This tiny sliver of the GGNRA that we dog folks get to share (it's less than 1%...and although the NPS will tell you that figure is bunk, we have the maps to prove it) is not pristine wilderness. These are former military facilities, bounded by busy roads, traversed by trails, paved for parking and dotted with decaying batteries. That's why we ended up there with our dogs to begin with...no one hassled us there. And that's why our access to these areas was made legal and why the NPS was told it must honor that access or the city would take back the land.

In fact, the whole refurbishing of Crissy Field was designed with off-leash recreation in mind. Tens of millions of dollars were raised, much of it from dog owners, on the promise that this would be the model for integrating recreation (including off-leash) and habitat creation. Is the NPS prepared to give that money back, now that they are proposing to renege on that promise?

Mayor Lee, these parks mean so much to the citizens of San Francisco. And not as fenced-off untouchable gardens of native plants, but as vibrant, beautiful open spaces we all can share. Off-leash recreation brings together San Franciscans of every age, ability level, social strata, sexual preference, race, creed and political stance. It requires no expensive equipment, no proficiency in English and no membership fee. Hell, it doesn't even require a dog (many non-dog-owners gravitate to Funston et al for vicarious doggy time). It relieves stress, promotes healthy exercise, increases social contact and brings revenue to the furthest reaches of the city.

I hope that you, as our Mayor, will stand in support of this wonderful use of our urban open spaces. If wear and tear from concentrated use and conflicts from crowding are legitimate concerns, then expanding the area available for off-leash recreation is a much more logical solution than reducing it.

Please tell the GGNRA to go back to the drawing board.

Thank you for your consideration, XXXX (Another citizen)

Correspondence: I primarily use the Alta trail head from Donahue Street in Marin City to walk my two pugs off-leash. I have seen hundreds of dogs which also use this section of the fire road over the 16+ years that I have been a resident

here. I have never witnessed anything which might be considered harmful to this environment as it relates to pets and their owners being allowed to exercise untethered. Several dog walkers depend on using this section of the trail for exercising the dogs of their clients. All of them have either kept their dogs on a leash or under good voice control whenever I have come across them.

Please keep This section of the fire road available for off leash use.

Frank Dean, General Superintendent Golden Gate National Recreation Area
Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness area like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly in the GGNRA with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to: ? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. ? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. ? Exclude speculative, exaggerated, biased, or misleading statements and studies. ? Provide reasonable ways to address any significant adverse

impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). ? Enable professional dog walking and align any professional dog walking rules with county or city regulations. ? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input. These are my personal comments and observations regarding this plan:

I am an 11-year resident of San Francisco and an active outdoor enthusiast. Together with my dog Walter, a 2-year old German Wirehaired Pointer, and my family and friends, we frequently hike in the Marin Headlands, play at Muir Beach, and visit Fort Funston for walks on the beach and hikes along the trails above the ocean. While at Fort Funston I have observed whales swimming up the coast of the Pacific Ocean, owls in the cypress trees, and ravens circling above the cliffs. My dog, on the other hand, keeps his eye on his tennis ball and he hasn't once had any interaction whatsoever with birds or other animals living in these areas. Moreover, because he is under voice command and sticks with me, he does not roam in any of the areas to the south of the Fort Funston parking lot where efforts are being made to restore native vegetation.

As a dog-owner, I have given up visiting some of my former favorite recreational areas because those locations either don't allow dogs or require the dog to be on a leash and that option does not provide good exercise for either me or my dog (e.g. Tennessee Valley Beach, Mt. Tamalpais, many state parks and beaches in Marin and Sonoma County, and the majority of Golden Gate Park). My dog and I greatly prefer Fort Funston and other GGNRA open spaces to city parks because the surroundings are more beautiful and both my dog and I get plenty of room to run and roam. These GGNA open spaces are a safer experience for dogs than city parks, as there no need to worry about cars and broken glass, and I also feel personally safer given that these spots are less urban.

When my dog was a puppy, I took him to Fort Funston daily, and he grew accustomed to returning to me promptly on voice command, playing well with other dogs and meeting a variety of people. As a result, he is a calm and friendly pet. I visit either the Marin Headlands or Fort Funston at least once or twice a week now, and if we didn't have this resource we would be forced to travel much farther from our home to find any comparable open space for hiking that allows off-leash dogs.

In the two years that I have visited Fort Funston and the Marin Headlands with my dog, I have not once seen a negative interaction between dogs and humans. The concept that humans are or could be "surprised" to find off-leash dogs in these areas is simply incomprehensible as these areas have been open to off-leash dogs for over 40 years and it's obvious from the

minute you arrive in the parking lot from the signs and simple observance of what is going on around you.

Finally, I am particularly opposed to the 'Regulated Off-Leash Areas' or ROLAs. It is simply unacceptable that the NPS can revoke access in the future to the ROLAs without further consultation and public comment. This provision appears to violate basic administrative law principles.

I urge you and your staff to seriously consider these comments and redraft the dog management plan to maintain the current off-leash areas, pursuant to the 1979 Pet Policy.

Sincerely,

Ellen K. Brown San Francisco, CA 94117

Correspondence: I am writing in opposition to the draft Dog Management Plan. I would like to see the current rules and regulations remain as they are, with perhaps a seasonal adjustment to limit impact on the habitats of the endangered species that use the GGNRA. Preferring to walk my dog at Muir Beach, and as a long time user of the beach, I am basing my arguments in opposition to the Plan on my experiences there.

One of the reasons given for banning dogs at Muir Beach is that park visitors want a "dog-free" experience at the beach. This is simply false. In all of the years that I have been walking my dog(s) at Muir Beach, the number of times that I have been told, or have recognized through body language, that someone does not want contact with my dog(s) is probably less than 10. Far outnumbering that, guessing at 25 or even 50-1 are the number of times that people have expressed a desire to pet my dog(s), their excitement at seeing them play on the beach and the missing of their own pets that they've had to leave at home during their travels.

The Dog Management Plan calls for more funding for greater enforcement and signage of the new regulations. I would suggest that the higher funding could be used both to enforce current regulations and to install signs that actually let people know what those regulations are. The signs in place now are do not clearly state current regulations, are ambiguous at best and are poorly posted and easily missed. As to better enforcement, a few citations would begin to get the word out resulting in better compliance.

That better enforcement though would have to include the use of the lagoon by people, not just dogs and their owners. On any given weekend, there are far more people, families and kids, swimming, digging, and damming the creek and lagoon than the occasional dog.

Thank you.

Correspondence: Frank Dean May 27, 2011 General Superintendent GGNRA Building 201 Fort Mason San Francisco, CA 94123-0022

Dear Mr. Dean, Re: Healthy Parks Healthy People US, etc.

My name is Lindsay Kefauver, I live in San Francisco and have been walking my dogs at Ft. Funston since 1978 for 33 years. I am a senior whose health and mental well-being is enormously benefited by being able to walk the trails at Fort Funston where I usually go 5 afternoons a week. I need to walk on paved paths as cannot get exercise standing around in a sandlot as you propose at Ft. Funston.

My vote is for Alternative A + or the status-quo of the 1979 Pet Policy. The plus is because we desperately need more access for off-leash dog walking on the GGNRA managed lands not less. When the GGNRA adds land then you must open up to more off-leash access.

The GGNRA's preferred alternative is clearly too restrictive. There is no justification in the DEIS for major changes to the legal 1979 Pet Policy - yes, twice a US Federal Judge has found your 1979 pet policy to be legal.

Please retain and formalize this existing GGNRA dog policy. The Park Service has not provided any measurements showing that dogs at Fort Funston, Ocean Beach or Crissy Field have a significant impact on the sustainability of threatened and endangered species of wildlife or native plants.

Then what about the NPS's May 31st conference on The Healthy Parks Healthy People US being held in the Golden Gate National Recreation Area? This is being billed as "the first of its kind in the United States...The forum will help forge a vision for the role of parks in contributing to a healthier nation."

I suggest that the GGNRA stand behind what you are promoting as a

national program. By choosing to restrict where health enthusiasts can walk in the GGNRA lands, many of whom are women and seniors who might not walk without the company & protection of their dog, you are denying a large group of Bay Area citizens what you pretend to be promoting for the US.

Instead of punishing responsible people with dogs who benefit so much from these recreational areas, why don't you try promoting educational awareness with new adequate signage and initially have park rangers out with good will and information instead of acting as a police force.

The fact that the NPS is promoting Healthy Parks Healthy People US at the GGNRA headquarters but instead working to restrict its own local citizens from the benefits of this program makes the program a total sham.

Please work to make the Bay Area a true proponent of Healthy Parks Healthy People US or the program will come back to embarrass the GGNRA.

Sincerely,

Lindsay Kefauver

Correspondence: Dear GGNRA Dog Management Plan, I am a long time resident of San Francisco and have lived my entire life in the San Francisco Bay Area, during the past 60years, I have seen open fields and hillsides converted into subdivisions and with thier loss a loss of diversity and numbers of wildlife. I hope that the GGNRA will continue to preserve some of the 'wild outdoor' experience that shaped my childhood and make it available for future generations. I realise that there are just so many of us humans crammed into

this small area that the availability of having wilderness experiences may never be the same as what I remember, but I would encourage you to take steps towards preserving what you can by limiting our impact on the environment by restricting dogs to only certian trails and further requiring them to be leashed. With the difficulty in finding funding, it may be difficult to fund enforcement, but I think it is imperative that the law is strictly enforced at least initially so that private citizens can feel empowered to enforce it as time goes on. Also there should be clear and explicit signs so that everyone is clear on what is and isn't allowed. I do not think that the GGNRA is the place for commercial dog walkers. I have seen dog owners' comments in the newspaper that they need to run their dogs off leash in the GGNRA in oder to give them adequate exercise. The city parks generally provide fenced areas for dogs to run off leash in areas that are not also the home to native flora & fauna. If dogs must have off leash areas in the GGNRA, I think that they should be fenced and clearly marked and located in areas that are not sensitive habitat. Finally, I would like to thank you for taking on this contentious but important issue. Sincerely, A Presidio Park Steward volunteer (and I volunteer because I care about the environment)

Correspondence: To Whom It May Concern:

I am writing in response to the GGNRA Draft Dog Management Plan and to express my vehement opposition to it. I have a dog and frequently walk her in the spaces that are being discussed in the plan and want it to be known that what is being proposed will greatly alter my daily schedule and ability to freely walk my dog.

It is not for a government body, which does not reside in our community, to dictate what we can and cannot do as a community. This sort of decision should be left to the people of San Francisco (and surrounding areas) to determine what is best for our community and, as you can most likely tell, we do not want there to be a chance in policy.

Please let it be known that I, Zoltan Bernat, a resident of San Francisco, CA, am going on record to voice my opposition for the Draft Dog Management Plan. If you have any questions, please feel free to email me at

Sincerely,

Zoltan Bernat

Correspondence: In support of well-defined and realistically enforced dog management:

I am a very frequent park user. It's important to have a peaceful nature space. I walk and enjoy the ocean or the woods as a companion.

Unfortunately my precious outdoor time has been increasingly degraded by untrained, unrestrained, unavoidable canine influences. By this i mean dog noise, dog excrement, random dogs jumping on me, dogs charging & nipping at me, owner & dog on leash taking up the whole 2-way path with no intention, awareness, or effort to "keep to the right". These intrusions occur in dogs-allowed parks, no dogs-allowed parks, and stretches of shoreline that are bird sanctuaries.

Case in point: On this morning's walk at Ocean Beach, 2 people and their dog were coming from the parking lot across from the zoo, heading north. (Bird Sanctuary.) The dog stopped to poop. (The dog owners did not.) The good-intentioned dog-owners were carrying plastic bags, but never looked over at their dog 3 yards away, just kept going. (High tide; off the stools went to sea.)

Correspondence: Frank Dean May 27, 2011 General Superintendent GGNRA Building 201 Fort Mason San Francisco, CA 94123-0022

Dear Mr. Dean, Re: Is your Compliance-based management strategy legal?

My name is Lindsay Kefauver, I live in San Francisco and have been walking my dogs at Ft. Funston since 1978 for 33 years. I am a senior whose health and mental well being is enormously benefited by being able to walk the trails at Fort Funston where I usually go 5 afternoons a week and once a week to the beach. I believe that most dog guardians in the Bay Area are as much environmentalists as those of you who aim to ban dogs from our shared, public open spaces.

My vote is for Alternative A + for the status-quo or 1979 Pet Policy. The plus is because we need more access for off-leash/under voice control especially in San Mateo where there is currently no off-leash access and a

request to add off-leash areas as more lands are acquired.

The GGNRA's compliance-based management strategy - commonly referred to as the "poison pill" - of the preferred alternative must not be part of any plan. I'm not convinced that this GGNRA strategy is legal. If the GGNRA decides there is not enough compliance with their new restrictions, the status of areas in the GGNRA will automatically and permanently become more restrictive - off-leash becomes on-leash, and on-leash becomes no dogs at all.

How will the GGNRA determine compliance? Will they use volunteers biased against dog walkers? Will it be staff who have gone on record as opposing people with dogs in the GGNRA.

The DEIS does not offer an opportunity for the public to comment on these changes. The rules will be changed essentially at the whim of a GGNRA official. And no reverse process is offered by the GGNRA - if there is good compliance then more areas are opened up for off-leash, etc.

The GGNRA presents no guarantee of fairness. In fact the DEIS is saying that it is okay for the GGNRA to exclude one group of citizens from our public lands. Isn't this discrimination?

You and the GGNRA must ensure we citizens that you will have an independent review of our comments and that it will not be the GGNRA staff who categorizes, analyses, and evaluates the public comment on such an important issue to the Bay Area.

Thank you for your attention.

Sincerely,

Lindsay Kefauver

Correspondence: I previously submitted comment letters by US certified mail on May 13, May 14, May 15, May 16, May 17, and May 18, 2011.

In those letters I erroneously said that Alternative A could be turned into a truly preferred alternative if only off leash areas were also provided at GGNRA sites in San Mateo County. I had overlooked the fact that Alternative A inexplicably removed off leash access from most of Ocean Beach. That is not justified, and off leash access should be restored to Ocean Beach as part of a preferred alternative.

Protection of the Western Snowy Plover is the chief rationale offered by GGNRA for banning off leash dogs from most of Ocean Beach. I, and others, have explained in other comment letters how WSP can be protected without banning off leash dogs. I won't go through that entire discussion

again. But effective GGNRA management actions would include seasonal exclosures, signage and education, prompt garbage pickup, and keeping other disturbances out of the immediate area where plovers are roosting. (I have observed horses, kite flyers, runners, picnickers, and NPS vehicles flushing WSP at Ocean Beach.)

Further GGNRA could have an independent study done to see what, if any, effect off leash dogs have on WSP at Ocean Beach. The DEIS and the "studies" cited therein haven't demonstrated any adverse impact of off leash dogs on WSP at Ocean Beach.

Sincerely, Keith McAllister

Correspondence Type: Web Form

Correspondence: I am a San Francisco resident (1990-1996 and 2006-2011) and a dog-owner; I take my dog to Fort Funston an average of about five times a week. For the 10 years that I was away from SF, I lived in a city with no dog parks, and found myself frequently talking to people about how much I loved Fort Funston, and about the dog-friendliness of the Bay Area and its parks, including the GGNRA. I am very concerned about the proposed limitations to dog-walking throughout the GGNRA, but as I am most familiar with and most attached to Ft. Funston, I am restricting my comments to that area.

I understand the need to protect wildlife and natural resources, and I accept that those efforts may require additional limitations on off-leash use of Ft. Funston. Regarding the needs of "people who don't prefer dogs," I am perplexed by the singling out of this group. In the plans for Fort Funston, the impact on "people who don't prefer dogs" seems to be the primary advantage claimed for the "Preferred Alternative (C)" over the existing system or the less-dog-restrictive Alternative E.

If I do not prefer children, or joggers with huge strollers, or the smell of meat cooking, or frisbee playing, I do not look to rules, regulations or park management to restrict access or activities in a particular park. Rather, I go to a park where I am less likely to encounter these things, or I go at a different time than those people. "People who do not prefer dogs" have many, many options for outdoor recreation in beautiful places. On the other hand, my options are limited when it comes to outdoor, off-leash exercise for my dog - state parks do not allow dogs at all, and many city parks require that dogs be leashed at all times.

The executive summary acknowledges that the Preferred Alternative would

have an adverse impact on people with dogs, but I believe the adversity will be much greater than what is claimed. Right now, the impact of many, many dogs and dog-walkers on Ft Funston is relatively small because we have access to the entire park. Limiting or eliminating off-leash access in so many GGNRA lands, and reducing the off-leash area at Ft Funston to the beach and the area adjacent to the parking lot is going to force many, many dogs and humans into a very small space. The increased traffic will kill off more vegetation; the higher density of dogs per square foot may increase conflicts (as will the requirement that dogs be on leash in the rest of the park - dogs on-leash are generally much more aggressive with each other than those off-leash); the likelihood of stepping in feces will be much higher - because not all dog owners are as responsible as we'd like them to be.

Given the restrictions proposed in so many other parks, I would propose that taking no action at Ft Funston would be the equivalent of a "fair trade" between the NPS and Bay Area dog owners. Recognizing that "no action" is not the most likely outcome, I believe Alternative E is the best of the alternatives presented in the report. Better yet would be a plan in which the off-leash areas in Alternative E were increased by adding the area just north of the parking lot, effectively making the park about one-half off-leash and one-half no-dogs or on-leash.

Correspondence Type: Web Form

Correspondence: I am writing to oppose the GGNRA's draft dog management plan. I believe the plan will have a negative impact on the residents of the City of San Francisco, as it proposes extremely restrictive policies about where we will be able to enjoy off-leash hiking, running and other recreation with our pets.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily ignores the needs of Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

In my opinion, the GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area--and it IS an URBAN recreation area--not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded. Further, by my observation and in my experience, there are quite a number of restrictions on off-leash use of GGNRA land already in place, but

enforcement seems to be the real issue. I fear that if these more restrictive regulations are enacted, it will only be the law-abiding dog owners who will suffer; the scoflaws won't care about the new restrictions--just as they don't follow existing laws now. I have also observed that when people and their families walk with their pets, they are more open to meeting other people, usually via inquiries about their pets. In the years we've had our dog, we've met more people and engaged in pleasant conversations with strangers than I have ever experienced in all my years before owning a dog. I truly believe pets can bring out the best of humanity in us all.

The GGNRA draft management plan does not provide tangible evidence that justifies such drastic changes to 40 years of healthy dog and human recreation. The Park Service should honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. Recognize that there are hundreds of uninhabited miles along the California coastline for wildlife to thrive, while we San Franciscans and our pets have a 7 x 7 mile peninsula on which to recreate. Please do not adopt the proposed regulations, but rather, honor the 1979 Pet Policy.

Thank you for your time and consideration.

Sincerely,

Renee A. Richards San Francisco, CA 94121

Correspondence: I am writing to strongly oppose the GGNRA's draft dog management plan. While I understand and support your conservation efforts, I believe this current plan does not adequately reflect the importance of off-leash dog walking areas in, or near, San Francisco.

While I do believe the current plan relies on some questionable studies to draw certain (questionable) conclusions, I am not a scientist, and therefore cannot speak directly to these points. Instead, I simply want to voice my concern that this plan does not adequately consider the negative impacts on all Bay Area residents.

For the past 8 years we have taken our dog to Fort Funston twice a week. This is a necessary and important routine in our lives to maintain the health of our dog, and ourselves. Fort Funston, and other parks mentioned in your plan, provide essential off-leash areas in a way that a standard dog park cannot. While San Francisco does provide (limited) off-leash dog parks, the

bulk of them are far too small to be of any real value for medium to large dogs.

The GGNRA land is an integral part of Bay Area life. It provides the only truly open space within reasonable distance. The current policies in place already severely limit dog access to GGNRA land, and these proposed restrictions will unfairly reduce that access even further - leaving many dog lovers with no viable options.

I ask that you please reconsider these proposed restrictions, to more adequately balance the needs of all parties. Please don't take away our only option.

Correspondence: Frank Dean, GGNRA Superintendent Building 201, Fort Mason San Francisco, CA 94123-0022 Re: Golden Gate National Recreation Area Dog Management Draft Environmental Impact Study Dear Superintendant Dean:

I have already sent comments on the DEIS for Marin Unleashed. The following comments are my own.

I have spoken with you several times about my intention of sending you suggestions that you could consider for dog management in the GGNRA in Marin.

I understand the concerns that you and many others have about dogs off-leash in areas where there are wildlife and fragile eco-systems that require protection. I share these concerns.

With that in mind, I put forth the following alternative:

I request the NPS consider an Alternative that would allow dogs on-leash on the fire roads that run out of the GGNRA and/or border the boundaries between the GGNRA and the communities that are adjacent to the GGNRA. The fire roads and the two trails listed below would allow a person with a dog on-leash to walk in the GGNRA in Marin from the southern end of Sausalito on the fire roads that are near the eastern boundary of the GGNRA north to Marin City and Tam Valley, and then to walk west along the fire roads near the northern boundary of the GGNRA to Muir Beach. ? The GGNRA shares a border with Sausalito, Mill Valley, Muir Beach and unincorporated Marin County land including Marin City and Tam Valley. The fire roads that connect the GGNRA to these communities and the fire

roads that run near the boundaries of the GGNRA with these communities should be accessible to the public walking with their dogs on-leash.

? The fire roads that lead from the neighboring communities into the GGNRA and run adjacent to them are, from Muir Beach in the north to Sausalito in the south:

? Coastal Trail from Muir Beach to Coastal Fire Road to Coyote Ridge Trail (a fire road) to Miwok Trail (a fire road).

? Miwok Trail from Highway 1 to Coyote Ridge Trail.

? Miwok Trail from Tennessee Valley Road to Coyote Ridge Trail.

? Marin Drive from Tam Valley to the Miwok Trail.

? County View Road from Tam Valley to the Miwok Trail.

? Tennessee Valley Road (or the adjacent Rhubarb Trail (Marin County trail)) to Oakwood Valley Fire Road.

? Oakwood Valley Fire Road from Tennessee Valley Road to Alta Trail (a fire road).

? Alta Trail from Donahue Avenue in Marin City to Rodeo Valley Trail.

? Pacheco Fire Road from Marin City to Alta Trail.

? Orchard Fire Road from Marin City to Alta Trail.

? Rodeo Avenue from Highway 101 to Alta Trail.

? We are requesting on-leash access to two trails because they provide access to 2 of the fire roads listed above:

? The Morning Sun Trail that was built to provide access from Sausalito to the GGNRA Headlands; it goes from the Spencer Ave bus-pad on the west side of 101 up to Alta Trail.

? The SCA trail that runs parallel to Wolfback Ridge Road and about 20 feet below it. This trail connects Alta Trail with the fire road (this one is unnamed) that goes over the 101 tunnel and then back into Sausalito (it comes out on Hecht Avenue).

The fire roads listed above are 12 feet wide on average, providing plenty of room for multiple use. Dogs on a 6 foot leash will not be causing damage to

wildlife or native habitat, or disturbing other users. These fire roads are all adjacent to the freeway and/or the communities of Southern Marin. They are not in the heart of the Headlands. They can all be accessed from outside the GGNRA reducing auto traffic into the GGNRA.

There has been little or no discussion of on-leash access for dogs in the GGNRA, the focus of concern has been off-leash / voice control use. For those of us who hike long distances with our dogs, on-leash access is important. As the Baby Boomers age, having a dog along on-leash on a long hike is an issue of safety and ensures that we will continue to exercise.

Thank you for this opportunity to share my thoughts on a subject that so many of us feel so strongly about (and so differently about). Wishing you all the best in the work you have ahead.

Sincerely,

Sonja Hanson Sausalito, CA 94965

Correspondence: I am an executive at John Muir Health in Contra Costa County. Please reconsider your "Dog Management Plan." Taking hikes, etc. with the family dog is a very valuable opportunity of exercise and social contact. Your proposal to ban such activities I feel significantly diminishes opportunities for improving the health and well-being of our population.

Thank you for listening.

Correspondence: May 30, 2011 Frank Dean, General Superintendent GGNRA Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean,

My name is Alexandra Dixon and I have lived in the Marina/Cow Hollow neighborhood for 50 years. I have had dogs in this neighborhood since 1977 and I have walked them in all areas of the GGNRA over the past 34 years. I take my dog to Crissy Field almost daily, and have also walked my dogs at

Fort Funston, Fort Mason, Fort Cronkhite, the coastal trail to Tennessee Valley and Muir Beach, Muir Beach itself, the Dipsea Trail, and Stinson Beach.

In all that time my dog has never had a negative environmental impact, nor has any of my dogs ever had a negative exchange with another living creature, including wildlife, other pets, or human beings.

I used to say, long before this ridiculous kerfuffle about off-leash recreation came up, that it is worth \$10,000 a year to me to have access to Crissy Field for off-leash recreation.

I am a member of the Fort Mason Community Garden, I believe in sustainable agriculture, I take public transit, I believe in having a small environmental footprint and in saving endangered and threatened species, and in particular I believe that man should not have unfettered dominion over the natural world, and should not allow his own selfish needs to have a negative effect on the creatures that share our space.

Having said all that, I also absolutely believe that a "National Park" in a densely populated urban environment is different from a park in a pristine wilderness such as Yosemite or Yellowstone.

Much of the GGNRA land in question was deeded to the NPS by the City of San Francisco in good faith with the stipulation that traditional recreational uses be preserved. The Park Service has acted in bad faith by slowly chipping away at off-leash recreation in Fort Funston and Ocean Beach. The City of San Francisco is within its rights to rescind the gift of these areas, and if you proceed with restricting off-leash recreation in these areas, please be prepared for the City to do just that, because the dog owning community is a HUGE percentage of the SF population, and we are well-heeled and well-organized.

I do not agree with any of your preferred alternatives; it is my conviction that the GGNRA should be providing MORE off-leash recreation, not less. The 1979 Pet Policy does not provide enough space for off-leash recreation but since it is the "least evil" of the options on the table, that is the option I prefer.

I have read analyses of the DEIS and am convinced that there is no sound science, nor public policy data, that provides support for further restricting off-leash recreation in the GGNRA. I believe that the NPS entered into this process with a biased point of view, attempted cynically to manufacture scientific evidence to support that point of view, and FAILED to do so. So we get 2400 pages of fluff, with no facts to back it up.

The 1979 Pet Policy which is presently in effect has ample teeth to ensure compliance if it is enforced. Despite what many people think, the off-leash policy does NOT permit ill-behaved dogs to disturb wildlife, people, or even other dogs. The policy is, and always has been, "voice control or leash." At any time, a park Ranger or Park Police officer can require a dog owner to prove that his or her dog is under voice control, and if the person fails to demonstrate this, can require that the dog be leashed, and can issue a citation to the owner.

Surely, with the vast majority of dogs being well-behaved, this is the logical approach to take - enforcing the current regulations with the few dogs that are not in compliance.

In addition, any "poison pill" that allows the NPS to unilaterally ban dogs from areas if - in the NPS's sole judgment - there is not 70% compliance, is an attempt to do an end-run around the civil/legal rights that all citizens enjoy. It's clear, at least to me, that the NPS views all of the alternatives as mere stepping-stones to their ultimate goal of banning dogs from the GGNRA - and what better way to do that, than to put in a poison pill which can be invoked at the NPS's sole discretion, without further public comment. I would NEVER support any alternative with such a provision. And, if an alternative containing such a provision is implemented - be prepared for a lawsuit.

After careful consideration, I support a modified Alternative A (the "No Action alternative") that codifies the 1979 Pet Policy as it was originally written (there is no evidence in the DEIS to support the closures of beach access because of the presence of snowy plovers), and that includes off- and on-leash access on GGNRA lands in San Mateo and on new lands that become part of the GGNRA, especially those areas in both that have traditionally had dog walking.

Thank you for your consideration.

Sincerely,

Correspondence: Limit off-leash recreation to areas where it will not have negative impacts

on sensitive wildlife and habitats and also on people. For example, I would love to take advantage of the walks offered by the "Y" in the Presidio, but cannot because of all the dogs off leash. Dog walkers take 4 or 5 dogs on these paths and let them run wild. It is terrifying because the dogs turn into packs and can be very dangerous.

I can never go to the beach either because of all the dogs off leash. Again the dog walkers are a big problem here. I have seen some dog walkers that don't even know the names of the dogs to call them off.

It seems so unfair that as a tax paying San Franciscan, I cannot enjoy some of the beautiful outdoor spaces that the city has because of all the off leash dogs. There needs to be more stringent regulations. And most importantly, they need to be enforced.

I hope that something can be done about this situation so that all the residents of this city can enjoy all the outdoor areas it has to offer. Thank you.

Correspondence: Dear GGNRA Staff,

It is my feeling that Fort Funston fulfills a unique recreational need in the Bay Area and is in fact one of the best off leash dog areas in the world. We train our program's dogs here to be under good off leash control. We also take Canine Studies students from all over the world to Fort Funston to show them how dogs of many breeds can learn to be compatible with people and other dogs.

In the proposed option for Fort Funston the trails would be closed to off leash dogs. This would lead to a higher number of off leash dogs concentrated in the ice plant area close to the parking lots. Currently dogs start off here but quickly move on into Fort Funston. With the new plan they would tend to stay in this area. This concentration of dogs would create problems due to the increase in dog density. It would also become less safe due to proximity to moving cars.

I proposed that you keep Fort Funston as it has been for several decades. It has proven to be an ideal example of how large numbers of people and dogs can recreate in an enjoyable and safe manner. It is a shining example of how an off leash recreational area can meet the recreational needs of people with and without dogs. You have a real jewel to point to that's unique in the

world. Please don't destroy it through closing portions of Fort Funston to off leash dogs.

Thank you,

Donald Martyn

Frank Dean, General Superintendent Golden Gate National Recreation Area
Fort Mason, building 201 San Francisco, CA 94123-0022

Dear Mr. Dean, As a responsible, working, tax-paying San Francisco resident and dog-owner I am writing to oppose the GGNRA's draft dog management plan.

