nutrient addition..., in areas off the trail since dogs would be under voice control," while under other alternatives it is concluded that the impacts would be negligible because dogs would be under physical restraint. This is an unsubstantiated assumption in support of the underlying bias of the analysis. The analysis does not attempt to connect intensity of use and impact and seems to be based solely on the incorrect assumption

that humans and wildlife would have no impact on off-trail areas, and that all impacts can be attributed to dogs.

*Recommendation. To address this deficiency, the NPS should re-evaluate untested, assumed linkages and re-define the existing and potential impacts that specifically result from dog use at each of the GGNRA sites. The preferred alternative for each site should then be re-assessed and modified to address only those site-specific impacts and issues.

Flawed evaluation of No Action alternative

The impacts of the No Action alternative are substantially overstated because the Draft Plan/DEIS determines individual areas of compliance with existing dog management strategies without sufficient supporting data and assumes that noncompliance results in adverse impacts. This unsupported logic both overstates the degree of additional management required to address the resource issues, but also misrepresents the relative impacts of the four action alternatives; for example, the public is assumed to comply with management strategies under an action alternative, whereas the public is found to be noncompliant with those same management strategies under the No Action alternative.

Select examples:

a. For many sites, including Stinson Beach, Crissy Field, Baker Beach and Bluffs, Mori Point, Oakwood Valley, and Muir Beach, analysis of Alternative A acknowledges noncompliance, while the other alternatives assume full compliance with dog restrictions. In some cases, the management strategy is the same, with the only difference between Alternative A and the preferred alternative being the assumption of compliance. b. On page 109 (Table 5, Stinson Beach, Soils and Geology) under Alternative A, the second bullet identifies long-term, minor, adverse impacts in areas outside parking lots and picnic areas. These impacts are not repeated under the other alternatives despite the fact that, except for Alternative D, the management strategies under all of the alternatives are identical for Stinson Beach. Each of the statements in the first bullet, except for Alternative A, No Action, includes the clause "assuming compliance." At least for the soils and geology evaluation, the analysis seems to take it for granted that the No Action Alternative is inferior. Both of these are examples of biasing the analysis against No Action. c. On pages 1147-1158, mission blue butterfly, Fort Baker and Milagra Ridge ' as with many examples in the Wildlife section, here Alternative A assumes noncompliance with leash laws (minor, adverse impacts) and the preferred alternative assumes compliance (negligible to minor, adverse impacts, with habitat restoration programs). d. On pages 1219-1240, San Francisco garter snake, Mori Point, Milagra Ridge, Cattle Hill, Pedro Point ' as with many

examples in the Wildlife section, here Alternative A assumes noncompliance with leash laws (minor, adverse impacts) while the preferred alternative assumes compliance (negligible). The text states (page 1230) that there is no documentation. that the current level of compliance with on-leash laws (No Action Alternative) is impacting this species. e. In the Water Quality section, the impact analysis for Alternatives B through E assumes compliance with the management strategies. However, the impact analysis for Alternative A does not make this same assumption. f.

*Recommendation. To address this deficiency, the NPS should re-evaluate unsupported assumptions and the analysis of the No Action alternative to ensure the methodology used for it is consistent with the methodology used for the action alternatives. The No Action alternative is a continuation of the current GGNRA management plan and policies ' not a continuation of existing conditions. The current plan and supporting documents include policies for good public information and education on GGNRA resources and partnerships with the community. The No Action alternative can and should include improved education and compliance measures (including accurate signage about voice control areas) to implement these current plan policies (which are also policies in the proposed GGNRA updated general management plan), including dog owner training, to raise the level of compliance.

Resultant flawed alternatives analysis

As described above in this section, the Draft Plan/DEIS assumes but does not provide the required rigorous analysis to enable the reader to draw logical conclusions about impacts and alternatives. The Draft Plan/DEIS does not provide adequate information on which to "study, develop, and describe appropriate alternatives to recommended courses of action in any proposal which involves unresolved conflicts concerning alternative uses of resources" (as required by NEPA Section 102(2)(E); 40 CFR "1501.2 and 1502.1 and corresponding DOI and NPS implementing guidance), or to allow meaningful evaluation on the alternatives including reasonable mitigation measures, as required by NEPA (e.g., 40 CFR "1502.14(b)and 1508.25(b) and corresponding DOI and NPS implementing guidance). This issue in the Draft Plan/DEIS results in a bias in the evaluation of alternatives, contrary to NEPA's requirement that "Environmental Impact Statements shall serve as the means of assessing the environmental impact of proposed agency actions, rather than justifying decisions already made" (40 CFR ' 1502.2(g)).

Select examples:

a. The impacts of the No Action Alternative are substantially overstated because the Draft Plan/DEES assumes that noncompliance results in adverse impacts. This both overstates the degree of management required to address

the resource issues, but also misrepresents the relative impacts of the four action alternatives; for example, the public is assumed to comply with management strategies under an action alternative, whereas the public is found to be noncompliant with those same management strategies under the No Action Alternative. b. On page 1264, bank swallow ' as with the western snowy plover, current impacts are considered minor to moderate based on occasional to frequent perceptible disturbances to the species from dogs; however, the description of Alternative A mentions only that dogs have been seen in the bluff area. There is no apparent nexus between dog activity and actual impact to bank swallows ' is the presence of a dog in the bluff area assumed to disturb the colony? Have the birds been observed flushing from nests, or have crushed burrows been found? The language here suggests these impacts are possible, but that they haven't actually occurred. c. In Chapter 2, starting on page 99, the discussion of the environmentally preferable alternative should be revised to reflect the value of recreational resources. Because the draft EIS does not recognize recreational resources as an environmental resource, the analysis of the environmentally preferable alternative is flawed. It fails to consider the range of resources afforded by the GGNRA that could be affected by the action alternatives. Recreation is called out in the GGNRA enabling legislation as one of the four outstanding values to be maintained and protected. In doing so, the enabling legislation recognizes that the achievement of these outstanding values is not mutually exclusive.

*Recommendation. To address this deficiency, the NPS should re-evaluate unsupported assumptions and the analysis of the alternatives to ensure the methodology used for it is consistent and based on site specific scientific data. And, since protection of the environment includes protection of established recreational opportunities and facilities on GGNRA lands and nearby parklands, the draft EIS should consider such resources as part of its selection of the environmentally preferable alternative. Under NEPA, the environmentally preferable alternative is one that would employ environmental design and adaptive management techniques to preserve all of the outstanding values of the GGNRA.

4. Improper Treatment of New Lands

The proposed action to close new lands to dog walking access conflicts with the GGNRA Enabling Legislation (PC 92-589) and with National Park Service Management Policies (2006) for determining uses and land protection plans. GGNRA is required to consider new lands in the same way that it considers uses and land protection measures on lands within GGNRA. The unprecedented "Closed until open" proposal would violate GGNRA's statutory obligation to preserve and maintain recreational uses, violate sound land planning with the community, and violate NEPA by prejudging alternatives before site-specific public and environmental review. There is

no basis for treating new lands differently than existing lands under NPS regulations and policies. Furthermore, there is no such policy in the existing GGNRA General Management Plan and Compendium. The Draft Plan/DEIS notes (p. 36), the enabling legislation states GGNRA's purpose as follows (emphasis added):

"In order to preserve for public use and enjoyment certain areas of Marin and San Francisco counties, California, possessing outstanding natural, historic, scenic, and recreational values and in order to provide for the maintenance of needed recreational open space necessary to urban environment and planning, the Golden Gate National Recreation Area is hereby established."

The phrases "preserve for public use and enjoyment" and "maintenance of needed recreational open space" set out a high standard for management actions that would limit or restrict this fundamental value and resource of the GGNRA. The words "preserve" and "maintain" mean the continuation of uses, recognizing that uses may be regulated to protect the other fundamental values of the GGNRA. NPS management policies expressly reflect this emphasis on continuing uses, measured by the yardstick of the unit's enabling legislation. Section 1.4.3.1 states:

In determining whether or how to allow the use, park managers must consider the congressional or presidential interest, as expressed in the enabling legislation or proclamation, that the use or uses continue. When new lands become part of GGNRA, the recreational uses existing at the time of acquisition should be allowed to continue unless GGNRA determines, through the public land planning and NEPA process, that unacceptable impairment would occur (as explained in Chapter 1 and Appendix C of the Draft Plan/DEIS).

Section 3.3 of the NPS management policies make clear that protective measures are to be integrated in to the planning process -- "Planning for the protection of park lands will be integrated into the planning process for park management" -- not be integrated into the planning process for park management" -- not predetermined in advance of site specific the public planning and environmental review process.

In preparing land protection plans, Section 3.3 requires: "A thorough review of a park's authorizing statutes and complete legislative history will be conducted as part of the land protection planning process."

Section 3.3 states that land protection plans should determine what "means of protection are available to achieve the purposes for which the unit was created." As noted above, recreational use is one of the basic purposes for which GGNRA was created. Dog walking was contemplated as a traditional

use in GGNRA and was plainly discussed in both the Senate and House bill reports, basic legislative history documents.

In the Introduction to land protection, the NPS management policies state (chapter 3, emphasis added):

The National Park Service will use all available authorities to protect lands and resources within units of the national park system, and the Park Service will seek to acquire nonfederal lands and interests in land that have been identified for acquisition as promptly as possible. For lands not in federal ownership, both those that have been identified for acquisition and other nonfederally owned lands within a park unit's authorized boundaries, the Service will cooperate with federal agencies; tribal, state, and local governments; nonprofit organizations; and property owners to provide appropriate protection measures.

To fulfill this obligation, GGNRA needs to cooperate with these entities, including nonprofit community groups and property owners adjoining GGNRA, to protect recreational resources. As Management Policy 1.4.3.1 directs:

Where there is strong public interest in a particular use, opportunities for civic engagement and cooperative conservation should be factored into the decision-making process.

GGNRA is aware of the strong public interest in dog walking access, and of the interest of San Francisco and Marin. Counties and responsible community and nonprofit organizations in cooperative conservation. It is entirely inappropriate and contrary to these management policies to close new lands to dog walking access without first providing opportunities for this civic engagement and for cooperative conservation efforts.

In conclusion, there is no basis in existing law or adopted policy for the NPS and the GGNRA dog management plan to summarily reject and fail to preserve and maintain an important recreational use on new lands that is allowed on existing lands, particularly in advance of sound environmental review and land use planning. This Plan and Draft Plan/DEIS do not provide this review and planning, because by definition, new lands have not yet been fully studied, acquired or subject to the level of site specific review required of this EIS.

For reasons noted above, it is inaccurate wrong to treat dog walking as the establishment of a "new use" in GGNRA, which would be the result of the proposed policy. We understand GGNRA's desire to create a presumption against continuing this use, however, there is no factual, legal, or

management policy basis for this approach.

*Recommendation. The preferred alternative should be revised to make clear that new lands will be treated the same as any other GGNRA lands and follow the same NPS management policies. Recreational uses should be allowed to continue except as may be regulated through site-specific public land planning processes and associated environmental review.

5. Lack of Specificity in Proposed Action

The description of Elements Common to Action Alternatives (pages 63-67 in the Draft Plan/DEIS) describes the proposed 75% compliance standard and secondary management response, but does not provide details of the monitoring plan or other elements of an adaptive management plan on which the management response would be based. The draft Plan/Draft Plan/DEIS does not propose an adaptive management component that meets applicable guidance and that can be meaningfully reviewed, as called for in NEPA procedures and current Council for Environmental Quality (CEQ) mitigation and monitoring guidance (January 2011), including but not limited to pages 9-11 and pages 13 and 19 (on the role of the public in the design and review of results).

Select examples:

a. The Draft Plan/Draft Plan/DEIS states (page 1725) that "the compliance-based management strategy is an important and effective tool to manage uncertainty when proposing new action" and "has been created" to assure successful implementation and long-term sustainability. However, the detailed description of this critical element has not been conveyed and is not included in the document (as noted on page 64). b. The Draft Plan/DEIS doesn't establish how or why a special-status species that has been sharing habitat with dogs for decades will experience an actual, likely benefit from stricter dog management, given other factors affecting the species. c. Where management actions that limit recreational access are proposed or under serious consideration, the Draft Plan/DEIS should also disclose whether access will be limited for people as well as dogs. The evaluation of significance under NEPA requires consideration of context and intensity. Meaningful public comment on proposed management measures is not possible without full disclosure of the impacts to all users and potential management measures. disclosure of the impacts to all users and potential management measures. *Recommendation. To address this deficiency, the NPS should fully disclose the details of the proposed action. it should describe how it will monitor compliance and resources and values at specific sites because the management measures are specific to GGNR.A sites. In addition to assessing the condition of these resources and values, monitoring should also focus on determining the contribution to those conditions from

other users and factors, including other human users and natural processes. This should be implemented as part of each alternative. Only through this objective monitoring approach can the GGNRA demonstrate that it has addressed the purpose and need on which the Dog Management Plan is based. Existing or proposed management strategies should be modified based on the objective monitoring results. Although it could be appropriate to use properly measured rates of compliance as an indicator, the draft Plan and Draft Plan/DEIS does not provide adequate information about the compliance-based program. To ensure objectivity, this monitoring should be conducted by an independent qualified third party with the results discussed with interested groups and made publicly available as part of a defined and technically-sound adaptive management program. Additional recommendations on management actions that should be considered by the NPS are provided below.

Concluding Comments

In conclusion, CFDG is committed to working with the GGNRA to implement a reasonable balanced dog management plan that is based upon accurate facts and science and that balances all of the values identified in the 1972 GGNRA enabling legislation.

Sincerely,

Martha Walters

Correspondence Type: Letter
Correspondence: Dear Mr. Dean:

I was born and raised in San Francisco, and when I had a dog, I walked him daily at Ocean Beach and Fort Funston. Although there are city "dog parks" near my home, I much prefer going to outdoor areas where I can hike with friends and enjoy nature, while exercising my dog. Unless I drive to Marin or the East Bay, the GGNRA sites are the only places in San Francisco where this is possible for me.

The DEIS fails to assess the impact on local parks if you reduce your off-leash areas to small "dog play areas". I remember when Ocean Beach was closed to off-leash dogs in the 1990's ' the impact to Fort Funston and even some city parks was dramatic. I understand there may be as many as 800,000 yearly visitors to Fort Funston alone and over 85% of them come to hike with their dogs. Imagine the impact if even 25% of these people choose to use city parks instead?

I've reviewed the online petition that was created to give people a way to express their concerns about the draft Dog Management Plan. It is evident that people are scared, frustrated, concerned ... it is imperative that you provide an alternative that allows us to hike with our dogs. Rather than just restrict our access, why didn't you look at the specific sites and determine what works well & what can be improved? Better enforcement of existing laws, more signage, clearer rules ... those of us who want to continue to walk in the GGNRA do so BECAUSE of the natural beauty we find. We want to preserve this too, but we do not think unwarranted restrictions are the answer.

I agree with the sentiments expressed by the petition signers and I am submitting these as my own comment.

Sincerely, Tessie Chua San Francisco, CA 94118

Correspondence Type: Letter

Correspondence: Dear Mr. Dean:

I am a long-time resident of San Francisco and I am not a dog-owner. I am a frequent user of the GGNRA areas near my home (primarily Ocean Beach and Fort Funston) and one of the delights of walking in these areas is watching the dogs. I often bring out-of-town guests on my walks and they are stunned to see how well the dogs get along ' and very surprised to discover that San Francisco offers such a recreation opportunity to dogs and their owners.

I think this is especially important for seniors and families with children. Having to walk the dog makes a good excuse to get out of the house and get exercise and socialize. Study after study has pointed to the health benefits for seniors. It helped teach my son (and countless other children) responsibility, social skills and appreciation for the natural beauty of the Bay Area. It gets children off their bottoms and out from the TV on a Saturday morning. In this day and age, when people are so concerned about childhood obesity, and the mental and physical health of our children, it makes no sense to deny families an opportunity to be together in a non-commercial, active setting.

My son is 21 years old now and he has been walking at Fort Funston since he was a baby. When relatives visit, they always ask to take a walk "with the dogs". I've always been proud of the fact that, once again, San Francisco offers something unusual. We are not like other cities, nor has this ever been our goal. I like the fact that Fort Funston and Ocean Beach are not fenced in dog parks ' off-leash recreation is just part of the overall recreational opportunity at these sites.

I've looked at the DEIS and find many references to "impacts on other parks" as being negligible. This can't possibly be true. I live near Golden Gate Park and the small, enclosed dog run is completely overrun. If you eliminate most of the off-leash recreation at Fort Funston and Ocean Beach, where will these people go? There WILL be an impact on local parks. Also, when you eliminate most of the off-leash recreation, my own walks will be much less interesting.

I am including a partial transcript script of a recent hearing at the Board of Supervisors Land Use and Economic Development Committee Meeting of April 11, 2011. I am in agreement with the points raised by the people testifying before this committee and submit them to you as my own comment.

Sincerely, Sama Meshel San Francisco, CA 94121-3424 City & County of San Francisco Board of Supervisors Land Use and Economic Development Committee Meeting April 11, 2011 Transcript of Agenda Items 4 & 5

Present: Supervisors Eric Mar (Committee Chair), Malia Cohen, Scott Wiener
Clerk: Alisa Somera

CLERK ALISA SOMERA: Item number 4: hearing on the effects of Golden Gate National Recreation Area's draft Off-Leash Dog Policy. Item number 5: resolution opposing the Golden Gate National Recreation Area's Preferred Alternatives for Dog Management.

COMMITTEE CHAIR ERIC MAR: And Supervisor Scott Wiener has called for this hearing.

SUPERVISOR SCOTT WIENER: Thank you, Chairman Mar. And I want to thank everyone both in the chamber today as well as in the overflow room, for taking the time to be here today and to take time away from your busy schedules and your jobs and your families and your lives to be here for this issue. I know that it's not convenient to come to City Hall in the middle of the day, so thank you.

We have limited public space in San Francisco and a lot of different uses of those spaces [time bell chimes]. Am I done? Okay, now we can go home. [laughter]

Anytime we have a discussion about how we utilize our limited public spaces, those discussions are controversial and result in passionate views on the subject. But we owe it to the people of San Francisco to engage in these important discussions. Many San Franciscans have dogs. Dogs need outdoor space for exercise, for recreation, and dog owners need access to outdoor space with their dogs. We've seen in San Francisco city parks the conflicts that sometimes occur between those with dogs and those without dogs, in terms of the allocation of our public spaces. Each of my colleagues, I am quite confident, has personal experience with these kinds of discussions and disputes. One of the things that lessens the tension in our city parks is the existence of GGNRA. GGNRA is beautiful. It is one of the true gems of this city, and the National Park Service should be commended for doing such a stellar job in maintaining it as a beautiful and attractive place.

Now we all know ' whatever one's opinion ' that over the past number of decades San Franciscans have relied on parts of GGNRA to walk their dogs both on leash and off leash. Whatever one's view is on the GGNRA proposal, I think that we can all agree that the proposal will have an impact on the ability of dog owners to access these lands in the ways they've been accustomed to doing so.

I, I have serious concerns about the GGNRA proposal, which is why I called for this hearing and why I introduced a resolution. I'm concerned about its impact on the ability of dog owners to bring their dogs to great open spaces

for recreation, and I'm concerned about the impact on our city parks if dogs lose access ' whether in part or in whole ' to GGNRA.

Now I also believe that we can have a GGNRA that values and cares for its natural heritage ' for plants, for wildlife, for natural terrain ' and that also allows for full recreational access for people and for dogs. In other words, we do not need to view this as an either/or. This needs to be a situation where everyone wins.

So we are going to, this is really a two-part hearing. The first part will focus on the GGNRA proposal, and after that is done, we will then talk about the possible regulation and permitting of commercial dog walkers in city parks.

So, before we proceed, if any of my colleagues have any remarks? Great. So before we get to public comment, we do have a few presentations from different perspectives, so that we can set the tone and get everything out on the table before the public comments. And first of all, I really want to thank GGNRA ' Frank Dean and Howard Levitt ' for, for coming today. I very much appreciate that, you taking the time. I'm glad the federal government didn't shut down, at least for now. And I, I just want to say thank you to you. And with that, we're going to start with the GGNRA. And you'll have five to ten minutes to present whatever you'd like to present about the plan. So thank you. Mr. Dean.

FRANK DEAN, SUPERINTENDENT, GGNRA: Good afternoon. Thank you, Supervisors, for the opportunity to come before you. My name is Frank Dean and I am the Superintendent of the Golden Gate National Recreation Area. And I appreciate the opportunity to come and speak today and hopefully bring a little bit of clarity to the issue, which I know is very controversial. And I think that, I should say at the outset that I am also a dog owner. My dog's name is Ranger, of course. And so I understand and appreciate this issue from a couple of perspectives. Just a little bit of context. I'm not sure if you guys are seeing the slides, but this, we'll try this. There we go.

The Golden Gate National Recreation Area is a National Park Service area, it's a national area. It was established in 1972 to protect the natural, scenic, and cultural values and the recreational resources in the park. And again, the second paragraph [referring to slide] shows that it was set up for public use and enjoyment. So we have the recreational aspect, and then further down in the paragraph, it talks about protecting the park in its natural setting, protecting it from development and uses that would destroy it.

