Living in a city means density. People don't have yards for their dogs to run free. And dogs need exercise. Our parks are our back yards and the designated areas where dogs can run free are precious and few.

City dogs are well socialized because they're allowed everywhere. This access trains them to be calmer than those isolated from humans' daily life. They're the most well-behaved canines I've ever encountered.

My husband and I often go to Crissy Field and walk on the beach and by the field, just to see and pet the happy dogs we find there.

NPS regulations might be appropriate in rural destinations, but in an urban park, they need the flexibility to alter the rules. GGNRA is used differently than Yellowstone, Yosemite or Mt. Rushmore. That needs to be taken into account as does the original agreement from 1972.

I urge you to approve Alternative A. This kind of regulation sets San Francisco apart from everywhere else in the country. San Franciscans believe in diversity, freedom, happiness. Alternative A represents those beliefs.

Correspondence: This comment pertains to Fort Funston specifically, a place of delight and emotional restoration for the two- and four-legged members of my family.

An environmental impact assessment evaluates the impact of an activity on an idealized native "wild" ecosystem, but may not adequately capture the effects of an action on a less romanticized, but ultimately more realistic, urban ecosystem. We tend to view non-native people and animals as spoilers of otherwise balanced natural systems, and with good reason, for many natural treasures have been irreversibly lost due to the shortsightedness that often accompanies human progress (Hetch Hetchy, thousands of acres of old growth redwood forest immediately come to mind). The beach at Fort Funston might arguably be one of those places, except that by banning or drastically restricting off-leash dog access, this beach and the land leading to it will not return to a more perfect state of natural-ness--a pristine state is unobtainable. The beach is located on the coast of one of the most densely human and dog populated areas on the West coast. Environmentalists with realistic visions for the coexistence of humans and the rest of the non-human biosphere have long advocated for dense urban living, so that the human footprint can be managed and contained in controlled areas. Fort Funston lies fully within an urban zone, in the county of San Francisco. The beach is strewn with plastic detritus and all types of man-made litter, and large concrete structures, drainage systems, and other feats of human engineering mean that this place will never return to its former unadulterated state, regardless of how many dogs and people no longer visit. Those dogs and people will find other outlets for outdoor recreation, perhaps, but it is reasonable to assume that the health and vitality of those animals will be adversely affected by the lack of access to an area that was once very much part of their "native" habitat. Denying people and their pets the opportunity to enjoy this ecologically imperfect, but perfectly exhilarating recreational area could have the perverse effect of increasing encroachment on other less spoiled natural areas, increasing ecosystem harm on areas that are better candidates for full draconian restricted access, as these two- and four-legged "invasive species" seek other places to enjoy nature and each other. Depending on implementation, zoned restrictions could have nearly the

same negative habitat impacts to the human and dog inhabitants of this urban zone as a full-on ban would. On behalf of the four primate and canine members of my family and the friends we encounter at Ft. Funston, we ask you to consider the impact the proposed restrictions would have on our emotional and physical vitality, and to preserve one of the activities that sets San Francisco apart as an area where common courtesy and sense are allowed to triumph over proscriptive and restrictive laws and regulations.

Correspondence: Dear National Park Service,

I was very pleased to have the opportunity to review your proposals and to speak with employees regarding the proposed changes to the rules allowing dog owners to bring their animals into the GGNRA. I was a member of the Mill Valley School District Board of Governors for four years and I understand how difficult it is to formulate rules in the midst of competing points of view. What I always found was that it is important to separate out the loudest voices from the objective basis for any decision, and I believe that the Park Service has made a good start in moving in that direction. For the record, I am a dog owner and I do use as much of the open space in the Bay Area as I can both alone and with my dog and I have a very personal interest in any changes to the current rules.

SUMMARY:

I believe your proposed rules are vastly too restrictive. I believe that instead you should follow the following three principals:

(1) On lease dog walking should be allowed in the vast majority of areas -- with a very limited area designated for people who don't even want on least dogs in the same area; (2) Off leash dogs be allowed anywhere that their presence is not likely to cause material environmental damage (such as beaches), with limited portions of those areas (or times) being designated "no off leash dog" to accommodate people who don't want to be faced with off leash dogs; (3) Certain accommodations be made to create "off leash" space in what otherwise might be environmentally at risk by, for example fencing in specific areas -- albeit areas that are large enough to allow a dog to run; and (4) limitations for professional dog walkers that are more restrictive during high use periods (summer day times) and less restricted at other times (early mornings, rainy days, winter weekdays, etc.) -- for example allowing only 3 dogs per professional during summer days and 6

dogs per professional at other times (with appropriate permits).

DISCUSSION:

I believe that if we can craft a set of rules that are backed by compelling logic, dog owning users and dog-less users of the GGNRA will be able to understand, follow and, most importantly, self-enforce those rules. I guarantee you that if dog owners understand that their ability to use the GGNRA can be restricted if more than 25% of dog owners violate the policies, those dog owners will become assertive enforcers of the rules.

I think it made a lot of sense the way you have divided the analysis into a set of rules for commercial uses (professional dog walkers), off-leash uses, on-leash uses and no dog areas. It's logical to me that the rules related to commercial uses would be most restrictive, the rules related to off-leash uses would be slightly less restrictive, and the rules related to on-leash uses would be the most unrestricted. However, I'm not sure that I completely understood the basis the Park Service used for drawing the lines for each of the four use cases -- Particularly given that the vast majority of space is being placed off limits even for on-leash dogs.

SPECIFIC THOUGHTS ON THE RULES AND THEIR LOGICAL UNDERPINNINGS:

First, the argument that many of your employees made ("no other Park Service land allows any dogs") is not at all compelling. This is a roll back of previous rules, and I think you need to apply a more convincing argument than "the Park Service is illogical everywhere".

ON-LEASH DOG RESTRICTIONS. As I said above, I think that restrictions of on-leash dog access should be extremely limited (and I note that many of your proposals make very significant reductions in dog owners' right to access the GGNRA with their animals). I have seen no scientific studies that show that on-leash dogs do any more harm to the environment than human beings do if they actually stay on-leash, follow the rules about trails and pick up waste. As a result, I believe that any decision to prohibit on-leash uses of the GGNRA needs to be justified on some basis other than environmental harm. The only basis I can see for the restriction (assuming there is no environmental issue) is to accommodate users who wish to have access to a dog-free area. That goal can be accommodated by having specific limited areas designated as "dog-free" (much the same way as limited areas might be designated "off-leash"), while the vast majority of the GGNRA would continue to allow on-leash uses. (See below for more discussion of "dog-free" access".)

The proposals I saw, however, make enormous reductions in the amount of

space that may be accessed by dog owners who keep their dogs on-leash ? with no apparent justification for that change. (I heard some people argue that dog owners will violate the rules of on-leash spaces and let their dog off-leash ? but I don't think that's an argument for restricting on-leash use further, it's an argument for greater enforcement and penalties.)

***** My suggestion would be to have a global rule that, except in specific, designated "no dog" areas, on-leash dogs would be allowed in all the GGNRA.

OFF-LEASH DOG RESTRICTIONS. I understand the need for more restrictive rules limiting the areas that can be accessed by dogs that are allowed off-leash. I'm sure there are many places where the environmental harm done by a dog that has run far off the path could be material. However, I believe that it is important in our community for dog owners to have a place where their dogs can run free, romp and play. That's good for the dog's health, good for the owners health, and plain fun.

***** My suggestion would be that, subject to a limited area designated dog-free, I would designate the vast majority of places where dogs cannot do any material environmental damage "off-leash" (clearly this would exclude some of the GGNRA (the environmentally sensitive part), but I'd hope that exclusion would be applied sparingly and only where there was a compelling argument of environmental necessity). My impression is that this would include most of the beaches, any area with fencing sufficient to protect sensitive areas and a great deal of the other open space.

If you conclude that a large number of users of those spaces would object to off-leash dogs playing in the same space, you might consider different restrictions depending upon the time of day. In South Carolina, where my father lives, the national seashore allows dogs on the beaches all day long in the winter months and before 10 AM and after 7 PM in the summer months. I'm sure a similar program could be implemented for some of the beaches around here.

COMMERCIAL DOG WALKERS. As I said above, I agree that restrictions on commercial dog walkers should be greater than the restrictions on non-commercial users of the GGNRA. However, it is important to note that commercial dog walkers are not making money off of the public space in the same way as other commercial ventures might. They are making the same use as the dog's owner does, and they are serving the community purpose of exercising the dogs, and teaching them to behave and get along with other dogs. Moreover, if we restrict commercial dog walkers too much, the result will be a significant impact on whatever smaller number of venues there are where they are allowed to go.

To be more specific, I think some restriction on the number of dogs the average commercial dog walker may accompany is fine (although I'm not sure why 3 dogs should be that number). (I do very much appreciate the proposals to allow professional dog walkers to obtain permits to walk more dogs.) I also think that time based restrictions on commercial dog walkers may make sense in many places -- possibly with more dogs allowed during off hours (early mornings, rainy days, winter week days).

***** My suggestion would be to allow professional dog walkers to use any on-leash or off-leash areas with up to 3 dogs (or a higher number if possible) at any time private citizens could, and for professionals holding a permit to use on-leash and off-leash space at off hours or during inclement weather with a larger number of dogs (say 6). While one might argue that professional dog walkers should be more restricted than that, I believe that it would be very difficult to enforce (how can you tell who is just walking their 3 dogs, and who is a professional, etc.?), and I don't see a justification based on environmental impact (if private uses don't cause a material impact, I don't believe that the commercial uses would). Possibly license fees could be charged to cover any additional costs if the Park Service found that the commercial use of the GGNRA was greater than anticipated. FINALLY, NO-DOG AREAS. WC Fields may have said that anyone who hates children and dogs can't be all bad, but that's probably a bad principle for rule making. Indeed, I often find that my own children are less well behaved (and more of a nuisance) than my dog. Fortunately, there are no proposals to limit my children's access. To be serious, I understand that some people will want to have an area of "no-dog" recreation. The question is, how much area should be devoted to the desires of what I believe is a small minority. Ultimately, I the proposals I saw seem to me to be wildly too restrictive. I have not seen any study showing what percentage of current users (or even current residents) would prefer to have a "no-dog" experience, so we have no objective basis for determining how much space should be allocated to that purpose. Thus, any restriction should be justified based on some other proxy for "fairness".

***** My suggestion, in the absence of an objective study, the Park Service should make the number of acres of "no-dog" space equal the number of acres of "off-leash" space. Equality might not always be the same as fairness, but in the absence of objective studies, it seems to be the closest we can get.

Thank you very much for taking the time to read my comments. I would be happy to speak with any Park Service representative and/or participate in a planning committee. Please feel free to contact me at your convenience.

Best regards,

John Duncan

Correspondence: Dogs On and Off Leash

Written by Rachel Marissa Steinberg 5th grade 11 years old, Marin Horizon School Thursday May 19th, 2011

If you have a dog, don't you enjoy going to parks, trails, and beaches and letting your dog play, run around, and meet other dogs to explore and much more? Could you imagine not being able to do that at a lot of beaches, parks, and trails in Marin County? That might just happen. There is a big debate on where dogs should and shouldn't be allowed on and off leash at parks, trails, and beaches all over Marin County.

Puppies need to be socialized so owners bring their puppies to places like parks, trails, and beaches. Dogs need outdoor space where they can socialize with other dogs and if owners don't follow the rules only that dog and owner shouldn't be allowed at that park. Dogs should have rights to be allowed at parks, trails, and beaches.

Many people enjoy bringing their dogs to beaches, trails, and parks to play with other dogs. This is important because when a puppy plays with an older dog, they learn about appropriate behavior. This is also important because if a puppy or young dog doesn't get socialized, they might never get along with other dogs.

If someone doesn't follow the rules posted at beaches, parks, and on trails, only then should they and their dog be banned. Not all dogs should be banned because of what only some dogs might do. A good rule would be if a dog isn't under voice control, then their owner should only be able to have their dog out on a leash. Also if their dog doesn't like other dogs or if they are not friendly, they should also keep their dog on a leash. And when something bad happens that has to do with dogs, people should not blame the dog, they should blame the owner. For example if an owner doesn't pick up after their dog, that is not the dog's fault, it's the owner's fault.

Some people need a guide dog or have a service dog and they need to go places like parks, trails and beaches. And people who are blind or have a disability sometimes need a dog to help them walk. Service dogs should be allowed almost any where because they are really needed by their owners.

Dogs should have rights and be allowed on and off leash at parks, beaches, and trails. It's not only the behavior of dogs that is important. Owners also have to be good and follow rules like picking up after dogs, and any other rules that apply. Dogs and their owners rely on parks, beaches, and trails. Don't you think dogs should be able to explore, play, and run around and be allowed on and off leash?!

Correspondence: I am completely opposed to restricting off leash access in the areas specified, especially Fort Funston Beach. I drive up from San Jose to let my dogs run on the beach as there are so few places dogs can get natural exercise like this. In addition it is an enjoyable place to be for us Humans that actually pay for these facilities through our taxes.

Restricting off leash access in yet another place is totally unacceptable, if this continues dogs will not be allowed anywhere!

I am sure all the millions of dog owners who vote will remember who was responsible for limiting their access to public places.

Correspondence: I all my years of going to the Montara Open Space I have never seen any dog related issues, between dogs or humans. Why are you going to make the "New Lands" in Montara off limits to dogs? I have a limited budget. And I do not want to fill the air with CO2 driving my dogs to one of the very few places left in San Mateo where I can walk a dog in open space on-leash (ON LEASH!) My CO2 from my car is a much bigger Environmental Impact than my dog. Did you think of that? Some limits on OFF LEASH is fine; but the plan to limit dogs in New Lands area where dogs have been going for decades makes no sense at all to me.

Correspondence: This past Wednesday afternoon my dog Franklin and I went to Crissey Field to enjoy the beautiful day.

There were many people including a group of about 40 elementary school children all wearing blue t-shirts. About 15 were having a great time running and playing with 3 dogs who had joined their fun. 2 retrievers who were getting their favorite recreation chasing and returning balls that the children were throwing. The 3rd was a shepherd who was in possession of a water bottle which he would not drop. His owner told me that a water bottle was his favorite "toy" but he would have to be tricked into giving it up.

Franklin (a terrior) was sitting on the breakwater with several children petting him and supplying him with little treats which I had given the children to feed him.

A father with two children and a dog came by and joined the group. Several more people were walking the beach with their dogs. Many more people were riding bikes or walking enjoying a beautiful day.

Franklin and I went on to walk the length of the beach and have a snack at the warming hut. It was truly a beautiful day.

Is this the experience you want to take away from the people who live in the City and our surrounding counties?

This land belongs to the City. The Park Service was hired to maintain it as a recreational area not to turn it into a game and horticultural preserve.

Correspondence: I am 51 years old and have lived in San Francisco since I was 8 years old except for the years I was attending college and obtaining my Botany Ph.D. at UC Riverside. I currently teach high school biology in the San Francisco Unified School District.

I currently enjoy the areas of Lands End and Sutro Heights on a daily basis

and periodically like to visit most of the other attractions in the GGNRA. I greatly appreciate habitat restoration efforts and the care and concern for the public lands in our nations first urban National Park and am a proud new member of the Golden Gate National Parks Conservancy.

I also just rescued a 8 month old dog named Ella who was proscribed for me as a companion animal to keep my spirits up following a string of unfortunate incidents.

I feel the preferred alternative of the GGNRA DEIS is overly restrictive. I have seen dogs off leash in many parts of the GGNRA and like people they are mostly well behaved. If dogs are flushing birds, chasing animals, digging up plants, harassing pedestrians or fighting, their owners should be issued a hefty fine. If dog owners don't have their dogs under voice command or don't pick up the litter, they should be issued a hefty fine.

Scientific evidence clearly demonstrates that dogs are a benefit the the mental health of humans, especially in an urban environment. Well behaved dogs playing and running off leash on Ocean Beach or Sutro Heights derive a degree of exercise and socialization their owners cannot provide while on-leash. Off-leash play leads to happy well-adjusted dogs which translates to the mental health of owners in my opinion.

I feel that compliance-based management stifles public opinion regarding many of the issues I've discussed and is misguided. I also believe much of the EIR is tailored to fit a position for a restrictive position regarding dogs and does not accurately reflect actual scientific evidence.

A restrictive approach to dog management will severely impact San Francisco's city parks which is counter to the spirit and intent of the land transfer by the city to the National Park Service. I think it is vital to the future health of the GGNRA to take into account its urban setting and context and take a more balanced approach toward dog management that considers the welfare of both wildlife and the urban population.

Correspondence: I have lived in Pacifica my whole life, 46 years, and I have spent over 30 of those years exploring every crevice of this area, so I know Pacifica's open spaces better than most. My Husband, two children, Australian Shepherd Hailey and I are avid backpackers, hikers, and mountain bikers (not Hailey), and we love the outdoors. When my husband and I were making a decision to settle down and spread out our roots, we spent a lot of thought and time researching and visiting areas that would fit our lifestyle. After much soul searching, we decided to purchase our "dream" home & commit to spending the rest of our life living in Pacifica in large part due to the fact that it was a dog-loving community that allowed us to enjoy being in nature with our beloved pet. We are now so rooted in this community that we cannot see being able to easily move, but we are faced with the horrible thought that we will never be able to roam the hills of our beautiful city again. When we chose to be pet owners, we did so with the thought of being dedicated to that pet as if it were our own child. It is unfair to take on the responsibility of owning a pet when you know that you cannot walk it daily or care for its other needs, and the GGNRA open spaces are really the only place to walk a dog that is not surrounded by traffic. In our busy lives, we have only so much time in our days to fulfill our responsibilities. I for one get my exercise and my quiet contemplative time while I walk my dog. I would never take a walk without my dog. I walk the Sweeney Ridge trail on average 6 days a week, no matter what the weather. What I can't understand is why any use of this trail would be discouraged since it is already such an underutilized area. During the week, I see fewer than 5 other hikers for the whole week; on the weekend I see about 5 other hikers per day. My dog Hailey has a tough time with other dogs, so this trail is a Godsend for me because it makes it so I can avoid the stress of passing another dog and still give her and I a needed release of energy. Here are some of the main reasons why I feel it really makes no sense to close off this area to dogs. The mission of the national parks is to "conserve the scenery and the wild life therein and to provide for the enjoyment of the same in such a manner and by such means as will leave them unimpaired for the enjoyment of future generations." 1. A dog will not damage the current foliage on this network of trails in Pacifica more than any human being would and definitely not more than a horse would. As you are probably aware of, this trail is a small 10 foot wide clearing that is flanked on both sides by a natural wall of very dense coastal scrub which is a mixture of coyote bush, poison oak, Sun Bruno coffee bush, and spiny berry bushes. I can tell you that no dog or human could easily get through that to damage any wild plant life. What dog owner would ever want their dog to come home with poison oak oil all over its coat or have to untangle it from the brambles? 2. As for the wildlife in this area, it is thriving. Access to this trail to humans and dogs has in no way hindered life in these hills. I have seen glimpses of mountain lions on

numerous occasions, regular sightings of bobcats, fox, and almost daily sightings of coyotes. Not to mention deer, skunks, rabbit, quail, and all manner of bird. In fact, these animals flow over onto our property on a regular basis. Any "regular" that hikes this network of trails knows what is out there. The dogs that I see on this trail are on leash, as is mine, because these responsible owners fear that their pets could become prey for the predatory animals that live in this area. They do not want their pets to come in contact with these creatures. Even the non-predatory animals are a threat; for instance, nobody wants their dog to get sprayed by a skunk. 3. The network of trails from Cattle Hill though and including Sweeney Ridge make up a very minute percentage of the total open space that is left closed off to hikers and dogs and left for wildlife to live & thrive in, especially if you include the water shed areas surrounding the GGNRA land. The few miles of trail that exist should be left for the "enjoyment" of people who respect and cherish the outdoors, both dog and non-dog owning. Why pick on only the dog-owning folks, when in most cases, the type of person who owns a dog is usually the type of person who likes being outside? These are the people that will go to bat to protect the environment. It seems to me that as an organization, you should be promoting use of these trails so that people will grow to love nature and ultimately vote for laws that will protect our open space or donate time or money to support the system. In terms of marketing your cause, it seems as if you are shooting yourself in the foot by limiting yourself of the support of the dog-owning market. 4. I would hate to see this law pass and the only people to suffer are those that are law abiding. It is unfortunate that more extreme limitations on our rights are imposed to deter the few people that already break the current laws, when in reality, those individuals that are breaking the current rules will break the new ones. 5. Does it seem right that there is only one alternative dog-walking site listed for Pacifica? It is a sad state of affairs. We are left with little or no options. It seems to me that there are certain areas that need more strict control on dog access for valid reasons, but I think its unfair to create and impose "cookie cutter" laws that are meant to fix one problem onto a completely different situation and community just in the name of change. Each of these areas needs to be looked at separately and given special attention. The decisions made affect a whole community of people and I truly hope that my voice is not ignored. It would be a shame to be surrounded by God's beauty, never to be able to actually experience it.

Correspondence: I am, and have been a dog owner for many years. Although we live in the East Bay Hills, and have wonderful access to the miles of trails, we love the ability to go to the beaches with our dog as well. In all the years we have

been going to the beach, I have yet to see mean or scary dogs.....no dog fights or unpleasant encounters with people. If some people are afraid (for whatever reason)of dogs in general....they should be given a small area of beach that is fenced in, where dogs can not go. The dogs shouldn't have to have to pay for their fears. The same goes true for the Snowy Plovers. Why don't you simply fence off the area of their breeding grounds to keep the dogs out.

Happy dogs equal happy people and there is nothing more free and spiritual than to see dogs romping on the beach along with their owners, children and other adults who do not have this irrational fear.

Yes, there are dogs who should not be able to enjoy this privilege and should be on a leash.....but they are the minority, certainly not the majority. In fact it is a known fact that dogs off leash are more socialized, get along better with other dogs and people, than dogs who do not have this ability. And what better place to run than the beaches: Ft Funston, Ocean, Crissy Field and others.

Please do not cave in to the dog haters and deny the dogs and their owners the rights of freedom to run

Correspondence: I am a veterinarian practicing in San Francisco and I am completely opposed to further restrictions on off leash dog walking areas in the Golden Gate National Recreation Area.

As a taxpayer, a conservationist, and a dog lover I strongly feel this is a misuse of governmental power. If this is truly a "National" recreation area, then it should be open to all who wish to use it. Already shore line trails and much of the GGNRA space is restricted to many except those that are walking. NO bikes and no dogs is common signage on many trails.

The answer is not further restriction, but education on how to have dogs interacting in public areas including when a leash is appropriate or necessary. Dog owners should, as individuals, be held accountable for their dog's behavior. If my dog caused a horse to fall on it's owner I would expect to be held responsible. If my dog was responsible for hurting another person or dog I would expect to be held accountable. I SHOULD be held accountable! I have personally been affected by out of control dogs at Fort

Funston such as when my child was knocked over by an exuberant and out of control dog and the unapologetic owner/walker informed me I was at a "dog park" and not a playground. Does this mean that all dogs should be restricted from Fort Funston? Absolutely not!! Should this dog walker/owner have been held responsible for any injury caused by an animal under their care. Absolutely YES!

The current dog walking areas MUST not be restricted!!! It will place an unfair burden on city parks by concentrating the large number of dogs in San Francisco and surrounding areas into relatively small city parks. It will increase negative interactions such as what I experienced at Fort Funston a couple of years ago.

Furthermore, the meeting times available to comment on such issues severely restricts many people, such as those with jobs, from commenting and having a say in this important debate.

Correspondence: It is my fervent and sincere hope that the GGNRA will see fit to MAXIMIZE opportunities for dog walking on property under its aegis. Family dogs are just that - part of the family - and should be accommodated as such. Even with dog walkers, these are family members. Fort Funston remains one of the happiest places in all of San Francisco because of the joyful canines and their people out there. My family visits San Francisco quite often, and in fact, we used to live in the City. We travel with our dog - everywhere. If San Francisco and the GGNRA become unfriendlier than they already are to dogs, we will just have to cut those visits down. This sounds like a small-impact action, but if enough dog owners follow this

path, it will make a difference. There are hundreds of thousands of family dogs in this country. By taking a stand against them, you take a stand against a huge segment of the economy that comprises veterinarians, manufacturers of dog medicines and related products, dog food companies, makers of doggy accessories (beds, crates, leashes, etc.), makers of doggy poop bags and dispersers, hotels that accommodate dogs (many of them 4-stars and better), dog walkers, dog sitters, doggy day-care camps, dog portraitists, makers of clothing for people who love dogs, and on and on. I hope the GGNRA will find a way to work with dog owners, not against them - and all their connections. Thank you for considering my comments.

Correspondence: We are regular visitors to Crissy Field. In fact, one of our favorite spots in all of San Francisco is East Beach, and one of the best things about East Beach is the dogs and their owners. It's great fun to watch the dogs playing together up and down the beach and in and out of the water, chasing balls, digging in the sand, running fast the whole length of the beach just for the sheer joy of it. We are not dog owners ourselves, and have never even been particularly interested in dogs, but sharing the beach with all these happy, well-behaved dogs running free with their happy owners is such a great pleasure that we always take our out-of-town visitors to East Beach to enjoy it together. The playful, off-leash dogs add an important note of levity to the humans' too-serious lives.

In more than 10 years, relaxing at East Beach two or three times a week year-round, we have never seen a dog threaten another dog or bother any person, old or young. The same is true along the Promenade all the way from the Yacht Club past the Warming Hut, even on days when the Promenade is crowded with walkers and cyclists. The dogs that are off leash are in fact well under the voice control of their owners, posing no danger or discomfort to anyone. We notice, too, that dog owners respect the wildlife protection sections and the tidal areas, keeping their dogs away from those sensitive areas.

The EIR mentions the potential management cost of continuing the voice-control regimen at Crissy Field. The dog owners may have already suggested this, but it seems to us that they could organize a volunteer beach-monitor system that would achieve GGNRA's objectives without the draconian restrictions that are proposed in the plan.

Correspondence: We have a large dog. We own a house in Noe Valley in the city. Our yard is not big enough for our dog to run more than a few feet. She needs more exercise than just walks on a leash in the neighborhood. The city parks in our area are too small for her. She gets overwhelmed by the other dogs and has lost 3 teeth due to scuffles in the park with other dogs.

We love taking her to Fort Funston because she can safely run on the beach without encountering another dog on accident. We can watch her and call her back if we see anyone else coming. She can run into the ocean and roll on rotting crab. Her twice weekly romps at the beach keeps her healthy and her weight down. We take her during the week and only run into other dog walkers and never tourists or families. She is 8 years old but the vet says her regular exercise keeps her limber and healthy.

1% of the entire GGNRA should be kept for off leash dogs. Our dog walker told us how Fort Funston was full of needles and homeless camps before the dog walking groups started arriving. We owe them thanks for helping clean up Fort Funston for dogs and families.

Correspondence: General views: It would be an abuse to enforce restrictive alternatives at all sites. Even the preferred alternatives mostly restrict ROLA areas and often on-leash areas. I assume the NPS seeks a balance serving the wide variety of public users. I urge that this balance NOT be imposed at every site; rather, a balance of uses can be obtained by offering different alternatives mix of uses at various sites. For example, very restrictive ROLA and on-lease areas at all sites just because some in the public are uncomfortable with dogs nearby, would be inappropriate. Instead, there should be some areas where liberal ROLA areas prevail, and some people will choose to go elsewhere. But there really should be some areas with large ROLA designations. This does not seem to be the case for the preferred alternatives throughout this plan. Again, the balance should be regional, not at every site.

The plan for dealing with non-compliance is a trap! 12 months with average 75% compliance is severe, but more importantly the plan that an area not in compliance would shift to the more restrictive alternative with no chance to ever get dog privileges back again later is unacceptable. (Do I have this right! Seems very bad.) I urge some plan where more restrictive enforcement is for a probational period, followed by return to the baseline

alternative. It seems clear that the enforcement plan proposed can only move one way, and thus will gradually shift all areas to more restriction or exclusion of dogs, inevitably. That is totally nuts!?

Comments on 2 sites: I have personal interest in Mori Point and Ft Funston. I do feel my comments apply more generally, however.

Mori Point -- ? I favor Alt. A (all trails on-leash) ? Alt. C (Preferred) is acceptable, as is Alt. E ? Bootlegger Steps and the Headlands trail should be on-leash too

Plan D is certainly too restrictive. It appears that Alts. A, C and E are similar, and I favor wide access on-leash throughout the site. Not sure why some ROLA is not acceptable, though the endangered species may be the reason? If so, so be it (although neither of the main species are bothered much by dogs nearby, are they? So might there not be some poor snake habitat that could be ROLA?) In Alt. C and E, are Bootlegger Steps and the Headlands Trail on-leash? They should be.

Ft. Funston - ? I prefer Alt. A (no action) ? Much of Alt. C (preferred) is acceptable, except I suggest a much larger ROLA

I favor a much larger ROLA area here than is suggested in the preferred Alt. C. My regional balance vs within-site balance really applies here. We really need, and it is appropriate to allow, some areas where there is a large area for ROLA. Funston has this tradition, and Alt. A is essentially this. I DO FAVOR Alt. A for Funston, but if more restriction is deemed necessary, I urge a larger ROLA area. Designating a few restricted trails is acceptable.

Thanks, and good luck with this!

Correspondence: One of the things I enjoy most about living in Pacifica is the accessibility of outdoor recreation. We live within easy walking distance of Mori Point and a short drive to other GGNRA locations (Sweeney Ridge and Fort Funston). I object to the proposed changes to the current dog policy for a number of reasons outlined below: ? I regularly use the trails of Mori Point and find the status quo quite satisfactory. Dog owners are generally VERY responsible and problems are rare. There seems to be a synergy in the area between human use (including people with dogs) and efforts to plan native native plant species and remove invasives. I see no need for any change, especially to a policy that will not allow even leashed-dogs on many of the trails. ?

GGNRA is located in a large urban environment. Although administered by the National Park Service, it is distinct from national parks such as Yosemite. The goal of land-use of this land should not be primarily preservation, but to help maximize recreational options for the population of the area. Multi-use, including both on- and off-leash areas for dogs should be encouraged. Compliance-based management, where restrictions only increase, should not be a part of any plan. ? The clause about new lands is much too restrictive. We in San Mateo County already have nearly no opportunities to have our dog under voice-control, and GGNRA land that allows on-leash options are severely limited.

Sincerely, Patricia Kremer

Correspondence: I take my dog off leash to Ocean Beach almost every weekend all year round. On most days--excluding the handful of warm days we get a year, which I avoid--I encounter very few other people. A large percentage of the people at the beach with me are there with dogs, most of which are well behaved and stick to the tideline. I have reviewed the proposed restrictions for Ocean Beach, and find them draconian. It is an enormous beach that is largely unused most days of the year, and it seems to me to be an overreach to shut practically the entire beach down to off leash dogs. I am in favor of protecting the plover, but as I understand it, the real issue is protecting their nests in the dunes. If that is indeed the case, why don't you just cordon off the dunes, or restrict access to that part of the beach? I think most people who want to have their dogs off leash mostly want to do so along the tideline so that their dogs can swim. I only go at low tide, and I only let my dog off leash when we are on the wet sand.

Correspondence: I'm a San Francisco native, born and bred, and I have always had at least one dog. To try and limit access for off-leash dog walking is a horrible idea. Dog walkers make a point of looking out for one another and their dogs and keeping our parks in good shape! Dogs not only add to the richness of living in the bay area, it has been proven that they also add to the quality of life for those that have them and those that come into contact with them. I really hope that the decision makers at the GGNRA will really think about the benefits of having happy dogs and happy dog people and happy people who

come into contact with happy dogs that occur on a daily basis in all of the off-leash areas in and around San Francisco. Keep the off-leash areas legally off-leash! Thank you.

Correspondence: The GGNRA have singled-out the canine species and off-leash dog walking as a problem for recreational park land, and propose to limit and in some areas remove, dogs from currently designated areas. The GGNRA's specific opposition to dogs and their exercising off-leash naturally invites specific consideration to how and why canine and humans exist together in society, in a broader capacity.

The dog is an intelligent and emotional species we turn to for assisting us humans in many tasks, and it contributes as part of a society's volunteer work force. Besides being a widely cherished family pet, the canine species is: ? A comfort to the terminally ill ? Trained to provide services to the impaired and disabled ? Employed in search and rescue scenarios in natural disasters and the tracking of missing people ? Hired by the army and police force for routine and special operations such as mine detection ? Used for guarding, herding, hunting and supporting local economies around the world ? Used as a surrogate to orphan mammals ? A species that in the past was considered a useful source of physical power, for household duties such as churning butter and turning roasting pits.

Sadly, dogs also: ? Endure "passive" cruelty typified by cases of neglect, and "active" cruelty of malicious intent, as when a person has deliberately and intentionally caused harm to them. ? Make up four million animals-about one every eight seconds-that are put down in U.S. shelters each year ? Are widely used in biomedical research, testing, and education, and live in caged unnatural environments indefinitely until they are given euthanasia, sometimes once the experiment is completed. ? Are forced into underground blood sports where they are made to fight, sometimes to the death for entertainment and revenue from stud fees, admission fees, and gambling. ? Are used as "Bait" animals to test a dog's fighting instinct; often mauled or killed in the process. ? Are banned in some US states and countries around the world without diagnosis for their breed's reputation, alone. ? Are forced to take part in dog racing solely for entertainment and profit and at the expense of the animal's welfare. ? Are irresponsibly over-bred in puppy mills, where the forced and crowded daily conditions result in health issues and psychological disorders. ? Are exposed to "Class B dealers" in many US states who are legally allowed to buy them from random sources such as shelters and pounds to the sell them on for medical research. 7 out of 11 of

the country's Class B dealers are under investigation, and another has their license suspended, yet this process is still legal.

In conclusion, we have changed and manipulated this species to exist alongside man. We have used its capabilities to our advantage, and too many have taken advantage of its nature negatively too. It is a small freedom of theirs to run free in a natural habitat. With consideration to all of the above, we as the dominant species of this planet have a moral and ethical responsibility to treat this species with respect and appreciation.

We need to accommodate their freedom to exercise and play in our recreational park plans. We can and should all co-exist.

Correspondence: The GGNRA needs to compromise. Before I owned a dog I would never have given any thought to this whole debate, but now I understand. I have an 11 year old mixed bred shepherd/retriever named Julia. She is a great dog. She is well exercised and happy. If I did not have places like Fort Funston, Ocean Beach and Crissy Field to go to, she would never get the type of exercise she needs to be calm, well mannered and healthy. The GGNRA's argument about public safety at Fort Funston specifically, is a poor one. Who else goes there? As a single woman, I do not feel comfortable hiking there by myself. Would families go there for a picnic? ...No, it is too windy. Fort Funston would become a magnet for partiers and vandals without all the dogs. The parking is great, it is remote and it bothers no one. If the argument is trash, there is very little. I think that most of the dog owners, and walkers, really respect this wonderful place. Sometimes I go twice a day and I have never seen a Ranger patrol the area. I also go to Stern Grove which would become overwhelmed with the volume of dogs and cars if Fort Funston is not available. That would put more strain on our SF Recreation & Parks Department for up keep. Maybe there could be check-in booth and admission could be charged to park? Monthly and yearly discounts (for anyone who uses the parking lot, including the wind surfers) could be offered? This would be a great way to make sure the dogs have collars and current registration as well. I think that for Ocean Beach and Crissy Field a great compromise could be the time of day. I know there are a lot of children and/or people who are afraid of dogs. They deserve to enjoy the parks too. But if you have a dog at the beach at 7am who cares? The dogs actually help keep the area safe. I have been there at 6:30 in the morning when it is so beautiful and quite, along side other caring dog owners and the joggers, only to find a few partiers or homeless on the beach. Maybe having the beaches off leash before 11am would be a solution?

We need your help, your voice. If I did not own my underwater house, I would considering moving out of SF if this ban is passed. I have lived here for over 25 years. I have been proud to live here, but this silly ban of Fort Funston is just wrong. We owe it to the dogs to have a safe place where they can be socialized and exercised.

Correspondence: Myself with my family visit multiple National Parks throughout the US yearly. Living in San Francisco, we visit Golden Gate National (and more specifically the Presidio) on a regular weekly basis. I feel that the Federal Government has done an outstanding job creating rules and regulations for the management of all the lands under the jurisdiction of the Department of the Interior. I do not agree with Golden Gate National creating new rules specifically for only this park. Park Management should only include in the dog management plan those rules that all National Parks are required to follow. There should be no area in which dogs are allowed off leash for both the safety of staff and other visitors, but also for the safety of all plant and wildlife. The National Park Service Organic Act states that "...to promote and regulate the use of the...national parks...which purpose is to conserve the scenery and the natural and historic objects and the wild life therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations." How can a National Park uphold this mission statement and allow this generation of citizens bring multiple dogs and have them off leash in such sensitive areas? I would like my daughters grandchildren be able to enjoy "the scenery and the natural and historic objects and the wild life therein." Please keep these land in impaired.

Correspondence: Dear GGNRA management:

Please do not change and limit the GGNRA/park areas from allowing dogs to play, run, socialize, and discover nature off-leash with their human family members!

There are already many areas preserved and protected for natural habitat. There are also many areas that allow people and kids to play, run, and enjoy

nature. But for animal lovers, like dog owners, we have so very few areas that we could go to nearby where we live in the Bay Area, to allow our dogs walk, play, and socialize with other dogs and people. Many of us, dog owners, view our dogs as our family members and even our "kids." Most of us who takes our dogs to off-leash areas are very responsibly pet owners. We know that the best way to allow our dogs be happy and then behave at home is to allow them exercise in their natural way -- be off-leash to run, play and explore. Because the Bay Area is so crowded and expensive, most of us live with our dogs in rather small restricted areas. If we could not bring them to nearby places on a regular basis to get off-leash exercise, then that is when dog owners just give up their dogs to animal shelters. Majority of these so called "problem dogs" are just dogs who have behavior problems because they do not get exercise. Ask any dog owner and they can tell you that after even 15 minutes of off-leash play (in dog parks or nature), their dogs are ready to go sleep at home. They are just like kids who played in the park, then they calm down, behave, tired and happy. One park trip could take care of most behavior problems (with additional training where appropriate). The statistics show that almost 50% of households have a pet. Dogs are very popular in the Bay Area. They need a place to be off-leash.

We want our dogs to be domestic animals and live side-by-side with us people and our neighbors. But if we want to continue to form the human-dog bond, we need to let them to "dogs." Dogs need to walk, run, play, explore and social off-leash where it is safe for them (and w/o cars)!

I go to Point Isabel in Richmond with my 2 Golden Retrievers all the time because I am currently living in the East Bay. They are high energy dogs and they need to go off-leash. I have never seen any problems with the people and dog sharing Point Isabel. The dogs just run and play and they don't bother people who do not want to be bother. There are many people who go to Point Isabel without dogs and they are never bothered by the off-leash dogs. This is also true for children, even toddlers. So why can't we leave things the way it has been for years. Don't punish majority of the responsible dogs owners with a few bad dog owners and dogs.

I do not agree with the proposals to restrict dogs off-leash areas. Thank you.

Elise Chu

Correspondence:

I am extraordinarily disappointed with NPS proposed preferred alternative for the Golden Gate Parks National Recreation Area's dog policy.

Third, the DEIS is unusually flawed, suggesting not only a hasty and poor analysis, but also opening up the DEIS to significant legal challenges:

1) The DEIS treats recreation in GGNRA as an adverse impact, despite the fact that GGNRA is a mandated recreation area, and not exclusively for conservation. DEIS must include an evaluation of the benefits of recreation. When I relocate to SF, I plan to enjoy these areas with my family, and my dog Charlie. I have no illusions about taking Charlie to a place like environmentally-sensitive habitat in Yosemite. But I would like him to be able to run all three beaches on Crissy Field.

2) The DEIS fails to take into account the urban context surrounding GGNRA. A dense, urban area (the 11th largest MSA in the country) surrounds GGNRA, yet the DEIS ignores the potential negative impacts of these new restrictions on area residents and the region as a whole.

Inexplicably, the DEIS fails to take into account the implication of these new rules on the regional population - even though estimates by the American Pet Products Manufacturers Association (2009-2010 National Pet Owners Survey) estimate that one in three households in the U.S. own a dog. Literally thousands of visitors to the GGNRA come to use the off-leash dog areas, and nowhere in this proposed alternative is their voice represented.

3) The NPS' DEIS frequently misrepresents proven science in pursuit of its over-broad regulatory agenda. For example, the DEIS frequently cites potential problems with off-leash dogs that "could" or "might" happen - even though there are no document examples of these issues in the 30+ years of the existing off-leash rules. Claims of impacts on bank swallows are unsubstantiated, and in fact run counter to 1996 GGNRA findings by Nola Chow that dogs do not impact the swallows (for reasons unclear, this particular report was excluded from the DEIS). Claims of impacts on snowy plovers and swallows is not sustainable when the data is closely examined. More alarming - the NEIS fails to provide site-specific resource impact statements. The absence of these document impacts suggests the NEIS may not withstand legal scrutiny, and further goes against GGNRA's own operational requirements - without documented proof of observed negative impacts, the NEIS is invalid.

4) The DEIS asserting that off-leash dogs represent a safety issue is woefully unsubstantiated. According to the official incident reports on file with GGNRA, less than 2% of reported safety and security issues in GGNRA are dog related, averaging 2 incidents per 1.3 million visits. While I concur that an off-leash dog that is a safety threat to GGNRA visitors should not be welcome within the Area, surely there is a middle ground between existing policy and a sweeping revocation of access. Potential alternatives include banning the individual and their dog from the Area, requiring permits to show a dog is authorized to be off-leash (with permit requirements including up-to-date vaccinations, for example). But with 98% of security and safety issues coming as a result of human behavior, off-leash dogs are not the issue NPS needs to focus its resources on to make visiting GGNRA a safer and more pleasurable experience.

5) The DEIS unfairly discriminates against responsible owners of well-behaved and socialized dogs by designating limitations on GGNRA use for ALL dogs based on the argument that something "might" or "could" happen. In the absence of clear documentation of a problem, discriminating against such a broad group is hardly democratic. Surely, there should be limitations on specific owners of specific dogs that threaten health, safety and/or well-being of GGNRA users and wildlife. But for those who are respectful of the existing reasonable limitations, holding them accountable for potential

behavior issues not related to their pets hardly withstands scrutiny.

7) Finally, banning off-leash (and in some cases on-leash) dogs from parts of GGNRA is an extreme step, ignoring potential incremental steps such as additional signage, warnings about habitat, natural barriers (such as vegetation near cliffs). GGNRA could, for example, require special permitting for off-leash animals on order to better track their conduct. Signs warning owners to respect specific areas during specific seasons would undoubtedly be well respected (especially given NPS' demonstrated willingness to unilaterally remove areas from access).

I am grossly disappointed in the proposed alternative for GGNRA, and strongly recommend NPS revisit this process. With documented input from the public, a reasonable compromise can be reached which promotes respectful use of the GGNRA by dogs, dog owners and other visitors, without grossly over-restriction of the rights of dog owners and broad revocation of access to off-leash areas.

Correspondence: Please have designated dog parks or walking trails. There are too many dogs, especially people getting more and more pit bulls. If they want to take their dogs where they can run free, take them outside a heavily populated urban area. That isn't too far for them to drive. Putting dogs on leashes forces the owners to be more responsible. They should enforce poop cleanup, too. Other areas have dog parks & trails, GGNRA should, too. Dog owners will complain, but you can't have kids running around with a pit bull off leash.

Correspondence: Taken together, the "Preferred Alternatives" in the Draft Dog Management Plan are far too restrictive in reducing (a) the number of places dogs are allowed, whether on or off leash, and (b) the number of areas where dogs may be off leash. The 1979 Pet Policy needs to be reinstated and, at the same time, the NPS must embark on a new strategy of collaborating with dog owner groups to the long-term benefit of everyone who loves our national parks.

I am a committed environmentalist: I donate to many conservation organizations and volunteer with habitat restoration activities. I am also a member of the public who loves dogs. My primary recreation is to hike with my dogs, both on and off leash, and I understand my obligation to ensure they and I do no damage, leave no litter, and respect designated nesting areas and other sensitive sites. My recreation is as valid as anyone's and needs to be broadly accommodated in the plan. For the National Park Service (NPS) to simply deny access to members of the public to swaths of public land is bad public policy.

Many dog owners in the San Francisco/Marin areas, like myself, are ardent supporters of open space and habitat preservation and restoration. The proposed preferred alternatives will serve only to alienate a vocal, empowered, and committed group that would be better steered toward supporting the NPS and shared goals of environmental protection and open space acquisition.

Cultural change takes place over time. Look at how far we've come in the past fifteen years in having people pick up dog feces. This act was unthinkable only twenty years ago and now most, of course not all, dog owners comply. It would be far more effective for the NPS to spend its time and effort on education and collaboration with dog owner groups to support NPS goals and develop a code of appropriate behavior for dogs in open space. Dog owners are very committed "watchdogs" over their peers' behavior and want to preserve their rights.

Certainly, some restrictions are necessary. Nesting sites, for example, should be off limits. Where appropriate, fencing, signs, and enforcement are essential. However, if the NPS really wants to protect very sensitive wildlife sites at certain times, it needs to restrict access to everyone. People degrade the environment, not dogs. Many times I have observed people clamber down banks to off-limits areas for a cell phone photo, or crawl under fences to play in newly restored areas-?while dog owners who are abiding by the rules grit their teeth, knowing we will get the blame.

I urge you to think in new ways. The Dog Management Plan should reflect awareness that people with dogs want to be with their dogs in the parks. The acquisition of open space should not automatically mean those areas are rendered off limits to us. The NPS should tap the commitment of dog owner groups to educate people about the environment and to be watch dogs for sensitive areas.

In sum, the preferred alternatives are unacceptable. The 1979 Pet Policy needs to be reinstated. Together the NPS and dog owner groups can develop innovative approaches to managing park land that instead of relying on

restriction and enforcement, focus on collaboration and education, recognizing that dog owners have the right to enjoy our national parks. Thank you. Yvonne Tevis

Correspondence: The proposed dog management plan is rash and unacceptable. Any wildlife that needs protecting in these areas are already in a national park with boundaries set up for their safety. The people frequenting these areas are responsible dog owners who know how to control their pets and exercise the utmost caution in unleashing them on the environment. Birds or other endangered animals nesting atop the cliffs of Ft. Funston would hardly benefit from dogs being leashed on the beaches 100 feet below. Furthermore, any animal that may be upset by a passing dog will be no match for other naturally occurring birds, gulls, raccoons and the plethora of other animals which already freely live in these areas. Our dogs do no more damage than their natural counterparts. Please reconsider taking no action against the current rules and regulations regarding unleashed dogs in the GGNRA. Our beloved companions deserve to be able to experience and enjoy nature the same as us.

Correspondence: I strongly support the proposal to restrict off-leash dog activity in the park. Free-roaming, off-leash dogs are fundamentally incompatible with the purposes of a national park because they harass and endanger the wildlife that is supposed to be protected. They also mean that no other park user can peacefully enjoy their own multi-use experience of the park because the guaranteed out-of-control behavior of just a few dogs destroys that possibility.

Correspondence: No scientific studies were done by GGNRA, on Rancho Corral de Tierra (Rancho) lands to justify the validity of the EIS, as it applies to the "New Lands". Where is the soils and geology report? Where is the water quality report? Where is the vegetation report? Where is the wildlife report? Where

is the special status species report? Where is the report on our cultural resources? Where is the report on visitor and use experience? Where is the park operations report? Where is the report on human health and safety? Where is the report on sustainability and long term management? In my opinion, this is an illegal EIS for the "New Lands".

Public hearings were promised but not held. GGNRA's preferred alternative for the Rancho is unfair and not truly multi-use. Marin and San Francisco have off-leash and on-leash areas for dogs, San Mateo is being given none.

I have walked my dog alone in the area north of Montara, east of Highway 1, and south of McNee Ranch State Park for 32 years, off-leash and on-leash. During this time there has never been an attempted, or a successful, molestation of a woman walking in this area. It is hilly with lots of trees and dense brush. Women often walk alone here because having a dog with you makes it safe.

Montara does not have a community park or community center for socialization. The area we use to walk our dogs serves both these purposes. If you ban dogs from this area, we will be forced to walk hundreds of dogs in the narrow streets with no sidewalks, and on Highway 1, to get to the State Park, where dogs are allowed on-leash.

As over 300 residents who walk our dogs in this area, we have put in six poop cans, and keep them stocked with plastic bags. We are self-policing and there is virtually no dog waste on the trails. There is lots of horse poop, and some coyote poop.

If there are any endangered plants or species in this area, they have survived half a century with hundreds of dogs using the area off leash. They are hearty enough to continue to survive with dogs continuing to use the area.

I am requesting that the GGNRA's preferred alternative for New Lands, including Rancho, be changed from alternative D (No dogs allowed) to a "No Change" alternative. Current usage of the land, including dog walking, should continue to be allowed until scientific studies are done indicating that dog walking is harmful to park resources.

A total ban on dogs is unacceptable. Creative multi-use solutions have not been considered. In Washington state, and Santa Cruz, CA, there are off-leash days, or off-leash hours in park areas. We are asking to continue to use approximately 100 acres with our dogs, out of 4200 acres.

At a time when obesity is a national concern, GGNRA is forgetting that the main reason people walk who have a dog, is for the dog's well being. You are encouraging people to stay at home with their dogs, and not walk.

Shame on you.

Correspondence: Dear GGNRA Supervisors:

I would like to comment on the Draft Plan/Draft Environmental Impact Statement for Dog Management in the GGNRA and go on record in support of the "No Change" Alternative "A" and the continuance of the 1979 Pet Policy on access for people with dogs. For the past ten years I have been walking dogs at Muir Beach, Crissy Field, Rodeo Beach, Ocean Beach, and Oakwood Valley, on and off-leash in compliance with prevailing regulations.

I believe I am a responsible dog walker- I carry a waste pick-up bag and a leash for my dog; I clean up after my dog; I don't allow my dog to harass other persons, animals or wildlife; I respect and protect natural resources; I don't allow the dog into restricted areas; and I follow the posted signage. In my experience and observation, the overwhelming majority of dog owners also follow these rules based on common and mutual courtesy. (I do see humans tramping in areas marked as sensitive habitats, and I see an astonishing amount of trash washing up at these beaches, and on the trails, but I don't believe these can be blamed on the dogs' use of these recreation areas.)

Moreover, after reading your proposed changes to the existing regulations and looking into the various issues involved, I would like to observe further that, in my opinion, Severe restrictions are not needed to protect other park visitors from dogs. Problems with dogs represent a tiny fraction of the total incidents and citations issued by the GGNRA over the past decade. Of those incidents and citations issued to people with dogs, the majority were leash law violations, or being in a closed area, and did not reflect any safety issues between dogs and other park visitors. Target enforcement should be focused upon the small number of people whose dogs misbehave, not on excluding the entire class of people with dogs from most of the GGNRA.

The DEIS continues a trend of GGNRA claims about impacts by dogs on birds that are not supported by the data. There is no scientific consensus that severe restrictions on off-leash dogs are needed to protect natural resources and wildlife (snowy plover, bank swallow, etc.). Some of the most compelling research in the last few years has been by researchers such as Forrest and Cassidy St. Clair (2006) and Warren (2007) who admit that they expected to find that off-leash dogs had a major impact on the diversity,

abundance, and feeding behaviors of birds and small mammals. However, when they did the actual research, they found no such impacts. This indicates that assumptions about impacts from off-leash dogs must be tested and proven to be true before they can be used to justify restrictions. Many of the assumptions cited by the GGNRA have not been adequately tested or proven. Dog owners are being held to a standard of behavior that is impossibly high, and significantly higher than any other park users. For example, studies by GGNRA staff routinely show people without dogs "disturb" plovers, but there is no attempt to restrict people without dogs from the beaches where plovers roost (not nest). Focus enforcement on people who do not keep their dog from chasing birds rather than on excluding all people with dogs.

The DEIS is full of impacts of dogs on wildlife and other park visitors that "could" occur, but there is little evidence that these impacts actually do occur. After over ten years of intensive scrutiny of off-leash dogs in the GGNRA, it should be obvious if those impacts really do occur. The lack of data indicates they do not. For example, the DEIS mentions that disease "could" be transmitted to people from unpicked-up dog feces. However there has not been a single case of dog-feces-caused human illness reported by the San Francisco Department of Health for over 50 years. A management policy should not be based on hypothetical impacts.

The level of enforcement required by the Preferred Alternative is excessive and unsustainable. Targeting people walking their dogs irresponsibly and leaving responsible dog walkers alone would be a much more efficient use of GGNRA resources. The DEIS states that it will cost nearly \$1 million to enforce the Preferred Alternative, through the hiring of more Park Rangers or Park Police. In an era of shrinking federal budgets, this seems a poor use of scarce financial resources. Existing Park Rangers could easily enforce already existing rules such as picking up pet litter or no chasing of birds. These enforcement actions are all that are needed to ensure responsible dog walking and minimal impact on natural resources and other park visitors from off-leash dogs.

The inclusion of a "poison pill" in the DEIS suggests the GGNRA will use it as an end run to ban off-leash dogs in the near future, bypassing the kind of public process such an action is normally required by law to follow. The DEIS includes a "compliance-based management strategy" that calls for further tightening of the restrictions in a given area if it is determined that less than 75 percent of dog walkers are complying with the new rules over a one-year period and that the GGNRA will change the management of the various areas to the next more restrictive level-an off-leash area will become on-leash only, an on-leash area will become no dogs at all. This section must be removed from any final Dog Management Plan because,

a) This compliance-based management strategy is unfair, because it can only be changed in one direction-toward more restrictive levels of access for people with dogs.

b) There is no provision for public comment in the case of a change in status of an off-leash or on-leash area because of the compliance-based management strategy.

c) How will compliance be monitored? Who will do the monitoring? The GGNRA has repeatedly relied on poorly trained volunteers with a deep-seated bias against dogs to monitor the interactions between dogs and snowy plovers. Why would we expect these compliance monitors to be any less biased? Will their claims of non-compliance be valid? Will the GGNRA resort to the use of surveillance cameras to monitor compliance?

d) This allows a few bad actors to result in the removal of off-leash access everywhere in the GGNRA, even if there are tens of thousands of hours of incident-free dog walking for every single incident. Including a "nuclear option" in a management plan is not good management policy. Regulations already exist to target those who do not control their dogs when they are off-leash. Please target enforcement at those bad actors, not at the huge numbers of dog walkers who do not cause problems.

In short, the "Poison Pill" of a "Compliance-Based Management Strategy" is unfair since it can only reduce off-leash access and not increase access in the future, and is an attempt to circumvent the legal requirement of a public process when management changes that are significant or highly controversial are made. It will not work and must be removed.

In the legislation that created the GGNRA, the reason for the creation of the GGNRA is listed as "the maintenance of needed recreational open space." Off-leash dog walking is among the recreational activities listed as traditionally occurring in the land that was to become the GGNRA. When dogs are walked in a responsible way (as most are), there is no conflict with the environment or with other park users. Target people not walking their dogs responsibly, but leave the vast majority of us alone.

The 1979 Pet Policy allowed dogs off-leash on less than 1% of GGNRA land. In other words, 99% of all GGNRA land is off-limits to dogs now. There is much-most-GGNRA land where humans will see either no dogs or dogs only on-leash. On the Oakwood Valley trails, for example, I frequently count the ratio of people with and without dogs and it is usually about 12-15 people using the trails with a dog and even at popular times of the day (Saturday morning, for instance), 1 or 2 people walking without dogs.

All evidence points to the status quo as being the best of the options

presented in the new proposal. It's the policy in effect since 1979, and over 99% of people and dogs seem to co-exist under current policy with no trouble. I would support some reasonable changes-perhaps new restrictions, such as licenses for dog walking in the GGNRA, and/or fees, for "commercial" dog walkers, which even the dog walkers' associations supports.

With respect to the \$800,000+ to implement and enforce the recommended new policies, may I respectfully suggest that these funds could be used more effectively for other purposes-better bathrooms, signage for humans, more poop bags, water fountains for all species, for example.

With proper enforcement of existing laws, public education, and better signage, dog lovers and non-dog lovers can coexist. As Ann Landers used to say, if it ain't broke, don't fix it. A bit of tinkering to improve things would be welcome, but to radically change policy because of a very small minority of abusers is impermissible for banning an entire constituency of recreational park users-dog owners and walkers-from the GGNRA.

Thank you.

Correspondence: I would like to weigh in as backing the proposed control of dogs in the GGNRA. Pet owners, like parents, always think their dog is perfect and see no reason for control. Just the other day, I was leaving an area when a dog ran up, started barking feriously and baring fangs. Meanwhile the owner, who was not able to move very fast at all, is calling the dog. And insisting "he wouldn't hurt anyone." Well, bared fangs do not indicate friendship to me. That is issue number one.

There are numbers of pet owners who do not clean up after their animals, especially if allowed to run off leash. That poses a potential health hazard to all, but especially to children. This lack of responsibility happens in neighborhoods. Can you imagine in a large open space what can happen?

And still one other issue which may develop over time: Though keeping dogs on leash won't totally solve the problem, I can foresee some pets not returning to owners and becoming somewhat feral posing another type of threat over the long term.

I was just in Bryce and Zion Canyons. Dogs are not allowed, and it was great. We go to the National Open Areas to remove ourselves to some extent from all the daily familiar things. It is a chance to live a little more freely.

Correspondence: I do not believe there should be any additional pet restrictions on the areas mentioned. Only about 1% of the GGNRA is open to dogs off leash. Over the past 20 years, I have seen areas gradually placed off limits to dogs: Drake's Beach, Limantour, Black Sand Beach. I believe these areas should be open to dogs off leash provided that they are under voice command and the owners clean up after the dogs.

There should be a fair balance between protecting wildlife and the taxpayers' right to exercise their dogs in open space in the GGNRA. I fail to see how the balance of nature will be upset if my labrador retrieves his tennis ball in the water at Drake's Beach.

Correspondence: Please protect Golden Gate's imperiled wildlife from harassment by unregulated recreation. To help protect these species and other protected

wildlife, inappropriate activities such as motor vehicle use on beaches were banned. However, the park continues to permit unregulated activities that disturb wildlife like western snowy plovers and marine mammals. Wildlife take refuge on Golden Gate's beaches to rest, breed, and rebuild energy for survival, yet unregulated off-leash dog recreation in these areas has resulted in habitat encroachment and wildlife harassment by dogs. For example, the park has reported that unleashed dogs represent the most significant recreational threat to wintering western snowy plovers.

Correspondence: Halting species loss has economic benefits, says EU

Green Business ; By Christopher Le Coq BRUSSELS | Tue May 3, 2011 11:55am EDT (Reuters) - The European Union should halt the rapid extinction of plant and animal species by 2020 because it will cost less than trying to repair the damage once it is done, Europe's environment chief said on Tuesday.

Worldwide, species extinction rates are between 100 and 1,000 times the natural rate, the European Commission said in its latest biodiversity strategy.

It quoted research estimates that by 2050, \$2-6 trillion in business opportunities could be realized should the private sector invest in preserving biodiversity.

The Commission set a target of halting biodiversity loss by 2020.

It also set a broader goal to restore biodiversity and ecosystem services provided by nature itself, such as air and water purification, by 2050.

"It is a much smarter economic investment to protect the diversity of life and healthy ecosystems ... than face tragedy once diversity has been lost," EU Environment Commissioner Janez Potocnik told a news conference.

The Commission did not provide details on how it hoped to achieve this, but Potocnik hopes a forthcoming overhaul of EU agricultural and fisheries policies will contribute.

In the EU's 27 member countries, 25 percent of animal species are under threat of extinction and 88 percent of fish stocks are seriously threatened.

Without action from business, as well as proper public policies, species loss will inexorably march on, largely through climate change, invasive foreign species and land-use changes.

Though the concept is abstract, the economic costs of continued species loss are real, according to the Commission and environmental campaigning organizations.

Overfishing leads to an annual loss of \$50 billion of income for the industry, according to research by The Economics of Ecosystems and Biodiversity (TEEB).

Biodiversity loss leading to a decline in insect pollination, which is essential in sustaining crops, would have serious consequences for farmers and agribusiness.

The EU executive says pollination has an economic value to the 27-state European Union of 15 billion euros (\$22 billion) per year.

Globally the figure is about 153 billion euros, representing 9.5 percent of global agricultural output for human food, according to TEEB.

But environmental organizations criticized the new 2020 biodiversity plan, noting that it lacks measurable targets.

"The EU's new biodiversity strategy is an important signal of good intentions but it does not have the real power to stop biodiversity loss," said Alberto Arroyo, conservation policy coordinator at WWF.

In March last year, EU leaders recognized their previous 2010 biodiversity objectives would not be met, with species loss continuing unabated.

| Correspondence: | Please adopt option C (the NPS Preferred Alternative) for the GGNRA Dog Management Plan. I am a regular supporter of the Golden Gate Parks | | | | |

Conservancy and a frequent and long-time (over 10 years) volunteer.

The present system cannot continue. Currently, the entire area of Fort Funston, a unique remnant of a great dune system, is being used as a dog park, with use by humans and their dogs given priority over every other use of that park. While the dogs can aid in the enjoyment of the park, they also unavoidably urinate, disturb the ground cover, tear up seedlings, and threaten and harass wildlife. I have found large areas dug up by dogs under inadequate control. Furthermore, while most owners make some attempt to clean up their dog's feces, many miss doing so, particularly when the dog has gone off trail. Finding that I've knelt in a pile of dog droppings while trying to remove a patch of weeds negatively impacts my experience of the park.

There are two particularly critical items in the proposal. - The first is the limit on numbers of dogs that can be walked by an individual, and the numbers that can be walked off leash. My many days spent at Ft. Funston have left me convinced that the majority of damage done by dogs is done by the large packs with a single walker or two. Many of these are professional dog walkers, and their use of the park is frankly exploitive. - The second is the implicit recognition that traffic should be restricted to the trails, as in any park. I think that most people, and even most dogs, recognize this, but many still do not. Educating people on the value of the park, and teaching them to respect it by respecting the trails, is in the long term the only way to protect the park.

My personal preference would be one of the options with more extensive protection for the natural landscape and wildlife; however, I realize that that a variety of groups have a stake in the GGNRA and a reasonable desire to be accommodated. I appreciate the work that all parties have put into developing this plan, but please remember that the stakeholders in the park include a large community of flora and fauna. They can't attend meetings and rely on us to represent them.

Regards, John Anderson

| Correspondence: | I have only recently moved to Pacifica two years ago, and one of the things that drew me to the town was large number of trails available for trail running with my dog. My dog is always on leash at all times while we're running anywhere, and that includes inside the GGNRA. I would ask that you continue allowing on leash dogs at: Mori Point, Sweeney Ridge (the | | |

entire thing), Lands End, Montara Mountain, and Ocean Beach. These are some of the largest areas people that own dogs have to walk them, and if you take them away it'd be a travesty.

I'd also to encourage you to think about loops in your trails. In some of the Marin trails for example, due to the dog walking restrictions, you have to either back track or disobey the law in order to actually complete the loop. This is also what you propose doing on Sweeney Ridge. Loops are important because you can then choose which direction to traverse them. For example, if I had to do the sweeney ridge loop from Fassler Ave to the Shelldance Orchid trailhead, my knees would give out on the steep section above Shelldance. It's very important to run up that steep part and down the more gradual side at Fassler.

Please take this into consideration. I'd like all the areas in Pacifica to remain on-leash only as they already are. I think in Pacifica we may have a larger percapita number of dog owners (from what I see anecdotally) so I do believe this is in the public interest of our town.

Thanks,

Clint

| Correspondence: | I strongly support Alternative B (the preferred alternative) for the San Mateo County properties. In addition, specifically for Rancho Corral de Tierra, a new land soon to be acquired by GGNRA, I strongly support on-leash dog walking ONLY. I hike regularly in this area and off leash dogs are a public safety hazard. On numerous occasions, I have nearly been attacked by off leash dogs. This is a very frightening experience and significantly interferes with my enjoyment of this beautiful land. As many dogs currently roam off leash on this property, the on-leash law will need to be strictly enforced once GGNRA begins to manage the land. I would not want to completely ban dogs from this property as many members of the dog walking community in this area do keep their dogs on leash and pick up after their dogs. However, in my 13 years of experience hiking in this area, voice control DOES NOT WORK for many dogs and should never be allowed on any of these lands. Aggressive dogs can cause significant safety hazards and limit the enjoyment of others who want to use the land without fear of being attacked by a dog. These off leash dogs also do significant damage to trails and foliage, scare and chase other natural animals in the habitat (birds, rabbits, etc) and generally create havoc in the entire natural environment. | | |

Thank you for taking my comments into consideration.

Correspondence: Please protect Golden Gate's imperiled wildlife from harassment by unregulated recreation.

--The park's mission is to protect the natural and cultural resources, not allow recreation to undermine it.

--Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

--The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by offering more than one trail and more beach areas free from dog recreation.

--Require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs.

--Limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Correspondence: I SUPPORT YOUR EFFORTS TO BETTER MANAGE DOGS IN THE PARKS! As a San Franciscan with a small child, I am tired of vying for open space with rough, unleashed, unruly dogs. I am tired of dog poop everywhere. There are way too many irresponsible dog owners, and they have a negative impact on our parks. In the last few weeks, I have noticed dog poop all over Ocean Beach (at Lawton). In April I watched an off-leash dog, at least a hundred yards from its owner, pee on another beach goer's bike and teeshirt!! And on Mothers Day in Golden Gate Park an unleashed dog ran over our picnic blanket. My 3 year old is scared of dogs. Can you blame her?

Sincerely, All Dogged Out

Correspondence: I think it would be a mistake to eliminate off-leash options at Fort Funston. So many dog owners take advantage of this resource. And having a site like Fort Funston where dogs are welcome means fewer dogs at other sites. This allows people who don't want to be bothered by dogs to avoid dog-friendly sites like Fort Funston. If restrictions are put into place, there will be no incentive for dog owners to congregate to Fort Funston. This will put more dogs in all of the GGNRAs and will very likely increase complaints about dog interactions.

Also, it's fair to say that humans are the ones who cause the most impact to the natural resources. You know that the most protective solution is to not allow anyone in these areas. But to balance that against allowing them to be used by the public, you must necessarily accept some impact. I'm all for restricting access to certain sensitive areas. But let's not pretend that putting dogs on leashes is going to substantially reduce impact. Perhaps if you also required children to be on leash, that might help.

I drive my dogs up to Fort Funston regularly. We also stop to do shopping while up there in Daly City. If you close this down, I'll likely take my dogs to Pulgas Ridge, and of course my consumer dollars as well.

Correspondence: Your DEIS states that reducing dog activity is beneficial. Then, why not open more lands to dogs (on and off leash). By your arguments, this would reduce the impact on current dog areas. Unless you believe that all dog use should be eliminated, then this "dilution" by open more areas should be

better than the current situation (by your own DEIS arguments).

Correspondence: I am in support of the preferred alternative for the Dog Management Plan. As a frequent user of the park, I have witnessed dog owners allowing their dogs to poop as they please, and run through areas roped off to protect vegetation. In one instance when I confronted a dog owner about cleaning their dog poop (on Crissy Field, one of the areas that will be open to off leash dogs) the owner responded by saying he did not think it was illegal to not clean up after his dog; I could not respond politely so I stared at him.

I have also experienced plenty of well dressed SF residents not cleaning up their dog poop on the block of which I live. I feel that many of the dog owner groups are very selfish and do not take in account other user groups. I do not visit Fort Funston because of the dog walkers, and the random dogs running around under "voice control" and falling off cliffs, attacking other dogs, and running up on people who are not comfortable around dogs.

I am also concerned for user groups that have not organized as well as dog "custodians" and may get overlooked in this process. I am able bodied, and have experience with dogs, so I am not scared, I am more annoyed by off leash dogs, yet I can see people who are not stable on their feet, or those who are not used to dogs, could be knocked over or intimidated by dogs that people think are under voice control, and may not be dangerous, but are perceived as such by non-dog owners.

Please protect the resources, and other visitor groups while allowing more liberal dog laws than any other national park.

Type:

Correspondence: I am not a dog owner, however I am very sympathetic to the needs of dog owners and their desire to have areas where they and their dogs can walk and play off-leash. I believe it would be a mistake to further limit the very small areas in the GGNRA that today allow off-leash dogs.

I believe deeply that we need fewer and more thoughtful rules to govern the use of our open spaces. It is disturbing to me that there are 2400 pages of documents posted, as well as countless hours and no small amount of money associated with this initiative, with the promise of many more hours expended and many more dollars spent to solve what I do not think of as a problem.

I have spent on average one hour per week at Crissy Field over the past 18 years that I have lived in San Francisco (both before and after its rebirth), and I have only rarely witnessed issues between dog owners and non-dog owners. Therefore, I think that Alternative A is the best choice for this area. In general I favor the most dog-friendly environment possible for all of these areas, but I do not use most of the other areas regularly and so do not have specific comments.

It also seems to me that creating an enforcement regime that closes all off-leash areas permanently in the event of a certain amount of observed non-compliance is somewhat punitive and unprecedented. I did not see a baseline of compliance today, but perhaps I missed it in the 2400 pages. In any event, it seems to represent a bias on the part of a bureaucracy that does not want to see off-leash dogs, and I believe that it should be stricken. If there is substantial non-compliance with the rules (whatever rules are adopted), then we should revisit the rules as a community, not simply revoke them and default to a more restrictive scheme "permanently."

Thank you for the opportunity to comment and your consideration.

Correspondence: Dear Superintendent Dean:

I am writing as a concerned citizen regarding the draft Dog Management Plan and Environmental Impact Statement (DEIS) for the Golden Gate National Recreation Area. I use and enjoy the GGNRA lands and am concerned about impacts from dog-related recreation on the wildlife,

habitats and other park users at the park.

I strongly encourage you to improve the plan by implementing the following steps:

1. All "Regulated Off-leash Areas" should be fenced, at least in areas where fences do not pose risks to wildlife and habitats. Fences provide more security for all park users and create clearer boundaries so that dog owners are aware of how to comply with park rules.
2. The Park Service's proposed requirement of 75% compliance is too low. The Park Service should require a minimum of 95% compliance before initiating measures to improve compliance.
3. Commercial dog-walking should not be permitted in the GGNRA. This is a commercial activity in the park and the Park Service cannot legally permit it.
4. At least some trails in San Francisco should be entirely closed to dogs. Under the current plan, nearly every trail in San Francisco is open to at least on-leash dogs, meaning no trails are available for people who prefer to enjoy the outdoors without interacting with dogs.
5. While dogs are important parts of some families and communities, they are just one animal that is having a significant negative impact on thousands of other animals and plants that rely on the park to survive and many other human visitors. The parks should be maintained to be safe and accessible for all users and to protect their natural and cultural resources for future generations.
6. And finally, as a nurse with many years experience in a busy local urban ER, I have seen the real damage that dogs can do. And it is almost always a huge surprise to the dog owner. They always say something like: "he's never done that before!" So as a public safety policy, I strongly encourage you to place more reasonable restrictions on dogs, and to not crump to the pressure of the loud but minority opinion dog lobby.

Thank you for this opportunity to comment on the Dog Management Plan.
Sincerely, Matt Cullinane, R.N.

Re: Dog Management Plan

Dear Mr. Dean,

I am a long-time volunteer in the Golden Gate National Recreation Area. I have surveyed rare plants as a consultant throughout the GGNRA, including Fort Funston, and volunteered in habitat restoration for more than 25 years. I have had extensive contact with dogs as a result.

When I began restoration at Fort Funston, there were no dogs to speak of on the bluffs. We encountered dogs on the beach. They were most interested in playing in the surf and catching balls thrown by people. However, due to the extensive amount of feces found in the ice plant at the base of the cliffs, Park personnel decided we should no longer work there. We proceeded to clear the bluffs of ice plant and plant natives grown in the Tennessee Valley nursery, now at the nursery at Fort Funston.

My last contact with Fort Funston was as a rare plant surveyor. I had several encounters with dogs and none of them were pleasant. I was sitting in a fenced-off area just above a small parking lot south of the main entrance to the Fort when a large chow, off-leash, rushed at me barking and growling. His owner did not restrain the animal at all. Later I was bit by a dog as its owner watched, explaining that the dog did not like clip boards. At no time when I was censusing plants did I see any Park police. I also observed an Asian couple with a small child walking along the paths attempting to enjoy the Park. The child was no more than three feet tall and large dogs, easily her height and up to 50 pounds, were barking at her and jumping towards her. The family gathered themselves bravely and left. This is not the sort of experience visitors should encounter when they visit the park.

I also worked at Crissy Field removing ice plant before the Presidio transferred to the Park Service and Trust. After the lagoon was built and restoration of the entire area had commenced, I went back to see what had transpired. I found dogs in the lagoon chasing birds. Signs at the Clapper Rail area were posted with no entry signs, yet dogs were chasing each other inside the enclosure and the owners paid no attention. Again I saw no Park police.

The Headlands has been spared the worst of the transgressions by dogs, although they are not immune. I frequently see off-leash dogs in Tennessee Valley and on trails. When a group is working on restoration and carrying tools coming on dogs is problematic as they sometimes bark and act

aggressive, presumably because they don't like tools. Police are very infrequent visitors to Tennessee Valley and are not likely to be found on the more remote trails.

I don't understand why one type of commercial operation is allowed to use public land for financial gain and not all others. If I were to set up a small stand in Lower Tennessee Valley, I'm sure Park personnel would have something to say. But because it is difficult to distinguish between people walking family dogs and commercial dog walkers, the Park is taking the easy way out by not limiting the commercial operators or banning them entirely.

In short there are far too many encounters with dogs that are unpleasant and frightening, lessening the pleasure of our beautiful Park significantly for the benefit of a few.

Therefore, 1. I prefer to follow the national guidelines for pets in national public lands (Alternative B). It sets a dangerous precedent to enact a variance from federal regulations. The only variance I would consider is off-leash dogs on the beaches, with the exception of Muir Beach due to the possibility of full restoration there. I have one further exception at Fort Funston I offer below. If absolutely necessary, with no possibility of back-sliding by Park personnel, I reluctantly support Alternative C. 2. No dogs should be allowed off-leash outside designated fenced areas. Owners and walkers have not demonstrated the willingness to consider the feelings and enjoyment of others. 3. No one should be allowed in the park with more than three dogs. More than three implies a business and the Park should not promote one business over others. Given the Park's inability to control dogs now, monitoring dog walkers for permits and licenses is highly unlikely to occur. 4. Voice control does not appear to work, or if it does, the owners/walkers refuse to use it as a control mechanism. Therefore, it should be removed as an acceptable means of curbing dogs. 5. The area near the main parking lot at Fort Funston has been completely destroyed by dogs. No plants grow. It is nothing but bare earth. It is very ugly, but, having destroyed an area where *Chorizanthe cuspidata* var. *cuspidata* (a rare plant) was found when I censused the area in the 1990s, it should be fenced and dogs allowed to roam the enclosure without restraints. In all other parts of Fort Funston dogs should be on leash and on trails. Having worked with others for years to restore the bluffs to native conditions, dogs should not be allowed into the protected areas. Staff and volunteer efforts to fence off sensitive areas have been compromised to allow dogs access to planted areas. Keeping them on leash will ensure that the thousands of hours of volunteer efforts to restore the Park will not be wasted. Just because we're free doesn't mean our labor shouldn't be valued. 6. The reason there is "public confusion" about dogs in GGNRA is the result of Park staff not enforcing federal guidelines. We had horrendous problems with bike riders

in the Park for the very same reason. That resulted in riders ignoring road rules, racing down roads at high speeds (and believe me, it's hard to get out of the way of a bike going 25 miles an hour while carrying pulaskis, weed wrenches and hand picks) and building private roads through remote parts of the Park. If one group is allowed to ignore rules it sets a precedent for others to do so. 7. The reduction of "public confusion" is the sole responsibility of the Park Service and must be vigorously carried out by signage and handouts, as well as warnings on the Park Web site. There is no excuse for permitting lawlessness to continue. And why should I work so hard to restore parkland, if the Park staff is going to allow it to be destroyed?

When we venture out into wilderness areas we are instructed to not create new paths so that impacts are minimized; dogs need to do the same. The Wildlife Protection Areas need to be just that; not the bathrooms of canines. This is not supposed to be for the benefit of the few. Park staff is charged to protect and preserve these lands for this and future generations. I do not want my descendants cleaning up and replanting after insensitive commercial operations. They can walk dogs on city streets just like every other operator does in every other community.

I greatly support a return to national standards; that is my first choice, with Alternative C a distant second. I have not seen the Park Service enforce other regulations in the Park and I am skeptical they will do so in this case. Having been bitten and threatened by dogs, I have little sympathy for commercial dog operations in Parks. A beautiful park is our legacy to future generations, not piles of poop and bare ground where rare and beautiful plants and animals once thrived.

Thank you for the opportunity to comment on this very important document.

Correspondence Type: Web Form
Correspondence: To: Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022

From: Matthew Zlatunich San Francisco, CA 94118

Dear Superintendent Dean,

I write in support of adopting a Dog Management Plan for the GGNRA. I have

been following this issue for many years, have reviewed the Draft DEIS and attended one of the public open house sessions.

My interests in the GGNRA are as a lifelong resident of San Francisco, a frequent park visitor and a volunteer participating in wildlife monitoring and stewardship activities. I enjoy the park for the unique opportunities to experience the natural and cultural resources and I appreciate the values of our National Park System.

I concur with the assessment that the natural and cultural resources and park visitor experiences have been and continue to be negatively impacted by the presence of substantial quantities of domestic dogs, both on-leash and off-leash, within the GGNRA. On many occasions my own park experiences have been negatively affected by the presence of dogs. I have had personal conflicts with dogs and their owners/guardians as well as being witness to conflicts between dogs and wildlife.

While I am supportive of many aspects of the Preferred Alternative, I have the following comments to offer:

-- General Comments --

Commercial dog walking should not be allowed. Commercial dog walking does not relate to the purpose and mission of the National Parks. Commercial dog walking provides no service or benefit to park users, has negative impacts on park resources and park visitors, and serves only for the capital gain of private enterprises at the expense of the American public.

Commercial dog walking will require additional annual expenditures for administering and overseeing a permitting process, additional law enforcement, additional resource maintenance and additional public relations.

The DEIS estimates that over 1000 dogs will be commercially walked within the GGNRA daily (p. 63 p. 276). Commercial dog walkers, with up to six dogs, will negatively impact the experience of park visitors on trails and in other areas of the park. If permitted, commercial dog walking activity will increase within the GGNRA and will displace park visitors, of all legitimate user groups, from areas of the park. Commercial dog walkers will dominate the ROLAs, displacing other park visitors. Commercial dog walking vehicles will occupy parking spaces resulting in fewer spaces available for park visitors. If allowed, commercial dog walking operations will have a dominant presence in some areas of the park thus affecting the overall character and ambiance of those areas.

Currently, commercial dog walking is not permitted within the GGNRA or any other National Park unit and there is no justifiable reason to do so. The NPS is

well within the scope of its management directives to not allow commercial dog walking and I support this position.

Off-leash areas should be well defined and be contained by a physical barrier. It can be assumed that off-leash dog recreation will be the primary activity within any established ROLA. ROLAs should be well distinguished by physical barriers and adequate signage so that all park visitors can choose whether or not to enter the area.

Park visitors should be limited to one dog per visitor. On trails, visitors with more than one dog have a wider space requirement and have the potential to impact other park visitors by impeding their progress along the trail. In ROLAs, it is not practical to allow voice control of more than one dog per person. With few exceptions, dog handlers are not capable of managing more than one off-leash dog at a time.

The proposed compliance percentage of 75% is too low. Given that many hundreds of dogs are walked within the GGNRA daily, a 25% non-compliance tolerance would create a situation where park resources are significantly negatively impacted. The expectation should be that non-compliance is a rare occurrence and the compliance strategy should reflect that in its standard. The standard of compliance should be the same as for any other park rule or law. An acceptable rate of compliance is somewhere near 100%.

A simple and effective reporting system should be established. The dog management plan should include a means by which park visitors can easily and effectively report non-compliant behavior. Park visitors are sometimes reluctant to report observed violations due to the time involved in making the report. A public reporting system should be incorporated into the plan that will be user friendly and workable. Such a system should require only a few moments of time and be an effective documentation of the violation.

The plan does not provide an adequate amount of hiking trails and picnic areas where visitors can enjoy a dog-free, National Park quality experience. Within San Francisco, the plan provides no significant area where park visitors can spend the day hiking and/or picnicking in a dog free environment. A solution to this problem would be to designate all of the coastal bluff areas, from the Golden Gate Bridge to and including Baker Beach, as a dog-free zone.

Wildlife viewing is a popular activity throughout the GGNRA. Wildlife viewing should be included as a visitor activity for Crissy Field. (p. 276 & table 9).

Snowy Plovers ?

Nesting records. The DEIS states that there is no record of nesting (p.1240). However, there are records of bird and egg specimens collected during nesting

season. Grinnell, 1932, identifies the Presidio as the type locality for the Snowy Plover with a collection date of May 8, 1854, a date that falls within the known nesting season for the species. Also, Smithsonian Institution collection data documents an egg specimen from San Francisco. See <http://collections.nmnh.si.edu/search/birds/>

Potential nesting site. The DEIS fails to acknowledge that the USFWS Snowy Plover Recovery Plan has identified Crissy Field as a potential expansion site for snowy plovers; see USFWS Recovery Plan pp. 43/44. Natural & Cultural Nexus. The Presidio of San Francisco is the type locality for the Snowy Plover, collected by Lt. William Trowbridge (Army Corps of Engineers, U.S. Coastal Survey), on May 8, 1854 (Grinnell, 1932). Trowbridge is also responsible for construction of the Golden Gate Tidal Gauge, which began operation in June of 1854 (Nolte, 2004). Given the location of the tidal gauge, it is quite possible that the type specimen was collected from what is now the Crissy WPA.

Species of Concern ? The DEIS does not fully describe the sensitivity of some habitat areas including Ocean Beach and Fort Funston. The plan considers species listed under the Federal and State ESA's but does not sufficiently describe non-ESA species of concern as listed by the IUCN, the American Bird Conservancy, National Audubon, and locally known species of concern. Species of local concern include:

Allen's Hummingbird Black Turnstone Brant Bryant's Savannah Sparrow
Burrowing Owl California Thrasher California Quail Clarks Grebe Elegant Tern
Heermann's Gull Hermit Warbler Loggerhead Shrike Long-billed Curlew Long-
eared Owl Marbled Godwit Northern Harrier Nuttall's White-crowned Sparrow
Nuttall's Woodpecker Olive-sided Flycatcher Pelagic Cormorant Red Knot
Sanderling San Francisco Common Yellowthroat Short-billed Dowitcher Snowy
Plover Surfbird Thayer's Gull Tricolored Blackbird Varied Thrush Wandering
Tattler Western Sandpiper Whimbrel Wrentit Yellow Warbler

The EIS should estimate the actual number of incidents that occur within the GGNRA. Table 6 (p. 230) indicates the recorded incidents involving dogs in 2007 and 2008. It is stated that these numbers of incidents of visitors not complying with dog walking regulations is not equal to the number of actual violations occurring at the park. Being that many violations occur which are not observed or un-reported, some estimate of the total amount of violations should be included in the EIS such that each documented violation would be representative of a certain amount of actual violations.

--Sites Specific Comments--

Ft. Mason ? I support the Preferred Alternative with the following changes: no commercial dog walking, one dog per visitor, compliance rate of 95% or greater,

and establishment of a simple and effective reporting system.

Crissy Field WPA ? The DEIS indicates that the east boundary fence will be relocated 200 feet eastward at a position 900 feet from the NOAA pier (p. 60). The language of the plan should allow the National Park Service flexibility in determining the exact location of the fence and consideration should be given to the visual penetration effect as well as the geographical conditions of the immediate area.

Under the preferred alternative, off-leash dog activity directly adjacent to the east boundary fence will pose a visual threat that will penetrate into the Wildlife Protection Area, effectively rendering a portion of the eastern WPA as non-viable habitat during daytime use hours. Given this concern, the fence should be placed a reasonable distance eastward, beyond the actual 900 foot border line, to allow for an adequate buffer zone.

Additionally, the geography of the area of fence placement is somewhat complicated by non-uniform conditions which include a variety of substrates, varying elevations, several lobes of fenced dune habitat areas, and a variety of pedestrian pathways. Consideration should be given to all of these conditions and fence placement should accommodate ease of pedestrian traffic flow while maintaining adequate protection of the WPA. When installed, the fence should extend to the water at extreme low tide.

Crissy Central Beach ? The Central Beach ROLA should be fenced and gated. Fences at the west and east ends should extend to the water at extreme low tide. Adequate buffer zones (~300ft) should be included beyond the west and east boundary fences to protect the WPA and the lagoon outlet from the influences of excessive dog play activity. Access points from the promenade should be gated. Signs should be posted clearly identifying the area as an off-leash dog play area and stating the voice and sight control rules.

Crissy East Beach ? Fencing should be installed to protect the lagoon outlet zone. Outlet areas from bodies of water into bays or oceans are of high habitat value. The outlet zone should be included as part of the protected lagoon area and similarly fenced.

Crissy East of the Lagoon ? The Freshwater Swale should be designated as a no dog zone.

Crissy Promenade ? I support the Preferred Alternative with the following changes: no commercial dog walking, one dog per visitor, compliance rate of 95% or greater, and establishment of a simple and effective reporting system.

Crissy Airfield ? The foot paths that cross the airfield are multi-use trails and should be designated as on-leash areas. Allowing off-leash dogs on the airfield

trails will lead to user conflicts.

The airfield ROLA should have some type of physical barrier along the boundaries. A physical barrier will clearly define the ROLA area. Clearly defined boundaries will maximize compliance and minimize conflict. Consider a movable barrier that can be set up and taken down as needed. Signs should be posted clearly identifying the area as an off-leash dog play area and stating the voice and sight control rules.

The eastern portion of the airfield should be a no-dog area. The Crissy airfield attracts a wide variety of grassland bird species, including rare vagrants, and is a popular venue for wildlife viewing.

The following bird species have been observed using the Crissy Airfield as a foraging and/or roosting habitat in recent years:

Canada Goose Greater White-fronted Goose Snow Goose Cackling Goose
Mallard Red-tailed Hawk Cooper's Hawk American Kestrel Great Blue Heron
Great Egret

Cattle Egret Killdeer Black-bellied Plover Pacific Golden Plover Black-necked
Stilt Least Sandpiper Wilson's Snipe Barn Owl Northern Flicker American
Crow

Common Raven Black Phoebe Say's Phoebe Horned Lark Barn Swallow Bank
Swallow Cliff Swallow Northern Rough-winged Swallow Tree Swallow Violet-
green Swallow

American Robin European Starling Red-throated Pipit American Pipit Yellow-
rumped Warbler Song Sparrow White-crowned Sparrow Savannah Sparrow
Vesper Sparrow Clay-colored Sparrow

Lapland Longspur Western Meadowlark Brewers Blackbird Tricolored
Blackbird Red-winged Blackbird Brown-headed Cowbird House Finch
American Goldfinch Lesser Goldfinch House Sparrow

Ft. Point ? I support the Preferred Alternative with the following changes: no commercial dog walking, one dog per visitor, compliance rate of 95% or greater, and establishment of a simple and effective reporting system. Baker Beach ? The Preferred Alternative for Baker Beach is problematic for several reasons. Splitting the beach into leash-only and no-dog areas will lead to confusion, non-compliance, visitor conflict and continued management problems. Furthermore, allowing dogs near the creek outlet, an area often used by shorebirds, will increase the potential for wildlife conflicts. As a means of eliminating these problems and of creating more opportunities for visitors to enjoy dog-free National Park experiences, I suggest designating the entire Baker Beach area as

a dog-free zone.

Lands End ? I support the Preferred Alternative with the following changes: no commercial dog walking, one dog per visitor, compliance rate of 95% or greater, and establishment of a simple and effective reporting system.

Sutro Heights Park ? I support the Preferred Alternative with the following changes: no commercial dog walking, one dog per visitor, compliance rate of 95% or greater, and establishment of a simple and effective reporting system.

Ocean Beach ? I support the Preferred Alternative for Ocean Beach. To improve upon the Preferred Alternative, I suggest using symbolic fencing and adequate signage to delineate the south border of the ROLA. A simple post and cable fence could be placed along the border from the sea wall to the plover sculpture. A well defined border will help to reduce compliance problems and visitor conflict. Additionally, I suggest changing the name "Snowy Plover Protection Area" to "Wildlife Protection Area". A designation of Wildlife Protection Area would be inclusive of all wildlife species that use the beach habitat area.

Ft. Funston ? I support the Preferred Alternative for Ft. Funston with the exception of allowing dogs on the beach. To improve upon the Preferred Alternative, I suggest not allowing dogs on the beach. The beach at Ft. Funston is used by a variety of shorebird species. Allowing dogs on the beach will result in dogs chasing shorebirds, which is not appropriate in a National Park. I support installing a fence, with access gates and adequate signage, along the border of the ROLA north of the main lot. A borderline fence will clearly delineate the boundary of the ROLA and will minimize compliance problems and visitor conflict. Signs should be posted that clearly identify the area as an off-leash dog play area and that state the voice and sight control rules. Additionally, I suggest aggressively restoring the coastal scrub habitat throughout Ft. Funston. Plant and animal species, as well as park visitors, have been displaced from Ft. Funston over time as dog play activities have increased. A proactive effort must be made to bring back the visitors who are interested in proper stewardship of this area of the park.

Type:

Correspondence: I appreciate the work that has been done by GGNRA on the dog issue. I support the preferred alternatives (shaded areas in the plan). I believe they represent a balance between the needs of dog walkers and those that come to parks to enjoy a dog free experience.

I feel it is especially important to protect the beach areas. I have witnessed many instances where off-lease dogs chase down sea birds that are foraging in the surf.

Thanks

Dan

Correspondence: I don't have exact figures to represent the number of beaches left that dogs are allowed on at all let alone off leash but as a dog owner I can from experience say that it seems that only one in five California beaches allow dogs on or off leash and only one in 20 allow dogs off leash. I feel that seems unfair. We consider our dog as part of the family and try to plan our close-to-home vacations with the dog in mind. We love the outdoors - camping, hiking and going to beaches. Back country trails do not allow dogs at all so our outdoor excursions are usually limited to places where the dog can be with us. Because of the limitations, the only beaches locally are Fort Baker, Muir and Carmel Beach. Carmel Beach doesn't seem to have any problems with having dogs off or on leash on it's beach, why is it such a problem for you ? We hope you will reconsider such a wide sweeping elimination of dog friendly beaches and keep at least one open for dogs off leash and on voice control.

Sincerely, Oola Mar

Correspondence: My comments only address the portion of the Draft Plan that pertains to Muir Beach.

The data presented in the Draft Plan does not support Alternative D being designated as the Preferred Alternative. Alternative D would ban dogs playing off-leash in the surf and on the sand at Muir Beach. The data presented in the Draft Plan only supports Alternative Plan A, the No Action alternative. The data, itself, however, is deeply flawed as is the methodology used in the Draft Plan as regarding Muir Beach.

It is true that there some people dislike or fear dogs. That is why almost every beach in Marin County either prohibits the presence of dogs or dogs being off-leash. But the people of Marin have designated Muir Beach as the one small conveniently located beach where their Labrador retrievers, golden retrievers, and other dogs can play in the surf and run on the sand. Dogs have been allowed off-leash at Muir Beach for more than 150 years. The Draft Plan does not provide any compelling reason why the National Park Service (NPS) should interfere with this long-standing right of the people of Marin County to let their dogs enjoy the beach.

Has the National Park Service received hundreds of letters and complaints in the last ten years complaining about dogs on Muir Beach? The answer is "no." The impetus for changing the status quo does not come from the people who frequent Muir Beach; rather, it comes from NPS personnel who probably do not even live in Marin Country. Though Muir Beach is primarily used by the locals in Southern Marin County, did the authors of the Draft Plan ever conducted a scientific survey of the people who actually use Muir Beach, especially on a regular basis, to determine whether they want dogs prohibited from being off leash on the beach? No, they did not. The attitudes of people in faraway counties who rarely or never go to Muir Beach are irrelevant to the future of Muir Beach.

Worse, the authors of the Draft Plan make general statements about the effects on dogs on distant ecosystems and then attempt to extrapolate their conclusions to the situation at Muir Beach. But they provide no baseline data showing that allowing dogs off leash at Muir Beach have ever been a problem, and no data showing that any problems are worsening at an accelerating pace.

If you had been writing a Draft Plan for an area that had never permitted dogs before or never permitted dogs to be off-leash or an area where the number of dogs has been greatly increasing in recent years, your Draft Plan might have merit. But this is not the case regarding Muir Beach. Dogs have been allowed off leash at Muir Beach for well over 150 years, the correct way to have done environmental impact study would have been to compare Muir Beach to a number of matched controls (i.e. similar small beaches, both in physical attributes, climate, and usage) that do not permit dogs to be off leash. There was no reason to speculate whether dogs might cause

irreparable damage. You should have collected and analyzed actual data before writing your conclusions. Why didn't you do this? Is it because the Park Service first decided to ban dogs on Muir Beach (the impetus possibly being the conflict between the Park Service and dog owners in the city of San Francisco) and then had to justify its decision?

The third major problem with the Draft Plan as regards Muir Beach is that the authors assume they are supposed to protect a priceless work of art and each blade of grass and every individual plant must be protected or the entire artwork will be irreparably damaged. In actuality, it does not matter if dogs sometimes harm an individual plant; the ecosystem, as a whole, is under no threat. The authors are using the wrong standards for deciding how to protect Muir Beach.

Water quality in the ocean off Muir Beach is very good; pollution due to dog waste is not a concern. Water quality in Redwood Creek is affected by run-off and human activities; there is no evidence that the presence of dogs has impacted the water quality of the creek. Salmon and steel head trout do not spawn in the Muir Beach lagoon; they spawn much further upstream. If more than 30 giant brown bears concentrated in stretches of Alaskan rivers do not deter salmon and steelheads intent on spawning upstream, the occasional golden retriever frolicking in the Muir Beach lagoon is not going to have an impact.

If the Park Service has to take action at Muir Beach, just restrict dogs to being on leash in the parking lot and the boardwalk leading to the beach. Restrict dogs from being in Redwood Creek, and if necessary, build better fences around the lagoon and the dune. The purpose of such fences would not be to ensure no dog ever enters an area where it does not belong; the purpose would be to ensure there are not so many dogs in the area as to cause irreparable harm.

And if there times of the year when the presence of dogs threatens the breeding habitat of migrating birds, then just prohibit the presence of dogs during that limited period. The East Bay Regional Park Service can successfully do this.

The following are my comments on some of the specifics of the Draft Plan and Plan D, your "Preferred Alternative." Language from the Draft Plan is shown in italics. My comments either follow the italicized text or inside of brackets within the italicized text.

The plan states that, "A plan/EIS is needed because Golden Gate National Recreation Area (GGNRA or the park) resources ? could be compromised to the extent that, without action, those resources and values in some areas of the park might not be available for enjoyment by future generations.

Additionally, a dog management policy inconsistent with NPS regulations and increased public expectations for use of the park for dog recreation have resulted in controversy, litigation, and compromised visitor and employee safety, affecting visitor experience and resulting in resource degradation. The conflicts will likely escalate if not addressed in a comprehensive plan/EIS."

The above statement is totally false in regards to Muir Beach. The Plan provide no evidence that there has been any increase at all at Muir Beach in the last ten years in:

? The number of conflicts between park users with and without dogs ? The number of incidents of fear of dog bites or actual dog bites or dog attacks ? The hours devoted by park staff to manage these conflicts ? The hours devoted by park staff to rescue dogs and owners ? The hours devoted by park staff to dispose of dog waste, educate the public on dog walking policies and regulations and enforce regulations ? That dogs running free in the surf and beach have affected species listed as threatened, ? endangered, or having special-status ? The number of private and commercial dog walkers have increased. ? Without action, those resources and values might not be available for future generations

Environmental Consequences Under Alternative A: No Action, Although this site has high visitor use and low numbers of citations and incident reports related to dog activities, some violations have been documented at the site. Since dogs would be allowed under voice control, there would be a higher likelihood of dogs running, running at higher speeds, and digging in soil. Impacts would occur from dogs disturbing the dunes, soil compaction on social trails and along the banks of Redwood Creek, and nutrient addition to soil from dog waste.

[Dogs have always run free here and dug in the soil. So do children. You provide no data showing that any significant or permanent damage to the ecosystem has occurred after more than 150 years of dogs running free and no data showing an acceleration of damage in recent years. Thus, the data shows there is no reason not to let dogs play in the surf and run on the sand at Muir Beach.]

At this site, the dunes (including a dune restoration area) are located adjacent to the beach and are not adequately protected. Ineffective post-and-cable fencing at Muir Beach discourages visitors from entering the dune restoration area but does not stop off-leash dogs, and lack of fencing at other dune areas does not physically exclude dogs. As a result, alternative A would continue to have long-term moderate adverse impacts on soils because the natural function of the dunes is being disturbed by impacts from dog activities at the site, which can interrupt the natural dune building and

accelerate the natural sand migration processes (NPS 2010b). Beach sand provides habitat, and nutrient enrichment and changes in soil density could result in changes to habitat quality. Digging could change the nature of the sand soil environment and make it less desirable habitat for invertebrates that live in the sand. ?At Muir Beach, commercial dog walking is uncommon. Therefore, commercial dog walking would have negligible impacts on soils.

[You have no data showing that the dogs on Muir Beach in the last 150 years or the last 10 years changed the nature of the natural sand soil environment and made it less desirable for invertebrates that live in the sand. Where is the comparison to a similar beach that has always prohibited dogs? Problems may exist at other beaches with very high dog usage, but there is no problem at Muir Beach.]

[Also, the Draft Plan states "Ineffective post-and-cable fencing at Muir Beach discourages visitors from entering the dune restoration area but does not stop off-leash dogs, and lack of fencing at other dune areas does not physically exclude dogs."

Unlike the Park Service, I actually use Muir Beach. There are many times more people than dogs entering the restoration area and ignoring the post and cable fencing. You do not propose, however, that people be banned from Muir Beach. If the fencing is inadequate to discourage dogs, then just fix the fencing. Put up an attractive four foot high picket fence with a few gates. And if a dog or two still enters the restoration area, so what! Any resulting damage would be temporary and insignificant.

According to the Draft Plan, Alternative A would have long-term cumulative moderate adverse impact on the soil due to soil compaction, erosion, and nutrient addition on trails and pathways, and the dunes would be disturbed. I challenge the Park Service to show data comparing Muir Beach to a similar small beach where dogs are prohibited that supports this spurious conclusion. There is no data supporting the conclusion that nutrient addition from dog waste during the last 150 years at Muir Beach has had a "long-term cumulative moderate adverse impact on the soil." To suggest that Muir Beach dog waste has had this impact is nonsense.]

Preferred Alternative D states that:

On-leash dog walking is based on an allowed 6-foot dog leash. Impacts on soils on the Pacific Way Trail would be negligible, since soils along the trail have been previously disturbed and compacted, resulting in a loss of natural soil function. These soils no longer support the growth of vegetation or microorganisms commonly found in soil. Impacts from dogs would be at such low levels of detection that there would be no discernible effect on

soils or natural soil function. Soils located in the 6-foot areas adjacent to both sides of the trail (LOD area) would receive long-term minor adverse impacts from dogs compacting and eroding the previously undisturbed soils. Nutrient addition from dog waste would also occur; however, impacts would not change the natural characteristics of the soils or natural soil function. Since commercial dog walking activity is not common at Muir Beach, it is likely that the new regulation would not have an impact on the number of dog walkers.

[Alternative A maintains the status quo; it does not increase the presence of dogs. Everything you write about the impact of Preferred Alternative D on the soil is equally true for Alternative A. How can you logically argue that dogs should be allowed on the Pacific Way Trail because the "soils along the trail have been previously disturbed and compacted, resulting in a loss of natural soil function," and then claim dogs should be banned from the beach where they have always run free because they might disturb and compact the soil?]

Turbidity Dogs entering streams, ponds, and lagoons with fine bottom sediments may stir up the sediment and increase turbidity in the water. Excessive turbidity can reduce the ability of sight-feeding fish to capture prey, can smother aquatic eggs, can cause filter-feeding mussels to close up and stop feeding, and can impair the aesthetic value of the water resource. The intensity of the impact on turbidity from dogs depends on the frequency of dogs entering the water body, the persistence of the turbidity, and the degree to which other sources (e.g., runoff from rain events and people wading in the same resources) contribute to the turbidity. All management alternatives other than existing voice-control restrictions (i.e., prohibition, leash control, ROLA) or conditions of noncompliance are expected to essentially eliminate turbidity impacts because dogs would be kept out of the park's water bodies.

[Don't speculate about the effects of dogs on turbidity at Muir Beach. Where is your supporting data? You have none. You have no data showing that dogs have created a turbidity problem at Muir Beach that affected sight-feeding fish, smothered eggs, killed mussels, etc.]

Nutrients Dog waste contains nitrogen and phosphorus, which are nutrients required by algae for growth. Excessive nutrients in water resources, especially ponds or lagoons with low flushing rates, can lead to excessive algae growth, known as an algal bloom. Algal blooms can be unsightly, and the eventual die-off of the algae can cause dissolved oxygen levels in the water body to drop below water quality standards, which can cause fish kills (MDNR n.d., 1). Where dogs are present near water bodies and the waste is not routinely removed by the dog owners, impacts on water quality may occur due to nutrients in dog waste in addition to multiple other sources of

nutrients contained in stormwater runoff.

[You have no data showing this is a problem at Muir Beach. Where is your data comparing Muir Beach to a similar beach where dogs are prohibited? Where is your data showing algae blooms are a problem at Muir Beach or that dogs are a proximate cause? These problems do not exist at Muir Beach so you do not need to ban dogs to correct these problems.]

Pathogens Pet waste contains a large number of bacteria and may contain Giardia, roundworms, Salmonella, parvovirus, and many other microorganisms called pathogens that can be harmful to human health. If pet waste is left on the ground, runoff from rain events may transport these microorganisms to adjacent water bodies. Defecation from dogs can also occur directly in a water resource, such as a creek, stream, or pond. Fecal coliform bacteria are routinely measured across the nation at bathing beaches as an indicator of potential contamination from human or animal waste. The primary impact of dog waste on water quality relates to its potential impact on human health ?.

A substudy of the San Francisco Sewage Master Plan determined that bacterial contamination of waters off Ocean Beach was significant due to dog waste deposited along the shoreline. Dogs Chapter 4: Environmental Consequences have been observed by park staff in the lagoon and ocean at Muir Beach, Redwood Creek ?. The presence of dogs in the water at each of these sites has the potential to impact the turbidity and increase the nutrient load and fecal coliform levels in the water.

[Heal the Bay's Summer Beach Report Card 2010 gives North, Central and South Muir Beaches an A+ for water quality for both dry and wet times of the year. You have no data showing that there is a problem with dog pathogens in the water or any pathogens, for that matter.]

[You have no data showing bacterial contamination of waters off Muir Beach even though Heal the Bay issues a report card every year. Instead, you cite studies showing problems at other beaches and write that the presence of dogs has the "potential" to pollute the water. But the data shows that dogs at Muir Beach do not pollute the water ? there is no health concern. There is no problem with algal blooms.]

Water Quality Impacts Alternative A: No Action. The tidal lagoon and Redwood Creek are currently closed to dogs, but there is no physical barrier to prevent dogs from accessing Redwood Creek, and fencing at the lagoon is ineffective against noncompliant dogs. Visitor use is moderate to high at this site and it has been observed that dogs frequently access Redwood Creek. One warning, one citation, and one report were taken for dogs in areas closed to pets in 2007/2008. [In 2007-2008, there was a total of three reports

of dogs in Redwood Creek.!! This does not support the finding that dogs "frequently access" Redwood Creek. This supports a finding that dogs rarely access Redwood Creek. More importantly, you have no data showing this level of dog activity causes any damage.] The voice-control area of Muir Beach encompasses the entrance channel of Redwood Creek and is located immediately adjacent to the shoreline of the lagoon, which has recently been restored. Additionally, the community of Muir Beach is located adjacent to the NPS beach, which adds to the moderate to high visitation at the site. Park staff members have observed that some local residents let their dogs run freely on the beach and do not dispose of dog waste properly. [This has been going on since the 1800's] Dogs may cause turbidity by running in the lagoon and Redwood Creek and stirring up sediment. There would also be continued potential for nutrients and pathogens from dog waste to enter the lagoon, creek, or adjacent ocean. [But you have no data showing either that this actually occurs or that the volume of contaminants is significant. Also, we are not talking about banning dogs from Redwood Creek; we are talking about the ocean, and to a lesser extent, the tiny lagoon at Muir Beach] However, pollutants are dispersed in high energy beach environment. Water quality impacts from alternative A would therefore be considered long term and adverse, [You have no data supporting this conclusion.] but minor because of other contributing factors such as stormwater runoff. The effects on water quality as a result of dogs would be detectable but would not be large enough to cause substantial local changes to water quality.[Consequently, consideration of water quality impacts should have lead to a finding in favor of Alternative A!]

The long-term minor adverse impacts on water quality from dogs at Muir Beach under alternative A were considered together with the effects of the projects mentioned above. The beneficial effects from the trail rehabilitation and restoration projects should reduce some of the adverse impacts on water quality from alternative A resulting in negligible cumulative impact on water quality. [In other words, there is no problem now and the chance there will be future problems will only grow smaller if the status quo is maintained!]

Coastal Community Habitats Coastal dune plant species are very sensitive and easily disturbed by trampling, digging, and other activities, and may not recover due to their sensitive nature or may create opportunities for the establishment of non-native and/or invasive plant species.

Alternative A: No Action. At Muir Beach, dune communities, including a dune restoration area, are located adjacent to the beach, which is open to dogs under voice control. This site has high visitor use and there were three recorded incidents of dogs in a closed area in 2007/2008 at this site. [Three incidents in all of 2007/2008? How many incidents of people being present in the dune area? You have no data showing this level of dog activity causes

permanent data. You have no data comparing the effects of dogs after 150 plus years on dune communities at Muir Beach to similar beaches where dogs are prohibited.] The dune communities at Muir Beach are not well protected, and rocky intertidal habitat also exists at Muir Beach but is unlikely to be affected by dogs. Ineffective post-and-cable fencing at Muir Beach discourages visitors from entering the dune restoration area; other dune areas are unfenced and would not physically exclude dogs. [More people than dogs enter these areas. If you want to keep most dogs out, just build better fences with gates. The presence of a couple dogs a week has not been shown to cause any permanent damage.] As a result, alternative A would have continued long-term moderate adverse impacts on coastal dune plant species because the integrity of the plant community could be negatively affected by dogs through trampling, digging, and dog waste. ["Could be"? The status quo has been dogs running free for more than 150 years. What does the real data show? There is no evidence of damage to the integrity of the plant community relative to similar beaches where dogs are prohibited.]

The beneficial effects from the many habitat restoration projects at and near Muir Beach should reduce some of the adverse impacts from this alternative on the coastal dune plant community. [There is no problem now and the likelihood of a future problem occurring will decrease because of plant restoration projects near Muir Beach. So why change the status quo?] Therefore, cumulative impacts on the coastal dune plant community under this alternative would be expected to be negligible to long term, minor, and adverse.

MUIR BEACH ALTERNATIVE A CONCLUSION TABLE The Plan Coastal Community Long-term moderate adverse impacts. Negligible to long-term minor adverse cumulative impacts.

[This conclusion is not even supported by your own findings. The correct conclusion is that a non-existent problem will be even less likely to exist in the future if we adopt Alternative A.]

WETLANDS AND AQUATIC HABITATS Muir Beach (Lagoon)
Alternative A: No Action. The lagoon located at Muir Beach is described as a small tidal lagoon fringed by wetland vegetation. A wetland restoration project was completed at this site in 2009, which included increasing its size and depth, adding woody debris and revegetating the shoreline; invasive vegetation was also removed as part of the restoration project; Phase I of this project reconnected the creek to the flood plain and expanded the tidal lagoon. Under current conditions, dog walking is allowed on leash or under voice control at the site. The park has closed the lagoon and Redwood Creek to dogs, although there is no physical barrier to prevent dogs from accessing the lagoon or Redwood Creek and it has been observed that these closures

have been violated. The area is considered a moderate to high use site, and dogs do gain access to the lagoon and surrounding wetland habitat.

[More people, especially children, than dogs play in the lagoon. There is no evidence they have done damage. You don't have to keep every single dog out of the lagoon every day. In any event, if it is a problem, construct a better fence.]

Alternative A: No Action. The long-term minor adverse impacts on riparian vegetation from dogs at Muir Beach under alternative A were considered together with the effects of the projects mentioned above. The beneficial effects from the rehabilitation and improvement projects should reduce some of the adverse impacts on riparian vegetation from alternative A. Therefore, cumulative impacts on riparian vegetation under this alternative would be expected to be negligible.

[There is no evidence that dogs have permanently damaged the riparian vegetation in the last 150 years and even the authors admit continuing to let dogs run free will have a negligible impact. Thus, protecting the riparian vegetation is no justification for restricting dogs.]

Riparian Forest and Stream Corridor Impacts Rationale The preferred alternative would allow on-leash dog walking in the parking area and on the Pacific Way Trail. The boardwalk/path to beach and the beach itself would be closed to dogs. The tidal lagoon and Redwood Creek is currently closed to dogs. Riparian forest vegetation located in the 6-foot area adjacent to the trail and parking lot would receive long-term minor adverse impacts from dogs trampling and digging in vegetated areas; nutrient addition from dog waste would also occur. The effects would be measurable and perceptible, but would be localized in a relatively small area. The long-term minor adverse impacts from dogs in the LOD area would occur in a relatively small area compared to the site as a whole. Physically restraining dogs on leash would protect vegetation off trail, and trails in riparian habitat constitute a small area in comparison to the entire site. Therefore, assuming compliance, the overall impacts on riparian vegetation from on-leash dog walking at Muir Beach would be negligible because impacts would result in no measurable or perceptible changes in the plant community.

[The intelligent conclusion would be to require dogs be on leash in the parking area and the trail to the beach, and not prohibit dogs from running on the sand and playing in the surf.]

Birds and Sea Mammals Although the site has documented low shorebird abundance and diversity compared to other GGNRA coastal beaches, dog presence at the site as well as dogs barking at, chasing after, and being in proximity to roosting or feeding birds would continue to result in

disturbance to shorebirds and waterbirds. This type of disturbance by dogs could result in loss of preferred habitat as well as energy loss to migrating and wintering birds, potentially reducing their chances of survival along their migratory routes and reducing fitness for successful reproduction. The presence of leashed and mostly unleashed dogs also results in flushing and displacement of shorebirds in response to presence of a perceived predator. [You have no evidence that the presence of dogs at Muir Beach is the cause of low shorebird abundance and diversity. Dogs have been there for 150 years. You have no evidence that continuing to allow dogs will further reduce the bird population.] Muir Beach also has a lagoon that supports shorebirds, wading birds, and waterbirds in addition to the limited numbers of shorebirds along the beach/ocean shoreline. A fence surrounds the lagoon but does not effectively keep dogs out of the area. The lagoon at Muir Beach was recently restored and may attract more shorebirds and waterbirds and increase visitor use of the site in the future, and the area could be subjected to repeated disturbance by unleashed dogs, including in closed or fenced areas. [Just build a better fence. Mill Valley has a dog park next the Bay shore. Dogs run free and birds frequent the tidal areas. You should not speculate; you should collect real data.] Additionally, marine mammals that haul out or strand at Muir Beach could occasionally be affected by dogs on the beach through dogs approaching, biting, barking at, or climbing on/surrounding the mammals or chasing after hauled-out mammals back into the water.

[What does the actual data show? How often has this happened in the last ten years? What has the affect been on the sea mammal population? Let me save you the trouble of doing the research ? there has been no impact.]

Construction Activities, Oil Spills, Vehicle and Boat Noise Development or construction actions at or in the vicinity of GGNRA sites have had or may have the potential to have adverse impacts on coastal communities, including shorebirds. Generally, adverse impacts on shorebirds may include temporary or permanent loss of habitat and physical disturbance by construction workers or from vehicle and/or boat noise during construction; levels of impacts may include avoidance, underuse, complete abandonment, or reduction in total numbers of shorebirds at construction areas in the coastal community. Oil spills affect birds, mammals, and fish. Marine mammals such as fur seals and sea otters are extremely affected by oil on the water, as are birds that float on the surface of the water (such as scoters and grebes).

[Dogs do not build structures, spill oil, and cause vehicle and boat noise that disturb birds and sea mammals. If those activities threaten birdlife and sea mammals at Muir Beach, banning dogs will not fix the problem.]

Water-dependent amphibians and reptiles Water-dependent amphibians and

reptiles found in Redwood Creek that may be affected by current conditions include Pacific tree frogs, California newts, and California giant salamanders. Under the no-action alternative, if dogs gain access to Redwood Creek they could affect amphibians/reptiles by fouling water with dog waste, trampling plants (habitat) along the water/wetland edges, and disturbing sediment and causing turbidity that can smother egg masses, or by injuring or causing direct mortality to egg masses or individual species in the creek. Other wildlife species, such as birds and small mammals, because of their mobility can usually avoid areas where dogs are present during peak activity or habituate to these activities, but loss of preferred habitat would still indirectly affect wildlife. Off-leash dogs could also chase wildlife, and nesting birds on the ground or in low vegetation could have nests destroyed by dogs wandering off the trail. Therefore, alternative A would result in continued long-term minor adverse impacts on wildlife species at Redwood Creek.

[But there is no evidence that this is a problem at Muir Beach. Dogs run free at Muir Beach; Redwood Creek has amphibians and reptiles. There is no problem. If there is a problem, then ban dogs from Redwood Creek, not the beach.]

Coho Salmon There is no physical barrier to prevent dogs from accessing portions of Redwood Creek that support coho salmon. Coho salmon use Redwood Creek throughout their life cycle, from migrating and laying eggs as adults to living in the stream as juveniles. Salmonids in general are sensitive to water quality issues. Because coho salmon complete sensitive portions of their life cycle in Redwood Creek, adult and juvenile life history stages could be affected by dogs that gain access to the creek. Eggs would not be affected, because salmonids require gravel areas of substrate for laying eggs; these areas are located farther upstream from the area where dogs can access Redwood Creek. Dogs along the shoreline of Redwood Creek could alter the normal behavior of coho salmon directly if they frequently access the creek or its shoreline, or indirectly by causing increased turbidity by trampling shoreline areas and re-suspending sediment so that feeding is impaired. Potential impacts would be localized to the small area where dogs can access Redwood Creek.

[There is no documentation that dogs have either directly or indirectly affected the coho salmon in Redwood Creek. If Alaskan brown bears do not deter salmon swimming upstream to spawn, one or two golden retrievers in the lagoon won't deter the salmon who do not spawn in the lagoon]

STEELHEAD TROUT [There is no documentation that dogs have either directly or indirectly affected the steelhead trout in Redwood Creek.]

CALIFORNIA RED-LEGGED FROG In the study area, this species occurs

in Marin County at Muir Beach (water bodies at the site provide habitat but no known breeding occurs) ? Although there is currently no documented California red-legged frog breeding at Muir Beach and no previous documentation of frogs in other water bodies at the site(, juvenile frogs were recently found moving from an upstream breeding pond (near Green Gulch) that is located away from the Muir Beach site down the creek corridor towards Muir Beach. As future habitat improves for the frogs and the construction of breeding ponds is finished, breeding may occur in the future at Muir Beach. Currently, frog life stages that could be affected at the site by dogs include juveniles and adults, since juveniles have recently been found at the site. Even though frog breeding habitat occurs off- site from Muir Beach, near Green Gulch, noncompliant dogs under voice control could gain access to this area and affect frog eggs. Eggs could be affected by trampling from off leash dogs, as has been documented at a pond in Pacifica, California by the City of San Francisco in San Mateo County. However, there is no published documentation that dogs have either directly or indirectly affected the frog at this location.

[Therefore, concerns regarding the red-legged frog do not justify ending the age-old practice of letting dogs swim in the surf and run on Muir Beach.]

Archeological Resources [If the presence of dogs has not destroyed or damaged any "archeological resources" at Muir Beach in the last 150 years, the desire to protect archeological resources does not justify restricting dogs at Muir Beach.]

Visitor Use and Experience Alternative A: No Action. Overall, the number of leash law violations is low for this site, with only three occurring in 2007/2008; no dog bites or attacks were reported during this period (table 9).[Dog bites or dog attacks are not a problem at Muir Beach!] Under the no-action alternative, there would be no impact on the visitor experience of visitors who would prefer to walk dogs at the park. Dog walkers would continue to allow their dogs off leash throughout the site. Visitors would continue to enjoy exercising, socializing, and playing with the dogs on the beach. Having dogs off leash and playing throughout the area may add to the park experience for visitors with dogs. Residents adjacent to the beach would continue to allow their dogs to roam freely off leash without supervision. No change in visitation by this user group at Muir Beach would be expected. Impacts on visitors who would prefer to visit the park without dogs would be long term, moderate, and adverse.

[The people of Marin Country decided long ago to designate Muir Beach as the one beach where dogs can play in the surf and run on the sand. There is no other beach nearby that can serve this role. Residents of Muir Beach and Mill Valley can get to Muir Beach in less than 10 minutes. It is easy to take

dogs there after work. Beaches on the Marin Headlands are too far away.]

Park Operations [Because the status quo is letting dogs play in the surf and run on the beach, there would not be added cost to park operations by Alternative A.]

Conclusion The NPS has an ongoing fight with dog owners in San Francisco. Please do not drag the people of southern Marin County in this dispute. Let us have our one beach where dogs can swim in the surf and run on the sand. If they have not caused irreparable damage in the last 150 years, there is no reason to change the status quo. Marin Beach is all we have for dogs. The Bay is too polluted and the area near the shore contains broken glass and other dangerous objects.

Received: May,23,2011 18:23:40

Correspondence Type: Web Form

Correspondence: I am writing to you on behalf of Guide Dog Users, Inc. (GDUI) an international organization dedicated to advocacy, peer support, public education and all aspects of training, working and living with dogs specially-trained to guide blind and visually-impaired people. GDUI does not train or place guide dogs; but acts as an independent resource network; providing information; support and advice concerning guide dogs; guide; dog training and access laws to its members; the media and the public at large.

GDUI urges you to support the adoption of regulations which would create physically enclosed spaces as off-leash dog play areas for the safety of guide dog handlers and their dogs.

In a 2003 GDUI survey, 89% of guide dog handlers reported incidents of interference from unleashed dogs, placing these visually impaired individuals in serious danger. Even when an interfering pet dog simply wants to play, the team's attention to important elements of safe travel is distracted making the blind person vulnerable to the dangers of traffic and other environmental challenges. 42% of respondents have been the victims of attacks by unleashed dogs causing physical and psychological injury to both members of the team and even death or premature retirement of the guide dog which can cost more than \$50,000 to replace.

GDUI supports the enforcement of leash laws in general because such laws provide important safeguards for people, our pets, wildlife, and parks. Enforcement of the National Park System's leash law and the creation of off leash play areas for dogs would insure dogs have reasonable access to the

Park without jeopardizing the safety of disabled individuals partnered with specially trained assistance dogs, pet dogs, wildlife, or park visitors.

Guide dogs are bred to be gentle and unlikely to defend themselves, and as such are particularly vulnerable to attack. Therefore, GDUI urges creation of off leash play areas for pet dogs at the Golden Gate National Recreation Area.

Correspondence: I am strongly against the proposed plan to severely limit the number of parks where dogs can roam free. Generally, San Franciscans are responsible dog owners and are very respectful of the parks. Dog parks are already completely packed and this will cause even more issues with space. I am one voter who will never support this plan.

Sincerely, Jenny

Correspondence: I have lived in San Francisco for fifteen years and have a family including a young child and a three-year-old puppy. We especially love hiking as a family with our dog on Montara Mountain (where we usually only run into a few other people or dogs), as well as Ft. Funston, Crissy Field, Ocean Beach and Muir Beach. We enjoy seeing people of all ages, races, family units, and their well-socialized dogs out at these beautiful places. I believe that part of the wonderful charm of San Francisco is the openness and tolerance of the people, which is reflected in how beautifully the dogs play when out in these open park spaces. In over a decade of using these spaces heavily-with and without a dog-I have not encountered any dog fights in any of them. (The only violence at all that I can think of is hearing on the news that someone was stabbed in the Ft. Funston parking lot, by another person, of course, who was not a dog owner.)

This plan, if implemented, will make the Bay Area less healthy and more dangerous for both people and dogs. Everyone who works with dogs is well familiar with the fact that a dog who is allowed to run and play in open spaces and play and socialize with other dogs is less neurotic and much better behaved than dogs who are left at home or tied up in the yard--those dogs are the ones who become aggressive and hard to control. An excellent

example of this is the great behavior of all the dogs who showed up at the protest march on Mar. 21.

Please keep the Bay Area safe and healthy for everyone, and resist these blanket changes that would sabotage something that should be a model for the rest of the state, if not the country.

Thank you for your time.

Correspondence: Hello, thank you holding very informative public meetings and for this opportunity to comment.

I'll limit my comments to a few specific areas within the GGNRA that I frequent with my wife and our dog.

At Ocean Beach, please mark Stairway 21 more clearly. We have no idea at all where it's located.

At Mori Point, for security reasons, please continue to allow access on the Pollywag Path. There have been several cars broken into while parked near the Moose Lodge entrance. And for a mere scenic reason, please keep the Lishima trail open in order to accommodate a return loop trail.

And in general, please consider the impact of the proposed limitations on nearby city and state parks.

Best, Michael Wright

Correspondence: I live in Mill Valley and I have two young daughters who petitioned me for years to get a dog. Last year we got one, a mini Australian Labradoodle we named Beans. Thus I was introduced to the world of dog owners. My dog loves to go for walks, like all dogs. I thought this would be great -- I need the exercise; he needs the exercise. We live in Marin County, surrounded by parks and open space. I was excited about exploring all of these beautiful places as I grew old with my dog. But no! I was surprised to find out that there are very few places where I can take my dog. I can walk him around the neighborhood, but he's an animal. He (and I) yearn for open spaces. What is the point of having parks if people can't use them?

Now I find that further restrictions are in the works. I can look out my window and see beautiful hills all around me, but I can't take my dog to go roam them. I ride my mountain bike up these trails and roads and never see anyone. WHAT is the big deal about opening these places to dogs?

It's ridiculous. I go to the Mill Valley Dog Park (where neither my dog nor I get any exercise) and I am totally impressed by how well-behaved the dogs are. This "Dog Management Plan" isn't about managing dogs. It's discrimination against people who own dogs. I pay my taxes, just like

everyone else. Why are my rights being restricted. It's outrageous!

Correspondence: I am writing to oppose the GGNRA draft dog management plan and "all action alternatives" that further reduce or ban dogs. Please keep our open spaces dog-friendly and plentiful. The Park Service should revise the dog management plan to: 7 Recognize dog recreation as a safe and healthy recreational activity and as important to the health and well-being of people, dogs, and communities, especially those in densely populated urban areas 7 Justify any changes with objective, reasonable scientific studies and findings and remove the many exaggerations, speculations, and misleading statements. Don't treat dog recreation as a hazard and nuisance despite facts to the contrary; it's compatible with other urban recreation.

My husband and I love to get to Fort Funston at least twice a month to take our beloved weimaraner for a long hike through the trails and along the beach. We look forward to being outdoors with our dog and it makes us so happy to watch her play and run - she is so happy! It would be a shame if we suddenly had no where to take our dog to experience the outdoors.

Best, Serena Earwicker Mountain View, CA

Frank Dean, General Superintendent

Golden Gate National Recreation Area

Fort Mason, Building 201

San Francisco, CA 94123-0022

Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the tens of thousands of Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

- * Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation.
- * Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.
- * Exclude speculative, exaggerated, biased, or misleading statements and studies.
- * Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).
- * Align commercial dog walking rules with county or city regulations.

These are my personal comments and observations regarding this plan:

My dachshunds enjoy running, fetching, and even swimming. They are well-behaved under voice control or on leash. Our favorite areas to play are Fort Funston, Great Highway, and Crissy Field. They also enjoy trail hiking with me on the Peninsula and Marin County, and along the coastside hills in Pacifica. It would be a shame to have to leave my beloved animals home if they are restricted from enjoying their favorite recreation areas. It is important for dogs (especially dachshunds) to be active and get enough

exercise.

I appreciate your consideration.

Sincerely,

Janet Lusano San Francisco, CA 94132

Correspondence: Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022 Dear Mr. Dean, I am writing to oppose the GGNRA's draft dog management plan.

I use a number of the proposed area with my 2 dogs - i use Muir Woods Beach, Oakwood trail, and my favourite is Crissy field and fort funsten. One of the unique and special things about San francisco has always been a open minded approach to diversity and differences of opinion. the world is becoming more and more dog-friendly - look around there are so many dog friendly hotels now and websites dedicated to travelling with your canine companion. San Francisco has been considered for a number of years as one of the most dog friendly places in the world. to some the dogparks--fenced in areas are enough - for dog lovers though we truly recognise the joy in our dogs as we watch them run and splash in the waves and water of our local beaches.

These dogs are like our kids and family members - just like with kids - you have badly behaved kids and parents who don't seem to control these badly behaved kids - there is a similar problem with a small minority of dog owners-- the overall majority of dog-owners and dog-walkers are extremely responsible and we above all realise there is a lot more at stake for us than there is for parents. I doubt there will ever even be considered a law that bans kids from the beach -

One of the reasons I've heard mentioned on this whole dogs off beaches--is to do with the very few owners who don't pick up after their dogs--this is not a mojority or even a viable number - it is rare that i come across another dog's poop --and when I do--I pick it up....

I can't tell you how many times after a sunny day at crissy field the number of plastic shovels, floating sandwich bags, burst beach balls, articles of clothing--all left behind littering the beach and environmentally effecting the leaving an unfriendly environmental effect behind -- it's easy to point fingers and say dogs and their owners--but truly - dogs are a part of the San francisco culture --

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded. This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others. The GGNRA draft management plan does not

provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to: Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). Enable professional dog walking and align any professional dog walking rules with county or city regulations. Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input. These are my personal comments and observations regarding this plan: (here's where you fill in your own personal story and what you've seen when you've been out at the GGNRA)

please - -please reconsider this proposal - Sincerely,

Bonny Dunn sausalito ca 94965

If you can start the day without caffeine,

If you can get going without pep pills,

If you can always be cheerful, ignoring aches and pains,

If you can resist complaining and boring people with your troubles,

If you can eat the same food everyday and be grateful for it,

If you can understand when your loved ones are too busy to give you any time,

If you can overlook it when those you love take it out on

you when, through no fault of yours, something goes wrong,

If you can take criticism and blame without resentment,

If you can ignore a friend's limited education and never correct him,

If you can resist treating a rich friend better than a poor friend,

If you can face the world without lies and deceit,

If you can conquer tension without medical help,
If you can relax without liquor,
If you can sleep without the aid of drugs,
If you can say honestly that deep in your heart you have no
prejudice against creed, color, religion or politics,
Then, my friend, you are almost as good as your dog!

Enable professional dog walking and align any professional dog walking rules with county or city

regulations. Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input. These are my personal comments and observations regarding this plan: it is the rule, rather than the exception, that dog owners are respectful and that dogs are well-managed by their owners. I've experienced this at both Crissy Field and Fort Funston. Clear signage is respected. I am grateful to enjoy exercise and beauty while with my companion dog. Please acknowledge that dogs play a significant role in urban life for many, many people.

Sincerely,

Rhonda Spencer

Correspondence: I already submitted a comment however I do have one more question and opinion. As long as I can remember, GGNRA has not allowed any type of commercial business on the property at Fort Funston. There was someone who wanted to set up a coffee/snack truck and was told that it was not allowed-no commercial businesses on GGNRA property. Why then do you allow professional dog walkers to conduct their business at Fort Funston? These people do NOT pay taxes on a large part of their income (as most goes unclaimed due to cash payments). Most of them are not licensed businesses. They walk too many dogs simultaneously. Many dog parks in the south bay limit the number of dogs one person can bring to the park to three(3). Three is the number of dogs a household may have without a kennel license. A couple of dogs running down a hillside do not cause much disruption to the environment. A person with a pack of 10 to 15 dogs does. Instead of limiting off-leash access to dog owners, limit the number of dogs any one person may bring at a time.

Correspondence: May 24, 2011

Frank Dean, General Superintendent

Golden Gate National Recreation Area

Fort Mason, Building 201

San Francisco, CA 94123-0022

Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness area like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the tens of thousands of Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. Exclude speculative, exaggerated, biased, or misleading statements and studies. Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). Align commercial dog walking rules with county or city regulations.

In addition, the plan to permit dog walkers to six dogs is ridiculous. I've been a professional dog walker for over five years and I don't know anyone that can't control six dogs on leash. The limit, if any, should be eight. This way you are not capping our income and you are not forcing us to increase our prices beyond the means of most of our clients. Require people to get a business license with the city, be insured with any of the major pet insurance companies and hold a permit. This will help get rid of some of the walkers who don't take this job seriously. And to be honest, it's more of the individual owners that are the ones causing problems: not leashing their

dogs, leaving feces on the trails, etc. I've heard this from multiple Park Police officers. This is an issue that has been going on for 10 years with no resolution. Stop spending so much time and money on an issue that can never be resolved. Find a reasonable compromise and lay this to rest!!!

Sincerely,

Jessica Chase San Francisco, CA 94129

Frank Dean, General Superintendent

Golden Gate National Recreation Area

Fort Mason, Building 201

San Francisco, CA 94123-0022

Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and

misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness area like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the tens of thousands of Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. Exclude speculative, exaggerated, biased, or misleading statements and studies. Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). Align commercial dog walking rules with county or city regulations and enforce current off-leash guidelines. These are my personal comments and observations regarding this plan (which I did not get to send with last comments.) I mostly walk my dogs at Fort Funston for the last 20 years. In all this time I have never seen any dogs disrupting snowy plover nests. I have seen NPS vehicles on the beach disrupting the sand and anything in their paths. Do not blame the dogs for this please as they do not contribute substantially to nest damages.

Sincerely,

Sky Kral San Francisco, CA 94110

Mr. Dean, Below are all the standard arguments against the Off-Leash proposal. On a more personal note, for young and old these are trying times we are living in. That's all folks need is more regulation and freedom of movement taken away from them and their pets. A walk on the beach with your dog running free and happy is a nice get away from today pressures. The Beach's are our backyard, a place to get away from it all. On with the standard arguments that oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law. The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. Correspondence: While not a resident of San Francisco, California, one of my daughters lives there, and I visit her frequently. I take my dog with me on these visits. My daughter and I like to walk our dogs along the beach and in Golden Gate Park. Most dog owners are responsible and respect areas which are signed to avoid because of new planting etc. We never fail to pick up after our dogs. Understandably there are areas where dogs must be on leash, but other than that I feel they should be allowed off leash in open spaces if the owner is confident that his dog will not be a hazard to other dogs or persons. The bottom line is: we need more dog areas, not less.

Correspondence: I support Alternative D for Muir Beach which minimizes the presence of dogs.

There are three types of dog walkers. "Responsible Walkers" follow posted dog rules and respect the environment and other user's health. They use leashes, dog litter bags, and carry out dog feces. "Dog Cheaters" will disobey rules when one is watching. Their abandoned plastic dog litter bags can be seen littering public land throughout Marin. "Dog Jerks" flagrantly ignore dog rules. They take their dogs on clearly prohibited trails and areas like fenced soccer fields. They watch while their dogs chase wildfowl in estuaries in Pickleweed Inlet and Richardson Bay.

There is inadequate enforcement in Marin to manage bad dog owners/walkers. Observe the environmental damage and lack of leash enforcement near Mill Valley Bayfront Park and Dog Area. Observe dog feces in the sand in children's play areas. A birthday party or social gathering for kids in many city parks results in dog feces on shoes and play balls. There is even less enforcement in the GGNRA.

Where ever dogs are allowed there will be environmental impacts and health risks to kids. The less access for dogs the better. Thank you for considering

my comment.

Correspondence: Dear Superintendent Dean and Park Commissioners, As a Bay Area resident, I am very concerned about the proposed changes in the GGNRA dog policy, which would eliminate entirely or severely curb canine access, and therefore access for people with dogs, to federal lands. I believe that this is particularly discriminatory to women, who may rely on a canine companion to safely walk or hike alone.

I urge you to keep the current GGNRA policy (the 1979 Pet Policy) and add balanced voice-control areas in San Mateo County and in new lands, such as the reserve in Montara. I also encourage you to establish rules allowing for professional dog walking for the many of us who have long workdays and commutes. Rather than banning dogs on the proposed blanket scale, each site in the GGNRA should be studied and, if there is a concern about canine impact on a particular endangered species, then simpler mitigations (signage, barriers) should be considered and implemented first.

Of course, there are a few irresponsible dog owners who don't pick up after their dos, but there are also irresponsible mountain bikers and hikers who leave other types of litter. This is not a good reason to keep all dogs and their owners out of public lands after 40 years of healthy dog recreation.

Healthy dog recreation is vital to the well-being of urban individuals and communities and should be fostered, not restricted.

Sincerely, Judith Pierce Rosenberg Montara, CA

Correspondence: I think that this plan to close so much of the GGNRA to off-leash dogs and their human companions is basically a huge, complicated solution to not much of (if any) a problem.

As a weekend visitor to Crissy Field and Fort Funston, I am there at peak times and I have never witnessed any sort of problem with dogs attacking or hurting people. On the contrary, the dogs I see are in heaven: getting exercise, socializing with other dogs and having a marvelous time. Also, their owners are talking with other dog owners, making pleasant conversation, relaxing and getting exercise. There is so little total acreage that is accessible to humans with their off-leash dogs in the park as it is.

Off-leash exercise is a must for many dog breeds. They simply must have off-leash exercise. My husband jogs with our Brittany regularly, but he can't possible run fast enough or long enough to exhaust our dog. Dogs who do not get regular, quality exercise are more aggressive and just plain cranky. They also bark more --a real nuisance in crowded urban areas like the Bay Area.

I think this plan will overload the off-leash areas in San Francisco and Oakland.

I think this plan with its draconian restrictions will only serve to encourage scofflaws and add to the resentment. I think that it will result in a lot of confrontation and ill will. I would not want to be a park ranger trying to enforce this!

Correspondence: I support Alternative C - Multiple Use. I have owned a dog in the Bay Area for 10 years, and I have been a GGNPA volunteer (Golden Gate Raptor Observatory) for 2 years. I am also a conservation biologist and an advocate for wildlife and wild places. I believe in the GGNRA first and foremost as a place for native species to thrive. Migrating birds in particular face many challenges to survival. It is critical that they have places to rest, feed, and breed as they make long migrations. However, I also know that dogs make good citizens when they are well-exercised and socialized, and that generally means time off leashing playing with other dogs and people. For these reasons, I support Alternative C - Multiple Use. I am also fully supportive of the park utilizing a Compliance-based Management Strategy in which non-compliance by dog owners results in a forfeiture of rights. I love dogs, but native wildlife and the health of the ecosystems in our last wild places must come first. There are no alternatives for native species and ecosystems and cultural resources are not easily returned once lost. Dogs can be walked in neighborhoods, dog parks, regional parks and city parks.

Correspondence: Thank you for taking comments. I strongly feel that dogs should be allowed (as it already exists) in areas of GGNRA. I have lived in California for over 20 years and I have had more incidents with people and people on bikes than I ever had with dogs and their owners. I know that most dog owners are responsible. Dogs need to have freedom to run and play and dog parks are not the solution. Dogs parks are not a natural way for people and dogs to interact in a pen. I firmly feel that providing off leash areas and leash areas allow dogs to be more happy and a happy dog is definitely a less aggressive and more socialized dog.

I really hope that you do not change the current rules and allow the areas in GGNRA to allow dogs.

Thank you for your time and consideration.

Sincerely,

D. Regina

Correspondence: Dogs need to run! There are very few places left that allow off leash exercise. For people such as myself, who are too old to run with their animals, the beach is the best environment for this activity. I am fortunate to have the ability to take my dogs to the private stretch of Stenson Beach once a week for some much appreciated ball chasing in the ocean. Most of the people I have encountered while participating in this activity genuinely enjoy watching my dogs play in the surf. I have a leash with me at all times and clean up after my dogs. The beach is actually one of the few places where people are pretty consistent about cleaning up after their dogs and keeping their dogs under control. I am personally a little tired of the attitude that all dogs must be leashed because a few may cause a problem. By all means, if someone is allowing their animal to behave inappropriately ticket them. Allow the remainder (the majority) to enjoy the beach environment with their dogs off leash. It's basically one of the last frontiers of off leash activity. What better place to enjoy that activity but in our National Park System. Sincerely, Martha Cherry

Correspondence: May 24, 2011 Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022
Dear Mr. Dean, I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law. The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded. This plan disregards the health and well-being of

people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others. In addition, it has not taken into account the impact off-leash restrictions in the GGNRA would have on city parks. The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation.

? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.

? Exclude speculative, exaggerated, biased, or misleading statements and studies.

? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).

? Enable professional dog walking and align any professional dog walking rules with county or city regulations.

? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

I would like to add a few comments on a more personal note:

I am a 23-year resident of San Francisco. I live in a small one-bedroom apartment in the city. I probably would not have adopted a dog if I did not have the option to take him to the beach regularly for a good off-leash romp and swim. My beloved black Labrador Retriever, Otis, is over 12 years old and in excellent health-trim, fit, alert, well-behaved and happy. He has some arthritis as a natural consequence of aging, so I make sure that he continues to get regular exercise. My vet and I both attribute his remarkable good health to the fact that he visits Fort Funston 3 times a week with Pawsitive Tails dogwalkers, a very professional organization, while I am at work. On weekends whenever possible I take him to either Funston or Crissy Field. Those outings give us both joy, keep us fit, and provide a quality of life for BOTH of us that cannot be replicated in a fenced-in dog run, or even in a city park.

I was a frequent Fort Funston/Crissy Field visitor long before I had a dog to

bring along, and in 23 years never ONCE have I witnessed a negative encounter between dogs and people in either place. I have been to both areas countless times, and even on those rare perfect warm San Francisco days, the areas are never over-crowded! I cannot say the same for the City's dog parks and dog runs. There is simply not enough space in these areas to accommodate the number of dogs living in the city.

Less than 1% of GGNRA land is available under the current Pet Policy for off-leash recreation, which means there are plenty of places available for people who would prefer not to be around dogs.

You may not realize or appreciate what an asset you have in the dog community. We let other visitors know when they are venturing into areas where they should not be or in any way behaving (or letting their dogs) behave in a manner that threatens the area. If you keep the policy as is, trust me-we will be the best protectors of that precious resource, because we know how much it means to us and we do not want to lose it!

Please do not attempt to punish or exclude those of us who are responsible dog guardians, who clean the beaches regularly and pick up after others, who responsibly train our dogs to respond to voice control and to avoid "sensitive areas", and who simply want to enjoy outdoor recreation on these beaches with our best friends. Sincerely,

Sandra Shuhert San Francisco, CA 94114

Correspondence: Animal rescue is part of San Francisco's spirit. Please continue this unique tradition of our city's by maintaining the meager 1% of open space for off-leash dog exercise that has allowed SF residents for many years to rescue and rehabilitate these amazingly adaptable and forgiving animals (that we, as humans, are responsible for domesticating)

San Francisco has always set the standard in this country on its fearlessness for taking a stand on social justice issues - one of which has always been its advocacy for animal welfare. SF's city animal shelters have far lower euthanasia rates than any other city country-wide and hundreds of privately run animal rescue groups. This is a standard that SF has set that we can be proud of, as a liberal and progressive city, and a model for other cities to follow. Much of this is due to people's access to 'multi-recreational' usage land that allows them to adopt dogs and properly exercise them, or have them properly exercised by dog walkers/trainers, which can often off-set a

dog's previous life of abuse or neglect. Dogs are amazingly adaptable creatures.

What the Proposed Plan doesn't take into consideration is that many 'rescue dogs' need to slowly acclimate to socialization with other dogs, and Option A (current plan) allows this by making good use of the 1% of GGNRA land (that will be taken away in the Proposed Plan) to exercise and socialize these special dogs. This land enables them to, with training and guidance by the hundreds of passionate dog professionals in the city, eventually and gradually become fantastic canine citizens of responsible SF residents who see potential in these neglected and forgotten animals.

The Proposed Plan, restricting a drastically reduced amount of land to off leash dog interaction, will compromise how dogs learn to live in a city. If there is no space to properly exercise dogs, these dogs will continue to exhibit behavior problems in the more densely populated areas available to them, pose risks and probable law suits, or simply not be adopted or be surrendered, and subsequently euthanized. We will become like every other city. This is a waste of perfectly fantastic dogs who basically just need a chance to learn the rules.

Correspondence Type: Web Form

Correspondence: I am a native San Franciscan. I currently reside in the Outer Sunset, a block away from Ocean Beach. I have been recreating on GGNRA land since the late 1970's. I grew up enjoying all of the places that have been the topic of recent discussion. GGNRA land has always been an integral part of my life. I now have a small dog walking business because of which, I frequent Fort Funston ten times per week. I think it is one of the most beautiful places on earth, I cherish this land and pick up litter daily to help in its preservation (an overwhelming amount of trash exists due to humans, not dogs) ?being able to enjoy this land greatly enhances my life and those of my canine companions. As a result, the lives of my human clients are enhanced as they are the proud owners of exceptionally well exercised, socialized and well behaved dogs. Dogs that are not adequately exercised can develop behavioral problems such as barking, destroying property in the home, etc. This obviously creates a ripple effect, extending into the neighborhoods and communities throughout our fine city. If the few existing off leash areas were further prohibited as proposed by the GGNRA, the result would be devastating for all. All of the parks in San Francisco that are not part of GGNRA land, will be overrun by dogs. The DEIS does not adequately address dispersion issues. The DEIS does not adequately address the environmental and social impact of forcing large numbers of people and

dogs into much smaller areas. Reducing the amount of area available for off-leash will significantly degrade the park experience for people with dogs. It will increase conflicts. Even more importantly, the DEIS does not address the environmental and social impact on small, neighborhood parks in cities like San Francisco next to the GGNRA. Because the GGNRA is located immediately adjacent to one of the most densely populated areas in the United States (San Francisco), it provides much needed recreational open space for Bay Area residents. If that open space is lost to recreational access, people and their dogs will move to the much smaller city parks and they will not be able to absorb the hundreds or thousands of people with dogs each day that will be kicked out of the GGNRA. As further proof that the GGNRA did not consider impacts on city parks in San Francisco, the Preferred Alternative suggests the nearest legal off-leash area in San Francisco to Fort Funston is Lake Merced. That off-leash area has been closed to off-leash for years and has been turned into a native plant restoration area and habitat for the endangered red-legged frog among other animals. Yet this is where the DEIS suggests people with dogs go. This exemplifies the lack of common sense and awareness present in these overly restrictive plans. For the sake of all San Franciscans, a better alternative must be reached. Furthermore, as an environmentalist, I believe there should be (and are) penalties for bad actors and these should be enforced. But the vast majority of people who do not act badly should not be penalized for the bad actions of a few. This strategy is unfair because off-leash status can be changed in only one direction (toward more restriction). It circumvents the legal requirement that management changes that are either significant or controversial must have a public process before they can be made. Critical information about how compliance will be determined ? by volunteers biased against dogs? by surveillance cameras? ? is not included in the DEIS. This "Dog Plan" is an attempt to move green spaces away from recreational use and towards preservation, which reduces uses for people too. This is blatantly inappropriate, as these "recreational areas" were designed specifically for urban dwellers such as myself to enjoy. The GGNRA should develop a new alternative, the A+ Alternative, that will better balance the recreational needs of the Bay Area with protection of natural resources. If this more fair and well balanced alternative cannot be reached, please choose Option A (no action). This meager 1% of GGNRA land available for off leash dog recreation is really important to those of us that cherish it. I pay taxes as both a resident and business of San Francisco and count on taking the dogs I care for off leash at Fort Funston. I am just one of many professional dog guardians, who act mindfully and responsibly while sharing the land. Conducting my business as well as recreating on this land means everything to me. I do not deserve to have it taken away. Thank you for considering my comments. Sincerely, Rasan Lowell SF CA 94122

Type:

Correspondence: I read the following letter to the editor in the San Francisco Chronicle on Thursday, May 12, 2011, and feel it perfectly reflects my feelings on the dog leash issue in the Golden Gate National Parks.

Please protect our precious San Francisco ecology by requiring dogs in the park to be on leash and by limiting the number of dogs a single person can bring into the park.

--- "Leash commercial dog-walkers"

Commercial dog walkers are abusing our parks.

As a frequent visitor to the Presidio, I encounter many groups of eight to 12 off-leash dogs in all areas of the park.

Although I love dogs, it does not seem fair or appropriate for commercial operators to allow their paid-for charges to run rampant in public parks where they threaten native wildlife and plants, as well as adults and children.

At the very least, these commercial operators should be limited to four on-leash dogs (the maximum one person can truly manage) in specific areas of the park.

They should be held accountable for infringements of park policies and, as other park vendors do, should have to purchase a license to operate in the park.

These funds could be used to enforce the regulations and maintain the dog-access areas.

Jean Colvin, San Francisco

Type:

Correspondence: I'm a professional dog walker and trainer in San Francisco and I take my pack of 5 - 8 dogs to the horse trails at Fort Funston. I've been going here twice a day for the last 4 years and have trained all of my dogs to respect, at

a distance, horses, hikers, and other dogs we may meet on the trails. I take pride in the control I have of my pack of my dogs and have taught my clients how almost every dog has this potential to learn such manners. Those who don't stay on leash until they learn.

I see hikers, without dogs, maybe once a month on these trails, and even when the weather is spectacular, I may likely be the only one on these trails. It's a shame to think this area may be kept from us, among the only ones who enjoy this land.

I recently was informed by a volunteer who picks up glass in this area that a pregnant coyote may have recently had pups, and to keep a look out for her or her pups. I immediately made sure my dogs kept from wandering in brush areas that may contain a coyote's den, and have spread the word to other dog walkers who frequent this area.

We are not anti-environmentalists, and are, in fact, in favor of preserving the beauty of the natural environment. And we are certainly animal lovers, and to any of us, the thought of our dogs harming other animals or birds is unacceptable. It is much more often individual dog owners who allow such activities than any dog walkers, in my experience.

We CAN strike a balance between continuing to allow dogs to run naturally and be controlled. Please consider using enforcement for those who do not control their dogs rather than taking away this amazing land from those of us who responsibly enjoy it every day.

Correspondence: There is a huge group of Dog Walkers at Fort Funston who voluntarily pick up all the trash and glass that washes ashore from human irresponsibility. Since we rarely see anyone else on these trails or walking along the beach - and certainly not with bags to pick up trash - we're quite sure we'd be the only ones to take on this task. We like the idea that due to our type of work, it allows us to contribute in this way to cleaning up an otherwise incredibly beautiful area.

And of course, we fanatically pick up after all our dogs, and those of other dogs, too.

Before Ft. Funston was used by dogs, it was used by reckless teenagers and homeless encampments, leaving trash and debris. One huge advantage to dogs' occupation of this area is that people responsibly use this area now, as

opposed to before it was discovered as a prime dog exercise and socialization area. There are certainly careless dog owners and dog walkers who are not consistent about picking up poo, but we are a growing group of walkers who take pride in our ability to make a difference in this way.

Correspondence: Dear Superintendent Dean,

I am a San Francisco Resident that has, since moving to San Francisco enjoyed a number of the GGNRA areas under consideration ? in Particular Rodeo Beach in Marin, Lands End, Baker Beach, Crissy Field, Ocean Beach and Fort Funston in San Francisco.

I am also a ten year volunteer at the Marine Mammal Center in the Marin Headlands, I know and appreciate your work, and that of Brian O'Neill, for all the support the GGNRA has given to the TMMC over the years.

However I am dismayed at the DEIS and much opposed to the changes proposed for both generic and specific reasons which I will try to address.

? I have a very active dog, a Border Collie rescue Mix, and being active it requires DAILY running. This running is done by myself and/or our Dog Walker. She is insured and Bonded and, and I am sure of her professionalism. Everyone who knows dogs knows that a tired dog is a relaxed dog, and a relaxed dog is a well behaved dog. Off Leash exercise is so much more than on leash exercise. On leash exercise limits the dog to my level of fitness, and that means that by forcing on leash requirements you are binding the exercise of many dogs to that of handicapped, and elderly owners. My dog "forces me" to go out every day and take a walk, and although that can be in my local neighborhood it is nothing like our walks in the Marin Headlands, or Lands End paths, or along Crissy Field. Off leash walking is my time with my dog. He is always under voice control because my time at the park is my time with him ? we "work" together. These moments when my dog runs back and forth with a stick in his mouth are the reason I get in my car and go the GGNRA controlled lands. I always carry two rolls of poop bags on my leash and I will clean up other dogs poop if I find it when cleaning up after mine. I also participate in dog owner's park cleanups, be it in the City or out at Funston.

? The concept of ROLA is astonishing. As far as I can understand The NPS self appoints itself to monitor a compliance level of 75% based on total dogs observed not in compliance . Who does the observing? A third party? When

do the observing? Of course, for it to be legal I presume it will be done for 365 days every day from 5 am to 10pm when the parks close, because, if there is no one there to observe and 100 dogs use the park, and are in compliance they will not be tallied, which means your data is invalid. As you can see ROLA is non-sensical in the way you define it, in the way you set it up to self police, but even more so in the way you ascribe to yourself the powers to make reductive changes to the use of the park without proper due process. The Poison pill has to be eliminated from the plan as it is unenforceable and lacks any kind of scientific basis (unless, of course you can observe all users all the time)

The fact that this NOLA Compliance based criteria is included in all options automatically disqualifies your alternatives . ? The DEIS does not seem to consider demographics: Answer a question ? is dog ownership in San Mateo/San Francisco County/Marin increasing or decreasing? All the studies I have seen it is increasing. Therefore, as caretakers for lands given your trust for recreational purposes by those counties should you not take that in consideration and offer an alternative where you INCREASE off leash areas? Off leash areas, at the time of the 1979 Pet Policy was limited to only 1% of all the lands you administer. Since then new land has been added but you have DECREASED the percentage of those lands to below 1%. Why is there no alternative where you reflect demographics and the desires of the citizens of those counties who gave you the land and offer another alternative where you increase these lands? Alternatively, since you only have 1% of lands open to dogs, why not, if you take certain areas away can you not have an alternative where you give back other lands now currently closed? I would have loved to have seen somewhere in the DEIS something along the lines of "We are proposing removing XXXX from off-leash areas, but are opening up YYYY to off-leash use." You have the space. Why not use it? ? Your purposes, for the GGNRA is for RECREATIONAL purposes. These lands are NOT National Parks ? they are ex army installations and they were given in trust for you to administer in keeping with the original deed. You appear to treat Recreation as having an inverse impact on the areas under consideration, ignoring that Recreation WAS and IS one of the four outstanding values mentioned in the 1972 enabling legislation I quote : "maintenance of needed recreational open space". When Daphne Hatch your chief of natural resources management and science at the GGNRA says Quote: "Ocean Beach without the people is an incredible habitat, But people think of it as a sandbox or their backyard." I truly wonder if the NPS knows the difference between Yosemite and Fort Funston or Ocean Beach". When I attended one of your open houses I was told that I was told that NPS is mandated by Congress to "manage uniformly all its areas" she forgot also to tell me that Congress added "The authorization of activities shall be construed and the protection, management, and administration of these areas ? shall not be exercised in derogation of the values and purposes for which these various areas have

been established". So there is no mandate to match the GGNRA's policies with National Park Service requirements that dogs not be allowed off-leash in a national park. ? Snowy Plovers: Your own research - Forrest Cassidy St Clair and Warren all demonstrate that dogs do not actually impact the diversity, abundance and feeding behavior of the birds. The Hatch report observed 5692 dogs and only 19 chased plovers. Your own studies prove that parents with toddlers, surfers and other park users disturbed the plovers far more than dogs, yet I do not see anything in the DEIS that is further restricting their access. Why are dogs being singled out? Your environmental impacts are a whole bunch of "could occur" "may occur" but I do not see a single study that backs this up. You mention Bank swallows, and their nests, but they burrow in the cliffs, areas that dogs simply do not go to. . Ultimately your environmental studies do not seem to support your conclusions and you can be taken to task on this. I have tried to read the DEIS but I have failed to come across any actual solid scientific data that supports your premises. I see a lot of "coulds" and "mays" but no actual evidence and no baselines ? None. In fact, the one study I did read in full ? the one above ? demonstrated exactly the contrary to the "results you would have preferred. You had all the time to back up your claims with hard data. The fact is you have not been willing to do s - discrediting the scientific basis of this DEIS, or, worse still, the data contradicted your preferred solutions, and you have chosen to ignore it. I could not find an comparative analysis of the "No Action" option. The impacts appear based on non-compliance to existing voice control and existing regulations. At some sites, the DEIS prohibits dogs from beach areas to protect shorebirds and stranded marine mammals, yet there is no documentation in the DEIS of current shorebird or marine mammal impacts caused by dogs. ? So if you have no sound scientific data to support the environmental reason to restrict areas to dogs let's look at the safety issue. Well in this case your data is overwhelming in pointing to what are the causes of serious safety incidents ? 98% DID NOT INVOLVE DOGS. The problem is people, not dogs. Only 2% involve dogs. This alone should really force you to re-think the whole reason for the DEIS. ? The DEIS is concentrated on dogs, and ignores impacts caused by people and their children, mountain bikers, fleet week, walk-a ?thons, feral cats, coyotes, horses, surfers, etc etc. In other words. The DEIS appears to be a targeted exercise. Not a 360 degree look at the panorama affecting the GGNRA ? Why is the current system not working for you? Are you able to enforce the current No ?off leash zones? They are 99% of the lands you administer. If you can do it now why the need to change? If you cannot do it now, what additional funding will you require to ensure the new areas will be enforced? ? You TOTALLY ignore the impacts that these policies will have on the surrounding areas. If you squeeze dogs out of GGNRA lands where will they go? To overloaded City Parks ? Have you involved the City in this plan? You also have totally ignored the beneficial and human impacts of off leash interaction with one's pet. As I mentioned above, My mother cannot run so why are you wanting to limit

the dog's exercise level to hers? She currently can play with our border collie and use a chuck-it with minimum effort for her and maximum effort for the dog. When I go to the park I see people playing with the dogs of all ages, races and, presumably, financial background. I do not see anything in your study except a rather curious reference to "minorities" not coming to the parks because of dogs - The DEIS cites a 2007 SF State study that claims all Latinos and Asians surveyed said that dogs were a problem but if you actually read the study you discover some things: a) the study was not, as the DEIS implies an "ethnic minority visitor use experience at the GGNRA" but was actually a study born to help connect minorities to the parks. But more damning the study was hardly a scientific one ? they interviewed fewer than 100 people and they were not randomly selected. It is this kind of "selective" scientific use that will have the words "Drake's Estero" popping up in people's minds.

In conclusion it appears that this is a misguided solution in search of a problem. Your data simply does not support the existence of the problem, and your attempts to squeeze a NPS agenda on local parks is misguided and contrary to the spirit with which these lands were entrusted to you. The more I look at the lack of data, the more I fear that, what the Dept. of Interior report said about Drakes Estero can be applied to this DEIS and that it exhibits "sloppiness, from a protective approach to data, from a lack of vision, and from an insensitivity to the growing controversy, but not from any obvious intent to deceive, defraud or mislead." I really hope you are not trying to mislead but the lack of any evidence to your premises, causes great reason to wonder if the NPS does have an anti-dog which will be forced upon these Recreational Lands regardless of their negative impacts. For all the reasons stated above, but in particular for: 1) The existence of a "Poison Pill" compliance override on all the alternatives 2) The lack of scientific data supporting your premises

I support Alternative A ? the No Action Alternative and would also include New Lands area in that Respectfully

| Correspondence: | Being a lesbian of both African American and Mexican American descent, I have encountered a great deal of discrimination throughout my life, especially since I was raised in the South. I fell in love with San Francisco immediately since it was a place I no longer felt excluded. I have now lived here more than 25 years and am overwhelmed with love for my great city. | | |

The Preferred Alternative is based on a philosophy of separation and exclusion. It denies that different park users can co-exist. Rather than share space between different park users, the Preferred Alternative carves up park space into separate areas for different park users. This basic philosophy is the exact opposite of the way we approach problems in San Francisco. It flies in the face of the unique social qualities of San Francisco. The GGNRA needs to develop a new Alternative that will better reflect San Francisco values such as co-existence, shared space, collaboration, and education to address problems should they occur. Because of my love for this great city, I am writing to express my utmost concern for what might become of our parks if dogs were further restricted from GGNRA land. As an environmentalist, I understand the need to protect these beautiful recreation areas but restricting dogs from the land is not a realistic solution. Banning/restricting dogs from GGNRA land would only crowd other public parks with dogs. These "alternatives" should be reconsidered as they will only cause harm to San Franciscans. Please consider the outcomes of these proposals and their potential for disaster.

Correspondence: As a Native American, I respect the land of my ancestors, and my family has lived in this part of Northern California for a thousand years. This debate continues to remain a debate between the nature of the areas of concern and what they are meant to serve. Pristine wilderness vs. multi-recreational urban land.

I take my dog to Fort Funston every day for off leash exercise, and there is nowhere else where she and I could renew our spirits than here. She or I could not be confined to a dog park, and I could not bear to see the state of the "dog run" area that the Preferred Alternative suggests after a few months.

This city has grown into an area of dog lovers and that won't change by re-thinking the nature of these areas and pretending they are wilderness lands.

Please penalize those dog owners or walkers who walk their dogs irresponsibly rather than punish all of us by taking away this critical land.

Correspondence: I am a hiker, hike leader, mapmaker, and amateur naturalist. I have friends with dogs; I also have friends who restore habitat and observe birds and other wildlife.

I have been visiting GGNRA since 1976. I do not have a complete picture of the dog issues throughout the park; I do keep abreast of the regulations as part of my guidebook/map work, and hike throughout the park as often as I can. Generally things seem to be working, however, I can see where dogs do (or likely) now impact shorebirds or wildlife, and some areas definitely seem overused.

The preferred alternative seems quite a bit more restrictive than the current regulations, but at the same time, I trust there is some good thinking and research behind most of those changes, taking into account all the management objectives of the park. And I hope that you get some interesting suggestions from the public, and that you can sort it out from the hyperbole.

Having participated in iceplant removal and the native plant nursery in Fort Funston in the 1980s, I was heartened by early progress toward habitat restoration; 20+ years ago you could start to see how the landscape used to look. Today, much habitat has quite frankly been trampled by romping dogs (particularly the area between the Nike site/parking lot and the water fountain, but also beyond). Places I would have found lupine and dune plants 20 years ago are basically bare sand with pawprints, and public usage has shifted to majority dog walkers. (Part of this shift is the increase in dog visits; also contributing is the erosion and closure of the old Sunset Trail which provided a wider range of walking options than today's simple trails). I'm glad people (and their dogs) get out and enjoy this unit of GGNRA, yet I am also mindful of significant habitat degradation (in some areas), and if I wanted a "friendly" dog to jump on me uninvited, Fort Funston is where I'd go. (I don't particularly mind but certain family members who grew up on farms get restimulated by jumping dogs, and dislike visiting Funston despite all its other attractions). Plus I don't remember it ever smelled quite so much like dog pee, and the whole militant dog owner shtick toward rangers has been a big turnoff.

Other areas I've noticed dogs and wildlife have been Ocean Beach; not all dogs chase birds but some do (if not active pursuit then at least wander closer than the birds like, so they fly off). Over the course of a low tide the birds get interrupted a fair amount (to be fair, also by joggers, walkers, kids, etc). I imagine the presence of dogs in the Headlands could have some sort of impact on the activities of wildlife (coyotes, foxes, etc.) but have not observed any situations there myself. (We have a friend who rides a bike with his dog on a short leash (dampened by a spring), up the Miwok Trail from Gerbode Valley every week; both he and the dog really like it out there

and I just can't see them having a big negative impact). So I wouldn't say keep all dogs out of the Headlands; there may be some wisdom to shifting usage to front-country trails but I don't know all the factors in the Headlands.

The other change I've noticed is the proliferation of commercial dog walkers. I have lots of opinions (some pro, some con). Specific to GGNRA, I do think it would be a positive step to limit the number of dogs per person (speaking as a non-dog owner, three seems plenty for individuals). If commercial dog walkers are just coming to GGNRA because it's free and they're lazy, that's not good for the park as a whole. If they are well-regulated, keep a reasonable number of dogs under control, and don't dig up the place and scare off the wildlife, that helps keep things somewhat sustainable. (And measuring that, through various sets of glasses, is part of why this document has so many parts and pages).

Given my observations of dog usage/growth at Fort Funston in the last 30 years, it would also be good for habitat management and visitor experience, to regulate commercial dog walkers so you have a handle on things if usage shifts. I wouldn't want the dog licenses to be as sought after as taxicab medallions; more of a good conduct and dogs per person thing, but there may of course be situations where limiting the number of permits (at least commercial permits) would be desirable too.

That being said, there's something marvelous about GGNRA that you don't really have entrance booths or fee stations; you can just hop out of the car (or the bus) and go out into the wild. I'd hope that some of that simplicity of getting outdoors can be preserved for dogs and their owners (i.e. well-posted restrictions and limits versus annual permits for individuals). The other marvelous thing about the place is how wild it is - I've seen everything from mice to mountain lions out there, plus fox, coyote, hawks, etc. It's a fragile enough part of the world, perched alongside 6 million people, that management for wildlife and habitats should indeed take a high priority.

Best wishes and thanks for your work.

Sincerely,

Ben Pease

[P.S. Oddly, your brief survey leaves no place to say that, in addition to hearing about the document from a blog, I also spoke to a real, live ranger, and I would love to have that option for the future!]

Correspondence: Living in the Marina, I walk my 2 Yorkies at Crissy Field every day and it's hard to imagine that they would be restricted to being on leash due to the reasons cited in the Preferred Alternative. I prefer smaller dogs, personally, and don't necessarily appreciate bigger dogs running up to my dogs in a threatening way, but during my twice-daily walks to Crissy Field for 7 years, I rarely witness the wildlife or people being harassed that is claimed to be going on.

Not only that, but the Compliance-based Management Strategy I've been reading about is entirely unfair. Off-leash status can be changed in only one direction? That leaves us only toward the direction of more restriction and ignores the legal requirement that significant management changes must have a public process. How exactly is the information about compliance being determined? That information is interestingly vague and not mentioned in the DEIS.

This is San Francisco, not a communist state. We demand more participation in this 'complicity based management strategy' process that affects so many of us. This is San Francisco, and we've won rights in the past due to our strength and determination, which will hold true.

Correspondence: May 26, 2011

Mr. Frank Dean General Superintendent Golden Gate National Recreation Area Building 201, Fort Mason San Francisco, CA 94123-0022

Re: Draft Dog Management Plan/Draft Environmental Impact Statement

Dear Superintendent Dean,

I grew up in San Francisco, and have been a dog owner my entire life. My last two dogs have been Labrador retrievers, so Crissy Field has been very important to me and my family, and our dogs who love to run and swim there. I live in the Richmond District, and walk at Crissy Field an average of once a week. I treasure its beauty and the fact that it feels wild, even though I'm still in the city. I also am amused and delighted by the sheer fun of seeing so many dogs and people enjoying themselves. And of course, we are so fortunate to have the GGNRA and its protection of wild lands near and in

San Francisco that was authorized when the GGNRA was created.

However, I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) are not based upon sound science or long-term monitoring of site-specific conditions.

As presented in the DEIS, the proposed dog management plan eliminates dog-walking (on and off leash) access for all new lands (additions to the GGNRA sometime in the future). The GGNRA's mission applies equally to new lands as existing lands and it is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands.

Of course I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, but other options besides restricting dog-walking access should be considered first. For example, it is not clear where dogs are allowed. I think the GGNRA should provide better signage and create more environmental barriers where necessary, such as the vegetative barriers surrounding the tidal marsh at Crissy Field.

In all my time at Crissy Field, I have see very few incidents of dogs going beyond the fences that enclose the dunes or the marsh, and even fewer incidents of dog aggression. I have never seen a dog be aggressive to an adult or a child. With the many dogs that are there on weekdays, and the hundreds that are there are weekends, I think that is quite remarkable, and certainly does not justify the restrictions being put forth in the GGNRA's preferred alternative.

As a responsible dog owner, I keep my dog under voice and sight control, clean up after her, and keep her out of the fenced dunes and vegetative areas. It is important that areas like Crissy Field remain open for off leash dog walking access. I know it is vitally important that our dogs are well behaved and trained in order to peacefully co-exist in an urban environment and adequate exercise and socialization is essential for a well-behaved dog. Having places where I can take walks with my dog allows me to get the exercise I need while also meeting my dog's needs. Without access to the small amount of land in the GGNRA we currently have (approximately 1% of the total acreage of the GGNRA), I am very concerned that many dog and dog owners will not have sufficient opportunity to exercise and recreate.

Some specific problems with the DEIS include the following points. Please revise the DEIS to correct these errors:

This DEIS and Plan doesn't recognize that environmental values include

both recreation and nature. In many places, the DEIS treats the environment and recreation as opposing values, i.e., that recreation only harms natural resources. The document doesn't acknowledge that people care about both and that people with dogs are often also good stewards of our environment.

The draft plan has the effect of punishing many people because a very small number are uneducated, insensitive, or irresponsible and because the current signage of off leash areas is unclear. The reasonable response to this problem is to educate visitors, improve signage and help park visitors follow the rules and learn how to respect the environment, not to ban the rest of us with dogs from the GGNRA. I wish that the DEIS would include an alternative along these lines.

The proposed "compliance-based" approach should be modified to create a baseline of current conditions, then measure impacts rather than compliance. It should include a robust public educational component and an objective, long-term monitoring program designed and carried out with the community. The GGNRA should develop partnerships with community, animal welfare, and conservation organizations to make this work. These partner groups could bring additional resources to limited federal resources. GGNRA should be a partner with the City of San Francisco and other communities, not an adversary.

I am also concerned that the DEIS doesn't take into account the potential effect of restricting off-leash dog walking on San Francisco's public parks, which could see a huge influx of dogs as a result. The GGNRA cannot do its planning without thinking of other neighboring recreation areas, such as the public parks, particularly in this time of limited resources.

The DEIS doesn't recognize that many areas of the GGNRA are located in or next to urban neighborhoods. The DEIS excludes the quality of the urban environment from its scope, saying it's not significant. The reality is that the GGNRA provides much needed open space in a major urban area. This omission is disconcerting because the fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) to serve the metropolitan Bay Area. The dynamic interrelationship between GGNRA and our neighborhoods is exactly the human environment that the EIS is required to study, but failed to do so. The DEIS notes some studies and general tendencies of dogs to harm natural resources, but with few exceptions, there is little documented site-specific impacts to support the restrictions of the preferred alternatives. Further, there is insufficient documentation that considers other impacts ? other park visitors that disturb and impair the natural resources, other wildlife, Mother Nature, boot camps, bicyclists, huge crowd attracting events such as Fleet Week, festivals and Walk-a-thons. The proposed broad limitations in the DEIS are without site-specific science that demonstrates that problems with

the quality of GGNRA's natural resources are actually attributable to dogs and not to other factors.

The DEIS needs to provide full disclosure to the public and decision makers. If dog- related disturbances are having a significant negative effect on wildlife, for example, the DEIS needs to provide site-specific scientific evidence as documentation and undertake a scientific evaluation as to whether people or other factors are also causing or contributing to the problem noted. If they are, GGNRA needs to provide an analysis that considers whether people should also be restricted from these areas. We need this documentation in order to comment meaningfully on the draft plan and DEIS. The science needs to be sound and the consequences need to be fully and fairly disclosed for everyone ? so that an informed decision can be made.

The DEIS is biased against and does not take a hard look at the No Action alternative or variations on that alternative. There are many areas in the GGNRA where the existing 1979 Pet Policy has been working, and where sensitive species are not present and visitor conflicts do not occur or are very infrequent. In addition, the DEIS does not provide site-specific information that these areas are inappropriate for continued dog walking.

Many people have worked diligently both together and separately to study the DEIS and to make thoughtful comments on its findings, in hopes of encouraging the National Park Service to rethink and more carefully document its stance. The outcome of this plan will have an important effect on the quality of life for everyone in the Bay Area. I urge you to support Alternative A with individual consideration for any new lands, for the sake of the health and recreation not only of thousands of Bay Area residents and their canine companions, but for everyone who enjoys the GGNRA. Sincerely,

Mary Gregory San Francisco, CA 94118 Member, Crissy Field Dog Group

Correspondence: To whom it may concern:

Please protect our precious San Francisco ecology by requiring dogs in the park to be on leash and by limiting the number of dogs a single person can bring into the park.

I feel Strongly that commercial dog walkers are abusing our parks. As a frequent visitor to the Presidio, I encounter many groups of six to twelve off-leash dogs in all areas of the park, "led" by dog walkers who in reality have no control over the animals.

Although I love dogs, and have four of my own ranging from 80-100 pounds, it does not seem fair or appropriate for commercial operators to allow their paid-for charges to run rampant in public parks where they threaten native wildlife and plants, as well as adults and children.

At the very least, these commercial operators should be limited to four on-leash dogs (the maximum one person can truly manage) in specific areas of the park. Also, it should be stressed that these pets should be on-leash, not under voice control in most areas. In real life, "voice" is not control, especially when the voice is not the owner of the pet, but a daily or weekly friend.

Dog walkers, and possibly their employers, should be held accountable for infringements of park policies. Also, like other park vendors do, dog walkers should have to purchase a license to operate in the park.

These funds could be used to enforce the regulations and maintain the dog-access areas.

Correspondence: I am a San Francisco resident of over 50 years. You may have guessed that I am also a senior citizen. You may not have guessed that I am a professional dog walker. My small business means everything to me...it brings me great joy, and enables me to live in this very expensive city. My business is registered and I pay taxes. I handle my dogs responsibly, which involves picking up after them and making sure we do not intrude on other park visitors. I take my dogs to Fort Funston, Crissy Field and occasionally

Ocean Beach (where dogs are allowed off leash). Often when I'm caring for these dogs I pick up litter. Most of the litter is left by people. Because of my very small business, I am able to live...I also greatly improve the lives of my clients who could not be dog owners in this city, were it not for me. I have seen others in my profession act irresponsibly and I want to be clear that I do not approve of their behavior. Since it is the wrong-doers who are causing the issues in the first place, why not punish them rather than the rest of us? I deserve the right to conduct my business. Thank you for considering my comment. Sincerely, Gloria Kenny

Correspondence: I moved here from NYC 5 years ago, and was thrilled that I could finally adopt 2 well behaved, well trained rottwiellers and have amazing places to socialize and exercise them, such as Fort Funston, where I go about 3 or 4 times a week.

As an African American male, I have often experienced others' concern when I enter a dog park or restricted dog run area with my dogs, despite their - and my - good manners, even though we may appear to others to be threatening, for a variety of reasons. Because of this, I encounter less discontent when I simply walk my dogs on the beach and on the trails, and to be forced into city parks or restricted areas would, no doubt, agitate others who frequent the park. I'm not giving up my dogs, and I can see how others, in my situation, will face conflict when forced into these smaller areas as well.

As I read this document, I don't see how the DEIS addresses this issue of all the dogs and people moving into city parks.

Correspondence: I'm an Asian American woman and own a Bernese Mountain dog. She doesn't play fetch, doesn't particularly enjoy socializing with other dogs, but enjoys our hikes on the horse trails at Fort Funston, where we have been going on weekends for years. She ignores the horses and other hikers (unless they want to greet her, which she loves), and we would be lost without these trails. I would not hike them without a dog at my side, and they enrich both our lives beyond words.

The Preferred Alternative assumes all dogs are dog-park dogs, which is unrealistic and based on ignorance of dog behavior and individual personality. If the Preferred Alternative goes through, there will be an abundance more of dog/dog aggression in fenced in dog areas than the alleged incidences -that seem to be more annoyances - that are faced in off-leash areas currently.

Correspondence: My favorite thing on earth is taking my twin girls to Fort Funston. We bring our yellow lab, Sugar who loves to run and play there. Watching my daughters play with Sugar at the beach is truly the most joyous event I have ever witnessed. Sugar was not always good with other dogs before we frequented this beach. Since there are often commercial dog walkers there, we have been able to meet many of them. The girls have learned to ask if Sugar may approach their group and the results have been fantastic! We have had so many opportunities from going to Fort Funston to make Sugar a well-behaved dog. The off leash play and socialization she has gained is so valuable to me and my family. We could not imagine not being able to have this experience. If dogs were restricted in these areas, I believe the result would be catastrophic. I would not want to bring my girls to a overcrowded dog park. There are too many dogs in this city to confine all into these very small, undesirable areas. Consider doing the right thing for San Francisco and don't take away our measly 1% of off leash dog land! My family along with many others would appreciate it. Best, Cynthia Richards

Correspondence: We are all responsible for our action and those who are under our control: including our dogs. Creating more restrictions on where we can take our dogs and how we need to restrain them WILL NOT CHANGE anything. It will just add to our frustration of dealing with an over-reaching government and constrain our enjoyment of outdoors.

I'm a new dog owner, but for years I enjoyed all those area that are discussed here while hiking and bicycling without a dog. I have never been bothered by dogs, or witnessed any damages done by them. Most dogs owners are responsible. Why would we apply the collective punishment by restricting the dog areas use because of the irresponsible behavior of a very few dog owners? I VERY STRONGLY SUPPORT Option A: CHANGE NOTHING!!!

Correspondence: May 25, 2011 Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022
Dear Mr. Dean, I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law. The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded. This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others. The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to: Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. Exclude speculative, exaggerated, biased, or misleading statements and studies. Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). Enable professional dog walking and align any professional dog walking rules with county or city regulations. Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input. These are my personal comments and observations regarding this plan:

I have 2 dogs, I am a strong supporter of the environment, I am a volunteer

with the Audubon Society, a farm and wilderness guide with an environmental education program, and a citizen of the bay area and I oppose this plan because it will drastically limit my favorite form of recreation: walking my dogs on the beach. I am well informed on environmental issues and I cannot imagine how this plan will improve the environment.

I moved to the Bay Area in 2008 and was shocked by the limited number of places where I could take my 2 well behaved dogs for a walk off leash. After researching, talking to people, and exploring the area I finally found Fort Funston and the GGNRA. I was thrilled to discover that there was still a place in the area that allowed my pets and me to go for a long walk, play in the ocean, romp with other dogs, and make friends. I have seen a huge amount of diversity in the people who come to enjoy the beach, and I have seen the community that is built around this amazing place. I have met children and their parents who do not have pets, but visit the beach to play and enjoy the experience of GGNRA as it is now. I have seen countless visitors laughing and having the time of their lives, I have seen folks taking it upon themselves to keep the area clean, but most of all I have seen my 13 year old dog acting like a puppy. Please preserve this experience for generations to come!

Sincerely, Cristin McKee Mountain View, CA 94043

The Park Service should revise the dog management plan to: Honor the original 1979 Pet Policy.

Respect dog-walking as legitimate recreation. Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. Exclude speculative, exaggerated, biased, or misleading statements and studies. Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). Enable professional dog walking and align any professional dog walking rules with county or city regulations. Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input. These are my personal comments and observations regarding this plan: (here's where you fill in your own personal story and what you've seen when you've been out at the GGNRA) Sincerely, Juan D Roa San Francisco, CA, 94107

Fort Mason, Building 201

San Francisco, CA 94123-0022

Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled,

minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

-Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. -Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. -Exclude speculative, exaggerated, biased, or misleading statements and studies. -Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). -Enable professional dog walking and align any professional dog walking rules with county or city regulations. -Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

Respectfully submitted on behalf of myself and my dog,

Kate Mulhearn Oakland (and formerly San Francisco), CA

Correspondence: Have a heart when you are making your final decision regarding the off-leash areas. GGNRA currently gives a mere 1% to dogs, that's not a lot. Dog owners pay taxes as well as non-dog owners and are entitled to their space, please keep that in mind. Thanks in advance for a positive outcome.

Dear Sir, I believe that the recommendations in the GGNRA Draft Dog Management Plan are overly-restrictive and represent a major departure from the current, balanced use of the park. The GGNRA's goal has always been to bring the park into compliance with a federal rule (36 CFR 2.15)

which bans off-leash dog walking in national parks. But the San Francisco Bay Area has a unique culture, history and community. Instead of trying to force the GGNRA to look like every other national park, the GGNRA board should respect the citizens' commission of 1979 and the unique history of the land. I believe we should be seeking ways to make the San Francisco Bay Area friendlier to dog and cat guardians. The GGNRA's proposal is a step backwards for animal welfare in the Bay Area. I hope the GGNRA Board will modify its proposal to be more balanced and friendlier to dog guardians. Sincerely, Patricia Klein Kentfield, CA 94904

Frank Dean, General Superintendent Golden Gate National Recreation Area
Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan and its preferred alternatives. The plan relies on speculations, manipulated statistics, exaggerated examples, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness area like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

?Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. ?Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San

Mateo County. ?Exclude speculative, exaggerated, biased, or misleading statements and studies. ?Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). ?Enable professional dog walking and align any professional dog walking rules with county or city regulations. ?Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

These are my personal comments and observations regarding this plan:

As a passionate dog rescuer, I can tell you that the preferred alternatives in the Plan will make the Bay Area's homeless animal problem worse. Less people will be able to or likely to keep their companion animals if they are stripped of places in which they are able to properly exercise their animals. The Plan is akin to putting more burden on our shelters and sending more dogs to needlessly die.

Not to mention that, in years of walking Ocean Beach or Crissy Field every single day, sometimes with dogs and sometimes without dogs, I have yet to see any wildlife or sensitive plant habitats harmed or infringed upon by companion animal dogs. Dog owners that use this RECREATION area are inherently responsible and value all life. They would be more likely than the average non-dog owner to protect and conserve (not litter, not throw any cigarette butts or smoke in the first place) our recreation areas during and after use.

Please don't send more dogs to needlessly await death in shelters; please don't support the killing of animals in shelters by stripping otherwise responsible dog caretakers of their dog-friendly recreation areas. Dogs are the innocents that need to be protected.

Sincerely,

Christine Hogan San Francisco, CA 94116

Enable professional dog walking and align any professional dog walking rules with county or city regulations. Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

These are my personal comments and observations regarding this plan: My husband and I just moved to San Francisco, and we have visited almost every dog park and beach in the city, checking out neighborhoods for ourselves and our two dogs. We have been nothing but impressed with the condition of all the parks and off leash beaches - dog owners in San Francisco are even more responsible and conscientious with their dogs and scooping waste than the people of New York - we spent four years there using Prospect Park, and the park space and beach space there was well respected, but San Franciscans take even better care of their off leash space. There is simply no legitimate reason to restrict the current off leash space
Sincerely, Kimberly Saunders San Francisco, CA 94103

Align commercial dog walking rules with county or city regulations.

These are my personal comments and observations regarding this plan: I have lived in the Bay area for over 15 years and have always been a responsible dog owner. I walk my dog at Crissy Field and run along the paths in the Presidio each and every day. My healthy lifestyle and enjoyment of these areas would be negatively impacted by this plan. In addition, the city parks where I take my two children would be overrun by dogs if this plan were to be implemented. I believe there is a better way. Sincerely, Tracy Falconer San Francisco, CA 94115

Correspondence: Dear Superintendent Dean: I am 33 years old, and have been a San Francisco resident for 9 years. I was born in Taiwan and consider myself an ethnic minority. I am an animal and nature lover and have been a pet guardian in the past. I am very concerned about the proposed changes to the GGNRA. I believe off-leash dog activity in the GGNRA is essential to the well-being of both dogs and humans. Dogs get needed exercise which keeps them well-behaved and these particular off-leash areas allow for unique and healthy human social interactions. I have become familiar with the proposed

GGNRA changes. I oppose the Preferred Alternative because it is too restrictive. I would like to see the Park Service revise the dog management plan to retain and formalize the existing GGNRA dog policy (aka the 1979 Pet Policy) plus provide for balanced off-leash areas in San Mateo County and new lands and remove any proposed rules to reduce or ban dog recreation based only on violations; compliance-based management strategy cannot be part of any plan. I would like a revised plan to measure the impact of dog recreation on the health and well-being of people. I would like to see disadvantaged groups and others able to provide unfiltered comments on their preferences and barriers to using the GGNRA. I, also, believe the GGNRA should provide better signage and that a revised plan should include awareness programs. A revised DEIS should exclude speculative, exaggerated, or misleading statements and provide site-specific need for actions and dismissals of suggested alternatives. Objective standards need to be applied to any recreational activities. The GGNRA should develop a new alternative, the A+ Alternative, which will better balance the recreational needs of the Bay Area with protection of natural resources. Thank you for your time. Respectfully, Marie Blackard San Francisco, CA 94103-3694

Correspondence: I recreate daily with my dog on POST (soon to be GGNRA) land here in Montara. By my informal count, somewhere between 7 to 8 out of ten people recreating on this land are with dogs. If you ban dogs from this area, I wonder who will be recreating here? I and many others have been using this area for 30 years to walk with our dogs. In all that time I have seen no evidence where our dogs damaged the land. I do not see anywhere in your 2,000 plus page study any indication that dogs have damaged these lands. With regard to wildlife, I have never seen a dog catch a garter snake or a frog. We do not have snowy plovers on this land. There are plenty of coyotes here. Certainly they are a much greater threat to wildlife than our well fed domesticated dogs. They certainly make their own unsanctioned trails. By your reasoning, must they be removed?

Please come down here and gather factual data before you make rules based on unformed opinions.

Correspondence: May 25, 2011 Frank Dean, General Superintendent Golden Gate National

Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean,

I regularly enjoy using the GGNRA. I am writing to OPPOSE the GGNRA's draft dog management plan. It is not based in fact; It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area.

GGNRA's original mandate was for recreation. The courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the needs of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their dog companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. Provide extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.

Exclude speculative, exaggerated, biased, or misleading statements and studies.

Provide reasonable ways to address any significant adverse impacts from recreational activities. (e.g., horse riders, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). These are my personal comments and observations regarding this plan: Dogs need off-leash exercise to help prevent behavioral problems. If dogs develop behavioral problems, they are more likely to be surrendered to our city shelter, Animal Care and Control. My organization, FixSanFrancisco.org, advocates for sheltered animals in San Francisco.

Sincerely, Julene Johnson San Francisco, CA 94117

Type:

Correspondence: In response to the DEIS Dog Management Plan, I would like to comment that we should all strive to keep what limited dog access we have to the GGNRA areas and that those areas should be managed with dog/human/wildlife/environment issues as a central core. As a neighbor to the park (Oakwood Valley) and steward/caretaker of it for more than 25 years, I am confident that I have a good measure of experience with the areas in question in Marin County.

While I strongly believe that dogs in the park, both off-leash and on-leash, have limited impact on the park as a whole and most likely less impact on the park than humans without dogs, overall, I do understand that in certain circumstances, dogs should be limited by fencing, signs and other means from accessing key sensitive areas. With that in mind, these areas should be limited to humans as well. I don't see any scientific studies in the plan proving that dogs do more damage than humans in the same areas. Whereas in life there are always a few people who do stupid things and spoil a good thing, that same bunch with dogs may occasionally do stupid things in the park. This is not a reason to ban dogs, though. It is a reason for more education and human interaction with those people, via rangers and/or volunteers. So, for instance, a stronger volunteer program with park interpretative volunteers interacting with dog owners/walkers at key locations would be a better alternative than closing access to people and dogs in those areas. I do see this as being a needed component to the restoration work at Muir Beach and I believe that it should be tried as a first resort.

My specific knowledge is with the Oakwood Valley area in Marin. I have been walking my dogs there for 25 years. In that time, I have only seen one negative dog/human interaction and it was with a young owner and a pitbull mix that was out of control. While this was an unnecessary and unfortunate occurrence, it was also a rare one. We should not punish everyone for the very rare, but poor choices occasionally made by a few individuals. While some people may wish to walk in areas without dogs, the overwhelming majority of trails and areas in the GGNRA are, and still will be, off limits to dogs. Tennessee Valley, for instance, just up the road from Oakwood Valley, encompasses a very large tract of land with many trails, all but one of which is off limits to dogs.

One thing I would like to add here is that creating dog walking loops of trails is generally better for both the humans and dogs than a short out and back trail. In Oakwood Valley we have enjoyed several loops from the Crest Marin neighborhood (Birdland) access points. In the main body of Oakwood Valley itself, we have a good loop that goes up the fire road from Tennessee Valley Road, and then loops back via a single track trail that may get cut off

in the current plan. I disagree with the logic for cutting off that single track as it adds variety and good dog training elements to the loop. The majority of people I meet on this trail are more than happy to share it with dogs. Where is the science that says otherwise? There has been no negative impact from dogs on this trail in the past. The biggest problem with dogs here is with the owners bagging the poop, but not picking it up. I for one, am one of the neighbors who does pick it up, and other people's as well.

Another loop of key importance to our neighborhood is accessed through the Fernwood Cemetary and comes out at the fire road near the water tank on the Alta trail. This historically has been a great source for walking dogs off leash along the Alta trail and then connecting to the upper portion of the Oakwood Valley Trail, then continuing down through Oakwood Valley fire road and out to Tennessee Valley for the return.. This longer, more vigorous loop is ideal for getting good exercise for both humans and dogs. It is consistently used, but I would not say it is overused. I am aware there is Mission Blue butterfly habitat along a stretch of the Alta trail and it is marked off and signed. Most people respect and pay attention to this. Perhaps a few don't. Again, education, better signage and perhaps more fencing could improve this for both humans and dogs and the butterfly. But in my 25+ years of experience walking these trails, I haven't seen any negative impact from dogs on lupine plants in this area. I have seen negative impacts from humans, and certainly from Scotch Broom. Is there any true science that shows negative impact from dogs in this area? Or is the impact from other sources?

My main concern is with the closing of these two key loops in the Oakwood Valley area. I highly recommend that these important loops be kept open and available to people with dogs. I have not seen any evidence in the DEIS that shows why these areas should not be open to dogs as currently used.

Dog owners that live near the parks have been using these areas for dozens of years. We are a diverse group of regular park users that have been getting squeezed down to smaller and smaller areas where we can recreate with our dogs. This is not good for the people, the dogs or the community. Our communities are more heavily impacted by overuse of limited dog areas for this exact reason. We need to keep some large areas with realistic loops for people and their dogs to recreate and learn good dog behavior in a natural environment. This encourages good human/dog interaction outside of the park as well.

Correspondence: I have read part of the DEIS for Dog Management in Golden Gate National Recreation Area, focusing on the sections pertaining to Fort Funston, where I like to walk my dog off-leash. It seems to me that with 20 other sections in the GGNRA the NPS could leave Fort Funston as is, i.e. with minimal leash restrictions. Urban dogs are typically cooped up indoors (or, if they're lucky like my dog, also have access to small back yards) for long periods of time. An inability to run free and burn off energy can have health and behavior impacts on these dogs. They need places like Fort Funston.

I understand concerns regarding dog fights, bites and unpicked-up waste, but these really are in the minority. A percentage of humans also commit violence against each other and other species, and trash the environment, but nobody's talking about putting them on leashes. Please don't fall into the typical trap in public policy where the actions and exceptions of the minority result in inconveniences and restrictions for the well-behaved, law-abiding majority. LEAVE FORT FUNSTON ALONE!

Correspondence: I am a native to the bay area and feel one of the main things that keeps me here is the blend of city and parks. We have beautiful cities and beautiful parks. I take my dog to Golden Gate Park, Ocean Beach and Crissy field often so that he can stretch his legs. This exercise allows him to stay out of trouble when he is home making him a better pet for me and my neighbors. By restricting dogs from many of our parks and beaches you may be creating another problem with dogs in the urban areas. These dogs will have less access to places to exercise and will cause much more problems in the other crowded places of the city. There is no question that well exercised dogs are better behaved dogs. Many issues that make the news involve dogs locked up and not receiving the exercise they need to stay urban friendly.

While I understand the need to protect wildlife, I don't feel dogs need to be removed in order to do that. As a responsible dog owner, I keep my dog on leash in crowded areas or when wildlife is visibly present. I take my dog to the less crowded parts of parks and beaches so that he can run without bothering anyone. Of course there are irresponsible dog owners who have a tendency to ruin it for others. But keep in mind, there are also irresponsible parents and people, who litter in the parks, allow children to chase animals, and violate a variety of other rules on a daily basis.

I also understand that some people are afraid of dogs and would like to restrict dogs from public open spaces. While I know there are occasional issues where an unleashed dog will frighten a person, it seems those instances are few. I know it may not be fair but these people also have to deal with dogs sitting in front of their favorite restaurants in San Francisco, wandering some of their favorite stores and a variety of other places in San Francisco. They seem to endure those encounters so it seems in a place like a park, where most people expect to see dogs, they will also manage to endure. San Francisco has a long running history of allowing all and requiring that we coexist happily. Rules like these toward dogs almost seem anti-San Francisco.

Instead of creating a variety of rules, why not promote responsible pet owners. The rules described seem like they will be hard to follow and enforce. Each park/beach seems to have inconsistent boundaries and rules, making it hard for even a law abiding owner to follow. I have found that the signs stating the rules are rarely informative enough to follow these types of rules. Wouldn't it be better to just enforce the rules that currently exist? I'm sure not picking up after your dog is already against the rules, as is having an unruly dog off leash in a public place. By enforcing those rules you would create a much more positive environment for both dog owners and other park users.

In a time when public parks are already in danger restricting a huge percentage of their loyal following seems like a poor business decision if nothing else. If you were to pole the people who use parks, I am sure you would find the majority of the daily and weekly users are the dog owners. The people who would benefit most from these new rules are not the ones who consider a walk in Golden Gate Park just park of the neighborhood nightly walk. They are also not the ones who go to Ocean beach the 200+ days its freezing cold. I know as a dog owner my passion for the parks would be almost no existent with the passage of these rules. I go to these parks about 100+ days a year with my dog and about 3 without.

Frank Dean, General Superintendent
Golden Gate National Recreation Area
Fort Mason, Building 201
San Francisco, CA 94123-0022

Dear Mr. Dean,

As president and representative of the Portuguese Water Dog Club of Northern California (PWDCNC), I am writing to oppose the GGNRA's draft dog management plan.

In summary, members of our Club enjoy off leash recreation at a number of the beaches and parks of the GGNRA, both as individuals and as organized Club events that occur throughout the year. Many of us have grown up in the Bay Area enjoying the open spaces of the GGNRA which have been historically open to off-leash recreation by dog owners and their dogs. When the GGNRA was created, the lands were designated as an urban recreation area, open to all, including dog owners and their dogs. The off-leash designations were different from and despite the National Park Service's usual draconian rules restricting off-leash dog recreation in all National Parks.

The urban recreation designation took into account that the GGNRA is surrounded by dense urban areas and was the outlet for millions of visitors as relief from urban stress and pressures. This designation (and the accompanying off-leash dog area) has been upheld in several Federal court decisions since 1978, maintaining that it is consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

The Supervisors of San Francisco City and County have resolved to keep the GGNRA dog management at the 1970's levels and are opposed to the current plans. The NPS must have regard for the fact that the GGNRA can accommodate both recreation and conservation, and has for decades; that the many acres of the GGNRA are not pristine wildernesses to be enjoyed only by the select few. The NPS must not discriminate against or exclude the Bay Area residents -- families, seniors, the disabled and minorities -- who exercise regularly with their canine companions.

We would encourage you to do everything in your powers to retain the small percent of off-leash dog areas currently available to responsible dog owners. Management of dog issues and dog walkers should reflect the codes of the municipalities in which the park areas fall.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

* Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. * Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. * Exclude speculative, exaggerated, biased, or misleading statements and studies. * Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). * Enable professional dog walking and align any professional dog walking rules with county or city regulations. * Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

To close, the Bay Area boasts a large population who choose to include dogs in their families as family members. And, they choose to exercise for the health of themselves and their companions in the parks available to us. The majority are responsible dog owners, who have taught their dogs good people and dog manners, have cleaned up after and supervised their pet's play. We often leave areas cleaner than we found them!

We urge you to review this plan and work with the companion dog owner community to find a balance of recreation and conservation. We support respecting the needs of dogs and dog owners for managed, unrestricted recreation in the few areas that were intended in the original GGNRA plan.

We do not support the proposed plan and will continue to oppose it.

Sincerely,

Ali Vorhies President Portuguese Water Dog Club of Northern California

Correspondence: Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022 Dear Mr. Dean, I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law. The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded. This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others. The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation.

Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.

Exclude speculative, exaggerated, biased, or misleading statements and studies.

Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).

Enable professional dog walking and align any professional dog walking rules with county or city regulations.

Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

These are my personal comments and observations regarding this plan:

With the state budget in crisis, where will the money come from to enforce these new restrictions? Furthermore, who will pay to police the city parks that will almost certainly experience an influx of dogs?

How did the GGNRA come to have no accountability to the public whose recreational needs it supposedly serves?

I am a tax payer with dogs. It is not unreasonable for me to expect that there would be designated spots in the Bay Area where I could walk my dogs. Please, do not lose sight of your original charter--recreation for the citizens of California.

Katherine McCormick

Correspondence: Let's start here: I like well-behaved dogs, preferably those with trained owners. I don't own a dog presently but, with hand or voice signals, can usually handle any dog that was been trained. I believe that open space is best served as available to those with and without dogs. Separating the two spaces is often best: dogs and owners can frolic and exercise in an area devoted to off-leash dogs while those desiring not to be where the dogs are can contentedly do the same elsewhere. No worries about troublesome or accidental interactions.

I come to this from experience. Here's a sample:

An off-leash boxer ran up a multi-use path toward me, jumped onto my chest, and damaged a newly healed incision. Its owner never stopped her conversation to notice, let alone control, her pet.

Riding my bike on a broad boulevard with light traffic, a Doberman ran out from a backyard obviously with a purpose, crossed the large yard, and clamped onto my ankle. He pushed me and my bike across the boulevard without letting up on his clenched jaw. No owner seen.

Walking on a sidewalk, after making eye contact with the dog walker and giving wide berth, I tried to pass a Chihuahua on-leash. The dog lunged onto my calf and dug in nails as it slid down my leg. The person reprimanded me for not wearing long pants. Nothing was said to the dog nor was the leash shortened to put distance between us.

Thank you for the thoughtfulness directed to this matter.

Dear Mr. Dean, I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law. The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded. This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others. The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

Honor the original 1979 Pet Policy.

Respect dog-walking as legitimate recreation.

Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.

Exclude speculative, exaggerated, biased, or misleading statements and studies.

Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).

Enable professional dog walking and align any professional dog walking rules with county or city regulations.

Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

These are my personal comments and observations regarding this plan: I regularly frequent dog parks around the city, including (but not limited to) Fort Funston, Crissy Field, and Ocean Beach. These are areas where my dog can run freely, with or without other dogs, and be able to get the exercise he needs. We are able to keep him out of any protected habitat restoration areas (e.g. along Crissy Field), so that the natural wildlife is not disturbed.

Not only are these places critical for the well being of my dog (and those of countless canine companions in San Francisco), but it is the time within each week that I most look forward to, as it has become a part of my routine. It is important for my own health and well-being to not only enjoy these spaces, but to share them with my canine friend(s). I can't tell you how much enjoyment I receive from playing with my dog, having space to run and play ball, being outdoors, and enjoying nature and the wonderful parks and outdoor space that this city has to offer WITH MY DOG! Please don't take away this right of mine/ours. The intention of these spaces is to be used for BOTH recreation and conservation. I don't understand why we have to choose one over the other. To do so is both one-sided and short-sighted. Thank you.

Sincerely,

Kari Loken San Francisco, CA 94117

Correspondence: "I am writing to oppose the GGNRA draft dog management plan and "all action alternatives" that further reduce or ban dogs in open spaces."

As an avid dog lover who loves the outdoors, I find that the GGNRA is already far too restrictive of dogs in the Parks. For example, we don't feel we can bring our dog to Pt Reyes because of the excessive dog rules, so we often just don't go. Alternatively, we love bringing our dogs to Pt Isabel in Richmond. Dog owners are very appreciative of a chance to exercise in a beautiful area. I see the vast majority do pick up after their dogs and are considerate of other people. Our dogs are giant breed dogs and, even in off leash areas, I always leash my dogs when I see the elderly or toddlers approaching for their safety. (Our dogs are gentle giants, but could accidentally knock a frail person over.)

Please do not further restrict the chances for us to visit parks with our beloved companions. Thank you.

Correspondence: Please keep the areas open to dogs off leash!

I used to live in San Francisco and got used to taking my dogs to Fort Funston and Ocean Beach. These are safe areas to have our dogs get some real exercise. I have rescue Pomeranians and they needed to run to really get their energy out.

I live in Oakland now but still come over to the beach as Happy is now blind., but he remembers the ocean and is comfortable to run a bit off leash. And, Laddie has always had a deformed foot and cannot run on hard surface - the sand is perfect and he runs without any limp! Please don't take this away.

I am sure there is a story behind each dog owner's desire to have these parks available to our dogs. I feel like people have every other park and beach area to go to. To have two spots in the City that serve the whole Bay Area is not too much to ask.

Thank you for your consideration,

Jessica Waters, Happy and Laddie.

Correspondence: As someone who does not have children, my two dogs are my family. We need somewhere to go off leash. There is a way to make this work without entirely closing these areas off to the dogs off leash. There are so many dogs and so many dog owners in this City, that if you eliminate off leash areas, you are not servicing a critical need and significant population of the City/State/US residents of San Francisco, Marin County, San Mateo County and EastBay visitors (who come into the City to walk their dogs off-leash in these beautiful areas of the City). I agree with many of the Alternative Maps and I have specific comments on the proposed Baker Beach Plan and Sutro Heights Park plan and I have a specific request for a small stretch of road inside the Park Presidio Trust gates at 14th & 15th Avenue. My comments follow. Thank you for your consideration.

Regarding Baker Beach, which is the area I most visit with my dogs. I

would like to request and comment that there is a small but perfect off leash area on the left side of Baker Beach with a natural water barrier to the rest of the very long beach with a significant area for non-dog owners to enjoy. All of the neighborhood locals go to the left side of the beach (under the houses) to the left of Lobos Creek outlet. PLEASE at least keep that area to the left of Lobos Creek open to dogs off leash! It is extremely difficult and absolutely no fun for the owner or the dog to be on leash at the beach because your dog who wants to swim and run...Even our little 13lb dog wants to run here. PLEASE keep this small area of Baker Beach open to dog-owners with their dogs off leash. As the Lobos Creek water run off is not really an area that children should be splashing and playing in anyhow...how clean is that water?...I believe that the dogs should at least be allowed this small portion of the beach...OR if this is impossible, at least say that dogs can be off leash up until 11am in this area and after 4pm...something like that rather than entirely banning the dogs from being off leash in this small area of Baker Beach.

Also I have a specific area that I would like to request be designated an off leash area in the Presidio Trust Area:

The area is just inside of The Presidio gate at 14th & 15th Avenue and on the road around to Mountain Lake park should all be off lease (there is an enormous dog walking population in this tiny area that is already closed off to cars) The Federal Presidio Park Police love to catch dogs off leash in this low volume walking area for the general public....the majority of the users in this area are local neighbors walking with their dogs. It is a tiny road that leads from the 14th & 15th Avenue gates to the gate for the Golf Course and around the Lake. As this area is almost entirely used by dog owners, it does not make sense to be ticketed for being off leash on this 1000 to 2000 foot stretch of access road by Federal park police.

It would also be great if the woods to the left of the Presidio Landmark from the trailhead parking lot down to Baker Beach should be off leash.

Sutro Heights. I would say that at least half of the Sutro Heights Park Users are dog owners. It is ridiculous to make this a leash only area with the amount of dogs in this park. These dogs are generally well behaved and mostly belong to neighborhood residents who have been using this park since these dogs were puppies. Everyone knows each other. The interaction between most dog owners and the other users in the park is very favorable. As an example, I walk one dog on leash the whole walk and the other dog (who is under voice command) goes off leash once we are into the park and then as we walk around the overlook and around the loop, then I usually hook her back up as we start to leave the park. Even with all the weddings and picnics going on, I have never seen a dog off leash bound into the

middle of a wedding or a picnic.

I support the area designated for dogs on Map 10 Preferred Alternative at Crissy Field.

I support the area designated for dogs on Map 16 at Fort Funston, except that I would like to see at least the road down to the beach on the right side be open to dogs off leash because sometimes I don't want to walk all the way onto the beach.

I recognize the importance of sharing these resources with everyone and that as a dog owner it is important to not let our use disrupt the use of others, so from my perspective a leash law is not necessary. Also, from years of observation, I am pretty sure that people who let their dogs off leash will still let their dogs off leash, even if you change the law.

Correspondence: Greetings,

I am writing today because I dearly love Golden Gate recreation areas and hope that you will develop higher levels of protection for the wildlife in these areas. Some ideas below that I hope you will consider:

--The park's mission is to protect the natural and cultural resources, not allow recreation to undermine it. Alternative D best reflects the national park values.

--Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

--The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by offering more than one trail and more beach areas free from dog recreation.

--Require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs.

--Limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Sincerely, Amber Tidwell

Correspondence: Golden Gate National Recreation Area may be one of our country's boldest park experiments: setting aside highly-prized land to provide a national park experience near a heavily urbanized area. Indeed, the park is home to more endangered and threatened species than any other park in the continental U.S.--more than Yellowstone, Yosemite, and Sequoia & Kings Canyon combined!

To help protect these species and other protected wildlife, inappropriate activities such as motor vehicle use on beaches were banned. However, the park continues to permit unregulated activities that disturb wildlife like western snowy plovers and marine mammals. Wildlife take refuge on Golden Gate's beaches to rest, breed, and rebuild energy for survival, yet unregulated off-leash dog recreation in these areas has resulted in habitat encroachment and wildlife harassment by dogs. For example, the park has reported that unleashed dogs represent the most significant recreational threat to wintering western snowy plovers.

My thoughts regarding the above are as follows:

--The park's mission is to protect the natural and cultural resources, not allow recreation to undermine it. Alternative D best reflects the national park values.

--Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

Correspondence: Although I agree that wildlife needs to be protected there is no evidence that dogs are harmful or endanger these bird. I would say that most dog lovers are also lovers of all animals both domestic and wild and would not like to see any harmed. For years there has been an are curtained off for the Snowy Plovers and I know that while most dogs are of leash the owners make sure they do not go onto the protected area. Protecting wildlife and allowing dogs off leash is not mutually exclusive, both can occur. Allowing off leash dog areas is beneficial to humans, it provides great joy to see your dog run after a ball, it is motivation for me to walk with my dog. Walking on leash is no where near as enjoyable. As city dwellers it is crucial for our human well being to have off leash dog areas particualry near and on the beaches. I am a great supporters of parks and have a life membership with the NPS

Correspondence: My family has lived in the San Francisco area since before the 1906 earthquake (and in California a lot longer than that) and I grew up near San Francisco. I am totally alarmed that this is even an issue. I urge the National Park Service to protect Golden Gate's imperiled wildlife from harassment by unregulated recreation. This is a no-brainer folks.

1. The park's mission is to protect the natural and cultural resources, not allow recreation to undermine it. Alternative D best reflects the national

park values.

2. Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

3. The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by offering more than one trail and more beach areas free from dog recreation.

4. Require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs.

5. Limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

To preserve these habitats is why we even have a park service.

Correspondence: To The National Park Service:

The Golden Gate Nat'l Recreation Area & the rare and endangered species living there are gems that must be protected at all costs. When considering planning for this area, please prioritize habitat above all else. End the allowance for off-leash dog walking, as dogs are too big a threat to the plovers. Also, other than service dogs, dogs should not be allowed in all

areas. There should be some dog-free places where hiking & picnicing can be enjoyed without them. Thank you. Connie Thomas

Correspondence: The park's mission is to protect the natural and cultural resources, not allow recreation to undermine it. Alternative D best reflects the national park values.

While I endorse multi-use park use whenever possible, those issues must be held to a higher standard and scrutiny when endangered species and wildlife habitat are at risk. When you consider that Golden Gate Golden Gate National Recreation Area is perhaps one of our country's boldest park experiments: setting aside highly-prized land to provide a national park experience near a heavily urbanized area. Indeed, the park is home to more endangered and threatened species than any other park in the continental U.S.--more than Yellowstone, Yosemite, and Sequoia & Kings Canyon combined!

I am a lifelong National Park visitor and have been to dozens of parks across America. While Yellowstone will forever be at the top of my list, Golden Gate offers such a unique opportunity for visitors near a major metropolitan city. However, the proximity of people to this park threaten to "love it to death." Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined. If that means that I can't visit the park as often as I'd like, so be it! If it means that I must keep my dog on a leash, not a problem. If that means that the dog must stay home, well, I can't take him to work or to any of the restaurants that I enjoy either. There are dog parks and paths everywhere. There is just one Golden Gate National Recreational Area.

Here is my position: 1. The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by offering more than one trail and more beach areas free

from dog recreation.

2. Require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs.

3. Limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Thank you for the opportunity to comment on these important issues.

Correspondence: Not only do off-leash dogs on beaches disturb wildlife, especially nesting birds, they also foul the beaches, annoy those of us just out for a peaceful walk along the shore and generally make noisy, dirty nuisances of themselves. I have always hated dogs, and I don't think I'm the only person on the planet who feels this way about them. They are noisy, dirty, and destructive and should NOT be allowed to run loose on beaches where endangered birds and animals should have precedence over a few people who think it is their "right" to roar around on motor vehicles and/or let their dogs run loose. The only thing worse than a dog is the person who owns it--and most of the dog owners I've had the misfortune to encounter take extreme offense when asked to do something as basic and courteous as keep their mutt out of my garden and/or CLEAN UP AFTER IT!! Yes, the Golden Gate National Recreation Area should fully embrace its goal to maintain the natural and cultural resources there, not allow a few people (with money behind them!) to overrun and ruin it for their own "enjoyment". If there MUST be an area where dogs are allowed off-leash, it needs to be fenced and clearly marked as such--and violators must be fined, since money is the only thing that will get their attention. GENUINE service dogs, such as seeing-eye dogs, dogs for the deaf and those licensed to accompany handicapped and wheelchair-bound people, can be excepted from the off-leash area since they wear a harness or leash and are trained for their jobs. I've seen too many people taking their dogs EVERYWHERE with them (including restaurants and grocery stores--yuck!)with the excuse that "it's a therapy dog". Anyone can go online and get a "therapy dog" vest for their hound, whether or not their animal is registered as such or not. To me, it's just another excuse for dog owners to do whatever they please and to heck with the rest of us...

Correspondence: Although I do not live close enough to the GGNRA to use it for regular dog walking purposes, I can sympathize with those who do. Living in the city with or without a pet provides emotional challenges on many fronts. The lucky among us who have dogs in their households understand that canines are unique in the animal world with a human bond like no other. It is vital, therefore, that reasonable accommodation be made to provide property exercise for these extended family members, as well as for their human guardians. The key here is reasonable. I believe that the existing GGNRA regulations regarding dog walking meet this criteria. What may be needed is stricter enforcement of dog walking rules and, perhaps, higher fines for non-compliance. Our sometimes over-regulated society should not put an even tighter squeeze on what is truly man's best friend.

Correspondence: Golden Gate park's mission is to protect the natural and cultural resources. Alternative D seems to best reflect the national park values. Allowing recreation to undermine the natural and cultural resources is a major mistake.

Golden Gate should accommodate diverse park user groups such as families, horseback riders, and runners. Dogs seem to be a special nuisance and must be kept under control. Dogs should be allowed off-leash in enclosed areas only. This will certainly protect park users, wildlife as well as other on-leash dogs. Obviously the off-leash area should be configured to have little, if any, impact on wildlife and habitats.

Thank you in advance to your careful consideration of these points. We want the Park's resources to be available for our children's children etc.

Type:

Correspondence: Golden Gate National Recreation Area is home to more endangered and threatened species than any other park in the continental U.S.--more than Yellowstone, Yosemite, and Sequoia & Kings Canyon combined!

However, the current regulations do not address certain kinds of activities which have been found to disturb wildlife like western snowy plovers and marine mammals.

Part of the intention for the park was to encourage wildlife so that people could see these animals in a natural habitat. Birds and mammals now take refuge on Golden Gate's beaches to rest, breed, and rebuild energy for survival, but this is being hampered by unregulated off-leash dog recreation in these areas which has permitted dogs to harass wildlife and damage habitats.

Unleashed dogs represent the most significant recreational threat to wintering western snowy plovers, an endangered species. Other than in off-leash areas which are fully enclosed to protect park users, wildlife, and other dogs, animals must be on a leash at all time enforced by significant fines to the animals' owners. No exceptions.

The park should provide more facilities free from dog recreation. Dogs should only be permitted in areas where they won't negatively impact sensitive wildlife and habitats, and where they don't impact other user groups from enjoying the beauty of the park.

We need to enforce the park's mission of protecting the natural and cultural resources, and amend regulations for recreational use, best reflected by Alternative D.

Please amend the proposal to provide for a 95%, not 75% compliance rate as outlined. These animals need and deserve our help.

Thank you for your attention to my comments.

Correspondence: Dear National Park Service:

Thank you for this opportunity to comment on the draft EIS for dog management at the GGNRA sites.

Clean Air Now's Board of Directors is concerned with the protection of wildlife and habitat in our national parks. Safe and secure recreation is important for the public's exposure to healthful air, relaxation, and the natural environment. It is the National Parks Service's job to ensure that human activity does not infringe on that critical need in society. All creatures must coexist in balance, and because of this we ask that you implement the EIS's "Alternative D". The park's mission is to protect the natural and cultural resources, not allow recreation to undermine it. Alternative D best reflects the national park values. We are all dog lovers, but we also see the need to properly exercise our dogs without harm to others.

A couple of other points we have in common with other groups:

--Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

--The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by offering more than one trail and more beach areas free from dog recreation.

--Require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs.

--Limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Thank you for helping to create a better park experience at Golden Gate National Recreation Area, and for giving imperiled species a chance to survive.

Sincerely,

James J. Provenzano President, Clean Air Now

Correspondence: I strongly support protecting our endangered species in the Golden Gate Recreational area, including requiring dogs to be kept on leash. Dogs can be a menace not only to wildlife, but to other dogs and to people, and most dog owners do not have their dog under voice control. It is more appropriate to designate a space for people and their dogs to play together where they don't threaten wildlife and can be avoided by people with a fear of dogs.

I urge you to take all steps necessary to preserve our wildlife. Once gone, they can never be recovered, a permanent loss to all of humanity.

Thank you for consider my views.

Correspondence: To Whom it May Concern -

It is suggested on many websites I have read that the comments that people submit re. this DEIS and the suggested restrictions to use by off-leash dogs and their owners be positive and constructive. I will attempt to be positive and offer constructive comments, but must state off the bat that it is extremely difficult. I feel that this whole process and its possible results are an affront to basic humanity, to co-existing in an urban environment. The approach of the National Park Service is underhanded and roundabout, with the obvious outcome of banning dogs entirely from these Recreational Areas.

That being said, I am writing today as a parent and dog owner. We go to

Crissy Field pretty much every day of the year, rain or shine. The toddler and the dog run across the field, play on the beach, and on beautiful days romp and wade together in the channel that runs between the "estuary" and the bay. Should the "Proposed Changes" go through (in any permutation), most of that would be taken away from us. It is 100% unreasonable to expect that dogs be kept away from the channel area, barring putting up a fence around the whole area of beach that the channel might possibly meander to. It is my request that NO CHANGES be made to the existing leash laws in the Golden Gate National Recreation Area. The funds that would be put into instituting the proposed changes would be much better spent towards enforcing the random wrong-doer than towards punishing each and every dog owner who has managed to peacefully coexist on these lands for almost 40 years. The Poison Pill clause that has made its way into your document (whereby if there are any transgressions then the leash laws can and will be further restricted) should be removed. Please consider the area in which the NPS is trying to institute these changes. It is one of the most densely populated areas in the country, which is blessed with some beautiful open spaces and coastline. Should the GGNRA areas be made off limits to off-leash dog use, where are the dogs and their owners going to end up? In the cramped, fenced-in dog runs placed sporadically around San Francisco? Talk about setting us up for failure?

It is my fervent hope that our Recreational Areas remain untouched by the NPS's agenda. If the proposed changes do go through, expect us to fight them tooth and nail, possibly re-claiming them from the Federal government if that's what it takes. This whole process has put into play a feeling of ill-will between your organization and the people of the San Francisco Bay Area. Wouldn't you rather we all were able to live and play together peacefully?

Correspondence: Why do Americans have to destroy all wildlife? Could we possibly embrace good ethics to protect the wonderful nature that has been given to us? We need to start thinking about the world we will leave our grandchildren. Will the USA just be covered with cement filled cities that grow so huge that they just touch each other in an never-ending field of cement & cars. I can't even believe all the cities I see that put trees last. Doesn't everyone understand that we need oxygen to breathe to live. Besides that just looking at grey cement everywhere is boring/depressing. Please protect all the wildlife as they have a right to live here also.

Correspondence: Golden Gate National Recreation Area may be one of our country's boldest park experiments: setting aside highly-prized land to provide a national park experience near a heavily urbanized area. Indeed, the park is home to more endangered and threatened species than any other park in the continental U.S.--more than Yellowstone, Yosemite, and Sequoia & Kings Canyon combined!

To help protect these species and other protected wildlife, inappropriate activities such as motor vehicle use on beaches were banned. However, the park continues to permit unregulated activities that disturb wildlife like western snowy plovers and marine mammals. Wildlife take refuge on Golden Gate's beaches to rest, breed, and rebuild energy for survival, yet unregulated off-leash dog recreation in these areas has resulted in habitat encroachment and wildlife harassment by dogs. For example, the park has reported that unleashed dogs represent the most significant recreational threat to wintering western snowy plovers.

--The park's mission is to protect the natural and cultural resources, not allow recreation to undermine it. Alternative D best reflects the national park values.

--Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

Correspondence: The Golden Gate National Recreation Area is one of the most beautiful Parks in our country. It is an icon, unique, wild yet at the doorstep of one of our major cities. And as such it requires regulation recreation to preserve its natural habitat and the the myriad species, some of them endangered, that call it home.

Unfortunately, unregulated recreation is causing damage. Fortunately, we can mitigate against this damage with a few simple rules. There are other recreational areas to drive motorized vehicles and allow dogs to run free.

OPTION D is what I urge you to adopt.

Respectfully Submitted,

Celestine Arndt

Correspondence: The Golden Gate Recreational Area is one of those very rare parks that sit in an urban enclave, where endangered species coexists with a major metropolitan environment. While some of the grosser activities, like those of off Road vehicles, there are activities permitted that disrupt the lives and breeding cycles that depend on the park for living and procreating. So protections for the park must include the following:

-The park's mission is to protect the natural and cultural resources, not allow recreation to undermine it. Alternative D best reflects the national park values.

--Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

Correspondence: Living on a coast that offers habitat for the western snowy plover and other listed species, we in Half Moon Bay have a responsibility to protect their habitat. And we do; dogs are not permitted on Half Moon Bay State Beach.

Given its mission to protect natural and cultural resources, the National Park Service has an even more compelling reason to protect the habitat of listed species. For that reason, I feel strongly that Alternative D is the right choice for park to adopt as its Dog Management Plan.

I have a dog, and I would love to be able to take her on the beach near my home. But if I walk an extra mile south I can take her to a beach without habitat for listed species. The GGNRA is just a few miles north of here, and I am sure that many residents and visitors experience the same tradeoff. But they have a choice; the western snowy plovers do not.

I understand the value of off-leash recreation areas for dogs. I only ask that such areas be enclosed and located where it will not adversely impact the habitat of endangered, threatened or candidate species. This allows dogs to have an outlet for the exercise and socialization they need, and allows those species (and other park users) to enjoy the park in their own ways that are equally deserving of protection.

It will take a while for the "my dog gets whatever I want it to get" crowd to get used to these limitations, but they will. And as animal lovers, they may also come to appreciate the value of preserving this amazing place for future generations.

Thank you for considering my comments.

Correspondence: Dear Frank Dean,

I am writing in the hopes that my comments will help sway the decision

towards the alternate plan D or A. I care for dogs, but am all too aware of how destructive they can be to sensitive habitats. My job is to restore habitats in the bay area. Within the areas I work, there are many dog walkers who allow their pets to run around off-leash and off trail. Because of this, many of our native plants we planted are trampled and killed. It is so disheartening to work for over a year growing these precious little native plants, only to have them die because of careless dog owners. I think that dogs on leash in parks without endangered species should be allowed. Those park sites with listed species, should either allow no dogs or only dogs on leash. The difficulty with this however, is that most of the GGNRA is not actively policed by park rangers. Without regular enforcement, people will continue to allow their dogs off-leash. Professional dog walkers should also be heavy regulated, because it is often these groups that do the most damage. I hope that the park will pass a strict plan like A or D so that its natural resources will be protected and the parks can thrive. Thank you!

Correspondence: PROTECTING the natural and cultural resources of the area is this park's mission, and the park should not allow recreation to undermine that mission.. Alternative D is what best reflects the national park values.

We think that SENSITIVE HABITAT/ENDANGERED SPECIES IN THE AREA CERTAINLY DESERVES A HIGHER LEVEL OF PROTECTION FROM HUMAN DISTURBANCE than the current 75% compliance rate.

There is a diverse group of people using this park. Runners, horseback riders, families and those with service animals. Offering more than one trail - and areas that are free from dog recreation...and restricting dogs to dog beach areas is a better way to accommodate everyone. Limiting off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats is a necessary step. And off-leash areas should be well signed, and enclosed, for protection of park users, wildlife, and the dogs themselves.

Correspondence: Hello,

After looking into the argument about dogs on Ocean Beach in respect to the effect it has on the snowy plover. I found that the mass movement of sand in the middle section of ocean beach(near Pacheco),by use of tractors allowed by the Park offices I presume has been more detrimental to the snowy plovers environment than any unleash dog activity.

Obviously human traffic, unleashed dogs do still have an effect on this bird that nests in these dunes and low lying banks of sand, but to hold them solely responsible is and seems very irresponsible by people who should know better. Such people should focus on the greater threats to the snowy plover.

Having dogs on leash on Ocean Beach near the areas of plovers nesting is a sound idea, but to have to leash a dog at all parts of the beach is unacceptable to me as a dog owner. After all this is parks and recreation.

Kindest regards, Wayne Sheridan

Correspondence: I'm a dog lover, but I also understand the value of this very rare area. This

park is set aside to protect natural resources. I think Alternative D is the best solution in light of that. I also question the compliance percentage. 75%? Nope, if my neighbors are quiet only 75% of the night, that means I don't get much sleep. We need to have 95% compliance, and shoot for 100%.

I also feel there should be areas where dogs can't run free. I take care of my elderly mother, and although she likes dogs, it is easy for one to knock her down. I can only imagine how I would feel with a very young child. Dogs should have free-range areas, but so should humans! We need areas where we can take the elderly, handicapped, and very young without the fear of off-leash dogs. The leash-free areas should only be allowed where the dogs will not have negative impacts on wildlife and the habitats of wild birds and animals.

Thank you for reading, Dixie Coutant

Correspondence: I am a regular visitor to the Golden Gate National Recreation Area, as well as a park volunteer. I support leash laws and restricted access areas for dogs. The reason we keep these areas protected is so that they can be a natural resource for visitors and wildlife. It is difficult to enjoy the silence and beauty of nature as a visitor -- and to protect wildlife -- when there are so many dogs roaming off-leash and excessive dog waste throughout the parks. So-called "voice control" for dogs has never and will never be an effective option.

Correspondence: I have grave concerns about the fungal disease known as white-nose syndrome, which has become an epidemic in the North American bat population. Since 2006, when the disease was first documented in a commercial tourist cave in upstate New York, more than 1 million bats have died, the disease (or fungus associated with it) has spread to 19 states and four Canadian provinces, and several species are at imminent risk of regional or global extinction. The U.S. Fish and Wildlife Service has called white-nose the "most precipitous decline of North American wildlife in recorded history."

The Northern Region of the Forest Service has an opportunity to take emergency measures, through region-wide cave closure on national forest

lands, to forestall or prevent the possible human transmission of white-nose syndrome into the northern Rockies area. I urge you to enact an emergency closure order immediately, as has been done in the Eastern, Southern and Rocky Mountain regions, before white-nose syndrome moves closer -- or worse yet, shows up in a cave or bat roost in the northern Rockies, at which point bats will spread the disease on their own.

Bats provide enormous ecological benefits by eating moths, beetles and other insects whose populations would otherwise go largely unchecked. In the United States, bats prey on prominent agricultural pests like cucumber beetles, stinkbugs and at least two major pests of corn crops. Researchers have estimated that the loss of insect-eating bats in North America could lead to agricultural costs of between \$3.7 billion and \$53 billion per year. Organic farmers will lose a valuable ally in pest management.

Thus far, six North American bat species have been documented as affected by white-nose syndrome; most have declined dramatically in the current range of infection. Another three species have been found with the white-nose fungus on them, but are currently asymptomatic. Bat species diversity is higher in the West than in much of the eastern United States, meaning that an even greater number of species may be at risk if the disease spreads into the western states.

While cave closure will mean that cave recreationists will be inconvenienced, a much greater proportion of the public, including wildlife watchers, hikers, paddlers, campers, farmers and the general public, has a great interest in seeing bats survive and thrive. More importantly, the existence of an entire suite of mammals is at stake, and once bat populations are decimated in the Northern Region, it is doubtful they will ever be restored to their former numbers.

This matter is of great urgency. As a concerned citizen and wildlife enthusiast, I strongly support a region-wide, blanket closure order for caves and mines in the Northern Region. Restrictions should be placed on all nonessential human access, with entry allowed by permit only for critical activities such as research on bats and white-nose syndrome and human safety issues. This closure should be enacted immediately and should be kept in place until more is known about white-nose syndrome and its mode of transmission or until an effective treatment is found.

Thank you.

Correspondence: It sickens me to hear about our wildlife and domestic animal & marine life being killed, tortured, maimed, driven to extinction all because government and stupid people are greedy, maybe don't like animals, fearful or ignorant.

For those who are misinformed, stupid, arrogant & ignorant, mean bastards and greedy there are only two words you need to remember and follow is EDUCATE YOURSELVES ! However you do this going to the library, researching the internet, talking to park rangers, talking with animal activists or visiting shelters, sanctuaries, preserves or wildlife rescue centers.

Our wildlife everywhere, domestic animals, marine life and desert creatures as well all deserve to be on this earth - as you are. I believe in those who harm our creatures should die or be tortured the very same way . I believe in " an eye for an eye". Abuse an animal - GO TO JAIL WITH NO PAROLE" ! God is an animal lover. He put all our loving, innocent , majestic wildlife& marine life, known as God's Creatures on our earth for a reason... to enjoy, to learn from, to reproduce, to live, to grow, to die from natural causes (like you) - all is part of the natural selection. All creatures on earth are part of the food chain and are important for the environment.

To kill these creatures is going against God's act. I'm not religious but I do believe that you are satan if you disregard him and his actions regarding animals. Beautiful park animals like bears, eagles, raccoons, skunks, wolves, coyotes, snakes and other animals are my friends! For hurting or killing them I hope you rot in hell. Mankind is an enemy to God's animal friends - educate yourself and be a friend. Otherwise your life and your hateful friend's lives are numbered.

Correspondence: This dog policy debate is a sad metaphor for bigger conceptual and political human problems. It's one of those issues where the group that most acutely feels effects in the short term (no matter how insignificant or ultimately manageable) will be making a lot of noise to get their way, but if this handful of dog owners and professional dog walkers win this fight and dogs get to run the park, in the long term we'll all be much worse off.

This is another example of the kind of short term thinking that has been cashing out our ecological diversity everywhere. At some point, I hope we as a people decide to draw a line in the sand, and if not in our National Parks, then where?

Correspondence: I appreciate the need for a comprehensive management plan related to dog policies for the GGNRA, but I oppose the recommended GGNRA Draft Dog Management Plan. The Dog Management Plan should continue and formalize the 1979 Pet Policy. A formal policy relating to commercial dog walkers is appropriate. Making areas added to the GGNRA in the future automatically off limits to dogs is inappropriate, knee-jerk legislation. Off leash voice controlled areas should be added, or removed, based on site specific reasons and evidence supporting any proposed change. The proposed plan does not include adequate evidence in support of the

proposed changes.

The plan over restricts pet access to the GGNRA. Off leash access in areas currently designated off leash should only be restricted if there is evidence to support the restriction. Dog visitors should not be treated as park hazards except where there is evidence that they are. I object most strenuously to the proposed rule that would ban dogs in on-leash only areas based on 25% or more non-compliance with leash rules. This is an enforcement problem, not a negative impact issue that would warrant banning dogs, and should be addressed as an enforcement problem. This proposed rule is bad legislation. We do not ban driving on roads where speed limits are routinely not observed. We develop more effective enforcement strategies.

The GGNRA is a unique national park. Unlike any other national park in the nation, it is located in a densely populated area in which there are approximately 6.9 million people, and it spans 3 counties which together have approximately 1.7 million people. Despite its designation as a national park, GGNRA lands serve an urban area, and need to meet the needs of the diverse population that lives in the Bay Area. The GGNRA's urban recreation mandate includes making the park a friendly place for pet owners (and their pets!).

The GGNRA is not a wilderness area. It serves an urban population, and its rules regarding visitors with pets should be responsive to the needs of an urban population. Reducing by approximately 90% the 1% of the GGNRA currently designated off-leash removes an important resource for urban pet owners.

As a resident of San Francisco for the past 32 years, and a dog owner for the past 25 years, I depend on open areas to exercise my dog. I visit the GGNRA every day, sometimes without, but mostly with, my dog. Like most, and perhaps nearly all, San Francisco residents, I don't have a yard in which to exercise my dog. I rely on dog-friendly open areas where I can exercise my dog off leash. Like the vast majority of dog owners, I am a responsible owner: I leash my dog in areas dense with people, in sensitive habitats off limits to pets, and in areas posted on-leash only. I don't let him dig or chase wildlife. I clean up my dog's stool, and even the stool that other, less responsible pet owners, leave behind. My dog needs more exercise than my old legs could ever possibly give him. He needs to run around, chase balls and play with other dogs, and he can't do this on a leash. Dogs that don't socialize off leash with other dogs develop aggressive, anti-social behaviors that make them a nuisance, and can even make them dangerous when they are allowed off leash.

The GGNRA 1979 Pet Policy has served the GGNRA and Bay Area pet owners well for over 40 years. It recognizes that pet owner recreation

includes dogs, and imposes sensible restrictions on pets and their owners. It recognizes that the GGNRA must serve the needs of an urban population. The GGNRA Draft Dog Management Plan / Environmental Impact Statement provides no evidence that the 1979 Pet Policy has had any material adverse impact on wild species or the natural environment in the GGNRA. If dog access is to be severely restricted as proposed, the damage dogs might do to the park in the future must be supported by the damage that they have done in the past. To arbitrarily change these rules and ignore 40 years of data is irresponsible. And if no data was collected during this period to justify the proposed changes, then a period of time should be allowed to collect data relevant to the proposed changes so that the policy is based on good science, not hypothetical future events.

I urge you to be responsible stewards of this important public resource. Decisions that restrict access have adverse consequences for those restricted. The reasons to impose such restrictions should have a sound foundation (hence the requirement for an EIR!). But the GGNRA Draft Dog Management Plan / Environmental Impact Statement is based on pseudo-scientific reasoning, with little or no data to support the recommendations regarding changes to pet access to the park.

Pets under the voice control of their owners are not engaging in predatory behavior, damaging the environment or molesting humans or animals (although pets not under control may indeed be doing these things). They are running around, getting drunk on scents that only noses a thousand times more sensitive than ours can truly appreciate, chasing toys, playing with other dogs, and just enjoying life and giving pleasure to the humans that love them in one of the most beautiful urban parks in the world.

Under the 197- Pet Policy, 99% of the GGNRA is either off limits to dogs or on-leash only. People afraid of dogs or otherwise bothered by the idea of visiting an area where dogs are off-leash have the run of the park without risk of meeting an off-leash canine if they wish to visit. The more you restrict dog access, the more dog-concentrated the remaining dog-friendly areas will be, and the worse the experience will be for both pet owners and non-owners alike.

There are plenty of valid reasons to restrict pet access or require them to be on-leash, and I am not advocating for unfettered access of pets to the GGNRA. Where there is sensitive habitat that could be damaged by foot traffic, they should be on-leash. In areas where ground-nesting birds are nesting, they should be on-leash. On beaches with dangerous surf conditions, they should be on-leash. On beaches that have dense human populations, they should be restricted. In areas with a fragile dune environment or where all foot traffic is restricted to a path, they should be on-leash (if foot traffic is allowed) or restricted (if foot traffic is not

allowed). Some dogs are aggressive, and they impose a danger to both humans and non-humans. They should be on leash, AT ALL TIMES. Do not let the existence of such dogs drive policy for the hundreds of thousands of Bay Area residents that routinely enjoy partaking of recreation in the GGNRA with their pets. Areas reserved for picnicking should be on leash-only. Certain beaches, especially those with critical habitat or high human density should be appropriately off limits to dogs. This is not rocket science. It is merely site-specific common sense and responsible pet ownership.

Please, I encourage you to approach this issue as any responsible pet owner would. If you do, the GGNRA will be preserved for future generations, including those with pets.

Correspondence: GGNRA,

As resident of Fairway Park, and a concerned citizen and responsible dog owner, I am compelled to comment on the ill-conceived preferred dog policy for Mori Point as outlined on your website.

As many of my neighbors, part of my decision on choosing to live in Fairway Park was based on the proximity to open space, now GGNRA, Mori Point. I have walked my dog here on leash for 9 years, collected trash and reported illegal activity on this land to authorities on several occasions. These incidents have included off road vehicles and a dog attack by an uncontrolled, off leash dog. As encouraged by multiple GGNRA signs, I consider myself a steward of this land and most of my neighbors act in the same way. Fairway Park, by my most recent estimate, includes more than 40 dog owners many of whom frequently use Mori Point to walk their dogs. Unfortunately, I now feel my use of this space is threatened by a preferred policy which restricts on leash dogs to 2 trails passing through the space only. This policy is very confusing based on the environmental reviews on your website which state little to no impact on habitat by leashed dogs. Further confusing this preferred policy is the fact that trails which allow dogs on leash are all within 100-200 feet of trails which prohibit dogs even though they share the same watersheds and natural features.

Mori Point is bordered by the old quarry, Fairway Park neighborhood, Sharp Park Golf Course and beach promenade making it a multi-use recreational area, not a wilderness area. Restricting leashed dogs within Mori Point will likely not be well-accepted, making the regulation a difficult one to enforce. The enforcement plan of going to even more restrictive policy based on compliance rate of less than 75% is backward. If a regulation is not acceptable to a large percentage of people using the space, it is the regulation, not the people who are misguided. If dog policy is seen as inappropriate by many users, the land and habitat could be further damaged by people using the space during off hours.

I trust the GGNRA will take the above into thoughtful consideration when developing dog policy. I look forward to many more years of using this space with my dog and continuing to work with GGNRA to make this a safe place for people and animals while continuing to protect the habitat as all of these are possible.

Sincerely, Julie Ulmer

Correspondence: 5/25/11 Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law. The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others. The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to honor the original 1979 Pet Policy, respect dog-walking as legitimate recreation, provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. Also exclude speculative, exaggerated, biased, or misleading statements and studies.

Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). Enable professional dog walking and align any professional dog walking rules with county or city regulations. Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

I go to Fort Funston and Land's End regularly with friends, dog, or both. It's such a joy and really contributes in a special way to the quality of life in the Bay Area. I people being pretty respectful stewards of the land and there is also plenty of land that is left wild. Please keep off leash dog walking intact.

Sincerely, Amad Demetrious

Correspondence: This DEIS is invalid because it fails to meet its legal obligation to take into

consideration the negative effects the proposed changes would create for humans, their dogs and the surrounding environment (e.g. local parks). Further, the studies/science utilized to support allegations of damage to resources in the GGNRA are fatally flawed - the positive impacts are ignored and the negative impacts are unverified. For example, this DEIS omits the Warren study of the snowy plover which concluded recreation of dogs and their owners does not negatively affect the feeding of the plover. Instead the DEIS relies on a study performed by Audubon activists who recommend Draconian restrictions which are unjustified in areas that are not critical habitat. Therefore, I believe the 1979 Pet Policy should be implemented in its original form with no restrictions on off-leash recreation at Ocean Beach, and it should be institutionalized as a Section Seven Special Regulation. Further, I believe that all properties added subsequent to the 1979 Pet Policy and in the future should have historical off-leash recreational usage allowed. This would accurately reflect the enabling legislation for this National Recreation Area which GGNRA management has held in disregard for quite some time. I also believe the GGNRA's inclusion of a Compliance-Based Management Strategy as well as the GGNRA's failure to commit to a Section Seven Special Regulation following this process indicates a lack of good faith and an intent to deceive the public as the GGNRA did following the implementation of the 1979 Pet Policy which the GGNRA later decried in Federal court as an "error".

Correspondence: My particular area of concern is Muir Beach and the protection of Natural Resources in that area without the restriction of some 'dog time' on this local beach. The Muir Beach and surrounding communities use the local trails and beach as their back yard. I personally know of an Ocean Rider member who takes her dogs to the beach every morning for exercise, but spends time with another MB resident cleaning up the trash from the visitors. The responsible dog owners should not be punished for those who are not. We realize that funds are limited for education and enforcement but I feel the dog community needs to participate in self-regulation. THE number one concern is to protect the natural resources which I feel can be done with proper fencing along the dunes and RWC outlet to allow wild life to move freely but to keep the dogs out of the Redwood Creek to Muir Beach. Dogs should NOT be allowed off-leash until they reach the beach and MUST be voice control. Possibly there is a way to have special collars or permits that prove a dog owner has passed a test.

Doggie stations need to be at the bridge entrance for doggie-do collection and disposal. Possibly there can be 'doggie hours'... when it is okay to use the beach. So those uncomfortable with dogs know they can go without the dogs at different hours or days; or weekends.

Horses and dogs have both played a crucial role as 'partners' with humans for centuries. There is a sense of safety that many (especially woman) feel if they tend to hike alone as long as their dog is with them. For years I rode the trails.. just me, my horse, my dog. I had had far less anxiety in those days

than I do now sharing the trails with mountain bikers. While I no longer own a dog due to the increased restrictions, I would hate to see dogs lose their right to enjoy this local beach, and some trail loops. I know how much it has meant to me in past years.

Correspondence: Dear NPS Representative,

I support any action the NPS can take to lessen the presence of unleashed dogs within the boundaries of GGNRA. I have been attacked by dogs twice in the past and when I see dogs unleashed it causes apprehension as I am walking along the trail. In fact, if I see an unleashed dog I usually walk the other way or stand to the side as the animal passes. So, my first reason for requesting a ban on all unleashed dogs from the park is the negative impact that unleashed dogs have on people, diminishing our ability to enjoy the trails of GGNRA. As one of the goals of the Park Service is to promote the enjoyment of our national parks, the presence of unleashed dogs prevents enjoyment for a significant number of people.

My second reason for opposition to unleashed dogs is the impact on wildlife, especially species that are on the endangered species list. While most dogs don't stray into areas where endangered species are located, there is enough of an impact from straying dogs that scientists have determined that there is a negative impact. We cannot allow a "tragedy of the commons" in GGNRA by allowing large numbers of people to unleash their dogs. It is simply not a good idea.

If the NPS determines that some accomodation must be made to the dog owners, then I hope that unleashed dops will ONLY be allowed in areas with high fences that prevent the dogs from straying into sensitive habitats.

Lastly, those who violate the rules should be fined in a way that makes it clear that the NPS is seroius about protecting the resources of GGNRA. In other words, a stiff fine would be appropriate.

Thanks for the opportunity to comment.

Sincerely,

Ron Sundergill

I believe that the Park Service is charged with the protection of wildlife as well as the natural beauty of our nation's parks. The San Francisco beach area is the home of the endangered Plover. Curtailing free running dogs and motor vehicles is reasonable and necessary for this protection. Leash enforcement and controled paths are efforts that should be employed for the protection of this area. David Eisbach

Correspondence: Frank Dean, General Superintendent

Golden Gate National Recreation Area

Fort Mason, Building 201

San Francisco, CA 94123-0022

Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by

either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. Exclude speculative, exaggerated, biased, or misleading statements and studies. Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). Enable professional dog walking and align any professional dog walking rules with county or city regulations. Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input. These are my personal comments and observations regarding this plan: (here's where you fill in your own personal story and what you've seen when you've been out at the GGNRA)

Sincerely, Sharon Reichardt

Correspondence: Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. I believe it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

- * Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation.
- * Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.
- * Exclude speculative, exaggerated, biased, or misleading statements and studies.
- * Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).
- * Enable professional dog walking and align any professional dog walking rules with

county or city regulations. * Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

I'm a mother of a toddler and a dog owner, and it is difficult to find places to go where I can bring both my son and my dog. Playgrounds, for example, are dog-free. But as a city-dweller with no backyard, I need to exercise my dog - as well as be active with my family. We frequently spend our weekend days at Fort Funston and Chrissy Field, where both my son and my dog can run and enjoy the outdoors. If dogs are no longer allowed in these locations, or if their presence is severely restricted (as I believe your plan aims to do) the result will be that my family and I simply won't visit as often. What a shame! These two parks are beautiful outdoor areas that I want my son to be able to grow up visiting.

Thank you, Elizabeth Browne

Correspondence: Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean:

I am writing to oppose the GGNRA's draft dog management plan. This violates San Francisco and the Bay Area dog friendly protocol. One percent of the GGNRA areas are assessable to dogs and their owners. Dog owners are a large part of the support and funding for these recreational areas.

As a dog owner and environmentalist, I take great care in cleaning up after my dogs. I do not let them chase after wildlife. My dogs enjoy walking especially on the beaches off leash. They are on voice command and have

never hurt another being or wild animal.

I believe the GGNRA needs to address issues such as pollution and providing permits for dog walkers. If you really look at the affect on the environment, it is humans that cause the greatest damage. After a sunny day, the beaches are loaded with trash. Each day I walk with my dogs, I make it a habit to pick up some sort of plastic garbage left by a human. If the GGNRA fined people for littering the beaches and park open spaces they would find that most of the culprits are non dog walkers.

I also believe if the GGNRA required permits for dog walkers allowing no more than six dogs per walk, it would also cut down on the negative complaints.

Your plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan is not a practical plan as the city of San Francisco Supervisors have stated their view in vote. The city parks will be overloaded with dogs causing much distress to the city of San Francisco.

Sincerely, Antonia Sousa

Correspondence: Dear National Park Service,

For more than 20 years, I worked at a wildlife rehabilitation facility under a Memorandum of Understanding with the California Department of Fish and Game, which required annual training that augmented my veterinary technician experience. I worked to save oiled birds, to rehab and release raptors, waterfowl, and many native mammals that are part of our fragile ecosystem. They were, after all, here before we humans.

I have seen, firsthand, how habitat destruction, development, public recreation activities, and human ignorance have impacted California's wildlife. In the Palo Alto area, for example, the California quail and burrowing owl populations have seen a severe decline. I was a shelter team leader when the driver of an off-road vehicle found and transported a desert tortoise to our shelter. It could not be re-released.

There are many many stories that I could relate to you of the negative impact I've seen from human encounters with native wildlife. It is our

collective job to protect these precious resources, and yours specifically.

I urge you, therefore, to severely curtail human activity, which includes domestic dogs, horses, and off-road vehicles in the Golden Gate National Recreation Area. Compliance should be 95%, not less. The public does not have a right to spoil sensitive habitats or the wildlife species that live there. Those resources are ours to protect. As a taxpayer and environmentalist, I urge you to do more to protect it from human disturbance.

Thank you,

Correspondence: Hello, I would like to share my comments on the off-leash policy. I am a dog owner and love to let my dogs run when I can, but only in responsible areas. Dogs should not be allowed access to harass wild life. This is the policy at Pt. Reyes National park for example and it is a great rule. The park is calm, beautiful and clean from pet messes. Pets are allowed in designated areas only. Dogs should have restricted off-leash areas or a dog park that protect them from wild life and more importantly the wild life from them. In addition, pet owners often ignore their pet's behavior and messes in public areas. I speak from experience here. Wild life and dogs don't mix. The primary goal should be to protect wildlife and this can be accomplished very simply with a dog park area.

Thank you for considering my comments. Sincerely, Kathleen Martin

Correspondence: Hi, it seems pretty incredible to me that people who want all dog off leash area to be enclosed, are also advocacy for horseback riding. While I agree certain area should be off limit to dogs, in my past experience, dogs on the beach are far less disturbing to both human and habitat alike than horses. If the concern is truly that of habitat lost and impacts on family use, horseback riding should really be banned in urban recreational areas.

Enforcement of leash law should be tighter in protected areas but, not to remove off leash areas for dogs on the beach.

Correspondence: I would like to express my support for Alternative A, with site-specific, monitoring-based analysis on any new land additions to the GGNRA. It only makes sense to evaluate each site when deciding whether and in what capacity to allow dogs. It saddens me to see how hostile the tone of the entire DEIS/Dog management plan document is toward dogs and their handlers. All too often management seems to conveniently forget that GGNRA has the word " Recreation" in it - and recreation includes dogs for a whole lot of people! The GGNRA sites are mostly located close to densely populated areas, and the reason most of them even exist is that at some point

a trusting individual or family donated land to an organization such as POST, thinking that this would preserve the open space for all to enjoy. Unfortunately, all too often that land then gets locked away from public use and even when it's re-opened, the restrictions are often severe. I understand it is important to restore sensitive habitats for wildlife etc, but areas that have been used by people for decades, should remain accessible by all, at least for the most part. And "ALL" includes dog owners, just like "ALL TAXPAYERS" include dog owners. thank you for your attention Tanya Rebarchik

Correspondence: Energy is very important to this small bird. Every time humans, dogs, or other predators cause the birds to take flight or run away, they lose precious energy that is needed to maintain their nests. Often, when a Plover parent is disturbed, it will abandon its nest, which increases the chance of a predator finding the eggs, sand blowing over and covering the nest, or the eggs getting cold. This can decrease the number of chicks that hatch in a particular year. Did you know that a kite flying overhead looks like a predator to a plover? A kite over a nesting area can keep an adult off the nest for long periods of time.

The western snowy plover has been living on the Pacific Coast for thousands of years, but was listed by the federal government as threatened in 1993, due to low population and decreased habitat.

Every time humans, dogs, or other predators cause the birds to take flight or

run away, they lose precious energy that is needed to maintain their nests. Often, when a Plover parent is disturbed, it will abandon its nest, which increases the chance of a predator finding the eggs, sand blowing over and covering the nest, or the eggs getting cold. This can decrease the number of chicks that hatch in a particular year.

Remember that when a species goes extinct, it is gone forever! We are privileged to be able to be stewards of the beach, its habitat, and its occupants, including the western snowy plover.

People should be able to recreate on the beaches AND there should be room for plovers to nest too. The idea is to "Share the Shore." This means having fun while protecting our natural environment at the same time

Correspondence: This DEIS is invalid because it fails to meet its legal obligation to take into consideration the negative effects the proposed changes would create for humans, their dogs and the surrounding environment (e.g. local parks). Further, the studies/science utilized to support allegations of damage to resources in the GGNRA are fatally flawed - the positive impacts are ignored and the negative impacts are unverified. For example, this DEIS omits the Warren study of the snowy plover which concluded recreation of dogs and their owners does not negatively affect the feeding of the plover. Instead the DEIS relies on a study performed by Audubon activists who recommend Draconian restrictions which are unjustified in areas that are not critical habitat. Therefore, I believe the 1979 Pet Policy should be implemented in its original form with no restrictions on off-leash recreation at Ocean Beach, and it should be institutionalized as a Section Seven Special Regulation. Further, I believe that all properties added subsequent to the 1979 Pet Policy and in the future should have historical off-leash recreational usage allowed. This would accurately reflect the enabling legislation for this National Recreation Area which GGNRA management has held in disregard for quite some time. I also believe the GGNRA's inclusion of a Compliance-Based Management Strategy as well as the GGNRA's failure to commit to a Section Seven Special Regulation following this process indicates a lack of good faith and an intent to deceive the public as the GGNRA did following the implementation of the 1979 Pet Policy which the GGNRA later decried in Federal court as an "error". I believe that my dog and me should be afforded the same rights as any other taxpaying, law-abiding citizen. This includes full, complete and equal use of the public facilities that my tax dollars support. driver's licenses are not denied to all because some drivers cause accidents. We dog owners should

no longer be made to feel like criminals in our own community, simply for trying to maximize the health, happiness and longevity of our family pets through exercise and socialization. Public parks belong to all of us, and all users should be able to share the benefits of these open spaces in a mutually respectful manner." de-criminalize a recreational activity that brings many neighbors together. Dog owners are taxpayers too. As a responsible dog owner myself, I value the time I spend with other dog owners, and enjoy that sense of community. A leash rule may be an easy answer but it is far from fair or right. The nature of the experience with the dogs off-leash - in which we are letting the dogs socialize, run, play, etc. - fosters a type of camaraderie that is increasingly rare in today's society, and it would be a great loss to our community were it to become unavailable. A small minority of owners may not be as responsible as they need to be, but to deny all dogs the opportunity to run free is unconscionable. They simply cannot get enough exercise if they are always leashed. When the rights of some are restricted, it is called discrimination. How can it be that a few people can disallow the many access to a public space and restrict their freedom? When one space becomes restricted what's to stop the spread of restriction? I am angry over how discriminated against we dog owners are. What other group is consistently labeled by the actions of a few? We are degraded to "those dog people" as soon as we wish to have off leash areas and/or times to enjoy with our dogs. What other group loses their privileges just from the actions of a few bad ones? People speed, but not everyone else gets a ticket. Drunk drivers can lose their license, but not all drunks are forbidden to drive. The way we are treated if applied to every aspect of society would be say if some young males went on a killing spree, then every male of that age would be confined from the public. Yet people say I know most of you dog owners are good responsible people with well trained behaving dogs, but you lose because of the actions of a few bad ones. This type of discrimination is totally not tolerated in any other area of of our lives. We dog owners are expected to "police" other dog owners in order to maintain what privileges we do have. Not only are we expected to keep our dogs behaving, and clean up after them, we are suppose to make sure other dog people we don't even know do same. This includes protecting sensitive habitats, that most of us have supported saving to start with. Sure would be nice if people with unruly kids were under other parents peer pressure to make their kids behave. Do other drivers have to do that when driving? Do people shopping have to keep other shoppers behaving? The thing is we do. We are the most self policing group out on a public beach or hiking area. I would like to see discussed is having more areas to take dogs to instead of less. I am not talking dog parks. I am talking about enjoying a long walk with my best friends, playing on beaches, enjoying the same rights of every other citizen. When a area is the only option for miles around it becomes overused and impacted. Then it is held up as a example of what dogs do to the environment. Where common sense would say if people had more choices in every area then those places would not be overused as people would then

be spread out with their dogs. It is the same as putting only two public parks in San Francisco and then saying how overcrowded and overused they are. Or saying people could only go to Baker Beach. Then forbidding people on beaches because of overuse! To me, it isn't even about the dogs so much as is about people being able to have some basic freedom to enjoy their dogs outside. When there is a leash law everywhere it isn't just leashing the dog, because at the other end of the leash is a person. We respect the environment, but it we need to have our areas too. It seems we are being totally discounted and will soon have no place to play freely. Just in fenced parks. This is not healthy for people let alone for dogs. I feel we have very few areas left and those are being taken. Especially in urban areas, we need our open space too. Are we people not as important? People need some place to just be unleashed as well. More and more laws and rules are being placed upon everyone. This takes away from a healthy mental state of mind. We need places to just walk, and play, without some law being broken just because we are there!

Correspondence: Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022 Dear Mr. Dean, I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law. The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in

both fact and intent with the original mandate for recreation upon which the GGNRA was founded. This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others. The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

- ? Honor the original 1979 Pet Policy.
- ? Respect dog-walking as legitimate recreation.
- ? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.
- ? Exclude speculative, exaggerated, biased, or misleading statements and studies.
- ? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).
- ? Enable professional dog walking and align any professional dog walking rules with county or city regulations.
- ? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

These are my personal comments and observations regarding this plan: The community building such urban recreation areas creates for local pet owners is paramount in upholding the 1979 pet policy. Dogs are our family members and more people than ever have pet companions; this is a trend which is not going away and will only continue to grow. To attempt to restrict access and ignore the reality of society is akin to unsuccessful policies such as Prohibition. And as such, the health of human and canine family depends on access to walking areas. Moreover, the community who uses these areas is largely conscientious and well-educated about the impact they and their canine companions have. Most of us only use a small portion of the GGRNA as it is. Until I had a dog, I never even visited Fort Funston. It is fantastic. If you have ever walked a dog there, you will have met and talked to so many kind people. I can't believe anyone would complain about pets visiting the small portions of the GGRNA that they do. Pet owners are by and large compassionate, compliant, and responsible. Do not penalize us for the wrong-headed approach of a few who are misguided. Our dogs can't vote, but we vote for them. Sincerely, Lynne Robertson & Cali San Francisco, CA 94117

May 24, 2011

Frank Dean, Superintendent Golden Gate National Recreation Area
Building 201, Fort Mason San Francisco, CA 94123

Dear Superintendent Dean:

I am writing concerning the proposed Dog Management Plan.

I urge the GGNRA to adopt the policies for each site that would be most protective of natural resources and wildlife, especially endangered or threatened species. I believe the top concern for national parks should be preservation of the environment and of wildlife.

I also am concerned about the many times I have been approached, touched, or jumped on, whether playfully or aggressively, by off-leash dogs in some areas, especially Crissy Field. Off-leash dogs represent some amount of injury that is just waiting to happen. I would prefer that leashes be required in all of Crissy Field, but if off-leash areas are permitted, I believe they should be fenced. It is plain that neither dogs nor many of their owners or walkers will voluntarily obey leash laws at Crissy Field. Furthermore, the Park Service should vigorously enforce full compliance, not just compliance at a 75 percent level.

Thank you for considering my views.

Sincerely,

Charles S. Klein Resident of Oakland, user of GGNRA

Correspondence: As with the entire National Park system, the Golden Gate Park's mission is to protect the natural and cultural resources, not allow recreation to undermine it. By supporting 'Alternative D,' we best reflect our national park values. Wishing to extend the lives of many species, protection from both humans and domesticated untethered animals seems like a good solution. Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined. More successful accommodations to those diverse park user groups, such as runners, horseback riders, families, and those with service animals, would be by offering more than one trail and more beach areas free from dog recreation. Please support limiting off-leash recreation. By fencing in a specific area for off-leash free running - an area not critical to wildlife habitat - this compromise will both fulfill the Park system's mission and allowing wildlife protection. Thank you for improving our parks. Our family has been richly blessed by having these places throughout the country available to us. We hope the parks continue to be as well maintained so they can be cherished by our children's children as well.

Correspondence: Dog parks in California are popular and needed as healthy outlets for dog

energy. However, in my view, they need to be carefully selected. At times, image or territory on the map does not give information about the true needs of the environment in those places. At Golden Gate area, so close to major city and harbor, having a park of National Park stature is a fragile treasure. It does not seem to be appropriate towards utilization by even beloved household pets. In every dog park I have ever seen, greenery gets nearly destroyed and birds and animals devastated.... adorned by leftovers of pets' excrement. I am not familiar enough with the Golden Gate area, but I suggest seriously that it should be protected for all nature's living there without fear and struggle, thus remain recreational for the body, mind and spirit as only the undisturbed parks render.

Correspondence: The GGNRA is a designated National Recreation Area, not a national park. If an estimated 15-25% of San Franciscans own dogs, this plan ignores their needs and desires and creates an overload at the few legal, off-leash parks remaining. Dogs need large off-leash spaces to romp as they spend most of their lives in homes and on leashed walks. I am grateful to live near Pt. Isabel dog park in the East Bay, but as leash restrictions tighten in other places even Pt. Isabel is impossibly crowded on weekends.

We who own dogs love being out in nature with our dogs, enjoying watching them stroll or romp around. We are also generally educated and vocal about the needs of our dogs. I find it hard to believe that the GGNRA is not finding ways to designate large off-leash areas in the new plan, as has successfully happened in communities such as Seattle and Denver. People will take their dogs off-leash anyhow; better it be in a designated area than in an area with endangered critters and no supervision.

Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022 Dear Mr. Dean, I am writing to you to voice my opposition to the GGNRA's draft dog management plan. I believe the GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded. This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others. The GGNRA draft

management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

1. Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation.
2. Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.
3. Exclude speculative, exaggerated, biased, or misleading statements and studies.
4. Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).
5. Enable professional dog walking and align any professional dog walking rules with county or city regulations.
6. Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

On a more personal note, I routinely walk my dog at Crissy Field and have never encountered a single negative incident. I consistently encounter responsible pet owners who supervise their dogs vigilantly, pick up after their dogs, and have excellent voice control over their dogs. Dog walking at Crissy Field have given both me and my dog wonderful social experiences and is without a doubt one of the best parts of living in San Francisco. My dog is my family and taking away the GGNRA off-leash areas would be akin to taking away all the playgrounds from those who have children. I sincerely urge you to honor the original 1979 pet policy and continue to provide bay area dog owners with the extensive off-leash and on-leash dog areas that we have enjoyed responsibly for years.

Sincerely, Melanie Fitzgerald San Francisco, CA 94110

Correspondence: I'm writing to express my support for the NPS's mission is to protect our natural and cultural resources, especially throughout the Golden Gate NPS where the endangered W Snowy Plover nests along with other shorebirds, waterfowl and marine mammals. With my work to protect wetland habitat and the funding and time and efforts of partners to protect these vital and diminished habitats throughout the Bay area, it would be counterproductive and detrimental to NOT have these protections in place in our vast and beautiful NPSs.

Please do not allow recreation to undermine it. Alternative D best reflects the national park values: --Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined. --The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by offering more than one trail and more beach areas free from dog recreation. --Require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs. --Limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Thank you for your time and consideration of this important matter

Caroline Warner

Correspondence: This DEIS is invalid because it fails to meet its legal obligation to take into consideration the negative effects the proposed changes would create for humans, their dogs and the surrounding environment (e.g. local parks). Further, the studies/science utilized to support allegations of damage to resources in the GGNRA are fatally flawed - the positive impacts are ignored and the negative impacts are unverified. For example, this DEIS omits the Warren study of the snowy plover which concluded recreation of dogs and their owners does not negatively affect the feeding of the plover. Instead the DEIS relies on a study performed by Audubon activists who recommend Draconian restrictions which are unjustified in areas that are not critical habitat. Therefore, I believe the 1979 Pet Policy should be implemented in its original form with no restrictions on off-leash recreation at Ocean Beach, and it should be institutionalized as a Section Seven Special Regulation. Further, I believe that all properties added subsequent to the 1979 Pet Policy and in the future should have historical off-leash recreational usage allowed. This would accurately reflect the enabling legislation for this National Recreation Area which GGNRA management has held in disregard for quite some time. I also believe the GGNRA's inclusion of a Compliance-Based Management Strategy as well as the GGNRA's failure to commit to a Section Seven Special Regulation following this process indicates a lack of good faith and an intent to deceive the public as the GGNRA did following the implementation of the 1979 Pet Policy which the GGNRA later decried in Federal court as an "error".

Frank Dean, General Superintendent

Golden Gate National Recreation Area

Fort Mason, Building 201

San Francisco, CA 94123-0022

Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the

original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the tens of thousands of Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

* Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. * Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. * Exclude speculative, exaggerated, biased, or misleading statements and studies. * Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). * Align commercial dog walking rules with county or city regulations.

These are my personal comments and observations regarding this plan:
(here's where you fill in your own personal story and what you've seen when you've been out at the GGNRA)

Sincerely,

Emy Sakai

Correspondence: Please continue to allow us to enjoy our home, our trails, the beauty of the

ocean and environment and allow us to take walks with our children and our dogs, our family. My family enjoys walking the trails in Mori Point, we often take our children and our dog. We enjoy the ocean, flowers, exercise and meeting our friends and strangers alike on the trail. We are respectful of the space, pick up any trash we see, stay on the trails and encourage others to do so. Taking away that privilege for our dogs will seriously impact the way we enjoy the space, exercise and our quality of life here in Pacifica. There are very many dog owners, not just in Fairway, or Pacifica, but the bay area that travel to this location for the trails, and stay to eat, shop and spend their dollars in Pacifica.

Correspondence: --The park's mission is to protect the natural and cultural resources, not allow recreation to undermine it. Alternative D best reflects the national park values. I urge the National Park Service to protect Golden Gate's imperiled wildlife from harassment by unregulated recreation. The park is home to more endangered and threatened species than any other park in the continental U.S. More than Yellowstone, Yosemite, and Sequoia & Kings Canyon combined! Protect these species and other protected wildlife from inappropriate activities such as motor vehicle use on beaches. The park continues to permit unregulated activities that disturb wildlife like western snowy plovers and marine mammals. Wildlife take refuge on Golden Gate's beaches to rest, breed, and rebuild energy for survival, yet unregulated off-leash dog recreation in these areas has resulted in habitat encroachment and wildlife harassment by dogs. Unleashed dogs represent the most significant recreational threat to wintering western snowy plovers. Endangered species

wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined. The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by offering more than one trail and more beach areas free from dog recreation. Require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs. Limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Thank you for listening. I implore you to give Golden Gate National Recreation Area imperiled species a chance to survive.

Sincerely, Elizabeth Ayala

Correspondence: Hi,

I live in San Francisco and live in the Mission District. I have a dog who visits Fort Funston daily and loves it!

I have some concerns about the GGNRA's dog management proposal,

including:

Compliance-based Management Strategy cannot be part of any plan. This would entail that no evidence of impacts from non-compliance being necessary, only the fact that there is non-compliance. This will potentially end off-leash access without giving people a chance to comment on the change. This punishes responsible dog owners for the bad actions of a few irresponsible ones. It must be opposed and removed. There is no justification in the DEIS for major changes. Please support formalization of 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

Thanks,

Manish Champsee

Exclude speculative, exaggerated, biased, or misleading statements and studies. ? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards

applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). ? Enable professional dog walking and align any professional dog walking rules with county or city regulations. ? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

These are my personal comments and observations regarding this plan: Most Saturday mornings, we take our dog Lola to Chrissy Field Beach to let her have a good run off leash. The pure joy on her face as she runs makes everyone who sees her happy too. It's like seeing nature as it should be. Chrissy Field beach is one of the few places in the city where there is enough space for the number of dogs, and the owners are mostly good about policing their pets and picking up after them. There are rarely any people on the beach at this time (between 10am and 11am) other than the dog owners. It seems a shame to ban dogs from the beach altogether at times when it isn't being used at all. The issues of appropriate clean up and keeping dogs out of protected areas is exactly the same for humans as it is for dogs. If you've ever been on the beach when there are families with young kids (and I say this as a parent with two daughters, ages 10 and 15 who I've been taking to Chrissy Field Beach since they were babies), you'll see almost the same behavior as you do with dogs. I saw a man follow his toddler over the fence of a protected area and play on it like it was their own private sandbox. Some dogs pee on the sand; so do some toddlers. Some owners don't pick up after their dogs; some families leave their children's dirty diapers on the sand. Most people are very good about taking care of the beach; a few are not.

We should support all groups who use the PUBLIC areas of our city responsibly, be they human or canine. It only causes bad feelings when one group is used as a scapegoat. I believe we can improve the quality of life for everyone if we use a little courtesy, common sense and compassion. Let's work together to come to a consensus that honors everyone's good intentions! Sincerely, Candy Buckner San Francisco, CA 94114

Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not

based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the tens of thousands of Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

Honor original 1979 Pet Policy and view dog-walking as recreation.

Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979.

Exclude speculative, exaggerated, biased, or misleading statements.

Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).

Align commercial dog walking rules with county or city regulations.

These are my personal comments and observations regarding this plan: Dogs do not negatively impact the environment. It is not the dogs that are stealing the nesting eggs from the birds, it is the crows and ravens! That is why there are fewer birds.

Mother Nature changes the landscape at Fort Funston on a daily basis. The wind, rain and wave water erosion cause the land to change dramatically. Everyday! So, it does not matter that the dogs run up and down the hills because they are always changing and will continue to do so, wether or not the dogs are there!

The dogs do not impact the ice plant - which is the natural plant that grows

out there. What the heck? Ice Plant????

Dog walkers benefit working people in allowing them to have time to go to work and spend with their families rather than doing this chore.

Dogs benefit from daily runs on the beach because they are better behaved and less aggressive when at home.

Dog walkers, by their sheer presence, keep gangs and violence off the beach and out of parks.

Our urban parks will be saturated with dogs and there will be a negative impact financially and more serious dog fights (and people fights)

There is a community of people that go to Fort Funston that will disappear and this is a tragedy.

Are the horses allowed to stay on the trails and we are excluded?

How the heck are we suppose to keep 6 large, excited dogs on leash going down the trails? I had my finger broken by a dog pulling me down the beach. How safe do you think it is for someone to be expected to dragged by 6 dogs wanting to run free? Also, I need my hands free for safety. The trails are unstable and sometimes I need to use my hands to stabilize myself or grab branches or rocks.

Sincerely, Janet Slissman San Francisco, CA 94116

Correspondence: The primary purpose of the park is to protect the natural and cultural resources within! Recreation should always be considered as secondary in importance. Alternative D best reflects these values. Moreover, there should be a higher level of protection from human disturbance, as concerns endangered species habitat... %75 is just not high enough. Somewhere above 90% would be much better.

The park should do more to make it accessible to different groups of users. Runners, horseback riders, families, people who need service animals, should be accommodated with multiple trails and types of trails. For those with dogs, off-leash recreation should only be in areas where it will not impact sensitive wildlife or habitat.

Correspondence: It is very important that any new land that the ggnra (or in general the national park) should obtain should not allow dogs at all and clearly there should be no dogs off leash. This federally funded park is the only that allows for dogs off leash and it should not be that way. Dogs should be on leash in all national parks. However, I can understand that people are used to one thing and will be very resistant to change, even though in this case the change is undeniably for the greatest benefit of all people and also better for the environment and our future. However, any new land should be treated as it should be treated with no dogs off leash and preferably no dogs at all. In particular, I am concerned about the new area on the san mateo coast. Please don't let dogs ruin this space for others and future generations.

Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness area like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. Exclude speculative, exaggerated, biased, or misleading statements and studies. Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). Enable professional dog walking and align any professional dog walking rules with county or city regulations. Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any

public input.

Sincerely,

Ally Blake

Correspondence: The pit pull attack on another dog (resulting in that dog's death) this past Sunday is yet another example of why dogs should not be allowed off leash and should be restricted to certain areas. All the dogs involved were on the beach off leash and this likely would have been prevented had the dogs been on leash. The owner and the pit bull got away which is another reason why there needs to be a good way of identifying dogs. All dogs should have permits and an ID (similar to a driver's license) should be clearly visible for others to see. From this and many other dogs events, I believe permits and "driver licences for dogs" (all dogs should wear vests with ID on side) is a very good idea. Any person that brings their dog without an ID should get a warning and then a fine.

Correspondence Type: Web Form

Correspondence: Dear Superintendent Dean,

Im a San Francisco resident born and bred and have been taking my dogs to Baker beach, Fort Funston and Crissy Field even since I was a toddler.

The human animal bond is very important to me. As a responsible dog guardian, I keep my dog under voice and sight control, clean up after her/him, and keep her/him out of the fenced dunes and vegetative areas. It is important for my dog walking friends and me that areas above remain open for off leash dog walking access.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site specific conditions.

As a responsible dog guardian and advocate for animals, I know it is crucial

that our dogs are well behaved and trained in order to peacefully co-exist in an urban environment and adequate exercise and socialization is essential for a well-behaved dog. Having places where I can take long walks with my dog allows me to get the exercise I need while also meeting my dog's needs. Without access to the small amount of land in the GGNRA we currently have, I am very concerned that many dog and dog guardians will not have sufficient opportunity to exercise and recreate.

Some areas within the GGNRA also serve as a place of solitude for me and provide me with a very important peace and safe outdoor space and experience within the San Francisco Bay Area, a large metropolitan area.

This DEIS and Plan doesn't recognize that environmental values include both recreation and nature. In many places, the DEIS treats the environment and recreation as opposing values, i.e., that recreation only harms natural resources. The document doesn't acknowledge that people care about both and that people with dogs are often also good stewards of our environment.

The DEIS doesn't recognize that many areas of the GGNRA are located in or next to urban neighborhoods. The DEIS excludes the quality of the urban environment from its scope, saying it's not significant. The reality is that the GGNRA provides much needed open space in a major urban area. This omission is disconcerting because the fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) to serve the metropolitan Bay Area. The dynamic interrelationship between GGNRA and our neighborhoods is exactly the human environment that the EIS is required to study, but failed to do so.

The DEIS notes some studies and general tendencies of dogs to harm natural resources, but with few exceptions, there is little documented site-specific impacts to support the restrictions of the preferred alternatives. Further, there is insufficient documentation that considers other impacts ? other park visitors that disturb and impair the natural resources, other wildlife, Mother Nature, boot camps, bicyclists, huge crowd attracting events such as Fleet Week, festivals and Walk-a-thons. The proposed broad limitations in the DEIS are without site-specific science that demonstrates that problems with the quality of GGNRA's natural resources are actually attributable to dogs and not to other factors.

The DEIS needs to provide full disclosure to the public and decision makers. If dog related disturbances are having a significant negative effect on wildlife, for example, the DEIS needs to provide site-specific scientific evidence as documentation and undertake a scientific evaluation as to whether people or other factors are also causing or contributing to the problem noted. [You could give examples where the DEIS says there are impacts in an area that you have not observed in that area or where the

problem is does not seem to be caused by dog]. If they are, GGNRA needs to provide an analysis that considers whether people should also be restricted from these areas. We need this documentation in order to comment meaningfully on the draft plan and DEIS. The science needs to be sound and the consequences need to be fully and fairly disclosed for everyone ? so that an informed decision can be made.

And lastly, after much consideration, I support Alternative A, the No Action alternative and would also include the "New Lands" areas (such as Cattle Hill, Sweeny Ridge, Mori Point, Pedro Point and Milagra Ridge and Rancho Corral de Tierra) in San Mateo county.

Respectfully,

Susan Lee San Francisco, CA 94115

Correspondence: Golden Gate National Recreation Area may be one of our country's boldest

park experiments: setting aside highly-prized land to provide a national park experience near a heavily urbanized area. Indeed, the park is home to more endangered and threatened species than any other park in the continental U.S.--more than Yellowstone, Yosemite, and Sequoia & Kings Canyon combined!

To help protect these species and other protected wildlife, inappropriate activities such as motor vehicle use on beaches were banned. However, the park continues to permit unregulated activities that disturb wildlife like western snowy plovers and marine mammals. Wildlife take refuge on Golden Gate's beaches to rest, breed, and rebuild energy for survival, yet unregulated off-leash dog recreation in these areas has resulted in habitat encroachment and wildlife harassment by dogs. For example, the park has reported that unleashed dogs represent the most significant recreational threat to wintering western snowy plovers.

--The park's mission is to protect the natural and cultural resources, not allow recreation to undermine it. Alternative D best reflects the national park values.

--Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

--Limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Correspondence: I am very concerned about the current situation in GGNRA regarding dogs having what is effectively unlimited and unrestricted access to all the areas of the park. Specifically at Crissy Field I have noticed damaged fencing and also seen dog owners facilitating their dogs following them into areas that have been fenced off or marked with the universal symbol for "no dogs". Along the Land's End trails dogs are running unleashed, even though I do believe I saw signage, and I've had to step aside on narrow parts to let the dog and running owner pass. Dogs and people are just 2 species that need to make use of these areas. I firmly believe that access for dogs needs to be restricted by fencing and by enforcement of "no dogs" signage in those areas and along trails that are narrow or pass through areas that are being used for nesting or replanting. And for their owners, compliance has to be firmed up; setting compliance for 95% is entirely reasonable. The current requirement of 75% is a "C" grade in school; it's average, not good. 95% is an "A". It's

really too bad that careless or belligerent dog owners have usurped control of the parks from other visitors and from the other species that live there. In addition to restricted access, education and enforcement of stricter standards is what I believe to be the only solution to what has become a depressing problem.

Correspondence: The Golden Gate National Recreation Area is a wonderful place for wildlife of many kinds to breed, rest and visit. There are many endangered species who visit regularly. The current rules for unleashed dogs, horses, runners and hikers are really encroaching on the needs of these species. It should be possible to set-up paths, beaches, and other places that will provide ample recreation for the humans and their dogs and still protect the wonderful wildlife that were the main reason for setting up the park system in the first place.

Correspondence ID: 3461 **Project:** 11759 **Document:** 38106

Correspondence: Dear decision maker,

I am contacting you regarding the Golden Gate National Recreation Area, and ways to protect and preserve the wildlife there.

I believe that endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

The park's mission is to protect the natural and cultural resources, not allow recreation to undermine it. Alternative D best reflects the national park values.

The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by offering more than one trail and more beach areas free from dog recreation.

Two suggestions: -Require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs. -Limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Thank you for your consideration.

Best regards, Gregory Coyle

Correspondence: Greetings, I was a long-time resident of San Francisco and still visit the GGNRA and San Francisco parks weekly.

More controls on dogs are desperately needed in the parks to protect wildlife, plant life and

I volunteered for the GGNRA on several bird censuses over a period of many years. While doing the counts and monitoring, I frequently witnessed dogs chasing birds, going into areas marked off as cliff swallow habitats and trying to climb up to the nesting holes and, of course, defecating all over natural habitats. I saw dogs going after quail babies in Golden Gate Park, as well as dogs digging up plants and barking at nesting herons.

Meanwhile, their owners walked on, not having the dogs under voice control and rarely putting leashes on them, even after their misconduct had been pointed out by myself and other volunteers.

At Crissy Field and Fort Funston, I have been attacked five times and barked at threateningly many more times. I am a senior woman, and I certainly don't do anything to antagonize dogs. Fortunately, I was not harmed.

Unfortunately, dogs can be very destructive. More controls are needed so that other living things are not harmed by them in our parks.

Correspondence: I am writing to oppose the GGNRA's draft dog management plan. I have been coming to Fort Funston with my dogs since 1985. I currently have 3 dogs, two of them rescue dogs. One of my rescue dogs, Cosmo, is a Border Collie/Golden Retriever mix and he is deaf. When we adopted Cosmo we were told that he would never be able to go anywhere off leash because of the increased danger of getting hit by a car, since he would never hear it coming. Cosmo has been going to Fort Funston for 8 years. He knows the

territory and is very comfortable there. This is in contrast to the anxiety he experiences when he is in an unfamiliar environment, which becomes readily apparent by his change in behavior. Fort Funston is the only place in San Francisco where Cosmo can safely run and play off leash. Border Collies need to run daily and there is no possible way for them to run as much as they need to while on a leash.

In addition to the benefits that my dogs enjoy by spending time at Fort Funston, it is so vital to my wellbeing and the wellbeing of my fellow dog lovers. An hour at Fort Funston is filled with fresh air, laughter and exercise. You can't help but smile when you see all of the dogs playing. One of my rescue dogs is a 7 year old Bassett Hound named Sasha. I have always known that Bassett Hounds can move much faster than one would think, but this morning Sasha was playing with a very fast little dog. No one had ever seen a Bassett Hound run so fast and for such a long time. We couldn't stop laughing, and laughter is so rare and so healthy. Sasha needs to run to keep her weight down to avoid back problems down the road. She couldn't have played like she did this morning at a city park.

My third dog is a 5 pound Chihuahua named Schnecken. While she could get her exercise anywhere due to her petite stature, I have never seen her as happy as she was this morning. The weather was perfect and a wonderful time was had by all. It would be a tremendous loss if we will no longer be able to have such times again.

The GGNRA's draft dog management plan is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness area like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

? Honor the original 1979 Pet Policy. ? Respect dog-walking as legitimate

recreation. ? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. ? Exclude speculative, exaggerated, biased, or misleading statements and studies. ? Provide reasonable ways to address any significant adverse impacts from recreational activities. ? Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). ? Enable professional dog walking and align any professional dog walking rules with county or city regulations. ? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

Thank you for your consideration.

Type:

Correspondence: The GGNRA's Preferred Dog Plan appears to have been developed without any consideration given to the impact the proposal would have on the city of San Francisco itself and its residents who actually use these areas.

The GGNRA is nothing like Yellowstone National Park and cannot be managed in the same way. Yet the NPS seems to know only one management model and therefore feels it must apply the same regulations to the GGNRA that it does to national parks. The GGNRA is an urban recreational area. Since San Francisco is so densely populated, Ft. Funston and Crissy Field serve as backyards for many San Francisco residents with dogs. For many of us, our dogs are like our children and it is our responsibility to provide what they need for healthy, happy lives. Many of us visit Ft. Funston and Crissy Field every single day to provide the off-leash recreation so essential for our dogs' well-being.

Although The GGNRA was required to consider the impact of their proposed changes on city parks, they failed to do so. The city's limited supply of dog parks have proven to be completely inadequate for their purpose. This point that was driven home very clearly on Friday, March 11, when the tsunami warning forced the closing of Ft. Funston and Crissy Field. Stern Grove, one of the largest off-leash city parks, was completely overwhelmed by dogs -- on a weekday.

Currently 99% of the GGNRA overall is closed to off-leash dogs, and it has been estimated that the current proposal would decrease that remaining 1% by 90%, leaving approximately one tenth of one percent available for off-leash dog recreation. The proposed reduction at Ft. Funston and Crissy Field is estimated to be 75%. How can this possibly be considered shared use for those San Francisco dog guardians who currently use Ft. Funston and Crissy Field far more than any other group?

Many years ago only drug-dealers and the homeless frequented Ft. Funston. It was dogwalkers who discovered it was the perfect place for their dogs to run off-leash. By doing so they gradually forced the drug-dealers and the homeless out of the area, making it safe for others to use. Now the GGNRA is saying to them "Thanks for making Ft. Funston safe, but you are no longer welcome here."

Whatever management problems may exist in the GGNRA cannot be blamed on dogs, so don't make them your scapegoats.