Seven years ago my husband and I looked the pros and cons of becoming urban dog owners. We talked with many, many city dog owners. We went to the off-leash dog parks to observe the environments. We went to Crissy Field and Fort Funston to see the areas that are available for off-leash dog walking. We received such positive recommendations that indeed San Francisco is one urban area that is dog-friendly and in fact, a great place to own and run a dog.

In particular, it was the 1979 Pet Policy where the city of San Francisco gave much of the land to the GGNRA with the express purpose that it would be used as it had been historically for recreational purposes, which includes dog walking that ultimately tipped the scale in favor of us getting our dog.

In the seven years since then we have enjoyed hundreds of beautiful walks on the beaches of Fort Funston and Crissy Field with our dog. During the week when we are at work, we pay a responsible dog walker to transport our dog to the beach and give her the exercise she needs to stay healthy. Our dog walker follows the rules of the area and never walks more than 5 dogs at one time.

In all that time I have rarely seen dogs cause problems or chase wildlife. As a matter of fact, usually the chasers of wild life are children or tourists.

We are positively behind the idea of establishing professional dog walker

rules and fees.

If off-leash areas are taken away we really may have to consider leaving the city of San Francisco now that we own and are responsible for the well-being of a large, energetic dog.. At the VERY least, I feel it would only be fair, if restrictions are to be imposed, that they go into effect after a 14 year grace period, allowing any new dog owner the current rules for the lifetime of an average dog. I'm not sure we would have made the decision to own a dog if it weren't for the current Pet Policy.

Sincerely, Joan Yokom San Francisco, CA 94103

Correspondence: I am a senior citizen, 73 years of age, who has lived in the Sunset District for 40 years. Since retiring 14 years ago I have been a daily visitor, rain or shine, at Fort Funston with my dog who is under voice control.

I deeply resent this third attempt to largely negate the 1979 Pet Policy.

If you visit the Fort during the week you will see that the majority of the visitors are seniors with off-leash dogs. Most of these visitors are women who feel perfectly safe from crime due to the presence of the dogs. On the weekends, there are also many families with children who visit with their dogs. Obviously, they feel comfortable with the off-leash dog policy.

If you severely limit the off-leash area, as is planned, you will have overcrowding with it's problems.

Another issue is the Native Plant situation. Some years ago a great effort was initiated, building fences and planting native plants. Since then, these efforts have ceased. The fences are falling down and covered with sand. Planted areas are filled with weeds and no effort is being expended to maintain them.

One other aspect to this effort to severely limit the off-leash area is on our local San Francisco Parks that allow off-leash dog walking. One example is Stern Grove. Recently, when Fort Funston was closed for a day due to the Tsunami warning, many dog walkers including some professional dog walkers with multiple dogs, converged on Stern Grove, increasing the number of dogs from the usual fifty to between two and three hundred. According to the local San Franciscans who utilize Stern Grove on a daily basis, this created a very unstable and over-crowded situation. Other San

Francisco dog friendly parks will also be negatively affected. Fort Funston does not exist in a vacuum.

In summary, Fort Funston is a wonderful place with a varied and very responsible clientele. Any changes should be carefully thought out and should be minimal. I support the Modified Alternative A (the No Action Alternative) that codifies the 1979 Pet Policy as it was originally written.

Thank you for your consideration.

Sincerely,

James Krotzer

Correspondence: 5-30-2011 Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean, I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law. The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate from congress for recreation upon which the GGNRA was founded. This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others. The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to: ? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. ? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. ? Exclude speculative, exaggerated, biased, or misleading statements and studies. ? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). ? Enable professional dog walking and align any professional dog walking rules with county or city

regulations. ? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input. These are my personal comments and observations regarding this plan: I have been walking my dogs at Fort Funston, since I moved back to the bay area in 1995. My dogs do not dig nor do they chase birds. They walk with me and play with other dogs they meet. It has helped with making my dogs better canine citizens. I have seen horses ride through snowy plovers, yet no one talks about banning them, and yes in my mind and by your actions that is what your intent is, the banning of dogs. I have met a lot of wonderful people that I most likely would never have met if I was not walking my dogs on GGNRA lands.

Sincerely, Joe Hague San Francisco, Ca

Correspondence: Dogs should be banned from Muir Beach.

I support Alternative D, with the caveat that dogs should be completely banned from Muir Beach.

Recently I was at Muir Beach and I saw a lady walking 3 huge dogs. One of these dogs made a big poop on the shoreline. Not far away a few children were running in and out of the water. I asked the lady to please scoop up the poop. She told me not to worry, that the ocean would take care of it. I took out my camera and took a picture of the poop, the lady, and her dog. She immediately reached into her bag, brought out a plastic bag, and scooped up the poop.

This same big dog stood up on a large beam of driftwood and sprayed an enormous amount of pee all over the end of it, and onto the sand around it. Only a few moments earlier, I had seen small children playing in that exact same spot, and putting sand in their mouths, as children will do.

I wish I could say this was an isolated incident, but it is not. I have a hundred examples.

10 years ago I would have said that a few dog owners have ruined it for the many. However, times have changed. In the past 2 years I would have to say that the many dog owners have ruined it for a few.

In the past year I have observed the following at Muir Beach: On any given day, fewer than 10% of dog owners will honor the code. 8 out of 10 dogs are

off the leash. Of these, zero to one is under voice control. Almost every dog at the beach gets into the creek, and some of them play in the creek for a very long time. The new signage does not seem to be any help at all.

On most days, there are more dogs on the beach than there are people. This has become the norm. More than half the dogs will form a pack, and their owners let the dogs run wild, knock children over in the water, and get into domination fights. Very few dog owners will get into the middle of the pack and break up fights.

Dogs pee in the sand, in the creek, and on most of the driftwood.

On some days, going to Muir Beach is like visiting the dump. I just turn around and go home. We need to take better care of this Park.

I suspect that most of the responses you receive will be from dog owners who will want to maintain the status quo. This will unfairly weigh against the natural wildlife, the creek, vegetation, sand dunes, and the many young children who cannot speak for themselves. Think of my voice as one who is representing all of these. And also representing those of us who simply want to enjoy the wildlife and the scenic beauty in a natural environment.

Please hold tough to your proposal. Thank you for all your efforts.

Correspondence: I oppose the GGNRA draft dog management plan and all action alternatives that will reduce or eliminate dog recreation in the GGNRA. Honor the existing "1979 Pet Policy" and provide balanced off-leash options for new lands acquired since 1979.

I am a dog volunteer at the SF/SPCA, and have been walking and training dogs there for 10 years. I also assist in public classes. I can tell you that the well-being of a dog (and its human family) is dependent on off-leash exercise and interaction with other dogs. A tired dog is more trainable, gets along with other dogs, and has a higher quality of life. Too often we see dogs turned into shelters because their owners were unable to find a place for them to play. Dog owners in urban areas don't always have yards, or a park nearby to exercise their dogs. This results in dogs that aren't social, and can lead to them getting euthanized in kill shelters for bad behavior.

In San Francisco particularly, dogs are a member of the family, and with some folks, their ONLY family. Please do not remove dog recreation from

GGNRA.

Correspondence: To whom it may concern:

I read the following letter to the editor in the San Francisco Chronicle on Thursday, May 12, 2011, and feel it perfectly reflects my feelings on the dog leash issue in the Golden Gate National Parks.

Please protect our rare and precious Bay Area biodiversity by requiring dogs in the GGNRA to be on leash and by limiting the number of dogs a single person can bring into the park. National Parks are intended to protect the land for the enjoyment of future generations, not this generation's pets.

Thank you.

-- "Leash commercial dog-walkers"

Commercial dog walkers are abusing our parks.

As a frequent visitor to the Presidio, I encounter many groups of eight to 12 off-leash dogs in all areas of the park.

Although I love dogs, it does not seem fair or appropriate for commercial operators to allow their paid-for charges to run rampant in public parks where they threaten native wildlife and plants, as well as adults and children.

At the very least, these commercial operators should be limited to four on-leash dogs (the maximum one person can truly manage) in specific areas of the park.

They should be held accountable for infringements of park policies and, as other park vendors do, should have to purchase a license to operate in the park.

These funds could be used to enforce the regulations and maintain the dog-access areas.

Jean Colvin, San Francisco

GGNRA was created for recreation, not preservation. To try to impose conservative policies to protect the animals in this environment is just crazy - we are talking about urban setting, not pristine conditions of National Parks, where preservation is justified. One cannot bring back these condition to urban environment with hundredth of thousands of people in the area unless you also plan to eliminate those populations in order to set aside areas for snowy plovers, garter snakes, and red-legged frogs. It really boils down to what is preferable to local residents, not GGNRA. It's people that must prevail, not GGNRA (ostensibly hired by and working for those people, although the record and "management plans" show otherwise) who is trying to protect a few animals that are actually doing quite well even without the presumptuous "protection" of GGNRA wild life conservancy plans, which are not backed up by science but by merely "good intentions".

We cannot bring back American Indians, and the fauna and flora of bygone years, it's too late for that now, after millions of people have moved in, intend to stay, and want their dogs to have some unleashed fun. Let's have reason and sanity prevail!

Type:

Correspondence: I'd like to thank everyone working on this plan for the hard work they're putting in dealing with a complicated issue with a lot of opinions on all sides. And of course by commenting here I'll throw yet another opinion into the mix.

I just got back from hiking around the Presidio. While there I noticed tons of dog prints all over the sandy dunes where fragile habitats can easily be damaged by that amount of foot traffic off the trail. This was right next to signs asking people to stay on trail. It seems far too many dog owners just don't realize how their dogs can affect those surrounding areas.

On the same hike we saw a dog tearing back and forth in this sandy area where it looked like native plants had been planted, or were at least struggling to establish themselves. If we want these areas to remain beautiful for many years to come, we need to allow the habitat restoration being done time to take hold, and when dogs are running completely free everywhere, it can really damage that progress in making, and keeping, our parks beautiful and great for all of us to enjoy.

I believe we can help protect these areas by making sure there are lots of good, clearly identified places, where dog owners can bring their dogs, but keep a lot of areas either dog-free, or only on leash. Education for the public is also important, to keep us all aware of how we can use our parks in a sustainable way ? in the same way people understand they shouldn't litter in a park, because if everyone did, it'd be full of trash, people need to understand they can't let their dogs run free because if everyone did, our parks would slowly degrade and no longer be the beautiful place they'd like to bring their dogs.

Thanks for your time and consideration.

Best, Josh

Correspondence: Frank Dean, GGNRA Superintendent Re: GGNRA Draft Environmental Impact Statement (Dog Management Plan) Report from Eco-Dog Coalition/evaluation of Ken Weiner, Atty at Law Report from Marin Unleashed Dear Frank: The Park Service's Dog Management Plan that is currently receiving final comment is of major import to a large percentage of the Marin County population and will affect the lives of many. You and I

have talked about this several times before. I am writing you today to support and re-emphasize a few specific points. These recommendations are offered following research, not knee-jerk reaction or opinion. That is why I support them, and I hope you will give them thoughtful consideration. One general point that I find particularly disturbing is the lack of participation allowed to Marin County in creating the Reg Neg committee itself. To exclude such an extensive natural area from even being at the table as a stakeholder to me seems patently absurd. Agreement or disagreement with concepts or proposals is one thing; exclusion from participation in the discussion about them is quite another. While this is water under the bridge at this point, I believe it diminishes the overall quality and efficacy of the report itself. It has been posited that only three of the areas in the 1979 Pet Policy for Marin County were Discussed by the Reg Neg committee. Further, few of the areas included in the 1979 Pet Policy for Marin are included for consideration in the Draft Plan/DEIS alternatives for Marin. This appears to be a serious oversight in my view. However, getting to specifics that have a substantial effect on my community of in Marin County, and even more specifically Southern Marin, the proposals I am focusing on largely concern permitting on-leash access on the fire roads that run along the borders of the GGNRA with neighboring communities ? e.g. Sausalito, Marin City, Tam Valley, Homestead Valley, Mill Valley and Muir Beach. I support the proposal for on-leash access on these fire roads, and the 2 trails that provide access to them: The fire roads: Coastal Trail from Muir Beach to Coastal Fire Road to Coyote Ridge Trail (a fire road) to Miwok Trail (a fire road); Miwok Trail from Highway 1 to Coyote Ridge Trail; Miwok Trail from Tennessee Valley Road to Coyote Ridge Trail; Marin Drive from Tam Valley to the Miwok Trail; County View Road from Tam Valley to the Miwok Trail; Tennessee Valley Road (or the adjacent Rhubarb Trail (Marin County trail)) to Oakwood Valley Fire Road; Oakwood Valley Fire Road from Tennessee Valley Road to Alta Trail (a fire road); Alta Trail from Donahue Avenue in Marin City to Rodeo Valley Trail; Pacheco Fire Road from Marin City to Alta Trail; Orchard Fire Road from Marin City to Alta Trail; Rodeo Avenue from Highway 101 to Alta Trail. And the two trails: The Morning Sun Trail that was built to provide access from Sausalito to the GGNRA Headlands; it goes from the Spencer Ave bus-pad on the west side of 101 up to Alta Trail. The SCA trail that runs parallel to Wolfback Ridge Road and about 20 feet below it. This trail connects Alta Trail with the fire road (this one is un-named) that goes over the 101 tunnel and then back into Sausalito (it comes out on Hecht Avenue). I ask that you give a careful added review to these sections. The difference it would make, to add these areas, would be immeasurable to the dog-owning residents of Southern Marin. Furthermore, many of the residents in these areas, like Wolfback Ridge, have been consulted on these proposals and have no problem with them. In conclusion, there are references made in their in-depth reports by the representatives of the Eco-Dog Coalition, and of Marin Unleashed. Those prepared by the latter group are offered in an

effort to establish the voice that was excluded from the table during the discussion and drafting of the current proposal. I have reviewed some, not all, of their material, and a few items jumped out as reasonable and important. For example, a comment is made about lack of clear and consistent communication in GGNRA areas ? what are the rules, where and when do they apply? There is no question that clarity helps people obey the law, and the more adequate it is, In many instances the less enforcement is needed. I am including signs, brochures, websites and maps, and this might benefit from another look ? it could be to your advantage. There also has been review done by Ken Weiner, a NEPA lawyer, that probably has had, or deserves your attention in the review. I do indeed realize the gargantuan job you have on your hands in reviewing so much material and, most likely, so many opinions. Nonetheless, if the job is going to work, and stand up to time, it requires no less. It will affect, and most likely change, many lives of the residents of our Bay Area communities in very basic ways. I will be attending the Breakfast sponsored by the Marin Conservation League on June 10, at which you and Cicely Muldoon will be speaking. I look forward to seeing you again, and hope we'll have an enlightening and amicable discussion there. Meantime, I apologize for the length of this letter, but wanted to share a few views. Good luck, Frank, in your mission. Warmest personal regards, Amy Belser

Correspondence: I just submitted a comment, but I wanted to add the following:

To whom it may concern:

I read the following letter to the editor in the San Francisco Chronicle on Thursday, May 12, 2011, and feel it perfectly reflects my feelings on the dog leash issue in the Golden Gate National Parks.

Please protect our precious San Francisco ecology by requiring dogs in the park to be on leash and by limiting the number of dogs a single person can bring into the park.

Thank you.

-- "Leash commercial dog-walkers"

Commercial dog walkers are abusing our parks.

As a frequent visitor to the Presidio, I encounter many groups of eight to 12

off-leash dogs in all areas of the park.

Although I love dogs, it does not seem fair or appropriate for commercial operators to allow their paid-for charges to run rampant in public parks where they threaten native wildlife and plants, as well as adults and children.

At the very least, these commercial operators should be limited to four on-leash dogs (the maximum one person can truly manage) in specific areas of the park.

They should be held accountable for infringements of park policies and, as other park vendors do, should have to purchase a license to operate in the park.

These funds could be used to enforce the regulations and maintain the dog-access areas.

Jean Colvin, San Francisco

Correspondence: I support the GGNRA's efforts to protect endangered species, native habitat,

and restored habitat, from off-leash domestic animals (dogs) with the proposed plan. The role of the National Park Service is to balance the needs of the environment, our national heritage (natural, historic, cultural), and our human needs for recreation and pleasure (including animal companions). The notion that domestic dogs are being mistreated by the proposed policy is an exaggeration fueled by the intense bond that people feel with their animal companions and the confusion of human long-term perspective with the short-term joy/frustration of dogs and other domesticated species. The freedom of animal companions to range unleashed (or even under voice control or leashed) over native plant and animal habitat does not trump our responsibility to restore and preserve native habitat and to protect threatened and endangered species. Without the latter, our experience of National Park lands is infinitely poorer.

Correspondence: The following are my comments on the Golden Gate National Recreation Area Draft Dog Management Plan / Environmental Impact Statement (DEIS). I support Alternative A, the no-action alternative.

My comments are organized around the following topic areas.

1. Semantics are important

Words matter. The wording that Golden Gate National Recreation Area (GGNRA) staff use sends messages both within the National Park Service (NPS) and to the public. I believe it is important for the NPS to be honest with the American people, who pay the NPS to manage their public lands. I request that the NPS change the following wording.

First, recreation management is fundamentally the management of people. In this case, the people are those who recreate with their dogs, and especially those who recreate with their dogs off-leash. Thus, the plan should be renamed to:

Draft Dog Owner Recreation Management Plan / EIS

This reminds the NPS and the public that it is people that are being managed, and people who are being affected by NPS management decisions.

Second, the NPS uses "park" as a shorthand for the GGNRA. The GGNRA is, of course, a national recreation area. It is not a national park, and it should be managed differently than a national park. Use of the term "park" mis-

represents the purpose and designation of this area. That is important.

The tendency for the NPS to inappropriately view the GGNRA as a national park is illustrated by the figure on page 9 of the NAU (2002) survey research report. The legend in that map refers to the lands as "Golden Gate National Parks."

Third, in the DEIS, the NPS periodically refers to the GGNRA "owning" lands. These are public lands owned by the American people, who have entrusted their management to the NPS. The NPS manages or has jurisdiction over these lands, but it does not own them.

Fourth, the DEIS uses "dog walking" as its default descriptor for recreating with dogs in the GGNRA. In my experience, there is a very significant difference between dog walking and off-leash recreation. Dog walking typically involves a leash and a walk around the neighborhood. Off-leash recreation, of course, does not involve a leash and typically involves recreation on public land. The NPS may desire that all recreation involving dogs in the NRA be on-leash dog walking, but the phrase is not appropriate as a descriptor of historical use in the area. I request that the NPS use an alternate phrase ? "recreating with dogs." This can incorporate everything from on-leash dog walking to off-leash recreation.

2. Mis-representation of the enabling legislation

It is my understanding that the enabling legislation for the GGNRA is as follows:

In order to preserve for public use and enjoyment certain areas of Marin and San Francisco Counties, California, possessing outstanding natural, historic, scenic, and recreational values, and in order to provide for the maintenance of needed recreational open space necessary to urban environment and planning, the Golden Gate National Recreation Area (hereinafter referred to as the "recreation area") is hereby established. In the management of the recreation area, the Secretary of the Interior (hereinafter referred to as the "Secretary") shall utilize the resources in a manner which will provide for recreation and educational opportunities consistent with sound principles of land use planning and management. In carrying out the provisions of this subchapter, the Secretary shall preserve the recreation area, as far as possible, in its natural setting, and protect it from development and uses which would destroy the scenic beauty and natural character of the area...

This is quite different from the NPS' stated purpose of the GGNRA (DEIS page 1):

to offer national park experiences to a large and diverse urban population while

preserving and interpreting its outstanding natural, historic, scenic, and recreational values.

It appears that the NPS has changed Congressional intent, and I do not see any rationale or legal foundation for doing so in the discussion of the enabling legislation (DEIS page 36). I request that the NPS provide a rationale for this change.

The DEIS preferred alternative may be consistent with the NPS' modification of Congressional intent, but it is not consistent with the enabling legislation.

3. Visitation is important

Outdoor recreation is important for many reasons, from physical and mental health to social bonds to connecting people to their public lands. The importance of recreation access to public lands has been recognized at the highest levels, with the February 2011 America's Great Outdoors report being a recent example. In their letter to the president, Secretary Salazar and others noted that "Americans care deeply about our outdoor heritage and want to enjoy and protect it." Not just protect it, but also enjoy it. The committee stated the specific goal of "Increase and improve recreational access and opportunities" (page 17). The steps outlined in the DEIS proposed alternative are directly counter to this goal.

The ability of Americans to enjoy their public lands is not only important to them as citizens. It is also important to the agency we have asked to manage our lands. Visitation strengthens public support for the NPS, and thus plays a critical role in the agency's legitimacy and ability to achieve its mission. Stephen Mather understood this well, and I encourage the NPS to remember it.

There has long been dog owner recreation on the lands comprising the GGNRA. These lands were transferred to the NPS with the understanding that this historical use would continue. Moreover, Congress clearly intended that the GGNRA serve a "parks to the people" function. The DEIS proposed alternative is inconsistent both with historical use and with Congressional intent.

The NPS accepted management responsibility for lands within the GGNRA knowing that federal regulation 36 CFR 2.15 existed and that numerous citizens visited these lands with off-leash dogs. If the NPS felt that off-leash recreation on these lands was inappropriate, it should not have accepted the lands into its system. Efforts to essentially eliminate this use undermine the agency's credibility as a manager of public lands.

I note that the NPS and the country as a whole has placed particular priority on getting youth outdoors. In America's Great Outdoors, there is a whole chapter

devoted specifically to youth. I believe there should be recreation areas where off-leash dogs are not allowed, in part because that is important for some youth and their parents. However, the converse is also true. For example, research in Oregon indicates that playing with dogs is a preferred outdoor recreation activity for both urban and rural youth. Based on my experience, this playing often is off-leash and involves public lands. The report can be downloaded at: http://egov.oregon.gov/OPRD/PLANS/docs/scorp/Youth_Focus_Group_Interviews.pdf

Franklin Roosevelt observed that "The fundamental idea behind the parks...is that the country belongs to the people, that it is in process of making for the enrichment of the lives of all of us." If this is true for the parks, surely it is even more true for national recreation areas. The steps outlined in the DEIS preferred alternative will subvert this idea that the country belongs to the people for the enrichment of all of our lives.

4. Inconsistency with purpose and need

The DEIS clearly states that "provide a variety of visitor experiences" is part of the plan's purpose and need (DEIS page 1). The preferred alternative is inconsistent with this objective, as it dramatically shrinks diversity in visitor experiences.

Recreating without a dog, recreating with a dog on leash, and recreating with a dog off leash are three very distinct experiences. Put differently, they are not substitutes for each other. Provision of diverse experiences is not only part of the plan's purpose and need; it is also a central tenet of recreation management for the past several decades. It is the backbone of the Recreation Opportunity Spectrum (ROS) and is Principle 5 (page 324) in Dr. Manning's text (see below).

The purpose and need section notes the importance of reducing controversy and conflict. The preferred alternative would increase controversy and conflict relative to the no-action alternative. The DEIS observes that past restrictions have generated these problems. Implementation of the quite dramatic restrictions contained in the preferred alternative will only exacerbate them. The key to resolving conflict is to provide desirable options for all historic uses, educate, and then enforce relevant closures. Efforts to suppress a popular use without providing desirable substitutes will increase, not decrease, controversy and conflict.

5. Need to adequately assess additional impacts

In the DEIS (pages 21-22), the GGNRA indicates that "Any change in energy requirements as a consequence of modifications in the number of vehicle trips to GGNRA resulting from the implementation of any of the alternatives would

be imperceptible." However, it is highly likely that implementation of any of the action alternatives would lead to increased vehicle trips to alternative sites, as access to opportunities for recreating with dogs in the GGNRA is constrained. I request that the NPS conduct a thorough evaluation of the impact of each alternative with respect to energy used by citizens obtaining opportunities that would no longer be available in the GGNRA.

In addition, I request that the NPS more fully evaluate the impact on other public lands in the region. By highly restricting a historic use of GGNRA lands, the NPS would displace off-leash recreation to other public lands. This impact should be compared relative to the no-action alternative, whereby the NPS can effectively manage, rather than displace, the use.

6. Use of good management principles

Dr. Robert Manning is a leading researcher in the field of outdoor recreation and the lead author of the most widely-used book in the field: *Studies in Outdoor Recreation: Search and Research for Satisfaction*. He is also director of the Parks Studies Laboratory at the University of Vermont. The National Park Service relies heavily on the research that he and his graduate students conduct.

Toward the end of *Studies in Outdoor Recreation*, Dr. Manning outlines several key principles and a fundamental recreation management framework. Principle 15 (page 326-327) notes that "Outdoor recreation managers should give explicit consideration to a variety of management practices rather than relying on those that are familiar or administratively expedient? Rationing use should be implemented only when other management practices are ineffective or not feasible."

Principle 10 (page 325) notes that "Outdoor recreation should be planned and managed within a rational, inclusive, transparent, and traceable framework." As noted in this section, the Visitor Experience Resource Protection (VERP) framework used by the NPS is one such framework.

The situation addressed by the DEIS affects thousands of people. They deserve to have the NPS follow good management principles. Based on communication with NPS staff, I understand that the NPS has conducted VERP processes at other NPS units in the region, including at Muir Woods National Monument and Alcatraz Island within the GGNRA, but it has not followed a VERP process in the context of dog owner recreation in the GGNRA.

I request that the NPS follow good management principles and processes by implementing VERP rather than simply relying on tools (access restrictions)

that are familiar and administratively expedient.

In other contexts, such as the 2007 Final EIS for winter use at Yellowstone National Park, the NPS has utilized adaptive management. If implemented well, adaptive management is an important and desirable approach to managing natural resources. However, the compliance-based management approach proposed for GGNRA is uni-directional and thus not adaptive. As described in DEIS pp. xiii-xiv, the GGNRA will only be adaptive in terms of further restricting access. Any steps toward further restrictions will be permanent. This approach does not reflect adaptive management or any other good management principle that I'm aware of.

7. Use of good science

According to the National Academy of Sciences, the NPS misused science in the case of the oyster farm at Drakes Estero. There is the danger the the NPS will again misuse science in the management of dog owner recreation on the GGNRA.

First, even if the results of the NAU (2002) report "Public Opinion Research Telephone Survey Regarding Golden Gate National Recreation Area Pet Management Issues" were valid, they would not be an appropriate foundation for restricting recreation with dogs. For example, the DEIS highlights (e.g., pages 279-280) the result that 22% of visitors reported that dogs being off-leash detracted from their experience and some respondents reported feeling uneasy or unsafe around dogs. This 22% is less than the percentage (27%) reporting that off-leash dogs added to their experience. In addition, the 22% was only of the 52% that had seen off-leash dogs. Of the 1,531 survey respondents who had visited any GGNRA site, only 174 (11%) reported that off-leash dogs detracted from their experience.

More importantly, 39% of respondents indicated that they did not see off-leash dogs. This is a reminder that it is possible for visitors to have experiences that do not involve off-leash dogs, as it should be. Some areas in the GGNRA currently allow off-leash dogs while some do not. This current mix of experiences is consistent with the DEIS' purpose and need of providing a variety of visitor experiences.

The fact that some (11%) of respondents reported off-leash dogs detracting from their experience reflects problems in GGNRA management, not problems inherent in off-leash recreation. One of two things presumably occurred for these people to have undesired experiences. First, they unknowingly went to areas where off-leash recreation is allowed, which reflects poor information provision by the GGNRA or poor information utilization by the visitors. Second, off-leash recreationists were in an area that currently does not allow off-leash recreation. This situation calls for better enforcement of existing

restrictions. Additional restrictions will only made this situation worse. In essence, the NPS is saying it should ban all RVs from national parks because I erroneously went to an RV campground and complained that there were RVs there, or because some RV drivers parked in a tent-only area. The solution is better management, including information and enforcement.

Moreover, the survey research suffers from a fundamental bias that makes it inappropriate for use in decision making. The researchers do a reasonably good job of addressing and discussing sampling and coverage error. However, they ignore measurement error, especially social desirability bias resulting from survey wording.

One would expect residents of the four counties to be aware of the NPS opposition to off-leash recreation in the GGNRA. By introducing the survey as connected to the NPS, the interviewers prime respondents to think about the NPS position with respect to off-leash access. Then, prior to asking opinions about off-leash access, it refers to "National Park Service regulations regarding dog leash laws at GGNRA sites" (question 10, page 44 of the report). That sentence alone would lead respondents to think that off-leash recreation was illegal. In case there's any doubt, the interviewers state that "current regulations?prohibit any off-leash dog walking" (question 11, page 45). By saying that an activity is prohibited, the interviewer primes respondents to oppose the activity and support the regulation.

With such leading questions, it's impressive that anyone supports off-leash recreation or opposes current regulations. It takes significant conviction to oppose federal government regulations, especially those coming from an agency such as the NPS, with national parks being viewed by the public as "feel good" parts of Americana similar to mothers and apple pie. Despite that pressure, 40% support off-leash dog walking.

Interviewers went on to state the GGNRA mission as (introduction to question 17, page 49):

the preservation, unimpaired, of the natural and cultural resources and scenic and recreation values of the park for present and future generations to enjoy.

As noted above, this mission is substantially different from the GGNRA's purpose in the enabling legislation, which reflects the intent of Congress (the elected representatives of the American people). I'm confident that responses would have been different if the interviewers had instead stated the following abbreviation of the enabling legislation:

to preserve outstanding natural, historic, scenic, and recreational areas for public use and enjoyment.

The effect of such leading questions is evident in the distribution of responses to question 13 and question 17. The questions are equivalent, with question 13 being preceded by significant priming to be consistent with NPS policy and question 17 being preceded by additional priming. Responses to question 17 indicate fewer "no opinions," less support, more opposition, and more strong opposition. In other words, the priming created by presenting the (NPS view of the) mission affected responses. One can reasonably conclude that "net support" (support minus opposition) would be greater if the survey followed good wording standards to avoid bias.

Measurement error is "perhaps the most common and most problematic collection of errors faced by the polling industry" (http://www.ropercenter.uconn.edu/education/polling_fundamentals_error.html). The significant measurement error in this survey renders results invalid as a scientific basis for decision making. I request that results from this study be removed from the DEIS. If results from such surveys is important in GGNRA decision making on this issue, I request that a scientifically-valid study be conducted.