So our challenge is really a balance ' it's protecting resources and balancing the use. This is a shot of Crissy Field. We have a ' we're skipping slides here, but we have a variety of uses here that we, that we provide to the

public, and it's, it's quite varied in, in our constituency ' all types of activities, not merely dog walking or hiking or, or, or fishing or, or jogging ' it's all kinds of users. We need to go back.

So, just a bit of context of how we got here and where we're going. Again, the park was set up in 1972 and back then the default rule for dogs and pets was the national rule that we have in the National Park Service under the Code of Federal Regulations, and that is that pets need to be on a leash where they're allowed by the park management.

In 1979, in response to increased use of the park and, and requests from the dog walking community, there was a, a policy was set up by our Advisory Commission at the time that was comprised of citizens that were appointed by the President, to set up a voice-control policy in certain areas of the park ' not all areas, but some areas. We learned later that that really had no basis in law, even though it was adopted. It was, it was an idea at the time to try to attempt to accommodate some use and protect the park in other ways.

Since that time the park has, has grown in popularity. The, the number of dogs, the number of people that come to the park has significantly increased. Things have changed. We've also restored Crissy Field. At the time the park policy was set up in 1979, Crissy Field was a, an abandoned air strip.

We also have had other forces that have come to bear on the park. We had the Endangered Species Act, which, in 1979, although the act existed, we did not know we had endangered Snowy Plovers and some other species that were residing in the park and using the park. So we had to set off certain areas of Fort Funston and Crissy Field to protect, and Ocean Beach, to protect those areas. That was the first time that we actually started to have some conflict with some of our users, when we started to restrict uses at certain times of the year.

2000-2005 we had several lawsuits, which sort of, about dogs being off leash. People were cited and they brought them to court, and then it sort of led to an understanding that there would be a need for a more formal rule making because of the controversy, the conflicts, the degradation of the resource, and then just general safety of our visitors.

We started to look at working with the various constituents in 2006 under a Negotiated Rulemaking process, and that lasted about a year and a half. It was a lot of good work, a lot of dedicated service by, by our citizens and users of the park, but it did not end in any kind of consensus as to how we should go forward. So fast forward to now, and we've decided to proceed with an environmental impact statement, which we have currently out in draft, which is the subject of today's discussion.

The purpose of all this really is to provide again some kind of balance in employee and visitor safety, reduce user conflicts, and to maintain the resources and values for the future.

Again, this is a balance, not a ban. It's often described as a ban on dogs. It's not at all. It's actually going to be different, if it's proposed, if the proposed plan is adopted. But it's not a ban. It will be different. It will be some changes ' some restrictions, perhaps ' but it's not an outright ban. Dog walking would remain a welcome park activity. There'll be seven proposed off-leash areas, five of them in San Francisco ' large portions of Crissy Field, Ocean Beach, and Fort Funston will remain open for off-leash use. A mile of Ocean Beach, half of Fort Funston beach, half of the Crissy Field airfield, and the entire central beach of Crissy Field would all remain open to off-leash dogs. There'll be 20 areas in the city that would remain open for dogs on a leash, and the plan provides for a variety of experiences, including for visitors that prefer not to interact with a dog, and it ultimately protects critical species and habitats.

We've often, over the years, worked with San Francisco on many issues, and this plan is no different. We plan to work with the city. This plan actually addresses impacts on city parklands. We could look at that. We're willing to work with the city officials and staff to see how we can, we can address your concerns and questions about that. And we look forward to that. We're working on many fronts with San Francisco right now, with the America's Cup and Sharp Park, to name just a few.

So, where do we go from here ' we need to hear from the public in a, in a really constructive and substantive way. To say that you're opposed to the plan or just don't like it is, is fine, but it's not helpful to shaping the plan. None of our plans ever look the same in the end as they did at the beginning, so we do listen, we're very open to constructive feedback. We need to hear from everyone, all groups, and all comments will be carefully reviewed and the final plan will respond to substantive comments. And ultimately the plan will be wise and appropriate for a national park area that it is.

We believe that this unique park can have a unique rule on dog use. This plan reflects years of hard work by hundreds of people, and its success will require everyone pulling together. So with that I'm available for questions or however you'd like to run the rest...

SUPERVISOR WIENER: Thank you. I do have a few questions. You, you just ' I was happy to hear that you just talked about how GGNRA would be working with the city. So, will, will GGNRA be effectively negotiating with the city in order to take into account the needs of San Francisco and its residents. In other words, apart from San Francisco, say, submitting a public comment, will there actually be a collaborative process to shape the plan

going forward?

SUPERINTENDENT DEAN: We can certainly have discussions with the city. I wouldn't characterize it as negotiating. We have a NEPA process, environmental review process, underway that, we have alternatives on the table. But again, constructive comments from the public and working with city officials ' we're all ears. We, we certainly, if, if there are certain things that need to be tweaked to make this work on the ground, we, we, we're open to that.

SUPERVISOR WIENER: Right. I think, as I understand it, the White House has instructed that under NEPA, federal agencies are to work with local officials. Is that, am I correct about that?

SUPERINTENDENT DEAN: Yes, I mean, we, we do, but it's, it's ' I'm not quite sure how you're characterizing it, but yes, we will work with you.

SUPERVISOR WIENER: Right.

SUPERINTENDENT DEAN: We're all, we're all ears.

SUPERVISOR WIENER: Okay, and, but apart from all ears, I mean is there...

SUPERINTENDENT DEAN: We can't come up with another alternative mid-stream here, so if, if, you know, we just can't develop it today or the next few weeks and then put it out there for review. We have to take the comments on what we have on the table, and then that will then inform and perhaps a new alternative will evolve from that. SUPERVISOR WIENER: So, for example, perhaps sticking with the current management plan but working with the city to improve enforcement ' would that be a possibility?

SUPERINTENDENT DEAN: Well, I, I don't believe the current, the status quo is sustainable, if it was working, we wouldn't be here today or talking about possible changes, so, are you asking for some sort of a delay, or, or more time, or..

SUPERVISOR WIENER: No, what I'm talking about, what the end result might be, because obviously there is disagreement about whether the current situation is, is working. I understand there's a perspective that says it's not, but there's also a perspective that says that it, perhaps with some smaller changes or changes to enforcement to ensure good behavior, that it could be a workable solution, instead of the rather significant change that the Preferred Alternative proposes.

SUPERINTENDENT DEAN: Well, I guess, it gets into how significant the

changes you, you're suggesting, but I, I mean, we don't believe in our professional judgment that the current situation is tenable or sustainable and that it's not working. We, we do see visitor conflicts, we see degradation of resource, we see people that are not welcome ' they, they tell us they don't feel like they can go to certain areas of the park ' so, how we steer that use, accommodating dogs in some way in the same areas ' whether it be some fencing or, or better signage or some enforcement, as you suggest ' in working with the city on, on, on the lands that they manage as well, I mean we're certainly open to, to any of those options.

SUPERVISOR WIENER: Now, does ' I know we've spoken before and I believe we're in agreement that GGNRA is not your typical national park, that it is an urban recreational area. Is that, is that your take as well?

SUPERINTENDENT DEAN: Well, it's a national park in an urban area, so it's, it's still that.

SUPERVISOR WIENER:.. And do you... SUPERINTENDENT DEAN: It is a national, it's a national recreation area, technically. We get that.

SUPERVISOR WIENER: Okay.

SUPERINTENDENT DEAN: But it is, but it is, but it is a national park area, and, and it's, I mean it is a park of the national park system. It's not, it's not a, in some ways, it's not any less or any different than Yosemite or any other national park as far as the policies that we have to adhere to. [talking within audience]

SUPERVISOR WIENER: If I, if I can just ask members of the public ' I understand a lot of us have very strong views about this, but under our rules, we ask people to refrain from speaking or applauding or booing or hissing or anything else ' we want to show respect. GGNRA did not have to come today. We don't have subpoena power. They're here to, to have a conversation.

Would, would you agree that recreational use is an important part of what GGNRA is, in terms of, it's in its name, it was in the Enabling Legislation.

SUPERINTENDENT DEAN: Absolutely. It's one of our core, core principles.

SUPERVISOR WIENER: Okay. And would you ' in terms of setting up how GGNRA is used, do, do you think it's important to take into account the needs of San Francisco, of its residents, of the people who are actually going to be using the facilities?

SUPERINTENDENT DEAN: Yes, it's, that's also one of our, our core tenets, is that we would accommodate the users that come to the park, whether they be from San Francisco or Marin or from Rhode Island ' it's, it's a national area.

SUPERVISOR WIENER: Now, in the DEIS it states that you did, the GG, GGNRA did consider the potential impacts on San Francisco, the Preferred Alternate, and that there would not be any significant impacts? Am I right about that?

SUPERINTENDENT DEAN: That's correct. That's what the document states.

SUPERVISOR WIENER: Okay, and what did GGNRA do to come to the conclusion that there would be no significant impacts of the Preferred Alternative on San Francisco?

SUPERINTENDENT DEAN: Well, it was not an exhaustive study; I will concede that. But basically we looked at the existing levels of use in city parks by dogs and users, and we looked at what we are proposing ' realizing again that it's not a ban, we're, we're, we're shifting people around within the existing parks that we manage, we're not banning them, to concentrate or focus the use in certain zones and to steer them away from other areas that might be more sensitive. We in the end did not believe that there would be significant impact on, on the adjacent parklands, whether they be city of San Francisco or San Mateo or Marin.

SUPERVISOR WIENER: Was there any numerical analysis..

SUPERINTENDENT DEAN: No, no there was not.

SUPERVISOR WIENER: Okay. And I don't know if this has, if anyone's mentioned this to you, but during the tsunami warning, Ocean Beach and Fort Funston I think were shut down as a precautionary safety measure. And I wasn't there personally, but I've been informed that Stern Grove had just, was basically overrun with dogs that day. And it's presumably that there may have been a causal connection there, was ' one happened right after the other. Were you aware, was, were you aware of that?

SUPERINTENDENT DEAN: I've heard that story as well, and, and and assuming that maybe for the moment, the example that there was a connection ' it, it wouldn't be exactly as we would propose under this plan because under the plan a mile of Ocean Beach would still be open to dogs off leash, at Fort Funston the uplands would be open ' certain areas, of course ' and the Fort Funston beach. So the tsunami, you know, situation was a bit different than ' everything was shut down on the coast, which is

not what we're proposing at all in this plan.

SUPERVISOR WIENER: Now, speaking of which, there is a ' I forget what it's called ' the compliance-based escalation?

SUPERINTENDENT DEAN: Yes.

SUPERVISOR WIENER: What's, what's the phrase?

SUPERINTENDENT DEAN: Compliance-based management.

SUPERVISOR WIENER: Yeah. So, my understanding is that if, if there isn't 75% compliance at least, then it will go to the next most restrictive..

SUPERINTENDENT DEAN: Correct.

SUPERVISOR WIENER: ..which would be no more off-leash.

SUPERINTENDENT DEAN: Well, whatever zone it was in ' if it was a leashed area, it would go to perhaps no dogs, if it was, if it was an off-leash area, it would go to a leashed area.

SUPERVISOR WIENER: And, so at that point there would be no more off-leash dogs permitted in GGNRA?

SUPERINTENDENT DEAN: Well, in that particular zone, wherever, wherever it would be ' the seven zones or, the 21 areas that we studied ' they were all looked at specifically, so..

SUPERVISOR WIENER: And then, the next step is if there would not be 75% or higher compliance, could it then go to a ban on dogs in that particular area?

SUPERINTENDENT DEAN: Potentially, yes, if it was a, if it was a leashed area that, that was problematic, it would, the next level would be no dogs.

SUPERVISOR WIENER: So if this plan is approved, we could in the future have a situation where parts or potentially all of GGNRA would be totally off limits to dogs.

SUPERINTENDENT DEAN: That would be a worst-case scenario, but we don't anticipate that, given the level of compliance we're asking for ' we're asking for 75%, which is like a C-. We're trying to be as flexible as we can, as reasonable as we can. And again, we would, before we did any changes, we would be stepping up our education, our signage and our enforcement to try and advise people that there's a, there might be change in the offing, let's

get back in, in, into the good column.

SUPERVISOR WIENER: And how is the compliance gonna be measured? Because one could imagine a number of different ways that could lead to a lot of different results.

SUPERINTENDENT DEAN: We would, we would have a, a third party, institution develop the criteria and the, the, the system. We have not developed that yet, but it would be third party developed and peer-reviewed. And it would be very transparent. The public would understand, it would be posted on the website as well as, I envision, posting on the website the progress ' how, how are things going out there in each area?

SUPERVISOR WIENER: Has this been tried anywhere else in the park system that you are aware of?

SUPERINTENDENT DEAN: They've tried it in, in different forms. Adaptive management is a, is a tool that we use, often resource-based. Cape Hatteras National Seashore in North Carolina is currently looking at something similar where they have off-road vehicle use on the beach, for example.

SUPERVISOR WIENER: How about with dogs?

SUPERINTENDENT DEAN: No, I'm not familiar with a dog example at the moment, no.

SUPERVISOR WIENER: So it would be fair to say that it's perhaps difficult to predict what level of compliance there will be?

SUPERINTENDENT DEAN: Well we, we actually do have some sense of, from some of our wildlife observers that are watching the plovers ' they, they do see dog walkers and they do make, you know, occasional notations ' so we do sense, have a sense of how things are going at Crissy Field now. But we believe with education and cooperation that we can get there.

SUPERVISOR WIENER: And then finally, in terms of the overall, of the overall incidents that are reported in GGNRA from any cause ' the percentage that are attributable to dogs ' I think from about five years ago, there were statistics that about 7% were attributable to dogs?

SUPERINTENDENT DEAN: I'm not familiar with that number, but I'm I'm not.

SUPERVISOR WIENER: Okay.

SUPERINTENDENT DEAN: Yeah.

SUPERVISOR WIENER: Do you, do you know if there's any more, any current data about what percentage.. SUPERINTENDENT DEAN: We've, we've had a lot of Freedom of Information requests for data, so I know we're crunching some numbers now, and I do know that as a percentage, it's interesting because when you compare it with ' the analogy has been made, with people, people- related incidents and dog-related incidents ' given the one slide I showed, where we've had various litigation and confusion and no clarity about what the rules are ' the, the level of enforcement has been up and down because there's been different direction given to our field rangers and staff about what is the current goal or what is the mission or what is the priority. There is obviously officer discretion as well ' you know, if you have a, a dog off leash or a dog problem versus something more serious going on, you know, the officer is going to go with the more serious case. So it's hard to sort of use that as a, as a measure. But we, we are going to share the statistics as soon as we can, and we had to redact a lot of the names and so forth, but we are gonna be posting that on our website.

SUPERVISOR WIENER: And will that be posted before the rule making is completed?

SUPERINTENDENT DEAN: Yes, yeah, yeah, I think some of it's already up there, but more to come.

SUPERVISOR WIENER: Okay, thank you. Those are all the questions I have.

SUPERVISOR MAR: Actually Superintendent Dean, I just had a couple of questions about Ocean Beach. And could you walk us through the, what is a Snowy Plover area ' so the Western Snowy Plover, one of the federally threatened species ' and then also just let us know what, what data do you have of, reports of dogs injuring the snowy plovers and in general kind of, again, the rationale for balance, as you call it, with the critical habitat and the sensitive species.

SUPERINTENDENT DEAN: Okay. Snowy Plover is a shorebird that, that frequents Ocean Beach about 10 months of the year. It is also at Crissy Field. But at Ocean Beach, the area where the birds are is between stairwell 21, which is in the middle of Golden Gate Park, on the western end, down to Sloat Avenue, Boulevard, roughly, so that area is permanently, not permanently but currently closed 10 months of the year while the birds are present. We do have observers that, that, that monitor the birds occasionally. It's, it's not as robust as we would have in the future. And what they observe are birds being flushed by dogs that are running through the area off leash or jogging along. So, you know, I could, I could provide more information if, if

needed, but again it's, it's against the law to disturb wildlife ' that's one of the rules that we have in all of our national park areas, so..

SUPERVISOR MAR: And I guess the proposed plan would reduce, or actually the plan would create a seasonal leash restriction from July 1 to May 15? That would be the proposal? Is that, is that right?

SUPERINTENDENT DEAN: I think it's actually, we were proposing to go to 12 months at Ocean Beach.

SUPERVISOR MAR: So it's extending it a full year.

SUPERINTENDENT DEAN: Yes, again, it's one of those things where it's confusing to people ' you know, am I in the right month or not? And so, 10 months versus 12 ' that was one where we decided to just keep the area from the Cliff House down to stairwell 21 as a, is a permanent off- leash area and then 10, 12-month closure on the area south.

SUPERVISOR MAR: And then back to the Snowy Plover. I would be interested in the Audubon Society and the other groups' information, but the SPCA and others are reporting that there, there are no official reports of a dog injuring or killing a Plover in the GGNRA. Is that correct?

SUPERINTENDENT DEAN: I'm not aware that that's a factual statement, but I, I mean, I know that the birds have been disturbed by, by dogs on both Crissy and Ocean Beach, and they're an endangered, they're protected by the Endangered Species Act, which is a federal law that trumps our, our dog policy, quite frankly, at the local level, the park level.

SUPERVISOR WIENER: Supervisor Cohen, do you have any? Okay, thank you.

SUPERINTENDENT DEAN: Thank you. SUPERVISOR WIENER: Next we are going to hear from the Recreation and Parks Department. Ms. Ballard? Thank you.

SARAH BALLARD, DIRECTOR OF POLICY & PUBLIC AFFAIRS, RECREATION & PARK DEPARTMENT: Good afternoon, Supervisors. Sarah Ballard, Director of Policy and Public Affairs for the Recreation & Parks Department. I'm here today to give you some information on our off-leash dog areas and briefly discuss some of the impacts that we expect if this, the proposed management plan of the GGNRA goes into effect.

Like the Golden Gate National Recreation Area, our job as a recreation and parks department is to be good stewards of the land, and we, too, have some sensitive natural areas and endangered species on our properties. And also,

like the GGNRA, our job is to balance multiple users' needs to recreate and enjoy nature. So we absolutely understand where they're coming from and what they're, what they're trying to achieve.

Our commission ' I think you all have a copy of this map ' our commission has approved 28 dog play areas or DPAs, as we call them, throughout our system. And each one of these was discussed and agreed upon through a, a lengthy process through our DAC ' our Dog Advisory Council ' and brought to our commission and approved there. And each one of the, the dog play areas is supposed to have essentially a Friends group that stewards the dog play area ' makes sure there are bags there, kind of does informal enforcement, and generally creates a sense of community around the dog play area so that the rules are enforced. In all honesty, we've had sort of mixed results with that plan, but that was the approach when these dog play areas were, were formalized by our commission.

It is important to note that while we do have defined dog play areas, we do have the problem of people using areas that are not for off-leash use. As Supervisor Cohen knows, we just had this issue in her district of folks using an athletic field for off-leash dog use and causing some significant impacts on the field. So we, we do struggle to, to enforce our off-leash rules.

This is a, just a brief list of the ' which you can't see, I apologize [laughs] ' of the 28 off- leash dog areas. You'll see that they're spread pretty much throughout the city. That was obviously one of the considerations, is that people have easy access to locations.

And then I've included in here a map ' and I frankly probably should have overlaid both of them ' but a map of where the GGNRA's proposed changes are to be and where the restrictions would be. It's important to note that, again, like the GGNRA, we have many of the same challenges. Over 80% of our dog play areas that I identified in the last slide are also near sensitive natural habitat. So, that said, while we do have a lot that we ' a lot of concern that we share with the GGNRA, we do have some significant concerns about this plan, and I will just take you through those briefly.

Most importantly, I think, the study does not adequately speak to impact on lands outside of the jurisdiction of the Golden Gate National Recreation Area. As a department, we think that is problematic. It stands to reason that if you restrict access in a certain area of the city to dogs, they will necessarily go somewhere else, and it's our view that that somewhere else will be our parks, and will cause an additional maintenance burden and enforcement burden for the city. And as Supervisor Wiener mentioned, we had some anecdotal evidence of that with the tsunami closure of, of Ocean Beach last month.

The EIS ' the, the environmental study of the proposed management plan ' also references limiting the number of dogs that professional dog walkers are allowed to have with them at any time, and floats the idea of creating a permit program or training for dog walkers. The city does not currently have either of those, either of those things in place. And while they are ideas that, that have been discussed at a variety of points in time at our commission and elsewhere, it could be problematic if there were ' for, for residents and citizens ' if there are different rules in different jurisdictions. And so it is our hope that as a part of this, presents an opportunity for the department and the city to work, to continue to work collaboratively with the GGNRA to make any of those proposals as seamless as, as possible.

And lastly, as Supervisor Wiener just spoke about, the 75% compliance language presents some significant concerns for us in that if they do, if the areas do continue to progress into, from on leash, from off leash to on leash to eventually no dogs, I can imagine that the burden on the city properties would be even more significant.

I think our, our, our largest concern is at this point we don't have empirical data or a good way to help you as policy makers evaluate impacts on, on city land because the document didn't really study where ' their document didn't really study where the users are coming from, how often, how often they frequent the place, and as I said, the particular location, and as I said earlier, where they might go instead if, if the certain area that they tend to frequent is not available.