Correspondence: Please reconsider. These are two of the reasons there are so many dogs in the shelters. People need a place to take their dogs, especially living in the city, where many do not have access to a yard. Dogs need to run, or often they have behaviour issues, stemming from built up energy and boredom, and guardians need a place to take them.

This hurts everyone. The shelters will be even more overcrowded.

Those who adopt should be rewarded, not made to feel as though no one wants them to succeed.

This also affects the dog-walkers and they provide a much needed service to all of those who work long hours, and are unable to give their dogs the outings they need to be healthy.

I implore you to consider these issues.

Sincerely, Sacha Blake

Correspondence: Hello,

I am writing to OPPOSE the proposed GGNRA Dog Management Plan that cuts almost all dog recreation including current on-leash trails and voice-control areas.

Bay Area people depend upon the GGNRA for outdoor recreation to exercise and to appreciate nature. This includes some 450,000 (15%) Bay Area residents with dogs who use the trails for daily exercise, health, and socialization, and there are few other dog-friendly trails, particularly in San Mateo County.

Have you ever seen the sheer glee and joy in the face of a dog off leash? Free to be dogs, not leashed subordinates to humans, they come alive and send joy right back to their owners. Dogs can play, run and frolic without destroying the environment.

Of course, dogs do have some impact on the environment, but it's always a few bad dog owners, (not the dogs) who ruin it by not managing their dog's recreation. The majority of dog owners ARE responsible.

Perhaps we, as dog owners, should have to take and pass a test on dog "civics" that would give us a right or license to have our dogs off leash. The non-passing/non-licensed dog owners should be fined and kept off the trails, not every other dog owner.

If this plan does pass, I will probably never adopt another dog again. If dogs can't play, what value is their living? I know that dogs are NOT human, but to many of us, they are equal members of our family. Who in their right mind would always maintain their child on a leash, prevented from romping or playing? Why in the world do we think we are so much better than these beautiful loving creatures and how can we even consider restricting their freedom so severely?

I urge you NOT to pass the proposed plan for the sake of all dogs and our own humanity. It is the right thing to do.

Respectfully, Therese Langille

| Correspondence: | This DEIS is invalid because it fails to meet its legal obligation to take into consideration the negative effects the proposed changes would create for | | |

humans, their dogs and the surrounding environment (e.g. local parks). Further, the studies/science utilized to support allegations of damage to resources in the GGNRA are fatally flawed - the positive impacts are ignored and the negative impacts are unverified. For example, this DEIS omits the Warren study of the snowy plover which concluded recreation of dogs and their owners does not negatively affect the feeding of the plover. Instead the DEIS relies on a study performed by Audubon activists who recommend Draconian restrictions which are unjustified in areas that are not critical habitat. Therefore, I believe the 1979 Pet Policy should be implemented in its original form with no restrictions on off-leash recreation at Ocean Beach, and it should be institutionalized as a Section Seven Special Regulation. Further, I believe that all properties added subsequent to the 1979 Pet Policy and in the future should have historical off-leash recreational usage allowed. This would accurately reflect the enabling legislation for this National Recreation Area which GGNRA management has held in disregard for quite some time. I also believe the GGNRA's inclusion of a Compliance-Based Management Strategy as well as the GGNRA's failure to commit to a Section Seven Special Regulation following this process indicates a lack of good faith and an intent to deceive the public as the GGNRA did following the implementation of the 1979 Pet Policy which the GGNRA later decried in Federal court as an "error".

Correspondence: This is a very poorly thought out and unfair plan, that does not properly balance the allocation of resources to the constituent users. The current regulations address most of the complaints re dogs and should be enforced; there is no need to exclude properly supervised dogs off leash on most of Ocean beach, particularly when most of concerns stem from excessive and inappropriate human usage, i.e. alcohol, graffiti, drugs, bonfires, trash, etc. There are no convincing peer reviewed scientific data that these regulations are necessary for protection of habitat or wildlife and the solutions are draconian. One can be sure that there will be no accommodation even if, in 5

years,there is no improvement no improvement in any outcome measures. Cramming all the dogs and handlers into a small area will only lead to more problems of a different nature.

Correspondence: As a former resident of San Francisco - my father and grandmother were natives of the city - I am a supporter and a fan of Golden Gate Park. I lived just two blocks from the edge of the park and have spent much time there over the years.

I am concerned about the presence of dogs that are not leashed and am writing to ask that all off-leash areas be enclosed to protect the many varieties of wildlife there. Please work to limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Golden Gate Park is a special place, one like no other, and it deserves the greatest level of protection possible. Thank you.

Correspondence: i have been following the GGNRA's attempt to eliminate off-leash dog walking at its current locations for over 10 yrs. now. And after 2 yrs. of Negotiated Rule Making, an astronomical cost, and 2400 pages, i'm stunned to read the DEIS and it's proposed alternative. I concur with many who have read this tome, there is nothing to justify such a dramatic alteration of the current off-leash dog areas. There is no empirical data to support the claims of increased safety incidences, at least nothing that would justify this kind of restriction. And the plan's attempt to link off-leash and leashed dogs to severe environmental degradation just isn't valid. Increased use of the parks will have a detrimental affect on its ecology... but that's because more people, with and without dogs, are using the parks as they were supposed to be used.. for recreation. I strongly request that until you can unequivocally prove dogs are indeed hindering the mating of the snowy plover and bank swallow, and that these species are dependent on these particular nesting areas for their survival, you continue to allow dogs and most importantly dog owners the right to recreate in these precious areas. Thank you.

Correspondence: To Whom It May Concern:

I'm writing to comment on the proposed dog management plan for the GGNRA. I am going to confine my comments to Ft. Funston, because that is the GGNRA location that I visit most frequently, although I also occasionally visit Ocean Beach and Crissy Field.

I strongly object to the proposed alternative for Ft. Funston. I walk my dog off-leash in Ft. Funston every week-and often multiple times per week-and I believe that the proposed alternative will prevent me from being able to enjoy the space.

I discovered Ft. Funston when I got my first dog three years ago. Because I wanted to walk her off leash to give her adequate exercise, I started going to Ft. Funston and began to appreciate what a wonderful place it is. As an urban dweller I don't get out into open, natural spaces as much as I would like. But because of my need to walk my dogs, I now enjoy the ocean breeze and view at Ft. Funston, and get some exercise as I walk along the beach in a way that I never would if I didn't have a dog.

My main objection to the proposed alternative for Ft. Funston is that it seems to ignore the fact that Ft. Funston is not a pristine wilderness area ? it is, in fact, a recreation area that is meant for human recreation as well as for animal and plant life. The proposal elevates the needs of non-human animal and plant species above those of human beings. In fact, it does not acknowledge at all the value of recreation for city dwellers and instead

considers recreation to be a negative impact on the GGNRA.

Wilderness protection is not the only use for public lands. Recreation is also a very important use ? especially in a dense urban area like San Francisco that has limited open spaces. When San Francisco gave control of Ft. Funston to the GGNRA, one of the primary mandated uses of the space was recreation. Right now the vast majority of those of us who use Ft. Funston as a recreational area are people with dogs-and your proposed alternative would limit our ability to enjoy the space in the way that we historically have.

The proposed dog management plan also does an inadequate job of analyzing the impact of the proposed changes at Ft. Funston and throughout the GGNRA on San Francisco city parks. Your perfunctory listing of other park spaces that are available within a ten-mile radius does not address whether or not dogs are allowed off leash in those parks and what the impact on those parks will be when hundreds upon hundreds of people are forced to begin using those parks instead of the GGNRA. The city of San Francisco should be extremely concerned about this aspect of your proposed alternative.

I recommend that instead of the proposed alternative for Ft. Funston, the GGNRA fix the fencing around the wilderness protection area, which you acknowledge in the draft dog management plan is partly buried, and improve the signage. Other than that, you should keep the rest of Ft. Funston off-leash, as it has been for decades.

The highest use for Ft. Funston, whose pristine state ceased to exist decades ago when barracks and coastal batteries were built on the land, is recreation for the public.

Correspondence: Please keep Fort Funston an off-leash play area for dogs. People who take their dogs there are super respectful of the habitat areas, always pick up dog waste, and only take dogs off leash that are social, friendly and under good voice control. It is one of the few areas in the Bay Area where dogs can really run, people can enjoy a scenic vista, and dogs can swim and play with lots of other friendly dogs. It would really be a shame to take one of the only outdoor places that is possible away from the dogs of the Bay Area and the people that love them.

Frank Dean, General Superintendent Golden Gate National Recreation Area
Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed and legislated as an urban recreation area, not as a pristine wilderness area like Yosemite. The San Francisco Bay Area is one of the most densely populated regions in the whole United States. Every person working in conservation will tell you densely populated urban areas are GOOD for conservation because mindless sprawl like in the rest of the country decimates habitat for flora and fauna. To use the Endangered Species Act and a species whose true extinction threat such as the snowy plover as a blunt instrument to achieve more conservation at the GGNRA is highly questionable from all angles and may be counterproductive in the long run. Any true conservationist who sees the big picture will let the dogs run on the beach and fight like hell to combat global warming and the

nuclear industry.

Urban recreation and the GGNRA are an indispensable part of what is essential for the health and well-being of the region's six million people and their numerous pets. The use patterns of the GGNRA over the decades are something that was legislated at the time of creation and any significant change of policy must be put up to a referendum vote for all those who live in the Bay Area. The pet policy is only one of the proposed changes, if this policy proposal is an indication that the GGNRA is intended to be transformed into a National Park, this must be done transparently and democratically, not in a smoke-filled backroom without public input.

In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded. This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to: ? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. ? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. ? Exclude speculative, exaggerated, biased, or misleading statements and studies. ? Provide reasonable ways to address and mitigate any significant adverse impacts from recreational activities. Use objective standards applicable to all recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). ? Enable professional dog walking and align any professional dog walking rules with county or city regulations. ? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

Correspondence: I would like to add my concern about restricting leashed dogs on Mori

Point.

Our daughter lives in Fairway Park and we have taken walks with their dog for about nine years.

Open space is hard to come by near a city. Many people have dogs and will be expected to bring them to an open space.

Requiring dogs to be on a leash is certainly reasonable and enforcement can be expected to be met with good will by most people.

An arbitrary rule restricting leashed dogs to only two paths is just asking for enforcement problems.

Re: Draft Dog Management Plan/Draft Environmental Impact Statement

Dear Superintendent Dean,

My name is Nancy Lund. I live in Berkeley in Alameda County. I frequently visit Fort Funston and Crissy Field.

I strongly believe that multi-use open space that includes off-leash dog walking is compatible with all other recreational uses and with the preservation of habitat and wildlife within the GGNRA.

All users (including cyclists, hikers, people with kites and Frisbees, picnickers, festival-goers, the Fleet Week crowds, and even wildlife) clearly have some impact on the GGNRA. In the Draft Environmental Impact Statement, the National Park Service inappropriately singles out dogs. Its conclusions are not based upon sound science nor long-term monitoring of site-specific conditions.

Any impact that dogs may have can be effectively mitigated through better signage, creating environmental barriers, and education of park users. The GGNRA should partner with community, animal welfare, and conservation organizations on programs that could eliminate perceived problems and contribute much-needed resources.

The GGNRA was created to provide open space for recreation (including dog walking) for the metropolitan Bay Area. The existing 1979 Pet Policy has served the community extremely well for more than 30 years. I strongly support Alternative A, the No Action alternative, in the GGNRA and the "New Lands" areas (such as Cattle Hill, Sweeney Ridge, Mori Point, Pedro Point and Milagra Ridge and Rancho Corral de Tierra in San Mateo County).

Respectfully,

Nancy Lund Berkeley, CA 94708

Correspondence: I have been taking my dogs to Fort Funston for over twenty years. I don't know what I would do without it. Most dogs are noticeably more relaxed when off-leash resulting in very few altercations. As a matter of fact, in all the years I have gone there I have only had two issues with other dogs. Today's dog population that generally live in cities with working "parents" need the freedom to run and play to be healthy, happy animals. Considering the ratio of dogs to people today in San Francisco and the Bay Area, it is even more important that dogs and their owners should have a place like Fort Funston to walk and play regularly. There are plenty of parks where dogs are not allowed that dogless people can visit!!

Correspondence: May 26, 2011 Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022
Dear Mr. Dean, I am writing to oppose the GGNRA's draft dog management plan and sincerely hope you do not approve it. I attended an open house session in Pacifica on Weds March 9, 2011 to learn more about the plans and alternatives, and came away convinced that the GGNRA was not adequately taking a number of factors into consideration. Further reading and thinking on my part has reinforced this perspective.

I live in Pacifica, San Mateo County, and work as a professor at San Francisco State University. I have a busy schedule and rely heavily on many GGNRA areas to walk my two medium-sized (35-45 pound) Australian shepherd dogs on a daily basis. I visit Ft Funston with the dogs a couple of

times a week on average so they can run off leash there. Particularly important for me are the Milagra Ridge trails and the Mori Point trails because I jog there 3-4 times a week with the dogs, often as part of my training for half marathon trail runs. I also walk with my dogs and my 10-year-old daughter at least several times at Linda Mar Beach in Pacifica and the beach at the Pacifica Pier. I oppose the GGNRA preferred plan for a number of specific reasons.

First, when I am trail running the dogs constitute a form of security for me. Yes, they are getting much needed exercise, but they are also providing me another two pairs of eyes and ears. Given the isolation of many of these trails, especially when you are more than 2-3 miles from the trail heads, I would honestly not feel comfortable running or walking there without the dogs. As a note, I have been training for a June trail run in the San Pedro Valley County Park in Pacifica, where you cannot bring dogs at all, and after one or two training runs have realized how uncomfortable I feel going off the main thoroughfare without any accompaniment (and, unfortunately, it is rarely feasible for me to have another human companion). To ban dogs entirely from the Milagra Ridge trails, in particular, would make it more risky for women such as myself to use these trails for anything other than short walks, and in fact would make me sufficiently uncomfortable so as to prevent me from using them at all. Given the rarity of 13 miles of uninterrupted jog-able trail, this does not seem in keeping with the mission of the GGNRA to accommodate recreation and conservation. Furthermore, I know other women hikers who would similarly feel unsafe. I should add that we are not worried about cougars or coyotes but about potential human aggression, which is not unreasonable given the surrounding urban environment. Second, the rationale for the complete ban on dogs from trails such as Milagra Ridge seems highly flawed. At the March 9 open house in Pacifica I was told by the ranger there the GGNRA wanted to completely ban dogs from Milagra Ridge because it constituted one of the less spoiled natural areas in the county and hosted a variety of birds. The fact that Milagra Ridge is an island ecosystem with a wide array of species is undisputed, and is part of what makes the area special. However, this is true today although dogs are currently permitted there on leash. Since birds and other wildlife are clearly happy there, why change what is already working when it is at the expense of people like me who want to use these trails with my dogs? On Milagra Ridge in particular there is such thick bush and foliage on each side of the trail that it is almost impossible for dogs, on leash or off, to leave the trail and disrupt the animals. Furthermore, these trails are sufficiently steep and remote that very few people (with or without dogs) actually use them except die-hard hikers and trail runners like myself (again, especially beyond the 2-3 miles past the parking lot). The decision to ban dogs entirely from them seems based on an idealistic vision that is not in keeping with the GGNRA's mission. It does not take into consideration the traditional use of this land or the reality of what is working there today

already with the current leash law in place.

Third, by restricting more GGNRA land to dogs and pet owners you will place an incredible burden on existing San Francisco off-leash dog areas, and give those of us living in San Mateo County fewer and fewer options for taking care of our animals properly. Around one third of Bay Area residents own dogs, and many of these dogs need daily off-leash exercise to avoid canine behavioral problems. The more you make it difficult for busy people to exercise their dogs, the more likely it is that these dogs will have behavioral problems and end up in shelters. The alternative is to restrict dog ownership, especially ownership of medium and large dogs, to wealthy people who can afford to own private land. To provide sizable off leash access at places like Ft Funston is part of the mission of GGNRA to provide for the needs of all Bay Area and San Mateo County residents regardless of income and living situation. There are dozens and dozens of parks and wildlife areas in the Bay Area and northern California that do not allow dogs. We need the GGNRA to expand tiny percentage of dog-friendly parks and trails, not restrict them further. I believe the GGNRA can accommodate both recreation and conservation, as it has done for many years. It was designed as an urban recreation area, not a pristine wilderness area. I wish there were more of these in the state, but the Bay Area urban environment and the GGNRA is not the place to try and do this without comprehensive reform of all laws and norms regarding lifestyle, economics, etc. I urge you to consider revising your dog management plan to: ? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County, where more not fewer off leash and dog friendly areas are desperately needed

? Honor the original 1979 Pet Policy and respect dog-walking as legitimate recreation and need. ? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).

? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input. ? Enable professional dog walking and align any professional dog walking rules with county or city regulations. Thank you, and I hope you will take these comments into consideration.

Sincerely, Nicole Watts Pacifica, CA 94044

Correspondence: Thursday, May 26, 2011

Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022 Dear Mr. Dean, I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law. The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded. This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others. The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to: ? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. ? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. ? Exclude speculative, exaggerated, biased, or misleading statements and studies. ? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). ? Enable professional dog

walking and align any professional dog walking rules with county or city regulations. ? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input. These are my personal comments and observations regarding this plan: one my purest joys is watching my dog run free. She runs and jumps and plays and it reminds me of my own childhood. When she is on a leash, she still enjoys being out, but seems frustrated, and I similarly feel frustrated. While I do live in Oakland, I have spent time with my dog outside in various public areas of San Francisco, especially Christy Field. We've had many great times there, met numerous nice people with nice dogs, all of whom were off-leash and well-behaved.

At a more general level, San Francisco is a progressive place. We believe in reasonable personal freedoms, especially when those freedoms do not significantly impose on our neighbors (eg, gay marriage, medical marijuana, etc). Walking my dog does not impose on anyone -- if anything it brings joy to others (ie, "What a cute dog!").

But go ahead and pass your dog management plan. All it will do is make San Francisco suck for dog owners and they can come live in Oakland. We could certainly use the influx of nice, responsible dog owners and tax payers.

Sincerely,

Steve Hull Oakland, CA 94605

Correspondence: I would like to make a brief comment as a dog owner and citizen. I have walked my dogs off leash at Fort Funston for almost 20 years. During that time, I have been impressed by the collegiality and care for the environment shown by the user groups. I have also seen impressive restoration of native vegetation, which has not been in any way disturbed or impeded by the presence of dogs off leash. Almost all of the dog owners I have encountered over the years have been respectful of the off limits areas, have cleaned of

after their dogs, and have cooperated with Park Service personnel. In an era of budget cuts to our National Parks, the presence of many responsible dog owners is a real benefit as this kind of usage helps keep Fort Funston safe and accessible for all. Based on all of the above and on the lack of very few alternatives for safe and healthy off leash dog walking in the urban environment of San Francisco, I VERY STRONGLY oppose the proposed restrictions in the proposed Dog Management Plan. As a responsible dog owner and citizen, I believe that these new rules are unwarranted, unfair, and will have a negative long term impact on Forth Funston and the GGNRA if they are implemented. I have contacted my elected representatives about this and will remain actively engaged to do everything in my power to insure that this wonderful resource for people and doges - many of whom are from shelters - remains available to our community.

Kevin Shannon, M.D.

Correspondence: As originally outlined in the letter sent to you earlier, I am vehemently opposed to the Golden Gate National Recreation Area's (GGNRA) Draft Dog Management Plan. The plan proposes to either eliminate or severely limit dog-walking access in 21 locations in Marin, San Francisco and San Mateo counties - including traditional off-leash areas like Crissy Field, Fort Funston, Marin Headlands, Mori Point, Muir Beach, Ocean Beach, and Rodeo Beach.

For people with dogs in the GGNRA area,located in a major urban area with minimal open space, these restrictions will have a dramatic impact, much so that those whose pets are such an important part of their family very well might consider moving where there are less restricte rules and regulations. I believe an "acceptable" dog management plan MUST take into consideration the impacts of the proposed plan on neighboring city parks, on the health and well-being of people who enjoy recreational dog walking, their pets or pets of friends unable to walk their pets, and must respect the recreational values that are part of the GGNRA's original mission ("to provide for the maintenance of needed recreational open space"), which this plan fails to do.

To do anything opposed to the original GGNRA mission would be egregious and liable to civil action.

Type:

Correspondence: May 26, 2011 Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean, I have been a resident of San Francisco since 1978, and I have been a homeowner in the Forest Hill neighborhood since 1986. I have raised my daughters here as well as our dogs. We have spent years walking our dogs at Fort Funston and Crissy Field. While my children were in elementary and middle school, I walked at Fort Funston every single day, and when my children were in high school, I walked the dogs at Crissy Field every day. Now we alternate walks between the two parks, but still walk our well-behaved, under voice control dog at one or the other park each and every day. It is an important part of our lifestyle for the health and fitness of our dogs and us humans. I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions. It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option. The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal. The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents. After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program. Thank you for your consideration. Sincerely, Ellice Sperber San Francisco, CA

| Correspondence: | As a Mexican-born San Francisco resident who has been walking my dogs at Ft. Funston for about a decade, I strongly object to the GGNRA's assertion (on page 281 of the DEIS) that dogs in GGNRA may present a barrier to GGNRA visitation by low-income people, Latinos and Asians. Every time I have visited Ft. Funston over a ten year period, I have seen a wide diversity of people recreating there. Many of the dog owners I see at | | |

Ft. Funston are Latinos, Asians and African Americans, and the people range in age from children to people in their 80s. In fact, I see a more diverse group of people at Ft. Funston than I have ever seen at national parks that do not allow dogs. I often bring visiting family and friends from Mexico to Ft. Funston to see what a wonderful place we have for people who like to walk out in this beautiful part of San Francisco with their dogs. The GGNRA is not a national park and it is not a pristine wilderness area. It is a recreation area. I oppose all of the proposed alternatives in the Draft Environmental Impact Statement, because they all are an attempt to change these areas from recreation areas into national parks, which is in direct contradiction to the mandate under which San Francisco granted these areas to the GGNRA. I support the 1979 pet policy and believe that new areas acquired by the GGNRA should also include large off-leash, voice controlled areas so that Bay Area residents and our dogs can recreate there.

Correspondence: I have lived in SF for 17 years. I worked there for 28. I have lived in the east bay for 21 years. All of the time I lived in the city, and after, when I continued to work there, never a week went by that I did not take my dog to Fort Funston, or the Presidio. I was fortunate to be able to take my dog to work with me.

When I go into the city to visit friends, a trip to the beach, usually at the Presidio, is always on the list. The dogs are able to romp, while my friends and I have a bite to eat and chat.

I have watched over the years as more and more space is taken away from dogs and their stewards.

I am all for protecting wildlife, but that does include dogs. Dogs need open areas to run and get their energy out, not more enclosed, on-leash areas. Have you not seen the difference between letting a dog play with abandon and taking it for a walk on leash?

For years dogs and their people have enjoyed these special places, and yet somehow, these places still exist.

Have you ever noticed that dogs, and their people, are more than willing to include everyone else, the bird watchers, the joggers, the families, the bikers, the hikers, the kayakers, etc, but for some reason it is always the dogs that get excluded.

The majority of dogs that frequent GGNRA are well behaved.

As an east bay resident who frequents the city, and the GGNRA, I say leave these off leash areas alone.

Correspondence: I am a 63 year old Native American and Native Californian. I cannot tell you how fed up I am with bureaucrats that have evolved over my lifetime into petty tyrants and over-lords. Who in the hell do you people think you are?

You have invented reasons for eliminating dogs from Fort Funston for years; when in reality your agenda is some perverted sense of environmental protection. Everyone knows it, and I am not going to be polite and couch my words in socially acceptable form. The lot of you is not worth one dog.

Try this: Get the hell out of my state. I hope I live long enough to see the size and scope of the Federal Government dramatically reduced and individual rights restored to America.

You people are Fascists. And the irony is that you believe you are possessed of a superior intellect and pious moral sense. Has God spoken directly to you lately? I'm just curious because the kind of arrogance you people exhibit is strangely like the Islamic Fascists.

And by the way, pass whatever law you want. If I want to walk my dog at Fort Funston, rest assured...I am going to do it.

Correspondence: I'm against the proposal of taking away off-leash right at the parks/areas proposed by GGNRA, for the forllowing reason:

1) Dogs are part of nature. It is against nature to take away the rights for them to enjoy the nature in those areas which are few left. Most of parks are either disallowing dogs be or they have to be leashed;

2) We have taken our dogs to Fort Fuston for 15 years. I never see any seriour problems. Most dog owners are doing their duty by cleaning up after their dogs. Sometime, a few dogs may bark or not friendly to each other. But, they are being dogs! As long as the owner still have control over their dogs, what is wrong?

3) I know certain areas have birds and they don't like to smell dogs. But, most dogs owners will command their dogs leave those areas alone, as long

as they are aware of it. On the other hand, why human have to get into the conflict between the birds and dogs? Are they in harmony before human get in the middle?

4) Should GGNRA also consider the health of dogs living in those areas? They need to meet and play each other to live in a well-behaved social manner. Without allowing them to run and play with each other will put extra stress on dogs and make them unfriendly! An unfriendly dog is not good for the environment.

5) If those parks adopt the new rules proposed by GGNRA, I'll probably end up taking my dogs walking on the street all the time!

Frank Dean, General Superintendent

Golden Gate National Recreation Area

Fort Mason, Building 201

San Francisco, CA 94123-0022

Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled,

minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation.

? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.

? Exclude speculative, exaggerated, biased, or misleading statements and studies.

? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).

? Enable professional dog walking and align any professional dog walking rules with county or city regulations.

? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

These are my personal comments and observations regarding this plan:
(here's where you fill in your own personal story and what you've seen when you've been out at the GGNRA)

Sincerely,

Lynn R Miller

I was bit by a dog in 2008 (11 stiches), had another rip up my kite. I saw a friend get bit by another dog when landing his hang glider. Recently a pit bull killed another dog. Dogs have gone into my day pack and stole my sandwich. I have also witnessed several times dogs pissing on my hang glider when laying on the ground assembled! It's very hard to not get feces on your shoes or bare feet! There are no bags available for dog poop. The constant smell is disgusting; I see dozens of dog walkers (commercial businesses!! how is that happening?) release their dogs and they first thing they do is squat and deficate right where I'm assembling my hang glider, the dog walkers cannot see every poop pile and 70% of the time they miss the pile. I basically like dogs but there are to many and the owners (a small number of them)just don't care or argue with you when you ask them nicely

to pick up the pile of feces. I support alternative C

Correspondence: I am writing to ask you to stop the Golden Gate National Recreation Area from implementing its dog management plan.

I am a long time dog owner, trainer, part time pet sitter, and foster mom to dogs in need. I also consider myself an environmentalist and conservationist. I have been walking Mori Point almost daily for 20 years; nine years with my previous dog and 11 years with my current dog. Dogs and people both require daily exercise and I can tell you, the people I meet daily at the beach are usually dog owners. Ever since GGNRA took over Mori Point there are now some fair weather fans that come out only on a nice sunny day. Trust me, for 20 years, it's the dog owners that are down at Mori Point, rain, fog, wind, or sun.

My friends come from Castro Valley, Redwood City, San Bruno just to walk their dogs. It is such a sense of community walking Mori Point and at times it's my meditation after a hards day work. Working with dogs, there are more dogs than you may realize that do not do well in dog parks. My dog has been bullied in dog parks and hence will not go in them without hiding under a park bench. She is wonderful off leash running free and it's a true pleasure to watch.

Dogs without proper exercise can end up with behavioral problems which

may mean dropping a dog off at the shelter. I also volunteer at the Peninsula Humane Society and they surely don't need more dogs in their shelter. People also need daily exercise, and some people wouldn't even be out walking if it wasn't for their dogs. As you know there are health benefits from daily exercise, such as weight loss, controlling blood sugar and cholesterol, as well as mental benefits.

I want you to know also, that my friend and I were walking Mori Point with our dogs and had to rescue a rabbit that had its leg stuck on the rope that GGNRA put up to keep dogs and people out. Our dogs watched with interest as we saved the little bunny and it hopped away free. No dog hurt the bunny, but material that GGNRA put up to keep us out now, hurt the bunny and thank goodness we got there when we did.

Thank you for listening.

Frank Dean, General Superintendent Golden Gate National Recreation Area
Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean, I am a senior, age 71 years and enjoy going to Fort Funston daily. I walk my small dogs without fear of street crime, robbery or roaming gangs in search for an easy target. I have met many seniors as well as families, joggers, and strolling folks with and without dogs while on my walks. I have formed friendships that show the Fort Funston area to be a community of caring and environmental savvy folks. Seniors like myself need exercise availability that is local and safe. Walking with our pets gives us the opportunity to socialize, enjoy the outdoors, and stay healthy. Dogs that are off leash also benefit by exercise not afforded by strict leash walking. Many of us seniors are members of the clean up teams, and will pick up litter not disposed of correctly. I frequent Fort Funston, but the pleas can be heard at all of the GGNRA sites. "Please don't limit off leash dog walking in the areas that now allow it."

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off-leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon

sound science or long-term monitoring of site-specific conditions.

It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option.

The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal.

The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents.

After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program.

Thank you for your consideration.

Sincerely,

Barbara Tessorerie _Daly City, Ca 94015

Correspondence: Whenever I've visited San Francisco (often), I have enjoyed going to Ft. Funston with my friends and their dog. It's been wonderful to experience the dog-lovers camaraderie. I admired San Francisco, specifically because of the way dog owners and dog lovers were treated, and how the space of Ft. Funston was so inclusive that way.

I do hope the use of the space for owners and their dogs will be continued.

To Whom it may concern, Regarding closing off Fort Funston to off leash dogs, I hope you will continue to honor the 1979 Pet Policy. I can't tell you how many people and their dogs will be heartbroken if you restrict off leash dogs. The reasons for closing don't make sense. I see horses tromping through there causing more damage than dogs and their riders don't even pick up their droppings! I personally pick up trash on the beach while my dogs run and play. I never see any problems once so ever, just dogs having the time of their life. There are too few places to take dogs in the city (or bay area, for that matter) and this is one place with lots of space for them to run off steam. Please reconsider your decision, and I speak for my friends without dogs also, who love to go there just to watch the dogs having such a good time. I am a senior citizen and need a safe place to take my dogs. Thank you Lucie Williams

As a senior citizen with a dog, I have watched the park service take away more and more of my traditional dogwalking space. Spaces, I might add, that have been used for a century for this purpose, and these are the sorts of purposes the Park Service agreed to preserve when it was given the land.

Please keep this agreement, and allow dogwalking (including offleash walking) throughout the GGNRA.

Correspondence: I grew up in San Bruno, moved away for about 20 years, and then returned about 8 years ago. Having lived in many other parts of the US, it became clear to me that one of the most unique and special things about the Bay Area is the many open spaces that allow dogs to run free. In EVERY other place I have lived (including Los Angeles, Austin, Boston, Columbus, OH and St. Pete, FL - yes, that's a lot!) it was extremely difficult to be a dog owner. It was nearly impossible to find any place to take a dog to run.

Having a place like the Bay Area where dogs have those spaces truly something that sets us apart. Having great places to take dogs is SUCH an important part of creating the amazing quality of life in the Bay Area.

I fully understand the need for some places to be free of dogs, and I completely support that as PART of the plan. But please don't whittle down what space is left in the name of making every open space adhere to the same plan just for the sake of it. Or worse, please don't limit the spaces to punish those few dog owners who are not responsible. People like me who take a dog out frequently know that incidents of dog owners not cleaning up or allowing aggressive dogs to behave badly are VERY infrequent. They are so rare that if they do happen, all the dog owners are shocked and determined to prevent further incidents.

We MUST maintain some places for dogs to run free. Our open policy (in some areas only) will assure that we maintain this unique and wonderful quality of living in the amazing Bay Area. Thanks very much for your efforts.

FYI, I've visited many open areas with my dog, and the areas I favor most are Chrissy Field and Fort Funston. I feel that Fort Funston is the most important area to save and Chrissy Field is also very important.

Correspondence: Dear Superintendent Dean:

I am writing as a concered citizen regarding the draft Dog Management Plan and Environmental Impact Statement (DEIS) for the Golden Gate National Recreation Area. I use and enjoy the GGNRA lands, and am concerned about impacts from dog-related recreation on the wildlife, habitats, and other park users in the area.

I strongly encourage you to improve the plan by implementing the

following:

1. All Regulated Off-Leash Areas should be fenced, at least in areas where fences do not pose risks to wildlife and habitats. Fences provide more security for all park users and create clearer boundaries so that dog owners are aware of how to comply with existing park rules.
2. The Park Service's proposed requirement of 75% compliance is too low. The Service should require a minimum of 95% compliance before initiating measures to improve compliance.
3. Commercial dog-walking should not be permitted at the GGNRA. This is a commercial activity, and thus the Park Service cannot legally permit it.
4. Certain trails in San Francisco should be entirely closed to dog-use. Under the current plan, nearly every trail in San Francisco is open to on-leash dogs, leaving 0 trails available to public use without the presence of dogs.
5. While dogs are an important part of our communities, they are domestic creatures that are having a significant negative impact on thousands of other animals and plants that rely on the park to survive, including some threatened and endangered species. The parks should be maintained to be safe and accessibly for all users and to protect our cultural and natural resources for future generations.

Thank you for this opportunity to comment on the Dog Management Plan. I encourage you to adopt the best measure possible to protect the National Park's vulnerable resources for everyone.

Thank you,

Carolyn Kolka

Correspondence: I am horrified and in shock that we actually have to fight for this issue. I would have never saved a dog if I knew this would be our future. I practically live on the beach at Fort Funston. I check the tides daily as my routine. I take my Sophie to Golden Gate Park, Baker Beach, the Marina, and McLauren Park. This are where she gets to run free and I can get a piece of mind. I don't ever recall any confrontations with the public. The people who get to frequent and enjoy these places are dog owners. It is what makes

San Francisco so special to have a dog here. Please don't change a good thing. Crazy for Dogs, Dr. Julie Trestman, D.C.

Correspondence: I want you to know that we are huge fans of the GGNRA beaches and believe that you have done a great job. We used to brag about the fact that we are off-leash and even had conversations with people from Southern California that thought it was so cool that we had our dogs off leash. It is such a great day to watch kids and dogs and adults bask in the sun together. So American!

However, as a California native I have to say I am blown away that I am even writing this. As a kid, I grew up on the beach in Pacifica (literally we lived on Pedro Point on the rocks). Off-leash was not in our vocabulary because we all just hung out on the beach with our dogs and our families. Kind of like what happens at Baker & Muir all summer long for us. We just hang out. I honestly thought the one group of people that I could count on not becoming "big brother" would be the parks. If the off leash beaches are taken from us We will never vote for another tax increase for one of your parks again. We will no longer donate money to them and we will seriously consider taking our tax money anywhere but the areas that you have robbed this from us.

No wonder people want to leave California in droves. We are destroying it from within. Please remember who pays your salary, taxpayers! For goodness sake, we even pay tax on dog food. That means that you work for our dogs if you want to get down to the brass tacks. So, I strongly encourage you to stop thinking about your insurance policies and liabilities and actually serve the people.

It is time to stand up and say enough is enough to all of these regulations. We all just want to live our lives and stop the ridiculous amount of rules.

Please keep the off leash areas as they are!

Correspondence: I am not a minority, just a 61 year old wife and mom. My husband and I have lost our business, in downtown Napa-retail Golf- and our house as we

speak. We splurge, 2 bridge tolls and fuel to SF, a weekend or two a month to visit Crissy Field beach with our dog. He (we) enjoy the beach along with a sandwich from the nearby Safeway. Everyone picks up after their dog, no dogs go in the fenced area. All of us just enjoy the view and the freedom, use the restroom and drive home to return to our jobs. Please let us continue the small freedom that the off lease beach gives us as we struggle to maintain dignity working (luckily my husband and I have hourly paid jobs still) hard.

Correspondence: I walks my two small dogs on the bluff trail at Mori point nearly every days. I enjoy the views so much, and there is never anyones else there on that trail. We are no trouble or bother to anyone. It is so close to my home -- I cannot travel further to exercise my little dogs.

Why does the Federal Government want to take this enjoyment away from me? I'm harming no-one. Why? They tell me this, I nearly cry. I cannot understand....

Correspondence: I am very upset with the GGNRA, I will never give you money or help you out. The GGNRA lands were given for recreational use. That included owners with their dogs off leash so they both could exercise. You are now taking that away from dog owners. I also live in Pacifica, and we don't have a dog park, or any legal off leash areas, and the little we have you are taking away from us. Dogs need to exercise and socialize. My dog barks less and gets along better with other dogs because she gets lots of exercise. It's interesting that you are limiting dogs as if they do damage, and yet what about people, and their trash, and their damage that they do to the environment. San Francisco teach GGNRA a lesson, take back the land, and keep it dog and people friendly. GGNRA have you not heard that dogs are man's and woman's best friend, but I guess you don't own any dogs or animals for that matter. You are to selfish.

Shame on you GGNRA, Your Karma will come back to haunt you for your evil deeds.

Correspondence: Dear GGNRA:

I am writing on behalf of my dog, Roxie, to tell you that your proposed dog management plan is far too restrictive and unfair. Parks should be for all, including dogs and dog owners. Dogs that have the opportunity to get plenty of proper (off leash) exercise are better behaved dogs overall. Your proposed plan goes too far, and we object with all our bark. We are also very concerned about the impact such a restrictive plan would have on local parks that do currently have off leash dog runs. Overcrowding at local parks would be a serious consequence to this extreme plan. Please hear our voices and reconsider.

Correspondence: Please preserve Ft. Funston park for people like me my wife and my adult daughter to walk our dogs off-leash. There is nowhere else. Golden Gate Park in SF has place for dogs off-leash, but they are small patches of dirt, no fit place for people to walk and enjoy dogs off leash. Ft. Funston is unique, and there is no reason to believe that the population at large cannot safely come and enjoy it also. Off-leash, dogs tend to be very sweet, and the people are very friendly. There is only this one place on the entire San Francisco area that I know of like this, it has natural beauty and a wonderful peacefulness for dog lovers. Park planning is a proper function of government, and this is the proper place to reserve for off-leash dogs just as it has served this area for years.

Thank you very much for all support for keeping Ft. Funston open for woalking dogs off-leash.

sincerely,

Robert Feinglass, Esq.

Correspondence: Dear Mr. Dean, My name is Amanda and I live in the Castro with my two

dogs, Dutch and Pug. Together we visit Crissy Field or Ft Funston 5 days a week - sometimes more - and have been for the past 4 years.

Even though there is a small dog park 2 blocks from my home, and a city park 2 blocks in the other direction, I prefer to drive to the GGNRA lands for a few reasons.

1) I'm an active person and love the outdoors. I enjoy hiking with my dogs, not sitting on a bench in a small enclosure.

2) My pug has been injured 3 times by dogs at the local dog park. It's a small, enclosed space with a lot of dogs and things often get out of hand. We have never had problems with aggressive dogs at open-spaces.

3) My Dalmatian has been to the vet twice after visiting the city park near our home (Dolores Park). Once for eating chicken bones someone didn't bother to throw in a garbage can, once after being attacked by an unneutered male dog. In the hundreds of times we've gone to GGNRA dog areas, I have seen ONE dog-on-dog attack that ended in blood. Kind of amazing, really, given the # of dogs that visit the area on a daily basis.

4) I have a brain injury and have trouble with the "social scene" at the dog park. Hiking alone with my dogs in open spaces is one of the few times I can forget about my disability and just... be.

While I agree that some places (like the heavily human-populated section of East Beach) are not suitable for off-leash dogs, and do agree that professional dog walkers be regulated and restricted, I don't think the proposed changes take the reality of our city's dog population into account.

I also understand the desire to reduce environmental impact on GGNRA lands. My pug is the famous "Green Pug" (<http://www.youtube.com/watch?v=yKoLBSK8SSE>) of the viral Earth Day video. Environmental issues are important to me, but making dogs public enemy #1 of the environment is a bit of a stretch. It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option. The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be

modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal. The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents. After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program. Thank you for your consideration. Sincerely,

Amanda, Dutch and Pug

Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022 Dear Mr. Dean, Hi my name is Emma Elizalde and I live in Forest Hill in San Francisco. I use Crissy Field to walk my dog at least once a week. With my old dog we used to take her to Fort Funston daily. I understand that you may think I am an "anti=environmentalist" but I would have to disagree. Along with donating to the Sierra Club and being on their mailing list, I also take my part in trying to make the environment a better place. Not only do I try to make the environment a better place but I also try to surround myself in nature. As much as I love Crissy Field, I wouldn't go as often if I wasn't able to walk my dog. These environmental walking locations exist for people to enjoy and part of people's enjoyment of the land is by sharing it with their pets. I am also half Ecuadorian and enjoy the Crissy Field and Fort Funston because of the off-leash dog aspect. I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions. Correspondence: I agree with the current preferred alternative dog managment plan.

I take my granddaughter to swim lessons in the Presidio near Crissy Field and the off-leash dogs are a problem for myself and my young grandchild.

We would love to stay for picnis after her lessons or just to play and walk but it is difficult when off leash dogs run up to her and they are her size or larger. It is frightening to her and I am afraid I cannot handle any difficulties that may arise from dogs off leash and away from their owner.

We would spend more time visiting the GGNRA if the dogs were kept "at bay".

Thank you.

Correspondence: To Whom It May Concern,

I hope you will consider keeping off-leash space in the GGNRA available for the use of pets and their owners. While problem dogs (and their negligent owners) are of course a very legitimate concern, changing the law will not dissuade these people. They will be there with their dogs no matter what any law says. Unfortunately the people that will be affected are the conscientious dog owners who will no longer have a healthy and pleasant way to exercise and enjoy Crissy Field, Fort Mason, and the rest of the GGNRA alongside their dogs. While problem dogs need to be dealt with, by other dog owners and by park law enforcement, it should be remembered that a well behaved, happy dog is often a great enjoyment and source of happiness park visitors, even those unaccompanied by a dog of their own.

Thank you so much,

Jeff (and Mimi)

Correspondence: My name is Katie and I live in Cole Valley. I have been living in San Francisco for almost 4 years. The first thing I did when I drove my car over the Bay Bridge into San Francisco at the end of a week long move via road trip from Pennsylvania was take my dog to Fort Funston. That is where my Aunt and Uncle, who have lived in the Inner Sunset for over 25 years and who also share my views about the GGNRA proposal, suggested I go as my first stop. I didn't stop at their house to unload my things or even use the restroom, I went straight to Funston. My dog who had spent most of the previous week in the back of the car and had been so anxious that he wouldn't even eat, was in heaven. I have never seen him so happy.

I do not go out to bars, or parties, or clubs, I go to Funston. It is what informs most of my opinion of San Francisco. If you take away Funston and keep me from enjoying it as I do now with my dog, I will lose my faith in the City, and it will hold little value for me. Being a PTSD survivor, walking off-leash at Funston with my dog keeps me sane and it keeps me happy. It keeps me from having to take psychiatric meds. It keeps me 20 lbs

lighter than my normal set point. It keeps me social.

Limiting the areas where dogs are now allowed will greatly diminish all these blessings if not completely destroy them.

I love being outside and enjoying the environment with my dog. I am a responsible user of the park and clean up and pick up trash whenever I see it. Most of the damage that I see being done, specifically erosion, is done by kids. But I want them to enjoy the park as well. They shouldn't have to be leashed at Funston and neither should well behaved dogs.

There are simple solutions to the problems that you say could be an issue in the future (since you weren't able to prove that they were indeed problems that need to be addressed. If you had taken the money spent on this ridiculous study and used it to maintain the fencing and paid for additional enforcement of the current boundaries, we would not be here today. Start spending all your time, effort and financial resources on what matters. Do the job you were hired to do.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions. It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation.

? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.

? Exclude speculative, exaggerated, biased, or misleading statements and studies.

? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other

recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).

? Enable professional dog walking and align any professional dog walking rules with county or city regulations.

? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

These are my personal comments and observations regarding this plan:
(here's where you fill in your own personal story and what you've seen when you've been out at the GGNRA)

Sincerely, Devlin Hennessy

Correspondence: The current off leash parks are invaluable to dog owners like me. They provide open space for dogs socialize with other dogs as well as humans. I frequently use areas like Fort Funston, Baker's Beach and Crissy Field, which have "trails" to provide for better exercise for me and my dogs. The terrains are more natural for animals than fenced areas. These areas are often cleaned up by dog owners/volunteers at no cost to the state. I have not encounter any aggressive animals. Animals and owners who go to these areas are friendly and have great respect in preserving the environment at its best.

The current Golden Gate National Recreation Areas (GGNRA) as it is operating make it our city distinctive that no other place provide. I often meet people who come from around the bay area just to see the vast variety of dogs as well as to enjoy nature.

Please do not eliminate or redefine these areas. It is an asset that uniquely sets the bay area apart from other locations.

Correspondence: I am a careful responsible owner of a small dog and cherish the openness, safety and freedom of Fort Funston, Crissy Field and parts of Marin GGNRA. My husband and I are also avid birders who support Pt. Reyes

Field Seminars, Auduban Society, and regularly do birding along Crissy Field, in the Presidio, Bolinas and Sunday guided birding in Golden Gate Park. I have never witnessed episodes of dogs giving chase or disturbing the flora/fauna/bird nesting sites in these areas. I understand the Barn Swallows have slightly relocated further up the shore at Fort Funston, are doing well, and a new threat to that population is the Raven's collecting at the beach, noy people or their dogs.

We all share these beautiful open spaces...dogs, hikers, birds, birders, cyclists, surfers, kite users, families, old/young people. The vast majority of dog owners are responsible and respectful about keeping their dogs under voice or leash control as needed, and cleaning up any feces when it is deposited. I wonder if the environmental impact of other mentioned groups has also been under study, since we share the realization that we all have responsibility to minimally impact the environment we share together.

I respectfully request that due consideration be given to the value of the exercise that people, their dogs, and other hikers obtain under the current conditions of areas which allow us the freedom to share exercise in open space with our animals. This has been working well, in my opinion, since the 1970's and I have seen no documentation that warrants the severe restrictions currently under consideration.

Please allow us to maintain substantial open off-leash areas for dogs and their owners as has been occurring for the past several decades. People and their animals need and deserve areas supporting exercise and physical freedom. With improved signage and reminders about protocol in these areas, the vast majority of people would respond with respectful compliance, allowing us to continue use of these areas as responsible land stewards as well as pet caregivers.

Thank You.

Correspondence: We are extremely responsible dog owners and have been for over 20yrs of our living at Ocean Beach. One of our dogs would chase birds and other dogs for that matter so she is always on leash and the other dog could care less and just likes to walk along and sniff sand dollars. We pick up after our dog and pick up garbage with left over bags we have with us. We also go to Fort Funston on a regular basis and the same rules apply for us there. Please keep these areas leash free. Thank you for reading!

Correspondence: Golden Gate National Recreation Area is home to more endangered and threatened species than any other park in the continental U.S.--more than Yellowstone, Yosemite, and Sequoia & Kings Canyon combined!

It is critical to protect these species and other protected wildlife. However, the park continues to permit unregulated activities that disturb wildlife like western snowy plovers and marine mammals. Wildlife take refuge on Golden Gate's beaches to rest, breed, and rebuild energy for survival, yet unregulated off-leash dog recreation in these areas has resulted in habitat encroachment and wildlife harassment by dogs. For example, the park has reported that unleashed dogs represent the most significant recreational threat to wintering western snowy plovers.

There are some critical steps to improve the situation for visitors and endangered and other wildlife:

--The park's mission is to protect the natural and cultural resources, not allow recreation to undermine it. Alternative D best reflects the national park values.

--Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

--The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by offering more than one trail and more beach areas free from dog recreation.

--Require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs.

--Limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Thank you for helping to create a better park experience at Golden Gate National Recreation Area, and for giving imperiled species a chance to survive.

Correspondence: Frank Dean, General Superintendent Golden Gate National Recreation Area
Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation.

? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.

? Exclude speculative, exaggerated, biased, or misleading statements and studies.

? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).

? Enable professional dog walking and align any professional dog walking rules with county or city regulations.

? Eliminate "compliance-based management," which will allow additional

restrictions to be implemented without any public input.

These are my personal comments and observations regarding this plan:

Our family has been walking our dogs off leash almost every weekend at Fort Funston and Ocean beach for several years now. This is an activity that we enjoy as a family that includes our 2 dogs adopted from rescue group and animal shelter. This is a recreation activity that helps us and our dogs stay healthy and happy. Whenever we go out there with our dogs we meet a lot of people who share the same sentiment about walking with their dogs. We can see how happy they are to be there and how much they enjoy exercising and bonding with their dogs in their smiles and expressions. This is a recreation that benefits both people and their dogs tremendously and even the people with limited means can participate which makes this resource so valuable. So even though we now live in San Jose, we still drive to these places to enjoy walking off leash with our dogs. I really hope that you will consider how much having these off leash areas in GGNRA benefits so many countless people and their dogs and do not make changes that will take away the joy and happiness for a lot of people. Sincerely,

Giny Woo

Correspondence: Draft Dog Management Plan, Draft Environmental Impact Statement

Dear GGNRA, My name is Amy Murata, age 36, I am a dog owner and a voting resident of District 5. I returned to my native California from 13 years living on the East Coast. I specifically chose to live and pay taxes in

San Francisco because of the incredible lifestyle our beautiful city affords us. The most attractive feature of our city is the ability to share it with our canine companions. The ability to enjoy the Golden Gate National Recreation Area (GGNRA) areas OFF-LEASH with my six month old Boxer, Olive, is a key feature of the extremely high quality of life that me and other responsible dog owners in San Francisco enjoy. Olive, like the overwhelming majority of other dogs who enjoy the GGNRA off-leash is completely under voice control and serves as San Francisco's best advertisement for the great lifestyle in San Francisco. I have wanted to get my own dog for over 10 years and I held off on doing so because I wanted to ensure that I lived in an environment in which my dog and I could thrive. I waited until I moved to San Francisco because the high quality of life offered by the off leash areas of the GGNRA and San Mateo County. My dog visits Fort Funston seven days a week and she also visits Crissy Field, Alamo Square, Buena Vista Park, and Duboce Park on a regular basis. I'd like to take this opportunity make a few points in opposition to the Draft Environmental Impact Statement (DEIS) for a new Dog Management Plan as it is currently written. Of note, the DEIS is comprised of a shocking number of assumptions which are not supported by facts or evidence. Many of the impacts are simply assumptions of things that "could" or "may" happen. These are not fact-based examples. The overwhelming number of dog owners and dog walkers are extremely responsible for the actions of the dogs within their care and I have never witnessed an incident in which a dog owner/walker has ever caused harm or negatively impacted another fellow citizen's GGNRA experience. As a citizen, I would hope that a decision that would impact so many people and dogs would be based in facts.

With regard to safety of other citizens who share GGNRA with other dog owners/walkers like myself, I would just like to highlight a misleading and flawed statement in the DEIS which erroneously suggests that eliminating off-leash areas within the GGNRA/San Mateo County would increase public safety. In fact, the data provided by GGNRA states that dogs account for only 2% of serious safety incidents involved dogs. Of note, the vast majority of serious incidents involved people only, no dogs. If non-serious safety incidents are included, dogs accounted for only 7% of the incidents in the GGNRA. Finally, I would like to say that a compliance-based Management Strategy cannot be part of any plan for the GGNRA. Doing so would punish responsible dog owners like me and other voting dog owners for the bad actions of a few irresponsible owners. Further, I am also strongly opposed to Preferred Alternative because of its restrictive nature. There is no justification offered in the DEIS for major changes. I fully support the formalization of the 1979 Pet Policy AND off-leash access in San Mateo County AND on new lands acquired by the GGNRA. We vote, own homes/businesses, pay taxes, and take responsible care of our dogs. Respectfully,

Amy K. Murata

Correspondence: I'm writing to urge you to vote against the GGNRA's dog management plan, specifically to preserve Fort Funston as a haven for San Francisco dogs. The issue of balancing human use and environmental concern in urban parks is a complex one, but considering the massive demand for and wild success of parks like Fort Funston, the environmental detriment is relatively insignificant. Fort Funston is a shining example of a functional urban park, in large part due its use by dogs and dog walkers. Advocates of the proposal would paint Fort Funston as a little swath of the Old West, ruled by anarchy, inaccessible to anyone but dog walkers. While the Chronicle had its eye on this issue, the Letters to the Editor section was rife with anecdotes of dog-related irritations and safety concerns from parents of young children. Yes, there have been dogfights and human conflict, as is to be expected in so heavily used an area, but Fort Funston is actually remarkably safe because of the presence of dogs, which diminishes the safely concerns so prevalent in other urban parks. Drug abusers, muggers, pedophiles, homeless encampments and other issues which pose a safety risk to demographics like children, the disabled, the elderly and women alone are massively deterred by the flocks of romping dogs. In my years visiting Fort Funston as a child and teenage girl, I've never had the sort of frightening or uncomfortable encounter I might have at, say, Golden Gate Park. The sense of security, the geniality of the dedicated dog owners who frequent the park, and the network of wide paved trails make the park a great place for anyone who can stand the company of dogs to visit. Whether you come to tire your dog out among the dunes or to enjoy the spectacular view of the ocean, Fort Funston has never been anything but peaceful and joyous. On the other side of the equation is the desire to restore as much land as possible to its natural, original state. Those who advocate the plan for this reason don't often mention that Fort Funston is hardly a virgin wilderness. It's a military base--paved over, tunnelled out and seeded densely with invasive iceplant. Considering how oft-used and human-appropriated the land is, one might as

well attempt to restore a children's playground or a high school football field to its natural state. As long as there must be some land in the city to meet dog owners' needs--and there must--Fort Funston is absolutely ideal. Yes, dogs are a detriment to what functional habitat is there. We've seen the figures about the drop in the populations of endangered birds, but never has this data been compared to the population drop in areas without offleash access. What data we do have indicates that the vast majority of environmental impact is caused by humans, not dogs. Moreover, curtailing dog use could incur some of the aforementioned human elements residing in other urban parks, such as homeless encampments, which are as much if not more an obstacle to restoration. In short, the potential environmental benefit in this case is not significant enough to justify limiting the use of such a fantastic and much-needed park. Once again, I urge the board to vote no.

Correspondence: I strongly prefer that the Marin Headlands Trails of Tennessee Valley, Coastal Trail, Coyote Ridge and Miwok Trails exclude dogs. I also strongly prefer that dogs not be allowed on Muir Beach, and that they be on leash at Stinson Beach and/or the beach is divided into two sections, with one being dogs allowed and one being dogs not allowed. This would need to be clearly posted and enforced to ensure that dogs don't wander to the wrong side and that dog owners understand the rules.

My stance comes as a result of several incidences over the years of dogs approaching us in a threatening way. We have had the experience, on more than one occasion, of off-leash dogs growling and baring their teeth and charging at us and our on-leash dog who was not evoking a challenge. We have children and felt that their safety was in immediate peril. One time on the Miwok Trail, I was terrified, especially since the dog owner was claiming his dogs were nice, even while they growled and charged at us. Many owners like him have claimed their dogs are harmless, even as their

dogs displayed behavior to the contrary, and they refused to leash the dogs even though it was supposed to be an on-leash trail. I feel that the on-leash rule almost never works, since no one is there to enforce it. I cannot go on a relaxing hike if I have to be the one to contend with those who do not respect the rules nor my right to feel secure. On the main Tennessee Valley trail, where dogs are not allowed at all, I have never had a problem and have only seen a dog once. It seems obvious that people will not bring dogs if they are not allowed at all and this rule is clearly posted. But if the rules are confusing or if they are more lenient, such as if on-leash is okay, then it seems a majority of people will let their dogs off-leash, and perhaps just carry the leash separately. I have seen this more times than not. If I politely ask them to put their dog on a leash while they pass us, the response is typically that their dog is harmless, and they would rather argue and defend their dog's character than to comply with the rule and my request. It seems the only way to change this would be to not allow dogs in those areas. It has been hard to relax at Muir Beach with so many dogs running loose, including dogs of breeds that are statistically more likely to seriously injure people. I want to be able to go to this beach and relax and not worry about being bothered by dogs nor worry about my children's safety. It's sad, but this is the one and only reason I haven't gone to this beach in a long time, and I should be able to go and feel safe since this is our nearest beach. Please consider that hikers, runners, beach-goers should be allowed a good number of beautiful trails and beaches where they can enjoy nature and not have to deal with dogs. The dogs have plenty of places to enjoy, it seems that with the way the rules are now, they are held in higher regard than those of us who want dog-free options.

Correspondence: To Frank Dean, General Superintendent, GGNRA

Dear Mr. Dean,

I have lived in San Francisco for almost 40 years. Although I am not currently a dog owner, I was previously one for almost 14 of the years that I have lived in San Francisco. As a dog owner, I regularly walked my dog off leash in the Presidio during the week and at Fort Funston or Crissy Field on weekends. The walks, which occurred rain or shine and usually with dog owner friends, were healthy, fun, and sociable for the dogs and humans. We controlled our dogs, cleaned up after them, and never had any confrontations with hikers, bicyclists, horseback riders, or children, although we encountered all of them.

In fact, I have a young daughter who would love for me to get another dog. And I would love for her to learn the responsibility of caring for a dog and to be able to enjoy off-leash dog walking, especially in a natural place as magnificent as the GGNRA. But the DEIS causes me great concern for my daughter, myself, and all off-leash dogwalkers in the Bay Area.

I am dismayed at and opposed to the GGNRA's current preferred alternative because of the unreasonable restrictions it puts on off-leash dog walking in the GGNRA. The proposed changes are unwarranted, unnecessary, and not based upon sound science.

Lest you think that I don't care about the environment, please be advised that I am a member of the Sierra Club (Life Member), Defenders of Wildlife, Earthjustice, Environmental Defense Fund, National Wildlife Federation, and California Trout. As an environmentalist, I naturally care about protecting the GGNRA's land, vegetation, and wildlife. But I do not that believe off-leash dog walking and protecting the environment are incompatible.

The thrust of the GGNRA's proposal is to punish all dog walkers for the conduct of a few. Yes, I admit there are some inconsiderate dog walkers. But why don't we focus on educating them, protecting sensitive vegetation (with signs, fences, etc.), and, if necessary, punishing those who cause problems. But let's not punish all dog walkers because of the conduct of a few.

There are also inconsiderate bicyclists, hikers, pedestrians, and car drivers. Should people in all of those categories be similarly restricted as off-leash dog walkers in their use of the GGNRA?

The GGNRA is an urban park. Its purpose was to provide open space for recreation. Off-leash dog walking is as much a form of recreation as any other use made of the GGNRA. I also hike, bike, and walk in the GGNRA, but those activities are not any more a form of recreation than is off-leash dog walking. The DEIS fails to address how dog walking recreation is

affected.

I urge the GGNRA to adopt a modified Alternative A (the No Action alternative). The current plan should be modified to provide clearer rules, more signage, improved vegetation barriers, and education and outreach as part of the overall program. Unwarranted restrictions on off-leash dog walking should not be imposed.

Thank you for your time and consideration of my comments.

Correspondence: My husband and I are members of Audubon, Wildcare, The Sierra Club and other wildlife organizations. We also own two dogs. We feel very strongly that there is enough land for all users, providing they are responsible, which is a problem for everyone, not just dog owners. Speeding bikers, bikers on prohibited trails, people leaving trash etc. are just a few of the other problems. We strongly support no dogs in critical breeding grounds, leashed dogs in some areas and no dogs in other areas. However, as with the debate with MCOSED, we also believe that dog owners should be allowed to use a part of these lands with their off-leash dogs.

One of the places we have been taking our dogs for years is Oakwood Valley. We have never witnessed one dog-related incident detrimental to wildlife or humans in the 20+ years we have been walking there with our unleashed dogs. We understand dogs are only allowed on 0.5% of all GGNRA land. On MCOSED dogs are only allowed on about 6% of the land. We have witnessed the following...birders and plants seekers going off trail in large groups to look into nests, pish for birds, pick flowers etc. Is that not also disturbing to animals?

Walking your dogs off-leash is so nice for both the owner and the dogs. We look at wildflowers and birds and they smell doggie things and run through mud puddles. When we see someone coming we call them to our side until we know it is a good situation for all. We don't see much wildlife on the fireroads and trails heavily used by bikers, walkers, birders, and dog owners. They stay in the more remote parts of the land where there is less human impact. Also, many people cannot walk their dogs on leash due to a disability so this would end all walks for them.

One of the main reasons for loss of wildlife is habitat loss. One of us

volunteers at WildCare and most of the injured birds and mammals that are brought in are the result of cars, gunshots and collisions with windows and high wires. As development continues to grow, the wildlife loses habitat and corridors to get from one place to another. There is plenty of blame to go around.

Compliance-based Management Strategy which changes off-leash to on-leash and on-leash to no dog is way too restrictive. If GGNRA then claims not enough compliance with new restrictions, where will the proof come from? People who are scared of dogs? This will also punish responsible dog owners because of the few irresponsible ones. This will potentially end off-leash access without giving people a chance to comment on the change. This is a really bad policy and must be removed. We support formalization of the 1979 Pet Policy PLUS off-leash access on any new land that the GGNRA acquires.

One last point...this misguided and very flawed document will also create new problems like leashed dogs are often more aggressive, more dogs will be brought to shelters that are already crowded and more dogs will be killed.

Please consider this and also that we are only asking for a small amount of land, mainly land that we have been using for years. We too have a right to use this land...which by its very name designates the land is for public use...it is not(sadly) anywhere near a wilderness anymore. It is people like us who were/are instrumental in saving places like the Marin Headlands from becoming a housing development.

Thank you.

Correspondence: Please reconsider restrictions on dog use areas within GGNRA sites. Since moving out of San Francisco to a suburb, Belmont, in January of this year I am struggling to find places due to restrictions on areas to see that our yellow lab gets exercise and is able to interact with other dogs. I have continued to use Fort Funston and Crissy Field for the enjoyment of our family with our dog. To limit these or other proposed sites for dogs leaves a severe loss of opportunities. Apart from Rodeo Beach and one trail out of Muir Beach there are very few coastal spots in Marin that are accessible for dogs. Just this past week my mother visited from the Midwest and she is disabled. I had heard about a dog beach in Pescadero and in addition to the

fact it was 17 miles South of Half Moon Bay, the approach to Bean Hollow State Beach was too steep and rocky for her to be able to participate and she had to wait in the car. Believe it or not others often enjoy interacting with our dog (and other dogs) in the recreation areas. There is a lot that goes into maintaining a pet so those who cannot due to age, disability, logistics etc. can have opportunities to experience these interactions in the GGNRA sites and other dog-friendly sites. It appears there is little evidence to support a significant adverse environmental impact by dogs. Furthermore, the owners, not the dogs, should be penalized for irresponsible management of pets.

Correspondence: I am firmly against the new proposal for off leash dogs at the GGNRA. I have been walking my dog on several parcels of land managed by the GGNRA over the past ten years including Crissy Field, Baker Beach, Fort Funston, and the Presidio trails. During this time I have witnessed very few incidents of the dogs creating problems. Most dog owners have their dogs under voice control and scoop the poop.

Making these areas on leash are going to increase incidents, not prevent them. I have seen runners and bikers get tangled up in leashes.

I would think the park police would have better things to do then chase after off leash dogs. Currently, dog owners police each other by chastising those who do not scoop or who have uncontrolled dogs off leash.

I hope the GGNRA reconsiders this preposterous proposal.

Correspondence: To whom it may concern-

As it stands, the Draft Dog Management Plan for GGNRA will bring about many more problems than the minor ones it hopes to alleviate. Here is my own personal example:

I live near the Panhandle, and I walk my dog to the Presido (Crissy Field)at least twice a week. Since I can walk my dog through the Presidio to get to Crissy, I walk. If the Dog Management Plan is accepted I will be forced to drive to the Presidio. Since thousands of local dog owners do the same thing, they will be forced to drive as well.

Consider all the extra car traffic and gridlock that will be caused by this plan - a very serious (unintended) environmental consequence of changing the current policy. I suggest that the dog policies as currently enforced remain in place.

thank you

Correspondence: My family spends a lot of time enjoying GGNRA property in and around San Francisco. Like many others, the open space, so accessible to the city, is a big reason we live in San Francisco. We moved to San Francisco from Maine-at the time of our move, the beach near where we lived was prohibiting dogs-I can't say it was the reason we moved, but, it made the move a lot easier. Walking the dogs on the beach (the beach in the summer was only accessible to dogs before 9 or after 6) was a community event. You saw the same people every day-it made all of us feel a part of something larger which is important. Taking that away from the dogs, took a huge part of community involvement and social interaction away from the people. Here in San Francisco, the dogs are very much part of, and an indentifying characteristic of the community we live in. The City is an incredibly dog friendly city, which in turn, makes it just a friendly city. Our

dog doesn't run off leash as he has never really mastered the coming back part and has one too many times swum out farther than his ability-but that doesn't stop us from enjoying the area or relishing in the pure joy you see on the faces of these dogs running free-in an urban oasis-and their people taking in the scene, talking to friends and making new friends. I have a two year old daughter-and I can't even begin to describe the joy she takes in watching the dogs play, swim, run and "dance." This is about the dogs, yes, but it's also about the people. I don't want to live somewhere where joy is kept on a leash. It will permeate all aspects of our community. San Francisco is the last place in the country where I expected joy to be kept on a leash. Life is hard enough-why would we take such action to take something away as vital to our community? Thank you.

Correspondence: The park's mission is to protect the natural and cultural resources, not allow recreation to undermine it. Alternative D best reflects the national park values.

Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by offering more than one trail and more beach areas free from dog recreation.

Require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs.

Limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Correspondence: I am a dog owner in Marin County and regularly use the GGNRA for leisure activities with and without our dog.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off-leash dog walking in many areas

within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions.

It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option.

The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal.

The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents.

After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program.

Thank you for your consideration.

Sincerely,

David Wagoner

Correspondence: GGNRA Draft Dog Management Plan/EIS.

Overall I am not a supporter of banning dogs out right from the GGNRA. It is a park for all of us and for the most part dog owners are responsible. While I understand a plan to have the GGNRA inline w/other NPS sites- the GGNRA is different from almost all other NPS sites. It is a collection of different parcels- some urban so rural that have been patched together. My wife and I are supports of the GGNRA through the Parks Conservancy because we want to support a park for all.

I do believe that most dog owners are responsible, and I can understand restrictions on so many dogs per person as one way to help out with the concerns of this EIS. I also would support seasonal closures of sensitive sites (i.e. during breeding seasons) but not full closure.

As for trail use, and we are avid trail hikers with our dogs in the Marin Headlands. If there are concerns about trail use, I would argue that horses and mountain bikers cause more damage to trails than dogs ever will.

I understand your daunting tasks, but I hope that you will preserve the concept of the parks for all users.

Correspondence: To: Frank Dean, GGNRA Superintendent Christine Lehnertz, National Park Service Western Regional Director San Francisco Supervisors John Avalos, David Campos, David Chiu, Carmen Chu, Malia Cohen, Sean Elsbernd, Mark Farrell, Jane Kim, Eric Mar, Ross Mirkarimi, Scott Wiener, The Honorable Nancy Pelosi, Jackie Speier, Dianne Feinstein and Barbara Boxer

We, the undersigned, represent businesses that provide services to dog owners and dogs. We train dogs, sell pet food and pet supplies, walk dogs and provide a variety of other services.

We oppose the Golden Gate National Recreation Area's proposed "dog management plan," which will severely limit off-leash dog walking and dogs in areas like Ft. Funston, Crissy Field, Ocean Beach and others, and we ask you to oppose it too. We disagree with this proposal for a variety of reasons, but we will focus here on the economic impacts for small businesses like ours:

*The GGNRA's preferred alternative will negatively impact many of our businesses, and will hit dog walking businesses especially hard.

*The proposal is harmful to our clients and customers.

*The proposal will hurt San Francisco's reputation as a dog friendly city, which currently attracts tourists interested in dog-friendly destinations.

In these economic times, we simply cannot afford to put small business owners in jeopardy. Please stand up for the dog-loving community in San Francisco and the businesses that support it. We urge you to oppose the GGNRA's proposed dog management plan.

Thank you for your consideration!

Correspondence: To whom it may concern,

I am urging the park service to support Alternative D in the GGNRA Draft Dog Management Plan. The park's mission is to protect the natural and cultural resources, not allow recreation to undermine it, and I strongly believe Alternative D best reflects the national park values.

I believe in the following points in support of Alternative D:

--Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

--The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by

offering more than one trail and more beach areas free from dog recreation.

--Require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs.

--Limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Please consider this comment in your decision.

Sincerely,

David Kajtaniak

Correspondence: Dear Mr. Dean, I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law. The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded. This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others. The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to: ? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. ? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. ? Exclude speculative, exaggerated, biased, or misleading statements and studies. ? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). ? Enable professional dog walking and align any professional dog walking rules with county or city regulations. ? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

I have been taking my canine companion, Ringo, to Fort Funston for over four years. I and all my friends have been most respectful of this area. And having dogs there makes it so much more of an interesting experience than it would be otherwise. The area is beautiful and remains that way with humans and dogs frequenting the area. It would be a great loss to SF should such areas be inaccessible to off-leash dogs.

Sincerely, Michael Yanakakis San Francisco, CA 94114

Correspondence: This letter is respond the the current DEIS Dog Management Plan, with suggested alternatives that mutually benefit the constituents and government officials imposing this plan.

You must acknowledge that dog walkers throughout the Bay Area are considerate constituents who, for the most part, actively follow current laws and regulations; pick up after their dogs; and are environmentally sensitive. There are indeed a few who spoil the situation, but the proposed new Plan severely regulates (punishes) thousands of dog lovers who are very considerate with their pets. I have lived in major parts of the United States, and the Bay Area is fortunate to have organized dogwalking groups that host monthly clean up activities in major park areas. Please note that there is not the same level of attention for Horse riders, beach- and park- attendees who damage grounds with inconsiderate trash (and horse remains) throughout Ocean Beach, GG Park, and various Marin beaches.

If the GGNRA was most concerned about environmental impact, it would severely fine those who litter (this is not enforced today) - ; invest in more trash receptacles and disposal management; and perhaps consider a for-fee membership system for dog areas to help maintain and preserve the areas. For those in the dog-walking profession, a limit of 8 dogs (not 3) is a proven management number where they can keep an eye on dogs for refuse cleanup.

To encourage more environmental protection, areas can be (are, and have been) cordoned off to allow for regrowth; this has proven an effective measure, and this could continu. Sections could be rotated for regrowth throughout park areas. Dog owners would stick to cordoned off or restrictive areas if more signs were posted. Again, fines or violations help enforce this, and noting this on your signs would be a very blatant way of ensuring enforcement. Should you accept these suggestions as a compromise, you

could meet with the dogwalker community to encourage dogwalkers to self-regulate (call out violaters) -- which I know they would do. We want to curb the "bad apples" in the bunch as much as you do.

The park is meant for enjoyment of people and animals. It appears the GGNRA is going to vast extremes to severely limit this enjoyment by instituting the proposed plan. As a doglover and environmentalist, I suggest you the following:

* Please allow dogs off-leash in key sections of all areas; perhaps set "time zones" (and publish) of when dogs are allowed off leash * Limit dogwalking organizations to 8 dogs per walker * Set strict enforcable fines for not picking up after dogs (requires people, but you'd make some money) * Require renewable, annual membership fee (\$25?) for any person w/a dog; membership card must be on person when with dog; fees would go to park preservation * Rotate sections/areas of the park for regrowth; you do this now, however add strict signs with warnings on steep fines (\$1000) * Enforce violations for not picking up dog feces and trespassing on cordoned areas * Add more signs, trash recepticles and waste pickup services * Meet with dogwalking community to encourage self-regulation (call out the violater when you see it) to encourage environmental protection

Do not punish the entire community for the sake of environmental protection. We taxpayers are paying for government salaries and GGNRA park maintenance, and this plan goes far beyond reasonable consideration and punishes those who support the system.

I ask as a taxpayer, doglover and environmentalist to "scale back" the plan to a reasonable measure. You will find the dog owner community receptive and proactive if you could meet us 'half-way'.

Regards, Teresa Fortescue

Correspondence: Dear National Park Service,

I just want to express my grave concern over the proposal to greatly constrict off-leash dog walking in the city of San Francisco and Marin in the Golden Gate National Recreation Area. This area is filled with many dog owners/lovers and we use these areas with respect and gratefulness. We all truly hope the status quo continues and that we can continue to walk our

dogs at Fort Funston, Crissy Field, Ocean Beach, Rodeo Beach, etc.

San Francisco Bay Area has a great deal of open space territories for non-dog-owners: Golden Gate Park, areas of the coastline and a plethora of parks so there are many places where people who do not like dogs can go to relax and enjoy the outdoors. Almost all of the dog owners in the Bay Area are very responsible and take very good care of their animals and obey the rules of guardianship. They pick up feces, often some left accidentally by another, control aggression if necessary and manage their dogs around sensitive or fearful people. It is a rare 1% or less of people who seem to be reckless. In any demographic or group there will be people deviant of what is considered appropriate behavior. In fact, more parents of children are less responsible than dog owners.

Please, I urge you to maintain the status quo of the dog walking areas and rules in GGNRA. It will help keep peace in the area much more than if the proposal goes through. If the proposal goes through, there will be many more problems with dogs of the Bay Area than there are now. It is a short-sighted way to manage what is perceived as a problem by a select few.

Please take my and other peoples' needs and desires in consideration as much as the authors of the proposal. We are many and we are hopeful that you will see things our way and make the right decision.

Sincerely,

Linda King-Byrnes

| Correspondence: | Any plan that restricts off-leash dog activity should be balanced between opportunities for dog owners to have a place in which to responsibly play with their canine companions and the needs of others to experience the park in a non-dog atmosphere. When dog owners exercise appropriate behaviors and train their dogs to responsible behavior, negative impacts of the presence of dogs can be mitigated. Therefore an educational program that includes a permit (like a tag or other easily-seen identification) when a dog has demonstrated minimum obedience might be an option. This could result in special areas where only tagged animals could play versus a place where onleash dogs could accompany their owners versus no-dog areas. | | |

Correspondence: Frank Dean, General Superintendent Golden Gate National Recreation Area
Fort Mason, Building 201

San Francisco, CA 94123-0022

Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. As an urban ecologist, I find it problematic to create exclusive wilderness areas in urban environments that are inaccessible to many of their human residents. These types of divisions often lead to class discrimination, reserving and restricting these areas to those who meet their criteria for entry.

The GGNRA can accommodate both recreation and conservation. It was

designed as an*urban recreation area*, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the tens of thousands of Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

I believe that creative solutions can be found to allow dogs' presence in the GGNRA while still protecting the wild beings that live in these areas.

Sincerely,

Max Salamander San Francisco, CA 94122

Correspondence: Dear Mr. Dean,

Frank Dean, General Superintendent

Golden Gate National Recreation Area

Fort Mason, Building 201

San Francisco, CA 94123-0022

Dear Mr. Dean,

Yosemite, ok. Sequoia, Kings Canyon ok too. My own front yard? No. I am unable to do the kind of recreation I enjoy most, hiking with my dogs, at the national parks in California. The beaches of San Francisco have always been one place to have some breathing room for those of us unable to drive to the East Bay to hike with our dogs. I have spent hours each week at Fort Funston and enjoy the community of people who go there with their dogs. The Fort would be a pretty empty place without the dog people as most others find it too cold, windy and lacking amenities. I know the wildlife intimately...the bunnies, owls, ravens, seabirds and all the passing marine mammals. As a member of both the Sierra Club and the Audobon Society, I have a great respect for the natural world and have not noted harm over the

20+ years I have been walking there.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions.

It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option.

The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal.

The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents.

After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program.

Thank you for your consideration.

Sincerely,

Jeanne Edenson San Francisco, CA 94112

Frank Dean, General Superintendent Golden Gate National Recreation Area
Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean,

Hello, I live in Crocker Amazon area and go to Ocean Beach every Saturday with my little dog for a walk and socialization. I and all our friends pick up after our dogs and I often bring larger bags to pick up garbage on the beach, which I assume they were left behind by people who spent time eating and drinking the night before. We not only pick up after our dogs, but also pick up after people who use the same beach. I am not sure why we, dog guardians, are the one blamed for harming the environment.

I also want to mention that I am Japanese and go to Ocean Beach just to let my dog run around off-leash. I would not be at Ocean Beach for any other reason. It is too cold for me to go there just to hang out. The beach is useless for me without the off-leash area.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off-leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions.

Correspondence: The draft document is enmeshed in opinion unsupported by scientific evidence. This is particularly true when linking canine activity to endangering threatened species. There should be no reduction in allocated space allowing off-leash recreation. There is so little space now that it appears that this document has been developed by people with an anti-dog agenda.

Off leash recreation is more than just about dogs. It's about people and the form of social recreation that they choose.

I have visited Fort Funston at least 1000 times and, although I no longer live in San Francisco, continue to visit each time I stay in San Francisco (at least once each year). GGNRA is a RECREATION area and must not be lumped into a "one size fits all" mentality by claiming that it is a National Park and, therefore, must be just the same as every other National Park. It's an urban recreation area.

Correspondence: May 27th, 2011

Frank Dean, General Superintendent Golden Gate National Recreation Area
Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean,

Greetings, my name is Phoebe Fearing and I am a San Francisco resident in the Sunset/Parkside District and own a small dog. Daily exercise is very important to both of us and so is the environment. I believe that open spaces should be available to us and that at the same time, it is everyone's responsibility to care for the environment which is why I've been writing my supervisor, Carmen Chu, to address the littering and pollution issues in our neighborhood. I find it appalling how so many people recklessly litter and pollute while others volunteer many hours of their days to clean up after those who abuse their freedoms. I think that the same principles of responsibility to take care of our environment should guide dog owners in open areas and that we must be responsible for the proper supervision of our dogs to ensure that they are not harming our parks, but they must be allowed to run freely for their health. After all, dogs started out in the wild. It seems absurd to me to restrict them to from being off leash or even on leash in parks. I hope we can find a way to protect the environment and also give our dogs the freedom they deserve to get their daily exercise in as many places as possible. With some guidelines for owners on how to properly supervise and control their dogs, I think this must be possible.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off-leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions.

It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option.

The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal.

The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of

impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents.

After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program.

Thank you for your consideration.

Sincerely,

Phoebe Fearing Sunset/Parkside, San Francisco

Correspondence: As a private individual I would like to submit my 2 cents worth on this proposed plan. I will admit I have not read through the entire document but I have gone to a number of meetings where a park representative was there to present the proposal and answer questions. A few things that came up that were never clarified was why was this proposal even necessary. The park representative brought up replacing indigenous plants but when it was brought up that there is no proof that the plan would show any progress in that area and similar programs have been less than successful he said no scientific studies had been done, that it is a "balanced use" issue. It struck me as the park rep was originally using "endangered species" to justify the proposal but when he couldn't back it up with any studies he changed his tactics. If balanced use it the issue I'd like to point out that more often than not when I am out with my dog parents approach me and ask if their children can say hi to my dog. They more often than not live in an apartment that does not allow dogs and want their children to become familiar with proper interaction with dogs which I commend. There are plenty of places in the bay area for people who do not want to interact with dogs to go without restricting the existing ones.

Also I am concerned with how things are to be handled if the proposal passes. It appears that a 75% compliance to the new rules will be required. The park agency will be the ones deciding if this is met or not and if not they are the ones who will restrict access even more with no input/recourse by the public. I am curious as to why it would be believed that if a little restriction doesn't work more restriction would be better? I would be much

more comfortable if they found it wasn't working it went back to the current policy until another option could be explored.

I have never found anyone who had a problem with the way the off leash areas have been used so see no reason to waste money on a non-issue when there are so many REAL issues such as homeless in the park who defecate, urinate, use drugs in front of tourists and families (yes, I've witnessed all of the above) or repair work of existing walkways and attractions. As my dad used to say "If it ain't broke, don't fix it".

Thank you for allowing me to comment.

Dear Mr. Dean,

I have lived in the Glen Park area for 7 years and enjoy the parks with my dog almost daily. I think of myself as green and treat the parks as if they were my own backyard. I feel that my fellow San Franciscan's feel the same and enjoy the solidarity we feel when walking our dog's at the local parks.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off-leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions. Correspondence: I am writing to you about the Dog Management Program. As a dog owner and resident in San Francisco, I am very disappointed to hear about these pending changes. I am greatly concerned that you have not consider the impact to human and dog well being. My understanding is that GGNRA has a recreation mandate. I spend much of my free time enjoying the off-leash parks with my dog Argos. Being able to bring my dog contributes greatly to my ability to enjoy the parks. Furthermore, since we live in a city, it is hard for my dog to get adequate exercise as it is. Without off leash dog parks available to us, he would not get much exercise at all. There is much research on the psychological and physical benefits to dog ownership; two articles in the New York Times recently highlighted this research. Dog owners are less likely to be overweight and have cardiovascular diseases because while walking their dogs, they get exercise themselves. More and more hospitals and senior citizens centers are utilizing dog therapy. Speaking personally, my husband adopted our dog to help me copy with a personal tragedy. I particularly enjoy taking Argos on off-leash walks where we can play fetch. The time we spend together at these parks are our happiest moments together.

Correspondence: May 26, 2011 Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022
Dear Mr. Dean, I am writing to oppose the GGNRA's draft dog management plan. I have attended a number of public meetings on the subject and have studied the findings in the report. As a San Franciscan who has been involved in the area of park advocacy, I am very distressed to think that we are about to remove most of the off-leash areas in the GGNRA. I served on a citizen's advisory committee in the mid-1970's when the GGNRA was just in its infancy. The idea to create an "urban park" by replacing outdated military sites with all types of recreational needs was so exciting. This was to be a unique park. It was not a pristine wilderness but rather the reclamation of restricted and areas that had been off-limits to our citizens. Dog recreation was encouraged as a way to bring people out to the new park lands. It worked and in fact worked well for over 40 years. Which is why this is so distressing. The proposed rules will seriously impact thousands of our citizens. For over 35 years I have been visiting the park lands of the GGNRA. Over those years I have brought both dogs, children and grandchildren to the park. Our family has so many special memories at Fort Funston in particular?.Here are just a few:

1. My dear friend was diagnosed with cancer, she wanted desperately to get a dog but due to her illness it was not wise to take on that responsibility. I took her to Fort Funston so she could interact with dogs, talk to their owners and be surrounded by that kind of love. It was incredibly therapeutic.

2. Another friend died very suddenly of a brain aneurysm about 10 years ago. Her family wanted a special memorial to honor her life. The place chosen was Fort Funston, amid the fog, in the dunes---with her dogs taking center stage in this final farewell. It was the most moving ceremony I have ever been part of. This was her special place?where she and her dogs could explore nature together.

3. Over the years I have entertained many friends and family from as far away as Switzerland. I always take them to Fort Funston so they can experience the wonderful joy of seeing people openly recreating with their dogs. Dogs running and playing while their proud owners visit and share experiences. It is a most unique experience. Something not experienced in most parts of the country and the world. THEY LOVE IT. It ranks right up there with cable cars and hill side views. People tell me over and over how they wish they could have this experience in their communities. They think of San Francisco as forward thinking and congratulate us on our unique form of recreation.

4. In 2008 my new husband proposed to me on the dunes of Fort Funston. It

was in the presence of my young grandson and our new puppy. I remarked to him that he could not have found a more perfect place. We looked at the dog and young child running on the sandy dunes and absolutely melted. These are the special moments of my life. They involved people, dogs, nature?all in harmony. This is why I go the park.

I also attended the meeting held by the San Francisco Board of Supervisors, on the impact that changes in the dog policy would have on parks in San Francisco. As a lifelong park advocate I implore you to take the resolution that was passed very seriously. Much of the proposed dog plan changes will be on GGNRA land that is within the City and County of San Francisco. Our citizens need to have a wide range of recreational opportunities. We have a tiny 7 X 7 mile area of land-there are over 800,000 people who share this space along with more dogs than children. We must look at the overall effects that rule changes will have on our entire city and the impacts that removing opportunities for recreation in one section will have in others. GGNRA lands are not islands that can be separated out of the city without consequences to the whole.

Additionally, I agree very strongly with these points: The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to: ? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. ? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. ? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input. Sincerely,

Linda Stark Litehiser San Francisco, CA 94112

Frank Dean, General Superintendent

Golden Gate National Recreation Area

Fort Mason, Building 201

San Francisco, CA 94123-0022

Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness area like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the tens of thousands of Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. Exclude speculative, exaggerated, biased, or misleading statements and studies. Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). Align commercial dog walking rules with county or city regulations. These are my personal comments and observations regarding this plan: I go to Fort Funston almost every day, with multiple dogs. My dogs (and myself) are very well trained. I pick up litter that often washes up on the beach. I also clean up after my dogs and other people's. I am confident in stating that I leave the park cleaner than I find it, each time I go. I am not the only one. Many San Franciscans who enjoy this area are also responsible environmentalists and nature-lovers. I propose fining or assigning community service/park clean up to people (dog-owners/walkers or otherwise) who act irresponsibly, rather than punishing the many people who might have dogs and use the park responsibly. I would be more than willing to involve myself and others in park clean-ups and restoration of the area. This is a far more reasonable solution than any of the proposed solutions or alternatives.

Sincerely, Rasan Lowell San Francisco Ca 94122

Correspondence: Sir;

I urge you to adopt a strict "no dogs allowed" policy to all property within your purview, and then rigidly enforce it. Most dog owners of San Francisco are motivated by a puerile narcissism that finds expression by inflicting their pets on everyone else. Irrespective of posted regulations they encourage their pets to bark, dig, urinate, defecate and engage in howling battles. Only a few clean up after the animals, and many turn them over to professional "walkers" who regularly invade the parks and playgrounds with packs of dogs that they turn loose and then scream at for hours.

Regardless of whatever regulations you adopt, only strict enforcement will save the GGNRA from the dogs. The people who belong to SFDOG are scofflaws and, while they lobby vigorously for lax dog regulations, have no intention of abiding by rules they don't like in any case. San Francisco's 100% policy of non-enforcement of dog laws has nurtured a generation of dog enthusiasts who really don't believe that there should be any regulation of dogs whatsoever, and are indignantly self-righteous at the very suggestion that rules should apply to THEM. If you have ever had to deal with spoiled, surly, ill-bred adolescents, then you have a small inkling of what it is like dealing with these people.

Once again, I implore you not to let them to take over and ruin the NRA as they have so many of San Francisco's parks and playgrounds. The GGNRA should benefit people, but will quickly become a "dogs only" playground once you allow them in.

Respectfully submitted,

A citizen of San Francisco

Correspondence: To whom it may concern:

I read the following letter to the editor in the San Francisco Chronicle on

Thursday, May 12, 2011, and feel it perfectly reflects my feelings on the dog leash issue in the Golden Gate National Parks.

Please protect our precious San Francisco ecology by requiring dogs in the park to be on leash and by limiting the number of dogs a single person can bring into the park.

Thank you.

-- "Leash commercial dog-walkers"

Commercial dog walkers are abusing our parks.

As a frequent visitor to the Presidio, I encounter many groups of eight to 12 off-leash dogs in all areas of the park.

Although I love dogs, it does not seem fair or appropriate for commercial operators to allow their paid-for charges to run rampant in public parks where they threaten native wildlife and plants, as well as adults and children.

At the very least, these commercial operators should be limited to four on-leash dogs (the maximum one person can truly manage) in specific areas of the park.

They should be held accountable for infringements of park policies and, as other park vendors do, should have to purchase a license to operate in the park.

These funds could be used to enforce the regulations and maintain the dog-access areas.

Jean Colvin, San Francisco

Correspondence: Dear Mr. Frank Dean:

I am very supportive of the Draft EIS for the GGNRA Dog Management Plan, which I think recommends as the preferred alternative a nice mix of on-leash, off-leash, and no-dog areas and a clear description and

enforcement of dog rules, which is what the National Park Service is proposing. I have read through the executive summary of the EIS and looked at the maps and am very supportive of the preferred alternative that the National Park Service analyzed. As the mom of two young children, I love the idea of having clear dog regulations that are actually enforced and a mix of off-leash, on-leash, and areas where dogs are not allowed.

In particular, having areas at Ocean Beach, Fort Funston, Crissy Field, and Baker Beach where we can picnic, walk, and relax with kids without worrying about off-leash dogs is very appealing to me. In particular, I am very supportive of having areas at Ocean Beach (Snowy Plover Protection Area), Baker Beach (North Beach), and Crissy Field (Wildlife Protection Area and East Beach) where we can recreate with young children in an area with no dogs. I am also supportive of having areas where dogs would be on-leash (the trails at Fort Funston, portions of Crissy Field Air Field and Promenade, Fort Point trails, Coastal Trail at Ocean Beach, and Baker Beach South Beach and trails). There are still large areas where off-leash dogs would be allowed, including the northern end of Ocean Beach, a large portion of the Crissy Air Field and much of Crissy Field Beach, and the beach and a large area north of the parking lot at Fort Funston. I think the National Park Service has proposed a very nice compromise between on-leash, off-leash, and no-dog areas within GGNRA lands in San Francisco.

There are many users of the GGNRA including families with young children (such as my own family), seniors, and people with disabilities or a fear of dogs. Not everyone wants to recreate with off-leash dogs or even with on-leash dogs. I have had several negative experiences with dogs within the GGNRA, where I have had to pick up one of my children to get them away from a dog, push a dog away from our food, or clean dog poop off my children's shoes. My children are smaller than many dogs. While the majority of dog owners are responsible and the majority of dogs would not hurt my children, I am not always able to tell which dogs are safe and which are not. Worrying about what a dog may do or dealing with dogs that do approach us just takes away from our ability to enjoy and relax. I have tended to avoid parts of GGNRA that have high numbers of off-leash dogs, such as Fort Funston and portions of the beach at Crissy Field.

I have also seen many dogs off-leash at Ocean Beach within the on-leash Snowy Plover Protection area, which I find upsetting, as they are potentially impacting a threatened species. I think as important as the establishment of clear rules on dogs is the enforcement of the rules by National Park Service officials. Under the current situation, it is not always clear what the rules are and whether or not they are enforced.

Sincerely, Amy Hutzel

Correspondence: My comments are in rebuttal to the City of Pacifica's submission (comments), which were based primarily on the recommendations of an entrenched special interest group which seeks to expand the rights of dog owners on our GGNRA lands without regard for other recreational use, safety of hikers and equestrians, or the impacts on natural areas and endangered species. Because this narrow interest group holds sway over the Pacifica City council and sub-committees, there has been very little input either solicited or incorporated into Pacifica's recommendations from the general public who enjoy GGNRA lands for other usage and thus Pacifica's comments are not representative of the vast majority of its citizens.

In regards to the GENERAL RECOMMENDATIONS submitted by the City of Pacifica (in quotes) my comments follow:

1. "the need for more recreational access on GGNRA lands for on-leash dog walkers in Pacifica including loop trails and access to and from neighborhoods or open space areas exhibiting high visitor volume"

Almost all State and County parkland within Pacifica is currently on-leash dog accessible including Pacifica State Beach and McNee Ranch. Further, the City of Pacifica has plans for an off-leash park in the future. The expansion of on-leash areas on GGNRA land would potentially open it to commercial dog-walkers.

2. "the belief that these changes are compatible with maintaining ecosystem integrity" There is no basis for this claim which contradicts many studies showing that dog access to GGNRA lands is detrimental to wildlife with impacts to soil and geology.

3. "our Committee members' observations that under controlled conditions, on-leash dog access to open space has not always, over the past decades, degraded habitat interim?" The Committee did not submit any relevant measurable data made "under controlled conditions" to make this conclusion other than "casual observation" consisting of self-serving observations with no basis in fact.

4. "concerns that the site use restrictions proposed in the DEIS will cause negative effects from the pressures for other outdoor dog-related recreation The City of Pacifica failed to outline exactly what these "negative effects" may be or how it relates to the DEIS."

In regards to the SITE-SPECIFIC submitted by the City of Pacifica (in quotes) my comments follow: "Sweeney Ridge: ?..the fact that the Sneath Lane/A'PS trail is paved would prevent most if not all dogs from accessing the property off the trails (in the event there is non-compliance with the leash law). Proper enforcement of the rules should ensure that few if any violations occur, in which case the environmental effects from site access on this parcel would be minimal."

This assumes that dog owners would keep their dogs leashed AND that dogs can differentiate between paved and un-paved trails and would stay on only paved trails. Would rely on enforcement in a remote area ? but concedes that without compliance and enforcement there would be "environmental effects" in contradiction to their statement above!

"Mori Point: We suggest that the trails designated on Map 17C as "Tmigtac" and "Pollywog" trails be modified to allow on-leash dog access. We believe the likelihood of either the red-legged frog or the San Francisco garter snake being harmed or negatively affected is extremely remote?."

The uplands of the Mori Point area is critical habitat for the endangered San Francisco Garter Snake (SFGS) and trails bisect this area which adjoins Horse Stable Pond, it's most crucial habitat. Currently dog walkers and hikers access this area from three different directions and thus there is intensive pressure on this species because of disturbances. By my own casual but routine observation I estimate that twenty percent (20%) of dog owners do not comply with the current leash law at Mori Point, and that by allowing on-leash access it would encourage more visitations by people with dogs, thus raising the count of off-leash dogs with greater impacts on wildlife. Further, because of the presence of coyotes in the area a greater dog presence would create more conflicts. The belief that on-leash dog access is without negative impacts is totally without merit and has no basis in fact.

"Future Considerations: ?We are concerned that a loss of on-leash dog access on lands within Pacifica might have unwanted economic consequences, as dog walkers will go elsewhere, effectively eliminating the possibility of patronizing Pacifica's restaurants, hotels, or other retail outlets?."

Unfortunately the City of Pacifica sometimes works against its own best self interest and has failed to subsume the interest of dog-owners to the wider economic benefits derived from being adjacent to a National Park. On more than one occasion the City Council has been presented with studies that demonstrate that economic growth near national parks outpaces other areas that lack similar natural amenities. On the other hand increased dog presence in the GGNRA will cause deterioration in the visitor experience

which can generate both social and economic costs. For this reason dog access should be given little weight as far as it's economic importance, must be balanced among more compelling reasons and its potentially negative effects must be managed.

Frank Dean, General Superintendent Golden Gate National Recreation Area
Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean,

I live in the San Francisco Bay Area, and enjoy using the GGNRA on a regular basis. Our favorite place to go is Fort Funston, and we typically spend an entire day there every few weeks.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions.

It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option.

The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal.

The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA

was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents.

After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program.

Thank you for your consideration.

Sincerely,

Leah Standard Newark, CA 94560

Correspondence: Dear National Park Service,

I just want to express my grave concern over the proposal to greatly

constrict off-leash dog walking in the city of San Francisco and Marin in the Golden Gate National Recreation Area. This area is filled with many dog owners/lovers and we use these areas with respect and gratefulness. We all truly hope the status quo continues and that we can continue to walk our dogs at Fort Funston, Crissy Field, Ocean Beach, Rodeo Beach, etc.

San Francisco Bay Area has a great deal of open space territories for non-dog-owners: Golden Gate Park, areas of the coastline and a plethora of parks so there are many places where people who do not like dogs can go to relax and enjoy the outdoors. Almost all of the dog owners in the Bay Area are very responsible and take very good care of their animals and obey the rules of guardianship. They pick up feces, often some left accidentally by another, control aggression if necessary and manage their dogs around sensitive or fearful people. It is a rare 1% or less of people who seem to be reckless. In any demographic or group there will be people deviant of what is considered appropriate behavior. In fact, more parents of children are less responsible than dog owners.

Please, I urge you to maintain the status quo of the dog walking areas and rules in GGNRA. It will help keep peace in the area much more than if the proposal goes through. If the proposal goes through, there will be many more problems with dogs of the Bay Area than there are now. It is a short-sighted way to manage what is perceived as a problem by a select few.

Please take my and other peoples' needs and desires in consideration as much as the authors of the proposal. We are many and we are hopeful that you will see things our way and make the right decision.

Sincerely, Dan Byrnes

Frank Dean, General Superintendent

Golden Gate National Recreation Area

Fort Mason, Building 201

San Francisco, CA 94123-0022

Dear Mr. Dean,

Frank Dean, General Superintendent

Golden Gate National Recreation Area

Fort Mason, Building 201

San Francisco, CA 94123-0022

Dear Mr. Dean,

[Put your personal comments here ? Introduce yourself, identify your neighborhood, say how often you use the GGNRA, and where & how often you take your dog. Counter the argument that we are "anti-environmentalists" by listing the environmental organizations you belong to, or the actions you take that indicate how important the environment is to you.

If you are comfortable doing so, indicate if you are a member of a minority group. The DEIS proposes that many seniors, disabled, or racial/cultural minorities do NOT come to the GGNRA because of off-leash dogs ? let's show how many of us come for EXACTLY this reason!)

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions.

It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option.

The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make

the plan work, not assume an adversarial relationship with failure the goal.

The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents.

After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program.

Thank you for your consideration.

Sincerely,

Shauna Joseph

Correspondence: I am not a dog owner, but i do so enjoy being out on GGNRA beaches and watching the dogs running freely. It makes my heart soar to see such beautiful unbridled joy. This plan to eliminate 90% of the off-leash areas in San francisco and Marin is terribly wrong and short-sighted. From what i'm told, these areas in dispute were promised as off-leash areas when the land was transferred to the GGNRA back in 1972. Where are these dogs and their dog owners supposed to go? You must allow dogs to run off-leash! This is a city, with limited outdoor recreational land, and you must respect the recreational needs of its inhabitants. I respectfully request you leave things as they are, and spend your limited funds on more pressing concerns.

Correspondence: Dear Mr. Dean, I am a dog owner living in the mission district in San

Francisco. I frequently walk my dog, a small chihuahua terrier, at Chrissy Field as well as Fort Funston. Both of these places are special to me and my dog because they allow him to run free without any danger of being hit by a car, and to play with lots of other well-behaved dogs. There are not many places available to do this, and we really appreciate the parks in San Francisco. I am a contributor to the Sierra Foundation and the State Parks foundation and wholly support an environmentally-friendly plan to keeping our parks beautiful and accessible to everyone. I have taken my dog for training and made sure that his behavior at the park is safe and monitored. If I ever feel there is danger of him misbehaving (mostly by trying to take picnic food), I put him on leash immediately. I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions. It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. Correspondence: I walk my dog at Baker Beach -the proposed plan there is overly restrictive. There are no endangered species of birds there. Dogs are not hurting the sand. I depend on walking my dog there for health and well being as I recreate. The dog walkers there are good stewards of the beach, and we clean up and self regulate the dog activity. The contiguous beach, China Beach is off limits to dogs so why deprive the Sea Cliff residents of a place to take dogs which many residents have been doing for over 40 years. I saw an instance of a dog walker helping to rescue the life of a woman who got pulled out by a wave with her boyfriend. The boyfriend died and the dog walker got a runner to pull the woman out in time as she was unconscious. It seems wrong that naked men can not get a ticket yet dogs would be illegal. People camp out and have illegal fires all the time. If environmentalists think dogs are the problem, then what about the surfers, and cruise ships spewing oil, Fleet Week etc.-aren't those interfering with nature as well? There is a huge population of ravens at the beach and these birds are bullies and affect the wild bird population more than dogs. I personally fill up the container for dog waste bags every week. I warn families if their children are playing in the water and there are undertows or rogue waves. There is no problem at Baker so let us walk our dogs there please.

Thank you.

Correspondence: The Sacramento Council of Dog Clubs, a coalition of American Kennel Club breed, all-breed and training clubs, incorporated in 1974, supports the enforcement of leash laws because they provide an important safeguard for people, their dogs, wildlife, and parks. The Council is concerned that the preferred alternative in the Draft Dog Management Plan Environmental Impact Statement has only one enclosed off-leash dog play area. The remaining areas proposed for off-leash dog areas are not enclosed. The Council supports the adopting of regulations which would create enclosed off-leash dog play areas. Without enclosure, both dogs and people are at risk.

Thank you for your attention to our concern.

Correspondence: Frank Dean, General Superintendent Golden Gate National Recreation Area Building 201, Fort Mason San Francisco, CA 94123-0022

Re; Draft Dog Management Plan/Draft Environmental Impact Statement

Dear Superintendent Dean,

I am a San Francisco Resident that has, since moving to San Francisco enjoyed a number of the GGNRA areas under consideration ? in Particular Rodeo Beach in Marin, Lands End, Baker Beach, Crissy Field, Ocean Beach and Fort Funston in San Francisco. With My husband I am also a ten year volunteer at the Marine Mammal Center in the Marin Headlands, I know and appreciate your work, and that of Brian O'Neill, for all the support the GGNRA has given to the TMMC over the years.

However I am dismayed at the DEIS and much opposed to the changes proposed for both generic and specific reasons which I will try to address.

7 I have a very active dog, a Border Collie rescue Mix, and being active it requires DAILY running. This running is done by myself and/or our Dog Walker. She is insured and Bonded and, and I am sure of her professionalism. Everyone who knows dogs knows that a tired dog is a relaxed dog, and a relaxed dog is a well behaved dog. Off Leash exercise is so much more than on leash exercise. On leash exercise limits the dog to my level of fitness, and that means that by forcing on leash requirements you are binding the exercise of many dogs to that of handicapped, and elderly owners. My dog "forces me" to go out every day and take a walk, and although that can be in my local neighborhood it is nothing like our walks in the Marin Headlands, or Lands End paths, or along Crissy Field. Off leash walking is my time with my dog. He is always under voice control because my time at the park is my time with him ? we "work" together. These moments when my dog runs back and forth with a stick in his mouth are the reason I get in my car and go the GGNRA controlled lands. I always carry two rolls of poop bags on my leash and I will clean up other dogs poop if I find it when cleaning up after mine. I also participate in dog owner's park cleanups, be it in the City or out at Funston.

7 The concept of ROLA is astonishing. As far as I can understand The NPS self appoints itself to monitor a compliance level of 75% based on total dogs observed not in compliance . Who does the observing? A third party? When do the observing? Of course, for it to be legal I presume it will be done for 365 days every day from 5 am to 10pm when the parks close, because, if there is no one there to observe and 100 dogs use the park, and are in compliance they will not be tallied, which means your data is invalid. As you can see ROLA is non-sensical in the way you define it, it the way you

set it up to self police, but even more so in the way you ascribe to yourself the powers to make reductive changes to the use of the park without proper due process. The Poison pill has to be eliminated from the plan as it is unenforceable and lacks any kind of scientific basis (unless, of course you can observe all users all the time)

The fact that this NOLA Compliance based criteria is included in all options automatically disqualifies your alternatives

7 The DEIS does not seem to consider demographics: Answer a question ? is dog ownership in San Mateo/San Francisco County/Marin increasing or decreasing? All the studies I have seen it is increasing. Therefore, as caretakers for lands given your trust for recreational purposes by those counties should you not take that in consideration and offer an alternative where you INCREASE off leash areas? Off leash areas, at the time of the 1979 Pet Policy was limited to only 1% of all the lands you administer. Since then new land has been added but you have DECREASED the percentage of those lands to below 1%. Why is there no alternative where you reflect demographics and the desires of the citizens of those counties who gave you the land and offer another alternative where you increase these lands? Alternatively, since you only have 1% of lands open to dogs, why not, if you take certain areas away can you not have an alternative where you give back other lands now currently closed? I would have loved to have seen somewhere in the DEIS something along the lines of "We are proposing removing XXXX from off-leash areas, but are opening up YYYY to off-leash use." You have the space. Why not use it?

7 Your purposes, for the GGNRA is for RECREATIONAL purposes. These lands are NOT National Parks ? they are ex army installations and they were given in trust for you to administer in keeping with the original deed. You appear to treat Recreation as having an inverse impact on the areas under consideration, ignoring that Recreation WAS and IS one of the four outstanding values mentioned in the 1972 enabling legislation I quote : "maintenance of needed recreational open space". When Daphne Hatch your chief of natural resources management and science at the GGNRA says Quote: "Ocean Beach without the people is an incredible habitat, But people think of it as a sandbox or their backyard." I truly wonder if the NPS knows the difference between Yosemite and Fort Funston or Ocean Beach". When I attended one of you open houses I was told that I was told that NPS is mandated by Congress to "manage uniformly all its areas" she forgot also to tell me that Congress added "The authorization of activities shall be construed and the protection, management, and administration of these areas ? shall not be exercised in derogation of the values and purposes for which these various areas have been established". So there is no mandate to match the GGNRA's policies with National Park Service requirements that dogs

not be allowed off-leash in a national park.

7 Snowy Plovers: Your own research - Forrest Cassidy St Clair and Warren all demonstrate that dogs do not actually impact the diversity, abundance and feeding behavior of the birds. The Hatch report observed 5692 dogs and only 19 chased plovers. Your own studies prove that parents with toddlers, surfers and other park users disturbed the plovers far more than dogs, yet I do not see anything in the DEIS that is further restricting their access. Why are dogs being singled out? Your environmental impacts are a whole bunch of "could occur" "may occur" but I do not see a single study that backs this up. You mention Bank swallows, and their nests, but they burrow in the cliffs, areas that dogs simply do not go to. . Ultimately your environmental studies do not seem to support your conclusions and you can be taken to task on this. I have tried to read the DEIS but I have failed to come across any actual solid scientific data that supports your premises. I see a lot of "coulds" and "mays" but no actual evidence and no baselines ? None. In fact, the one study I did read in full ? the one above ? demonstrated exactly the contrary to the "results you would have preferred. You had all the time to back up your claims with hard data. The fact is you have not been willing to do so - discrediting the scientific basis of this DEIS, or, worse still, the data contradicted your preferred solutions, and you have chosen to ignore it. I could not find an comparative analysis of the "No Action" option. The impacts appear based on non-compliance to existing voice control and existing regulations. At some sites, the DEIS prohibits dogs from beach areas to protect shorebirds and stranded marine mammals, yet there is no documentation in the DEIS of current shorebird or marine mammal impacts caused by dogs.

7 So if you have no sound scientific data to support the environmental reason to restrict areas to dogs let's look at the safety issue. Well in this case your data is overwhelming in pointing to what are the causes of serious safety incidents ? 98% DID NOT INVOLVE DOGS. The problem is people, not dogs. Only 2% involve dogs. This alone should really force you to re-think the whole reason for the DEIS.

7 The DEIS is concentrated on dogs, and ignores impacts caused by people and their children, mountain bikers, fleet week, walk-a ?thons, feral cats, coyotes, horses, surfers, etc etc. In other words. The DEIS appears to be a targeted exercise. Not a 360 degree look at the panorama affecting the GGNRA

7 Why is the current system not working for you? Are you able to enforce the current No ?off leash zones? They are 99% of the lands you administer. If you can do it now why the need to change? If you cannot do it now, what additional funding will you require to ensure the new areas will be

enforced?

7 You TOTALLY ignore the impacts that these policies will have on the surrounding areas. If you squeeze dogs out of GGNRA lands will they go? To overloaded City Parks ? Have you involved the City in this plan? You also have totally ignored the beneficial and human impacts of off leash interaction with one's pet. As I mentioned above, My mother cannot run so why are you wanting to limit the dog's exercise level to hers? She currently can play with our border collie and use a chuck-it with minimum effort for her and maximum effort for the dog. When I go to the park I see people playing with the dogs of all ages, races and, presumably, financial background. I do not see anything in your study except a rather curious reference to "minorities" not coming to the parks because of dogs - The DEIS cites a 2007 SF State study that claims all Latinos and Asians surveyed said that dogs were a problem but if you actually read the study you discover some things: a) the study was not, as the DEIS implies an "ethnic minority visitor use experience at the GGNRA" but was actually a study born to help connect minorities to the parks. But more damning the study was hardly a scientific one ? they interviewed fewer than 100 people and they were not randomly selected. It is this kind of "selective" scientific use that will have the words "Drake's Estero" popping up in people's minds.

In conclusion it appears that this is a misguided solution in search of a problem. Your data simply does not support the existence of the problem, and your attempts to squeeze a NPS agenda on local parks is misguided and contrary to the spirit with which these lands were entrusted to you.

The more I look at the lack of data, the more I fear that, what the Dept. of Interior report said about Drakes Estero can be applied to this DEIS and that it exhibits "sloppiness, from a protective approach to data, from a lack of vision, and from an insensitivity to the growing controversy, but not from any obvious intent to deceive, defraud or mislead." I really hope you are not trying to mislead but the lack of any evidence to your premises, causes great reason to wonder if the NPS does have an anti-dog which will be forced upon these Recreational Lands regardless of their negative impacts.

For all the reasons stated above, but in particular for:

- 1) The existence of a "Poison Pill" compliance override on all the alternatives
- 2) The lack of scientific data supporting your premises

I support Alternative A ? the No Action Alternative and would also include New Lands area in that

Respectfully

JoAnne Lee

Correspondence: Greetings: I just want to make a brief comment of support for your plans to control off leash dog use in the GGNRA. Everyone has the right to use the trails and open spaces without a dog in company and without the disruptions and dangers that dogs cause to the elderly and to children. Dogs obviously DO cause environmental degradation when there are large numbers of them running around. However, some accomodation has to be made for them but that should not mean unrestrained packs of dogs dominating the public space causing damage to the flora and fauna as well as being a nuisance to people. I like dogs too but there are too many of them in our public spaces, beaches, trails.

Correspondence: I am writing to oppose the entire DEIS plan put forth by the National Park Service in regard to the Pet Policy in the Golden Gate National Recreation Area. The plan, as proposed, creates a Hobson 's choice for the hundreds of thousands of park visitors who choose to recreate with dogs. You have developed a means to completely remove a historic use of the park and communities that are created by that use.

I no longer live in San Francisco, being priced out by the economy and my profession and have not been to Fort Funston or Crissy Field since October 2009. I left San Francisco in February 2008 after my dog, Sport, had to be put to sleep as a result of a dreadful illness that may have been caused by the Cosco Busan spill in November 2007. I am also a member of the Dolphin Swimming and Boating Club and we were advised not to swim because of the spill. Perhaps the NPS should be more concerned about bird and native plant health because of the toxins of the industrial uses of the San Francisco Bay area instead of dogs ? a native species.

In my return to San Francisco, I was greeted as an old friend by hundreds of people at Fort Funston and Crissy Field who knew me and my dog Sport.

By taking away the ability to exercise and socialize our animals in the GGNRA, you will be taking away a fundamental Constitutional right ? the right of free association. In the eight years that Sport and I visited Crissy Field, Ocean Beach or Fort Funston twice daily I created an amazing community of friends. Friends I still have today. These friends were of all ages, races, ethnicities, genders, sexual orientations and economic statuses. These friends got me through the grief and trauma of years of watching my friends die from AIDS that no support group or therapist could. I, like so many of my dog walking friends, were very conscientious about our dogs' behaviors towards birds, park visitors, and poop. The NPS, in this poorly constructed plan, are clearly trying to completely remove all dog owners, dogs, dog walkers or any other people who enjoy dogs from the GGNRA.

I had several incredibly poor interactions and tickets issued to me by Enforcement Ranger Eric LaSalle in the early 2000s and fear for the safety of my friends who continue to walk their dogs off leash. Ranger LaSalle was disciplined due to his behavior towards me by the NPS. However, in the future, Enforcement Rangers will have a free hand in enforcing the rules and they carry weapons. This most certainly is going to end poorly.

The GGNRA is located in a crowded urban area. It is not a pristine wilderness. It does not meet the same requirements of some of our "national treasure" National Parks such as the Grand Canyon, Yosemite or Yellowstone. Oh, right ? those "national treasures" are paved over, full of traffic and were so over managed in the early days that many native species were killed (mountain lions and wolves) as nuisances. I do not trust the NPS and its ability to manage our wild areas of the country. Why, all of the sudden is the GGNRA of such great importance as a wildlife habitat? The majority of the lands in San Francisco that were given to the Park Service could be deemed Superfund sites due to the lead levels because of their histories of being military bases.

The simple reason the National Park Service wants the GGNRA to be a "plant museum" is to make money. Property in the Bay Area is some of the most valuable property in the world. What better way to make money for the NPS than by creating off limits spaces for regular people and then creating "lodges," conferences centers and pay-per-use access to these lands as is happening in the Presidio and Fort Baker. Without the same people seeing the changes that the NPS attempts to put in place and protesting them ? the NPS can go ahead and continue to restrict access to more and more public lands.

I fully oppose the entirety of the DEIS.

Correspondence: Dear Mr. Dean,

My name is Betty Wong, a native and resident of San Francisco, CA. My neighborhood is Glen Park. My dog visits the Fort Funston area on any every day basis.

We are an Asian American family with seniors who love the off-leash area of Fort Funston for our dogs to run.

We do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off-leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions.

It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option.

The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal.

The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents.

After careful consideration, I support a modified Alternative A (the "No

Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program.

Thank you for your consideration.

Sincerely,

Betty Wong San Francisco, CA 94131

Correspondence: I am a resident of San Francisco, a lover of the outdoors, and a responsible dog owner. I take my dog to play off leash at Fort Funston at least once a week, rain or shine. On occasion, I also take my dog to Crissy Field. First, I would like to comment on the Dog Management Plan in general and then specifically on Crissy Field and Fort Funston.

In general, I find that the Preferred Plan to be overly restrictive, non-inclusive, and borderline belligerent towards responsible dog owners who use GGNRA land. I am most concerned about the "Compliant-Based Management Strategy." I see no reason why this was included in the Plan other than the GGNRA positioning itself towards an outright ban on off leash areas. The inclusion of the "Compliant-Based Management Strategy" is a combative and unfair gesture against the majority of dog owners who use GGNRA land responsibly. The GGNRA is not a national park, nor should it strive to become one, and the "Compliant-Based Management Strategy" should be absent from any final plan that is adopted.

I understand that some people do not care for dogs as much as I love spending time with my dog off leash, and the problem for the GGNRA is where these two groups meet on GGNRA land. A prime example of this is Crissy Field. Crissy Field is enjoyed by locals, tourists, runners, bikers, families, children, sunbathers, kite-fliers; the list goes on and on. Because it is a popular multi-use recreation area with people who do and don't like dogs, I can understand a need for designated off leash and on leash areas at Crissy Field.

However, Fort Funston is completely different. In general, it is nowhere as popular as Crissy Field. Furthermore, the overwhelming majority of people who do visit Fort Funston are there to take their dog off leash. The park is also big enough that those who do not care for dogs can easily enjoy one of

the great areas away from the majority them, like the bluffs or on top of the battery. Because Fort Funston not a popular, multi-use recreation area, I see no reason to designate an on-leash area. I lived 6 years as a dog owner in the dog-friendly Pacific Northwest, and in my opinion Fort Funston is the best place for off leash dog walking that I've been to. It should stay that way.

I sincerely hope my comments and the constructive comments of other responsible dog owners show the GGNRA that although action is needed, compromises should also be made. One of the best compromises I can think of adoption of the Preferred Alternative at Crissy Field in return for the adoption of Option-A at Fort Funston, keeping it the best off leash area on the West Coast.

Correspondence Type: Web Form

Correspondence: I have been burglarized 3 times--twice while I was in my house alone. I have since gotten a dog and an alarm system. I rely on my dog to warn me of any potential intruders; the alarm system only works once someone has set it off---it does not warn me of potential threats, which my dog does. The police did nothing after each burglary as they had "more important cases to handle". Getting a dog turned into a necessity rather than a luxury.

Owning a dog implies a commitment to treating the animal well. That entails giving the dog sufficient exercise. If GGNRA enacts its current proposal, I will have no where to take my dog for exercise. Those areas that will be left, will be overrun by the 100,000+ dogs that reside in this city.

I need the protection of my dog and my dog needs to be treated well and get the exercise she needs. Without that, I run the risk of my dog changing her nature and becoming more aggressive and less reliable which puts me at risk.

GGNRA has not substantiated that there is actual damage from dogs. It has implied that there might be. Before we eliminatae dogs from these areas we need to be assured that there is actual damage that can not be avoided by some other means.

Correspondence: May 27, 2001 Frank Dean, General Superintendent Golden Gate National

Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean, I am writing to you with concern and opposition to the GGNRA's preferred alternative in our area of Pacifica in San Mateo County. Our family walks our dog almost daily on the lands of Sweeney Ridge, Mori Point, Rancho Corral Tierra and occasionally in the San Pedro Highlands. These areas have been open to dog walking for many years and have been a great area for recreation and source of joy for our family. We have been lucky to enjoy the environmental and historical beauty of these lands while exercising with our dog. I understand the need to protect fragile areas and balance public recreation needs but it feels we are being excluded from use of this public recreation resource with years of use and very little impact in these areas. I would hope better signage and enforcement could accomplish your goal without restricting the areas we are currently able to bring our dog. Please continue to allow us to recreate with our dog in the GGNRA. I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off-leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions. It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option. The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal. The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents. After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program. Thank you for your consideration. Sincerely, Aaron

May 27, 2011

Dear Mr. Dean, My name is Jocelyn Saidenberg and I work for the San Francisco Public Library as a branch librarian. I currently own a beautiful collie-mix dog whom I adopted from a shelter. I have lived in San Francisco for 18 years, and one of the main attractions that lured me here, and keeps me here, is the ability to run and walk with my dog in so many beautiful green spaces. I run and walk with my dog, very responsibly, in many of the areas that are part of the GGNRA. Crissy Fields, Fort Funston, Baker Beach, Lands End, Ocean Beach are all places I visit with my dog weekly. At least ten times a year, I take hikes with my dog in the Marin Headlands and along Rodeo Beach. Being able to run and walk with my dog off-leash in natural areas is an essential part of how I live and thrive and is an essential part of how my dog lives and thrives. This is true for so many others, human and animal, in the Bay Area. It is integral part of what makes for healthy communities. I am a member of the Green Party and other local environmental organizations, such as the local chapter of the Sierra Club. I am deeply concerned about our planet and the environment, yet I am also certain that healthy living in a complex urban area means providing a diversity of recreational activities, including responsible off-leash areas for dogs and their owners. I do not agree with the Golden Gate National Recreational Area's current preferred alternative as it significantly restricts and eliminates off-leash dog walking in many areas within the GGNRA. It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options

(besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use which includes dog-walking access with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. After careful consideration, I support the "No Action alternative." Thank you for your consideration.
Sincerely, Jocelyn Saidenberg

Re; Draft Dog Management Plan/Draft Environmental Impact Statement

Dear Superintendent Dean,

I am a San Francisco Resident that has, since moving to San Francisco enjoyed a number of the GGNRA areas under consideration ? in Particular Rodeo Beach in Marin, Lands End, Baker Beach, Crissy Field, Ocean Beach and Fort Funston in San Francisco.

With My husband I am also a ten year volunteer at the Marine Mammal Center in the Marin Headlands, I know and appreciate your work, and that of Brian O'Neill, for all the support the GGNRA has given to the TMMC over the years.

However I am dismayed at the DEIS and much opposed to the changes proposed for both generic and specific reasons which I will try to address.

7 I have a very active dog, a Border Collie rescue Mix, and being active it requires DAILY running. This running is done by myself and/or our Dog Walker. She is insured and Bonded and, and I am sure of her professionalism. Everyone who knows dogs knows that a tired dog is a relaxed dog, and a relaxed dog is a well behaved dog. Off Leash exercise is so much more than on leash exercise. On leash exercise limits the dog to my level of fitness, and that means that by forcing on leash requirements you are binding the exercise of many dogs to that of handicapped, and elderly

owners. My dog "forces me" to go out every day and take a walk, and although that can be in my local neighborhood it is nothing like our walks in the Marin Headlands, or Lands End paths, or along Crissy Field. Off leash walking is my time with my dog. He is always under voice control because my time at the park is my time with him ? we "work" together. These moments when my dog runs back and forth with a stick in his mouth are the reason I get in my car and go the GGNRA controlled lands. I always carry two rolls of poop bags on my leash and I will clean up other dogs poop if I find it when cleaning up after mine. I also participate in dog owner's park cleanups, be it in the City or out at Funston.

7 The concept of ROLA is astonishing. As far as I can understand The NPS self appoints itself to monitor a compliance level of 75% based on total dogs observed not in compliance . Who does the observing? A third party? When do the observing? Of course, for it to be legal I presume it will be done for 365 days every day from 5 am to 10pm when the parks close, because, if there is no one there to observe and 100 dogs use the park, and are in compliance they will not be tallied, which means your data is invalid. As you can see ROLA is non-sensical in the way you define it, in the way you set it up to self police, but even more so in the way you ascribe to yourself the powers to make reductive changes to the use of the park without proper due process. The Poison pill has to be eliminated from the plan as it is unenforceable and lacks any kind of scientific basis (unless, of course you can observe all users all the time)

The fact that this NOLA Compliance based criteria is included in all options automatically disqualifies your alternatives

7 The DEIS does not seem to consider demographics: Answer a question ? is dog ownership in San Mateo/San Francisco County/Marin increasing or decreasing? All the studies I have seen it is increasing. Therefore, as caretakers for lands given your trust for recreational purposes by those counties should you not take that in consideration and offer an alternative where you INCREASE off leash areas? Off leash areas, at the time of the 1979 Pet Policy was limited to only 1% of all the lands you administer. Since then new land has been added but you have DECREASED the percentage of those lands to below 1%. Why is there no alternative where you reflect demographics and the desires of the citizens of those counties who gave you the land and offer another alternative where you increase these lands? Alternatively, since you only have 1% of lands open to dogs, why not, if you take certain areas away can you not have an alternative where you give back other lands now currently closed? I would have loved to have seen somewhere in the DEIS something along the lines of "We are proposing removing XXXX from off-leash areas, but are opening up YYYY

to off-leash use."You have the space. Why not use it?

7 Your purposes, for the GGNRA is for RECREATIONAL purposes. These lands are NOT National Parks ? they are ex army installations and they were given in trust for you to administer in keeping with the original deed. You appear to treat Recreation as having an inverse impact on the areas under consideration, ignoring that Recreation WAS and IS one of the four outstanding values mentioned in the 1972 enabling legislation I quote : "maintenance of needed recreational open space". When Daphne Hatch your chief of natural resources management and science at the GGNRA says Quote: "Ocean Beach without the people is an incredible habitat, But people think of it as a sandbox or their backyard." I truly wonder if the NPS knows the difference between Yosemite and Fort Funston or Ocean Beach". When I attended one of you open houses I was told that I was told that NPS is mandated by Congress to "manage uniformly all its areas" she forgot also to tell me that Congress added "The authorization of activities shall be construed and the protection, management, and administration of these areas ? shall not be exercised in derogation of the values and purposes for which these various areas have been established". So there is no mandate to match the GGNRA's policies with National Park Service requirements that dogs not be allowed off-leash in a national park.

7 Snowy Plovers: Your own research - Forrest Cassidy St Clair and Warren all demonstrate that dogs do not actually impact the diversity, abundance and feeding behavior of the birds. The Hatch report observed 5692 dogs and only 19 chased plovers. Your own studies prove that parents with toddlers, surfers and other park users disturbed the plovers far more than dogs, yet I do not see anything in the DEIS that is further restricting their access. Why are dogs being singled out? Your environmental impacts are a whole bunch of "could occur" "may occur" but I do not see a single study that backs this up. You mention Bank swallows, and their nests, but they burrow in the cliffs, areas that dogs simply do not go to. . Ultimately your environmental studies do not seem to support your conclusions and you can be taken to task on this. I have tried to read the DEIS but I have failed to come across any actual solid scientific data that supports your premises. I see a lot of "coulds" and "mays" but no actual evidence an no baselines ? None. In fact, the one study I did read in full ? the one above ? demonstrated exactly the contrary to the "results you would have preferred. You had all the time to back up your claims with hard data. The fact is you have not been willing to do s - discrediting the scientific basis of this DEIS, or, worse still, the data contradicted your preferred solutions, and you have chosen to ignore it. I could not find an comparative analysis of the "No Action" option. The impacts appear based on on non-compliance to existing voice control and existing regulations. At some sites, the DEIS prohibits dogs from beach areas to protect shorebirds and stranded marine mammals, yet there is no documentation in the DEIS of current shorebird or marine mammal impacts

caused by dogs.

7 So if you have no sound scientific data to support the environmental reason to restrict areas to dogs let's look at the safety issue. Well in this case your data is overwhelming in pointing to what are the causes of serious safety incidents ? 98% DID NOT INVOLVE DOGS. The problem is people, not dogs. Only 2% involve dogs. This alone should really force you to re-think the whole reason for the DEIS.

7 The DEIS is concentrated on dogs, and ignores impacts caused by people and their children, mountain bikers, fleet week, walk-a ?thons, feral cats, coyotes, horses, surfers, etc etc. In other words. The DEIS appears to be a targeted exercise. Not a 360 degree look at the panorama affecting the GGNRA

7 Why is the current system not working for you? Are you able to enforce the current No ?off leash zones? They are 99% of the lands you administer. If you can do it now why the need to change? If you cannot do it now, what additional funding will you require to ensure the new areas will be enforced?

7 You TOTALLY ignore the impacts that these policies will have on the surrounding areas. If you squeeze dogs out of GGNRA lands where will they go? To overloaded City Parks ? Have you involved the City in this plan? You also have totally ignored the beneficial and human impacts of off leash interaction with one's pet. As I mentioned above, My mother cannot run so why are you wanting to limit the dog's exercise level to hers? She currently can play with our border collie and use a chuck-it with minimum effort for her and maximum effort for the dog. When I go to the park I see people playing with the dogs of all ages, races and, presumably, financial background. I do not see anything in your study except a rather curious reference to "minorities" not coming to the parks because of dogs - The DEIS cites a 2007 SF State study that claims all Latinos and Asians surveyed said that dogs were a problem but if you actually read the study you discover some things: a) the study was not, as the DEIS implies an "ethnic minority visitor use experience at the GGNRA" but was actually a study born to help connect minorities to the parks. But more damning the study was hardly a scientific one ? they interviewed fewer than 100 people and they were not randomly selected. It is this kind of "selective" scientific use that will have the words "Drake's Estero" popping up in people's minds.

In conclusion it appears that this is a misguided solution in search of a problem. Your data simply does not support the existence of the problem, and your attempts to squeeze a NPS agenda on local parks is misguided and contrary to the spirit with which these lands were entrusted to you.

The more I look at the lack of data, the more I fear that, what the Dept. of Interior report said about Drakes Estero can be applied to this DEIS and that it exhibits "sloppiness, from a protective approach to data, from a lack of vision, and from an insensitivity to the growing controversy, but not from any obvious intent to deceive, defraud or mislead." I really hope you are not trying to mislead but the lack of any evidence to your premises, causes great reason to wonder if the NPS does have an anti-dog which will be forced upon these Recreational Lands regardless of their negative impacts.

For all the reasons stated above, but in particular for:

- 1) The existence of a "Poison Pill" compliance override on all the alternatives
- 2) The lack of scientific data supporting your premises

I support Alternative A ? the No Action Alternative and would also include New Lands area in that

Respectfully

JoAnne Lee San Francisco

Correspondence: May 27, 2011 Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022
Dear Mr. Dean,

My name is Stephen Liu and I am a San Francisco Bay Area native for over forty years that uses Crissy Field, Fort Funston, and other GGNRA parks during the year. I take my Nemo my dog out every day for running and exercise and we appreciate the off leash areas we have in San Francisco. My Nemo is 110 lb Labrador retriever that needs his exercise and when we are out we enjoy the outdoors and the windy paths we travel during our outings. We take care of the environment and are respectful to the area around us. Please do consider reversing the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County. It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these

important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option. The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal. The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents. After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program. Thank you for your consideration. Sincerely,

Stephen Liu Daly City, CA 94015

Correspondence: Comments on GGNRA Draft Dog Management Plan DEIS

To: Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022

From: Eddie Bartley San Francisco, CA 94107

Dear Superintendent Dean,

First off, thank you for extending comment period for the GGNRA Dog Management Plan as the extra time has provided me more opportunity to consider such a wide ranging issue from a variety of perspectives and counter-points. Even though my overall conclusion remains very similar to where it began, at least I feel I have a better understanding of the perspectives of those with opposing views and the intricacies of the plan

itself.

I am in support of adopting a Dog Management Plan for the GGNRA. My interests in the GGNRA are as a San Francisco resident, natural history educator, a frequent park visitor and a volunteer participating in many public and private wildlife monitoring programs in the Golden Gate National Parks. For many decades I have enjoyed these parks for unique opportunities to experience natural and cultural resources and I applaud the values and spirit of our National Park System and its mission to "preserve unimpaired the natural and cultural resources and values of the national park system for the enjoyment, education, and inspiration of this and future generations."

The assessment that these natural and cultural resources and park visitor experiences have been, and continue to be, negatively impacted by the presence of substantial quantities of domestic dogs, both on-leash and off-leash, within the GGNRA is not only correct but abundantly obvious. Due to gradual but persistent societal changes, the sheer number of dogs in our region has grown to the point where having an experience or providing a nature education program in the GGNRA without disruption by dogs has become rare. Indeed, whether leading groups of students to learn more about the amazing variety of wildlife in the parks or performing nest or population studies of birds many of us are effectively excluded from some areas of the GGNRA in pursuit of our own studies and recreation. For example: Most of Ft. Funston has become a "no go" area for studying and appreciating wildlife. No way would I lead a group or take a nature class there. The possibility of a conflict with dogs is almost guaranteed with a group of students holding binoculars or carrying tripods. Many dogs somehow see tripods as a threat and often act quite aggressively around them. Sure, the majority of the dogs are well socialized and not a problem but a substantial number of them are not. Dogs are a predator species after all and the introduction of tens of thousands of these animals into some of our most sensitive wildlife areas has predictably become a huge challenge for our native species as well many of whom are already dealing with significant habitat losses.

Perhaps in part because I'm a local naturalist, friends and students have shared many, many stories unprompted by me of conflicts they have experienced or observed between dogs and wildlife and dogs and people in the GGNRA. Most all of these conflicts could have been avoided had the dog owners had control of their dogs but after years of studying this issue I don't see any improvement in those odds. Frankly, in my opinion, the fact that out of 120,000 plus dogs in San Francisco less than 12% of them are licensed goes a long way to arguing that dog owners in general are not showing the level of social responsibility that should be expected of our citizens here. These facts are directly from studies performed by San

Francisco Animal Care and Control.

From a personal perspective I am grateful for the National Park Service's willingness to try to bring in all of the different shareholders and interest groups comments and opinions into the negotiation stage of the GGNRA Dog Management Plan. I certainly do not envy you your task! Naturally, many dog owners are feeling very defensive about criticisms they feel are leveled against them and their charges. Other dog owners are on the offensive and lining up attorneys (as well as lining their pockets) to take the NPS to court over whatever decision is finalized. Environmentalists and wildlife conservationists have been taking it on the chin being called "dog haters" and worse. As one of this latter group I find those charges ironic and absurd. A wild animal enthusiast who doesn't care for the welfare of all animals, including domestics, would be a rare person indeed in my experience. I find myself of the same mind as many of my colleagues and friends: I love dogs and am concerned for the well being of our faithful companions, but have become alarmed about the well being of our local wildlife and the worrisome declines in so many native species.

While I am supportive of many aspects of the Preferred Alternative, I have the following comments to offer:

General Comments

The DRAFT ENVIRONMENTAL IMPACT STATEMENT (DEIS) is inadequate: Factually erroneous statements in the report about the historical and current status of the Western Snowy Plover are particularly egregious. Snowy Plovers formerly nested in The Presidio and in fact The Presidio is the Type Locality of the Snowy Plover (Trowbridge, May 8, 1854). Omission of sighting vetted scientific studies regarding the impact of dogs on natural and cultural resources has led to misinformation and speculation of statements in the DEIS. Neglecting to provide "Criminal Incident Records" for recent years (2009 & 2010) in a timely manner despite Freedom of Information Act requests was another important omission of the DEIS.

Voice Control is not a valid method of controlling off-leash dogs: This fact is abundantly obvious from a visit today to any of the popular off leash dog areas, especially beaches. Yes, a minority of dogs do respond well to voice control, but the vast majority respond only when the dog wants to. There is much more yelling by dog owners than obeying and this in itself has a negative impact on other visitor's park experience. Particularly disruptive is the commercial dog walker's activities.

Shorebirds are the species most affected by the presence of dogs: The plan in general does not adequately provide shoreline that is free from off-leash

dogs. It is clear based on abundant scientific studies that all species of shorebirds have experienced declines in populations and many such as the Western Snowy Plover are now at imminent risk of extinction unless we do a better job of protecting places where they live. Loss of appropriate nesting habitat is a primary reason found for the declines but also losses of feeding and resting locations of which there are many within the GGNRA. I urge your team to reconsider the alternative plans based on this urgent need for protected shoreline, especially beach areas. Upland habitat is important also but due to the popularity of beaches this habitat is where the largest burden falls on shorebirds. I see that the Dog Owners Groups are calling for "Their 1%" of access to recreate their dog's off-leash. One minor point here is that of the entire park only about 3% is open even to humans so that would be about 1/3 of space shared with off-leash dogs. Indeed it is practically every trail. While I strongly disagree with the entitlement mentality of their demand I suggest an easy solution: let the conservationists pick which areas that 1% can be. There won't be much beach access.

How will this plan affect other National Parks? I have overriding concerns about how the final ruling will impact visitors experience at all National Parks, not just the GGNRA. Will emboldened dog owner groups now challenge the pet management rules in all National Parks? Will we be confronted with off leash dogs chasing wildlife in fresh water meadows while hiking a boardwalk in Yosemite Valley? Oh wait a minute, I've already experienced that just last year. Will Park Rangers be hamstrung by too many areas where dogs are allowed and dog owners who pretend to not understand the rules?

As the Park Rangers know well, the level of difficulty for enforcement grows exponentially when the delineation of areas of different rules is not made abundantly clear. A streamlined approach of a few areas where dogs are allowed (off leash or on) and the majority of areas where no pets at all are allowed would not only ease the ranger's burden but allow the majority of park visitors who are pet free to enjoy a much more natural and peaceful experience. Currently a small percentage of park visitors are commanding a much higher percentage of the park's burden, causing much displacement of wildlife and excluding many visitor's by bringing domestic pets into nearly the entirety of the publicly accessible portions of the GGNRA. Based on the principles of democracy a much more fair and egalitarian approach would be to limit the small percentage of visitors who are bringing their pets into the park that same percentage of space that is available to all visitors. Legally there is no civil right for these pet owners to bring their pets into the National Parks at all. Once again, per the NPS Mission, these Parks have been set aside to "preserve unimpaired the natural and cultural resources and values of the national park system for the enjoyment, education, and inspiration of this and future generations." This mission does not include resource extraction, harming or impairing these resources which is occurring

currently under the present situation.

Commercial dog walking should not be allowed. Commercial dog walking does not relate to the purpose and mission of the National Parks.

Commercial dog walking provides no service or benefit to park users, has negative impacts on park resources and park visitors, and serves only for the capital gain of private enterprises at the expense of the American public.

Commercial dog walking will require additional annual expenditures for administering and overseeing a permitting process, additional law enforcement, additional resource maintenance and additional public relations.

The DEIS estimates that over 1000 dogs will be commercially walked within the GGNRA daily (p. 63 p. 276). Commercial dog walkers, with up to six dogs, will negatively impact the experience of park visitors on trails and in other areas of the park. If permitted, commercial dog walking activity will increase within the GGNRA and will displace park visitors, of all legitimate user groups, from areas of the park. Commercial dog walkers will dominate the ROLAs, displacing other park visitors. Commercial dog walking vehicles will occupy parking spaces resulting in fewer spaces available for park visitors. If allowed, commercial dog walking operations will have a dominant presence in some areas of the park thus affecting the overall character and ambiance of those areas.

Currently, commercial dog walking is not permitted within the GGNRA or any other National Park unit and there is no justifiable reason to do so. The NPS is well within the scope of its management directives to not allow commercial dog walking and I support this position.

Park visitors should be limited to two dogs per visitor. On trails, visitors with more than one dog have a wider space requirement and have the potential to impact other park visitors by impeding their progress along the trail. In ROLAs, it is not practical to allow voice control of more than two dogs per person. With few exceptions, dog handlers are not capable of managing more than two off-leash dogs at a time.

The proposed compliance percentage of 75% is too low. Given that many hundreds of dogs are walked within the GGNRA daily, a 25% non-compliance tolerance would create a situation where park resources are significantly negatively impacted. The expectation should be that non-compliance is a rare occurrence and the compliance strategy should reflect that in its standard. The standard of compliance should be the same as for any other park rule or law. An acceptable rate of compliance is somewhere near 100%. Anything less than 95% compliance will be seen as incompetent

enforcement and encourage some dog owners to not comply with the rules.

A simple and effective reporting system should be established. The dog management plan should include a means by which park visitors can easily and effectively report non-compliant behavior. Park visitors are sometimes reluctant to report observed violations due to the time involved in making the report. A public reporting system should be incorporated into the plan that will be user friendly and workable. Such a system should require only a few moments of time and be an effective documentation of the violation.

The plan does not provide an adequate amount of hiking trails and picnic areas where visitors can enjoy a dog-free, National Park quality experience. Within San Francisco, the plan provides no significant area where park visitors can spend the day hiking and/or picnicking in a dog free environment. A solution to this problem would be to designate all of the coastal bluff areas, from the Golden Gate Bridge to and including Baker Beach, as a dog-free zone.

Sites Specific Comments

Ft. Mason ? I support the Preferred Alternative with the following changes: no commercial dog walking, two dogs per visitor, compliance rate of 95% or greater, and establishment of a simple and effective reporting system.