Second, in *Studies in Outdoor Recreation*, Principle 6 (page 324) is "Outdoor recreation may be most appropriately considered in terms of motivations and benefits rather than participation in recreation activities and visits to parks and outdoor recreation areas." Benefits-based management represents the "best available science" in recreation management, and Dr. Manning expands on the benefits approach in chapter 7 of that book.

Following the principles of the National Environmental Policy Act (NEPA), and to achieve good management and the public interest, I request that the NPS more fully document, and quantify to the extent possible, the benefits from GGNRA visits that will accrue to citizens under each of the alternatives, including the no-action alternative.

Third, recent research conducted in Yellowstone National Park and other units managed by the NPS has highlighted trophic cascades and the role of inter-specific disturbance. All human activities (and all activities by other species) impact other components of the ecosystem. This does not mean that we will, as a society, treat all disturbance as acceptable. However, it provides a more honest reference point for discourse about acceptability. I request that the NPS document the historic range of variability, using pre-white settlement as a reference point, for the species discussed in the DEIS. In addition, I request that the NPS document the effect on those species of humans other than those recreating with dogs. This includes the effect of NPS actions. This provides an important context for discussions of the impact of people recreating with dogs.

Correspondence: Dear Superintendent Dean,

My name is Deborah Roberts. I have lived here in Mill Valley, specifically Tennessee Valley, for 11 years. It is very important to me to be able to continue to take my dog off-leash to Muir Beach and the Miwok trail in Tennessee Valley. I am a very responsible owner. My dog is under sight and voice control at all times. We hike everyday on the Miwok in Tennessee Valley. It is my daily ritual! It truly is my backyard.

In the DEIS, there is very little reference to "recreational" uses. Recreation was a major priority in the establishment of GGNRA. Very little reference was made to recreational use. GGNRA was set-up for urban environment of San Francisco Bay Area. THE DEIS does not address a very important component, human recreational environment.

Walking my dog off-leash in these places is very important to my health and well being. I love being on the Miwok trail daily with Tesouro. We run and play together up and down the hill. As it is, dogs are already at the back of the bus at Miwok. This is only one of two trails of the dozens in Tennessee Valley that are dog friendly. If you take it away, you are taking away my daily recreation. You are not just removing us from the back of the bus but removing us almost all together!

I do NOT agree with the GGNRA proposal.

The DEIS fails to provide documentation or legitimate scientific studies that show that dogs are having a significant negative impact on birds and the environment. Without scientific proof that dogs, and not children or horses, are impacting the GGNRA in a negative way, it is unacceptable to deprive me of my recreational rights living here in this area I call home.

Thank you for considering and honoring my needs as I agree to have nothing but respect for the GGNRA as a responsible dog owner.

Respectfully, Deborah Roberts

Correspondence Type: Web Form
Correspondence: May 30,2011 Frank Dean, General Superintendent GGNRA Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean,

I am a 55 year old widow who lives in Noe Valley, San Francisco. I consider myself an environmentalist, and value the preservation of wildlife. I have been a member of several environmental groups, including the Sierra Club and I reject the Sierra Club's support of the current proposal to limit (and possibly ban - if there is insufficient compliance) off-leash dogs in the GGNRA. I am writing to oppose the GGNRA's draft dog management plan and protest it's unfair impact on single senior women who hike with their dogs for health. With a history of heart disease in my family, my physician has recommended hiking for exercise for physical and emotional health. I hike with my dog for safety. It is not realistic to think that I can do a vigorous hike on the slopes with my dog on a six foot leash. Implementation of the preferred proposals will result in my inability to continue with the health program recommended by my physician. I believe many other single senior women are in my position as well. In addition, I have talked to several seniors who get up in the morning and take their dogs to play on the beach. This constitutes not only their physical exercise but their social interaction as well. Prohibiting off-leash areas for these seniors who are not able (due to physical limitations) to hike with their dogs will deprive these individuals of their physical exercise and social interactions which support their health, happiness and longevity. (I noted that studies supporting these findings were completely omitted from the GGNRA Proposal report.) As a researcher and attorney who has reviewed the entire GGNRA Proposal, there are several problems with the GGNRA Proposal. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law. The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded. This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others. The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to: Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. Exclude speculative, exaggerated, biased, or misleading statements and studies. Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards

applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). Enable professional dog walking and align any professional dog walking rules with county or city regulations. Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input. I also am writing to register my complaint for the presentation of the information. I attended each of the public meetings and was shocked at the comments of the rangers in attendance, who indicated, after hearing my complaints regarding the quality of relevance of the research upon which the proposals were based, that even if the research was faulty, the proposals were supported by the anecdotal evidence of the rangers. Finally, I would like to understand why information regarding the cost of the GGNRA Proposal has not been made public. Thank you for your consideration.

Sincerely,

Judith Brown, Ph.D., J.D. San Francisco, CA

Received: May,30,2011 17:44:06

Correspondence Type: Web Form

Correspondence: I am writing in regard to the public comment of the proposed GGNR dog plan. As a San Francisco citizen, registered voter, biologist, conservationist, park volunteer, National Park donor and finally dog owner, I am profoundly disturbed by the NPF's DDMP. At it's best, the plan is a weak and flawed attempt to address a very small number of issues within a much larger & required management plan regarding the GGNR. Disgracefully, the DDMP attempts to do so by restricting some of the GGNRA's most numerous users and generous supporters. Even worse, it uses biased and misleading scientific data in the attempt to support the plan. I strongly endorse that the 1979 GGNRA dog plan remain as is and in favor of Plan A (no change) for all areas/resources until a more comprehensive and inclusive EIS/management policy for the entire GGNRA is designed. This following are just a few (of many) examples citing errors, problems, and incorrect data that has found within the DDMP draft by the NPS.

A. Recreation Area vs. National Park and rules governing such:

By definition of the 1972 charter, the GGNRA is not a National Park. Though the Secretary of the Interior & NPS has been charged to manage the GGNRA, attempts to impose NPS regulations-both land management and policy planning- on the areas is flawed and contrary to many goals listed to within the GGNRA charter. Policy and regulations specific for dogs and owners within GGNRA were established in 1979. It should be noted that

these regulations offered off-lease/voice controlled areas to dog owners in a small fraction (~1%) of the total area of the GGNRA. It is cited numerous times within the DDMP & Executive Summary that 1979 GGNRA dog policy did not comply with NPS regulations. This makes perfect sense ? as it is not a National Park. The GGNRA is a mosaic of lands largely embedded within a densely populated urban landscape. Much of the land has been developed through several urban-use iterations over the last 200 years, including military bases, railroad lines, public baths, ice skating rinks & private estates (among others). Most of the area's natural environment has also been transformed (intentionally & non-intentionally) by native and non-native plant/animal species. Almost none of these areas resemble the pre-European dune ecology that dominated the Western Coast of North America. Developing an Environmental Impact Summary (EIS) for such a diverse, complex and modified areas is without a doubt a challenging endeavor for the NPS. But the EIS must be specific for a National Recreation Area, with policy and regulations that reflect it's unique requirements. For example, fences and barriers are great & proven tools in the GGNRA to regulate traffic of humans and canines. Fences also can be used successfully to protect native plants and animals. In contrast, a national park ranger (SFSU DDMP open house) explained that fences in national parks had specific restrictions and had limited durations. Such an example highlights the needs for the NPS to develop policies and regulations specific to the GGNRA. In addition attempts to use cited data and studies from pristine wilderness areas or undisturbed areas of National Parks can be flawed and scientifically inaccurate ? but is done frequently within the current DDMP. In fact, several of the cited works don't accurately describe the data & the areas of study in the context of a dog or general EIS within the GGNRA. One of many examples can be found in pg.225 of the DDMP regarding " Alterations of Park Soils". The citation -Joslin and Youmans 1999, 9.3- is taken from a review from Montana Chapter of the Wilderness Society. Naturally, the review focuses on the subject of land policy more accurately described as Montana wilderness. But more importantly the citation actually does not include any actual data ? just a page & chapter in a review upon which the authors (Joslin/Youmans) cite other works. Even worse, the work was not published in a peer-reviewed journal. It begs the question if any/how many of the other cited works have any relevant data associated with development of a EIS for areas and ecosystems found within the GGNRA. A second example citing data from a study that intentionally manipulates readers toward a misleading & biased conclusion can be found on page 227. The cited study (USGS 2008, 12) refers to a USGS survey measuring baseline pesticides concentrations at 10 creek sites ? some of them located within the GGNRA. The data collected from this single study was no doubt an important first step "provide baseline information to enable evaluation of the need for future monitoring". But there is no data or method in this report to connect the low levels of Fipronil observed to any activity of dogs or dog owners in the area. So it begs the question, why is it in the

DDMP? A better application of this data would be found in comprehensive EIS study/plan of the GGNRA that included all the possible sources of the multiple pesticides sampled ? including residential and commercial use. The only possible conclusion of including this data within the DDMP is weakly attempted anti-dog rhetoric with no sound scientific basis.

B. Protection of Resources.

The DDMP plan goes to detail about the management of many different GGNRA resources, including plants and animals. It is impossible to comment upon all of the listed GGNRA resources within the DDMP. I will focus my comments upon one such resource that is a particular importance ? the conservation program of the Western Snowy Plover. This comment will be used as an example of how the DDMP has delivered a biased plan that improperly uses or ignores existing scientific data from multiple sources. The DDMP unfairly creates an illusion that the current canine management plan has had a large negative affect on the WSP population within the GGNRA. Worse still, it implies that further regulation is needed and makes an assumption not supported by scientific data the new regulations will improve WSP communities within the GGNRA.

There is no doubt that the protection the Western Snowy Plover is a concern toward any conservation plan involving costal habitat. The 2007 Western Snowy Plover Recovery Plan clearly defines its objectives as:

"The primary objective of this recovery plan is to remove the Pacific coast population of the western snowy plover from the List of Endangered and Threatened Wildlife and Plants by: (1) increasing population numbers distributed across the range of the Pacific coast population of the western snowy plover; (2) conducting intensive ongoing management for the species and Its habitat and developing mechanisms to ensure management in perpetuity; and (3) monitoring western snowy plover populations and threats to determine success of recovery actions and refine management actions "

The 2007 WSPRP also list the main reasons for declining WSP populations as: "Habitat degradation caused by human disturbance, urban development, introduced beachgrass (*Ammophila* spp.), and expanding predator populations have resulted in a decline in active nesting areas and in the size of the breeding and wintering populations."

The current DDMP drafted by the NPS uses the WSP protection plan as a reason to limit dog access ? both on and off leash ? in several GGNRA areas such as Ocean Beach and Crissy Field. The problem with the DDMP is that is does not address the most substantial threats to the Western Snowy Plover population in these areas. Though canine disturbance can be construed as a SINGLE aspect under the subject of "human disturbance" ? it is certainly

not the primary cause emphasized by the WSPRP (shoreline stabilization and urban development). Only a comprehensive plan including large-scale habitat restoration/protection, subsequent elimination of ALL intrusion into nesting/wintering areas (including people, canines, vehicles), as well as predation control (from feral and native species) can insure an honest effort in protection of WSP. As in other sections of the DDMP, the NPS attempts to manipulate and exclude data from recent WSP surveys (generated by the NPS) in attempts limit dog and dog presence in GGNRA, as well as generate positive public opinion for a weak and non-functional EIS. This type of false rhetoric from an agency tasked with managing resources is simply shameful. The DDMP claims that "Both on- and off-leash dogs are routinely brought into the WPA by park visitors, and are the greatest source of disturbance to western snowy plovers (Zlatunich 2009, 10)". Data presented in Tables 5, 6, and 7 from Zlatunich 2009 clearly provides evidence contrary to the DDMP statement. In the 11 hours of survey time (time with plovers present) reported in the Zlatunich study (conducted at Crissy field), there were 14 recorded incidents of WSP disturbances (Table 6). 79% (11/14) of these disturbances were caused by human walkers and runners. In addition, the number of humans within the 11hrs of survey (time with plovers present) numbered 398 vs 58 dogs (18 on leash/ 40 off-leash) ? a ratio of nearly 7 to 1. The data presented clearly shows that a large numbers of recreational humans are involved with the majority of WSP disturbances. In fact, only 1 of the reported 14 disturbances came from off-leash dogs. Table 7 reports a disturbance rate of 2.5% for off-leash dogs as compared with 3.6 % to walkers and 5.9% for joggers. A concerned citizen and WSP advocate such as myself begs to ask the question: How can the NPS's DDMP continue to blame off-leash dogs for WSP disturbances (at Crissy Field) when the data that they cite provides direct evidence that humans are the primary reason?

C. Compliance Based Strategy / Enforcement

Under the GGNRA DDMP compliance based strategy, "If noncompliance continues and compliance falls below 75 percent (measured as the percentage of total dogs / dog walkers observed during the previous 12 months not in compliance with the regulations) the area's management would be changed to the next more restrictive level of dog management". Furthermore the DDMP strategy is " designed to return impacts to a level that assumes compliance". No study or data provided in the DDMP shows that escalation to a more restrictive regulation of any area will reduce or return said impacts to a compliant level. It is alarming that the compliance strategy is designed to only increase restrictions, while not containing any flexibility to decrease restrictions within areas as needed. Why would such a strategy be designed with only a single, punitive direction resulting in more restrictions? Also, if such a compliance based strategy were adopted, how would it be enforced across some many areas with so many visitors? During

attendance to the SFSU DDMP open house, I was able to speak directly with NPS officers about the enforcement issues. Though I was not able to find within the DDMP plans of budgetary increases for enforcement efforts, I was told by a NPS officer that "some additional personal" would be included in the budget for enforcement. When I asked "how many" new enforcement personal would be available, the NPS officer replied "less than 5 new personal". I appreciate that fiscal/budget constraints will affect that actual number of NPS officers available for enforcement ? and the answer I received must be taken at face value as a spot estimate. But the simple fact that imposing more restrictive regulations across a wide area of GGNRA lands will result in many such areas falling into non-compliance. As per the DDMP designed strategy, non-compliance will cause even more restrictions to be implemented. With every new level of restrictions - enforcement efforts must be taken & enforcement resources must be allocated. This strategy also does not address the fact that a large percentage of the visitor population to the GGNRA areas are local pet owners. They are not going to simply stop visiting their local areas - nor abandon their pets. Increased restrictions will move them to other areas (GGNRA and others) that lack enforcement resources. In fact on page 270 of the DDMP policy, the NPS already concedes that " The enforcement of violations is not uniform. This is partly due to the size of the park and the inability of LE staff to be in many different areas at once". If the DDMP compliance based policy is moved forward as stated, and the amount of enforcement resources are not greatly expanded, how is this strategy deemed feasible? According to the NPS DDMP, enforcement of past dog and EIS policies have not been uniformly implemented. The recommendations for any new regulations across the entire scope of the GGNRA past the standing 1979 policy can only be looked at as an unenforceable strategy. The DDMP does include an actual, but limited data set regarding law enforcement data from 2007 and 2008. Though the data set includes only 2 years, the number of incidences involving dogs actually decreased from 2007 to 2008 from 1535 to 889, a decrease over 40%. It is interesting to note that the NPS does not comment on this drop in incidences, and its overall implications to the larger argument that more/new dog regulations are required.

Projected GGNRA Visitor Use:

The proposed DDMP makes the following statement in within chapters 1 (page5):

"Since the 1990s, the San Francisco Bay Area population and overall use of GGNRA park sites have increased, as have the number of private and commercial dog walkers. At the same time, the number of conflicts between park users with and without dogs began to rise, as did the fear of dogs and dog bites or attacks. The hours devoted by park staff to manage these conflicts, rescue dogs and owners, dispose of dog waste, educate the public

on dog walking policies and regulations at each park site, and enforce regulations also increased."

This statement seems at odds with other data presented within the DDMP and its predicted visitor policy. Page 290 states:

"As previously discussed in chapter 3, visitation to GGNRA is not expected to experience a significant increase in visitation over the next 20 years given the overall visitation trends to the park. Assuming there are no major changes in park boundaries or facilities, park visitation would range between 12.5 million to 16 million people annually, similar to how it has been operating over the previous 20 years. Therefore increased visitation to GGNRA should not result in cumulative impacts to GGNRA resources. "

Figure 5, page 267 shows data reflecting number of visitors to GGNRA. Interestingly- at the time of the current 1979 dog policy, visitor numbers were recorded at ~12 million/year. According to this data, visitor numbers greatly increased during 80-87 period to ~ 22 million/year. During the last 20 years, visitor numbers seem consistent at running around 15 million/year, a much closer number of visitors to when the 1979 policy is adopted. Data from the US Census Bureau clearly agrees that population of San Francisco and the surrounding Bay Area is growing, and that pet populations most likely have grown as well. As a reader of the plan, I am confounded with the statements within the DDMP. If NPS acknowledges that the local population is increasing, and visitors to GGNRA is also increasing, how is the DDMP/NPS not predicting increased impacts on GGNRA resources? Even worse, how can they claim that new dog regulations need to be adopted, if park visitation is predicted to be fairly constant, and there will be no impacts on GGNRA resources. Another argument can be made that as both the human and dog population of the Bay Area increase, the GGNRA resources available to them should also increase. The original charter for the establishment of the GGNRA states that " in order to provide for the maintenance of needed recreational open space necessary to urban environment and planning". As the urban environment/population increases ? so should the GGNRA resources that service them. Under this interpretation, the NSP should be developing strategies to increase areas available for both on and off-lease dog use. This was listed as of the the primary issues within the executive summary : " needs of urban residents " pg. iv. This is clearly not being considered within the current DDMP.

Public Participation / Involvement of GGNRA Regulations

Perhaps the most striking feature about the proposed DDMP was the fact that local citizens (including dog owners) were not able to participate in regulation drafting. By leaving out & not actively working with the local public population, the NPS created a DDMP that ignores the needs of very

people who most often use the GGNRA resources. The DDMP does include a background (though biased) on the construction of a dog management/EIS plan. The NPS efforts in 2004- 2006 to implement the Negotiating Rulemaking act and form a "neutral party" (the Negotiated Rulemaking Committee) to help draft a dog management plan was by far the best effort to include the local public in design regulation. The NRC actually contained representatives from a variety of different interest groups. The DDMP states that the NRC was able to reach consensus "on nine guiding principles, guidelines for commercial dog walking, and a site-specific alternative for Oakwood Valley (Marin County)." The NRC failed to reach consensus of other issues - "special regulation for dog management at GGNRA". As mentioned, any EIS or management strategy for the GGNRA will include a complex process. The NPS seems to take the opinion that the NRC failed in it's goals, and now must act alone in developing a draft ruling. This is a short-sighted & incorrect view of the data, as well as not being responsible to the public interest in which the NPS exists to serve. The NRC did reach agreements for some issues, and provide a very important communication between public needs and the NPS. This type of negotiating system must continue to be implemented if the NPS is serious about drafting a comprehensive EIS (including dog policy) policy that can be successfully implemented. This may take more time and communication between the public, but makes the difference between success and failure. It is important to note the increased communication between the NPS and GGNRA users was one to the central areas for improvement reported by Dr. Nina Roberts in 2007. Though the main intent of Dr. Roberts work was sullied in the DDMP by using only 1 isolated quote in regards to dog use in the GGNRA, one of it's central themes regarding the need for communication between all the diverse people who use GGNRA rings true. Perhaps members of the NPS should reread Dr. Roberts work and take heed on what the needs of the people are involving the GGNRA ? I can assure you that the focus is not regulating dogs in GGNRA It should also remind the NPS that communication requires parties that listen to each other as well as an active and balanced discussion. Dictating or imposing regulations on others will not provide for a successful communication strategy to the public.

With these comments in mind, I strongly support Plan A for all GGNRA sites and resources. It would be my intention to dismiss the NPS proposed DDMP draft, in favor of designing a more comprehensive EIS that includes all of the issues the required for a successfully and balanced management plan across the GGNRA. The decision to abandon the current proposal is based on the reoccurring bias and scientific errors endemic throughout the entire proposal. I would look to the NPS to reinstate a more comprehensive and inclusive communication with to general public to aid them designing such a plan.

Regards, Scott Stawicki San Francisco, CA 94114

Dear Mr. Dean,

I'm afraid our city is going to lose every place a dog can run. As a non-canine walking person, I enjoy watching dogs in their element, It is nothing short of poetic.

Best regards,

jj San Francisco, CA

Correspondence: I am writing regarding the proposal for change in use for dogs in the GGNRA. I have read the proposed plan and attended your public information session at lake merced and have concluded that this proposal is regressive and discriminatory.

I say this based on several observations. 1) applying the same use requirements as NPS land does not align with the size of the GGNRA areas in question nor to their proximity to urban environments. I can see that on the human use side, you have made concessions to accommodate this, but are not doing so in the same way with dogs. 2) The proposal goes straight from one community-based, mixed use model to the new model without any exploration of measures to make off-leash dogs compatible with the other objectives of the recreation areas, such as fencing and other barriers that have been acknowledged by NPS and other environmental groups to be effective. Your proposal simply says no. how can you expect people to trust your policy if you do not make any earnest attempt at compromise or mitigation before proceeding to restriction and exclusion? 3) Your proposal seems to place all of the responsibility for impact to wildlife on un-leashed dogs without comprehensive, un-biased studies which point to this conclusion. I am not a scientist, but I do operate in a world where data are included as part of the decision-making process. The few reports you did include point to human impact (snowy plover at crissy field, for example) as having the highest disturbance rate, yet I see nothing in the plan which is

aimed at restricting walkers, runners, messy picnickers (whose trash we pick up when walking our dogs) cyclists, skaters? 4) You provide zero data, suggesting there has been zero work done around the effectiveness in wildlife protection based solely on the removal of off-leash dogs while human use continues unfettered. Until you can show multiple cases of this targeted restriction creating positive change for the ecosystem in question, it shows only a course towards outright discrimination.

In conclusion, as an environmentalist, active citizen, dog-owner and voter, I have to describe the proposal as exclusionary, biased, arbitrary and misleading. With so much pristine land that can and should truly be treated with the special care and oversight it deserves, I cannot understand why you are adopting this approach and applying these resources to areas that will never achieve anything close to the splendor or ecological importance of places like Yosemite, Yellowstone, Mt. Lassen and so many others that desperately need your vigilance and diligence in orchestrating their preservation. Please dismiss this discriminatory attack on the community that treasures the GGNRA as it is and re-prioritize policy and enforcement in the places that will benefit future generations the most.

Thank you, Sarah van ness san Francisco, CA 94114

Correspondence: GGNRA:

First, I am strongly opposed to GGNRA's inclusion of a many cultural resources in the DEIS when, simply-stated, many of these cultural resources are not within the dog-walking areas and some of the "negative activities" cited in this section cannot be attributed to dog-walking activities.

In addition, I am strongly opposed to the GGNRA's Preferred Alternatives for the dog-walking area of Fort Funston, in specific, and moreover opposed to the general reduction of off-leash walking areas in all of the GGNRA sites.

Discussion about Chapter 3: Affected Environments In general Chapter 3: Affected Environment, the DEIS overstates the cultural resources that are affected by the Chrissy Field and Baker Beach dog-walking areas. Below are listed 4 examples:

- In referencing Chrissy Field the DEIS states "original buildings-hangars, barracks, guardhouse, etc." are included in the "Affected Environment".

Most of these structures are located on the south side of Mason Street, geographically located across the street from the dog-walking boundary and in visits to the hangar areas of Chrissy Fields, dog-walking is not an activity found in this area where public and retail-oriented spaces are surrounded by parking areas.

- In reference to "Fort Winfield Scott" section of the DEIS, this section should be renamed to "Fort Winfield Scott Seacoast Fortifications" or entirely removed to itemize only embattlements that are contained within the Baker Beach dog-walking areas. In addition these fortifications should be itemized within the text and on the map in a consistent manner, and the "damage" that is caused by dog-walking activities to these fortifications should also be realistically discussed.

- In addition, the mention of "headquarters" in the text of Fort Scott implies that the "campus" including the headquarters building, barracks buildings and parade grounds are part of the DEIS area of concern. These cultural resources are geographically distinct from all of the dog-walking areas included in the DEIS. The reference to the "headquarter" should be re-written clearly.

- In referencing Chrissy Field, the DEIS states that "vandalism" is regularly occurring at this site. I find it difficult to believe that this "vandalism" should be attributed solely to dog-walking users of this site.

Discussion about GGNRA's Preferred Alternative at Fort Funston The Preferred Alternative and Alternates B-E at Fort Funston

-reduce the amount of off-leash areas to an unacceptable amount of gross area for the amount of users and dog-walking activities that occur there.

-reduce the amount of off-leash areas to an unacceptable amount of gross area for users that cannot physically walk down to the beach.

-limit (severely) the dog-walking areas when the beach is closed for various incidents like water contamination (i.e. similar to closure at the time of Busan Oil Spill) or more often, high-tidal water levels when the beach is not useable.

-limit the dog-walking areas to such a small gross area will most likely cause a rise in dog-related negative incidences, that no user nor park personnel would find positive.

I would like to recommend Fort Funston ALTERNATE B with the following modifications:

-At the intersection of the (Coast Trail, Beach Access and Sunset Trail), and heading north, limit this area to non-dog-walking activities for the protection of the Bank Swallow and for users that are not comfortable with dogs.

-North of that intersection (Coast Trail, Beach Access and Sunset Trail) provide a second smaller parking area and accessible trail with signage noting dog walking is permitted at the southern parking area.

-Provide clear signage in both areas of expectations and reasons for the rules. In the 8 years I have been using Fort Funston there have been no rules posted at the parking area of Fort Funston.

Discussion about GGNRA's General Reduction of Off-Leash Walking Areas Reducing the amount of open space for dog-walking activities is a punitive approach to current off-leash walking practices. The community was promised that the GGNRA lands would be maintained for its urban dwellers, and as a part of San Francisco blended community, the dog-friendly members are disappointed by the GGNRA's negative approach. I believe the system in-place is working (on many levels) and could work better if smaller, more localized strategies were undertaken to preserve cultural resources, landscape and wildlife habitats. Simply reducing the cherished dog-walking areas, throughout the Bay area for the sake of corresponding to Federal guidelines, is a waste of the positive efforts of the GGNRA.

Thank you for allowing this forum for comments and concerns.

Correspondence: I live in the Fairway neighborhood that borders Mori Point. I have spent many hours enjoying the scenery, hiking on the trails, and walking my dog. I walk my dog along the trails in Mori Point at least twice a week. My neighbors are the most frequent users of the area; we have a strong interest in keeping the area pristine. I want to be able to use the area for years to come. I am in favor of any plan which:

1. Permits dogs on all trails and roads within the GGNRA, and especially the Pollywog Trail in Mori Point. I have been walking dogs along the Pollywog Trail, Old Mori Point Road, and down to the beach for the twenty two years that I have lived in the neighborhood. I adore that walk and it is

one of my favorite parts of living in this neighborhood.

2. Requires dogs to be leashed everywhere within the GGNRA. The Mori Point area is frequently used by dog walkers, hikers, and bikers. Requiring dogs to be leashed is the best alternative to maximize visitor enjoyment and minimize conflicts.

3. Contains no restrictions or permits for dog walking within the GGNRA. This would require too much management and would be difficult for visitors to comply with.

4. Contains no poison pill which would permit the GGNRA to outlaw dog walking due to noncompliance. It is patently unfair to have a plan which allows the rights of law abiding dog walkers to be dependent on the compliance of other people.

Thank you for your time and consideration.

Correspondence: My partner and I have two small Havanese dogs that we have taken to various off-leash areas around the city - mostly on the beach along Crissy Field and the beach in front of East Beach parking, when there are not many people unaccompanied by dogs present on that beach, but also on the grassy area of Crissy Field for Havanese Meet-Ups and when riding bikes with a trailer for the dogs past that part of the Crissy Field area. We also have been off-leash in Alta Plaza Park, Lafayette Park and Alamo Square Park as well as Fort Funston and appropriate areas of Golden Gate Park. It is one of the most thoroughly enjoyable activities for us and for our dogs here in the City. We recently moved here - May 2008 - and the perceived and actual dog-friendliness of San Francisco is one aspect of the City that we share with friends and family across the country. It is a true drawing card for travelers to the Bay Area, imho, and, therefore, likely beneficial to the local economy. The proposed reductions to off-leash areas fly in the face of this important character of life in San Francisco, imho.

I also have reviewed and heard comment on the supposed environmental impacts and these seem based on scant facts or authentic research (I am an educational researcher and am also familiar with key methods of both environmental research and relevant public policy research). There seem to be few truly tested proclamations about environmental impact throughout the report. My own experience on Crissy Field is that while dogs and their owners virtually never get in the protected dune areas of the beach I *often*

see people unaccompanied by dogs laying out blankets and/or having a picnic or otherwise sitting in the designated protected areas, even when there are few if any other people or dogs (for that matter) on the beach (so that there are plenty of opportunities to sit on the beach properly unbothered - it seems simple to be a preference of folks to sit among the protected dunes). I say this to point out that I have witnessed far more instances of *people* violating protected areas at Crissy Field and elsewhere and very, very few instances of a stray impetuous dog trespassing in these areas.

Please do not reduce the off-leash areas which are currently just a minimal part of the overall GGNRA. It is a *recreation* area not an endangered habitat area. And dogs and their owners are among the most protective of and respectful of the park lands in question.

Correspondence: 5/30/11 Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022
Dear Mr. Dean, I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law. The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded. This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others. The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to: Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. Exclude speculative, exaggerated, biased, or misleading statements and studies. Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). Enable professional dog walking and align any professional dog walking rules with county or city

regulations. Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

Sincerely,

Gretchen Lan San Francisco, CA 94122

Correspondence: Please eliminate any restriction of the off-leash areas in the GGNRA plan. As a parent of young children and a dog owner,keeping Fort Funston and portions of Crissy field as official off-leash areas is essential to my ability to enjoy the San Francisco Coast line with my family. Our dog is young and needs to run and socialize as much as my children do. Fort Funston and Crissy Field are an essential part or our recreation enjoyment in the city. Please preserve or increase the off-leash areas in the GGNRA. Thank you.