So that's a brief wrap-up of our concerns and I'm available for any questions.
SUPERVISOR COHEN: Thank you. Hi Sarah.

SARAH BALLARD: Hi SUPERVISOR COHEN: Okay, I was curious to know if, if you guys have ' you being RPD and the GGNRA ' have had any kind of a conversation about, to address your concerns.

SARAH BALLARD: We have. We have met with the GGNRA ' twice?

FRANK DEAN: Yes.

SARAH BALLARD: Twice about some of the concerns that we have.

SUPERVISOR COHEN: And were your concerns addressed? Did they answer them? Did they acknowledge them?

SARAH BALLARD: I would ' yes, yes. We have a, a long partnership and a history of working really well together. We share borders on a, on a variety of properties. I think the, the question for the city now becomes the process by which concerns are addressed and how, how we are comfortable with

when and how they're addressed. I would, I can let the superintendent answer that question, but I, I think he's pretty clear on what our department, what the concerns from our department are.

SUPERVISOR COHEN: Oh thank you, sure.

SUPERINTENDENT DEAN: What was the question?

SUPERVISOR COHEN: So the question, to just repeat it again, was ' I was curious to know if you had an opportunity to sit down with Rec & Park to talk, to discuss with, to discuss the addressing of their concerns ' concerns like impact on lands that are outside of your proscribed area.

SUPERINTENDENT DEAN: We, we did. And once, when the plan, we did speak to the city Park & Rec Manager and General Manager and his professional staff a few times, and most recently when the plan was about to be released, we did walk them through it. And we did talk about the, there was a concern that they raised at that point about potential impacts on city parks. At this point, you know, we don't have a lot of data and ' nor do they ' but it's somewhat speculative as well to say there's gonna be an impact. We don't know that, nor do they. But as I said before, we're willing to work with the city and our colleagues and try and, and sort that out.

You know, again, we're not banning dogs, we're still allowing them and we're just sort of putting them in different places or fewer places, but it, you know, Phil Ginsburg has told me as well that some of the dog parks are under-utilized, so I mean, I don't know if that's true, but it seems like there is some flexibility here and I think the city has rules in place, leash laws in place that we're now just trying to do ourselves, so it seems a bit awkward that, you know, we're being asked not to enforce rules that we have in other national parks, in other national park areas, and the city has those same rules, but we're not, we're being asked to stand down and not do that and manage our own properties.

SUPERVISOR COHEN: Thank you.

SUPERVISOR WIENER: Ms. Ballard ' in terms of the issues that have been discussed, are, is Rec & Park, are Rec & Park and GGNRA in agreement on those issues or is it an ongoing discussion?

SARAH BALLARD: I would, I guess I would say it's an ongoing discussion. We've had productive conversations around the idea of, as I mentioned, commercial dog walkers and the number of permits and the number of dogs they might have, that it probably makes sense for the city and the Golden Gate National Recreation Area to do something jointly. I think we continue to maintain that if this plan is implemented, there will be impacts on city parks, and remain concerned that their environmental

document does not study and quantify those.

SUPERVISOR WIENER: Thank you.

SUPERVISOR MAR: Yeah, Ms. Ballard, I was just going to ask you, that, let's see, it looks like the GGNRA plan would pretty much create off, eliminate off-leash dog areas in Lands End and Baker Beach, and the map that you gave us has the red areas, so it impacts a small part of my district, District 1, and Supervisor ' I guess it would be Mark Farrell's district ' the area that's along the Presidio, and I'm just looking at our map also of the existing Recreation & Park off-leash areas in the city. And I know that the GGNRA says that we have 30 off-leash dog parks and that we have more off-leash dog parks than LA, Boston, Chicago, Miami, Denver, and Sacramento combined, but still I could see the, the dangers of having more people in Mountain Lake Park, so that the, there's very few off-leash dog areas in the western side of the city; besides the two Stern Grove areas that you mentioned, there's only a couple in Golden Gate Park on the western edge, on Fulton and Lincoln, and then there seems to be one near the northwestern edge of San Francisco State near Lake Merced, but I'm just wondering, what do you think would be the impact on those west side areas with the proposal to eliminate off-leash dog areas in Baker Beach and Lands End.

SARAH BALLARD: That is probably the most significant area of concern, and I think you've identified possible impacts correctly in that Mountain Lake Park, the dog training area in Golden Gate Park, as well as Lake Merced could be heavily impacted.

I think the other thing that's worth noting, that we may want to look at, is from an environmental perspective: if users can no longer walk to locations near their house and they're actually getting in their car to drive to a location, to an off-leash dog area across the city or one that they, you know, a larger one ' McLaren Park has our largest off-leash dog area in our system. And if someone's driving across the city to utilize those, those spaces, then there's also an environmental impact there that's worth noting.

SUPERVISOR WIENER: Thank you very much. Next we will hear from Rebecca Katz, the Director of Animal Care and Control.

REBECCA KATZ, DIRECTOR, SAN FRANCISCO ANIMAL CARE AND CONTROL: Good afternoon, Supervisors. My name is Rebecca Katz and I am the Director of San Francisco Animal Care and Control, your city's open door shelter.

You will hear a great deal of testimony today about what may be lacking in the National Park Service's draft Dog Management Environmental Impact

Statement. You have and will continue to hear more about the prospective impacts on our city parks and the impacts on users of the GGNRA property. But I'd like to take this opportunity to address our concerns ' ACC's concerns ' about this plan as it relates to animal welfare more specifically. ACC is responsible for stray and unwanted domestic animals and finding them new homes, but we also provide rescue and facilitate wildlife rehabilitation for sick, injured, and orphaned animals throughout San Francisco. Accordingly, we are an advocate for dogs and off-leash play as well as for other animal welfare issues, including coexistence with local wildlife.

The National Park Service's Dog Management Plan for the GGNRA notes that the plan is designed to ensure the protection of natural, cultural, and recreational resources on that land. The primary supporters of that plan share our concerns about the impact on native wildlife. But the issue has come forward to the Board of Supervisors and other elected officials as a matter of choosing the side of dogs or that of natural resources ' either/or.

ACC does not view this as an either/or situation. We share the advocates' concerns about wildlife and other environmental impact. However, the EIS document presented by the National Park Service does not clearly demonstrate that the presence of off-leash dogs is the sole or even the primary cause of damage to native species. The EIS document lacks foundation or analysis about the cause of any impact. The mere fact of off-leash dogs being present does not lead to an automatic conclusion that those dogs have impacted an area that is also frequented by people without dogs or by people with dogs on leash, horses, hang gliders, the Park Service rangers' ATVs, or other predatory wildlife.

The National Park Service's conclusion that restrictions and a compliance-based enforcement that could ultimately lead to an outright ban on dogs being allowed on GGNRA property does not contemplate the urban environment in which those lands sit or the interests of the people of San Francisco and the Bay Area.

Moreover, the Preferred Alternative is overly restrictive, given that the National Park Service has not taken intermediate steps to educate the public and users about what is required for coexistence. In fact, most of that has been done by local dog organizations interested in preserving their access to off-leash areas.

It seems that the National Park Service has not considered various options at their disposal prior to implementing restrictions. For example, they could implement an adaptive management plan that might include signs, timed use, fencing, enforcement of laws or rules similar to our local pooper

scooper laws, licensing laws, or permitting options.

We have met with the GGNRA Superintendent, Frank Dean, and Director of Communications Howard Levitt from the National Park Service to discuss our concerns. And of course, we share their concerns about visitor and employee safety, wildlife protection, and maintaining resources for future generations. We would like to work with them on solutions that would allow for more flexibility and coming up with a plan that addresses the needs of San Francisco residents, both human and non-human. Unfortunately, up to this point they have not seemed receptive to suggestions for compromise within the draft plan. Peaceful coexistence requires understanding and movement from both sides and is the only way that a city like San Francisco, with such diverse interests, can seek solutions to our challenges.

Without a firm commitment from the National Park Service to consider the concerns of San Francisco stakeholders, on behalf of San Francisco Animal Care and Control, I feel compelled to oppose the Dog Management Plan as presented, which dramatically changes the nature of the current and intended use of GGNRA land.

And I am available for questions as well.

SUPERVISOR WIENER: Any questions for Ms. Katz? Great. Thank you very much, Ms. Katz.

REBECCA KATZ: Thank you.

Correspondence Type: Letter

Correspondence: SUPERVISOR WIENER: We also have representatives from the Port of San Francisco. Ms. Bach?

CAROL BACH, ENVIRONMENTAL MANAGER, PLANNING AND DEVELOPMENT DIVISION, PORT OF SAN FRANCISCO: Good afternoon, Supervisors. My name is Carol Bach. I am an environmental manager in the Port's Planning and Development Division. And I came today primarily to be here in case there were any questions specific to Port parks and open spaces, but I'd like to offer that, some information ' that because of the nature and location of Port parks and open spaces, most of them are not significantly used by off-leash dogs or even to a significant extent by on-leash dogs. The exceptions ' there are two exceptions ' Warm Water Cove and Heron's Head Park, where there is more use of those areas by dog owners. And of those, only Heron's Head Park, which is on our

southern waterfront, just adjacent to the former Hunter's Point power plant ' only Heron's Head Park is governed by a policy prohibiting off-leash dog use, although with expansion of the park and construction of improvements, we are going to be this summer constructing an off- leash dog play area just outside of the current boundaries of Heron's Head Park.

Unlike Rec & Park, as I mentioned, our parks and open spaces tend not to be close to sensitive habitats. They're pretty urban areas, for the most part. Again, Heron's Head Park is the significant exception to that. But like Rec & Park we struggle with enforcement of the dogs-on-leash policy.

So, that's what I wanted to advise you. SUPERVISOR WIENER: Okay. We have two more informational speakers before, and then we'll get to public comment. Next I want to invite up Ken Weiner ' no relation [laughs] ' he spells it wrong, too [audience laughter], who came down today from Seattle. Mr. Weiner is a partner at KL, K&L Gates and is the founding chair of the environmental land use and natural resources west coast practice of that firm. He is the former Deputy Director of the White House Council on Environmental Quality and is gonna talk to us about the DEIS and NEPA.

KEN WEINER: Thank you. I represent Crissy Field Dog Group, which is a nonprofit organization dedicated to promoting responsible dog ownership and off-leash dog walking in GGNRA. Crissy Field Dog Group participates with SF SPCA and other community and recreational groups in Eco-Dog, a coalition of groups that advocate for responsible dog guardianship and environmental stewardship. And paralleling Michael's remarks, many of our members are also members of many of the groups he mentioned as they enjoy GGNRA now and hopefully for the future because of its natural values.

Our focus and the focus of our remarks is to try to depolarize issues and find ways to support GGNRA's mission to preserve natural and recreational values and scenic and cultural values unimpaired for current and future generations. And I, I'd like to, first we'd like to acknowledge the effort that GGNRA has put into this and the excellent introduction by Superintendent Dean at this hearing. These are difficult public lands management issues.

We think the city's and GGNRA's charters can help guide us. You all know San Francisco's charter ' it begins with a home rule goal, to "improve the quality of urban life." GGNRA was born from the simple logical premise that open space is vital to the San Francisco metropolitan area, that it's an essential ingredient to the quality and design of our urban environment. GGNRA, GGNRA was established by Congress in 1972 to meet the recognized need for urban recreation and for open space as the San Francisco metropolitan area was growing and becoming increasingly

developed.

The Park Service will tell you that it has to manage all units of the national park system consistently with its Organic Act to protect natural resources from impairment. This is accurate. And it's also accurate that it has to manage each unit consistently with the Congressional Charter for that unit ' in this case, the Golden Gate National Recreation Area.

President Nixon's message to Congress in February 1972 proposing the creation of GGNRA stated "This proposal would encompass a number of existing parks, military reservations and private lands to provide a full range of recreational experiences." Now when people like to cite legislative history, I like to go back to original sources. And when I was working on the President's 1977 environmental message and program, I happened upon, in John Erlichman's files, a copy of the original transmittal of the proposal for the Golden Gate National Recreation Area legislation to Congress. So this is from February '72, about 40 years ago. And in that transmittal, the Secretary of the Interior explained that while state and local governments have provided some open space, "the potential for park and recreational development of a much greater acreage should be realized in order to meet the demonstrated need for recreation space" and a variety of outdoor recreation uses.

I point this out because someone told you that the local parks are enough and that the purpose of GGNRA is to provide just natural areas. Clearly that was not part of the original proposal and intent for GGNRA. That original intent identified needs, noting for example that on the south side of the Golden Gate, this heavily used urban parkland, including Fort Mason, Gas House Cove, Crissy Field and Marine Green, Marina Green, and Congress's intent was stated in the 1972 bill reports for the legislation, that GGN, GGNRA "will ensure its continuity as open space for the use and enjoyment of present and future generations of city dwellers."

Well, dog walking is well known and recognized by Congress as part of this use and enjoyment. In describing part of the area in the city, the Senate and House reports both commented that the proposed area "will satisfy the interests of those who choose to fly kites, sunbathe, walk their dogs, or just idly watch action along the bay." The official legislative history notes, "The legislation will if enacted capitalize on the availability of this important unequaled resource in the San Francisco region by establishing a new national urban recreation area, which will concentrate on serving the outdoor needs ' [that is], which will concentrate on serving the outdoor recreational needs of the people of the metropolitan area. As an urban recreation area it must relate to the desires and interests of the people, but it must at the same time, as has been said, be managed in a manner which will

protect it for future generations."

These were also the city's understandings in transferring land to the GGNRA. As you may know, GGNRA has a mission statement which states the mission of the Golden Gate National Recreation Area is the preservation, unimpaired, of the natural and cultural resources and scenic and recreational values of the park for present and future generations to enjoy. And that is all we ask.

So in looking at alternatives, I'd like to just make a couple observations to share with you our conclusion that the draft EIS doesn't provide a solid technical basis for dismissing the No Action alternative when many areas under the current policy are working. And let me make a, just a simple clarification, which is ' the No Action Alternative does not mean do nothing, it's a, it means implement the current management plan. The current management plan calls for education, outreach, enforcement. It doesn't say do nothing, and, and that's important in thinking about the No Action alternative as not being a continuation of the status quo, but whether or not the status quo can be improved by doing better under the parks, under the Park Service's National Recreation Area plan.

You may know that the plan is being developed in the context of a larger update to the GGNRA management plan, so this is not just about dogs. If the current Preferred Alternative is adopted, based on the type of analysis in the draft EIS, it will reflect a larger direction on curtailment of recreational uses in the Recreation Area.

An EIS is required to examine the human environment. The federal NEPA rules define the human environment as "The human environment shall be interpreted comprehensively to include the natural and physical environment and the relationship of people with that environment." You know in your own CEQA documents, and in other NEPA documents in which the city has been involved, that it's typical to have a recreational section that looks at recreation impacts. This draft EIS has no detailed analysis of adverse impacts to recreation in the affected area, including indirect impacts and related mitigation measures.

In thinking of this definition, GGNRA's own legislative history and your own charter and their charter, one of the most remarkable statements in this draft EIS is "The quality of urban areas is not a significant factor in determining a dog management plan." As a Land Use Committee, you know better than most a good environmental design, just as you were hearing in recent presentations this afternoon, can solve many controversies that seem intractable, including how open space parks and trails are designed. But this is dismissed as not relevant in the proposed plan.

We don't disagree with the objective of clear rules and signs, of better compliance and of fewer conflicts, but the severe restrictions in the Preferred Alternative, though not a ban, are not yet balanced. In short, GGNRA has more work to do to examine all reasonable alternatives as required by NEPA, and we hope that you will encourage them to do just that.

So in conclusion, I'd like to emphasize that we really do appreciate the outreach by GGNRA at a series of public meetings on its plan and EIS. Those took a lot of organization and staff time, and regardless of whether people like the format of the meetings, there were a lot of thoughtful comments and suggestions that were made, and GGNRA staff say they are listening with an open mind. And we hope that's true because the draft plan and EIS didn't reflect a lot of the comments made in the scoping process earlier, and some of the comments ' thoughtful, non-ideological comments at these meetings ' were citizens asking about how the compliance-based program would work, how it would be measured, whether it's truly an adaptive management program, whether it will really involve reaching out for education and teaching people, as was suggested earlier by the superintendent, before tickets are issued.

Neighborhood residents suggested where separate access paths to a beach for dogs and people could easily resolve a longstanding problem area at Fort Funston and be designed to restore native species at the same time and blend into the natural environment. And people have suggested areas where they could walk their dogs just on leash, not even off leash, on a ridge top. Or in one of the most visited areas ' Crissy Field ' I heard people wondering why a former airfield would become off limits and suggest better ideas than closing 75% of the shoreline habitat, the shoreline area right now, even though it would be possible to protect the Snowy Plover habitat without compromising that.

So this isn't about environmental development, it's about meeting two environmental needs ' natural areas and recreation in an urban area, as ACC has said, and the Board of Supervisors hasn't been reluctant in the past to stand up for the needs and rights of its residents in the GGNRA. Some of you recall your December 2001 resolution when park management changes to the rules didn't adequately engage the community. Well this time, GGNRA is using the NEPA process to seek the comments of San Francisco and its citizens, and we appreciate their efforts, and we know it's not easy.

For the quality of the city, the quality of the environment, the quality of the neighborhoods and in short for the quality of urban life, as it says in the San Francisco charter, we ask you to ask GGNRA to take a hard look at the urban environment and become a partner with you and with us to improve its proposed plans so that both natural and recreational resources are

preserved.

SUPERVISOR WIENER: Okay, thank you, Mr. Weiner. [applause]. Okay, and then finally, before we ask for a response from GGNRA, we'll hear from Sally Stephens, who is the President of the Animal Control and Welfare Commission here in San Francisco. Commissioner.

SALLY STEPHENS, CHAIR, ANIMAL CONTROL AND WELFARE COMMISSION, AND CHAIR, SFDOG: Hi, thank you. Yes, as you said, I am the Chair of SFDOG, also the Chair of the Animal Control and Welfare Commission.

I'd like to say just real briefly, one comment is that in all the discussion about endangered species, there is no federally designated critical habitat anywhere in the GGNRA, especially for the Plovers or any of the other ' especially in San Francisco.

I think that there's literally thousands of people who walk every day in the GGNRA with their dogs, and it's probably the most diverse group of park users that you're ever gonna see. You have kids, seniors, gay, straight, disabled, every race, ethnicity, every social and economic class. We are environmentalists. We enjoy being out in open space with our dogs, as people have done for, for thousands of years. And we actually embody the Park Service's recently announced Healthy Parks Healthy People campaign, yet they want to force us out. At all the sites in GGNRA where dogs have been walked off leash legally ' and this was determined by two courts, that the '79 Pet Policy was a legal management [coughs] (excuse me), management tool. For decades vibrant social communities have grown and flourished. This is the human environment that Ken Weiner was mentioning just a minute ago. We see the same people the same time, whether it's rainy, foggy, windy, no matter what, and even on those rare sunny days in San Francisco. Friendships are forged and nourished, and in a city the size of San Francisco, community such as this is a precious resource. It should be encouraged, yet again this plan will essentially destroy those communities.

We've only ever been able to walk dogs off leash on 1% of the GGNRA land. That's important to remember ' 1% -- yet they now want to cut that by 90%. In San Francisco city limits, it's about 75% that they're cutting. It's Marin they're cutting more, in San Mateo there are basically no off leash [areas] whatsoever.

Normally when you make such a dramatic cut, you need really compelling reasons. And if you actually read through the 2400-page DEIS, there's nothing there, they're not there. There's, it's full of impacts that could happen or might happen but very little evidence that any of these potential impacts actually have occurred. And believe me, they've been looking for them. And

they don't see them.

If you read the DEIS and look at the reports it cites, it cites, and actually read the reports, you see that dogs have very little negative impact on the natural resources in the GGNRA, that dogs disturb wildlife less than people do, and that dogs pose no threat to the survival of the Snowy Plover. There's no safety issue in the GGNRA with regards to dogs. And as mentioned, people are involved in and cause 98% of the serious incidents that the GGNRA law enforcement data report. Dogs are only 2%. If there were these huge amounts of, of dog bites that people portray it as being, it would be in those reports. And it's not.

What are things that are not in the DEIS? There's no study of the impacts on city parks. They basically say well because there'll be some small area open for dogs at Fort Funston or Ocean Beach or Crissy Field, people won't go into the city parks. But the reality is that people will go into the city parks because those areas will become congested even in the GGNRA; when you force everybody into a smaller area, you're gonna get congestion. People are gonna move into city parks. And the city parks cannot handle that; they're much smaller. There's only 43 acres total of off-leash space in San Francisco city parks. And of that acreage, the Rec & Park's Natural Areas Program is calling for a reduction of 15%, so when the Natural Areas Program plan comes out in, sometime this year, we're gonna see a proposed reduction of off leash in city parks as well. It's gonna be, you know, it's compounding.

And just to give you a, a sense of that this isn't just dogs, the Coalition of San Francisco Neighborhoods at its March meeting took a position opposing the Preferred Alternative because it didn't look at the impact on city parks. And I think the fact that tsunami Friday happened right before that probably had an impact. There's no study 'as, as Mr. Weiner said ' there's no study on the impact on the human environment, social communities, human health, all those impacts. We know for sure, there's many studies come out that people that walk with a dog get more exercise than people that walk alone and that they actually lose more weight than people who walk either alone or with other people.