Crissy Field WPA ? The DEIS indicates that the east boundary fence will be relocated 200 feet eastward at a position 900 feet from the NOAA pier (p. 60). The language of the plan should allow the National Park Service flexibility in determining the exact location of the fence and consideration should be given to the visual penetration effect as well as the geographical conditions of the immediate area.

Under the preferred alternative, off-leash dog activity directly adjacent to the east boundary fence will pose a visual threat that will penetrate into the Wildlife Protection Area, effectively rendering a portion of the eastern WPA as non-viable habitat during daytime use hours. Given this concern, the fence should be placed a reasonable distance eastward, beyond the actual 900 foot border line, to allow for an adequate buffer zone.

Additionally, the geography of the area of fence placement is somewhat complicated by non-uniform conditions which include a variety of substrates, varying elevations, several lobes of fenced dune habitat areas, and a variety of pedestrian pathways. Consideration should be given to all of these conditions and fence placement should be such that will accommodate ease of pedestrian traffic flow while maintaining adequate protection of the WPA. When installed, the fence should extend to the water at extreme low

tide.

Crissy Central Beach ? The Central Beach ROLA should be fenced and gated. Fences at the west and east ends should extend to the water at extreme low tide. Adequate buffer zones (~300ft) should be included beyond the west and east boundary fences to protect the WPA and the lagoon outlet from the influences of excessive dog play activity. Access points from the promenade should be gated. Signs should be posted clearly identifying the area as an off-leash dog play area and stating the voice and sight control rules.

Crissy East Beach ? Fencing should be installed to protect the lagoon outlet zone. Outlet areas from bodies of water into bays or oceans are of high habitat value. The outlet zone should be included as part of the protected lagoon area and similarly fenced.

Crissy East of the Lagoon ? The Freshwater Swale should be designated on the area maps as a no dog zone.

Crissy Promenade ? I support the Preferred Alternative with the following changes: no commercial dog walking, two dogs per visitor, compliance rate of 95% or greater, and establishment of a simple and effective reporting system.

Crissy Airfield ? The foot paths that cross the airfield are multi-use trails and should be designated as on-leash areas. Allowing off-leash dogs on the airfield trails will lead to user conflicts.

The airfield ROLA should have some type of physical barrier along the boundaries. A physical barrier will clearly define the ROLA area. Clearly defined boundaries will maximize compliance and minimize conflict. Consider a movable barrier that can be set up and taken down as needed. Signs should be posted clearly identifying the area as an off-leash dog play area and stating the voice and sight control rules.

The eastern portion of the airfield should be a no-dog area. The Crissy airfield attracts a wide variety of grassland bird species, including rare vagrants, and is a popular venue for wildlife viewing.

Ft. Point ? I support the Preferred Alternative with the following changes: no commercial dog walking, two dogs per visitor, compliance rate of 95% or greater, and establishment of a simple and effective reporting system.

Baker Beach ? The Preferred Alternative for Baker Beach is problematic for several reasons. Splitting the beach into leash-only and no-dog areas will lead to confusion, non-compliance, visitor conflict and continued

management problems. Furthermore, allowing dogs near the creek outlet, an area often used by shorebirds, will increase the potential for wildlife conflicts. As a means of eliminating these problems and of creating more opportunities for visitors to enjoy dog-free National Park experiences, I suggest designating the entire Baker Beach area as a dog-free zone.

Lands End ? I support the Preferred Alternative with the following changes: no commercial dog walking, two dogs per visitor, compliance rate of 95% or greater, and establishment of a simple and effective reporting system.

Sutro Heights Park ? I support the Preferred Alternative with the following changes: no commercial dog walking, two dogs per visitor, compliance rate of 95% or greater, and establishment of a simple and effective reporting system.

Ocean Beach ? I support the Preferred Alternative for Ocean Beach. To improve upon the Preferred Alternative, I suggest using symbolic fencing and adequate signage to delineate the south border of the ROLA. A simple post and cable fence could be placed along the border from the sea wall to the plover sculpture. A well defined border will help to reduce compliance problems and visitor conflict. Additionally, I suggest changing the name "Snowy Plover Protection Area" to "Wildlife Protection Area". A designation of Wildlife Protection Area would be inclusive of all wildlife species that use the beach habitat area.

Ft. Funston ? I support the Preferred Alternative for Ft. Funston. To improve upon the Preferred Alternative, I suggest installing a fence, with access gates and adequate signage, along the border of the ROLA north of the main lot. A borderline fence will clearly delineate the boundary of the ROLA and will minimize compliance problems and visitor conflict. Signs should be posted clearly identifying the area as an off-leash dog play area and stating the voice and sight control rules. Additionally, I suggest aggressively restoring the coastal scrub habitat throughout Ft. Funston. Plant and animal species, as well as park visitors, have been displaced from Ft. Funston over time as dog play activities have increased. A proactive effort must be made to bring back the visitors who are interested in proper stewardship of this area of the park.

Thank you again for considering my comments on these important issues. Please don't hesitate to contact me to discuss any of these points in further detail.

Eddie Bartley

Correspondence Web Form

Type:

Correspondence: This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others. The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to: ? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. ? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. ? Exclude speculative, exaggerated, biased, or misleading statements and studies. ? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). ? Enable professional dog walking and align any professional dog walking rules with county or city regulations. ? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input. These are my personal comments and observations regarding this plan: I have been taking dogs to Fort Funston, Crissy Field, the Presidio, Sweeny Ridge & Mori Point for the last 18 years. In all that time, I have not seen any dogs harm any birds or the habitat. Yes, they chase them, but so do the kids on the beach. Dogs dig in the sand, but so do people. Most dog owners I've encountered from the time my son was born have been nothing but gracious and respectful of me, my dogs and my baby/child. The studies about the plovers and other species are not specific for the GGNRA specifically and the dogs are not harrassing them needlessly.

If you close the GGNRA to dogs it will wreak havoc on the environment in the city and surrounding environs.

Also, dogs and their owners/guardians are the largest users of the GGNRA land and by being there at all hours of the day, they actually deter vandalism by their presence.

Please don't make these drastic changes to the GGNRA dog policy. Thank you for your consideration. Anne Z. San Francisco, CA

General Superintendent Frank Dean Golden Gate National Recreation Area
Building 201, Fort Mason San Francisco, CA 94123-0022

RE: Dog Management Plan/Draft Environmental Impact Statement

Dear Superintendent Dean:

As a concerned citizen, resident of San Francisco and volunteer for the Parks Conservancy, I am writing regarding the draft Dog Management Plan and Environmental Impact Statement (DEIS) for the Golden Gate National Recreation Area (GGNRA). I commend the National Park Service staff that have considered dog issues in the GGNRA for many years and have released this plan for our review and comment. I visit, volunteer at, and enjoy the GGNRA lands and am concerned about impacts from dog-related recreation on the wildlife, habitats and other park users at the park.

I strongly encourage the National Park Service to improve the plan by implementing the following:

1. Protecting the park resources is the priority for the National Park Service. Dogs that are not kept leashed chase birds and other wildlife. While dogs are important to many people, they are a single species, *Canis familiaris*. Dogs are having a significant negative impact on the park resources including many species of birds, reptiles, mammals and plants that rely on the park to survive. There are endangered, threatened, and declining species that reside in or migrate to or through the GGNRA lands and depend on this habitat. The recently released 2010 State of Birds Report states "Half of all coastally migrating shorebirds have declined, indicating stress in coastal habitats. See pages 22-23 <http://www.stateofthebirds.org/StateoftheBirds2011.pdf> The negative impact by dogs to the federally listed as threatened Western Snowy Plover has been documented by the Park Service, Golden Gate Audubon, and in other published reports (See http://homes.msi.ucsb.edu/~lafferty/Publications/SnowyPlovers_files/Laff.01.bi olcons.pdf). Domestic dogs also have a negative impact to some human visitors. The parks should be maintained to be safe and accessible for all users and to protect their natural and cultural resources for future generations.
2. All approved "Regulated Off-leash Areas" should be fenced, at least in areas where fences do not pose risks to wildlife and habitats. Today there is much confusion about areas where dogs are allowed off leash. Fences create clear and distinct boundaries so that people with dogs are aware of how to comply with park rules.
3. The proposed requirement of 75% compliance is too low. The Park Service should require a minimum of 95% compliance before initiating measures to improve compliance.
4. A simple and effective reporting system

should be established. The dog management plan should include an easy and effective reporting method for park visitors to report problems. Today Park visitors are hesitant to report problems due to the time involved in making the report. A public reporting system should be incorporated into the plan that will be user friendly and workable. The reporting system should require only a few moments of time and effectively track and document violations. 5. In areas where dogs are allowed, there should be a maximum of three per person. I regularly observe multiple groups of commercial dog walkers with 10 or 12 up to 15 dogs. Voice and sight control of this many dogs is not possible. With this large number of dogs the dog walker picks up feces from one dog and misses the fact that other dogs are chasing wildlife or defecating. Feces are left in GGNRA lands where it has a negative impact on park users, wildlife, and water quality. See EPA defined dog waste as a non-point source of pollution <http://water.epa.gov/polwaste/nps/whatudo.cfm> and http://www.epa.gov/owow_keep/NPS/toolbox/print/psatpet.pdf http://www.epa.gov/owow_keep/NPS/toolbox/other/KSMO_PetWaste.pdf The San Francisco Public Utilities Company on dog waste and water http://sfwater.org/detail.cfm/MC_ID/14/MSC_ID/118/C_ID/3426 6. Some trails in the GGNRA in San Francisco should be no dogs allowed. Under the current plan, nearly every trail in San Francisco is open to on-leash dogs, thus there are no trails for people who prefer to enjoy the outdoors without interacting with domestic pets. I recommend that the Coastal Bluff Trails be no dogs allowed.

Site Specific Comments

Ft. Mason ? I support the Preferred Alternative B with the following changes: limit of three dogs per visitor, compliance rate of 95% or greater, and establishment of a simple and effective reporting system.

Crissy Field Wildlife Protection Area ? The DEIS indicates the east boundary fence will be relocated. The plan should allow the National Park Service to designate the exact location of the fence and signage. The fence placement should be based on protect park resources, habitat requirements, the geography, and last visual aesthetics. Any designated off leash area should not be immediately adjacent to the Wildlife Protection Area. The fence should extend to the water at extreme low tides.

Crissy Central Beach ? In order to make the Central Beach regulated off leash area obviously clear and distinct, post signage with regulations and fence and gate the area. Fences at the west and east ends should extend to the water at extreme low tide. Adequate buffer zones are recommended at the west and east boundary fences to protect the Wildlife Protection Area and the lagoon outlet from dog play activity. Access points from the promenade should be gated.

Crissy East Beach ? Install fencing and signage to protect the lagoon outlet

area. Outlet areas from bodies of water like this (into San Francisco Bay and the Pacific Ocean) are of high habitat value. The outlet area should be included as part of the protected lagoon area and also posted with signage and fenced.

Crissy East of the Lagoon ? The Freshwater swale should be designated as a no dog zone.

Crissy Promenade ? I support the Preferred Alternative C with the following changes: a maximum of three dogs per visitor, compliance rate of 95% or greater, and establishment of a simple and effective reporting system.

Crissy Airfield ? The foot paths that cross the airfield are multi-use trails and should be designated as on-leash areas. Allowing off-leash dogs on the airfield trails will lead to user conflicts.

The Crissy airfield regulated off leash area should have a distinct demarcation along the boundaries. A clear fence or other boundary is necessary to clearly maximize compliance and minimize conflict. Signs should clearly identify the area as an off-leash dog play area with posted regulations.

The eastern portion of the airfield should be a no-dog area. The Crissy airfield attracts a wide variety of bird species, including rare vagrants, and is a popular venue for wildlife viewing. I often visit this site to view the migrating hawks in the fall, the Western Meadowlarks each fall through spring, and I had the opportunity to see a rare species ? the Red-throated Pipit, at this site.

Ft. Point ? I support the Preferred Alternative B with the following changes: limit of three dogs per visitor, compliance rate of 95% or greater, and establishment of a simple and effective reporting system.

Baker Beach ?The creek outlet to San Francisco Bay is an area where many shorebirds feed and rest, again an area of important habitat value. All of Baker Beach should be designated as no dogs allowed.

Lands End ? I support the Preferred Alternative B with the following changes: maximum of three dogs per visitor, compliance rate of 95% or greater, and establishment of a simple and effective reporting system.

Sutro Heights Park ? I support the Preferred Alternative E with these changes: maximum of three dogs per visitor, compliance rate of 95% or greater, and establishment of a simple and effective reporting system.

Ocean Beach ? I support the Preferred Alternative C for Ocean Beach. Clear designation or fencing and signage is necessary at the south border of the ROLA. A simple post and cable fence could be placed along the border from the sea wall to the plover sculpture. A well defined border will help to reduce

compliance problems and minimize visitor and wildlife conflicts. Change "Snowy Plover Protection Area" to "Wildlife Protection Area". Wildlife Protection Area more accurately describes the many wildlife species that use the beach habitat area. I recommend native dune plant restoration at Ocean Beach.

Ft. Funston ? I support the Preferred Alternative C for Ft. Funston. To improve upon the Preferred Alternative, I suggest installing a fence, with access gates and adequate signage, along the border of the ROLA north of the main lot. A borderline fence will clearly delineate the boundary of the ROLA and will minimize compliance problems and visitor and wildlife conflicts. Signs should be posted clearly identifying the area as an off-leash dog play area and stating the regulations. The Bank Swallow nesting area should be protected by signage and enforcement.

Last, I strongly recommend restoring the coastal scrub habitat at Ft. Funston. I used to visit Fort Funston to see the birds and marine mammals from the bluffs and beach. Now I do not visit Fort Funston nor do I take friends or visitors to this location as it is a "dogs in control" area. Plant and animal species, as well as park visitors, have been displaced from Ft. Funston over time as off leash dog activities have increased. Dogs and dog owners have caused erosion damage to the Bank Swallow nesting site by scaling the bluff. Shorebirds that have migrated great distances are flushed by off leash dogs. A proactive effort must be made to bring back the visitors who are interested in proper stewardship of this area of the park.

Thank you for this opportunity to comment on the Dog Management Plan. I encourage you to adopt the best measures to protect the National Park's valuable resources for future generations and for wildlife.

Thank you,

Noreen Weeden

Correspondence: I believe the park's mission is to protect resources, not allow recreation to undermine it. Alternative D best reflects the national park values. Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined. The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by offering more than one trail and more beach areas free from dog

recreation. Require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs. Limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Correspondence: Please do not take the Draconian move of banning dogs from our public spaces. Dogs bring so much joy to lives - study after study shows that people who own pets are happier and better adjusted. People who are out walking their dogs are some of our most responsible, involved citizens: people who love our beautiful Bay Area, care about wellness and health. The vast majority of dog walkers are conscientious - don't punish everyone for the few that aren't. Educate dog owners, enforce fines for the ones who misbehave, but don't just ban everyone. I've lived here my whole life (half a century) and dog owners are far more responsible and engaged than they were in the past. People's lives are tough right now: don't take away a source of joy and happiness. Thank you.

Correspondence: Dear Mr. Dean, I am writing to oppose the GGNRA's draft dog management plan. I am a dog owner who believes in reasonable laws regarding pets. All of us need to live within the shared space (both physical and cultural) that is the San Francisco bay area. As an environmentalist, it has pained me to watch the way that a rhetoric of "stewardship for the environment" has been selectively mobilized to produce a distorted and biased story about the history and future the GGNRA. The GGNRA can accommodate both recreation and conservation. As I'm sure many of the letters you have received argue, it was designed as an urban recreation area. We need to be able to make real (rhetorical and legal) distinctions between urban outdoor spaces-- like Fort Funston-- and other wilderness. This proposed plan disregards the health and well being of people, dogs, and the community. At worst, this is a power grab masquerading as environmentalism and bureaucratic efficiency. At best, it is an arbitrary plan that excludes the Bay Area residents who exercise regularly with their canine companions. Companion animals are a vital part of many people's lives and well-being. These animals are often the gateway for children into a life long appreciation of non-human life, need, and difference. Please do not diminish the quality of my life by taking away the very small (percentage wise) area that is available to me and my dog for exercise, socialization, and

appreciation of the

In The courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded. The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to: ? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. ? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. ? Exclude speculative, exaggerated, biased, or misleading statements and studies. ? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). ? Enable professional dog walking and align any professional dog walking rules with county or city regulations. ? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

Sincerely, Irene Gustafson SF, CA 94110

Correspondence: I support more restrictions on dogs in our public parks. I rarely visit Crissy Field because it seems to have become a huge dog park. I used to be a regular visitor; walking, jogging, biking, or windsurfing. But not anymore. My favorite beach is Stinson, because they have dog controls in place. I no longer go camping, because it seems like most campgrounds have poor dog controls. The barking and piles of droppings are what I dislike the most.

Sincerely, David Dryden

Correspondence: Dear Superintendent Dean,

I am writing to oppose the GGNRA's Draft Dog Management Plan because the proposed Compliance-Based Management Strategy in any of the alternatives because it doesn't take into account of the actual environmental impacts on GGNRA lands.

The document assumes that noncompliance will automatically lead to resource degradation or negative impacts. There is no data or factual statements that support this assumption. This is simply discriminatory towards responsible dog owners like myself, who is the owner of a well-trained dog and under voice control not to chase shore birds and wildlife, as well as pick up other people's trash or dog feces every time I visit the GGNRA lands mentioned above.

I ask that the GGNRA first establish what the existing conditions are, and adopt an Adapted Management Strategy that would monitor the impacts on resources over time, including closer studies of not just impacts caused by dogs, but also humans, other wildlife and nonnative invasive plants. The information must also be fully disclosed to the public in order to come up with a meaningful plan that addresses the issue.

Thank you for your consideration.

Sincerely, Tszsan Kathy Reichardt

Correspondence: This DEIS is invalid because it fails to meet its legal obligation to take into consideration the negative effects the proposed changes would create for humans, their dogs and the surrounding environment (e.g. local parks). Further, the studies/science utilized to support allegations of damage to resources in the GGNRA are fatally flawed - the positive impacts are ignored and the negative impacts are unverified. For example, this DEIS omits the Warren study of the snowy plover which concluded recreation of dogs and their owners does not negatively affect the feeding of the plover. Instead the DEIS relies on a study performed by Audubon activists who recommend Draconian restrictions which are unjustified in areas that are not critical habitat. Therefore, I believe the 1979 Pet Policy should be implemented in its original form with no restrictions on off-leash recreation at Ocean Beach, and it should be institutionalized as a Section Seven Special

Regulation. Further, I believe that all properties added subsequent to the 1979 Pet Policy and in the future should have historical off-leash recreational usage allowed. This would accurately reflect the enabling legislation for this National Recreation Area which GGNRA management has held in disregard for quite some time. I also believe the GGNRA's inclusion of a Compliance-Based Management Strategy as well as the GGNRA's failure to commit to a Section Seven Special Regulation following this process indicates a lack of good faith and an intent to deceive the public as the GGNRA did following the implementation of the 1979 Pet Policy which the GGNRA later decried in Federal court as an "error".

Correspondence ID: 3616 **Project:** 11759 **Document:** 38106

Correspondence Type: Web Form

Correspondence: I am a dog lover, pet sitter and dog trainer. My dog training degree came from an evidence based course. Dogs are social animals and need mental and physical stimulation (evidence based). I take the dog or dogs I am pet sitting (one house-hold at a time) out evenings and weekends for off leash activities to Chrissy Field, Sunset Beach and Fort Funston. Those dogs not able to go off leash take on leash walks in many of the GGNRA areas. I have always cared about the environment and always keep my city clean, recycle and compost.

I like to recreate in the outdoors and want to be with the animals I love. I understand that the existing conditions (1979 pet policy) only gives 1% of the GGNRA for on leash and off leash dog walking. 1% is already such a small percentage and the GGNRA preferred alternative significantly restricts and eliminates off and on leash dog walking in many areas within the GGNRA.

Please keep the 1979 pet policy in place.

Respectfully,

Joan L. Mapou

Correspondence ID: 3617 **Project:** 11759 **Document:** 38106

Correspondence Type: Web Form

Correspondence: Dear Mr. Dean,

I visit GGNRA almost every weekend with my two beloved rat terriers, Mia

and Luna. It is one of my favorite things in the world to go from Glen Park in San Francisco, where we live, to Ft. Funston or one of the other parks in the area. As a tax payer and a Latino immigrant who is now a naturalized U.S. citizen, I am proud of my tax dollars being used to provide the public with parks that are safe, enjoyable and welcoming of well-behaved off-leash dogs.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off-leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions.

It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option.

The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal.

The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents.

After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program.

Thank you for your consideration.

Correspondence: I am writing to express my concerns regarding your proposed closure of most of the areas currently available for off-leash dog-walking at Fort Funston. I have read through the Draft Dog Management Plan and I also attended the Open House at Fort Mason on March 2011. I have been walking my dog at Fort Funston for the last 15 years and am very familiar both with the terrain and with Fort Funston's history with regard to off-leash dog-walking over that period of time. Although I regret GGNRA's proposed dog-walking restrictions in many of the areas covered by the Management Plan, I am limiting my comments to the restrictions proposed for Fort Funston because I believe that they cannot be justified by GGNRA's own research or objectives and will result in significant hardship for San Francisco's dog-owners. Of the available alternatives, I believe that the NPS

should adopt Alternative A (no action) with regard to Fort Funston because it does the most to preserve off-leash areas for dogs. In my opinion, Alternative E is misleadingly titled as providing "Most Dog-Walking Access" because in fact the areas open to dog-walking would be less than those under Alternative A. I urge the NPS to clarify this point to the public and to take the possibility of confusion into consideration when reviewing public support for Alternative E.

Principal Reasons for Favoring Alternative A

- 1. Importance of preserving Off-Leash Areas for Dogs.** Other than the horse, it is difficult to imagine another species that has had as lasting and beneficial a relationship with humans than the dog. It's important that the NPS balance many factors when considering the appropriate use of lands under its purview. However, just as the NPS takes into consideration threats to endangered species, it is entirely appropriate that the NPS also consider our species' obligation to provide adequate exercise for a species whose ongoing contributions to humankind cannot be over-stated. The fact is that requiring dogs to get virtually all of their exercise at the end of a 6' long leash is simply cruel. Dogs cannot get their natural exercise needs fulfilled walking at the pace of a human. The opportunities for off-leash exercise for dogs are already extremely limited in San Francisco and elsewhere and will become more so if the NPS management plan is enacted. Fort Funston has long been one of the few areas in San Francisco where dogs can enjoy off-leash exercise with relatively few negative impacts to the environment and disruption to other users. It should be managed in a way that will allow it to continue to fulfill this important purpose. Indeed, this is a cultural resource in its own right and deserves protection.
- 2. Absence of Critical Habitat Protection.** At the open house held at Fort Mason, one of the senior rangers confirmed that there were few, if any endangered flora at Fort Funston because of decades of urban and natural degradation beginning with the area's use as a military complex. I have also not seen anything in the NPS Report that suggests otherwise, other than declaratory general statements that there would be some adverse impacts. Yet, the NPS's preferred solution would close the entire area to off-leash dog walking. As for fauna, where bank swallows or other birds nest on a seasonal basis, the NPS has a reasonable solution that adequately balances competing interests by simply closing those affected areas on a temporary basis to off-leash dogs or, if necessary, to any dog-walking activity.
- 3. Closure will simply lead to concentrated degradation in areas that remain open.** The extremely limited opportunities for dog-walking in non-urban outdoor spaces in San Francisco will guarantee Fort Funston's continued use as a dog-walking area by area locals, regardless of which management plan is adopted. The NPS's preferred plan, in which off-leash dog-walking areas are restricted to the beach and to one area adjacent to the parking lot, will simply concentrate that usage to a much smaller area, thus magnifying both environmental impacts to the extent that there are any and the likelihood of conflict between dogs and people.
- 4. Closure violates one of the four outstanding values to be protected by the GGNRA in the 1972 enabling legislation.** It is

important to recall that the GGNRA, including Fort Funston, was originally intended as an urban recreation area. It should not be viewed in the same category as other non-urban National Parks covered by the NPS. As an urban outdoor recreation area, it fulfills an important function in allowing urban dogs and their urban human owners a rare opportunity to get out and stretch their respective legs. That function should not be jeopardized or restricted, absent compelling reasons to do so ? reasons which the NPS has not shown with regard to Fort Funston.

Correspondence:

Frank Dean, General Superintendent

Golden Gate National Recreation Area

Fort Mason, Building 201

San Francisco, CA 94123-0022

Dear Mr. Dean,

I am a long-time resident of the Bay Area, having moved to San Francisco in 1999 and to Marin in 2009. A large part of the reason that I chose to live in the Bay Area (I am originally from the East Coast) is the natural beauty and accessibility to the outdoors. As many Bay Area residents do, I own a dog, who is beloved and an intrinsic part of our family. We are very responsible dog owners, always cleaning up after our dog no matter where we walk him, making sure that we stay on trails that are indicated for dogs and keeping him on leash when it is required. We are also firm supporters of the environment, and have donated over the last few years to San Francisco

Baykeeper, an organization that is a pollution watchdog for the San Francisco Bay, using science and advocacy to strengthen clean water laws and hold polluters accountable. We also support the Marin Agricultural Land Trust (MALT) which preserves open space for farming, encourages stewardship of the land and discourages development. Clearly, taking care of the environment is a big concern for us.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions.

It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option.

The GGNRA is the open space for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area.

After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program.

Specifically in Marin County, I do not think two public ocean beaches that allow dogs off-leash is too many. Keep both Rodeo and Muir Beach off-leash / under voice control. Allow access to humans with dogs on the fire roads and trails that run directly out of the neighboring communities into the GGNRA and to the fire roads adjacent to the surrounding communities that circle the GGNRA. I agree that on-leash makes sense for most of the fire roads, not only for the safety of wildlife, and the maintaining the spirit of sharing the fire roads with others, but also for the safety of our dogs. Maintain that Alta Avenue from Donahue to Orchard Fire Road should remain off-leash / under voice control, as should Orchard Fire Road and Pacheco Fire Road that run up to Alta from Marin City. This area has had

hundreds of dogs each day for years, and it can be argued that the dogs have done little or no damage. Removing this area from off-leash/voice control is not only unnecessary, it does not benefit the NPS in its goal to strike a balance between resource protection and recreation; and it would result in costly enforcement that is not warranted.

Thank you for your consideration.

Sincerely,

Maria Jose Castro-Dara

Correspondence: Dogs are GREAT..but unfortunately only have as much common sense & courtesy as their owners. GGNRA areas ought to focus on natural set asides for current and future use, in addition to the historical.

? I've watched owners with their dogs run right through marked areas for Snowy Plovers by Crissy Field, almost belligerently. ? One individual came

out of the redwood stand adjacent to El Polin Springs with 10 dogs; they had been off leash in the stand, wondering about. ? There's plenty of feces along the trails every time I've hiked through the Presidio. ? While I firmly believe most dog owners are conscientious, the sheer number of dogs means every day wildlife is assaulted/hassled throughout the GGNRA. The Presidio in particular can look like a private reserve for dog owners.

As GGNRA Management considers a dog management plan, greater consideration should be given to the following than the draft plan currently does:

? Dogs on trails should be on-leash; it's the only way to ensure wildlife can co-exist in close proximity with dense human populations ? Fenced, large dog run-free areas need to be created throughout the GGNRA ? Beaches: some beaches within the GGNRA lend themselves to leash-free areas, some simply do not. Clear signage delineating such areas would be needed ? Commercial dog walking should be banned from the GGNRA: I don't get to use the area for profit and, without a permitting process, neither does anyone else. ? Cat colonies?? I'm completely unclear as to why there is an exemption for a destructive, feral animal that consumes our native bird/reptile/small mammal populations and has no place in the local ecosystem.

Thank you for the opportunity to provide feedback on the GGNRA Draft Dog Management Plan.

Correspondence: Please, please do not allow dog owners more use of public lands to have their dogs off leash, Please lessen their off leash dog use as much as possible. As it is, almost every park in the Bay Area is open to dogs, including watershed land, right next to reservoirs. Since dogs carry a number of parasites, the only reason I can imagine for this is the power of the dog lobby.

The few areas requiring dogs be on leash or are restricted to dogs are ignored. When I was a docent with Audubon for the Burrowing Owls in Berkeley, where people had a large off leash area, most still would not put their dogs onleash near the owls.

It doesn't matter how many people are threatened or attacked by dogs, or how many of us plead with dog owners to have control of their dogs, no public area is truly safe. But we have the choice to never go to the parks -- it's even more upsetting for native animals who have no where else to live, who are tormented, injured, and killed by dogs. It's not the dogs' fault -- it's their irresponsible owners. I've been yelled at and threatened when I've politely asked people to respect the no dog areas or leash laws. I've seen people laughing happily when their dog has been mauling young calves on park land. Even when people try to stop their dogs from hurting animals or humans, most have absolutely no control.

Really, we need some place where wild animals and we also are safe from

dogs and dog feces. We need to be able to go to parks and not worry about having to face groups of snarling off leash dogs. The only way for this to happen is to have more laws restricting dog use, and to actually enforce them.

I am writing to express my support for developing and adopting regulations that will require dogs to be restrained by leash while in Golden Gate Recreation Area. As a professional dog trainer and free lance writer, I have written on the importance of leashes for the management and protection of dogs. Maintaining dogs safely on leash is vital for the health and safety of humans using the recreation area, wildlife and the dog. Loose dogs can and will pose a risk to visitors in the Recreation Area. A dog jumping on, chasing, startling or even playfully nipping at a runner, rider or cyclist can cause a wide range of injuries. Dogs will chase wildlife and cause damage, disturb natural behavior, injury and potentially death. Wildlife poses a variety of health and safety risks to unleashed dogs. In my region, coyotes have attacked small, unleashed dogs in local parks. There are multiple parasites and diseases that can be transmitted to domestic dogs and the dogs can pass on to humans. It is vital that dogs be restrained with a leash when walking in public areas. However, many owners ignore leash laws. Even in national parks where there is a law requiring all dogs to be on a lead no more than six feet in length, I see constant violations.

If there are designated off leash areas in the vicinity, then dog owners should be directed there. If not, then creating a designated and fully fenced off lead area is a suggestion I would pose. Adopt leash regulations and create a dog-specific area where they can run off lead.

Correspondence:

Dear National Parks Representatives,

I am writing to strongly urge you to continue to allow off-leash dogs in the GGNRA properties of Sweeney Ridge and Mori Point in Pacifica, CA. Two months ago my family got our first family dog. For the first 6 weeks we ran her every day on-leash only, which was fulfilling for us and seemed to be fulfilling for our dog, at the time.

Two weeks ago, I felt like she was comfortable enough with me and with following basic commands that she could try running off-leash. On our very first off-leash run through Mori Point, I realized that up until this time I had been depriving her of her basic dog rights. What made me realize this was the joy in her face, her stride and demeanor which was displayed by a tongue hanging out of her mouth, a ferociously wagging tail, and vivid dancing eyes. Her bliss was obvious within just a few minutes off-leash.

At this moment, I felt terrible for having deprived her of this experience up until this point. I feel that by running off-leash she is able to explore her environment in a more independent way, however, she is still bound by the invisible tether of being a pack-follower to me. There is something that we cannot quantify, and that is very difficult to describe, but when you see a dog able to fulfill his/her instincts, you will recognize it. The dog will be a happier, healthier, more fulfilled creature for it, and so will you.

I understand that the GGNRA typically requires on-leash dogs for the sake of safety. I can attest that in the 4 years I have lived in Pacifica, and in the two weeks that I have been running my dog off-leash, I have never encountered a malicious, out-of-control dog. The high ratio of open space to people ensures that I don't encounter more than 10 dogs while out running in a 1-hour time period. I feel that this helps to limit any negative, defensive behavior that one might see at other areas (such as Fort Funston). Furthermore, I have never seen handlers with packs of large dogs (Pits, Rotweilers, etc...) using the GGNRA properties in Pacifica to exercise/parade their dogs. I have never felt like my safety was ever compromised in Pacifica due to an off-leash dog.

I feel that it would be a terrible waste of taxpayer dollars to enforce rules that don't need to be made. Please use taxpayer money towards more socially-responsible and necessary programs. PLEASE continue to allow off-leash dogs in Pacifica GGNRA properties!

Thank you, Sarah N.

Correspondence Type: Web Form
Correspondence: I am writing to comment regarding the proposed changes in accessibility for dogs and their owners to certain areas within the Golden Gate National Recreation Area. Specifically, I strongly object to any change in the permitted uses of Fort Funston.

I hope it is kept firmly in mind that the mission of Fort Funston is in the

name of its umbrella designation ? the Golden Gate RECREATION Area. By that standard, Fort Funston is a great success. What is playing catch or Frisbee with one's dog if not recreation? Recreating at Fort Funston is how I apologize to my dog for the boredom and constraints of his otherwise on-leash life. His recreation ? catching a flying disk, chasing a ball, goading another dog to chase him ? hurts no one. I submit that the positive externalities of this recreation far outweigh the small costs it might entail.

Even a casual look at Fort Funston confirms that it bears little resemblance to a nature preserve. Nature preserves don't have giant concrete edifices named "Battery Davis," or acres of foreign flora like ice plants, or remnants of missile sites. Fort Funston is a former military installation turned recreation area. It should be allowed to function as such, and its function and unique attributes should be understood in the context of the many other places that accomplish other GGNRA goals, but do not allow off-leash dogs.

I am not asking to change the fact that the majority of the public lands in the area do not permit off-leash dogs. It is fair and appropriate to prevent off-leash activity at many public places. I also understand that the presence of off-leash dogs may well make Fort Funston less attractive to some potential visitors. But given the many other places along the coast where off-leash dogs are banned, it is a small inconvenience at best to say, "this one spot is optimized for dog lovers ? if you don't like dogs, go to the next spot up or down the road." The idea that we are being negotiated DOWN from a mere 1% of the GGNRA is, simply, absurd.

Thousands of local residents see Fort Funston as a brilliant amenity exactly as it is. I see more smiles in an hour at Fort Funston than I see the whole rest of my week. That experience relaxes me and lubricates my interaction with the traffic and hassles that come with our densely packed region. Is that not the whole point of recreation ? to make our non-recreational time more bearable?

I am an environmentalist, and heartily agree with the vast majority of efforts to preserve pristine wild places, help endangered species, etc. But Fort Funston is not pristine, and has not been so for a very long time. I have read about a few strained claims of dogs affecting the nesting of a few birds along the cliffs. Those claims ring hollow. The coastline is long; Fort Funston is short. The ecosystem's original contours and rhythms were disrupted decades ago; evicting dogs will not restore them. And if those problems are truly pressing, fencing off those cliffs could address the concern while minimally affecting the rest of the recreation area.

For dog owners, Fort Funston is a unique and nearly magical place ? a place where treasured companions get to briefly sample pleasures usually denied

them by the urban lifestyles of their owners. It is clear that the voices that seek to change the status quo at Fort Funston do not belong to people who appreciate the sight of a dog running after a tennis ball, but that kind of activity is both a source of beauty and pleasure to thousands of Bay Area dog owners, and undeniably a form of recreation.

One of the best things about living in the Bay Area is its tolerance for a wide variety of lifestyles and pursuits. I would not seek to ban horseback riding from the many public lands that allow it, or to prohibit hang gliding from Fort Funston itself. When given room to do so, it easy for multiple practices to peacefully coexist. Fort Funston today is a model of tolerance and community. The proposed changes would make it much less so.

Shutting down this resource will not reduce the number of dogs in the Bay Area, but it will reduce their happiness, and their ability to peacefully co-exist with us and with each other. It will also likely increase the load on the remaining spots where dogs can play. And it is clear that what the proposed plan would do is effectively shut down Fort Funston as a dog park.

I visited Fort Funston before getting my dog three years ago, and saw its availability as an essential part of the equation that made getting a dog work. I take him there almost every week. Without this Fort Funston ? this wide open space ? his life would be much the worse. So would mine.

Correspondence: I am writing to support the preferred alternative as presented in the DEIS. Although I have some reservations about all elements of the plan, I believe that it is basically sound and should be supported. I have two dogs and have had several negative experiences while walking my dogs on GGNRA lands. One time, at Fort Funston, one of my dogs was chased in a very aggressive manner by a pit bull and eventually was bitten by this same animal. All this occurred while the owner of the other dog watched from afar as I tried to break them up. The bite drew blood but otherwise didn't hurt my dog badly. However, the interaction with the dog's owner was very disturbing. The man said our dogs were "playing" but I think not and few dog owners would agree that if another animal bites and draws blood that they two animals are playing together. This is one example among many of where there was inadequate control by dog owners over their pets. One other time worth mentioning happened when I took my son to Fort Funston when he was 4 years old. A commercial dog walker was unable to control an animal that lunged at my son to get the stuffed toy in my son's hand. The large dog slammed into my son and caused him to hit his head on the course asphalt

pavement. I called the park police and reported this incident at the time. My son has suffered permanent disfigurement to the forehead from this fall.

In short, I think the NPS needs to put a rule in place that curtails the seemingly out-of-control offleash dog access in some parts of GGNRA to restore a modicum of safe recreational access for all park users. I think this DEIS is going in the right direction, though some relaxation of "no dogs" could occur in some parts of GGNRA lands in Pacifica with no detrimental effect to the natural environment, including listed species habitats. For example, the Baquiano Trail and the Sneath Lane access trail from the parking lot to the Baquiano Trail could be allowed for onleash access.

Finally, I support a carefully analyzed and implemented compliance strategy to ensure full compliance with all rules related to dog management. Things are far to lax now and must be brought under control The basic elements of such an approach are in the plan, but actual implementation is not ensured by simply writing a plan. There must be coordinated follow through with the affected cities and neighborhoods, good signs, and then enforcement. Without this, all the effort expended to date the the NPS will be essentially wasted.

I appreciate all the hard work and extensive analysis that went into the DEIS by the GGNRA and other NPS staff. They are to be commended for this diligence and attention to the complicated social and environmental aspects of this issues.

Sincerely, Paul Jones

Correspondence: To whom it may concern,

I am writing to express my opposition to the preferred alternative in the DEIS. I have been a resident of the Marina for 21 years and daily user of Crissy Field and an weekly user of Baker Beach and Fort Mason. For the community of local dog owners, walking at Crissy is an important part of our daily lives and a way to stay in touch with friends and neighbors. The preferred alternatives for all these areas seem unnecessarily restrictive, excluding large areas (such are the airfield) which are rarely utilized by other park users unless there is a weekend event. Although I can understand restrictions on heavily trafficked areas such as the promenade, the proposed restrictions seem excessive. Also concerning is the "poison pill" provision where the NPS reserves the right to rescind all 'off leash' dog walking based

on a single infraction. This is absurd! Are you also similarly proposing to ban all cyclists in the GGNRA if one cyclist exceeds the speed limit or ban all cars if one driver rolls through a stop sign? I doubt it. An anti-dog bias is clearly evident throughout the document. This process is not about finding a compromise, it is about imposing a solution that brings the GGRNA rules in line with existing NP properties, not withstanding the existing mandate to preserve recreational uses that is the foundation of the GGNRA.

Sincerely, Amal Murgian

Correspondence: Dear Mr. Dean and other officers of the GGNRA:

I have followed the debate about off-leash dogs in the GGNRA with concern since I belong to several animal protection societies, especially of birds. Let me summarize my points briefly:

1. I applaud your plans to ban dogs from the areas you outlined.
2. Leaving things as they are gives too much discretion to irresponsible dog owners. I am using the word "irresponsible" quite deliberately, having had several unpleasant run-ins with dog owners during my weekly hikes on Mt. Tamalpais. I found some of these people rude or aggressive and unwilling to listen to the reasons I asked them to leash their animals. They were not at all concerned about other creatures and their lives. In fact, when I mentioned plants or flowers, I received comments like "there are so many of those that a few dogs cannot do any damage."
3. I want to **STRESS** that I do now and have owned dogs for the last 30 years and like them very much. But I can honestly say that I always have put them on the leash during my hikes. Dogs are incredibly adaptable. Once they know the routine they enjoy trotting alongside their owner(s) perfectly happily, getting the necessary exercise and enjoying their outing. They do not need to be put in situations where they can bother others or disrupt people enjoying the beach. The same goes for their chasing wildlife. If something moves, a dog will chase it. We all know that. I have seen dogs running after very small fawns, for example, and at times catching sea birds.
4. Rather than demonstrating noisily, dog owners should understand that they are only one constituency privileged to use the magnificent GGNRA for their recreation.

Sincerely, Elisabeth G. Gleason Professor emerita of History University of San Francisco

Correspondence: 27 May 2011

Frank Dean, General Superintendent Golden Gate National Recreation Area
Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean,

My dog Dooney and I moved to San Francisco at the end of November. Dooney is a very special part of my life. Although abused as a puppy, and still shy around new folks, she's been my companion for the last 7 years and has been there for me through cross-country moves, personal illness, and a painful divorce. Since moving to SF, however, it seems like we've both found our home. Dooney goes out daily with her dog walker and "pack" - a practice that has really gotten her out of her shell! She seems so much more relaxed and happy. On the weekends, I take her to Crissy Field and we walk along the beach. We sit and watch the Golden Gate - it is our "happy place" and where I go to recharge after the long week. I simply cannot imagine not having access to this beautiful area any more. I realize there are those who argue that the dogs are damaging to the environment, but I disagree! Responsible dog owners care very dearly about the environment. We're the ones who are outside every minute possible enjoying the beauty and sunshine (and even fog) with our four-legged companions.

As such, I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off-leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions.

It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option.

The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal.

The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for

these local residents.

After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program.

Thank you for your consideration.

Sincerely, Dori Raymond

Correspondence: Dear Mr. Dean,

I am an Asian American woman who has lived in both San Francisco and Marin. I love the Bay Area for so many reasons, but one of the main things that makes this place so uniquely special and not just another big urban area is how man, nature, bikes and animals can all share and enjoy the GGNRA.

I purchased my house on the edge of the Marin Headlands because I can walk out my door and enjoy being in nature. I've hiked it, biked it, run it, camped it. It is an integral part of my life. And seeing happy people enjoying it with their dogs is why I now have a dog named Spirit. My husband I consider him our kid. We regularly enjoy all areas of the GGNRA with Spirit--the Marin Headlands, Crissy Field, Fort Funston, Ocean Beach, Muir Beach, Stinson Beach. He has become so healthy and well-adjusted because he gets these many opportunities to exercise and interact with people and dogs.

Through Spirit we, in turn, have become much more educated about the preservation of these places because we are more aware of issues like the current proposal. Spirit has endowed us with an appreciation for animals and nature that goes infinitely beyond the great love we already had before he was around. Most of the people with dogs I know or meet are equally positively affected by their dogs. In contrast, I've observed many uneducated adults and children littering, yelling and scaring wildlife, throwing rocks and sticks at or chasing animals, or cutting trails and causing erosion, leaving big ruts in trails with their bikes. No user group of the GGNRA is perfect. To punish dogs by taking away what little off-leash land they currently have is unreasonable and unfair. It will lead to problems between humans and dogs when dogs cannot be properly exercised and socialized and when

humans are less exposed to dogs and therefore don't have the opportunity to learn how to act with dogs. It is cruel and abusive if dogs cannot get the distance and speed of exercise they need and cannot fully express themselves as dogs. I have lived on the edge of the GGNRA for eleven years and have seen an increase in all forms of traffic on this land--dogs should not pay the price for something that EVERYONE has a part in.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off-leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions. It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option. The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal. The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents. After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program.

Thank you for your consideration.

Sincerely,

Polly Ing

Correspondence: Please keep dogs on leash and out of most ggnra areas. The only place they should be allowed should be a portion of Ft Funston. There are too many dog messes not cleaned up and for those with fears or allergies to dogs, they are not able to enjoy these areas. Since the resources do not exist to effectively enforce rules or good behavior by the dog owners, not allowing dogs is the best option. Just as i would seem insane for a person to expect to be allowed to walk nude or shoot guns in these area, brining dogs especially off leash is equally wrong.

Attn: Frank Dean Golden Gate National Recreation Area

Dear Mr. Dean,

I do not support the proposed changes to the 1979 Pet Policy for the GGNRA. I believe there are other ways to preserve natural resources without restricting off leash dog walking areas.

I live on the 8th floor of Opera Plaza condominiums with my 4 legged terrier. For years, every single morning around 6:30 a.m. we go to Chrissy Field and run and walk the beach and trails. This is our back yard. He is off leash for an hour, we both get our daily exercise, and it is pure joy for both of us. There is a wonderful community of responsible and dedicated dog owners who are there every morning. This makes city living possible - and enjoyable - for me. IF there were no off leash areas where we could exercise together and enjoy the surrounding beauty before I go to work every day, I would likely move out of the city.

I support conservation and preservation, but if we can not have access to those areas with normal recreation, doesn't that defeat the purpose of the GGNRA? I am in favor of a program that balances recreation including dog walking, with preservation. I support a modified Alterntaive A - a no action alternative- with improved vegetative barriers and educational outreach for those who may be less responsible. The proposed changes will severely

compromise the quality of my life - and the lives of many other responsible citizen's who live in San Francisco.

Thank you for considering my strong opinion,

Jody Brotman Crissy Feild Dog Group Member

Frank Dean, General Superintendent Golden Gate National Recreation Area
Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean,

My name is Brian Kurtz and I am a resident of Bernal Heights. Although I utilize my local dog parks including Holly Park and Bernal Hill I make a point of going to Fort Funston at least 3 or 4 times a month. Additionally we have a dog walker who takes our Pug out to GGNRAs quite frequently, a few times a week. As a member of Green Peace, Earth Island Institute and the Sierra Club I do feel as though I have a profound interest in the health of the environment.

As a general rule dog owners tend to be responsible individuals. They take great pride in showing their pets are well behaved and cooperative. Of course there is always exceptions, I am a person who fully believes we need to share the open space with everyone and each of us needs to have respect for the outdoors. We all need to share and interact civilly, on or off leash.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off-leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions.

It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural

resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option. The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal. The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents. After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program. Thank you for your consideration.

Correspondence: Edward James Kiernan and Libby Kiernan Sausalito, CA 94965

May 27, 2011 Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean:

I am writing to express my opposition to the proposed rule changes to off leash dog walking in GGNRA. My wife and I reside in Sausalito with our six-year-old Australian Shepherd, who we consider part of the family. We have always been responsible dog owners who clean up after our pet and make sure she does not harass wildlife or people. I has been our experience that our behavior is the norm, as opposed to the exception, amongst dog walkers in the GGNRA, and are extremely upset to learn of the draft plans that would severely restrict our ability to enjoy these recreational lands with our pet.

As it is now, about once a week, we run our dog at one of the areas which now permit dogs off leash, including Muir Beach, which is up the road from us, Crissy Fields, when we visit the City, and, occasionally, Fort Funston and Baker Beach. Because we bring our dog with us almost everywhere we recreate and because she is an active breed that needs exercise, as a practical matter, banning off least dog walking the GGNRA is really a ban on our use of this public property. As a responsible dog owner and tax payer, I find the proposed ban an offensive and arrogant trampling of our rights to enjoy this public land that has been designated for recreational use. My wife and I support preservation of the environment, have participated in beach clean-up events (more than once), and diligently work to ensure both our and our dogs impact on the environment is minimal. However, banning off leash

dog walking, as proposed, is, in our view, a misguided effort to convert these recreational areas within a major urban environment into pristine wilderness, untouched by humans and their domesticated animals. Such efforts, while attractive in the abstract, are both unrealistic and extremist when it is considered that millions of people and their pets live in this region and that this public property was specifically set aside for recreational purposes. The misguided nature of these efforts is all the more apparent when it is considered how well preserved these lands are under the current rules that allow people and their pets (off leash, under voice command), so these proposed rule changes strike us as a solution in search of a problem. Thus, we would like let the record reflect that we do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions. It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, we believe other options (besides restricting dog-walking access) should be considered first. We favor an approach that balances recreational use (including dog-walking access) with preservation. We think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option.

The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not arrogantly assume an adversarial relationship with failure the goal. The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents. After careful consideration, we support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program. If an effort is made, members of the dog walking public can be partners in preserving these precious lands, whereas the approach now contemplated unnecessarily will alienate a large percentage of those who currently

recreate on these lands.

Thank you for your consideration.

Sincerely,

Edward James Kiernan and Libby Kiernan

Frank Dean, General Superintendent

Golden Gate National Recreation Area

Fort Mason, Building 201

San Francisco, CA 94123-0022

Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

- * Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation.
- * Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.
- * Exclude speculative, exaggerated, biased, or misleading statements and studies.
- * Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).
- * Enable professional dog walking and align any professional dog walking rules with county or city regulations.
- * Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

These are my personal comments and observations regarding this plan: As a native San Franciscan, I am reminded daily of how fortunate I am to have a home town that some people can only dream of visiting. A huge part of that great fortune is the time I am able to spend in the GGNRA with my dog, Joe. He's really at his happiest on the beach, and I am so grateful that we can enjoy that together. We're at Fort Funston and Crissy Field at a couple of times a week. It would be such a great loss to so many if we lost access to

these areas as places to walk our dogs.

Sincerely,

Edward Brauer San Francisco, CA 94117

Correspondence: Dear Superintendent Dean:

I am a thirty year resident of San Francisco, age 71 years. I live in Cow Hollow where I have owned my own home for 21 years. I also owned a house at Lake Street and 12th Avenue where I lived for 7 years. During these thirty years I have been a constant, responsible and dedicated dog owner. My favorite place to bring my dog is Crissy Field, which is close to my home. There I can walk comfortably, chat with other dog walkers, and my dog is able to run and play with other dogs. These are recreational activities which are extremely important to my health and well being. My dog (and the ones I've had before this one) when off leash is always under my voice control and active visual supervision. I am careful to clean up after him and to respect the fences, signs, and other environmental barriers which protect the birds and plantings which I also greatly enjoy. I have supported and/or been a member of many environmental organizations over the years including (but not limited to) the National Audubon Society, Defenders of Wildlife, the Sierra Club and the Nature Conservancy. Dog walkers of Crissy Field in general are respectful and protective of the natural resources we enjoy along with others who come to the GGNRA. As with any group, there are individuals who err and should be warned and then ticketed, but their misdeeds should not create legislation which is damaging to a very large number of compliant individuals. People with dogs, in my observation, are good stewards of the environment. Often it seems that the dogs themselves, in their joyful playing, swimming, and running are telling us how important it is to protect and maintain the environment. I do not believe that environment and recreation are adversarial. I think consequently that the DEIS is gravely mistaken in its' proposals. I fully support a modified Alternative A (the "No Action alternative.

Correspondence: Please help imperiled wildlife by not allowing anything to disturb their

nesting and living habits. I have lived in San Francisco for 35 years and have always hiked all around the GGNRA on both sides of the bridge. It is one of the most extraordinarily beautiful places I have ever seen. Part of what makes it beautiful to me is the bird life. There are so many habitats that have been taken over for human use, there is less and less available for birds. Dog owners can take their dog to the beach ON A LEASH, and still enjoy the beach without disturbing others. Perhaps a small section could be dedicated to those who want to let their dogs run free, as long as it doesn't disturb the wildlife.

--The park's mission is to protect the natural and cultural resources, not allow recreation to undermine it. Alternative D best reflects the national park values.

--Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

--The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by offering more than one trail and more beach areas free from dog recreation.

--Require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs.

--Limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Thank you for your consideration

Frank Dean, General Superintendent

Golden Gate National Recreation Area

Fort Mason, Building 201

San Francisco, CA 94123-0022

Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation.

? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.

? Exclude speculative, exaggerated, biased, or misleading statements and studies.

? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).

? Enable professional dog walking and align any professional dog walking rules with county or city regulations.

? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

In addition, as a nurse. I see the benefits of exercise in our elderly population. The majority of which walk because they have dogs. Many of

these people would not be out there if it wasn't for their pets.

Sincerely,

Michelle Isonio Redwood City, CA 94061

Correspondence Type: Web Form

Correspondence: The proposal is difficult to access and even more difficult to understand:

It is difficult to find the proposal on your website, and once found, it is difficult to understand because it is written in legalese. If you are honestly interested in finding out how the community feels about the proposal, the first step should be to communicate it in English.

The proposal represents an existential threat to most Bay Area dogs:

As near as we can tell, the proposal can be boiled down to "walking your dog off leash will be banned on most Bay Area beaches". For retrievers (and therefore for most dogs) this represents an existential threat, since it effectively outlaws their primary reason for being, which is to play fetch. Euthanasia may be the only humane option for these dogs, but that is not mentioned in the proposal. That the proposal fails to recognize this impact on dogs is shocking and outrageous.

The proposal substantially reduces the quality of life for dog owners:

Dog owners are being asked to surrender their enjoyment of most public beaches. Nowhere in the proposal is this cost accounted for or even mentioned. Dog owners vote and pay taxes, apparently to put people in office who then turn around and appoint bureaucrats who spend our tax money to deny us access to our own land? Wars have been fought over lesser grievances. It has been said that evil is often banal. This proposal proves it.

The proposal fails our children:

Children need to learn that we share this planet with relatives who may have fins, feathers, or fur. Playing fetch with a dog is one of the most common child/animal interactions, and banning this activity on most Bay Area beaches fails our children.

The proposal fails our senior citizens:

Many older owners, including ourselves depend on dog walking for exercise. This activity is important to our mental and physical health, and the proposal bans it on most Bay Area beaches. Again, the proposal does not seem to consider this factor at all. Were the authors of the proposal selected on the basis of being uncaring and ignorant? It would appear so.

The proposal fails our community:

The proposal unnecessarily creates deep divisions in our community. It has already spawned tremendous anxiety among dog owners, and gratuitously created deep seated animosity towards the National Park Service in particular, and environmental causes in general, that will be difficult to reverse. The proposal fails to recognize that most dog owners value their dogs more highly than their fellow human beings, and, as the callousness of the proposal proves, for good reason.

The proposal violates the terms on which the NPS originally took over management of GGNRA:

The NPS was charged with running the GGNRA as a recreation area, not as a national park. At the time that deal was made, dog walking was explicitly on the list of recreational activities the GGNRA was designed to accommodate. Dog owners would never in a million years have supported that original deal if they knew the NPS was even remotely capable of going back on it by producing a proposal such as the one before us today. We expect that this bait and switch maneuver will be litigated all the way to the supreme court if necessary, regardless of the financial cost, which brings us to our final point:

The proposal wastes taxpayer dollars:

The cost of the study and the cost of defending against guaranteed lawsuits from dog owners, including ourselves, are projected to reach into the millions of dollars. These dollars come from taxpayers, many of whom are struggling to survive financially. This money will never be seen again. It is a dead loss to our society. There is no multiplier effect from studies and lawsuits, that money provides a temporary stimulus to bureaucrats and lawyers and then it is gone forever, with zero benefit to society or to the ecosystems which we are all agree we want to protect. Every dollar spent on this madness is a dollar less spent on protecting the environment. Thanks NPS!

Conclusion:

Based on the above, we feel strongly that this disgraceful proposal should be either withdrawn or completely rewritten (in English this time) to take the above points into account and to expand off leash access at Bay Area beaches. As it stands now it is fatally flawed in all of the ways described above, and we are shocked and outraged that as taxpayers we have participated in funding a work product this shoddy, incomplete, biased, and frankly, witless. To salvage what little credibility the NPS has left we also suggest the personnel responsible for this fiasco be fired and an apology made to the taxpayers.

Enable professional dog walking and align any professional dog walking rules with county or city regulations. Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input. These are my personal comments and observations regarding this plan: Being able to take my 2 dogs off leash to Baker Beach, Crissy Field, and Fort Funston is one of the best things about living in San Francisco. I can't imagine enjoying these location without my dogs. Dogs enhance our lives in so

many ways and they deserve a space to run. Walking on leash is just not the same. If these areas are taken away from us, the parks within the city are going to be overcrowded and unenjoyable for dog owners and non-dog owners alike. Please don't take these areas away from us!

Sincerely, Sarah Zemunski San Francisco, CA 94109

Correspondence: I drive to the city on a regular basis to walk with my dog at East Chrissy Field beach. Please don't take this away or the other dog friendly venues. There are countless numbers of venues that are not dog friendly that families and individuals who do not wish to share their space with dogs having fun to frequent. I do believe is responsible dog ownership, so dog owners need to take responsibility for keeping the parks clean and not disturbing the wildlife or vegetation. That said, there are many humans without dogs, who are irresponsible with regard to keeping parks clean, safe and respecting the wildlife and vegetation.

Where would you have dogs go? These open spaces are far safer than small overcrowded "dog parks" that are can be measured in square feet. Dogs are a large part of our society. It is our responsibility to provide safe open spaces for them to exercise and play.

Furthermore, for destination dog friendly venues, most people also spend money in that community. So the potential for lost revenue to local business is real.

Come out to one of these beautiful parks and watch the dogs. You will find yourself forgetting your stresses and instead smiling and feeling better just witnessing their joy. There are countless studies demonstrating the health benefits of dogs in our lives.

Thank you for your consideration.

Correspondence: I am a professional dog walker in Mill Valley, CA. I often use several of the trails that are under review for changes in dog walking. I have to say that I am daily befuddled at the thought of what I do becoming illegal. It's difficult to imagine walking with dogs in Nature as the unholy thing it seems to be being made out to be. When the dogs and I are out there on the trails, exercising, socializing, and doing doggy business, it is the most natural and wonderful thing I can think of.

Being a professional, I take great pride in the manners that I require of the dogs in my packs, NOT allowing them to pile out of the truck, but leashing each and every one until we are well onto the trail, and then releasing only those who are trustworthy and well trained enough to be polite trail users. I pull them over when I see other folks coming along, (runners, mt bikers, mommies with strollers or tots in tow, anyone walking with walking sticks or canes, the occasional park service vehicles, etc), and strive to never, ever be a problem for other trail users. It is my goal, and that of other professionals I know, to inspire the public to love our dogs as much as we do. Knowing that this is not always going to be the case, I avoid, avoid, avoid whenever possible, and bait my ever hungry canine companions towards me with treats, if necessary, to ensure that their attention in on ME, and not anyone else passing by. We've received many compliments over the years about how it can be done WELL.

I provide a very valuable service to my community, and plead with you to not take away the privilege of hiking these precious family pets in Natural places where they can romp and play and spin out their beans so that they can stay happy, healthy and fit, which makes them better citizens all around.

As a private individual with three of my own dogs, my heart wrenches at the thought of never being able to go to Muir Beach again. I've lived in Marin for 25 years BECAUSE of the Natural beauty of this place. The restrictions coming down feel as though we are being choked right out of the county.

As far as degradation of the parks via feces and off trail galavanting, there will always be individuals who scoff at their responsibility, but they are the minority. And I would bet that no matter what restrictions come to pass that those same individuals will continue to violate the laws. The VAST majority of us LOVE our parks, and show it by cleaning up after our precious pets, as we do not like to step in poo anymore than anyone else. In fact, my own personal and professional policy is to pick it up if I see it, whether it came

from the dogs in my care, or not.

If this precious privilege is taken away, not only will my own dogs and I suffer for it, but my business, as well. As someone who runs a legitimate business and pays taxes, I would hope to continue to do so. It is hard enough being a single person living in Marin, paying Marin rent, buying Marin gas, food, etc, without having to move out of the county to rebuild my business elsewhere, or simply close up shop. Basically, I'm begging here. Please, please don't take away this thing we love so much.

Thanks.

Megan

Correspondence: And who was John Muir without Stickeen?

I exercise a pit bull/lab mix female who is two years old. I started taking Bear out when she was seven months old - the couple who owned her were both suddenly diagnosed with illnesses that prevented them from training and socializing this incredibly sweet natured animal. As I started taking her out in the world a lot of people would try and avoid me and immediately shielded their children. I came to understand that the dog's demeanor did not make a difference, people's bias took over immediately. They were frightened and as they guarded their children, their children became fearful. Bear is now under voice control, loves to play, and rejoices in the outdoors, running, rolling, playing fetch, and hide and seek with me in bushes and trees. And I rejoice in her play, and in her athleticism, she has saved me as I have saved her, totally equal in our devotion.

After I saw the notice that GGNRA was reviewing its dog-leash policy I thought I would talk to others to see what their feelings were. I choose two friends who do not own any pets. Their immediate response was negative, dogs should be on a leash. When asking why, one responded that her next door neighbor's dog was out on their property and barked at her, and this is from a distance as she lives in Sebastopol on larger acreage property. I asked her if she called to the dog, or if she said "stop" or "it's all right," or anything. She said no, it just frightened her. The other friend said a dog had knocked down her 3 year old grand child in a park. I asked if the dog was barking or aggressive. She said no, the dog looked to be playing.

I know our population has increased, and I know tourism and the use of the

parks under the control of the GGNRA has dramatically increased. I also feel that ordinary attitudes that my generation was raised with have also dramatically changed. I was raised with dogs with the attitude that they were man's best friend. As a kid growing up on Long Island, we loved our neighbor's and friend's dogs. They were by our very side - they came everywhere with us - did they knock us down, oh, yes. Did we tumble and roll with them on the lawns, oh yes. Did we run and play, take them in our boats, on rides to the beach, swam with them in the ocean, oh yes. We exhaled in the freedom of being kids with dogs, our dearest friends, confidants, the only one we could cry with - our loyal buddies.

I don't know how we have become so biased, opinionated, righteous in our demands, and so outraged to feel that we not only have to restrict where animals go and how they go, but that animal care-takers too should have the joy taken from them, the joy that comes from raising a dog as a family member that gets to live to its potential, that watches over the family, that cries when we cry, that springs to joy when we are happy.

Perhaps there are other methods besides reducing what little pleasure owner and dog now have. I think it rationale to assume that when people are afraid of a dog they encounter, they react negatively, and the dogs with their keen sense of awareness intuit those fears. That can be the start of an uncomfortable situation in the making. The dog could bark, could back away as if readying itself, may appear as acutely aggressive. All our knowledge is from exposure and education. The park does much in the way of introducing the visitor to the terrain, threatened species, and natural history. I believe dogs are part of our natural history and evolution. Dogs have served mankind for many centuries as we hunted, by our sides, as farmers fending off predators. Instead of further reducing dogs freedom by policy, how can we educate those who visit our parks and beaches. We educate about the snowy plover that habitats our beaches, why not for man's best friend! Education has always played a part in national park policy - if we can post signs on how to protect the endangered species, or habitat, why not on how to meet and greet dogs. Why not encourage local elementary schools to the reading to youngsters of what purpose and value dogs are to man, which, of course, brings to mind Stickeen accompanying John Muir as he mapped the Sierra. I am sure that John Muir would not be in favor of a further reducing to a couch potato his best friend. I ask you to consider the full impact on further restricting these animals that serve us and serve our families, children, and society.

Frank Dean, General Superintendent Golden Gate National Recreation Area
Fort Mason, Building 201 San Francisco, CA 94123-0022 Dear Mr. Dean,

Three generations of our family have lived in San Francisco since immigrating from China in the mid-1800s. We have explored and enjoyed the many of the areas now within the GGNRA. As a retired SF Unified School District teacher, former board member of the California Institute for Biodiversity, and owner of over 5 acres of land which have been put into trust with the Bodega Land Trust, I understand how important it is to value and preserve our environment.

This letter is to address the GGNRA's proposed policy to restrict off leash dog walking at Ft. Funston. I have been enjoying the outdoors at Ft. Funston a minimum of 3 days a week for over 30 years, walking the many trails with our dogs. During this time, I have witnessed the formation of a very viable community of nature lovers and animal lovers. It is a healthy environment for us as well as our dogs; it has become the true urban recreation area that was envisioned over 30 years ago by the citizens of San Francisco. Dog walking is our recreation and we are excellent stewards of the environment!

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking at the Fort. Yes, I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas; however, I also believe other options (besides restricting dog-walking access) should be considered. It is possible to balance recreational use (including dog-walking access) with preservation. We are doing just that now.

The current DEIS does not evaluate the impact on the "human environment" at Ft. Funston. It fails to adequately address how the proposal affects "recreational" values for the citizens of San Francisco; it fails to recognize that environmental values include both recreation and nature. Indeed, in many places the DEIS treats the environment and recreation as adversarial values (i.e., that recreation only harms natural resources). Education/improved signage and physical/vegetative barriers are preferable

to restriction. It is imperative that the DEIS include such an alternative as a reasonable option.

Conventional wisdom and experience dictate that any "compliance-based" approach punishes many for the perceived transgressions of a few. In my experience as a teacher, I've always found that confrontation is not a productive means to an end and I urge you to partner with the community to develop a workable plan and not to assume an adversarial relationship.

I urge you to consider education/improved signage and physical/vegetative barriers at Ft. Funston. Keep Ft. Funston as an off-leash area. Sincerely,

Diana Owyang

Correspondence: The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded. This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others. The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management

plan to: 1)Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. 2)Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. 3)Exclude speculative, exaggerated, biased, or misleading statements and studies. 4)Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). 5)Enable professional dog walking and align any professional dog walking rules with county or city regulations. 6) Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

I personally have been a very responsible dog owner who has enjoyed Crissy Field and Fort Funston. All dogs should have an area where they can run free. I hope that you will consider these comments. Sincerely, Dr. Veronique Lauriault

Correspondence: I would prefer to have dogs banned from Mori Point, Malagra Ridge, and Sweeney Ridge altogether....no leashed or unleashed dogs. I have done extensive hiking and biking at all locations mentioned and many dog owners begin their walks with theri dogs on leash and then take the leash off when they get away from parking areas. I have seen dogs chasing birds, squirrels and other wildlife.

If all dogs are banned it is easier to regulate. There is no way that rangers and other law enforcement can make sure all dogs remain on leash. By eliminating all dogs one doesn't have to follow everyone to make sure they conform to leash law. Just keep all dogs out and don't worry about leash or no leash.

Pacifica is going to create a special dog recreation area where dog owner can run their dogs without leash.

Frank Dean, General Superintendent

Golden Gate National Recreation Area

Fort Mason, Building 201

San Francisco, CA 94123-0022

Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation.

? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.

? Exclude speculative, exaggerated, biased, or misleading statements and studies.

? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).

? Enable professional dog walking and align any professional dog walking rules with county or city regulations.

? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

These are my personal comments and observations regarding this plan:

I am a dog walker and I take my dogs to many of the parks in the GGNRA. But I only take one or two dogs at a time. Every dog walker that I see out there is responsible, picking up poop and taking care that their dogs are behaving. In fact, I believe that dog walkers and other animal professionals are the most caring and responsible people out there. I believe that it is random, rogue dog owners who do not train their pets and are most likely also not responsible in picking up their pet's waste or curbing their pet's possible bad behavior.

I don't believe it is the "right thing to do", putting many, many people out of work or in desperate circumstances for their livelihood. Not to mention all of the people (from all over the Bay Area, tourists, etc) and their pets who count on these areas to be open to them and their pets every day.

Why do a handful of irresponsible people have the power to ruin something wonderful many, many responsible, caring people depend on and love? There has to be a better way.

Sincerely,

Jennifer Loayza San Francisco, CA 94112

Correspondence: I urge the National Park Service to protect Golden Gate's imperiled wildlife from harassment by unregulated recreation.

Golden Gate National Recreation Area may be one of our country's boldest park experiments: setting aside highly-prized land to provide a national park experience near a heavily urbanized area. Indeed, the park is home to more endangered and threatened species than any other park in the continental U.S.

To help protect these species and other protected wildlife, inappropriate activities such as motor vehicle use on beaches were banned. However, the

park continues to permit unregulated activities that disturb wildlife like western snowy plovers and marine mammals. Wildlife take refuge on Golden Gate's beaches to rest, breed, and rebuild energy for survival, yet unregulated off-leash dog recreation in these areas has resulted in habitat encroachment and wildlife harassment by dogs. For example, the park has reported that unleashed dogs represent the most significant recreational threat to wintering western snowy plovers.

The park's mission is to protect the natural and cultural resources, not allow recreation to undermine it. Alternative D best reflects the national park values.

In regards to off-leash areas, they should be enclosed to protect park users, wildlife, and other dogs. You should also limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

Correspondence: I have three small toy breed dogs. We like to visit Baker Beach often. This is the only place i feel comfortable leaving them off leash to play fetch with a ball. The problem i have experienced is the owners of larger breed dogs who are off leash. The have a need to dominate the area and the more than half the time the owners are not paying attention to their dog. They just let them roam and wander. For example, my dogs are playing nice together and what do you know a large dog will interfer and take the ball and run off or better yet just go after my smaller dog as pray. This has really annoyed me to no end as when this happens I intensely ask the owner if they are around to pull off their dog. They just look at me in shock. I give them a few not so nice words about controlling their dog. I guess my point is that it would be nice to have a park area fenced in for small toy dogs 0-30Ibs and another fenced area for larger dogs 30ibls and higher. They could be part of the park areas within each neighborhood. Other states have this sort of set up (Arizona). I do think owners should be ticketed for not picking up their dogs poop. This is also a big problem in the city neighborhoods. I also think that outsiders, those who do not live in SF, just come on by and do and take what they can. There needs to be a few more restictive rules so our neighborhoods keep clean. I hope this has provided some incite to the dog, people, and environment situation. Thank you for your time, Karen Kelly

Correspondence: Keep dogs out of GGNRA trails! I have been bitten and snapped at by dogs off their leash many times at Mori Point, and I'm just plain tired of it. Not to mention stepping in the dog poop, and seeing the wildlife scared away by dogs charging into the bushes. Yes, I'm tired of it. No dogs at all. I would support a leash-only rule, but dog owners completely ignore such rules where we have them now (e.g., Linda Mar beach). Dog owners should have their own dog parks, where they can play dodge the doo-doo and hope that dog charging at you is friendly. Josh Gordon

Correspondence: May 27, 2011 Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022
Dear Mr. Dean,

My name is Susan Nightingale. I am a business owner of 31 years employing over 100 people. I also am a dog owner/lover. I have had 4 dogs at one time in recent years and it has been our refuge and joy to walk at Fort Funston. We drive to Fort Funston on a weekly basis because it is so important to us all to be in nature and walk freely with out a leash. All my dogs are well behaved to both other dogs and people. They all come when called and have always been good citizens. The exercise they get from off leash walks is essential to their well being and mine.

I have taken my beloved dog friends to Fort Funston on a regular basis for over 20 years. I want to assure you that I have never seen any dog disturb wild life there. They run and play. It is important to me to respect this beautiful spot and I always pick up after them. I support the NRDC, the LVC, the Nature Conservancy, Canopy for Trees in Palo Alto, POST, Committee for Green Foothills and numerous other environmental and conservation organizations. I am fully aware of how precious our parks and open spaces are and I am committed to doing whatever I can to help. My love of dogs and walking in nature does not mean that I do not respect nature. I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions. It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options

(besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option. The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal. The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents. After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program. Thank you for your consideration. Sincerely, Susan Nightingale Portola Valley, Ca. 94028

Correspondence: Frank Dean, General Superintendent Golden Gate National Recreation Area Building 201, Fort Mason San Francisco CA 94123-0022

Dear Superintendent Dean,

I am writing to respectfully request that the proposal to limit off-leash dog areas in the GGNRA be abandoned and that the alternative proposal be rejected as well. Both the original proposal and the alternative are too restrictive for the large number of people and dogs who live in San Francisco and use these urban recreation areas. The impacts of off-leash dog walking as stated in the EIS are not supported by facts. In addition, the EIS does not consider the negative impacts of its alternative proposal for dog walking in the Bay Area.

I have lived in San Francisco for over 30 years and have had dogs for most of that time. I frequent Ft. Funston regularly with my dog (off-leash and under voice command). We both enjoy walking there. It's a great

opportunity for both of us to get exercise, socialize and alleviate the stress of living in an urban area. If Ft. Funston were not available to us, I would visit a city park which I expect most other dog owners would do as well. Restricting GGNRA use and the resulting overcrowding of city parks will have a negative impact on the dogs, on people, on the environment and on city services that have to deal with resulting problems.

Ft. Funston has a long history of being a treasured open space that all people of the Bay Area can enjoy. It is a beautiful location used by hikers, hang gliders, horseback riders and dog walkers. We all love it there. Visitors to Ft. Funston all get along, do their own thing, and enjoy themselves. In all my years of going there, I have never witnessed fights between dogs or people, nor have I seen any of the problems that are alleged in the EIS. I have never witnessed dogs destroying the landscape, chasing birds or doing anything other than romping and enjoying the fresh air.

There is an argument that the ecosystem of Ft. Funston has been negatively impacted by off-leash dog walking. That is just not correct. For example, a UC Berkeley Environmental Sciences study presented by Megan Warren on May 7, 2007 concludes that within the GGNRA, the feeding of the Western Snowy Plover does not appear to be negatively affected by human and pet recreation.

Any environmental impact study on the GGNRA would have to include the impact of all of the groups who visit the area, not just the dogs. One could argue that one way to restore the original ecosystem of Ft. Funston would be to prohibit any trespassing by humans or animals, tear up the parking lots and keep everyone out. However, the GGNRA was created for recreational use.

Of course, the natural environment and beauty of the GGNRA should be protected ? that is the expectation of all of us who visit it so often. But the GGNRA is not a wilderness area. I am an environmentalist and would not support a position that would endanger the environment.

These are hard economic times for people. One outlet for free recreation is to go to Ft. Funston with our dogs off-leash. Do you really want to take away such a fundamentally positive thing that so many San Franciscans enjoy ? something that contributes to people's wellbeing? None of this makes any sense to the people of San Francisco.

Please keep the GGNRA policy unchanged and reject any alternative plan. Let it remain open to off-leash dog walking and to the people of this area to enjoy.

Thank you.

Sincerely,

Patricia Veitch

Correspondence: To Whom It May Concern,

I was surprised and saddened to hear that you are considering limiting access to dogs in Muir Beach and that one of your proposals would completely prohibit dogs anywhere but in the parking lot. I have lived in Muir Beach for 11 years and have an 8 year old black labrador. I have cherished being able to walk from my home down to the Beach and up the Coastal Trail with my dog. It is one of my favorite parts of living in Muir Beach.

I urge you to consider an option that allows for dogs on Muir Beach and on the Coastal Trail. Muir Beach is one of the few Marin beaches where dogs can run free together and it is a big part of the Recreational (thinking of the R in GGNRA) element of this place. If people are seeking a non-dog beach, they could drive just 15 minutes up the road to Stinson.

In addition, I urge you to consider allowing dogs on leash on the trail from the Pelican Inn to the Green Gulch Gate. Green Gulch does allow dogs on leash on their property, but without being about to use the road from the Pelican Inn to the Green Gulch Gate, there is no way to get there without getting in a car. If allowed, this would preserve one good dog walk residents of Muir Beach could take.

I also encourage you to increase signage (including fees for violation) in order to help clarify regulations and encourage responsible dog ownership.

Please keep Muir Beach Dog Friendly!

Sincerely, Mary Daniel Hobson

Correspondence: I am not a dog owner but I oppose the proposed restrictive Alternatives in the DEIS. I visit Fort Funston on a weekly basis and love interacting with other people's dogs. I particularly appreciate that we have a place where dogs and people can have freedom near an urban environment. The offleash options there are critical as an last-remaining option for well-behaved dogs that are under voice control. I have never had a negative experience at Fort Funston and would be seriously disappointed if the land access to dogs was restricted as proposed.

Correspondence: This letter is in response to the GGNRA Draft Dog Management Plan.

You are the National Park Service. How is NPS serving the people?

Just because National Park Service (NPS) acquired more land doesn't mean you have to change it.

My biggest argument is that NPS doesn't have a good enough reason to change anything. Where dogs are allowed now, they should be allowed always.

These lands have been open to dogs for decades. NPS owes something to the people and dog owners who are and have always been the Parks' biggest customers.

How do you serve the people?

The people who go to the parks regularly are the ones who value it most. NPS doesn't understand how much dog owners truly appreciate the Parks. There's nothing NPS can possibly do that will make it all right for your most appreciative customers if you take any of the land and make it off-limits to dogs.

How does this serve the people?

NPS does not exist to expand on an agenda of banishing dogs. NPS tries to disguise this by claiming it's good for the environment, yet your real agenda isn't environment or wildlife based-you call it "Dog Management". NPS is discriminating against dog owners by even calling it "Dog Management".

Don't you see?

We're not talking about allowing dogs where they haven't been allowed before. These are places where dogs have been allowed for a long time. The wildlife is doing just fine with Park visitors who bring their dogs along. We see all kinds of wildlife at Fort Funston everyday. There's ravens, hawks and even an owl on occasion. If dogs were a problem for the wildlife, then the wildlife wouldn't be there, it would have left a long time ago.

People have a tendency to think that animals in the wild need our protection. But we become arrogant when we imagine more common wildlife will not survive without our interference, so we over-protect for the sake of Policy. Some endeavors that ring of good intentions were ultimately born of pride. Don't misunderstand-I'm not talking about endangered, predatory cats in Africa. I'm talking about hawks and ravens in abundance in our own backyards.

The wildlife in these Parks is thriving on its own without interference-even though there are lots of dogs around. In addition, it's impossible for dogs to disturb cliff dwelling birds. So how can NPS say that the dogs are disturbing the wildlife?

Yet NPS claims that dogs cause erosion as well. Nevertheless, the imperceptible erosion caused by dogs cannot compare to the erosion caused by the wind most every day along the coast. The weather and winter storms cause more erosion than the dogs can possibly do. The wind literally extends beaches across The Great Highway, forcing the closure of the highway a few times a year.

Also, let's not forget that much of the coastal land's instability makes it useless for development or other purposes-that's why Fort Funston is still a Park, and houses occasionally tumble down into the sea while others await the same fate. When the houses fall, do we blame the dogs?

So really, what do you have against dogs?

Fort Funston in particular is used by hundreds or maybe a thousand people, mostly with dogs every day. When the wildlife is thriving and the erosion is imperceptible with dogs, then what reason does NPS have to kick the dogs out?

I'd almost be willing to bet that some high official at NPS together with some NPS Representatives-like those at the public Meetings-had a bad experience with a dog, so he or she just doesn't like dogs, and goes on to make Policy to remove all dogs from all Parks. Because one dog did something, or its owner didn't have control of it, then all dogs and all dog owners are evil.

I had a couple of bad experiences with dogs myself, but by being around dogs, I gradually got over it, and now I'm a happy dog owner, and I wouldn't have it any other way. No matter who you are and whether you like dogs or not, you have to admit that owning a dog is part of an American dream for lots of Americans-we can't all be wrong-and this dream includes taking our dogs to the Parks and Beaches.

I've been to NPS public comment meetings. It feels like NPS is just paying lip service to dog owners by eliciting our comments. It sounds like NPS will do whatever it wants, and when we try to state our position, the reply is we're being "unreasonable." If we don't want to concede, we are unreasonable. How is not wanting to change it unreasonable?

We're not trying to develop it, change it, or make it into something it isn't - that's what NPS would like to do. The land is not just Parks, it's also part of the Golden Gate Recreation Area. Dog owners and Parks are not in conflict about opening to dogs a pristine land that never saw a human footprint. The land has already been set aside for Recreational use, and dogs are a part of that use, as much as running, hang-gliding, exercising, school sports-team training, and just plain walking.

Leaving Parks the way they are is a very good idea that doesn't cost extra work or money for anyone.

At his point, I could go into numerous reasons how taking the dog to the Park benefits dogs, dog owners and society as a whole. But, I don't want this to distract from the main point I'm trying to make-that NPS doesn't have a good enough reason to change anything. Thriving wildlife and virtually no erosion caused by dogs proves this argument. After these points, NPS has no legitimate argument.

Frank Dean, General Superintendent

Golden Gate National Recreation Area

Fort Mason, Building 201

San Francisco, CA 94123-0022

Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation.

? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.

? Exclude speculative, exaggerated, biased, or misleading statements and studies.

? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).

? Enable professional dog walking and align any professional dog walking rules with county or city regulations.

? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

These are my personal comments and observations regarding this plan: I love walking my dog no one should be allowed to restrict where I go. We walk on Linda Mar Beach trails all the time. I am a responsible dog owner

who picks up after my dog. So what could I possibly be doing that would impact the environment anymore than walking by myself?

Frank Dean, General Superintendent Golden Gate National Recreation Area
Fort Mason, Building 201 San Francisco, CA 94123-0022 Dear Mr. Dean,

My husband and I have been residents of San Mateo County for almost 40 years. We live in Burlingame and own property in both Pacifica and El Granada. We are concerned about the elimination of opportunities for dog owners to use open areas for recreation. We do understand some areas are more sensitive than others and must be protected. What we don't understand is the logic of making all these areas off limits for people to enjoy with their dogs even if they are on leash.

It is hard for individuals to care about open space if they are restricted from developing a connection with it. If one can't read, one would not care about a library. I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law. The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the

GGNRA was founded. This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others. The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to: ? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. ? Provide for on-leash dog walking in most areas as well as off leash walking in some more sensitive areas that have been acquired by the GGNRA since 1979, especially in San Mateo County. ? Examine carefully what may be speculative, exaggerated, biased, or misleading statements and studies. ? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). ? Enable professional dog walking and align any professional dog walking rules with county or city regulations. ? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

Correspondence: May 28, 2011 Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean:

Thank you for the opportunity to comment on the GGNRA draft dog management plan. I live in Oakland, California and have lived in the Bay Area since 2002. I used to live in San Francisco. I meet friends from San Francisco every Sunday at Fort Funston (and occasionally Chrissy Field) with our dogs. I have a 12 year old lab mix and we both enjoy visiting Fort Funston. I sometimes bring friends to Fort Funston with me, even those who don't have dogs. I've been a member of the Sierra Club, and contributed to the NRDC and other environmental organizations. I am an environmentalist, and have spent my career working on environmental issues.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off-leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979

Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions.

It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option.

The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal. The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents. I believe off-leash recreation is extremely important for dogs. Not only does it reduce problems between dogs, but it also helps foster happy, well-adjusted dogs, who don't cause problems with people. Living in an area of Oakland with very limited access to off-leash recreation, I see the difference between dogs where I live now, and dogs where i used to live in San Francisco. They aren't socialized as well. Dogs need to spend time off-leash, recreating with other dogs.

After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program.

Thank you for your consideration.

Sincerely, Janet Magnuson Oakland, CA 94610

Correspondence: I am a longtime member of the Sierra Club, and I am appalled at the discriminatory bias that the National Park Service has against man's best friend.

I love the outdoors and I'm a committed environmentalist. I also love my dog, and my favorite pastime is exploring our natural world with him. We treat the resources with utmost respect. I do not at all appreciate this document which attempts to paint my dog as some type of villain. I live in Florida but visit California with my dog. You can be assured that if these

restrictions are put into place, the San Francisco area will no longer receive my tourist dollars.

40% of American families include a family dog. It has been scientifically proven that owning a dog improves our health and longevity, but only if we can provide the right amount of outdoor exercise and stimulus for them.

The GGNRA has already restricted dog owners to less than 1% of its space. It should be INCREASING the space available for this 40% of the population, not decreasing it. Walking with and enjoying the outdoors with our dogs is a timeless human recreational activity; one of the simplest, most basic forms of recreation since the human and canine species formed their special bond 10,000 years ago.

A friend of mine immigrated to America from Norway and he is flabbergasted at the puritanical attitude about dogs in the outdoors of the United States. He loves many of the freedoms America offers him, but doesn't understand why in Norway, dogs are an accepted part of public life, and are welcomed almost everywhere, but in America, the land of the "free", this basic need is taken away from our citizens.

Please scrap or rewrite this document to increase dog walking on this public land (purchased with my tax dollars), instead of further restricting it.

I support formalization of the 1979 Pet Policy allowing Dog Walking at Fort Funston without any further territorial restriction.

Re: Executive Summary, DEIS Dog Management Draft Plan, Fort Funston, pp. xx-xxi

"Impacts to San Francisco lessingia would be long term, minor, and adverse for alternatives C, D, and E, and the preferred alternative, negligible for alternative B, and long term, moderate and adverse under the no action alternative" (p. xxi)

On the NPS.gov homepage of the Presidio of San Francisco, the article on

the San Francisco Lessingia (*Lessingia germanorum*) the article states:

"Range in State: San Francisco Bay Area. The only population known of outside the Presidio is located in Daly City. The Presidio is the type locality for this species."

Please provide substantive documentation including biology reports that San Francisco Lessingia (*Lessingia germanorum*) existed at Fort Funston as a native species prior to the adoption of the 1979 GGNRA Pet Policy, and that this native plant has degraded or disappeared as a direct result of dog walking.

I question the accuracy of all of the DEIS Executive Summary related to Fort Funston on pp. xx and xxi.

I am not a dog owner, but enjoy walking at Fort Funston and enjoy the dogs. Current policy seems fine to me, although a daily foot patrol by a Park Ranger might be good for friendly public relations and the Rangers' cardiovascular health. Licensing of dog walkers might also be explored.

I support formalization of the 1979 Pet Policy allowing Dog Walking at Fort Funston without any further territorial restriction.

Sincerely,

William Klingelhoffer San Francisco, CA 94122

Correspondence: I can't believe San Francisco would seriously consider reducing park areas for dogs and their owners. It's a main reason that we continue to pay SO much to live in the city. The cost of housing and living is driving people out of San Francisco and this will only make it worse.

My wife and I walk our terrier Cecil every weekend at Ocean Beach, Fort Funston, Stern Grove and Glen Canyon. Dogs get owners out enjoying the parks and meeting other people. Taking away that right would create an out-roar like the city hasn't seen seen civil and gay rights.

Please do the right thing and overturn these planned changes. Thanks for listening!

Correspondence 3682 **Project:** 11759 **Document:** 38106**ID:****Received:** May,28,2011 09:36:36**Correspondence** Web Form**Type:****Correspondence:** I have been a regular visitor to San Francisco and Marine County for the last few years. One of the things that has impressed me the most and that I talk

about when coming home is the dog friendliness of the parks, and the extremely good behaviour and control of the pets. I have never seen a dog fight. Even without a dog, I have enjoyed walking through breathtaking parks and greeting dogs and owners. I have read your proposal and noticed that none of the preferred alternatives include Option E, where dogs would keep the freedom they enjoy now. This would in a sense discriminate against a large chunk of the population who owns a dog, enjoys dogs but has no possibility to own one, or cannot afford to buy a car to drive to a place where the dog can run free. I can understand limiting the amount of dogs one person can bring, and I can understand the need to balance the different interests. But in your solutions the balance has tipped too much to one side.

I urge you to work harder to rectify the balance and to make sure that off-leash areas are better distributed and more accessible. That said, I have a special interest in park conservancy, and have volunteered several times, but this is not a contradiction. I still think that a better compromise can be reached.

Thank you very much.

Frank Dean, General Superintendent Golden Gate National Recreation Area
Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean,

I am a dog owner. I live in Potrero Hill in SF. I frequently use the GGNRA. I like to take my dogs to natural areas. I belong to the Sierra Club and support environmental causes.

Chronologically I am a senior and off-leash dogs do not bother me. I have a

dog that needs to run off-leash to get exercise.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off-leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions.

It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option.

The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal.

The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents.

After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program.

Thank you for your consideration.

Frank Dean, General Superintendent Golden Gate National Recreation Area,
Building 201 Fort Mason San Francisco, CA 94123-0022 *****MAP
TO BE SENT SEPARATELY ENTITLED "CLIPPER RIDGE DOG
TRAILS" VIA EMAIL TO <goga_gmp@nps.gov>,
<GOGA_Planning@nps.gov>, *****

Regarding the Dog plan for new lands aquired by GGNRA and specifically
Rancho Corral.

I live in the neighborhood along Coral Reef that we call "Clipper Ridge" and
with my husband and family have lived here for 27 years during which time
we walked dogs off leash, rode horses, and enjoyed the trails and vistas
immensely.

I ADAMANDLY OPPOSE YOUR STATED PREFERED
ALTNERNATIVE TO THE " Dog Plan " (DEIS) AND SUPPORT THE
BASIC PREMISE THAT ALLOWS DOGS ON LEASH THROUGHOUT
THE GGNRA AND DOGS OFF LEASH UNDER VOICE CONTROL IN
SMART PLACES. Dog walking is popular in this area both on- and off-
leash and the dog policy that welcomes on-leash dog walking is a good
place to start for GGNRA. The draft management plan should be revised to
include specific areas for on- and off=leash. Moreover, current plans are too
restrictive and should be completely revamped to reflect the evolving
attitudes toward our land appreciation ? there is a growing population of dog
walkers who will enjoy and embrace public lands if they become available
for dog walking. For most parts of Rancho , on-leash walking is appropriate.
Historically, the trails close to homes and specifically to Clipper Ridge
should accommodate off-leash walking (please see map attached entitled
Clipper Ridge dog trails). These are frequented by dog walkers and some
hikers, bikers and they provide access to the southern lobe (south of
Dennison Creek) of Rancho.

There are two popular loops frequented by dog walkers, one through LT
(low trails) and one up to Flat Top (penciled in red pen) ? The LT are low
trails that are seasonally flooded in 1-2 places and would benefit from
boardwalks for winter . ? Parts of C1 are very steep but have responded well
to erosion bars; eventually they should be revised to contour up to Flat Top
? C2 is somewhat steep and has responded well to erosion bars (note, most
of the soil erosion occurred before 1980 based on air photos) ? CF (central
freeway) is a gentle slope up to Flat Top; historically the disturbance to

grade the road did the most damage but sediment seems more stable now

To my knowledge there have been no complaints registered about dog walking in this neighborhood. I request that you allow dog walking on a loop to and from Flat Top (on C1,C2,CF, and LT) , as these have proven to be highly valued resources for dog walkers for the past 30 years. Moreover I request that you allow voice control-only (off leash) walking on 1 or 2 branches of the trail (confluence of C1 and LT is a good dog romping area). We are important stewards for this land and would continue to value this open space as a recreational opportunity.

On trails leading to gun club, I think on-leash would prove to be successfully frequented by many participants. Dogs have shared the trails with bikes, horses, and hikers for years and could do so for many more.

Thank you for your consideration

Jennifer Harden

Correspondence: Dear Mr. Dean, I was born in San Francisco and have lived here all my life. In 1973, I voted in favor of the ballot amendment that deeded Fort Funston to the National Park Service with the understanding that the Park Service would maintain these lands for recreational purposes in perpetuity. Quotes in local newspapers from the person who became the first GGNRA Superintendent and flyers promoting support for the ballot measure, as well as ballot arguments in the voter's pamphlet promised this. The proposition passed in 1973. In 1979, consensus was reached with steak holders that a very small percentage of the GGNRA would be maintained for use by off-leash dogs. This was promulgated as the 1979 Pet Policy.

My wife and I are both senior citizens and have walked our dogs at Fort Funston for many years. We have seen the Park Service gradually remove portions of the GGNRA from recreational use and severely impair our recreational opportunities in our City. You have broken the promises you made to the citizens of San Francisco.

Your current plan unilaterally removes these small pieces of land from use by off-leash dogs and sets aside an agreement reached through consensus building. As we move into the second decade of the 21st century, the city of San Francisco is planning for a substantially increased population. It is said that we are the second most densely populated city in the country, and we

are planning for increased population density. What you are doing here is poor policy which negatively affects your neighbors greatly, and you refuse to even consider the impact your proposals will have on our city. You refuse to consider the needs and desires of the majority of park users of these tiny areas. You are proposing these changes in rules for an urban recreation area, not Yosemite or Yellowstone.

Your poor performance as a neighbor is only exceeded by your arrogance. Mr. Dean, I oppose your alternatives and urge you to revert to the 1979 Pet Policy. Sincerely,

Avrum Shepard

Correspondence: Dear Administrator, I am deeply dismayed to read the recent draft plan for Fort Funston. It is hard to believe that anyone who has visited Fort Funston would want to make any changes or limitations to off-leash dog walking. When I first got a dog 15 years ago, I was told that Fort Funston is "dog heaven". Every time I go there, I see this is true. Fort Funston is currently heaven for both dogs and people. It is impossible to go there without seeing happy dogs and happy people, enjoying the out-of-doors. This kind of enjoyment is not possible with leashes. It is hard for me to believe that someone would knowingly choose to remove joy from this earth, for no good reason. So I can only guess that you have never been there. I would encourage you to go to Fort Funston and walk on the trails, and see the happy dogs and people before you make a decision to ruin it. There are many parks and beaches in Californina that either do not allow any dogs, or do not allow off-leash dogs. People who want to avoid dogs have plenty of choices. But people and dogs who enjoy the off-leash experience have very few options. When I go to Fort Funston, I often see families with children, some of whom do not have dogs. Without exception, the children are enjoying the dogs, and it is obvious that for families without dogs, Fort Funston provides an opportunity to enjoy seeing and interacting with happy, loving dogs. For the number of people and dogs who enjoy Fort Funston, there are remarkably few problems. I believe this is partly due to the group of dedicated volunteers who promote a culture of both cleaning up after dogs, and being considerate of other park visitors. Dogs at Fort Funston are not aggressive, are kept under control, and are simply having fun in a natural way. Fort Funston is NOT a pristine natural environment. Before becoming a park, it was a military installation, and since then, it has been open to dogs. Birds which inhabit the cliff areas are not disturbed by the dogs. There is no valid environmental argument for keeping the dogs on-leash in any

area of the trails or beach at Fort Funston. Dogs need to run and play, and many people cannot afford huge yards. My dog trainer has told me that small fenced off-leash dog parks promote aggression in dogs, but the same is not true for Fort Funston, because there is room for the dog to run and walk, so they do not feel threatened. Please consider carefully this misguided plan. Look at the faces of the park visitors at Fort Funston, and ask yourself why you would want to make them unhappy. There is no good reason to limit off-leash dog use at Fort Funston. Thank you for your consideration.

Correspondence: Ladies and Gentlemen

I am a senior citizen living in San Francisco. I walk my small dog in the affected GGNRA areas almost daily. I am a responsible owner and clean up after my pet and obey all existing rules.

The GGNRA is a multi use facility and it is my observation that the current rules are fair to all. Severely curtailing permitted current uses will only place added burdens on our already over-burdened City park facilities.

I respectfully urge that you continue the current multi-use regulations which have proven to be fair to the overwhelming numbers of users of Park facilities. To do otherwise is to unfairly penalize pet owners and the desires of our elected officials.

Thank you for this opportunity to express my opinion.

COMMENTS ON DRAFT DOG MANAGEMENT PLAN Submitted by Charles Pfister

The following comments refer to specific page numbers/sections of the Draft Dog Management Plan.

P. 15 ? Wildlife: "Intensive dog use of an area could disrupt its use by wildlife ?.

The use of the adjective "intensive" is misleading and meaninglessly vague in this context. Dog use does not have to be intensive, in the sense of total number of dogs present, to disrupt wildlife. Unfortunately, even if most dog owners handle their charges responsibly, one or two misbehaving dogs can ruin the attempts of the responsible owners to avoid disturbance and completely clear out kilometers of an open beach of shorebirds (see section "P. 797 Wildlife / Birds"). Synergistic impacts (Smit and Visser 1993) may magnify the impacts of a small number of off-leash dogs. At Ocean Beach on a warm day when the beach is crowded with people, a few off-leash dogs may represent a severe disturbance, because few alternative resting areas may be available.

Sandpipers and plovers, types of shorebirds found along sandy beaches and some fields in GGNRA, are known to have relatively high metabolic rates compared with other bird species (Kersten and Piersma 1987) and even short-term (and what might to some casual observers seem occasional and inconsequential) disturbance of feeding and migration behavior could have potentially serious consequences.

Using formulas to estimate energy expenditure by disturbed shorebirds, a shorebird biologist estimated that a certain species of shorebird would lose 25% of its daily energy requirement during migration staging if disturbed 20 times per day (Brian Harrington, Manomet Center for Conservation Science, personal communication, 2002). Goss-Custard et al. (2006) have used models based on an intensively studied population of oystercatchers in the baie de Somme, France to estimate that if the birds are disturbed more than between 1.0 and 1.5 times per hour in good feeding conditions or 0.2 to 0.5 times per hour in poor feeding conditions a reduction in fitness would result.

P. 19 Employee, Visitor, and Dog Health and Safety

The total number of leash law violations recorded by GGNRA and reported in this section is only the tip of the iceberg of orders of magnitude more incidents that actually occurred but were not detected and so should be noted in this section. Over the years, GGNRA has taken a "monkey-no-see" approach to enforcing the leash law and protecting wildlife and visitors from harassment by dogs. The number of violations should be seen in the context of how abysmally ineffective GGNRA has been in enforcing leash laws and protecting wildlife and visitor experience.

GGNRA has not used professional management techniques to protect wildlife and visitors from off-leash dogs. Such techniques would include reviewing enforcement attempts related to outcomes and adjusting methods

to attain results; educating GGNRA law enforcement staff about how to recognize harassment of wildlife and visitors; and following up on reports by visitors concerning patterns of disturbance of wildlife and visitors by off-leash dogs. A FOIA request submitted in 2005 related to dog management did not show any evidence of professional management techniques related such as mentioned above. GGNRA also did not respond to dozens of complaints about dangerous situations for visitors related to off-leash dogs and harassment of wildlife by reviewing policies and procedures. Instead, GGNRA was more concerned with appearing to address the issue ? not with securing results. A result of such an approach is the current high rate of non-compliance concerning leash laws.

In a letter to me dated 8/9/2001 in response to my reporting chronic disturbance of shorebirds by off-leash dogs and the lack of protection provided by GGNRA, Superintendent Brian O'Neil invited me to report future incidents of wildlife harassment I observed to park dispatch. He did not offer any suggestion that GGNRA would engage in professional management techniques to address the problem.

In fact in subsequent years, I frequently jogged on Ocean Beach, and in almost every instance observed multiple incidents of harassment of birds by off-leash dogs and violations of the leash law. Approximately 20 times I reported such harassment, as suggested by O'Neil, and waited at the site of the harassment to determine the outcome of my call. In no case did GGNRA respond soon enough to intervene in the harassment I reported. In no case did my call result in a report or citation being issued documenting the harassment. Most disturbingly, GGNRA did not show any indication of taking any initiative to prevent future instances of harassment of wildlife such as I reported. Some dispatchers seemed uninformed about the current regulations or even that disturbance of wildlife was illegal in GGNRA.

Some of the specific incidents on Ocean Beach included:

? 8/21/2004

5:30 - 6:00 p.m. -- Observed large flock of approximately 500 elegant terns and off-leash dogs ? no evidence of enforcement

6:00 p.m. -- Called in about dogs. Told by dispatch that three rangers called in sick.

6:55 p.m. Saw terns flushed by two dogs off-leash. Called dispatch again. Was told two rangers had previously responded but found no indication of violations. The rangers were now at a rest stop but would respond again.

7:25 p.m. No evidence of further response.

? 3/21/2007

6:15 ? 6:25 p.m. ? Observed harassment of shorebirds by off-leash dogs and called dispatch. No response.

7:10 p.m. ? No response. Called to find out what happened. No record of explanation.

? 4/9/2007

5:15 p.m. ? Reported harassment of shorebirds by off-leash dogs. Ranger came within a few minutes but did not find harassment. Conversation with dispatcher ? he described how visitors put dogs on leash when they see rangers come and that there is a website with the location of park rangers. No mention of countermeasures. Called a second time because of continued harassment. No record of response.

? 9/21/2007

5:15 ? 6:00 p.m. ? Harassment of shorebirds: visitor throwing ball for dogs in snowy plover area of dunes; several dogs chasing birds along shoreline. No evidence of patrol.

5:44 p.m. ? Reported harassment of birds.

5:58 p.m. ? No response. Called again. Dispatch said ranger was en route.

? 11/3/2007

5:35 p.m. ? Reported golden lab chasing dogs in area Tarval to Ortega, going north. Approximately 100 shorebirds trying to feed at tide line; many off-leash dogs south of this area.

5:45 p.m. ? No response. Called again and spoke with "Vicky" the supervisor; no record of previous call. Will send someone out. No record of further response.

? 11/18/2007

11:15 a.m. -- Reported dogs chasing birds in snowy plover protection area. Dispatcher initially said that dogs off-leash were OK along the water. Gary, acting supervisor then got on the line and claimed what the dispatcher said was a "miscommunication" or "misunderstanding". He claimed that the snowy plover protection area is only the "dry" area of the beach. Excuses for

not responding: oil spill, etc, etc.

11:30 a.m. ? I left beach. No response by this time.

? 12/31/2007

11:57 a.m. ? Reported two pit bulls off-leash approaching snowy plover area; chasing birds

12:02 p.m. ? No response. Dispatched stated that ranger had responded and was on the "street side" (i.e., Great Highway) but went up to look over the beach and saw no problem. I never observed the ranger in the area of disturbance.

? 3/7/2008

5:44 p.m. ? Reported several dogs off-leash running up and down the beach. Saw German shepherd chasing birds on tide line and several other dogs off-leash dogs.

5:59 p.m. ? No response. Called dispatch, who reported that a ranger had responded but saw nothing. I never saw any ranger in the area of the disturbance.

? 3/10/2009

5:07 p.m. ? Reported off-leash dogs chasing shorebirds

5:22 p.m. -- No response. Dispatch gave excuse of drugs and stolen car call at Presidio. Sending someone from Presidio. She will assess the situation. Dispatcher was not aware that my call was in the snowy plover protection area. Dispatch was not aware that dogs chasing shorebirds was not OK outside the snowy plover protection area.

P. 28 Dogs and Wildlife: "While it is generally well known and well documented that the presence of dogs in natural areas can result in disturbance to wildlife, studies reviewed as part of this analysis provide conflicting conclusions."

"Conflicting conclusions" is a misleading characterization. There is no scientific research that contradicts the fact that off-leash dogs frequently represent an intense level of disturbance for the primary type of situation of dogs vs. birds encountered in GGNRA: off-leash dogs disturbing shorebirds and other birds on open sandy beaches. See section "795 ? Wildlife / General Wildlife."

P. 794 -- Wildlife / Impact Thresholds The discussion of adverse impacts does not make sense. If an impact is not outside the "natural range of variability," then it is by definition not detectible. The phrase "natural range of variability" needs to be defined. It is not clear to me why the authors of this section require a park-wide effect to occur for an impact to be categorized as "major." It is not necessary to endanger a regional population of a species for the impact of disturbance in a specific area of GGNRA to be major. For example, any chasing of shorebirds by dogs of more than a few times per day, such as occurs almost daily at Ocean Beach, would be potentially a major disturbance impact in that area.

It should be noted that any dog allowed by its owner to chase birds or other wildlife is a violation of 36 CFR 2.2(a)(2) which prohibits harassment of wildlife. It is true that human visitors engaged in activities such as walking, surfing, fishing, and kite flying disturb wildlife to some extent. However, in almost no case is the disturbance as serious as the disturbance caused by off-leash dogs and the human disturbance is almost never intentional, and therefore does not violate 36 CFR 2.2(a)(2). The analysis of adverse impacts as written appears to condone illegal activities under 36 CFR 2.2(a)(2) if there is no regional population impact. Harassment of shorebirds at Ocean Beach represents a particularly cruel form of harassment (see section "P. 797 Wildlife / Birds").

A more direct assessment of the impacts on wildlife in each section discussed, such according to criteria suggested by Pomeranz et al. (1988), would be more appropriate.

P. 795 ? Wildlife / General Wildlife

Studies by Bekoff and Meaney (1997) and Forrest and St. Clair (2006) were cited in the Draft as examples of studies that suggest that there is no impact of off-leash dogs on wildlife.

An examination of these studies shows that both have little to no relevance to coastal disturbance issues in GGNRA. Specifically, the bird species included in the impact studies were songbirds and the habitats involved were forests and meadows. In these environments dog walkers traveled primarily along trails and disturbance was thought to occur intermittently (Bekoff and Meaney 1997) only when off-leash dogs left the trails. This disturbance scenario represents levels of disturbance much lower than in areas in GGNRA such as Ocean Beach or Crissy Field, where off-leash dogs potentially travel throughout the entire extent of wildlife habitat and even brief observation reveals that dogs frequently chase birds. In both of these studies available evidence suggested that dogs did not frequently leave the trails, so that in neither study was there any direct evidence that disturbance of birds by off-leash dogs was actually occurring. Therefore, the negative

results of these studies may not represent any testing of the hypothesis that off-leash dogs disturb wildlife.

Addition discussion of each study:

Bekoff and Meaney (1997)

This study is primarily based on a survey of attitudes of visitors to open space areas in Boulder County, CO about dogs ? a survey that by the nature of the questions asked seems specifically intended to find support for allowing off-leash dogs in open spaces. A small part of the study consisted of alleged observation to detect any immediately observable impact on wildlife by dogs.

This part of the study is hopelessly flawed. Observations of dogs were made by an observer following dogs along a trail in various open space areas. Observations were allegedly made about the frequency of dogs disturbing wildlife: various mammals and several bird species (black-billed magpies, robins, dark-eyed juncos, mallard ducks, Steller's jays, and mountain and black-capped chickadees). The definition of disturbance of wildlife was "flushing or chasing." It was not clear whether the observers were qualified to determine whether birds were disturbed by dogs or whether accurate observations could have been made regarding all species of wildlife during the "real-time" observation relied upon to detect disturbance. It should also be noted that disturbance may not be immediately observable in terms of avoidance of dogs by wildlife (see below in this section and under "P. 1250 Special Status Species ? Western Snowy Plover / Ocean Beach"). It should be noted that songbirds are rarely susceptible to harassment or disturbance by dogs. Their habitats, behavior, and the lack of ability of dogs to stalk them make songbirds essentially invulnerable to disturbance by dogs, unless a human trains a dog to locate nests of ground nesting species.

The study authors claim that in 150 hours of observation, no observations were made of birds being disturbed by dogs. However, the bird species included in the study are unlikely to be disturbed by dogs in their natural habitat, and observations also indicated that dogs rarely left the trail for a significant distance (a result that might also suggest observer effect.) Thus, it is not clear that disturbance of birds was even an issue in the study area.

The authors never specifically define what criterion would be used to determine whether disturbance of wildlife was occurring beyond "flushing or chasing." However, in the Discussion section, the authors suggest that they were using a highly restrictive, almost legalistic definition of disturbance. They claim to have seen only two instances of "earnest chases" of wildlife, in which it was "unambiguously concluded that it was the dog who initiated and maintained the chase." With such a convolutedly

restrictive description of what was allowed to be considered disturbance of wildlife, it is no wonder that so few instances of disturbance were documented.

The authors of this study also make the incredible statement that: "All observers noted that dogs off-leash were friendlier than dogs on leash though no data were detailed data were collected on this aspect of behavior." The fact that the observers in this study would hold and even publish such a biased, unsubstantiated and subjective impression about off-leash dogs in an area of concern central to the study indicates that data regarding the disturbance of wildlife by dogs cannot be trusted nor can the authors' interpretation of the results of the study.

The conclusions of the authors regarding mammals have been superseded by a far more sophisticated study of the impact of off-leash dogs on mammals also along trails also in open space areas in Boulder County, CO (Lenth et al. 2008). This study compared various objective indicators of mammal activity along trails in open space areas in which dogs were prohibited vs. areas where dogs were supposed to be under "sight and voice control." The presence of dogs along recreational trails was correlated with altered patterns of habitat utilization by several mammalian species. This study showed how unreliable the methods and results were of the earlier study by Bekoff and Meaney (1997) and that their method of direct observation of dogs "flushing or chasing" wildlife did not detect significant disturbance impacts on mammals.

Forrest and St. Clair (2006)

Another study cited, Forrest and St. Clair (2006), compared local diversity and abundance of mammals and birds in open spaces where visitors were required to leash dogs vs. areas where dogs were allowed off-leash. Most of the visitors traveled through the open spaces via trails. The study found that "off-leash dogs have no effect on the diversity or abundance of small mammals or birds in urban parks." However, the study has little relevance to the issues at hand in GGNRA, as the study involved songbirds, not shorebirds, and the habitats in the study were generally not comparable to GGNRA, especially the open beach area used by shorebirds in GGNRA.

Even if the result of the study that off-leash dogs do not impact birds were potentially relevant to GGNRA, the authors of the study present a long discussion showing why the negative result of their study may not be valid.

? Local diversity and abundance may not be a good indicator of the impact of disturbance on a species.

? The authors indicate that evidence shows that there may have been a high

rate of non-compliance of leash laws so that "the functional differences in our leash designation treatments and, consequently, differences in our response variables?" were possibly invalid.

? The authors state that observations made in the field suggest that dogs did not stray far from trails in most habitats, so there may have been little actual disturbance of wildlife over the areas used as treatment locations in the study. Therefore in this scenario: "?dog activity is restricted to such small temporal and spatial scales that its effects are negligible."

? "A third reason that leash designation may not affect birds and small mammals ? is because these communities may already have responded to the presence of wild coyotes."

Thus the result of the study that off-leash dogs do not affect wildlife is dubious, according to the authors themselves.

Citing of these two barely relevant or irrelevant studies in a paragraph beginning with a cursory two sentences with no citations discussing the impacts on wildlife of off-leash dogs presents a bizarrely skewed account of the relevant scientific literature and probable impacts on wildlife of off-leash dogs in GGNRA. These studies are referred to in several occasions in the Draft without the shortcomings and lack of relevance being discussed.

In other sections, the Draft cites some studies that show or infer that dogs represent an especial disturbance to wildlife. Studies not cited of particular relevance to GGNRA that show impacts of dogs or identify dogs as likely factors in general human disturbance of birds in coastal environments include:

? Davidson and Rothwell (1993) ? In a summary of research on the effects of human disturbance on waterfowl and shorebirds during winter and spring and fall migration it was found that on tidal flats, moving people and animals (especially dogs) generally create worse disturbance than sedentary people.

? Kirby et al. (1993) ? At an estuarine beach in Wales, a traditionally important roost for several shorebird species, including black-bellied plover, red knot, sanderling, dunlin, and bar-tailed Godwit, dogs caused 27-72% of total disturbances observed per year.

? Keller (1991) -- At low tide, 70% of disturbances of eider ducklings were caused by dogs with or without people, while people without dogs accounted for 9%. Broods were disturbed by dogs for significantly longer periods than by walkers or anglers and at about twice the distance.

? Pfister et al. (1992) ? Disturbance at a high tide resting area at a coastal barrier beach displaced shorebirds and seemed to cause long-term declines in abundance. Most disturbance was believed to be caused by pedestrians and off-leash dogs.

? Scott (1989) -- Dog-walkers were the most frequent cause of disturbance of shorebirds at a coastal estuary.

? Smit and Visser (1993) -- A summary of Dutch research from reports not normally accessible to English-speaking scientists concludes that running dogs are very disturbing to shorebirds.

? Thomas et al. (2003) -- Human disturbance reduced the amount of time sanderlings spent foraging on two Central California beaches. The most significant factor was the presence of free running dogs on the beach.

P. 797 Wildlife / Birds

In general scientists have not frequently done specific research regarding the impact of dogs on wildlife, since the severity of the disturbance is obvious in many cases. Most of the relevant research exists under more general disturbance topics. The relevance to disturbance by dogs can be inferred from the research results and knowledge of the biology of bird species and the site characteristics in GGNRA.

The literature summary in the Draft is primarily concerned with the general issues of the disturbance dogs may cause to wildlife. The literature review should be extended to focus on specific disturbance and other conservation issues related to GGNRA. For example, dogs are often mentioned as an especially intense form of disturbance in bird disturbance studies in coastal environments (see above in section "P. 795 ? Wildlife / General Wildlife").

It is virtually impossible to quantify the overall impact of a specific factor, such as disturbance by dogs, on shorebird populations because of the enormous difficulty and expense of obtaining the necessary data. Colwell (2010, pp. 284-286) summarizes some studies of behavioral responses of shorebirds to disturbance, indicating that many of the studies focused on measuring foraging responses to disturbance. However, the full implications of ongoing chronic disturbance of shorebirds by dogs such as occurs in GGNRA must be discussed primarily in theoretical terms.

A previous study (Pfister et al. 1990) found that intermittent disturbance along a beach of similar length to Ocean Beach resulted in reductions of shorebird numbers of species using the beach for a high tide roost of up to 50% within a year and probably caused some species to abandon the beach entirely over time. In this study, however, disturbance only occurred at high

tide. Therefore, disturbance at Ocean Beach may be far worse, since shorebirds seem obligated to use the zone of maximum disturbance at the tide line for feeding (see below). It should also be pointed out that in the Pifster et al. (1990) study shorebirds had alternative roosting areas within a few miles. This does not appear to be the case at Ocean Beach.

Disturbance of shorebirds may be hard to observe at Ocean Beach, because once aggressive dogs are present, birds scatter and are not easily observed. For example, on April 8, 2000 during the peak of northbound migration of shorebirds, I walked along the beach south of Sloat Boulevard. I counted approximately 300 large shorebirds (whimbrels; willets; and godwits) intensively feeding at the edge of the surf. At this time there were no dogs on the beach. Within approximately 90 minutes many dogs were on the beach and most of the birds had been dispersed. At this later time an observer would never have known about the earlier assemblage of large shorebirds and would have not realized that such severe disturbance had occurred.

Correspondence: Part 2 of 2. These comments will also be submitted in one part via US mail.

The following is a discussion of various issues related to the impact on shorebirds of off-leash dogs at Ocean Beach.

? Lack of alternative resting areas

Based on observations I have made at Ocean Beach, it has become clear to me that the vast majority of shorebirds at Ocean Beach remain on site continuously for both feeding and resting and do not "commute" to other parts of San Francisco Bay at various tidal cycles or due to disturbance. I have inferred this fact by comparing counts of shorebirds on consecutive days and by the fact that I have never seen flocks of shorebirds or individuals flushed by disturbance travel in any other direction than along the beach.

Because the shorebirds at Ocean Beach do not appear to have alternative roosting areas where they can seek refuge during periods of disturbance, they are subject to the full impact of disturbance with potentially more serious consequences (Colwell 2010, p. 281).

? Shorebirds exposed to intense disturbance while feeding at the tide line.

Shorebirds at Ocean Beach/Fort Funston generally remain along the tide line -- where most dogs are walked by their owners -- for foraging. The primary prey species of most shorebirds appears to be the sand crab, probably *Emerita analoga* (Ricketts et al. 1985; p. 252). Foraging behavior of the sand crab (Ricketts et al. 1985; pp. 252-3) seems to correlate well with the behavior of feeding shorebirds. Specifically, the crab moves up and down the beach to remain in the zone of breaking waves and emerges from sand that has become fluid by water movement in the "wash zone." Thus, the fact that shorebirds congregate at Ocean Beach at the edge of the surf (often jumping into the wash zone) is probably explained by the fact that they are tied to this area in order to forage on sand crabs.

The degree of disturbance by off-leash dogs along the tide line at Ocean Beach/Fort Funston can be catastrophic. When large numbers of shorebirds are present, inevitably off-leash dogs chase the birds up and down the beach. Some persistent dogs will continuously harass and chase flocks of birds for hundreds of meters or more up and down the beach. Given that the shorebirds are tied to the tide line in order to get their food for survival, it is hard to imagine a more cruel and brutal form of human disturbance of wildlife in nature.

? Narrow beaches increase impact of disturbance

At higher tides shorebirds are forced from preferred feeding areas around Sloat Boulevard; at many mid-tide levels shorebirds there are wedged against the cliffs of Fort Funston and are unable to avoid passing foot traffic. One off-leash or even a leashed dog would be capable of flushing birds from an entire segment of beach under these conditions.

? Areas of cover scoured by storms and sand removal

In the winter, storm surges and high tides sometimes scour the beach in the Snowy Plover area on Ocean Beach. The area where the plovers normally seek refuge among debris at the back of the beach becomes flatter and swept clean of debris. This condition also occurs after sand removal. Under these conditions, western snowy plovers, sanderlings, and other shorebirds and other bird species are exposed to more disturbance from humans and dogs due to lack of cover and protection in resting areas.

? Larger flocks targeted by dogs

Off-leash dogs appear to affect the flock structure of shorebirds. Large flocks of shorebirds are thought to be more vulnerable to disturbance (e.g., Smit and Visser 1993), and my observations over the years indicate that large flocks of shorebirds present tempting targets to off-leash dogs. I have found congregations of up to approximately 300 larger shorebirds (willets,

godwits, whimbrels) during both northbound and southbound migration on numerous occasions south of Sloat Boulevard. There have been congregations of up to 500 smaller shorebirds, primarily sanderling, further north between approximately Noriega and Taraval. In addition, this area is used in the fall by terns. In the fall of 1998 I observed approximately 1000 elegant terns in this area resting on the beach. Flock structure is believed to confer benefits to shorebirds, including increased foraging efficiency, defense from predators, and successful migration strategies (Colwell 2010, pp. 188-193). The disturbance from off-leash dogs tends to break down the flock structure and scatter shorebirds into small isolated groups.

Although I accept the general concept of the Preferred Alternatives in allowing some portions of the beach area to be used by dog walkers with off-leash dogs, these sections need to be greatly confined so that most of the beach areas do not have off-leash dogs and birds can avoid the sections of beach disturbed by off-leash dogs.

P. 802 Compliance-Based Management Strategy

The 25% compliance rate target is far too low to protect wildlife or visitors. Goss-Custard et al. (2006) have used models based on an intensively studied population of oystercatchers in the baie de Somme, France to estimate that if the birds are disturbed more than between 1.0 and 1.5 times per hour in good feeding conditions or 0.2 to 0.5 times per hour in poor feeding conditions a reduction in fitness would result. As discussed in other sections, just one or two aggressive dogs can wreak havoc in an area of shorebird concentration. Some areas of GGNRA are visited by dozens or even hundreds of dogs per hour. If 25% of these in a controlled area are still off-leash, the character of the area related to wildlife and visitor experience would still be that of an off-leash area.

A 2005 FOIA request did not show that GGNRA had any method of tracking repeat offenders regarding leash law violations or other bad behavior of their dogs. The level of contempt for the law and public safety expressed in various incident reports by dog walkers indicates that any fines for dog-related violations must be severe in order for compliance to be a realistic goal.

In preparing a final Dog Management Plan, NPS should investigate reports that in the past 15 years, GGNRA has transferred rangers who enforced the leash law when complaints about a specific ranger were received from dog walkers who were irritated with the leash law being enforced. The reasons for GGNRA's pathetic performance in protecting wildlife and visitors from off-leash dogs needs to be fully explicated so that in the future "compliance-based management" is credible.

Although I accept the idea of compliance-based management, GGNRA should not completely rely on compliance to assess and implement the DMP. Changing environmental conditions, changing wildlife populations, and changing visitor behavior could undermine various assumption in the DMP. GGNRA should continue to monitor the outcomes of its policies and be able to adjust the DMP related to factors beside the compliance rate.

P. 1250 Special Status Species ? Western Snowy Plover / Ocean Beach

A number of studies done by GGNRA regarding the western snowy plover are cited but not discussed in detail. These studies are, however, often picked apart by non-scientist off-leash dog advocates, suggesting that the studies have failed to find any evidence of disturbance of western snowy plovers by dogs.

I have previously reviewed a number of these studies as cited in the Draft.

The number of instances of disturbance and harassment of western snowy plovers reported by NPS is small because the sampling method used by NPS: 1) involved observers moving down the beach and surveying an entire segment of the beach and not watching specific flocks of plovers and 2) the sampling method did not attempt to specifically include observation periods when the level of disturbance was mostly likely to be severe, so the periods of peak disturbance, which may be very significant in assessing overall impacts, are not represented in the data.

Regarding:

? Hatch. 2007. Status Report: Western Snowy Plovers and Recent Changes in Human and Dog Use Within the Snowy Plover Management Area at Ocean Beach?."

I reviewed a draft of this report dated 5/14/07.

The use of "encounter rates" as a measure of the rate of disturbance is an attempt to use the data set for something it is just not suited for. It is not possible to justify obtaining "encounter rates" from observations made along a transect. Even assuming the observer could perfectly observe all birds and disturbance within a "sector," the study appears to overestimate the time an observer could make observations within a sector. When the observer is half way through a sector, half the sector is behind him/her and events in that portion are no longer observable. Shorebirds, including western snowy plovers, have a patchy distribution on the beach. If within a sector, a major flock is located in the beginning portion of the sector, during most of the observational period, this flock will not be visible to the observer. Thus, while the study suggests that an observer was within a western snowy plover

area for 15 hours/year (i.e., "the amount of time window in which observers can actually observe potential impacts to western snowy plovers -- p. 7"), the effective amount of time in which disturbance could actually be observed would be closer to 7.5 hours than 15 hours (given a perfect observer), if one were to accept the concept of "encounter rate." However, the actual number of hours of effective observations of plovers is probably much less, since it is hard to imagine that an observer could accurately observe all disturbances of these small, cryptically-colored birds from distance of more than 100 feet, assuming the observer had already spotted and was carefully watching a bird or flock. The actual number of hours of observation in which useful observations might have been made of western snowy plovers on Ocean Beach could be as low as 2 or 3 hours or less per year in all observations combined. Given all the factors involved in determining the behavior, distribution and abundance of snow plovers, this is a pathetically low number of observational hours from which to draw any conclusions.

The study also failed to adequately survey the beach during the relatively narrow windows of peak northbound and southbound migration of shorebirds, when critical disturbance would be likely to occur. The study failed to take into account differential behavior and distribution of western snowy plovers based on the amount of dog and pedestrian traffic on the beach (Baye 1995). For example, a few dog walkers with aggressive off-leash dogs could displace plovers from feeding on the front of the beach, yet a survey would not find any disturbance issues, since the plovers would have already been displaced, and there might be few dog vs. plover interactions during the survey.

Because of the sampling method, there is so much variation in such variables as "Dogs Per Hour Chasing Shorebirds (p. 13)" that such variables are not really useful for statistical analysis or even biological interpretation. Median or average values of disturbance rates have little usefulness in assessing disturbance at Ocean Beach. On some dates or times, there are virtually no pedestrians and dogs on the beach; at other times, there may be numerous dogs but because of previous severe disturbance, little interaction between dogs and birds. Averaging data of surveys from these cases with surveys with more intensive dog/bird interactions would tend to obscure the nature of the impact of dogs on birds.

The study found average "Dogs Per Hour Chasing Shorebirds" of between 0.14 and 1.92 (p. 11). I have sought out situations in which disturbance was likely to occur and frequently made observations suggesting rates of over 20-30 disturbance incidents per hour for shorebirds (regarding a specific flock or sector of the beach). In a one-hour observational period in 2006, I observed five disturbance incidents regarding western snowy plover roosting in a mixed flock of other shorebirds, primarily sanderlings. Apparently, in one hour I observed more instances of dogs disturbing western snowy

plovers than in the entire five years of this study (p. 11).

NPS apparently uses the correlation between the number of dogs vs. western snowy plover abundance as evidence that dogs impact plovers. Although the conclusion may be somewhat relevant, I think that the weakness of the correlation is more significant than its statistical significance. The correlation is much weaker than found in a similar correlation between a disturbance index and local abundance of various shorebird species (Pfister et al. 1992). Gill et al. (2001) discuss scenarios in which wildlife that exhibit a weak avoidance behavior towards a disturbance may actually be impacted by disturbance more than a species that exhibits strong avoidance behavior. This occurs because a species has no "suitable alternative habitat" and will be forced to remain in a highly disturbed area, regardless of whether its fitness or survival is impacted by disturbance.

"From a population viewpoint, the species most likely to be adversely affected by disturbance are those for which the fitness costs are high but they have little excess habitat to move to ? and are thus constrained to stay in disturbed areas and to suffer the costs in terms of reduced survival or reproductive success."

I believe that this is the case with western snowy plover at Ocean Beach.

NPS has focused most of its survey and research effort on western snowy plover and hardly mentions other bird species that are harassed and disturbed by dogs. A number of bird species commonly found in GGNRA are listed in the 2007 United States (Yellow) Watch List (a joint project between American Bird Conservancy and the National Audubon Society -- <http://www.abcbirds.org/abcprograms/science/watchlist/index.html>). Such a list includes species that are not yet listed as threatened or endangered but after a conservation analysis are believed to be in greatest need of immediate conservation attention to survive a convergence of environmental challenges, including habitat loss, invasive species, and global warming.

Species on the list that I have observed to be subject to harassment and disturbance by dogs include:

Elegant tern Sanderling Long-billed curlew Marbled godwit

These species and other birds harassed by dogs should have been discussed in the Draft.

P. 1401 Visitor Experience Use and Experience This section is extremely weak. Lumping all visitor who are against off-leash dogs in GGNRA as "visitors who would prefer not to have dog walking in GGNRA" does not begin to characterize the nature and variety of ways visitor experience can be

impaired by dogs and off-leash dog walking in GGRNA and trivializes the intensity to which the presence off-leash dogs may cause feelings of fear and unpleasantness to visitors.

Various subgroups of visitors have extraordinary safety concerns because of off-leash dogs, including: 1) the elderly; 2) visitors with young children; 3) horseback riders and other special users; 4) blind and disabled visitors; 5) various minority groups; and 6) visitors who suffer from fear of dogs because of previous experiences or for other reasons. For many in these groups, an off-leash dog area may represent a flat out "no go" area.

For visitors who do not necessarily have extraordinary safety concerns, the impact on their experience in visiting GGNRA due to dogs, especially off-leash dogs, can also be strong enough to displace them from off-leash areas. Many visitors enjoy the opportunities GGNRA offers to escape the urban environment and experience nature, solitude and even almost wilderness. Off-leash dogs can completely destroy the quality of this experience for many visitors.

A study of visitor experience related to dogs in open space areas in Boulder, CO (Vaske & Donnelly 2007) indicated that a significant proportion of visitors to open space areas reacted strongly to negative behavior associated with off-leash dog walking . A total of 951 visitors, both dog owners and non-dog owners, completed questionnaires regarding their attitudes towards potentially disruptive behavior by dogs. Those dog behaviors were classified as "direct" and "indirect" and were as follows:

Direct behaviors:

? Dogs jumping on a visitor (60%)

? Dogs pawing a visitor (50%)

? Dogs licking a visitor (35%)

? Dogs sniffing a visitor (23%)

? Dogs approaching uninvited (36%)

Indirect behaviors:

? Owners not picking up after their dogs (79%)

? Dogs causing wildlife to flee (57%)

? Dogs flushing birds (46%)

? Owners repeatedly calling their dogs (31%)

? Dogs off trail (18%)

? Dogs "play" chasing another dog (18%)

Respondents were asked about their attitudes towards experiencing those behaviors in open space area. The percentage for each category listed above indicates the percentage of respondents who felt the behavior was a "moderate" or "extreme" problem if it occurred during visitation.

Additional analysis of the data indicated that for 9 of the 11 behaviors visitors indicated "no tolerance" norms even for only one occurrence of the behavior. Such a result can be interpreted to mean that the given behavior is unacceptable and there is no tolerance for the behavior if encountered by visitors.

The results of the study by Vaske & Donnelly (2007) suggest that the negative behaviors many visitors associate with dogs in natural areas are not simply minor irritants but could potentially spoil the entire experience for the visitor. Such an interpretation is consistent with my own experience that many friends and acquaintances completely avoid areas of intense off-leash dog activity in GGNRA, such as Crissy Field, Fort Funston, and Ocean Beach.

A factor not discussed by NPS in the Draft is how the presence of off-leash dogs affects the carrying capacity of GGNRA. Carrying capacity is the level and type of recreation use that can be accommodated in a park without violating standards for relevant indicator variables (Manning 2007, p. 25). In terms of the indicator of visitor experience, different user groups probably have widely different tolerance levels of the presence of dogs and dogs off-leash. The stratified results of the 2002 Survey regarding such issues as attitudes towards leash laws undoubtedly reflect such differences.

A quantitative study by Arneburger et al. (2004) showed that the presence of off-leash dogs in an urban park made a remarkable difference in the degree of tolerance of visitors for crowding in the park. The presence of off-leash dogs decreased the tolerance of visitors to social conditions such as crowding. A certain degree of crowding of visitors that might be acceptable with few or no dogs off-leash became unacceptable when many visitors had dogs off-leash. Such a result is intuitively obvious at areas of GGNRA where visitors with off-leash dogs congregate, such as Crissy Field or Ft. Funston. Active off-leash dogs may seem to take up all the space between

people and create a greater sense of crowding than would otherwise occur.

Anywhere in GGNRA where large numbers of dog walkers and other visitors congregate, the potential exists for visitor tolerance of crowding to be exceeded due to synergistic impacts of off-leash dogs, social crowding, safety concerns, and many other factors. Although there are no studies specifically addressing the idea of carrying capacity in GGNRA, the results of the 2002 Survey should provide some clues as how certain user groups may view carrying capacity and be displaced from off-leash dog areas. The idea of a carrying capacity was not discussed by NPS in the Draft at all.

The fact that dog walking, especially off-leash dog walking, in GGNRA potentially excludes many user groups and a large proportion of potential visitors must be explicitly discussed and the ramifications for the mission of the NPS resolved for any alternative allowing off-leash dog walking.

P. 1402/3 -- Visitor Experience / Impact Thresholds The definition of a "major" and "moderate" impact as defined requires consideration of whether other Park areas are available to visitors if a specific area receives an impact. The definition of "major" and "moderate" should only refer to the impact within the area being considered. If off-leash dogs make an area so uncomfortable for a significant proportion of visitors that the visitors are displaced from that area, then the impact is "major" for that area.

If a significant number of visitors do not tolerate dogs in an area where off-leash dogs are present, then my view is that this is a major impact, since a significant number of visitors may be displaced from a specific area. The only way visitors could avoid feeling unsafe or uncomfortable in an area where off-leash dogs are present, would be to have enough space to completely avoid encountering off-leash dogs. This is usually not possible at some of the most popular areas in GGNRA, including Ft. Funston, Ocean Beach, and Crissy Field. It is likely that a significant proportion of potential visitors are displaced from off-leash areas (see below under "P. 1404 Visitor Experience / Visitors Who Do Not Have a Preference about Dog Walking in GGNRA").

P. 1403 -- Visitor Experience / User Groups The designation of three user groups, essential pro-dog, anti-dog, and neutral, is an arbitrary and extremely oversimplified approach to evaluating visitor experience.

P. 1404 Visitor Experience / Visitors Who Do Not Have a Preference about Dog Walking in GGNRA This section refers to the 2002 Social Research Laboratory survey results that 49% of respondents reported that off-leash dogs had no impact on their experience. The survey results actually are that 49% of respondents who had seen off-leash dogs believed that off-leash dogs had no impact on their experience. This section incorrectly assumes

that this results means that these 49% of respondents represent a user group that as "no preference" regarding the presence of off-leash dogs in GGNRA. This assumption is false, because the survey results did not question the respondents as to what their attitudes would be if the respondents had experienced some type of negative behavior associated with off-leash dogs, such as categorized by Vaske & Donnelly (2007). (This false assumption should have been obvious to NPS, as over half of the respondents opposed off-leash dog walking.)

A more rigorous interpretation of the results of the 2002 Social Research Laboratory by reference to the study by Vaske & Donnelly (2007) suggest a more likely characterization of user groups is that the 36% of respondents who "strongly oppose" off-leash dog walking in GGNRA as identified by the survey represent a collection of user groups who have extraordinary safety concerns, general safety concerns, and/or find that many of the negative behaviors of off-leash dogs strongly impact their visitor experience. It is likely that the 17% of respondents who "somewhat oppose" off-leash dog walking have some safety concerns and/or find negative behaviors associated with dogs moderately impact their visitor experience.

It is possibly or even likely that the 36% figure of respondents strongly opposing off-leash dog walking represents an approximation for the proportion of visitors who would likely be displaced from areas where off-leash dog walking occurs and cannot be avoided by visitors.

No doubt that dog owners wishing to walk their dogs just as vehemently want access to off-leash dog walking areas as those who wish to avoid dogs. NPS must recognize that ultimately off-leash dog walking not only diminishes the visitor experience for many but even excludes a large proportion of potential visitors.

P. 1591 Human Health and Safety

Although actual attacks involving dogs biting and knocking down visitors to GGNRA may be relatively infrequent, any exposure to off-leash dogs potentially involves considerable risk. Certain user groups, such as the elderly and young children, are known to be particularly vulnerable to serious injury when bitten by a dog. More troubling, it is not possible to predict when and where a serious attack might occur. One study showed that in the case of serious attacks by dogs on a child, 66% of dogs had never previously bitten a child, and 19% had never bitten any human and 66% of owners had taken their dogs to obedience training classes (Risner et al. 2007). According to Dr. Gail C. Golab, director of the American Veterinary Medical Association's Animal Welfare Division, "Any dog can bite? Even the gentlest dog, if it is physically or mentally unhealthy, is in pain, feels threatened, or is protecting its food or a favorite toy, can bite (quoted in

USPS 2011)." When an attack does occur, there is a significant chance of a fatality. One study estimated that a risk of 2 fatalities per 1,000 reported dog bites exists nationwide (Wright 1985).

A dog bite is a common type of injury (Holmquist & Elixhauser 2010). One study found that approximately 1 in 50 patients treated in emergency rooms suffered from a dog bite (Beck et al. 1975). It is estimated that half of all children in the U.S. suffer a dog bit injury by the time they are high school seniors (Dr. Alison Tothy, American Academy of Pediatrics, Illinois Chapter, quoted in USPS 2011). The exposure to risk increases in areas of GGNRA that became crowded in terms of both visitors and dogs. Visitors may have few opportunities to avoid direct encounters with off-leash dogs. In addition groups of dogs such as brought by commercial dog walker or that form when various visitors allow their dogs to congregate increase the safety risk due to aggression characteristic of pack walking and the increased likelihood of social and re-directed aggression .

Visitors to GGNRA who have been bitten by a dog or who recognize the danger of off-leash dogs may well have a fear of dogs that would limit their enjoyment or preclude their visiting an area where off-leash dogs are allowed.

Although few studies seem to exist regarding human psychology and attitudes towards negative behaviors of dogs, NPS needs to recognize that potential safety issues are very real in the minds of visitors and have a significant impact on an individual's psychology and ability to enjoy the visiting experience. Niktina-den Besten (2008) found that the presence of dogs was a significant negative factor in the child's mental map of a neighborhood.

The Draft does not acknowledge that visitors to areas where off-leash dogs are allowed are potentially subjected to unmitigated encounters with large and powerful off-leash dogs. There is little the visitor can do to mitigate exposure to the risk of being charged or attacked by dogs in such cases. Such encounters can be especially frightening in relatively isolated areas with no cover, such as Ocean Beach.

One implication of my analysis of the impacts of dogs on visitor experience and human health and safety is that major areas of GGNRA should provide access to visitors to allow them to experience significant portions of each area without encountering off-leash dogs. For example, at Fort Funston, visitors should be able to enjoy portions of the bluff and beach and a pathway in between without encountering off-leash dogs.

P. 1595 Human Health and Safety / Park Staff Health and Safety Impacts
The belligerent behavior of some dog walkers towards NPS Staff should not

be considered as a factor in the Plan. A user group that resorts to intimidation and violence should not be rewarded with mention in this context. Park staff should be trained and equipped to enforce laws and regulations in the public interest.

Appendix E: Guidelines for ROLAs ? Voice Control The guidelines for ROLAs require dogs to be under "voice and sight control at all times, meaning that dogwalkers must be able to recall their dog promptly, and shall demonstrate this when required by Law Enforcement personnel." As written, this requirement is meaningless and unenforceable. An individual might be able to demonstrate voice control in one situation, when in a more crowded environment or in a location with a large flock of birds or other tempting wildlife targets, the dog might react completely differently. I suspect that NPS has issued very few citations for 36 CFR 2.34(a)(4) and that such a code would not be an effective tool for insuring that "voice control" guidelines are followed.

In my experience "voice control" has in any case not been a successful or realistic concept. Dogs owners frequently do not consider it necessary to prevent their dogs from engaging in harmful and disruptive behaviors such as categorized by Vaske & Donnelly (2007). When they do show sensitively towards impacts on other visitors, dogs, or wildlife, the owners frequently do not attempt to control the dog until the harmful behavior has already occurred. It does not make any difference if a dog owner can "promptly" recall a dog, if the harmful behavior has already occurred. It does not seem possible that a commercial dog walker or any other park user walking two or more dogs could effectively exercise "voice and sight control at all times" over all his/her dogs.

Furthermore, although relying on the concept of voice control for decades, it does not appear that GGNRA has ever evaluated the effectiveness of voice control. In responding to a FOIA request for records of citations issued related to failure to exercise voice control, GGNRA reported that they had no way of searching their records for that information. Available information suggests that voice control is not effective in protecting wildlife or visitor experience.

By proposing an unproven and untested concept of "voice control," NPS would be creating zones where visitor safety and wildlife protection could not be assured. This has essentially been the status quo for most of GGNRA in past years. However, if such areas are formalized and legalized, visitors from vulnerable user groups should be warned not to enter these areas, as their safety cannot be guaranteed.

A "voice and sight control" regulated area in Boulder County, CO did not

prevent disturbance of wildlife (Lenth et al. 2008).

GGNRA should analyze dog citations by zip code to determine whether education is even a feasible method of increasing compliance with restrictions on dog walking. If citations are mostly for dog owners in the media market near GGNRA, it is unlikely that any action but increased enforcement would change compliance rates.

Correspondence: Dogs should NOT be allowed to run free, off leash, any place they or their owners like. I love dogs, love state parks, Volunteer at Candlestick SRA, but I'm 70 years old and get very nervous when large loose dogs are bounding around. Areas where dogs are allowed should be enclosed so you have a choice whether to have dogs in your outing or not. Separate dog areas could also help preserve native plants and animals from sometimes destructive dog activities. I saw a large dog, digging and chasing a ground squirrel, wreak havoc in a pristine wildflower area.