Correspondence : Mr Dean, I find much to object to in this flawed and biased report. When one considers how much evidence this report is lacking and how many other studies show contrary facts, I can not help but conclude this report is prejudiced against dogs and discriminates against dog owners. Please read the following that I have collected.

1) There is no scientific consensus that offleash dogs have a significant impact on bird and wildlife populations. A recent study by Forrest and Cassady St. Clair (2006) (see below for citation information) studied diversity and abundance of birds and small mammals at 56 sites in urban parks in Edmonton, Alberta. To their surprise, they found that whether a site was on- or off-leash had "no measurable effect on the diversity or abundance of birds and small mammals. Indeed, they said, "wildlife, particularly birds, in suburban and urban areas exist there because they are fairly tolerant of moderate levels of human activity."

2) The GGNRA's own studies indicate that dogs have no significant negative impact on the population of snowy plovers at Ocean Beach, The Nov 15, 1996 report of snowy plovers by GGNRA staffer Daphne Hatch found that there was an increase of more than 100% in the number of snowy plovers in

the years after the 1979 Pet Policy went into effect (allowing offleash dogs on Ocean Beach and elsewhere). There was no negative relationship between the number of dogs and the numbers of plovers on the beach at the same time. Indeed, the 1996 Hatch Report says: "Factors other than the number of people or dogs, possibly beach slope and width, appear to exert greater influence over Snowy Plover numbers on Ocean Beach."

3) The GGNRA's own data indicate that there was no negative impact on plover abundance after the court rulings reinstated the 1979 Pet Policy allowing dogs offleash on Ocean Beach. Indeed, the numbers actually increased. A follow-up 2006 Hatch Report considers effects on the numbers of plovers after two Federal Court rulings reinstated the 1979 Pet Policy, allowing offleash dogs back on Ocean Beach. According to the study, the maximum number of plovers ever recorded was in 1994, at a time when there were no restrictions on offleash dogs on Ocean Beach. Numbers of plovers have varied since then, (from a low of 14 in 2000 to 35 in 2005), but there is no correlation between when numbers of plovers were low and when dogs were allowed offleash. Over the same time period, similar changes in plover populations have been seen at Half Moon Bay State Park. At that beach, there was once a maximum of 60 plovers, but there are currently only 25-30 present. This decrease cannot be blamed on dogs since dogs are not allowed on the beach at the state park at all, even onleash. Clearly any decreases in plover populations in recent years are unrelated to whether offleash dogs are present or not. Indeed, data from the 2006 Hatch Report posted by the GGNRA on its website actually show an increase in plover numbers in 2005, the year after the first Court Ruling. The annual mean of snowy plover numbers (total number of plovers observed during all surveys in a year, divided by the number of surveys done that year) show an increase in plover populations after the Court rulings (from 26.55 in 2004 to 31.30 in 2005). The annual snowy plover median listed (the number of plovers counted in a single survey, with half the surveys counting more plovers than the median number and half the surveys reported less) is 28 for 2004 and 33 for 2005.

4) People without dogs pose an equal "risk" to plovers, yet there is no attempt to restrict their access to the plover areas. Unable to prove any impact on plover population numbers, the 1996 Hatch Report argued that dogs "disturb" plovers. However in the entire 1.5-year study, only 19 out of 5,692 dogs -- less than one-third of one percent -- were observed deliberately chasing plovers, and none was reported to actually catch or harm a bird. The report adds that on another 15 occasions, at least 100 additional plovers were "inadvertently disturbed" by dogs, comparing this to the 48 plovers inadvertently disturbed by people without dogs, implying dogs inadvertently disturb plovers at least twice as often as people alone. But a closer reading of the report shows that the disturbances from people were noted in about half the recording time (24 hours of observations) as that devoted to studying dogs (40 hours). Had the two groups been observed for equal amounts of

time, the number of disturbances would have been nearly the same. Yet there are no proposed restrictions on people without dogs who walk or run through the plover protection areas.

Note that in the 2006 Hatch Report, an incident is classified as a "disturbance" when, in response to an offleash dog, a plover lifted up its head and looked around. This overreaching and misuse of the term "disturbance" illustrates the bias inherent to the Hatch observational studies.

5) The Federal Government cannot make policy decisions (such as this proposed closure) that are based on assumptions that have no hard data to back them up. The assumption that any disturbance of plovers or other shorebirds causes significant problems for the birds is repeatedly stated as fact. However, even the 1996 Hatch Report says that "Little research has been conducted on the energetic effects of disturbances, and on whether individuals can compensate for this lost energy intake and increased energy expenditure." One recent study, conducted as part of a Senior Research Seminar at UC Berkeley did test the commonly repeated assumption that recreational disturbances changed the feeding behavior of snowy plovers. Megan Warren (2007) found no significant relationship between feeding behavior and direct disturbance by people recreating on the beach. "The Crissy Field study did not provide any relevant results, however, the data from the two Point Reyes study sites do not support the hypothesis that western snowy plovers in more heavily disturbed areas devote less time to actively foraging and more time to being alert." What other often-repeated assumptions about the effects of disturbances on plovers and other shorebirds will be similarly disproved when studies are done that put them to the test? Do we really want to restrict an entire class of people based on unproven assumptions?

6) The studies of offleash dogs in the GGNRA do not consider "real" threats to plovers from natural predators like ravens. Offleash dogs may be more likely to chase ravens, a natural predator of plovers, because the ravens are so large. Thus the presence of offleash dogs may keep ravens away from plover areas. This is one possible explanation for why the numbers of plovers increase when offleash dogs are present.

7) If the GGNRA was sincere about protecting plovers, they would put up "temporary" fences to keep ALL park visitors out of the plover protection areas, not just people with offleash dogs. To restrict only one class of park users and not others who have similar "effects" is discriminatory.

8) The GGNRA has not taken any other action to protect plovers, despite clear opportunities to do so. During the recent Cosco Busan oil spill, the GGNRA quickly erected floating booms to keep oil from entering the Crissy Field lagoon at the eastern end of Crissy Field, yet made no attempt to

similarly protect the plover area at the western end of the beach. The oil posed a significant risk to the plovers, yet the GGNRA did nothing to protect them from it. Indeed, oiled plovers have been reported in the GGNRA. The GGNRA has allowed sporting events like the 2006 Turkey Trot to proceed, with the result that at least 1000 people (more likely 1500) walked or ran through the plover protection area on Ocean Beach. Park rangers routinely drive four-wheel drive cars and trucks through the Ocean Beach plover protection area while pursuing people with offleash dogs. During Fleet Week, the plover protection area at Crissy Field is filled with people watching the air show, with no restrictions or protections in place. Dead sea mammals are left on beaches, encouraging natural predators of plovers like ravens to come to the beach.

9) The GGNRA should focus enforcement on offleash dogs who actually do chase plovers. Banning an entire class of people (those with offleash dogs) from the area because of the actions of a very few is discriminatory and does not offer the plovers any significant increase in safety. In order to ticket people with offleash dogs in the plover protection areas, Park Rangers will have to be present at the sites. They could, therefore, easily cite people whose dogs chase plovers (the few) and leave those people whose dogs ignore the plovers (the vast majority) alone.

10) Even if the restriction is justified, the area closed at Ocean Beach is much too large. The plovers are located down by Noriega St, and yet the area closed begins near Lincoln, nearly six city blocks farther north. A similarly large buffer zone is claimed at the southern end of the plover area. The buffer zones are too large and should be shortened.

Correspondence: Please leave things as they are. Many people enjoy Fort Funston, Crissy Field etc. with their dogs. Many families, many old people seniors, many people of all ages and ethnic groups. We like to play fetch, we like to jog, we like to let dogs play with dogs - none of these are possible on a leash. Please let us keep these tiny, tiny pieces of the recreation area - given to the park service years ago on the condition that existing uses, such as playing fetch off leash, be continued. There is no where else to go in San Francisco. I have a small child and I can say with authority that there are already plenty of places to bring a child where dogs are not allowed. We need to keep a few for the families, seniors and other people who want to enjoy recreation with a dog. Otherwise all these people will be swarming the small parks and the soccer and baseball fields. Many places are already set aside for native plants and birds. Please make this plan go away. Thank you, Megan Smith, Little League and soccer mom and dog owner, Fort Funston user, San Francisco resident .

Correspondence: I have lived in Marin County for 25 year, always with 1-2 large dogs that need opportunities to run as well as walk. I have regularly taken my dogs to Homestead Valley, Alta Trail, Muir Beach and Crissy Field. All my dogs have been under voice control. Exercising my dogs in ROLAs is an important component of my own physical and emotional health.

I don't think the proposed alternatives are at all balanced for multiple use or by county - they distinctly lean toward restricting the most frequent/greatest number of users in many areas, with Marin having nearly all its ROLAs eliminated. Have you ever done a usage survey? In the areas I mention above and others, off-leash dog walking (and dog swimming) is the recreational usage for at least 50% of all visitors, probably more than that for some areas. Does the R in GGNRA not stand for recreation? How can you call a plan that eliminates a majority recreational use "balanced" for visitors?

I also don't buy the vague "potential threat to wildlife" canard - I also use a dog park in Mill Valley that co-exists with blue herons, killdeers, snowy egrets, pelicans, Canada geese, and many other types of birds. When we were first dedicated the land some 20 years ago, Audubon representatives protested, citing the "potential threat" argument. But all the avian populations have flourished except when sickened or killed by human-caused pollution: sewage, oil and other toxic spills.

I have not read the 2,400 page document but have been told that it fails to provide documentation based on scientific studies that show that dogs are having a significant negative impact on birds and the environment, and that this impact is solely caused by dogs and not other factors. There will always be some irresponsible dog owners and I fully support laws that target them, just as I do for irresponsible gun owners, irresponsible drivers, etc. But we don't take away privileges from a huge segment of the population just because of the few, and that shouldn't be the case here either.

Correspondence: The NPS has been too lenient regarding dogs in GGNRA, and should not fear a public backlash mobilized by a vocal minority. Strong restrictions are necessary to enable everyone to enjoy and preserve the precious landscape. Without care the habitat will disappear, and if this occurs, future generations will lament that we prioritized short-sighted, selfish dog walkers over an irreplaceable ecosystem, while interfering with citizens' ability to peacefully enjoy nature.

Very few dog handlers demonstrate an attitude of responsibility and consideration, and instead are just as aggressive and intrusive as their dogs. I cannot fully enjoy walking at Crissy Field or Land's End because I have had many unpleasant interactions with dogs and their inconsiderate owners. I have been hit hard in the back by catapulted balls, been shocked when a

large dog jumped from behind onto my hips and legs, felt scared when another dog jumped on my legs and closed its mouth around my fingers, and have repeatedly dodged whirlwinds of dogs chasing each other. I enjoy well-behaved dogs in appropriate places, and in the past owned a wonderful, trained dog, but do not invite interaction with strange dogs. Every time a dog aggressively approached me without my beckoning, I politely, yet firmly, confronted the owner, and each time I was met with incredible rudeness. I have never encountered a ranger around the time of the incident to report the interaction.

It is only a matter of time before someone, perhaps a child or elderly person, is seriously hurt by a dog on government property, which may beckon legal action against the NPS. I do not want our tax dollars to go towards defending lawsuits because the NPS did not take responsibility towards the general public, and instead allowed dogs to run loose. The NPS must protect both the habitat and the general public, not pet dogs' ability to run wild on precious land.

I have witnessed dogs burrowing deep holes behind restricted, fenced areas, run freely in the snowy plover habitat during nesting season, chase seabirds fishing close to shore, as well as audibly disturb the landscape, which may drive wild animals from their habitats. Many dog walkers either do not care about those around them, or cannot control their charges, particularly when they take many canines out at once. I do not understand how the unboundaried play of dogs should be allowed to override the deep enjoyment of people relating with nature, which for many serves as a precious escape from the pressures of urban life.

Most of the anti-leash lobbyists are misguided about dog pleasure. Canines are pack animals who require a strong leader; when living with humans, every professional trainer will state that the leader should be the person, and that trouble arises when the dog believes that it can dominate people. Dogs are happiest when they know their boundaries, for this replicates the hierarchy found within canine social structure. Most of the dogs on GGNRA land are not well-trained; they jump on strangers, do not respond to voice command, do not heel, and have to create hierarchy with every interaction, and too often assume that they are dominant over strange people. This causes stress for the innocent person going for a walk, as well as for the dog, and ultimately for the environment as well. For those who believe that dogs need free interaction, large play areas should be created on less sensitive habitat, and away from where regular walkers wish to clear their heads and enjoy nature.

It is a relief to walk on the Peninsula and in the East Bay, where dogs are either prohibited or where their behavior is restricted. Throughout the Peninsula Open Space area and at Tilden Park, for example, very clear and

numerous signs create a workable rules of engagement for the places that dogs are allowed. These local governments do not seem inhibited about restricting where dogs are allowed, and under what conditions they may come. Why is the NPS more timid than these local governments? The misguided 'freedom' that is plaguing the GGNRA stands in sharp contrast to western Europe, for example, where it would be inconceivable for dogs to harass strangers in parks and on wildlands, at peril to the habitat.

It is simplest and ultimately best to follow the example of the Peninsula Open Space and many other federal lands, which is to prohibit dogs in most areas. It will be too difficult for the NPS to enforce complicated and subtle rules. Too many owners have a sense of entitlement at the peril of the world around them, and until our pet culture changes to one of consideration, dogs should not be allowed to run unleashed on GGNRA lands. This may be a case of where a few bad handlers ruin the situation for everyone else, but in my copious experience, it is on every occasion I venture out that I witness a dog destroying habitat or interfering with a citizen's peaceful enjoyment of the land.

Correspondence: I oppose the GGNRA draft dog management plan and all action alternatives that will reduce or eliminate dog recreation in the GGNRA. Honor the existing "1979" Pet Policy" and provide balanced off-leash options for new lands acquired since 1979.

Let me explain. My partner and I have two small Havanese. We routinely walk them in off-leash areas of Crissy Field. Mostly in the stretch of beach that I believe will still be available for off-leash, but also on the beach directly in front of East Beach parking when there are not large numbers of people unaccompanied by dogs - especially in the winter months when virtually no one beside owners with dogs are even bothering to use the beach. Further, we enjoy the grassy area of Crissy Field.

I have to say that rather than being bothered by the presence of dogs we and our dogs have been stopped on countless occasions with people - both locals and tourists - proclaiming how happy they are to be able to come to an area where they can enjoy the outdoors AND the presence of dogs (sometimes they are dog lovers who live in apartments where no dogs are allowed, so they come to the beach for their "dog fix"; other times tourists have spoken wistfully of their canine friends left at home and express appreciation for an opportunity to be reminded of them and to see dogs so well-integrated into

the social life and recreational environments of the City).

When so very little of the overall area of the GGNRA is devoted to off-leash opportunities, why reduce these few, well-utilized, respectfully-utilized and appreciatively-utilized park areas? Upon review of the impact report there seem to be virtually no really thoughtfully researched or factual accounts of adverse environmental impacts of these off-leash areas. It seems like it is a "policy for policy's sake" or a desire to force the San Francisco park lands into alignment with other park lands nationally without taking into account the unique character and social/recreational opportunities these areas afford our City.

Correspondence: Thank you for listening to my contribution and input on the policy regarding dogs in the open space area of the GGNRA. My thoughts are guided by being an outdoors person for many, many years. I have also worked as a naturalist and conservation specialist in the GGNRA ? Fort Funston, as well as led groups of young people and adults in the outdoors rafting and hiking adventures.

Here are a few ideas and suggestions for why on-leash/off leash dog policies are for better for the community:

1) Recruiting Future Stewards of the Outdoors - As a life-long advocate of the environment and an outdoor educator, I believe it is important to get as many people as we can into the open space, enjoying and appreciating all it has to offer. Children and families that have a family dog want to bring it with them to the open space. The no dog policy will eliminate their ability to fully appreciate our parks and those children will never know the value of keeping and preserving our parks.

2) Public Health Value - At a time when obesity is at epidemic level and free or low cost recreational opportunities for children and families are going away, the parks serve as one of the best venues for life-long health and fitness. Dogs help us to get outside and move. Therefore, if the parks allow dogs, people will get outside and walk with them and get the exercise they need. Families with dogs will have a much better level of health and fitness.

3) Safety ? I am a woman who walks all times of day (and sometime evenings) without another person with me and I feel I need my dog with me. If dogs were banned, it would make it more challenging and would take

away my access to the parks. This past week my partner was stalked and chased by a coyote in the Rancho. It was snarling, yapping and came within five feet of her. Her dog stood between her and the coyote. At times like these, woman's best friend can be a great deterrent.

ROLAs (Regulated Off-Leash Areas)

In stating that additional ROLAs (Regulated Off-Leash Areas) will not be considered", the GGNRA violates the court ordered procedures in US v. Barton. The GGNRA again seeks to ban historical recreational uses without public input. "Regulated Off-Leash Areas" should be considered like any other recreational pursuit, and decisions based on the merits of a given area based upon objective criteria - including historical uses.

My recommendations for the GGNRA dog policy are:

For those that do have voice control:

ROLAs option, my recommendation would be to have access limited and restricted to dawn-8 a.m. and 5 p.m. ? dusk (or 4 p.m. until dusk during PST).

Another ROLAs option would be to have a similar policy that was instituted in 1979's advisory commission for Marin County's Whitegate Ranch. That policy allowed for an Advanced Dog Training Area where use is restricted to owners and dogs that have successfully completed basic obedience training and are in process of advanced obedience or special skills training (i.e. search and rescue, etc).

On-leash During the other times I strongly recommend an on-leash dog policy. We share this open space with hikers, birders, children, bikers, seniors, and wildlife. Everyone can enjoy this amazing environment if dogs are on leash or if people have the voice control for the ROLA option.

A strong enforcement policy ? I have walked many times on Milagra Ridge and have found that dogs, people, bikers and seniors can appreciate the area and enjoy a relaxing day at the park. Part of the reason for that is the strong enforcement of the on-leash policy. People know that Rangers patrol the area (particularly on weekends) and therefore comply with the policy.

Trail Portal The current trailhead in Montara is not workable given it is in the middle of a residential area and next to a school. There has been strong opposition to the LeConte trailhead already and Second Street is semi-private, narrow, unimproved dirt road. If individuals parked cars at either of these locations it would cut off fire department access to the homes and the

Rancho.

I strongly advocate that you not penalize all dog owners for a percentage of bad dog owners. I would however strongly encourage an on leash policy with strong enforcement policy for those who cannot comply with the regulations or a contained ROLAs option. With that, we can all enjoy this amazing and spectacular area together.

Correspondence: I have walked my dog daily at Crissy Field (from west end of lagoon to fort point) for 10 years. While there are cranky people and mad dogs, that is few and far between. Never have I seen a "pack of threatening dogs". On average, like a busy Memorial Day today, there were about 250 people, 8 dogs on the grassy area, and 10 on the beach,(west beach area) 2 dogs off leash and 10 dogs on leash on the gravel trail. Off season and foggy days (almost 360 days) there are generally 2 dogs in the grassy area, 4 on the beach, and maybe 3 off leash. The only time I have seen signs stating CLOSED FOR RESTORATION was the aftermath of a massive structure built for a fancy party on the flat grassy knoll near the warming hut. There are restoration signs there now, as it is the aftermath of a structure that took 1 week to build for a 1 night party, complete with wood dance floor. The grass is now mud and has been this way for about 2 months. The grassy area of Chrissy Field is so large that the few dogs that frequent it could never cause as much damage as this party rental area. The gophers are mote damaging to the lawn than a dog could ever be. If the herons eat too many of the protected gophers, will the herons be banned? If I were a snowy plower, a loose child, a rolling ball, or a dog on leash would be scary. This area should be prohibited to all. On busy times, the trash blows and toilets flow with the remains of humans who don't carry bags to clean up after themselves. Today I was at Chrissy Field and there is only one word to describe it...MOVEMENT! Whether you walk your child, your dog, your rabbit; bike,boat, hike, swim, fish, run, cook, or look, everyone was active and moving, even the hummingbirds, gophers, herons, sea gulls, pelicans, and seals, all enjoyed the day and all without mishap. Yes, a child, or a dog, or even I might suddenly stop or dart in front of a runner or biker causing a slowing of a heartbeat, but it is not with malice; it is just life. Some people get up in the morning with the intent to look for and express negativity, even on those beautiful days like today. I guess Crissy meets the needs of everyone. Let everyone be. Crissy Field has always been green and healthy. Why destroy what works? Dog owners clean up after their dogs and the park service cleans up after the people. Please don't fix what is not broken!

Correspondence: This morning my sister, my husband, our dog and I walked at Fort Funston. It was stunningly beautiful and as we arrived at the parking lot our dog went wild with excitement at being at his favorite place on the planet. He loves it there more than any couch, the car, or any other spot. Why? Because he has the freedom to romp up and down free of any leash, free of anything other than our voice control. We have voice control, and we clean up after him, and we watch out for walkers and bicyclers and other folks who don't have dogs but love the park too.

Please don't take away this treasure from us and the thousands of other people and dogs who LOVE it.

We're environmentalists, bird lovers, plant lovers, park lovers, and are committed to keeping parks like this beautiful, open, and available to all people. We're open to restrictions, but the ones that have been drawn up leave us nothing of the park we've come to love. Please, give us all a chance to work together to come up with a plan that protects the land, protects the birds, protects the native plants, but also protects the joy we and our dogs have every day.

Please. Don't move forward with the plan you've released. It is wrong. We can do better.

Thank you, Craig Wiesner

Correspondence: Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022 Dear Mr. Dean, I walk every morning at Fort Funston, seven days each week, in the early morning. I am extremely disturbed by the unfairness of the proposed plan to limit dogs and off-leash dog walking.

In my many years of daily walks at Fort Funston, I have met countless interesting, productive and caring people. Enormous efforts are expended to keep Funston clean and safe. I personally know what Fort Funston was like before the dog walkers-it was dirty and abandoned and not the lovely place it is today. It is the "dog people" who have kept it clean and pleasant for

many years. As you no doubt know, we are a cohesive community of responsible dog owners, providing social interaction for many who would not regularly have a community (MANY SENIORS) or daily social interaction.

A very large number of seniors have dogs and walk them at Fort Funston (and no doubt other GGNRA areas). I personally see and walk with more than eight every morning between 6:45 and 8:30am. The eldest of my friends is 88 and walks daily with her shepherd. You will be removing an important social and fitness benefit from many lives if you so severely restrict off-leash dog access.

I would like to inquire about the fact that over the past eight months or so, the gate at Fort Funston is often locked shut for hours beyond dawn/sunrise. On a typical morning when this happens, you will see up to 20 or more cars parked along Skyline. It is very dangerous for people to have to pull in and out right on the side of the road, to say nothing of walking your dog from your car along Skyline to the path up to the Fort. Once again, I would like to bring up the issue of the morning seniors, who I assure you are very uneasy with this parking arrangement. I have backed many cars out for seniors who were concerned about getting their car out into the Skyline traffic. I truly believe it is inevitable that there will be an accident, and a person or dog will be hurt. If it is in fact true that the gate should open at sunrise, please honor that. We all see the many park vehicles inside the gate when it is locked. Fact or fiction, many of us believe the gate gets opened late whenever there is a march, or a meeting, or some new development in this dog crisis.

I am very concerned about the possible future lack of off-leash dog space. Where will we all go? What will happen to small neighborhood parks?

The remainder of my message is boilerplate, but I agree strongly with every word. The GGNRA is proposing to relegate us to a hilly pasture of foxtails at Fort Funston. This is unworkable and I urge you to work to compromise with us.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions. It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor

an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option. The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal. The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents. After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program. Thank you for your consideration. Sincerely,

Cathy McGee Pacifica, CA 94044

Golden Gate National Recreation Area

Fort Mason, Building 201

San Francisco, CA 94123-0022

Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation.

? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.

? Exclude speculative, exaggerated, biased, or misleading statements and studies.

? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).

? Enable professional dog walking and align any professional dog walking rules with county or city regulations.

? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

These are my personal comments and observations regarding this plan: Before my dog passed away in July, 2010, we spent many hours hiking in the GGNRA in Pacifica. This was a great place for both of us to exercise and keep ourselves healthy. I think it would be a grave disservice to ban dogs from the GGNRA in Pacifica. Please keep this area multi-use, including dogs and their owners.

Sincerely, Judy Kay, RN, BSN, HNB-BC Pacifica, CA 94044

Correspondence: I am mother and love having the dogs at Crissy Field. My children enjoy playing and interacting with them. It is the reason that we go to Crissy Field rather than other parks. Seeing the dogs swimming, running and playing is a joy and only enhances our experience. Having dogs on leash only would greatly restrict this and would be a big disappointment. The dog owners we have met are very responsible and I never fear for the safety of my children. As a mother, I have a choice of going to a place where dogs are off-leash or on-leash. Parents who are uncomfortable with off-leash dogs have many options.

Correspondence: I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation.

? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.

? Exclude speculative, exaggerated, biased, or misleading statements and studies.

? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).

? Enable professional dog walking and align any professional dog walking rules with county or city regulations.

? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

These are my personal comments and observations regarding this plan:

My partner and I have two small dogs. Walking them in off-leash areas of GGNRA is a highlight of our recent decision to move to San Francisco (May 2008). In fact, opportunities to walk with our dogs in appropriate areas of the GGNRA was a key factor in our deciding to purchase a Condo and make San Francisco our home. The pet-friendliness of the City, which would be marred by the largely unsubstantiated proposals in this Dog Management Plan, was a selling point for us, as it is likely for many other Bay Area urban home-buyers. Why take away this important social and recreational incentive that results in bringing people to the City and strengthening the economy? Further, we and other dog owners we know and see every day are among the most attentive recreational users of the GGNRA. Dog owners seem always on the look out for ways to be respectful to this important access to the natural environment, while I have witnessed many non-dog owners abusing the recreational privileges of the parks by littering or sitting, spreading a blanket or holding a picnic in areas that are meant to be protected and off-bounds to people and domestic animals. Enforce desired protections by citing both non-dog-owners and dog-owners alike who may be in violation. Though I'd venture to say very few are dog owners.

It is critical to maintain these off-leash areas. Without such areas we run the risk of creating great and unnecessary frustrations to dogs and dog-owners alike, which could mar our good record of having relatively low-incidences of dog misbehavior among urban areas nationally.

Correspondence: FLAWED DEIS NEED FOR
ACTION/JUSTIFICATION/DISMISSALS/EVIDENCE ? PUBLIC
COMMENT AND SUGGESTIONS

SUGGESTIONS:

1) This DEIS is unjustified and the Park Service NEPA analysis is fundamentally flawed; the entire DEIS should be rejected in totality. The Park Service should start over and create a dog management plan that more appropriately represents the Recreation Mandate of this National Recreation Area (NRA), the cultural values of the Bay Area, and sound land use principles instead the speculative, exaggerated, and misleading analysis and justifications.

2) All "Alternatives Suggested and Dismissed from Consideration" need to be re-evaluated considering the recreational value of the park, valid scientific monitoring and measurement of incremental impacts from dog recreation, and the recognition that some impacts are justified to support the recreational mandate and to maintain recreational opportunities for this and future generations.

3) Acknowledge that Fort Funston is zoned for high visitation and not a "natural" area. Just like other sports areas and cultural lands (e.g., golf courses, athletic centers, museums, parade grounds, building, etc.), Fort Funston was never intended to be primarily a native plant and wildlife habitat but a place for a high volume of urban people to enjoy active recreation. Acknowledge that these crowded parks are vastly different from uncrowded "natural" areas (e.g. Oakwood Valley, Sweeney Ridge, etc.) and require different management and impact monitoring strategies. Also, acknowledge that Fort Funston provides tremendous value to the urban community by providing for the needs of a large segment of the population that enjoy dog recreation and that other mixed-use options that marginalize dog recreation are unlikely to increase the recreational value of the area.

4) Comply with the GGNRA enabling legislations requiring sound principles of land use planning and management such as those used by the Park Service at Rattle Snake National Recreation and Wilderness. If the Park Service is unable to achieve the recreation mandate, transfer the management of the GGNRA to a more suitable organization that values recreation.

5) Provide comprehensive measurements of actual park visitation and dog usage instead of just statements about crowding levels and estimates of dog usage. This is critical for measuring the current recreational value and for monitoring the Park Service maintenance of that value for current and future

generations.

6) Use this public comment process to prove that the Park Service meaningfully involves the public in the decision-making process and to mend the Park Service relationship with the recreational user of our NRA and to create a more cooperative relationship.

JUSTIFICATION:

The "SUMMARY-CONSISTENCY WITH SECTIONS 101(B) AND 102(1) OF NEPA" illustrates why this DEIS is fundamentally flawed and should be rejected in totality. The Park Service was required by NEPA to analysis how each alternative meets or achieves the purposes of NEPA, as stated in sections 101(b) and 102(1). Below is their analysis of the existing "No Action" Alternative A which highlights the fundamental flaws with this entire DEIS need for action/justification and the resulting plan, as well as the fundamental disregard that the Park Service has for the Bay Area residents and the urban recreation mandate of our NRA.

Most startling is the Park Service dismissive attitude toward local residents as highlighted in the DEIS on Page 267: "In many parts of the Bay Area, GGNRA lands are the backyards of the citizens, and residents have COME to expect public lands to be made available for dog walking and other recreational activities". The Park Service seems to have no understanding or appreciation for the on-going cultural and health significance of these urban recreation areas and seems determined to re-write history and impede this generation and future generations from enjoying the legislatively mandated recreational value of our NRA and instead is purely promoting and exaggerating the "conservation" value of the park.