There's no study on the impacts of city animal shelters and on dog behavior. At the Commission in March, last month, we heard testimony from dog behavior experts and rescue groups that such a significant loss of off-leash access and the resulting overcrowding of city parks will lead to an increase in problem behaviors in dogs. To a person, well known dog behavior experts say that off-leash exercise creates better behaved dogs. Issues such as dog bites and aggression are far less common in San Francisco than nationwide, largely because there is so much off-leash access. Dogs are far more likely to display aggressive behavior towards other people and dogs when they're

on leash.

To quote Trish King from the Marin Humane Society, "It is very likely that behavior problems will increase dramatically if the amount of space dogs can use is reduced. This in turn may lead to the relinquishment of more dogs to animal shelters. The number one reason that dogs are relinquished, turned in to shelters, is because of behavior problems."

To quote Ian Dunbar, internationally known dog behaviorist, "There's absolutely no doubt in my mind that restricting off-leash areas for dogs will be a social, public health, and legal disaster for parks and cities." And I have given you copies ' oh, actually I didn't give them to you [laughs], I am now ' copies of the statements from various experts on dog behaviors. And these are basically nationally known experts. This isn't just, you know, some person just randomly thinking, this is people who's made their living out of studying animals and dogs.

Increasing the number of surrenders to shelters is a significant impact on the city. It's city resources at the shelter. We have tried to have a no-kill philosophy in the city, that any potentially adoptable animal is not euthanized at city shelters, but the more ' if you put more of them in to the shelters, it's likely some will fall through the cracks. That's, that has a significant impact on the city, and we don't want that.

The Commission voted 5 to 2 to recommend that the Board oppose the Preferred Alternative because it didn't look at these impacts on dog behaviors.

So why is there all these calls to restrict off leash. It's basically an extreme view of what an urban recreation area or an urban park should be. It's sort of like the idea that, it's like a museum where you look at things through, you know, from behind glass, glass walls or where things are all roped off, and you're, you're stuck on a boardwalk with a sign that says Do Not Enter, Do Not Go Here. It's a look-but-do-not-touch idea. We feel that urban recreation areas are for active recreation ' that's the reason it was created and that's what they should be for. In this densely urban Bay Area, our urban recreation areas are our backyards and our sandlot, sandboxes. The people who created the GGNRA understood; that's why there's so much in all the enabling legislation and the, and the hearings about preserving recreational open space.

We feel, as the creators did, that this is about sharing space, that people, dogs, and nature have coexisted in the GGNRA for decades and we want to see that continue to go for decades to come.

This is not a pristine wilderness. It's located within the city limits of a city of

800,000 people. Fort Funston has a missile silo under the parking lot. These are not pristine wilderness. Yet we're being told it has to be managed as if it, as if it was.

During Negotiated Rulemaking we were told by Barbara Goodyear, U.S. Attorney who advised the GGNRA in legal issues, that all units of the National Park Service have discretion in how they manage their units. For example, you can walk a, have a dog off leash in national preserves as long as they're hunting and killing animals. You don't manage Yosemite Valley with the expectation that people will have a solitary wilderness experience. Therefore, the assumption is, or, continuing that, is you don't manage the GGNRA with the expectation that people will have a solitary wilderness experience, yet that's what they're trying to do.

The, the ' we want to continue to share that 1% of GGNRA land on which we've ever walked our dogs off leash, and we basically want to keep the R in the GGNRA. I think that, that Superintendent Dean's comment ' we don't have a lot of data ' is telling because they're making radical changes in use of this area ' the GGNRA areas ' without having done the data and the work that they need to know whether or not they truly need to do one. They can't even give you statistics to tell you how many people are visiting the GGNRA any day, that sort of information ' how many have dogs, how many don't. Those are the types of things that should've been looked at before they even came up with this DEIS. If you have any additional questions, I'm happy to answer them.

SUPERVISOR WIENER: Any questions? Thank you, Ms., Commissioner. And then, before we get to public comment, if GGNRA would like to respond to anything? If ' you have the option now to do so. It's you're, it's, it's your decision. Okay, thank you.

Okay, we'll now go to public comment. So for those who are, you can, if anyone else has cards, you can bring them up to Ms. Somera here, who will hand them to me.

For those who have not done public comment before, here's how we do it. Everyone will have 2 minutes. You do not have to take the full 2 minutes [laughter]. We have a, I have a lot of people signed up and that's great. You can take the full minutes, the full 2 minutes, but you don't have to, and if you want to say I agree with what so-and-so says, that's perfectly fine as well. At, with, when you have 30 seconds left, there will be a very soft bell that goes off, and at the end of your 2 minutes, there will be a very loud bell that goes off, and that is your cue to, to finish up your remarks.

I'm going to call ' and again, I want to remind people, we please request no applauding, no booing, no hissing, nothing, just good old talking. And I'm

going to call up about 10 people at a time. If you're in the overflow room and you hear your name, just come on down, and then you can line up. And I would just ask that when you come up, say what your name is and then when the person ahead of you finishes, just come right up right away, you don't have to wait for me to call you so we can not have big gaps between people.

So we'll start with the following people, and I also apologize for butchering people's names, which I will do: Sandra Hazanow, Laurie Routhier, Lisa Kueukdogerh, Pam Hemphill, who is also a commissioner on the Animal Control and Welfare Commission, Jan Blum, Arthur Feinstein, Feinstein from the Sierra Club, Amy Meyer, Mayer, Neil Desai, Cheryl Traverse, Vicki Tiernan, Andy Moore, and Carol Arnold. So, Ms. Hazanow.

SANDRA HAZANOW, DVM: Thank you, Supervisors, for this opportunity. I am Sandra Hazanow. I'm a veterinarian and I'm the President of the San Francisco Veterinary Medical Association. I come here today as an individual and not as a representative of the organization because I have not been given permission from the organization to speak on their behalf. We didn't actually bring it up.

If you can bear with me, I kinda want to take this issue to, to something that Sally had just mentioned. And it's about the behavioral perspective. In my 20 years as a veterinarian in San Francisco and surrounding communities, I've noticed an interesting thing: I think it's a pattern that's associated with socialization ' the dogs in San Francisco that I treat have to be muzzled far fewer times during regular routine handling than the dogs in surrounding communities. I think this, this lends itself to, clearly to an understanding that the dogs are much better socialized, more trusting of people, and thus less aggressive. They're less fearful of routine handling and much more amenable to living as happy healthy animals within our communities.

Interestingly, I was thinking about this on my way over ' even within the city I've noticed some differences, and those areas very close to the Presidio, where I practiced for 10 years ' the dogs there are super friendly, they all go to the park, they all go to Presidio, they all go to Crissy Field. And where I currently practice ' not so much. Many of the dogs are little bit restricted, their behaviors are a little more restrained, and they are cautious. So, so even for like the happy-go-lucky hound, leash restriction can actually cause problems. Many of these dogs can develop a problem that was mentioned, called barrier frustration, and dogs that don't have the opportunity to behave as normally as they would if they're [bell] roaming freely..

SUPERVISOR WIENER: Thank you. SANDRA HAZANOW: Anyway, so in summary I think that the proposal to restrict the ' that's 30 seconds, right?

[referring to bell]

SUPERVISOR WIENER: No, that was the 2 minutes, yeah.

SANDRA HAZANOW: Okay, sorry. I thought that was the soft one. I apologize.

SUPERVISOR WIENER: Yeah, so, thank you very much. Next speaker.

LAURIE ROUTHIER: Hi, good afternoon, Supervisors. My name is Laurie Routhier and I am the director of the animal shelter at the San Francisco SPCA and additionally have served, served for years on our city's Dog Advisory Committee and the Negotiated Rulemaking committee for dog management.

And I would like to say thank you ' thank you for working to improve the GGNRA's proposed plan so that it both protects the natural resources and the recreational values of our city. Their plan is overly restrictive and it represents a major departure from the established balanced use of parklands that's prevailed for over 40 years. There's really plenty of space for balancing the needs of a diverse populace and with good park trails and, park management and trail management, the diversity of experiences can be preserved.

By vastly off-leashing [laughs] ' off leashing! I'm sorry. By vastly reducing off-leash recreation in the GGNRA, that'll have a negative impact on tens of thousands of dog guardians and of course, as has been mentioned, also the behavioral health of dogs. We know that people and dogs really have the, get the same benefits from playing outside and exercising. And in my position at the shelter and as a former dog trainer, I know how vital it is that dogs get off-leash play. It's been mentioned, and I think it's particularly important to recognize that currently less than 1% of the GGNRA's lands are available for off-leash activity, and this would reduce it even further. And with 76,000 acres being discussed, there's plenty of space for us to find a balance. And really neighborliness is a lot more effective than, you know, setting up battle lines. I think that we have a lot of opportunity to educate our community, put up some better signage and fencing and so forth to reach the goals.

Thank you.

SUPERVISOR WIENER: Thank you very much. Next speaker.

LISA KUEUKDOGERH: Good afternoon, Supervisors. My name is Lisa Kuekdogerh. I am disabled and I do not have a dog. Last year I had to undergo grueling medical treatments. I am weak and even coming here to

comment is an effort. I am grateful for getting the chance to speak.

For both my mental and physical health, I made a point to visit Fort Funston when I could. I knew getting out of my social isolation was essential. I knew watching dogs play would bring me joy. I knew encountering the occasional extraverted dog would give me the chance to pet a dog and get a few face licks.

My medical team told me I had to start walking as often as I was able. Given my physical state and being a woman, I wanted to be safe. Fort Funston with its open air format and the natural comings and goings of people and off-leash dogs was the perfect match.

After not showing up at the Fort for a few days, a voice called out to me: How ya doing? Haven't seen you lately. I was surprised and had no idea who was talking to me. She was a professional dog walker. I quickly learned there was a vibrant social community at the Fort and that I was welcomed into it. She continued to keep tabs on me, and does to this day. She has driven me to doctors' appointments and surgeries. She has become a vital part of my social support network.

I have never encountered a more cohesive, caring, and self-policing community. I have met other disabled and senior folks who visit Fort Funston, and for many of the same reasons I do. One woman told me she knows if she collapses on the trail due to her health condition, as happened to her once before, she and her dog will be taken care of by the people there.

Finding this community has been essential to my well being, and I don't want to see it disappear. This is the Fort Funston I have come to know and I wanted you to know about it, too. Thank you for your time.

SUPERVISOR WIENER: Thank you very much.

CHERYL TRAVERSE: Hi. My name is Cheryl Traverse and I'm here representing senior citizens who own dogs. And I went to Fort Funston yesterday and just kinda took a little snapshot of what was going on. This was a Sunday, nice day in the park. [referring to slide] Here's my vicious Schnauzer. You'll notice most of the people are walking on the path. There's not many people off the path at all.

Here's another view. You see most of the people walking on the paths, not off the path. Here's a place down near the Snowy Plovers. Notice that the fences are not up and active. There are no signs warning you not to go off the path. But still, most of the people are on the path, all the way up to the top of the hill here.

This is how we recreate when we have dogs. And when we're seniors, we need the 40 minutes of work to get us down to the, to the bottom and back, to live a long healthy life. Here's another view that'll give you an idea.

So I just wanted to say that, you know, if it's not broken, don't fix it. I mean, where is the data that this is wrong and not good? There's nothing here going on that would be impactful to the, to the environment. There aren't even signs and fences. I've been doing this for 25 years, walking over here. They took the fences down saying this is a habitat ' that's gone now, I think because of the sewer project ' the, the, the pipe that's being built there. All the fences and the don't go here, don't go there.

So I just wanted to educate people on what recreating with a dog is, and that, the fact that, you know, it doesn't look very dangerous to me.

Thank you.

SUPERVISOR WIENER: Thank you very much. Next speaker.

CAROL ARNOLD: Good afternoon. My name is Carol Arnold, I'm a third generation San Franciscan, a long-time environmentalist with membership in Defenders of Wildlife and the Nature Conservancy among other groups. I'm now retired, but my entire career was devoted to conservation and restoration of California's natural resources. I also served on the GGNRA Negotiated Rulemaking Committee and the Natural Areas Plan in regard to ' the city's Natural Area Plan, in regard to dog policy.

I'm here to voice my opposition to the Preferred Alternative to, of the GGNRA's EIS on this proposed Dog Management Plan.

It's been my experience working in conservation for many years that dense urban areas like San Francisco are not where cash-strapped resource agencies should be devoting most of their limited resources. We all know that people in all their diversity and pursuing all their various activities, recreational or otherwise, impact the natural environment ' wherever they are.

Because of this, agencies should focus their efforts on making the urban environment as enjoyable a place to live for as many people as possible in order to avoid the much greater impact that occurs when residents, feeling the pinch of restrictions, flee to the suburbs or rural areas, where natural habitats are significantly more intact and therefore more vulnerable.

GGNRA's proposal will leave a miniscule one-tenth of 1% of lands managed by them available to off-leash dog walkers. This is not only in direct violation of the 1979 Dog Policy in effect when the city-owned lands

were transferred to GGNRA, but is blatantly unfair and will create a huge enforcement problem for the city when numerous dog owners arrive to walk their dogs in city parks.

I urge you to do the right thing and vote to approve the resolution before you today. And thank you so much for allowing this true public hearing, which was denied to us by the GGNRA.

Thanks.

SUPERVISOR WIENER: Thank you. Next speaker.

VICKI TIERNAN: Good afternoon, Supervisors, and thank you so much for this hearing. My name is Vicki Tiernan and I just wanted to speak a little bit about the history over the last 10 years.

In 2001 the Citizens Advisory Commission sat poised to, to eliminate the, the 1979 Pet Policy entirely. The Pet Policy was derived as a result of extensive public hearings. It was not just decided upon by the, the Commission from thin air. The, over 1000 people showed up to protest that, including 9 of 11 of your predecessors on the Board. The vote was not taken that, that night, but subsequently the Park Service announced that the '79 Pet Policy had never been valid, and they started putting up leash signs in the places where off-leash dogs had, had traditionally been allowed.

This went on ' people were getting tickets just for having their dogs off leash in the, in the legal areas, until 3 people fought their tickets and a District Court judge ruled that in fact the 1979 Pet Policy was a legal policy and is the operative policy.

I'm talking about all of this to point out that there's a pattern here: there's very strong motivation on the part of the Park Service to eliminate dog walking entirely in the GGNRA.

There was also a push within Congress, to get Congress to actually remove the word Recreation from the title of the park and call it the Golden Gate National Parks, ostensibly for fund-raising purposes, but if you do a little research you'll find that the Parks Conservancy does a whole lot better already with fund raising than other areas.

I urge to take a, the strongest possible stand against the Park Service's actions on this. Thank you very much.

SUPERVISOR WIENER: Thank you very much. Next speaker.

ANDREW MOORE: Thank you. My name is Andrew Moore, and I want to

thank you for having this hearing. Thank you.

I have lived in Bernal Heights area of San Francisco for over 35 years. I am a senior, having recently retired from my career as a building contractor. I am a passionate environmentalist and also a dog owner. I have always enjoyed the fact that San Francisco is considered a dog-friendly city. For all the years I have lived here, I have hiked with my dog at least twice a day. This is my primary form of recreation and I enjoy it immensely.

The GGNRA now proposes to cut back areas open for dog walking even more than they already are. I strongly object to the Preferred Alternative of their Dog Management Plan and just as strongly request that you support the resolution before you today.

One other thing that I'd like to say ' this is not Yellowstone. This is not Wrangell-St. Elias in Alaska. This is 49 square miles of highly dense urban area with small park area attached to it. Thank you.

SUPERVISOR WIENER: Next speaker? You can just come on up, yeah.

MALE SPEAKER: Hi, my name is ' thank you, Supervisors, for putting this together. We really appreciate that. I'm a long-term San Francisco resident. I've been here for 30 years. I'm a third time property owner here and a first-time dog owner for about the last 6 years.

And I'm really concerned about limiting the amount of space that we get at GGNRA. I take my dog, my service dog, Molly, with me virtually everywhere I go. I have, I do two trips a day, usually to Dolores Park or maybe one trip to Dolores Park and then to Baker Beach or to Ocean Beach or to Fort Funston. And those are some of her favorite playtimes, and the times when she gets the most exercise and the most fun. And my tax dollars are at stake here. That's part of what I pay taxes for here in San Francisco. And believe me, I pay a lot.

And that's all I have to say. Thanks very much.

SUPERVISOR WIENER: Thank you very much. I just want to acknowledge that Supervisor David Campos has joined us. Welcome, Supervisor. Next speaker.

JAN SCOTT: Hello, my name is, is Jan Scott and I live in the Sunset District, and I've been taking my dogs and children to Ocean Beach and Fort Funston beaches before the GGNRA was even involved in the situation. Three to four times per week for the past 30 years I've jogged on the beaches with my various dogs. This is my most important recreation and

probably most days my most pleasurable activity.

I'd like to use some time to address the question of the ACC Commissioners about why people go to the GGNRA instead of using our, our city parks. And from, my particular reason is that our city parks for the most part are fairly small. They're little areas, maybe at the most a quarter or a half a mile long, so it's difficult to get a long jog in, in those areas, unless you just want to just run around in a circle, whereas the GGNRA has long places where you can go for a long distance. So that's my reason for it.

To continue with what I prepared here ' those of you who visit Ocean Beach and Fort Funston probably know that it's really foggy and windy about 90% of the time and it's usually used by primarily dog walkers ' people with their dogs ' especially Fort Funston, and then a smattering of other types of walkers and joggers, fishermen, surfers, people like that.

My concern is, is that when we have to leave and go to the city parks, the, Fort Funston will be empty. And so we'll have the opposite problem as they were describing, where we have these big empty beaches and then just a mile or two away we have crowded parks. And in my opinion, that is just a really ridiculous use of resources.

So I really urge you to pass this proposal and I [bell] hope you will come up with a more wholistic approach. Thank you.

SUPERVISOR WIENER: Thank you very much. Next speaker?

EMILIANA PUYANA: Hi, thank you for taking my comment. My name is Emiliana Puyana. The proposed changes to the GGNRA would affect my life at many different levels ' first, at a personal level, I will no longer have a place to adequately exercise with my dogs. At a business level, my dog walking business would be severely affected and my livelihood would be in great danger. As a responsible member of the San Francisco community, I am deeply concerned about the proposed changes. I don't even want to imagine [what] my day-to-day life would look, would look like if I don't have the ability to go to the park and exercise with my dogs.

I think it's important to mention that we are talking about 1% of the GGNRA. It's a very small sacrifice to make that ensure that, to ensure that thousands of people and their dogs have a safe place to exercise.

We have a responsibility to our dogs. We need to provide adequate space for them to exercise. We also, however, have a responsibility to preserving the natural part, the natural parts in the national parks. That being said, I believe that we can come up with a better solution, one that serves everyone.

The gentleman from the GGNRA mentioned that the remaining off-leash areas would be large. That is simply not true. The Preferred Alternative leaves very, very small areas for us to walk our dogs. If you take into account the number of dogs that, that frequent places like Fort Funston on any given day and the area that they're gonna allow for off-leash areas, once you put that large number of dogs 'hundreds of them' at any given time into these small areas, the incidents, the incidents related with dogs and people and dog on dogs, are bound to go up, there's just no other way to look at it.

With regards to the Snowy Plovers, you know, I, I have seen dogs chasing them at the beach and they do fly away, but I will say for me, I am a runner and I go for [bell] on Ocean Beach, and when I run by the beach, the birds also take off. SUPERVISOR WIENER: -Thank you very much. Next speaker.

NATALIE TONDELLI: Hi. My name is Natalie Tondelli and I wanted to say a few things. I'm pro-environment, pro-dog, and pro-human. As a professional dog trainer and dog walker I've utilized, valued, and respected the current GGNRA off-leash areas for the past 7 years. I cannot stress the importance of combating dog behavioral issues by exercise, socialization, and exposure that only off-leash play can give.

By adopting the policy, it is inevitable that the congestion on the trails will end in the elimination of off-leash recreation for all dogs, based on the compliance ruling.

It is baffling that in a time of severe budget crisis, we are pouring so much money, time and effort into an inflated proposal that seems to be based on a lack of scientific evidence. The GGNRA proposal takes no account of the human impact in these areas, like running, people's garbage, cigarette butts, the impact of other animals, and even just the smell and threat of humans to other small animals. Or the erosion of soils.

All responsible dog owners and dog professionals are in favor of permitting dog walking off leash and collecting revenues and fees. We need to have a balanced and fair proposal for San Francisco city parks as well as the GGNRA. The already tiny 1% of legal off-leash areas in GGNRA is to encompass everyone and their activities.

Thanks.

SUPERVISOR WIENER: Thank you.

ANNE DUFRANE: My name is Anne DuFrane. I live here in the city, over off the Embarcadero, just off the Embarcadero, and I would 'I'll introduce

my dog, Franklin, a service dog, who is with me.

I would like to concede my time to Carol Kucera. We've shared our views extensively and she can speak much better to all issues than I can. Thank you very much.

JUDY KUCERA: We just met. My name is Judy Kucera, and I'm further down on your list. I'm a recent dog owner. We got a rescue dog, who is 18 months old ' my husband and I ' a year and a half ago, and it was a revelation to me to see how much was available to us as elderly dog owners with our young dog.