Commercial dog walkers also probably ought to have some sort of controls - maybe limited to 3 dogs on leash or not allowed in certain areas. It's a commercial enterprise using park resources, public resources. There ought to be some limits.

Correspondence: Dear Mr. Dean, My name is Nathan Logan Hanley. I am an independent filmmaker living in Portola Valley. I am also an avid dog enthusiast and consider myself to be very environmentally conscious. I have had the luxury of being able to call some of my best friends over the years dogs; and have also made very frequent visits with them to Fort Funston so that they could mingle with other dogs, run, and have fun. I have been very grateful in being able to do so and I know they have been too. The thought that the GGNRA is considering such a drastic move when it comes to Fort Funston and other off leash dog areas simply breaks my heart. I have just one dog now, my good friend Elijah; and his freedom at Fort Funston is a weekly jaunt that

brings both of us so much pleasure. It would be a true injustice to have that taken away by poor judgment or rash decision making. Suffice to say, I really do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions. It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option. The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal. The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents. After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program. Thank you for your consideration. Sincerely, Nathan Logan Hanley Portola Valley, CA. 94028

Correspondence: My dog has been enjoying the Park immensely, even though it is far from my house. I never hesitate to drive up there. My dog is a very friendly Goldn Retriever and enjoy meeting all of other dogs, especially when he sees the beach to dive in! Boy, does he enjoy running the trail and into the water to swim and run around the beach with so many other dogs. All the dogs are very frinendly and we, dog lovers make sure that we all clean the dog mess

and keep clean the Park. If you close this Park, we have no place our dogs to run freely and enjoy the open field with many other friendly dogs and dog owners - as you may guessed that we, owners of dogs enjoy the beautiful Park just as much as our dogs. Please don not take away this joy from us all. I have never met any unfriendly dogs nor incidents of fights amongs pets. I don't see nay reason to enforce the leash law, if you witness how happy all the dogs and how friendly they are. We, all the animal lovers urge you not to close this happy haven for animals as well as people.

Thank you.

Correspondence: To whom it may concern re: the draft Dog Management Plan.

Dogs can have significant negative impacts on wildlife, native habitat, and other park users if they are uncontrolled and in large numbers. We must also ensure that any recreation in the National Park respects the natural and cultural values that are intended to be enjoyed by all.

Dog recreation areas should be enclosed to protect wildlife, habitats, and other park users. Commercial dog-walking is not an appropriate activity in the park. There should be more trails in San Francisco that are closed to dogs.

Thank for your time, Fred Rinne

Correspondence: I've seen numerous dog attacks, (dog vs. dog) and also many frightened people, including myself, when dogs have charged, barked, and basically threatened people for whatever reason dogs do that. I hate going anywhere that there are no leash laws, especially in a public area. Fort Funston is also a tourist area, and it's just bad news when you have 100+ dogs running openly in a parking lot/visitor area. I would suggest a leash law in the parking lot and visitor area, and off leash for the beach and surrounding open space areas. I'm a dog owner, I love dogs, and I believe it's lack of owner responsibility for the most part, but dogs are an animal, and they have their own way of doing things, and from time to time their predator instincts come out and people and or other animals are injured or killed.

Correspondence: I am in various areas of the Golden Gate National Recreation Area almost every single day. Often for work, and sometimes just for the sheer joy of it. I love the park. It is one of the gems of Bay Area.

I completely support the proposed preferred alternative dog management plan. In fact, I would support a significantly more restrictive plan. I enjoy most dogs, but I also like having an area to be away from them and the risks they represent. A national park where the mission is to protect multiple species seems the right place to restrict dogs. I've seen so many people who have a sense of entitlement ruin nice days in the park with their off leash dogs - dogs that don't get cleaned up after, dogs that dig, dogs that chase wildlife, dogs that scare children, and on and on.

The rules must be understandable and enforceable. So while it might be nice to say, for example, that East Beach could be off leash until 8am and after 6pm, that is difficult to sign. (How many visitors read signs anyway?) Even on-leash dogs (and dog owners) can be problematic for the park and park resources. GGNRA was not established to be a dog park.

When looking at the dog management plan, I think it is wise to ask: is this good for the park? Does this support the NPS mission? Everything else should be mitigated and I think you have a wise plan to do so.

Correspondence: I strongly believe that multi-use open space that includes off-leash dogwalking is compatible with all other recreational uses and with the preservation of habitat and wildlife within the GGNRA. All users (including cyclists, hikers, people with kites and Frisbees, picnickers, festival-goers, the Fleet Week crowds, and even wildlife) clearly have some impact on the GGNRA. In the Draft Environmental Impact Statement the National Park Service inappropriately singles out dogs. Its conclusions are not based upon sound science nor long-term monitoring of site-specific conditions. Any impact that dogs may have can be effectively mitigated through better signage, creating environmental barriers, and education of

park users. The GGNRA should partner with community, animal welfare, and conservation organizations on programs that could eliminate perceived problems and contribute much-needed resources. The GGNRA was created to provide open space for recreation (including dogwalking) for the metropolitan Bay Area. The existing 1979 Pet Policy has served the community extremely well for more than 30 years. I strongly support Alternative A, the No Action alternative, in the GGNRA and the "New Lands" areas (such as Cattle Hill, Sweeny Ridge, Mori Point, Pedro Point and Milagra Ridge and Rancho Corral de Tierra in San Mateo county). Respectfully, Jan Corlett, San Francisco

Correspondence: To Frank Dean. Dear Sir, I am a resident of San Francisco, and a native, born at Letterman General Hospital. I have always had a dog in my home. First in the Presidio when growing up and then in San Francisco. I have always enjoyed their company, their loyalty, and their unconditional love. It is very wrong for the government to take away the right of dog owners to have access to the system of parks and open spaces where they can bring their dog to exercise and run free when it is not infringing on anyone else. I have visited Fort Funston many times and the dogs there are well behaved and under control of their owners and dog walkers. There are only dog people walking in that area with a few other sight seers who love the dogs. The open land is supposed to be for the people to enjoy not for the officials to take away. It is for recreational use of the people who live in city areas. The government is supposed to be for the people, it is paid by the people, and should be answerable to the people. Do not take away our rightful recreational property. Do not turn against those things that have been entrusted to you as public servants for the people of this area. Sincerely, M. Damir, resident of San Francisco for 76 years

Correspondence: Clearly, NPS has bent over backwards to accommodate dogs in and around San Francisco.

Having worked for three springs to monitor butterflies on Milagra Ridge, I have seen endless parades of off-leash dogs and do not enjoy being jumped on or approached. My preference would be for NO dogs in areas where there are protected species, but I would be even happier to see no dogs or

excrement at all in GGNRA lands. Restricting dogs to paved roads and paths as the California State Beaches do would be my strong preference.

It has been dramatic recently how most dog owners locally have leashed their dogs knowing that the management plan is being considered. I fear that once the comment period is over the leashes will again come off.

Given the effort of GGNRA to present alternatives, my choice of the alternatives would be "D" with the addition of better compliance, 95% at a minimum. There must be serious consequences for non-compliance, too.

Thank you for your efforts.

Correspondence: Thank you for the opportunity to comment on the GGNRA Draft Dog Management Plan. Clearly, the GGNRA is an important and much loved resource here in the Bay Area, accommodating many different experiences and values. While dogs are much loved members of our community, some impacts of these animals (and, unfortunately, disregard by their owners) can and has led to significant harm to the many hundreds of other species which depend upon the park habitats. Please bear in mind that, despite the vociferousness of some dog owners and their organized opposition, it is incumbent upon all of us to accept certain limits and regulations to ensure the survival and well-being of all of the park's natural resources and to foster the full range of enjoyment from visits to the GGNRA.

Understanding the goals of the National Park Service, it would be simplest to institute the same regulations in GGNRA as are mandated throughout the NPS (i.e. "Alternative B") but, owing to the extreme politicization of this policy over the past decade, this seems to be fruitless. While I therefore understand the need for exceptions, some policies cannot be condoned in NPS areas. In particular, permitting commercial dog-walking is inappropriate. A firm limit of 3 dogs per visitor is prudent, as it is unlikely that more than this number of dogs could be reasonably controlled at any time by most people. Furthermore, if any sites are to be designated as "off-leash", they must be clearly marked and bordered, preferably fenced for the protection of other park visitors (and the dogs themselves), and to prevent damage to surrounding resources.

It is imperative, whatever agreed policy is implemented, that leash and voice control requirements be strictly enforced in all areas at all times. We have already seen that lack of enforcement under the existing rules has led to

erosion of the rules such that many areas have become de facto off-leash areas. This cannot continue if the NPS is to ensure the safety of all visitors and protection of natural resources. In particular, the stated aim of 75% compliance with leash and voice control requirements is far too low. History has shown (and I have too frequently observed when hiking or bird-watching in multiple areas) that a lack of continuous enforcement has led to wide disregard of the regulations, even in designated habitat conservation sites (such as the Snowy Plover Wildlife Protection Area at Crissy Field). The NPS should expect full compliance with all rules, and set a goal of 95% compliance with leash and voice control rules for dog use as a trigger for more restrictive policy.

So what should be the dog use policy for the GGNRA? In my view, protection of all of the natural resources in the GGNRA should be paramount if we are to ensure the survival of the area and to allow the widest range of user experiences. In general, therefore, I favor Alternative D (Most Protective), as it allows for dog walking and exercise but most fully protects resources and visitors by reducing circumstances that could cause conflicts or harm. No commercial dog walking, period. However, I understand the need to balance some "traditional" practices in a few selected areas, and would support the NPS' "Preferred Alternative" in a few places (i.e. Fort Mason, Muir Beach). Whatever policy is adopted, per my comments above, the areas must be monitored and rules must be strictly enforced.

Please persevere in your efforts to design an acceptable and workable dog use policy for the GGNRA, allowing for the enjoyment of "man's best friends" as well as the protection of all of the park's resources. I urge you to select the Environmentally Preferable Alternative, and to insist on full monitoring and compliance with the policy and rules to ensure the survival of precious natural resources and to allow for the full enjoyment of the park for the widest range of visitors.

Thank you for incorporating my comments in the decision making process.

Sincerely, Richard Bradus, M.D.

Correspondence: Sierra Club San Francisco Bay Chapter Serving Alameda, Contra Costa, Marin and San Francisco Counties

May 28, 2011

Frank Dean, General Superintendent Golden Gate National Recreation Area
Fort Mason, Building 201 San Francisco, CA 94123 RE: GGNRA Draft
Dog Management Plan/Environmental Impact Statement (DEIS)

Dear Superintendent Dean:

The Sierra Club, San Francisco Bay Chapter urges the GGNRA to reject the Preferred Alternative identified in the above referenced DEIS due to that Alternative's inadequacy in protecting native plant and wildlife species, including listed species, as well as its failure to provide undisturbed national park experiences (nature recreation, education and science) to its visitors due to the impacts of off-leash and leashed dogs.

Instead, we urge you to adopt Alternative D, "Most Protective of Resource" as the alternative most appropriate for implementing a GGNRA Dog Management Plan that protects the parks natural resources and provides appropriate visitor experiences. We also urge you to add a further component to Alternative D. We believe it is essential that ROLAs be delineated by physical boundaries in order for dog walkers to more easily determine the location of these ROLAs and to facilitate enforcement of ROLAs by providing clearly discernible borders.

Protection of Natural Resources Compels Alternative D

We believe the scientific literature is clear in concluding that both off-leash and leashed dogs significantly impact our natural environment. This conclusion was recently reinforced in a study reported in the journal *BioScience* 61(2):125-132. 2011 doi: 10.1525/bio.2011.61.2.7, "Is Wildlife Going to the Dogs? Impacts of Feral and Free-Roaming Dogs on Wildlife Populations", by Julie K. Young, Kirk A. Olson, Richard P. Reading, Sukh Amgalanbaatar and Joel Berger. This study concludes that, "dogs can significantly disrupt or modify intact ecosystems well beyond the areas occupied by people [abstract]".

Impacts to Migrating Waterbirds Shorebird studies (e.g., Guts Don't Fly: Small Digestive Organs in Obese Bar-Tailed Godwits, Theunis Piersma and Robert E. Gill, Jr., *The Auk*, Vol. 115, No. 1 (Jan., 1998), pp. 196-203) have shown that migrating shorebirds can alter their morphology and convert their internal organs including their digestive tracts into energy (fatty tissue) for long migratory flights. Upon their arrival at migratory feeding grounds these shorebirds need to feed continuously and studies have documented feeding up to 18 hours a day. If disturbed from such feeding they may not survive further stages in their migratory journey.

Unleashed dogs on beaches are well known to disturb feeding waterbirds thus potentially causing this delayed mortality. This is a significant impact and greatly diminishes the functional value of Ocean Beach and Crissy Field as well as Rodeo Beach and Muir Beach and other GGNRA beaches for migrating waterbirds.

Only Alternative D would provide shorebirds and other waterbirds that use GGNRA beaches for nesting, foraging and roosting with beaches that are free from the energy consumptive disturbances that result from unleashed and leashed dogs.

Impacts to Listed Species We were disappointed that you did not more fully emphasize the Lafferty studies at Sands Beach, Coal Oil Point Reserve in Santa Barbara, California. This study demonstrated that human recreation on beaches and particularly off-leash dogs pose a significant problem for the viability of nesting snowy plovers. In fact, no snowy plovers had successfully fledged on this beach for 30 years. A management regime that included a physical boundary around a proposed nesting area and the prohibition of off-leash dogs resulted in the success of snowy plover nesting after initiation of that regime.

The federal Endangered Species Act states in Section 2 that "[i]t is further declared to be the policy of Congress that all Federal departments and agencies shall seek to conserve endangered species and threatened species"(16 U.S.C. '1531(c)). The ESA also states in Section 3(3) that, "[T]he terms "'conserve", "conserving" and "conservation" means to use?all methods and procedures which are necessary to bring an endangered species or threatened species to the point at which the measures provided pursuant to this chapter are no longer necessary?" In other words, all Federal agencies should help in the effort to remove threatened or endangered species from the endangered species list. Since one of the goals of the NPS is preserve our nation's wildlife and plant species this instruction holds particularly true. This is a much higher test than simply protecting a species. Under the ESA there is a requirement for the NPS to actually help "recover" the species, i.e. bring it back from the brink of extinction, and this means increase its population if possible and then sustain those increases.

Thus, in determining appropriate levels of dog use in GGNRA particular attention must be paid to those areas that provide listed species habitat. Ocean Beach and Crissy Field are two areas that support the listed Western snowy plover. The Lafferty research demonstrates that with a significant reduction in disturbance, especially from off-leash dogs, snowy plovers can successfully nest on these beaches and thus increase the total snowy plover population. We believe that it is incumbent upon the NPS to implement such management regimes at these two sites, and any others that support listed

species, in order to comply with the federal ESA obligations cited above.

This would entail the prohibition of off-leash dogs on Ocean beach and Crissy Field. Alternative C does provide for some of this protection but we believe it is inadequate. Alternative D would provide the greatest opportunity for the Western snowy plover to have successful nesting seasons at these beaches, and others in the GGNRA.

Barriers around ROLAs.

The Lafferty study was quite clear that signage alone was inadequate to instill public compliance with a prohibited access area. On the other hand, a minimal fence in combination with a docent program was quite successful. The minimal fence alone was also inadequate, although better than the signage alone. This demonstrates that the management regime for ROLAs proposed in all alternatives is doomed to failure. Without a physical barrier and some human presence, be it educational docents or enforcement staff, the boundaries of a signed-only ROLA will be ignored. (We argue that since a barrier and docent were necessary to keep off-leash dogs out of an area, it is likewise necessary to have barriers and docents to keep off-leash dogs in a ROLA.)

For this reason we believe that Alternative D (or the Preferred Alternative, although not our choice or any of the other alternatives, if chosen) must include physical barriers around all ROLAs. Again, the Lafferty study demonstrated that effective compliance was developed only with a physical demarcation and the presence of docents. Signage alone was completely ineffective.

Studies have also shown that leashed dogs may also disturb wildlife, Wildlife Responses to Pedestrians and Dogs, Scott G. Miller, Richard L. Knight and Clinton K. Miller Wildlife Society Bulletin, Vol. 29, No. 1 (Spring, 2001), pp. 124-132. Impacts take place both on beaches and trails and leashed and off-leash dogs cause disturbances that affects both plants (digging up vegetation and causing erosion, as adequately explained in the DEIS) and animals. Thus all of the above arguments for choosing Alternative D as the best alternative for GGNRA apply to both leashed and off-leash dogs.

Impacts to visitor experience

As described in the DEIS, both off-leash and leashed dogs can diminish the enjoyment of national parks for those people who are not comfortable around, or are afraid of, dogs. Dogs can harm seniors with stability problems simply by jumping on them and can injure children who are not

aware of how to behave around dogs.

None of these experiences are appropriate for a national park. Alternative C provides for a large number of ROLAs and a very large amount of trails proposed for leashed dogs. Under the Preferred Alternative, only one GGNRA trail in San Francisco is proposed to be totally free of leashed and off-leashed dogs.

This will make most trails in the GGNRA in San Francisco unusable to the populations described above who find dogs, for whatever reason, a deterrent to trail use.

Only Alternative D will provide all GGNRA visitors a national park experience that is free from the impacts of leashed and off-leashed dogs on a majority of its trails.

Conclusion

The Mission of the National Park Service is to, "conserve the scenery and the natural and historic objects and the wild life therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations." (NPS Organic Act)."

A plain reading of this Mission dictates that the GGNRA adopt Alternative D.

Leashed and off-leash dogs have significant impacts on vegetation, soils, and wildlife. The excessive presence of leashed and off-leashed dogs as proposed in the Preferred Alternative can only result in a failure to "conserve the scenery and the natural and historic objects and the wild therein?"

Leashed and off-leash dogs have negative impacts on many segments of our citizenry. Leashed and off-leash dogs can interfere with the ability of visitors to appreciate the GGNRA or even result in some visitors avoiding parts of the GGNRA thus reducing the ability of the GGNRA to provide for "the enjoyment of future generations?"

For all of the reasons cited above, we urge the GGNRA to adopt Alternative D for its Dog Management Plan.

Thank you for your consideration of our views.

Yours, Arthur Feinstein, chair Sierra Club, San Francisco Bay Chapter

Correspondence: GGNRA Staff,

Please try to balance the needs of all of the users of our Bay Area natural resources. There are people who love walking with their dog(s) - people who consider their dog a family member, and there are people who are disturbed by or scared of dogs. Please leave some areas in Marin, San Francisco and the Peninsula for on-leash dog walking. I understand that the most environmentally sensitive areas need to be off-limits to leashed dogs, or at least seasonally off-limits.

Also, please leave a few areas for off-leash, voice-controlled dogs. It is wonderful to watch the joy that off-leash socializing gives to dogs. You could allow at least one prominent area south of San Francisco, one on the north side of San Francisco, and one in Marin to be for off-leash dog walking. Fort Funston and parts of Crissy Field are good examples. If the off-leash designation is official and well-known, and if the signage is good, than people who do not want to hike with off-leash dogs will know to hike elsewhere, in one of the many other natural areas available to them.

This is the San Francisco Bay Area. We have a history of being inclusive and not discriminating against others. Please continue this tradition by making room for both types of users of the GGNRA - those with dogs and those without.

Thank you.

Correspondence: Dear Mr. Dean,

Thank you to you and your staff for the thoughtful development of the dog management plan that strives to maintain the delicate balance between wildlife habitat and human recreation in a beautiful natural landscape that makes the Golden Gate National Recreation Area (GGNRA) so special. As a veterinarian working at The Marine Mammal Center in the GGNRA, and as a tenant living within the GGNRA, I really appreciate the difficulty of balancing the needs of different constituents, wildlife and the delicate coastal habitat. I have lived in the Marin Headlands for over 10 years, and

regularly walk along Rodeo Beach, although I am not currently a dog owner, where I observe dogs and their owners enjoying running in the surf. I will always remember meeting a father of a special-needs young boy who was playing in the intertidal area with his dog, and hearing that it was the one place locally they could come a feel free and one with nature. Throughout these years, I have not observed dogs disturbing marine mammals there, and in fact, The Marine Mammal Center occasionally releases rehabilitated animals off Rodeo Beach due to its proximity to the Center and its suitability as an access point to coastal waters for sea lions.

I thus support the DEIS preferred alternative C for Rodeo Beach, and hope that this area can remain an off-leash area for dogs under the guidelines in the DEIS. I could not find specifics on whether dogs would be allowed on leash between the housing in the Headlands and the trailheads on which dogs will be allowed on leash. I hope that on-leash dog walking from housing to trailheads will be allowed, so the residents and their visitors who have dogs will not be compelled to drive short distances to comply with new regulations.

I truly appreciate the work that has gone into this plan, and I hope alternatives will be chosen that can balance the needs of wildlife, habitat and Park visitors.

Correspondence Type: Web Form
Correspondence: I am writing in opposition of the the GGNRA's Draft Dog Management Plan and EIR. As a long-time San Francisco resident and dog owner, I simply cannot fathom why the Park Service is attempting to railroad through these onerous new restrictions without a single shred of evidence that dogs pose any threat to the well-being of the RECREATION AREA (not "National Park"), and without going through the due process of public hearings mandated by law.

Quite simply, you are inviting a lawsuit- one which I will gladly support and in which we, the 200,000-strong San Francisco dog owners are almost assured victory based on the outcome of previous similar cases. Frankly, you have wasted taxpayer dollars throughout this process, and you are about to waste even more defending these unsupportable rules.

Do dogs chase endangered birds? According to your own (white elephant, insanely expensive and altogether inconclusive) EIR, there were FAR more instances of humans (particularly small children) harassing birds in the GGNRA during the study period. Do you intend to ban children from the

Recreation Area as well to protect your precious birds?

Does dog waste pollute the Recreation Area? No more so than waste from other animals- not to mention human waste from the derelicts you tolerate living and sleeping in the parks. Where is the plan to prevent people from relieving themselves in the GGNRA?

Do they make certain people feel uncomfortable? WHO CARES? Currently less than 1% of the entire GGNRA land is available for off-leash recreation, leaving TENS OF THOUSANDS OF ACRES available for peaceful enjoyment of non-dog-lovers. Let them use the 99% of the Recreation Area that we can't. The point of the GGNRA is to offer recreational opportunities to all types of people- and off-leash dog walking is one of the most prevalent forms of such recreation in San Francisco. I can't remember the last time I played soccer, or football, or baseball, but I walk my dog EVERY DAY.

Perhaps the most insulting and disturbing aspect of this process is your feeble and thinly-veiled attempt to circumvent due process and disenfranchise the public via your silly "public meetings"- in which no microphone was provided for those opposed to the plan to voice their concerns. You should be ASHAMED of the way this was handled, though it is clear from these actions that you were afraid of allowing the public to point out the inanity of your plans and the shortcomings of the EIR on which you wasted so much time and money. Under the guise of a storied American institution (the NPS) you violated everything that American supposedly stands for- most importantly, public involvement in the political and legislative process and local control of public facilities.

The San Francisco Board of Supervisors recently voted 11-1 in favor of a resolution supporting dog-owners' rights and opposing this ludicrous plan. Please stand reminded that the Board has the authority to wrest control of the portions of the Recreation Area within our city limits back from the NPS. These lands were granted to you in trust, but with the caveat that San Francisco could reclaim them should you fail to administer them in a way that meets the needs of all San Franciscans, including dog owners. Should this plan go forward, we will lobby our Supervisors to kick the NPS out of SF once and for all and return areas like Chrissy Field and Fort Funston to their originally-intended recreational purposes.

This plan is absurd and should never have been proposed. If you pass the rules as outlined we will fight on tirelessly until we win.

Type:

Correspondence: As a frequent user of the parks, I have been concerned for some time about the increasing number of dogs allowed in the parks, particularly off-leash, and especially in beach and riparian areas. Although my primary concern is the disruption of wildlife habitat, I also feel that there are virtually no park areas left where a person can take a walk, observe nature, meditate, etc., without the presence of dogs.

Far too often I encounter ill-trained dogs off-leash, chasing shore birds, etc., and sometimes being actively encouraged by their owners to do so. I generally find that if I attempt to approach these people to voice my concerns, I am met with hostility.

On occasion dogs have jumped up on me, sometimes quite forcefully, and I have been left with muddied clothing and in one instance a knee injury. Sometimes the owners have been apologetic, but other times they just laugh at how playful their dogs are, as if no one could possibly experience discomfort at the prospect of being run into and jumped upon by a 50-pound animal. I was in a picnic area once designated as on-leash only, and a dog ran up and ate the hot dog right off of my plate. When I said something to its owner about the leash rule, he told me that I needed to educate myself about the park rules, as it was okay to have a dog off leash if it was under voice control. This struck me as so absurd, given the circumstances, that I did not bother to respond.

I could go on at length about other encounters with dog owners that left me feeling discouraged and disturbed, but the gist of my point is that I do not believe that rules for either on-leash or voice-control areas are enforceable, simply because most people do not obey the rules and there is no one to see that they do. I don't think that either dogs or dog owners are inherently bad. But I do think that we have become a "dog society" in which, no matter what the rules, dog owners do not really believe that they apply to them. Alternatively, I sometimes speak to people who had no idea that dogs were not allowed in a particular section, or only allowed on-leash. And I have to say that these designations are easy to blur. If an area is designated on-leash only, dogs will be off leash. If an area is voice-control, dogs will be running around without any supervision.

I worry that the dog ownership coalition is so large and vocal that people who prefer to enjoy nature without dogs are simply discounted. Moreover, I find it somewhat shocking that in the Bay Area, which I have always thought of as progressive, there would be such a lack of focus on wildlife habitat, which is shrinking all of the time. There needs to be a greater focus on our wildlife and environment. If we need stringent laws, with real enforcement and penalties for breaking them to bring this about, then those

laws should be implemented.

Thank you for your consideration.

May 28, 2011

Dear General Superintendent Dean:

I am a resident of Pacific Heights, on the Board of Directors of the Pacific Heights Residents Association, and a representative to NAPP. I am also a dog owner. In one role or another, I have been working on the "dog issue" since 1970, the year I arrived in San Francisco, and the start of the hard-fought battle for the Pet Policy, which was finally issued in 1979. In this transmission, I speak only on behalf of myself, a responsible dog owner who uses Crissy Field almost daily, who picks up after my own dog and anyone else's dog that may have left something behind.

I also am aware that the NPS has a legislative right to curtail off-leash dog walking in certain areas of the Presidio and the GGNRA, if that is deemed to be necessary. However, I consider its proposed solutions for off-leash dog walking draconian. I have issues with all of the plans except the no change version.

The areas proposed for off-leash dog walking in San Francisco in the Preferred Plan are so limited that most local residents wishing to exercise their dogs off-leash will opt out of taking them to Crissy Field and go to one of the City's parks. I don't think that the City of San Francisco should have to absorb the users of former City-run and owned property into its parks because the NPS has issued its third plan to keep us off its turf.

The comments that follow refer only to the Crissy Field area, because I am

most familiar with it.

The two areas selected for off-leash dog walking in the Preferred Plan discriminate against people with disabilities: Central Beach is, of course, sand, and that is a very difficult surface for people who have walking or pulmonary problems. Walking on sand takes a lot more energy than walking on a firm surface. For people in wheel chairs, it probably precludes them for using it.

Similarly, the grassy areas of the former landing strip are lumpy and difficult to walk on.

At both areas, there is insufficient access to adequate parking close by to accommodate handicapped dog owners who have come to Crissy Field to exercise their dogs.

I have pulmonary problems and enjoy off-leash dog walking on the Promenade. On the Promenade, bicyclists are a problem because most of them ignore the posted 5 MPH speed limit. The riders with dogs are the most egregious abusers of disposing of their dogs' feces because they ride far ahead of their sniffing, social pets.

I could be somewhat satisfied with access limited to Central Beach + the southern half of the former airstrip -- **IN ADDITION TO THE PROMENADE AND BEACH ACCESS BEGINNING ON THE WEST SIDE OF THE BRIDGE TO THE WESTERN END OF CENTRAL BEACH.** This suggestion does not address the added burden to City open space by limiting off-leash walking as much as you have suggested.

I would also like to point our that on rainy and/or winter days, dog walkers are the main users of Crissy Field.

Thank you for considering these issues and suggestions.

Sincerely,

Margot Parke

Correspondence: May 25, 2011 Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022
Dear Mr. Dean,

I am a 64 year old senior and since I retired from a professional career at the University of California San Francisco, I take my dog to Ft. Funston 4 times a week. I have an energetic dog and off-leash activity is important.

Since I moved to California in 1974, I have gone to Yosemite National Park at least twice a year. In the past 4 years I have participated in week or month long volunteer experiences with the Yosemite Association, Yosemite Conservancy and Sierra Club. I have been a member of the Sierra Club for over 20 years. I have been a docent at Crissy Field with the NPS in 2009-2010. In 2011, with Jose Roldan's approval, I had planned to transition to walking Crissy Field and answering questions. However, with the release of the GGNRA draft plan, I have been less active with the GGNRA.

I would like to address my dog experiences in Yosemite National Park and four of the areas that I frequent-Ft. Funston, Sweeney Ridge, Miwok-Wolf Ridge Trails, and Crissy Field-that are addressed in the GGNRA draft plan.

First, in Yosemite National Park dogs are allowed on all campgrounds, paved roads, paved bicycle paths, and sidewalks. That means you can walk your dog on leash on bicycle paths or roads to Mirror Lake and over 4 miles in the valley floor. Dogs are also allowed on-leash on the one way 4 mile Old Big Oak Flat Road from Hodgdon Meadow to Tuolumne Grove. I did part of this hike with my dog in 2010 and 2011. This road is in the middle of the wilderness. I am going into so much detail regarding Yosemite National Park dog regulations to show you that your new draft plan is more restrictive than Yosemite National Park.

Specifically, at present, dogs are allowed on leash at the Sweeney Ridge Trail. In the new draft plan this will be prohibited. The first 1.8 miles is a paved road. It then divides and continues one way as a paved road and the other way a dirt road. I have hiked this trail with a leashed dog for over 6 years. The area is used by many locals as a pleasant daily walk with their dogs. Recently I talked to everyone with a dog on that trail and most people had no idea that their dog walking activity would be prevented.

I have also hiked the Miwok-Wolf Ridge trail quite a lot. There are so few trails one can take a dog on-leash that to prohibit dogs on Sweeney Ridge and Miwok-Wolf Ridge would be very sad.

I love the off-leash activity at Ft Funston. To get to the beach at Ft. Funston is an ordeal and most people without a dog go someplace else where they can drive right up to the beach. I didn't see any horse restrictions in the GGNRA draft plan. Horses create much more erosion and the owners do not pick up after them.

Finally, I do agree with your plan to close the East Beach to dogs at Crissy Field. The beach at Crissy Field is very convenient and has become over populated with dogs and dog walkers. I do believe parents and children should have a place to go without dogs.

Thank you for your consideration. If you have any questions I would be happy to talk to you.

Jeannette Bonifas San Francisco, CA

Correspondence: We have no where for dogs to run and play in the city. I have a child and a dog and I feel that we have to have large enough open spaces for everyone including dogs. Please keep Fort Funston available for the dogs to use. We need to all live together. San Francisco is a diverse place for all types. It's so expensive to live here and many of us don't have large yards for pets to play in. We need some open space or it makes living in San Francisco near impossible. Thank you

Correspondence: I am writing to oppose GGNRA's draft dog management plan. It is not based on fact; instead, it relies on speculations, exaggerations and misleading statements. It reaches conclusions that are not supported by either science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an <<urban recreation area>>, not a pristine wilderness area. The courts have repeatedly upheld the existing 1979 pet policy. They have said it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs and the community. It arbitrarily excludes the tens of thousands of Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities and others.

The GGNRA draft dog management plan does not provide evidence to

justify such drastic changes to 40 years of healthy dog recreation. The National Park Service should revise the dog management plan to: 1. Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. 2. Provide for off- and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. 3. Exclude speculative, exaggerated, biased or misleading statements and studies. 4. Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishers, surfers, bicyclists, beach-goers, joggers, walkers, etc.) 5. Align commercial dog walking rules with county or city regulations.

My suggestions are supported by the fact that as a San Francisco Native, and a current Marin County resident, I have been using the GGNRA lands for recreation, in particular recreational dog-walking, since it was created in 1972. My dearly departed Australian Shepherd Luna, who passed away on February 18, 2011, from Lymphoma, derived the greatest joy from playing ball in the surf a Muir Beach and Stinson Beach. We now have a 4-month-old Australian Shepherd, Bonita, and we want her to grow up to experience the same joy. Please don't deprive an active puppy of that joy of vigorous exercise.

There are enough "No Dogs Allowed" and "Dogs On Leash At All Times" public open spaces in the Bay Area. My daily exercise regimen includes exercising with my dog. Please don't deprive me of the right to exercise with my dog in the public open spaces of the GGNRA.

Thank you for your consideration.

Respectfully, Karen Engbretson Sausalito, CA

Correspondence: The park's mission is to protect the natural and cultural resources, not allow recreation to undermine it. Alternative D best reflects the national park values.

Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by

offering more than one trail and more beach areas free from dog recreation.

Require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs.

Limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Correspondence: As an owner of multiple dogs, the ability to take my dogs to hiking trails and beaches legally is something that has become an intrinsic part of our lives. It is something that we do on a weekly basis, as long as weather permits. These outings are so much a part of what makes the bay area a such a special and wonderful place to live for both people and their dogs. Both dogs and their companions hike, and relax. This fosters easy-going, happy and relaxed states of mind that in turn is also passed along to the community in the form of our interactions with each other. We are responsible dog owners who make sure that our dogs are well-behaved, free of disease and we always have poop bags on hand. There are already so many parts of the GGNRA where dogs are prohibited. I feel that this new dog plan is another way to slowly eliminate dogs from the GGNRA altogether. That will force dog owners to either use the parks and trails illegally or have to stay on city streets which are already congested and not a place for recreation. A study by National Geographic showed that there are more dogs in San Francisco than children under 18 years of age. All of these people and families need places to go and hike and run. Please don't take away the few places left that responsible dog owners can take their dogs off-leash. These places are so much about what makes the SF bayarea unique and special. Thank you!

Correspondence: Dear Mr. Dean:

I feel that dog walking qualifies as an appropriate use of a recreation area as defined by the enabling legislation. I feel off-leash dogs should be allowed in a portion of GGNRA property in proportion to the fraction of users that are dog walkers. There are three GGNRA properties with which I am familiar, Crissy Field and the Marin Headlands, where I walk dogs only occasionally; and Rancho Corral de Tierra (Rancho), where I walk dogs daily. The area defined for walking dogs off leash is far too small on Crissy Field, and your proposal to ban dogs entirely on Rancho is absurd. Apparently the current plan for the Rancho property involves opening it to horses and banning dogs. Although I have no objection to horses being on the property, dog walkers currently outnumber horse riders on the property by at least 20:1. Banning dogs entirely is obviously not in keeping with the wishes of the current users.

I also feel the Rancho property is a poor choice as a refuge for wildlife, although every effort should be made to preserve wildlife consistent with its use as a recreational property. As a Sierra Club member since 1972, I have and do support the need for wildlife sanctuaries. We already have wildlife sanctuaries nearby. The Rancho property has been in agricultural use for decades, and is bounded by a heavily used highway on one border and residences (in Montara) on two others. It should be best used for recreation, including off-leash dog walking, mountain bikes, running, hiking, and similar uses.

By supporting off-lease use by dogs, I do not mean to imply that the use by dogs should be totally without restriction or regulation. For many years the Marin Headlands had a successful plan in place for managing dogs, which included areas that were not open to dogs, areas that allowed dogs only on leash, and off-leash areas for dogs. The area which allowed off-leash dogs was very substantial, and included all or most of Rodeo Beach, along with

other areas. This plan seemed to be working for everyone, but was terminated several years ago for unknown reasons. For several years now the Rancho property has been successfully managed by a group of local residents, the Montara Dog Group, with no powers of enforcement. Nevertheless, voluntary participation is high, and there have been very few incidents. There are other examples of dog friendly areas, such as the beach at the city of Carmel, CA, which has been successfully open to off-leash dogs for decades.

It seems one of the reasons quoted for not allowing off-leash dogs is environmental impact. Through 30 years of off-leash dogs at Rancho, I have not observed any significant environmental effects. The objectivity of the park service in performing scientific studies is far from spotless, as the recent analysis of the Tomales Bay Oyster Farm by the NPS (which resulted in a negative review internal to the government and a letter criticizing the results from Senator Feinstein) illustrates.

When I attended the presentation in early March in Pacifica by the GGNRA on the Dog Management Plan, your representative said the GGNRA was trying to be "reasonable." If banning all dogs from the Rancho property is reasonable, I would like to know what your definition of "unreasonable" is. Residents of the Coastside in general and Montara in particular have long taken an interest in the Rancho property. There was an attempt to put in a gated community when Westinghouse owned the land. This was defeated by the late Nancy Maule and others, and Westinghouse moved the development to the south end of Half Moon Bay. Caltrans wanted to put in a bypass road going over the ridge on concrete pillars, which was also defeated (in favor of a tunnel) after a lot of local effort, including a ballot referendum. Later, another land developer wanted to put in 40 acre "ranchettes," on the property, which was defeated at the county level, again a local effort. We were initially happy that the GGNRA had agreed to purchase the land, which was followed by your banning dogs from the property. People have been walking dogs on the Rancho property for at least 25 years, probably much longer.

It will be interesting to see how this all turn out. I suspect it will wind up in court, as did your decisions on dogs at Fort Funston.

Sincerely,

Michael Madden

Correspondence: May 22, 2011

e:

My name is Betsy de Fries. This is my second and final follow up comment regarding the "Dog Management Plan/Environmental Impact Statement". I have lived on the edge (WUI) of the GGNRA at the trailhead of the Miwok Trail for almost 12 years. Prior to that I lived for many years at the top of Glen Drive, Mill Valley where our land bordered the parkland from Mill Valley as far as Corte Madera. In all that time I have walked unfettered with dogs on a daily basis through parklands and watersheds ? often as far as Muir and Stinson Beaches.

Having read the proposed plan at great length and attended several of the NPS Open Houses I write to oppose the GGNRA draft dog management plan. I find the NPS is once again skewing evidence and scientific fact to mislead, exaggerate, speculate and manipulate and forming conclusions that are neither based in fact nor supported by science or the law.

The GGNRA is large enough, at more than 75,000 acres, to accommodate both recreation and conservation. Originally designed as an urban recreation area and not as a pristine wilderness area, like Yosemite and many other National Parks, NPS now seeks to alter the mandate of its creation. It is worth noting that the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded. The area now in contention, upon which the NPS wishes to leash dogs, is in fact less than 1% of the total acreage of the park.

This plan would disenfranchise an entire class of park visitor in favor of other classes. It disregards the health and well being of people, dogs, and the community and arbitrarily excludes Bay Area residents who exercise regularly with their canine companions, discriminating against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others. Moreover the NPS is blatantly disregarding their avowed purpose to "provide a variety of visitor experiences" by ignoring the obvious needs of a large part of the visitor constituent ? those who are dog owners. They are being singled out and excluded in favor of hikers, walkers, mountain bicyclists, equestrians, bird watchers, fishermen, naturists and beachgoers.

Gross Manipulation of Existing NPS Scientific Data for Advocacy Purposes: In the same way that our State Senator Diane Feinstein finds it "troubling" that the NPS has consistently manipulated existing scientific data to achieve its end goal with regard to the oyster operation at Drakes Estero, I too find it troubling that the NPS now uses the same tactics to exaggerating the problem of dog management. Her letter to Interior Secretary Ken Salazar can be found here:

<http://1.usa.gov/mPT8qj>. Note these very disturbing quotes:

? The Frost Report details a "collective but troubling mindset" (p. 32) of misusing science for advocacy purposes. "This misconduct arose from incomplete and biased evaluation and from blurring the line between exploration and advocacy through research." (p. 35) ? The National Academy of Sciences found that the Park Service "selectively presented, over-interpreted, or misrepresented the available science on the potential impacts of the oyster mariculture operation." ? Likewise, the Office of the Inspector General concluded that the Point Reyes science advisor "misrepresented research."

There can be no doubt that the park service has cynically ignored and purposefully buried scientific studies in an attempt to foist their "preferred alternatives" onto the public and to create obfuscation at higher Government levels. The same tactics employed as above were used in this NPS report:

"Western Snowy Plover (a Federally Threatened Species) Wintering Population and Interaction with Human Activity on Ocean Beach, San Francisco, GGNRA, 1988 through 1996" by park scientist Daphne Hatch.

. The 1996 Hatch Report states: "Factors other than the number of people or dogs, possibly beach slope and width, appear to exert greater influence over Snowy Plover numbers on Ocean Beach." . Unable to prove that dogs affect the numbers of plovers, the 1996 Hatch Report argues that dogs "disturb" plovers. In fact, in the entire year-and-a-half study, only 19 out of a total of 5,692 dogs ? less than one-third of one percent ? were observed deliberately chasing plovers, and none was reported to actually catch or harm a bird."

Further scientific studies over the past 20 years show that in reality there is - no scientific consensus that off-leash dogs have a significant impact on bird and wildlife populations. I refer to the following studies: . The 2006 Canada study, by Forrest and Cassady St. Clair. . The 1997 Colorado study by, Beckoff and Meany. . The 2007 UC Berkeley, California study, by Megan Warren.

This proven evidence is contrary to NPS assertions and refutes much of the false claims made by them. Indeed their own their own scientists can find no evidence to support the claims of bird and wildlife harassment.

The Aggregation of Evidence. The NPS is engaging in the aggregation of evidence found in one single park site - Fort Funston - and is attempting to leverage these finding as evidence prevailing in all of its 21 parks. This is to exaggerate the problems of erosion and wildlife disturbance by off-leash dogs. This "one policy fits all" is grossly unfair. All assertions made by the NPS should now be independently examined in detail for their veracity before

changes are made to the existing law.

The Gross Exaggeration of Problems with Dog Safety on the GGNRA. The NPS states an urgent need to create an overall policy to deal with dog safety issues and seeks to create a park force of additional rangers to deal with these exaggerated problems proposing to spend upwards of \$1,500,000 per annum on the staffing of such rangers whose sole purpose will be to ticket park users. Revenues from these tickets will presumably pay for salaries. This is a cynical move to create a "revenue stream" ? an underhanded tax on the people ? under the guise of providing, "a clear, enforceable policy to determine the manner and extent of dog use in appropriate areas of the park."

The reality of problems related to dogs is very far that stated in this plan. A more accurate study conducted by Sally Stephens, commenting at the GGNRA NR Full Committee meeting 10/27/07, produced an exact tally of the number of dog incidents comparing them with the number of people related incidents over a period from 2001 ? 2006.

I attach her significant research here. As you will find it is in total contrast to the sweeping and unfounded assertions made by the NPS:

ARE THERE SIGNIFICANT SAFETY ISSUES AROUND DOGS IN THE GGNRA? SAFETY OF THE DOGS THEMSELVES During the course of Negotiated Rule making, claims have been made that "literally hundreds of off-leash dogs have been lost, injured, or killed while roaming the [GGNRA] off-leash." (Emergency Petition to the GGNRA, p.20) These claims have been used to justify restricting off-leash access ? it is necessary for the protection of the dogs. Is this accurate?

Analysis of incident reports from 2001 to 2006 provided by the GGNRA yield the following information:

| | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
|------|------|------|------|------|------|---------------|-----------|---|---|---|---|---|---|----|-------------|----|----|----|----|----|----|-----|--------------|---|---|---|---|---|---|---|-------------------------------|----|----|----|----|----|----|-----|-------------------------|----|----|----|----|----|----|-----|-----------------------|-----|-----|-----|-----|-----|-----|------|-----------------------|-----|-----|-----|-----|-----|-----|------|----------------|---|---|---|---|---|---|---|-------------------|----|----|----|----|----|----|-----|--------------|---|---|---|---|---|---|----|----------------|----|----|----|----|----|----|-----|
| 2001 | 2002 | 2003 | 2004 | 2005 | 2006 | 6 year totals | Dogs Lost | 3 | 4 | 2 | 6 | 1 | 2 | 18 | People Lost | 57 | 57 | 68 | 65 | 63 | 63 | 373 | Dogs Injured | 2 | 1 | 0 | 1 | 1 | 0 | 5 | People Injured: Motor Vehicle | 31 | 26 | 28 | 20 | 24 | 16 | 145 | People Injured: Bicycle | 19 | 31 | 19 | 24 | 19 | 38 | 150 | People Injured: Other | 285 | 231 | 262 | 208 | 171 | 175 | 1332 | People Injured: TOTAL | 335 | 288 | 309 | 252 | 214 | 229 | 1627 | Dog Fatalities | 0 | 1 | 0 | 0 | 0 | 1 | 2 | People Fatalities | 11 | 19 | 14 | 19 | 18 | 21 | 102 | Dogs Rescued | 8 | 9 | 5 | 8 | 3 | 4 | 37 | People Rescued | 50 | 71 | 81 | 46 | 94 | 90 | 432 |
|------|------|------|------|------|------|---------------|-----------|---|---|---|---|---|---|----|-------------|----|----|----|----|----|----|-----|--------------|---|---|---|---|---|---|---|-------------------------------|----|----|----|----|----|----|-----|-------------------------|----|----|----|----|----|----|-----|-----------------------|-----|-----|-----|-----|-----|-----|------|-----------------------|-----|-----|-----|-----|-----|-----|------|----------------|---|---|---|---|---|---|---|-------------------|----|----|----|----|----|----|-----|--------------|---|---|---|---|---|---|----|----------------|----|----|----|----|----|----|-----|

The data in the incident reports indicate that there were a total of 62 incidents involving dogs over the course of the six years from 2001 to 2006. The claim of "hundreds" of incidents involving dogs in the GGNRA is, quite simply, false. When you consider that tens of thousands of dogs visit the GGNRA each day, the total number of incidents reported is miniscule (62 incidents out of nearly 22 million dog visits over the six years). The GGNRA is not an unsafe

place for off-leash dogs. Interestingly, comparing the numbers in the table between dogs and people indicates that the GGNRA is significantly more unsafe for people than for dogs. Claims have also been made that "the Bay Area's top animal behavior specialists have conducted extensive studies and shown that allowing dogs to roam off-leash is the cause of leash aggression, not the cure for it." (unpublished Letter to the Editor of the SF Chronicle, posted to a blog 10/17/07) This sounds impressive, but it too is false. At the February 8, 2007 meeting of the San Francisco Animal Control and Welfare Commission, Jean Donaldson, the founder and director of the SF/SPCA Dog Training Academy, testified on this issue. Donaldson has over 30 years experience in dog behavior and training, and is the author of several books, including *The Culture Clash*, which was voted the Best Behavior Book of 1997 from the Dog Writers Association of America and is the #1 book recommendation for dog owners from the Association of Pet Dog Trainers. At the Commission meeting, Donaldson said (a complete transcript of her statement is at the end of this issue summary):

There is not only no evidence that allowing dogs off-leash for play opportunities increases the incidence of aggression, to a person every reputable expert in the field of dog behavior in the United States is of the opinion that it is likely that off-leash access decreases the likelihood of aggression. There is no research demonstrating that dog parks or off-leash play contributes to any kind of aggression, including dog-dog aggression. It was brought to my attention a couple of months ago, that claims were being made that such research existed. And so I did an exhaustive literature search as well as consulting at length numerous colleagues in dog behavior in the United States. All were amazed at the suggestion in view of no such research. Trish King, my counterpart at the Marin Humane Society, has been publicly quoted several times as having authored research concluding off-leash play contributes to aggression. I spoke to her at length about this and we corresponded in the last couple of weeks. She has not performed or published such research. She is furthermore, and I quote, "mortified", unquote, that anyone would suggest or imply that. She believes off-leash access, if anything, prevents aggression. Priscilla Feral, the president of Friends of Animals, often has also been quoted as opposing off-leash access. I spoke to her this past Monday regarding Friends of Animals' position, and she was adamant that statements suggesting that Friends of Animals oppose off-leash access are false. The same holds true for Kathy Santo, a nationally recognized colleague of mine. I also spoke to her this week. She followed up the conversation with me with an email, which I will now quote: "Hi Jean. I wanted to email you and clarify my stance on dogs engaging in off-leash play. I strongly believe that it is good, or more accurately necessary for healthy dogs to play off-leash in safe areas while supervised by their owners. An exercised, socialized dog is a happy and well-adjusted dog."

Clearly, there is no compelling reason concerning the safety of dogs

themselves to restrict off-leash recreation in the GGNRA.

SAFETY OF OTHER PARK VISITORS

A) DOG INCIDENTS IN THE GGNRA Those opposed to dogs in the GGNRA have often painted a picture of thousands of dogs running amok terrorizing other park visitors. But is this common or even true? An analysis of incident reports provided by the GGNRA for the years 2001 to 2006 do not support these claims:

| | | | | | | | | | | | |
|--------|--------|--------|--------|--------|--------|---------------------------------------|--------|--------|--------|--------|--------|
| 2001 | 2002 | 2003 | 2004 | 2005 | 2006 | Off-Leash Incidents | 270 | 244 | 494 | 559 | 179 |

| 296 | 296 | 296 | 296 | 296 | 296 | Total Pet Citations | 363 | 311 | 520 | 428 | 122 |
| 42 | 42 | 42 | 42 | 42 | 42 | Total Incidents | 14,578 | 12,160 | 12,389 | 14,259 | 13,704 |
| 13,179 | 13,179 | 13,179 | 13,179 | 13,179 | 13,179 | Pet Incidents as % of Total Incidents | 2.79% | 3.31% | 5.24% | 5.25% | 2.65% |
| 2.25% | 2.25% | 2.65% | 2.25% | 2.25% | 2.25% | | | | | | |

It is clear from this table that the majority of incidents and citations involving dogs in the GGNRA are for violations of leash laws, not for dog bites or problems with other park users. Compare the number of dog incidents and citations to the total number reported during the same periods. In every year for which the reports were provided, dog incidents/citations constituted less than 5.5% (and frequently less than 3%) of the total. Dogs do not represent a major safety problem for other park visitors that would require restrictions on off-leash recreation to correct. Comments demanding absolute safety where dogs are concerned have been made. During the time the NR Committee has been meeting, a man shot and killed a hang glider at Fort Funston, and wounded another. During NR, two women were charged with luring a man to Fort Funston with the promise of sex, only to rob and kill the man once in the park. No dog has ever killed a person in the GGNRA. Unfortunately, the same cannot be said for the human visitors. What is the real threat? It should also be noted that many people, especially women and seniors, do not feel safe hiking alone in the GGNRA WITHOUT a dog. The GGNRA is adjacent to a dense urban area. Unfortunately, that means it is also adjacent to all the ills that beset that urban society. A woman was raped and killed about two years ago while walking/running in an East Bay park during her lunch hour. Many women and seniors do not feel safe walking in the GGNRA, especially its more remote areas, because people with bad intent can so easily access the park. These same women and seniors do feel safe walking in those same areas if they have either their own or other people's off-leash dogs around them. If these areas are closed to off-leash recreation, they will be effectively closed to many women and seniors who will not walk in them alone. Of course, dogs should never bother other park visitors. Proper Park Petiquette is to not let your dog approach people you do not know. Dogs should not jump on people, or take food away from them. Dog training and public education can address these problems. It is not necessary to restrict off-

leash recreation to address these issues. Note also that there has not been a single case of dog-feces borne illness in a human reported to the San Francisco Department of Public Health in over 50 years.

B) DOG BITES Concerns about dog bites are often specifically cited as a justification for restricting off-leash access in the GGNRA. Of course, a single dog bite is one bite too many. But are concerns about bites significant enough to justify restricting off-leash recreation in the GGNRA? There is no public safety crisis involving dogs in San Francisco. According to SF Animal Care and Control, about one-quarter to one-third of all households in San Francisco have at least one dog. Therefore, ACC estimates the total number of dogs in the City to be about 120,000 to 140,000. The total number of dog bites reported in San Francisco in 2004 was 384, down 20% from the number in 2003 (SFPD testimony before SF Police Commission, and private communication; this is the last year for which I have information). But ? and this is a big "but" ? San Francisco does not separate incidents where dogs bite other dogs from incidents where dogs bite people when it reports the total number of dog bites. Since the vast majority of dog bites involve one dog biting another, the number of people bitten by dogs is actually significantly lower than the total number suggests. Considering the number of dogs in San Francisco, the number of bites is extremely small. Do the math: 120,000 dogs times 365 days a year equals the potential for a minimum of 44 million bites each year. The actual number is 384 (a significant number of which are dog-dog, not dog-people bites). Reports of serious dog bites and fatal dog attacks make the news precisely because they are unusual and rare. In one of the most comprehensive analyses of injuries due to dog bites, Canadian researchers searched a national database of all reports of injuries throughout Canada in 1996 (Canadian Hospitals Injury Reporting and Prevention Program, or CHIRPP; the study can be found at: http://www.phac-aspc.gc.ca/injury-bles/chirpp/injrep-rapbles/dogbit_e.html). Dog bites represented 1% of all injuries in the CHIRPP database. The CHIRPP analysis found that children between 2 and 14 years of age sustained over 70% of all bites. Most of the dogs involved in bite incidents (65.2%) were either part of the family, part of the extended family, or part of a friend or neighbor's family. Only 12.2% were stray or unfamiliar dogs. The majority of the dog bites (64.5%) happened in someone's home (either the victim's or another person's home). Only 3.1% of dog bites (38 total) occurred in a public park. In other words, bites occurring in locations similar to the GGNRA accounted for a miniscule 0.02% (2/100th of one percent) of the total number of 188,717 injuries in the database that year. A majority (50.3%) of victims had been interacting with the dog before the bite: 19.3% were petting, handling, feeding, or walking with the dog; 17.5% were playing with the dog; 7.8% had hurt or provoked the dog; and 5.7% were disciplining the dog. The Canadian results are similar to those reported in the US. The Centers for Disease Control's MMWR weekly from July 4, 2003 says that 42% of all dog bites occurred among children under 14 years of age, and cites research that indicated that in children under 18 years old, 80% of bites

were inflicted by the family's (30%) or a neighbor's (50%) dog. Children are primarily bitten by dogs they know and not unfamiliar or stray dogs that run up to them in a park.

In testimony before the San Francisco Animal Control and Welfare Commission on February 8, 2007, Jean Donaldson, the founder and director of the SF/SPCA Dog Training Academy said:

Off-leash play has not proven to be a factor in dog bites. According to both the Centers for Disease Control and Prevention and the American Veterinarian Medical Association, the majority of bites take place on the guardians' property. The remaining incidents involve dogs that are either restrained, i.e., leashed, or dogs that are "at large", [that is,] unsupervised dogs that have escaped confinement. Consider for example, the three highest profile serious dog attacks in the history of San Francisco. Those are Diane Whipple in 2001, Sean Jones in 2001, and Nicholas Faibish in 2005. In the first, the dogs were on-leash. In the second, the dogs had escaped confinement in the backyard and were at large. And in the third, the dog was confined in the guardian's home. I would add that in all these instances, the dogs were un-neutered. Interestingly, it could very well be that the safest dogs are those that attend off-leash dog parks. Shyan and cohorts published a research paper in 2003 in the Journal of Applied Animal Welfare Science, which looked at the prevalence of inter-dog aggression in dog parks. Dog to dog problems turned out to be minimal and of a non-serious nature. While the paper did not consider the question of dog-to-human aggression, the obvious interpretation of this low incidence of aggression was interesting and I think very relevant. They suggested that self-selection operates strongly, i.e., people who take their time to get into their car or walk to a designated off-leash area to exercise their dog tend to not to be the type who are derelict in other areas of dog guardianship, such as training, socialization or appropriate containment.

As is clear from all of this, the chance of being bitten in a park by a strange dog that you have not interacted with is pretty slim. Consider where dog bites rank in the context of accidental injuries for people in general. According to the Centers for Disease Control's WISQAR (Web-based Injury Statistics Query and Reporting System, accessible at: <http://www.cdc.gov/ncipc/wisqars>; this site tracks injuries treated in hospital emergency rooms) site, the top 15 causes of accidental injury in the United States in 2006 were:

| Rank | Cause of Unintentional Injury | Number of Injuries | % of Total Injuries |
|------|---|--------------------|---------------------|
| 1 | Fall | 7,934,840 | 28.7 |
| 2 | Struck by/against object (not vehicle or machinery) | 4,663,517 | 16.9 |
| 3 | Overexertion | 3,474,597 | 12.6 |
| 4 | Occupant in Motor Vehicles | 2,723,465 | 9.8 |
| 5 | Cut/Pierce/Stab | 2,215,211 | 8.0 |
| 6 | Other Bites/Stings (not dogs) | 1,095,521 | 4.0 |
| 7 | Other | 922,208 | 3.3 |
| 8 | Poisoning | 703,702 | 2.5 |
| 9 | Unknown/Unspecified | 652,130 | 2.4 |
| 10 | Other Transport (includes horseback | | |

riding, ski lifts, golf carts, etc) 635,018 2.3 11 Foreign Body 621,433 2.2 12
Pedal Cyclist 465,395 1.7 13 Fire/Burn 417,540 1.5 14 Dog Bite 306,273 1.1
15 Machinery 278,676 1.0

Dog bites represent 1.1% of all accidental injuries. At least four of the injuries on the list are not only more common than dog bites, but could easily happen to visitors in the GGNRA ? fall, overexertion, motor vehicles, and cyclist. If off-leash access is restricted in the GGNRA to "protect" the public, then walking, hiking, all motor vehicles, hang gliding, rock climbing, and bicycling should similarly be banned. These activities combined account for 52.8% of all accidental injuries. Once again, the low frequency of dog bites, especially when compared to other more common causes of injury, indicates that bites cannot be used to justify restricting off-leash access. Fatalities from dog bites are even more rare. In 2001, the American Veterinary Medical Association published a report from its Task Force on Canine Aggression and Human-Canine Interactions titled: "A community approach to dog bite prevention," (JAVMA, Vol. 218, No. 11, June 1, 2001, p. 1733). The report states that nationally, there are about 53 million dogs (this was in 2001; there are more dogs now), and an estimated 4.5 million dog bites each year, of which about 20% (800,000) require medical attention. Note that these statistics do not mean that 10% of all dogs bite, since they don't account for repeat offenders. Note also that these numbers include medical treatment obtained at sites other than emergency rooms, which accounts for the difference in numbers between the WISQAR site and the JAVMA article. NOTE: The JAVMA report states: "although most dog bites occur on the property where the dog lives, unrestrained or free roaming dogs do pose a substantial threat to the public." In this context, "unrestrained or free roaming dogs" does not mean off-leash dogs supervised by a person. "Unrestrained or free roaming dogs" means stray dogs that have no person supervising them. Out of the millions of bites, about 10-20 are fatal each year, roughly 0.0003% (three-ten-thousandth of one percent) of the total number of bites. That number has remained nearly constant for decades, despite significant increases in both the numbers of people and the numbers of dogs. About 70% of those killed by dogs each year are children under the age of 12 (a total of 7 to 14 deaths a year). Of course, even one bite is one too many, and any fatal dog attack is devastating for families and friends of the victims. But what is the context for these numbers? Do dog bites pose a significant risk of death to children? To get a sense of the context, compare the number of children killed by dogs with the number of children who died from other causes. Sadly, over 1000 - 2000 children die each year as a result of abuse, most at the hands of their parents or primary caregivers. ("Primary Prevention of Child Abuse", Lesa Bethea, American Family Physician, March 15, 1999, vol 59, no 6) The SAFE KIDS USA Campaign (formerly the National SAFE KIDS Campaign) is dedicated to preventing accidental deaths of children. Their website (<http://www.safekids.org>) provides information on the causes of unintentional death and injury for children under the age of 14. Dog bites are not even mentioned. According to

the SAFE KIDS website, in the year 2002, some of the causes of accidental death in children were: ? 1,638 from motor vehicle crashes ? 838 from drowning ? 599 from pedestrian injuries ? 520 from fire and burn-related injuries ? 130 from bicycle-related crashes ? 95 from falls ? 100 from poisonings ? 60 from firearm-related injuries ? 147 from playground equipment-related injuries (between 1990 and 2001) ? 89 from inline skating injuries (since 1992) ? 120 from ATV-related injuries (in 2005) ? 20 from school bus-related injuries (in 2003)

http://www.usa.safekids.org/tier3_cd_2c.cfm?content_item_id=19010&folder_id=540 When the numbers above are compared to the number of children killed by dogs, it is clear that dogs do not pose any significant risk to children.

Putting this all together, there is no compelling reason associated with dog bites to restrict off-leash recreation in the GGNRA.

Therefore it can be concluded that well-exercised dog is a well-behaved dog. Dog owners carry the responsibility for the actions of their dog. There is no evidence that allowing dogs off-leash for play opportunities increases the incidence of aggression, to a person. Every reputable expert in the field of dog behavior in the United States is of the opinion that it is likely that off-leash access decreases the likelihood of aggression.

Unbiased Reporting. It is essential that you take the time to read and consider these independent studies, since it can be inferred from their findings that the NPS is intent only on the advocacy of their own agenda and cannot therefore be trusted to produce a fair and unbiased plan. This plan will affect so many of the lives of people in the Bay Area enjoying the GGNRA for the purpose in which it was established.

Park Service should revise the dog management plan in the following ways: . Honor the original 1979 Pet Policy. . Respect dog-walking as a legitimate recreation. . Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in Marin County. . Exclude speculative, exaggerated, biased, or misleading statements and studies. . Provide reasonable ways to address any significant adverse impacts from recreational activities. . Use objective standards applicable to other recreational activities like equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers etc., . Eliminate "compliance-based management," which allows for additional restrictions to be implemented without any public input.

Fiscal Responsibility and Accountability. It is reprehensible that the NPS should spend so much money, time and energy on this plan when they say they cannot provide staff to maintain existing parkland and adequately finance fire management and prevention. I speak from experience in trying to get park

personnel to remove trees and debris that fall from the park on to our property.

In Conclusion: The park is a national treasure and the GGNRA draft management plan does not provide enough unbiased evidence to justify such drastic changes to 40 years of healthy dog and human recreation to the detriment of all. Policing the GGNRA would create a very negative atmosphere. However, educating people and make them feel a part of and responsible for the well being of the GGNRA is a much better policy one of which I could support spending good tax paying on.

Sincerely,

Betsy de Fries Mill Valley CA 94941

Correspondence: I am a regular user of both the Marin Headlands and Crissy Field. I support stricter rules concerning dogs in the parks for both environmental reasons and out of respect for other users. Many dog owners think that having their dog nose another person or jump on them is cute and friendly. As a person

who was attacked by a dog as a child I find off leash dogs to be a nuisance at best and sometimes frightening. For the vast majority of dogs 'voice control' is a joke. I support keeping our parks safe and clean for everyone including wildlife. Dogs running free are not part of this equation.

Correspondence: Dear Superintendent Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to: -Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. -Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. -Exclude speculative, exaggerated, biased, or misleading statements and studies. - Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). -Enable professional dog walking and align any professional dog walking rules with county or city regulations. -Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

Sincerely, Lisa Kucukdogerli

To Whom It May Concern:

Golden Gate National Recreation Area may be one of our country's boldest park experiments: setting aside highly-prized land to provide a national park experience near a heavily urbanized area. Indeed, the park is home to more endangered and threatened species than any other park in the continental U.S.--more than Yellowstone, Yosemite, and Sequoia & Kings Canyon combined!

To help protect these species and other protected wildlife, inappropriate activities such as motor vehicle use on beaches were banned. However, the park continues to permit unregulated activities that disturb wildlife like western snowy plovers and marine mammals. Wildlife take refuge on Golden Gate's beaches to rest, breed, and rebuild energy for survival, yet unregulated off-leash dog recreation in these areas has resulted in habitat encroachment and wildlife harassment by dogs. For example, the park has reported that unleashed dogs represent the most significant recreational threat to wintering western snowy plovers.

I am writing to urge the National Park Service to protect Golden Gate's imperiled wildlife from harassment by unregulated recreation.

I feel that endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

Also, the park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by offering more than one trail and more beach areas free from dog recreation.

I feel the park should require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs and limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

The park's mission is to protect the natural and cultural resources, not allow recreation to undermine it. I think alternative D best reflects the national park values.

Thank you for listening to these comments, which are intended to be helping

to create a better park experience at Golden Gate National Recreation Area, and giving imperiled species a chance to survive.

Sincerely, Serena C. Wittkopp, B.A. Graduate of Arts and Letters

Correspondence: I understand that you want to limit the use of the GGNRA from dogs and I disagree.

You are located in San Francisco, a densely populated area. The dogs and the humans need to be able to utilize the space that is available. There are plenty of areas in California and in the Bay Area, where habitat and species are protected. San Francisco, the 2nd most densely populated city in the nation should not be one of them. Dogs have a therapeutic value to humans and they need space and place to be dogs. Humans need to be able to recreate with their canine companions. It is a symbiotic relationship. Dogs need to be able to run and romp and play because that is their nature. This area has been available for years and ought to continue to be so. I am a 62 year old San Francisco native. Roberta Coleman

Correspondence: This document is flawed as to scope and to how it avoids addressing laws and factors passed after NEPA went into effect. SO, this document at least needs a supplement or revision, if not a substantial re-do.

NOWHERE is there any mention of or concern for a specific animal grouping-- guide dogs and service dogs. Nor is there any reference to protecting vulnerable HUMAN populations.

Yet, Guide Dogs for the Blind has been in San Rafael, CA, since the 1942--LONG before NEPA was passed and long before the establishment of the GGNRA. Worse, in the files of GGNRA is a 2005 letter from Guide Dogs for the Blind, wherein their field service manager cites a 2003 survey indicating that:

89% of their graduates [EIGHTY-NINE PER CENT] "have had Guide Dogs interfered with by off-leash dogs"; and further that

42% of their graduates [FORTY-TWO PER CENT] " have had their Guide Dogs ATTACKED [[emphasis mine]] by off-leash dogs".

When a person using A Guide Dog loses those services, it can take up to two years and cost \$50,000, or more, to get a new Guide Dog. During that interim training period, the mobility of that person whose guide dog was incapacitated is greatly limited.

If, contrary to existing policy elsewhere within the NPS system GGNRA allows off-leash dogs, then GGNRA can be viewed as liable for injuries to the Guide Dog, to the person, and to training and replacement costs.

By the silence of this document on the hazards of off-leash dogs, readers are allowed to assume that off-leash dogs present no discernible hazard or risk to anyone. This also means there is an unprofessional hiding of the facts, making GGNRA possibly culpable for triple damages in any civil lawsuit.

So, failure to have a plan that properly addresses the needs of those dogs [Guide Dogs] as well as of "service animals" is negligent and non-responsive, as to a comprehensive response to and plan for ALL animals, and not just "off-leash" dogs.

Once the neglect of safety of Guide Dogs from attack by off-leash dogs is raised, that raises the larger issue of how safety of ALL people is also not addressed,

Since there already is evidence that off-leash dogs DO attack Guide Dogs, that means it likely the person using a Guide Dog also is entangled or engulfed in the attacks of off-leash dogs on Guide Dogs. Protection of that user of a Guide Dog's services also is not addressed. Since Guide Dogs are attacked, the larger issue of safety for vulnerable populations also is not addressed. Not only do people using guide dogs have a greater vulnerability, but so do many people with mobility impairments, toddlers, pre-schoolers, adults pushing a baby in a stroller, a group of primary grade children out on a field trip and some seniors.

Members of all those groups have slower speed, reaction time, and mobility options than those who wrote this document and than those likely to be monitoring and / or enforcing any off-leash regulations.

Which also shows how narrow is the experiential thinking that produced this narrow-focus document that deals only with:

off-leash dogs, and endangered flora and fauna, but not with Guide Dogs, Service Animals, and the people who rely on them.

By considering a deviation from NPS standards, GGNRA is opening up the entire system to a crazy-quilt of possible local options, which will be unknown to visitors from outside that area. Despite disclaimers to the contrary, any deviations from national NPS standards that GGNRA authorizes will be used by others, elsewhere, for their "local rules".

Even allowing consideration of off-leash dogs also lessens the importance of native and entrenched flora and fauna.

This document's neglect of addressing the safety needs of vulnerable populations ASSUMEs all visitors to / users of GGNRA facilities are all fully able-bodied, agile, mobile, and possessed of all their cognitive faculties.

Somehow, the writers of this document got stuck somewhere in the early 1960s, ignoring the passage of the Older Americans Act in 1965 and the passage of the Americans with Disabilities Act [A.D.A. in 1990.

Since the 1965 Older Americans Act was in effect when NEPA was passed in 1969, there should be no professional excuse for ignoring the impacts of that 1965 law on a 1969 law.

Further, with passage of the civil right law known as the A.D.A., people with disabilities are, supposedly, guaranteed a right to all programs and services a government agency provides.

If GGNRA allows off-leash dogs anywhere, that will effectively block some people with disabilities from also going into those areas.

Somehow, GGNRA wants to subordinate a national civil rights law to a local standard of allowing off-leash dogs to have designated areas. GGNRA does not have the authority to contravene, overrule, undermine, or evade a federal statute.

By all that this document neglects to address, GGNRA cannot fairly and prudently consider any areas for off-leash dogs. This document needs to be rejected and re-done.

Dear Superintendent Dean,

Below are the comments I hand-delivered to your office at Fort Mason yesterday at 2 p.m. I've had other thoughts about the DEIS and specifically Fort Funston which I'd like to add.

In the many hours I've spent with our dog Penny at Fort Fun, rain, shine, wind, cold, the most consistent presence has been dogs and their people -- I, a senior woman with my dog, have always felt safe and that if I took a fall or there was any kind of emergency, someone would help me. Also, I have never seen a homeless encampment or a feral cat there, in large part, I believe, because of the presence of dogs and their people (although I had an interesting conversation with a woman who takes her dogs there at 6:30 a.m. and laughed when she told me her dog had interrupted a man defecating in the bushes by the hang-glider overlook). Before the Park Service destroys this precious and possibly unique dog/human community I think more evidence is needed that it's an inappropriate use of GGNRA resources. Sincerely, Judith D. Kucera

Frank Dean, General Superintendent GGNRA Building 201, Fort Mason
San Francisco CA 94123-0022

Re: Draft Dog Management Plan/DEIS

Dear Superintendent Dean,

My husband (64) and I (67) have owned our small (lot is 25 x 100 ft.) home in the Glen Park/Bernal neighborhood of SF for 30+ years. 2 years ago we adopted a rescue dog for companionship and exercise. Because of our ages we initially looked for an older dog, but fell in love with Penny (now 3, a 60 lb. Chow/Shepherd mix, see pix) at the SPCA pet fair and embarked on a new, demanding and immensely satisfying relationship.

Over the past two years we've spent countless hours exploring San Francisco with Penny, but our favorite spot has been Fort Funston because of the dog-friendly environment where we can go for long walks together and she can socialize with other dogs and humans off-leash. Twice a week she goes there in a play group with a dog-walker (I quite often tag along because it's so much fun watching them play together ? Penny's best friend is a year-old Weimie she's known since he was 2 months old), and 2 - 3 times a week she goes there with Mark or me; other days we go to city parks for her daily 2 mile walk. For a year and a half we went to A Better Way for Dogs and learned voice control and how to work with her on and off leash,

and we've worked hard to be responsible dog-owners. As long-time environmentalists (I'm a Sierra Club member) we also try to be responsible stewards of the natural world (we used to go to Ocean Beach to do clean-up in the '80's ? young people thought we were weird!), so we keep a close eye on her when we're out there, and have worked hard to exercise voice control when she's off-leash.

I've attended 2 NPS meetings as well as the SF Supervisors meeting to learn about the Draft Proposals for the GGNRA and have been utterly dismayed at the extreme reductions in on/off-leash recreation outlined for dogs and their guardians. After studying the Fort Funston ROLA proposals it seems clear that no dog behaviorists were included as DEIS advisors, because neither the on or off-leash areas have any shade!!! Also, as a senior, I'd risk injury trying to get Penny to the beach (which as you know is often unusable because of high tides or bad weather) on-leash, and because the trails would be crowded Penny would be anxious, esp. on-leash, and more likely to be aggressive (evinced possible "leash rage"). The ROLA proposed next to the parking lot is completely inadequate for the number of dogs using Fort Fun and is an invitation to non-compliance which under the current proposal would eventually result in dogs being banned entirely.

The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents, or to evaluate the impact on local parks of such a drastic change in existing policies..

The recent brochure I got in the mail from the Golden Gate Conservancy was headed "Parks for all Forever" ? unfortunately as dog-owners we feel excluded from this generous vision by the DEIS. Having read quite a bit about NPS dog policies, it seems clear that our dog, and therefore we, are not welcome in the national park system, with very few exceptions, most of them a thousand or more miles away. Obviously there are areas where dogs shouldn't go, for endangered species preservation or their own well-being. However, in general, we don't understand why the policy doesn't allow leashed dogs wherever humans are allowed, and why there are not many more ROLAs in the NPS as a whole. Since some 15% of Americans own dogs, it does not seem unreasonable that 1% of Parklands would be set aside to allow access for them too, and to this end we think:

- 1) The National Park Service should treat the GGNRA as a model for developing more enlightened dog policies throughout the park system, which could be co-ordinated with the "Let's Move" efforts which our First

Lady Michelle Obama is so actively involved in, encouraging families to get outside with their dogs, educating them about dog behavior, and providing room for off-leash recreation (you can't play catch when your dog is leashed!)..

2) Hire dog behaviorists to improve the existing models Fort Funston, Crissy Field and other important GGNRA dog recreation areas including the New Lands. Point Isabel Regional Shoreline is a sophisticated model of multi-recreational use which could be drawn upon and then used throughout the park system. Consider experimenting with a "green" approach to dog waste, providing compost stations like those coming into use in Canada, or biodegradable bags which could then be composted instead of going to landfills.

3) Signage and fencing or other barriers for areas closed to the public and/or dogs should be abundant and educative.

4) Remove the "poison pill" plan with regard to compliance.

5) Require all dogs using the GGNRA to display a current license together with contact information in case of emergency and to be under voice control when off-leash.

6) Set up a low-cost automated permit system for dogs (\$1 - \$2 a day per dog) which will help defray any extra maintenance costs.

7) At Ocean Beach either: retain and expand existing snowy plover protections to include human disruption as well as heavy equipment, kite flying, beach fires and other known factors affecting the bird population. Where feasible create plover-friendly areas including oyster shells for cover. Or, recognize that Ocean Beach may never become a nesting area because of the heavy human presence there. Is it true that only 7 plovers have been sighted in the annual counts since the dog ban was instituted? Maybe GGNRA plover restoration efforts should be concentrated elsewhere instead of closing off 2 = miles of a beach much needed for human recreation, with dogs welcome on-leash and off in a larger designated ROLA..

After much thought, I support Alternative A, the No Action alternative, and retaining the existing 1979 policy with changes as outlined above. It's especially important that the New Lands policy be changed to include respect for existing uses of the lands including on and off-leash dog-walking. I see many dog-walkers at Fort Funston who drive up from San Mateo County because there are so few off-leash areas there, and the New Lands proposal would exacerbate this situation. State and county parks in San Mateo have extremely restrictive dog policies ? perhaps an enlightened NPS policy would have a trickle-down effect in this regard. It's important to

remember that dogs have important well-documented roles to play in providing companionship, exercise and protection (I feel much safer hiking now that I have a dog) for their humans.

Other changes we would support:

Pit-bulls (and other breeds specified in local ordinances) must be neutered or on-leash.

Owners/walkers must have a leash for each dog and a bag for feces pickup.

Dogs may be off-leash during daylight hours only

Dog caregivers must leash excitable dogs within 50' (? not sure how far) of horses, hang-gliders, and other stimuli known by the owner to cause prolonged barking or aggression. When sharing paths with young children and bicyclists, owners must leash their dog and/or withdraw a safe distance to reduce other users anxieties. Owners are expected to act as good-will-toward-dogs-ambassadors, recognizing that many people have a high level of anxiety about dogs. Inappropriate or aggressive behaviors which caregivers don't take immediate steps to control should be reported and may result in the dog and its caregiver losing access privileges. Those reporting such behavior can call a hotline and give an incident report describing the dog, its care-giver, time/place and vehicle license number if known, as well as a brief description of the problem. If urgent they should call 911.

No off-leash dogs in or within 25' of parking lots.

We hope that you and the Park Service can find ways to reconcile the many conflicting interests surrounding this issue, and develop a more humane and sensible approach to the problem which will continue to welcome us and our dog in the GGNRA.

Sincerely, Judith D. Kucera and Mark Hein

Correspondence: Why We Don't Trust You

In the DEIS, "A substudy of the San Francisco Sewage Master Plan determined that bacterial contamination of the water off Ocean Beach was significant due to dog fecal matter deposited along the shoreline. (NPs, 1999)" (DEIS, p 228, para.5)

See, this is just one example of why we don't trust you, GGNRA. Why would you include this statement in your DEIS when you know this "substudy" was impossible to track down? During Negotiate Rulemaking in 2007, NPS admitted neither they nor the SF PUC Water Quality Bureau could find it, yet here in 2011 you made this claim sound like it came from a real document. And this is your basis for the accusation that dogs contaminate the water starting with the Executive Summary.

You actually had real data to draw from regarding water quality at Ocean Beach and elsewhere. The SFPUC website has information available to the public. The reason you didn't is THERE IS NO PROOF DOGS ARE CONTAMINATING THE WATER. To the contrary, there is evidence fecal contamination doesn't exist there at all. The SFPUC monitoring San Francisco beaches showed off-leash beaches do not have higher bacterial contamination than beaches where dogs are prohibited.

On May 26, 2011, a front-page story in the San Francisco Chronicle was entitled, "Where Not to Go in the Water at Bay Beaches." The environmental group Heal the Bay annually rates the Bay Area Beaches, among others, and concluded, " Ten Bay Area beach locations received perfect scores and were named to the groups' honor roll, including Ocean Beach at both Balboa Ave. and Sloat Blvd., Crown Memorial St. Beach in Alameda, Montara State Beach, Surfers Beach, and six others in San Mateo County." (p.1,12)

So go ahead, GGNRA. Keep making stuff up and spreading it around. We'll see what Nancy Pelosi and Diane Feinstein have to say about this. We will never stop fighting for our rights.

Type:

Correspondence: I am writing to oppose the GGNRA draft dog management plan alternatives that further restrict or ban dogs in open spaces. There are 4 parks I specifically want to address:

1) Mori Point in Pacifica. The work GGNRA has been doing in this park has been fabulous. Though you've cut out some of the trails we used to walk on, what you've done has made the park more accessible to more people (instead of my secret almost private place, which I do admittedly miss). However, the plans to close off upper Mori Trail and Lishumash trail are ill-advised. These trails provide a more rugged experience that dogs and owners need, move us away from people with little kids and strollers, and give people more exercise and dogs more places to sniff, without harming the vegetation or affecting wildlife. Your draft plan also cuts off all access to the Headlands, which is odd and unfair. It prevents us from the longer walks along the cliffs heading south, and from meeting up with the trail that leads to the Quarry, both popular and beautiful walks. Furthermore, the plan to close off the trail that leads north from lower Mori Road just before we reach the new ponds (this path fronts backyards), will cut off easy access from the entire neighborhood. I meet many elderly people, people in wheelchairs or with canes, and people with young kids who enter the park through this trail. Closing it off will cause all the people who live there to either have a much longer walk to the main entrance by the Moose Lodge, or they will have to drive there, increasing parking congestion amid much more inconvenience.

2.) Milagra Ridge in Pacifica. This is a wonderful space that is lightly utilized (some of the time I'm there alone with my dogs). The heaviest users are people with dogs, and everyone I've seen with just a couple of exceptions respects the on leash requirements here. We like to walk along the dirt trails as well as the paved ones, for the variety, for the exercise, and for the views. I've never heard of any negative encounters between dogs and wildlife (the one time we saw a deer I held my dogs close and there was no interaction). Closing off any of it to dogs on leash is unfair and unnecessary to protect this park. Dogs have been using it for many many years with no ill effects to either wildlife, vegetation or other users, and I strongly urge you to continue the current policies of on leash dog access.

3.) Sweeney Ridge (Pacifica and San Bruno). This park has steep trails that provide intense exercise and reward us with spectacular views. We need this place and our dogs need this place. Dogs have been using these trails for many many years and there is no compelling reason to destroy what has

been a workable and successful human/dog experience.

4.) Ft Funstan. Alternative A, leaving the area open to off leash dogs as it has been for 50 years, is by far the best option. It benefits the dogs, the owners, and the rest of the GGNRA by allowing one place where it is legal to run the dogs. All other parks have severe restrictions or prohibit off leash dogs, and it is reasonable for Park Service to recognize that this place is different and deserves to be treated differently than all the rest of NPS territory. Besides recognizing the force of tradition, this would demonstrate that the Park Service recognizes that a unique area deserves unique consideration for the needs and expectations of the population which uses it and contributes people power to its upkeep.

In my discussions with Park Service Rangers, I kept hearing that no other parks in NPS allow dogs at all, and therefore GGNRA should conform to those restrictions. I think this reasoning misses the point. GGNRA is not Yosemite, or Glacier, or Yellowstone, or Zion. It is an urban park, surrounded by populations who have been used to considering and using these areas as part of the neighborhood. An urban park serves an urban population, which contains dogs as valued members of the community.

I hope you will take very seriously the needs of the people who use these parks and want them to remain dog accessible. The Park Service needs the support of the population in order to successfully manage these areas, and the people need your support to make these parks meet our needs.

Thank you, Shelley Levine

Correspondence: I have been a resident of the Marina District in San Francisco since 1997, and my company has our office on the Main Post of the Presidio. As a result, I spend a considerable amount of time in the Presidio and around Crissy Field. I am a runner and a biker and use a lot of the trails/open space in the Presidio.

I am not a dog owner, but wanted to say that in all my time spent in the Presidio, I have never encountered any trouble with any off leash dog or even seen any issues. The dogs and their owners are very much a part of the landscape of the Presidio, and I strongly disagree with any attempt to place additional restrictions on the amount of space available for dogs.

There is no need to change the current plan, and if for some reason the plan

is changed, the current proposals are much too restrictive and not in keeping with the open space use that best serves the community.

Frank Dean, General Superintendent Golden Gate National Recreation Area
Building 201, Fort Mason San Francisco, CA 94123-0022 Re: Draft Dog
Management Plan/Draft Environmental Impact Statement

Dear Superintendent Dean,

I have been a resident of San Francisco since 1977. I have lived next to the Presidio for all of my time here and have been very impressed with the Park Service's transformation of the Presidio from an army base into a National Park. I am an active environmentalist and am a member of the Golden Gate Parks Conservancy - William Kent member, the Sierra Club, and the NRDC.

I believe that the GGNRA is an absolute jewel of a resource and is generally well run. I believe that the Presidio and the rest of the GGNRA should be managed, however, as urban parks and that their management should be guided by a set of principles tailored for urban parks rather than the principles that guide the remote wilder lands that comprise the bulk of the National Park system.

One of the unique opportunities for the Park Service with an urban location like the Presidio is to introduce urban dwellers to the out-of-doors and management policies should be creative and inviting. Urban dwellers are drawn to the Presidio to walk their dogs and become enchanted with the beauty of its natural setting. Restricting dog walking will reduce the number of citizens who experience the out-of-doors...precisely what I would think the Park Service would not want to do.

I am a dog owner and have been so for fourteen years. I walk with my dog in the Presidio daily, on trails near my home and often along Crissy Field out to Fort Point. I also hike with my dog in those areas of the Marin Headlands that permit dog walking. Of course I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas. However, I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The

proposed changes to the existing conditions (1979 Pet Policy) are not based upon sound science or long-term monitoring of site-specific conditions.

As presented in the DEIS, the proposed dog management plan eliminates dog-walking (on and off leash) access for all new lands (additions to the GGNRA sometime in the future). The GGNRA's mission applies equally to new lands as existing lands; it is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands as well as for existing.

The DEIS doesn't recognize that many areas of the GGNRA are located in or next to urban neighborhoods. The DEIS excludes the quality of the urban environment from its scope, saying it is not significant. The reality is that the GGNRA provides much needed open space in a major urban area. This omission is disconcerting because the fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) to serve the metropolitan Bay Area. The dynamic interrelationship between GGNRA and our neighborhoods is exactly the human environment that the EIS is required to study, but failed to do so.

In all my time at Crissy Field, I have seen very few incidents of dogs going beyond the fences that enclose the dunes or the marsh, and even fewer incidents of dog aggression. I have never seen a dog be aggressive to an adult or a child. With the many dogs that are there on weekdays, and the hundreds that are there on weekends, I think that is quite remarkable, and certainly does not justify the restrictions being put forth in the GGNRA's preferred alternative.

Many people have worked diligently both together and separately to study the DEIS and to make thoughtful comments on its findings, in hopes of encouraging the National Park Service to rethink and more carefully document its stance. The outcome of this plan will have an important effect on the quality of life for everyone in the Bay Area. I urge you to support Alternative A with individual consideration for any new lands, for the sake of the health and recreation not only of thousands of Bay Area residents and their canine companions, but for everyone who enjoys the GGNRA.

Sincerely,

Kathryn Nyrop San Francisco, CA 94123

Correspondence: This letter is asking for your support in allowing continued access for dogs in the Rancho Corral de Tierra, soon to be part of the GGNRA. This large property is close to my home in Montara.

I am a small animal veterinarian and I have been hiking with my dogs in the local open space area for the last 15 years. This is something I do daily-and without it my quality of life would be compromised. Daily walks with my two well behaved dogs is the highlight of my day. I am a member of the Montara Dog Group as well as the Sierra Club. In addition to walking our dogs, I often bike ride or ride my horse in this same open space. You can consider me a heavy user of this wonderful resource-and I want to emphasize how well dog walkers, horseback riders, cyclists, and hikers get along and respect each other. The Montara Dog Group has encouraged responsible dog walking by starting a volunteer organization of people who remove dog waste from the mountain and by promoting leash protocols that respect all users in the park.

I encourage you to adopt Alternative E from the GGNRA Draft Dog Management Plan. This will allow continued on leash dog walking with off leash to be considered if certain criteria in the plan are met. The proposed Alternative prohibits dogs from an area where people have been walking them for 50 years. This is unacceptable.

The reasons I want Alternative E are:

This is a very small percentage of GGNRA, yet a huge part of life in Montara. In fact, one of the reasons we moved here from southern California was precisely due to the opportunity to walk our dogs in an open space.

Dogs do not harm the open space. [The Peninsula Humane Society Wildlife Expert supports this comment. There is no evidence collected by GGNRA to dispute it.]

GGNRA is a RECREATION area, and walking dogs is a very popular form of recreation.

There is a lot of room in the Corral--and all users should be considered.

Many trails afford opportunities for dogs, horses, bicycles and hikers to enjoy this open space area.

As you proceed with revising and modifying the dog plan, please select an option that includes dogs. There are two important thoughts that I want to express:

1. Dogs have been walked in this area for 50 years, and there is no documented evidence of harm. This activity benefits many local users, and it is vital that we be allowed to continue this activity.

2. I am concerned about the "Compliance Based Management" system and would like more specific guidelines about dog walking. For example, if a dog is off leash and not doing harm, would this cause the rules to revert to the next stringent level? Is there any community input allowed on this? Who would enforce Compliance Based Management.

I hope you plan to allow dogs based on site specific information for the Rancho. I would also like to see the rules depend on documentation of actual effects of dogs on the Rancho. I do not want dogs to cause any harm, nor do I want to see them restricted without good reason.

Thank you for taking the time to read and consider my comments.

Lisa

Correspondence: Recreation should not be allowed to undermine the park's mission to protect natural and cultural resources. Alternative D best reflects the national park values.

--Endangered species wildlife habitat deserve (and require) a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

--To better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, more than one trail and more beach areas free from dog recreation are needed.

--Require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs.

--Limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Thank you

Correspondence: I am a 68 year old woman who values the off-leash areas to walk my young dog. I go to Fort Funston and Crissy Field at least 4 times a week and enjoy meeting and visiting with other dog walkers as much as my dog enjoys playing with various and sundry dogs along the way. If those dogs were on leash this simply would not happen Dogs on leash often become very protective and aggressive towards other dogs and strangers. I can still manage the stairs to go down to the beach at Fort Funston, but that will not always be the case so I hope you will reconsider your plan to make all of the trails on the upper area off limits to off leash dogs. I believe that these areas should be an example of how sociable dogs can be when allowed to run off leash. I have walked my dogs in these areas since 1994 and have observed only 2 occasions that dogs were out of control and needed to be constrained. Those 2 occasions both involved dogs that were not neutered. I would suggest that efforts be made to enforce laws that I believe already are on the books, such as restricting the number of dogs that dog walkers can walk at one time and insisting that dogs be neutered or spayed. I have volunteered at Wildcare in San Rafael so I do have an awareness of the impact people and their pets have on our native wildlife. I do not believe that the proposed changes to existing conditions set by the 1979 Pet Policy will improve our impact on the natural surroundings. In order to achieve that we would all have to be barred from these areas and that includes hang gliders, hikers, horseback riders and bicycle riders. We are in an urban environment and that simply isn't reasonable or rational. Please put your energies and money elsewhere.

Correspondence: 12 aprile 2011 (28 maggio 2011 PM PACIFIC posted to ggnra in protest of their taking away leash free 1% of golden gate national recreation area to dogs)

dear mayor lee and san francisco supervisors (and ggnra "officials" literally

hiding out at nps.gov),

greetings! it is with extreme urgency that i write you tonight because i personally cannot afford to take off work and visit with each of you in person as i would have preferred to do, you see i have to work very hard every day just to stay in san francisco, my home of choice since 1986, and i understand that you all are coming to decisions and actions on the golden gate national recreation area's (ggnra's) sudden proposed anti-dog issues in and around the city and county of san francisco, and as my direct employees in my hometown and county i must give you my explicit directions: i am PRO maintaining and growing leash-free areas in and around the city and county of san francisco and i expect you to be also as well as for you to advocate for the same.

as way of quick background: people have walked with their dogs off-leash on the coastal lands of the san francisco bay area for centuries. the ggnra was created in 1972 to "provide for the maintenance of needed recreational open space" for the people of the bay area. congress stated the purpose of ggnra's creation was to "assure the preservation of open space . . . to provide public access along the waterfront, and to expand to the maximum extent possible the outdoor recreation opportunities available to the region."
(reference <http://www.sfdog.org/>)

and to share with you only some of my own qualifications, i rescued-adopted a two-year old adult dog in 2006 from milo foundation, who is my own personal california assistance dog, who lost her leg to a fungal infection in january 2009, having had two heart surgeries and a year-plus-long vascular port commencing in 2008, yes i could have bought and owned a home outright in most ANY where in the usa during the bush & co era with the moneys i personally helped pump into the LOCAL economy saving her life, not to mention nor forget the help i and she received from her team of friends and family. the fungal infection was something undetected and manifested itself only post her 2006 adoption and specifically in july 2008. as a three-legged strong and healthy dog now, her having quality leash-free areas within and around the city and county of san francisco is vital for her ongoing good health and maintenance requirements.

when the federal government including and specifically bush & co was creating the HUGE mess that we are all in now, i was helping to spend LOTS of money in the LOCAL economy, the dog health economy, as were my friends, and as a side benefit i helped maintain the health and well-being of san francisco and the state of california. indeed, i qualify as one of the many people with dogs who often refer to the surrounding ggnra areas as "heaven on earth" and i with my friends and family will continue to fight to keep the bay area's "backyard" open to all.

now i need you to step up to bat for me and mine: vote PRO maintaining and growing leash-free areas in and around my home, the city and county of san francisco, california. thank you for your immediate consideration, time, and more importantly, for your immediate actions taken on my, my family, and my friends' benefit in maintaining leash-free in full and intact throughout san francisco.

yours only with equality in the streets,

richard lynch

| Correspondence: | May 28, 2011 Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022 Dear Mr. Dean, I am a resident of San Francisco and a homeowner in District 11. I have walked the beautiful trails at Fort Funston with my dogs since 1992, nineteen years. In fact even though I lived in San Francisco since 1975, I had never frequented the Fort Funston until I rescued my first San Francisco SPCA dog. I take my dogs to Fort Funston every single Saturday and Sunday. I am 59 years old and walk with many of my friends and their dogs. These friends are between the ages of 55-70 years of age. We are either already Senior citizens or quickly on our way to becoming AARP members. We are not afraid to use the GGNRA because of off leash dogs. We love our dogs they are members of our families. In fact research shows that individuals who own dogs experience better health as a result of exercising their dogs. I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions. The Preferred Alternative is not acceptable. It is overly | | |

restrictive, and its restrictions are not justified by the totality of available data. It is based on separation and exclusion, a management philosophy that goes against the values of the Bay Area in which it is fully immersed. It violates the mandate for the "maintenance of needed recreational open space" contained in the legislation that created the GGNRA. The DEIS presents very little evidence of the impacts dogs actually have. The DEIS instead makes assumptions about what could happen.

I have been very politically active in San Francisco for two decades. In addition to the many issues I have fought for ? economic equity for women, more humane approaches to working with juvenile offenders, saving the environment by reducing our carbon footprint ? I have been active in preserving off leash dog walking in our San Francisco parks as well as the GGNRA. Given the intense scrutiny of dogs by the GGNRA and the City and County of San Francisco over the past decade and more, the fact that there is not more persuasive real data about significant impacts of off-leash dogs means that there is no real justification for the proposed restrictions contained in the Preferred Alternative. The contraction of areas available for off-leash recreation will significantly compromise the park experience for people with dogs, and could lead to an increase in conflict as more and more people are forced into smaller and smaller areas. The impacts of people moving from the GGNRA into city parks is not adequately addressed in the DEIS.

Any alternative must address these impacts on city parks and ways to mitigate them. It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option. The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal. The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for

these local residents. I love San Francisco. I am proud to be part of a community that embraces all of our differences and strives to make our community work for everyone. After careful consideration I ask the GGNRA to develop a new alternative, the A+ Alternative, that will better balance the recreational needs of the Bay Area with protection of natural resources. The A+ Alternative would include everywhere that is currently off-leash, plus sufficient off-leash opportunities in San Mateo County to meet the demand, and more trails off-leash throughout the GGNRA. In addition, new land added to the GGNRA would include off-leash areas, especially in those areas where it has traditionally taken place. There would be no compliance-based management strategy in the A+ Alternative. Any dog management philosophy in the GGNRA, like that for any other recreation use, should be based on Bay Area values of co-existence, shared space, collaboration among park user groups, and education where problems arise. Enforcement of already existing regulations should target irresponsible dog owners who create the few problems documented by the GGNRA, while allowing responsible dog owners to continue their traditional off-leash recreation without harassment.

Thank you for your consideration. Sincerely, Michelle Magee San Francisco, CA 94112

Correspondence: Please protect the wildlife by not allowing unleashed dogs to have full access to GGNRA. It would be my hope that designated areas for dogs can be established in areas that will not adversely impact the wildlife, nor the habitat.

Thank you for considering this compromise.

Correspondence: I can not encourage the National Park Service more strongly to follow through with this plan. The needs of wildlife far exceed the needs of people to be able to walk their dogs off leash as they would like. The whole reason of the National Park Service is to preserve nature and wildlife for all Americans, now and in the future. How can you accomplish that great goal when the lands you seek to preserve is overrun with dogs off leash? As an avid hiker (I hike 20+ miles with 4-5K altitude gain once a week), I have

found people with their dogs off leash in areas closed off to dogs far too many times. When this is mentioned to the dog owners they either get hostile, ignore me or state their dog is perfectly trained and the rules do not apply to them. Just hiking I have been cornered more times than I care to remember by snarling, dangerous curs. rarely do the dog owners, or is the supposed appropriate term "guardians", apologize as they struggle to get their dogs under control. Once two women kept up a conversation while one of them got their snarling pit bull and drug it away from me without uttering a word to me. I know there are many mature, sensible and polite pet owners in the world, but having been bitten once and kept off the trails for weeks after while I healed, the inconsiderate ones are my biggest fear, as I have a right to be on the trails unmolested by supposedly domesticated animals. So, I will not deny I have other motives aside from the preservation of wildlife. It is sad enough that there is potential danger from other humans, and wildlife, I should at least be safe from supposedly domesticated animals. I won't even begin to discuss the continuing issue of dog feces, either in the open or bagged up and left on the trail (who do they think will pick it up? The park maid??). I hope and pray this plan comes to full fruition and I am willing to write whatever letters, emails or make what ever telephone calls necessary to secure its implementation. Respectfully, James W. Blaine III

Correspondence: This DEIS is invalid because it fails to meet its legal obligation to take into consideration the negative effects the proposed changes would create for humans, their dogs and the surrounding environment (e.g. local parks). Further, the studies/science utilized to support allegations of damage to resources in the GGNRA are fatally flawed - the positive impacts are ignored and the negative impacts are unverified. For example, this DEIS omits the Warren study of the snowy plover which concluded recreation of dogs and their owners does not negatively affect the feeding of the plover. Instead the DEIS relies on a study performed by Audubon activists who recommend Draconian restrictions which are unjustified in areas that are not critical habitat. Therefore, I believe the 1979 Pet Policy should be implemented in its original form with no restrictions on off-leash recreation at Ocean Beach, and it should be institutionalized as a Section Seven Special Regulation. Further, I believe that all properties added subsequent to the 1979 Pet Policy and in the future should have historical off-leash recreational usage allowed. This would accurately reflect the enabling legislation for this National Recreation Area which GGNRA management has held in disregard for quite some time. I also believe the GGNRA's inclusion of a Compliance-Based Management Strategy as well as the GGNRA's failure to commit to a Section Seven Special Regulation

following this process indicates a lack of good faith and an intent to deceive the public as the GGNRA did following the implementation of the 1979 Pet Policy which the GGNRA later decried in Federal court as an "error".

Correspondence: I oppose all the Alternatives in the DEIS (especially the Preferred Alternative), I do not feel such severe restriction are warranted and would like to see enforcement of current regulations and cooperation between the GGNRA and diverse citizens representing the interests of local urbanites here in the Bay Area. I love walking my dog off leash and under voice control at Fort Funston. I want a dog management plan based on real science, not pre-determined biased obscure observations with guessed at causes and outcomes. I want to cooperate with the Sierra Club and with disability advocates and other concerned groups because I am a steward of the land and appreciate being there. I am an environmentalist and a conservationist and a dog lover and active hiker with dogs.

Compliance-based Management Strategy cannot be part of any plan. It changes status of areas (off-leash becomes on-leash; on-leash becomes no dog) automatically and permanently if GGNRA claims not enough compliance with new restrictions. No evidence of impacts from non-compliance are necessary, only the fact that there is non-compliance. This will potentially end off-leash access without giving people a chance to comment on the change. This punishes responsible dog owners for the bad actions of a few irresponsible ones. It must be opposed and removed. This poison pill is unfair and unacceptable. I oppose the Preferred Alternative because it is too restrictive. There is no justification in the DEIS for major changes. I support formalization of 1979 Pet Policy PLUS off-leash access in the current GGNRA and on new lands that the GGNRA acquires in the future.:

Recreation ? The GGNRA has a recreation mandate and the DEIS treats recreation as an adverse impact, rather than a value to be preserved. DEIS should add section evaluating benefits of recreation. Urban Environment ? The GGNRA is in a dense urban area, yet the DEIS is written as if the Bay Area and its residents don't exist just outside its boundaries. This is an urban area, not a pristine wilderness. The DEIS ignores impact on residents or area resources, especially city parks if restrictions take effect. Note that the SF Board of Supervisors passed a resolution opposing the Preferred Alternative because of the lack of study of impacts on city parks. Human Environment ? The DEIS does not consider impacts on the health (physical, mental and socialization) of people if dog walking is severely restricted. The DEIS also

does not consider impacts on social communities of people with dogs at GGNRA sites of severe restrictions take effect. Active recreation with dogs is an activity all the members of my family share; kids, teens, parents, aunts, uncles and grandparents walking on the beach together with our dogs. Family recreation activities really should be maintained. Walking dogs bring people together into communities and I have met new friends while at Fort Funston walking my dog. This is very important to me. Undocumented Assumptions ? The DEIS is full of assumptions about impacts ? things that "might" or "could" happen ? but there is no evidence of actual observed impacts. Cannot base management plan on hypotheticals. The GGNRA has had years to observe and document actual observed impacts. The fact the GGNRA did not include them in the DEIS indicates they don't exist. I have never seen dogs causing major problems, not attacking people or bothering bank swallows or snowy plovers at Fort Funston. I have seen all terrain vehicles down at the beach at this and other beaches. Safety ? DEIS claims a major safety problem with dogs in the GGNRA. But their own data indicates dogs accounted for only 2% of serious safety incidents involving dogs. The vast majority of serious incidents involved people only. Even if you include non-serious incidents, dogs accounted for a mere 7% of incidents in the GGNRA. Dogs are not a major safety problem. I walk thru the tree lined trails there and as a woman I feel safer on a deserted trail without a dog at my side. Diversity ? Dog walkers constitute the most diverse group of people who use the GGNRA ? seniors, kids, people with disabilities, gay and straight, all ethnic groups, all religions, all social and economic classes ? all interacting in positive ways, bound by their common love of dogs. There is no mention of this diversity in the DEIS. Minorities are mentioned only in the context of being afraid of dogs. The DEIS incorrectly quotes from a focus group of people who had largely never been to the GGNRA as proof that minorities don't come to the GGNRA because of the dogs. DEIS did not consider negative impacts on minorities and disabled who lose access to dog walking. I meet all sorts of diverse people and their dogs when out at Funston, especially on those few spectacular gorgeous days when it is a cross section of the Bay Area represented on the trails. Bad science ? The DEIS uses misleading literature citations to claim dogs have negative impacts on wildlife and the environment. When examined closely, many of these studies do not say what the DEIS says they do. Other references cite non-existent studies. Claims of impacts on snowy plovers and bank swallows are not supported by available data. The DEIS must start over and study actual impacts documented to occur at each site in the GGNRA, and must consider whether there are simpler mitigations that can address any impacts that are actually found. Management Tools ? The DEIS does not consider simple management tools that could be added to the 1979 Pet Policy that could alleviate concerns without needing to ban people with dogs. For example, if concern is dogs going over cliffs at Fort Funston, a low-lying fence near the cliff and better signage could keep people and dogs away from the cliff. Education programs to socialize dogs to horses

could help reduce negative interactions between horses and dogs on trails. Visitor Experience ? The DEIS describes the visitor experience as focused on people who don't want to be around dogs. I love bring my super friendly dog there to meet anyone who came without one - just to be around dogs! I have heard this on multiple occasions. Relative Impacts of Dogs Compared to Other Causes ? The DEIS considers dogs as if they are the only thing in the GGNRA. There is no context. For example, there is no discussion of impacts of natural predators on snowy plover birds and how that compares to those from dogs, or how do disturbances from people compare to disturbances from dogs. Without this context, the DEIS cannot say restricting dogs will have a significant positive impact on species. Horses, humans and ATV's have a MUCH higher impact. Negative impacts on dog behavior ? The DEIS did not consider negative impacts on dog behavior caused by severe restrictions on off-leash in the GGNRA and by resulting overcrowding in city parks. Dog behaviorists, including Ian Dunbar, Trish King, Jean Donaldson, and Veronica Boutelle, have said the loss of off-leash exercise will cause an increase in problem dog behaviors, including bites. This resulting increase in problem behaviors will lead to an increase in surrenders at city shelters, which cannot handle the increase. This is another impact on surrounding communities that was not considered in the DEIS. The SF Animal Control and Welfare Commission held a hearing on this and passed a resolution calling on the Board of Supervisors to oppose the Preferred Alternative because of that. Lack of Site Specific Information ? The DEIS fails to document actual impacts on resources at each site. DEIS assumes that if an impact "could" occur, it does occur at each site, even though there is little evidence of actual impacts documented at each site. If the DEIS cannot document actual impacts, then they cannot restrict access. Non-compliance does not equal negative impacts ? The DEIS assumes that non-compliance with leash restrictions means there are negative impacts on environment by dogs. Yet there is no evidence that impacts actually happen. DEIS has to re-evaluate that assumption and must base any conclusion on actual documented impacts.

Correspondence: I come to review the GGNRA Dog Management Draft Plan ("the Plan") with three perspectives, that of a parent of children who were afraid of dogs, of an active Presidio restoration volunteer, and as a dog owner. Incorporating all of these perspectives, I find the "preferred alternative" put forth in the Plan too restrictive for dogs and their people. Alternative A is the best option.

The executive summary states that the current GGNRA practice is not

consistent with the policy of the National Parks as whole. Consistency is not the goal that we should seek. Clarity and appropriateness of policy will serve the most people. The GGNRA is an urban park and must respond to the people who live here as well as the nation. The National Park system is much too restrictive in its dog policy. Since getting a dog our NPS visits have plummeted. The GGNRA can lead the way toward a more inclusive dog policy. According to the Humane Society of the US 39% of households own dogs. All of our national parks are prohibited to 39% of the population who would like to hike, ski, or explore with their dogs. The GGNRA

The Plan states that current practices "compromise visitor and employee safety". The level of incidents reported in the plan. The plan states that there were 43 dog bites in the year 2007-8 in the whole area covered by the plan. Considering the huge usage by dogs and people this is a miniscule! There is no mention of human on human injury or damage during that time. In the grand scope of the GGNRA and in the city this is not a problem.

While the plan spends a lot of time trying to calculate the impact of dogs on the landscape and wildlife (a huge 45 incidents of dogs chasing wildlife), there is no consideration given to the positive effect that off leash use has on the dogs and people who use it, or the loss that would be experienced if off leash access were curtailed. Off leash hiking is not at all the same as leashed walking. The quality of my experience as a human is greatly enhanced by being able to walk at my pace on a trail and to see my dog interacting with her ball or other dogs or with all the smells on the trail. Going to a dog park is like hanging out at a bar or coffee shop (for both owner and dog). It is not like taking a real walk or run. The benefit of off leash dog play of course goes to the dog too. Many experts (including former SFSPCA director Jean Donaldson) agree that off leash exercise decreases dog aggression and allows them to exercise in ways that they can't on leash. Leashed dogs can really run very far or very fast unless they have super athlete humans on the other end of the leash.

My children were initially fearful of dogs, but the many good experiences with off leash dogs at our beaches taught them about dogs. This experience enhanced their lives. The wonderful off leash access that our dogs currently enjoy makes GGNRA a destination for folks traveling with dogs. This type of experience should be expanded in our National Parks, not reduced.

The presence of people and their dogs increases public safety at places like Ft. Funston. For example leash controls would likely decrease the number of people out at Ft. Funston on winter evenings and make that place less safe for everyone who does go. I am much more afraid of other humans out there than dogs.

Decreasing off leash areas in the GGNRA would have a negative effect on

parks in San Francisco, increasing the density of dogs in the off leash areas and dog parks in the city.

The GGNRA would do well to work with local dog groups to enhance compliance with reasonable laws and regulations. I often see dog owners reminding others not to trample plants on the beaches and bluffs. We pick up after each other. I find the level of dog waste on trails and beaches to be extremely low! When local frequent park users are onboard, they can be a major help with compliance. At an open house I heard that "ease of enforcement" was a priority in making some of these regulations. I object to this. People's needs and rights to use the land should lead, not police convenience.

I would like to some specific comments to the three areas that we use most: Crissy Field, Baker Beach and Ft. Funston. ?Both Crissy field and Baker Beach have very different densities of people at different times of the week. Weekend use is high and weekday use is much less. If need be, there could be different dog usage restrictions on the weekends. This would mainly require some decent signage and initial education of users. It would be quite a huge shame to ban dogs on Baker beach on Wednesday morning when no one is there because there are lots of family picnickers there on the nice weekends of the year. The same goes for East Beach on Crissy field. On weekends and after work during the windy season, the beach is packed (kite and windsurfers), otherwise it is very sparsely populated. ? At Ft. Funston inappropriate dog-horse interactions could be greatly mitigated by appropriate signage at the major access points to the trails and beach. Many people don't know that folks occasionally ride horses there. The sign near the hang-glider landing area could be a model for the type of warning needed for horses.

I appreciate the opportunity to contribute my input.

Correspondence: Dogs have lived with humans for 10 thousand years. We have domesticated them and they have relied on us for a long time. Dogs also provide a love ambiance that helps reduce stress. To repay them for this, we should provide them with a good place to run around off-leash. Dogs should be allowed off-leash within the GGNRA.

I have a very energetic dog who needs to walk off-leash for at least 30 minutes everyday; and i walk her in many places within the GGNRA. Fort Funston, Crissy Field and Baker beach to name a few. I really love walking

with her off-leash; if the restrictions are put into use, my life, and my dogs life, would be effected in a negative way. I'm sure many, many more dog owners feel the same way. I am a 14 year old who volunteer with the Presidio Park Stewards, so I understand that dogs do have an impact on plants and the habitats of animals of all kinds. But dogs are also animals who have needs, and can also work with nature instead of against it.

Dogs need exercise to stay mentally and physically healthy. It needs to run, just letting it into the backyard will not insure the dog gets enough exercise. The best way for a dog to get exercise is by playing with another dog. The dogs run, wrestle, and chase each other, which can only happen in the dogs are off-leash. When dogs get tired they are less likely to be aggressive or have behavior problems. "A tired dog is a good dog". Fort Funston in the most popular dog park in San Francisco, and every GGNRA proposal would cut more than half of the dog off-leash areas out. If the most popular dog park in San Francisco is cut in half the people will go else where. But most other dog parks in San Francisco are too small to handle half the dogs that go to Fort Funston. Too many dogs in a park will pose more problems with waste and destruction of habitat. If the GGNRA cuts too much away there will be overcrowding in other parks.

As I see it, the GGNRA's current dog policies are working fine for everyone who visits the parks. Option A (keeping it the same) is how I would like this to turn out. I do not see the negative effects of dogs within the park. I hope you will consider my points and opinions.

Correspondence: I am a senior lesbian who moved to Pacifica a year ago from the East Bay to enjoy the beautiful ridge trails and ocean walks. Since moving here I find that the GGNRA is proposing to limit the places I can walk my dog even on an a leash, and is planning on limit further off leash walking. Sweeney Ridge where I often go with my dog will ban dogs completely and Milagra ridge will limit the trails available to me with my dog. As I understand it the area for off leash walking at Fort Funston will also be decreased. We live in an Urban area one with many dogs. By limiting access to this degree, becomes collective punishment of all dog owners. Rather than hold those who do not respect others, accountable all of us must pay. We live in a lovely natural place. All, including dogs have a right to share it. There should be more off lease areas not less. Next environmentalists will be pushing to exclude people form the parks as well.

Correspondence 3741 **Project:** 11759 **Document:** 38106

ID:**Received:** May,28,2011 23:39:21**Correspondence Type:** Web Form**Type:****Correspondence:** I have been volunteering for the GGNRA for the past 17 years and have seen population pressures mount on park resources with each passing year. I feel there needs to be a better balance of human recreation vs protection of natural resources. For this reason, I urge you to go with the preferred alternative, particularly as it applies to Fort Funston.

While I don't trivialize the importance of dog walking as a form of recreation, I don't feel it should be allowed at the expense of native habitat for wild animals and the ecosystem that supports them. The fact that dog ownership in SF has risen dramatically should not be the reason for the further demise of endangered animals and degradation of their habitat.

Correspondence ID: 3742 **Project:** 11759 **Document:** 38106**ID:****Received:** May,28,2011 23:57:41**Correspondence Type:** Web Form**Type:****Correspondence:** Please do NOT change the current pet policy on GGNRA lands. There are currently so few places in San Francisco to walk dogs off-leash. Restricting access in the GGNRA would further reduce off-leash options. Humans and dogs seem to co-exist currently. There have been few "incidents" involving off-leash dogs. If NPS is concerned about damage to natural resources, then it can issue citations to violators, but it should not punish all dog owners for the few scofflaws in our midst.

Correspondence ID: 3743 **Project:** 11759 **Document:** 38106**ID:****Received:** May,29,2011 00:25:22**Correspondence Type:** Web Form**Type:****Correspondence:** Dear Mr. Dean, My name is Brian Bullard. I am a fourth generation San Franciscan, currently living in Marin County, since 1957. I am an owner of Fur Family & Friends, a pet care agency, and am a member in good standing of Marin Pet Care Association. I have permits to walk on Open Space with my client's dogs and I walk on GGNRA property daily. I am truly concerned about the newly revised plan for dogs. I am also concerned about how dogs impact our environment, and I take great measures to keep them under control and clean up after them. The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment",

but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents.

After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program.

Thank you for your consideration.

Sincerely,

Brian B Bullard Larkspur CA 94977

Correspondence: Frank Dean General Superintendent, GGNRA

Re: Dog Management Draft Plan/DEIS

Dear Superintendent Dean:

As a longtime resident of San Francisco, I have for many years walked and enjoyed GGNRA lands, especially the Crissy Field area and the Marin Headlands, and am delighted that the National Park Service has developed a comprehensive plan to regulate dog walking in the GGNRA.

I strongly support the NPS preferred plan. It is a thoughtful compromise among competing interests and, if observed, would allow for greater preservation of GGNRA's natural and cultural resources and greater enjoyment of the GGNRA by many diverse park users, present and future.

I am concerned, however, that compliance will be a major issue. One example: I have seen numerous people running their dogs off-leash through the Crissy Wildlife Protection Area in knowing defiance of posted leash requirements. The NPS must retain sufficient powers to enforce compliance with the plan, without resorting to further rulemaking.

The draft plan's "75% compliance" proposal is a good idea, but the requirement should be higher ? 95% ?

Can some or all of the "Regulated Off-Lease Areas" be fenced, so there are

clear boundaries for dog owners and other park users?

Thank you for your extensive efforts in publicizing, and soliciting comments on, the draft plan. The GGNRA is a fantastic national resource which deserves our protection and preservation.

Nancy Smith

Correspondence: Superintendent Dean,

My name is Steve Hooker. I live in San Francisco, and have done so since the mid '70s. I have raised my family here, I own a home here, I own a business here. The land that you are responsible for is land I have been going to for several decades. I took my young son to the beaches in this city, I took my dog to the beach in this city. I continue to take her there daily, along with other dogs. I plan on growing even older than I am by continuing to go to the beach in this city on a daily basis. My idols are those older people who make the trip out the beach daily with their dogs. I will be them before long, if I am lucky.

My own usual haunt is Fort Funston. There are older people there that amaze me, who don't seem like the type to be hiking around out there, but more like the type who should be at home with a book, or in front of a screen. They know that they need to stay active if they are going to stay active, and do you know how they manage to keep themselves active? They have dogs. The dogs need to be cared for, and so they take them out and get them exercise and play and let them take care of their business too. In the process, they stay in touch with the other folks who frequent the area, and get their own exercise. They have a community, the inspiration that comes from going to a place of great beauty, and they are healthier for it. Some of them would not be able to do it if required to have their dog on leash, as an excited dog can pull and cause a person to fall and hurt themselves.

In addition to the elderly folk, there are young children, some there with their own dogs, and others who are unable to have one but who want to know about them, and relate to them. This is where that can take place, where the dogs and the kids can educate one another about how you get along with and understand another species, that shares a long history of cooperation and companionship with our own. That may not be Smokey Bear's business, but Smokey is sharing city beach lands with city dwellers, and he just might have to make a few adjustments to the way he does things.

While kids are at the park, they aren't watching TV, playing video games, eating french fries, drinking soda, etc... They are getting exercise, and that has to be contributing to their health, don't you think? Isn't there a Healthy Parks Healthy People program, and wouldn't getting people to the park be a major part of implementing it, whatever it was?

You will also find people of all races, ethnicities and religions, people with handicaps, dogs with handicaps, and more. You will find people and dogs getting exercise and socializing. There can be no better "use" of such a place. And if you don't want us to "use" it, then don't insist that it is a park.

The draft plan doesn't take into consideration for a second what a negative impact all of its options would have on this city (even the "no change" option contains the compliance based management system, which is clearly designed to get all dogs out of your park step by step). It goes so far as to say that that impact is of no great importance in the development of a plan. If you take away recreation at the beach from a city like SF, you turn us into a landlocked city, and do us a great disservice. Does the GGNRA just not care that this is one of the main ways we "recreate" in this part of the world. Recreation is part of your (the GGNRA's) mandate, and you (the GGNRA) do exist inside of municipalities that gave their lands to you with the understanding that the ways and needs of their people would be of some importance to the GGNRA. Your "park" does not exist as a plot of land that we drive to from some distance so we can view it from behind a barrier. The place you are in charge of is in our back yards, literally. If you see no reason to work with us then you have no right to serve as the stewards of our beaches.

Do a study if you have to, or you could take it from me: the people who go to the beach (besides sunbathers, and a very few others) are people with children and people with dogs. If you succeed in taking dogs out of the GGNRA, you will end up getting rid of the people who go there as well. The scariest part of that is that it seems to be your ultimate goal. Why else target the people who use the area the most, or make a lot of claims that are either untrue, unsubstantiated or ludicrous. I know you have heard this over and over, but the science that this plan is based on is not even flawed or skewed science. It is nonexistent science. You yourself admitted as much at the SF Land Use Committee hearing where you told Scot Wiener that you had no numbers to back up your claims. And of course, the NPS has a record of using "biased, improper, mistake-ridden work by scientists" (not my words, but the Interior Department's office of the solicitor's, in regard to the Drake's Bay Oyster Company issue).

I am sure there are some changes that could be made that would allow us to better share the resources within the GGNRA, but this plan makes no attempt to suggest any such changes. Instead, after years of "study," and a

ton of our money, it makes a lot of unsubstantiated claims about the potential impact of dogs on plant and animal species. Such claims need to be backed up with scientific documentation, and they haven't been.

We need a few things, and they won't happen unless this plan is seriously altered or not implemented at all. Here are a few:

The preferred alternative cannot be allowed to go forward. It is more than too restrictive, Parts of it are downright dangerous. Having the off-leash area at Funston be an area that borders the cliffs and the parking lot, given that the density in that area will be greatly increased shows a complete disregard for the safety of the pets that will be using that area. Leashing packs of dogs while descending to the beach is also a recipe for disaster.

The compliance based management system has got to be removed. It will not be implemented in a fair way. There is no way to measure compliance as a number reliably, and it will be done subjectively, by a 3rd party who will have no interest in being accurate anyway. There will be some level of non-compliance, and that level will be called excessive, and off leash will become leash, and leash will become no dog.

The existing pet policy needs to remain in place, and new lands (especially in SM county) need to have some dog recreation land, including off-leash areas. One thing that came up at the SF Supervisors' hearing was the fact that some of the users at Funston and Crissy were not from SF. Do you want to know why that is? They have no off-leash space available to them in San Mateo County to speak of, and the plan would make it so that they have less.

Where there are real safety concerns, changes can be made to situation as it is. Fences/barriers, improved signage (that wouldn't be hard). Consideration for the impact on the population of this city (canine and Human) should be evident, and consideration for the impact on City parks should as well.

We can work together to make something that works better than what we have now, but the alternatives in the present DEIS cannot be seen as suitable, even with some tweaking, ...none of them. Work with the cities you inhabit, and we will work with you. Show us that you don't care about people, dogs, recreation, or health and happiness through exercise and the inspiration that comes from spending time in nature, and we will all lose so much. I wouldn't wish a San Francisco with no beaches for people and dogs to enjoy on anyone. I would truly love for the GGNRA to continue to be something worth treasuring. I can watch TV if I want to see nature. I want to experience it, with my best friends, every day I possibly can. You would take that privilege away from me and my neighbors. Don't do it.

Correspondence: Dear Sir or Madam:

On behalf of my wife and our five year old, neutered male pug, we not only implore you, but we beg you to choose Alternative A (no action) for the San Francisco areas of Crissy Field and Fort Funston. All alternatives suggested other than no action have an adverse effect on my family, my dog, and our dog walker.

Ever since my family and our dog relocated here to San Francisco over three years ago, we have paid for a dog walker to help with our dog. And ever since then, our dog receives the requisite exercise Monday through Friday while my wife and I work demanding corporate jobs during the week. We pay a fair amount to compensate the dog walker and in return, our dog is well taken care of. We, as the owners, are assured that proper daily exercise been given to our dog by our dog walker. Further, we have used only two dog walkers in the city of San Francisco and both proprietors had come highly recommended and are well reputed with other dog walkers and owners in the city.

By proposing alternatives that reduce or eliminate geographical area for monitored dogs to roam restricts the logistics of how to best serve the group of dogs that are taken out for exercise. This in turn may congest the approved areas, reduce the surface area for the dogs to exercise, and ultimately, the dog suffers from an unproductive outing. Further, our dog walker will then be unable to provide the same level of service in the same amount of time. They may have to reduce the number of dogs taken out per outing and raise prices to their customers for the lost scalability. We, as dog owners, would suffer as well by having to pay higher prices and/or suffer

from not having our dog being properly exercised.

We are not insensitive or not understanding for the need to propose alternatives that mutually benefit all natural and cultural resources and ensure visitor safety for all that patronize the GGNRA. Unfortunately, after much thought and consideration, none of the alternatives other than no action, keep the same level of benefit for my family, our dog and our dog walker.

We feel the adverse effect of these alternatives, other than no action, simply cannot be condoned. We attended one of the first public house open meetings at Tamalpais High School and voiced our concern and also wrote in comments at several booths. We suggested the following programs to be explored since we are advocates of Alternative A: 1. Have dog walkers register with the GGNRA to establish proper channels of communication and documented compliance. 2. Post placards for an email address or website to report patrons who are damaging natural resources or endangering visitors of the GGNRA.

We simply wanted to reiterate our current position and hope you kindly consider our position of endorsing Alternative A. Thank you very much.

Sincerely,

Christopher and Renee Mendez

Correspondence: To Superintendent Frank Dean,

I have been a resident of San Francisco for over 10 years. My family and I really enjoy many of the GGNRA parks. We have a 2-year old son and a dog, so the GGNRA parks provide opportunities for us to all spend time together.

If you limited the dog areas in your parks, it would definitely negatively affect our opportunities to enjoy nature together. There are many, many dogs in San Francisco and they deserve to have places to exercise along side with their families.

I think you should support maintaining the existing dog areas (both on- and off-leash) while looking for additional areas that could be used for dog activities. Public education and outreach would also be useful to show the

public how to properly respect the GGNRA land.

It does not make sense to further restrict the use of GGNRA land for recreational and dog use. In San Francisco's urban environment, all opportunities for recreational and dog use are already fully accessed by our residents. We need more opportunities, not less.

Thank you in advance for your thoughtful consideration, --Edward
Pertcheck

Correspondence: Frank Dean, General Superintendent Golden Gate National Recreation Area
Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean,

I'm a resident of San Jose. There is nothing even remotely close to the Fort Funston/Ocean Beach experience in our area. My dogs and I make a weekly trip "up North" to enjoy the off leash freedom and unique beauty these places have to offer. In the 6 yrs I have been doing this I have yet to see a dog guardian who does not have voice control, intentionally enter a restricted area, or fail to clean up after their pet. These GGNRA areas are urban park settings, not a wilderness areas. The DEIS fails to recognize that GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship. I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program. Thank you for your consideration.

Correspondence: Before I had my daughter, my girlfriend and I (now my wife) would take walks with our pit/lab mix all over the city. The best off-leash area is Fort Funston by far. We call it dog heaven. Now our daughter is almost 2 and our dog and her are best friends. My daughter is a kinder more empathetic person because of their relationship and we look forward to our walks at Fort Funston every week. Because of the high wind and cold weather in that area, that area is only suitable for dogs and hang gliders most days out of the year. There are no absolutes in life and accidents do happen from time to time, it's because of an irresponsible owner or inattentive parent and you can avoid them easily because you usually can see them a mile away. We've been going there almost every weekend with no issues.

Correspondence: Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly in the GGNRA with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to: ? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. ? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.

? Exclude speculative, exaggerated, biased, or misleading statements and studies. ? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). ? Enable professional dog walking and align any professional dog walking rules with county or city regulations. ? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

These are my personal comments and observations regarding this plan: I attended the hearing of the Board of Supervisors and heard both sides of the argument. I was surprised and shocked at the lack of real research or facts about what's actually happening in these urban recreation areas. No one was able to link off-leash dogs to any issues that you are facing. Until there is a real exploration of the problem, it is irresponsible to ban off-leash dogs.

Sincerely, Kim Thompson San Francisco, CA 94117

Correspondence: Re: Public Comment into the presence of dogs in the listed bay area sites.

It would be ideal to keep dogs out of all biologically sensitive areas, which includes almost every site on the list. The breeding and routines of native species must be preserved and maintained and dogs are extremely disruptive. This includes leashed dogs if only because their owners often ignore the leash once in situ.

That said, I understand this is an unrealistic demand. Therefore my "public comments" would be as follows:

Allow urbanized areas such as Ft Mason, Chrissy Field, and Fort Point as leash-free dog runs. Also, as a compromise, allow Fort Funston to continue to be essentially the dog run that it is (replete with untended feces) with the caveat that this does not include the lower beach area, only the upper iceplant infested bluffs surrounding the parking lot. Otherwise, dogs have no business in the areas listed where seabirds forage, interact, and mate.

While native species are my priority I believe this is also a matter of public safety. I am a parent and a domestic animal lover as well as a naturalist. I have had the misfortune of being mauled (almost to death, in 1983) by a pair of "family dogs" who "wouldnt hurt a flea" so I am well aware of the potential danger dogs pose that their owners are often most unaware of. When unleashed slightly aggressive/over friendly dogs can be at best scary to children and at worst, dangerous. I feel that areas like Chrissy Field are excellent dog-runs, populated with many people and that dogs will tend to behave better in this more supervised setting than when in the more wild, exciting, environments of sparsely populated beaches. This is indeed a matter of public safety.

Thank you for your attention to this matter.

Sincerely, William A. Cuevas

Correspondence: I take my dogs to Ocean Beach or Fort Funston on a regular basis. They love the freedom to roam & sniff & I enjoy the exercise keeping up with them. I NEVER let them bother the birds or other wild life & I pick up not only their poop, but any other poop/refuse that I see lying around. It would be a terrible blow to no longer be able to let them go off leash. I believe that the threat of losing this privilege has awakened all dog owners to the urgency & importance of keeping their dogs under control. I hate to ever throw anyone under the bus but perhaps it is the professional dog walkers who have an excessive amount of animals to oversee & who are perhaps not a diligent as the owners who are the real problem. Perhaps more guidelines about the number of dogs one has under their control is in order but PLEASE don't totally forbid off leash activity. Thank you for allowing me the opportunity to make my feelings known. Sincerely,

Stephanie J. Garrett aka Doxie mom to Max & Fred

Correspondence: Gentlemen; i have read the entire GGNRA draft dog report as it relates to me and my dog (Crissy Field, Stinson and a few other places).

i have been walking dogs at Crissy for over 40 years and since about 2000

almost daily.

I think the proposals are stunningly awful. For over 150 years the GGNRA lands and Presidio have accommodated the local public wonderfully. Even back in the 1950s when places like Fort Cronkite were in full operation (soldiers shooting on the rifle ranges etc.) hikers and dog walkers were welcome. As a boy scout we camped there. The proposed 'plan' would ruin that.

What seems to be missing from the plan is any appreciation that these lands have been an urban, wild park. There is a claim that various species are endangered. If they have survived 150 years of intense military activity and daily dog walking one wonders why the need for change.

The argument that if dogs were allowed at GGNRA, people would urge that they be allowed in Yosemite or Yellowstone is spurious. Everyone knows the difference between an urban, entirely artificial 'museum' and wild nature. In closely reading the Draft, I see nothing but speculation about impacts dogs might have. No studies are mentioned. You are probably aware of the massive tree cutting, path building etc. that is taking place in the Presidio and the mammoth campaigns to bring people to GGNRA lands like Crissy Field (running events, camping events, visitor centers etc.) surely this activity has a much larger impact, "foot print" if you will, than dog walking yet nothing is said about it and to my knowledge no studies have been done.

Dogs have always been part of man's life. To be healthy they must be allowed to run free. The world's greatest athletes could not properly exercise a dog on a leash.

Why is GGNRA so opposed to dogs? There have been no studies to demonstrate adverse impact and they are very good for the community. People with dogs talk to one another, those without don't. I met a woman who told me that when she turned 45 she got a dog. In the next six months, by her estimate she met more people than in her entire life to that point. I met a mixed race couple at Crissy who told me that they lived in their neighborhood for two years without knowing their neighbors then they got a dog. Soon they knew everyone and made many new friends.

In my experience, dogs on leash tend to be more 'growly' and aggressive toward other dogs and people than dogs at large.

If a dog is a problem, punish it or its owner, don't punish the entire community, the vast, vast, majority of whom are well behaved and loving.

In the draft you note that eighty percent of the anti-dog comments came from out of state - get real, these lands are an urban park used by Bay Area

residents on a daily basis, not occasional visitors from Oklahoma or New York. To give these comments weight is absurd.

The draft mentions low income people are also opposed. My guess is that those people are from neighborhoods where fighting dogs are part of the culture and are very dangerous. Again, that is not Crissy Field or other GGNRA lands. Comparing their experiences with those of GGNRA users is an apples and oranges comparison and invalid.

The entire management of GGNRA with respect to dogs is contradictory. On the one hand everything is being done to encourage people to come here (and they do, in droves) but on the other, you complain that dogs create a problem. Before the Crissy Field "face lift" and even for a year or two afterwards the place was empty except for dog walkers, wind surfers, occasional bike riders and some weekend picnic parties. Today, thanks to the efforts of various governmental agencies, the place is crawling with visitors daily, rain or shine. Certainly their impact is far greater than dogs.

The preferred proposal for Crissy Field is unworkable. The off leash area is ill-defined with little parking. it seems designed to create infractions and makes no rational sense as it will only concentrate a greater number of dogs (particularly from adjoining areas where they are even more restricted) on a smaller space virtually guaranteeing problems. Further, from the maps it appears that the dog area will be the same area as is used by the increasing number of big events from which dogs are necessarily excluded. THis is short sighted and unfair.

Finally the dog exclusion or downgrade rules that add further restrictions on dogs if infractions are observed is monstrous and will result in the eventual entire exclusion of dogs. THis is calculated and mean spirited. It suggests a completely insincere effort to create a fair and workable solution to the perceived dog problem. I might add, during the short period in the early 2000s when the leash rule was enforced, the enforcement lead to huge conflicts and ill feelings not just between dog walkers and park enforcement people and other employees but also with other visitors, some of whom would aggressively demand that dogs be put on leash and seemingly go out of their way to create trouble.

My personal experience is that non-dog people appreciate my dog (and others) nearly every time we go out little children want to pet my dog, a large (65 lbs.) black poodle. Little old people want to visit with him because he reminds them of their old dog. People want to pose for pictures with him, particularly foreign visitors.

Some (very few) people or little children are genuinely afraid of dogs. That has never really been a problem. He (and most other dogs i have observed)

somehow have an innate sense that they are not wanted and stay away. He is also under good voice control and will come away and is easily leashed up.

I strongly support leaving things as they are now . If a dog is guilty of some infraction, ticket him or his owner. Don't penalize the entire community.

Best Regards Jim Thompson

Correspondence: After my father passed away 10 years ago one of the few things that cheered me up was taking the dogs, mine and his, out to Ft. Funston. Every day rain, shine or terrible wind I would pile the dogs into the car and take a long walk out at the park. Often time my step mother would join me and we could walk for hours talking and watching the dogs play. Out there is always felt like a community, I saw the same people and dogs everyday. I have meet some very nice people out there. As a small single woman I don't always feel safe in parks or by myself in them but I always felt safe there no matter what time of day it was.

I had heard from other dog people that years ago the GGNRA had banned dogs from FT. Funston and it was a terrible place to go. There was crime, a rape in fact, it was dirty and had just wasn't safe. Then the dog people took it over and it was much better. I can't say that about most parks in the City. In fact I avoid most parks in SF because I don't always feel safe or they are filled with trash or have a homeless camp in them.

When I am out there I see the dog walkers pick up after their dogs, they pick up the trash and ever have clean up days. People and the dogs get along very well. In all the years I have been going there I have rarely seen any run ins between dogs or people.If dogs get lost, someone will help you look for them. Ft Funston has become a dog park and you hardly ever seen people without dogs out there. Ft Funston is a beautiful place, but it is rather rugged

and has some harsh weather.

I do understand the park are for everyone and we need to share. The changes the GGNRA is proposing are very harsh and limiting. Over the years I have watched Ft Funston change but that was due to the weather no the dogs or even the people.

Please leave Ft Funston off leash. Do not limit the areas of access or make it off lease. I love and very much so enjoy the area as is.

Thank you

Superintendent Frank Dean General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022

COMMENTS ON THE DRAFT ENVIRONMENTAL IMPACT STATEMENT FOR PET MANAGEMENT AT THE GOLDEN GATE NATIONAL RECREATION AREA

Superintendent Dean:

The following comments will not be unfamiliar to the Park Service. For almost a decade, a variety of conservation, animal welfare, child advocacy, and environmental justice organizations have consistently impressed upon the Park Service that it must take a proactive, precautionary approach to dog management at the GGNRA. An essential component of this proactive management is to ensure that off-leash dog play areas are designed with the safety of people, pets, and wildlife as the primary design objective.

Ensuring that dog play areas are safe is not rocket science: it is a simple design problem with a basic, widely adopted solution. Safe off-leash dog play areas must be fully-enclosed with a physical barrier-and preferably all entry and exit points double-gated-to ensure the safety of park users and protect park resources.

Enclosed off-leash dog play areas ensure that our dogs do not fall off cliffs, run into traffic, or are lost while visiting the GGNRA; they ensure, when properly located, that wildlife will not be harmed or harassed by dogs; and they empower park visitors, giving them the power to choose if and when to

have off-leash dog experiences by entering an enclosed area, rather than having the experience imposed upon them whenever they visit the GGNRA.

And perhaps most importantly, enclosed areas are solidly grounded in the non-impairment mandate that governs the National Park System. An enclosure, like seat belts, bicycle helmets, safety goggles, and other safety devices, allow us all to participate in activities that are inherently risky while reducing the probability that drastic consequences from those risks materialize. This is precisely the point of the Park Service's governing mandate: to ensure that today's activities do not degrade existing resources or future recreational opportunities by permitting risky activities without adequate safeguards in place.

This is not a controversial idea: it is the principle element of good dog park design. Animal welfare organizations and park managers around the country have already adopted this design principle. For example, the American Society for the Prevention of Cruelty to Animals (which has submitted separate comments to the GGNRA) has exhorted dog owners to "[k]eep your dog on a leash when you are outside, unless you are in a secured, fenced-in area." <https://www.asPCA.org/pet-care/dog-care/dog-care-general.aspx>. The Humane Society of the United States, in its book *Animal Control Management: A Guide for Local Governments*, has explained that "[a]dequate restraint should be defined as physical control of animals; alternative methods of restraint, such as voice control, electronic fences, and chemical sprays, are not reliable for dogs whose basic predatory, sexual, or territorial defense drives have been triggered." http://bookstore.icma.org/Animal_Control_Management_A_G_P609C16.cfm. The State of California, which went through a dog management process in 2001, concluded that off-leash dog parks should "[b]e enclosed, unless located in areas where there is clear and functional topographical or other significant boundaries." http://www.parks.ca.gov/pages/795/files/dog_park_pilot_program.pdf. Even SF DOG has explained dog owners need off-leash dog play areas to have "[a]dequate barriers, natural or man-made, to protect dogs from vehicles, steep cliffs, or other hazards." http://www.sfdog.org/do/olrm_scan.pdf.

This is why, after years participating in a negotiated rulemaking process that largely failed, the negotiators reached consensus on only one point: to create a fully enclosed, double-gated off-leash dog play area on the Oakwood Valley Fire Road. As promised by the GGNRA, this consensus position was included in the preferred alternative in the existing plan.

Unfortunately, this is probably the only sensible part of the GGNRA's preferred alternative. The preferred alternative, rather than ensuring that off-leash dog play areas are safe, creates an unworkable, expensive, and risk-inducing compliance management plan for off-leash dogs. Apparently in lieu

of erecting simple barriers, the GGNRA intends to hire monitors to observe off-leash dog behavior, ratchet-up enforcement only after violations and harm to park resources occur-through a compendium amendment process no less, which evades basic administrative rulemaking procedures that govern national parks and federal agencies-and spend millions of dollars on this process.

If the expense, time, paper, and staff resources spent to date on the GGNRA's failure to resolve the off-leash dog problem at this park weren't insult enough, the GGNRA's proposal will deliberately extend this ongoing problem for decades to come. It is patently absurd for the Park Service to waste so many government resources on such a plan when a simple, physical solution is readily available, and particularly so when the park needs to be directing its resources at risks from oil spills, climate change, and managing the highest concentration of endangered species in any National Park in North America.

Yet the GGNRA has dismissed the most cost-effective, consensus-based, and most widely adopted recommendation for designing good off-leash dog play areas: enclosing them with physical boundaries. The GGNRA "considered but dismissed throughout the plan/EIS" any consideration of enclosures because of concerns about aesthetics and because of an artificial constraint that the Park Service placed on this alternative, and only this alternative: that physical barriers be so impermeable that all off-leash dogs will be contained by the barrier. This is an arbitrary and capricious justification for precluding this alternative from consideration under the EIS alternatives section. The Park Service admits that it's preferred alternative, a compliance management program, will only strive for 75% compliance-a far lower standard than the standard the Park Service apparently applied to physical barriers when they were rejected from the alternative analysis. This is a blatant failure to comply with the National Environmental Policy Act and the Administrative Procedure Act.