Below is the Park Service NEPA analysis of the "no action" alternative along with my PUBLIC COMMENTS:

1. Fulfills the responsibilities of each generation as trustee of the environment for succeeding generations.

a. Alternative A would not fully meet the purpose of fulfilling the responsibilities of each generation as trustee for the environment. The no action alternative is based on a combination of Park Service regulations, the 2005 federal court decision (U.S. v. Barley, 405 F.Supp.2d 1121 (N.D. Cal. 2005)), and public use practices. Because dog walking regulations are routinely ignored by visitors at many park sites, on-the-ground activities sometimes vary widely from posted regulations. These differences are attributable in part to changes in dog walking policies over the years, court decisions regarding dog walking in GGNRA, and public confusion due to

both those changing circumstances and variable levels of enforcement.

Off-leash dog walking currently occurs at many of the sites. Dogs enter areas where sensitive species or habitats may occur. Dogs also frequently go off the trails or roads and create impacts to soils and vegetation through compaction, trampling, and nutrient addition. Under the no action alternative, dog walking activities would remain the same and adverse impacts to vegetation, wildlife, special status species, soils, and water quality would continue unregulated and unmitigated.

PUBLIC COMMENTS

The choice for America is recreation or conservation or a balance of both for future generations. We must protect our recreation heritage and culture, including off-leash dog recreational heritage and culture, for future generations to enjoy. The Park Service has not met any burden of proof that the off-leash GGNRA dogs have any real impact on the existing natural environment or other recreational users, and the history of off-leash dogs started in the park long before it even became a NRA. The natural environment in the park is quite healthy, and the Park Service has not provided any significant evidence that it is less healthy than 40 years ago due to any recreation in the park. Future generations must be able to continue the Bay Area outdoor enthusiast traditions. Hopefully, the Park Service will continue to introduce habitats for protected species within the park without significantly banning people's ability to exercise with their off-leash dogs in the park or take their children to the park with their family dog or impede other traditional recreation in the park.

Sure dogs are natural scavengers and predators, as are people. Our companion dogs are typically well-fed and don't go to the NRA to destroy the natural environment that we all love or to harass people or wildlife. The Park Service has taken an extremely conservative position that minor disturbance, even just altering to the presence of a dog, is unacceptable and is disturbing wildlife. All people would be ejected from our NRA, if the Park Service measured the adverse impact of people on the environment in the same way they are targeting people with dogs. Both dogs and people impact wildlife but some level of impact has to be accepted if we - and future generations - are to continue healthy interact with our environment.

The Park Service has minimized the importance of "recreation" to future generations and to the national parks system. "Recreation" is a mandate of the GGNRA, as reflected in the name. The Park Service has attempted to change that mandate by removing "recreation" from the park's name and changing it to Golden Gate National Park (GGNP). While the name change has failed in Congress, supporting organization such as the Golden Gate National Conservancy and Wildlife Equity refer to the park as the GGNP,

formerly known as the GGNRA. In addition, the Park Service contends that the GGNRA was created to create a National Park caliber experience which was not the intent of the GGNRA, which was clearly a NRA not a National Park.

The main catalyst for removing dogs from the park seems to be that National Parks do not allow off-leash dogs, except for some that allow hunting. The National Park service wants to manage all their parks the same and consider people with dogs challenging them in court and winning to be a nuisance. The Organic Act calls for the National Parks to regulate and conserve the "natural and historic objects and the wildlife therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations." If any of the action alternatives are adopted, future generations will not only be impaired but prevented from enjoying our recreational areas. Instead of being recreational areas, they will be gardens and enclosures to observe from afar instead interactive and personal experiences that we enjoy today.

Adverse Impacts Support by Minute Scientific Evidence and Voluminous Speculation: The Park Service is using unfair practices and is convoluting the real issues with 2200-pages of highly speculative and unsubstantiated adverse impacts caused by dog recreation. The Park Service has not provided any burden of proof in the 2200-page DEIS that dogs are significantly impacting the natural environment within our NRA and has not fulfilled its responsibilities to provide for sound land management practices, which should include monitoring the natural resources and recreational value. Almost all the evidence is speculation about what the dogs "may" do with no supporting monitoring in our NRA.

The Park Service sited research from other organizations that is non-conclusive about how dog impact wildlife populations, and Park Service makes no attempted to quantify how GGNRA dogs are increasing or decreasing the wildlife populations nor what that impact is over time. The Park Service is also ignoring that wildlife are known to habituation to human activities, including the presence of a dogs, and that over habituation to human activity is also not healthy for wildlife in an urban environment nor is it generally wise to encourage significant up-close human interactions with predators and other wildlife.

There is no evidence presented about the level of impact or the cumulative impact on nature that will impact future generations. By these standards, the potential to step on one tadpole seems sufficient evidence to exclude dogs. Based on this standard of evidence, all human recreation should be banned from the GGNRA because humans "may" impact the natural environment. Examples of dog impacts are digging in the sand, walking through closed areas, disturbing wildlife just with their presence or unintentional flushing,

preventing birds from foraging by walking by, littering (e.g., peeing & pooping), etc. With all of these activities, the GGNRA humans have a much greater footprint on the natural environment than the dogs and the addition of a dog only has a minor and acceptable additional impact considering the role of dogs in encouraging daily recreation and the urban recreational demand for this activity.

The DEIS alternatives are not about introducing dogs to the GGNRA; the dogs have been off-leash on these lands even before it became the GGNRA. The DEIS says the adverse impacts are measurable; however, the Park Service has few measurements of the impacts, and in the rare cases the Park Service has done measurements (e.g., water quality and the Western Snowy Plover), the results don't support their speculation. Their main measurable evidence of degrading the environment are the high rate of leash law violations. The leash law violations are actually just evidence that dogs are off-leash in these areas so if the Park Service speculations are true the impacts should be even more measurable.

Even though the Park Service has not quantified the adverse impacts, recreational areas such as Fort Funston, just like any of the Presidio athletic fields or cultural centers, obviously don't have sensitive native vegetation, and wildlife is not as plentiful because of the high visitation by people. These type locations cannot be used to justify removing trail hiking because the high city park level visitation and the type of recreation is not the same as that on hiking trails in large open spaces.

This areas are just like children's playgrounds or baseball fields that don't have extensive native plants or much wildlife either. Fort Funston is covered with non-native ice plants that the military used to successfully stabilize the dunes and is the dog world's athletic field that requires and receives almost no maintenance costs. Considering that some 450,000 people visit the GGNRA with their dogs, some special dog-focused locations, like Fort Funston, provides a valuable location where dog training can be perfected with little impact on visitors that dislike dogs and also provides exceptional health, safety, dog behavior insights, and cultural benefits to the Bay Area community. Indeed, Fort Funston is one of the great cultural phenomena's of the GGNRA and represents a unique opportunity for gaining a greater understanding of healthy canine/human social interactions.

Note that Fort Funston has always been zoned for high visitation; and it is offensive that the Park Service posts signs about "an Abused Landscape" on park entrance signage. Fort Funston is not abused because it hasn't been restored to a native plant or wildlife habitat any more than Fort Mason is abused because it doesn't have native plan habitats instead of administrative building, piers, lawns, etc. or the Presidio is abused because it has sports fields, parade grounds, building, shopping centers, golf courses, etc. that

have not been restored to native plant or wildlife habitats. Once again, this just demonstrates the Park Services disdain for recreation, particularly dog recreation.

Fort Mason, the Presidio, and Fort Funston all represent land that is being used as intended for the benefit of an urban population. In the 1980 GGNRA General Management Plan, it was recognized that Fort Funston would appear to some as a "natural" area but would require the same maintenance as other high visitation areas such as Fort Mason. The current Park Service seems to be confused or even worse deceptive about the purpose and needs of the Fort Funston recreation area. Perhaps, Fort Funston does need more monitoring and maintenance to ensure that it continues to provide the same recreational value to the present and future generations but the Park Service has not done either, or at least not provided that information in the DEIS or through apparent activities on the ground. The Park Service should be measuring the impacts of activity on the environment and working the dog community to address those that will likely impact future generation or that can be resolve with reasonable modifications to park management and visitor usage.

Based on this DEIS and the draft GGNRA General Management Plan newsletters, the Park Service seems to be planning to change the recreation usage of Fort Funston. Currently, according to the upper parking lot traffic counts, there are at least 2000 people on average a day and probably more that use Fort Funston for healthy and safe recreation, including long walks and active socialization with others. On a pretty weekend or evening, the parking lot overflows and the park is full of happy families and people with their dogs enjoying the park together. This high visitation is achieved with almost no services or facilities from the Park Service other than maintenance such as routine garbage collection, portable toilet maintenance, and trail maintenance. The main facilities include a side walk/road from end-to-end, some self-maintaining trails, a sand latter, garbage cans, a few benches and water stations, a portable toilet in the parking lot, and a parking lot. The high visitation is achieved even without real services such as food services, park ranger programs, or visitor centers, unlike Stinson Beach and Crissy Field that show lower visitation per the Park Service counting methodology. Ocean Beach is the location that has more visitation than Fort Funston.

The Park Service seems to imply that Fort Funston is evidence of the adverse impact of dogs on wildlife, soil, and vegetation and is ignoring that expected high visitation and crowding is the main cause of any issues in this area that is zoned for high visitation.

Crowded, high visitation areas will have less wildlife than uncrowded areas, with or without dogs. The adverse impacts for the natural environment throughout the NRA are questionable and don't address the issue of the

incremental impact of dogs on the environment in the park. In addition, the Park Service has not defined any quantifiable standards for what represents a minor, moderate, or major impact. Having hiking trails equates to a moderate impact for some areas, even if that trail is only 0.5% of the area, and with no indication of impacts that accumulate over time. All the adverse impacts levels are highly questionable and seem inflated. The Park Service should not be allowed to use purely subjective standards without sound measurements to support these drastic changes nor to imply that impacts are the same for sites with different zoning.

Non-Critical Beach Habitat for Western Snowy Plover Replaces SF Beach Recreation: The DEIS Preferred Alternative excludes dogs from two-thirds of Ocean Beach because the Western Snowy Plover uses the grassy dune areas for resting and feeding during the overwintering season. The first question is: "Should a non-critical habitat for a protected species significantly impede human recreation in high visitation areas of the GGNRA?" That is the main question that Americans must answer because, if so, unbiased research would likely show that visitors without dogs have a far greater impact on the Western Snowy Plover than visitors with dogs and all people should be excluded from these SF public beaches by that standard. It is highly suspect that is actually what the Park Service's plans since the Park Service refused to provide the current draft of the GGNRA General Management Plan even though it was requested in a Freedom of Information Act request.

The Park Service has done little to prevent people from going through the dune areas because it isn't a breeding area so it isn't that critical for the species recovery. The DEIS actually rejects the proposed fencing solution in the Negotiated Rule Making. Fencing, such as exists in many areas of the park, that would not only reduce the theoretical impact of dogs but also reduce the larger population of disturbances by people using the dunes for watching the ocean or sunsets or for accessing the beach from the local neighborhoods.

Even if conservation receives a much higher priority than recreation, the Park Service research is highly biased and provides little evidence that the dogs are significantly impacting the Western Snowy Plover. Based on their population data, the Western Snowy Plover population actually improves when there with more dogs off-leash on Ocean Beach, and they have not developed a direct correlation. The Park Service is only speculating that off-leash dogs impact the Snowy Plover population at Ocean Beach and their feeding success with little scientific evidence. From a practical standpoint, the plover activity is in the dunes, and dog activity is primarily at the tide line. The dogs are only in the plover areas briefly if the owner, like others from the Sunset neighborhood, chooses to use the dunes for accessing the beach. Otherwise, owners would have to deliberately take their dogs to the

dunes to disturb the plovers. Few people even know the plovers are there; particularly since the Park Service has done little to warn the public about the significance of the dune areas. I've noticed highly effective large distinctive signs at Mori Point warning about the coyote risks but nothing comparable for the Western Snowy Plover, the Bank Swallows, or the dangerous cliff areas in the NRA.

The Park Service in collaboration with organizations such as the Audubon Society to research the impact of dogs on the Western Snowy Plover. This research is highly biased and doesn't provide evidence that the WSP population is significantly impacted by the dogs or by people. Their philosophy seems to be reflected by this quote from Daphne: "Ocean Beach without people is an incredible habitat?"

In fact, the WSP population increased with the dog activity. Unbiased research from Warren, shows no correlation between recreational (including dog) activities and snowy plover feeding habits.

In addition, the habitat is not deemed critical and is only a resting place for the Plover. The standard is that any impact should result in dogs being excluded. Once again, by those standards, all people should be excluded as well since people have a greater impact on the Western Snowy Plover than dogs.

Replacing the San Francisco Bay Area Recreational Heritage with New Coastal Conservation Habitats: The Park Service is ignoring the value of dog recreation for future generations. The Park Service is attempting to convert the traditional San Francisco recreational areas for people into new habitats for coastal birds and plant life. For decades, Fort Funston has been the Mecca for off-leash dog recreation and represents the ultimate experience for people that enjoy taking their families out with their dogs or using their dog as a catalyst for daily exercise and fun. On a beautiful warm day, hundreds to a thousand people cover the park with their canine companions. On a typical day at least a hundred dogs are in the park at any one time. Baker Beach is a local beach where families go for beautiful vistas and safe off-leash recreation.

While two major adverse impacts relates to Ocean Beach with the Western Snowy Plover, all the remaining five DEIS major adverse impacts are related to Fort Funston, the Mecca of Bay Area dog activity. The Park Service wants to plant new population of endangered plants at Fort Funston and increase wildlife in the open spaces that are currently used for families, seniors, and other for getting out with their dogs for play, fetch, dune scabbling, ocean swimming, and hiking. Fort Funston has successfully established closed areas for creating other large coastal habitats but exaggerates the dogs' impacts, generally only along the trails edge, on the

success of those closed areas. Eliminating the large number of visitors will allow the Park Service to easily create these new native vegetation habitats without having to share the park these dog visitors that visit frequently. Even if the Park Service creates educational facility, as proposed in the drafted GGNRA General Management Plan, visitation to this area will drop dramatically, probably more than the 50% visitation drop at Ocean Beach over the past decade.

From a cultural standpoint, Fort Funston represents a living monument to dog people and our relationship with our dogs and how dogs relate to each other. For decades, the San Francisco culture has embraced off-leash dog recreation, and Fort Funston is the Mecca for this movement. Fort Funston is a place that few non-dog people have ever gone because it is more remote and obscure than the typical GGNRA beach areas. Because of the heavy visitation by people with dogs, there is little impact on non-dog people as owners hone their dog's social manners and a dog's recall and new dog people can safely learn about appropriate dog behavior while at Fort Funston. However, the DEIS considers the high percent of visitors with dogs to be a negative since the percentage of visitors without dogs is low. If dogs are leashed and the poison pill implemented, Fort Funston will likely turn into an uncrowded area since visitors with dogs won't have the incentive to drive all the way to Fort Funston from other areas. Few people know Fort Funston exists until they get their first dog. As an outdoors type person, I think I only visited the Fort Funston for the vista once, if that, before our dog joined the family.

The DEIS action alternatives will reduce the day-to-day use of the GGNRA by some 450,000 people that visit the park with their dogs. These dog people have traditionally ensured that recreation continues to be a mandate for the GGNRA. If any of the DEIS action alternatives are accepted, future generations will not be nearly as inspired to use the GGNRA on a daily basis for exercising, relieving stress, and socializing their dogs.

2. Ensure for all Americans safe, healthful, productive, and aesthetically and culturally pleasing surroundings.

a. Alternative A would not fully meet the purpose of ensuring for all Americans safe, healthful, productive, and aesthetically and culturally pleasing surroundings. Dog walking regulations would continue to be unclear to visitors and would continue to create visitor and dog conflicts. Off-leash dog walking would continue in areas with high visitor use and high multiple-uses, which would increase the risk of dog related injuries to occur. Unkempt dog waste would also continue to be a problem, which would increase health and safety concerns and decrease the aesthetic and cultural landscape of the park.

PUBLIC COMMENTS

Fun and Diversity: Walking a dog off-leash in the Bay Area is fun and provides diversity and one of the layers of texture to our laid-back outdoor culture. Visitors with dogs share the park with a rich tapestry of people from naturalists, bird watchers, walkers, joggers, bicyclists, surfers, beach combers, sun worshipers, children, tourists, handicapped people, kite flyers, picnickers, disc or ball throwers, horseback riders, hand gliders, etc. Dog people celebrate this diversity that adds joy to our time outside. Some conflicts occur but they are few and far between. Most people respect others' space, are ok with some minor interactions, and just enjoy the park together. Most of us love seeing the rich tapestry in motion.

People love being out with their off-leash dogs because of our empathetic feelings for our dog and that their joy transfers to us:

? Watching our dogs explore the environment with their noses ? Watching dogs meet and greet each other ? Dog-dog play sessions ? Playing with our dogs with balls, discs, sticks, recall games, etc. ? Watching our dogs frolic in the surf or along the trail ? Watching other people and children enjoying interacting with our dogs ? Watching our dogs' social skills develop with both people and other dogs

Sure some people dislike or fear dogs. People with fear issues aren't likely to be comfortable with being on the trails with mountain lions in the hiking areas so this issue mainly impacts city and beach areas. In the perfect world, people would not have phobias or intolerances of others; however, isolating people from dogs will not help deal with the irrational fear or dislike that some people have of dogs. Children are unlikely to grow up with any irrational phobia or dislike of dogs if they have encountered family dogs regularly in the GGNRA.

From personal experience on public beaches, the few people that exhibit true fear of dogs appear to be recent immigrants to the Bay Area that have never been exposed to the friendly, family dog. In some countries, most dogs should be feared because they are feral, not socialized to people, and are not vaccinated. The GGNRA family dog is quite different from these feral animals. The GGNRA should do a better job of providing awareness about the low risk to people instead of flaming people's irrational fear.

Health Benefits: Because visitors with dogs love being out with their dogs, exercise is fun and dog people use the park for exercise more than most outdoor enthusiasts. The DEIS ignores the tremendous health benefits of some 450,000 dog people exercising in the GGNRA on a regular basis. On average, these dog people go to the GGNRA eighty days in a year, some twice a day. Instead of discouraging people, the GGNRA should be

encouraging more people to get out and move. San Francisco is currently one of the fittest city in the world.

<http://www.shape.com/lifestyle/travel/fittest-cities-8-san-francisco> The GGNRA provides a free platform that everyone should use for getting in shape and preventing morbid obesity, diabetes, heart problems, stress, several cancers, etc.

Dogs are a catalyst for getting normal people moving and off-leash recreation is the ultimate walking exercise program. With a high-energy dog and a responsible owner, dogs are exercise coaches and get their companions out at least twice a day, rain or shine. In addition to burning calories, off-leash dog hiking relieves stress and is a form of meditation. Both the dog and the human move at their own brisk pace and in harmony with no tugging or stopping. With other friendly dogs, the dogs calmly greet each other and sometimes play but usually just move along quickly. On the trails, leashed dogs are not a problem because there is plenty of space for recalling and preventing any physical interaction.

Moving the Feces: Some dog owners fail to pick up their dog's feces but in the GGNRA other dog owners generally pick up the orphan poop. Dog pee is a more negligible health and aesthetic issue since pee is sterile and one only smells pee after a first rain in the high visitation entrance areas such as at Fort Funston. Leash laws have little impact on the small percentage of dog owners that don't pick up poop. City and neighborhood streets and parks that require leashes have a worse a problem with orphan poop. Discouraging these irresponsible people from going to the GGNRA will only transfer and concentrate the existing problem from the GGNRA into the city and neighborhoods, where it isn't managed as well. Moving the feces out of the GGNRA sight or concentrating it in a smaller area is not improving public health. As the DEIS state, the Park Service routinely empties GGNRA trash cans that are filled with poop bags. Little poop actually stays in the park, and while the GGNRA theorizes how dog poop could impact ocean water quality, their water quality measurements do not support those theories. In addition, theoretically, dog poop from city and neighborhood streets will move faster into the ocean or Bay than orphan poop filtered through the GGNRA soil.

Nothing raises the ire of other dog owners more than those that don't pick up. With some 450,000 people taking their dogs to the GGNRA on a regular basis, even 1% of dog people being irresponsible means poop on the trail shoulders. Dog groups have regular clean-up days in heavy dog use areas such as Fort Funston and other owners just routinely pickup on the trails. Dog owners dislike orphan feces even more than other visitors because our dogs are more likely to step in, sniff, or eat the feces ? disgusting.

The Park Service has done little to address the orphan poop issue. Other,

more dog-friendly parks, provide bags and signage to help encourage poop pickup. GGNRA places such as Sweeney Ridge don't have signage, and people routinely leave poop along the trail for other irritated owners to pick up. The Park Service could be more proactive in implementing permanent signage, dog owner awareness campaigns, and using large temporary signage for the few problem locations.

3. Attain the widest range of beneficial uses of the environment without degradation, risk of health or safety, or other undesirable and unintended consequences.

a. Under the no action alternative, off-leash dog walking would still occur in areas with high multiple visitor use, creating visitor conflicts and dog-related injuries. Dog walking regulations would remain unclear, which would also contribute to visitor conflicts and dog related injuries. In addition, off-leash dogs would enter areas where sensitive species or habitat exists, trample vegetation, compact soils, or chase wildlife, all of which would degrade the natural environment.

PUBLIC COMMENTS

Little Confusion: Visitors with dogs off-leash where leashes are required are seldom confused other than perhaps the confusing Marin trails or a few tourists that just observe others off-leash and assume it is legal. Families with small children, seniors, and other individuals that are normally law abiding citizens find themselves as law breakers when they get a family dog. Responsible people will break the current suppressive leash laws if they are committed to their dog and their own mental and physical health. The high number of regular people violating leash laws is an indication that public need is not being met. Providing a better balance of off-leash versus on-leash access, particularly in San Mateo County, would reduce people's stress and encourage responsibly exercising themselves and their dog.

Almost all parks and trails in San Mateo County require leashes, if they allow dogs. Providing off-leash dog recreation area in the GGNRA, would provide places that people could go without worrying about being ticketed. People that want to walk their dogs without any possible encounter with off-leash dogs or those that just dislike dogs could use those other extensive park and beach areas without dogs.

Safer Family Dogs: GGNRA off-leash dogs are likely the safest family dogs in the world. Most are or could easily be therapy dogs in nursing homes, schools, and other community service organizations. GGNRA off-leash dogs, particularly in San Francisco, are socialized on almost a daily basis with a wide variety of people, seniors, toddlers, dogs, horses, etc. All these positive encounters are critical for building the safest dogs possibly in the

world.

Even families without small children reap the benefit of their dogs safely interacting with children so that their dogs know that children are not some unknown alien. Wise dog owners only interact from a safe distance and teach their dogs that small children are wonderful and mean great treats are coming. Babies, toddlers, and other children are regularly out with their family dogs at high-use, off-leash dog areas such as Fort Funston. The main danger to children in the park is highly socialized GGNRA dog accidentally bumping a child when playing or being too friendly and jumping on a child. Unsocialized dogs in homes that don't get regular exercise and training are a far greater risk to people and children's health and well-being. In the home, children are the most likely to have serious dog bite because their faces are lower, their skin more fragile, they're more likely to irritate the dog, and the dog can't easily move away. Responsible socialization, exercise, and positive interactions help reduce this risk.

Most dangerous and vicious dog bite incidents occur at the dog's residence and are related to resident dogs not family dogs. Resident dogs (e.g., fighting dogs, guard dogs, police dogs, backyard dogs, etc.) are not an integrated part of the family like GGNRA dogs. Other public dog risks are stray dogs that are abandoned or escape their homes and aren't social. Either loose in the neighborhood or interacting with visitors in the home, most GGNRA family dogs have a long history of positive interactions with all types of people and are less likely to cause harm due to fear. Exercising together creates a strong bond between humans and their canine companions and helps ensure that these dogs are treated positively and have positive association with people.

The GGNRA law enforcement information supports the low incidence of dog bites and attacks in the GGNRA. The Park Service only reports about 27 dog "bite/attack" a year. Fort Funston has the most incidents but provides tremendous value to the dog community and represents the highest concentration of off-leash dogs and crowded conditions plus the additional issue of equestrians that sometimes ride at Fort Funston. Even there, the number of incidents is quite low and insignificant in comparison to the high number of people with dogs. The visitor traffic counter for the main parking lot has on average 1083 and the Park Service uses a multiplier of 2 for an estimated average daily visitation of 2166, which is more than the Park Service estimates for the high resource intensive Crissy Field. Unfortunately, the Park Service visitor trend and counting appears severely flawed and is likely significant understating visitation at both sites.

I expect that dog recreation is far safer than most other active recreation including jogging (e.g., falls, sprained joints, etc.) and bicycling (e.g.,

crashes, car accidents, etc.).

Cliff Rescues

The cliffs represent a safety risk for dogs and their people. The cliffs are near the main trail at the main Fort Funston parking lot and along much of the coastal park areas. Only one small sign, about 150 feet down the trail, warned people about the cliff danger, until the Park Service added a new bigger sign recently. A few people do go out to the cliff to do things like take scenic pictures without being fully aware of the risk. Other dog owners are the one making others aware of the risk; however, people can use the park for a long time before realizing the significance of the cliff risk. The park service has refused to consider planting prickly vegetation to dissuade people and dogs from going to the cliff edge or even fencing or better signage. There is a need for more action by the Park Service but preventative measures, other than reducing and banning dogs, would be a more reasonable solution.

Note that the Ranger/USPP descriptions in the PDFs of the cliff rescues in 2007 and 2008 provide no indication of high risk rescues putting park personnel in unreasonably risky situations, particularly at Fort Funston. Driving a car to work is far more life-threatening than these cliff rescues appear; particularly considering that safety equipment and experience is available to minimize the likelihood and severity of any fall.

4. Preserve important historic, cultural, and natural aspects of our national heritage and to maintain, wherever possible, an environment that supports diversity and variety of individual choice.

a. Alternative A would not fully meet the purpose of preserving important historic, cultural, and natural aspects of our national heritage and maintain, wherever possible, an environment that supports diversity and variety of individual choice. Currently ground disturbance by dog walking, specifically under voice control is damaging to cultural resources at sites such as Fort Funston and Baker Beach within the Presidio NHL. Under the no action alternative, dog walking under voice control could continue in areas that would damage the cultural resources.

PUBLIC COMMENTS

Recreation Heritage and Culture: The Park Service seems to attribute physical structures to Cultural Resources and is ignoring the important cultural components. The military structures and Native American heritage is important to preserve but so is the the development and maintenance of the local culture. Nothing is more fundamental to the Bay Area or the GGNRA than the community gatherings and bonding experiences that

happen on beautiful days at high visitation places such as Ocean Beach, Crissy Field, Muir Beach, Rodeo Beach, Fort Funston, Mori Point/Sharp Park, etc. It is quite an incredible experience to participate in this tremendous melding of people from all ethnic, generational, socio-economic, recreational backgrounds as they communally relax and enjoy the park in their own way. Just as watching our dogs and wildlife play provides tremendous pleasure, so does joining this mass of humanity enjoying the simple pleasure of enjoying the outdoors together. On those beautiful days, it is one experience after another of happy people enjoying the park and each other. This diversity and freedom is core to the Bay Area culture and what separates it culturally from most other communities.

Dog Recreation Heritage: Walking our dogs is part of our living national heritage, particularly in the Bay Area. Dogs have been off-leash in these areas long before the establishment of the GGNRA and have over a 30 year history with the GGNRA. This heritage is even more important cultural landmark particularly the remaining concrete foundations and military batteries in these parks. Generations of people have grown up taking their off-leash dogs to GGNRA lands, and it is only fair to allow future generations the same joy.

Remaining Military Concrete Structures: As stated in the DEIS impact statements in Table 5, there is no effect from dog recreation on the cultural resources in the GGNRA per NHPA. The ground disturbances are not due to the dogs; the ground disturbances are due to natural erosion and somewhat people visitation and trampling. It is disingenuous for the Park Service to present "Cultural Resources" as a justification for this plan throughout the executive summary and justification narratives when it is clear in the detailed impact statements that dogs are not having any measurable impact.

5. Achieve a balance between population and resource use that would permit high standards of living and a wide sharing of life's amenities.

a. Under the no action alternative, dog walking regulations would continue to be unclear to visitors. Dog walking would continue to occur in restricted areas and would continue to adversely impact the park's natural and physical resources. Although, visitors would have the opportunity for dog walking at the park, resources would continue to deplete. Without higher protection of resources and clear dog management regulations, these amenities would not be available for the enjoyment of future generations.

PUBLIC COMMENTS

Recreation is a mandate of the Golden Gate National "Recreation" Area since its inception. Dogs have been off-leash on GGNRA land for over 40 years and certainly well before the creation of the park. Having a family dog

and fully enjoying life with our dog is part of the high standard of living that Bay Area people enjoy. Dogs inspire us to get out and move and reduce our daily stress. Seeing a dog's pure enjoyment in life transfers to us and makes us happier people which reduced mental and physical ailments. Many people live in the Bay Area because of the high quality of parks and our ability to enjoy the outdoors with our canine companions.

The dogs have been in the parks for over 40 years but the Park Service has not measured the adverse impacts on the park. The evidence provided is speculative and biased, and the Park Service has not done reasonable due diligence to test or measure for real impacts. The only scientific measurements relate to the Western Snowy Plover and that research is highly biased and doesn't provide evidence that the WSP populations are directly impacted by the dogs or how much of an impact occurs. In fact, the WSP population seems to be higher with less recreational suppression. In addition, the habitat is not deemed a critical habitat for the recovery of the plover and is only a resting place for the Plover. The Park Service standard seems to be that any possibility of an impact is justification to exclude people with dogs. By those standards, all people should be excluded as well since people have a greater impact on the Western Snowy Plover than dogs. Actually, that seems to be the fairly hidden agenda that is part of re-designation of Ocean Beach to "Natural".

Most local people are not unclear about the regulations. People believe the regulations are arbitrary and suppressive because they know that their dogs are well trained and not a threat to the park or to other visitors. Off-leash walking is good for both the human and the canine soul and the waistline.

If any of the action alternatives becomes policy, future generations will not enjoy the rich and diverse recreational opportunities that are the Bay Areas' heritage.

6. Enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources.

a. Alternative A would not meet the purpose of enhancing the quality of renewable resources. Under the no action alternative, dog walking would continue to contribute to the adverse impacts to the park's resources. The second purpose, "approach the maximum attainable recycling of depletable resources," is less relevant to the dog management plan, as it is geared toward a discussion of "green" building or management practices. There would be no construction related to the no action alternative (alternative A), so this purpose would not apply. The action alternatives would involve the installation of new signage throughout the park stating the dog walking regulations for each site. Environmentally appropriate design standards and

materials would likely be used to minimize impacts to depletable resources.

PUBLIC COMMENTS

Renewable resources is not significantly impacted. However, because off-leash dog hiking is not available in San Mateo County, residents have to drive all the way to San Francisco County to enjoy hiking with their dogs. This only deters healthy recreation but increases traffic and the associated negative impacts on safety and pollution. The DEIS presents two off-leash areas in San Mateo County. Pulgas Ridge area is about a third of a mile long play area and in the middle of a longer on-leash hike. Esplanade Beach in Pacifica is a dangerous beach to reach and a dangerous beach for people and dogs. The beach has significant riptides that could catch a dog and result in owner death while trying to save the dog. In addition, rogue waves could pound a person against the cliffs.

Correspondence: I cannot speak to all the areas encompassed by this proposal, only Crissy Field and Fort Funston. They both have separate areas already. Crissy Field has a long paved walkway for people to go on where dogs are on leash. I very rarely see people without dogs on the beach unless they're going out on the water to windsurf. It is usually very windy and cold there by the waterfront.

At Funston, the area is somewhat dangerous because of the cliffs; the beach is very hard and steep to get to and virtually deserted. The parasailers take off in a different area. Literally, everyone on the "dog side" is there with a dog. We have an entire coastline of beach access that is far easier to use where "dogless" folks go. The reason people started using Funston with their dogs is because it was deserted and rather undesirable as beaches go. Ban dogs and you'll just end up with a deserted beach again!

Correspondence Type: Web Form
Correspondence: May 27, 2011 Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022
Dear Mr. Dean,

My husband and I have been enjoying bringing our dog, Poncho, to Crissy

Field for the past five years since we first adopted him from the SPCA. For the past year we've lived in the Marina and prior to that spent several years in Nob Hill, so going to Crissy Field is very convenient and is a daily part of our routine.

We do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA, and specifically within Crissy. The proposed off leash space is simply inadequate in size to enable the current number of dog owners and their dogs to continue enjoying off leash activities. Furthermore, the proposed beach area at Crissy is not nearly as easily accessible as the main beach where most dog owners currently spend their time.

The proposed changes to the existing conditions of the 1979 Pet Policy are clearly not based upon sound science or long-term monitoring of site-specific conditions. My husband and I consider ourselves environmentalists in that every day we make decisions and take actions that help to preserve our environment. The time we spend at Crissy with Poncho is no exception. We find it shocking and appalling that the GGNRA has targeted dog-owners and their dogs as being the culprits of environmental damage at Crissy Field, thereby warranting the substantial decrease of off leash areas. We find it extremely difficult to believe that the GGNRA's claims can be substantiated based on the extensive time we've spent at Crissy and our consistent experience of dog owners respecting the environment and specifically the restricted areas.

It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options besides restricting dog-walking access should be considered first. I favor an approach that balances recreational use, including dog-walking access, with preservation. I think that a multi-faceted approach that incorporates education, improved signage and physical and/or vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option. The proposed compliance-based approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts versus compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal.

We love going to Crissy because it gives Poncho the opportunity to get the daily exercise he needs that can only be accomplished off leash. His daily exercise is imperative to his health and well-being, which not only impacts our family but everyone with whom he interacts in the city. We are

concerned about the impact of this pent-up energy of all dogs that are accustomed to getting exercise off leash. This affects their interactions with other dogs and of course people as well.

Taking our dog to Crissy is a great opportunity to spend time in nature ourselves and to get away from the hustle and bustle of the city. Having easy access to nature that we can share with our dog is essential to our health and well-being also. Being city dwellers, it's imperative to have an escape that we currently accomplish with Poncho, throwing the ball for him along the main beach at Crissy. The DEIS fails to consider that the GGNRA is the front yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation, including dog walking as a form of recreation, for residents of the Bay Area. NEPA requires evaluation of impacts on the human environment, but the DEIS fails to do so by failing to adequately address how the proposal affects recreational values for these local residents.

The proposed off leash beach area is not easily accessible as is the main beach. For the past couple of years I've had difficulty walking on the sand on several occasions due to physical limitations, and having to walk out to the proposed off-leash area is simply not possible for me in many instances. I can't help but to wonder what legally disabled people are supposed to do to get down to that part of the beach. I realize dogs can go off leash on the grass, which is more accessible. However, my dog has a bad shoulder that does not bother him when he runs on the sand, but becomes a problem on the grass area.

In summary, I support a modified Alternative A (the "No Action alternative"). The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program.

Thank you for your consideration.

Sincerely, Katherine Katz

Correspondence Type: Web Form
Correspondence: Frank Dean, General Superintendent Golden Gate National Recreation Area
Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean:

I have been a resident of the Marina in San Francisco since 1984. I own my home. For 21 years, I have been walking my dog or dogs at Crissy Field -- OFF LEASH -- perhaps 3 to 4 times each week including at least once each weekend. I spend most of my time with my dogs at the East Beach, on the adjacent grassy areas, and on the promenade. My dogs have been generally well trained and respond to voice control most of the time.

I have quite considerable experience with the interactions of people and dogs at the East Beach and the adjacent grassy areas. I, and most of the other dog owners I have watched and interacted with, have been very careful to pick up our dogs' waste AND we take great care and pride in picking up litter.

I am also a senior citizen, 67 years old. I need to have parking close to the East Beach available for me and my dogs, because it is too far for me to walk to Crissy Field or to walk blocks from far away parking. One of the major reasons I walk my dogs at Crissy Field is the availability of nearby parking. (One of the major defects of the preferred alternative for Crissy Field is the lack of adequate parking near the area where dogs would be permitted off leash.)

The primary reason why my dogs and I go to Crissy field is that my dogs are able get plenty of exercise chasing balls into the water and surf. THEY CANNOT GET SUFFICIENT EXERCISE WHILE ON LEASH -- I am not physically capable of running or exercising with them on leash.

So, both my dogs and I derive tremendous health benefits from our excursions to the East Beach. I get sunshine, fresh air, a modicum of exercise, and social interaction with other dog owners and with beach walkers who walk without dogs. My dogs get sufficient exercise so that they are not over weight; they are able to work off their considerable energy; and they have been properly socialized with, and play with, other dogs and people at the beach.

I strongly disagree with the GGNRA's preferred alternatives for Crissy Field, and for the other GGNRA dog areas, because all these alternatives greatly restrict and eliminate off-leash dog walking. I conclude that the author(s) of these alternatives are biased against off-leash dogs. Worse still, the proposed changes to the existing conditions (1979 Pet Policy) at Crissy Field are not based upon sound science or long-term monitoring of the site-specific conditions. The DEIS simply fails to justify its preferred alternative that would exclude off-leash dogs at the East Beach at Crissy Field.

The GGNRA MUST CONSIDER BALANCED AND REASONABLE ALTERNATIVES for off-leash dog walking its lands. Without doubt, I share most peoples' concern about the long-term preservation of the

GGNRA's natural resources and their desire to protect these important natural areas. But based on my repeated observations and many conversations with recreational users of the East Beach at Crissy Field, I am confident that that area is well-protected from not only off-leash dogs, but also from the many children, sports enthusiasts, and other users of the East Beach.

The GGNRA should consider options other than eliminating off-leash dog-walking access at the East Beach and on the promenade. The current barriers and 1979 Pet Policy embody an approach that balances recreational use -- including off-leash dog-walking access -- with preservation. The GGNRA's constituency is broadly composed of many people, including a high percentage of dog owners. Eliminating all dogs at the East Beach would unfairly benefit one segment of the GGNRA's constituency and punish another.

The GGNRA's proposed "compliance-based" approach punishes far too many dog owners and dogs for the perceived -- NOT ACTUAL, in my experience -- transgressions of a very, very few. I know from personal experience that, by far, the vast majority of off-leash dog owners are responsible in caring for this precious beach and the grassy areas. We clean up after our dogs, we are mindful that these dogs do not interfere with others' use of the beach, and we signal other dog owners who might not be aware of their responsibilities.

The GGNRA should modify its compliance-based approach to create a baseline of current conditions and then measure impacts against compliance. Based on my considerable experience at Crissy Field, I am highly confident the GGNRA would learn that the so-called bases or justifications for the alternatives -- at least at Crissy Field -- have no validity. Indeed, many of the purported justifications for the restrictions are couched in "could's" rather than what has actually happened. The text of the DEIS demonstrates that there is no basis in history or fact for prohibiting off-leash dogs at the East Beach, the promenade, and the adjacent areas.

The GGNRA's DEIS and preferred alternatives establish a hostile and adversarial relationship with dog owners. The GGNRA should instead fulfill its mission by working with the community to find alternatives that do not alienate one segment of the population, which has as much right to use the GGNRA parks and land as others.

The DEIS fails to consider that Crissy Field is one of the front and back yards for San Francisco. The fundamental purpose of creating the GGNRA was to provide open space for recreation -- INCLUDING DOG WALKING AS A FORM OF RECREATION -- for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment," but the DEIS

fails to do this by failing to adequately address how the proposal affects "recreational" values for these local residents. In particular, the preferred alternative for Crissy Field entirely ignores the recreational benefits for the senior citizen, dog-owning community, including those of us who use the East Beach for our own, and our dogs', health and recreation.

Moreover, the GGNRA's preferred alternative for Crissy Field would severely and unfairly penalize senior citizens and those who rely on using the East Beach because of its abundant nearby parking and its ideal environment for exercising their dogs. The GGNRA should not, and cannot realistically, expect us to use only the western beach for walking on the beach and exercising our dogs off leash. That beach is essentially inaccessible due to the great distance away of available parking. The GGNRA should not expect senior (or disabled) citizens to park on the other side of the street and then have to walk all the way across the grassy area just to get to the beach where our dogs can chase balls in the surf and walk with us in the sand. Because of the uneven terrain and hidden holes in the field, the grassy areas is also dangerous for dogs to run on, and for humans to walk on. Because of this danger, that grassy field is ABSOLUTELY NOT a feasible solution for exercising dogs off leash.

I have read the parts of the DEIS for Crissy Field. The preferred alternative, with its accompanying text, purports to provide a fix for something that is not broken, and for something that the DEIS does not and cannot document as being broken.

I support a modified Alternative A -- the "No Action alternative." The current plan could be slightly modified to provide clearer rules, more signage, and education and outreach as part of the overall program. There is no need for more vegetative barriers at Crissy Field. Based on my years and frequency of watching the land within the barriers, I remain confident that these barriers are effective to protect the vegetation. And the snowy plover does not chose to spend time at the East Beach and adjacent grassy areas.

Thank you for your consideration.

Sincerely,

Peter Fortune San Francisco, CA 94123

Correspondence Type: Web Form
Correspondence: Hello...

My name is Marty Jaye & I am a 59-year-old, long-time resident of San Francisco with two active adult dogs. I am also a disabled person who uses a power-operated wheelchair and mobility scooter.

For years my family has enjoyed taking our dogs for off-leash play in the GGNRA, especially at Fort Funston and Crissy Field's East and Central Beaches. Not only are these locations our favorite places to go with our dogs, but they are among very few options in the city providing both wheelchair access and off-leash recreational activity with our dogs.

With daily vigorous activity our dogs are healthy & well-behaved. According to our experience and our vet's opinion, on-leash exercise is simply inadequate for our dogs. When they have had to be restricted to on-leash activity only, they have had both negative behavior issues and weight gain. One of our dogs has a medical condition for which weight gain is very detrimental. We feed them low-calorie food, but our vet has emphasized the critical importance of abundant off-leash exercise.

A primary issue for our family's dog care is my physical mobility. With the GGNRA's current dog policy, paved trails at both Fort Funston and Crissy Field enable me to participate actively in exercising our dogs. According to the Executive Summary, Alternatives B & D would completely bar me from being able to exercise my dogs at Crissy Field and Alternatives C & D would allow some, though very restricted (and likely very crowded) off-leash beach access. At Fort Funston, all options other than Alternative A would restrict off-leash dog activity from all wheelchair accessible trails. This, in effect, makes the area closed to wheelchair users who need to provide off-leash exercise for their dogs.

I strongly urge the GGNRA to reevaluate all alternative options to allow for mobility-impaired park users who need to exercise their dogs off leash. I urge the GGNRA to make it a priority to enable equal off-leash access for mobility-impaired individuals. Alternative A has worked extremely well in this regard.

I also urge the GGNRA to extend ROLAs in all parts of the GGNRA. With only very restricted off-leash areas available, a "ghettoized" situation is created with the few off-leash areas left becoming very crowded, resulting in inadequate exercise possibilities and heightening the potential for difficult behavioral problems--problems that do not crop up when off-leash space is plentiful.

In evaluating potential changes in dog-use policy in the GGNRA in general, I also ask you to consider the following: Many urban areas in the country allow for open, off-leash dog use in tandem with various management tools

to minimize negative impact. Rather than significantly restricting off-leash dog use of GGNRA park land, consider keeping the 1979 Pet Policy with these amendments: clear, attractive signage indicating sensitive ecological areas; clear, attractive signage delineating "good citizen" guidelines for dog-walking park users; and erection of more eco-friendly barriers to protect sensitive/vulnerable areas.

Finally, it is unclear from reading the GGNRA's proposed dog management policies what specific negative impacts there are to the parklands from off-leash dog activity. Data in the DEIS document is not clearly indicative of specific damage that off-leash dogs are causing in each of the GGNRA's areas. Has the GGNRA studied negative impacts caused by humans without dogs or what damage may be caused by natural predators? Without information specifically delineating negative impacts from each of these groups, how can the GGNRA state categorically that off-leash dogs are causing untenable damage?

Thank you for considering my comments.

Correspondence: I do not agree with the plan to restrict off leash (under voice control). Please keep the current areas designated as off leash, off leash. My dog are an important part of my family. Taking her to an off leash areas such as Fort Funston to run and play with other dogs is one of the few areas that she can run. It is also great for me to see her enjoy herself and enjoy nature with her. it is great exercise for both my dog and me. Please honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.

? Exclude speculative, exaggerated, biased, or misleading statements and studies.

? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).

? Enable professional dog walking and align any professional dog walking rules with county or city regulations.

? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

Sincerely, Cheryl Ruble

Correspondence: May 30, 2011 Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022
Dear Mr. Dean, I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law. The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded. This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others. The GGNRA draft

management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to: Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. Exclude speculative, exaggerated, biased, or misleading statements and studies. Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). Enable professional dog walking and align any professional dog walking rules with county or city regulations. Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input. These are my personal comments and observations regarding this plan: The plan in itself is unnecessary, as most owners and walkers are responsible. Instead better compliance could be achieved through enforcement of the rules already in place. Park rangers should cite owners who do not exhibit voice control of their animal, and also those who do not clean up their dog's excrement. With the policies in place and the proper enforcement, there will be no actual or perceived threat to the natural habitats the GGNRA consist of. Sincerely, Aaron Feibus San Francisco CA 94131

Correspondence: Dear Sir, This is my final plea for you to reconsider removing the off leash areas of the GGNRA. I am a life time responsible dog owner and enjoy the walks I take with my dog daily. I live along the Great Hwy and utilize Fort Funston occasionally. My daily walks with my dog allow me to walk safely and allows both of us to get exercise. Fort Funston allows us to have a leisurely hike with the paths. We live in an urban area. If the off leash areas are taken away, you will remove our reason for going to Fort Funston and force us to walk around the city streets. I am sure it will be more of a burden for folks who are afraid or dislike dogs and would probably make more folks complain.

There are plenty of parks and areas for people who do not want to be around unleashed dogs. There are very few places for people with dogs to enjoy recreation in the city. I do not take my dog to GG Park because it is more populated with tourists and I respect that.

There are irresponsible people in our city/county/state/country. There are irresponsible dog owners too. I hope that you will realize that most dog

owners follow rules, police their dogs and are respectful to our fellow citizens. There are so many arguments for and against having the off leash requirements. I hope you will keep those of us who would like to enjoy our environment while we still have it. For those of us who utilize Fort Funston, please understand that our pets have enjoyed the leash free freedom for years and to have that taken away is punishment for many wonderful people and pets.

One last comment I would like to make is that for those studies that blame the dogs for the condition of Fort Funston/Great Hwy. Please know that the sea and wind have created the ruggedness of the coastal area. Not the dogs. It is naturally beautiful without the unmaintained 'fences' along it's paths. Please don't blame the dogs for the sand covering up the man-made barricades.

Thank you for your time.

Frank Dean, General Superintendent

Golden Gate National Recreation Area

Fort Mason, Building 201

San Francisco, CA 94123-0022

Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. Exclude speculative, exaggerated, biased, or misleading statements and studies. Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). Enable professional dog walking and align any professional dog walking rules with county or city regulations. Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

Correspondence: **Please: No New Leash Restrictions at Fort Funston**

This comment will urge the Golden Gate National Recreation Area to adopt no new restrictions to off-leash walking at Fort Funston. Before I expand on

that point, I'd like to share a few words about my connection to this place.

****Why I Care About This****

I'm a lucky person: I grew up in a family that taught me to appreciate life. Even better, they taught me to do it in one of the most beautiful corners of the globe: the Golden Gate National Recreation Area.

I was born in 1970, and when I was growing up, weekends meant trips to the many GGNRA jewels: Ocean Beach, Baker Beach, the Marin Headlands, Point Reyes, Muir Beach, Mount Tamalpais, Rodeo Beach. And since we lived in Daly City, they meant, more than anything, a quick 3-mile drive down Skyline Boulevard to Fort Funston.

My uncle Lawrence Pizarro was an Air Force veteran of Vietnam. For a while he came to San Francisco for frequent cancer treatments at Letterman VA Hospital in the Presidio. Whatever the purpose of his trip, when he came we counted on at least one jaunt to Fort Funston to "look at the waves," a delight he had little opportunity to enjoy near his home in the central valley. We climbed the dunes and dangled our feet off the cliff as the Pacific swallowed his gaze and the waves below us swished in and out. It was on excursion like these at Fort Funston that I started to learn how (and why) to capture a moment and inhabit it.

As an aviator, my uncle also enjoyed watching the hang gliders. He died twenty years ago, and today, over thirty years after our walks through the Battery Davis tunnel (back when it was still open to walkers), I still cannot go to Fort Funston without recalling how he taught me to watch and hear the way the hang gliders climbed on the wind and cut through it while quietly swishing past us on the observation deck.

To me, Fort Funston isn't a place to walk. It's a place I go several times a week to restore myself and to reconnect with the things I value most: my family, my past, my heritage, wonder, science, the natural world. It is a place my family and I treasure and one that will always be home to some of the best, most important memories of my life.

I mention all of this as I comment on the GGNRA's dog management plan because I wish to give proper context to my comments. I am not writing on behalf of a cause, a species (either domesticated, threatened, or endangered), a movement, a group, an industry, or a financial interest. I am writing because I am a person who grew up in the GGNRA, because I love the place, and because I hope the GGNRA will allow me to continue enjoying one of my very favorite things in the world: roaming Fort Funston with my dog, neither one of us tethered to the other.

****The Human Benefit of Off-leash Dog Walking****

I'm convinced that, by fixating on dog needs and dog welfare, the current debate on dogs in the GGNRA is missing an important point: the value of off-leash dog walking should be measured in what it does, not for dogs, but for people.

My dog enjoys our walks at Fort Funston, it's true. But selfishly I'm much more concerned about the effect that leash restrictions there will have on me and on the thousands of other people who take pleasure in seeing their dogs enjoy Fort Funston. The debate should not fixate on the welfare of dogs; instead, it should consider the unique and irreplaceable benefit that people derive from walking with our dogs off-leash.

If the GGNRA restricts off-leash dog walking at Fort Funston, it will restrict one of my very favorite things in life. Indeed, it will do this to the thousands of people who love exploring and appreciating this beautiful place with their dogs.

****On-Leash Dog Walking is Fundamentally Different from Off-Leash Walking****

I'd like to make sure the GGNRA understands that walking dogs off-leash is qualitatively different from walking dogs on-leash.

A leash is a tether. It ties a person to a dog. Of course, this is a legal, practical, and safety necessity in most areas outside the home. And while leashes are an effective means of protecting people, dogs, and public interest in most situations, this protection comes at a price for dog people: it forces us to be tethered when we leave home with our dogs.

A typical, enclosed, urban dog park offers welcome relief from the tether. But most such dog parks are small. In these parks, neither the dogs nor their people have room to explore and roam. These are important places, and they give our dogs the opportunity to exercise and socialize, but these benefits come at the cost of confinement. People can't get in much of a walk with our dogs at the typical urban dog park.

To dog owners, a safe off-leash area for dogs like Fort Funston is more than a luxury, it is a place where the creatures we love have a rare opportunity to do what evolution and breeding created them to do: roam, explore, run, play, search, retrieve, and more. Dog people simply treasure the opportunity to see the canine members of our families engage in these activities in a safe place.

Remember: this is about people: Fort Funston is a place where dogs can do

what they were meant to, and this brings singular joy to the thousands of people who love those dogs.

We can recreate parts of this equation at some enclosed dog parks. But Fort Funston offers an additional benefit: it is a place where people can not only watch our dogs do what they were meant to; it's a place where we can engage in these same activities alongside our canine family members.

This is a luxury that exists in precious few other places. Something you'll hear frequently at Fort Funston and other dog-walking treasures like Crissy Field is that these wonderful places are one of the reasons many dog people are willing to pay the Bay Area's exorbitant cost of living. World-class, dog-friendly resources like Fort Funston are part of what make our region so enviable.

Requiring leashes at Fort Funston will destroy the unique and irreplaceable benefit that thousands of people currently and regularly derive from the place.

We run. We walk. We exercise. We relax. We connect with other people and dogs. We enjoy the spectacular views. And at Fort Funston, we do this at a place where these activities have minimal effect on others.

****Who Besides Dog People is Using Fort Funston? ****

Hang gliders. Model aircraft flyers. Horseback riders. Picnickers. Walkers who are there without dogs. Beachgoers. There are many reasons people visit Fort Funston, but the truth is that it's not an area intensively used for any of these other purposes.

With that in mind, it is a place where off-leash dog walking is apt to have the least effect on others.

Given its use, especially compared to other areas in the GGNRA, Fort Funston is a perfect place for off-leash dog walking.

****But Dog People Do Have an Effect on Fort Funston****

It's true. Off-leash dog walking at Fort Funston has an effect on people who don't own dogs. It's important that dog people acknowledge this fact: we do have an impact, not only on people who don't like dogs, but also on the ecosystem, on the park staff and more. I'd like to say a few things about that.

****People Who Don't Want to Be around Dogs Have Many Other Choices in the GGNRA****

People who do not want to be around dogs have far more choices in the GGNRA portfolio than off-leash dog walkers do.

Taking Fort Funston away from off-leash dog walkers won't significantly increase the options for people who don't like dogs, but it will significantly harm those who enjoy off-leash dog walking.

****GGNRA: Please Clarify Habitat and Off-Limits Areas at Fort Funston****

At Fort Funston, you'll sometimes see people and/or dogs exploring beyond fences and beyond the areas once delineated by now-broken or missing fences.

The consensus among dog people at Fort Funston is that they'd be happy to respect any and all currently off-limits areas, whether they are for safety or for the restoration of native habitat. But the consensus also says that it's unclear where you are currently prohibited to walk at Fort Funston. With a few fence repairs and well-placed signs, the GGNRA could clarify which areas are currently off-limits. Dog people at Fort Funston agree: this would virtually eliminate the encroachment of dogs and dog walkers on these areas.

Dog people tend to be advocates for nature and wildlife. They are a constituency that is inherently receptive to efforts to protect habitat and species. In the dog walking community at Fort Funston, the GGNRA has a natural ally: a group that treasures this place, a community that would happily respect thoughtful limits sincerely intended to protect native habitat and species, a volunteer pool that would enjoy working together to help restore the natural beauty of the place we love, and a responsible group ready to police itself to encourage other dog walkers to respect any and all clearly set and meaningfully derived limits.

Really, this is what dog people at Fort Funston are always talking about.

Also: during this debate, the notion has been put forth by some members of the public that dogs are responsible for threatening species at Fort Funston. I assume the GGNRA is sufficiently knowledgeable about the issues to recognize that dogs are not to blame for the loss of native habitat there. As one of the GGNRA's signs at Fort Funston notes:

"Originally, Fort Funston's vibrant dunes were covered with a thick carpet of native wildflowers, including beach strawberry, Indian paintbrush, coyote bush and seaside daisy. These plants formed the basis of a strong food chain supporting birds and mammals, as well as insect life, fungi and microbes. Bulldozers cleared away native plants to make way for Battery Davis in the 1930's. Soldiers subdued the resultant blowing sands with some native

plants as well as iceplant, an invasive South African succulent. The iceplant soon covered the cleared dunes and replace much of the native vegetation. As the native plants disappeared, so did the wildlife that depended on them, such as quail, fox and rabbits."

When the GGNRA is ready to take advantage, it will find a vast, untapped volunteer labor pool that will turn out en masse to help establish, clarify, and police restricted areas.

But the restricted areas should not include any of the areas that are not currently restricted, for example the area along the cliff north of the observation deck, the ice plant area north of the parking lot, the ice plant area northeast of the parking lot, the trails marked as "Leash Required" on the Preferred Alternative in the current proposed Dog Management Plan and the areas marked "Regulated Off-Leash Area" in the current proposed Dog Management Plan.

****And Speaking of Policing: Poop****

Look down next time you're at Fort Funston and you'll see another of the impacts that dogs have there.

I think this is one of the principal failings of the dog walking community at Fort Funston. It's inevitable in an off-leash walking area that your dog will poop in a place that's difficult to find and even harder to reach.

We need to change people's understanding of their own responsibility here. It's never okay to fail to pick up after your dog. It's always okay to point out to another dog owner when they happen to have missed their dog's poop.

And we need to appreciate the GGNRA for reliably sending its staff around Fort Funston to empty the garbage cans that equip us to keep this place clean.

I think a few signs and roaming volunteers spreading the word about how unretrieved poops harm every dog owner at Funston could completely change the gestalt about our responsibility to pick up our dogs' poop.

****We Need to Prevent Dog-Horse Interactions at Fort Funston**** Like many dogs, our last one, a docile bunny rabbit trapped in dog's body, turned into wild, snarling animal at the site of a horse. And many of her compatriots in the canine community, share the same strong feelings about horses today.

As a group with shared interests, the dog people at Fort Funston can and need to do a better job of preventing horse-dog interactions. With a little encouragement from the GGNRA, (and again perhaps a few additional signs

and volunteers), we could easily create momentum that would encourage dog people to leash up whenever they saw a horse.

****We Need to Keep Our Dogs Away from People at Fort Funston Who Don't Want to be Around Dogs****

There are, of course, people who don't like dogs at Fort Funston. These folks have a right not to be sniffed, licked, loved, or otherwise inspected by our dogs, and dog people need to do a better job at reading other folks' body language, noticing when their dogs' attention is unwanted, and stopping it.

****Dogs Promote Diversity at Fort Funston****

One additional point here: because Fort Funston is such an extraordinary place, it attracts all kinds. It is of few places in the Bay Area where people of all races, classes, ages, backgrounds, political orientations, etc. gather. And because many of us gather there because of a common reason (our dogs), it's also a place where people from different backgrounds actually talk, share, and get to know one another.

Because of our dogs, Fort Funston is a place where the Bay Area converts our region's diversity from a potential asset to an actual one. I love this about Fort Funston, and I'm certain that restricting off-leash activity at Fort Funston will do what it does to foster community across racial, ethnic, and other stubborn lines.

****One Last Time: Fort Funston is a Place Where People Thrive because Their Dogs Do****

No one is entitled to take their dogs off-leash. No one owes dog owners that privilege.

But dog owners would love the chance to work with the GGNRA to display just how well off-leash dog walking can work for all people who want to use Fort Funston.

Go out to Fort Funston, ask around, and you'll find the same thing: dog people are ready to pitch in and care even better for the place we love.

There are plenty of places where people can avoid dogs, but there are precious few that offer the dog walking community what Fort Funston does: a place where people thrive because their dogs do too.

Dog people are ready to work to make Fort Funston a model of community-government collaboration that sets a new standard for well managed,

respectfully used, self-policed, off-leash, dog friendly areas.

Dog people love this place and look forward to working to make it even better, cleaner, safer, and more welcoming for everyone who wishes to share this gem with us.

Correspondence: compliance with (36 CFR 2.15) is not a valid motivation for a change from the 1979 Dog Management Plan. The GGNRA is *not* a National Park, it is a National Recreational Area. The existing practices prior to the area becoming a GGNRA and the 1979 provisions along with the existing endangered species provisions are adequate for the mixed use of the recreation area.

Correspondence: I have lived in Marin since 1960. My father was instrumental in conceiving of and obtaining the first railroad rightaway for the bicycle paths, he was on the first BCDC (with Senator Feinstein), and is currently on the board of Audubon. I explain this to show our family has always had strong environmental appreciation/preservation beliefs.

I asked him how he thought dogs could harm the environment differently than other animals to warrant a special ban. He couldn't think of anything! We talked about ground-nesting birds, yet raccoons, coyotes, and humans are just as dangerous-more so for the first two-to the birds. All of the animals poop; only the dogs' are picked up and removed. The birds don't appear to be scared of or by dogs. If you ever watch a dog swimming or running towards one, they wait until the last minute before moving, and then only move a short distance away. The birds appear as if they're teasing the dogs, frankly.

Please don't make a special ban for dogs. All animals should be allowed on GGNRA.