Primary to that was the socialization, which occurred taking our dog to Fort Funston, where she was able to interact with dogs and people, and thanks to a lot of training both from ourselves and our friend, Ruth Jensen, who is a dog walker here in a city, and a certain amount of dog training from Bob Gutierrez down on the peninsula, she's turned into a wonderful, calm, social animal. Not that she wasn't pretty good to begin with.

Anyone who's been in Central Park in New York in the spring recognizes what happens when you confine too many dogs in too small an area. The smell of urine is overwhelming as that snow melts. And my fear about San Francisco, where my dog and my husband and I have roamed in city parks and in the GGNRA, is that by, by having such a drastic reduction of open space available for off-leash dog walking, you're going to be creating terrible problems because my understanding is, there are at least 100,000 dogs in this city.

The positive effect of having dogs in, or at Fort Funston are that I have never seen a homeless encampment, which I have seen in other parts of the city, and I've seen my dog playing with the ravens, whom I hear are attacking Bank Swallows ' I heard that from the GGNRA ecologist ' as they peak their little heads out of the nest.

So the GGNRA has a huge number of problems, and I think this is the least of their worries. And I really think that the Board of Supervisors has done a wonderful job in stepping in and stepping up to the plate. [bell] Thank you.

SUPERVISOR WIENER: Thank you. Next speaker.

JUSTIN HANZEL-DURBIN: Hello, my name is Justin Hanzel-Durbin. I'm a San Francisco resident out in the Sunset. I'm also an environmental engineer. And I just wanted to thank you guys for giving us this opportunity to actually speak about this. Public, public comment wasn't really being taken in a forum like this at the other meetings.

I've taken a pretty broad look at this document, in more of a scientific look, as far as environmental impact statements go, and I find it totally deficient in scientific data. I don't see the normal scientific data that's in these sort of reports. There's not very many studies that are actually in the document or, there's no baseline from what I can tell that was taken by the National Park Service here, to truly gauge where we're at.

You know, if, if they were going to enforce the laws and the regulations that are currently in place, then I think we'd have a totally different starting point from what we're looking at in this report. And I think until they actually enforce the rules that are in place, then we shouldn't even have this report.

So I'd truly encourage you guys to pass this resolution. Thank you very much.

SUPERVISOR WIENER: Thank you. Next speaker.

LINDA LITEHISER: Hello, Supervisors. Thank you for having this hearing. My name is Linda Litehiser.

SUPERVISOR WIENER: Can I ask you, ma'am, if I could just call more names.

LINDA LITEHISER: Yes, sure, sure.

SUPERVISOR WIENER: My apologies for interrupting you. The following should line up: Reid Reichardt, Kathy Mok-Reichardt, Andrea Buffa ' who I think may have spoken already ' Samir Ghosh, Angela Gardner, Linda Gulandis [ph], Steven Krefting, Ilana Minkoff, Judith Kowena [ph], Jean Kind, Joan House, Willa Hegerty, Renje Pittin, Amber Westbrook, and Becky Evans. Thank you, I really appreciate it.

LINDA LITEHISER: Thank you. Thank you, Supervisors, for having this hearing. I'm Linda Litehiser. I'm a 42-year resident of San Francisco. I'm also a home owner, a dog owner, and an active advocate for our city parks. I'm also very supportive of environmental issues and have been all my life, but I'm very worried about the proposed, proposal by the GGNRA to limit dog use in the park.

I'm here to speak on behalf of my family ' my husband, my children, my grandchildren. I want to stress that dog play ' off-leash and on-leash activities ' are very much a multi- generational activity. It's what binds families, it's what brings us to our parks in many cases. It certainly is in mine. I also wanted you to know that we proudly show off San Francisco's dog play areas and the GGNRA areas to our out-of-town guests. People are just amazed that we have this ability in our city to show this kind of

recreation as, as such a wonderful, happy family and, you know, recreational activity. They just don't see it in other parts of the country.

It is such a beautiful thing when you go into the parks and you see families ' people of all ages, all cultures ' mingling together, with their dogs, dogs of every stripe. It's, it's a wonderful thing.

I also wanted to just stress what other people have said. Golden Gate National Recreation Area is a unique urban park. It's the urban area that we want to combine with all these other recreational activities, so we need this for our people, for our sanity, and for our health. Thank you.

SUPERVISOR WIENER: Thank you very much. Next speaker, please. And if the speakers want to all move up a little more? That'd be great. Thank you.

GEORGE PAPHITIS: Hello, my name is George Paphitis. I'm a 30-year resident of San Francisco and as we all know, the GGNRA controls virtually all our access to the waterfront of the, of the city, so I'm very concerned when 90% of the 1% of the lands allotted to off-leash area, is being restricted. And I figure that this is hardly a balanced approach. And I would strongly support your resolution, Mr. Wiener, for a re-examination because I don't think the data is there to support such restrictions and I think it should go back to the, the cooking pot and come up with a better solution. And that's all I have to say. Thank you.

SUPERVISOR WIENER: Thank you very much. And before we have the next speaker, I just want to, Supervisor Campos wanted me to convey that he has serious concerns about the GGNRA proposal. He's not allowed to come up here because he and Supervisor Cohen constitute a quorum of the Public Safety Committee and that could be a Brown Act violation, but he did want me to convey that.

SUPERVISOR COHEN: Sorry.

SUPERVISOR WIENER: Next speaker. MALE SPEAKER: I'm a research scientist actually in San Francisco. I spend a lot of my time in the lab. They don't let me out often. Now that I am out, I'm shocked and appalled at what the, some of the people in uniform behind me call the science. Using and abusing data is appalling. I think that's how this country gets in trouble, that's how we got into Iraq ' weapons of mass destruction, woo! [laughter] And I, I just fear that now we're looking at dog of mass destruction ' if you believe these people, they say that dogs kill birds, dogs injure people, dogs do all sorts of horrible things, and they've admitted at the same time there's no data for that. So I think we should take this entire plan, throw it out, let's

look at some real data.

Maybe we'll find something else that, that helps our birds even more ' maybe that dogs are helping the birds by scaring away the cats. After all, I think there's probably more scientific data that shows that cats do indeed attack birds. We don't have any data that shows that dogs attack birds except for anecdotal data with no witnesses.

I do think it's time that the federal government maybe stop using and abusing scientific research. I have a lot of confidence in the woman who was here earlier from Rec & Park. It sounds like people from San Francisco really know how to manage things in San Francisco. Maybe we let Rec & Park take over Crissy Beach and Ocean Beach; I think we, we'd all be a little more satisfied with, with local presence and see how they would do it. If in fact there are such grave problems with the Golden Gate National Recreation Area, maybe it's time for some change after all. Thank you.

ANDREA BUFFA: Hi, my name is Andrea Buffa. I live in the Sunnyside neighborhood of San Francisco. I'm a long-time peace and justice activist and also an environmental activist. I've worked on climate change and green jobs and renewable energy for about a decade.

Samir is going to help me with the slide show because lots of folks sent us pictures of people recreating with their dogs in the GGNRA and it's such a diversity of people, I think it's amazing to see. Let me just forward it.

But I just want to speak to why we should pass a resolution. First, I think we need to make the GGNRA take our concerns more seriously. It's not like our resolution is going to stop them from moving forward. They are moving forward. But I get, I'm afraid that they think we can do our rallies and submit our comments and then they can just keep going, but if the city goes no, this is not okay, they'll take that more seriously. I think we need to get the city officially involved in the NEPA process by formally submitting a comment. I think that you passing a resolution will help our federal, federal representatives to get involved. The GGNRA is part of the National Park Service, which is a federal entity, but if we can go to them and say look, the city of San Francisco is taking this very seriously, we need you to take it seriously as well.

I also think we should pass a resolution to acknowledge our community and the impact that this gonna have on our community, to reject the idea that it's dogs versus the environment and to insist that there's another way and we're San Francisco and we can figure out what that way is. I think we need a resolution because we need to tell the GGNRA that you can't just slap together a bunch of data and then make a recommendation that isn't actually

supported by the data. That's not okay.

And I think we also need to tell them that it's not okay to put forward an environmental impact statement that doesn't provide data on the impact on city parks. Thank you very much.

Correspondence ID: 4702 **Project:** 11759 **Document:** 38106

Received: May,31,2011 00:00:00

Correspondence Type: Letter

Correspondence: SUPERVISOR WIENER: Thank you very much. Next speaker.

ILANA MINKOFF: Hi. My name is liana Minkoff and this is my service animal, Lucy. Until 4 years ago, honestly, I really didn't like dogs. I've lived in the city for 11 years and my solution was to go to places where there weren't dogs. It wasn't that hard to find ' there's plenty of it.

I had a change of heart 4 years ago when I got very, very ill and started developing panic attacks as a result of my illness, and my friend's dog was what saved me from these panic attacks; on a regular basis at all hours of the day and night, she'd come over and her dog would sit with me and just lick me and lick my face and make me feel better.

And so I decided, as I was starting to get to a point where I needed to get out the house more, that I would get a dog. And I'll tell you, this has been the best addition to my life. I have not had one panic attack since I've had her.

One of the reasons that, one of the ways that I am able to have her with me all day is that every day we get up and we go run around off leash for at least 45 minutes. We go to Ocean Beach and we go to Crissy Field, sometimes in the morning, sometimes during lunch. We prefer to go to the beach because the dog parks are too overcrowded at lunch time.

2:00 to 4:00 PM, which is when they showed the pictures, is when the dog walkers are taking the dogs back home after their lunch time walks [laughter]. If you go to the dog parks between 11:00 and 2:00, it's sometimes so crowded, it's not comfortable. We go to Douglas, we go to Corona Heights, we go to a lot of places, and I'm telling you, it is just packed. Those pictures are totally accurate for 2:00 to 4:00 PM, but not for the rest of the day, which is why we choose, choose to go to the beach, so she can run up and down the beach, get her energy out, and do this for the rest of the day. She's been sitting in here for over 2 hours, calm. She's a little dog ' they have a lot of energy.

At any rate, I am also curious to know ' it's been said many times today ' that

our city has more acreage than any other city, for dogs ' how many more dogs do we have than all these other cities combined as well? That would be my big question, so if you could please research this issue thoroughly and support the resolution to oppose the GGNRA, both Lucy and I would really appreciate it.

SUPERVISOR WIENER: Thank you very much. Next speaker.

WILLA HEGERTY: My name is Willa Hegerty. I am a dog owner and I am 13 years old. I joined this, I'm commenting because I think this is an important issue that should be discussed by young people.

My dog and I visit Fort Funston at least 4 times a week. If you take away these places, there will be nowhere else to go. There will be chaos at neighborhood parks and, and [there] are other ways to help the environment.

The Western Snowy Plover needs protection, but there are other ways to protect the, the species. Certain areas should be put aside for their habitat, and I acknowledge that there should be certain rules put in place.

They say they need to, the GGNRA says they need to protect the areas for future generations, but Fort Funston holds clean-ups frequently and I pick up my dog's feces and I help the environment. Why should I be punished?

They say "The plan is to improve visitor and employee safety and reduce user, user conflicts." I predict, with research to back up my prediction, that dogs will be aggressive and have behavior issues. Dogs will not be socialized. This will increase user conflicts and there will be more accidents in the GGNRA.

It affects me because I will not get enough exercise, my dog will become unhealthy and will not be socialized, my community will be, will be overcrowded. The Bay Area, in the Bay Area one in three houses holds a pet. Where would these pets go?

And the DEIS is full of things that could happen. They don't have any proof these statements are true, so I suggest the next time the GGNRA wants to put out a draft plan, they do their homework before. Thank you.
[laughter/applause]

SUPERVISOR WIENER: Thank you very much.

FEMALE SPEAKER: That's a hard act to follow. [laughter] However, I want you to imagine this scenario: you're buried under a rubble of a, of an attached building or an avalanche. Everyone has forgotten about you. Suddenly you hear a whimper or you feel a cold, soft nose. What would do

for that animal who came to your, to your aid?

I just want to read you a list of some of the things that dogs do for us: Canine Corps, police dogs, service dogs, search and rescue, avalanche dog, cadaver dogs ' and must I remind you that they were the unspoken heroes of 911 ' drug dogs, TFA, cancer detection, seizure detection, dogs to read to. Dogs have changed human beings' lives. We domesticated them; we must take care of them. Dogs need to run free and be dogs. And that's why we need to have a large area.

All life came from the sea. That's why I like to take my dog to Fort Funston. I feel rejuvenated by the salt air, by the, by the people and the wonderful dogs around me. I get exercise. I wouldn't go there if it weren't for my dog.

And I also want to point something, a couple of other things out to you. First of all, I want to point out that we have rules called no age discrimination and the ADA. The rules that let us walk our dogs in Fort Funston say that we may walk our dogs off leash only at the beach. I don't know about the rest of you, but I had a knee operation 10 years ago. I can't get down that sliding path to the beach. That's discrimination. There are seniors who meet every morning at Fort Funston. They can't get down to the beach. Let us mingle with everybody else, enjoy the bluffs where no one else will be, there aren't Snowy Plovers nesting on those bluffs at Fort Funston. And I'd like [bell] that if dogs have to be restrained, let's restrain children. [laughter]

SUPERVISOR WIENER: Thank you. Next speaker.

SAMIR GHOSH: Hi, my name is Samir Ghosh, I'm a San Francisco resident, District 8 resident. Thank you very much. I wholeheartedly support Supervisor Wiener's resolution opposing the NPS proposed GGNRA dog plan, and I don't know how you listen to all these comments. Thank you very much. In spirit of minimizing repetition, I support Sally Stephens' comments wholeheartedly as well.

A couple of things I will reiterate ' that dogs are not off leash because they are well behaved, they are well behaved because they are off leash. This issue is not about dog right side versus Snowy Plover rights. This is about dog owner rights. One-third of San Francisco households have dogs. Limiting to tiny dog parks is a back-of-the-bus segregation, in my opinion. Dog owners' own recreation is limited by the limits on the, on their own dogs. I don't have time to do both ' take my dog to a dog park and then go do my own exercise somewhere else.

And then ' 1% again I know has been said, as far as the GGNRA parks for off leash; I think it's worth stating again. I don't understand why Snowy Plover proponents don't suggest that we take another 1% of the GGNRA,

GGNRA parks and allocate them to non-humans. Their recreation is, is, you know, they're supporting their own recreation.

And also I'll state that dog owners are not against wildlife. On the contrary, I think pet owners are far more connected to and empathetic to animals than non pet owners, because of their connection to their pets.

NPS also does have the, the authority to manage different than Yellowstone, they have their section clause, clause 7 that allows them to do that. I also question NPS motives when they're using, continue to use Golden Gate National Park as the name instead of the Golden Gate National Recreation Area, which was declined in 2008.

One other quick thing is that dogs, the Dog Plan's No Action option is misleading; it in fact still includes the compliance management, which would potentially lead to a total ban. They do not, and it's also one-directional ' they offer no way to go backwards to get additional rights; once you lose the rights, there's no way to get them back. [bell] Thank you.

SUPERVISOR WIENER: Thank you very much. Next speaker.

MALE SPEAKER: A year ago I adopted a dog, who turned out to have some serious behavior problems, including, including severe anxiety. I thought I may have to give her up. I was informed by professional trainers that vigorous exercise and socialization were important keys to resolving such issues in dogs. Sure enough, places like Fort Funston and other off-leash areas have been an integral part of her recovery and transformation into a well behaved member of the community. Last I heard, San Francisco has more dogs than children and for many, their well being and their owners' sanity depends on the GGNRA parklands. I understand that some people are afraid of dogs, but it hardly seems that the way to encourage enjoyment of outdoor parks and appreciation of nature is through segregation of animals or by relocating them to the more urban San Francisco neighborhood parks. But that's what the GGNR, GGNRA seems to want. They're using the Snowy Plover, but even the Fish and Wildlife Service has not listed Ocean Beach as a critical habitat for those birds.

GGNRA has an obvious federal agenda, agenda that completely disregards the city and people of San Francisco, not to mention the dogs. Thank you.

SUPERVISOR WIENER: Thank you very much. And before we get to the next speaker, let me call some more names: Sheila Mahoney, Philip Gerrie ' oh, he spoke already ' David Anderson, Eric Nees [ph], Gloria Stein, Kimberly Thompson, Arnita Bowman, Nancy Stafford, William Carlin, Nancy Wuerfel, Paul Monti, Bob Planthold, Cindy Landell [ph], I believe, Lisa Vittori, Keith McAllister, Mara Armanini [ph], and Dr. Suzanne

Valente. Go ahead.

RENEE PITTIN: Good afternoon, Supervisors. My name is Renée Pittin, and I'd like to say something about the health aspects of recreation.

In my own case, my doctor has advised me, required me to exercise, and in particular to walk. I did try walking on my own and I found it both excruciatingly boring and like a forced march.

Fortunately I have a dog, so I do walk, especially at Fort Funston. Sometimes the weather is terrible, but Fort Funston is always awesome in both the contemporary and the traditional meanings of the term. And there is community there, both of those walking dogs and of those who don't have dogs and come there in order to see the dogs.

So in terms of both physical and mental well being, this small, less than 1 %, off-leash area is a very important component of our lives.

By maintaining and optimally expanding off leash in the GGNRA, the federal government has a chance to be at the cutting edge of its own Healthy Parks Healthy People program, enhancing opportunities for people to exercise with their off-leash dogs. Unfortunately they are going in the totally wrong direction. The city here has an opportunity to remind the GGNRA of the traditional uses of this tiny area and of the consequences to the residents of the city of this severe truncation of off-leash areas in the GGNRA.

Thank you very much for this hearing. Thank you for your resolution. And thank you for the opportunity ' finally ' to speak.

KATHY MOK-REICHARDT: Good afternoon. My name is Kathy Mok-Reichardt and I have been a resident of San Francisco for almost seven years. During this period of time I have never recreated in any of the GGNRA lands where off-leash dog walking is allowed until I adopted a dog.

As a rescue dog owner, I am extremely grateful for the 1% available parklands where I can exercise my dog off leash. Like many other rescue dogs, my dog came into my life with problems that I later found out only adequate exercise could, could solve. And having a previously abused dog, I am very thankful for Fort Funston, Ocean Beach, and Crissy Field, for they are places where my dog has found her confidence, has finally come to feel safe and even liked in a society with people that previously betrayed her trust.

Walking a mixed-breed dog with exceptionally high energy 3 hours a day around city blocks and city parks on leash is not comparable to the 30-

minute off-leash time she gets at the GGRA, GGNRA lands. It would be detrimental to my dog's well being and rehabilitation progress if off-leash dog walking is banned in these areas.

When I recreate on GGNRA lands with my dog, I always pick up after her as well as other people's trash, such as sandwich wraps, soda cans, cigarette butts, to name a few. I don't ' I wish I could speak for all dog owners, but I don't want to make the same mistake the GGNRA made by making generalizations of all dog due to, all dogs due to a handful of irresponsible dog owners. It's no different from attempting to limit the number of cars because of a minority of reckless drivers causing trouble on the road.

A proposal over 2000 pages with so little data to answer the questions raised by even our supervisors, is unreasonable to the extreme, and I urge the Board of Supervisors to take these into consideration when voting on the resolution. Thank you.

JOAN HOUSE: Hi, my name is Joan House. I've lived in the city for 35 years. I've own a dog for 49 years, and I love this city. And in the big picture, it's the land of the nuts and fruits [laughter] and what I love about that is, we're educated and we vote. And I appreciate the, Super Dean for being here from the GGNRA. And one thing that really stood out in the delivery was ' if the bird gets 10 months out of the year, that's a good thing. So why not give them 12. We can count. We can keep a steady, you know, calendar of what months to not harass or harangue the little Plover. I love those little Plovers. They're really really great. When I first moved here, I let my dog chase them, then I realized I didn't like that behavior, so for the last 35 years, my dogs don't chase birds. But, to stick him on a leash and to put him in a city park with, the overcrowding would be horrendous. It would make the dogs behave criminally and it would make the owners behave criminally. [laughter]. And it would just have so much stress on the parks that it would be ridiculous. It's not well thought out.

But if the dog, if the bird has 10 months, give it 12. It seems to be the power grab and the land grab of the federal government. Don't like it, don't appreciate it. Own dogs, vote. Thank you for the hearing and thanks for letting us speak.

SUPERVISOR WIENER: Thank you very much. Next speaker ' or singer

WALTER PAULSON: [Sung to the tune of "Fun, Fun, Fun" by the Beach Boys]: Well, the dog's running free like you want your best friend to be now [laughter] You forgot all about now the dog ha-as its needs now And he's running real fast and he's running real fast as he can n0000www And the dog will have fun, fun, fun at Fort Funston unless you take the off-leash dog law awa-ay. And the dog will have fun, fun, fun at Fort Funston if, unless

you take the Fort Funston dog leash away. And the dog will have fuuunn at Fort Funston unless you take the off law leash law awa,ay. [sung to another tune]: And then you can jump for your dog, jumpin' if you want to feel the freedom of your dog. Jump, jump for the dog. Tell me now if you want your dog to be happy and freeee, then juuump for your dog Jump in if you want to feel good kisses from your dog now. Juuump for your dog today. [laughter and applause]

SUPERVISOR WIENER: Thank you.