Moreover, the Park Service's suggestion that barriers will destroy the aesthetics of the Park Service is not only arbitrary and capricious, but also directly contrary to the Park Service's existing practice at the GGNRA. In location after location-from Milagra Ridge to Fort Funston to Land's end to Crissy Field to Oakwood Valley to Muir Woods-the GGNRA is constantly enclosing sensitive resources with post-and-cable and other physical barriers to protect park resources and values from activities that may harm them. The Park Service's decision to eliminate from consideration enclosing threats to resources, while it continues to enclose park resources in nearly every unit it manages, is completely unexplained in the DEIR. This failure to explain its decision is a fundamental failure in compliance with the National Environmental Policy Act, and the Administrative Procedure Act.

Perhaps most importantly, the Park Service's decision to enclose the resource while allowing threats to roam the park freely is inconsistent with precautionary management and the non-impairment mandate of the Park Service's Organic Act. By enclosing park resources, the GGNRA is slowly converting this great urban National Park into a zoo-like environment, where visitors move from enclosed to exhibit to enclosed exhibit to catch a glimpse of the incredible resources available in the Park. This is precisely the opposite of how the National Park Service should be managing its resources: it should be containing threats to ensure they do not impair the landscape in away that precludes future generations from enjoying the Park. It should not be enclosing the resource into segmented areas while the rest of the Park is impacted by uses that are incompatible with its basic operating mandate.

Even if one were to put aside the inconsistency of the Park Service's aesthetic rationale for excluding enclosures from alternative analysis, it is simply unfounded on the facts. The Park Service seems to believe that only 6-foot high chain-link fences, perhaps with barbed-wire along the top, are the only physical enclosure that can be placed around off-leash dog parks. But this is far from the case. Off-leash dog parks can have a variety of physical barriers, including features from the natural environment. Indeed, a fully-enclosed off-leash dog park proposal for Lake Merritt included butterfly garden draped around the enclosure. At its core, this argument is simply a design problem, not a problem that is so intractable that it is justify to exclude from alternatives analysis.

But a few things are clear about dog management: if an area is inappropriate for a physical barrier, then it is not an acceptable place to allow dogs to roam off-leash. If the Park Service truly believes that barriers are not appropriate, then it simply should revert to the National Park Service's leash law as the preferred alternative, because the park service has failed to demonstrate in the EIR that voice control is sufficient to keep dogs from encountering dangerous situations. Indeed, several articles and recommendations that expressly state that voice control is insufficient to ensure dogs remain safe from harm, yet the Park Service has failed to acknowledge these articles while proposing to continue a voice control management plan in the Park. This is an arbitrary decision by the GGNRA: and these articles are attached, again, so the GGNRA can contemplate its error one more time.

At its core, the thousands of pages in the Draft Environmental Impact Report is nothing more than papering over a structural problem within the GGNRA. The GGNRA appears to believe that there is a political problem in enforcing leash laws to this day. And while there may have been a political problem a decade ago, the political paradigm has changed enough so that the public will support the GGNRA to enforce the law: if the GGNRA simply creates a plan worthy of the public's support. Since 2001, San Francisco has been the site of several nationally-recognized dog maulings and attacks, and the numerous

problems with pet management in both City and National Parks has changed the paradigm in San Francisco and the greater Bay Area. As the DEIR states, off-leash dogs have become a limiting factor in attracting ethnic minority groups to the GGNRA, which is particularly disconcerting given the park was established to bring national park values to urban impacted people. The Northern Arizona University phone survey shows that 71% of Bay Area residents support enforcing the National Park Service's leash law at the GGNRA. At every public hearing since 2001, opponents of leash law enforcement have been outnumbered by supporters of it: when the GGNRA provides a sensible management plan for these supporters to stand behind.

Yet again, the GGNRA has put forward an unworkable plan that, given its reluctance to enforce leash laws historically, is unlikely to be implemented; given the fiscal constraints of modern government, is unlikely to be funded, and would be inherently unjust if it was; and which did nothing to protect resources before harm occurs. In the process, the GGNRA has isolated itself from its supporters, and thereby is creating the political problem that would otherwise exist only in its own perception.

For all of these reasons, the Wild Equity Institute urges the GGNRA to reject the preferred alternative and, in its place, put-forward a pet management plan that encloses any off-leash dog play area that is permitted under the plan. If enclosures are inappropriate in a specific area, then so is an off-leash dog play area, and alternative dog recreation opportunities, such as on-leash walking, should be considered.

In addition to these comments, I refer the National Park Service to comments submitted by Charles Pfister, Dan Murphy, Golden Gate Audubon Society, and comments submitted by the Wild Equity Institute and the Center for Biological Diversity during the ANPR process, the NEPA scoping process, and the numerous other hearings that have occurred on this issue over the past decade, and incorporates those documents here by reference. In addition, I refer the GGNRA to the 2005 Leash Law Enforcement Petition and the over 100 exhibits attached to it. I would like to refer the National Park Service to additional documents that I requested through the Freedom of Information Act in December of 2010: but the Park Service has violated the Freedom of Information Act, our First Amendment rights, and our rights to participate in this administrative proceeding by failing to process those records in a timely manner. To this date thousands of responsive documents have not been disclosed. Sincerely,

Brent Plater

Correspondence: I was disappointed to learn of potential changes to dog leash laws affecting GGNRA lands. Having relocated to the Bay Area about 3 years ago from Los Angeles, one of the biggest draws of the area was the relative abundance of open space for use with my dogs. My partner Sev and I frequently take our dogs to the various parks and beaches in Marin, most often Stinson beach, in areas currently permitting them to be off leash. While back yards in Marin don't provide an abundance of space for our dogs to run freely, I was willing to pay the purchase price of a home here and corresponding taxes knowing that the park lands would essentially provide an on-demand back yard. I would encourage you to reconsider modifying the current policies and regulations of the GGNRA. Sincerely, Kurt Mortensen

Correspondence: I am writing to express my opposition to dog management rules proposed by the Golden Gate National Recreation Areas.

The current restrictions are more than adequate to protect wildlife, the land, to encourage the urban parks' use, and to accommodate park users who do not like dogs.

I have yet to hear anything that even begins to convince me that their plan will benefit the bay area urban wildlife enough to warrant the drastic changes they propose for dog access to the parklands. Any tour of most of the land in question will reveal wildlife flourishing in proximity to people and their dogs. It is only because wild species are doing well under the present setup that there is any wildlife to protect and manage.

The GGNRA has not presented any evidence about how their plan will improve conditions for wild species. Instead, GGNRA comes to the issue of parkland use with a simple agenda ? fewer people with dogs is always better for the parklands. This stark ideology is no way to run any park system, particularly one that weaves its way through an urban area.

I have particular experience with the San Mateo County GGNRA lands. Sweeney Ridge, Milagro Ridge, the areas in Montara ? these lands get very little public use. Only an agency that was driven purely by an ideological agenda ? fewer dogs is always better ? would consider changing the access rules for these lands. There is simply no need for change, because the park

users' impact on these lands is so minimal.

Please keep dog access rules the way they are now, with only a few spots, like Muir Woods, closed to people with their leashed dogs. By any measure, bay area GGNRA lands are doing well. There may be a few discrete areas where changes to the present regulations are necessary. But the present GGNRA report simply does not factor in the public benefit that accrues when park users are permitted to walk their dogs in GGNRA land; nor does it factor in the impact on other non-GGNRA park lands if dog owners are forced to take their dogs to these parks because they are locked out of GGNRA lands that were formerly amenable to dogs and their owners.

Please do not reduce dog access to any of the GGNRA land below their current levels. The dog management report provides no support for reduction in access; a tour of the vast majority of GGNRA land reveals that no reduction in dog access is necessary.

Thank you.

Correspondence: Dear Superintendent Dean, I have resided in the Bay Area since 1968, and have lived in Mill Valley for 31 years. I have always had dogs, and have chosen places to live that make it easy for me to have access to spaces that I together with my dogs can enjoy. Currently I live about < mile from the trailhead to Miwok Trail, where I have hiked with my dogs over 30 years. I use most of the GGNRA spaces-the Coastal Trail, Muir Beach, the Marin Headlands, Homestead Valley, etc.-in our area. I am out with my dogs almost every day (I am now retired). I am very familiar with your proposal and am extremely opposed to it. The GGNRA was established as a recreation area. Your report barely makes reference to that use. As someone extremely familiar with all the local GGRA in which dogs are allowed, I find little evidence that dogs have any significant impact on the native animal nor plant environment. I believe that dogs have less of a negative impact than certainly people-as well as other recreational users. But not only has my personal observation supported that-more importantly the GGNRA's proposal cites reasons for the severe limitations of dogs-both on-leash and off-leash-are NOT supported by scientific evidence. In addition, the majority of people without dogs, upon seeing my dogs, on trails or at the beach, seem not only not minding them, but delighted by them. They bring smiles to people of all ages. For me, my dogs are integral to my exercise, and therefore to my health. The GGNRA proposal is not only unnecessary but if enacted, harmful to the lives of both humans and dogs alike, and

would have minimal positive impact on our environment.

Respectfully,

Gayle Donsky Mill Valley 94941

Correspondence: While I realize that park management involves balancing recreational uses with stewardship of natural resources, I feel very strongly that the needs of sensitive wildlife and habitats must have priority over those of visitors and their dogs.

It has been my observation over the past 10 years that leash requirements are routinely ignored by the majority of dog walkers at GGNRA sites in San Francisco. The proposed Plan is a compromise that will allow dog walkers much more leeway than they would have anywhere else in the national park system. It will be up to dog walkers to show they are willing to abide by the new regulations.

I urge that the Plan/NPS preferred alternative be modified as follows:

? Clearly define the boundaries of off-leash areas by installing fences or other barriers that have low environmental impacts. Off-leash areas that are not enclosed will not provide adequate protection for wildlife, park users, or on-leash dogs.

? Raise the standard of compliance with regulations to 95%. Given that very large numbers of dog walkers and dogs visit the park, even a 5% violation rate represents a significant number of incidents. A 25% violation rate is plainly unacceptable.

? Increase the number of trails in San Francisco that are closed to dogs. Birds and small mammals perceive a dog as a threat even when that dog is on a leash. People who are afraid of dogs or simply prefer not to encounter them should have more than one trail available to them.

? Establish a limit of no more than three dogs per person and prohibit commercial dog walking.

Correspondence: I am writing to oppose the GGNRA management plan for off-leash dogs. I have two small dogs, 20 lbs. each and as a city dweller, a fourth generation San Franciscan living in Cow Hollow, the accessibility to Crissy Field has been exceptional as a place I have gone almost every weekend for the past six years. Words can't describe how important this area is for dogs to play, run and socialize - we've been so lucky to have it. If you take it away, or limit our access, it would be a crime. Dogs need socialization - they're much better adjusted, interact better with other dogs and humans. Do you not go out there yourself to see how well-adjusted and happy dogs and owners are when they have the room to run, exercise and play? To take this away or severely limit access is just not fair. We're tax payers. We follow the laws. At Fort Mason, where dogs are not allowed off-leash, when you walk the dogs at night, there are drug dealers, homeless dwellers defecating wherever they want to; it seems you should focus your energies on these types of situations rather than law-abiding dog owners. Please reconsider.

Correspondence: _____ May 29, 2011 _____ (date)

Frank Dean, General Superintendent Golden Gate National Recreation Area
Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly in the GGNRA with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors,

families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to: ? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. ? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. ? Exclude speculative, exaggerated, biased, or misleading statements and studies. ? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). ? Enable professional dog walking and align any professional dog walking rules with county or city regulations. ? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

These are my personal comments and observations regarding this plan:

Although we like our neighborhood city park, Alamo Square, and play there regularly, it just isn't big enough for everyone. Our dogs are very athletic and like to exercise, they don't enjoy hanging around wrestling with other dogs, they like to work. We love Crissy Field and Fort Funston among others because they offer an expansive stretch of land for off-leash running and ball chasing which is essential for our dogs' health (as well as our own!)

It brings joy into our lives watching our dogs light up with such happiness in these places. Like many San Franciscans, we don't have children (or a yard), but we have dogs, and they are a big part of our family life. Exercising them and playing with them is how we love to spend our free time. We don't want the off-leash recreation area taken from us, we value it and visit it more frequently than most residents! I rescued a dog from the SFSPCA a few years ago and she's so smart, athletic and energetic that I have to take her to the beach to fully exercise, condition and keep her happy. She is a working dog who swims, runs and hikes to keep balanced. She cannot get this kind of exercise/stimulation at most of the city parks because they are crowded and/or small. Having access to GGNRA parks are one of the big reasons we still live here in the city and it would be devastating to lose this recreation area especially since dogs are prohibited in most California State Parks as it is.

Sincerely, _____KSF_____ (name) _____San Francisco, CA 94115_____ (city, state, zip)

Correspondence: May 29, 2011 Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022
Dear Mr. Dean,

I frequent Crissy Field on a daily basis as a runner. Perhaps my greatest pleasure in experiencing this area of the GGNRA is watching the numerous dogs romping on the beach and playing with other canines. It is part of what makes Crissy Field such a fun experience. I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law. The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded. This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the tens of thousands of Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others. The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to: Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. Exclude speculative, exaggerated, biased, or misleading statements and studies. Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). Align commercial dog walking rules with county or city regulations. These are my personal comments and observations regarding this plan: (here's where you fill in your own personal story and what you've seen when you've been out at the GGNRA).

In regard to my experience at Crissy Field, I know there are those who have raised safety concerns about off-leash dogs. In the twenty years I have been running there on a daily basis, I have never personally witnessed a problem. IF ANYTHING, IT IS THE NUMEROUS RENTAL BIKE GROUPS, SUCH AS 'BLAZING SADDLES", THAT CAUSE ONE OF THE LARGEST SAFETY HAZARDS. There is no regulation on how many

bikes can utilize the Crissy Field walkway and on weekends there are hundreds of rental bikes. Often the riders are in groups, chatting and snapping photos of the Golden Gate Bridge. I;ve never had an off-leash dog run into me, but I have been hit on a couple of occasions by bike riders who are not paying attention.

Thank you for reviewing by comment. Again, I stand with the San Francisco Supervisors in opposing the GGNRA's dog management plan. Sincerely,

Pamella Earing San Francisco, CA 94115

Correspondence: Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean:

I had the opportunity to meet you and both the public meeting in Pacifica and the San Francisco City Council hearing room. You seemed like a decent, forthright man. So I am particularly puzzled at your staunch opposition to dog access in the GGNRA.

I am writing to oppose the GGNRA's draft dog management plan. From speaking to you and other park service employees, I have come to the same impression as many members of the dog community -- the report is not based in fact; instead, it relies on speculations, exaggerations, misleading statements, and pure anecdote. Its conclusions are not supported by either the science or the law; nor do they even have enough substantiation to begin to convince me my conversations with you and other park service staff.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness area. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

The proposed dog management plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their dogs. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

What strikes me as particularly odd is that someone like me has a lot in common with GGNRA staff. I love the Bay Area hiking trails. I want to see them preserved. I support the park service, including funding increases, etc. I find it very distressing to find that the park service wishes to exclude me, one of their supporters, based on spotty reasoning influenced more by ideology than by science. Simply put - I thought I was part of your constituency and have found out that instead you want the GGNRA lands to be something close to a terrarium as opposed to an urban park system that encourages public use and conservation.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

honor the original 1979 Pet Policy and respect dog-walking as legitimate recreation;

provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County;

exclude speculative, exaggerated, biased, or misleading statements and studies;

provide reasonable ways to address any significant adverse impacts from recreational activities, using the same objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.);

eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

The present plan reads like an ad hominem attack on dogs. In fact, dogs' impact on the GGNRA lands appears minimal; certainly, nothing in the report our conveyed in conversation by yourself or park service staffers suggests otherwise. Speculation I heard from GGNRA staff about what might benefit the Blue Mission Butterfly or about the benefit of swaths of land through which predators may be able to migrate if there are no domestic dogs anywhere on the land do not justify the measures proposed by GGNRA.

I have walked all over the San Mateo County lands that will be affected and see hardly any people. Many of those people I do encounter are enjoying the parklands with their dogs. The facts on the ground do not warrant the draconian management plan preferred by the GGNRA.

Very truly yours,

Jonathan Lipsky

Correspondence: Thank you for the opportunity to comment on the GGNRA Dog Management Plan/EIS. Everyone agrees that a balance between recreational uses and the protection of the natural resources within a park is a good thing. I strongly believe that the preferred alternative is not a balance between these two competing uses. I think it unduly favors a particular use group: dog walkers.

As a frequent visitor to GGNRA lands of San Francisco and San Mateo County for more than 20 years, I have noted that the majority of dog walkers do not follow the leash or voice control requirements. The proposed new dog management policy is too weak to protect natural resources/wildlife (plants and animals), people who have a fear of dogs, and other dogs who are on leash. To make it stronger, please:

? require all off-leash areas be enclosed to protect park users, wildlife and other dogs; ? limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats; ? provide more trails that are free of dogs (currently, only 1 trail in San Francisco will be available for those who do not wish to interact with dogs); ? limit dog walkers in the park to 3 dogs and to not permit commercial dog walking; and ? implement compliance-based adaptive management that requires at least 98% of dog walkers to comply with the new regulations.

I have personally witnessed off-leash dogs chasing snowy plovers on Ocean Beach in the area where these birds are supposed to be protected (and I do know how to distinguish snowy plovers from sanderlings).

Correspondence: Dear Park planners, I am a concerned citizen who has spent nearly two hours every day on Ocean Beach from Santiago Street to the Cliff House and back - for the last 15 years. I love this beach. I love the people on this beach. I love the birds on this beach. And I love the dogs on this beach. This unique natural resource welcomes all and needs to be open to all forms of

recreation - including ample off leash running areas for our canine friends. There is no greater sight or feeling than watching dogs romp, play, and run as fast as the wind. I have witnessed hardly any problems do to the dogs - and they provide a great deal of enjoyment and pleasure to the visitors to Ocean Beach. Please maintain an ample area for our beloved friends to run - it is a noble creature who should be treated as man's best friend. Thank you, Peter Munks (call anytime, , and I will discuss this at length)

Correspondence: I strongly urge the GGNRA to revert to forbidding "voice control" off-leash dogs in the GGNRA. That original plan is in compliance with federal code, and rightly so. "Voice control" is a joke. It is a misnomer, something that can be debunked in minutes through observation.

The sense of entitlement and ensuing political pressure that dog owners have in San Francisco and surrounding areas have led to making various state and city parks unenjoyable for many park patrons, including myself.

I have been assaulted various times by unleashed dogs at parks, and once by a dog owner or friend of the dog owner for defending myself from a dog attack by an unleashed dog at Marina Green (which is part of the GGNRA). The park ranger who responded to the incident seemed to imply that it was not wise to object to off-leash dogs or even them violating one's personal space. The dog owner, to my knowledge, was not cited.

In a larger context, cats (feral or domesticated), wild animals, children, and senior citizens do not attack people, but dogs do attack these and other populations of people. Then there is the impact on the fragile environment by scavenging dogs.

A more complete protection of all park users and the GGNRA itself is needed. At minimum, do not give into any diminishing of your proposals to protect the parks. Preferably return to true protection of the Bay area and all of its creatures and reduce off-leash access further than proposed.

<http://www.tinyurl.com/GGNRAcommentonline> Frank Dean, General Superintendent Golden Gate National Recreation Area San Francisco, CA 94123-0022

Dear Mr. Dean, I'd like to introduce myself and tell you of my interest in Crissy Field and the pet policy currently under consideration for the GGNRA. My name is Zoe Schwartz and I live in the Marina district just a few blocks from Crissy Field. I am a retired senior citizen and I love to walk in Crissy Field. I am also a dog owner, and my dog enjoys the walks as much as I do. Together we take long walks, usually twice a day, and these walks are very healthy for the both of us.

I am a supporter of many environmental organizations. In particular, I have been active in the Trust For Public Land which, as you know, has been instrumental in acquiring land which has been transferred to and incorporated into GGNRA. I am a staunch believer in their credo: Parks for People. Crissy Field is a unique urban park where people of varying interests including walkers, joggers bike riders, boater, windsurfers and more share an amazingly beautiful spot and do so in a respectful way. One of the first things that amazed me when we moved to the Marina district and began frequenting Crissy Field was how amazingly well the off-leash policy works and how diligently the dog organization works to maintain the cleanliness of the park. They monitor and maintain the dispensers that provide poop bags and on many occasions I have observed members of the organization picking up random poops left by some less considerate dog-walkers. They also educate people as to the sensitive areas of the park and the rules and restrictions applying to dog owners with regard to those areas. I am not a member of the organization but I admire and am thankful for their diligent efforts to make Crissy Field a place where people and dogs can get along harmoniously.

As a firm believer that "if it isn't broken, don't fix it," I do not agree with the GGNRA's proposed changes that will significantly restrict and, in some areas, eliminate off leash dog walking. I see no need for changes to the existing conditions (1979 Pet Policy). While I fully understand that there will always be a few irresponsible dog owners just as there are irresponsible people in all walks of life, I think it is unfair to punish the vast majority for the transgressions of a few. What I do see in this situation, is the opportunity for the park and the community to work together to provide clearer rules, more signage, improved vegetative barriers, and increased education and outreach as part of the overall program that balances recreational use (including dog-walking access) with preservation. For that reason, I humbly request that you adopt a modified Alternative A, the "No Action alternative". Thank you for your consideration. Zoe Schwartz

Correspondence: I am a 31 year resident of San Francisco and have a wife, a six-year old daughter, and a dog. All of us need open space to walk, run and play. The proposed plan for limiting access for dogs is going to, at the very least, split the family as we will be forced to exercise the dog in a different location than our child likes to play.

AS THINGS ARE NOW we (husband, wife, daughter and dog) can spend time together walking in the headland or playing at Crissy Field pretty easily.

AS THINGS MIGHT BE the opportunities for all of us to be together will be severely restricted and, I think, practically speaking, eliminated as we do not have that much time as it is.

I would add that we had the child before the dog and there were times I would have preferred to be in a dog-free place. This is something easily done with a some notices and a few additional porta-johns. However, this proposal is taking an completely insensitive meat axe to the problem that as far as I can see is not based upon any sort of study.

Our family is at Crissy Field at least three times a week with the dog at least three times a week. No one has been there to ask us a single question as to how we use the space or what we think might be an improvement. I certainly do not believe public hearings give one an accurate picture of the actual use of areas and the consequence to the area of that use. Who has time to show up at a public hearing during work hours?

Both kids and dogs need a place to run -- and a lot of those kids like running with dogs to play with.

Frank Dean, Superintendent, GGNRA Building 201, Ft. Mason San Francisco CA 94123-0022

Via E-Mail

Dear Mr. Dean,

I am writing to strongly object to the proposed Golden Gate National Recreation Area (GGNRA) Draft Environmental Impact Statement (DEIS) for areas currently used by off-leash dog walkers in Marin, San Francisco and San Mateo counties.

I urge your office to formally adopt the status quo regarding existing uses of GGNRA lands, and maintain policies that encourage varied forms of recreation in current and future acreage.

I am a middle aged Asian woman. I reside in the Twin Peaks area of San Francisco. Since September 2001, I have walked as often as possible, at least weekly, preferably daily, with my Labrador mixed breed dog at Fort Funston or Crissy Field. My dog is off leash and under voice control. My dog and I walk in all kinds of weather, year-round. I am vigilant about cleaning up after my dog, and carry extra supplies that I freely offer to those dog walkers caught unprepared or in inconvenient locations. I am a supporter of The Nature Conservancy and the Natural Resources Defense Council.

Assuming there is a need for the DEIS, other than for punitive purposes put forth by a vocal minority of park visitors whose attitudes towards dogs are generally negative, the following comments are based upon my use of GGNRA parks in all three counties, and the GGNRA public meeting on 7 March 2011.

My objections to the DEIS are that it is too broad, too vague, and applies the wrong standard to the miles of coastline subject to GGNRA oversight. The statement seeks to conform all GGNRA lands now and in the future to a standard of oversight and use that is inconsistent with urban areas and present uses. As the regional population increases, presumably the frequency of use and variety of uses for acquired lands will also increase.

Too Broad

The scope of the area within GGNRA boundaries is relatively large for an urban park, and getting bigger. At most, a single digit percentage of total lands supervised by GGNRA is currently used by recreational or professional dog walkers. The acquisition of additional land is anticipated in

the near term, and broad-brush application of use restrictions regarding that land is not supported by the DEIS.

The DEIS does not refer to specific or generalized instances of visitor conflict related to dog walking practices within existing, traditional, popular dog walking areas. The fact that previous attempts to regulate off-leash dog walking resulted in conflicts between park personnel and visitors does not mean that off-leash dogs per se constitute a health or safety risk to other visitors. Park personnel are entitled to clear guidelines regarding their duties and responsibilities. Arbitrary or seemingly arbitrary enforcement of DEIS preferred alternatives will not serve park personnel, or the public, well.

Too Vague

Adopting GGNRA's preferred alternatives may or may not result in increased numbers of visits or a broader variety of visitors overall. The DEIS does not detail any statistical or other evidence for the assertion that people are dissuaded from using GGNRA lands in general due to the presence of off-leash dogs. I specifically object to the implication that racial, gender-based, age-based or class-based complaints led directly to the GGNRA proposed rule change. If GGNRA intends to make such assertions in a public document, statements must be on the record, at minimum generally attributed, and accompanied by relevant demographic details. Similarly anecdotal evidence from regular dog walkers regarding frequency of visits would be strongly to the contrary, and no doubt can be substantiated if needed.

I see disabled visitors to Fort Funston rolling in wheelchairs or using walkers on paved trails to walk their dogs on a regular basis. Such use does not appear to be curtailed by the presence of scores of off-leash dogs in close proximity. To the contrary, the presence of other dogs and their people appears to energize such visitors, and encourage them to participate in recreation. It is clear, with my dog, that seeing and greeting such visitors sensitizes her to the fact that people are all shapes and sizes, and all are entitled to respect.

If the purpose of the DEIS is to establish a precedent to reclaim urban-adjacent areas to wildlife habitat, GGNRA must state that purpose. Reversion to habitat precludes most recreational uses, including hang gliding, horseback riding, cross country running, and cycling, none of which are subject to restriction proposals in the DEIS.

Wrong Standard

The assertions proffered in the GGNRA DEIS regarding traditional off-leash dog walking areas fail to note the realities of open spaces in close proximity

to urban areas. Most of the locations proposed for more restrictive dog policies include amenities such as water fountains for dogs and people, garbage bins and plastic bag dispensers, paved or unpaved trails, installed steps or rock buffers too steep for most casual walkers, benches, parking lots, and public restroom facilities. Those indicia are not compatible with the express and implied intent to convert to restricted use disallowing off leash dog walking or outright bans on dogs. GGNRA proposes to promote and enhance natural areas preservation and restoration in locations where the existing and probable future population, including companion animals, is already established. The aims of GGNRA in specific areas which are already subject to multiple uses, including high frequency, high volume off leash dog walking, omit and summarily dismiss the recent history and recreationally beneficial impact of such uses, and are therefore misleading as presented in the DEIS. I submit that the GGRNA lands frequented by off-leash dogs and their people are safer and more welcoming to park visitors in general than areas that are more desolate and offer fewer amenities. For those who wish to encounter nature on her terms, the National Park Service is world renowned for maintaining and protecting land for that purpose.

Conclusion

The GGNRA now encompasses many miles of shoreline that were granted to its supervision by municipalities and local jurisdictions with the expectation that the future uses of those lands would be preserved for, and enjoyed by, generations to come. Improvements to those lands have resulted in one of the outstanding examples of urban parks anywhere, in terms of accessibility, variety, and scope.

This letter commends GGNRA for stewardship of some of the most valuable real estate in the world. My objection is limited to the recurring, and misguided, efforts to restrict the access of a longstanding and dedicated population of park visitors who visit specific areas for the specific purpose of walking their dogs off leash. That opportunity is a privilege and a premise of living in a region where quality of life is of utmost importance. It is an opportunity freely shared with all who visit for similar reasons. Please retract the proposed changes to dogs in the park, and work with interested parties to ensure that all who visit may enjoy their time at the GGNRA.

Thank you for your attention.

Respectfully, K. Lu San Francisco, CA

Correspondence: May 29, 2011 Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022
Dear Mr. Dean,

My husband and I have lived in the Cow Hollow area of San Francisco for the past fifteen years. We have three very active children, and I must say that bringing them up without a backyard would have been a challenge if it were not for the Golden Gate Recreation Area. At least 4-5 days per week we get our exercise by walking our dogs at Chrissy Field, Fort Funston and other areas. It has become a healthy and bonding family tradition to walk, talk and hike with our dogs. It is such an integral part of our week, it would be devastating to see it end.

I guess you could say that we could leave the dogs at home, but that is ostensibly the reason why we walk. They are happier and healthier, and so are we.

It is essential for the GGNRA to consider reasonable alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option.

This DEIS and Plan doesn't recognize that environmental values include both recreation and nature. In many places, the DEIS implies that recreation only harms natural resources. The document doesn't acknowledge that people care about both and that people with dogs are most often the best stewards of our environment. Further, the proposed broad limitations in the DEIS are largely without site-specific science that demonstrates that the perceived degradation of the quality of the GGNRA's natural resources are actually attributable to dogs vs. other factors.

After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program.

Thank you for your consideration.

Christopher & Jane Cook

Correspondence: Hi, I feel a responsibility to all the dogs and dog people I know to speak up on the GGNRA management plan currently under consideration. The only place still available for walking dogs off leash anymore in this area (Pacifica) is Fort Funston. That is still quite a drive, but people go because there really are no other legal choices. The prospect of losing Ft. Funston, to what sounds like a glorified enclosure, is really frustrating and heartbreaking. Dogs need to run to be healthy and happy. Furthermore, it seems logical that having dogs is a healthful commitment emotionally and physically for people. In this day, when exercise is in the forefront of a healthful lifestyle, dog walking is a happy possibility for urban dwellers. To say that these few places currently available for dog walking are for dogs is inaccurate; they are most certainly for the people who love dogs. The people I have observed at Ft. Funston are unfailingly responsible about curtailing their dogs' behavior and messes. We also show our appreciation for having this great area by having clean up days to maintain plants and debris on a regular basis. People, without dogs, can walk just about anywhere and there are an abundance of options for them. We do live in a beautiful area just

loaded with nature's opportunities. I am so hopeful that this process is still open to new ideas and solutions and not a "done deal". I really believe that it will be a big step backward for what is normally a fair-minded and forward thinking area--San Francisco. Sincerely, Alice Garibaldi

Correspondence: Dear Superintendent Dean,

My name is Jeff Ubersax, age 36. I have lived in San Francisco for 14 years and have lived in the Inner Sunset for the past 13. I received my Ph.D. in Biochemistry and Molecular Biology from UCSF. I am currently an employee of Amyris as a Scientist where we are working to make renewable chemicals, drugs, and biofuel to displace petroleum usage. I am a current or former member of REI and the Sierra Club and consider myself an environmentalist.

I have a well trained and well behaved dog and have enjoyed walking him off leash at Crissy Field and Fort Funston for several years. We go to Crissy Field 3 times a month and Fort Funston one time a month. We have also occasionally gone to Muir Beach and Rodeo Beach. I have always cleaned up after him and kept him from going into restricted areas such as the tidal marsh or dunes of Crissy Field, the habitat restoration areas along the sand ladder at Fort Funston, and the lagoons at both Muir Beach and Rodeo Beach.

Prior to being a dog owner, my wife and I visited Crissy Field and Fort Funston a few times every month. We enjoyed walking along the beach and taking in the beautiful scenery and watching other people's dogs run and play off leash. Watching dogs run and play off leash was a major reason for us going to these two areas and added greatly to the recreational value of them. The current DEIS has not taken into account the fact that many people who are not dog owners, including many of my friends and family in San Francisco, gain significant recreational enjoyment from watching dogs run off leash in these areas.

The GGNRA is located in and adjacent to a large urban center. Much of the land is no longer in a pristine native state. I applaud and support efforts to restore the GGNRA to a more native state, as has been done at the Crissy Field tidal marsh. That said, much of the areas around Fort Funston and Rodeo Beach have been highly impacted by military use. The military planted large amounts of ice plant to stabilize the sand dunes at Fort Funston and Rodeo Beach. Parts of the DEIS that treat these areas as pristine

wilderness are misguided.

The DEIS makes a number of general statements about the negative impact of dogs. The DEIS fails to present any site specific evidence of these impacts caused by dogs on soil, vegetation, and wildlife. The DEIS needs to show evidence that dogs have negative impacts on site specific soil, vegetation, and wildlife to justify restrictions on dog activity. The DEIS is full of possible impacts of dogs on wildlife and vegetation and other visitors that 'could' occur, but there is little evidence that these impacts do occur. The DEIS should base it's management plan of actual observed impacts.

The DEIS fails to note that there is conflicting scientific evidence about the impacts of dogs on birds and vegetation. There is no scientific consensus that restrictions on off-leash dogs are needed to protect wildlife and vegetation. Forrest and Cassidy ST. Clair (2006) and Warren (2007) show that there is little to no impact of off-leash dogs on bird diversity, abundance and feeding. The DEIS needs to test the hypothesis that off-leash dogs are harmful to these sites before it can justify further restrictions.

There is evidence that humans alone and humans with leashed dogs have greater impact on the environment. Knight and Miller (1996, Wildlife responses to pedestrians and dogs) shows that the flush distance of birds is greater for human or humans with leashed dogs than unleashed dogs. This suggests that the birds in this study view humans as more of a threat than dogs. The DEIS needs to present a balanced view of the scientific literature and as there is no consensus about the impact of off-leash dogs, site specific studies should be carried out. It is often very difficult to differentiate the impact of dogs vs humans in an area. The raw data in the studies presented in the DEIS often shows that the conclusions reached in those studies and in the DEIS are not supported by the data.

My own observations suggest that humans have a bigger impact on many of the areas sited in the DEIS. I have seen far more people and children climbing and degrading the cliffs at Fort Funston than I have seen dogs. The DEIS should observe and report of the frequency of violations by people vs. dogs.

The DEIS suggests that dogs are the main driver of complaints by visitors. Complaints about the smell of urine around the batteries of Fort Funston have no evidence that those smells are coming from dog urine. In my many visits to Fort Funston and the marine headlands (Battery Rathbone), there has been the smell of urine around old batteries. There have also been beer cans and cigarette butts in the area. I find it much more likely that the smell of urine is from human urine rather than dog urine, especially as there are dramatically fewer dogs at Battery Rathbone than at Fort Funston.

Problem interactions between park visitors and off-leash dogs represent a tiny fraction of the total incidents and citations issued by the GGNRA. Visitor fears of being attacked by an off-leash dog are fears based on emotion, not empirical evidence. The vast majority of citations in the GGNRA are leash law violations or being in closed or restricted areas and did not reflect any safety issues between dogs and park visitors. It is unfair to restrict a class of users from the GGNRA based on the irrational fears of another class of users. The GGNRA should focus on enforcement on the small number of people whose dogs misbehave, not on excluding the entire class of users.

The preferred alternatives listed in the DEIS assume 100% compliance when judging their impact. The DEIS assumes non-compliance with current rules and regulations when looking at the no-action plan. The DEIS should be comparing apples to apples and look at the impacts of the no-action plan with 100% compliance and enforcement. I strongly believe that better visitor education and better signs can dramatically increase compliance and reduce negative impact under current rules. Furthermore, the DEIS states that it will cost nearly \$1 million dollars to enforce the Preferred Alternatives but does not consider how the addition of more money to enforce the no-action plan would change the outcome of that plan. The DEIS should consider how additional funding could help enforce current rules and how this would impact site specific areas.

The DEIS includes a compliance-based management strategy that says if there is non-compliance with restrictions imposed under the Preferred Alternative, the GGNRA will change the management of the area to the next more restrictive level. This change will be permanent with no chance to go back to less restrictive rules. This section must be removed from the final plan as it is not based on scientific evidence at all. There is no evidence that more restrictive rules will lessen the impact that dogs have on areas. Furthermore, there is no provision for public comment and federal courts have routinely told the GGNRA that they have to hold public meetings and take public comments before making such changes. Furthermore, compliance would not likely be monitored by independent and non-biased observers. This section of the plan should be removed.

I support the Alternative A plan (no change or no action) along with additional visitor education and enforcement. I believe that this plan will help bring together dog owners and the GGNRA. This plan best represents the original intent behind the GGNRA as a way to preserve open spaces for recreation.

Respectfully,

Jeff Ubersax San Francisco, CA 94122

Correspondence: I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly in the GGNRA with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to: ? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. ? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. ? Exclude speculative, exaggerated, biased, or misleading statements and studies. ? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). ? Enable professional dog walking and align any professional dog walking rules with county or city regulations. ? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

These are my personal comments and observations regarding this plan: (here's where you fill in your own personal story, how the dog management plan will impact you if it's implemented, and what you've seen when you've been out at the GGNRA)

Correspondence: Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022 Dear Mr. Dean, I live in Pacifica, with my wife and our rescue mutt, Lucky. I walk my dog at the nearest GGNRA lands (Mori Point, Fort Funston) at least 5 times a week. I enjoy the outdoors, am a member of the Sierra Club, The Nature Conservancy, and donate to Peninsula Open Space Trust. I appreciate the open space available in the SF Bay Area and love that I can walk from my house and be in the hills overlooking the ocean in a few minutes.

I do not agree with the conclusions presented in the GGNRA's Draft Environmental Impact Statement (DEIS) and I don't agree with the suggested Preferred Alternatives because they severely restrict off leash dog walking and visitation by people with dogs in general within GGNRA lands.

It is important to keep the GGNRA open to people with their dogs and continue to allow off-leash dog walking in areas already open to people with dogs and off-leash walking as allowed in the 1979 GGNRA Pet Policy. I propose that you maintain current usage, your Alternative A.

The DEIS and the Park Service does not address the recreational, social, psychological, and health benefits of off-leash dog walking with the recreational lands with the GGNRA and the extreme negative aspects of the proposed Preferred Alternatives upon current visitors with dogs to the Recreational Areas. There are not current usage statistics included in the DEIS. If these statistics were included, they would demonstrate how adverse

the effects will be upon the large population of current visitors. The Park Service has information on current user populations with dogs and typical dog movement on and around paths, how far most dogs will travel off path. You choose to not to make this information publicly accessible. During a recent visit to Ft. Funston a park employee acknowledged that most of the visitors to Ft. Funston had dogs. It seems like you wish to reduce visitors to Ft. Funston since your Preferred Alternative will negatively affect most of the visitors to Ft. Funston. It seems obvious to me that the Park Service is not interested in the needs of most of the visitors to local Recreational Areas, even though Ft. Funston currently is serving it's highest and best use.

The DEIS does not present any original, long term research results conducted on GGNRA lands that demonstrates that people with dogs have a deleterious affect upon plants and wildlife more than expected of visitors without dogs. The use of the word "Could" is used many times in the DEIS. Dogs "could" stir silt up, "could" harass wildlife, etc, instead of attempting to study actions of visitors and reporting statistics of actual use, misuse, and its effects.

GGNRA lands are Recreational Areas to be used by the residents of the SF Bay Area and Region. GGNRA is not a destination National Park. It is my big back yard. These are local lands, often given to the GGNRA to permanently prevent development, not to restrict recreational use.

It is not correct to think and act as if people with dogs and wildlife/plant life are mutually incompatible. The DEIS presents scientific literature review that demonstrates that people with pets do not harm wildlife and that areas with dogs have more reported instance of wildlife. Anecdotal reports suggest that cliff swallows at Fort Funston abandon cliffs where dogs are excluded and move to dog friendly areas. Dogs may deter harassment by predators.

The SF Bay Area is not pristine, untouched wild areas. Excluding people with their dogs will not make a naturally balanced, evolved ecosystem on GGNRA lands. Excluding dogs will not cause Marin Headlands redwoods to regrow. Excluding dogs will not eliminate monocultures of ice plant and cape ivy in Marine Headlands.

I walk my dog, off leash, at Fort Funston and Mori Point Recreational Areas 7 times a week. Mori Point is a former gravel pit with severely compacted soil (DEIS soil report). It was transferred to the GGNRA to prevent development, not to restrict recreational uses. I walk from private property to less used trails at Mori Point, trails that will not be open to dogs in the Preferred Alternative. I object to the changes at Mori Point. Dog walking on less used paths reduces interactions between people who don't like dogs and dogs. Your trail eliminations at Mori Point forces everyone, regardless of

their specific use, to use the same single path regardless of their activity. If you were concerned with recreational uses and reducing conflicts, more paths would reduce potential conflicts.

I am also concerned that unlabeled paths currently at Mori Point and marked for "Realignment" will be eliminated. I hope "Realignment" is not Park-Speak for remove.

The New Lands dog policy eliminates most dog walking from existing Recreational areas and prohibits dog access in new lands. This is NOT multiuse resource planning.

The compliance based dog policy is designed to be punitive and is not designed to reward compliance nor does it link impact with use and changes in policy towards off leash dog walking.

In a weekend survey that I conducted a survey at Ft. Funston, at least 86% of cars entering the parking lot had dogs. Most of the recreational visitors to Ft. Funston will therefore be extremely negatively impacted by the preferred alternative at Ft. Funston. My wife is disabled. I will not be able to walk with my wife and our off leash dog, (or on leash dog) at Ft. Funston with your preferred alternative.

A proposed need for action stated in the DEIS is "without action, those resources and values might not be available by future generations." Ft. Funston is subject to tidal erosion, seasonal landslides because of rain, and wind driven sand movement. Coupled with rising ocean levels, Ft. Funston will not be around to be enjoyed by future generations. Your DEIS Preferred Alternatives will PREVENT CURRENT ENJOYMENT of traditional recreational areas by residents of the SF Bay Area, allowing it to wash into the ocean, unenjoyed by the majority of the current visitors.

It is imperative that the social and recreational needs of current residents and visitors be acknowledged and accommodated. Saving for future generations will do nothing for today's needs. If the Preferred Alternatives are implemented, no doubt in the future the statement from the future GGNRA will still be, "Save it and our values for future generations". So who gets to use the land? No one, apparently.

Much of the land was transferred to the GGNRA so in order to keep the land from development.. Development is the single biggest problem in residential areas. Because of high density populations, pressure is put upon vacant land to achieve its highest and best use. If the deed to the land is restricted to prevent development, then it becomes a discussion about how to arrive at the highest and best use. Removing a large population of visitors in a highly populated area is not good use. It ignores humans, the only reason for there

to be any public access. In the absence of humans nothing else matters

Sincerely,

Ted Garber, Ph.D. Pacifica, CA 94044

Correspondence: I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off-leash dog walking areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions.

It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I want to protect the GGNRA's natural resources, I believe options other than restricting dog-walking access should be considered first. I favor an approach that truly balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option.

The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and is not based on any documented impacts of non-compliance, just the mere fact that non-compliance occurs. Because it will change the status of areas from off- to on-leash or on-leash to "no dogs allowed" automatically and permanently if non-compliance is alleged, it will deny the public the chance to comment on these major changes when they occur. That violates the law that requires public comment when a change is either significant or highly controversial, as these changes would clearly be. It should be soundly rejected.

The DEIS fails to consider that the GGNRA serves a large metropolitan area. The purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the San Francisco Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to adequately address how the proposal affects "recreational" values for these local residents.

I support a modified Alternative A (the "No Action alternative") that codifies the 1979 Pet Policy as it was originally written (there is no evidence

in the DEIS to support the closures of beach access because of the presence of snowy plovers), and that includes off- and on-leash access on GGNRA lands in San Mateo and on new lands that become part of the GGNRA, especially those areas in both that have traditionally had dog walking.

Correspondence Type: Web Form

Correspondence: I write in support of adopting a Dog Management Plan for the GGNRA. National Park values must be maintained to a high standard that is consistent system wide. While I am supportive of many aspects of the Preferred Alternative, I have the following comments to offer:

Commercial dog walking should not be allowed. Commercial dog walking does not relate to the purpose and mission of our National Parks, provides no service or benefit to park users, has negative impacts on park resources and park visitors, and serves only for the capital gain of private enterprises at the expense of the American public.

Off-leash areas should be well defined and be contained by a physical barrier. ROLAs should be distinguished by physical barriers and adequate signage so that all park visitors can choose whether or not to enter the area.

Park visitors should be limited to one dog per visitor. With few exceptions, dog handlers are not capable of managing more than one off-leash dog at a time.

The proposed compliance percentage of 75% is too low. The expectation should be that non-compliance is a rare occurrence and the compliance strategy should reflect that in its standard. The standard of compliance should be the same as for any other park rule or law. An acceptable rate of compliance is somewhere near 100%.

Within San Francisco, the plan does not provide an adequate amount of hiking trails and picnic areas where visitors can enjoy a dog-free, National Park quality experience.

The dog management plan should include a means by which park visitors can easily and effectively report non-compliant behavior. Park visitors are sometimes reluctant to report observed violations due to the time involved in making the report. A public reporting system should be incorporated into the plan that will be user friendly and workable. Such a system should require only a few moments of time and be an effective documentation of the violation.

Enable professional dog walking and align any professional dog walking rules with county or city regulations. Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input. These are my personal comments and observations regarding this plan: I walk my 2 dogs at Fort Funston where we get exercise and socialize with friends. My boston Terrier is a ball girl. She has to chase the ball. She loves being off leash and couldn't chase a ball on leash or get the exercise she and I both need. We love recreating and living in San Francisco. I have a high stress job as a registered nurse and don't know what I'd do with out a way to relieve stress like I do in parks and GGNRA near my urban home. We also go to Stern Grove and believe the it would be over crowed if Fort Funston was limited for off leash use. Sincerely, Melinda McMurray _

Correspondence: Thank you for so carefully considering how to best allow the public to use these magnificent resources.

Please make provisions for off leash dog use. I hike this area because I love it, and I am motivated to use it more because I have a dog who is WELL BEHAVED off leash. I think that is the crux of the matter A few ill mannered dogs (and owners who have not been responsible for properly training their dog/s) make access a problem for all dog owners. Don't make us all suffer for a few.

This is a recreation area, not a national park. I heard a radio interview by the park director and could hear in his voice that he was not inclined to make this an "exception" to national policy. However this is a local issue, in a densely populated area, and there are many people who will use it precisely because they have a dog.

The weather in many parts of the country does not allow for as much outdoor activity for so many people. Many more people use these recreation areas because they have dogs.

Correspondence: May 29, 2011 Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean, I am writing to give you my feedback on the GGNRA draft dog management plan. I have been having alternating reactions reading the plan, one is that the NPS is working hard to justify removing dogs from the GGNRA. My second reaction is to just forget about giving feedback and start fighting to have the GGNRA removed from NPS control. I am hoping that in providing input to the dog management plan you will understand how so many people feel about the wonderful resource the GGNRA is for the people of the bay area and how dogs fit into people's lives.

Although I am not currently a dog owner most of my life I have been. I grew up in Marin County when the Marin Headlands and the Presidio were still active military bases. It was such a relief to us that when the bases were closed they were not developed into private use but instead became parks. I don't specifically recall when Fort Funston was turned over to San Francisco

and then later to the GGNRA, but I do know the intent was to keep the property from being closed off from the public. One of the things that makes the bay area such a great place to live is the parks with all their opportunities for outdoor recreation.

Even though the Bay Area is heavily populated it doesn't feel like we are living in an urban jungle because we had the foresight to keep open spaces close by. In Marin County that meant keeping west Marin designated as agricultural and open space. When the Army pulled out of the bay area it meant not building on the bases but instead opening them up for recreation. It wasn't until about 11 years ago when the park service without warning started closing areas of Fort Funston off to dogs that I realized the National Park Service controlled the GGNRA.

Since I have started to become involved in efforts to keep Fort Funston open to dogs my general impression of the way the NPS has approached the GGNRA is to return the properties into their wild state before people came to California. I know this is not the exact stated goal, but in reading through the Draft Dog Management Plan I realize that the park service does approach managing the GGNRA the same way it does places true wilderness like Yosemite and Yellowstone. The GGNRA is not wilderness and should not be treated as such.

Fort Funston means a lot to me. It is where I walked with my father and the family dogs. When my father was ill we were able to walk together at his pace while the dogs were able to run around. My father walked every day out at Fort Funston before he passed away. The regulars who go out there look out for each other. My dad was part of the early morning crowd that went out before work. When he needed help driving and I went out there at the crack of dawn with him I was amazed at how friendly everyone was. After his passing I continued to walk the dogs before work out there. I ALWAYS felt safe even when during the winter I was out there before dawn. I can't say that about someplace like Golden Gate Park or even my neighborhood park.

The constant stream of people with their dogs out there discouraged campers, all night teenage parties and homeless encampments. Every now and then someone would be out there but they never made Fort Funston a permanent home because there were people and dogs out there. A few years after my father passed I started going to Fort Funston after work since I didn't like getting up so early. I found another nice group of people out there. There were people who were on the same general schedule as me and I looked forward to seeing them and their dogs every day. Sometimes we would dog sit for each other. It is a great social environment out there.

I saw such a diverse mix of people out there. There was an older lady out

there regularly in a wheelchair being pushed by an aid. She would go as far as the water fountain and stay there for a while petting all the dogs. She seemed so happy to be out there visiting the dogs. On weekends whole families come out. The kids run around climbing trees while the parents toss a ball for the dog. Most city parks segregate dogs and kids so you can't take the dogs to the playgrounds. And that makes sense to me. However most people I know with kids also have dogs, just like the household I grew up in. I have been to enough dog parks to know that there isn't anything for kids to do there. So as a result places like Fort Funston and Chrissy Field become the only places people can go with their kids and dogs.

Recently while dog sitting I made a doggie play date with one of my friends who has a child and dogs. I met her and her husband and daughter and their two dogs out at Chrissy field. She was 8 months pregnant and her daughter was 18 months. So her hands were full. We were all able to hang out and play with the dogs and her daughter. Her dogs and the one I was sitting were able to play with other dogs and to chase the ball. There is no way we could have done this on leash. The east parking lot where we met was PACKED. The beach was full of others doing the exact same thing we were. Families out with their kids and dogs. Clearly there is a demand for this. She drove up from San Mateo to come to Chrissy field because the beach is perfect to this. The waves are not too big, the view is great and there are other dogs for her dogs to play with.

I do have a wonderful neighborhood park 5 blocks from my house, Cayuga Park. It has a playground, a tennis & basketball courts and a baseball diamond surrounded by a very beautiful garden. It is a great park sit in or play sports but it is really isn't a great place to give a dog good walk. When the dogs became senior citizens I reduced Fort Funston to maybe 4 times a week and walked Cayuga Park the other days. The great thing about going someplace like Fort Funston is I get a walk too. It's not like going to a dog park where I stand there trying to get my dog to run around. Going to Cayuga Park was basically a walk to and from the park because there isn't much walking to do once in there like at Fort Funston.

At Fort Funston I would park usually in the main parking lot and walk down the hill past the trail to the beach. It is a very nice loop with some variations we could take. Whenever I dog sit I take the dog out there. I have made so many memories of my late father and our departed dogs there. One of the very last things I did with my father was to go out to protest the closing of areas of the GGNRA to dogs at the Presidio Officers club. I believe that protest was one of the reasons that the GGNRA had to do a formal process to change the dog policy for the park.

At first I thought the process for proposed rule changes to the park were so that the GGNRA could change the NPS rules so that off leash dogs would

be allowed as the exception to NPS policy. It seems to me now that the Park Service is on some sort of mission to justify removing dogs from the park. I know there is a lot of acreage in the GGNRA, but the volume of documents produced in the report seems like it's meant to bury the issues. The worst of it is when I was at one of your information sessions looking over the map of Fort Funston it wasn't even accurate. The bunkers at the top of the hill have two tunnels. One has pavement up to the entrance the other doesn't. After all the time and effort on the report the maps are not even accurate.

I was also disappointed that areas like the Tennessee Valley trail in Marin were left out of the report. I was told this was because dogs are not currently allowed there. All GGNRA properties should have been in the report. The report should have been written describing how dogs are managed on ALL GGNRA property. The report should reflect the entire scope of the GGNRA property and truly reflect how many areas do and do not allow dogs. When you exclude an area you are exaggerating how much of the total acreage is open to dogs now and how much of a change you are making. That is another way the park service has allowed inaccuracies and bias to enter the plan.

I really do appreciate the efforts of people to protect nature. I wanted to be a park ranger growing up. I earned a Bachelors of Science in Environmental Biology from UC Davis. But I got frustrated by both the bureaucracy of government and the radical elements of the environmental movement and chose not to go into the field.

I really do think there is a way for people to enjoy the GGNRA and to protect nature and to allow dogs off leash. I actually see allowing dogs off leash is a way for people who would have resigned themselves to walking their dogs on city streets or just going to a dog park to get out and see nature and want to protect it. The more areas we open up to more people the more people will see that open space and wildlife should be protected.

Overall when I see people out at Chrissy Field or Fort Funston they don't like seeing trash on their walk. I know I am not the only one who picked up other peoples trash during my walk. We like seeing the hawks and swallows flying around. None of the responsible dog owners is going to let their dog do something harmful. I do realize there are some people out there who are not responsible owners. But there are people all over who don't behave responsibly. It seems unfair to punish all of us for something a few people might do.

There are plenty of things to disturb wildlife in a park in the middle of a city. For example when I have gone down to the beach below Fort Funston the dogs are generally playing in the water. Not climbing up the cliffs disturbing the bank swallows. However I do see kids climbing up the cliffs.

After the 4th of July I have seen evidence of people shooting off bottle rockets below the cliffs. There are many Crows out at Fort Funston and we all know they like to scavenge other birds' nests. At Lake Merced across from Fort Funston where some of the swallows feed there are two very loud shooting ranges. So how can the Park Service say that removing dogs is going to protect the Bank Swallow?

I firmly believe the GGNRA can accommodate both recreation and conservation. It was designed as an URBAN recreation area, not a pristine wilderness area like Yosemite. It should not be managed the same way. The courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded. If the Park service cannot manage an urban park than maybe the GGNRA should be removed from the Park Service's control.

This plan disregards the health and well-being of people, dogs, and the community. It does not take account of the impact of removing dogs will have on other parks in the Bay Area. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. ? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. ? Exclude speculative, exaggerated, biased, or misleading statements and studies. ? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). ? Enable professional dog walking and align any professional dog walking rules with county or city regulations. ? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

I know there is no way for you to make all parties happy because there is such a vast spectrum of thought on how the GGNRA should be managed. However I would like to see the decisions made to be based on FACTS not some sort of anecdotal stories of about dogs in the park.

Sincerely, Carola Hamann San Francisco, CA 94112

Correspondence: May 29, 2011 Frank Dean, General Superintendent GGNRA Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean,

I live in San Francisco and have since 1971, I live in Twin Peaks neighborhood. I'm a member of the Sierra Club. I have two dogs, a toy poodle, a boston terrier and I regularly enjoy wild life and exercising off leash at Fort Funston. I love the fresh air, the fog, the ocean, I used to ride my horse there but no longer have a horse.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off-leash dog walking areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions.

It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I want to protect the GGNRA's natural resources, I believe options other than restricting dog-walking access should be considered first. I favor an approach that truly balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternatives as a reasonable option.

The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and is not based on any documented impacts of non-compliance, just the mere fact that non-compliance occurs. Because it will change the status of areas from off- to on-leash or on-leash to "no dogs allowed" automatically and permanently if non-compliance is alleged, it will deny the public the chance to comment on these major changes when they occur. That violates the law that requires public comment when a change is either significant or highly controversial, as these changes would clearly be. It must be removed.

The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form

of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents.

After careful consideration, I support a modified Alternative A (the "No Action alternative") that codifies the 1979 Pet Policy as it was originally written (there is no evidence in the DEIS to support the closures of beach access because of the presence of snowy plovers), and that includes off- and on-leash access on GGNRA lands in San Mateo and on new lands that become part of the GGNRA, especially those areas in both that have traditionally had dog walking.

Thank you for your consideration.

Sincerely,

Melinda McMurray San Francisco, CA 94131

Correspondence: To the Golden Gate National Recreation Area, I think the Dog Management Plan is too ambitious in terms of micro management. It's application and enforcement could lead a lot of cost and ill will from the public. I am not convinced that it is necessary. Hence, I believe Alternative A is best if the Plan has too be imposed. I have lived in the Bay Area 99% of my life. I am still there most of the time even though I have no legal address there right now. Yes, I do have a dog . She is 14 years old, so I probably won't have her much longer. I doubt I will get another. So the truth is , it's not really my business in a personal sense except that I think dog ownership can be a blessing and I don't want to see it messed up by too much regulation. Realistically, I think some changes are bound to occur. I think they are warranted regarding Professional Dog Walking at certain sites under your jurisdiction. However, I think Marin can regulate itself. If changes are going to be imposed, I want to comment on Muir Beach and Baker Beach and Rodeo Beach. I think Muir Beach, on the beach area should allow off leash , voice control because it is a part of the local lifestyle. That is Alternative A. Muir Beach has always been an important destination for the free spirited Marin lifestyle. I don't think the National Park Service should kill the feel of the beach with more rules. I think the least the change , Alternative A, should also be applied at Rodeo Beach. It's a nice big place with plenty of room on the beach for all. Baker Beach on the other hand is more urban so realistically the possibility of stupid behavior is more acute. Therefore, I

think the beach should be split into portions for on leash, off leash and no dogs. That is Alternative A also. I want to thank the Golden Gate National Recreation Area for the opportunity to comment on this Plan. Obviously, a lot of time, effort and expense has gone into this proposal. From what I have looked at it is balanced. I think that future changes in the Golden Gate National Recreation Area should be based on this document and applied on a case by case basis as the need arises, rather than at one fell swoop.
Sincerely, John C. Williams

Correspondence Type: Web Form

Correspondence: Dear NPS,

I am a longtime resident of San Francisco, and frequent visitor of the GGNRA together with my husband, our baby, and our dog, Angus. We run and walk to and around Crissy Field at least several times a week, and visit Rodeo Beach and other areas of the GGNRA in Marin on weekends. Also, on weekday mornings, while my husband and I are working, Angus visits Fort Funston and other GGNRA spots with his wonderful dog walker, Rodrigo. We live in a small flat and rely on the amazing outdoor resources San Francisco has to offer for our own and our dog's quality of life. I have been visiting the same beloved spots in the GGNRA for nearly 30 years, always with my dogs. Were it not for the great resources in such close proximity to our urban setting, my family would likely not have dogs, or else would choose to live elsewhere. Having dogs and being able to give them a good quality of life ? including giving them regular outdoor free play ? is a significant part of our daily family experience and happiness.

I am also, in my professional life, an environmental planner. I have a master's degree in marine environmental management and am passionate about environmental protection. I have read many environmental review documents (both EISs and EIRs) in my career. I read much of the Dog Management Plan Draft EIS and, beyond my disagreement with the proposals provided in the document, I was incredibly disappointed by the quality of the document. Generally speaking, I had four major concerns:

1. There was a woeful lack of substantiation (scientific evidence or other documentation) to many claims made in the document. The document needs to be carefully reviewed and revised to ensure all statements are backed up by adequate references, or else that the statements in the document are revised.

2. The authors of the document clearly did not have a good grasp on the

experience of local residents using the GGNRA, or give the reader much context of the dense urban setting that surround the GGNRA. The document should be revised to include the experiences of local residents as well as much better characterization of the local setting (i.e. the urban environment). In my personal experience in the areas that I visit almost daily in the GGNRA, conflicts with dogs very rarely occur, dog walkers are extremely respectful, and dogs are generally very well behaved. While incidents may occasionally occur (though I have never witnessed an incident in my many years of visiting the park), there is no clear evidence presented in the document of a major issue. It would certainly be a shame to manage to the lowest common denominator.

3. There was very little creative thinking evident in terms of management approaches that could both address any real issues whilst still providing off-leash dog opportunities (i.e. planting/creating natural barriers around the Wildlife Protection Area near Crissy Field rather than so simply proposing a ban on off-leash dogs, increasing educational outreach in areas of special sensitivity). The lack of creative management approaches gave the impression that the NPS does not care about residents' values, and that they simply want to manage this urban park like other national parks. I sincerely hope this is not the case, and suggest that the document needs to be revised to include more nuanced management approaches that do not involve banning off-leash dog walking.

4. Finally, most importantly (and most appallingly!) there was a complete lack of analysis regarding recreational resources in the urban setting of the San Francisco Bay Area. NEPA requires that environmental impacts on the quality of the human environment be considered. They were not at all adequately considered in the draft document. The revised EIS should consider the human environment and recreational resources as a critical element in selecting the environmentally preferable alternative. The proposed alternative would have a significant impact on my quality of life, and many others.

Also, a minor comment, but one worth noting: the term "commercial dog walkers" does not properly characterize these individuals. The term implies a large-scale and impersonal operation; the reality is most of these individuals have small-scale operations providing dog-walking services to working families. Please, modify the term "commercial dog walkers" globally throughout the document to "professional dog walkers." Thank you.

While I am strongly in favor of protecting our natural resources, in an urban environment, it is also important to acknowledge other values and provide a balanced approach to management. I believe there is a way to honor both the needs of families with dogs and the needs of wildlife. Please carefully consider in the revised document how this can be done better. After all, in

the bigger picture of environmental protection, we should be encouraging densification of urban areas (i.e. less sprawl), and continuing to provide urban residents the type of resources we have in the GGNRA to maintain their quality of life. If these beloved resources are so altered that they cannot be enjoyed by families with dogs, many of us may move farther afield.

Please honor the mission of the GGNRA, which is to promote not only natural but also the recreational values of the park, and revise the EIS accordingly. Angus, my family, and so many others depend on the continued enjoyment of our resources.

Best, Antonia Sivyer

Correspondence: I am a supporter of the GGNPC and believe that by and large those in charge of making the Presidio almost financially self sufficient w/o over commercializing it have done an excellent job. So it wonders me that the abominable "Ditch the Dog? plan could have been produced under its auspices. Dogs have very limited off leash range at Crissy Field, Fort Funstan and Ocean Beach as it is. Those who do not care to share space with dogs have vast options as to how to avoid them. So why the time, expense and trouble to create a 1400 page indictment of the most loving creatures on earth? It makes me wonder who appointed the perpetrators of the task force who wrote it and what the appointment criteria was.

I have always had dogs and they have never given me or others trouble. I am now 84 and too old to adopt another since my last one died. Therefore I get my dog fix by visiting Crissy Field or the superb "Dogs are welcome" beach at Carmel and I find the dogs invariably friendly and heart warming to watch as they happily romp about their limited space. Above all
REMEMBER THAT THE PARKS ARE FOR EVERYONE as well as plants, birds, man's best friends not just for those who don't choose to share public space with dogs.

Correspondence: Dear Mr. Dean,

I support the efforts to develop new rules for dog walking on GGNRA lands. I believe that increased restrictions on dog walking in Marin County is vital in order to protect our sensitive park lands and the animals that live there.

As an avid hiker, I am disgusted by the "doggie bags" that litter the sides of trails. I invariably run into dogs who are off leash with the owner not in control of their pets. This is disconcerting to a solitary walker like myself. I'm in favor of the nationwide federal regulation that does not allow off-leash dog walking on NPS lands. However, knowing that this will never happen here in Marin I would support Alternative D for Muir Beach and Alternative C for Oakwood Fire Road in Tennessee Valley and the northern portion of Rodeo Beach with Alternative B for all other areas.

I understand the constraints on the NPS to manage the park lands. I find it sad that the park staff also has to confront hostile people when they try to issue citations or remind the public of the rules regarding dog walking.

Thank you, Adi De Sanna-Girroi

Correspondence: I am submitting my comments on the DEIS in opposition to the proposed plan. I support the No Action alternative along with better enforcement and education of the current rules and regulations.

I live in San Francisco and use the GGNRA areas with my Labrador retriever on a daily basis. I primarily use Crissy Field, Baker Beach, and Rodeo Beach/Fort Conkrite/Miwok Trail areas. I am an environmentalist in my own right and have been involved personally in major conservation land transactions and plans along with being on a board of directors of a land conservation organization, so I am well aware of the balance of preservation, protection, and conservation along with public recreation. All lands and areas need both, and based on my observations and use, I see adequate protections of the environment in place in the GGNRA areas. Instead of making new rules and adding restrictions, the current rules and regulations should be enforced and used to educate the public.

Like the vast majority of dog owners using the GGNRA areas, I keep my dog under voice and sight control, clean up after him and keep him out of the restricted posted areas. It is important to keep these areas open for off leash dog walking access, especially in an area like the Bay Area with a

large population.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site specific conditions. The GGNRA's mission applies equally to new lands as existing lands and it is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands.

I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, but other options (besides restricting dog-walking access) should be considered first. For example, it is not clear where dogs are allowed. I think the GGNRA should provide better signage and create environmental barriers, such as the vegetative barriers surrounding the tidal marsh at Crissy Field or the restored dunes at Fort Funston.

The draft plan has the effect of punishing many people because a very small number are uneducated, insensitive, or irresponsible and because the current signage of off leash areas is unclear. The reasonable response to this problem is to educate visitors, improve signage and help park visitors follow the rules and learn how to respect the environment, not to ban the rest of us with dogs from the GGNRA. I wish that the DEIS would include an alternative along these lines.

The DEIS doesn't recognize that many areas of the GGNRA are located in or next to urban neighborhoods. The DEIS excludes the quality of the urban environment from its scope, saying it's not significant. The reality is that the GGNRA provides much needed open space in a major urban area. This omission is disconcerting because the fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) to serve the metropolitan Bay Area. The dynamic interrelationship between GGNRA and our neighborhoods is exactly the human environment that the EIS is required to study, but failed to do so.

The DEIS is biased against and does not take a hard look at the No Action alternative or variations on that alternative. There are many areas in the GGNRA where the existing 1979 Pet Policy has been working, and where sensitive species are not present and visitor conflicts do not occur or are very infrequent. In addition, the DEIS does not provide site-specific information that these areas are inappropriate for continued dog walking.

Once, again, I am writing in opposition to the preferred alternate, and in support of the No Action plan.

Correspondence: As a frequent user of the Presidio and other areas of the GGNRA, I heartily support improved management of dogs in the park.

Today I was walking and 2 huge Great Danes off leash ran up to me barking. Although it turned out, they were "friendly", I was unnerved by the incident, especially since 2 friends recently have been bitten by off leash dogs in the Park.

I strongly support the the folowing: Commercial dog walkers should be limited to very specific, clearly marked areas. They should be limited to 4 ON-LEASH dogs, the most one person can truly manage Commercial dog walkers should pay a fee to receive permits to use the GGNRA (the same as any other vendor). The funds generated would help cover costs of plan implemntation On-leash areas should be clearly marked

Individuals or companies should be ticketed for not obeying the policies

Establishment of clear policies and enforcement are critical to maintaining the health and safety of all park users, as well as the wildlife and plants that make our GGNRA so special.

Correspondence: May 29, 2011

Frank Dean, General Superintendent Golden Gate National Recreation Area
Building 201, Fort Mason San Francisco, CA 94123-0022

Re: Draft Dog Management Plan/Draft Environmental Impact Statement

Dear Superintendent Dean,

My name is Lisa-Anne Manolius. I am a San Francisco resident, a professional certified dog trainer and a dog guardian. I take my dog to GGNRA off-leash areas at least 3 times a week, most often Fort Funston, Ocean Beach or Crissy Field. I am a dedicated dog and animal advocate who cares very much about the environment. I have regularly donated to the World Wildlife Federation, the Environmental Defense Fund and the NRDC. I also happen to be a member of a minority group; I am a US naturalized citizen who was born and raised in Jamaica, and am part Asian and part Black.

The human-animal bond is very important to me. As a responsible dog guardian, I keep my dog under voice and sight control, clean up after him, and keep him out of the fenced dunes and vegetative areas. It is important for dog guardians and me that areas like Fort Funston, Ocean Beach, Crissy Field and other GGNRA lands remain open for off leash dog walking access.

I do not agree with the GGNRA's current preferred alternative, as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site specific conditions.

I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, but other options (besides restricting dog access) should be considered first, such as better signage and environmental barriers to demarcate areas where dogs are and aren't allowed.

As a responsible dog guardian and animal advocate I know it is crucial that our dogs are well behaved and trained in order to peacefully co-exist in an urban environment. Adequate off-leash exercise and socialization are essential for a well-behaved dog. Having places where I can take long walks with my dog allows me to get the exercise I need while also meeting my dog's physical and behavioral needs. Without access to the small amount of land in the GGNRA we currently have, I am very concerned that many dogs and dog guardians will not have sufficient opportunity to exercise and recreate, a serious problem for dogs, their owners and City residents without dogs.

The DEIS includes the following problems and errors: ? Neither the DEIS nor the Plan recognize that environmental values include both recreation and

nature. In many places, the DEIS treats the environment and recreation as opposing values, i.e., that recreation only harms natural resources. The DEIS doesn't acknowledge that people care about both and that people with dogs are often also good stewards of our environment.

? The GGNRA has a recreation mandate and the DEIS treats recreation as an adverse impact, rather than a value to be preserved. There are more dogs than children in San Francisco, approximately one dog for every 7 City residents. The DEIS ignores the significant life-quality enhancement that dog guardians like me derive from recreating with their dogs. Spending recreational time with my dog is a time of peace, reflection and bonding in the beauty of nature that GGNRA lands provide. There are simply no other opportunities for a remotely similar recreational experience in the crowded urban environment of San Francisco.

? The DEIS doesn't recognize that many areas of the GGNRA are located in or next to urban neighborhoods. The DEIS excludes the quality of the urban environment from its scope, saying it's not significant. That could not be further from the truth. The reality is that the GGNRA provides much needed open space in a major urban area. This omission is disconcerting because the fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) to serve the metropolitan Bay Area. The dynamic interrelationship between GGNRA and our neighborhoods is exactly the human environment that the EIS is required to study, but failed to do so.

? The Plan effectively punishes many people because a very small number are uneducated, insensitive, or irresponsible and because the current signage of off leash areas is unclear. The reasonable response to this problem is to educate visitors, improve signage and help park visitors follow the rules and learn how to respect the environment, not to ban the rest of us with dogs from the GGNRA. The DEIS should include an alternative along these lines.

? The proposed "compliance-based" approach should be modified to create a baseline of current conditions, then measure impacts rather than compliance. It should include a robust public educational component and an objective, long-term monitoring program designed and carried out with the community. The GGNRA should develop partnerships with community, animal welfare, and conservation organizations to make this work. These partner groups could bring additional resources to limited federal resources. GGNRA should be a partner with the City of San Francisco and other communities, not an adversary.

? The DEIS notes some studies and general tendencies of dogs to harm natural resources, but with few exceptions, there is little documented site-specific impacts to support the severe restrictions of the preferred

alternative. Further, there is insufficient documentation that considers other impacts ? e.g., other park visitors that disturb and impair the natural resources, other wildlife, Mother Nature, boot camps, bicyclists, huge crowd attracting events such as Fleet Week, festivals and Walk-a-thons. The proposed broad limitations in the DEIS are without site-specific science that demonstrates that problems with the quality of GGNRA's natural resources are actually attributable to dogs and not to other factors. Not once have I seen a dog disturb birds' nesting places on GGNRA lands, or harm wildlife.

? The DEIS fails to consider the significant negative environmental effects of the Plan on the San Francisco Bay Area. The Plan will have significant impacts on all Bay Area residents, whether they own dogs or not. The Plan will result in further overcrowding of City parks, which are already heavily used, and many of which are too small to reasonably accommodate the current numbers of dog that frequent them. Overcrowding will naturally diminish park goers' enjoyment of the park experience. City parks will suffer environmental damage that naturally accompanies overuse of lands. City taxpayers will ultimately bear the financial burdens of park overuse.

? The DEIS fails to consider the harmful behavioral effects on Bay Area dogs. The Plan will result in insufficient exercise and socialization for countless numbers of City dogs, which in turn will cause humans to suffer negative environmental impacts. Dogs that don't get enough off-leash exercise and socialization display a host of undesirable behaviors including excessive barking (noise pollution) and increased stress, anxiety, fear and aggression. The latter puts the public who encounter such dogs at risk.

? The GGNRA is in a dense urban area, yet the DEIS is written as if the Bay Area and its residents don't exist just outside its boundaries. This is an urban area, not a pristine wilderness. The DEIS ignores the significant impacts on residents and area resources, especially city parks if restrictions take effect. The SF Board of Supervisors passed a resolution opposing the Preferred Alternative because of the lack of study of impacts on city parks.

? The DEIS does not consider impacts on the physical and mental health people will suffer if dog walking is severely restricted. The DEIS also does not consider impacts on social communities of people with dogs at GGNRA sites if the plans take effect. I derive many benefits from walking my dog in GGNRA off-leash areas ? my physical health benefits from walking and playing with my dog, my stress and anxiety are reduced, and I have opportunities to meet and socialize with friends who also have dogs. If the GGNRA's Plan takes effect, I will have no similar opportunities to do these things in San Francisco.

? The DEIS is full of assumptions about impacts ? things that "might" or "could" happen ? but there is no evidence of actual observed impacts. It is

wrong and unfair to base management plan on hypotheticals. The GGNRA has had years to observe and document actual observed impacts. The fact the GGNRA did not include them in the DEIS indicates they don't exist. I have NEVER in 4 plus years seen a dog attack a person at GGNRA lands, dogs attacking one another or dogs disturbing any birds' nests/burrows.

? The DEIS claims a major safety problem with dogs in the GGNRA, but the GGNRA's own data indicates dogs accounted for only 2% of serious safety incidents involved dogs. The vast majority of serious incidents involved people only. Even if only non-serious incidents are considered, dogs accounted for a mere 7% of incidents in the GGNRA. Dogs are not a major safety problem. I worry about threats from other humans on trails, not from dogs, and feel infinitely safer on a deserted trail with my dog than without.

? Dog walkers constitute the most diverse group of people who use the GGNRA ? seniors, kids, people with disabilities, gay and straight, all ethnic groups, all religions, all social and economic classes ? all interacting in positive ways, bound by their common love of dogs. There is no mention of this diversity in the DEIS. Minorities are mentioned only in the context of being afraid of dogs. As a member of two racial minorities and one ethnic minority, I object to that characterization. It's simply untrue. The DEIS incorrectly quotes from a focus group of people who had largely never been to the GGNRA as proof that minorities don't come to the GGNRA because of the dogs.

? The DEIS uses misleading literature citations to claim dogs have negative impacts on wildlife and the environment. When examined closely, many of these studies do not support the DEIS' claims. Claims of impacts on snowy plovers and bank swallows are not supported by available data. The DEIS must start over and study actual impacts documented to occur at each site in the GGNRA, and must consider whether there are simpler mitigations that can address any impacts that are actually found.

? The DEIS does not consider simple management tools that could be added to the 1979 Pet Policy that could alleviate concerns without needing to ban people with dogs. For example, if concern is dogs going over cliffs at Fort Funston, a low-lying fence near the cliff and better signage could keep people and dogs away from the cliff. Education programs to socialize dogs to horses could help reduce negative interactions between horses and dogs on trails.

? The DEIS considers dogs as if they are the only animal species with possible impacts in the GGNRA. There is no discussion of impacts of natural predators on snowy plover birds and how that compares to those from dogs, or how do human disturbances compare to disturbances from

dogs. Without this context, the DEIS cannot say restricting dogs will have a significant positive impact on species.

? The DEIS did not consider negative impacts on dog behavior caused by severe restrictions on off-leash in the GGNRA and by resulting overcrowding in city parks. Expert dog trainers and behaviorists, including Dr. Ian Dunbar, Trish King, Jean Donaldson, concur that the loss of off-leash exercise will cause an increase in problem dog behaviors, including bites. This resulting increase in problem behaviors will lead to an increase in surrenders at city shelters, which cannot handle the increase. This is another impact on surrounding communities that was not considered in the DEIS. The SF Animal Control and Welfare Commission held a hearing on this and passed a resolution calling on the Board of Supervisors to oppose the Preferred Alternative because of that.

I support Alternative A, the No Action alternative, and would also include the "New Lands" areas (such as Cattle Hill, Sweeny Ridge, Mori Point, Pedro Point and Milagra Ridge and Rancho Corral de Tierra) in San Mateo county.

Re: Draft Dog Management Plan/Draft Environmental Impact Statement

Dear Superintendent Dean,

My name is Kimon Manolius. I am a San Francisco resident and a responsible dog guardian. I take my dog to GGNRA off-leash areas at least twice a week, most often Fort Funston or Ocean Beach. I also consider myself an environmentalist and give regularly to wildlife and environmental

preservation and conservation groups.

The human-animal bond is very important to me. As a responsible dog guardian, I keep my dog under voice and sight control, clean up after him, and keep him out of the fenced dunes and vegetative areas. It is important for dog guardians and me that areas like Fort Funston, Ocean Beach, Crissy Field and other GGNRA lands remain open for off leash dog walking access.

I do not agree with the GGNRA's current preferred alternative, as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site specific conditions.

I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, but other options (besides restricting dog access) should be considered first, such as better signage and environmental barriers to demarcate areas where dogs are and aren't allowed.

As a responsible dog guardian and animal advocate I know it is crucial that our dogs are well behaved and trained in order to peacefully co-exist in an urban environment. Adequate off-leash exercise and socialization are essential for a well-behaved dog. Having places where I can take long walks with my dog allows me to get the exercise I need while also meeting my dog's physical and behavioral needs. Without access to the small amount of land in the GGNRA we currently have, I am very concerned that many dogs and dog guardians will not have sufficient opportunity to exercise and recreate, a serious problem for dogs, their owners and City residents without dogs.

The DEIS includes the following problems and errors: ? Neither the DEIS nor the Plan recognize that environmental values include both recreation and nature. In many places, the DEIS treats the environment and recreation as opposing values, i.e., that recreation only harms natural resources. The DEIS doesn't acknowledge that people care about both and that people with dogs are often also good stewards of our environment.

? The GGNRA has a recreation mandate and the DEIS treats recreation as an adverse impact, rather than a value to be preserved. There are more dogs than children in San Francisco, approximately one dog for every 7 City residents. The DEIS ignores the significant life-quality enhancement that dog guardians like me derive from recreating with their dogs. Spending recreational time with my dog is a time of peace, reflection and bonding in the beauty of nature that GGNRA lands provide. There are simply no other

opportunities for a remotely similar recreational experience in the crowded urban environment of San Francisco.

? The DEIS doesn't recognize that many areas of the GGNRA are located in or next to urban neighborhoods. The DEIS excludes the quality of the urban environment from its scope, saying it's not significant. That could not be further from the truth. The reality is that the GGNRA provides much needed open space in a major urban area. This omission is disconcerting because the fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) to serve the metropolitan Bay Area. The dynamic interrelationship between GGNRA and our neighborhoods is exactly the human environment that the EIS is required to study, but failed to do so.

? The Plan effectively punishes many people because a very small number are uneducated, insensitive, or irresponsible and because the current signage of off leash areas is unclear. The reasonable response to this problem is to educate visitors, improve signage and help park visitors follow the rules and learn how to respect the environment, not to ban the rest of us with dogs from the GGNRA. The DEIS should include an alternative along these lines.

? The proposed "compliance-based" approach should be modified to create a baseline of current conditions, then measure impacts rather than compliance. It should include a robust public educational component and an objective, long-term monitoring program designed and carried out with the community. The GGNRA should develop partnerships with community, animal welfare, and conservation organizations to make this work. These partner groups could bring additional resources to limited federal resources. GGNRA should be a partner with the City of San Francisco and other communities, not an adversary.

? The DEIS notes some studies and general tendencies of dogs to harm natural resources, but with few exceptions, there is little documented site-specific impacts to support the severe restrictions of the preferred alternative. Further, there is insufficient documentation that considers other impacts ? e.g., other park visitors that disturb and impair the natural resources, other wildlife, Mother Nature, boot camps, bicyclists, huge crowd attracting events such as Fleet Week, festivals and Walk-a-thons. The proposed broad limitations in the DEIS are without site-specific science that demonstrates that problems with the quality of GGNRA's natural resources are actually attributable to dogs and not to other factors. Not once have I seen a dog disturb birds' nesting places on GGNRA lands, or harm wildlife.

? The DEIS fails to consider the significant negative environmental effects of the Plan on the San Francisco Bay Area. The Plan will have significant impacts on all Bay Area residents, whether they own dogs or not. The Plan

will result in further overcrowding of City parks, which are already heavily used, and many of which are too small to reasonably accommodate the current numbers of dog that frequent them. Overcrowding will naturally diminish park goers' enjoyment of the park experience. City parks will suffer environmental damage that naturally accompanies overuse of lands. City taxpayers will ultimately bear the financial burdens of park overuse.

? The DEIS fails to consider the harmful behavioral effects on Bay Area dogs. The Plan will result in insufficient exercise and socialization for countless numbers of City dogs, which in turn will cause humans to suffer negative environmental impacts. Dogs that don't get enough off-leash exercise and socialization display a host of undesirable behaviors including excessive barking (noise pollution) and increased stress, anxiety, fear and aggression. The latter puts the public who encounter such dogs at risk.

? The GGNRA is in a dense urban area, yet the DEIS is written as if the Bay Area and its residents don't exist just outside its boundaries. This is an urban area, not a pristine wilderness. The DEIS ignores the significant impacts on residents and area resources, especially city parks if restrictions take effect. The SF Board of Supervisors passed a resolution opposing the Preferred Alternative because of the lack of study of impacts on city parks.

? The DEIS does not consider impacts on the physical and mental health people will suffer if dog walking is severely restricted. The DEIS also does not consider impacts on social communities of people with dogs at GGNRA sites if the plans take effect. I derive many benefits from walking my dog in GGNRA off-leash areas ? my physical health benefits from walking and playing with my dog, my stress and anxiety are reduced, and I have opportunities to meet and socialize with friends who also have dogs. If the GGNRA's Plan takes effect, I will have no similar opportunities to do these things in San Francisco.

? The DEIS is full of assumptions about impacts ? things that "might" or "could" happen ? but there is no evidence of actual observed impacts. It is wrong and unfair to base management plan on hypotheticals. The GGNRA has had years to observe and document actual observed impacts. The fact the GGNRA did not include them in the DEIS indicates they don't exist. I have NEVER in 4 plus years seen a dog attack a person at GGNRA lands, dogs attacking one another or dogs disturbing any birds' nests/burrows.

? The DEIS claims a major safety problem with dogs in the GGNRA, but the GGNRA's own data indicates dogs accounted for only 2% of serious safety incidents involved dogs. The vast majority of serious incidents involved people only. Even if only non-serious incidents are considered, dogs accounted for a mere 7% of incidents in the GGNRA. Dogs are not a major safety problem. I worry about threats from other humans on trails, not

from dogs, and feel infinitely safer on a deserted trail with my dog than without.

? Dog walkers constitute the most diverse group of people who use the GGNRA ? seniors, kids, people with disabilities, gay and straight, all ethnic groups, all religions, all social and economic classes ? all interacting in positive ways, bound by their common love of dogs. There is no mention of this diversity in the DEIS. Minorities are mentioned only in the context of being afraid of dogs. As a member of two racial minorities and one ethnic minority, I object to that characterization. It's simply untrue. The DEIS incorrectly quotes from a focus group of people who had largely never been to the GGNRA as proof that minorities don't come to the GGNRA because of the dogs.

Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation.

? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.

? Exclude speculative, exaggerated, biased, or misleading statements and studies.

? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).

? Enable professional dog walking and align any professional dog walking rules with county or city regulations.

? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

Sincerely,

John

Correspondence: Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022 Dear Mr. Dean, Like thousands of other responsible pet owners, I walk regularly at Fort Funston. I am there seven days a week, for the "early shift" just before 7am. I have one dog, and up until about a year ago had two. I am extremely disturbed by the unfairness of the proposed plan to limit dogs and off-leash dog walking.

In my seven years of daily walks at Fort Funston, I have met countless interesting, productive and caring people. Enormous efforts are expended to keep Funston clean and safe. I have heard countless stories from many long-time walkers about the decrepit and filthy state of Fort Funston before it was "taken over" by the dog people. As you no doubt know, we are a cohesive community of responsible dog owners, providing social interaction for many who would not regularly have a community (MANY SENIORS) or daily social interaction.

A very large number of seniors have dogs and walk them at Fort Funston (and no doubt other GGNRA areas). I personally see and walk with more than eight every morning between 6:45 and 8:30am. The eldest of my friends is 88 and walks daily with her shepherd. You will be removing an important social and fitness benefit from many lives if you so severely restrict off-leash dog access.

I would like to inquire about the fact that over the past eight months or so, the gate at Fort Funston is often locked shut for hours beyond dawn/sunrise. On a typical morning when this happens, you will see up to 20 or more cars parked along Skyline. It is very dangerous for people to have to pull in and out right on the side of the road, to say nothing of walking your dog from your car along Skyline to the path up to the Fort. Once again, I would like to bring up the issue of the morning seniors, who I assure you are very uneasy with this parking arrangement. I have backed many cars out for seniors who were concerned about getting their car out into the Skyline traffic. I truly believe it is inevitable that there will be an accident, and a person or dog will be hurt. If it is in fact true that the gate should open at sunrise, please honor that. We all see the many park vehicles inside the gate when it is locked. Fact or fiction, many of us believe the gate gets opened late whenever there is a march, or a meeting, or some new development in this dog crisis.

I am very concerned about the possible future lack of off-leash dog space. Where will we all go? What will happen to small neighborhood parks?

The remainder of my message is boilerplate, but I agree strongly with every word. The GGNRA is proposing to relegate us to a hilly pasture of foxtails at Fort Funston. This is unworkable and I urge you to work to compromise with us.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions. It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option. The proposed "compliance-based"

approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal. The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents. After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program. Thank you for your consideration. Sincerely, Nina Steinman San Francisco, CA 94118

Correspondence Type: Web Form

Correspondence: My wife and I have spent many happy hours for the past two-plus years walking with our Norwich terrier, Emma, and some times with Emma and our now four-year old grandson, Levi, up and down the trails, over the dunes, and along the beaches of Ft. Funston. I have spent only a few hours, and much less happily, reading GGNRA Draft Dog Management Plan / Environmental Impact Statement.

I certainly learned a little about soils, plant and animal species, and the potential impacts on all from dogs (although I must tell you that on a per minute basis our grandson has a much greater impact on all of these).

I have no doubt that the good people who worked on the EIS are overwhelmingly earnest, sincere, intelligent, and dedicated to their view of the form in which the GGNRA should be preserved (another although here - although it is hard for me as a reader of the EIR to keep a straight face when it takes the authors of the report a paragraph to conclude that a little dog piddle has a negligible effect on the water quality on a beach washed twice a day by the waters of the Pacific Ocean or that the nutrients added to the local soils by dog poop is detrimental because it perturbs the natural balance of wild animal poop volume).

As one who has, like many others, stood on the high bluffs of Fort Funston and watched the sun set over the mighty Pacific Ocean as the wind gusted

through the dunes, I can tell all the authors of all the EIRs ever written that to pretend to meaningfully affect the natural forces in this world is, to the extent that it is sincere, simple hubris.

The premise of the EIR is that change is bad so that anything that promotes change, other than to undo previous change, should be stopped or, if not stopped, reduced. Those of us with more faith in the restorative power of nature than in the wisdom of man would like to leave room for the "Recreation" in GGNRA. That was the promise of GGNRA at its inception and the state of things that NPA should be preserving.

Those of us who thrill to the sight of a creature free to run and bark and accelerate erosion by "stopping fast" on soft sediments, free to sniff the breeze and even unmentionable body parts of its fellow creatures, we believe that this is worth preserving even though neither dogs nor their owners are ever going to be as universally wise and companionate and careful of the Earth many of us could wish.

I am a trained geologist and seismologist with decades of experience studying and characterizing the natural world and this I know: on the scale of geologic time it is not the Earth that is in danger - it is us. Whether we learn to preserve ourselves for a bit longer is to be determined. In the meanwhile, let us continue to enjoy a little freedom on the small percentage of GGNRA where off-leash dog running is currently allowed.

If you have survived, but not been persuaded by, this much philosophical context here are a few practical considerations.

Preferred solutions for the GGNRA areas generally are for reduced dog use rather than elimination of dog access. There are no guarantees, however, that these reductions, once implemented, will not be followed by further reductions in the future since they only ameliorate and do not solve the problem. Therefore, those who want "the ultimate solution" will be back for more restrictions. What we have now is good enough.

As you know the concern from the City is that NPC is simply unloading the GGNPA problem onto local jurisdictions and enforcement agencies. The part of the EIR that notes other dog use areas within a certain distance from current GGNRA areas makes no assessment of the impact on these new areas other than the completely unsubstantiated and qualitative pronouncement that it will generally be minor to moderate. If, in the view of the current non-dog users of these non-GGNRA areas, dog use becomes an increased annoyance raising political pressure to restrict or ban dog use in these areas GGNRA will not reconsider their EIR statements not any policies that have been implemented as a result.

In conclusion, live up to the promise of GGNRA as it was presented to all of us who supported its formation: the maintenance of needed recreational open space necessary to urban environment and planning. NPC did not inherit a pristine wilderness to be preserved, but a vibrant mixed use bequest whose status as mixed use recreation was to be protected.

Correspondence: I am writing to oppose the GGNRA's draft dog management plan. Simply, it reaches conclusions that are not supported by either the science or the law.

I believe that the GGNRA can accommodate both recreation and conservation. People with dogs have a need to walk their dogs, spend time with their dogs, and enjoy their dogs. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

In this time of recession, the GGNRA is proposing to spend money policing areas to make sure no dog owners are breaking the law, instead of trying to acquire more land so there is more room for dog owners and non-dog owners alike.

The Park Service should revise the dog management plan to:

? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation.

? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.

? Exclude speculative, exaggerated, biased, or misleading statements and studies.

? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).

? Enable professional dog walking and align any professional dog walking rules with county or city regulations.

? Eliminate "compliance-based management," which will allow additional

restrictions to be implemented without any public input.

These are my personal comments and observations regarding this plan: I have lived in Montara for over 30 years, very near one property that will soon be within the GGNRA 'fold'. I was told by a GGNRA representative that this area too will have to be policed to make sure dog walkers keep their animals on leash. Now I walk this area at least twice a week, once with my dogs and once on horseback. I can count on one hand the number of times I have seen someone else in this area, whether on foot or on horseback. And you plan to tell me that I cannot walk my dog offleash because that is the Rule? Why try to restrict people's lives? Why not try to have less rules and let the general populace work together to solve problems that may arise?

Sincerely,

Linda Steinhoff

Correspondence: I am a native San Franciscan. I live in Bernal Heights in San Francisco. I am a home owner and dog owner and as such I often hike in GGNRA both with and without my dog. I feel that the designated areas for dogs should not be changed in any way detrimental to the livelihood of the dogs. While on the streets of San Francisco we walk on leash, of course. In the dog parks/areas is where the dogs get to shine, socialize, train and run off all that energy they have from living indoors most of the time. My dog would not be able to get the exercise she needs and loves if she was on leash the whole time as I am not physically able to do it. Off leash, however, she can run around with other dogs and/or run after the ball multiple times getting lots of exercise. I've heard is said many times by dog trainers, a well exercised dog is a well behaved dog. I can truly attest to that.

GGNA parks are awesome for everyone! We especially love going to Fort Funston at least once a week. I have yet to have a bad experience there. Nothing but good pets and good people. All working with each other to help get the dogs social and well behaved. If they were all on leash it might be difficult to get them better behaved. It seems to me when dogs are on leash they sometimes seem to be more territorial and protective of owners then when they are off leash. I've noticed this especially with dogs that are generalized as aggressive: pit bulls, german shepherds, dobermans, etc. It's an amazing sight to see them all getting along so well in big open spaces. I've even heard a dog owner say of their 5 little barking/agressive poodles, "oh, they just bark because they never get off leash". Perhaps if they had

some off leash socializing they wouldn't be so barky on leash.

I am a responsible dog owner and keep my dog always in sight at least 50 to 30 ft close to me and call her near if she starts to drift.

As long as the areas that need to be protected are fenced off and proper signage is up then dog owners do keep the dogs out of those areas.

Please do not punish 98% of the dogs/owners because 3% are behaving poorly.

Sincerly, Diane Carrara

Re: Draft Dog Management Plan, Draft Environmental Impact Statement

Dear Superintendent Dean,

My name is Paul Quinn, my wife, dog and I live in the Sunset district of San Francisco. Since moving to San Francisco in 2004, we've always loved walking on the beach to relax and enjoy the natural beauty of Northern California. Two years ago, walking on the beach became even more important to us with the addition of a dog to our family. Being responsible dog owners, we took great care to ensure that our dog is well trained and behaved (adhering to all posted regulations), always under voice control and clean up after her. We take our dog to GGNRA off-leash beaches, most often Crissy Field four or five times a week. Additionally, I am an active outdoor athlete, and use the GGNRA frequently for hiking and running and never find (or have found) off-leash dogs to be a problem.

I do not agree with the GGNRA's current Preferred Alternative as it significantly restricts and eliminates off-leash dog walking in many areas of the GGNRA. The ability to take my dog for an off-leash walk at Crissy Field is just as important to me as it is to her: it allows us both to get exercise, socialize with our neighbors and enjoy our city. As a responsible pet owner, I fail to see the value or fairness in punishing the many for the

actions of a few.

Specifically, the Compliance-Based Management Strategy is not acceptable. By creating a poison pill, a few "bad apples" will have the power to ruin the off-leash experience of countless responsible dog owners. By all means, the current rules must be enforced, and I support fines for violating them. Furthermore, the GGNRA is not wilderness, it is part of an urban environment and as such there are many "non compliant" behaviors (e.g. speeding cars, bikes where they are prohibited, etc.). Should all activity in the GGNRA be subject to similar strategies, or, should enforcement be applied to all users of the GGNRA?

Given the importance of off-leash dog activities to the citizens ? human and canine ? of San Francisco and the Bay Area and since only 1% of GGNRA land is available for off-leash dog use, at the very least, the "No Change" Alternative A should be adopted.

Having said that a broader more comprehensive alternative should be considered and include the current off-leash areas without change and without any compliance-based strategy and open additional trails to off-leash dog walking.

In conclusion I'd like to reiterate by objection to the current Preferred Alternative. As a responsible dog owner with a well trained and well behaved dog who lives in San Francisco, we ? my dog and I ? depend on off-leash recreation in our urban environment. Furthermore, responsible dog owners deserve access to more off-leash space, not less. As I mentioned above, I'm an active person who runs and hikes on GGNRA trails and the Preferred Alternative does not have enough access to trails.

Respectfully,

Paul Quinn San Francisco, CA 94122

Dear Mr. Dean,

I am writing to express my strong opposition to the GGNRA's shameful draft dog management plan. In addition to being based on speculation, exaggerations, and outright untruths, it reaches conclusions that are not supported by facts or by the law.

In a tolerant community like San Francisco -- where more households have dogs than have children(!) -- the current draft plan is nothing short of a disgrace.

The GGNRA has plenty of room to accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation.

? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.

? Exclude speculative, exaggerated, biased, or misleading statements and studies.

? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).

? Enable professional dog walking and align any professional dog walking rules with county or city regulations.

? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

These are my personal comments and observations regarding this plan: I have been walking with my dog peacefully and respectfully at the GGNRA

for over 13 years. If I had known how poorly the GGNRA management would consider my needs as a dog-owning citizen, I would never have supported the transfer of these areas from the city to the GGNRA.

Sincerely,

Elizabeth Statmore

Correspondence: I was born and raised in San Francisco. I love my city and my family. Including my dogs. I pay taxes, I am a public servant. I think the GGNRA should keep its promises to San Franciscans like me. The GGNRA promised to keep the access to dogs and their owners as they stood when they were GIVEN our CITY land. I pay my taxes. My rights should be protected. If dog off leash areas are taken away and dog friendly areas are taken away, our dogs are still going to have to be exercised causing congestion and frustrated dogs and owners in neighborhoods. Please keep your promises. Please keep Fort Funston, Muir Beach, Crissy Field, and all other access areas available to all San Franciscans, and their pets.

Correspondence: Hello,

I am writing to plead that the proposed plans to cut off-leash dog walking not be approved. The dogs of San Francisco will suffer greatly without the opportunity to enjoy off-leash time within their city. I understand the need to protect endangered wildlife and plant species but I do not believe this is the way to do it. As someone who has studied the needs of dogs and worked directly with them for several years now I am intimately familiar with the exercise requirements of these pets. If people are not able to provide their dogs with off-leash exercise many dogs will not be exercised at all. As a result, they will become restless and bored and take out their frustrations on their homes and their guardians with unruly and destructive behavior. If this becomes enough of a problem, guardians may choose to relinquish their dogs to ACC, and the shelter system does not need to be any more strained than it already is.

I own a high-energy breed of dog, a shepherd, and I could not imagine

having nowhere within the city to take her for off-leash exercise. If these plans are approved you will be doing a great disservice to the dogs of San Francisco, which I have always known to be a dog-loving city.

I am unfortunately not educated enough in matters of wildlife preservation to propose an alternative plan, but I sincerely hope you will be able to find another way to protect the native species of San Francisco, and I hope also that this opens the eyes of dog owners who do not control their pets responsibly in off-leash areas.

Thank you.

Correspondence: Dogs to be allowed off leash in the existing designated dog areas

limit professional dog walkers to no more than 6 dogs

certify professional dog walkers with a licensing program

setup a dog owners membership program so that membership fees can be utilized for clean up and the purchase of a bio-digester for dog wastes

utilize bio-degradable dog waste bags that can be utilized in a bio digester

communicate with dog owners via their membership to help make donations of time, and money for clean up

setup a web site for dog owners that is tied into the membership for dog owners that has FAQ on the proper usage of the dog areas in the park.

use funds from the dog owner membership to publish paper handouts for dog owners on proper usage of the park area

i think setting up a revenue model for dog owners to pay for the park maintainance as well as Bio Digesters in the Pakr so that DogOwners can drop their waste into the digesters and the digesters provide fertilizer for the plantings in the park.

Correspondence: I'm a park user, parent of 3 children and a dogowner. I support the preferred alternative, but am concerned about the ability of GGNRA to enforce these rules. I am glad the off-leash area near my home (outer Richmond) will remain open to off-leash, but I'm also concerned that the park will not be able to enforce non-leash behavior in the "ROLA" areas. That is, dogs chasing or biting children, running through picnics, etc.

Correspondence: Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022 Dear Mr. Dean, My name is Kim Goussev, and I live in Potrero Hill. I will occasionally take my dog to the off leash grounds at Crissy Field and am always respectful of the environment- I curb my dog, control his behavior so he doesn't bother the many families that go as well, among other practices. My elderly mother and grandmother join me on occasion and they enjoy the great atmosphere at crissy field as well. I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off-leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions. It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option. The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal. The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for

these local residents. After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program. Thank you for your consideration. Sincerely, Kim Goussev San Francisco Ca 94107

Correspondence: I urge the National Park Service to protect Golden Gate's imperiled wildlife from harassment by unregulated recreation.

--The park's mission is to protect the natural and cultural resources, not allow recreation to undermine it. Alternative D best reflects the national park values.

--Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

--The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by offering more than one trail and more beach areas free from dog recreation.

--Require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs.

--Limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Thank you for helping to create a better park experience at Golden Gate National Recreation Area, and for giving imperiled species a chance to survive.

Correspondence: May 29, 2011

Frank Dean, General Superintendent GGNRA Fort Mason, Building 201

San Francisco, CA 94123-0022

Dear Mr. Dean,

I am a 58-year-old, African-American, San Francisco homeowner and dog owner who spends a tremendous amount of time with my dog at Ocean Beach in the off-leash section. Not only do I take my rescue dog to the Ocean Beach small dog walk every Saturday morning, I also take him there every Sunday, early most weekday mornings and sometimes in the early evening, after work. This is by far, my dog's favorite area to romp off leash and my favorite location to remove myself from everyday stresses.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off-leash dog walking areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions.

It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I want to protect the GGNRA's natural resources, I believe options other than restricting dog-walking access should be considered first. I favor an approach that truly balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such alternatives as a reasonable option.

The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and is not based on any documented impacts of non-compliance, just the mere fact that non-compliance occurs. Because it will change the status of areas from off- to on-leash or on-leash to "no dogs allowed" automatically and permanently if non-compliance is alleged, it will deny the public the chance to comment on these major changes when they occur. That violates the law that requires public comment when a change is either significant or highly controversial, as these changes would clearly be. It must be removed.

The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents.

After careful consideration, I support a modified Alternative A (the "No Action alternative") that codifies the 1979 Pet Policy as it was originally written (there is no evidence in the DEIS to support the closures of beach access because of the presence of snowy plovers), and that includes off- and on-leash access on GGNRA lands in San Mateo and on new lands that become part of the GGNRA, especially those areas in both that have traditionally had dog walking.

Thank you for your consideration.

Sincerely,

Veronika A. Powlis San Francisco, CA 94115

Correspondence:

I have one 7-year old black lab, and I walk her around sigmund stern grove, ocean beach, and fort funston several times a week.

Severe restrictions are not needed to protect other park visitors from dogs. Problems with dogs represent a tiny fraction of the total incidents and citations issued by the GGNRA over the past decade. Of those incidents and citations issued to people with dogs, the majority were leash law violations, or being in a closed area, and did not reflect any safety issues between dogs and other park visitors. Target enforcement on the small number of people whose dogs misbehave, not on excluding the entire class of people with dogs from most of the GGNRA. Jean Donaldson, nationally recognized expert on dog behavior testified before the SF Animal Control and Welfare Commission on 2/8/07: "[S]elf-selection operates strongly, i.e., people who take the time to get into their car or walk to a designated off-leash area to exercise their dogs tend not to be the type who are derelict in other areas of dog guardianship, such as training, socialization, or appropriate containment." The DEIS does not adequately address dispersion issues. The DEIS does not adequately address the environmental and social impact of forcing large numbers of people and dogs into much smaller areas. Reducing the amount of area available for off-leash will significantly degrade the park experience for people with dogs. It will increase conflicts. Even more importantly, the DEIS does not address the environmental and social impact on small, neighborhood parks in cities like San Francisco next to the GGNRA. Because the GGNRA is located immediately adjacent to one of the most densely populated areas in the United States (San Francisco), it provides much needed recreational open space for Bay Area residents. If that open space is lost to recreational access, people and their

dogs will move to the much smaller city parks and they will not be able to absorb the hundreds or thousands of people with dogs each day that will be kicked out of the GGNRA. As further proof that the GGNRA did not consider impacts on city parks in San Francisco, the Preferred Alternative suggests the nearest legal off-leash area in San Francisco to Fort Funston is Lake Merced. That off-leash area has been closed to off-leash for years and has been turned into a native plant restoration area and habitat for the endangered red-legged frog among other animals. Yet this is where the DEIS suggests people with dogs go.

The DEIS continues a trend of GGNRA claims about impacts by dogs on birds that are not supported by the data. It is based on bad science. There is no scientific consensus that severe restrictions on off-leash dogs are needed to protect natural resources and wildlife. Some of the most compelling research in the last few years has been by researchers such as Forrest and Cassidy St. Clair (2006) and Warren (2007) who admit that they expected to find that off-leash dogs had a major impact on the diversity, abundance, and feeding behaviors of birds and small mammals. However, when they did the actual research, they found no such impacts. This indicates that assumptions about impacts from off-leash dogs must be tested and proven to be true before they can be used to justify restrictions. Unfortunately, most of the assumptions cited by the GGNRA have not been adequately tested or proven. In addition, the GGNRA has repeatedly cited research that they claim shows major impacts from off-leash dogs. However, when the raw data from these studies is analyzed, it is clear the claimed conclusions are not supported by the data. This is highly reminiscent of the problems documented at the Point Reyes National Seashore, where claims by staff biologists about negative impacts from an oyster farm located within the park were proven to be baseless when the raw data was independently analyzed.

Severe restrictions are not needed to protect the snowy plover. The GGNRA's own data show that off-leash dogs have no impact on the numbers of snowy plovers, a threatened species that roosts only (does not nest or raise chicks) on relatively small parts of Ocean Beach and Crissy Field. Indeed, larger numbers of snowy plovers frequently coincided with times when dogs were allowed off-leash in the area. The 1999 Hatch Report observed 5,692 dogs at Ocean Beach and found that only 6% chased birds (mostly seagulls). Indeed, of these 5,692 dogs, a mere 19 were observed to chase plovers. That is one-third of 1% of the dogs observed. Target those dog owners for enforcement, but leave the other 99.66% of dogs that did not chase plovers alone. Some studies define "disturbance" of a bird so broadly as to include the fact that if a bird merely looked up when it heard a sound, even if it took no further action, it was a disturbance. The GGNRA's own studies show that joggers and walkers, not to mention parents with toddlers, equestrians, surfers, and other park users "disturb" plovers, yet there is no

attempt to restrict their access in the plover areas. There are much less restrictive measures the GGNRA could take to protect snowy plovers, including the use of temporary "exclosure" fencing when the plovers are present. This would keep everyone, people as well as dogs, out of the area. Enforcement that targets people who intentionally disturb plovers would also help. During a 2/17/07 Negotiated Rulemaking meeting, Barbara Goodyear, Field Solicitor for the NPS, said that deliberate behavior (e.g., training your dog to chase birds) should be the target of a management policy, but that incidental behavior (e.g., walking by a bird and causing it to flush) should not. Yet the Preferred Alternative cites incidental behavior as a justification for increased restrictions on off-leash dogs.

Severe restrictions are not needed to protect the bank swallow. The DEIS claims "continuing" impacts from dogs and/or humans that include digging at or collapsing the burrows of bank swallows, flushing the birds from nests, and causing active sloughing and landslides that may block or crush the burrows. However, there is no documentation that any of these impacts actually occur. Bank swallows burrow near the top (but not at the top) of sheer cliff faces at Fort Funston. There is no way dogs can access these burrows, so there can be no impact on them from the dogs. A GGNRA bank swallow report claimed that these impacts "could occur" even without proof that they actually do. This "could occur" has been changed in the DEIS to "continuing impacts".

The DEIS is full of impacts of dogs on wildlife and other park visitors that "could" occur, but there is little evidence that these impacts actually do occur. After over ten years of intensive scrutiny of off-leash dogs in the GGNRA, it should be obvious if those impacts really do occur. The lack of data indicates they do not. For example, the DEIS mentions that disease "could" be transmitted to people from unpicked-up dog feces. However there has not been a single case of dog-feces-caused human illness reported by the San Francisco Department of Health for over 50 years. A management policy should not be based on hypothetical impacts. It should be based on actual, observed impacts. Hypotheticals that are not actually seen in the GGNRA cannot be used to justify restrictions on off-leash recreation in the GGNRA.

The claim that environmental justice requires severe restrictions on off-leash dogs is not supported by the studies cited in the DEIS. a) The DEIS cites a 2007 SF State study that claims all Latinos and Asians surveyed said that dogs were a problem. However, the study itself was not about the "ethnic minority visitor use experience at the GGNRA" as claimed by the DEIS, but was actually intended to address ways to improve "connecting people to the parks." Off-leash dog walking connects all different kinds of people to the parks. In addition, the SF State study was not an extensive survey ? it interviewed less than 100 non-randomly people who were largely unfamiliar

with the GGNRA (only 1/3 had visited at least one GGNRA site in the past year). b) A second study cited by the DEIS (Northern Arizona University phone study) was a scientifically rigorous study that used random sampling in identifying who was interviewed for the survey. This study concluded that there was no real difference in attitudes between the various ethnic groups about dogs in the parks. c) Indeed the restrictions on off-leash access supported by the Preferred Alternative will have a serious negative impact on the thousands of ethnic minorities who walk their dogs off-leash in the GGNRA, a point not addressed in the DEIS. Off-leash dog walking is the most diverse recreation activity in the GGNRA, enjoyed by the widest variety of people ? seniors, kids, the disabled, every ethnic group, every sexual orientation, and every social and economic class.

The claim in the DEIS that they have to manage the GGNRA in a manner similar to the way they manage parks like Glacier National Park or Yellowstone National Park is misleading and cannot be used to justify the restrictions called for in the Preferred Alternative. a) The GGNRA is a National Recreation Area, not a National Park. The mandate for the GGNRA's creation was, according to the legislation that established the GGNRA in 1972, for the "maintenance of needed recreational open space". Off-leash dog walking was acknowledged at the time as one of the traditional recreational uses taking place in the GGNRA when it was created. In 1979, the US Congress passed a law that all national park units, including national recreation areas, national seashores, and national monuments have to be managed uniformly. But, concerned that the unique purposes for each park would be overlooked in this change, they added the following language to the law: "The authorization of activities shall be construed and the protection, management, and administration of these areas ? shall not be exercised in derogation of the values and purposes for which these various areas have been established". So there is no mandate to match the GGNRA's policies with National Park Service requirements that dogs not be allowed off-leash in a national park. b) In 2002, a panel of senior National Park Service officials concluded, in part, "[T]hat offleash dog walking in GGNRA may be appropriate in selected locations where resource impacts can be adequately mitigated and public safety incidents, and public use conflicts can be appropriately managed." Adequate mitigations and management already exist ? target people whose dogs bother birds and wildlife or who jump on people, but leave the vast majority of responsible dog owners free to recreate off-leash with their dogs on the less than 1% of GGNRA land on which they've always been allowed off-leash. c) Dogs are allowed off-leash to hunt in national preserves, and other units administered by the National Park Service. Surely, if it's okay for a dog to be off-leash while it helps chase, corner and kill a wild animal, it should be okay for a dog in the GGNRA to be off-leash to play with people and other dogs. d) The GGNRA is located in the densely populated San Francisco Bay Area. It is in a major urban area. Much of the land was highly modified by the

military when they controlled the land before the GGNRA was created. The GGNRA contains numerous missile silos, artillery batteries, and their assorted support structures. The military planted huge amounts of ice plant to stabilize the sand dunes at Fort Funston and elsewhere. Standards of management that treat much of the GGNRA, especially those parts in San Francisco, like pristine wilderness are misguided. e) During 2/17/07 Negotiated Rulemaking meeting, Barbara Goodyear, the Field Solicitor for the NPS, made it clear that while all parks are managed to the same level (conservation of resources), there is flexibility in how that is done from park to park. She cited as an example, the fact that you don't manage Yosemite Valley with the expectation that people will have a solitary wilderness experience. You manage it with the knowledge that people will bump into each other in that part of Yosemite. The GGNRA, an urban park located in and immediately adjacent to a large city, does not have to be managed in the same way as Yellowstone or Glacier National Parks.

The level of enforcement required by the Preferred Alternative is excessive and unsustainable. Targeting people walking their dogs irresponsibly and leaving responsible dog walkers alone would be a much more efficient use of GGNRA resources. The DEIS states that it will cost nearly \$1 million to enforce the Preferred Alternative, through the hiring of more Park Rangers or Park Police. In an era of shrinking federal budgets, this seems a poor use of scarce financial resources. Existing Park Rangers could easily enforce already existing rules such as picking up pet litter or no chasing of birds. These enforcement actions are all that are needed to ensure responsible dog walking and minimal impact on natural resources and other park visitors from off-leash dogs.

The inclusion of a "poison pill" in the DEIS suggests the GGNRA will use it as an end run to ban off-leash dogs in the near future, bypassing the kind of public process such an action is normally required by law to follow. The DEIS includes a "compliance-based management strategy" that says that, if there is not enough compliance with the restrictions imposed by the Preferred Alternative, the GGNRA will change the management of the various areas to the next more restrictive level ? an offleash area will become on-leash only, an on-leash area will become no dogs at all. This change will be permanent, with no chance to go back to less restrictive levels at any time in the future. This section must be removed from any final Dog Management Plan. a) This compliance-based management strategy is decidedly unfair, because it can only be changed in one direction ? toward more restrictive levels of access for people with dogs. b) There is no provision for public comment in the case of a change in status of an off-leash or on-leash area because of the compliance-based management strategy. The GGNRA has already lost two court cases (and one appeal) when it tried to make a significant and controversial policy change without going through a public process. The federal courts have routinely told the

GGNRA that they have to hold public meetings and take public comments before making such changes. Clearly, a change in status of an off-leash area to leash-only would be both significant and very controversial, and therefore should require a period of public comment and public hearings before being implemented. The poison pill in the DEIS is an end run designed to allow the GGNRA to make such changes without having to go through a public process (they can claim the public process was the public comment on the DEIS itself, not on the changes it allows at a future time). c) How will compliance be monitored? Who will do the monitoring? The GGNRA has repeatedly relied on poorly trained volunteers with a deep-seated bias against dogs to monitor the interactions between dogs and snowy plovers. Why would we expect these compliance monitors to be any less biased? Will their claims of non-compliance be valid? Will the GGNRA resort to the use of surveillance cameras to monitor compliance? While noting that there is no mention of surveillance cameras in the DEIS, GGNRA staff have refused to say they would never be used. d) This allows a few bad actors to result in the removal off-leash access everywhere in the GGNRA, even if there are tens of thousands of hours of incident-free dog walking for every single incident. Including a "nuclear option" in a management plan is not good management policy. Regulations already exist to target those who do not control their dogs when they are off-leash. Target enforcement at those bad actors, not at the huge numbers of dog walkers who do not cause problems.

Off-leash play decreases the likelihood of dog aggression in dogs. In comments to the SF Animal Control and Welfare Commission on 2/8/07, Jean Donaldson, then head of the Dog Training Program at the SF/SPCA and a nationally recognized author on dog behavior said: "There is not only no evidence that allowing dogs off-leash for play opportunities increases the incidence of aggression, to a person, every reputable expert in the field of dog behavior in the United States is of the opinion that it is likely that off-leash access decreases the likelihood of aggression." She also said: "Interestingly, it could very well be that the safest dogs are those that attend off-leash dog parks." And she said: "There is no research demonstrating that dog parks or off-leash play contributes to any kind of aggression, including dog-dog aggression."

A well-exercised dog is a well-behaved dog. Dogs that are not adequately exercised can develop behavior problems such as barking, destroying property in the home, etc. Behavior problems are one of the primary reasons that people surrender dogs at shelters. San Francisco has a "No Kill" goal that no potentially adoptable animal in a city shelter (SF Animal Care and Control, SF/SPCA, Pets Unlimited). Representatives of the SF/SPCA have said that the Preferred Alternative will make it harder for the SF/SPCA to perform their mission to reduce surrenders to city shelters and make San Francisco a truly No Kill city.

Correspondence: For full disclosure, I am an employee of the GGNRA, but am not speaking on behalf of the park--only as an individual, father of three children and owner of a dog. I support the preferred alternatives with the following exceptions:

1. I believe that leashed dogs should be allowed on the paved road at Sweeney Ridge. That is, the road between Sneath Lane and the Nike Missile Site. This would serve the park's goal of keeping the wilder sections of the site dog-free, but allow local residents the opportunity to walk on a portion of the park.

2. I believe that the proposed alternative at Fort Funston will not work unless the park fences the trails to keep visitors and dogs on trail. My experience working at Fort Funston has shown that unless fences are present, dogs will roam wherever their owners allow. That said, I suggest making the trails very wide, say 15 or 20 feet, to allow plenty of room for visitors with and without dogs to enjoy the trails. This will prevent a "fenced in" feeling, while allowing the park to restore the dune habitat that used to dominate Fort Funston. I don't believe the park can enforce leash laws or area restrictions without fences, and believe that fencing has worked in the northern portion of the site, allowing habitat restoration while also allowing dog owners and non-dog owners to enjoy the site.

Finally, I believe that many dog owners see citation fines as "the cost of doing business," and encourage the park to increase citation costs, especially for repeat offenders.

Thank you for your time and effort on this difficult issue.

Correspondence: With all due respect, it does not make any sense to implement a policy requiring dogs to be on leash at all times in national park property. Dogs who play off leash at the beach or in national parks do not threaten or endanger any plant or animal life, they are simply enjoying playtime with their masters and other playmate dogs and do not bother anyone. 99.9% of dogs are well behaved, have owners who pick up after them and ensure that

they do not make any damage or bother the few humans who do not like or for some reason are afraid of dogs.

The dog owners who do not clean up after their dogs or let them behave inappropriately are the ones that should be dealt with and fined. At least there are only few of them. Restricting all dogs because of a few is not appropriate. My dog loves to run after his Frisbee and swim out in the Bay after it. How long do you suggest his leash now should be if your policy is implemented? Revise your plan and leave things as they are.

Correspondence: A flat-out policy needs to be made that any new lands added to the GGNRA (eg., Sharp Park and environs) is dog-free.

No dogs, on or off-leash. This is especially important at Sharp Park where there are two Endangered species that need protected.

Correspondence: Thank you for accepting comments on the GGNRA Proposed Dog Management Plan. My partner and I just spent the last two days pouring over the GGNRA's Criminal Incident Records for the year 2009 (Redacted) that relate to domestic animal issues at the GGNRA. We have categorized the incidents that were available to us and have copied them into this comment for the record.

Unfortunately, these reports which were provided at the request of a colleague under the Freedom of Information Act were only provided very recently and not in time to submit earlier comment. Also reports for the year 2010 have not yet been provided as requested so it is not possible to determine whether there have been any improvements or progress in number or degree of incidents of this type. We believe the information included in the 2009 and 2010 Criminal Incident Records should have been included in the Draft Environmental Impact Statement.

In reviewing the 2009 Criminal Incident Records several items stand out. 1. Based on these 2009 reports the professionalism of the U.S. Park Officers and Rangers was outstanding during this difficult period of transition and should be commended for their performance. As local naturalists and

wildlife advocates these officers have our gratitude for performing a very tough job with patience and dignity. Thank you! 2. There are a high percentage of non-compliant dog owners and professional dog walkers who provide false information or are rude and verbally abusive to the U.S. Park Officers. We are saddened to read about these incidents but not surprised based on our own experiences with non-compliant dog owners in the GGNRA. 3. There are a surprising number of fraudulent representations of dogs as "Service Dogs" 4. There are a high number of non-compliant dog owners who are repeat offenders. 5. Professional Dog Walkers place a tremendous burden on the natural resources of the parks and GGNRA Staff. 6. There is a high degree of variability between Park officers and at different park properties as to whether a non-compliant dog owner will be cited or given a warning. 7. Many dog owners whose dogs have acted aggressively towards other dogs or visitors flee the scene when an injury occurs or a complaint is registered. 8. Many non-compliant dog owners are abusive to visitors who complain to them about their dog's behavior or their handling of their dog. 9. Overall there is a tremendous burden to the U.S. Park staff in dealing with non-compliant pet owners.

Some conclusions: 1. Based on many hundreds of hours over decades of personal observations while at the GGNRA and the number of records in this 2009 report, the officers are observing only a very small subset of the number of actual domestic animal code violations that occur within the GGNRA. Of course the most egregious violations, if observed by visitors or park staff, are reported and handled quickly by officers. It is apparent that the vast majority of violations of rules are never reported by visitors or observed by park staff. Naturally, many non-compliant owners change their illegal behaviors quickly upon noticing the presence of park staff. Due to the size of the parks compared to the park's small number of staff a visitor can hike for many hours, even days, without ever coming in contact with park staff. Therefore the incidents in this report should be considered as a small percentage of the overall violations that do occur within a year at the parks. 2. The non-compliant dog owners listed in the majority (>90%) of incidents in the 2009 Criminal Incident record are given a verbal or written warning. The reports indicate that their names are entered into a database and they will be cited for subsequent infractions. During this transition and education period I personally concur with this method. However, using traffic law violations as a metaphor for pet rules in the parks is not unseemly and if licensed auto drivers come to expect only a warning when they are caught running a stop sign they are much less likely to comply with that law in the future. 3. Repeat dog rule offenders should always be cited and chronic offender's fines should increase with the number and severity of the offense. 4. Professional Dog Walking should not be allowed but being that the burden of proof is so high for the officers, all dog walkers should be limited to three dogs per walker.

GGNRA 2009 Criminal Incident Records involving dogs

Off-leash dogs at the GGNRA have harmed park visitors. 13 Records, at least 13 people injured 140009008641 Muir Beach, dog and juvenile on boogey board collide in water, boy taken to hospital for medical care 070009-012319 Ft. Re: Draft Dog Management Plan/Draft Environmental Impact Statement

Dear Superintendent Dean,

It is crucial that the National Park Service arrange for an INDEPENDENT ORGANIZATION TO EVALUATE AND ANALYZE PUBLIC COMMENTS submitted for the Draft Dog Management Plan/Draft Environmental Impact Statement.

Many of the public comments point to false statements made by GGNRA staff regarding the facts on the ground at various GGNRA sites. GGNRA staff also made countless speculations in the DEIS that are unsupported by any evidence. GGNRA staff made numerous false and misleading literature citations in the DEIS to make it appear that there is evidence supporting unsupported statements. It is absolutely unacceptable for the same GGNRA staff to evaluate the veracity of their own statements.

At your open house event at Fort Mason, I pointed out to staff (from the organization that prepared the DEIS) specific false statements in the DEIS that came from GGNRA staff. I was told to "put that into a comment." I asked how they would evaluate my comment to decide if what I said was true. The response was that they would ask Daphne Hatch. Since I was pointing out false statements whose origin was Daphne Hatch, that was a bizarre response.

The level of bias displayed by GGNRA staff against all off leash recreation in the GGNRA leaves them with no credibility to evaluate their own pseudo-scientific arguments.

A committee of the National Academy of Sciences recently evaluated the work of National Park Service scientists regarding oyster culture in Drakes Bay. NAS reported in a news release, May 5, 2009, that, National Park Service scientists, "selectively presented, overinterpreted, or misrepresented the available scientific information," and, "exaggerate[ed] the negative and overlook[ed] potentially beneficial effects." The work of GGNRA staff that appears in the DEIS is at least as egregious as that evaluated by NAS.

Without independent evaluation and analysis of public comments, the whole NEPA process, the final EIS, and the policy resulting from it, can claim no credibility as unbiased or science based.

Sincerely, Keith McAllister Oakland, CA 94611

Correspondence: I frequently visit GGNR areas with my dog and really appreciate having beautiful spaces to take a dog. I always keep her on leash and have never encountered an off-leash dog that was aggressive. Still, for the sake of preserving fragile habitats, I would support requiring all dogs be on leash, and perhaps limiting the number of dogs per visitor to ensure that they can be under full human control at all times (which would mean commercial dog walkers would reduce their use of the parks.)

I encourage the committee to consider options that would still allow visitors to bring 1-2 leashed dogs into GGNR areas.

Correspondence: This plan would have a severely negative impact on my family. Fort Funston is the **only** place in San Francisco that I can let my dogs run off leash. One of my dogs doesn't do well in enclosed dog parks, and the other has problems with recall. (The cliffs on the beach keep her from getting off of the beach.) There is no other place that I can take both of them- not even an open space like the dog park at Stern Grove. I would need to drive much further to find a place to let them run free (negative environmental impact from extra mileage by car). If there haven't been major problems with dogs, dog walkers, and dog owners in Fort Funston, I don't understand why you are considering this draconian policy.

Ft Funston (and the rest of the GGNRA within SF) are located in a dense urban setting. Policies at these parks should reflect that reality. Specifically at Ft. Funston, if your draconian policy is adopted, the number of visitors to that park will **plummet**. From all of the time I have spent there, it seems like nearly everyone is either walking a dog(s) or hang gliding. The steep access to the beach makes the park unfriendly to families, especially those with young children or seniors. The number of protected native plants or animals is minimal.

If anything, you need to remedy the unsafe parking and traffic conditions on Skyline Blvd. The lower parking area (at the intersection of Skyline Blvd and John Daly Blvd) is really unsafe. More parking spaces are needed north of that intersection (where the fire lane is now), so that people don't have to

get on the highway/Skyline Blvd just to turn around. Pulling out of any of the parking spots along Skyline Blvd is dangerous. In order not to be hit from behind, cars need to back into traffic travelling at highway speeds, and get to highway speed in a very short distance. I have personally almost been rear-ended on multiple occasions.

There also needs to be a two-way intersection built across Skyline Blvd directly outside of Ft. Funston's entrance. The sight lines in this location would actually be safer than where cars are forced to turn in order to go north on Skyline Blvd (outside of the country club). I have also personally felt very unsafe on occasions making that u-turn - there just isn't enough time/space to get up to highway speeds. There is enough unused space in the highway median so that turn pockets and queuing lanes can be built in order to allow turning movements in all directions. With long enough turn pockets, the intersection wouldn't likely need to be signalized. Failing these measures, the GGNRA needs to work with local jurisdictions (and Caltrans?) to examine drastically reducing the speed limit on the section of Skyline Blvd from where it begins to the first left turn in Daly City.

Lastly, there needs to be more transit access to Ft. Funston, both at the entrance to the park at the intersection of Skyline Blvd and John Daly Blvd., and into the main entrance. If you are examining the environmental impacts that park users incur, please also examine how public transit access could be bolstered.

Bike access also needs improvement. Given the recreational nature of the area and how many cyclists use the road, Skyline Blvd should have a dedicated bike lane. I have seen bicyclists almost get hit. If there aren't any secure bike parking facilities in Ft. Funston, this needs to be examined as well.

Correspondence: Hello, I live in montara and have been walking my dog in Rancho Corral de Tierra for the past ten years. 80% of the people walking in this area have dogs. In fact, many of the people without dogs are happy to see and pet other peoples dogs. We do not have a local park or rec center. Rancho is the one place people in Montara meet up, socialize and form a community. There is nowhere safe to walk my dog in Montara, other than Rancho. Walking in the neighborhood, requires walking in the street with cars going by. My 2 1/2 year old son loves to go on walks with our dog Max. If we had to walk in the street, he would miss out on that wonderful pastime. I request that Alternative E (in the dog management plan) be adopted for Rancho

Corral de Tierra. Anything else, would adversely affect all the residents of Montara. Bike riders, horse back riders, walkers, runners and dog walkers have co-existed in harmony for many years. Please do not change what is working.

Sincerely, Christa Livingstone

Correspondence: I am writing to comment on your plan concerning hiking with one's dog off leash. My particular interest is the newly acquired Rancho Corral de Tierra lands.

I am a 74-year-old woman with moderate hearing loss. These facts are pertinent because age and disability are frequently cited as reasons for not allowing dogs off leash on GGNRA lands. I hike several times a week with my dog off leash on the Rancho Corral de Tierra land between Montara and the McNee Ranch State Park.

While this is a pleasure for both of us, the more important facts relate to health and safety for me. The pleasure motivates me to get the vigorous exercise that benefits an older person. The varied terrain at Rancho Corral de Tierra makes for a good hike in conditions that are not readily available elsewhere on the coast when walking with a dog. With my dog off leash we can precede a pace best for both of us ? me slowing some on the hills and

my dog chasing her ball.

Because of my hearing loss I wear hearing aids, these of course help but do not restore normal hearing and may occasionally be a handicap due to wind noise. My dog alerts me to what is happening around me. She has helped me avoid both mountain bikers and horseback riders on narrow sections of trail. And she tells me when other hikers and dogs are approaching. She comes readily to lead so I can leash her if necessary. Both of us are safer together. Further as a woman I feel safer hiking with my standard poodle.

I contribute to the community that has developed in Montara among off leash dog folk by maintaining one of the dog waste stations. I supply waste collection bags and empty and pack out accumulated waste. Such a sense of community and of responsibility for one's community seems to me to be something our government needs to make special effort to support.

My fear is that further restrictions to off leash dog hiking in GGNRA will have a negative impact on those few areas that remain available. And, in my case will necessitate a long drive to some area where I can hike comfortably with my dog - not a good choice economically nor for the environment.

My plea is for people not dogs. My hope is to continue to enjoy my choice of recreation, hiking with an off leash dog, - recreation that contributes to my health and well-being and that of the many others I meet on the trail.

Correspondence: I oppose any further restrictions on dog walking. Off-leash areas should be expanded, not eliminated. The public lands exist for the enjoyment and recreation of the public. The use of public lands must be undertaken responsibly so as not to infringe upon the enjoyment of others or damage the public lands so they can't be enjoyed by future generations. Dog walking, when undertaken responsibly, does not have any greater impact than people walking without dogs. Responsible people keep their dogs under control and clean up after them. Irresponsible people are themselves out of control and do not clean up after themselves. Unless you are prepared to ban all people from parks or severely restrict their movements based on the bad behavior of a few people, please do not target a specific group of people who only want to enjoy the public lands (that they own) together with their four-legged companions. As a nation, we have adopted these creatures as our companions and they bring us great benefit. Dogs provide unconditional love and acceptance, unending entertainment, and motivation to get out of the house, exercise, unplug, and enjoy the real world. These are benefits to

individuals and benefits to society. With all of the negative and harmful activities that take place on public lands, and throughout society in general, it is simply beyond reason why a positive and harmless activity has been selected for new rules and restrictions. For dog lovers, and there are a lot of us, our outdoor activities center around walking our dogs. We walk and explore together and we enjoy the freedom together. Banning dogs from certain areas and restricting dog walking to a leash only activity in other areas may seem like a ban or restriction on dogs, and that is bad enough, but the effect is that it bans a targeted group of people from those areas, and that is discriminatory and unreasonable. Any harm that you can identify that is caused by off-leash dog walking, I can match with an equal or greater harm caused by people walking without dogs. Please reconsider your proposed action in this light. I believe that when you weigh the real benefits of off-leash dog walking against the imagined harm you will see that this is an activity that should be allowed to continue.

Correspondence Type: Web Form
Correspondence: Dear Mr. Dean,

My name is Georgette Petropoulos and I've lived in San Francisco my entire life. My family got their first dog when I was a young teenager in the 1960s. That's when we discovered Fort Funston and Baker Beach. For more than 40 years my family, friends and I have enjoyed these open spaces along with our dogs.

One thing that has always been apparent, especially at Ft. Funston, is the sense of community and safety one feels there. It is generally cold and windy, and if not for the people with their dogs and hang gliders, it would be desolate. Throughout the years I've met many elderly people who go to Ft. Funston because they feel safe among the dogs and their owners. I have been a member of the Sierra Club for many years, and preserving our native habitat and species is important to me. However, I do not believe that dogs are having a negative impact on the flora and fauna throughout the GGNRA, especially since the percentage of space available for off-leash recreation is so minimal.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off-leash dog walking areas within the GGNRA.

The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and is not based

on any documented impacts of non-compliance, just the mere fact that non-compliance occurs. Because it will change the status of areas from off- to on-leash or on-leash to "no dogs allowed" automatically and permanently if non-compliance is alleged, it will deny the public the chance to comment on these major changes when they occur.

The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents.

After careful consideration, I support a modified Alternative A (the "No Action alternative") that codifies the 1979 Pet Policy as it was originally written (there is no evidence in the DEIS to support the closures of beach access because of the presence of snowy plovers), and that includes off- and on-leash access on GGNRA lands in San Mateo and on new lands that become part of the GGNRA, especially those areas in both that have traditionally had dog walking.

Thank you for your consideration.

| Correspondence: | I have been a responsible dog owner for nearly 30 years and I am always amazed by the bias shown toward dogs. To be well-behaved members of society, dogs need open space to exercise and interact with other dogs, yet this freedom is constantly being threatened. In my experience, dog owners tend to be more environmentally conscious than your average person so why are we being targeted? We clean up after our dogs and we make sure our dogs don't bother people. We take our responsibility seriously. What we get in return is priceless -- the look of sheer joy our beloved canines get when running on the beach and the contented calm they have on the drive home. I have experienced the profound impact it has on my life and that of my dogs when areas we once enjoyed are made unavailable to us. We have not done anything that justifies having this privilege taken from us. On the contrary, I see many humans without canine companions ravaging the environment. It sickens me to find a pristine beach littered with garbage and broken bottles, yet humans are not being banned from these areas. The changes being proposed by GGNRA are simply unfair to dogs and their owners. | | |

Correspondence: Dear Mr. Dean, I am a 67-year-old native San Franciscan who has enjoyed walking with my dog at Baker Beach and Ft. Funston for more than 40 years. I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law. The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded. This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others. The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation.

Correspondence Type: Web Form

Correspondence: I am writing to oppose certain provisions of the GGNRA's draft dog management plan, particularly the "preferred alternatives" for GGNRA-administered areas in San Mateo County. The proposal to ban dogs completely from "New Lands" (aka Rancho Corral de Tierra) is especially draconian and would be punishing to the local communities. The preferred alternatives for Mori Point, Milagra Ridge, and Sweeny Ridge and Cattle Hill also seem to consist of arbitrary and capricious restrictions on current regulations and practices.

It is disturbing that the preferred changes do not appear to be based on actual, documented impacts, but rather on generalizations and assumptions. There is also a distinct lack of fuller context: the possible impacts of dogs are not discussed relative to the impacts of all users (i.e. people), nor are the well-documented physical and mental health benefits of pet ownership and dog walking considered.

The primary underlying assumption of the draft dog management plan appears to be that the open space areas administered by GGNRA are the

equivalent of pristine wilderness National Parks, such as Yosemite. To the contrary, the GGNRA was intended to provide urban recreation areas, serving both recreation and conservation ? a goal that is totally achievable.

Rancho Corral de Tierra, in particular, has a 300-year history as ranchland. Cattle, horses, and dogs have all been historically present; generations of local residents have recreated on these lands, without destruction of wildlife or degradation of the environment. The draft dog management plan acknowledges that no huge influx of new visitors to the area is expected. Therefore, the proposed ban on dogs in this area is unlikely to serve any beneficial purpose and only creates an unnecessary source of conflict between GGNRA and local residents. Banning dogs from these areas effectively bans dog owners. People who want to hike with their dogs won't go where they cannot take them. Thus the draft document proposes to ban significant numbers of people from enjoying the open space that surrounds their neighborhoods.

Overall, the GGNRA draft management plan does not provide evidence to justify such drastic changes to many years of healthy dog and human recreation. The Park Service should revise the dog management plan to: ? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. ? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. Leashed dogs should be permitted on all groomed trails, unless there is clear, site-specific evidence of harm caused by dogs over and above the impacts caused by other recreational users. ? Provide reasonable ways to address any significant adverse impacts from recreational activities. Consider dog walking in the context of impacts caused by all recreational activities. Consider the impacts of dog walking relative to the benefits of pet ownership and dog walking. Banning dogs from an area effectively bans their owners, which means a significant portion of the human population would be left without access to recreation. ? Align rules for professional dog walkers, as well as others walking multiple dogs, with county or city regulations. ? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input. Ticket those who violate leash-only areas and "pooper scooper" regulations, rather than punishing entire communities for some arbitrary number of dog violations. Changes to dog policies should be based on objective data indicating actual harm, not on some whim-based rubric.

These are my personal comments and observations regarding this plan:

In addition to being a dog owner/walker, I am also an equestrian. I have ridden my horse on the trails of Rancho Corral de Tierra regularly over the past five and a half years. My horse and I have encountered hundreds of dog walkers during this time, with dogs both on and off leash. Only a handful of

those encounters have been less than perfectly pleasant, and none have required any more action on my part than waiting quietly for the owner to get their dog under control. I do not believe that the vast majority of responsible dog walkers and their pets should have to suffer for the inattention of a few.

My horse isn't bothered by dogs, she is more often disturbed by the shrill voices of shouting children as they run and play along the trails. In all honesty, I find the noise levels made by some of the other park visitors and their families disturb my enjoyment of the outdoor experience. But I would never suggest that children be banned from all or any part of GGNRA lands. Of course they should be there to get exercise and learn an appreciation for our beautiful environment. There is room for all of us: hikers, bicyclists, equestrians, and dog walkers to share the trails while protecting sensitive environments.

Correspondence: Comment GGNRA Draft Dog Management Plan / Environmental Impact Statement

Brief Overview of Comment Thank you for your hard work trying to balance the various interests at stake regarding dog management in the GGNRA. I am a weekly user and lover of Fort Funston as well as a frequent user of many of the other GGNRA areas. I am an active environmentalist and supporter of local environmental organizations, a physician caring for women and children, and an owner of a dog. As such, I believe that I have a balanced perspective of the competing interests at stake in the management plan. My comment has two specific points: 1) the "preferred alternative" at Fort Funston is not a good compromise because it is too overly restrictive of Regulated Off-Leash Areas (ROLA) and, as such, undermines the stated goals of the process (e.g., maximizing visitor experience and reducing user conflicts); and 2) the "Compliance-based Management Strategy" is an utterly unfair aspect of the plan and must be removed if the plan is to be considered fair and acceptable to the many interested parties. I believe that an acceptable compromise is achievable, and would better serve the interests of all involved, with fairly minimal changes if the GGNRA is open to re-examining certain aspects of plan.

Who I am My name is Edward Machtinger and I live in the Mission District of San Francisco. I am a physician and an Associate Professor of Medicine at the University of California, San Francisco (UCSF). At UCSF, I direct the Women's HIV Program which provides primary care to a large number of

women and girls living with HIV/AIDS. I am also an environmental activist. I am a regular and dedicated contributor to the Bay Institute, a leader in protecting, restoring and inspiring conservation of the San Francisco Bay and its watershed . I have published many letters to the editor in newspapers that specifically address habitat and the environment. I am a donor to many other organizations dedicated to preserving habitat for endangered animals and believe that this issue, habitat preservation, is among the most important of our time. I am gay and married to another San Francisco resident who is an elementary teacher at a public school in the City. I am also a dog owner; we adopted a dog from the San Francisco Animal Control named Poka. At least once each week for the past many years, my husband and I have taken Poka to Fort Funston for over an hour of hiking and nature appreciation. Taking Poka to the ROLA at Fort Funston is the single most important and frequent activity in which my husband and I engage the natural world. We also frequent the Marin Headlands for hikes together with Poka. I believe that I have a very reasonable perspective of the competing interests at stake in the Dog Management Plan because I have longtime dedication to: 1) the care and safety of vulnerable people; 2) habitat preservation; and 3) the importance of being outside in nature with our dog.