Type:

Correspondence: I won't comment on some of the factual issues with the report, since countless other have already done so. The bias in this plan is obvious to any reader - the committee clearly seeks to severely restrict access for dogs on GGNRA lands. For over 30 years, dog owners have been given access to PUBLIC LAND for their use & enjoyment. The committee has not bothered to provide alternatives in the form of providing additional off-leash areas to offset the vast swaths of land being designated on-leash or no access. This land is within urban environments and as such is regularly subject to pollution, human activity, noise, smog, and many other urban issues which are contrary to "restoring the habitat". Singling out dogs as an environmental menace is simply unfair. The land is in an urban area and is meant for the ENJOYMENT OF EVERYONE. Not just naturalists, the committee, scientists, or all the other tiny special interest groups who have had an outsize impact on writing this plan. Urban environments, especially San Francisco, have significant numbers of dogs and dog owners. This land is meant for the use of the general public, and in certain areas, such as Fort Funston, the majority of the public visiting those areas are dog owners.

Of course, there are always people who break the rules. They don't pick up after their dogs, they are walking a dozen dogs at a time and not paying attention, they cannot control their dog by voice but still allow it to roam off leash. In every group there are "bad apples" to punish everyone because a minority are not in compliance is heavy handed and unnecessary. If the real concern is the resources to manage the areas, then set up a permit system to collect funds and fine offenders. Eliminating almost all the off-leash walking areas won't prevent people who aren't going to follow the rules. They still won't and the problem will not be solved. Enforcement of existing rules will make the parks enjoyable for everyone and not alienate a significant portion of the public.

Given that the vast majority of comments received are extremely negative, the committee should seriously reconsider its ill-advised course of action. I am strongly in favor of Option A with additional enforcement and/or permit requirements.

Correspondence: Penny Keating Pacifica, CA. 94044-3959

May 30, 2011

Frank Dean General Superintendent GGNRA Building 201 Fort Mason San Francisco, CA 94123-0022

Dear Mr. Dean and Associates,

For months now I have felt anxious and depressed over the draft GGNRA dog "management" plan. I am 64 and have gained a great pleasure from walking and running with my dog(s) since I was a child growing up in San Francisco when there were hills to run in.

I have been walking and running my dog(s) in Pacifica and near by bay area open spaces for many, many years. It gives both me and my dog(s) a great sense of happiness, being alive and connection to the earth to walk/run in nature. It is a necessity for my dogs to have space to run. I cannot keep up with them for a good workout. I have used an extension leash and also an electronic leash which allows for full control while they are off traditional leash. Just the sound brings them into instant alertness to my command.

I find that the majority of people on the beaches also find joy in the absolute "in-the-moment" joy we see in our dogs running, playing, interacting with other dogs and people on the beach. I am VERY aware of the need to have a well behaved and well trained dog and to be a good steward by cleaning up after my dog(s). I also always carry a bigger bag to pick up the litter left behind by other beach-goers, fishermen and boats.

I am the daughter of an environmentalist whose hero was John Muir and I was raised to see the natural world as sacred. I grew up seeing the open spaces as my cathedral. I care deeply for my cathedral and its' beings.

I feel that my rights to freedom of "religion" and happiness are being greatly threatened.

Some years ago a group of dog walkers including myself, started the

Pacifica Beach Coalition to clean the beaches among other important missions. Our group has grown over the years. Those early-concerned dog-walking members have been running clean-ups for over 10 years because they are on the beaches and trails everyday and THEY CARE!!! This year there were something like 4,000 volunteers to help our earth day event manned and promoted by the Pacifica Beach Coalition and many of the early dog-walking/environmentally concerned volunteers.

I see many flaws in the "research" presented to back up a plan that is greatly unbalanced.

It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option.

The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal. The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents. After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program. Thank you for your consideration. Penny Keating

Correspondence: I am writing about the proposed ban on dogs in the newly added GGNRA

area next to Montara Mountain. I would strongly encourage you to reconsider this ban. This is one of the few areas left that dogs can run free and the reason I moved here. I keep my dogs close to me when we run, and keep them out of sensitive areas. I am a biologist and a science teacher so I am aware of the need to keep native plants and animals safe. It is also important however to have areas that are open for free recreation. In this era of shutting down state and government facilities, please don't take this one from the community who has supported so strongly in the past. Thanks,
Leni Liakos

Correspondence: As a professional dog trainer in San Francisco I cannot stress enough the importance of preserving the off leash areas in the GGNRA. By restricting these areas, dogs will get less healthy exercise, which not only affects their quality of life, but also the quality of life (not to mention the safety!) of the entire community. I specialize in rehabilitating shy, fearful and aggressive dogs. If dogs do not have the appropriate exercise natural progression tells us that it's likely that we'll see an increase in fear, anxiety and aggression.

I have been taking my own dogs to Ft. Funston and Crissy Field for the past 9 years, and in all this time have never witnessed anything more dangerous than a rousing game of chase. To lose these two areas will impact my life, the lives of my dogs, as neither is the type to enjoy the enclosed dog play areas in San Francisco.

If it's true that only a fraction of the dogs who live in the SF are registered with the city, and that this small number is what inspires the building of designated dog play areas... at this point we already do not have enough space to exercise our dogs. I cannot imagine what the current city parks will look like if these open spaces are taken away.

I would like the existing areas to be preserved, and the fragile habitat areas marked clearly, and fenced off to avoid trampling and damage. I would also like to see an expansion to the legal off leash areas in the GGNRA in the future.

Correspondence: The report appears to make no attempt to analyse the relative usage of each

of the areas by category, i.e dog and non-dog and the impact on the area outside of the GGNRA if the dog users are excluded and/or constrained by the changes proposed.

e.g, by simple estimation the majority of usage in ft funston is dog walking, yet no statistical analysis has been preformed and no subsequent analysis of the impact of the changes proposed.

This appears to be a bias fundamental in the intent of the report, only the 'environmental' impact has been considered.

Additionally no historic statistics have been presented to support any unacceptable increase in dog related 'issues' the report is purely speculative in this regard. This appears to be another biased omission intent in avoiding real analysis, and replacing it with 'opinion' unsubstantiated by fact.

Correspondence: Thank you for making a plan to try to control dogs in the GGNRA. But I don't like the preferred alternative plan, I think it does not give enough protection to people or to wildlife or the land, and beaches. I like dogs and it would be nice if there were more parks just for them but I think you need to do more to control dogs at Ocean Beach, Chrissy Field, and other beaches and at other parts of the GGNRA because most dog owners either do not understand the affect their dogs have, or don't know how to train their dogs, or maybe they just don't care.

I have been fishing at Ocean Beach for almost 30 years, and Chrissy Field, and other Presidio beaches since the Army left. I have seen many dogs create problems at both places. I have been attacked by dogs at the beach near Fort Funston, at other parts of Ocean Beach, at the wildlife zone at Chrissy Field and at the part of the beach just west of the Saint Francis yacht club. They did not bite me but I was very scared. Two of those times the dog owner was mad at me for trying to scare their dog away even though their dog almost bit me.

At Chrissy Field some fisherman go very early in the morning because when the dogs come and splash in the water it scares fish. Some fish come very close to shore but leave if dogs are in the water. Most of Chrissy Field is spoiled for fishing most of the day and for any other activity than running dogs because of all the dogs there.

I have seen dogs off leashes attack horses at the beach near Fort Funston and

attack other dogs and other people at Ocean Beach, and Chrissy Field. I don't know about horses on beaches but this is about dogs. You should not let dogs without leashes in any part of the GGNRA at any time. Most people cant control their dogs even on leashes, and almost none I see in the GGNRA or in San Francisco can control their dogs at all just by talking to them without leashes.

I see many dog owners ignore the rules about dogs at the wildlife area for Chrissy Field but I have never seen anyone get a ticket for that. Most of the time I see the same people doing it again another day even if a GGNRA person talks to them. Most dogs I see without leashes chase birds, which does not look that bad but I have read it is bad for the birds.

I know fishermen who have had unleashed dogs steal their bait and one who was fishing when a dog ran up and grabbed his lure and got hooked.

I have seen many dog owners let their dogs go to the bathroom on the beach and I often find plastic bags filled with dog waste on the beach.

I have read some dog owners say there is not enough areas to take their dogs and GGNRA beaches are next to San Francisco which is a big city. I don't think this matters because it is what a dog does in the GGNRA that matters.

I am getting older and I am worried about what might happen in the future if a dog tries to bite me and I am too old to dfend myself. Sometimes I am the only person around except for the dog owner, who may not catch a dog in time. I see some older people fishing sometimes and I wonder what would happen to them.

About how I would like to hear about future reports, meeting, other info: I read local news websites. I did see some areticles on neighborhood news websites but never saw any ads or announcements from GGNRA on them. I would like to see GGNRA announce some of these things on local news websites, in addition to the news areticles they write.

Correspondence: I oppose the proposed dog management plan

My best friend died suddenly this week, and I am writing on his behalf, too, because this issue is so important. He loved seeing the dogs frolic on Crissy

Field beach and went with me several times to Fort Funston.

GGNRA is supposed to be for all of us to enjoy. Almost 40% of all households own at least one dog, and almost 70% of all homeowners own at least one dog.* It is disingenuous to make it is dogs vs. people or dogs vs. birds. This is about people who wants to enjoy the parkland and beaches we pay a lot of money to support and exercise our dog at the same time. A dog doesn't care where he is, just who he's with. So this is about me, the human.

Danger? No dog is born dangerous to humans; they can only be trained or mistreated into being so. It's extraordinarily rare when compared to the danger of humans to each other. My wife would never dream of going out on a hillside trail alone without our dog because she'd worry about the male humans hurting her, not a dog. Statistically, the odds are phenomenally greater that another person, not a dog, hurts a person. We'll never forget the Trailside Killer in Marin.

Correspondence: Frank Dean GGNRA Superintendent

Darn Mr. Dean:

I have lived in the Marina in San Francisco since 1984 and for 21 years have exercised my dog or dogs at the East Beach, the adjacent grassy areas, and the promenade (since it was built). I write again to add another fatal criticism of the DEIS for the so-called preferred alternative for Crissy Field. I have years of firsthand, eye-witness experience at Crissy Field with off-leash dogs, beach users, picnickers, and the protection of the vegetation, as well as the snowy plover (to which a section of the west beach is dedicated, without dogs, for a period of time each year).

This DEIS and Plan doesn't recognize that environmental values include both recreation and nature. In far too many places, the DEIS treats the environment and recreation as adversarial values: the DEIS erroneously assumes that recreation only harms natural resources. That document utterly fails to acknowledge that people care about both recreation and natural resources, and that most all of the people with off-leash dogs at Crissy Field and the East Beach are responsible, careful stewards of our environment. We pick up our dogs' waste; pick up litter; signal other dogs owners to pick up their dogs' waste; and advise diligence in watching dogs to ensure they do not interfere with others' enjoyment of the beach and grass y areas. This bias in the DEIS is especially salient in the discussions relating to Crissy

Field; the false justifications for the so-called preferred alternative pits recreation against natural values and erroneously assumes that harm "could" result to the environment, when there is overwhelming evidence to the contrary. To the extent that any fix" is needed for something that is definitely not broken, the DEIS fails to identify or explore reasonable alternatives where nature and recreation can and do thrive together.

Not only is there no specific evidence of any significant PAST degradation at Crissy Field and East Beach. The proposed broad limitations in the DEIS for the East Beach and Crissy Field as a whole are largely without site-specific science demonstrating that the ANTICIPATED degradation of the quality of the natural resources would actually be attributable to off-leash dogs as opposed to other factors. There are so many other users of that area (e.g, children with inattentive or irresponsible parents; sail boarders; alcohol users; picnickers; sports participants; beach litterers) that the DEIS fails to consider as potential causes of any anticipated degradation.

For Crissy Field and the East Beach, I urge you demand that the DEIS contain actual justification for changing the current status quo. Based on m 21 years of walking my dogs off leash in the grassy areas the East Beach and the promenade, I am confident that you will conclude that the environment and beach users are protected by the 1979 Pet Policy and the vast majority of responsible dog owners whose dogs are off leash there.

Thank you for your consideration.

Correspondence: I support maintaining the current, traditional off leash dog regions on GGNRA property throughout the Bay area which have been in place for decades. As has been demonstrated by public space planners, dog owners and open space enthusiasts, restricting these areas to leash only space will only crowd municipal parks and reduce an important cultural, health and community activity for many Bay area residents.

A critical oversight in the GGNRA's assessment was their decision to use a literature search and not real time water and soil sample analysis on which to base their decision. This means there was no actual testing of soil or water quality over a period of time during which dogs were present on the open space in question--instead the GGNRA used case studies from other sites with similar characteristics on which to make their determination.

Bad science makes for bad decisions and misleading data. Bay area dog owners deserve much better--

The dog community contributes significant revenue to the tax base of its respective communities. We're looking at 1% of the total area of the GGNRA--we deserve to give our dogs at least that--if not more.

1% for dogs and their owners--it worked for decades, keep the current program and open off leash space in place.

Correspondence:

Dear Superintendent Dean,

I have lived in the Sunset in San Francisco for 14 years and have owned a dog for the last two years. I regularly visit GGNRA lands to enjoy hiking, beach access, and historic sites. Since owning a dog, I have continued to take advantage of the opportunities for recreation in the GGNRA. I take my dog to Crissy Field once a week and to Fort Funston about once a month. I am a responsible dog-owner who walks with my dog under voice-control, who respects areas of the GGRNA that are restricted to dogs, and who always cleans up after her dog.

I have read the Draft Plan/Draft Environmental Impact Statement (Plan/DEIS) for Dog Management in the GGNRA that was released in January, and I feel that there are significant flaws in the document. The DEIS provides no site-specific studies or evidence to support its strongly stated conclusion that allowing dogs access to limited areas on the GGNRA results in a negative impact on those areas.

The studies that are referenced in the document are often decades old and are based on research done in places as removed from the GGNRA as Virginia or Colorado. Additionally, these studies present contradictory conclusions about the severity of impacts due to dogs. The final conclusions of the DEIS claim studies prove that dogs have a significant negative impact of the environment, but the Boulder, CO study referenced in the document

demonstrates that off-leash dogs did not travel far off-trail and rarely disturbed other people, wildlife, vegetation, or bodies of water. Another study states that dogs traveling on a trail with screening vegetation are unlikely to even encounter, let alone disturb, wildlife. Water quality sampling in the GGNRA at some sites that are currently accessible to dogs has shown that "the quality of water bodies throughout the park is generally acceptable for sustaining aquatic life." The DEIS cites the Crissy Field tidal marsh as a particularly healthy body of water, even though Crissy Field is a widely used off-leash dog recreation area. These conflicting data should put the conclusions in the DEIS about dog impacts into doubt, but instead the document clearly treats them as indisputable fact.

Another weakness of the DEIS is the failure to prove that any documented negative impacts on the area are due specifically to dogs. Because site-specific studies of GGNRA lands do not exist, there is no way to determine the extent of any negative impacts or to distinguish between impacts from dogs or humans. For instance, the DEIS refers to erosion as a major concern at Fort Funston and cites digging and climbing on cliffs by dogs as the cause. However, I have frequently seen adults and children climbing up the coastal cliffs at Fort Funston and, surely, dogs are not responsible for the graffiti that can be seen carved into the cliffs. I have also witnessed people walking on the dunes at the southern end of the Fort Funston beach and using paths other than the sand ladder to travel between the upper section of Fort Funston and the beach. This behavior must significantly contribute to erosion at the site, but no reference to human impacts on Fort Funston are mentioned in the DEIS. Also, the DEIS states that after certain areas of Fort Funston were restricted to dogs, an increase in bird presence was documented. This is cited as an example of a negative consequence of allowing dogs at Fort Funston. However, this land closure also prevented human access to these areas, which should also be considered when drawing any conclusions about impacts to wildlife.

The DEIS describes the many at-risk species that can be found in the GGNRA and justifiably states that the GGNRA lands contain important, biodiverse communities. The DEIS does not, however, provide clear documentation of the overlap of most of these species with areas currently accessible to dogs. Under current regulations, less than 1% of the GGNRA is accessible to dogs, and the DEIS does not prove that this small amount of land has a detrimental effect on the overall populations of these at-risk species. In cases like the snowy plover where there are clearer data, the DEIS again does not distinguish between the impact of the presence of dogs, on- or off-leash, and the presence of humans in the birds' habitat.

I feel the GGNRA has not based their conclusions regarding the negative impact of dogs on recreation area lands on solid, scientific evidence. The DEIS repeatedly lists negative impacts that "could" occur at the 21 sites

under review but provides no studies showing these impacts are in fact occurring and that they are the result of the presence of dogs. As a member of the community who enjoys visiting the GGNRA regularly, I ask that the GGNRA responsibly study this problem and support their case with rigorous, scientific data before restricting access to the GGNRA for a significant population of frequent visitors.

Thank you for considering my comments,

Sarah Green

Correspondence: Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022 Dear Mr. Dean, We have a well trained Golden Retriever. She just passed the AKC Canine Good Citizen test. We believe it is the dog owner's responsibility to have a well trained dog and to always pick up after your dog. We live in the Marina and walk her to Crissy Field about three times a week. We are members of NRDC and are very concerned about protecting the environment. We are always respectful of the protected areas at Crissy Field.

I'm a senior citizen and an important part of my exercise program is walking my dog off-lease at East Beach. I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions. It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option. The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal. The

DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents. After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program. Thank you for your consideration. Sincerely, Vicki Haggin San Francisco, CA 94123

Correspondence: Dear Superintendent Dean,

I am writing to oppose the GGNRA's Draft Dog Management Plan because exaggerations of the potential impacts of the "No Action" alternative are found throughout the document, while in all other alternatives there is an assumption that there will be compliance.

It is illogical to assume that if there is compliance, there will be a decrease in resource degradation. To correct these exaggerations, I ask that the GGNRA do an analysis on the current management strategy, which would mean that park rangers could provide education, dog owner training, better signage, and fencing off of sensitive areas to the endangered shore birds and wildlife. Instead of closing an area to dogs or eventually humans altogether, the current management strategy can enforce the above means to curtail the potentiality of noncompliance.

Thank you for your consideration.

Sincerely, Tszsan Kathy Reichardt

Correspondence: I oppose the GGNRA draft dog management plan and all action alternatives that will reduce or eliminate dog recreation in the GGNRA. Honor the

existing "1979" Pet Policy" and provide balanced off-leash options for new lands acquired since 1979.

While I believe that protection of sensitive areas is a concern, there needs to be more than anecdotal tales of dogs impacting sensitive areas. Responsible dog ownership can add to the enjoyment of public areas by all citizens.

Correspondence ID: 4068 **Project:** 11759 **Document:** 38106

Received: May,30,2011 19:30:18

Correspondence Type: Web Form

Correspondence: Dear Superintendent Dean,

I have been a resident of San Francisco for 14 years and I am a frequent visitor to several sites within the GGNRA. I have owned a dog for two years and enjoy hiking with him in the GGNRA, particularly at Crissy Field and Fort Funston. I recognize the importance of responsible dog ownership and I always have my dog under voice-control when he is off-leash and I also clean up after him.

I have read the Draft Plan/Draft Environmental Impact Statement (Plan/DEIS) for Dog Management in the GGNRA that was released in January, and I believe the analysis of the "No Action" alternative (Alternative A) is not handled properly, resulting in a bias against this plan option.

The analysis of the "No Action" alternative assumes essentially total noncompliance with current regulations, whereas the analysis of the other four alternatives assumes the opposite,-extensive compliance with the new regulations. The "No Action" alternative analysis also assumes that noncompliance with current regulations results in significant damage to the sites despite a lack of scientific documentation establishing this fact. This unequal analysis of the proposed alternatives creates a bias against the "No Action" alternative since the assumption of compliance for the other alternatives guarantees they will always have a lower impact on the area.

The DEIS repeatedly states that monitoring of compliance with dog regulations at sites throughout the GGNRA has been inconsistent and applied unevenly. The document also notes that there are some sites with confusing or inadequate signage regarding dog regulations. These facts would seem to call into question any assumptions about the actual level of compliance with current regulations and require further, careful monitoring before a proper analysis of this point can be made.

There is another underlying assumption in the analysis of the "No Action"

alternative that creates a bias against this option. When assessing the impact of the "No Action" alternative on park operations, the DEIS projects that additional labor and expense will be required for a sustained period to handle dog management, even though this option represents no change from the current operations. The analysis of the other four alternatives regarding park operations assumes that only a temporary increase in labor and expense would be required to implement new dog regulations. The DEIS offers no explanation as to why the new regulations would not also require sustained enforcement and maintenance of signage to be effective. Because of this imbalance of assumptions, the "No Action" alternative is projected to place a higher burden on park operations than the other four alternatives.

When analyzing the "No Action" alternative, the DEIS makes no allowance for the effects of improvements to the existing regulations that would mitigate the assumed negative impacts of allowing dogs in limited areas of the GGNRA. These improvements could include more consistent enforcement of current regulations, replacing inadequate post and cable fences with more effective barriers around sensitive areas, a steep increase in the fines for violations of dog regulations, or stricter policies such as requiring dog training classes for repeat offenders much like drivers caught speeding are required to go to traffic school. The Crissy Field tidal marsh provides an excellent example of how a combination of consistent enforcement, clear signage, and effective wire fencing led to a thriving protected area coexisting with an extensive off-leash dog area.

The DEIS states that the GGNRA is prepared to spend 1.5 million dollars a year to implement their preferred alternatives at the 21 sites covered in this report. This figure is seven times what is now spent on enforcement of the current dog management policies. If the GGNRA would consider increasing spending to improve compliance with existing dog regulations, I am confident they could preserve the already limited access for dogs and achieve their goals of protecting the natural resources of the area.

I believe the various alternatives for each site discussed in the DEIS were not fairly and comparably analyzed, resulting in a consistent bias against the "No Action" alternative. I ask that the GGNRA reevaluate the assumptions underlying the conclusions about the impacts of the alternative plans and gather data to more accurately gauge the levels of compliance with current regulations.

Thank you for considering my comments,

Sarah Green

Correspondence Web Form

Type:

Correspondence: Dear Superintendent Dean,

I have lived in San Francisco for 14 years and frequently visit the GGNRA. Since getting a dog two years ago, I go to Crissy Field every week and to Fort Funston about once a month. I enjoy walking with my dog under voice-control in these areas and I always make sure to have my dog in sight and to pick up all pet waste.

I have read the Draft Plan/Draft Environmental Impact Statement (Plan/DEIS) for Dog Management in the GGNRA that was released in January, and I believe the compliance-based management strategy outlined in the document is inappropriate and a violation of the requirement of the GGNRA to seek public input regarding major changes in regulations.

The DEIS suggests that compliance with current dog regulations is poor, but the document doesn't place the number of documented incidences of noncompliance in context with the total number of visits by dogs. On any given weekend day at Crissy Field, I would estimate around 700 dogs visit the area. The DEIS lists around 250 leash law violations over a one-year period at Crissy Field, which in the context of tens of thousands of dog visits over that same period seems extremely low. However, the DEIS uses these incomplete statistics about noncompliance to justify the implementation of the compliance-based management strategy if compliance with new regulations falls below 75%.

I also believe there are several flaws in the compliance-based management strategy itself. The DEIS only vaguely outlines how baseline compliance would be established and how future monitoring of compliance would be done. Also, this compliance monitoring would be done by GGNRA staff, not an impartial group, leading to doubts about the accuracy of the data collected.

In addition to the flaws in the design of the compliance-based management strategy, the policy itself is overly restrictive. Currently the GGNRA is working with the public to develop a set of dog regulations that is acceptable to a large group of GGNRA users. Any changes to these rules through invocation of the compliance-based management strategy would be permanent. There is no mechanism to appeal the shift to the more restrictive alternative or revisit the policy when new management or enforcement techniques can be considered. This is not a responsive management strategy for public recreational lands, but a punitive approach that robs GGNRA users of their voices.

I feel the compliance-based management strategy outlined in the DEIS ignores the responsibility the GGRNA has to incorporate public comments when developing new policies and I believe it should be removed from the plan before finalization.

Thank you for considering my comments,

Sarah Green

Received: May,30,2011 19:37:40
Correspondence Type: Web Form
Correspondence: As an equestrian who has ridden at Fort Funston for the last ten years please see my comments on the Draft EIS below.

Equestrians who ride on the beach and on Fort Funston proper have coexisted with dog walkers, hang gliders and other visitors for decades. In the past ten years, however, the lack of guidance and enforcement and inconsistent policies have led to increased incidents between off leash dogs and horses. While the majority of dog owners (including those who ride horses with off-leash dogs) keep their dogs under voice control, incidents have increased and continue to threaten the health and safety of other visitors. Because of the danger, many visitors choose not to frequent Fort Funston allowing the perception that the entire area is only a "dog park" and creating the feeling that the park service is violating their multiple use mandate by catering to a single user group.

In the spirit of multiple use, I support Alternative E with the following two caveats: 1) Horse trail- I do not believe it is necessary to exclude dogs from the horse trail as long as they are on-leash. The trail has several blind corners and if an on-leash policy was enforced, horses, riders and dogwalkers would be safe. 2) ROLA- I am very concerned about concentrating dogs in an area without barriers. If the ROLA doesn't have a barrier to the south, there would be no way to prevent offleash dogs from concentrating on an onleash state beach and increasing incidents with other users.

General Comments pertaining to dog walking in GGNRA Lands and the document itself: 1)Why wasn't a global no dog alternative analyzed in the DEIS? It may not be preferred among most users, but it would satisfy the requirements under NEPA and show a good comparison of how excluding a certain use would socially affect visitors. 2)Commercial Dog Walking-On most public lands, any commercial entity making money off of use of those lands usually has to pay a permit or lease fee to the agency responsible for

those lands (BLM- OHV races, Livestock grazing, mining, etc.; US Bureau of Reclamation-houseboat rentals, jet ski rentals, marinas, campsites, etc.). It seems that an entity bringing multiple dogs to NPS lands and making money off of that without having to assist in the upkeep of that area (financially or otherwise) is unfair to the rest of the general public using those lands and strains agency resources. This should be a general requirement on commercial dog walking in all GGNRA lands for all Alternatives (including the No Action alternative). 3)2002 Telephone Survey- It seems this is outdated for such a large plan (9 years?)?a more recent survey should be done prior to completion of the FEIS. 4)Who are the cooperating agencies in this process? When were they involved? Did they sign an MOU identifying their role in the process? 5)ROLAs- Great idea, but a ROLA without actual barriers is useless. EXAMPLE-A ROLA on a beach?unless there is a physical barrier, the offleash dogs will run outside of the boundaries (even under voice control). ROLA boundaries should be signed and some type of barrier be erected to contain dogs. If you can't contain the dogs from running outside the boundary then it is NOT a good place for an offleash area. 6)DEIS/ FEIS distribution-Why wasn't a request sent out to the mailing list asking them which format they would like to receive the DEIS in? Printing thousands of hard copies of a thousand plus page EIS seems like a complete waste of park service budget and resources. This request is recommended for the FEIS. 7)EIS Volume 2- It would help if there was a TOC at the beginning of volume 2 in addition to a TOC at the beginning of Volume 1. 8)Moderate to major impacts- Why is there NO mitigation identified when moderate to major impacts are recognized? It seems like a proper analysis would at least identify some measures to reduce impacts. 9)Alternative Conclusion Tables-Why are some of the cells empty on these tables? Example: Page 870, First Row?Why are the "Impact Change Compared to Current Conditions" and "Cumulative Impacts" columns empty? If there are no changes or cumulative impacts, this should be stated.

Executive Summary 10)ROLA's- If you mention a ROLA in the ES, it should be defined. 11)Commercial Dog Walking (pg. xiii second to last paragraph)-" 6 dogs. Six dogs off leash is not reasonable. How was this number decided? If too much for summary reference where discussed in document?AND explain better there. 12)Compliance Based Management Strategy (pg. xiii last paragraph)-Need to address noncompliance in ROLAs (e.g. not picking up waste, more commercial dogs than permitted per handler, etc.). 13) Compliance-Based Management Strategy (pg. xiii last paragraph)-"To prevent these impacts from increasing or occurring outside of the designated dog walking areas the NPS would regularly monitor all sites" Need more information-How would monitoring take place and how often? If too much for summary need to reference where discussed in document.

Chapter 2 Alternatives 14)Alternative Elements Eliminated from Further

Analysis-Pg. 93, First whole paragraph, "This program was cost prohibitive and would have required substantial park staff time" Cost is not an acceptable reason for eliminating an alternative. If this type of management is too costly than the park service should not allow the activity in the first place.

Chapter 3 Affected Environment 15)Visitor Experience, Incidents between Visitors and Dogs, Pg. 280-First sentence should mention hang gliders. 16)Law Enforcement, page 283, Third paragraph- "Violations are handled using a reasonable enforcement response". Reasonable is a bad choice of wording. This is subjective and varies by incident. 17)Law Enforcement, page 283, fourth paragraph- This issue with this whole paragraph is that there is not consistent enforcement throughout the park. 18)Page 286 "It is also assumed that the large percentage of visitors that experience incidents with dogs do not report them to park staff (Coast, pers. Comm., 2006)" This is a FACT?it should not just be an assumption. I have ridden horses on the beach below Fort Funston for over 10 years. There has not been ONE ride where an offleash dog has not chased after my horse. That being said, they usually turn around or stop after a while, but these are all incidents that harass/ annoy/ or effect the visitor experience of another user of the public land. I do not call the park service every time this occurs because I have a VERY seasoned horse and am used to handling the situation, but it should be noted that the events do occur on a regular basis and they are non-stop under current management.

All of Fort Funston Affected Environment and Analysis Adjacent Parks-" ?the closest park is Lake Merced". THIS is an incorrect statement. The closest park to Fort Funston is Thornton Beach State Park whose boundary butts up against Fort Funston 's southern Beach boundary. Throughout the entire document, there is inadequate cumulative analysis about the effect activities at Fort Funston have on Thornton State Beach Park. For one, this state beach is on leash. A proper trends analysis would show that offleash visitors to Fort Funston historically have allowed their dogs to run offleash on Thorton State Beach. I am extremely concerned about the future of this area. If a ROLA was established on Fort Funston without barriers, this trend would continue and increase conflicts among users to the south.