SHEILA MAHONEY: My name is Sheila Mahoney and fortunately for you, I won't sing today. [laughter] But I'm a 40-year resident of San Francisco and I am a senior. Since 1989 my husband and I have walked our dogs at Fort Funston almost every single day we didn't have to work. And I suggest that you visit Fort Funston yourself, to judge what's going, what's going on there.

I'm also a long-time volunteer with the, with the San Francisco SPCA Animal Assisted Therapy program. I have taken my dogs to hospitals, rehab units, and psych wards, so I well know that dogs can help to heal the body and the spirit. And I consider watching the dogs playing and running at Fort Funston ' my own personal animal-assisted therapy, open air session.

Frankly, if we didn't have dogs, we'd spend our time at home reading the New Yorker [laughter] instead of getting our 2-mile walk. I find it ironic that the National Park Service is pushing the Healthy Parks Healthy People program when they're cutting the 1% of the GGNRA lands now available, when they really should be expanding the area for off-leash areas.

When we started walking in '89, there weren't that many people out there. I, I'd say there's probably 20, 40 times as many people walking. We need more space, not less. Thank you.

SUPERVISOR WIENER: Next speaker.

PAUL MONTI: Good afternoon. Thank you for this opportunity to speak. My name is Paul Monti and I am a fourth generation San Franciscan. Thank you. I'm not paid to be here, and I've been at Ocean Beach all my life. I played at Playland. I fished off Seal Rocks with my, with my father before the National Park Service took over and blew up the causeway that we used to get out there. I played in the caves along the old Sutro Baths ruin before they took over and put bricks and walls up to keep people from playing in the caves. You know, and now I go up to, to Fort Funston and it's covered with concrete, it's covered with iceplant, which is an invasive species. Almost all of the trees there are eucalyptus, which are from Australia. And

it's still a wonderful, beautiful place to be. I, I absolutely love it.

Oftentimes I take a look at the, at the landscape and everybody out there and I just say to myself hm, well, let me remove everybody from the landscape who doesn't have a dog out here. And I'll do that and all of a sudden the landscape is completely empty. There's nobody there. And, you know, I'm wondering if that's how they want it to be.

Oftentimes I also go to the beach ' I live at 48th and Noriega, which is across the street from the beach. And you know, they're worried about the Snowy Plovers being stressed. There's no proof of all these allegations about them dying in mid-flight from being stressed or, you know, all this other stuff, but I'm wondering, if they're so stressed, why they ride motorcycles up and down the beach? Why they have ATVs with cops on them riding up and down the beach? Why they have 4-wheel-drives, cars, bulldozers moving sand around on the beach. Snowy Plovers have never nested there. I don't think that they're stressed any more than seagulls or pigeons or anything else for that matter, but again, I'm, I'm, you know, I'm not an expert. [bell] Is that it? [laughter]

SUPERVISOR WIENER: Thank you. Hi.

STEVE HOOKER: Hi, my name is Steve Hooker. I'm taking Angela Gardner's position because she had to leave ' not as a representative of ProDog, though I am a member. I am professional dog walker or winged monkey, depending on how you want to look at it.

A couple of things: GGNRA says that the current situation is, is not sustainable. It's been in place since 1979. We have the most beautiful thing in the city at Fort Funston. I have people from all over the world look at my Facebook page and the pictures of Fort Funston and what goes on out there, and they say why can't we have this here in Sweden? Why can't we have this here in all these other countries? It's just not true. They can sustain it.

One more thing: as a walker, I have to say this. It may not be their problem, but it is the city's problem. We have a gigantic industry in this area and in the city that is seriously threatened by this. You're gonna have hundreds of people unable to work. You're gonna have thousands of dogs unable to go out anymore. It's gonna be a big deal in all the ways that they've already told you about. Thank you very much.

SUPERVISOR WIENER: Thank you very much. Hi.

ARNITA BOWMAN: Hello, I'm Arnita Bowman and I'm an auditor with over 15 years experience. I was formerly with a major public accounting firm and was a senior IT auditor for the City of San Francisco audit. This

environmental impact study and plan is overwhelming and misleading to the public.

As an example, the National Park Service claims that our dogs are a public safety risk, even though there is virtually no impact on safety in their small incident counts or even ' sorry ' their small incident counts aren't even supported by the real GGNRA data. The actual GGNR data shows that about 1% of the public safety risks are actually related to dogs. This is in contrast to the 14% of Bay Area people that actively enjoy the parks with their dogs, often on a daily basis. For the subset of bite attack incidents, in looking at the actual data, most are relatively insignificant incidents related to scratches, bumps, or no injuries at all, and few require any medical attention.

I'm new to this cause and I have to say, I'm shocked by the deliberate delays by the GGNRA in providing real data to citizens. Initially I submitted a Freedom of Information Act request and the Park Service quickly responded. Then delays started when I was clear that I was a strong environmentalist and was pro-dog. It took 2 months and a Department of Interior appeal and the threat to go to court before the National Park Service provided a simple download of an access database with the Golden Gate, or with the GGNRA law enforcement data.

They are doing the same thing with my three other requests for real data related to the GGNRA and the hypothetical adverse impacts on, that are claimed in the report.

I have to say, I strongly agree with the environmentalists that we need to look at evidence but disagree that bad National Park policy, bad National Park Service policy should be the primary justification for this plan.

For over 30 years the dogs have been an integral and active part of recreation in the GGNRA, so changes need to be based on real facts and not all [bell] Thank you.

KEITH MCALLISTER: Good evening, Supervisors. My name is Keith McAllister. Let's talk about wildlife for a minute. Dogs have no impact on the Bank Swallows at Fort Funston. The GGNRA draft Dog Management Plan claims that dogs at Fort Funston "dig at or collapse burrows, flush birds from nests and cause active sloughing and landslides." In fact there is no evidence that dogs have any of these impacts.

The GGNRA monitors from 2000 to 2006 observed very few dogs in the closed area around the Bank Swallow colony. That's all the evidence there is ' the presence of a few dogs. Digging, flushing, and landslides are listed in the monitoring report as potential impacts, not observed events. From

potential impacts, the GGNRA leaps through continuing impact in the DEIS. Note that still no one has seen a dog collapse a Bank Swallow burrow, flush a swallow or cause a landslide in the Bank Swallow colony. It is significant that these impacts have not been observed. People have been out there looking for them.

A GGNRA researcher closely monitored the Bank Swallow colony in 1994 and '95 and wrote an official report. She observed that there were dogs present and noted that they did not disturb the swallows. She also listed a number of things that GGNRA should do to protect the Bank Swallow colony, but doesn't mention the dogs.

Speculation of what might happen, which runs counter to years of experience with what actually does happen is not science.

And I might add to a previous speaker ' the brush rabbits are still at Fort Funston, and although the quail are not, the quail are no longer at the Arboretum either, and the Arboretum is fenced with no dogs at all, but the fact that the quail are gone cannot be blamed on dogs here unless science means to you what it means to our friends in the local environmental community. Thank you.

SUZANNE VALENTE: Hi, I'm Dr. Suzanne Valente from Ocean Beach DOG. Thanks for hearing from us.

In 2006, when the GGNRA announced their intent to do this DEIS in the Federal Register, I filed a Freedom of Information Act request to obtain the data, documents, and/or staff report which substantiated their claim of controversy over the Dog Policy, compromised visitor and employee safety, and resource degradation, which justified this current DEIS.

The GGNRA's response merely stated ' the staff report and other documents you seek do not exist at this time. So, we're not crazy, there is no data behind the DEIS. But there is a predetermined outcome ' to remove all off-leash recreation. In 2007 now NPS Director Jon Jarvis me ' I would rather give up those GGNRA properties than have dogs running loose on them. The scientific studies in this DEIS were designed to support the GGNRA's predetermined outcome. The choice of Golden Gate Audubon Director Michael Lynes to perform the DEIS Plover study confirms this bias. I think he spoke here today. Golden Gate Audubon has been on record for years in opposition to dogs being allowed off leash in the GGNRA. The DEIS Plover study deliberately misleads the reader about the GGNRA's legal obligations to protect the Plover. Ocean Beach and Crissy Field are not designated as critical habitat by the U.S. Fish and Wildlife Service. Legally, the GGNRA is obligated only to prevent the harassment or taking of the Plover within its boundaries, none of which were observed in this study. So to justify their

predetermined outcome, the study instead relied upon arbitrary inadvertent disturbances, which could be as minor as the bird lifting its head or standing up.

This DEIS failed to mention the 2007 joint UC Berkeley-GGNRA Warren study that concluded Plovers feeding was not negatively impacted by the recreational activities of humans and dogs. All of the scientific data in the DEIS is equally compromised and must be disregarded. Skewing a scientific study to reach a predetermined outcome is unconscionable. Thank you. Oh, and can I leave you this?

NANCY STAFFORD: Hi, my name is Nancy Stafford and I'm a professional dog walker for 20 years. I'm out in the parks every day ' numerous parks across the city. And there is definitely an increase in the use of parks. Whenever there's been discussions over the past 10 years since the Dog Advisory Committee ' in fact, since Amos Brown discussed this ' there's always been a demand for more off-leash areas and not less.

So I don't know how they ' I mean, I guess you could go into an off day and not see very many dogs, but that's extremely unusual. They are heavily used and we need more spaces. In the evenings and in the mornings, they're overcrowded.

The other point I want to make is a study that was done about the Plovers that studied over 5700 dogs, of which only 6% actively chased birds ' well this was a study on all birds, but ' and of which only 19 chased the Plovers; that's out of 5700 dogs. I don't think 19 is a significant impact. Thank you.

SUPERVISOR COHEN: Okay, ladies and gentlemen: it is 4:46 and I have to use the rest room, so we need to take a 5-minute break and we will begin, we'll go back to public comment and we'll start with this gentleman over here, okay?

SUPERVISOR WIENER: Five minutes.

FEMALE VOICE: Supervisor Mar?

SUPERVISOR COHEN: He had, he had a meeting he had to tend to.

SUPERVISOR WIENER: Supervisor Mar had to go, yeah.

SUPERVISOR COHEN: But don't worry, we still have a quorum here..

SUPERVISOR WIENER: Still a quorum, yeah.

SUPERVISOR COHEN:...so we can still handle the business. Okay? So just

5 minutes. Wait a minute, listen up ' it's 4:46. Okay? Thank you.

[break]

SUPERVISOR WIENER: Okay, next speaker.

FEMALE VOICE: Thank you.

MALE SPEAKER: For decades I've been going to the local residential parks with my dog, with my dogs for recreation, hiking, and relaxation, and then insidiously and abruptly, the fact that we're about to lose it based on environmental allegations that haven't been fairly studied, proven, or peer-reviewed, basically a 2000-page, 10-pound allegation. But I want to thank our Supervisors for having this hearing ' thank you so much ' to address these unjustified draconian restrictions. I wanted to thank and encourage the supportive representatives that I think are helping us, including Mark Leno, Jackie Speier, and Leland Yee, and Dianne, and Senator Dianne Feinstein, who recently interviewed in the same kind of misuse of science and allegation to, to serve a preconceived agenda of shutting down a, a local oyster farm.

I wanted to also thank and draw attention to KGO and the host Michael Walcoff, to publicize and resist the cases of this misuse in science to deprive local owner, dog owners of our parks and beaches. Thank you.

SUPERVISOR WIENER: Thank you very much. And let me just call the final list of people before you go: Stephen Golub, I believe, John Jankowsky [ph], Lindsay Kefauver, Jill Inderdohnen, Courtney Durbin, Bruce Engel, Frank Triska, John Keating, Russ Kahn [ph], Susan Adams, Sandra Shuhert, Barbara Oplinger, Sky Kral, Ruben Garcia, Robin Buckley, and Dina Khait, and then Jose Maldonado. Thank you.

NANCY WUERFEL: Good afternoon, my name is Nancy Wuerfel. I support Supervisor Wiener's resolution opposing the GGNRA Preferred Alternative.

I have served for 9 years on the Park, Recreation and Open Space Advisory Committee. I care about our parks. The work by the National Park Service to evaluate the ripple effects of changing the Dog Policy on city, city parks is not finished. The draft EIS report fails to consider that San Francisco is one city with multiple owners of open spaces within our 49 square miles. One owner cannot make use policy changes without affecting the other owners of open spaces. The alternatives proposed by the Park Service for their land unfairly impact the city's stewardship of our land by crowding more people back into our urban parks for off-leash recreation.

More people using parks means more traffic and parking problems around those parks offering off-leash areas. More use of these areas means more maintenance. More maintenance means more money. The proposed GGNRA restrictions are not even the end of the squeeze play. With their stealth provision to further limit off-leash areas in an unappealable unilateral decision that these new restrictions are not being complied with to their satisfaction, the National Park Service can progressively remove permission in the future for off-leash dog areas to exist on their land. Then what do you think will be the result of this continuing strife? Supervisors, the public will be demanding that you fix this mess.

I do not own a dog, but I will be impacted because of the increased use of my park by people from all over the city looking to exercise their dogs. Before the federal government is, is allowed to further restrict off-leash use on their land, they must be made to declare what will be the impacts on the city, who innocently gave up much of our coastline to them.

Please require fair and honest disclosures. The Park Service is playing for keeps, the changes are forever, act [bell]

SUPERVISOR WIENER: Thank you. Next speaker.

BILL CARLIN: Supervisor Cohen, Supervisor Wiener, thank you for having this meeting. My name is Bill Carlin.

You heard a lot of testimony today pro and con about the DEIS, which, even from the testimony of Superintendent Dean, was deficient in its methods of formulation and its results. And far as the arguments from the people opposed to off-leash dog recreation, I think they're epitomizing the view of the ' or in the testimony of the representative from the Audubon Society that said that a Blue Heron might or might not have been killed by a dog at Heron's Head Park, might or might not have dog, have teeth marks on it, but nobody knows, so nobody can tell, so that's a good reason to cut back on off-leash recreation in the Golden Gate National Recreation Area.

Relative to the letter which the group of so-called putative environmental organizations sent to you, I had an email, which, part of it said ' moreover, we do not understand why some members of the Board expect the GGNRA to maintain what has been widely recognized as an unmanageable and dangerous status quo in the national parklands.

Major writing and rewriting of history here. First of all, it is not a national park, it is a national recreation area, and since, for the past 21 years the 1979 Dog Policy has provided a manageable and safe method of off-leash recreation in the Golden Gate National Recreation Area. The GGNRA is

never ' is never was, and is not a national park, it is a recreation area.

The DEIS is deficient, it needs more work and should not be implemented without more study. Please support the resolution. Thank you.

SUPERVISOR WIENER: Thank you. And one quick thing I want to note ' this has been an amazing turnout. We, our plan ' the second part of this hearing has to do with the regulation of commercial dog walkers and what we were gonna do is after this is over, go back and then broach that subject. We're, I don't think, we're not gonna have ' we probably have another half hour to an hour of this aspect of the hearing, so I don't think we're gonna have time to do that today because we're going to lose a quorum.

And so, what we'll do is, we'll finish all the public comment on the GGNRA. If there's anyone here ? and we'll continue the remainder of the hearing and have public comment at a subsequent hearing on that. If there's anyone here today who wants to talk about regulation of commercial dog walkers, please do so. But we will have the actual hearing on that later and you'll have another opportunity if you so choose. But I don't want to make people have to come back, and we're, we're, we would be happy to hear any input on that.

So, next speaker.

LINDSAY KEFAUVER: Hello Supervisors, good evening, Supervisor Cohen and Supervisor Wiener. Thank you so much for this hearing and for this resolution. Sorry. I would like, like to address what Superintendent Dean calls the compliance-based management, that Supervisor Wiener addressed earlier in his comments.

I'm very concerned about this. This compliance-based management is really in reality the poison pill of their Preferred Alternative. I'm very, I hear from Superintendent Dean that they're gonna use a third party to handle this. I'm very concerned about who this third party will be you know, are they gonna have surveillance cameras, are they gonna have volunteers, is it gonna be staff? I'm just, I'm very concerned about the fairness of it and I don't trust that it will be fair.

Regardless of which alternative is chosen, this poison pill means that within a few years, claims of non-compliance, whether real or not, will result in automatic changes, that dogs will be banned everywhere in the GGNRA. We dog guardians are contributing citizens of the United States. We are not outlaws. The National Park Service should be ashamed of even proposing such a scheme. As bad as the GGNRA's Preferred Alternative is, the poison pill makes it totally unacceptable and I think the city has every right to send a resolution restricting what the GGNRA can do, and I please, I ask you

please to not let this happen. Thank you so much.

SUPERVISOR WIENER: Thank you. Next speaker.

FEMALE VOICE: I need to.. SUPERVISOR WIENER: Yeah, take your time. We can just have other speakers go first? If you're gonna set up, yeah.

FEMALE VOICE: Oh sure. All I need to know is how I make a

SUPERVISOR WIENER: Okay.

JILL INDERDOHNEN: Hi, my name is Jill Inderdohnen. I want to thank you for the hearing. Pass the resolution and allow us our 1% please. Thank you.

FEMALE VOICE: Wow. [laughter/applause]

LISA VITTORI: How do I make this a full screen is what I'm trying to figure out.

SUPERVISOR COHEN: IT will take care of that.

LISA VITTORI: Whoop. And I apologize for ' okay. Should I wait for ' no? [referring to slide projector] Is it, is it..

SUPERVISOR WIENER: There you go.

LISA VITTORI: Okay. This is the slide show that Andrea played a little while ago, but I wanted to point out several things. My name is Lisa Vittori, by the way, and I've been organizing a lot of this because I used to work for the National Park Service and I think that they're lying. And I think they're biased, and I'm really sad about it because people have had to choose sides.

So I just wanted to show you a bunch of slides that are about joy. We are the people who are using the parks. Who do they want to reserve it for?

So kids ' kids are afraid of dogs. Here we are [referring to slides]. People of color are afraid of dogs. This is what ' these are counter ' this is just Sunday. This is Sunday. Any day we could have seen this. This is a family. People need places with, for their kids and their dogs. This is an elderly person, okay? On Sunday afternoon, okay? With a cane. Okay, I keep hearing that kids are afraid of dogs, people with disabilities, people of color, blah blah blah. You know, I think it's a lie. And that's one of the things that I want you to pay attention to.

This is a small dog group. It's a community that comes out ' I don't know if

it's monthly or weekly. This is, this is all of them. These are the people who are using ' who are we saving this beach for if not this public?

This is a group of kids from a school. They're probably not allowed to touch this dog ' because I work in schools ' but I'll tell you that they probably fought for the prime position next to that dog.

She says she's been walking in the GGNRA for 80 years, okay? She's obviously more than 80 years old. Okay? A person with a dog; I don't know if she's a teenager or young adult, but look at the expression of joy.

This man is, this is Muir Beach ' because this isn't just San Francisco, this is also Montara, this is Muir Beach, this is all ' it's a regional problem. He said ' I've been coming here for 40 years, I've never seen a problem. Okay?

This is Angela Gardner, the pro dog walker with her out-of-control dogs [laughter]. Another set of dangerous dogs right here [laughter]. Now this woman is getting active exercise. Okay? A child, okay? Playing with her dog. Watch this ' okay, I don't know which beach that is.

Another kid with their dog. This is what it's like. This is Crissy Field at the inlet that they want to keep us from being at. This inlet is full of kids and dogs every sunny day. Okay? Elderly people. Now I want to point out this one ' this is [bell] Where, what happened to my 2 minutes? Oh my God. [laughter]

SUPERVISOR WIENER: Thank you very much.

LISA VITTORI: Thank you.

SUPERVISOR WIENER:Hi.

COURTNEY GUNTER-DURBIN: Hi. My name is Courtney Gunter-Durbin. I own a dog training and dog walking business in San Francisco and I also sit on the Board of Friends of Animal Care and Control here.

I'm extremely concerned about the impact the GGNRA plan could have on local dogs and their owners. As a trainer, I can't overstate the importance of appropriate off-leash exercise for dogs to prevent behavior problems. Leashing, restricting and confining dogs to fenced areas will create more conflict, not less. Dogs who feel restrained and overcrowded are more likely to display reactive and aggressive behaviors.

I personally was present at Stern Grove the day of the tsunami warning and in fact had to break up a dog fight there that day. I have no doubt that the overcrowded conditions and the lack of personal space and the frustration

the dogs were experiencing was a big factor in that fight.

It's also really important to make a distinction of what is appropriate exercise for dogs. All dog play areas are not equal, so comparing Fort Funston to the fenced-in dog run at Golden Gate Park is really apples to oranges. Some of the play areas that are underutilized are underutilized for good reason. They offer inadequate space or environment for appropriate exercise and they don't offer any exercise outlet for the owners, who also want to be out there exercising with their dogs.

So we need true open spaces for off-leash dogs under voice control to be able to take a real walk. Thank you so much for hearing us today.

SUPERVISOR WIENER: Thank you for coming. Next speaker.

SKY KRAL: Hello, my name is Sky Kral and I'm a Bernal Heights resident, and therefore I live in David Campos's district, he's my Supervisor, and I walk his dog, Winston. [laughter] He's a fabulous bulldog and he's not overweight, he's 6 years old and very fit because he's been going out with me since he was a puppy. Winston and I and about 5 or 6 of our canine friends, we go to various San Francisco parks and sometimes to Fort Funston. I have never seen an empty park. I usually walk between 8:00 AM and 2:00 PM. They came right after the dog walkers started taking the dogs home, I believe, to ever find an empty park in San Francisco. At 5:00 the dog owners start coming home from work and then they take their dogs out. It's often very crowded there.