My two comments 1. The "preferred alternative" at Fort Funston is not a good compromise because it is too overly restrictive of Regulated Off-Leash Areas (ROLA)

Simply stated, the preferred alternative is not a good compromise. I believe the intentions of those that chose this alternative are honest and well intentioned. However, the principal reason to restrict ROLA, environmental preservation, can be achieved by far less restrictive means such as improved fencing, signage, and enforcement. In truth, it appears like these less restrictive methods have not been tried. Preserving ROLA at Fort Funston is particularly important because it is one of the most popular sites in the GGNRA for ROLA. If adequate ROLA is preserved at Fort Funston, many of the other newly proposed restrictions on ROLA at other GGNRA sites will be more tolerable and acceptable and local City resources will not become overwhelmed.

Specifically, the preferred alternative does not provide adequate ROLA in the areas above the beach and does not provide an option to have a dog on voice control in a loop from one's car to the beach and back. The preferred alternative requires park visitors to leash their dog for long stretches in order to access the ROLA on the beach. This is very problematic because it is FAR safer , and less conflict inducing, for a dog to be under voice control instead of on leash while traversing narrow trails and walking down the steep grade to the beach. Unnecessarily leashing unaggressive dogs can impede the experience and safety of park visitors because it is far safer for the dog and visitor to travel across these areas untethered to one another. I

fear that older people, or people with disabilities, will be forced to tether themselves to their dog while walking across difficult terrain and will injure themselves as a result or simply not be able to spend time in nature.

Reducing these restrictions in ROLA on the trails to the beach and above the beach do not appear to negatively impact the core environmental goals of the plan, including protecting the habitat of vulnerable animals. Environmental and safety issues of having ROLA on the trails and above the beach, to the degree that these issues exist, can be addressed through better signage, education, and enforcement.

I strongly suggest adopting the least restrictive option for Fort Funston that allows for a loop of ROLA from one's car to the beach and back (Alternative A or at least alternative E). Doing so would acknowledge the unique and important experience of the many park visitors, like my husband and me, who rely on ROLA at the GGNRA for their principal experience in nature. Furthermore, preserving ROLA at Fort Funston would be a signal that the GGNRA values the experience and perspective of many caring and environmentally-interested dog owners like myself and would make restrictions on ROLA at other sites more acceptable and make it much more likely that the end result of the plan will be a coming together of all parties to support the compromise. I would also strongly suggest incrementally less restriction on dogs on Marin headlands trails. The potential environmental damage to the environment of leashed dogs on these trails to protected butterflies is not evidence-based and is likely completely unrealistic. As such, I strongly suggest adopting alternative A or E at this site as well.

2. The "Compliance-based Management Strategy" is an utterly unfair aspect of the plan and must be removed if the plan is to be considered fair and acceptable to the many interested parties

Including this provision would be considered by many, including myself, to be "poison pill" for the plan. The responsibility for enforcing the plan is in the hands of the GGNRA. If people do not abide by it, the GGNRA is responsible for escalating measures to ensure its enforceability. These measures could include fines, fencing, education, convening meetings of community members, and many other options. Community members do not, and should not, be ultimately responsible for the plan's enforcement. The community CAN support the plan and HELP enforce it through peer pressure and other means. However, for the community to act in this way, the GGNRA needs to enact a fair plan to engender the community's trust and "buy-in". It is simply unfair and wrong to put in a provision that allows for the entire process to be subverted, and the compromises unilaterally redrawn, because the GGNRA cannot live up to its ultimate responsibility to enforce the rules. I strongly suggest removing this provision from the plan. Doing so would be a sign that the GGNRA, despite, at times having

differences of opinion with some in the community, are nonetheless community partners with many shared values.

Thank each of you again for your hard work for the preservation of our country's beautiful outdoor and recreation spaces.

Warmly,

Edward Machtinger, MD

Correspondence: Dear Mr. Dean,

I have submitted a letter about the DEIS, with what I hope are substantive comments.

However, I would like to make a comment about the whole process. The GGNRA, which is funded by taxpayers and is supposed to be working for the people of this country, has been extraordinarily biased in its presentation of the DEIS. Clearly, the Park Service's preference is for no dogs, period. That is evident by the restrictive Preferred Alternative and by the "poison pill" aspect of the plan which states that if the Park Service determines that there is a certain percentage of non-compliance with the rules that are decided upon, then the Park Service can just change the rules with no public input.

The crowning arrogance was the sign that has been put up at Crissy Field recently that says that dog owners cannot use the outdoor showers. There was no announcement of this in the press. There are no reasons given, just the sign that prohibits using the showers. Why is this a new rule, after YEARS of happy co-existence between families with small children who need to be rinsed off, windsurfers that want to shower, and dog owners with sandy and salty dogs, each waiting their turn and gratefully sharing the resource?

In this age when technology makes it so easy to communicate, why didn't the GGNRA leadership say what the problem was, and ask its public to help come up with solutions?

Our national parks are wonderful and we all want to help keep them that way. The National Park Service and the GGNRA could use some work.

Sincerely, Mary Gregory

Correspondence: I am writing because of GGNRA trying to make dogs on lease on GGNRA property. I am so against GGNRA trying so hard to close Fort Funston to off leash dogs. I have gone to this place with my dogs and friends dogs for years/ since 1970. Since before the city let GGNRA take over the park area including the beach, Crissy Field, and Lands End. I have gone to all those areas for years. You did close Lands End. Not happy but we still had beach area, Crissy Field, and Funston. I know when GGNRA was given the property it was to be kept friendly to use as it has always been. I listened then .. and have been gradually seeing GGNRA trying to put it in line with other National Parks. Never was to be. Never had problems with GGNRA when it had head quarters at the Cliff House. Started after you moved to Ft Funston. We know we where suppose to be able to continue walking our dogs there. You say the birds are harassed by the dogs they obviously are moving because the winds are flattening their nest ...The ice plant is not native but it protects the sands and is sturdy. So kids, people, and dogs can all have fun over the dunes and not worry about destroying something. Have small areas fenced to show off native plants. Don't stop us from running and enjoying the place. Even schools come out there to exercise. And I think most (not all) clean up dog poop/ but they have a cleanup every Saturday. So I can only stay do not do it. It is not necessary to make it like other national parks... its not suppose to be.

Correspondence: I strongly support the GGNRA dog management plan. The parks and

recreation areas of the bay area must be balanced between people and pets. Dogs are harming the natural habitat of native species in many areas. Elderly people, young children, and disabled people need recreation areas where they are not threatened by off-leash aggressive dogs. Far more people in SF do NOT own dogs compared to those who do own dogs. It is courageous of the GGNRA to resist the disproportionate political influence of the activist dog groups.

Correspondence: Mr. Frank Dean General Superintendent Golden Gate National Recreation Area Building 201, Fort Mason San Francisco, CA 94123-0022

Re: Draft Dog Management Plan/Draft Environmental Impact Statement

Dear Superintendent Dean,

I have owned dogs my entire life. I have lived in San Francisco for 31 years and first owned a basset hound here, and currently own a Labrador retriever, always taking her on walks through the Presidio and to Crissy Field. I am devoted to the preservation of the extraordinary natural environment that makes San Francisco such a special place to live and work and play but I am also devoted to the idea that the area in which the Presidio National Park resides is not a monoculture ? it is diverse. That diversity is the key to its richness and promise; that diversity is also the signature feature of this park: the only urban national park in the country. That diversity means there should always be a place for dog owners to walk their dogs off-leash as long as they are under voice and sight control and the owners are responsible and clean up after them.

Today I saw a new sign at the outdoor shower on Crissy Field saying dogs were prohibited: this is outrageous! I have been washing off my dog in this shower since the shower was built and there has never been any problem between dog owners and other users -- wind surfers, parents and children, etc. The definition of a healthy community is learning to get along with different populations and this is a healthy community. There is no reason dogs cannot be hosed off at the outdoor showers. That sign should be removed immediately.

Moreover, I do not agree with the GGNRA's current preferred dog-related alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) are not based upon sound science or long-term

monitoring of site-specific conditions.

I am all for the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, but other options besides restricting dog-walking access should be considered first. I think the GGNRA should provide better signage and create more environmental barriers where necessary, such as the vegetative barriers surrounding the tidal marsh at Crissy Field. In my many years of walking my dog I have seen an off leash dog in such an area only once, and even then the dog owner quickly brought the dog back under control. That is remarkable, and does not justify the restrictions being put forth in the GGNRA's preferred alternative.

As a responsible dog owner, I keep my dog under voice and sight control, clean up after her, and keep her out of the fenced dunes and vegetative areas. It is important that areas like Crissy Field remain open for off leash dog walking access. I know it is vitally important that our dogs are well behaved and trained in order to peacefully co-exist in an urban environment and adequate exercise and socialization is essential for a well-behaved dog. Recreation is part of the public mandate and a key part of recreation is recreating responsibly with one's dog.

Having places where I can take walks with my dog allows me to get the exercise I need while also meeting my dog's needs. Without access to the small amount of land in the GGNRA we currently have (approximately 1% of the total acreage of the GGNRA), I am very concerned that many dogs and dog owners will not have sufficient opportunity to exercise and recreate.

Some specific problems with the DEIS include the following points. Please revise the DEIS to correct these errors.

1. This DEIS and Plan doesn't recognize that environmental values include both recreation and nature. In many places, the DEIS treats the environment and recreation as opposing values, i.e., that recreation only harms natural resources. The document doesn't acknowledge that people care about both and that people with dogs are often also good stewards of our environment.
2. The draft plan has the effect of punishing many people because a very small number are uneducated, insensitive, or irresponsible and because the current signage of off leash areas is unclear. The reasonable response to this problem is to educate visitors, improve signage and help park visitors follow the rules and learn how to respect the environment, not to ban the rest of us with dogs from the GGNRA. I feel the DEIS should include an alternative along these lines.
3. The proposed "compliance-based" approach should be modified to create

a baseline of current conditions, then measure impacts rather than compliance. It should include a robust public educational component and an objective, long-term monitoring program designed and carried out with the community. The GGNRA should develop partnerships with community, animal welfare, and conservation organizations to make this work. These partner groups could bring additional resources to limited federal resources. GGNRA should be a partner with the City of San Francisco and other communities, not an adversary.

4. I feel the DEIS is not taking into account the potential effect of restricting off-leash dog walking on San Francisco's public parks, which could see a huge influx of dogs as a result. The GGNRA cannot do its planning without thinking of other neighboring recreation areas, such as the public parks, particularly in this time of limited resources.

5. The DEIS doesn't recognize that many areas of the GGNRA are located in or next to urban neighborhoods. The DEIS excludes the quality of the urban environment from its scope, saying it's not significant. The reality is that the GGNRA provides much needed open space in a major urban area. This omission is disconcerting because the fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) to serve the metropolitan Bay Area. The dynamic interrelationship between GGNRA and our neighborhoods is exactly the human environment that the EIS is required to study, but failed to do so.

6. The DEIS notes some studies and general tendencies of dogs to harm natural resources, but with few exceptions, there is little documented site-specific impacts to support the restrictions of the preferred alternatives. Further, there is insufficient documentation that considers other impacts ? other park visitors that disturb and impair the natural resources, other wildlife, Mother Nature, boot camps, bicyclists, huge crowd attracting events such as Fleet Week, festivals and Walk-a-thons. The proposed broad limitations in the DEIS are without site-specific science that demonstrates that problems with the quality of GGNRA's natural resources are actually attributable to dogs and not to other factors.

7. The DEIS needs to provide full disclosure to the public and decision makers. If dog-related disturbances are having a significant negative effect on wildlife, for example, the DEIS needs to provide site-specific scientific evidence as documentation and undertake a scientific evaluation as to whether people or other factors are also causing or contributing to the problem noted. If they are, GGNRA needs to provide an analysis that considers whether people should also be restricted from these areas. We need this documentation in order to comment meaningfully on the draft plan and DEIS. The science needs to be sound and the consequences need to be fully and fairly disclosed for everyone ? so that an informed decision can be

made.

8. The DEIS is biased against and does not take a hard look at the No Action alternative or variations on that alternative. There are many areas in the GGNRA where the existing 1979 Pet Policy has been working, and where sensitive species are not present and visitor conflicts do not occur or are very infrequent. In addition, the DEIS does not provide site-specific information that these areas are inappropriate for continued dog walking.

Many people have worked diligently both together and separately to study the DEIS and to make thoughtful comments on its findings, in hopes of encouraging the National Park Service to rethink and more carefully document its stance. The outcome of this plan will have an important effect on the quality of life for everyone in the Bay Area. I urge you to support Alternative A with individual consideration for any new lands, for the sake of the health and recreation not only of thousands of Bay Area residents and their canine companions, but for everyone who enjoys the GGNRA.

Thank you for your time.

Sincerely,

Daniel P. Gregory San Francisco, CA 94118

Correspondence: San Francisco is a tiny city, densely populated, with immoveable boudaries on three sides that can only be crossed at considerable effort and expense. San Franciscans have fewer cars than most CA citizens, do to cost and parking restriction. San Francisco residents, both 2 and 4 legged, have the least amount of recreational space of any major metropolis.

GGNRA now proposed to further reduce the space available for residents who own and exercise their dogs, an activity that is healthy and necessary for both human and canine. It is also free. The city provides space for

golfers, tennis players, children and tourists. It cannot provide enough space for dogs to offset the limitations being proposed.

I love our National Parks, and I am a docent at a GGNRA site, but I do not condone the implicit concept that GGNRA should be operated like a national park. It is NOT, and while San Francisco has always welcomed tourists and visitors, it cannot always be thru the sacrifices and quality of life of its beleaguered residents.

Please give the dogs the range that they have historically enjoyed. Visitors who don't like dogs have LOTS of places to enjoy. The dogs and their owners have precious few acres, and need more, not less. Thank you.

Correspondence: I have been a long-time environmental advocate and care deeply about our nation's natural resources. I am also a responsible dog owner.

Frankly, I am tired of being excluded from our National Parks. I travel with my dogs and they need and want to be with me. The policy of the NPS prohibits me from enjoying the wonders of our parks by prohibiting me from walking my dogs with me on park trails.

The current proposals to restrict my access to ocean front property in San Francisco is beyond comprehension. I understand the need to protect natural resources, but excluding me and my dogs from Fort Funston doesn't accomplish that goal.

Everywhere I go I see PEOPLE doing things that are injurious to the environment. Banning dogs from anywhere does not prohibit PEOPLE from causing harm.

Please reconsider your proposal to restrict access for dog owners and their dogs at Fort Funston. It is just not fair, just or reasonable.

Correspondence: I am a fourth generation San Franciscan and a second generation Sunset

District resident. Although I no longer walk on the beach or at Fort Funston with a dog, I spent many years doing just that sometimes up to 3 times a day. From all my research into the so-called environmental reasons for banning or severely limiting dogs from these and other GGNRA areas, I see no valid reason for it. I urge you to allow dogs in the areas that were outlined for off-leash dog recreation back in 1979. And I urge you to keep the RECREATION in our area. You are guests in our backyard, not the other way around.

Thanking you for your understanding.

Correspondence: Recreation with dogs is not just recreation for dogs - it is for the people with the dogs (dare I day dog owners) also.

Walking (with or without a dog) lowers blood pressure, lowers rates of chronic and costly diseases, and has many other positive effects. We should be encouraging people to recreate with their dogs - not constantly attacking it.

Particularly in the case of Fort Funston and many other areas, these are former military bases. The are not undisturbed wilderness areas. To pretend otherwise is somehow to ignore the facts.

Please preserve the current system that allows people to recreate with their dogs at Fort Funston and in all other areas currently allowed.

Correspondence: Since the park is home to such an unusually large number of endangered and threatened species (and since the park's mission is to protect natural and cultural resources) I feel that:

--Alternative D best reflects the national park values.

--The compliance rate should be 95%, not 75% as outlined, to protect

endangered species wildlife habitat from human disturbance.

--The park should better accommodate diverse park user groups (such as runners, horseback riders, families, and those with service animals) by offering more than one trail and more beach areas free from dog recreation; by requiring all off-leash areas to be enclosed to protect park users, wildlife, and other dogs; and by limiting off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Correspondence: May 29, 2011

Frank Dean, General Superintendent Golden Gate National Recreation Area
Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean,

For generations my family and friends have enjoyed walking and family outings on what is now known as the GGNRA. I voted for the formation of the GGNRA with the understanding that recreational activities (including off-leash dog walk and play) would continue in perpetuity. Please keep your agreement with those of us who voted for the GGNRA's formation. Our dogs are part of our family and we expect to include all of our family members when we go to Fort Funston, Muir Beach and other locations with friends and family. We have met so many wonderful people as we walk and play with our dogs. Frankly, were it not for our dogs we would seldom visit these areas, we wouldn't be so closely aligned with nature as we currently are, and we certainly wouldn't know so many of our fellow dog guardians and community members.

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the

community. It arbitrarily excludes the Bay Area residents who exercise regularly in the GGNRA with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to over 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to: ? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. ? Provide for off-leash and on-leash dog walking other lands acquired by the GGNRA since 1979, especially in San Mateo County and on Muir Beach in Marin County. ? Exclude speculative, exaggerated, biased, or misleading statements and studies. ? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). ? Enable professional dog walking and align any professional dog walking rules with county or city regulations. ? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

As it is, we have access to only a very small percentage of the GGNRA --- only 1%! People who do not want to be around dogs at all have 99% of the GGNRA lands to enjoy. Families with their dog companions have access to only 1%. You have not presented any convincing evidence in your documentation that indicates a reasonable and honest argument for reducing access to the current 1%, or for that matter a change to the 1979 Pet Policy.

I stand in opposition to the proposed GGNRA draft dog management plan.

Sincerely, Francine Podenski Walnut Creek, CA 94595

Correspondence: More of the GGNRA, especially at Fort Funston, needs to be protected from OFF LEASH dogs. I have no problem with dogs off-leash on the wide, asphalted trails, but dunes and coastal scrub need to be protected---fenced off,if necessary--- from the onslaught of off-leash pets. Also, wildlife such as the snowy plover need to be protected on the beaches during nesting season. For these reasons, I support the preferred alternative plan.

Furthermore, if concessionaires are required to pay for conducting their business within the borders of a national park, I don't see why professional dog walkers are allowed to conduct their business here free of charge. I feel that dog walkers should be required to buy a permit to use the parks.

Correspondence: Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Frank Dean,

My name is Craig Shoji and I'm an avid user of the various GGNRA parks and beaches around me. Every morning I take my dog for a walk to Dolores Park and let him romp around off leash with his other dog friends. It's an amazing socializing experience for him as he's easily worked up when on leash and has shown signs of leash aggression to other dogs. When he's off leash he's extremely friendly and very good about helping dogs who are out of line. It's quite endearing and has been invaluable for him as a well behaved dog.

I also love going to Fort Funston and Baker beach to let him run around and make friends with the other dogs there. He's got wonderful recall and he's never a nuisance to the fishermen and local patrons of the beach. He loves exercising there, fetching balls and sticks and digging holes in the sand. I also love to take him on off leash hikes around the Marin Headlands and other hiking trails north of the Golden Gate. Ticks and foxtails aside, he's very well mannered on the trails and love to get out just as much as my wife and I do.

My dog is never being invasive of the environment of the wildlife habitats, and I frown on people who let their dogs erode the cliff sides at the beaches. I'm a huge fan of the environment (who isn't??) and preserving it, but I feel that can be done with a respectful balance from pet owners and people that frequent the parks. Sadly, a main part of the reason I love to frequent GGNRA locales is because they're off leash, and if that were to change I don't think I'd be as inclined to use the spaces.

Below is a statement that I wholeheartedly agree with:

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions.

It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option.

The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal.

The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents.

After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program. Thank you for your consideration. Sincerely,

Craig Shoji San Francisco, Ca 94114

Correspondence: Thank you for the opportunity to comment on the proposed dog plan. I live in the city of San Mateo. I visit the GGNRA regularly and in particular I walk the beach of Crissy Field. I consider myself sympathetic to (domestic and wild) animals' needs and have adopted shelter animals to be my companion pets since I was a child.

My dogs do not accompany me in public areas that do not allow dogs. My dogs have always been leashed in the public areas that allow for dogs. Leashes allow me to maintain control of my dogs. I understand that not everyone likes dogs. I also respect the fact that people can be frightened of dogs, partially dogs that are not leashed.

I consider myself a responsible dog owner and is the reason I am commenting on the proposed plan. To do so I believe describing my personal experience at GGNRA with unleashed dogs is the best way to substantiate my position on the plan.

Earlier this month while walking along the beach of Crissy Field, I was startled several times by unleashed dogs that came up behind me barking, this is not the first time this has happened to me and frankly does not add to my experience at the beach. On this particular walk I was almost knocked over by a dog as it ran into me chasing a ball. If the dogs were leashed I believe that I would not have been barked at and almost knocked over because people have more control over the dogs.

During this walk, and like so many others, I observed dogs eliminating themselves on the beach and the waste product left on the beach. I believe if the dogs are leashed then their human companions are more likely to pick up the waste. It could be in the unleashed situation that the human did not know

that the animal had gone to the bathroom. Regardless of the circumstances leaving dog waste behind poses a public health problem. Also seeing dogs eliminating themselves, wherever they choose, diminishes my experience at the GGNRA.

It is my understanding that Crissy Field and the GGNRA need to comply with the federal regulations such as the management and protection of endangered species. I fully support compliance with these laws. Based on my observation of unleashed dog behavior at Crissy Field and other GGNRA areas I am not convinced, based on my years of observation of dogs at GGNRA, that allowing unleashed dogs to run as they please can ever be compatible with these federal regulations. I do not know how the park service could realistically enforce this type of situation. This is further complicated with the federal budget cuts that could reduce the enforcement personnel at GGNRA.

I understand that GGNRA has allowed unleashed dogs on its grounds for many years and that this is unique within the federal park system. This is not a precedent, it is an aberration. I see no compelling logical reason to continue allowing unleashed dogs at GGNRA. San Francisco has dog parks throughout the city and suggest that those who prefer unleashed dogs to take their canine companions there.

As one who has visited the GGNRA over the years, it is clear that there is an increase in the number and variety of visitors who frequent GGNRA and that the quality of our visits also need to be taken into account. Just at paramount is the routine and sustainable enforcement of federal regulations such as the endangered species act.

I encourage the National Park Service to manage dogs at the GGNRA like it does its all of its other national parks. There should be no exclusion for GGNRA because no compelling reason exists for it.

Correspondence: Frank Dean, General Superintendent?Golden Gate National Recreation Area?Fort Mason, Building 201?San Francisco, CA 94123-0022

Dear Mr. Dean, My name is Audrey Liu and I have lived in San Francisco for a little over 3 years. When I moved here, the first thing I did was adopt a dog from the local pound and I did it here, in San Francisco, because after living in New York City and Los Angeles, San Francisco seemed like the perfect place to have a dog. It's very rare that a city can afford its occupants

the luxury and pleasure of having a dog, but San Francisco stands out as one that does and does with great empathy and understanding. During these years, I've taken my dog to Dolores Park every morning for our routine walk. He goes to Fort Funston three days a week on his dog walks and I take him on regular hikes every month in Marin County. To prohibit his presence or limit our access to these great parks is not only depriving him of a proper livelihood, but me as well. I love my community, I'm a part of our neighborhood block association and regularly participate in neighborhood improvement projects.

There are bigger grievances at hand that should be considered before limiting access for our dogs to the park. Consider the fact that every morning, Dolores park is littered with trash-beer bottles, Bi-Rite shopping bags, picnic remnants. Perhaps we should reevaluate the impact of dogs on these parks and consider the impact of people. I pick up after my dog and I simultaneously have to keep him from getting into a heap of trash that a group of kids left the night before. I have to keep him from approaching a homeless person who is crawling in and out of the bushes (destroying the beautifully cared for gardens of the park) defecating on himself. If you choose to target our pets first, then I must seriously question the priorities of our city.

In addition, I understand that the DEIS proposed that racial minorities do NOT come to the GGNRA because of off-leash dogs. As a Chinese-American woman, I can honestly say that this is not true. Each morning, I walk through the park and the dog owners are seniors, they are minorities, so not only is this proposition a stretch, it's absurd. Such, below is a statement that I fully endorse.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions.

It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option.

The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal.

The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents.

After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program. Thank you for your consideration. Frank Dean, General Superintendent Golden Gate National Recreation Area
Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness area like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the

community. It arbitrarily excludes the Bay Area residents who exercise regularly in the GGNRA with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

- ? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation.
- ? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.
- ? Exclude speculative, exaggerated, biased, or misleading statements and studies.
- ? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).
- ? Enable professional dog walking and align any professional dog walking rules with county or city regulations.
- ? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

These are my personal comments and observations regarding this plan:

I enjoy trips to Fort Funston with my dog and my parents and their dogs. Depending on the weather and energy levels, we've been visiting the park as much as two to five times a week for over eleven years.

Fort Funston is an extremely important place for my family. I use a wheelchair and have a service dog. Fort Funston is one of the few places with a significant distance of accessible paths and an off-leash area; it is one of the few areas I let my dog off-leash because I am able to travel parallel to him along the paths as he romps. With the proposed changes to off-leash areas at Fort Funston, I will only be able to travel along the perimeter of the area where my dog plays, which will restrict our interaction and enjoyment of the park.

From a social standpoint, we have made lasting friendships with people with different backgrounds that we would not otherwise interact with, were it not for our common bond as dog owners.

As frequent visitors, we can say that it is exceedingly rare to see problems between dogs or with dogs and people. We often see visitors without dogs and they are eager to interact with the dogs. I met one visitor that was going through treatment for breast cancer. She had come specifically to sit in the park and watch and pet the dogs and experience their energy. She's not alone among visitors I've met that enjoy the dog therapy that can be had at the

parks.

Again, I oppose the GGNRA's draft management plan. It fails to recognize the value - to people and dogs - that these parks provide under current policies.

Sincerely, Cecelia Perkins Burlingame, CA 94010

Frank Dean, General Superintendent Golden Gate National Recreation Area
Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness area like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly in the GGNRA with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to: ? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. ? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. ? Exclude speculative, exaggerated, biased, or misleading statements and studies. ? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to

other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). ? Enable professional dog walking and align any professional dog walking rules with county or city regulations. ? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

These are my personal comments and observations regarding this plan:

I disagree strongly with the proposed GGNRA draft management plan for many personal reasons. As a city dweller I know I can enjoy a happy, healthy walk at Fort Funston because the dog owners are very conscientious in keeping their dogs under control and keeping the Fort paths very clean for everyone. With the dog walkers around I feel safe to walk and enjoy the beauty of Fort Funston because I am in the company of kind, clean, community concerned people. Please understand the reason for these GGNRA parks are for the enjoyment of the local people that use them everyday, not just for occasional visitors. I have been a member of the GGNRA, the Audubon Society and California Native Plant Society and understand the importance of our native environments. The GGNRA's plan does not seem to understand the environments of these local urban parks at all.

Sincerely,

Jacqueline Perkins Daly City,CA 94015

Correspondence: Dear Mr. Dean,

Please do not restrict our off-leash dog walking options further. I am an environmentally conscious citizen and love love love living in the Bay Area. It is truly one of the most beautiful places in the world. That being said, I have a dog who deserves the opportunity to, well, be a dog. He is a being of this earth as well, and should have the opportunity to run, sniff, feel the wind in his hair, explore. As a city dweller, we do not have a yard, and I already feel badly for him as a domesticated dog in a small apartment with an adventurer's spirit. Please don't break the spirits of dogs all around the Bay Area.

Thanks for you consideration.

Kelly Dorrance

Frank Dean, General Superintendent Golden Gate National Recreation Area
Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly in the GGNRA with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to: ? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. ? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. ? Exclude speculative, exaggerated, biased, or misleading statements and studies. ? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). ? Enable professional dog walking and align any professional dog walking rules with county or city regulations. ? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

These are my personal comments and observations regarding this plan: The

day Cleo, our 14 year old dog, came to live with us at 8 weeks old, our motto was, "A tired dog is a well-behaved dog". It's been in that spirit that we've raised both of our dogs, Cleo and Xena. I have been frequenting Crissy Field for recreation with my dogs off and on since 1997. They are now 14 and 13 years old. Because of our activities, and therefore their exercise and socialization, at Crissy Field, my dogs are model dog citizens: they have no aggression towards other dogs and they're wonderful with all humans, including children. The reason that so many dogs (over 100,000) can live so harmoniously with people in such a compact city is exactly BECAUSE of places like Crissy Field, Fort Funston, Ocean Beach and the many other places that fall within the GGNRA. It bears repeating that San Francisco is a city, an urban area, and not a pristine wilderness area and we have to balance all things to make it continue to work; up to this point it has worked extremely well. It would be a crime to take this recreation area away from the citizens of San Francisco and their dogs. Please, please, don't take this little slice of heaven away from my dogs. They love it...even at their advanced ages!

Sincerely, Deborah K. Brown San Francisco, CA 94114

Re: Draft Dog Management Plan, Draft Environmental Impact Statement

Dear Superintendent Dean,

I'm entering my seventh-year as a resident of the Richmond district. When my husband and I moved here in 2004, we only signed a six-month lease because we weren't sure if we'd like city living, now we're raising a family here and hoping our grandkids are born here! One of the major contributing factors to our happiness in San Francisco is the fantastic walking available in the GGNRA. Almost daily we take our toddler and our dog on a walk in the GGNRA, and we love the off-leash exercise opportunities for our dog, especially at Crissy Field and Lands End.

We make every effort to be extremely conscientious dog guardians. Our 12-year-old Beagle/Corgi/Something mix is a very well-behaved, certified therapy dog who is also a Canine Good Citizen. We bring a bag, a spare, and one to share on every walk, and we volunteer to help clean up our local park (Mountain Lake Park). I've considered moving out of the city where it's

(at least strongly rumored) to be cheaper and easier to raise a family, but having the dog-friendly urban oasis of the GGNRA as a backyard continues to be one of the biggest perks for staying in the city. If the proposed new rules go through, it would have a big and negative impact on our daily life.

There are a few main points I want to discuss:

First, as I've followed this discussion over the years, it seems that there is a general perception-especially among the NPS administration-that dog-owners and environmentalists are at odds. In fact, that just has not been my experience at all. San Francisco is one of the most progressive cities in the country on environmental issues, and every dog owner I've ever met also cares deeply about the environment-after all, dogs need to walk, so we get out in nature often! Personally, I strongly support environmental organizations with my money, time, and votes.

I can only recall one of two instances in almost seven years of daily GGNRA use of seeing a dog owner act irresponsibly around sensitive areas-San Francisco residents as a whole are a responsible lot, but dog owners seem to take their guardianship seriously. The DEIS is short of specific examples (but full of generalizations and assumptions), but definitely lumps all dog owners into one category and tries to punish the entirety for the transgressions of a few. Especially when I see things like the "compliance-based management strategy" as part of the DEIS, which seems to assume that dog owners are irresponsible and makes no allowance for collaborative community-based strategies and cooperation-building, it's clear that the stance from the beginning of this process towards dog owners has been adversarial. I wonder what would happen if the process could be restarted with true partnerships with organizations like the SPCA and Eco-Dog?

Second, I can't emphasize enough how much this beautiful recreation area means for me in the middle of an urban environment. I absolutely would move if I didn't have this available for my daughter, and being able to take both my dog and my daughter on a walk is a crucial part of the experience both from a logistics/scheduling standpoint and a life-enjoyment factor. From what I understand, this area was originally developed for recreation-and it seems clear from the dog ownership numbers in this city that people in this town really enjoy their canine companions. As it stands, only a small fraction of the GGNRA lands are open for off-leash recreation, and this new plan is vastly inadequate for the needs and clear desires of San Francisco residents. (And this extends beyond just dog owners; I have two good friends in the Marina district who can't own dogs in their apartments who go to Crissy Field regularly to get their dog fix.)

Part of the problem seems to be that the NPS administration wants to run the GGNRA like it does other National Parks. But the GGNRA just isn't like

any other National Park that I've been to (and I've been to several dozen). Perhaps it was a mistake to try to even have the NPS manage the GGNRA- maybe the cultural DNA of the NPS and trying to make everything run exactly the same wasn't a good idea.

Thirdly, as someone who has invested a lot of time, energy, and money into training our dog, I know that most dogs simply cannot be adequately exercised on-leash. And especially since I now always have a two-year-old with me when we're out and about, I could never walk far enough of fast enough to give my dog enough exercise. Dogs who learn to walk responsibly off-leash are by far the safest dogs, and dogs on-leash are far more likely to cause problems as leashes define boundaries and can promote territorialism. I feel far safer for myself and my toddler when I'm in an off-leash dog area than an on-leash area.

And while we're talking safety, having my dog with me is part of my own personal safety in the GGNRA. Part of its charm is its vastness, but I wouldn't feel safe venturing out alone, especially in the early morning or evening hours without my dog.

Fourthly, I have read all of the available information over the years of this discussion, and I just cannot find evidence that the bulk of the claims made in the DEIS are scientifically supported. I also haven't seen any sincere good will efforts made by the NPS to address the few problem areas. For example, when I was a new city resident walking my dog at Ocean Beach, I had no idea where the off-leash versus on-leash dog portions of the beach were. In fact, when I went back to try to find exactly where the demarcations lines were as part of an article I wrote about Bay Area dog destinations, I finally found the correct information through the Ocean Beach dog group- the official NPS websites were difficult to navigate and on-site signage was very poor. If such drastic measures need to be taken, then we need site-specific evidence that dogs are actually the problem (from what I've observed, hordes of people watching fireworks do a lot more damage.)

I do realize that there may be some changes needed, but by and large dogs, people, children, and wildlife have co-existed quite nicely for three decades. Maybe a few tweaks are in order (I would support dog-walker licenses and limiting the number of dogs per adult, clearer signage, and other common sense measures that could be worked out in a community-partnership fashion), but the drastic and draconian measures that the DEIS proposes are not justified and will cause much more harm than good for dogs and people.

I fully support Alternative A, the No Action alternative of the DEIS for all locations, but especially for Lands End and Crissy Field.

Thank you for your time and consideration. I am happy to be an informed and responsible participant of keeping the GGNRA a fantastic urban destination for natural recreation, but I am firmly convinced that this version of the DEIS is deeply flawed.

Sincerely,

Daneen Akers San Francisco, CA 94118

Correspondence Type: Web Form

Correspondence: I am a 15 year resident of San Francisco, father of 3 little kids (age 6,3,and 3), and a dog owner. I work in Palo Alto and spend 2 hours commuting every weekday. I regularly tell people that the primary reasons we haven't moved south despite the painful commute and the insanity of navigating the city's educational system are the beaches and parks. I usually go on to explain that our weekends revolve around getting up early and going with our dog and kids to the beach, either Crissy Field, Baker Beach, Ocean Beach, or Fort Funston. Our kids usually request/demand that we go to the "beach with the river" (meaning East beach Crissy Field), and once in the car our dog begins chortling with anticipation of swimming after tennis balls. It is the way we experience this unique city, and it is something we couldn't do if we lived elewhere. Simply put if we had to keep our dog on a leash during these trips we wouldn't go and we would probably move out of San Francisco. I know this sounds melodramatic but its not an exxaggeration.

With that as the backdrop, let me commend the drafters of the dog management plan. For the most part I think you have done a great job finding the rational and razor thin middle ground between the envirnomentalist, the dog haters, those that are simply annoyed by dogs or nervous around dogs, and the dog fanatics. However, I would suggest one refinement. You should alter your East Beach and Baker Beach proposals to be a time based system. Specifically I think you should allow off leash dogs prior to 10 am and perhaps after 7 pm on weekends and holidays, and prior to 3 pm on weekdays. If you have spent any time at these locations during these time slots, as you obviously have, I assume you have observed that there are very few visitors who aren't accompanied by dogs. The beach going families, tourists, wind surfers, and kite boarders don't arrive until later. There are also no breeding snowy plovers or other sensitive environmental concerns that I am aware of.

If I was going to make a second suggestion it would be increasing the

severity of the disincentives to be and irresponsible dog owner. For example I would be very supportive of a \$250 fine for any dog chaperone caught not having poop bags in their possession and a similar fine for anyone who is clearly not making an effort to keep their dog out of sensitive environmental areas (e.g. behind the fenced/roped off areas at Crissy Field and Baker Beach.)

Good luck.

Correspondence: Dear Mr. Dean, I am a 14 year resident of San Francisco and a dog owner for 11 of those years. I own a home in Noe Valley. Either I, or the dog walkers I employ, use the parks of the GGNRA (Fort Funston, Crissy Field, Presidio, Marin Headlands) on a daily basis. I am a member of the Sierra Club and have supported many environmental and wildlife initiatives. Protecting the Earth and her resources for future enjoyment and sustainability is a priority.

I do not agree with the GGNR's current preferred alternative as it greatly restricts and eliminates off leash dog walking in many areas within the GGNRA. I would not enjoy or use these lands if they did not permit off-leash access. It would be a shame to see these lands go unused and un-enjoyed. Since I have owned a dog, I have become a frequent user of these recreation areas and it has improved my quality of life and health dramatically. I appreciate and am grateful for the access I have had for the years I have lived in the Bay Area and I want it to continue as it is.

I follow the posted rules and do not enter protected areas that are clearly marked or fenced. My dogs have always been well trained and under voice control. On crowded warm weekend days (the few we have), I voluntarily leash my dogs, even. I do my part to clean up the parks, not only for myself but for others who may have inadvertently left refuse behind. I feel that I would be penalized instead of rewarded for how I have supported these parks. Please consider alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe there exists an approach that balances recreational use (including dog-walking access) with preservation. Please consider education, increased and improved signage, and fencing or other barriers instead of completely denying access. This would be a detriment to human enjoyment of these lands, as well. It is imperative that the DEIS include

such alternatives as a reasonable option.

After a very thoughtful review, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program.

Thank you for your consideration. Sincerely, Pamela A. Petriello San Francisco, CA 94131

Correspondence Type: Web Form
Correspondence: Dear Superintendent Dean,

I wish to express my support for the National Park Service's goal of finally creating a Dog Management Plan (DMP) for Golden Gate National Recreation Area (GGNRA), but I am extremely disappointed by how much of the park would remain open to pets, and I am very opposed to the proposals to allow off-leash pets in any area of the park. National Park Service (NPS) areas are not the appropriate location for dogs, let alone for dogs to be allowed off-leash. The NPS's mission is to protect the natural and cultural resources; not to allow recreation to undermine it.

If dogs are to be allowed in certain areas, they should be restrained on leashes at all times, as they are required to be at other NPS sites. And those areas in which on-leash dogs are permitted should not be near to or within wildlife habitat. Recognizing that the NPS will inevitably cave to those who believe that they have a god-given right to take their pets with them wherever they go and let their dogs run amuck, the proposal, at a minimum, should be modified so that it:

* requires that all off-leash areas be enclosed to protect other park users, wildlife, and other dogs. Park visitors should be given a choice about whether they will interact with off-leash dogs.

* limits off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

* acknowledges the importance of the GGNRA as a migratory bird corridor in the Pacific Flyway.

* carefully analyzes past, present and future impacts of dogs to wildlife and

habitat in the GGNRA.

- * establishes measures to protect and preserve wildlife and habitat for future generations to enjoy. In particular, the NPS must maximize protections for special-status species such as the Bank Swallow, Western Snowy Plover, Northern Spotted Owl, and Brown Pelican.

- * provides more trails that are free of dogs.

- * limits dog walkers in the park to three dogs. It is not appropriate for the NPS to create commercial permits for professional dog walkers. Also, it is unlikely that most visitors with dogs will be able to keep control of more than 3 dogs at one time.

- * completely abandons all proposals for "regulated off-leash areas." A few pet owners may be able to keep their pets under "voice control," but in my experience, the vast majority of pet owners who let their dogs off-leash in "voice control required" areas have no ability to recall or control their pets with just their voice. Far too many times I've encountered pets well out of ear-shot of their owners, or pets that just ignore their owners. When asked to better control their dogs and keep them from chasing after shorebirds, people, or other dogs, these owners invariably insist that their dog is under control. And

- * implements compliance-based management and include specific details on how existing and new dog regulations within the GGNRA will be enforced. Leash requirements must be strictly enforced throughout the life of the policy. Otherwise proposed on-leash areas will become off-leash areas, as has already happened under the old rules. Any Dog Management Plan or EIS Alternative must also include funding for enforcement.

The goal of achieving 75% compliance with the leash and voice control requirements is far too low. The NPS should not be creating a system that expects and tolerates failure by 25% of the dog walkers. The NPS should adopt a goal of at a minimum 95% compliance with leash and voice control requirements. And if pet owners are unwilling to comply with park regulations, then the park should be closed to walking pets and pet owners who violate the regulations should be cited for doing so.

While I recognized that the NPS has long been involved in trying to find the right balance for protecting the natural values of the GGNRA and meeting the demands of a variety of park users, I strongly believe that pets should not be permitted in any NPS area. NPS areas--particularly wild areas--are not the appropriate location for dogs; they should be reserved for native wildlife and for human visitors who are willing to take only photos and leave only footprints, hopefully leaving the park in better condition than

when they arrived. There are so many other public lands on which pets are permitted throughout the nation--and the San Francisco area already has a very high concentration of other public parks in which pets are permitted, both on- and off-leash--that there is no need to allow pets in NPS sites--areas in which we as a nation are, if the rhetoric is to be believed, trying to provide some of the greatest protections for wildlife against human-related disturbance. The NPS set a horrible precedent when it didn't restrict pets when the GGNRA was created, and this DMP just perpetuates and exacerbates that terrible decision.

GGNRA is the world's largest urban park and provides critical habitat for some of the state's most rare and threatened species, including 11 federally listed endangered wildlife species and 9 federally listed plant species. I am concerned that the DMP could lead to changes that would continue putting sensitive park resources and public safety in jeopardy. Numerous academic and government studies identify off-leash pets as threats to visitor safety, wildlife, and the integrity of natural and cultural resources. For example, a study by the American Humane Association documents injuries to humans, wildlife, and pets as a result of unleashed pets and recommends that pets be leashed in public areas set aside for natural resource protection purposes. GGNRA records indicate numerous incidents of dog bites, threats of dogs to park visitors, and instances where park rangers were forced to risk their own safety to rescue uncontrolled pets and pet owners trapped on cliffs or in the ocean. Over the years, the Golden Gate Audubon Society has documented that approximately 2/3 of dog walkers in the Crissy Field Wildlife Protection Area (WPA) ignore the leash requirements and let their dogs roam off-leash even while the threatened Snowy Plover is present. The rates of non-compliance are even higher on Ocean Beach and at Ft. Funston.

I strongly discourage GGNRA from implementing any seasonal closures to protect nesting wildlife; to adequately protect wildlife, current and potential nesting areas should be off-limits to dogs year-round. Seasonal closures are largely ineffective, even with the best of signage and education campaigns. By permitting off-leash dogs in, as an example, snowy plover habitat during any portion of the year, the park will reduce compliance with regulations when the plover is present, as many people will not realize that the closure is seasonal. I frequently visit the beaches of Point Reyes National Seashore where there are seasonal closures for beaches upon which snowy plovers nest and elephant seals haul-out. I have lost track of the number of times I have encountered people with dogs--usually with the dog off-leash--in areas closed to dogs, and when I inform the owner that pets are not permitted there, the response is often to the effect of "but the beach was open to dogs a few months ago." It doesn't make sense to open an area of the park for just a couple months each year to allow a small segment of the population to conduct an activity which has proven to be disruptive (and even deadly) to

the wildlife the park is supposed to protect.

The DMP is also inadequate for protecting snowy plover habitat because it does not include the entire portion of Crissy Field and Ocean Beach. It draws imaginary boundaries that do not comport with typical visitor's understanding of GGNRA, and the plovers are not, to the best of my knowledge, able to discern where these boundaries are either. A typical visitor with a dog will not always know if he or she is entering an area where pets are restricted, especially if the regulatory signs are vandalized or torn down by individuals who disagree with the rules, as too frequently occurs. This, again, will invite violations of pet regulations as people claim ignorance or confusion over the exact boundary. A closure prohibiting pets-- on- or off-leash--should apply to all of Ocean Beach and Crissy Field.

The DMP would also preclude the possibility of the snowy plover or other shore birds from ever adopting many coastal areas of GGNRA as nesting areas. According to the background information printed in the Federal Register during a previous comment period pertaining to dogs on Ocean Beach and Crissy Field, "snowy plovers do not nest in the park; they overwinter from approximately July through April. During the overwintering period, Snowy Plovers rest and feed to gather reserves necessary to successfully breed at other more suitable nesting locations up and down the Pacific coast." Given that snowy plovers nest on the beaches of Point Reyes, I would assume that snowy plovers used to nest on the beaches of the San Francisco peninsula, beaches which are now part of GGNRA. Aside from disturbance by dogs and humans, are there any other factors that prevent Crissy Field, Ocean Beach, and other park coastal areas from being suitable nesting locations for snowy plovers and other shorebirds? If not, then the presence of dogs and humans in these areas during the nesting season is likely the reason why the snowy plover has to migrate to other locations. And allowing pets in these areas when snowy plovers would otherwise be nesting there will assuredly prevent the plovers from ever selecting Crissy Field and Ocean Beach as a nesting site. And given how few suitable nesting sites are left for the snowy plover, it is incumbent upon the National Park Service?which is mandated to protect the wildlife unimpaired?to do everything it can to preserve whatever habitat there is for the plover to thrive. The National Park Service should therefore restrict dogs and other pets from potential nesting areas throughout the year.

And it's not just snowy plovers that are negatively impacted by dogs in GGNRA. Too many times I have witnessed off-leash dogs in NPS areas chasing after and harassing birds and other wildlife. A friend has related to me how, on a weekly basis, she witnesses a professional dog walker release up to 6 dogs to run and chase each other and wildlife in Oakwood Valley, trampling and tearing up the host plant to the endangered Mission Blue Butterfly. I've heard other friends describe witnessing off-leash dogs in

national parks attacking or harassing pinnipeds and chasing after shorebirds, including the threatened snowy plover. These reports lend more validation to the argument that dogs-especially off-leash dogs-have no place in national parks.

But it is not just park wildlife that is negatively impacted by pets. On several occasions as I have hiked in national parks or strolled along a park beach (more often than not where pets are prohibited, but also frequently in areas where they are at least required to be on leash), I've encountered off-leash dogs running out-of-sight of and well ahead of their owners, and frequently out of earshot. A number of these dogs have charged me, and many have made contact. So far, I have been fortunate and have not been bitten or injured. The same cannot be said for many of my friends or their pets which were on-leash. When I politely try to inform the dog's owner of the park regulations pertaining to pets, the owner more often than not interrupts me and generally is downright rude, making comments such as "Mind your own business" or "Go home." My friends relate similar stories. Granted, many pet owners are responsible and do not take their dogs where they do not belong, but it seems as though many of the pet owners who take their dogs to national parks are not amongst the ranks of the responsible or courteous. I grew up with dogs and am therefore familiar with them and know how to react to the dogs charging at me, but it still is not a comfortable situation to be in-not knowing whether the dog will actually attack or not. And for those who are unfamiliar with or afraid of dogs, such encounters are terrifying.

As a result of these encounters, I endeavor to hike on trails and visit areas where pets are prohibited. The DMP would provide those of us who share such sentiments with few trails within GGNRA where we would not likely encounter dogs. It is disturbing how little of our nation--let alone the San Francisco Bay area--is left for those of us who wish to visit natural areas without encountering dogs-or cell phones, guns, horses, bicycles, ATVs, aircraft, etc. We as a nation are quickly destroying wildlife habitat and the wilderness in the pursuit of doing whatever we feel like doing with no regard for how it affects others.

GGNRA is also perpetuating a horrific precedent that will reverberate throughout the National Park system by having regulations pertaining to pets at odds with those at nearly every other NPS site. I already encounter many pet owners walking their dogs on the trails of Point Reyes National Seashore who express surprise that pets aren't permitted on these trails given that they frequently walk their dogs in GGNRA...and aren't both Point Reyes and GGNRA National Park Service sites...and if they can walk their dogs on GGNRA trails, why not within Point Reyes?

By establishing some areas where pets are prohibited, others where they are permitted on-leash, and then others where they are permitted off-leash,

GGNRA and the NPS just seems to be doing its best to confuse the public and to give pet owners the excuse of ignorance when they are caught with their dogs off-leash in a closed area. The NPS should have uniform regulations pertaining to pets throughout the system. And in order to protect the wildlife, their habitats, as well as other visitors, the only sensible conclusion is to prohibit pets from all NPS sites. By maintaining one park-system-wide pet policy and instituting a nationwide education effort to inform pet owners about the policy, pet owners won't have an excuse for not knowing that pets are either prohibited from national parks or are at the very least required to be on-leash in a handful of specific areas at NPS sites.

And prohibiting pets at NPS sites would reduce another problem I frequently witness: dogs left in vehicles--often very hot vehicles. Another excuse I have frequently heard from those walking their dogs in areas where pets are prohibited is that they didn't want to leave their pet in the vehicle. This is understandable. I am outraged when I see a pet locked inside sun-heated vehicles while their owners are off hiking. I would assume that many dog owners, having become accustomed to hiking in GGNRA or other non-NPS public lands with their dogs, automatically take their dogs with them whenever they go hiking thinking that they will be able to go for a hike with their dog like they do at GGNRA. But then they arrive at parks like Point Reyes National Seashore and realize that dogs are not permitted on the trails. They have a choice to make: leave the dog in the vehicle, take the dog on the trails despite the regulations, or to go home or elsewhere where dogs are permitted. Far too many people choose one of the first two options. If the dog is left in the vehicle, it frequently sets to barking non-stop until the owner returns, sometimes several hours later. The rate at which pets would be left in vehicles or taken on trails because the owner didn't want to leave the dog in the vehicle would likely be greatly reduced if pets were prohibited in parks. Pet owners would hopefully have heard through a public information campaign that pets aren't permitted at NPS sites and will leave the pet at home if the owner wants to visit a NPS site.

And then there are all the dog owners who refuse to clean up after their pets, and all of the resultant disease and pollution issues, which are well documented and upon which I won't elaborate in this comment. But dog feces which are not cleaned up is just one more reason to prohibit dogs from NPS sites.

Some may argue that a prohibition against pets in NPS sites is excessive and unnecessary; that proper signage of where pets are and are not permitted would be sufficient. Those who make this argument must either willfully ignore or be blissfully unaware that a large number of pet owners are, apparently, oblivious to signage relating to pets or are somehow incomprehensibly ignorant as to what the signage means. Pet owners can pass by multiple signs indicating that pets are prohibited or are required to

remain leashed, and when they are informed that they passed by such signs, they declare that they never saw the signs. Or, if they did see the signs, they claim that they thought that the signs meant something else. I've had a staggering number of individuals who must have thought that I was an idiot or extremely gullible tell me that they understood the signs with the red slash through the silhouette of a person with a dog on leash to mean that dogs were permitted to be off-leash.

Some who want to maintain the destructive status quo may argue that they have long been able to walk their dogs in certain areas, even before GGNRA was established, and that that the NPS has no right restricting their ability to continue walking their dogs there. Following this rationale, upon those lands that the NPS has acquired which have been previously logged, mined, or hunted, logging, mining, and hunting should be allowed to continue largely unabated. Except for a few exceptions, these activities are not permitted. When National Park Service sites are established, we--as a nation through our elected representatives--are agreeing that these areas are special and deserve the highest level of habitat or cultural resource protection and that any activities that might have previously occurred there will be ended if such activities do not leave the "scenery and the natural and historic objects and the wildlife...unimpaired for the enjoyment of future generations." When National Parks Service sites are created, activities that impair park resources are, more often than not, ended. So, logging was prohibited within Sequoia National Park, Olympic National Park, Redwoods National and State Parks, and a number of other sites, when these areas were designated as National Parks, even though people had been logging in those areas for, at times, generations. Similarly, mining, hunting, and other extractive activities have been prohibited at various sites when they are included within National Parks.

Granted, dog walking is not an extractive activity; it's recreational (although far too many birds and other wildlife have been destroyed by dogs in parks). And while dog walking may not impair park resources to as great a degree as logging, mining, and hunting, no one can truthfully claim that there is no impairment caused by dogs to park resources. With regard to other recreational activities, when the use of Personal Water Craft (PWC) was deemed to pollute park waters, disrupt the natural quiet, and disturb park wildlife and visitors, PWCs were banned from many NPS sites where they had previously been permitted. There are many other recreational activities which the NPS has curtailed or prohibited because of the activities' negative impacts to park resources. But for some bizarre twist of logic, the NPS at GGNRA has created a large exemption for dog owners, which continues to result in the impairment of park resources. Why? It's not as if the NPS will be prohibiting the pet owners from walking certain trails or visiting favorite beaches. Pet owners would be more than welcome to visit these sites, so long as they do not bring their dog along for the hike. It isn't

in any sense different from PWC enthusiasts wishing to go to, say, Tomales Bay within Point Reyes National Seashore. They are welcome to visit and kayak and participate in other low-impact activities on Tomales Bay, but they may not use their PWCs. And loggers, miners, and hunters are all free to visit National Parks, but they are prohibited from logging, mining, and/or hunting during their visit. If a pet owner wanted to go for a walk with a dog, the pet owner would have to find a different location to do so--similar to how a hunter has to find other locations than national parks at which to hunt.

Regardless, I am unaware of any other regulated recreational activity that the NPS allows to continue within parks with such high levels of non-compliance. Maybe I'm wrong, but it seems as though the NPS would prohibit any other activity with similarly large numbers of participants refusing to adhere to pertinent regulations. What is so different about visiting parks with dogs that results in this special treatment?

National Parks and National Recreation Areas have been created to conserve the resources in those areas in an unimpaired state so that current and future generations may experience and enjoy those resources. The NPS, therefore, cannot legally permit activities that would harm or impair those resources, lest the resources be lost to future generations, regardless of how much enjoyment current visitors may obtain from participating in those activities. Nor should the National Park Service allow activities by some that negatively impact the enjoyment of the park by others. Yet the NPS and our government seems to quickly cave-in to every user group that claims their rights are being infringed upon because the NPS prohibits a particular activity that is detrimental to the wildlife and habitats which the NPS is supposed to protect. Why can't the NPS adhere to its mission?

In light of NPS officials inevitably bowing to political pressure from pet owners and considering that much of GGNRA is already urban and heavily developed, GGNRA would be one NPS site where I can understand bending the rules by allowing a few areas to be opened for walking pets on leash, so long as those areas are adjacent to San Francisco residential neighborhoods that have no other parks where pets are permitted, and so long as those areas do not include wildlife habitat or sites on the Marin Headlands. And under no circumstances should pets be allowed off-leash outside of a handful of areas.

There is little debate that off-leash dogs both harm the natural resources--primarily by harassing and scaring off the wildlife--and that off-leash dogs negatively impact the enjoyment of other park visitors who don't appreciate or might be frightened by large dogs bounding toward them, or by scaring off the wildlife other visitors may be observing. For these reasons--along with promoting humane treatment of pets and providing uniformity between national park pet policies--I encourage the NPS to prohibit pets from

GGNRA--or at a minimum to prohibit them from all but a few locations and to vigorously enforce the Park Service leash policy where pets will be permitted. Thank you for considering my comments.

Sincerely, Christopher Lish

Correspondence: I am writing to respond to the proposed plans to the Golden Gate National Recreation Areas. I strongly object to changes in the laws and rules regarding dogs. The current restrictions are more than adequate to protect wildlife, the land, and to accommodate park users who do not like dogs. Walking dogs outdoors should be encouraged, and not discouraged. Restricting access to dogs will create overcrowding in state, city and county parks. Further, the wildlife in the lands in the GGNRA are thriving despite the fact that the lands are situated in an urban area.

I live in Pacifica, CA and I am particularly concerned about the restrictions proposed on the Baquiano trail, in the San Pedro Point conservancy area, in the Sweeney Ridge area and in the Milagra area. These are beautiful areas that are used primarily by people in the community and many have dogs. The current leash laws are all that is necessary to protect the environment. The trails are in coastal prairie lands and dogs, even if unleashed, would not be tempted to leave the trail because there is a proficiency of prickly low-growing shrub that prohibits free movement/exercise. Owners are not tempted to let animals roam because there is a lot of poison oak and also ticks.

The lands surrounding the GGNRA lands are already quite protected and do not allow dogs at all. The San Mateo County Park service, which owns the San Pedro Valley Park, that adjoins Sweeney Ridge, does not allow dogs at all. The Crystal Springs reservoir lands to the south and east, are closed to both people and dogs and kept pristine to protect the water supply. Additionally, there is not a problem with dog waste in the Pacifica GGNRA lands. The community is very ecology-minded and pollution is minimal. Occasionally, there is waste that has not been picked up, but it is generally limited to the trailheads because of the territorial nature of dogs. Further, coyotes are common in this area and dog feces are not meaningfully different from coyote feces, which are often found on the trails. People who complain about dog feces are likely mistaken about how much dog feces is on the trails because coyotes, bobcats, cougars and raccoons are flourishing in this area and the feces from these animals are easily mistaken for dog

feces by people who do not own dogs.

It is extremely poor policy to be pursuing plans that discourage exercise. Obesity has become a real concern in this country which has in turn adversely affected the rates of diabetes, heart disease and stroke. The government should be encouraging exercise and recent studies have shown that exercising with dogs is one of the best ways to keep up an exercise routine. (See: <http://well.blogs.nytimes.com/2011/03/14/forget-the-treadmill-get-a-dog>) A study in the February 2006 American Journal of Preventive Medicine found that dog owners in Canada walk almost twice as much as those who do not own a dog. Regular walking is a good way to improve health. With ever-spiraling healthcare and Medicare costs, good habits should be encouraged.

Dogs are allowed in a very small proportion of GGNRA lands and yet that access is very important because without it, families with dogs will have to use other facilities which, in this densely populated area will put too much pressure on city and county parks. While I agree that having pristine land set aside for wildlife is generally a good idea, creating a very large terrarium in the second largest metropolitan area in the most populous state is ridiculous. People need to be able to use the land and not merely appreciate it as an abstract concept. San Francisco has more dogs than children. There are an estimated 120,000 dogs in San Francisco, according to the city's Animal Care and Control department. There are anywhere from 108,000 to 113,000 children, according to U.S. census figures from 2000 and 2005. (SFgate, 6/17/07.) Banning dogs ignores the reality that dogs are part of the fabric of the city.

As public funding has been cut over the past years, many parks do not have adequate policing/security. As a woman, my dogs are important to me because they offer some protection from crime and from mountain lions. Some states are pressuring the parks to allow guns in the parks -- if state laws allow. Certainly dogs are a much safer and more socially acceptable deterrent to crime and animal attack than guns. Also, I do feel that I find it pretty arbitrary to pick on dogs. Mountain bikes have been growing in popularity in the parks over the past decade. I use the trails on a daily basis and have seen countless smashed snakes, lizards and newts with bike tire tread marks imprinted in the bodies on the trails. As for dogs on the beach -- families with children and teenagers leave a lot more trash on the beach than do dogs. Go to the beach at the end of any warm day and you'll find a lot more juice boxes, chip bags and beer bottles than you will dog feces. Do you plan on banning mountain bikes and young people from the parks next?

The GGNRA lands are thriving despite being situated in such a populous area. There are no longer dirt bikes criss-crossing Pacifica every weekend. The endangered populations of birds have beaches, such as the one at Mori

Point, to use without any human or canine interventions. While I appreciate the concerns of bird lovers, and I consider myself among that group, I think that the needs of people in an urban area must be addressed as well. Frankly, the idea that domestic dogs pose a threat to our bird populations seems pretty absurd. Pollution, loss of habit, loss of prey species, global warming ? these are actual threats to our bird populations. Antagonizing a large, vocal group that loves to be out in nature is simply not good policy.

Sincerely,

Gerry Sutkowski Pacifica, CA

Correspondence Type: Web Form
Correspondence: Dear Mr. Dean, Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean,

My name is Deryl Carboy. I live in Palm Desert, CA and visit with my son and his family in the Bay Area several times a year. I am 82. Without a doubt the highlight of our visits is our daily walk at Crissy Field with their family dog. The parking set up, the flat paths and easy access to the beach where the dog runs, swims and plays with other dogs make it a wonderful place for our family outings.

I have read several sections of the DEIS and note that it mentions that many seniors and disabled people do not visit the GGNRA because of off-leash dogs. I would like to refute this. First, with respect to Crissy Field, we visit because of the off-leash dogs. It brings us a great deal of joy to watch my son' golden retriever fetch, roll in the sand and swim. I have many family photos taken during these fun times. The reason we do not go to the other GGNRA areas is because they involve steps or are otherwise not set up to accommodate seniors. If these places could be modified to make them more accessible - and provided off leash dogs are allowed - we would go on outings to these places as well. I am simply unable to navigate the steps at Fort Funston or on the Coastal Trail where my son also takes his dog. We tried these locations however needed to return to Crissy Field. We occasionally go to Baker Beach as the parking area is close to the water where the dog plays.

I see from the maps in the DEIS that the GGNRA's current preferred alternative significantly restricts and eliminates off leash dog walking in

many areas within the GGNRA. The GGNRA is a national treasure and steps should be taken to EXPAND access for people with dogs, especially families and seniors. This might include better steps, paths, benches, hand rails and signage. When we are at Crissy Field I notice senior citizens and disabled people as well as parents with toddlers, sitting on the benches and the concrete wall near the east parking area watching the dogs play. Watching these playful creatures in a beautiful environment is a source of joy for all who visit. I simply cannot fathom why the GGNRA wants to take this away from the dog guardians and all of us who cannot or do not have dogs who love to watch them at play.

I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas for all citizens for generations to come. As such, it is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on all GGNRA lands, current and new. I favor an approach that balances recreational use (most definitely including off leash dog-walking) with preservation. I think that an approach that incorporates education, improved signage, improved access for seniors and disabled and physical/vegetative barriers is a good place to start. Restricting dogs makes the GGNRA a place that actively discriminates and is void of the fun and joy that dogs and their families bring. It is only logical that the DEIS consider progressive and community friendly option.

The document discusses a "compliance-based" approach as it punishes park goers with dogs for the perceived transgressions of a few. What if a senior or disabled person or young woman with toddler is unable to walk to the areas that are set aside for dogs ? They would be put in the terrible position of having to break the proposed rules or go home without enjoying without enjoying the natural beauty of Crissy Field, without socializing with a diverse set of other visitors and without giving their dog a chance to run and play. This simply does not make any sense. It is a byzantine approach and is set up for failure. Can you really not think of forward thinking and inclusive ways to allow all people and their family members, dogs included, to enjoy the GGNRA.

The GGNRA seems to be taking a very distrusting and adversarial position vs. the dog guardians of San Francisco. My experience is that this rather large group of citizens (all my son's friends have dogs) highly value our natural resources, always clean up after their dogs, are polite around seniors and the disabled. I have seen the Crissy Field Dog Group cleaning up trash and other debris. My daughter in law goes out with a group at Fort Funston that does the same thing. Dogs and their guardians make us all better and happier and make the GGNRA a cleaner and safer place. My son and his family do not have a yard. The GGNRA is their yard and the place that they socialize with their friends. The DEIS does not take this into account. The fundamental purpose of creating the GGNRA was to provide open space for

recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents. If the GGNRA preferred alternatives are put in place my recreation at Crissy Field and my family's recreation at Crissy Field and the other GGNRA locations will be severely impacted. This does not seem to be considered in any way.

After careful consideration and reviewing the maps, I support Alternative A (the "No Action alternative") for Crissy Field, Fort Funston and Baker Beach. This Alternative A might be modified to provide more benches, more ADA access points, more signage, improved vegetative barriers, and education and outreach as part of the overall program. Thank you for considering my comments.

Sincerely, Deryl Carboy Palm Desert, CA 92211

Correspondence Type: Web Form
Correspondence: I am writing to oppose the GGNRA's draft dog management plan. It is not based on facts and reaches conclusions that are not supported by either science or law. The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness area. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded. The proposed plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others. The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to: (1) Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. (2) Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. (3) Exclude speculative, exaggerated, biased, or misleading statements and studies. (4) Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). (5) Enable professional dog walking and align any professional dog walking

rules with county or city regulations. (6) Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

Based on my personal experience, it does not seem that allowing dogs on GGNRA lands would cause any additional harm to the land than already caused by allowing adults and children. If there are issues concerning pickup and removal of dog waste, then that is an issue that can be addressed by perhaps citing and fining those who fail to do so. Otherwise, the dogs are being punished for something that is not their fault. Having off-leash dog areas is very important to the well-being of dogs, allowing them to really exercise and get all of their energy out. This, in turn, is a benefit to the larger community, which is not bothered by aggressive dogs.

Thank you for considering my comment.

Correspondence: I am 76 years old and health problems prevent me from going far. I can occasionally visit GGNRA.

There are parks to exercise dogs near my home and all over. Please limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats. GGNRA's purpose is to protect natural and cultural resources. Alternative D best accomplishes that.

Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

Courses for runners and horses should be confined to the periphery of the park where they will not impact sensitive species.

Thanks, Art

Correspondence: Dear NPS - Golden Gate NRA,

I appreciate the opportunity to provide input to this Draft Management Plan.

Although I appreciate the needs and desires of dog-owners, I think that NPS units should be more for wild plants and animals than for purely human-oriented (or dog-oriented) pleasure. It is with this in mind that I make these specific recommendations:

--Limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

--Require all off-leash areas to be enclosed to protect park users, native plants and animals, and other dogs.

--Endangered or rare plants and animals habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

--The park should better accommodate diverse park user groups, such as runners, families, and those with service animals, by offering more than one trail and more beach areas free from dog recreation.

--The park's mission is to protect the natural and cultural resources, not allow recreation to undermine, damage or destroy it. Alternative D best reflects the national park values.

Thank you.

Correspondence: These comments are in regards to the proposed GGNRA rules for managing pets, including dogs, in the GGNRA.

Mori Point in Pacifica, CA: I support Map 17, the preferred alternative. I visit Mori Point most weekends. There are always many dogs off-leash. Some are under voice command, most are not. Most people who say they have voice command do not: the dogs do not listen to the owners and do not behave. Virtually all off leash dogs enter open space, running and disrupting wildlife, particularly birds.

Here's an image of a Great Blue Heron hunting on Mori Point:

http://www.pacificariptide.com/pacifica_riptide/2011/05/dejeuner-sur-lherbe-heron-hunts-mori-point.html It's safe to say that this bird would fly away if off-leash dogs ? or dogs on-leash in close proximity ? are present. If the usual dogs that some owners insist on letting run off-leash were present.

----- Regarding the GENERAL RECOMMENDATIONS submitted by the City of Pacifica: 1. The comments submitted by the City of Pacifica represent the views of a few individuals, not my views, and not the views of most Pacifica residents. The City of Pacifica comments also do not represent any general consensus.

In particular, a. The City of Pacifica comments: "Mori Point: We suggest that the trails designated on Map 17C as "Tmigtac" and "Pollywog" trails be modified to allow on-leash dog access. We believe the likelihood of either the red-legged frog or the San Francisco garter snake being harmed or negatively affected is extremely remote?."

----- On the contrary: trails designated on Map 17C as "Tmigtac" and "Pollywog" should not be modified to permit dog access ? on-leash or off-leash.

This area provides vital upland habitat to the rare and endangered San Francisco Garter Snake arguably the most beautiful serpent in North America and likely its most endangered.

Dogs are a clear and present danger to frogs, snakes and other wildlife. In addition, their urine and excrement are disturbing to local wildlife, especially coyotes and bobcats.

b. The City of Pacifica comments: "Future Considerations: ?We are concerned that a loss of on-leash dog access on lands within Pacifica might have unwanted economic consequences, as dog walkers will go elsewhere, effectively eliminating the possibility of patronizing Pacifica's restaurants, hotels, or other retail outlets?."

On the contrary: Pacifica still has a lot of unbroken ridge lines and beautiful open space -- with a lot of fascinating flora and fauna, including several rare and endangered species. It is a key reason people visit Pacifica: a fun hike, some good bird/butterfly watching, rare plants. etc.

Folks are able to come and walk their dogs ? leashed and legal - in many areas around town. - Visitors from nearby surrounding communities regularly walk their dogs in Pacifica, I see many off-leash any time I visit Mori Point. Since they live here, it's not as likely they will purchase restaurant meals etc. - Visitors from outside the area, on the other hand, usually will not have pets with them, but will be more likely to purchase meals, hotel rooms, etc.

Whether the businesses in Pacifica are competitive with the surrounding areas is independent of any dog walking opportunities.

The City of Pacifica has approved one dog park, which is still to be developed. Pacifica would behoove itself to be more livable by providing more than one dog park ? and not rely on destroying the wildlife habitat of our public lands to provide the service of a dog park.

----- Sweeny Ridge/Cattle Hill I support the preferred alternative.

----- Pedro Point, Pacifica CA I support the Preferred Alternative. This year, I saw more than one pet owner come to the beach, let the dog run and relieve itself. One person picked up after the dog, the other did not. This should not be permitted.

----- Chrissy Field I support Map 10-D. The main reason for this is that this area is important to the western Snowy Plover, which is listed as a threatened species under the federal Endangered Species Act.

----- Fort Funston I support the preferred alternative.

----- Milagra Ridge I support the preferred alternative.

----- Rodeo Beach I support the preferred alternative. I have often gone hiking and bird watching on this beach ? and would not like to see the many bird species threatened or unable to survive due to the presence of off-leash dogs.

----- Marin Headlands I support the preferred alternative. I have hiked this area many times, and seen bobcats and California Gnatcatchers, to name two special species.

All of my comments are based on the facts that:

? Dogs have our homes, our yards, our sidewalks, our streets, and many of our public spaces where they may run, play, eat and survive.

? Wildlife, on the other hand, has only that habitat which it has evolved to use. It cannot survive in our homes, in our yards, on our sidewalks and streets, and most of public open spaces. Running from dogs costs wild animals vital energy that they no longer have to get food, shelter. It adds stress that contributes to inability to survive and reproduce.

? People are increasing our numbers and the space we use so greatly that beaches and open spaces are encroached upon by us and our pets, to the extent that these spaces no longer provide safe shelter and food habitat for the wildlife that calls it home.

? I support education, ticketing and finally banning of dogs in areas where

pet owners ignore the rules.

Raised with cats and dogs, I'm looking forward to the day when I have the time to have my own big dog.

As stewards of our environment, we must respect the fact that wildlife will not survive without our active participation. Once wildlife is gone, it is gone forever. We cannot bring it back. I feel a responsibility to keep our beautiful wildlife habitat, plants and animals thriving ? for future generations to learn about, understand, and enjoy.

Thank you for the opportunity to share my views on this important issue.

Correspondence: 5/29/11

Frank Dean, General Superintendent Golden Gate National Recreation Area
Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean,

My name is Shannon Mace. I live in the Mission, a block away from General Hospital. I use the GGNRA parks almost every weekend with my dog Mika. I will usually go to either Fort Funston or Crissy Fields at least once a week. I understand that people are saying that if you are pro dog, then you must be anti-environment, but that is simply not the case. I support the Sierra Club, and I have helped to implement a green culture of recycling at my work. I stop and pick up trash at your parks if I see it lying on the ground. The environment is important to me, and being in nature is important for both my dog and I.

I work at the Janet Pomeroy Center, a recreational for disabled individuals. I have gone on field trips with them to the GGNRA parks, and they enjoy both the parks, and meeting the people (and their dogs) who go to the parks.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off-leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions. Furthermore, based on what I have observed while at the parks, the primary cause of environmental damage is not out of control dogs, but unsupervised

children, or other adults ignoring the posted signs. (It's not dogs that are carving designs in the sand dunes of Fort Funston.)

I believe that it is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. (Maybe restricting children?) I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education / improved signage and physical / vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option.

The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal.

The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents.

After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program.

Thank you for your consideration.

Sincerely,

Shannon Mace San Francisco, CA, 94110

Correspondence: It is time to restrict dogs in the national park lands - on and off leash. People should be able to enjoy most, if not all, of the waterfront beaches of San Francisco and in the Bay Area park lands without dogs.

Fort Funston should have very restricted dog use - most of the land at Fort Funston should be dog free for everyone to enjoy - how did it ever become a dog park?

Your plan for most of Ocean Beach with no dogs is great.

The plan for the beaches at Crissy Field works - with no dogs on East Beach, and a very separate area for dogs.

It's great that Muir Beach is planned as a no dog area.

Please do not give in to the very vocal minority group of dog owners, and if anything, reduce the number of areas for dog use in your plan. It's unbelievable how entitled and self centered they are.

Thank you for protecting our open spaces and making them available for all to enjoy - not just for people who love their dogs.

Correspondence: Dear Mr. Dean Frank Dean General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean,

My name is Jack Haemmerlin. I am 83 years old and, due to a war injury, I am disabled. I currently live in Palm Desert, CA however I lived in the Bay Area for many years and worked at the local TV stations. I have asked my partner, Deryl Carboy, to submit this letter for me as I am not good with the internet. I I visit with friends in the Bay Area several times a year. During each visit, rain or shine, we take my friend's dog to Crissy Field so she can run and play. I like to take pictures. This is possible because the beach is so close to the parking and rest facilities. We have tried to visit the Marin Headlands, Baker Beach and Fort Funston however because these locations are not friendly for access for disabled people we are restricted to visiting only Crissy Field. If these places were better set up to allow for access and we could allow the dog to run off leash (I cannot hang onto the dog while navigating the steps) we would visit these locations as well.

During a recent visit my friends explained to me about the proposed restrictions that the GGNRA would like to impose for on and off leash dog walking. I looked at some pages of the document, especially those pertaining to Crissy Field. Even though I don't have a dog I would like to comment as I feel very strongly about this. Visiting these areas is the highlight of my visits back to the Bay Area. I love to take pictures of the dogs. If the GGNRA preferred alternative is adopted I would not be able to visit Crissy Field with my friend's dog. I cannot imagine that you intended to discriminate against seniors and the disabled.

From a broader perspective, I see from the maps in the DEIS that the GGNRA's current preferred alternatives for most of the GGNRA areas significantly restricts and eliminates off leash dog walking. As a former resident of the Bay Area I know that the GGNRA is a national treasure and steps should be taken to EXPAND access for people with dogs, especially families, the disabled and seniors. This might include better steps, paths, benches, hand rails and signage. When we are at Crissy Field I notice many people who do not have dogs petting my friend's dog and watching other dogs play and swim. I know from first hand experience that seniors and disabled people are much happier when they have a dog and can get out and socialize and get exercise along with the dog.

I think that it is very important to preserve the GGNRA's natural resources and want to protect these important natural areas for all citizens for generations to come. As such, I suggest that the GGNRA consider reasonable and balanced alternatives for dog walking on all GGNRA lands, current and new. I favor an approach that balances recreational use (most definitely including off leash dog-walking) with preservation. I would like to see an approach that incorporates education, improved signage, improved access for seniors and disabled and natural barriers. Restricting dogs would make the GGNRA a place that actively discriminates (is that legal ?) and would be deprive families with dogs of the full enjoyment of this area (and all the health benefits that come from dog walking) and would deprive non-dog owning visitors of the fun of watching the dogs play on all areas of the grassy airfield and the beach.

The document proposes a "compliance-based" approach to punishes park goers with dogs for the perceived transgressions of a few. After all my years of observing human behavior, if you set up a rule that is unreasonable or simply does not make sense, people will break it. If seniors, or disabled or young mothers would like to exercise their dogs near the parking lot at the beach or the parking lot near the big green air field, they will. They will do this because reaching the designated areas may be physically difficult or impossible and because other park goers LIKE to see the dogs play and often engage with the dogs. I know I do and I see others doing this as well. The GGNRA seems to be taking a very unfriendly and adversarial position

vs. the dog guardians of San Francisco. This will only make Crissy Field and the other areas places of conflict, not peace and relaxation.

My experience is that this rather large group of citizens, my friends in San Francisco and the many friends in the Bay Area with dogs who I still speak with, highly value our natural resources, always clean up after their dogs, are polite around seniors and the disabled, or ARE senior and disabled and count on the GGNRA for their and their dogs' exercise and fresh air. I should add that the dog owners seem to be a very friendly and helpful group of people. They are always very considerate of the seniors and others using the beach and sidewalks. I am grateful they are there especially when the weather is not nice as I know if something happens to me or I need help they will always offer to assist me.

The GGNRA is a backyard to residents and visitors to the Bay Area. The DEIS does not take this into account. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents. If the GGNRA preferred alternatives are put in place my recreation at Crissy Field and my friend's recreation at Crissy Field and the other GGNRA locations will be severely impacted. This does not seem to be considered in any way.

After careful review of the maps, I support Alternative A (the "No Action alternative") for Crissy Field, Fort Funston and Baker Beach. This Alternative A might be modified to provide more places for seniors and those who are disabled to sit such as benches .

I appreciate your reading my letter.

Sincerely, Jack Haemmerlin Palm Desert, CA 92211

Correspondence Type: Web Form
Correspondence: I am currently living in Seoul, Korea, but between 2001-2010 I lived in San Francisco, four of those years with my golden retriever mix, Henry. I am planning to return to San Francisco in the next few years, with Henry. I am the Director of Scientific Affairs at the Institut Pasteur Korea. I am a PhD scientist and very knowledgeable about human health, particularly chronic diseases such as obesity and cardiovascular disease.

I am very concerned that the regulations being proposed are too restrictive and are motivated by a desire to turn GGNRA into a wildlife preservation area, without consideration for the impact on human health and recreation. People living in the Bay Area tend to have a higher quality of life because of the access to the outdoor park system (of which the GGNRA is a key element) and their ability to stay fit.

Personally since I have moved to Seoul and can no longer walk my dog like I used to, I have gained 20 pounds and my health has declined dramatically as a result. I am very concerned that restricting GGNRA access to such a large number of Bay Area residents will cause a similar decline in their health. The GGNRA belongs to the Bay Area and access should not be limited so drastically in this way.

Concentration of all dogs and their owners in very small segments of the park will further create unpleasant and potentially dangerous situations due to overcrowding, and this will no doubt impact other dog-friendly parks that remain, as they will have to absorb the traffic of dog owners seeking places to walk their dogs and get the exercise they previously were able to have at GGNRA.

Instead, I suggest GGNRA maintain the same level of access to dogs and their owners, but more rigorously patrol off-limit areas and enforce policies on cleaning up after pets. It is true there are always the small percentage of inconsiderate dog owners who do not respect the rules, but punishing all of us who abide by the rules and are considerate is unfair, and will create a much poorer quality of life and health for a wide sector of the Bay Area population.

I urge you to reconsider the plan and continue allowing off-leash dogs in areas of GGNRA like Muir Beach, Crissy Field, Fort Funston, and Ocean Beach so the Bay Area residents with dogs can continue to enjoy these areas and continue the high quality of life and health that is the reason so many of us choose to live in the Bay Area.

| Correspondence: | As a responsible pet owner and a home owner and resident of San Francisco, I walk my dogs daily in the parks and recreational areas in and in the vicinity of San Francisco. Areas where I frequent are Golden Gate Park, Fort Funston, Crissy Field, Baker, and Baker Beach. The area where I typically take my dogs for off-leash recreation is primarily Fort Funston. As | | |

I work during the week, my use of Fort Funston is primarily on the weekends. Due to the terrain, it is very rare to see picnic-ers at Fort Funston due to more challenging access to the beach areas. I would really appreciate if some compromise re: dog usage in GGNRA were implemented. For example, limiting the ratio of dogs under the supervision of humans, or allowing some areas to remain off leash such as Fort Funston, which is not a big draw for tourists.

Thank you for your consideration.

Dear Mr. Dean, I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law. The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded. This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the tens of thousands of Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others. The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

- Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation.
- Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.
- Exclude speculative, exaggerated, biased, or misleading statements and studies.
- Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).
- Align commercial dog walking rules with county or city regulations.

These are my personal comments and observations regarding this plan:
(here's where you fill in your own personal story and what you've seen when

you've been out at the GGNRA) Sincerely, Akiko Kariya

Correspondence: Yesterday I took a walk at Ft. Funston to bird and examine the native flora. I haven't been there in quite a while. I entered Ft. Funston at the intersection of Skyline and John Muir and took the northern loop trail. As I walked, I encountered more than a dozen dogs, mostly off leash or on very long leashes. Some of them approached me in a threatening manner, others were just curious. All were an annoying distraction from my appreciation of the area. As I finished my walk I realized that I was the only person on the entire trail without a dog. In the past I would see a mix of dog owners and non-dog owners. It appears that the dog owners have driven everyone else away by the lack of consideration. This needs to be redressed. There need to be bans, enforcement of leash laws (especially at 75%) is futile. I should be able to enjoy this national park just as enjoy all others where dogs are not permitted.

Correspondence: Dear Superintendent Dean and members of the committee developing the Dog Management Plan:

The purpose of this letter is to express my concerns about the proposed Dog Management plan alternatives. I am a tax paying citizen of the United States and City and County of San Francisco. I have a dog and I use the GGNRA with my dog for healthful exercise and recreation. The DEIS serves to inappropriately limit the rights of the tax paying public.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off-leash dog walking areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions.

It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I want to protect the GGNRA's natural resources, I believe options other than restricting dog-walking access should be considered first. I favor an approach that truly balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternatives as a reasonable option.

The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and is not based on any documented impacts of non-compliance, just the mere fact that non-compliance occurs. Because it will change the status of areas from off- to on-leash or on-leash to "no dogs allowed" automatically and permanently if non-compliance is alleged, it will deny the public the chance to comment on these major changes when they occur. That violates the law that requires public comment when a change is either significant or highly controversial, as these changes would clearly be. It must be removed.

There are, however, some improvements that a modification could address for the positive, specifically as they relate to Crissy Field:

1. The crushed gravel promenade from the parking lots west past the grassy meadow is of particular concern. There are dogs on and off leash, bicycles, runners, pedestrians, children learning to ride bikes, etc. Surely you have

seen on weekends it is a mob scene and recipe for accidents. Leashing dogs in this area and eliminating bicycles would certainly cut down on the risk of injuries to all users of the promenade.

2. Enacting the 1979 Pet Policy would return the west beach to a leash free environment all year round providing more areas to ease the density of dogs rather than commit them to smaller confines as proposed by GGNRA.

3. Professional dog walkers should be limited to a manageable number of dogs per person. Some are extremely conscientious and keep the dogs engaged. But there are also the dog walkers who meet up with other dog walkers and stand around and chat while 15 to 20 dogs run wild around

The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents.

I uphold my responsibility to manage my dog under voice control and on leash. I believe it is incumbent on all dog guardians and handlers to do the same and maintain peaceful existence at all GGNRA sites. I do not feel it is appropriate for GGNRA to arbitrarily take away citizens rights as indicated in the draft plan. There are times in the day that the majority of people using Crissy Field and other beaches in the GGNRA are people who are with their dogs. Removing dogs from the beach will overburden the city parks and other GGNRA sites and negatively affect the health of the people and dogs in San Francisco. The exercise that we humans receive exercising our dogs at the beach positively contributes to our overall sense of well being and physical condition.

After careful consideration, I support a modified Alternative A (the "No Action alternative") that codifies the 1979 Pet Policy as it was originally written (there is no evidence in the DEIS to support the closures of beach access because of the presence of snowy plovers), and that includes off- and on-leash access on GGNRA lands in San Mateo and on new lands that become part of the GGNRA, especially those areas in both that have traditionally had dog walking.

Thank you for your consideration. Sincerely yours,

Susan Spiwak

Correspondence: Dear Superintendent Dean,

I am writing to oppose the GGNRA's Draft Dog Management Plan because it fails to include any site-specific documentation of existing conditions and their analysis thereof.

The document states in general the impacts caused by dogs without any reference to actual impacts already caused. As the GGNRA is made up of vast lands, specific places as well as specific impacts must be documented to support the Plan's conclusion.

There is also a lack of information on the resource degradation, i.e. what these resources are. To justify the conclusion, the Draft Plan must be able to demonstrate how the degradation of these resources are specifically caused by dogs, as opposed to impacts caused by humans, other wildlife and predatory plants and species. In other words, I ask that the GGNRA look more specifically at each area, document the impacts of all park uses, disclose all information to the public and come up with a new alternative.

Thank you for your consideration.

Sincerely, Tszsan Kathy Reichardt

| Correspondence: | This DEIS is invalid because it fails to meet its legal obligation to take into consideration the negative effects the proposed changes would create for humans, their dogs and the surrounding environment (e.g. local parks). Further, the studies/science utilized to support allegations of damage to resources in the GGNRA are fatally flawed - the positive impacts are ignored and the negative impacts are unverified. For example, this DEIS omits the Warren study of the snowy plover which concluded recreation of dogs and their owners does not negatively affect the feeding of the plover. Instead the DEIS relies on a study performed by Audubon activists who recommend Draconian restrictions which are unjustified in areas that are not critical habitat. Therefore, I believe the 1979 Pet Policy should be implemented in its original form with no restrictions on off-leash recreation | | |

at Ocean Beach, and it should be institutionalized as a Section Seven Special Regulation. Further, I believe that all properties added subsequent to the 1979 Pet Policy and in the future should have historical off-leash recreational usage allowed. This would accurately reflect the enabling legislation for this National Recreation Area which GGNRA management has held in disregard for quite some time. I also believe the GGNRA's inclusion of a Compliance-Based Management Strategy as well as the GGNRA's failure to commit to a Section Seven Special Regulation following this process indicates a lack of good faith and an intent to deceive the public as the GGNRA did following the implementation of the 1979 Pet Policy which the GGNRA later decried in Federal court as an "error".

Type:**Correspondence:** To whom it may concern,

I am a responsible guardian of two smallish dogs (30 lbs). We go to Muir Beach most every week and have for close to 7 years. I always keep them on leash on the path out to the beach. If I assess that the beach is too crowded with people, I keep them on leash and they enjoy sniffing their way along. If, as is often the case in the morning, there are not many people, and most of them have dogs, I will let them off leash for a run. My dogs are not water dogs, they simply like to sniff, run and play on the sand. They are both people and other dog friendly. Were they not, I would not take them off leash. I watch them constantly and always clean up after them. They are never more joyful then when they are running free at the beach. There are so few places where they can do so. I vote for Alternative B; where dogs are kept on leash on Pacific Trail and then allowed to run off-leash, under voice control, on the beach.

Thank you for providing multiple options for community comments.

Correspondence: Frank Dean, General Superintendent

Golden Gate National Recreation Area

Fort Mason, Building 201

San Francisco, CA 94123-0022

Dear Mr. Dean,

[Put your personal comments here ? Introduce yourself, identify your neighborhood, say how often you use the GGNRA, and where & how often you take your dog. Counter the argument that we are "anti-environmentalists" by listing the environmental organizations you belong to, or the actions you take that indicate how important the environment is to you.

If you are comfortable doing so, indicate if you are a member of a minority group. The DEIS proposes that many seniors, disabled, or racial/cultural minorities do NOT come to the GGNRA because of off-leash dogs ? let's show how many of us come for EXACTLY this reason!)

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas

within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions.

It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option.

The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal.

The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents.

After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program.

Thank you for your consideration.

Sincerely,

_____ (name)

ID:**Received:** May,30,2011 10:35:55**Correspondence Type:** Web Form**Type:****Correspondence:** I strongly support alternative D, providing the most protection for natural resources and imposing the most restrictions on dogs and their owners. In my experience, most dog owners at the beach overestimate their ability to control their dogs with voice commands and underestimate the extent to which their dogs annoy or frighten others. I go to the beach often and frequently see visitors pestered by dogs whose owners are unable or unwilling to control them. My wife was knocked over by a large dog at Stinson Beach last year. We've given up going to the beach nearest our home (Ocean Beach) and instead go to Baker Beach across town because of the large number of uncontrolled dogs at Ocean Beach.

Dear Mr. Dean,

[Put your personal comments here ? Introduce yourself, identify your neighborhood, say how often you use the GGNRA, and where & how often you take your dog. Counter the argument that we are "anti-environmentalists" by listing the environmental organizations you belong to, or the actions you take that indicate how important the environment is to you.

If you are comfortable doing so, indicate if you are a member of a minority group. The DEIS proposes that many seniors, disabled, or racial/cultural minorities do NOT come to the GGNRA because of off-leash dogs ? let's show how many of us come for EXACTLY this reason!)

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon

sound science or long-term monitoring of site-specific conditions.

It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option.

The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal.

The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents.

Correspondence: I am very pleased with the GGNRA's decision in regards to the dog management plan. I am a native San Franciscan and for far too long I have

watched dogs of all sizes, off-leash, chase snowy plovers, terns, gulls and sand pipers away from resting areas and stressing them out. Far too long I have watched uncaring owners of these dogs do absolutely nothing to prevent their dogs from frightening the birds. I have also witnessed and been the victim of dogs that chase or jump people. There are more dogs in San Francisco than there are children, and they have become quite a menace due to irresponsible owners. Our beaches suffer from their selfishness and carelessness as our birds suffer. I am shocked at how few people seem to care anything about the birds. They have almost no voice if it weren't for the GGNRA. I appreciate all you do for the beaches and the bird populations. Thank you. Sincerely, Kim Mosler

Correspondence: I am submitting my comments on the DEIS in opposition to the proposed plan. I support the No Action alternative.

I live in San Francisco and use the GGNRA areas with my Labrador retriever on a daily basis. I primarily use Crissy Field, Baker Beach, and Rodeo Beach/Fort Cronkrite/Miwok Trail areas. I have always supported environmental issues however I believe this plan is not well thought out and unnecessarily restrictive to a large part of the population.

My comments:

There are adequate protections for sensitive land and wildlife. The GGNRA should better maintain these protections-specifically the fencing on the beach at Crissy field where sand has covered it. This is a simple fix rather than restricting use.

I am a responsible dog owner, as most are, keeping my dog under voice and sight control, cleaning up after him and keeping him out of the restricted posted areas. It is not appropriate to restrict all dog owners for the few issues with a small percentage of dogs. The reasonable response to this problem is to educate visitors, improve signage and help park visitors follow the rules and learn how to respect the environment, not to ban the rest of us with dogs from the GGNRA.

It is important to keep these areas open for off leash dog walking access, especially in an area like the Bay Area with a large population. As residents and taxpayers of San Francisco, we should not be restricted from use of these areas if we are using them responsibly. The GGNRA was created to provide urban recreation areas and the quality of urban environment in these

areas need to be considered more in the DEIS. The interrelationship between GGNRA and our neighborhoods is exactly the human environment that the EIS is required to study, but failed to do so. The GGNRA was not established as a wildlife preserve and while those needs are important, there are better places for them than an urban environment where open recreational access is so critical.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) are not based upon sound science or long-term monitoring of site specific conditions. I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, but other options besides restricting dog-walking access should be considered first.

The DEIS is biased against and does not take a hard look at the No Action alternative or variations on that alternative. There are many areas in the GGNRA where the existing 1979 Pet Policy has been working, and where sensitive species are not present and visitor conflicts do not occur or are very infrequent. In addition, the DEIS does not provide site-specific information that these areas are inappropriate for continued dog walking.

Once, again, I am writing in opposition to the preferred alternate, and in support of the No Action plan.

Correspondence: Please make ocean beach dog free. This is an area that I am close to and would love to enjoy without the fear of dogs and disturbance of having dogs run up to me. Furthermore, I would like to see dogs on leash everywhere and more places that don't have dogs at all. For historical reasons, elderly African-Americans often do not feel comfortable with dogs. Dogs are a symbol of racism. They were used against African-Americans and it has been my experience that this racial group (especially those of the older generation) do not like being around dogs. I realize that African-Americans are often not considered but I would urge the park to do just this. I have also noticed that dogs tend to mirror their owners. Unfortunately, people often have unconscious bias against african-americans. So it does happen that owners see a large black man and get frightened. Their dogs pick up on this and act with hostility towards that man. I know it is not on purpose but it is not ok. This is also one reason why african-americans tend not to have favorable feelings towards dogs.

Correspondence: Frank Dean, General Superintendent GGNRA Fort Mason, Building 201
San Francisco, CA 94123-0022

May 30, 2011

Dear Mr. Dean,

I am a Professor at Presidio Graduate School, an MBA program in Sustainable Management. We teach our students not only about the environment, and about business, but about how to effectively change the world so that we can not only survive on the planet, but flourish. The system we address includes the earth, of course - but just as importantly, humans, animals, & the places they live and work. Sustainability in all forms is an integral and driving force in my life.

My life is shared with a 100 pound Curly-Coated Retriever named Jackson; before him, there was Sam the Dalmatian. Instead of two-legged children, I raise four-legged ones, and they are nearly as much responsibility. Jackson is under voice control, and I have spent countless hours training and socializing him. A year ago we moved to San Francisco, and one major driver was the number of off-leash parks we could choose from so he could get the exercise he needs. Being off leash for him is an integral part of his health, and I care deeply about that as you might imagine.

As part of the system that the GGNRA exists in, I naturally care about preservation of natural resources. However, I do not believe it needs to come at the expense of the other parts of the system - namely, our dogs, and the humans who also enjoy roaming these grounds with them. People of all ages and races exist equally here, brought together by their love of dogs. They are respectful of each other, and watchful over their dogs. I have never witnessed an incident, and I typically am at either Fort Funston or Stern Grove every single day.

I do not agree with the proposed changes to the existing conditions (1979 Pet Policy), and I believe options other than restricting dog-walking access should be considered first. The proposed "compliance-based" approach is one based on punishing the many for the perceived issues of the few; this doesn't make sense because the peer pressure to keep these lands open & available is sufficient for all but the most unaware people to change their behavior. We have moved well beyond "carrot & stick" approaches to

motivating behavior, and I would be happy to work with you to develop some more relevant & effective ideas.

Stakeholder engagement is key to maintaining fair and equitable solutions, and your proposal that denies the public a chance to comment gives way to a lack of transparency. Instead of seeking cooperation, the GGNRA is seeking to assume autocratic control over decisions. Healthy systems encourage debate.

A sustainable urban area includes open space for recreation - and for many of us, walking our dogs each day is our primary form of recreation. They need it, and we need it as well. I support a modified Alternative A (the "No Action alternative") that codifies the 1979 Pet Policy as it was originally written, and that includes off- and on-leash access on GGNRA lands in San Mateo and on new lands that become part of the GGNRA, especially those areas in both that have traditionally had dog walking.

Thank you for your consideration.

Sincerely,

Dr. Donna Montgomery San Francisco, CA 94116

From: Aleks Petrovitch Owner of Aqua Surf Shop Sf Ca 94116

Dear Mr. Dean,

I am writing to strongly oppose the GGNRA's draft dog management plan. It is misleading and based on "Bad Apples" whom ruin things for all of us responsible dog owners. These GGNPA area bring me and my well behaved dog, incredible peace of mind and happiness. We will not have this taken away, and are more than happy to do our part to help out to make sure responsible owners and well behaved dogs get to continue to enjoy these outdoor areas

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

* Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. * Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. * Exclude speculative, exaggerated, biased, or misleading statements and studies. * Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). * Enable professional dog walking and align any professional dog walking rules with county or city regulations. * Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

These are my personal comments and observations regarding this plan:

Type:
Correspondence: Dear Mr. Dean,

I am an animal behavior and welfare professional who has worked at shelters on the east coast and, since coming to San Francisco in August of 2010, have worked for a certain large animal shelter here in the city. Upon my arrival here, I was immediately struck by the fact that not only are the attitudes of the people here generally much more friendly, relaxed, and happy than the attitudes of people on the east coast, but that the attitudes of the dogs mirror those of their owners! In Baltimore, dogs don't walk off-leash and don't accompany their owners on errands and outings nearly to the degree they do here - in fact, one almost never sees that back east. The result is tense, pent-up dogs who are leash reactive, fearful of strangers, aggressive to other dogs, and uncontrollable and unrecallable when (illegally) allowed to run off leash in parks. These dogs are allowed very little enjoyment of life and very little freedom, and their behavior and personalities are reflective of that.

Arriving in San Francisco, I was astonished to see - everywhere! - well-behaved, easygoing dogs trotting obediently and happily behind their owners, off leash, on the sidewalks of the city! None were snapping at children or other dogs, none were barreling ahead of their helplessly shouting owners, none were running into traffic. As I began to spend a lot of time in the city's parks with my own dog (also a east coast transplant), it blew my mind to see the friendly, polite interactions between all the dogs playing off-leash there. There is almost never a scuffle that isn't done in play, hardly a cross word, and hardly even any subtle, troubling body language for which we animal behavior types are constantly vigilant. In short, there was no trouble! Dogs greet and play and steal each other's toys, and nothing bad happens. This kind of overall inter-canine harmony is unheard of in Baltimore, where frequenters of dog parks (both human and canine) are constantly on edge, waiting for that inevitable fight to break out. Even my own dog, a 14 year old Shiba Inu, who never met a dog she liked in Baltimore and couldn't be trusted off-leash for even a second, has, in 10 short months here, made a complete reversal in her personality and now joins in playful games of chase with new dog friends every day in Dolores Park!

I have begun to understand why it is that dogs are almost entirely different creatures here in San Francisco: because they go EVERYWHERE and do EVERYTHING with their owners, and have the freedom to behave somewhat naturally as dogs! Dogs were not meant to be leashed, and while it is sometimes in their best interest to leash them, it just makes it all the more important that they have ample safe off-leash play space in which they

are allowed to run, play, and be natural dogs. It makes them happier, which in turn makes us happier, which in turn is one of the big things that makes San Francisco such a great place to live. I implore you, as an animal behavior specialist and as the lucky guardian of a life-changingly wonderful dog, don't eliminate off-leash areas in San Francisco. In doing so, you would eliminate a large source of this city's canine and human happiness quotient, and would create new dog problems you couldn't even imagine.

Thank you, Ian Gilmore

Correspondence: Dear Mr. Dean et al.,

I am writing to oppose the GGNRA's draft dog management plan. As a homeowner in Marin County, I have found that there are very limited spaces available for residents to walk their dogs off-leash. In addition, a large part of the GGNRA prohibits dogs, even when on-leash.

Just yesterday I was told by the mayor of Sausalito that our city has more dogs than children in residence. Dog ownership is obviously an incredibly important component of our community and having access to space that provides for the development of healthy, well-socialized dogs is a significant benefit to the community as a whole.

While I appreciate that there are competing demands for the use of GGNRA, I would encourage the Park Service to honor the 1979 Pet Policy and to treat the GGNRA as the urban recreation area that it is.

Thank you in advance for your consideration.

Sincerely,

Carol Quitmeyer

Correspondence: Dear GGNRA,

I am writing in support of your limited dog management plan. I work in an area where I consistently have problems with dog owners disregarding the rights of other people and wildlife. Dog restrictions are routinely ignored and some go as far as claiming their dog is a "service animal" while the dog is pulling on its leash and exhibiting none of the qualities of a highly trained animal that provides an indispensable service to a person who needs it.

Please don't let this highly passionate and vocal special interest group get their way at the cost of other users and wildlife. Please consider the rights of people that are terrified of dogs and wildlife that may not continue to exist if dogs allowed to trample their limited habitat. Dogs should not have an inherent right to be off leash everywhere and your limited off-leash areas combined with the more appropriate city dog parks is more than reasonable.

Please consider this comment a strong expression of support for your limited dog plan.

Sincerely, GGNRA User

Correspondence: To Whom It May Concern, Thank you for this comment opportunity.

I'd like to strongly suggest that Muir Beach and the mountains south of Muir Beach towards Tennessee Valley and onto Rodeo beach all be a

100% NO DOG Zone.

The last three times I've been there I have seen multiple rabbits, 1 coyote, and 1 bob cat - and some one was with me for a witness.

I know from the research that people who hike with dogs will see less birds, bc the dogs run ahead and directly or more likely indirectly scare them away.

I think Muir beach and the mtns south to rodeo beach should allow wildlife to roam free with out the fear of being chased or harassed by dogs.

I also WANT to see these animals. Dogs in this area would decrease my enjoyment by scaring the animals away.

Thank you. Matt

Frank Dean, General Superintendent

Golden Gate National Recreation Area

Fort Mason, Building 201

San Francisco, CA 94123-0022

Dear Mr. Dean,

I am a professional dog walker in San Francisco. While I do not directly use GGNRA land for my service, many of my colleagues do. The DEIS seems like it was designed specifically to discriminate against dog walkers and dog owners. There was absolutely no inclusion of a plan for increasing dog recreation. Shouldn't a balanced plan put forth proposals on both sides of the

argument?

I agree with the DEIS in that dog walkers should be regulated within the GGNRA. But the compliance based management strategy put forth in this document is the wrong way to do it. Dog walking is one of the fastest growing service industries in the country. It should be regulated and assisted by the Federal Government. In these tough economic times, the government has a duty to help maintain and grow any emerging industries to increase employment. The GGNRA and professional dog walkers should be working hand-in-hand to grow the industry, increase jobs, and create a sense of trust between our industry and the government. We should be on the same team.

Therefore, I propose the creation of a Canine Stewardship Core(CSC) to work with the GGNRA Conservancy to regulate off leash dog walking AND protect and beautify the GGNRA. Whatever damage off-leash dog walking allegedly creates within the GGNRA, surely it can be off set by intelligent projects to restore other areas within the GGNRA. I'm proposing free labor from hoards of dog lovers in exchange for access to the historically off leash areas within the GGNRA. Each side need to compromise and bring something to the table and build a relationship for the future based on trust and mutual respect.

Fort Funston specifically is needed by the City of San Francisco for off leash dog recreation. It is a dog paradise, a magical place. Whatever is done in the rest of the GGNRA, please leave us Fort Funston. And not the small area that has been outlined in the preferred proposal, but the historical boundaries created by the 1979 Pet Policy. Without it, the City's parks will be overwhelmed with dogs and the citizens of this fair City will lose one of the best dog parks in the world. I'm not a nature expert, but it seems like the land there is in good balance. Its mostly sand dunes and ice grass(an invasive, non-native species). The dogs are not doing much harm there. Fort Funston acts like a pressure release for all the dog energy in the City. Without, who knows what may happen? Has the DEIS addressed the impact on City Parks? No. We need more research.

This is difficult because the DEIS is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

I believe it is possible for the GGNRA to accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness like Glacier National Park. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded. One cannot manage an urban park like a wilderness park. The thousands of dogs in San Francisco and the Bay Area need more

space to recreate, not less.

Do we need regulation of professional dog walking? yes. Permitting and regulation of dog walkers will create funds to help cities and counties maintain parks. Budgets for park maintenance are being slashes throughout the country and these funds will help keep our parks in good shape. Paying for access is completely reasonable for professional dog walkers.

Should it be "compliance-based management." Absolutely not. This gives far too much power to a group already shown to be anti-dog. The people of the County should be allowed to vote on how to regulate dog walking. It is our right at citizens of a democracy. If the NPS/GGNRA wants a cut of dog walking profits, we dog walkers should have a say in how we are governed.

This speaks to the fundamental core of our great Nation's principles. "No taxation without representation!"

I ask the NPS to create a new DEIS, one that will:

Create a Canine Stewardship Core to help the GGNRA work with and communicate with the dog community.

Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. Provide for extensive off and on-leash dog walking on all trails and lands acquired by the GGNRA since 1979. Exclude speculative, exaggerated, biased, or misleading statements and studies in the next DEIS. Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards.

Enable professional dog walking and align any professional dog walking rules with county or city regulations. Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input. Recognize professional dog walking as a legitimate industry that should be nurtured and regulated by the Cities and Counties in which it occurs.

Sincerely,

John Delaplane San Francisco, CA 94117

Correspondence: <Letterhead>

Frank Dean Superintendent Golden Gate National Recreation Area Fort Mason Building 201 San Francisco, CA 94123 Attn: Dog Management Plan/Draft Environmental Impact Statement Dear Superintendent Dean:

The California Native Plant Society works hard to protect California's native plant heritage and preserve it for future generations. Statewide, our nearly 10,000 members promote native plant appreciation, research, education, and conservation through our five statewide programs and 33 regional chapters. Through membership in CNPS, Californians of all walks of life are able to support and engage in opportunities to experience and learn about native plants and their habitats, gardening and landscaping with native plants, restoration of habitat areas, and conservation issues throughout the state.

It is very important to us that the GGNRA begin to manage pet dogs in a more appropriate manner to reduce impacts to native plants and insure all National Park visitors feel comfortable experiencing the natural and historical riches of the GGNRA. After careful review of the Draft Environmental Impact Statement on Dog Management in the GGNRA, we strongly encourage you to improve the plan in the following ways:

1)Regulated Off-leash Areas should be fenced, at least in areas where fences do not restrict views or pose risks to wildlife and habitats. NPS already uses appropriate fences to protect sensitive habitats, historical resources and insure public safety, so there is a clear precedent for their use in defining sensitive areas. Appropriate fences would provide clear, enforceable boundaries between dog and non-dog areas and keep all park users safe and comfortable in their parks.

2)The Park Service's proposed requirement of 75% compliance is too low. The Park Service should initiate measures to improve compliance if the level falls below a minimum of 95%.

3)Regulate commercial dog walkers like any other National Park concession enterprise.

4)More trails in San Francisco should be closed to all dog use. Under the current plan, nearly every trail in San Francisco is open to at least on-leash dogs, meaning no trails are available for people who prefer to enjoy the outdoors without interacting with dogs.

While dogs are important parts of our families and communities, they are just one animal that is having a significant negative impact on thousands of other animals, plants that rely on the park to survive and many other human visitors. The parks should be maintained to be safe and accessible for all users and to protect their natural and cultural resources for future

generations.

Sincerely,

Mark A. Heath Yerba Buena Chapter CA Native Plant Society Delegate to
Negotiated Rulemaking Committee for Off-leash Dogs in GGNRA

Correspondence: I first came to the Presido of San Francisco as a Soldier in 1987. I have returned since leaving active service many, many times. Walking Crissy Field beach with my dogs where I used to run on duty or in the woods around the old Magazine. The opportunity for my dogs to run in the surf or play in the long grass are some of my best memories with pets now gone and some of my favorite photos of these lost friends and members of my family. The majority of pet owners, the majority of all park users, are responsible. We carry bags to clean up dog waste. We monitor our dogs when off leash and ensure they behave properly. Dogs need places to run. They need places that smell wild. Dogs that are exercised properly are happy, well behaved and socialized. Please don't remove the dog off leash areas. Because I lived there, because I kept the grounds as one of many Soldiers there, I think of the park as my past home. I enjoy now returning with my family which includes my dog to walk and remember my time there. Removing the off leash or dog allowable areas would diminish the experience. Keep the park accessible and enjoyable for all.

Correspondence: Dear Sirs,

My biggest problem with your proposal and with the NPS regarding dogs in National Parks is that you have not accepted that dog-owners are a large, permanent and important user group. You have not incorporated dog access as one of your objectives. Your plans only focus on current and possible future restrictions. You do not ever show that you plan to expand or increase dog-access. Dog use should be part of your planning. Why don't you connect with various dog-groups and search for ways to increase access? Why don't you make dog-access something that is constantly being evaluated? Have you ever opened new areas? Do you evaluate current restrictions for possible change? Just as with other recreational activities,

why don't you consider new locations and new facilities? Have you ever considered dog parks within the larger park? The GGNRA is largely an urban park and placing dog parks in various locations within it would be logical and provide real public service. As with other facilities, private groups and individuals could provide funding.

Essentially, you have taken a position where dog-access is seen as a matter of restriction and not treated as an important, ongoing part of national park services and so have placed the NPS and the dog-owning community in a permanent adversarial relationship. You should accept dog-use as part of your services, be constantly looking for ways to increase it and not treat it as a one-time consideration.

Dog access should be part of NPS planning and not treated as something to oppose, restrict and minimize. We pay for the parks and we are a major user group. None of your actions and plans demonstrates that you recognize that or include dog use as one of your permanent services. Stop fighting it and make it part of your ongoing functions.

Sincerely,

Fred Schein

Correspondence: As a federal taxpayer, Bay Area resident and park user, I am concerned about the negative impacts of dog-related activities on the natural resources of the GGNRA and also on the ability of the public to enjoy the park.

I appreciate all the work of the GGNRA staff and citizen volunteers in developing the DEIS, and surely the "Preferred Alternative" is better than the status quo. But in order to be even moderately adequate, the proposed plan needs to be improved in a number of ways, including: ? If there must be any off-leash areas, require them to be enclosed, and limit them to areas where there will be no negative impacts on habitat; ? Provide more trails that are free of all dogs; ? Limit dog walking in the park to 3 dogs per person, and do not permit commercial dog walking; and ? Implement compliance-based adaptive management that requires at least 95% of dog walkers to comply with the new regulations.

One of my favorite places to enjoy the natural world used to be Fort Funston, but I never go there anymore because of the way it has been taken over by inappropriate dog activity. The myth of "voice control" is clearly

evident there, with many dog owners repeatedly yelling at their non-responsive animals, further degrading what should be an enjoyable park experience. Even law-abiding dog walkers avoid places like this because of attacks on their leashed pets by off-leash dogs.

The GGNRA made a serious mistake when it adopted a policy of non-enforcement of 36 C.F.R. ' 2.15(a)(2). It is way past time to reverse that decision and to join the rest of the National Park Service in complying with an intelligently conceived regulation that is necessary to achieving the NPS mission.

Correspondence: Dear Mr. Dean, I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law. The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded. This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others. The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to: Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. Exclude speculative, exaggerated, biased, or misleading statements and studies. Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). Enable professional dog walking and align any professional dog walking rules with county or city regulations. Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

Correspondence: To Whom It May Concern:

I am writing in response to the DEIS for dog management as an environmentalist, nature-lover, Sierra Club member, National Parks Pass Holder, an outdoor educator, a San Mateo County resident and a daily GGNRA user. There is little I love more than enjoying the outdoors and teaching others about the amazing habitat we have available to us in the San Francisco Bay Area, and I believe having access to the Golden Gate National Recreation Area is a true treasure. Specifically, what makes it a treasure is that this area is in the backyard of millions of people who have learned to co-exist with natural areas. I would hate to see Sweeney Ridge riddled with houses or Fort Funston paved over to become a shopping center; I am grateful these lands are preserved by the National Parks Service.

However, they are preserved for many reasons, recreation as one of the foremost. The GGNRA is a special area- quite unlike Yosemite, the Grand Canyon and Yellowstone. It lies in an urban environment and thus has vastly different usage. Families enjoy walking the dog alongside Ocean Beach, couples snuggle on a park bench at Mori Point and young urbanites hike amongst trails in the Marin Headlands. In my experience, these users are generally responsible, pick up after their animals and throw away their trash; they love having these areas, use them often and want to see them maintained. The image the DEIS paints is quite the opposite- the dogs are vicious killers of wildlife and their humans allow them to bite others and scare off minorities. According to the DEIS, the current GGNRA is stricken with unruly and dangerous dogs and people who are ruining the area for everyone. After looking at NPS research and data, the few incidents that have occurred insinuate that there are actually very few events in comparison to the number of visitors and the effect on wildlife is negligible, if not none at all. Where are the facts, not just the "could" or "might" statements? The DEIS does not provide enough real research to justify any of its claims.

The GGNRA is an urban park. It allows people, their animals and nature to interact and live together. The Draft Dog Management plan fails to recognize the good that comes from these interactions-- that people enjoy nature and visit the park more, that these dogs are safer and better socialized and that they are a model for co-existence. In fact, I believe more land should be opened to on leash and off leash recreation as to better balance park usage. The Bay Area prides itself on diversity- gay, straight, black, white, parents or non-parents, single people, couples, dog owners or non dog owners. The GGNRA needs to reflect that instead of discriminating

against a group of park users.

I reject all alternatives in this document and believe the 1979 pet policy should remain, and dog-friendly areas should be expanded. Parks should be for people to enjoy in balance with nature- there is no research in the DEIS that suggests this is impossible (even for people with dogs). Why? Because it isn't.

Correspondence: Our national parks should provide the best possible visitor experience for people, not dogs. Dogs and wildlife do not mix. Dogs should generally be banned from national parks, national recreation areas, etc. If they are allowed, the areas should be limited to reduce conflict with wildlife and they should always be on a leash to reduce conflict with other visitors. Please ban dogs from the Golden Gate National Recreation Area, or at a minimum, require leashes and only allow dogs in limited areas.

Thank you.

Correspondence: I am opposed to proposed new restrictions for dogs to the GGNRA, particularly at Fort Funston, Ocean Beach and Marin Headlands. I have been a resident of the San Francisco Bay Area since I was born in the East Bay, 42 years ago. I am a homeowner and taxpayer.

Restricting access to dogs and dog owners would significantly have a negative impact on my lifestyle and I would no longer be able to enjoy the outdoors with my best friends. My dog allows me to visit these urban parks and feel safe to exercise and enjoy the outdoors alone without fearing for my personal safety. Please don't restrict access to the GGNRA for me and my friends.

Correspondence: I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions. It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option. The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal. The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents. After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program. Thank you for your consideration.

Mary O'Brien San Francisco

Frank Dean, General Superintendent Golden Gate National Recreation Area
Fort Mason, Building 201 San Francisco, CA 94123-0022 Dear Mr. Dean, I
am writing to oppose the GGNRA's draft dog management plan. It is not
based in fact; instead, it relies on speculations, exaggerations, and

misleading statements. It reaches conclusions that are not supported by either the science or the law. The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded. This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others. The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

- ? Honor the original 1979 Pet Policy.
- ? Respect dog-walking as legitimate recreation.
- ? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.
- ? Exclude speculative, exaggerated, biased, or misleading statements and studies.
- ? Provide reasonable ways to address any significant adverse impacts from recreational activities.
- ? Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).
- ? Enable professional dog walking and align any professional dog walking rules with county or city regulations.
- ? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

While my dogs and I do not use the GGNRA frequently, when we do, I am most grateful for its existence; I try to behave in a manner that is consistent with that gratitude, i.e., I try to be a responsible and careful dog owner and park user. It is my experience that most other dog owners feel and behave similarly.

The GGNRA is public land, supported by my tax dollars and those of other users. You serve at our behest. Lest you should forget, we live in a representative democracy, where the desires of all are meant to be taken into account when the use of limited resources is being determined. This certainly includes dog owners, of whom there are many in the San Francisco Bay Area. As was pointed out above, the GGNRA is an urban recreation area; it is meant to accommodate the needs of all its urban users. I ask you to please try to remember this when you are making decisions about the use of this area by dogs and their owners. Sincerely,

Elizabeth K. Raymond Berkeley, CA 94705

Frank Dean, General Superintendent Golden Gate National Recreation Area
Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. Exclude speculative, exaggerated, biased, or misleading statements and studies. Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). Enable professional dog walking and align any professional dog walking rules with county or city regulations. Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

These are my personal comments and observations regarding this plan: wilderness protection and conservation is important, but a few irresponsible

pet owners should not spoil the rights and experiences of all dog owners.
perhaps the parks could institute a volunteer "watch dog" group?

Sincerely, E DePalmer San Francisco, CA 94115

Correspondence: Having lived in the Bay Area for most of my life, I've seen many changes through the years but one thing I have always been able to count on are the unique opportunities available here that aren't readily found elsewhere...not only from a quantitative but qualitative perspective. GGNRA offers some of the absolute finest opportunities given the broad spectrum of activities available to all. It would be a shame to place restrictions limiting the areas in which families are able to enjoy taking all members..even the four legged ones who are so important to us and our quality of life.

I have visited Ft. Funston several times and make the trek with my little girl and my beloved senior service dog, now retired. He is old and arthritic yet enjoys his walks on the beach even though he always requires assistance getting into the car afterward...not a small feat given he weighs 120 pounds and I am but a lone, single mom trying to enjoy local beauty with my family. Point is, that each and every time we have visited the park we have always seen respectful, cooperative, peaceful interactions amongst ALL park visitors. I have literally never witnessed difficulties between dogs and others, and have always found dog owners quite respectful of others and in terms of keeping the grounds clean. In fact, it has been my experience that dogs bring so much enjoyment to everyone, that it enhances the visits for everyone...whether they are there with their dogs or alone.

Please do NOT restrict the off leash areas. I am surprised this is even on the table as a current topic. There seems to be little to no impact in the areas currently enjoyed by dogs and their people, and that there is plenty of other open space in the same parks for folks who prefer to avoid dogs to enjoy.

Please consider keeping the off-leash areas maintained as-is and the notion that these areas are precious and vital to our quality of life.

Thanks.

Correspondence: Elizabeth Ponzini San Francisco, CA 94122

Frank Dean Superintendent Golden Gate National Recreation Area Fort Mason Building 201 San Francisco, CA 94123 Attn.: Dog Management Plan/Draft Environmental Impact Statement Dear Superintendent Dean:

I am a resident of the San Francisco's outer Sunset District. Every time I try to enjoy Crissy Field or Ocean Beach, I leave the area because there are numerous off-leash dogs running mad under no control by their owners. I would like to go to the beach one day and actually enjoy it without fearing being attacked by off-leash dogs. I do not even attempt to go to Fort Funston as it is impossible to go there and not have a usually frightening interaction with not one, but many off-leash dogs. I am a dog owner and I take my dog to designated off-leash dog parks throughout San Francisco and Marin(where there are many already!). There is no need to have our nation's National Parks also serve as a defacto dog park for a few local residents and commercial dog walkers. It is very difficult to walk your dog on-leash when everyone else's dog runs up and jumps on me and often threatens my on-leash dog.

If you choose to allow off-leash dogs in National Parks, please at least contain them with fences or other clearly designated areas so people wishing not to interact with dogs can chose to do so. I do take my dog for walks in the GGNRA, but only on-leash in designated areas. I want to respect the NPS mission statement of protecting the wildlife and habitat for all to enjoy.

Why have urban National Parks if not everyone can enjoy them?

Sincerely,

Elizabeth Ponzini

These are my personal comments and observations regarding this plan: I have spend a good deal of time with my dog at both Fort Funston and Crissy Field and although it provides my canine companion an area to run and play, it also provides both of us a place to socialize with other dogs and dog owners, and gives us an outlet for so many to enjoy exercise and recreation with our dogs making for happy and and healthy dogs and humans. While walking my dog along the beach at Crissy Field I have even met people from other parts of the country who travel with their dogs and we often discuss how wonderful it is to bring dogs to such places and makes the Bay Area a unique place to visit. And if anything, dog owners including myself are quick to police each other when misbehaving dogs are about because the majority of us know the benefits and and honor of having such wonderful places to share with each other are our canine companions. I hope the decision is given more thought to help keep both the on-leash and off-leash areas in tact. Sincerely, Heather Miller San Francisco, CA 94117

RE: GGNRA Draft Dog Management Plan / Environmental Impact Statement

The Alto Bowl Horseowners Association appreciates the opportunity to comment on the GGNRA's Draft Dog Management Plan / Environmental Impact Statement.

The ABHA is a not-for-profit cooperative association that manages the pasture boarding of horses on Horse Hill Open Space Preserve, Mill Valley, under a long-term grazing lease with the Marin County Open Space District. In addition to being experienced horsekeepers and trail riders, many ABHA members are also hikers, cyclists and dog owners, thus bringing diverse perspectives to the issues addressed by the Plan / EIS.

The ABHA actively works to preserve the cultural heritage of the horse and trailriding in Marin County. Horse Hill is one of four remaining equine facilities in southern Marin, the other three being NPS-partner stables: Miwok Stables (Tennessee Valley), Presidio Riding Club (Rodeo Valley) and Golden Gate Dairy (Muir Beach).

Riders from Horse Hill use nearly all of the available trails in the GGNRA (Marin County), including Alta Avenue, Oakwood Valley Fire Road, and the trails in Muir Beach and Rodeo Valley. We also ride many other protection roads and trails in the Mill Valley area including those on open space lands administered by MCOSSD, such as Camino Alto OSP and Blithedale Summit OSP, and those under the jurisdiction of the Marin Municipal Water District and California State Parks.

We herewith offer comment regarding the Plan's seven Marin County "Sites", plus "New Lands":

We believe it's very reasonable that "resource protection" and "visitor safety" should have highest priority in any plan, yet the NPS preferred alternatives for all Marin sites except Muir Beach appear to compromise those obligations in order to enable "multiple use" for the purpose of dog walking. We strongly suggest that alternative "D" is the most appropriate alternative for all Marin sites, providing strong protection of natural resources and a high level of visitor safety.

Alternative "D" restricts dog walking, where allowed, to on-leash only,

which is the most dependable method of controlling canine behavior when dogs are sharing space with humans and horses. "Voice and sight control" are dog-handling methods that require significant training for both dog and handler and yet often fail in stressful situations. Equestrians who ride park trails frequented by dog walkers can offer many stories of unleashed dog encounters that were unpleasant and hazardous to horse, dog and humans.

The NPS preferred alternative "C" for Oakwood Valley is of particular concern to the ABHA. It proposes the conversion of the Oakwood Valley Fire Road to a fenced and gated Regulated Off Leash Area (ROLA) of very narrow configuration. This would essentially eliminate use of the fireroad by bicycles and horses, such use being currently permitted. The Oakwood Valley Trail on the west side of Oakwood Valley is presently designated hiker-only, so under alternative "C" equestrian access to the pond at the upper end of the valley would be eliminated. While this dead-end trail might seem insignificant on its own, it represents a popular destination for horseback rides from Horse Hill via the Mill Valley Multiple Use Path and Tennessee Valley Trail through Tam Junction. Any dog management plan that reduces or eliminates trail access for other users is not acceptable.

The proposed Oakwood Valley ROLA has several practical deficiencies beyond denying access to other users. These problems include: a very narrow confined space with no options for dogs and handlers to move about the ROLA with adequate separation from others; a lack of spaciousness and sightlines that will obscure illegal or inappropriate activities; a lengthy fenced area that is a major barrier to passage of native animals across meadows; lack of safe parking on Tennessee Valley Road for the numbers of dog walkers likely to be attracted to the site; and excessive implementation, maintenance and enforcement costs. We understand that the ROLA proposed under alternative "C" for Oakwood Valley was a result of Negotiated Rulemaking Committee discussions; we believe that the unintended consequences of placing a ROLA at this location were not fully considered.

Finally, the Plan Executive Summary states that all action alternatives for Oakwood Valley would have beneficial impacts for visitors who do not prefer dogs at the park, which is not correct. The NPS-preferred alternative "C" and alternative "E" would essentially deny access to the fire road for those not willing to enter the ROLA when occupied by off-leash dogs.

We thank NPS staff for the immense effort that produced this Draft Plan / EIS and we look forward to its successful implementation in final form.

Robert Eichstaedt President Alto Bowl Horseowners Association Mill Valley, CA 94942

Correspondence: Dear GGNRA, One of my favorite places to take my dog is Fort Funston. Please keep places such as Funston and Chrissy field open for our dogs to run and play. I always clean up after her and have done tons of training to keep control of my pet. We have the same goals which is to keep and protect our environment. I feel lucky and thankful to have these wonderful places to enjoy with our pets. Thank you for your consideration when you are making decisions that will impact thousands of people and their pets future. Linda M.

Correspondence: Because I live in Connecticut, I visit the GGNRA only occasionally when I travel to California. Nonetheless, this issue is very important to me. I am opposed to the preferred alternative absolutely and am in favor of the "no change" option.

I have written a book, Unleashed Fury: The Political Struggle for Dog-Friendly Parks published in 2011 by Purdue University Press, about political disputes over leash laws. Too often, dogs are blamed for problems without any supporting scientific studies. The negative impact of dogs is exaggerated, while the positive benefits of off-leash recreation for humans and animals are not properly acknowledged. The DEIS fits this pattern. It does not make its case scientifically for the draconian policy for which it calls. Nor does it properly reflect the importance of off-leash walking for humans who enjoy this activity.

More and more studies are demonstrating the benefits of walking dogs for health ? both physical and psychological. Off-leash areas allow people to come together and form friendships. They are places where people can socialize and exercise, while their dogs obtain the same benefits and become better behaved in the process. Particularly in a dense urban environment, such as San Francisco, people need public spaces to exercise their dogs. Otherwise, ownership becomes difficult. The benefits of owning dogs are extensive and well documented in scientific literature. Some examples included higher levels of self-confidence and reduced stress levels. Cities across the country are recognizing this fact and creating MORE, not fewer off-leash areas.

New York City allows dogs to run free at many of its parks before 9 am. When this policy was challenged a few years ago, the City's Health Department conducted a comprehensive study of dog bites. It found that only 2.3 and 2.2 percent of all dog bites in 2004 and 2005 happened in public parks. Even those bites were not necessarily attributed to off-leash dogs. Based on these findings, the City recommended the continuation of the policy, which it considers a success. Truth be told, almost all dog bites occur on private property. A well exercised dog is less likely to be aggressive. It is also worth emphasizing that no one is calling for free roaming dogs. The current policy, which should not be changed, requires that dogs be under voice control and within the sight of their owners at all times.

From afar, what I find most distressing is the second-class treatment of dog walkers. There is almost no activity that people enjoy that the government threatens to revoke if one or a small number of people behave badly or break the law. This notion, called Compliance-based management, is unacceptable and grossly unfair to those human beings who enjoy this recreational activity. The federal government has the resources and wits to devise a means to revoke the off-leash walking privileges of anyone who does not comply with the rules. What it absolutely should not do is revoke the privileges of the well-behaved many because of the actions of a few. It is a philosophy utterly inconsistent with the spirit of American law. If a few golfers start taking target shots at people adjacent to a golf course, should all golf courses be shut down? To ask is to answer the question. Nor should dog walkers be collectively punished (a foreign concept in American law) for the actions of a few people. This aspect of the DEIS plan is an affront to all Americans ? whether they live on the east or west coast or in between.

While people in decision-making roles might not consider off-leash dog walking to be as legitimate an activity as skiing or running or anything else, they should look around and notice its popularity. This brings enormous enjoyment to people, connects them to other humans, animals and yes, the environment. It brings them outside where they come to appreciate the beauty of nature. Thousands of people have provided testimony to the Park Service about these benefits, about their concern for nature, and about their passion for this activity. I cannot think of any other issue ? nothing comparable ? for which the government simply disregards this mountain of evidence. The pattern of bias ? in favor of national interest groups and against dog walkers ? is deeply troubling to me as an American citizen. This is not a subjective observation, but one supported by the opinions of the judiciary. The National Park Service has been taken to task for revoking the 1979 pet policy illegally, with a federal court ordering it reinstated in 2005. Whenever the national park service has strayed from law, it has been to the detriment of dog walkers.

It is truly inspiring to witness the political activism of the dog walkers in the face of an agency that has been against them at almost every turn. They have not only volunteered their time on committees and researched this issue, but they have also held regular clean-up days for parks and provided other public services, such as dog training advice. There are huge numbers of dog walkers in San Francisco. The preferred alternative does not accommodate their need for off-leash areas. No Change is the best option. Otherwise, there will be enormous pressure placed on City Parks, which are simply not sufficient in size to accommodate the activity. The City Supervisors are on record against the Preferred Alternative. The National Park Service should be as well.

As it is, the GGNRA provides access to both dog walkers and people who do not want to encounter dogs. There are plenty of areas that do not allow dogs at all in the GGNRA and there are many on-leash areas. The dog walkers are asking to retain those few areas where they get their enjoyment. This was the idea behind the establishment of the GGNRA. It was to be a recreation area, where City dwellers could enjoy themselves in a diverse array of ways. Please keep it that way! "No change" is the best option.

Correspondence: May 30, 2011

Frank Dean, General Superintendent GGNRA Fort Mason, Building 201
San Francisco, CA 94123-0022

Dear Mr. Dean,

My name is Bob Edwards and I live at 310 E. Napa Street in Sonoma, CA. Along with my wife, Joan Tillman, and our golden retrievers, Zachary Baggins and Zoe, I am a regular visitor to the beautiful GGNRA. We have been visiting the GGNRA since we first moved to San Francisco in 1995 with Zachary & Zoe's famous predecessor, Nicki.

We continue to visit now that we live in Sonoma. Crissy Field, Muir Beach, Rodeo Beach, Ft. Funston, Ocean Beach and the Marin Headlands and costal trails are some of the areas we have visited regularly, to enjoy the ocean, bay, scenery and solitude, walk off-leash with our dogs and socialize with friends and fellow dog-lovers. One of the last outings enjoyed by our Barclay (golden retriever, age 16) before he left us was to the GGNRA.

As members of the Board of Directors of Sonoma Valley Dog Owners and

Guardians (SVDOG), we have good reason to know that, like millions of dog-lovers from around the Bay Area, many people from Sonoma County with dogs in their families also visit the GGNRA. This is because Sonoma County has few public beaches or open spaces that allow dogs to run free with their families; even adequate dog parks are rare.

WE ARE ENVIRONMENTALISTS AS WELL AS DOG-LOVERS My wife and I treasure the GGNRA because we are rabid (no pun intended) environmentalists and animal lovers. We are members of the Sierra Club, PETA, the Defenders of Wildlife, The Wildlife Federation, Best Friends Animal Sanctuary, the ASCPA, Greenpeace and the US Humane Society, as well as Panthera (protecting big cats around the world). It is no exaggeration to say that the environment and its defense take up a lot of our time and interest. Animals, including dogs, are integral to our lives.

But we are not "eco-anarchists with an attitude." We are former Fortune 500 corporate executives ? "suits" -- now in our 70's and though we've seen our share of protests and activism, life is blissfully slowing down just a little. Along with its beauty and relative emptiness and serenity, we more than ever value the ability to walk our dogs off-leash in the GGNRA because it is open, accessible and safe -- for us and our dogs. My wife, like me a graduate of the Marin Humane Society's Canine Behavior Academy, was recently diagnosed with a serious illness and still treasures walks with our dogs off-leash, where she maintains control of them by voice, as she has for years.

DOGS - ON OR OFF-LEASH -- DO NOT HARM GGNRA ECOSYSTEMS or PEOPLE'S EXPERIENCE & ENJOYMENT OF THEM. In the time we've enjoyed the GGNRA we have seen zero -- zero -- negative impact on the environment or other visitors caused by off-leash dogs ? ours or anyone's. The number of birds (yes, the snowy plovers, too) and other wildlife we have encountered has not been diminished by the presence of dogs. Indeed, I submit they have thrived, and I have yet to see a credible study, report or incident record that seriously supports otherwise.

Most of what has been offered as a "scientific" basis for GGNRA's alleged need to restrict off-leash dogs is frankly rubbish; I would welcome the chance to cross-exam the authors of those so-called reports and studies. The junk science, exaggerations and (to be charitable) slight-of-hand errors in them would not fool a jury of 10th grade biology students.

The negative environmental impacts we've observed in the GGNRA over the past 16 years have been rare, transitory and (surprise!) the fault of humans, not dogs. It is humans who leave trash, deface signs, disturb the quiet, occasionally menace other visitors and otherwise disrespect or threaten the environment with unauthorized fires, plant "thievery" and trail

erosion from mountain biking.

Of course, who can ignore that it was humans who built a massive pollution-drenched military base in what is now the GGNRA and, in the process of so doing, permanently altered the environment beyond anyone's ability to restore it to its "native" state, short of eliminating all people.

[To the Native Plant enthusiasts who would restore GGNRA vegetation to its pre-European "native" condition days by eliminating dogs, I say: Why stop there? Why not restore it to its Pleistocene "native" state, when the entire state was under the Pacific? There is a mission and an idiocy lacking any understanding of natural history or of how plant ecosystems ebb, flow and propagate on our planet. These are not "scientists;" they are Gardeners-Gone-Wild determined to convert public land to their private plant preserve.]

Let me also be clear on the perennial "poop rap" against dogs: The overwhelming majority of dog owners always pick up the poop. Consider that there are hundreds of thousands of people with dogs who visit GGNRA regularly. If only a fraction of one percent didn't pick up after them, the beaches would be knee-deep in poop. But that clearly is not the case. I submit that, like me, Rangers find more trash and condoms than dog poop in the GGNRA.

The same can be said of distorted "incident reports" involving dogs. Given the vast number of dogs who are daily exercised off-leash in the GGNRA, if even a tiny fraction caused injuries or problems the place would be swarming with armed Rangers, the papers would be full of dog-eats-kid horror stories and citizens -- including dog owners -- would be up in arms about "out of control dogs." But that has not happened and exaggerated reports to the contrary are just that ? exaggerations, if not outright lies.

While incidents do occur involving dogs, they are rare, especially in the context of the huge number of dogs who visit there. Most are trivial and easily preventable/avoidable short of banning off leash dogs. Consider, however, that FAR GREATER and environmentally more serious incidents in the GGNRA occur because of conduct by people. Yet no one is suggesting that people be banned or restricted because of the bad acts of a relative few.

DOGS ARE HIGHLY VALUED IN AMERICAN SOCIETY We are concerned that the GGNRA does not fully appreciate that Dogs are not "just pets" these days, nor are they "livestock" or somebody's "fetish." They are treasured members of millions of families throughout the US. Google the statistics if you seriously question the importance of dogs to US households. If GGNRA had a credible means of gathering statistics, I submit you would

find that the most frequent users of the GGNRA are people in the company of their dogs.

These days, hardly a TV commercial is made that doesn't feature a dog; dog-stories regularly make the best-sellers list and pepper the nightly news, especially when they do something cute or heroic or just goofy. That's because people LOVE dogs. The national affection for canines is relevant because tourists and local residents alike routinely travel everywhere with their dogs. In crafting public policy for a National Recreation Area that exists for the enjoyment of people, it is frankly insane to ignore these realities. It is easy to wrap an open mind around the realization that in a national recreation area in a major metropolitan area, deciding to restrict or ban dogs makes no more sense than deciding to do the same with children.

THE GGNRA'S "PREFERRED ALTERNATIVE" IS SERIOUSLY FLAWED. For all of the above reasons, we do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off-leash dog walking areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions. GGNRA is, after all, a "recreational area" at the heart of a 10-million person metropolitan area, not a remote pristine national park or preserve.

It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While we want to protect the GGNRA's natural resources, I believe options other than restricting dog-walking access should be considered first. We favor an approach that truly balances recreational use (including dog-walking access) with preservation. We think a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such alternatives as a reasonable option.

The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and is not based on any documented impacts of non-compliance, just the mere fact that non-compliance might occur. Because it will change the status of areas from off-to on-leash or on-leash to "no dogs allowed" automatically and permanently if non-compliance is alleged, it will deny the public the chance to comment on these major changes when they occur. That violates the law that requires public comment when a change is either significant or highly controversial, as these changes would clearly be. It must be removed.

The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA

was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents.

DON'T CREATE A GGNRA MANAGEMENT NIGHTMARE Lastly, in any administrative rule-making involving the GGNRA, we believe it is critical to understand and respect the cultural traditions and political sensitivities of the huge Bay Area community which surrounds it and from which the overwhelming number of GGNRA visitors come.

As a senior and an attorney, I am seriously concerned that any effort to change the current (1979) off-leash policies will result in civil disobedience, if not actually make a (totally avoidable) sport out of unlawful conduct. What the GGNRA is proposing raises the question of very real and profound long-term enforcement issues that the GGNRA is woefully incapable of managing, particularly in a time of reduced staff and budget.

Recall that your predecessor's misguided preemptory attempt to restrict off-leash dog recreation resulted in a tumultuous, angry meeting attended by over a thousand irate dog-lovers that threatened to get seriously out of hand. That led to legal action by dog lovers that blocked the GGNRA's changes, forcing it into rule making. Unfortunately, in initially ignoring the lawfully proscribed process for changing its rules, GGNRA management lost virtually all respect and credibility among dog-lovers, and brought us to where we are today.

The huge Bay Area dog-loving community has demonstrated that it is law-abiding, as its participation in rule-making demonstrates. It is capable and prepared to utilize every legal, political and public relations tool at its disposal to protect off-leash access to the GGNRA. Yet it is naive to ignore that in that mix the potential for civil disobedience is a very real possibility ? in my opinion, highly likely ? and certainly something for which the Bay Area community is legendary. Regrettably, it was the GGNRA that set a precedent for ignoring the law.

Consider, too, that technology has swept ahead since that first tumultuous meeting. Today, think of endless You-Tube video of Twitter-coordinated flash-mobs, mass disobedience and demonstrations of dogs and dog-lovers continually taxing the limited capacity of GGNRA staff to defend 82,000 acres from thousands of people with off-leash dogs 24/7. Not a pleasant prospect. Local congressional delegations could not miss the late-night comics having a field day at GGNRA's expense. The resulting footage would enliven cable news on the Right and the Left, with predictable comparisons to the "Arab Spring." Eventually the phone would ring in your

office.

WE SUPPORT THE "NO ACTION" ALTERNATIVE. For all of the above reasons and after very careful study and consideration, we support a modified Alternative A (the "No Action alternative") that codifies the 1979 Pet Policy as it was originally written. There is no evidence in the DEIS to support the closures of beach access because of the presence of snowy plovers, and that includes off- and on-leash access on GGNRA lands in San Mateo and on new lands that become part of the GGNRA, especially those areas in both that have traditionally had dog walking.

Thank you for your consideration.