If I go to a small park, some of the dog, enclosed dog play areas are no larger than the size of this room or possibly twice as big as this room. And once you have one or two dog walkers, you're fine in there, but if a third or fourth dog walker comes in ' as they will if Fort Funston is shut down ' it is chaos, there are fights, there are problems, there are parking issues. All sorts of problems develop.

Another park that I like to use is McLaren Park. It's fabulous. It is the largest off-leash dog area in San Francisco city, this area. There has been a proposed take-over of some of the, the only regulated off-leash dog area in that park by the Frisbee golf club. And they are trying to overlay their golf club Frisbee course on the off-leash dog area. They also have a poison pill in their reg, in their rules about it, that if there is conflict, dogs will have to leave the area. Put a dog and a Frisbee together ' there could be a conflict. [laughter] So, and so another poison pill, and they have not yet gotten permission, though I have seen them already start to level some of the land, put up posts, drop concrete, and it is not even already, it is not permitted yet. [bell] Thank you.

FRANK TRISKA: Hello, my name is Frank Triska. I live in Noe Valley. As we all know, Ocean Beach is a rather narrow strip of sand. When you look to the west there's the whole rest of the world. When you look to the east, you look at the homes of 800,000 people crammed into 49 square miles. Yet we heard today, in the first presentation, that as a, relative to national park policy, there's no real difference between Yosemite and Playland at the beach. If the presence of 800,000 people next to a beach is of no consequence, then I'm not surprised that we have a problem.

My major use of the Golden Gate National Recreation Area is to run our dog at Fort Funston. Before we had a dog, we had a small child who is now grown up, and we used to go to the beach near Taraval. And my son would get sticks with his friends and run up and down the dunes, swinging his swords and yelling and hootin' and hollering and having a generally good time. I know now that that was probably more damaging to Snowy Plover habitat than anything my dog would ever do. But if we're not going to leash the children, and we are, we're not gonna leash the dogs, then probably a better solution is to identify the really critical habitats and place, fence them off and then free the beasts and the children. Thank you. [applause]
SUPERVISOR WIENER: Thank you.

FEMALE SPEAKER: Thank you for having this hearing today and I, in case I marked my card wrong ' I'm a little jet-lagged ' I am for the resolution.

I am the proud owner or owned by a 12-year-old black Lab named Otis, who is in incredibly good shape for an older dog. The reason he is in the good health that he is in is because he goes out with a dog walking group, Pawsitive Tails, 3 times a week to Fort Funston, and often goes to either Crissy or Fort Funston with me on the weekends.

Let's not pretend that the dog parks in San Francisco are equivalent to the experience you have taking your dog to Crissy Field or to Fort Funston. They are not. Some of the San Francisco parks are great, I don't mean to diss them. Some of them are glorified dog runs. They smell bad, they're small, and these are not appropriate ways to, for me to get exercise and for my dog to get exercise.

I'm very concerned about the 75% compliance, as are many people. I see it as equivalent to, you know, if 10 people run a red light, then you close off the intersection and tell everybody to walk. I think we need better enforcement for people who are violating than we currently have. I think there are ways to make the status quo work with better enforcement, better fencing for these protected areas, clearer signage and education.

One other concern I have that I just wanted to mention is that part of the Fort Funston plan has us getting our dogs down to the beach on leash. I

would like, and I would challenge anyone in the GGNRA to take an enthusiastic water dog who's anxious to get to the beach, and try to get down that steep slope with them on leash.

Let's see. I believe that's all I have to say. Also, I am in support of the dog walkers, there are plenty of professional, well [bell] walking groups out there who will be impacted as small businesses if this goes through. Thank you.

SUSAN ADAMS: Hi, my name is Susan Adams and I'm a resident of San Francisco as well as a native. And I've been taking my dog for over 30 years to Fort Funston for exercise. And I have to say that I have not experienced one serious problem in all those 30 years, and you would think that in all that time I would have, I would have seen ' except I was around the time a man stabbed a dog, but I didn't think that was the dog's fault, that was a, a human problem.

It seems to me, listening to all the environmental organizations that came forward this afternoon ' it seems incredibly disingenuous to me that they would single out dogs as the sole or the primary cause of disturbance of the environment without considering human events like Fleet Week, when hundreds of people go to Crissy Fields and trample the Plover habitat without any restriction or guidance from GGNRA. Or what about the Turkey Trot, where 1,500 people ran down Ocean Beach, right through all the Plover area and again, that, that was encouraged by GGNRA. And then, what about ' can you ' how does this work? Turn it over? [referring to slide projector]

I don't know if you can, if you can see that well. GGNRA themselves plowed over a, a section of Ocean Beach in 2007 that was the Snowy Plover habitat area. That's why the Snowy Plover isn't, isn't residing at Ocean Beach anymore, because they did it in, in order to prevent erosion. This is all on-line. You can see pictures, and I'll probably email you some more. Thank you.

SUPERVISOR WIENER: Thank you. Next speaker.

ROBIN BUCKLEY: Hi. My name is Robin Buckley, I'm a fourth generation native San Franciscan. My parents still live out on 39th Avenue where I grew up.

And being out by the beach, I used to go Fort Funston as a child to play Army with some of the neighbor kids. This was when it was still a military installation, but you could go out around the edges. Now I go out there on the weekends and I can, you know, hardly walk through, I mean there's so many people out there walking their dogs. And we need more space, not less

space.

This was supposed to be, in, when, the city gave the property to the GGNRA with the stipulation that it would remain, we'd be able to use this property as we have traditionally. Traditionally I have used it to walk, but primarily to walk dogs. I've had several dogs over the years and I hate using dog parks. Dog park, I walk around in a circle because the dog park isn't very big. So, you just end up going around in a circle on a path.

I'd much rather have an experience walking along the beach. I don't necessarily ' right now we go down to the legal end of the beach, down by Sloat. There's a, a area that's less than a block long. When it's high tide, you can't even walk there. And that's what they've given us. They've given us this little tiny area to walk in, and I'm disgusted. Thank you. [laughter]

SUPERVISOR WIENER: Thank you very much. Next speaker.

JOHN KEATING: Hi, I'm John Keating. Thank you, Supervisors. I've been following the GGNRA management issues for about a decade now, since I arrived at the coastal bluffs to find that the Park Service had closed the only really good disabled access trail in the Bay Area without any concern or contact with the public beforehand, and then subsequently watched as they closed down the only large sand dune that children could play on in the Bay Area while completely ignoring public comment they received on that.

I want to thank the GGNRA ' Superintendent Dean, Howard Levitt, Sherwin Smith, and the others who are behind us who's involved in this process, for being here. I want to thank them for their public service. And I think this is the highest public service, when you listen to the public and in a public hearing.

I think that goes to the central issue of what's going on here, and make no mistake about it, the change in process by the GGNRA fundamentally changes the way it deals with the people and with the city. And what they have done ' well let me first say, I agree with many of the comments about the technical deficiencies of the NEPA process. When there is an analysis presented for impact review, it ought to be scientifically sound and not read as an advocacy piece rather than an impartial presentation. And there is that risk in this process; it's been identified by the courts before as a process where the Park Service wishes to railroad through such changes.

Going to this current process ' what is fundamentally different, that impacts the city and the people, is a change from the mandate and goal to listen to the public's interest, concerns, desires, [bell] to change, to do a technical back room analysis.

SUPERVISOR WIENER: Thank you very much. Next speaker.

RUBEN GARCIA: Hello Supervisors. My name is Ruben Garcia and I'm a SEIU union organizer. How're you doing. Thank you very much for having this hearing. I just want to echo the, the previous speaker. This is the hearing that the GGNRA didn't have. They didn't want to face a public upset about what they were doing, and that's why they created that kind of like, like a easy, easy for them process when you go and you talk to one of them, and they don't care what you say, nobody's listening to you; there's no record. There's a record of this, and I think that's the way they should conduct their business.

So anyway, so we're talking about 1% of the total GGNRA. And I'm a lifelong environmentalist. Believe me, I, I, I used to be part of the Sierra Club inner city outings. We used to take San Francisco kids to the beach because a lot, believe it or not, a lot of our kids in the Mission and the Bayview, they never make it to the beach, they never make it to Fort Funston. So we used to take kids from there to the, to the beach or to Yosemite, whatever.

I also have a letter here from over 50 businesses that are related to dog ownership, and they are protesting. I want to introduce this into the record. They are protesting the GGNRA policy that they're trying to impose. I, I, I went through the, through the draft that they have. I, I was trying to find the evidence of some, of some situation. I just couldn't do it. So I truly believe that this is a process that they have developed to really wait us out, where in 5 years or 7 years, we won't be able to go to Fort Funston or any of these places.

So I urge you to introduce these resolutions as a way to bring them back to the negotiations table. This is a city. This is, and I'm, really feel sorry about them. They probably used to work at Yosemite or one of those beautiful parks, and then they, they got transferred to the city, [laughter] where they live, where now they're running a park with over a million and a half people next to them. And there, and it's very hard to adjust to that, and I understand that. But they have to understand that this is a recreation area. This is an area where we have [bell] to bargain, we have to understand each other. Thank you very much. [applause]

SUPERVISOR WIENER: Thank you very much.

BRUCE WOLFE: Good afternoon, Supervisors. Thank you very much for introducing this resolution and for having this hearing. It's our only opportunity to be able to be heard.

My name is Bruce Wolfe. I'm President of DogPAC here in San Francisco.

And I just want to say, your, Supervisor Wiener, your opening questions to the GGNRA about whether this has been done anywhere else in the country with regards to dogs just lends itself, to me, to be that it's one big huge experiment ' that we don't know what's gonna, the outcome is gonna be, we don't know how enforcement is gonna go. There's, we already know from, even from the environmental groups' own admission, there hasn't been very good enforcement as it is, with the current areas that are protected. I also want to say that I did, I, I am a person with a disability. I'm also a disability advocate, and, along with my colleague, Bob Planthold, who spoke earlier. I do want to say that I did contact many disability organizations, one of which is Disability Rights Advocates, who has now a lawsuit which is possibly going class action against the GGNRA for ineffectively making the GGNRA ' all of the GGNRA ' accessible to people with disabilities. And this has, you know, been an ongoing case since 2008.

Also, nobody had mentioned, with regards to the science, what's happening at Drake's Bay. And I think that needs to also be part of the discussion here.

GGNRA butts up against the City and County of San Francisco, which you know you don't have control or jurisdiction over since the transfer, and essentially leaves San Francisco landlocked, without any access or control over its future of its coastline.

I'm a person with a disability, as I mentioned. I have a service dog that I adopted from the SFPC, SPCA. He's 14 years old now. Why? Because he's able to have those large open expanses to be able to run. And to be 14 years old and to be an, almost a 90-pound German shepherd [bell] is quite a feat. So I support the resolution. Thank you very much.

JOSE MALDONADO: My name is Jose Maldonado. I am a young athlete, and I think dog off leash in parks help people exercise more, stay healthy, and I think we need more parks like this instead of taking off. I know, I don't know the, the purposes of this, where who thinks that we don't know, but seriously I think people enjoy so much, as well as my girlfriend, family and friends, and new people that we meet and dogs that we interact with. So I think this is a very beautiful thing to have. Please do not take it away.

DINA KHAIT: Hello, my name is Dina Khait and I'm here as a dog lover, owner, advocate, current volunteer for Rocket Dog Rescue, and nursing student. And I want to say that we have a family dog who's 13 years old and as long as I remember, we've always taken her to Ocean Beach and Fort Funston, and it's just some of the greatest times that I know that me and my friends and my family have had, especially after you're, you know, stressed with school and work, you just, you don't want to go to a little tiny city park that's gonna be overcrowded. You want to have a nice, beautiful area with

mountains and beaches and very friendly dogs.

I haven't, I walk there several times a week - 3,4 times a week - and I never see dogs doing anything except playing with each other. You know, okay, we can, they say that we can have the dogs on leash, but everybody knows that dogs cannot have the same exercise on leash as off leash. And obviously there are many people that are not physically capable of, you know, running as fast as their dog [laughter]. Obviously for many reasons ' physical condition, you know age, disability, whatever the issue may be ' but that doesn't mean that their dog shouldn't have the right to be healthy and get socialized with other dogs.

I've fostered over 25 dogs with Rocket Dog Rescue and each one of those dogs I have taken to Fort Funston. So, I oppose the plan.

SUPERVISOR WIENER: Thank you very much. Hi.

ALLISON MORGER: I know it's been a long day for everybody, so I'll kind of keep this short. My name is Allison Morger. I am a dog walker and trainer in the City of San Francisco for the past 13 years. I also own a pet store in the West Portal area. And there's a couple of points that I don't know if people have made enough.

Every day at Fort Funston, I'm there every day, and I pick up a couple of bags ' big bags of trash from the beach. This trash isn't left by my dogs. Cigarette butts not left by my dogs, left by human beings.

I've also rescued several seabirds that have been caught in the line of fishermen that are allowed to walk on the beach, cut their lines and leave their hooks. And I don't see any regulations and signs for them, but that seems to be perfectly reasonable. I've rushed several seabirds down to Peninsula Humane Society who have been caught in those lines.

The other thing is that when you take the dogs out of an area ' for instance, John McLaren, and I walk there often too, it's a beautiful park ' on the weekends it's not safe. I tell my clients don't go if the dog walkers aren't there, because there's tons of gang violence. Because when you have dogs in an area, you're not gonna have homeless encampments and you're not gonna have a bunch of gang violence and people that are possibly up to no good in that area. So, taking the dogs out of Fort Funston is gonna open up a huge number of problems that I don't think anyone has really looked at the monetary thing of, of policing those areas from those types of things happening. Thank you.

SUPERVISOR WIENER: Thank you very much. Hi. BARBARA OPLINGER: Hi, I'm Barbara Oplinger and against my better judgment I'm

up here speaking [laughs]. But I do want to make two points and one is that I, I'm against the GGNRA's proposals, their report, their plans because it's blatantly discriminating against dog owners. If, if we can't go to these areas, we, we have a responsibility for our dogs and we can't go to the areas that are being blocked off.

And the other thing is that as a frequent visitor to, to Crissy Field, I have noticed that when, when the park put a more substantial fence around the Plover area, it actually helped greatly to prevent people from coming through the areas. So, all they need to do is make provisions like that to help and to not discriminate against dog owners. Thank you.

SUPERVISOR WIENER: Thank you very much. Hi. Come on up.

JANET SLISMAN: Hi, my name is Janet Slisman and I'm a professional dog walker in San Francisco. I'm, I've been in business now for about 3 years and my reason for going into the business was because there were so many different problems with dog walkers that I felt like I could really make a difference. And so I started my business using, I have six crates inside of a van, so each dog has its own crate with bedding, and it's safe. And I only take 6 dogs at a time. I have a first aid kit and I'm certified in first aid. All the things that, that dog walkers should be doing.

And I just feel that because I've been doing this for 3 years, I've kind of like been the trial person that does 6 dogs work ' the number of dogs you take out. And what I feel is, is because the, because the, the employment in the city and the economic environment have been so bad, that it makes our business very unpredictable. And so I have customers that are trying to cut back on their, on their dog walking costs, and so they will call me at the last minute and say can you please take my dog, you know, so at any given moment, even though I say I have a limit of 6 and I have a list of 6 dogs, I may have another customer add in another dog. So the reality of it is, is if you, if you use the, the amount at 8 dogs, it makes it a lot easier for us to be able to sneak in a dog extra every day if I, if we have to. And so that makes it easier for our businesses to be run.

The second thing that I wanted to talk about was the fact that in the proposal, they are [bell] Is that the?

SUPERVISOR WIENER: You can finish your sentence.

JANET SLISMAN: Okay. They were saying that we, that we have to keep our dogs on leash as we get out of the vans, and that's really difficult because the people that employ, or who hire me are people are, who have very difficult dogs, and so, you know, taking 6 dogs down the beach off

leash is really a very difficult thing to do. Thank you.

SUPERVISOR WIENER: Thank you. Okay, is there any further public comment? Okay, hearing none, public comment is closed. Thank you all so much for coming out. Now, Superintendent, would you like to say anything?

SUPERINTENDENT DEAN: I'll be brief. This is, the hour's late. Thank you for, for the hearing today. I, I was, we were all taking notes and, and I think it was informative for us. We've listened carefully.

As today's comments show, I think this is a difficult and challenging issue for us all. We are the second most national park area [sic] in the country, 14 million people, and we realize that a large part of that is because we live next to 6 million people who come here many times during the week.

I'm not gonna get into rebuttals or disputing some of the things we've heard today, but I, I will say that, you know, we do manage ' one thing I did want to point out ' we do manage 80,000 acres ' that's what, that's within the park ' but only manage directly 14,000. But it seems like a lot of the areas that we're focusing on and that we studied for the plan is the same small percentage, sort of the prime real estate where everybody wants to go ' the beach areas and some of the more popular areas like Crissy Field. So we understand that. And, and that's part of the challenge that we all face.

We will continue to work with the city as we go forward. And at the end of the day this will be a plan that attempts to balance the recreational needs and, and also protect resources. And we'll be deeply informed by the great input we've heard.

I also wanted to mention that through the previous meetings that we had ' the public meetings ' we have over 180 pages of flipcharts that are being translated and, and put into informing us in our, in our plan as we go forward, and will be incorporated as public documents in the final plan. In the end, though, this will be the most friendly national recreation area in the country as far as dogs ' whatever, whatever form it takes, whatever the final details, it's gonna be the most friendly national recreation area in the nation.

We, we take our recreation mission very seriously and this means that we have to balance and consider the needs of all users.

So thank you again and just a reminder to everyone ' we have been taking notes, as I said, but continue to comment, you know, substantively through our website so that we can account for all the comments.

SUPERVISOR WIENER: Thank you. I appreciate that and if I may just ask: so going forward, will GGNRA, will you be in a position, in terms of

interacting with the city representat

Correspondence: Please make the parkland accessible to human beings seeking an opportunity to enjoy the the natural environment. Dogs in parks ADD SIGNIFICANT STRESS to the environment. Adding dogs to the park environment have a large negative impact. They disturb the natural environment. My father was a game warden and he always told me that we were guests to the environment. It seems to me that people with dogs bring them to the parks and let them run wild, not supervising them. If you are going to allow dogs in the park, please consider a dog access fee of ~\$10-\$20 per visit for the dog. The access fee needs to reflect the actual disruption. -Rosemary

Correspondence: Dear Mr. Smith, Thank you for letting me submit my letter! It really means a lot to me. The letter is below.

-Willa Hegarty

Dear Superintendent Dean,

My name is Willa Hegarty. I am 13 years old. I have been a resident of San Francisco my whole life. I have always been a dog lover. Two years ago I got a golden retriever named Lucy. She has brought me so much joy. Before having Lucy I had never heard of Fort Funston or Ocean Beach. I am NOT an anti-enviromentalist. I ran for ecology in my school. I love all animals and do not wish to hurt any. I want to maintain places in the GGNRA for future generations. I visit Fort Funston 3 times a week. My dog was very shy. We would go to "Puppy Socials" and she would try to escape from all the dogs. When we took her to Fort Funston she got exposed to many dogs and people. This helped her blossom. She is now a very happy, energetic, and social dog thanks to Fort Funston.

I think the GGNRA's proposal is unbalanced. It has failed to show impact on City Parks. It does not contain factual information. The GGNRA did a study on dogs and the Western Snowy Plover. 5,692 dogs were observed. 94% did not chase birds. 6% chased birds that were mostly seagulls. 19 dogs chased

plovers. I think this is the owners' fault not the dogs. The owners did not properly train the dog. The DEIS plan was based on disturbances. Disturbances can be as slight as the bird moving it's head.

I believe the DEIS plan was not based on facts but assumptions. The DEIS plan eliminates off leash walking or bans dogs altogether. The DEIS is full of things that might or could happen. There is no evidence that the information has or ever will happen. It also assumes impacts on the parks are all from dogs , but they could involve weather, people, natural predators, etc. The DEIS made no attempt to identify, study, or report any benefits on recreation. A DEIS plan should be based on science not opinions.

The Compliance based Management Strategy (CBMS) says that non-compliance leads to negative impact. There is no evidence this is true. This statement should not be accepted.

In 2006 Suzanne Valentine filed a Freedom of Information Act that requested the data, documents, and/or staff report that justified the DEIS. She got a reply saying that 'the staff reports and other documents you request do not exist at this time'.

The GGNRA is required by NEPA to consider impacts on humans, including human health and social community in a DEIS. The DEIS had NO mention of health or social community. Having a dog benefits you physiologically, psychologically, and socially. No health benefits were mentioned in DEIS.

Fort Funston for example has the most diverse social community I have ever seen - people of every age, race, ethnic and religious group. I talk to people I wouldn't even notice if it weren't for our bond with animals.

Usually every person I meet is nice and calm. I think this is because they are around dogs a lot of the time. Walking dogs has different health benefits. Walking dogs provides people with exercise. Obesity is a major problem in the country. Walking my dog is a big part of my exercise. My dog has also been overweight. Fort Funston has been essential to keeping her at a healthy weight.

The DEIS says dogs scare away children. I think if children are exposed to dogs at a young age they won't care if one licks them. I see many children at Fort Funston on the weekends. There are also many health benefits. For more information on health benefits please look here

www.pawssf.org/document.doc?id=15)

The GGNRA is treating its land like Yosemite and Yellow Stone. The

GGNRA is a unique area. It shouldn't be treated like other parks. It is an URBAN AREA. IT IS NOT A PRISTINE WILDERNESS! GGRNA is a National Recreation Space. One Recreational Activity is Dog Walking. I find it Ironic that the NPS has a Healthy Parks Healthy People initiative. They don't want us to walk because we are walking with our dog.

The GGNRA has failed to show the effect on city parks. Tsunami Friday was an example of this. When dogs are put in a small area there is a pack mentality. When dogs are put in a small area they get aggressive. There will be more dog bites and accidents. There will be more accidents in the GGNRA as well. The DEIS plan claims "An increase in nearby parks is unlikely...." There is no information to support the statement. Scott Wiener asked the GGNRA at the hearing at City hall how he evaluated that there would be no impact on city parks. The GGNRA replied It was not an exhaustive study. NEPA required the DEIS to show impact on neighboring cities.

Rather than put out a document with no substance. I suggest you scrap the document. Start from scratch and contact dog behaviorists. Or you could start enforcing the 1979 pet policy. Put up more signs and maintain the parks better. In the two years I have been going to Fort Funston I have only seen ONE ranger! Enforce the rules instead of making up new ones. I support Alternative A, the No Action Alternative.

Thank You Willa Hegarty Age 13

Correspondence Type: E-mail
Correspondence: Dear Superintendent Frank Dean,

I am writing to you regarding the GGNRA's Draft Environmental Impact Statement. The document you have prepared is not based on facts about dogs' impact on the environment and the survival of endangered species. There is no scientific data to illustrate your conclusions in your report. Humans, pollution, and other factors contribute to certain species being endangered.

I walk my dog at Fort Funston and it could hardly be compared to other parks such as Yosemite. I have never seen a ranger patrolling the area. I only see maintenance workers clearing out the trashcans. The pathways have potholes and fences are falling down. The weather is often inhospitable, but dog owners brave the conditions to exercise their dogs. Most of the dog parks in San Francisco are very small, so an area like this is really needed to

sufficiently tire out dogs to maintain their physical and mental health. The impact on San Francisco's dog parks was not addressed in the Draft Environmental Impact Statement.

The National Park Service has never tried to police the area. There is very little signage put out. The City of San Francisco is looking for ways to improve the area by restricting the number of dogs that dog walkers can handle at a given time to 6 dogs. Fewer residents use the park during the week. It is during the weekend that more people use the park when there could be more problems with dogs. Rangers should be present to cite any violations.

If the GGNRA's preferred alternative goes through, the only users of Fort Funston will be the hang gliders. (Maybe they are impacting the habitats of the birds in the area by flying around.) I really get the feeling that with the National Deficit as it is, the leaders of the National Park Service would prefer to leave Fort Funston abandoned with very little use than to have it be a robust recreational area for the residents of San Francisco and San Mateo counties. Please go back to the drawing board and come back with an alternative that we all can live with.

Thank you

Anne Kenney

I support all bonds to buy parkland because of the joy I receive in walking my well-behaved dog off-leash. It is a joy to meet other people and their dogs at Crissy Field in San Francisco. I feel that people who are not

considerate should be fined and lose their privileges, but the ones with good mannered dogs should not be punished. Please allow off-leash dogs in your parks. Thank you!

Correspondence: It's bad enough the state doesn't allow dogs in all of their parks(except the parking lot and restricted paved areas). PLEASE DON'T bar dogs from national recreation areas too. We won't have anywhere we can go. If you're worried that off leash dogs will molest wildlife - have a leash requirement JUST IN THOSE AREAS. People who love the outdoors love their dogs too. The number of parks that accepts dogs is too limited. If you're arguing that dogs make a mess - look at Baker Beach, which is very clean. All you need to do is provide enough trash cans and bags. Help us please! Don't lock us out.

Correspondence: I am dog owner and also consider myself an environmentalist and I do not support the preferred alternative in the Dog Management Plan. I feel that is too restrictive and unfairly penalizes the majority of dog owners for the indiscretions of some bad ones. GGNRA is an urban park, centered in an area with more dogs than children, and dog owners and dogs need more open space, not less. Dogs are not permitted on state lands and the San Francisco city parks that allow dogs are small in size, limiting the length of stay. Many dog owners, like myself, love the privilege of taking long hikes or walks on the beach or on Marin County trails with our dogs. This plan drastically reduces - and in many cases - eliminates this option.

I particularly object to the proposed changes at Fort Funston. The restrictions here are drastic and reduce the amount of off-leash area by almost 90%. The small off leash area near the main parking lot is not nearly enough space for all the dogs and owners that utilize this part of the park. This reduction in space - and forcing too many dogs in a smaller area, could result in conflicts that this plan attempts to reduce. Dog walking at Fort Funston is a long standing recreational use, and it is perfect for it. It has wide expanses of sand, with little important vegetation or habitat (even prior to dog use) which provide open spaces large enough for everyone to enjoy.

The plan discusses a loop trail from the parking lot down the Beach Access

trail, along the beach, and up the Sand Ladder. However, the majority of time, the outflow pipe blocks passage down the beach, making a loop impossible. This results in reducing the off leash area even further. One of my favorite places in the city to walk with my dog is south of the sand ladder. The proposed new rule banning dogs on this section of beach is unfair and unnecessary. This section of beach is not overly used and I have never encountered any conflicts. It is a peaceful stretch of beach, and long enough to allow space for all users. Additionally, this section is proposed as off limits to dogs because of the bank swallows, but there research by California's Department of Fish and Game that found that the bank swallow is remarkably indifferent to the activities of people near nesting sites. Bank swallows frequently nest near intense human activity, including busy highways, construction sites and quarries. There does not appear to be scientific evidence supporting the claim that people or dogs on the bluffs far above the nests or beneath the flyover zone would hurt the birds.

I believe the analysis for indirect impacts to adjacent lands isn't accurate either- no impacts are anticipated for areas at Fort Funston, but when Fort Funston's proposed off-leash area becomes so crowded, dog owners may go to other areas, creating visitor and other resource impacts. In the 1970's and early 80's, Fort Funston was a cesspool of illegal activity. By walking dogs at Fort Funston, dog owners have transformed this part of the park into safe community of people who look out for each other - as well as the environment. Dog owners are not deviants; we are legitimate users of the park that should not be penalized.

The plan seems to set aside certain areas in each county for dogs (i.e. Rodeo Beach in Marin), and without a doubt, the majority of Fort Funston should be for off-leash.

I have similar objections and concerns about the proposed restrictions for Crissy Field. There is little habitat of value at East Beach. This area is very popular area for off-leash dogs, and to prohibit dogs from this area entirely is again, unfair and unnecessary, and forcing all dogs that use this area into the small section of central beach is a recipe for conflicts.

The NPS is changing a long standing tradition of being able to walk a dog - off leash - on the beaches in San Francisco. A better compromise needs to be reached.

Thank you. C. Scerri

Correspondence: i do not support the dogs who walk the Tennessee Valley trail to the beach. The ladies, who I walk with tell people that it is against the law to have their dogs (sometimes off leash) walking to the beach. However, there is very little enforcement on that trail. As far as the Alta, dogs should be on leash instead of under "voice" control. As you know, the Alta is the best doggy park in the County, however not everyone wants a dog to run up to them. Many times when I am on the Alta with our children, some of the children are afraid of dogs. When they scream out of fear, they are told that the dogs don't bite or that they are friendly.

Dogs should be on leash on the Alta and Oakwood Valley trails.

Thanks for your continued support to educate our community to the natural beauty in our "backyard."

Royce

Crissy Field Dog Group Scoping Letter to GGNRA. Re: General Management Plan, July, 2008 I Concerns and Issues 1. GGNRA DEIS: ? Overall lack of site-specific baseline and impact analysis (Chps.3 and 4) ? Major dispersion issue for all three counties ? Most people are overwhelmed and intimidated by the 2400 page DEIS ? No Recreation section ? Treats environmental and recreation as opposing values ? Impact that new regulations will have on SF low-income disabled and senior dog owners who need accessible off leash

areas ? Adoptability concerns for SF SPCA, MHS, PHS-SPCA and Bay Area rescue organizations ? Preferred alternative is overly-restrictive and unrealistic; no technical basis for change from No Action alternative ? Solution: Modified No Action alternative, that would include New Lands (San Mateo) and management measures, including but not limited to clear signage, a robust educational program and the creation of a five-member independent recreation oversight committee.

2. Inherent NPS bias: NPS Director Jarvis' public statements about GGNRA Dog issues, GGNRA staff bias for this issue. As NPS' Western Regional Director, this is a direct quote from Mr. Jarvis as reported by Suzanne Valente and Steve Golumb when they asked Mr. Jarvis about possible City Of San Francisco reversion at Ocean Beach and Fort Funston. This conversation took place outside of the NPS Centennial-Initiative Listening Session, Presidio Officer's Club, San Francisco, Ca., March 22, 2007 "I would rather give up those [the GGNRA] properties than have dogs running loose on them." March 22, 2007 KQED Forum Show, April 7, 2011, <http://www.kqed.org/a/forum/R201104070900> 2007 GGNRAJGGNPC Intercept Survey

3. NEPA Consultation: Under NEPA, any persons, groups or organizations are encouraged to "consult" with the lead agency (GGNRA) regarding their concerns and suggestions about the DEIS. CFDG did speak with Frank Dean about having people/groups come and meet with him and GGNRA staff after the May 30th deadline and have an opportunity to explain their written comments. To date, Mr. Dean has not responded to this constructive suggestion to CFDG. CFDG Preliminary Analysis of Draft Plan/Draft EIS Draft Impact Analysis 1. Leaps of Impact ? The draft EIS impact analysis ' which in turn drives the alternatives analysis ' often makes leaps of faith based on assumptions, rather than scientific or technical data. ? The basic assumption throughout the draft EIS sections is that: the presence of dogs means impaired natural values, based on the general tendencies of dogs to root around or chase other animals. As a general matter, it's hard to take issue with a sweeping generalization like that. ? In many places, the draft EIS does not provide any data on actual impacts by dogs in areas being proposed for closure to dog walking. ? There are big consequences to thousands of people around the Bay Area for getting this wrong. ? But this is a site-specific technical planning document, where hard information about actual effects needs to be disclosed and evaluated. ? In places where data are provided, for example, there are areas where the draft EIS explains that people, as well as dogs, who traverse dune areas disturb the western snowy plovers. Monitoring surveys in an area observed 48 off leash dogs chase the plovers in 12 years. The plovers continue to return to the area each year. The draft EIS then makes undocumented assumptions that there are unacceptable impacts and that dogs, not people, are the culprits. ? There might or might not be a problem ' we can't tell from the draft EIS. If there is, we can't tell

from the draft EIS whether access should be limited for people, for dogs, or both. ? The public deserves to know these answers to be able to comment intelligently on the draft plan or be willing to accept ' for themselves or their dogs ' such severe restrictions.= access to our own public lands, and San Francisco city beaches where people have visited for decades.

2. The here and now (site specific data) A related problem with the draft EIS is that it does not address site specific conditions and resources. The draft plan and draft EIS are in some respects about 20 plans and EISs, because they examined each GGNRA area. We can appreciate how difficult this is for GGNRA and the Park Service to accomplish. ? But the courts have consistently explained that difficulty does not excuse lack of adequate data and study in an EIS. And the bulk or size of an EIS does not equate to its adequacy. ? In many places, the draft EIS lack any description of actual site specific impacts on which closure decisions are being made. In other places, the draft EIS assumes species are present in areas where there is no record of their presence. In other places, there is inconsistent information about the presence of species.

3. This isn't Yellowstone [urban] ? NEPA requires evaluation of impacts on the "human environment," defined as: Human environment shall be interpreted comprehensively to include the natural and physical environment and the relationship of people with that environment. 40 CFR 1508.14 ? You wouldn't know from reading the draft EIS, or at least the first roughly 1,000 pages, that much of GGNRA is located in and around the city of San Francisco. ? For example, the description of the "General Project Setting" in Chapter 3 makes passing reference to the City and County of San Francisco, nearly the entire description is about its natural resources (the Biosphere Reserve, California Floristic Province, etc.). ? The draft EIS is required to provide "full and fair discussion of significant environmental impacts." Incredible as it may seem, the draft EIS has excluded consideration of urban quality. It says: "The quality of urban areas is not a significant factor in determining a dog management plan" (draft EIS p. 22). ? This is a serious flaw, contrary to NEPA's requirements and to reality. GGNRA is located in an urban metropolitan area. The SF Charter states as a fundamental purpose: "to improve the quality of urban life." The quality and design (including trails) of open space and recreation areas are fundamental to the quality of urban life. ? The draft EIS is largely written as if San Francisco's neighborhoods and its residents don't exist. ? The legislation establishing GGNRA and the mission of the GGNRA both include preserving "recreational" values, as well as natural, scenic and cultural values. ? One would assume that a proposal that had an adverse impact on recreation ' which is part of both the human and physical environment -- would include an analysis of impacts on recreation in the project area. The draft EIS doesn't. ? The draft EIS has sections on "visitor experience" within GGNRA, which mainly treat recreation as an adverse impact on GGNRA,

rather than a value to be preserved. ? It's standard for EISs to have a section on recreation, which evaluates the on- site and off-site impacts on recreation of a proposed federal action. The draft EIS does not have a section on recreation. ? Here, it's essential, because GGNRA is San Francisco's front and back yard. It's where the people of the dense metropolitan Bay Area's neighborhoods play. This is a crucial omission in the analysis. ? This bias is then extended to the overall document, which generally puts recreation against natural values, rather than identifying and exploring a number of reasonable alternatives where they work together.

Alternatives - Draft Plan & DEIS 5. No Action is given short shrift. ? No Action means continuation of current Management Plan, not "do nothing" ? This means that ways of improving how GGNRA carries out the current 1979 Pet Policy should have been considered and wasn't given a fair evaluation. It is treated as a throwaway option ' because of the need stated by GGNRA to provide clearer rules, better compliance, and reduce potential for conflicts. We agree with those goals. ? These are problems with how the current plan is carried out, more than where access is allowed. There may be a need for some changes, but the draft EIS doesn't provide a scientific or technical basis for the severe limitations proposed. ? NEPA requires that each alternative be given substantial treatment so that reviewers can meaningfully compare them. GGNRA has more homework to do to allow a fair and objective comparison of the No Action alternative to the other alternatives. [if pressed further ' good example is use of compliance-based approach and public outreach and education so visitors know the rules and follow them ' which is what GGNRA articulates as a main reason for the dog management plan]

6. Hybrid Alternative ("C" out of 5 of course) ? If No Action is not selected, a hybrid alternative is a rational approach to balancing preservation of natural and recreational values. A draft EIS is like a mid-term exam. After all these years, it's the first time we've gotten to see something in writing. Under NEPA, the final EIS has to change to respond to comments from the owner of the Recreation Area ' which is not the National Park Service or the Interior Department -- it's the public. GGNRA's preferred alternative is called Alternative "C" ' and that's probably the mid-term grade it should receive. ? It needs more work, but it can be improved if GGNRA is open-minded and really listens and studies the thoughtful comments by the public at the recent public meetings and incorporates the public written comments. ? [if pressed further, two examples: Crissy Field beaches and grassy airfield and Fort Funston separated beach access]

7. Compliance-based Approach ? Assuming the proposed plan is improved to provide reasonable dog-walking access, the draft EIS proposes a concept that might work going forward. We're taking a close look at it, because clearly GGNRA has given some thought to it. ? It's called a "compliance-

based approach." The idea is that GGNRA will monitor how well people are following the rules. If visitors with dogs are following the rules by a landslide margin, access would continue; if not, additional restrictions would occur. ? There are significant problems that need to be ironed out with this approach. ? First, it's not clear how compliance will be measured. For example, do you average all tickets given out at all GGNRA units for a year? As another example, if you have people following the rules really well in one area (or site) of GGNRA, but not in another one, what do you do? [e.g., limit access for both, for one, etc.]. We need to know more about how this will work. We understand that the GGNRA wants to hire a private third party to develop a monitoring program and they do not want to share the development of the monitoring protocols with the public. We strongly disagree with this approach and think the creation of any monitoring protocols should involve the public in a transparent and open process. ? Second, if you've ever had a dog in your family ' or even if you haven't ' you know it's people who need to be trained: the dogs learn from their owners how to behave. A compliance-based approach works best when the people know what the rules are, so they can teach their dogs (or know they can't, and the dogs have to stay on a leash). There has to be some up-front education of park visitors about the rules as part of this compliance-based approach. This educational approach should be more than just handing out brochures to the public. ? Third, this approach will work best if there's a partnership between GGNRA, and some community and animal welfare groups, which are well suited to reach out to visitors and help with the educational part. There is a real opportunity here to build bridges and reduce federal costs for compliance.

8. Environmentally Preferred Alternative ? NEPA requires each agency to identify the alternative or alternatives that were considered to be "environmentally preferable." ? The reason is that NEPA, as our nation's most basic environmental charter, requires federal agencies ' quote "in cooperation with State and local governments and other concerned public and private organizations" ' to use "all practicable means and measures" to create and maintain conditions under which people and nature can live in "productive harmony." (what's now called sustainability) [Sec 101 of NEPA 42 USC 4331(a)] ? The national environmental policy enacted by Congress articulates what "productive harmony" and a healthy environment means, and this includes:

- o Attain the widest range of beneficial uses of the environment without adverse consequences...
- o Maintain wherever possible an environment which supports diversity and variety of individual choice...
- o Achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities.... ?

Unfortunately, the draft EIS does not apply this meaning of environmental quality to its identification of the environmentally preferred alternative. ? The draft EIS takes a narrow perspective that the alternative that most preserves natural values only is the environmentally-preferred option. ?

Where you have a national recreation area whose mission is natural, recreational, scenic and cultural values in a great city ' and all of these values are part of NEPA's view of a quality environment ' the environmental-preferred alternative is the alternative that most promotes all of these core environmental values. ? We point this out because it reflects a bias in the document that systematically does not yet recognize that this plan is for an urban recreation area that needs to ' in the words of GGNRA's own mission: 'preserve natural and recreational values unimpaired.'

Correspondence:

Dear Superintendent Dean:

I write to offer SF Animal Care & Control's comments on the National Park Service's Draft Environmental Impact Statement for Dog Management (Plan/DEIS) for the GGNRA. As you are aware, SF/ACC is responsible for stray or unwanted domestic animals and finding them new homes, but we also provide rescue and facilitate wildlife rehabilitation for sick, injured and orphaned animals throughout San Francisco. Accordingly, we are an advocate for dogs (and off-leash exercise) as well as for other animal welfare issues including respect for and coexistence with local wildlife.

The Plan/DEIS expresses' an intention to ensure the protection of natural, cultural and recreational resources of that land. The primary supporters of the Plan/DEIS share our concerns about the impact on native wildlife. However, the Plan/DEIS lends itself to an interpretation that polarizes advocates on either side by pushing them to choose advocacy for dogs or that of natural resources. SF/ACC does not agree that a dog management plan has to invoke an either/or situation. We share the advocates' concerns about wildlife and other environmental impact. However, the EIS document presented by the NPS does not clearly demonstrate that the presence of off-leash dogs is the sole, or even primary, cause of damage to native species or wildlife. The EIS document lacks foundation or analysis about the cause of any such impact. The mere fact of off-leash dogs being present does not lead to an automatic conclusion that those dogs have impacted an area that is also frequented by people without dogs or people with dogs on leash, horses, hang gliders, the Park Service Ranger's ATVs, or other predatory wildlife.

The NPS preferred alternative with restrictions and a compliance based enforcement that could ultimately lead to an outright ban prohibiting dogs from being allowed on GGNRA property altogether does not contemplate the urban environment in which those lands sit or the interests of the people of San Francisco and the Bay Area. Moreover, this position is overly

restrictive given that the NPS has not taken any intermediate steps to educate the public and users about what is required for coexistence and collaboration. In fact, the limited education that has taken place has been initiated by local dog organizations interested in preserving their access to the off-leash areas. It seems that the NPS has not attempted to implement other, less restrictive options at their disposal prior to proposing significant limitations. For example, the NPS could implement an adaptive management plan that might include signs, timed use, fencing, and/or enforcement of local or state laws similar to our local pooper scooper law, licensing laws or permitting options. Taking such steps would indicate openness to our community's concerns and to our unique Bay Area environment.

After several meetings with you and GGNRA Director of Communications Howard Levitt, we heard and even share your concerns about visitor and employee safety, wildlife protection, and maintaining resources for future generations. We would like to continue to work with you on solutions that would allow for more flexibility in coming up with a plan that addresses the needs of San Francisco residents, both human and non-human. Peaceful coexistence requires understanding and movement from both sides and is the only way that a City like San Francisco, with such diverse interests, can seek solutions to our challenges.

Yours very truly, Rebecca Katz