Sincerely, Bob Edwards and Joan Tillman with Zachary Baggins and Zoe ?

National Park Service

RE: GGNRA Draft Dog Management Plan

Dear National Park Service,

I am writing to voice my opposition to any added restrictions for dogs (on and off-leash) as proposed by the Park Service. Presently, people with their dogs are restricted to a small percentage of the total area included in the GGNRA. This is especially true for areas available to people who enjoy walking their dogs without a leash. The off-leash area is presently less than 1% of the total park land. I would rather the present plan be amended to provide more off-leash areas for dogs and open new lands to dog walking.

The vast majority of dog owners are responsible. They should not be further restricted because of the incidents/altercations sited in your report. These incidents represent a small portion of the total use enjoyed by the public. These incidents should not be the excuse to further restrict law abiding, tax paying citizens from using the GGNRA.

Frank Dean, General Superintendent Golden Gate National Recreation Area
Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean,

I am life-long resident of the San Francisco Bay Area; born in San Francisco and lived in Marin since 1999. My husband and I are middle aged ~ 68 and 54, respectively and we walk our dogs only as permitted on the designated fire roads and beaches as currently allowed by the GGNRA. We use the Crown Road trailhead at the top of Kent Woodlands almost daily as it is the closest, and safest, of the current venues for off leash dog walking. Our Australian Shepherd puppy is voice trained, friendly and well-behaved. The vast majority of dogs and people we encounter are responsible pet owners like ourselves who adhere to the rules and are courteous to the other users of the fire road. We are members of the Marin County Bike Coalition Spoke Society, MALT, the League to Save Lake Tahoe, Trout Unlimited and are avid outdoor lovers and participants.

We are opposed to the current very restrictive proposal and very much enjoy the 1979 Pet Policy as it now stands. We are both concerned about the long term preservation of our beautiful Bay Area open spaces going forward, and feel that this proposed alternative is too restrictive for the residents of the Bay Area who are outdoor lovers, and responsible pet owners.

Thank you very much and please do not hesitate to contact me/us for any questions you might have.

Sincerely,

Leslie Shelton Tognazzini Roland E. Tognazzini

Correspondence Type: Web Form

Correspondence: Until recently, I lived in San Francisco. I was born in the City in 1960, but moved to Sonoma because the dense urban environment of the City became too much for me and I decided to live in the countryside.

While a child in San Francisco, I had a dog and took walks and allowed my dogs to exercise off leash at Fort Funston, Ocean Beach, and Crissy Field. This was well before the lands were transferred to the GGNRA. It was legal and one of many recreational activities people enjoyed doing, which included horseback riding, hang gliding, surfing, kite flying, sun bathing, jogging, and hiking.

I understand the park service's desire and mission to protect and maintain the ecology of the parks. I understand the need to keep the public safe.

But I also know the following.

1. In 1973, the public voted in favor of the ballot amendment that deeded Fort Funston to the National Park Service with the understanding that the Park Service would maintain these lands for recreational purposes in perpetuity. The proposition passed. In 1979, consensus was reached that a very small percentage of the GGNRA would be maintained for use by off-leash dogs. This consensus statement became the 1979 Pet Policy. You are bound by that.

2. There is no conclusive, empirical evidence showing that off leash dog walking has any negative environmental impact or contributes to ecological damage. While the NPS has speculated about possible correlations between off leash dog walking and declines in bank swallow numbers, destruction of native habitat, and even cliff erosion at Fort Funston, the fact is that there has never been scientific evidence to support these claims. There is plenty of NPS conjecture, but no proof.

3. Off leash dog walking does not represent a safety hazard to the public. While there have been a small number of dog bite incidents and dog-on-dog attacks, the overwhelming majority of dog encounters in GGNRA parks are completely safe. Moreover, the majority of the bite incidents are to dog owners. Is off leash dog recreation 100% risk free? No. But neither is hang gliding, surfing, swimming, or hiking. All these are legal activities in the parks.

I am completely opposed to any ban of off-leash dog walking.

However, I do also acknowledge that there are some real problems that need addressing, which include the very large groups of dogs brought to the park by individuals that are supervised inadequately. There is also the fact that there are a small percentage of dog owners who are irresponsible - who fail to clean up after their dogs or who fail to keep their pets under proper control.

There are other solutions to these legitimate concerns. For example.

1. **PROFESSIONAL DOG WALKERS.** All professional dog walkers using the parks should be licensed and bonded and be ready to show proof when asked by a ranger. No professional dog walker should have a group of off leash dogs with them with a dog/person ratio higher than 4:1. All professional dog walkers should apply annually for a license to use the GGNRA parks. At that time, they should present their state license and bond and pay an annual user fee of \$100. This money should go toward the maintenance of the parks.

2. **NON PROFESSIONAL DOG WALKERS.** All recreational dog walkers should be held to the same 4:1 dog to person ratio. If you want to bring more than 4 dogs to a GGNRA park for off leash runs, you need more human supervision.

3. **DOG WASTE CLEAN UP.** Clean up of dog waste is required. Owners who fail to pick up waste should be very heavily fined. Perhaps \$100.

4. **DOG CONTROL.** It is essential for owners to take more responsibility for their dogs. Rather than banning recreation for everyone, it's important to establish rules of conduct. The SPCA and dog advocacy groups should be asked to help with this, and I am sure they would be glad to. There should be signage with rules for conduct posted. For example, dogs should be able to come, sit, and stay on command. Owners must immediately call their dogs to them when requested to do so by another visitor. Dogs who are aggressive to other dogs or people are not allowed and owners will be fined if they bring such a dog to the park. Etc.

5. **OWNER AND DOG EDUCATION.** There is something called a "Canine Good Citizenship" certificate which signifies that a dog is able to sit, stay, come on command as well as demonstrate good behavior when encountering strange dogs or people. I would like to see monthly obedience classes in the parks designed to help dog owners pass this test with their dogs. There are many dog trainers who would love to bring their business to the parks and teach there. Require all owners using the park for off leash dog walking pay an annual fee of \$25 per dog which would go toward park maintenance (owners would have to carry this "dog walking license" with them at all times). But any dog who passes this Canine Good Citizenship Test would have the annual fee waived.

In short, off leash dog recreation is an important part of what keeps people in the City happy and healthy. Maintaining this activity is a firm promise the NPS made to the citizenry when it took control of the land. I completely oppose efforts to ban off leash dog walking, and encourage the NPS to engage in real and honest attempts to deal with those challenges that do exist

in ways that continue this recreational activity.

Correspondence: Dear National Park Service,

I've been taking my eight-year-old Black Lab to Crissy Field for years, and have always loved the stunning view, openness and friendliness of the space. The energy of all the dogs running free, often in packs, chasing the same ball, and splashing around in the Bay keeps me coming back often.

There is no other place in the city as welcoming and friendly of dogs, so whenever I want my dog Isso to have the full freedom to run as much as he wants and socialize with other dogs, I take him to Crissy Field.

The changes you propose severely limit the areas where dogs can roam off-leash. It will change the whole dynamic of the experience for dogs and their owners. Now, just like every other park in the city, we are confined to a section where all dogs must cram in if they want to run off-leash. The sense of openness and freedom at Crissy Field will be lost forever.

My favorite thing to do at Crissy Field is walk the length of the park with my dog until we reach the Warming Hut, where I grab a hot chocolate and watch people. It will not be the same experience if he has to be on-leash for most of that walk. The whole purpose of bringing him there in the first place

was to allow him to be a dog and run freely with other dogs.

Thank you for your consideration of keeping things the way they are. Please don't let a good thing go, especially for the myriad dogs in the city and surrounding areas that look to Crissy Field as the ideal place to let loose and have fun.

Correspondence: I commented early on in the process and in person at the open house. My perspective however has changed a bit through the process. I agree we need some sort of reform. Seeing the animosity arise in the city over this issue made me realize that its not working as well as it could be.

I still strongly believe we need to maintain off leash dog walking areas for dogs under voice control

I still strongly believe the "compliance" language in the document that would strike all off leash areas needs to be stricken. No where in our society is there 100% compliance with any law. Our prisons wouldn't be overflowing if that were the case.

What I'd like to see is a solution that meets the needs of all San Franciscans, the entire community. I've lived in SF for 30 years and walked my dogs for over 20. I know the rhythms of usage. I'm in the parks every day.

Make Chrissy Field off-leash only before 10am. It's become so populated since the "renovation" that it really is a recreation area for people. It's not a natural area any more. It's an outdoor entertainment center. And dogs shouldn't be off leash during high use times.

Make Ocean Beach seasonal or timed access. Either open to off leash Nov - May or before 10am. The weather is what dictates visitors at this beach.

Make Baker Beach people only

Turn Fort Funston into this country's world class status dog park. Rent out space like in Curry Village to a dog washing facility/coffee bar like at Pt Isabel and generate revenue to offset the costs of maintenance. Leave the entire area off leash, including the horse trail (which hasn't been groomed for horses for years. Its impassable for riders at the north end due to tree

overgrowth.)

Is obvious you need a solution that will rally support vs divide us. I think most dog owners want to comply and find a solution that meets the needs of the most people possible.

Correspondence: do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions. It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option. The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal. The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents. After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program. Thank you for your consideration.

Frank Dean, General Superintendent
Golden Gate National Recreation Area
Fort Mason, Building 201
San Francisco, CA 94123-0022

Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, misleading statements and inaccurate data. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can, and already does, accommodate both recreation and conservation. It was designed as an urban recreation area, not a wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 Pet Policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded. That remains true to this day. If anything, we should open up more areas to off-leash recreation to minimize the environmental impacts on these areas, as the population of this user group grows and more people use these areas daily.

Over the past 20 years, we have learned a lot about how concentrated farming operations is not an environmentally safe or viable way to manage lands used for ranching/farming. It stands to reason, concentrating your biggest user group into small and smaller areas will only create environmental harm and destruction. Environmental destruction due to overuse and concentrating users into tiny areas is completely avoidable if we simply start with the 1979 Pet Policy as a template and expand from there, to areas already being used by people with their dogs. The gross majority of this harmless user group naturally gravitate to using areas that are safe for this activity. The most reasonable and responsible way to manage these lands is to look to what is working, and then change policy based on the successful use of these areas. What is happening now is working extremely well and is very successful. Actually, it was even better off before the 12-acre closures happened at Fort Funston and the renovations that occurred at Crissy Field, which have already proven to have negative impacts on the surrounding landscape (it's simple and obvious just to look at what the areas looked like before the closures and now some years after - Crissy Field

looks like a theme park, it's horrible - it is no longer the wild and natural landscape, with a thriving wildlife population, like it once was). Do not let a small number of outspoken people negatively influence the health and sustainability of these areas further because they do not like dogs in particular; that's not a reason to change policy for a vibrant and well-used recreational area that supports a unique ecology 'as is'.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

- * Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation.

- * Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. Exclude speculative, exaggerated, biased, or misleading statements and studies.

- * Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).

- * Enable professional dog walking and align any professional dog walking rules with county or city regulations.

- * Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input. SFRAW is a San Francisco based, green food co-op that is 100% volunteer-run and member supported. Founded in 2003, we have over 450 paid members. Our focus is on sourcing local, sustainable whole foods from small family farms that practice "beyond organic" humane farming methods and promoting natural lifestyles for both people and companion animals. Sincerely,

Kasie Maxwell Founder, San Francisco, CA 94124

Correspondence: I DO NOT SUPPORT OFF-LEASH DOGS IN NATIONAL PARKS.

I am a 20 year San Francisco home owner AND a dog owner. I do not want off-leash dogs in any of our parks.

Dogs are dangerous and frightening. My dog was recently attacked and almost killed by three Great Danes that were off-leash. It was a horrible experience.

Only if dogs are controlled will I ever feel safe again.

Thank you.

Frank Dean, General Superintendent

Golden Gate National Recreation Area

Fort Mason, Building 201

San Francisco, CA 94123-0022

Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by

either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County and Marin County. Exclude speculative, exaggerated, biased, or misleading statements and studies. Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). Enable professional dog walking and align any professional dog walking rules with county or city regulations. Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

These are my personal comments and observations regarding this plan: We need more open space for dogs, not less. Dogs are hugely beneficial to the physical, mental, and environmental health of our community. They provide so many people with inspiration to exercise and socialize, they are faithful companions, they provide proven health benefits lowering blood pressure and relieving stress, they bring people together, they are a more ecofriendly option to having children in a world which is overpopulated, demanding and consuming much less waste than a human child, they are great teachers, and they are magnificent in their own right. Dogs deserve space to run and play. Taking away this natural need will cause problems instead of solve them. Making some trails off leash and others on leash allows for the difference in needs for dogs who are good off leash and those that are not. Beaches such as Muir and Stinson/Seadrift are perfect places for dogs to romp and play. They are fine how they are currently set up with the dogs allowed on the sea drift end of Stinson Beach. The health of our community

is reliant in part on dogs having many places to romp and play with their owners.

Sincerely Donna Marks Lagunitas CA 94938

Correspondence: Thank you for the opportunity to comment on the dog plan.

My husband and I are residents of Pacifica and live within walking distance from both Milagra Ridge and Mori Point. We have lived here for 33 years and feel extremely fortunate to have GGNRA sites on the coast in Pacifica for the public's enjoyment.

Both Milagra Ridge and Mori Point allow dog access if on leashes. I have never seen the leash law enforced at these parks although I have always encountered dogs off leash in both these parks whenever I go.

I have experienced the following stressful situations at both parks:

-physical and emotional distress caused by uncontrolled dogs aggressively running towards my husband and/or I, and jumping on one or both of us;

-dog attacks by unleashed dogs on leashed dogs;

-several heated conflicts between myself/husband and non-compliant dog owners;

-damage and destruction to fragile native plant restoration projects by unleashed dogs running off trails;

-injury and death to indigenous animals caused by uncontrolled dogs running after and attacking them;

My husband no longer accompanies me to the parks anymore because there is usually a frightening or unpleasant encounter with an off-leash dog and/or its owner whenever he goes. He is afraid of being bitten by a dog or getting into an altercation with a dog owner.

I do not think it is right or in the public's interest to let non-compliant dog owners prevent safe enjoyment of the parks by other users, or allow their dogs to damage native habitats because they want to let their dogs run free.

Since the leash law is not or cannot be enforced at Milagra Ridge and Mori Point parks I support an alternative to the leash law that prohibits dogs from these parks, and designates space within the north San Mateo park system that allows free-running dogs in an area which will not adversely impact safe and enjoyable use by all people, and will not cause damage to native environments. I would think the issues I've experienced are not specific to just the above mentioned two parks and so think this alternative should apply to other parks as well, but I can only speak from personal experience at these two.

Thank you for the opportunity to provide comments and suggestions.

Correspondence: What is the difference between keeping dogs on leash vs. off leash in a national park? The same amount of "damage" will happen regardless. Not to mention the fact that humans will cause more damage than any off-leash dog can do. How can an off-leash dog harm the wildlife more than people grilling out, playing frisbee, dumping drinks out on grass, etc? If I go to Fort Mason green area, there are more people doing damage than any dog off leash could dream of doing. I imagine this is the same case at any park in the area.

Correspondence: Dear Superintendent Dean,

I am writing to oppose the GGNRA's Draft Dog Management Plan because it consists of many undocumented assumptions that do not support its conclusion.

It fails to differentiate between the impacts of dogs, humans, other wildlife and predatory plants and species. The US Fish and Wildlife did not recognize Ocean Beach and Crissy Field as critical habitats for the snowy plovers. Specific potential habitats of garter snakes in the GGNRA as well as impacts caused by dogs are also undocumented. As such, the need for the proposed management plan is not established.

It is questionable that noncompliance (of dogs going off-leash in on-leash areas) will necessarily cause any impacts. I ask that the GGNRA reevaluate

its logic behind its arguments and look at the baseline conditions in specific areas before coming up with a new alternative.

Thank you for your consideration.

Sincerely, Tszsan Kathy Reichardt

Correspondence: First I appreciate the opportunity to contribute to the dialog and provide input on the policy regarding dogs in the open space area of the GGNRA. My thoughts are guided by being an avid outdoors person more than 50 years! I have also worked as a naturalist in the National Park Service, as well as led groups of young people and adults in the outdoors on mountaineering, rafting and hiking adventures.

For the past 25 years, whenever I'm hiking (and at times biking) in the U.S. I'm doing it with my on leash dog. Here are a few ideas and suggestions for why an on-leash dog policy is a good one:

1) Recruiting Future Stewards of the Outdoors - As a life-long advocate of the environment and an outdoor educator, I believe it is important to get as many people as we can into the open space, enjoying and appreciating all it has to offer. Children and families that have a family dog want to bring it with them to the open space. The no dog policy will eliminate their ability to fully appreciate our parks and those children will never know the value of keeping and preserving our parks.

2) Public Health Value - At a time when obesity is at epidemic level and free or low cost recreational opportunities for children and families are going away, the parks serve as one of the best venues for life-long health and fitness. I also believe that dogs are some of the best "get up and move" advocates we have. If you have a dog, you know that you have to get out and walk them. In turn, you get your exercise, and have a much better level of health and fitness with your pet. So, if there is a "no dogs" policy, families with dogs will not be able to appreciate the trails in the park and will get less exercise and health benefits.

3) Safety ? I am a woman who walks all times of day (and sometime evenings) without another person with me and I feel I need my dog with me. I have met more then enough crazies and creepy folks on the trails, in a variety of remote areas, to believe that I would not feel be safe to appreciate our parks without him. If dogs were banned, it would take away my access

to the parks. This past week I was stalked and chased by a coyote in the Rancho. It was snarling, yapping and came within five feet of my dog and me. This went on for 30 minutes before I made it back to a clear open space. My dog stood between the coyote and me and I believe without him there could have been a distinct possibility of getting bit by this animal. In all my years of hiking and walking in this area, I have never before had such an encounter, however, I was relieved that I had my dog with me.

My recommendations for the GGNRA dog policy are:

1) On-leash dog policy ? I strongly recommend an on-leash dog policy. I do not believe that the majority of dog owners, who say they have "voice control", really have voice control. I also think it is not a good idea to have dogs off leash anywhere in the park, particularly after this last encounter with the coyote. I know if my dog was off leash, it would have been a disaster for all beings involved.

We share this open space with hikers, birders, children, bikers, seniors, and wildlife. Everyone can enjoy this amazing environment if dogs are on leash. If they are not, there is a constant risk of kooks with no control of their canine friends.

2) A strong enforcement policy ? I have walked many times on Milagra Ridge and have found that dogs, people, bikers and seniors can appreciate the area and enjoy a relaxing day at the park. Part of the reason for that is the strong enforcement of the on-leash policy. People know that Rangers patrol the area (particularly on weekends) and therefore comply with the policy.

3) If the GGNRA is going to offer a ROLAs option, my recommendation would be to have access limited and restricted to dawn-8 a.m. and 5 p.m. ? dusk (or 4 p.m. until dusk during PST). I also recommend NOT having dogs in "Area 1" because it is adjacent to the school and there is no good public access point currently available.

The current trailhead in Montara is not workable given it is in the middle of a residential area and next to a school. There has been strong opposition to the LeConte trailhead already and Second Street is semi-private, narrow, unimproved dirt road. If individuals parked cars at either of these locations it would cut off fire department access to the homes and the Rancho.

Another ROLAs option would be to have a similar policy that was instituted in 1979's advisory commission for Marin County's Whitegate Ranch. That policy allowed for an Advanced Dog Training Area where use is restricted to owners and dogs that have successfully completed basic obedience training and are in process of advanced obedience or special skills training

(i.e. search and rescue, etc).

I also want to note that I have been very uncomfortable with the negative and disrespectful tone that some members of the "dog advocate" communities have demonstrated. These individual do not speak for many dog owners in the bay area, and certainly not for me. Their anger and disrespect should be channeled to the dog owners who have, for many years, not taken control of their dogs and their behavior. This is not a GGNRA problem; it is a bad dog owner problem.

I strongly advocate that you not penalize all dog owners for a percentage of bad dog owners. I would however strongly encourage an on leash policy with strong enforcement policy for those who cannot comply with the regulations or a contained ROLAs option. With that, we can all enjoy this amazing and spectacular area together.

Correspondence: I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; it is misleading & is not backed up by science or the law. I am a longtime resident & dog owner of San Francisco. I live in the Sunset District, and I run a fulltime professional dog walking, dog training & pet sitting business. I also sit on the board of the Friends of Animal Care & Control in San Francisco.

The number one thing that came to my mind upon reading this document & attending the public meetings was: "Wow. Where did all these rangers come from??" I walk daily, sometimes multiple times per day at Fort Funston and/or Ocean Beach & have for many, many years. I can count the number of rangers I have ever encountered there on one hand. This is a HUGE part of the problem. We already have existing laws regarding voice control, scooping poop, dangerous dogs, etc. The fact is that there is nobody enforcing or educating about the current laws. Making new laws is not going to solve this problem because the rule followers are not the problem. There is nothing built into this plan to plan for how this will be measured or enforced ? and since it is not being measured or enforced now at all ? the "compliance based management strategy" is an extremely slippery slope.

Regarding professional dog walkers, San Francisco Animal Care & Control already has an existing list of guidelines for professional dog walkers in terms of the maximum number of dogs per walker, maintaining voice control or leashes, scooping poop, preventing digging & chasing etc. Most responsible dog walkers have already voluntarily agreed to follow these

guidelines & are in favor of regulation, but there is not enough education or enforcement about these policies either. The current city guidelines regarding professional dog walkers can be found here: <http://www.sfgov2.org/index.aspx?page=1083>

Thank you, Courtney Gunter Durbin

Correspondence: Hello, This is the second time I am writing to oppose the GGNRA's draft dog management plan. I am a longtime resident & dog owner of San Francisco. I live in the Sunset District, and I run a fulltime professional dog walking, dog training & pet sitting business. I also sit on the board of the Friends of Animal Care & Control in San Francisco.

True voice control works. If it isn't working, it is NOT voice control. If you cannot call your dog off of chasing a bird or digging a hole, then your dog is not under voice control, and should be leashed. This is already the existing law, though it is never enforced. In fact, many park users do not have any idea that they should prevent their dog from digging or chasing birds as there is little to no education & inadequate signage. Even a small amount of education & enforcement would go a long way. In fact, the only people I ever see educating the public on these rules is the professional dog walkers. I often ask people to prevent their dog from digging, or chasing birds. I remind them to scoop poop, and I ask them to leash their dog if he is not under control. I often see other dog walkers educating the public & self policing these parks that we use daily, but I see zero enforcement or oversight otherwise. Off leash freedom should be a privilege for trained, trustworthy, social dogs under voice control -- THIS is what we should be enforcing.

A trained dog under voice control causes no more trouble than a leashed dog does, and possibly less, considering that leashed dogs often show different behaviors than they would show off leash. They are more likely to be reactive, less likely to feel social with other dogs & people, more likely to be frustrated & pent up. Fencing in has a similar effect. Taking a city full of a huge number of dogs & leashing them all up or fencing them in will not create less conflict, but will create more. Dogs need to run & exercise daily, and without that release develop behavior problems. They are much more likely to be reactive when feeling restrained, confined & over crowded.

Take the example of Stern Grove on "Tsunami Friday." Several fights broke out due to so many frustrated dogs who could not get the exercise they

needed in that crowded environment. Confining the vast numbers of dogs residing in this area to enclosed spaces will cause far greater problems than allowing trained voice control dogs to retain their offleash freedoms. As a trainer, I can't think of a better way to ensure more dog behavior problems than to take away their ability to get appropriate daily exercise while living in a densely packed city, with a high expectation on dogs to be social & well behaved. We will be setting dogs & their owners up to fail.

Comparing an open recreation area like Fort Funston to a fenced in dog run like the one at Golden Gate park is comparing apples to oranges. These are not equivalent options. Fenced in parks are not healthy environments for many dogs & many dogs will simply not be able to get their exercise needs met here at all, especially when they become over crowded & dangerous. Not to mention, confining dog owning humans to fenced in parks also greatly limits their ability to get the exercise they need & want. It is an important recreation outlet for us as well to walk with our dogs. These fenced in parks do not allow any outlet for human exercise & recreation ? as we hear so much about Healthy SF ? fencing in the people is totally counter intuitive.

Correspondence: Hello, This is the third time I am writing to oppose the GGNRA's draft dog management plan. I am a longtime resident & dog owner of San Francisco. I live in the Sunset District, and I run a fulltime professional dog walking, dog training & pet sitting business. I also sit on the board of the Friends of Animal Care & Control in San Francisco.

Regular dog walkers, both professional & personal are the daily users of these parks, rain or shine. We love these parks & take care of them. Who organizes the beach & park cleanups monthly? Who picks up the trash & broken glass left behind by human visitors? Who is the first to notice if there is an environmental change occurring & speak up about it. The reality is that the dog walkers are the guardians of these parks. I almost always have a poop bag containing trash & glass to throw out as I walk. I tell others (usually non-professionals) to prevent their dogs from digging & chasing birds. In fact the only people I see enforcing these rules are us! I am a dog walker AND an environmentalist (as many of us who chose a career that takes us outside daily are) so I am concerned when I see a change or a

problem at the park & I act to do something about it.

A good example was when we were all tear gassed at Fort Funston thanks to the police running a drill at the shooting range across the street. People & dogs were getting very sick. The authorities came to inspect but did not put up any signs or prevent people from continuing to enter, though there was clearly a dangerous situation as many dogs, people & especially children can have strong reactions to tear gas ? and at first nobody realized what it was, just a strange chemical smell in the air & in our throats & that people were vomiting, passing out, at least 2 dogs had seizures. Who voluntarily stood in the parking lot all morning, telling folks to avoid walking here today? Who called the authorities in the first place to alert them to the problem? Who reported it to the news so word could get out? All dog walkers of course. These parks are our office & our backyard. We love them & seek to protect them.

Thank you, Courtney Gunter Durbin The Whole Pet 2350 27th ave San Francisco, CA 94116

Correspondence: Dear Friends at GGNRA ?

I am writing to you as the Governor's appointee to the 3rd Supervisorial District of the County of Marin, formerly held by the late Charles McGlashan. I also live in Sausalito and am a longtime Southern Marin resident. I do not envy you this particular task, and I offer comments that have been gleaned from many conversations with Southern Marin residents regarding the proposed dog leash regulations.

I have great respect for the need to preserve and restore this treasured recreation area in the midst of a bustling urban center, and think that most of the proposed changes strike a reasonable balance between what the strict environmental protectionists would want on the one hand and what the dog lovers would want on the other.

The following general comments apply to the proposal overall:

1. Continuous trail loops will encourage more active engagement with the environment while exercising. Many people, especially those who are aging, walk their dogs on trails such as this as their main exercise. We are all working towards similar goals of a healthier and more vibrant community

and loop trails would serve those goals.

2. Education and signage: Education and explanatory signage will go a long way towards the goal of keeping dogs out of sensitive habitat. Most people want to do the right thing, they just need to understand the details of habitat protection. Making it clear that people AND dogs must stay on trails and roads and avoid going cross country should be enforced throughout the area. (This seems particularly apropos of the Homestead Valley alternatives.)

3. Specific times for ROLA would allow some flexibility and would create optimum visitor experiences for those with and those without dogs.

We also would like to make a few specific points on behalf of the constituents on this side of the bridge:

Oakwood Valley Fire Road and Oakwood Valley Trail to Alta Trail: The most striking concern here is the gated and fenced dog run concept. We have heard anecdotally from several members of the "Dog Tech" subcommittee (Roger Roberts, Capt. Cindy Machado, Jane Woodman and Sonya Hanson, among others) that there was in fact not consensus regarding this ? and the 'assent' that was heard at the meeting was meant to be ironic. The gated and fenced idea seems to run contrary to the hoped for experience that being out in nature would provide.

We would request that the Oakwood Valley Fire Road and the Oakwood Valley Trail be a continuous loop with 'dogs on leash' at a minimum (off leash would be preferable) and that the connector to the Alta Trail and up to Donahue be designated as 'dog-friendly', as well. It would be preferable to leave this trail available for dogs along its entirety, creating a loop that can be accessed from several different points (Tennessee Valley Rd, Donahue St. and the Orchard Fire Rd). Please note that there is the appearance of an equity issue here, as the trail is primarily accessed at the top of Donahue in Marin City. This is a community with some of the highest rates of heart disease, diabetes and childhood obesity in Marin. Having this loop accessible to all ages in this community, and especially children, is seen as a critical component to creating a healthy community.

Marin Headlands: Again, we would like to suggest that as many loops be created as possible with fewer dead-end trails. It would certainly be acceptable to have both off-leash and on-leash areas, but it seems that dogs on leash should be allowed on sidewalks and roads. For instance, the intersection of the Rodeo Valley Trail could be connected at McCullough to the Coastal Trail, which would provide a great deal of variety and options for trail choice.

We hope that NPS will continue to make the recreation area as accessible to

all as possible. In reviewing the Transportation Plan, it is clear that getting people out of their cars and out into nature is the goal, which we applaud. While we strongly support protecting vulnerable habitat, we are concerned that the current plan would leave Muir and Rodeo as the only beaches in the Marin portion of the GGNRA where dogs would be allowed.

Fort Baker: Please consider including the Parade Grounds, Drowns Fire Road and East Road for dogs on leash.

I think the vast majority of dog owners are good citizens and strive to make sure that their canine companions are good citizens, as well. Try as we might, there will always be the rare bad actors and bad visitor interactions. Making it clear where dogs are prohibited gives the "no dogs" visitor the option to be in a 'dog-free' zone, and fair warning on other trails that they are likely to encounter dogs there. Similarly, dog owners can feel comfortable that they can enjoy time outdoors in this splendid and treasured place on trails where they are indeed welcome.

Thank you for considering these points. I look forward to seeing the comments once you have collected them all. As I said at the top of this letter, I do not envy you this task, but very much appreciate your dedication to improving the experience for all.

Best regards,

Kathrin Sears

Correspondence: Hello, This is the 4th time I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; it is misleading & is not backed up by science or the law. I am a longtime resident & dog owner of San Francisco. I live in the Sunset District, and I run a fulltime professional dog walking, dog training & pet sitting business. I also sit on the board of the Friends of Animal Care & Control in San Francisco.

Much has been said about the lack of scientific support for this document, and the fact that this is a recreation park, not a museum, not Yosemite. Fort Funston is cold, foggy & covered with non-native ice plant. There are missile silos under the parking lot & a shooting range across the street. It is not a place to go have a picnic with your kids. There are lots & lots of places to go have a dog free picnic but there are very few places to let dogs get the

exercise they need to live safely & harmoniously in this urban environment.

This plan is dangerous to the health & wellbeing of park users, human & canine alike. The "preferred alternative" is not acceptable, relies on hypotheticals to support it instead of scientific data, and goes against the values of the Bay Area where these parks reside. It is overly restrictive & not remotely "balanced." A new plan must be developed that allows for true balance & co-existence of park users. This must include specifics regarding education & enforcement. Condemning all dog owners for the actions of a few irresponsible park users is not "balance." Non-dog-owning park users also cause disruptions to birds & the environment. Irresponsible park users of all types should be considered in the management plan.

This plan has been opposed by the city supervisors & all local neighborhood groups. Several dog experts including Jean Donaldson, Ian Dunbar & Cesar Millan have made statements against the plan, and supported the fact that dogs need open space & real exercise to be healthy, and to prevent behavior problems & aggression. There is no scientific data to support the idea that offleash dogs under voice control cause any more problems than leashed dogs, or human park users, their children, their litter, their vehicles, etc do. The courts have repeatedly upheld the existing 1979 pet policy, for good reason, as it reflects the needs & values of this area, and should continue to be respected. If this is to change, it needs to be done with true scientific study & accurate reflection of the needs of this community.

Thank you, Courtney Gunter Durbin The Whole Pet 2350 27th ave San Francisco, CA 94116

Correspondence: May 30, 2011 Frank Dean, General Superintendent GGNRA Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean, I support continuing to follow the existing guidelines drawn up in the 1979 Pet Policy. Indeed, I recommend opening more off leash areas within GGNRA. If there were more open areas, I would use them as well. People with dogs use parks daily. I have been a resident of California my whole life. I have been a Bay Area park user my whole life as well. I went to Ocean Beach almost daily from 1977 until 1984 when I moved from the neighborhood. I work in San Francisco so I still visit regularly. I have been walking with dogs in San Francisco and Marin since the 70's. I also recreate with my dogs at Crissy Field and occasionally Fort Funston. Look back at the newspapers, many of us were worried when the proposal to

create the National Recreation Area was first put forward, but we were assured time and again that there was to be no threat to the current recreational uses. I would like to see that promise maintained. It is the right thing to do. Especially in this densely populated urban area. I recommend stronger enforcement of poop pickup rules as I feel many who oppose dogs really object most strenuously to dog poop not dogs themselves. Please continue the current boundaries or even better, expand the off leash areas to include more GGNRA parklands. Of the choices presented currently I support a modified Alternative A (the "No Action alternative"), the 1979 Pet Policy. But add to that off- and on-leash access on GGNRA lands in San Mateo and on new lands that will be added to the GGNRA in the future, especially those areas in both that have traditionally had dog walking.

Thank you for your consideration.

Sincerely,

Margaret Pinter Home: Oakland, CA 94618

Correspondence Type: Web Form

Correspondence: I am a resident of San Francisco, who regularly uses the Crissy Field and Baker Beach areas of the Golden Gate National Recreation Area (GGNRA). I use both areas, but especially Crissy Field, for bird watching, and Baker Beach for sunbathing. I support the general goals of the Draft Dog Management Plan (DDMP): to prohibit dog use in areas with natural resources that would be adversely affected by dog use or areas where there would be conflicts with other recreational users; and to permit controlled dog use in other areas. However, the DDMP should be improved in several respects.

At Crissy Field, the National Park Service (NPS) should re-consider the feasibility of having a ROLA almost immediately adjacent to the Snowy Plover Wildlife Protection Area (SPWPA). The map of Crissy Field appears to show the ROLA ending a bit to the east of the SPWPA. The "no dogs" area should include all dune areas immediately adjacent to the SPWPA that provide potential habitat for Snowy Plovers.

Generally, when I visit the SPWPA there are numerous off-leash dogs, even though the SPWPA is signed for on-leash use only during the times of year when I am there. (The reports of the Snowy Plover census also show

significant non-compliance with the on-leash requirement.) As a result I generally don't see any Snowy Plovers. One evening, I visited at a time when there were no dogs present, and the Snowy Plovers were readily visible. I am afraid that if there is not a significant barrier between the ROLA and the SPWPA, numerous off-leash dogs will enter the SPWPA. Accordingly, if the ROLA and the no dog areas are immediately adjacent to each other, it will be necessary to erect a barrier between the two that dogs will be unable to cross. Before erecting such a barrier the NPS will need to consider whether such a barrier will have any adverse effect on the Snowy Plovers (e.g., by providing perches for bird predators).

In any event, the signs restricting dogs from the SPWPA will need to be more numerous and clearer than at present, so that it is impossible to enter the SPWPA without seeing a sign that says "no dogs". Currently, it is possible to enter the SPWPA without encountering a sign (e.g. by crossing the wall separating the SPWPA from the parking lot behind the National Marine Sanctuary Parking lot). Furthermore, the current signs need to be improved so as to more clearly prohibit dog use; at present the most prominent component of the signs are the words "Wildlife Protection Area". The most prominent component of the sign should be "NO DOGS" in large letters, accompanied by the symbol for no dogs. I support the use of the Airfield at Crissy Field as a ROLA, as that is an area where dogs will not interfere with wildlife or other users.

At Baker Beach I strongly support having a portion of the beach off limits to dogs. I also support the dog prohibition for Marshall's Beach and adjacent beaches to the north of it. The NPS should consider whether the area near the mouth of Point Lobos Creek should also be off limits to dogs. I used to see many birds hanging out at the mouth of the creek, although I have not seen them in recent years.

The Compliance Based Management Strategy needs to be improved, particularly with regard to areas where dogs are prohibited in order to protect endangered species and other wildlife. It is not clear how the 75% threshold would apply to an area where dogs are prohibited. Does this mean that if 24% of the dogs in an adjacent area where dogs are allowed enter the "no dogs" area there would still be no "Secondary Management Response"? If so, that is totally inadequate. An increase in restrictions in adjacent areas should be imposed whenever there is significant, continuing non-compliance that results in disturbance to the protected wildlife, regardless of the percentage of dogs that enter the prohibited area from the area where dogs are allowed. Thus, for example if dogs regularly enter the SPWPA from adjacent areas where dogs are allowed, resulting in disturbance to the Snowy Plovers, then the area where dogs are prohibited should be expanded to provide a larger buffer to the SPWPA.

Education and enforcement will be crucial to the success of the Dog Management Plan. Dog owners do need to understand that dogs actually disturb wildlife. However, I see little reference to enforcement in the DDMP. While education is preferable to enforcement, that is only true if education results in compliance. My own efforts to inform visitors to the SPWPA that their dogs are supposed to be on leash has not always resulted in compliance.

The education and enforcement efforts will require considerable manpower. For example, at the SPWPA, personnel will need to be regularly present on weekends during the Snowy Plover season to, at first, inform dog owners that dogs are prohibited, and thereafter cite dog owners who do not comply with the prohibition. In my many visits to the SPWPA, I have never seen any NPS personnel, or volunteers who are authorized to engage in outreach to dog owners.

The GGNRA is a unit of the National Park System. Protection of natural resources should be the top priority. Unfortunately, over recent years much of the Presidio, especially the areas near the beaches, has become one giant off-leash dog park. Contrary to the views of the San Francisco Board of Supervisors, I believe that the provision of off-leash dog areas is primarily a local responsibility, and not the responsibility of the National Park Service.

Some dog owners have expressed the view that if the NPS prohibits dog use, then the City of San Francisco should take back the areas the City donated to the GGNRA, because the areas were donated for recreational purposes. (This argument does not apply to the Presidio which was never owned by the City.) However, dog-walking is not the only recreational use that the public makes of the GGNRA lands. Bird-watching is also a recreational activity enjoyed by many, and dogs interfere with bird watching, especially along the beaches. Dogs can be walked in many places, but shorebirds are restricted to beaches (and other wetland areas). Accordingly, it is especially important that sufficient beach areas in the GGNRA be designated as "no dog" areas to provide enough shorebird habitat. This is especially true, as most of the beaches in the area are part of the GGNRA.

Finally, I note the need to establish rules for dogs at areas not covered by the current DDMP, including China Beach and the trails in the interior of the Presidio, although I understand that that may need to wait until the current Dog Management Plan is implemented.

Thank you for your consideration of my views.

Correspondence: I walk and/or my dog at Crissy Fields most weekends and it makes me really sad to contemplate a time when I can't do that as freely as I can now. As I walked him today at Crissy Field, I became even more sad when I noticed that there are no signs whatsoever in this GGNRA area describing your proposed action to the public. Where is the signage alerting people of your proposal? I felt sorry for all the people who ran by me with their dogs who will never get a chance to comment on your proposal because they don't know about it. The lack of signage made me feel like the Park Service does not care about involving the public in their decisions about public resources.

I urge you to properly sign your proposal in all potentially affected GGNRA areas and extend your comment period to allow park users to weigh in on decisions that will affect them.

Correspondence: This DEIS is invalid because it fails to meet its legal obligation to take into consideration the negative effects the proposed changes would create for humans, their dogs and the surrounding environment (e.g. local parks). Further, the studies/science utilized to support allegations of damage to resources in the GGNRA are fatally flawed - the positive impacts are ignored and the negative impacts are unverified. For example, this DEIS omits the Warren study of the snowy plover which concluded recreation of dogs and their owners does not negatively affect the feeding of the plover. Instead the DEIS relies on a study performed by Audubon activists who recommend Draconian restrictions which are unjustified in areas that are not critical habitat. Therefore, I believe the 1979 Pet Policy should be implemented in its original form with no restrictions on off-leash recreation at Ocean Beach, and it should be institutionalized as a Section Seven Special Regulation. Further, I believe that all properties added subsequent to the 1979 Pet Policy and in the future should have historical off-leash recreational usage allowed. This would accurately reflect the enabling legislation for this National Recreation Area which GGNRA management has held in disregard for quite some time. I also believe the GGNRA's inclusion of a Compliance-Based Management Strategy as well as the

GGNRA's failure to commit to a Section Seven Special Regulation following this process indicates a lack of good faith and an intent to deceive the public as the GGNRA did following the implementation of the 1979 Pet Policy which the GGNRA later decried in Federal court as an "error".

Re: Comments on Draft Dog Management Plan/Environmental Impact Statement

Dear Mr. Dean,

I am writing to request that the Draft Dog Management Plan be modified to make dog use in the GGNRA more, rather than less, accessible. I am concerned about the welfare of dogs and dog owners, particularly the urban population that exists in and around the GGNRA lands.

The reality is that the park lands under discussion are part of an urban community, not a wilderness.

The GGNRA is a unique urban open space, the historical result of lands preserved from residential and commercial development as a result of military use and political will in the Bay Area. It was created to serve the outdoor recreational needs of a large metropolitan area. The current analysis and recommendations fail to consider dogs as part of the urban environment in which the GGNRA was created.

Dogs and dog-walking, both on and off leash, existed in the lands now controlled by the GGNRA before the GGNRA was created.

People and dogs have lived together in urban environments for thousands of years and will continue to do so. It is critical to the emotional and physical health of dogs to be able to exercise fully. This is rarely possible on leash or in small postage stamp sized "dog areas"

If dogs are not given adequate exercise they are prone to more physical health problems. More importantly they often exhibit more behavior problems that affect people. As a veterinarian of 30 years I can tell you that

dogs that need exercise and do not get it are more likely to have aggression related issues, including dog bites. I am concerned that if you do not continue to provide space for dogs to run you will see an increase in the incidence of dog related problems.

The dog policy in the GGNRA has always differed from the policy in other national parks for valid reasons. Dogs should be regarded not as something foreign from which the environment must be protected, but as part of the urban environment which can co-exist in harmony with the other parts of that environment.

Given that people will continue to have dogs, and that these park lands have permitted dogs to run, there is an established expectation that they will continue to do so. Many people made responsible decisions to get dogs while thinking that they had a wonderful place close by to exercise them

It is unfair to punish all responsible dog owners with such severe measures for the problems created by a few dog owners. For example, we do not see similar severe measures being taken against bicyclists for the actions of a few.

Elderly people, special needs people and lower income people are more severely and unfairly punished by these current GGNRA proposals because they will have to travel so far to properly take care of their dogs. They may not be able to do so and may be forced to surrender their beloved companions.

A culture is judged by its wisdom and kindness to the old, the frail and to animals. This harsh proposal reflects poorly on the awareness of the GGNRA. There are more cooperative and community oriented approaches to this problem. A collaborative, educational approach is more humane and balanced.

A multi-use policy is appropriate for the GGNRA, including an adequate balance for dog-friendly and non-dog areas. The vast majority of GGNRA lands are already closed to dogs. The GGNRA should continue to allow a significant portion of its lands for both on-leash and off-leash use. The GGNRA policy should be made more, rather than less, dog friendly and expand dog use areas to allow even more responsible dog ownership enjoyment.

Sincerely yours,

Pamela Bouchard DVM.

Correspondence: The following are additions to Arnita Bowman's public comment regarding Public Health and Safety Suggestions & Comments mailed on May 28th.

DOGS ENCOURAGE DAILY EXERCISE

The following are excerpt from the New York Times on March 14, 2011 from the article: Forget the Treadmill. Get a Dog. By TARA PARKER-POPE

"You need to walk, and so does your dog," said Rebecca A. Johnson, director of the human-animal interaction research center at the University of Missouri College of Veterinary Medicine. "It's good for both ends of the leash." Several studies now show that dogs can be powerful motivators to get people moving. Not only are dog owners more likely to take regular walks, but new research shows that dog walkers are more active overall than people who don't have dogs.

Researchers from Michigan State University reported that among dog owners who took their pets for regular walks, 60 percent met federal criteria for regular moderate or vigorous exercise. Nearly half of dog walkers exercised an average of 30 minutes a day at least five days a week. By comparison, only about a third of those without dogs got that much regular exercise.

The researchers tracked the exercise habits of 5,900 people in Michigan, including 2,170 who owned dogs. They found that about two-thirds of dog owners took their pets for regular walks, defined as lasting at least 10 minutes.

Unlike other studies of dog ownership and walking, this one also tracked other forms of exercise, seeking to answer what the lead author, Mathew Reeves, called an obvious question: whether dog walking "adds significantly to the amount of exercise you do, or is it simply that it replaces exercise you would have done otherwise?" The answers were encouraging, said Dr. Reeves, an associate professor of epidemiology at Michigan State. The dog walkers had higher overall levels of both moderate and vigorous physical activity than the other subjects, and they were more likely to take part in other leisure-time physical activities like sports and gardening. On average, they exercised about 30 minutes a week more than people who didn't have dogs.

5 WAYS PETS CAN IMPROVE YOUR HEALTH

<http://www.webmd.com/hypertension-high-blood-pressure/features/health-benefits-of-pets> By Jeanie Lerche Davis WebMD Feature Reviewed by Louise Chang, MD

A pet is certainly a great friend. After a difficult day, pet owners quite literally feel the love. In fact, for nearly 25 years, research has shown that living with pets provides certain health benefits. Pets help lower blood pressure and lessen anxiety. They boost our immunity. They can even help you get dates.

Allergy Fighters

"The old thinking was that if your family had a pet, the children were more likely to become allergic to the pet. And if you came from an allergy-prone family, pets should be avoided," says researcher James E. Gern, MD, a pediatrician at the University of Wisconsin-Madison, in the *Journal of Allergy and Clinical Immunology*.

However, a growing number of studies have suggested that kids growing up in a home with "furred animals" -- whether it's a pet cat or dog, or on a farm and exposed to large animals -- will have less risk of allergies and asthma, he tells WebMD. In his recent study, Gern analyzed the blood of babies immediately after birth and one year later. He was looking for evidence of an allergic reaction, immunity changes, and for reactions to bacteria in the environment.

If a dog lived in the home, infants were less likely to show evidence of pet allergies -- 19% vs. 33%. They also were less likely to have eczema, a common allergy skin condition that causes red patches and itching. In addition, they had higher levels of some immune system chemicals -- a sign of stronger immune system activation.

"Dogs are dirty animals, and this suggests that babies who have greater exposure to dirt and allergens have a stronger immune system," Gern says.

Date Magnets

Dogs are great for making love connections. Forget Internet matchmaking -- a dog is a natural conversation starter.

This especially helps ease people out of social isolation or shyness, Nadine Kaslow, PhD, professor of psychiatry and behavioral sciences at Emory University in Atlanta, tells WebMD.

"People ask about breed, they watch the dog's tricks," Kaslow says.

"Sometimes the conversation stays at the 'dog level,' sometimes it becomes a

real social interchange."

Dogs for the Aged

"Studies have shown that Alzheimer's patients have fewer anxious outbursts if there is an animal in the home," says Lynette Hart, PhD, associate professor at the University of California at Davis School of Veterinary Medicine.

"Their caregivers also feel less burdened when there is a pet, particularly if it is a cat, which generally requires less care than a dog," says Hart.

Walking a dog or just caring for a pet -- for elderly people who are able -- can provide exercise and companionship. One insurance company, Midland Life Insurance Company of Columbus, Ohio, asks clients over age 75 if they have a pet as part of their medical screening -- which often helps tip the scales in their favor.

Good for Mind and Soul

Pet owners with AIDS are far less likely to suffer from depression than those without pets. "The benefit is especially pronounced when people are strongly attached to their pets," says researcher Judith Siegel, PhD.

In one study, stockbrokers with high blood pressure who adopted a cat or dog had lower blood pressure readings in stressful situations than did people without pets. People in stress mode get into a "state of dis-ease," in which harmful chemicals like cortisol and norepinephrine can negatively affect the immune system, says Blair Justice, PhD, a psychology professor at the University of Texas School of Public Health and author of *Who Gets Sick: How Beliefs, Moods, and Thoughts Affect Your Health*.

Studies show a link between these chemicals and plaque buildup in arteries, the red flag for heart disease, says Justice.

Like any enjoyable activity, playing with a dog can elevate levels of serotonin and dopamine -- nerve transmitters that are known to have pleasurable and calming properties, he tells WebMD.

"People take drugs like heroin and cocaine to raise serotonin and dopamine, but the healthy way to do it is to pet your dog, or hug your spouse, watch sunsets, or get around something beautiful in nature," says Justice, who recently hiked the Colorado Rockies with his wife and two dogs.

Good for the Heart

Heart attack patients who have pets survive longer than those without, according to several studies. Male pet owners have less sign of heart disease -- lower triglyceride and cholesterol levels -- than non-owners, researchers say.

PEOPLE WITH DOG FEAR OR PHOBIAS

People with a dislike or fear of dogs is not a major or compelling justification for banning or restricting dog recreation. If DEIS presents such arguments, there needs to be peer reviewed, unbiased social research studies completed for the GGNRA to demonstrated that this is a compelling justification and dog recreation has more than a nuisance effect that impedes these people visiting the park. In addition, the Park Service should be alleviating these people's fears instead of unnecessarily intensifying them.

The Sierra Club is misleading our membership that: "Asian and Latino park users report that they are less likely to visit parks for fear of harm from dogs and because of the presence of dog feces." which is offensive and manipulative portrayal by narrowly focused members of the environmental community. The report actually talks about barriers and does not measure the significance of those barriers in any way. It also fails to mention that the discussion groups were skewed towards recent immigrants and to those that have never used the GGNRA. Even I - with a tremendous love of the outdoors, people and dogs ? often mention not liking that a few irresponsible people aren't picking up dog poop but that doesn't mean I won't go because of poop or that it is more than an insignificant nuisance. I also dislike litter, horse poop on the trail, bicycles going too fast, fishing lines obstructing the beach, body odor, bad breath, intimidating park ranger behaviors, trucks on trails, unclean bathrooms, unmaintained trails, no trash cans, poor signage, too many people on the beach, fencing preventing me from going to the pond edge, etc. but that doesn't mean I think we should eliminate other recreational users, park personnel, nor anyone else's ability to go to the park.

Poor transportation and communication, unfamiliarity and different cultural norms, unfriendly park employees and visitors, fear of crime, and overly restrictive rules seemed far more of pervasive an issue than dogs for those in the SFSU study discussion groups. Dog barriers certainly tie in with the general discussions about some individuals' fear of the outdoors and the outdoors being unclean, however, positive exposure to the outdoors and dogs could help overcome those fears with most people. The study also talks about how attitudes change from first generation to subsequent generations which is supported by my recent conversation with a woman that lives steps from Mori Point in Pacifica that just returned from a trip to Thailand where she visited her family. Po (name changed) immigrated to the Bay Area and for some 30 years has loved her daily walks with her moderate sized

shepherd-mix and small terrier rescue dogs, often off-leash, at Mori Point and Sharp Park. Her son, now in US intelligence, grew up going to these parks with their dogs. When her sister visited last year from Thailand, she initially intimidated by the off-leash dogs but Po told her sister to basically "get over it, this is America" and her sister did. From being a PC volunteer in Yemen in the '80s and during my travels in Southeast Asia, I saw many feral dogs on the streets and understand why immigrants, in particular, would initially be afraid of off-leash dogs; just as it is normal to be afraid of almost everything that is so different in America or as I was of many unfamiliar things in Yemen. Po demonstrates that with a little time and positive interactions that dogs really aren't necessarily a long term barrier but are actually an opportunity for all individuals to integrate into our diverse community just like everyone else, particularly since a dogs are such social facilitators in these high visitation parks within neighborhoods along the coast.

Reading the Park Service dog plan has made me seriously think about people with phobias and how dog's impact their experience. Soon after reading the plan, I was trying to keep my balance as I scrambled down a steep, rocky, washed-out fire road deep into Cattle Hill and was thinking "what person that is afraid of dogs would be here". As ranger LaSalle proudly writes in most his \$100 off-leash tickets, Sweeney is a "wildlife haven with big animals" even after a generation after generation of dog recreation. The only people we saw were two young girls pushing mountain bikes up the trail were delighted to take a breather and pet Ella, and a woman with a reactive dog that we easily avoided. The real danger was sliding and ending up in a cast or maybe meeting a mountain lion. Both of which I've done in my life. The dense spring grass was up and, other than the trail, the vegetation looks untouched except for hundreds, if not thousands, of mole hills and wild fur-filled canine poop. Why on earth cram all dog people into a few small areas when remote hiking is so good for the human soul, and the people and dogs have such little impact on the remote areas?

I felt like the European peasants must of felt when they were excluded from the huge royal forests; surely, the park service and their extreme protectionist alias won't turn the more remote areas into their own private preserve. Is this really about dogs or is it about "conservation hoarding" and keeping people off their land? Ranger LaSalle also tells people "this park belongs to the National Park Service." I get that many in the Park Service dislike dogs, and probably that people with dogs as well as others that are using the parks for active recreation and not for their desired conservation or observation. However, discriminating against any person, just because they simply dislike them is not a value that the Bay Area culture embraces nor that the US government should embrace. The DEIS discuss dogs barking impacting the natural soundscapes and the smell of urine. Both seldom

occur and certainly not at a level to severely impede people's visits any more than the sound of children laughing or roughhousing or passing a poorly maintained toilet. I'm in the parks almost daily and seldom hear a dog bark and only smelled urine a few times at Fort Funston after the first rain on the season. When I looked at the Yellowstone winter season general management plan environmental impact studies, the Park Service recognized a potential problem and actually did scientific studies of the noise and fumes from snowmobiles. In this case, the park service is just pulling out everything they can possibly think of to convolute the DEIS and make it difficult for people to understand actual concerns, If the Park Service truly believes Bay Area residents and overall visitorship is severely impacted by any recreational activity, they should go beyond anecdotal evidence, such as my biased stories and most of the biased information in the DEIS, and conduct unbiased scientific social research and environmental research in the GGNRA to determine the real barriers and opportunities and the impact that has on GGNRA visitorship and not simply present misleading and biased survey excerpts and antidotal evidence targeting dogs.

Certainly the SFSU study nor the 2002 population study (questions designed to bias the results) are not substantial enough to draw any conclusions that dogs are a significant barrier for the general Asian or Hispanic/Latino population or any population. When I studied the responses from self-identified Hispanics in the GGNRA 2002 population survey, dog ownership resulted in significantly more days spent in the GGNRA, just like others with dogs. Instead of predominantly white Park Service management and conservation groups pretending to "channel" for the disadvantaged in their efforts to manipulate the public, the Park Service should seriously look at the demographics of people submitting public comments because the GGNRA is important to a diverse group of people with dogs. I'm white but I'm offended when I look around the parks and at the dog rallies and see the diversity that is united by our canine companions. The seniors, children, people with disabilities, and minorities benefit from dog recreation as much, if not more, than others.

Please consider following additions to Arnita Bowman's public comment regarding Environmental Injustice Suggestions & Comments mailed on May 28th.

The Compliance-Based Management Strategy must go.

This poison pill that will allow the GGNRA to change the status of off-leash areas to on-leash or no dogs without additional public comment if there is not 100% compliance with the new restrictions will not work. The change would be permanent. A management plan should not come with a built-in nuclear option, which is what this is. It allows a relatively few bad players to

undermine and destroy a traditional recreational use of the area. No number of responsible dog owners will stop what will become the inexorable removal of all off-leash access in the GGNRA if this strategy remains part of the plan. Tens or hundreds of thousands of hours of incident-free dog walking will not matter. There should be (and are) penalties for bad actors and these should be enforced. But the vast majority of people who do not act badly should not be penalized for the bad actions of a few. This strategy is unfair because off-leash status can be changed in only one direction (toward more restriction). It circumvents the legal requirement that management changes that are either significant or controversial must have a public process before they can be made. Critical information about how compliance will be determined ? by volunteers biased against dogs? by surveillance cameras? ? is not included in the DEIS.

Correspondence: Dear Superintendent Dean,

I am one of the many dog owners in San Francisco that is saddened and distressed by the GGNRA's draft dog management plan. As you've likely heard already, the vast majority of us are highly responsible animal lovers who simply want a few places in the Bay Area where our canine companions can meet and play with their own kind. San Francisco is so expensive and densely populated that only a lucky few have a living space which has outdoor access, and even those who can afford it rarely have a yard in which our dogs can run freely. To curtail this natural dog activity--indeed, it is a strong need in dogs that must be satisfied for their mental well-being--is nothing less than cruelty to these animals.

Believe me, I understand the importance of protecting and encouraging the existence of the Bay Area's native wildlife. But my understanding is that the studies done to support the GGNRA's proposal have limited probative value when it comes to the actual impact allowing dogs off-leash has on the environment. Unless and until it can be proven that off-leash access is a fundamental cause of wildlife decline, the proposal is simply an attack on easy targets - dogs and their owners.

My dog and I have frequented GGNRA areas since he came into my life 4 years ago, and I strongly believe the most harmful threat to GGNRA area is the extensive littering that riddles our beaches and parks. I religiously clean up after my dog, as do my my friends and acquaintances when it comes to their own dogs. In fact, it's rare to come across an irresponsible dog owner who doesn't, and I fully support ticketing such people. I'm also supportive of

enforcing rules against destructive dogs that are not under voice-control.

However, in my opinion the major culprits putting our parks and shores at risk are people who can't be bothered to throw away their trash in a garbage can that's readily available. Every time I take my dog to the beach I am heartbroken by the plastic bags, cigarettes, cooler fragments, fish hooks and other detritus that riddles our shores. Also seemingly harmful to our environment are scofflaws who ignore park rules and enter off-limit areas, mindlessly tread on plants, wander off marked paths, and allow their children to pick flowers and act aggressively to animals. GGNRA could have a far greater impact on the well-being of the wildlife in our beloved beaches and parks by monitoring and ticketing those offenders. I also take issue with the limitation on areas where dogs are currently allowed but may no longer be able to go, such as Sweeney Ridge. Frankly, there seems little support for the proposition that an on-leash dog on a hiking trail would somehow cause more damage than the far more common humans using the same trail.

Recreational use by humans seems to be a little-considered factor in the GGNRA study and proposal, yet these areas largely exist for human enjoyment, including those of us lucky enough to own dogs. To grossly limit our enjoyment of these areas, with no concrete support for the proposition that well-behaved pets with responsible owners are affecting the areas in a way that destroys them for future generations, is nothing short of discriminatory. Personally, my ability to run with my dog on the beach and hike with him in our parks has increased my well-being and helped me to reach a level of health I've not experienced in 20 years. If GGNRA cares so little about the health and well-being of its constituents, I am sorely tempted to take my dog--and more importantly, my property and income tax dollars--to an area where dog owners and their pets are treated more fairly.

If GGNRA can fully substantiate the contention that environmental harm in GGNRA areas is due solely to responsible dog owners and their pets, I'm happy to consider a compromise that addresses such harm. However, a study that fails to fully consider the impact of humans who litter and ignore park rules, bicyclists, horses, and other animals as potential causes of harm deserves little credit, and to rely upon this study to curtail the rights of responsible dog owners is a slap in the face.

Please consider the rights of **all** Bay Area residents in making this crucial decision about where dogs can access and where they can be off leash.

Best Regards,

Marie Seibel

Re: Comments on Draft Dog Management Plan/Environmental Impact Statement

Dear Mr. Dean,

I am writing to request that the Draft Dog Management Plan be modified to make dog use in the GGNRA more, rather than less, accessible.

Personal: I have lived in the Bay Area since 1972, mostly in the East Bay, and have made extensive use of GGNRA lands since the inception of the park. I am sixty-nine years old and now retired. I am also a dog owner, spending much of my time with a wonderful ten year old rescue dog, an Australian-Shepherd/Border Collie mix. We do frequent/daily walks, at least ten to twenty hours weekly. While I still live in the East Bay, I continue to make extensive use of GGNRA lands, especially in Marin County. Walking is an essential part of both my dog's health and my own. Off-leash exercise is critical to my dog's health and happiness.

The Draft Proposal: I read the GGNRA analysis in the Draft Dog Management Plan with interest and concern. I believe the fundamental flaw in the analysis is the failure to consider dogs as part of the urban environment in which the GGNRA was created. The GGNRA was never a pristine natural environment such as that found in Yosemite, Glacier, or Capitol Reef National Parks - all of which I love and enjoy. The GGNRA is a unique urban open space, the historical product of lands preserved from residential and commercial development as a result of military use and political will in the Bay Area. It was created to serve the outdoor recreational needs of a large metropolitan area and contains a significant portion - and some of the best - of the open space in the Bay Area. There are valid reasons why the dog policy in the GGNRA has always differed from the policy in other national parks. Dogs and dog-walking, both on and off leash, existed in the lands now controlled by the GGNRA before the GGNRA was created. Dogs should be regarded not as something foreign from which the environment must be protected, but as part of the urban environment which can co-exist in harmony with the the other parts of that

environment.

Recommendations for more extensive dog use: A multi-use policy is appropriate for the GGNRA, including an adequate balance of dog-friendly and non-dog areas. The vast majority of GGNRA lands are already closed to dogs. The GGNRA should continue to allow a significant portion of its lands for both on-leash and off-leash use. In fact, I believe that the GGNRA policy should be made more, rather than less, dog friendly. Because of its unique position as the primary open space provider in the magnificent Bay Area, the GGNRA would do well to expand dog use areas to allow even more responsible dog ownership enjoyment.

Sincerely yours,

steve gimber

Correspondence: GENERAL PUBLIC COMMENT & SUGGESTIONS

For me personally, it has been on a long, up and down, exhausting journey since seeing an article in January about the pending GGNRA dog management plan and environmental impact study (DEIS). During my journey and after reviewing the plan and visiting most of the parks, I've become an activist on the GGNRA trails and Bay Area dog groups and heard or read hundreds of inspiring personal stories and comments on the GGNRA. This one is universal and expresses my own feelings, better than I could, as a transplant from rural Oklahoma and much of why I continue to live in the Bay Area and am so intensely dedicated to opposing this attempt to marginalize "recreation" in the GGNRA:

"I go to the beach more than I go to parks. Going to the beach is more or less the same as going to the parks for me. The ocean is also a form of nature. When I look at the ocean, I could totally relax and let my imagination run wild. I feel that life in America is truly wonderful when I watch people fishing, jogging, playing and walking their dogs. Sometimes, I would even call my parents in China to tell them that I was at the beach and they could even hear the waves! I lived near the beach in Tsingtao when I was in China, and thus, I was especially happy when I ended up living near the beach here in America." [Chinese female, 44 years old, recent immigrant, San Francisco resident]

Ironically, I found this quote when looking at the SFSU (Roberts 2007) study <http://wildequity.org/images/4856> that, like other literature, the SF Bay Area Sierra

Club spokes people and the DEIS (page 31) are taking out of context to help justify eliminating dogs.

SUGGESTIONS

- 1) Abandon this extreme draft dog management plan including the 75% compliance rule
- 2) Honor the legislative mandate for the GGNRA which is for a National Recreation Area for a large urban population (aka, "maintenance of needed recreational open space necessary to urban environment and planning"). The mandate was never to provide a "National Park caliber experience".
- 3) Recognize dog recreation as a valid and safe recreational activity that should be supported by our National Parks and the GGNRA and reform the Park Service regulations acknowledging such
- 4) Before publishing the revised Dog Management Plan, complete and publish the GGNRA Foundation Statement and the GGNRA General Management Plan to provide full disclosure of the Park Services' understanding and intent for the GGNRA and to allow for meaningful communication to the public about the full extent of the GGNRA's plans for recreation.
- 5) Provide the public with the data supporting conclusions instead of just statements without support (e.g., increased off-leash dogs and chasing events). The public should be able to trust that the Park Service is using reasonable standards and not just be the promotion of a hidden agenda; and reasonable standards should stand up to reasonable scrutiny. Data should be presented even if it does not support the Park Services' agenda.
- 6) Fully disclosed the significance of the GGNRA protected species population to the recovery of the species and only reduce recreation if the recreation is proven to significantly impact the recovery of the species and other less extreme management changes are not available.
- 7) Monitor Park Service performance related to maintaining the recreation values using accurate visitation determination methods and unbiased visitor and population surveys. The current methodology seems to ignore many sites and only monitor a few entrance points and based on estimates from the 2002 Population Survey is significantly understating yearly local visitation.
- 8) Re-evaluate the current leash requirement closures and planned "Natural" area designations based on the recreation value of Ocean Beach and Crissy Field in comparison to the significance of these areas to the recovery of the Western Snowy Plover and the regional maintenance of other birds and wildlife, the actual evidence of impacts from dog recreation on the plover, the evaluation of other suitable protection options (e.g., education, signage, barriers, etc.).
- 9) Complete a comprehensive study of the recreational value of dog recreation (e.g. health, safety, culture, relaxation, etc.)
- 10) Conduct scientific studies to determine the actual impacts of dog recreation on the natural environment (e.g., effect of habituation, actual interactions and intensity, impact on individual and population viability, severity of dog trampling damages on vegetation and soil, impact of education/signage/barriers on human's management of dog, etc.).
- 11) Remove speculative, exaggerated, misleading, and anecdotal statements from the revised draft and rely on reasonable scientific studies of the actual incremental impacts from dog recreation that are not already attributable to other activities.
- 12) Define

an assessment methodology for evaluating impacts that relies on objective standards that consider both likelihood and potential severity and are not purely subjective standards. These standards should equally apply to other recreational activities and minimize the use of personal biases and hidden agendas. 13) Encourage people to get daily exercise with their dogs and to socialize their dogs (e.g., education and training programs, social events and activities, park services, etc.). 14) Justification for any reduction of recreation to be based on creditable evidence and justifications that is specific to each GGNRA park unit and that considers the recreational needs of people, including people with dogs. 15) Revise the DEIS justification to only use primary impacts and benefits instead of imply that all issues are significant. 16) Determine whether additional service (e.g., food service, training programs/areas, showers, etc.) would contribute to the recreational value at Ocean Beach and Fort Funston. Consider whether minimal park usages fees are appropriate as in other areas managed by the Park Service. 17) Re-evaluate the suggested alternatives dismissed from consideration and consider feedback from the public comment that requests that recreation is the mandate of the GGNRA and some impacts are acceptable to achieve that mandate. 18) Reject the ROLA plan in favor of the existing voice-control requirements supplemented by awareness programs. 19) Establish sound professional dog walking rules and regulations that enable safe but reasonable options for the community. 20) Implement programs to control poison oak and fox tails, particularly in crowded, high use parks; solicit assistance from concerned dog groups.

HONOR THE MANDATE OF THE GGNRA ENABLING LEGISLATION

The enabling legislation opening paragraph is:

"In order to preserve for public use and enjoyment certain areas of Marin and San Francisco Counties, California, possessing outstanding natural, historic, scenic, and recreational values, and in order to provide for the maintenance of needed recreational open space necessary to urban environment and planning, the Golden Gate National Recreation Area (hereinafter referred to as the "recreation area") is hereby established. In the management of the recreation area, the Secretary of the Interior (hereinafter referred to as the "Secretary") shall utilize the resources in a manner which will provide for recreation and educational opportunities consistent with sound principles of land use planning and management. In carrying out the provisions of this subchapter, the Secretary shall preserve the recreation area, as far as possible, in its natural setting, and protect it from development and uses which would destroy the scenic beauty and natural character of the area."

After some 40 years, the GGNRA park land is beautiful and diverse and the Park Service has not provided nor attempted to provide any scientific evidence that indicates dog recreation will have a significant impact on future generations' ability to enjoy the park as we do or on the natural environment. The main risk to our Recreation Area is that the Park Service will be successful in marginalizing recreation in the GGNRA and deprive over 3 million people of needed open space

for exercise and relaxation (aka recreation). The Park Service is diluting the recreational mandate as presented in the 2008 draft of a Foundation Statement that has not been enacted by the GGNRA but is being presented in the media as the purpose of the GGNRA instead of the actual enabling legislation mandate. The Draft Foundation Statement Purpose and what has been presented to the media is:

"The purpose of Golden Gate National Recreation Area is to offer national park experiences to a large and diverse urban population while preserving and interpreting its outstanding natural, historic, scenic, and recreational values." In the subsequent description of the Park Significance, there is no mention of providing the core value of the enabling legislation which is to provide "open space needed for an urban environment and planning" nor a mention of "recreation" at all. The Park Service continually attempts to imply that "recreation" should be constrained in the Foundation Statement document with statements like: "The enabling legislation establishing the park - recognizing that heavy use could impair its "outstanding natural, historic, scenic and recreational values," - reconfirmed the mandate of the Organic Act: "In the management of the recreation area, the Secretary of the Interior shall utilize the resources in a manner which will provide for recreation and educational opportunities consistent with sound principles of land use planning and management."

In contrast, the NPS policies state:

"Virtually every form of human activity that takes place within a park has some degree of effect on park resources or values, but that does not mean the impact is unacceptable or that a particular use must be disallowed. Therefore, for the purposes of these policies, unacceptable impacts are impacts that, individually or cumulatively, would be inconsistent with a park's purposes or values."

At the time the GGNRA was established, it was included in the National Park Service but was not a "National Park" nor was their claims of being a "National Park". If the National Park Service cannot accept the "recreation" mandate, I believe the President should consider transferring the GGNRA to an organization that can fulfill the park mandate and work with our urban community to preserve the recreational and environmental value of this "National Recreation Area".

The Foundation Statement is quite significant and any changes to park values should be agreed to before presenting these to the media or adopting them in more operational management plans such as the dog management plan. Per the NPS Policies 2006, the planning process should begin with the development of a foundation statement that is based on the park's enabling legislation or presidential proclamation and that documents the park purpose, significance, fundamental resources and values, and primary interpretive themes. The foundation statement is generally developed (or reviewed and expanded or revised, if appropriate) early, as part of the public and agency scoping and data collection for the general

management plan (GMP).

The Foundation Statement indicates that "We are dedicated to ongoing, dynamic conversations with the communities we serve. We will provide opportunities for meaningful involvement to promote better understanding and communication, discuss concerns, and express values and preferences when park decisions and policies are being developed and implemented." The Park Service has lived up to this value by soliciting feedback and listening; however, once the park service "listen" they virtually ignore the feedback of the mass majority as they have done with dog recreation. The Park Service management seems to have determined that the primary mandate of the GGNRA should be protected species propagations and any activity that impedes that goal should be politely eliminated even if they need to use misleading and unfair tactics to achieve their goals.

Instead, the Park Service is using misleading and unfair tactics to marginalize a subgroup that gets tremendous health and community benefits from the "Park of the People" and seems to be the most vocal advocates for recreation. I'm offended at how the dog community has been treated as a nuisance that doesn't even require scientific studies showing real impacts on others or the environment or attempting other management alternatives before the Park Service proposes such dramatic cuts.

It is unfortunately that the Park Service is forcing us non-political people to organize and to express how important these open spaces are for our diverse community's health and well-being. I'm a dedicated environmentalist and would never have expected to become so alienated from the Park Service or conservation groups. In my opinion, people like my family and other GGNRA regulars should be the spokespeople for the NPS Healthy Parks Healthy People campaign with our long walks in the GGNRA almost every day with our well-trained and behaved dog; instead it so bizarre that the Park Service is trying to ban responsible people like us from the GGNRA.

CONSERVATION VS PUBLIC RECREATION PRESERVATION

I've become super sensitized over the last few months to how our coastal recreation areas are so vital to making Bay Area people healthier and happier and safer and how the Park Service and local conservation groups are high-jacking open spaces that Congress mandated for "recreation areas". It is a significant concern that Ocean Beach parking lot traffic dropped 50% from 1996 (1.3 million) to 2010 (630,000) without any apparent justification, other than suppressive Park Service policies and lack of any services. Note that the Bay Area population increased by 4.7% from 2000 to 2010 per the US Census Reports. Fort Funston traffic counts, in contrast, increased by 20% from 1996 to 2010. The Park Service only uses visitation projections based on traffic counts so perhaps people are using different transportation methods today but the Park Service's lack of a methodology or concern for changes in visitation is also a concern; as well as that fact that

visitation is not monitored at many locations, and it doesn't seem visitation and user satisfaction is a key performance indicator. For my FOIA request for visitation surveys, the Park Service couldn't provide a single visitor survey, other than the survey designed to justify banning dog recreation.

Instead of sharing recreation in these areas, these "conservation hobbyist" are completely focused on their recreational hobby of changing the existing environment with natural plant restoration projects and creating new zoo-sized enclosures in city parks that highlight "protected species" which then gives them the license to turn park beautification projects into "conservation hoarding" as has been done at Ocean Beach and Crissy Field. The Park Service seems to now be preemptively extending the "conservation hoarding" strategy to the entire 80,000 acres and dramatically changing the mandate of the GGNRA without real public comment. The 2008 Draft GGNRA Foundation Statement, the Draft GGNRA General Management Plan, and the 2011 Draft GGNRA Dog Management Plan all highlight that the Park Service is marginalizing the recreation mandate of the GGNRA with little regard for the people. It is highly concerning that the Park Service issued a preliminary GMP in 2008 and received public comment and has not published the GMP three years later but is proceeding with this dog management plan without establishing and publishing the foundation. It is also concerned that as part of my FOIA request, they refused to provide the current draft of the GMP as required by law, which impeded my ability to raise awareness about the systemic marginalization of all recreation other than "stewardship".

The Park Service and these groups have shrewdly been hiding behind the words "protected species" because it seems even a whisper of the word, and the public and politicians are afraid to scrutinize their actions. The Park Service has also wisely omitted from the DEIS any recognition of whether an area is a critical habitat deemed by the US Fish & Game to be critical for the recovery of a species. Particularly with the Western Snowy Plover, it is not a critical habitat, and I doubt whether plovers resting in the narrow dunes is even conducive to the population's health and well-being with or without minor disturbances from recreation. There are bird sanctuaries nearby that are far larger and more suited to their needs; in fact, the bird sanctuaries in the East Bay are even larger than our 80,000 acre National Recreation Area and the undeveloped areas are miles wide instead of meters wide. Both Ocean Beach and Crissy Field are just narrow dune strips bordering on traffic or congested tourist pathways and any plovers in those dunes must be relatively habituated to human activity far more than plovers in remote areas.

Real conservation is important and so is public health and safety. The Park Service new Healthy Parks Healthy People motto is right on the money but needs to be more than a feel good motto. In 1972 in the GGNRA enabling legislation, Congress wisely recognized this need with "in order to provide for the maintenance of needed recreational open space necessary to urban environment and planning" and "shall utilize the resources in a manner which will provide for recreation and

educational opportunities consistent with sound principles of land use planning and management". Just as it would be poor judgment for the Park Service to reintroduce the native grizzly to urban parks because of the public health and safety risks; it is poor judgment to allow non-critical habitats and in some cases just "suitable habitats" for native and non-native "protected species" to be a justification for driving people out of an urban recreation area, which has been done at Ocean Beach and Crissy Field, and is now planned for the rest of our urban recreation area.

Even without harassment, it is reasonable to believe that wildlife is being displaced from any relatively small urban park with high visitation with or without dogs. It is OK. The problem is the Park Service is not demonstrating an understanding of the health and cultural role of recreational open space necessary to urban environment and planning. Preserving open space for recreation is as important if not more so than maintaining other National Park Service areas that don't support wildlife such as the Presidio golf courses, parade ground, sports fields, buildings, campgrounds, etc. Not every space needs to be focused on conservation, and there is no justification to marginalize recreation on virtually all of San Francisco's coast leaving San Francisco land-locked and people hostage to the US government; just because the Park Service doesn't want to be in the recreation business. There is no more of a real conservation reason to turn Ocean Beach from a recreation area into a "Natural" area than turning Golden Gate Park entirely into a Buffalo or a Grizzly Bear habitat with guided tours and stewardship programs to maintain the area.

What is most disturbing is the Park Service has not studied or at least is not providing any studies of the impact of dogs on any wildlife or protected species in our urban National Recreation Area, except the Western Snowy Plover and a minor study at Fort Funston. I expect this is because the impacts would not be measurable or would be insignificant, particularly in comparison to other human recreation or park activities. In 2007, the Park Service justified re-closing the Western Snowy Plover beach areas to voice-controlled dogs after reviewing their internal monitoring that they claim showed increased off-leash dogs and chasing incidents. Just as with the DEIS, they did not provide any measurement of the degree of disturbances to justify the closures, and I suspect in reality this highly secretive monitoring was merely some minor anecdotal evidence. According to Suzanne Valente, the Park Service refused to support their claims with evidence and to release the supporting data even with her Freedom of Information Act (FOIA) request. In reviewing the 2007 to 2008 ranger/park police incident details for Ocean Beach, I only found four incidents of rangers or park police seeing dogs disturbing Western Snowy Plovers even though they wrote up case reports with more than 400 off-leash dog owner contacts and likely saw many more off-leash dogs that they didn't pursue or report. I expect, however, that the rangers/park police would have interrupted and cited any actual disturbances of the plovers by dogs, particularly considering the Park Service's objective of excluding people with dogs.

Most dogs, walkers, joggers, fishermen and others are on the beach and it is likely that the resting plovers have habituated to their routine, non-eventful presence. I've walked the Ocean Beach Snowy Plover Protection Area (SPPA) beaches three times since January and have only seen people ocean-gazing in the dunes. When I asked the rangers at the DEIS open house about why the Park Service was not stopping people from being in the dunes (e.g., barriers), the response was it wasn't critical enough because it wasn't a critical habitat for the Western Snowy Plover. They also mentioned that the beach erosion was likely the major cause for the decline in Western Snowy Plovers at Ocean Beach. I'm still confused that the Western Snowy Plover population was at its highest in 1994 before the Park Service started trying to protect them (e.g., before banning dogs and when overall visitation may have been twice as high as today). Wouldn't it be bizarre if more people is actually a deterrent to the ravens and sea gulls that prey on plovers and recreation is actually beneficial to the plover in the SPPA.

The Park Service have conducted and released results for a biased study at Crissy Field designed to show even miniscule dog impacts and only showed that dogs on-leash or off-leash cause few disturbances. Walkers and joggers caused 79% of the 14 "disturbances" in this popular beach recreation area that is a major destination for tourists. The Park Service has completely ignored unbiased plover studies in the GGNRA, such as the Warren study from the University of Berkeley, that showed no significant impact on the Western Snowy Plover feeding time from recreation users, including dogs. The Park Service again ignores monitoring data showing declines in plover populations from the 2008/2009 to the 2009/2010 season despite reductions in recreation. Most disturbingly, the park service is so focused on proving recreation is a significant impediment that it is ignoring other disturbances which are likely more significant such as those by the plover's natural predators such as sea gulls, ravens, and wild canines. That being said, I believe the Park Service should focus on more holistic monitoring of the health of the entire eco-system including that of all wildlife and humans that rely on the health of these parks.

As a nature lover, one of the greatest joys of being in the GGNRA is experiencing the rich beauty of the nature that surrounds us; I want nature preserved but recognized that adding dog recreation has a negligible impact on existing nature in the parks other than encouraging more visitorship, and the existing wildlife has long adapted to our recreational use in these parks. Currently, dog off-leash play type areas are less than 1% of the GGNRA park lands and on-leash/off-leash dogs on trails probably impact less the 1% of the remaining park land. Just because the Park Service and some conservationists want to dedicate the parks to conservations and solitary experiences is not a justification for high-jacking our recreation area and unnecessarily impeding the intended urban recreation.

A major concern with the DEIS is the use of exaggerated, misleading and speculative language; particularly in regards to protected species. The following

are examples of these extreme biases need to be removed from all sections:

1) The DEIS claims that dogs have accessed the bluff above where Bank Swallows nest in sheer cliff faces near top; pet rescues have occurred over cliff, which may disturb the colony during breeding season when personnel reel down. There is no evidence of dogs and or humans digging at or collapsing the burrows, flushing birds from nests, and causing active sloughing and landslides that may block or crush burrows with the young inside. Dogs cannot reach birds from bluff; cliff rescues are rare no documentation that dogs or humans contribute to any other factors that may affect birds

2) The DEIS claims dogs could damage Mission Blue Butterfly habitat in the trail beds and adjacent to the trails/roads; protective fencing for habitat does not exclude noncompliant dogs. However, there are no known studies measuring the impact of dogs on the habitat. The rangers did not document any cases of dogs in or damaging the restoration areas

3) The DEIS claims dogs could gain access to closed lagoon for the Tidewater goby (fish), dogs along the shoreline could crush goby burrows, cause increased turbidity. While individuals would be affected neither the population and gene pool would not be affected, and there are no known studies measuring the impact of dogs on the habitat. The ranger narratives only documented one case with two dogs briefly swimming in the Rodeo Lagoon during 2007 and 2008.

4) The DEIS claims dogs can cause California red-legged frog (amphibian) eggs, juveniles, and adult life stages to be affected by trampling and suffocation by sediments coating the eggs and behavioral disturbance or causing injury or mortality to individuals. There are no known studies measuring the impact of dogs on the habitat.

Other points to consider include:

Dogs have little negative impact on the natural resources and do not pose a significant threat, if any at all, to the survival of protected species, or other wildlife, in the Golden Gate National Recreation Area. Similarly, they are not a major safety threat in parks, where the significant amount of serious incidents that are reported to rangers and law enforcement involve people, not dogs. Protected Species: The GGNRA Draft Dog management/Environmental Impact Statement plan (DEIS) has information about 17 protected species listed as federally or state endangered or threatened. There is practically no documentation that demonstrates dogs impede population growth of these species or cause significant detrimental impacts on them within the GGNRA. In fact, the DEIS frequently advances hypothetical situations that posit what possibly could occur to species and habitat with specious conclusions (See species chart).

Critical habitat: Loss of critical habitat is the primary threat to most imperiled

species. Four species referenced in the GGNRA DEIS (Tidewater goby, Coho salmon, Steelhead trout, and California red-legged frog) are found in areas of the GGNRA considered to be critical habitat. However, the DEIS provides no data that demonstrate irreparable damage has been inflicted on the species or its respective habitats by dog (or human) which on rare occasion has been observed in a creek that is closed. While it's normal for populations to fluctuate, Coho salmon is the only species among this group that has experienced a recent decline, which is attributed to a regional oceanic phenomenon.

Western Snowy Plover: The Western Snowy Plover is the snowy plover that lives within 50 miles of the Pacific coast from Washington to Baja California and is listed as threatened under the Endangered Species Act. Snowy Plovers do not migrate and live throughout the United States, and the Western Snowy Plover is not genetically different from other snowy plovers populations that are not on the protected list. http://fresc.usgs.gov/research/StudyDetail.asp?Study_ID=425 Breeding sites such as the South San Francisco Bay Bird Observatory (non-GGNRA) with 30,000 acre in Milpitas has 275 breeding adults and is one of 11 California breeding habitats with more than 40 plovers during the breeding season . See http://science.nature.nps.gov/im/units/sfan/vital_signs/snowy_plover/docs/GOGA_Plover%20Monitoring%20Brief.pdf AND http://www.fws.gov/arcata/es/birds/wsp/documents/siteReports/California/RU3_S NPL_Report_2010.pdf

The snowy plovers do not nest or breed in the GGNRA but some do at times rest and forage at the two most popular and crowded San Francisco city beaches, units of the GGNRA. In the 2009/2010 season, the Audubon Society's 20 hour study of the birds showed up to 166 people in one hour period at Crissy Field and on average 1.55 plovers. See <http://www.fws.gov/arcata/es/birds/wsp/plover.html>. Other GGNRA studies show Ocean Beach has an average of 27 plovers resting and feeding in the dunes but don't show human usage at this popular beach.

Less than 2% of the California population of Western Snowy Plovers sometimes forage at these city beaches, and there is no evidence that resting and foraging in the limited dunes in these dense urban areas is critical and is perhaps not even beneficial to the species or to the Western Snowy Plover population or the Pacific coastal eco-systems. These preservation efforts may also cause some harm as, the GGNRA posts requirements for all walkers, joggers, and other recreational users to stay near the waterline away from the dunes in the Snowy Plover protection areas (http://www.nps.gov/goga/planyourvisit/upload/sb-plight_web.pdf), which forces unnecessary feeding disturbances for almost all of other shorebirds, including some other protected shorebirds, using the beach for wintering or during migration. Beach erosion and lack of dune acreage seems to be the most significant factor that deters the plover at Ocean Beach. Plovers are impacted less by dogs than by motorized park patrols, construction, walkers, beach-goers, joggers, surfers, equestrians, and natural predators. In fact, in the Crissy Field study (20 hours),

only 1 off-leash dog (1 for 40 off-leash) even remotely disturbed the plovers in comparison to 11 disturbances by people (11 for 298 people). On-leash dogs (2 for 18 on-leash) also caused more disturbances than the larger number of off-leash dogs. There are no reports of a dog ever injuring or killing a plover in the GGNRA. The significant disturbance during 2010 season was the building of the Crissy Field WPA fence that resulted in the plovers leaving for the season.

ERRONEOUS JUSTIFICATION BASED ON PEOPLE THAT FEAR OR SIMPLY DISLIKE DOGS

People with a dislike or fear of dogs is not a major or compelling justification for banning or restricting dog recreation. If DEIS presents such arguments, there needs to be peer reviewed, unbiased social research studies completed for the GGNRA to demonstrated that this is a compelling justification and dog recreation has more than a nuisance effect that impedes these people visiting the park. The Sierra Club is misleading our membership that: "Asian and Latino park users report that they are less likely to visit parks for fear of harm from dogs and because of the presence of dog feces." which is offensive and manipulative portrayal by narrowly focused members of the environmental community. The report actually talks about barriers and does not measure the significance of those barriers in any way. It also fails to mention that the discussion groups were skewed towards recent immigrants and to those that have never used the GGNRA. Even I - with a tremendous love of the outdoors, people and dogs ? often mention not liking that a few irresponsible people aren't picking up dog poop but that doesn't mean I won't go because of poop or that it is more than an insignificant nuisance. I also dislike litter, horse poop on the trail, bicycles going too fast, fishing lines obstructing the beach, body odor, bad breath, intimidating park ranger behaviors, trucks on trails, unclean bathrooms, unmaintained trails, no trash cans, poor signage, too many people on the beach, fencing preventing me from going to the pond edge, etc. but that doesn't mean I think we should eliminate other recreational users, park personnel, nor anyone else's ability to go to the park.

Poor transportation and communication, unfamiliarity and different cultural norms, unfriendly park employees and visitors, fear of crime, and overly restrictive rules seemed far more of pervasive an issue than dogs for those in the SFSU study discussion groups. Dog barriers certainly tie in with the general discussions about some individuals' fear of the outdoors and the outdoors being unclean, however, positive exposure to the outdoors and dogs could help overcome those fears with most people. The study also talks about how attitudes change from first generation to subsequent generations which is supported by my recent conversation with a woman that lives steps from Mori Point in Pacifica that just returned from a trip to Thailand where she visited her family. Po (name changed) immigrated to the Bay Area and for some 30 years has loved her daily walks with her moderate sized shepherd-mix and small terrier rescue dogs, often off-leash, at Mori Point and Sharp Park. Her son, now in US intelligence, grew up going to these parks with their dogs. When her sister visited last year from Thailand, she initially intimidated

by the off-leash dogs but Po told her sister to basically "get over it, this is America" and her sister did. From being a PC volunteer in Yemen in the '80s and during my travels in Southeast Asia, I saw many feral dogs on the streets and understand why immigrants, in particular, would initially be afraid of off-leash dogs; just as it is normal to be afraid of almost everything that is so different in America or as I was of many unfamiliar things in Yemen. Po demonstrates that with a little time and positive interactions that dogs really aren't necessarily a long term barrier but are actually an opportunity for all individuals to integrate into our diverse community just like everyone else, particularly since a dogs are such social facilitators in these high visitation parks within neighborhoods along the coast. Reading the Park Service dog plan has made me seriously think about people with phobias and how dog's impact their experience. Soon after reading the plan, I was trying to keep my balance as I scrambled down a steep, rocky, washed-out fire road deep into Cattle Hill and was thinking "what person that is afraid of dogs would be here". As ranger LaSalle proudly writes in most his \$100 off-leash tickets, Sweeney is a "wildlife haven with big animals" even after a generation after generation of dog recreation. The only people we saw were two young girls pushing mountain bikes up the trail were delighted to take a breather and pet Ella, and a woman with a reactive dog that we easily avoided. The real danger was sliding and ending up in a cast or maybe meeting a mountain lion. Both of which I've done in my life. The dense spring grass was up and, other than the trail, the vegetation looks untouched except for hundreds, if not thousands, of mole hills and wild fur-filled canine poop. Why on earth cram all dog people into a few small areas when remote hiking is so good for the human soul, and the people and dogs have such little impact on the remote areas?

I felt like the European peasants must of felt when they were excluded from the huge royal forests; surely, the park service and their extreme protectionist alias won't turn the more remote areas into their own private preserve. Is this really about dogs or is it about "conservation hoarding" and keeping people off their land? Ranger LaSalle also tells people "this park belongs to the National Park Service." I get that many in the Park Service dislike dogs, and probably that people with dogs as well as others that are using the parks for active recreation and not for their desired conservation or observation. However, discriminating against any person, just because they simply dislike them is not a value that the Bay Area culture embraces nor that the US government should embrace.

The DEIS discuss dogs barking impacting the natural soundscapes and the smell of urine. Both seldom occur and certainly not at a level to severely impede people's visits any more than the sound of children laughing or roughhousing or passing a poorly maintained toilet. I'm in the parks almost daily and seldom hear a dog bark and only smelled urine a few times at Fort Funston after the first rain on the season. When I looked at the Yellowstone winter season general management plan environmental impact studies, the Park Service recognized a potential problem and actually did scientific studies of the noise and fumes from snowmobiles. In this case, the park service is just pulling out everything they can possibly think of to

convolute the DEIS and make it difficult for people to understand actual concerns, If the Park Service truly believes Bay Area residents and overall visitorship is severely impacted by any recreational activity, they should go beyond anecdotal evidence, such as my biased stories and most of the biased information in the DEIS, and conduct unbiased scientific social research and environmental research in the GGNRA to determine the real barriers and opportunities and the impact that has on GGNRA visitorship and not simply present misleading and biased survey excerpts and antidotal evidence targeting dogs.

Certainly the SFSU study nor the 2002 population study (questions designed to bias the results) are not substantial enough to draw any conclusions that dogs are a significant barrier for the general Asian or Hispanic/Latino population or any population. When I studied the responses from self-identified Hispanics in the GGNRA 2002 population survey, dog ownership resulted in significantly more days spent in the GGNRA, just like others with dogs. Instead of predominantly white Park Service management and conservation groups pretending to "channel" for the disadvantaged in their efforts to manipulate the public, the Park Service should seriously look at the demographics of people submitting public comments because the GGNRA is important to a diverse group of people with dogs. I'm white but I'm offended when I look around the parks and at the dog rallies and see the diversity that is united by our canine companions. The seniors, children, people with disabilities, and minorities benefit from dog recreation as much, if not more, than others.

IMPACTS OF ADJACENT LANDS

I worry when I look at a map of the Bay Area and all the closures of parks to people with dogs and particularly about Stern Grove and McLaren. Neither will easily support the current Fort Funston visitation or the visitation caused by the increased leash enforcement in San Mateo County. Both suddenly will become more desirable than the new, tiny Fort Funston off-leash area. People with dogs are being discriminated against in more and more Northern California city, county, state, and national parks, which only concentrates any problems. Closing parks to people with dogs must stop. While the NPS has represented that dogs are a safety risk in the GGNRA, the actual law enforcement data actually shows that the GGNRA dogs are well behaved considering the high usage by people with dogs, and there are only a few incidents that rise above nuisance type problems. In comparison to other recreational activities, dog recreation is safe and gets people out in the parks on a daily basis while creating safe dogs for the community.

UNSUSTAINABLE IMPACT CLAIMS

The NPS is discriminating against people with dogs by not recognizing dog recreation as a high use recreational activity for the GGNRA. The NPS represents that the current dog management plan is unsustainable. After reviewing the DEIS, visiting all but 3 of the park units, reviewing the law enforcement data, and the

Western Snowy Plover research; the only unsustainable aspect of the current GGNRA dog management plan is the self-inflicted NPS conflict with the people with dogs over leash laws and areas closed to pets. Instead of addressing that problem, the DEIS plan will only exacerbate these problems within the GGNRA and adjacent lands.

ROLE MODEL FOR OTHER OPEN SPACES

The existing San Francisco model should be the role model for other communities on how to integrate dogs for a healthy and vibrant community. On the whole, the GGNRA dogs are well exercised, socialized, and trained, and dog owners are responsibly managing their dogs. While some unfortunate incidents do occur, those incidents are rare and only a few are more than nuisance type incidents. Dogs inspire people to lead healthier lives and to interact on a daily basis with the community. While some people dislike or are afraid of dogs, there are many parks that don't allow dogs or require the dogs to be on leash. There will always be people that dislike others for whatever reason; however, suppressing dog recreation, particularly off-leash, will only lead to more dogs and people not being socialized to each other and increasing the number of dogs and people with fears.

Correspondence: I support Alternative D. I live near Ocean Beach and have seen too many incidents of dog fights, uncollected dog excrement, children being knocked over, and dogs running through people's picnics. Although I know that there are many responsible dog owners, they are not willing or able to police the irresponsible dog owners. I also think that many dog owners overestimate their ability to control their dogs with vocal commands. I routinely see owners with off-leash dogs that do not appear to be under voice control, even when it is clear that their dogs are bothering others. Letting dogs run off-leash is a privilege not a right and this privilege has been abused.

Correspondence: I think GGNRA accusations of canine erosion of Fort Funston is a mask.GGNRA has not maintained Fort Funston.The roads are in need of repairs.The benches are in bad shape.There is no place to have a picnic lunch(a table under the trees in bad shape).GGNRA should explain how the funds are spent.I also think Frank Dean should be replaced asap.Under his administration Fort Funston has deteriorated. When Pres Nixon created

GGNRA,the Federal Government saw a need to protect these urban recreation areas from commercial development for the locals to enjoy.A role the Feds should play.Almost 40 yrs later,the Feds say,we know best.We don`t listen to locals.We will tell you what is legal.An obvious over use of power ignoring the original intent of creating GGNRA. The excuses we hear all the time from Rangers,I have a dog.Frank Dean has a dog Ranger.I feel sorry for these dogs who never get a chance to run loose and meet other dogs. If the GGNRA insists on new rules,SF should take back Funston/Crissy.The GGNRA would not be able to enforce the new rules pending litigation thru the courts.

Correspondence: Dear Superintendent Dean,

I understand the GGNRA would like to further limit the few areas in San Francisco where my dog can roam freely and play with other dogs. Indeed, it seems like the new plan also cuts down on the areas my dog can be. This plan should not be implemented for a number of reasons, including the following:

- (1) dog owners and their pets are already the easy scapegoats of plans which have grossly limited the parks where dogs can be, both on and off leash;
- (2) the study which forms the basis for the plan, from what I can tell, does not fully demonstrate that dogs are the cause of any significant environmental impact;
- (3) the study does not consider the effects of the proposed plan on responsible dog owners, who have a right to enjoy our parks with their close companions -- what happened to the enjoyment of the parks by residents, and our health and well-being that comes from being able to exercise with our pets?;
- (4) the plan does not consider a strategy whereby only dogs that could even remotely be considered a problem - i.e., those that are overly aggressive and not under their owners' control - are limited in their use of GGNRA areas; and
- (5) the study doesn't fully consider other possible sources of harm to the environment, such as bicyclists and people who break park rules with little regard for the environmental impact of their actions.

I am one of many extremely responsible dog owners who are offended by

the proposed plan, and honestly believe that curtailing the rights of dogs and their owners will have little effect on the environment. Please take into account the interests of all SF residents when implementing a plan to protect our parks and beaches, and don't allow us to be the target of even more rules based on an incomplete and, in my opinion, biased study.

Thanks for reading this, and I hope GGNRA makes the right decision in this matter.

Correspondence: To Whom It May Concern:

Although I no longer live the Bay Area, my dog and I enjoyed numerous hikes through the San Francisco beach areas - particularly Fort Funston and the associated beach area. I was alarmed to hear that there was discussion of making the area restricted to leashed dogs. While there are different variations in the proposals, I think it can be summed up that the new plans place far more restrictions on the area for dogs and dog owners than have been in place before.

Understanding that there are long-term environmental impacts to be considered, I can only relate my experience with the area when there were no "official" restrictions in place. At that time (approximately a decade ago), it was understood that dogs were leashed in the parking lots and areas leading to the dunes/beach area. Common logic prevailed: if a dog was unleashed, s/he could be hit by a vehicle or attacked by another dog. There was minimal policing of the area; individuals policed themselves - including staying off regrowth areas and sensitive dune sites. Dog-owners picked up after their dogs. If they did not, someone would remind them of their owner duties, or a "good samaritan" would do the pick-up. In other words, dog owners took the responsibility for the area. The reward was that the area was open for all and harbored a sense of community.

I'm concerned about these new proposals in limited roaming areas for dogs. Not only are the proposals costly (maintenance of site, policing the area, etc.), but by placing leashing restrictions no more and more areas, we are limiting the exercise/running drive in dog and frankly the rights of tax-paying dog-owners. While there are hundreds of places hikers and bikers can roam without dogs on trails, the number of open areas for dogs is ever shrinking. Where are these dogs to play and exercise. Small city "squares" within parks are not the answer - anyone with any knowledge of dog behavior knows that these areas are not conducive to socialization. Small

and limited spaces increase territorial issues which lead to dog aggression.

In my years taking our Rottweiler to Fort Funston, she never got into a fight with any dog. Why? Because she had the ability to run, exercise, and escape a potentially threatening situation (not that one arose). It was this relaxed atmosphere that became such a treat for both us and our dog.

Please reconsider putting any regulations in place at Fort Funston. It's important for the dog community and for the community as a whole.

Thank you.

Correspondence: I have an active Labrador Retriever and own a home a half mile from Ocean Beach. We go there EVERY day. We run/walk from Santiago Street to the Cliff House and back. I have been doing so for twenty years. I CARE about this beach and all the creatures on it. I donate annually to both The Marine Mammal Center and to the International Bird Rescue and Research Center. My dog is leashed whenever she poses a threat to birds even on the "off-leash" area. Keeping Ocean Beach clean and a welcoming environment for flora, fauna and people is critical to me. My dog and I depend on this space for our wellbeing. Our social life revolves around the other caring beach people. Our appreciation for Ocean Beach is acknowledged every day and this beautiful space is never taken for granted. We watch out for issues that need attention and contact the beach patrol, GGNRA and TMMC when necessary. We have created a friendly, cohesive community. This Dog Management Plan assumes that millions of dogs are invading/threatening Ocean Beach and therefore must be prohibited. This is totally false. In reality, there are very few of us on the beach regularly. The weather and surface conditions are not inviting to most people. Only on exceptionally warm days (which are rare) is it crowded. GGNRA needs to understand that Ocean Beach is the western edge of a very dense urban city. This is San Francisco-a destination- not a rural area! People come to our city from all over the world and it's amazing how much JOY they get from seeing my dog in her element. They feel FREE NOT FRIGHT. All the GGNRA's inflated concern is invented. There are no more people with dogs now than there were twenty years ago. Ocean Beach is as wild and wonderful as it always has been and I want to maintain that. This draconian GGNRA plan is so suspect and potentially so damaging to those of us who live here. It's shocking to me how wrong this bureauratic nonsense is. Please realize, at the very least, this plan is UNREALISTIC and UNREASONABLE!

Correspondence: may 30th 2011 Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022
Dear Mr. Dean, I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law. The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded. This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others. The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation.

Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.

Exclude speculative, exaggerated, biased, or misleading statements and studies.

Provide reasonable ways to address any significant adverse impacts from recreational activities.

Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).

Enable professional dog walking and align any professional dog walking rules with county or city regulations.

Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

These are my personal comments and observations regarding this plan:

With less than 1% of the GGNRA being used for off leash dog walking purposes, it seems only fair to keep the these areas used in their current state.

A joint effort of community meetings between Off-leash Dog walkers (both professional and non-professional) and the NPS could be used to address any problems that arise from the current use of off leash dog walking
Sincerely, Erik Heise erik heise (name) (address) San Francisco, california 94116(city, state, zip)

Correspondence: Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022 Dear Mr. Dean, I am writing this letter to voice my opposition to the proposed GGNRA's draft dog management plan. I have read the plans for the areas that my dog, Monkey and I go to on a regular basis and their implementation would severely interfere with our quality of life. For the past two years, since Monkey was rescued, she and I have spent countless hours at Crissy Field, Ocean Beach and Fort Funston. These places have been instrumental in bonding me with this animal for life. When I first brought her home she was six months and had never been taken for a walk. She came from a 'backyard breeder' who sold her in a yard sale but soon (after a foreclosure) she ended up in the cages of a Vallejo shelter. She had little trust for anything human and that included homes and pretty much everything inside of them. Her fear was so acute in the first six months living with me and my husband that she would not come downstairs willingly and oftentimes had to be carried outside before she would walk. So in the beginning of our friendship it was these open spaces of fresh air and nature-filled oasis that allowed her to be free from the anxiety that being indoors brings her. Only outdoors did she show life and happiness!

Two years have gone by since Monkey has in fact rescued me. Because I have found that just like Monkey I am at my happiest in these open spaced, nature-filled oases. Monkey still struggles with wanting to be outdoors all the time but she has learned to recognize 'Do you want to go to the beach?!'

I know Monkey is just one dog but her story or similar ones are repeated thousands and thousands of times over in this beautiful city we all share. Thank you for taking the time to consider us.

Sincerely, Dorothy R. Adams

Correspondence: I am writing to oppose the GGNRA's draft dog management plan. I have lived in Muir Beach for the past 11 years, and have two dogs as part of my family. Twice each and every day, our dogs are walked on the beach or run on the trails. Our house directly overlooks the beach and we have a clear view of the beach activities. After reading and reviewing the proposed plan, I believe that it is not based in fact and it relies on speculations and misleading statements. I believe that it will restrict my freedom and rights as a woman and as a dog owner. While I can appreciate that some people desire a "dog-free" experience on local beaches and trails, that option is already available at 99% of GGNRA lands, with the larger public beach at Stinson and most of the surrounding GGNRA trails already dog-free. In contrast, Muir Beach and the Coastal trails adjacent are the only dog-friendly options which remain in Southern Marin. I believe that the GGNRA can accommodate both recreation and conservation and its name GGNRA actually includes the very important word 'RECREATION'. It was designed as an urban recreation area for residents of the Bay area to recreate. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

The proposed plan disregards the health and well-being of people, dogs, and our community of Muir Beach and the surrounding communities who frequent the area. It arbitrarily excludes the residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and women like me who feel safe while enjoying the environs. Safe from not only animal predators such as coyote and cougars, but also menacing men who can be found lurking on the trails.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

- Honor the original 1979 Pet Policy.
- Exclude speculative, exaggerated, biased, or misleading statements and studies.
- Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.)
- Eliminate "compliance-based management," which will

allow additional restrictions to be implemented without any public input.

As a resident of Muir Beach I walk the beach and the surrounding areas EVERY day usually twice each day with my dogs - I propose that the GGNRA: - continues to allow off-leash beach access for dogs. - maintain the dog-friendly Coastal Fire Road and Trail adjacent to Muir Beach - request an additional dog-friendly access of the Coyote Ridge Trail to Miwok Fire Road which would allow hikers with dogs to cross from Muir Beach into Mill Valley. - dog litter bag dispensers and waste receptacles placed at the footbridge entrance to the area. - Increased signage and education efforts provided by NPS so that all visitors to these areas are aware of current rules and regulations. Specifically: a large sign at the footbridge entry to the beach which clearly defines beach rules for all visitors.

Unlike an outright ban of one segment of the population, as is proposed in the NPS Preferred Alternative D, these efforts serve to educate and inform all visitors to the area, representing a true spirit of stewardship for the land. Additionally, these efforts will negate the need for costly reinforcement of new regulations. The preferred plan states that "off-leash dog walking can occur at a small beach area on county property adjacent to the NPS beach". This area is called "Little Beach" and it is not accessible without crossing the main beach or driving along neighborhood private roads. Most of the time, the rocks are impassible because of surf and tides. The "social trail" from Pacific Way to the north end of Big Beach is a steep, hazardous, rocky cliff pathway, with no handrails. There is no public parking on Sunset Way or Pacific Way. All lanes are fire lanes. Extra and illegally parked cars would create a hazard for the surrounding community in terms of blocking access to emergency vehicles. For those who would arrive on foot via the road, there are no amenities or services for Little Beach. No trash cans. No toilets- not a reasonable alternative. Formally stating and implementing such a plan would require appropriate impact studies and input from the surrounding community.

Thank you for the opportunity to comment.

Correspondence: I am familiar with two areas of the plan: Baker Beach, and Crissy Field, so my comments will be mostly about those areas, though I think my points are relevant for the entire plan.

1. Regulated Off-Leash Dog Area - I assume this area would fill up with

dogs, like many of the city dog parks do. I've heard stories and witnessed plenty of incidents of dogs who are not controlled by their person, and these areas get pretty stinky too. I would not favor a ROLA in any of the areas under consideration.

2. Professional dog walkers - I think professional dog walkers should be prohibited from all areas under consideration. If they are allowed, I think they should be required to purchase a license for walking their dogs in GGNRA areas. In addition, I think the number of dogs they walk at one time should be regulated. 10 dogs make a pack. A pack of dogs is very different from an individual dog with its person.

3. Dogs under voice control - I favor the plans that include areas where dogs are allowed off-leash, as long as they are well-controlled by their person. No one should have more than one dog off-leash at a time.

4. In addition to the above comments, regardless of what plan is decided upon, I would favor the restriction of no more than three dogs per person. Period. And never should one person be allowed all three dogs to be off-leash at one time.

I am a dog owner. I love dogs. I think that for one person to be responsible for 10 dogs at a time is not fair to the dogs, and not fair to the people and other dogs that they encounter.

Thank you for the opportunity to communicate my views.

Correspondence: Frank Dea, General Superintendent: GGNRA

Engendering respectful collaboration among GGNRA stakeholders is the responsibility of GGNRA leadership and the National Park Service. For the first time since GGNRA establishment, I am inclined to believe that the City and County of San Francisco may be the more appropriate steward of GGNRA lands within our boundaries. I am saddened by this fact. I have been an active supporter of the GGNRA since its inception. Five generations of my family have enjoyed recreational time along our Ocean Beach corridor (since the late 1850's). I will provide a "map" to the evolution of my thinking on this topic below. Salient points will be highlighted so as to make a perhaps "too long" letter more accessible.

1). The GGNRA is designated a 'recreation area' for specific reasons. The mission of open space within an urban area is unique. This mission must reflect and balance the use requirements of a broad spectrum of stakeholders. Successful support of the GGNRA mission will not occur without strong stakeholder understanding & acceptance.

2). The City of San Francisco is one stakeholder in the GGNRA. This city has a large population of companion dogs, whose service is invaluable. As a licensed nursing home administrator, I can attest to the positive role of dogs in the lives of both independent elders and those who live in supportive environments. "Hug a pet" dogs spend hours each day providing therapy for institutionalized adults. They are rewarded for their work with recognition of, & response to, their needs. Many of these animals socialize and play at GGNRA sites. Large numbers of elders bring their dogs to GGNRA sites, as well. For many of these elders, their dogs open the door both to socialization and to the formation of community support networks which evolve through

their recreation areas. Aging in Place networking is now a popular movement, but vital informal networks were forged through dog walking sites beginning over 25 years ago. You can find such a support network by simply visiting Fort Funston and observing use patterns. Dog guardianship is an intergenerational activity. Therefore, community support networks rooted in this activity are also intergenerational and benefit the full community.

3). Acknowledging & planning for the varied the needs of urban dwellers and their companion pets is appropriate.

I very much appreciated the opportunity to review the plan with GGNRA personnel & private contractors provided during the spring. That being said, it was clear that seemingly all stakeholders had resorted to the use of "talking points", which indicates that the concept of successful collaboration in seeking the greatest common good had been abandoned. I was disappointed to discover mutual distrust between groups which should be focused on forging a inclusive plan incorporating recognition of all points of view with respectfully agreed upon & accepted compromise forged between disparate stakeholders. I believe that the GGNRA leadership's mission is to successfully develop collaborative models. Successful meeting models focused on collaboration between disparate stakeholders have, of necessity, been developed within San Francisco. As a neighborhood association president, I participate in such meetings routinely. National Park & :GGNRA leadership should learn to apply this successful model of collaboration as responsible public stewards of our shared open spaces. 4). While I understand that the GGNRA is a national recreation area, I must express my belief that comments from stakeholders many miles distant should not be equally weighted. I will provide an example supplied by a park rep. who cited a family from Chesapeake, Md. which were very distressed by the presence of dogs while visiting Fort Funston. They stated that the dogs were unruly, prevented their accessing the beach area, caused an allergic reaction in one of their children, and finally stated opposition to having unleashed dog recreation as this prevented them from enjoying time oceanside. Clearly, this family found Fort Funston while unable to find Ocean Beach, accessible from the Cliff House to Sloat Blvd. Their input is flawed and their use minimized by constraints of both geography and time.

5). Responsible stewardship requires full spectrum responsible use of limited resources. I will refer you to the SF RPD experience at Noe Courts in the early 1990's in support of this position. Noe Courts stakeholders fought each other until this hard lesson was learned. Dog owners and Coleman Advocates refused to compromise, wasting their energy on confrontation. In the end, park use was limited to only one of these stakeholders & everyone ultimately became a loser. In a short time, the park was overrun with less respectful , irresponsible users and the park became

dangerous for all residents of the neighborhood. This reality forced respectful collaboration and compromise among all stakeholders and only then was the full community able to enjoy their shared open space.

The presence of dogs and their human companions provides a committed stakeholder group which can monitor and maintain an area. In an age of limited financial resources, the community which spends the greatest amount of time at Fort Funston can also become the community which monitors, under the guidance of and in cooperation with park leadership, the quality of life for all at Fort Funston. Without the presence of those recreating with their dogs, this area will quickly be taken over by other, less respectful and responsible, populations. Fort Funston offers a rich environment for homeless encampments and drug dealing. Infection control and crime control will both become unmanageable on this tract of land without the high use pattern of the dog companion population. As a native plant enthusiast, I can guarantee you that I do not spend as much time working on native plant tracts as I do walking my dog when I have one.

6). While not currently a dog guardian, I have been one over the years. My last dog and I delighted in daily visits to Fort Funston. I am also a native plant gardener and an amateur wildlife/insect photographer. Thus, I appreciated and routinely spent time observing the restored habitat areas in Fort Funston with my dog under voice control. I clearly remember the distress the dog walking community experienced when, over a period of a week, the Fort's foxes were found eviscerated. At first the concern was that our community was responsible and that we must act to end the impact of irresponsible dog guardians. Ultimately, investigation proved that coyotes had entered the area. The presence of these wild animals caused a decrease in the presence of other wild life. I would hope to see responsible collaboration amongst all stakeholders, such as occurred during the time of the fox eviscerations, encouraged by GGNRA leadership. I believe that collaboration among stakeholders, leading to respectful use by all groups, will be the ultimate measure of success for urban recreation areas.

Respectfully, Chris Dillon San Francisco, California

Type:

Correspondence: May 30, 2011 Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022
Dear Mr. Dean, My name is Lyn Stromberg. I am a 59 years old physician, currently living in Berkeley. I have lived in the Bay Area since 1980 when I came here to attend Stanford University School of Medicine. I fell in love with the Bay Area and the innumerable ways in which it is unique; I feel fortunate to be able to call it home. I have two vizslas, a high energy breed that requires ? and revels in ? the kind of exercise that can only be achieved on off leash runs. We come to the GGNRA at least a couple of times a month and most often visit the Fort Funston area. My dog-owning friends with whom I walk and I take great care to be responsible dog owners ? keeping our dogs under voice control, cleaning up after our dogs and ensuring that other non-dog owners sharing the trails enjoy their experience as well. Often, non-dog owners will stop us to ask about our dogs, requesting to pet them and expressing that they cannot own their own dog for various reasons but like to come to the off leash areas to enjoy them and see them run free. I am deeply concerned that the GGNRA's current preferred alternative seriously strays from the intent of the GGNRA to be a recreational area serving the multiple diverse needs of the population. Fewer individuals would utilize the GGNRA if these proposals, as they now stand, were to go into effect; I know I would come less frequently. Certainly, decreasing the careful use and enjoyment of this area cannot be the intent these changes. If so, this is a disservice to the citizenry.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions. It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option. The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal. The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The

fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents. After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program. Thank you for your consideration. Sincerely, Lyn Stromberg Berkeley, CA 94702

Correspondence: I strongly object to the proposed establishment of a ROLA in Oakwood Valley for several reasons. First, its construction and use will destroy the existing habitat. Second, it will increase the number of cars in an area where there is inadequate parking, which will cause further destruction as car owners will undoubtedly create their own parking spaces. Third, it is my experience, as a runner and dog walker in both Oakwood and Tennessee Valleys for the past 26 years, that an increasing number of dog owners do not obey the rules, and I would discourage an increase in the number of dogs and dog owners in the area for this reason. Mill Valley already has an excellent dog park near the Middle School. It is a large space with water access. Rather than create another dog park, I suggest we encourage use of this park, and protect the precious habitat of Oakwood Valley.

Correspondence Type: Web Form

Correspondence: I am very grateful that this plan has been created, and see much care and consideration of all aspects in its making. I am fully in support of the plan as it is, and I have further comments that I appreciate having the opportunity to

share.

I often take walks in the Presidio, and have felt the impact of dogs in my experience. It is common for me to see individuals with 7 to 9 dogs with them, usually at least half off leash. I feel strongly that professional dogwalkers, or even private citizens who own so many dogs, should not be allowed to walk with more than 3 dogs without a permit, and never with more than 5. I feel that professional dogwalkers are benefitting from all of the work done to care for the parks, and are making their profit at the expense of the public. I feel that they should be licensed and should pay for a permit for any use of the parks for walking the dogs, so that they are contributing a portion of their profits to the care and maintenance of the parks. All of their dogs should be on leash, except in designated off-leash areas.

In my personal experience, no matter where I am in the park, I rarely get to have a dog-free experience. I like to go to the park to experience peace and solitude, away from noise, and to enjoy the beauty of the landscape. However it seems like wherever I go, I need to deal with someone's dog running up to me - whether cute or intimidating, they are interrupting my experience - and are usually accompanied by their owner's shouting at them in an attempt to demonstrate their responsibility and control - which is usually futile and further distracting.

Sometimes dogs are threatening or make me feel stressed and nervous, and I have no recourse. Never mind the all too frequent unpleasant experience of unavoidably seeing dogs defecate or urinate. Not what I went out for. It seems that dog owners feel that all people should be as charmed by their dogs as they are, and seem insensitive to their impacts of noise, aesthetics, and experience of others who do not share their canine appreciation.

Dog feces make the park feel unsanitary, and have an impact on other species, such as butterflies, that live their lives by their sense of smell. They change the chemistry of the soil which can effect plant populations. They make parents uncomfortable having their children touch the plants along trails -when contact with plants is one of the great things an urban park makes possible.

What I really wish for, is to add to the plan, certain dog-free days, even in areas that allow dog use. For example - East Beach, which often feels like a dog run. For people who are seeking an undisturbed-by-dog experience, we are relegated to the small Snowy Plover refuge area - which doesn't seem right. Also for the health, recovery, and sanitation of these dog-used areas it would be beneficial to have dog-free days.

I feel that the city itself needs to start to set limits on the number of dogs its

public landscapes can support - licensing and having a saturation limit on the dog population, but this is beyond the scope of this plan. Thank you for making an effort to begin the important process of acknowledging the impact that uncontrolled dog-ownership has on our public landscapes, and the public who uses them, which include people like me, who would like to experience nature without dog interactions - and also the flora and fauna who rely on these landscapes as critical habitat refuges.

Correspondence: May 30, 2011 Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022
Dear Mr. Dean, I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

I absolutely love walking my Labrador at Fort Funston and at Crissy Field. I am a responsible dog owner. The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded. This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others. The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to: Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. Exclude speculative, exaggerated, biased, or misleading statements and studies. Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). Enable professional dog walking and align any professional dog walking rules with county or city regulations. Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input. These are my personal comments and observations regarding this plan: (here's

where you fill in your own personal story and what you've seen when you've been out at the GGNRA) Sincerely, Laura West San Francisco, CA 94114

Correspondence: Regarding your preferred dog management plan: quite frankly I do not trust the GGNRA or NPS to review/analyze the comments submitted to the GGNRA/NPS regarding this plan in a fair and objective way. I heard that Frank Dean made the statement he would rather turn the lands back to the City (my preferred plan) than see them over run by dogs. And we're supposed to have faith that the GGNRA/NPS will review the comments honestly? If there are more comments in your favor are you willing to take a hard look and see how many are from people not even in the Bay Area? It's easy for the so called environmental groups to call on a nationwide letter writing effort supporting your plan when those people haven't set one foot in the areas that will be affected. In short, we don't trust you and we want objective oversight over the analysis/review process. You rigged the rule making process and quite frankly you've probably also rigged the review/analysis process. We demand an independent audit of all the public comments submitted.

Correspondence: Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the

community. It arbitrarily excludes the Bay Area residents who exercise regularly in the GGNRA with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to: ? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. ? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. ? Exclude speculative, exaggerated, biased, or misleading statements and studies. ? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). ? Enable professional dog walking and align any professional dog walking rules with county or city regulations. ? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

I've been taking my dog to Fort Funston for the 2 years I've had her. I make sure to pick up after her, prevent her from digging, and leave the area the way we found it. We've never seen a snowy plover, let alone chased one or disturbed its nesting area. Have you seen how many dogs go to Funston every day? If you put all those dogs into one small off-leash area, it will be a lot less enjoyable for both the dogs and their owners. And the stress on other city parks will be unbearable. Please keep Fort Funston open to people and off-leash dogs.

Sincerely, Margaret Crandall SF, CA 94107

Correspondence Type: Web Form

Correspondence: Thank you for this opportunity to comment on the GGNRA Draft Dog Management Plan. I and my husband have been walking our current dog, Toby, and previous dog, Chrissie, for over two decades at Fort Funston. Fort Funston is a most special place for us, providing a place to exercise our dog, socialization of our dog with other dogs and people, as well as providing us with an opportunity for us to get exercise and connect with a wonderful community of people. I am very concerned that the GGNRA Draft Dog Management Plan overly restricts access of dog owners to a unique oasis in an urban area which provides a healthy outlet for dogs and their owners. I am also concerned that the new rules will only increase the likelihood of an increasing tendency in recent years for Fort Funston to be locked to completely restrict and block access to anyone in the early morning hours.

I am both a person who owns a dog but also is deeply concerned about our environment as well as need to share the limited gift of places like Fort Funston to be enjoyed by all of nature's creatures and vegetation great and small. I understand the balances and compromises that must be made by the GGNRA. But I also know that I and fellow dog walkers have been among

the most responsible and passionately caring folks for the existence and preservation of Fort Funston and other beaches in the GGNRA. We have worked hard to take personal responsibility to keep the area free of litter and dog poop with a glad willingness to pick up after others including many non-dog walking users of the area. As a whole, dog walkers in our community are polite, caring, and the greatest proponents and defenders of preserving natural parks and open spaces during a time that our state and nation would eliminate such places as an unnecessary expense.

So, I am asking that you reconsider your plan to look at better and less restrictive ways to serve the entire community and natural inhabitants of the GGNRA. I ask you to reconsider proposals that give GGNRA's major lovers, protectors, and users including the dog walking community a place that all can enjoy, protect, and improve what GGNRA provides. I ask that if there are any ways that in particular, the dog walking community is falling short in its responsibility in preserving and ensuring access to GGNRA, that it be given fuller opportunity and sufficient time to come up to the plate to address your concerns. I ask that you listen to the San Francisco Supervisors recommendation in their 10 to 1 vote to oppose GGNRA Draft Dog Management Plan.

Thank you again for the opportunity to comment.

Best regards, Derrick Kikuchi Daly City, CA

Correspondence: I am a San Franciscan resident with a 10 year old dog named Rudy. She is new to San Francisco having lived with my father for 10 years until he just recently died from cancer.

Living in the Mission is a VERY challenging place to walk Rudy. Its overwhelmingly concrete, crowded and stressful (on me and on my companion). Often we take car trips to more peaceful places like Bernal Hill

and Baker Beach. These places afford us the necessary opportunity to spread our wings and explore off-leash. When we finally get to take her leash off, Rudy is happy and harmless and very well watched (by me) in these spaces.

On a factual note, from what I have researched, there are no hard facts that dogs are detrimental. I have seen human beings being more detrimental to natural environments (plastic, noise, biking) than their pet companions. Based on my observation, my dog has had little to no environmental impact on the areas she has been off-leash in. Additionally, based on my observation, human activities I have observed have had a far more SIGNIFICANT impact on the environments.

I have read that dogs have been off-leash since the 1800s - so I ask why change this now? I see no immediate reason to change an essential pet policy and I don't think the GGNRA can "manage" this situation by eliminating dogs from it. Its not what I want as a dog guardian and a San Franciscan resident. And, I will continue to oppose this plan or any other that attempt to limit off-leash areas.

So, my official comment is that none of the preferred options in the proposed plan are acceptable or necessary.

There is no reason to change this pet policy. Most dogs in this city depend on off-leash areas to stay healthy and sane.

Please stop picking on the wrong target and pick on us humans.

Thank you.

Correspondence: My name is Mandy Johnson. I am mother to Emma, a lovely 3rd-grade public school student; pregnant with my 2nd child; and the proud owner of two rescue dogs named Morty and Freddy. I have lived in Bernal Heights with my family for 12 years. I am also a public servant, working in management at the California Public Utilities Commission. I know a thing or two about rulemaking, and I can sympathize with the difficult task the NPS has ahead of it.

My husband, daughter, dogs, and I visit the GGNRA 4-8 times every month. We take our daughter's friends to Fort Funston after school and on weekend playdates; we bring our out-of-town visitors to Lands End and Baker Beach; we meet up with neighbors and friends at Crissy Field and Ocean Beach;

and, in every case, we bring our beloved dogs, Morty and Freddy. Morty's pure joy when he catches sight of the ocean is contagious -- he runs and we chase him; he explores and we find new things at which to marvel; he flops down in the surf to pose for photos; he greets other dogs, and we strike up conversations with other dog owners. Freddy is older and less active, but a trip to the GGNRA makes him seem young again. He enjoys the exercise, fresh air, and the admiration of other beachgoers. His gentle smile and impossibly furry coat attract children like a magnet; through Freddy, we have befriended countless toddlers and parents on the beach who love dogs, but don't yet have any of their own. The natural beauty we enjoy and sense of community we feel in the GGNRA is one of the things I love most about living in San Francisco.

When I first learned of the GGNRA Dog Management Plan/DEIS from other dog owners, I thought it couldn't possibly be as bad as they said. I, like the vast majority of dog owners, respect and follow park regulations, but I'm not blind to the small minority who don't. I love taking my dogs to Fort Funston, and I can understand the concern with dogs straying off the trails leading up to the beach. Like most dog owners, I'm also a nature lover and environmentalist; I share the GGNRA's desire to maintain park resources for future generations. I recognize that some additional restrictions -- or, at least, additional enforcement of existing restrictions -- could, if done right, be to everyone's benefit.

When I attended the public meeting on March 7 to learn more about the DEIS, however, I was disheartened. I came in with an open mind -- and talked to several NPS staff who also seemed open-minded -- but encountered more than a few NPS staff who became unmistakably cold and aloof once I identified myself, respectfully, as a park visitor and dog owner. I got a sinking feeling that the fix was in.

While the Preferred Alternative seems reasonable in the case of heavily-used Fort Funston and Crissy Field, it struck me as unnecessarily restrictive in several other cases, specifically:

-- Lands End: My family and I visit Lands End more frequently than any other part of the GGNRA, parking in Sea Cliff and entering from the east side. Even on the sunniest Fridays and Saturdays, I'm struck by how open and uncrowded the park seems (until you get within 200 feet of the west parking lot, that is.) Our typical walk takes us from the east entrance along the Coastal Trail, down to Mile Rock Beach, and back. On average, we spend 2-3 hours there and see fewer than 5 other dogs. At the beach itself, we often see absolutely no one else for 15-20 minute stretches (which never ceases to amaze me, because I think it's one of the most breathtaking parts of the GGNRA). While we don't see a lot of people at Mile Rock Beach, we do see a lot of what they have left behind; I always leave the beach with a

backpack full of garbage I picked up while scrambling across the rocks. The Preferred Alternative would ban dogs from Mile Rock Beach altogether -- and for the life of me, I cannot conceive of why. It is a solution in search of a problem. -- Ocean Beach: One of our favorite family outings starts at the N-Judah turnaround. We cross over to Ocean Beach and walk the dogs on-leash to Stair 21, then off-leash as far north as the tide allows; we then go back the way we came, and finish with a hearty lunch at Outerlands cafe. On these walks, I'm struck by all the refuse left behind by picnickers and late-night bonfire revelers; by all the deep treads left behind by the GGNRA 4x4 trucks running back and forth on the beach; and by the fact the friendliest, most responsible beachgoers, by far, seem to be other dog owners. Like at Mile Rock Beach, I usually leave Ocean Beach with a backpack full of empty Coke cans and Doritos bags that I've picked up along the way. Under the Preferred Alternative, the litterers will still be welcome up and down Ocean Beach, but my dogs and I will not. I can understand keeping dogs on-leash south of Stair 21 (although, I think if plovers are the prime concern, we should start by eliminating the truck traffic, bonfires, and periodic bulldozing that occur in that area), but I cannot understand the rationale for banning them entirely from that stretch of beach. The ban is not supported by the (rather methodologically thin) evidence GGNRA presents of habitat disturbances, and it is certainly not supported by my frequent firsthand experiences. -- Baker Beach: Unless it is a rare 80+ degree Saturday or Sunday -- when hordes of people flock to the beach -- I have found Baker Beach to be a surprisingly quiet and relaxing place to bring my daughter, her friends, and the dogs. Even on sunny days with little wind, we get large swathes of the beach all to ourselves. I also don't see a lot of dogs here (especially not on those very few hot, crowded weekend days); it is not a highly-trafficked beach, like Crissy Field or Fort Funston. The restrictions on beach access and elimination of off-leash recreation seem arbitrary, at best. Again, the Preferred Alternative seems like a solution in search of a problem. -- New Lands: This is where, frankly, it really feels like the fix is in. Regardless of how the land was used prior to acquisition by GGNRA, the Preferred Alternative deems it off-limit to dogs. This approach not only disregards the fact that GGNRA is a recreation area, where the needs of the surrounding urban communities must be considered; it is self-defeating. The opposition and public outcry that will inevitably come from dog owners whenever GGNRA considers acquiring new land will almost certainly torpedo the deal -- whereas coming in with a balanced, open-minded approach would blunt public opposition, and likely redound to the benefit of GGNRA. The fact that GGNRA is taking a hard line, I fear, tips its hand. And its hand looks awfully anti-dog.

More generally, I don't understand why the GGNRA has proposed a "compliance-based" enforcement strategy for the new dog regulations. If the NPS has sufficient resources to do this level of enforcement now, why haven't they applied them toward enforcing existing dog regulations? The

California State Parks, while famously and woefully underfunded, have a strong ranger presence to talk with visitors and make sure all regulations are followed; I regularly encounter and talk with rangers in my visits to state parks. By contrast, I rarely see NPS rangers at the parks outside of their 4x4 trucks. The dog owners I know would welcome enforcement of existing park regulations -- both dog-related and otherwise -- because we all care about conserving these gorgeous and important natural resources. Much like the Preferred Alternative to managing New Lands, the "compliance-based" enforcement strategy is overtly confrontational and, ultimately, self-defeating. Aggressively seeking out a small number of violators in order to justify a crackdown on dog access, and putting the new restrictions in place automatically -- completely bypassing the public comment process -- may not be legal and most certainly will be unpopular. If the GGNRA wants the City and County of San Francisco to try to take back GGNRA land, this is an excellent way to do it. As someone who loves and enjoys GGNRA land, I have to believe the NPS has better ways to expend its time and resources than willfully courting public controversy.

Thank you for your consideration. I appreciate that you are wading through a lot of passionate comments on all sides of this question. I just hope that, in spite of my worries, you will be fair, reasonable, and open-minded in seeking solutions that consider the needs of all stakeholders.

Frank Dean, General Superintendent Golden Gate National Recreation Area
Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Superintendent Dean:

I am a senior with a home in San Francisco. I and my senior dog frequently walk at Fort Funston and Crissy Field. We walk in the GGNRA because we are safe walking there ? there is a community of folks who walk there who share common interests ? dogs, love of the environment, and the enjoyment of nature ? and because in this very populous city, the GGNRA is our place for recreation.

I strenuously object to the "Compliance-based Management Strategy", which could arbitrarily and unilaterally end off-leash recreation, without public input or objection. It is unjust because those who are irresponsible, or who are deemed to be irresponsible, would decide the fate of off-leash dog-

walking in the GGNRA. In addition, the "Compliance-based Management Strategy" also works in only one direction: towards less off-leash space. There is no positive reinforcement, only punishment. The "Compliance-based Management Strategy" also violates the law that requires public comment when a change is either significant or highly controversial, as these changes would clearly be.

This "Compliance-based Management Strategy" should not be part of any Dog Management Plan. The GGNRA already has policies and penalties for those who break the laws. Use the law and punish the offenders. Do not punish the innocent for the faults of the guilty, and do not destroy a loved and valuable institution because some irresponsible people do not follow the rules.

I object to the GGNRA's current preferred alternative, which almost eliminates off-leash dog walking within the GGNRA. The proposed changes are not based upon sound science, or upon proper monitoring of site-specific conditions. Rather, I support an approach that balances recreational use, including off-leash dog-walking, with preservation. This would be a modified Alternative A (the "No Action alternative") that codifies the 1979 Pet Policy as it was originally written, and that also includes off- and on-leash access on GGNRA lands in San Mateo and on new lands that become part of the GGNRA.

Finally, I ask that you hire an independent and neutral third party to receive, count, organize and analyze the comments sent to the GGNRA regarding the Dog Management Plan. Otherwise, there will be no oversight, no watchdog, and no credibility for any results which the GGNRA might announce or purport to use as a basis for future action.

Thank you for your consideration.

Sincerely,

Dr. Renee Pittin San Francisco, CA 94131

Re: Draft Dog Management Plan/Draft Environmental Impact Statement

Dear Superintendent Dean,

I moved to San Francisco in 1962 and raised my family mostly in Marin. I have felt extremely grateful for the beauty and benefits of the GGNR. I am now 78 and live half time in my condo in San Francisco. I continue to cherish the area as an ideal place for daily walks with my dog.

I am devoted to nature and respect your intention to preserve it in all its wonder, but I am totally opposed to what I consider to be an arbitrary increase in already restricted areas for man and dog recreation. As I understand it, GGNRA's current preferred alternative significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. In addition, as presented in the DEIS, the proposed dog management plan eliminates dog-walking (on and off leash) in all new lands (additions to the GGNRA sometime in the future). Such a plan appears to ignore the extraordinary value to man and beast of dog walking and equates this valuable form of recreation with environmental destruction, a linkage that in my mind has not been demonstrated.

I suspect that the vast majority of dog owners is being punished for the misbehavior of a few. This is obviously not a way to solve a problem, in so far as it exists. Personally I always walk with my dog on leash and monitor him closely. My dog-walking companions do the same.

The No Action alternative or variations on that alternative should be the plan of choice, including individual consideration for any new lands.

Thank you for your consideration.

Sincerely,

Susan Shaffer Member, Crissy Field Dog Group Member, Sierra Club

Correspondence: To Whom It May Concern:

I am a Marin County resident, dog owner, and a donor to the Golden Gate National Parks Conservancy.

Please cast my vote for maintaining current levels of off-leash dog access to

GGNRA lands. I understand that complications arise from this policy (as do for any policy adoption), but feel strongly that they can and should be mitigated. We need to share the park responsibly. Off-leash (as well as on-leash) dog access is already quite limited in the GGNRA in Marin, please don't punish those of us who want to use the parkland responsibly with our dogs.

I am fully supportive of requiring dog owners and dog walkers who use the GGNRA to be responsible park users. Perhaps we could be required take classes on responsible dog management, or required to volunteer to restore habitat, etc., and/or pay licensing fees to subsidize classes, patrolling, and/or other mitigation efforts. Allow the dog owning community to be good GGNRA patrons.

Please maintain a balanced policy and keep the GGNRA open to a wide variety of users. Keep off-leash access at current levels!

Thank you,

Amy Larson

Correspondence: I have been a professional dog walker at crissy field for the last 6 years.

In addition to cleaning up after myself and my dogs I also routinely collect human waste, both trash and biological. Condomns, syringes, feces and menses are are in a typical months work.

The professional dog walkers seem to be the only ones aware of the rules, like staying out of the dunes, lagoon and off the main trail while offleash.

I routinely encounter civilians letting their dogs dig for gophers and chase the protected wildlife.

If this is such a problem wouldn't it make sense to actually post these rules?

How can you be upset that people are disobeying unpublicized rules?

How on earth do you plan on enforcing all these new rules when you haven't even posted the existing ones?

I'd also like to point out that crissy, ocean beach and fort funston have

entirely different user bases and the dog walkers at each location have adapted their systems to reflect that.

This is all very sad.

What would be so hard about limiting your liability by charging an entry fee? You could print the limited liability waiver on the back of the ticket just like an amusement park does.

What would be so hard about segregating the beach? A picnic area without dogs, a dog area without picnics.

Without these open spaces dog quality of life will deteriorate and behavior will accordingly. You will see friendly dogs become aggressive.

I find it frustrating that my tax dollars pay you to arbitrarily nearly shut me out of business.

Please try to work with us. Sending mounted police to patrol dog parks is hostile and unnecessary. Why can't park police walk? Wouldn't walking and talking with us be a good place to start?

I'd love to have a park policemen take 45 minutes to go on a complete walk with me sometime.

I bet we don't disagree on as much as you'd think.

Thanks for listening, Wild Bill Peacock

Golden Gate National Recreation Area

Fort Mason, Building 201

San Francisco, CA 94123-0022

Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and

misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

* Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. * Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. * Exclude speculative, exaggerated, biased, or misleading statements and studies. * Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). * Enable professional dog walking and align any professional dog walking rules with county or city regulations. * Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

These are my personal comments and observations regarding this plan: (here's where you fill in your own personal story and what you've seen when you've been out at the GGNRA)

Sincerely,

Aria Ashton

Correspondence: Dear Supervisor Dean-

This is the letter I wrote to Supervisor Weiner and Mayor Lee. It summarizes the distrust and doubt I have about this process.

Dear Supervisor Weiner:

Below is the letter I wrote to Mayor Lee on Tuesday, detailing my experiences in negotiating with the GGNRA. They have not been negotiating in good faith. I am saddened by the this, because we are all essentially open space advocates. However, this has brought out the worst in otherwise good people.

Please be careful. Thank you.

Lisa V.

----- Forwarded Message ----- From: Lisa Vittori <> To: mayoredwinlee@sfgov.org Sent: Tue, April 19, 2011 6:01:51 PM Subject: Please stand up to GGNRA

Dear Mayor Lee-

Thank you for expressing interest in talking with the GGNRA regarding their heinous "dog management plan". I appreciate the fact that you are looking out for the interests of San Francisco residents in this matter. However, I must warn you: the GGNRA has not negotiated in good faith so far.

I speak from personal experience, as an environmentalist and a former ally and employee of the GGNRA. Over the last 35 years:

* I watched as the GGNRA (and the National Parks Conservancy) moved from an attitude of inclusion to a policy of exclusion. * I've watched as they acquired land by promising to continue existing recreational uses, then renege. * I personally managed major habitat restoration projects for ten years with my dogs by my side, until they started using habitat restoration as

a reason to exclude the public. * I watched as they touted community collaborations in public, and plotted in private (e-mails, staff meetings, internal memos) to limit recreational dog-walkers, children's camps, equestrians, surfers, wind-boarders, and other park users.

You may recall the infamous public hearing held in January, 2001, in which the GGNRA was required to receive public testimony regarding limiting dog-walking. I was there.

The weather was terrible ? blustery rain. The location was obscure ? a little known building in the Presidio. The time was inconvenient ? a week night in January. Yet ... 2,000 people showed up. Well dressed people slogging through muddy parking lots, standing in the rain because there wasn't enough room in the building. The park service finally opened an overflow room after hundreds of people, normally upstanding citizens, started banging on the picture windows, demanding entry.

The most interesting part of that meeting for me occurred during a break at around 11 p.m. Amy Meyer, one of the GGNRA commissioners, was speaking to a group of employees. She thought she was speaking off the record, to allies. I joined the group.

She expressed annoyance that the meeting was dragging on so long, then said: "I don't know why they're bothering. We've already made our decision." At that point more than 600 people were still signed up to speak, and the meeting was aborted at midnight.

That, Mr. Mayor, is why we are asking for your help, and why we beg you to be cautious in your dealings with them. The decision was made at least 15 years ago. Public input has been a sham, despite the massive public outcry over the last 10 years.

We think they need to start entirely over, and include us as full stakeholders in the process.

Thank you for your attention to this.

Lisa Vittori

P.S. I refer you to a letter sent today by another citizen, a brilliant letter that accurately summarizes our hopes and concerns.

Dear Mayor Lee-

I understand that you'll be speaking with the National Park Service regarding their proposal to sharply reduce off-leash recreational space in the

GGNRA, and I hope that you'll bring to that discussion your patented brand of common sense. It's sorely needed in this debate.