Correspondence: Sirs:

As the 2004 recipient of the Terwilliger Environmental Award, my views about the GGNRA proposals for managing pets reflect my strong

commitment to the earth and teaching about it. At the SFRPD's Randall Museum in San Francisco, I coordinated science education and dealt frequently with dog-related issues. Early in my time at the museum, I mounted the exhibit "Endangered in San Francisco" for visiting school children and families. Volunteers worked with me to initiate monthly habitat restoration and birding on Corona Heights as well as to coordinate the San Francisco Natural History Series. At the Museum, I developed and presented a wide variety of general and environmental science programs for children and trained instructors and docents.

Having retired from the SFRPD recently, my interest now is focused on Pacifica where I live. My concern for the survival of the endangered and threatened species locally corresponds with the National Park Service mission to protect them. The D alternative of the Dog Management Plan is usually my preference.

However, no area in San Mateo County is identified for off leash dogs. Designating such an area somewhere in this county, I believe, will serve as further protection for the habitats critical to protected and other wild species. Pacifica has a large and vocal community of dog owners, and the City of Pacifica recommendation to allow dogs on Tmigtac and Pollywog trails at Mori Point ignores the endangered species and the rest of us who work to preserve them and reflects only the dog owners' voice. (It is sad to see a city administration afraid of such a vocal group when the potential damage to the protected species is a real threat.)

In my third year as a Mission blue monitor, I continue to see off-leash dogs on Milagra Ridge weekly. Walking routinely and occasionally helping with habitat restoration at Mori Point as well as at Pacifica State Beach, I am forced to pay attention to avoid feces from unleashed dogs. Monitoring wintering Western snowy plovers, I spoke regularly to recalcitrant off-leash dog owners. Recently, while exploring Corral de Tierra, a group of us with CNPS met several off-leash dogs chasing balls into the area where endangered Hickman's Cinquefoil is surviving. The potential damage was unintentional but real.

Western snowy plovers, Bank swallows, San Francisco garter snakes, Red legged frogs, Mission blue butterflies and Hickman's cinquefoil all the other endangered or threatened species need the best protection possible. Wherever protected species exist, as at Crissy Field and Ocean Beach, NO on or off-leash dogs should be allowed anywhere near sensitive habitat.

In Marin, at Baker Beach and Ft. Mason I support the preferred alternative. At Crissy Field and Ocean Beach I support Alternative D. Absolutely no ROLA should be allowed anywhere near threatened or endangered species habitat, including Ft. Funston. Given the abuses I see regularly, I firmly

believe that any off-leash area must be fenced and leash compliance must be enforced at 95% with a goal of 100%. Non-compliance must have consequences that will cause all dog walkers to police themselves or lose the privilege of using an area or trail, ie. dog walking must be banned completely if the owners do not comply with rules.

Many people quietly give up walking in areas that have high dog use to avoid being nudged aside or jumped on and because they do not enjoy the odor of urine and feces. Their preference for trails without dogs should also be given more consideration.

In this densely urban area, the GGNRA effort to accommodate many varying park needs and users has presented an herculean task. I want to express my appreciation and enormous gratitude to the dedicated and talented staffs of NPS, NPCA, GGNRA and GGNPC.

Margaret Goodale

Re: Golden Gate National Recreation Area Draft Environmental Impact Statement

Dear Mr. Dean:

The GGNRA was created in 1972 to "preserve for public use and enjoyment certain areas of Marin and San Francisco [and] to provide for the maintenance of needed recreational open space" Pub. L. No. 92-589. Adoption of the Preferred Alternative suggested by the GGNRA's Draft Environmental Impact Statement would run counter to these important and long-recognized goals.

For nearly forty years, the people of the Bay Area have enjoyed the GGNRA with their families and friends, both two-legged and four. My colleagues and I make regular use of the GGNRA. In areas where dogs are permitted off leash, both the dog owners and the non-dog owners among us value the ability of dogs to run leash-free. Dogs are an essential part of the landscape at Crissy Field, Fort Funston, Muir Beach, and other areas, and the draw of these places lies largely in the opportunity to interact with and watch dogs enjoying the open space. I know from personal experience with

my golden retriever at Crissy Field and Fort Funston that many people enjoy and appreciate the joy of a dog splashing through the ocean in pursuit of a ball or stick.

Open access to the GGNRA is an essential component of life in the Bay Area. Adopting severe restrictions limiting access based on the will of a few individuals is directly contrary to the goals of the GGNRA, which was created for all people to enjoy. In the open spirit with which the GGNRA was created and to avoid the costly, time consuming dispute that will undoubtedly ensue should the GGRNA adopt the Preferred Alternative, the GGRNA should reject the Preferred Alternative and uphold its commitment to ensuring open recreational access to land designated as such by Congress.

Sincerely,

Danielle Crockett

Correspondence: I am writing to oppose the GGNRA's draft dog management plan. I believe the plan will have a negative impact on the residents of the City of San Francisco, as it proposes extremely restrictive policies about where we will be able to enjoy off-leash hiking, running and other recreation with our pets.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily ignores the needs of Bay Area residents who

exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

In my opinion, the GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area--and it IS an URBAN recreation area--not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded. Further, by my observation and in my experience, there are quite a number of restrictions on off-leash use of GGNRA land already in place, but enforcement seems to be the real issue. I fear that if these more restrictive regulations are enacted, it will only be the law-abiding dog owners who will suffer; the scowflaws won't care about the new restrictions--just as they don't follow existing laws now. I have also observed that when people and their families walk with their pets, they are more open to meeting other people, usually via inquiries about their pets. In the years we've had our dog, we've met more people and engaged in pleasant conversations with strangers than I have ever experienced in all my years before owning a dog. I truly believe pets can bring out the best of humanity in us all.

The GGNRA draft management plan does not provide tangible evidence that justifies such drastic changes to 40 years of healthy dog and human recreation. The Park Service should honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. Recognize that there are hundreds of uninhabited miles along the California coastline for wildlife to thrive, while we San Franciscans and our pets have a 7 x 7 mile peninsula on which to recreate. Please do not adopt the proposed regulations, but rather, honor the 1979 Pet Policy.

Thank you for your time and consideration.

Sincerely,

Virginia Otis

Frank Dean, General Superintendent Golden Gate National Recreation Area

Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean,

I am a 67 year old woman, privileged to live with a wonderful 11 year old rescue dog. We have been going to Fort Funston several times a week for more than a decade. I've felt so lucky to have such a beautiful place available to us, where I've made many good friends, both canine and human. I believe that my good health and that of my dog are a direct result of our being able to exercise freely there.

My dog is mellow, well-trained and well-behaved ? he brings smiles to the faces of the children and families we meet. We are respectful of the land and vegetation and give thanks for every minute we're able to spend at "The Fort."

I've been concerned about the environment all my life and am a regular contributor to The Nature Conservancy, Marine Mammal Center, California League of Conservation Voters and The World Wildlife Fund, among others. I am committed to preserving and protecting our natural areas.

I strongly disagree with the GGNRA's current preferred alternative. It is restrictive and arbitrary, as there is no sound evidence that off-leash dog walking is detrimental to GGNRA lands. In addition, I don't understand how you can in good conscience renege on the 1979 Pet Policy, which was a fundamental part of the agreement by which you acquired this land. Such action is unfair and perverse.

Please consider reasonable alternatives. It would be tragic for me and so many others if we were to lose areas where both people and dogs can socialize in a calm, friendly setting. Being at Fort Funston lifts my spirits and literally makes my day. My dog is ecstatic just being there. I know this is true for hundreds of other people and their pets.

I'm counting with all my heart on your sense of what's right - finding some other way to balance recreational use with with preservation and I support a modified Alternative A (the "No Action Alternative"). We have kept up our end of the bargain and I think you owe us a better deal than the one currently proposed.

Thank you for your consideration.

Sincerely, Nancy Prowitt

Type:
Correspondence: Dear Mr. Dean and GGNRA,

I am writing to you to let you know that I oppose your plan to limit dogs in the GGNRA.

I am particularly concerned with the plans to limit dogs at Fort Funston. As a native of San Francisco I have been going to Fort Funston for over 40 years, and my appreciation of it has grown immensely since I started taking my first dog there eleven years ago.

I see enormous value to the community to have an area where people can enjoy the outdoors and have their four legged family members enjoy a little freedom. I visit Fort Funston every weekend, my wife joins us on Sunday, regardless of the weather; fog, wind, rain or shine. I look forward to this activity, partly because of the walk (takes my dog Sparky and myself 50 minutes to do a loop), the beauty and also the friendliness of the other dog owners and the sheer joy you see in dogs and people of all ages.

I do feel that things can be done to help preserve the area, but the plan put forward goes way to far. I would suggest:

- All trails should be off leash (voice command) this includes: beach, Chip trail, Horse Trail, Sunset Trail, Battery Davis Trail, Coast Trail, trails to the beach and the trail from the ranger station to the main parking lot
- I think most of the damage done by dogs are from their owners throwing balls in areas that dogs should stay out of.
- There should be a few designated area where dogs can chase balls (in front of the main marking lot, drinking fountain area by stairs, beach and on marked trails.
- GGNRA should repair the fences in the habitat protected areas and post signs with the fine amount.
- Rangers should patrol the area to enforce the new rules

I would like to see a reasonable plan put forward by the GGNRA, but the plans you have proposed would significantly reduce my enjoyment of the area and I think it would also reduce the benefit that the community gets from having an off leash area of this size available.

Have you ever been to Fort Funston on a weekend and seen this enjoyment?

Robert Valle San Bruno, CA 94066

Thanks

Correspondence: Regarding the Draft Dog Management Plan/DEIS, we advocate for Alternative A (no action): The current dog practices should continue as is and without any changes. We absolutely support that our beaches, and especially Ocean Beach, Fort Funston, and Crissy Field, are natural resources worthy of preservation to be safely enjoyed by all visitors, now and future generations. It also makes sense that the GGNRA have a plan that is unique from the other National Parks when it comes to the dog policy since we live in a densely populated area and the beaches are in essence our backyards. We have lived in San Francisco for over 20 years and have used the GGNRA extensively, and half of that time as a non-dog owners, with pure enjoyment of the natural resources. We have witnessed much wildlife and appreciate the uniqueness of such in our urban environment.

Humans, birds, and dogs should have the equal opportunity to coexist without the new restrictions proposed by the GGNRA. Three years ago we adopted a small dog, who is now fifteen pounds, and the preciousness of the open space provided by the GGNRA became absolutely invaluable. Two years ago we moved to 45th Ave. at Lawton St. and adopted a second 15 pound dog, and we can say that we are at Ocean Beach nearly every day since. Our considerable experiences at Ocean Beach have proven contrary to the DEIS and that the current situation is safe for all (humans, dogs, snowy

plovers, etc.) and that the recreational areas provide an invaluable resource for us and our lifestyle. During all of our time visiting Ocean Beach these past couple of years, we have only had safe and positive experiences with park rangers, most of whom engage us in small talk about our dogs, whether on or off leash. Our dogs pose no danger to the wildlife or public, in fact most day's people and children want to pet or play with our dogs. And with our frequent visits to the beach, our dogs have learned "no birds" means no disturbing the wildlife. Additionally faces have become familiar and we've met many wonderful people. The daily dog walks along the ocean not only provide a great opportunity to exercise and experience nature's wonders, but it has also enabled us to meet distant neighbors and build community: Shouldn't that be the goal of the National Park Service and the GGNRA?

Living four blocks from Ocean Beach, we use the beach often either with our two small dogs or alone as a place to exercise. We witness firsthand the birding activity and the impact humans with or without dogs have on the birds: Birds, especially the protected snowy plovers, are not at the beach 24/7, and people exercising along the shore or roaming in the grassy dunes disturb the birds more frequently than dogs simply because their numbers and usage outweighs that of dogs. Although there may be random episodes where a dog is off-leash and chasing the birds, it is infrequent. We are there year-round, not just on the weekends, not just when the weather is actually warm or even hot, but we are there when it is windy, cold and foggy, or just pleasant. We use the GGNRA beaches nearly every day, and there is no justifiable reason to make any further dog restrictions. If restrictions are to be made, it should be because of human activity rather than inaccurately placing blame on dogs for wildlife or habitat decline. There will always be people who don't like dogs, but enforcing restrictions won't change that vocal but minority user group. In our experience of using the beach multiple times a day and nearly every day for the past 2 years, there is no reason to make any changes other than provide better signage to clarify where and how far away the off-leash areas are located or to educate the community about why certain sections are designated leashed only and how their positive actions will preserve our wonderful recreational areas.

Since the public announcement about the proposed dog policy changes, there have only been a few occurrences where we have seen other dogs chasing wildlife or disturbing the habitat. And in most of those situations we have been able to go to the dog owner and talk with them about how important it is to respect the current dog policy so that dogs are always allowed on the beaches. When explained why dogs chasing birds is bad, as was told to us by another beach user who claimed to be a naturalist, each dog owner took action: Upon learning how disturbing the feeding birds may result in future starvation we have seen firsthand dog owners taking immediate action to restrain their dogs and most have thanked us for the clarification. Instead of making changes to the current dog policies, better

signage and explanation should be made readily available so dog owners know why there are usage limitations, and where and how closely located are the off-leash areas. Although we have read comments about negative incidents involving dogs and people, in all of our time at the beach we have not actually witnessed any so we believe it to be in reality a minority issue; therefore, the GGNRA should not propose additional restrictions across the board to all dog owners and all dogs but should instead individually address any problems. We believe that the reality is most San Francisco dog owners are environmentalists who care about preserving the beaches and its wildlife while maintaining maximum enjoyment of our special urban oasis. We are truly lucky to have the GGNRA in our backyard, and we believe most of the populace recognizes this, which is why our recreational areas should continue to be available for all to enjoy.

Sincerely,

Lisa Dougherty Jason Stallcup

Correspondence: To Members of the Negotiated Rulemaking Committee for Dog Management,

I have lived in the Outer Richmond for 4 years now and am a regular visitor to Lands End. I am writing because I have been in (and witnessed) numerous dangerous situations with dogs and their owners while walking the Coastal trail and I fear it is only a matter of time before someone is seriously injured. This trail is heavily used by joggers, tourists and hikers of all ages. In several parts, the trail is narrow, uneven, steep and bordered by cliffs. There are blind corners, tight turns and several stair cases. When dogs both leashed and unleashed are being led through these sections, it creates serious congestion and apprehension for the parties involved, as well as the potential for serious injury. Alternative D is the best proposal, because it does not allow dogs in the above-mentioned areas.

Thank you for your time, Maggie Dale - San Francisco resident and weekly hiker on the Lands' End Coastal Trail

Correspondence: Hello~

I am writing, first, specifically towards Muir Beach. This is mine & my pup's favorite place to walk, run & swim. In all our visits to this beautiful place, we have never seen a negative encounter of dogs & people, dogs & wildlife, or even dogs in the dunes. Without Muir Beach, we would be drastically limited in our options for outdoor exercise & play, which is why GGNRA was first instated. Without scientific studies proving the claims that dogs are causing damage to the various areas that would be affected with these changes, I feel it is more of a personal attack on dog owners... While I do understand that there are sure to be some irresponsible dog owners here & there, though I have yet to encounter any at Muir Beach, I hope the final decision is in favor of promoting the good health & exercise of dogs & their owners. Personally, I always keep my dog on leash until we've reached a good location to settle and play at. We never leave anything behind, and often take what other's have left behind with us. There already seems to be many beautiful places I wish I could run with my dog that I cannot (ie. Tennessee Valley) Please, please, do not take away Muir Beach. It is one of the main reasons I moved to Mill Valley 5 years ago. If I cannot take my dog, I would not be visiting it nearly as often.

As for the other locations included in this proposed plan, I know there are many responsible pet owners that would be negatively affected. Especially in the city where there are so few open spaces to run. I would hope that the accusations made about dogs affecting the wildlife were founded on scientific research, but they are not. The same argument could be made for irresponsible parents letting their children run on the dunes, and into protected wildlife habitats. (Ironically, I have seen more children causing damage than dogs...)

I thank you for taking comments and for your time. I hope that we are able to continue enjoying the beautiful spaces that have been protected for our well being.

Sincerely~

Mary Peterson

Correspondence: Even though I live in a beautiful, progressive, liberal, accepting city, my life was empty before I adopted my Spike. Welcoming Spike into my life (and saving his life) was a life changing event. I adopted him knowing that we

would be welcomed at numerous green spaces in the city. And, we built a great life together.....exploring all the dog-friendly parks in the city. Walking and getting outside with my companion helped me overcome my depression - both by exercise and being outdoors. My life was changed because I was able to "get outside" with my dog and be in this great city. Because of the dog-friendly parks, I frequented neighborhoods and business I would not have, had I not had a dog. Having a dog, and being able to visit certain parks with him, I helped small businesses. Should parks become on-leash or closed to dogs, I will not visit these small businesses and spend my money. Additionally, I feel us "good" dog-owners are being jeopardized for the irresponsible dog owners. On many occasions, I have confront dog owners to; pick up after their dogs, not allow them into off-limit areas, leash their dogs in leashed areas, etc. Why are these laws not being enforced by the responsible authorities? I know funds are limited, but on many occasions I have witnessed park officials and other authorities ignore an irresponsible dog owner. Unfortunately, the irresponsible owners are the ones that make an impression. The responsible owners (those who live within the laws) are not recognized. Why not enforce the laws before taking away our space? Change cannot happen without education. The laws that are proposed are not educating us, the laws are dictating a change. The irresponsible dog owners will still break the law and ignore the rules. The responsible dog owners will respect the rules, continue to voice concerns to those breaking the rules..... Why is the city going from a to z? Why are we not taking the step to enforce the rules and fine/prosecute the offenders? We do this with other laws: drunk driving, littering, etc. Let's start to ticket the law breakers, and we will see change.....

If doggie green space and off leash areas are taken away from city residents, I suspect many people will move out of the city.

Correspondence Type: Web Form
Correspondence: Dear Superintendent Dean,

I have lived in San Francisco for 14 years and have visited many sites within the GGNRA both with and without my dog. I enjoy hiking in the Marin Headlands and understand the importance of limiting the presence of dogs in many areas of that section of the recreation area. I also enjoy taking my dog to Crissy Field or Fort Funston every week and have enjoyed the opportunity to allow my dog to have off-leash exercise and access to the beach and swimming. I am always a responsible dog-owner, have my dog under strict voice-control, and I consistently pick up pet waste.

I have read the Draft Plan/Draft Environmental Impact Statement (Plan/DEIS) for Dog Management in the GGNRA that was released in January, and I believe the plan fails to adequately balance the GGRNA's responsibility to preserve urban recreational opportunities that was outlined in the enabling legislation that created the GGNRA in 1972. The fact that the every preferred alternative for all 21 of the sites covered under this plan represents a more restrictive dog management policy than is currently in place strongly suggests that the interests of dog-walking visitors are not being given equal consideration as other factors.

In the user impact analysis section of the DEIS, the document mainly focuses on non-dog walking users and emphasizes possible scenarios where the presence of dogs "could" negatively impact their experience. There is almost no mention of the significant and very real negative impacts the new dog regulations will have users with dogs despite the fact that they represent a major category of regular GGNRA visitors at several sites like Crissy Field, Fort Funston, and Muir Beach. There is also no mention of the satisfaction many non-dog-walking GGNRA visitors get from watching dogs freely at play. For twelve years before I got a dog of my own, I frequently visited Fort Funston and Crissy Field specifically to enjoy the sight of dogs having fun.

The two surveys cited in the DEIS present directly conflicting data for both the question of whether there is general support for off-leash dogs in limited areas of the GGNRA and the question of whether minorities are dissuaded from visiting the GGNRA because of the presence of dogs. These are two major reasons the DEIS cites for the need to further restrict dog access to the GGRNA, even though there is no solid evidence to support these conclusions.

The DEIS also cites the high incidence of violations of current dog regulations as a justification for further restricting dog access in the GGRNA. However, the plan does not discuss how the numbers of violations relate to the total number of dog visits to the GGNRA. The vast majority of these dog citations were for violations of leash laws, not harmful human-dog interactions that could result in injury, even though the DEIS states that the danger dogs could pose to visitors is a main concern. Overall there were 54 negative dog-human interactions cited in the GGNRA in a two-year period during which tens of thousands of dogs also visited the recreation area.

The DEIS also repeatedly states that "dog walking regulations are unclear to visitors" but doesn't consider enhanced signage and education as an option for improving compliance with current dog regulations. A clearer understanding of which areas are dog accessible would significantly reduce conflicts between different groups of GGNRA users without reducing access for any one group. Visitors who prefer a non-dog recreational experience

would be able to avoid areas that allow dogs and to enjoy the more that 95% of the GGNRA that does not. Under the preferred alternative plan, the GGNRA is willing to increase the amount spent on enforcement and visitor education by seven-fold, but they do not seem willing to make a similar commitment to enforcing existing regulations that would preserve access to the GGNRA for all types of visitors.

I also believe that the GGNRA could preserve the current level of dog access within and protect delicate sections of the recreation area if the GGNRA repaired what has become an adversarial relationship with the many groups representing dog-walking visitors to the GGNRA. A working partnership between the GGNRA and these groups is crucial to improving conditions at all dog-accessible sites within the GGNRA. Dog organizations can assist with visitor education programs, organize pet waste pick-up events, represent a reliable source of volunteers for improvements to fencing and replanting native vegetation in affected areas of the GGNRA, and provide a strong unofficial force to change the culture of compliance at problematic locations in the GGNRA.

Many of the problems the DEIS cites in relation to dog access seem to be related to commercial dog walkers and people responsible for large numbers of dogs. It is understandable that it is more likely that someone with many dogs would be less able to adequately control them, pick up pet waste, and keep them out of restricted areas. This is reason for the GGNRA to begin regulating commercial dog walking and perhaps limiting the number of dogs one person can bring, but it is not a reason to deny access to historically dog-friendly areas of the GGNRA for individual, responsible dog owners.

I believe that off-leash walking access for dogs is an essential part of the mission to preserve recreational open space for the urban environment that was the founding principle of the GGRNA. A small, designated off-leash play area for dogs or on-leash only paths cannot adequately replace the experience of hiking with an off-leash dog. Access to off-leash dog recreation areas also allows those with limited physical capabilities like the elderly or disabled to provide their pets with sufficient exercise. The veterinary community recognizes that off-leash, open-space interactions between dogs reduces overall aggression and is an important aspect of dog socialization. It is important that as the GGNRA expands in the future, it continues to provide opportunities for these types of recreation and community interactions. Consequently, the plan should include some access for dogs in the new lands in San Mateo County, particularly since many of these areas allowed dogs before being acquired by the GGRNA.

When Bay Area cities and counties turned over much of their open spaces in 1972 to create the GGNRA, they did so with the understanding that all residents of their urban areas would continue to have a place to enjoy open-

space and experience nature under a variety of circumstances. The GGNRA was never meant to be exclusively a nature preserve or to be restored to a pristine wilderness. It is vital that it continue to balance the recreational needs of the community, including dog-owners, with its commitment to the environment. I ask that based on this founding principle of broad, recreational access the GGNRA reconsider the restrictions on dogs that are part of this DEIS.

Thank you for considering my comments,

Sarah Green

Correspondence: I am writing to express my disagreement with your proposed dog management plan. Muir Beach is my & my dog's favorite place to walk, run & swim. In all our visits to this beautiful place, we have never seen a negative encounter of dogs & people, dogs & wildlife, or even dogs in the dunes. Without Muir Beach, we would be drastically limited in our options for outdoor exercise & play, which is why GGNRA was first instated. Without scientific studies proving the claims that dogs are causing damage to the various areas that would be affected with these changes, I feel it is more of a personal attack on dog owners... While I do understand that there are sure to be some irresponsible dog owners here & there, though I have yet to encounter any at Muir Beach, I hope the final decision is in favor of promoting the good health & exercise of dogs & their owners. Personally, I always keep my dog on leash until we've reached a good location to settle and play at. We never leave anything behind, and often take what other's have left behind with us. There already seems to be many beautiful places I wish I could run with my dog that I cannot (ie. Tennessee Valley) Please, please, do not take away Muir Beach. It is one of the main reasons I moved to Mill Valley 5 years ago. If I cannot take my dog, I would not be visiting it nearly as often.

As for the other locations included in this proposed plan, I know there are many responsible pet owners that would be negatively affected. Especially in the city where there are so few open spaces to run. I would hope that the accusations made about dogs affecting the wildlife were founded on scientific research, but they are not. The same argument could be made for irresponsible parents letting their children run on the dunes, and into protected wildlife habitats.

I thank you for taking comments and for your time. I hope that we are able

to continue enjoying the beautiful spaces that have been protected for our well being.

Sincerely~

Kevin Hartman

Correspondence: My name is Jessica B. Crawley, Esq. I have lived in San Francisco since 1984 when I moved here with my family when I was 1 year old. I have visited GGNRA lands with my dogs since I got my first dog in 1992. I have participated in beach clean-ups since I was 7 years old. I currently visit GGNRA lands on a daily basis including Crissy Field, Ocean Beach, the Presidio, Baker Beach and Fort Funston. I walk or jog with my dogs in the GGNRA every single day, rain or shine. Walking my dogs off-leash and under voice control in the GGNRA keeps me healthy and physically fit, provides me with time to reflect, de-stress and enjoy nature. My dogs are extremely well trained, they compete in rally obedience, have several titles and awards, and are Canine Good Citizens (passed the AKC Canine Good Citizen test). Sufficient exercise through off-leash recreation in the GGNRA is a significant reason my dogs are happy, extremely healthy, fit and well-mannered. I always carry bags with me to clean up my dogs' waste. I am a member of Ocean Beach Dog Group, Association of Pet Dog Trainers and Cavalier King Charles Spaniel Club-USA.

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law. The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded. This plan disregards the health and well-being of

people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others. The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

-Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation.

-Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.

-Exclude speculative, exaggerated, biased, or misleading statements and studies.

-Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).

-Enable professional dog walking of 6 or less dogs and align any professional dog walking rules with county or city regulations.

-Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

These are my personal comments and observations regarding this plan: In the almost 20 years I have visited the GGNRA I have never seen a dog act aggressively toward a person, nor have I seen any dogs bothering bank swallows' burrows on sheer cliff face at Fort Funston. I observe a significant increase in litter when people without dogs visit the GGNRA on the weekends where the weather is especially nice. This litter is typically picked up by dog owners/walkers or groups at organized clean-ups.

Frank Dean, General Superintendent Golden Gate National Recreation Area

Building 201, Fort Mason San Francisco, CA 94123-0022

Re: Draft Dog Management Plan/Draft Environmental Impact Statement

Dear Superintendent Dean,

I have been a Bay Area Resident and have lived and worked in San Francisco and Marin counties since 1978. I have explored beaches and trails throughout these areas for many years with my current dogs Grace and Space and my former dogs. My girls and I are eager partners for our daily outings that connect us to the recreational pleasures of places like Crissy Field, Baker Beach, Lands End, Ft. Miley Upper Fort Mason, Marin Headlands, and Muir Beach. These daily outings keep us connected and balanced for the demands of a busy life.

My dogs and I have attended training sessions to learn basic obedience skills and recall. Both are well socialized to both people and dogs and are exceptional companions at home, around town and on the trail. I expect my dogs to be well behaved and responsive to voice commands on leash and off. I leash my dogs to keep them from sensitive areas and clean up after my dogs. As a dedicated hiker/walker/bicyclist, I also educate fellow dog and non-dog enthusiasts about canine/human//bike interactions. On walks, I educate friends about the native plant/animal communities.

I have worked professionally as an environmental scientist/senior environmental project manager for over twenty years in both the public and private sectors. During this time, I worked for the US EPA, National Park Service (on loan to the GGNRA for work on the Presidio Project) and the San Francisco Redevelopment Agency. I understand the complexities of developing a fair and balanced dog management plan within the GGNRA. In addition, I have been a long-term member and supporter of NRDC and The Nature Conservancy.

For the past ten or more years, I have been the chair (and co-founder) of the Crissy Field Dog Group and have worked extremely hard to work with the GGNRA (and with the late GGNRA Superintendent Brian O' Neill) and other environmental and recreational groups to figure out a reasonable and viable alternative/solution for this complex dog management issue.

So it was to my great disappointment and surprise when the GGNRA released your draft Plan/EIS. I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (GGNRA's 1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions and do not provide a basis to change dog walking

areas under voice control as identified in the 1979 Pet Policy. It is essential for the GGNRA to consider reasonable and balanced alternatives for off leash dog walking on existing lands.

While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting off leash dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option.

The additions I would add to what you call Alternative A (No Action) would be a Hybrid or Modified Alternative A which would include the inclusion of the "New Lands", in San Mateo and Marin Counties and the application of the following management measures that would support a reasonable, realistic and enforceable dog management plan.

The Hybrid Alternative, includes the 1979 Pet Policy (Alternative A: No Action-existing conditions), include the New Lands, and the implementation of management measures, which include but are not limited to more, better and clearer signage, a robust educational program that would include partnering with local animal welfare groups such as the San Francisco SPCA, Marin Humane Society and the Peninsula Humane/SPCA at a minimum. Other measures include the use of environmental or vegetative barriers, and low-level post and cable fencing to protect a plant species such as the blue lupine. I also support the creation of a "recreation team or panel" who can assist the GGNRA with issues regarding all recreational visitors in a public forum on a quarterly basis.

The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a scientific baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure as the goal. As a matter of fact, Eco-dog (with a letter from the San Francisco SPCA) has submitted a draft Compliance Based Adaptive Management Program that proposes a viable alternative to this approach that proposes a constructive and transparent compliance program to be administered with public input with clear and defined parameters.

The DEIS also fails to consider that the GGNRA is the front/back yard for a large metropolitan area. I live in Marin County and have strong ties to the lands of the GGNRA, as do many of my friends and fellow dog enthusiasts that live in San Francisco/North/East/South Bay Counties and beyond. The

fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area.. NEPA requires evaluation of impacts on the "human environment": the DEIS fails to do so by failing to adequately address how the proposal will affect "recreational" values as well as natural, scenic and cultural values on residents of the Bay Area..

This DEIS and Plan doesn't recognize that environmental values include both recreation and nature. In many places, the DEIS treats the environment and recreation as adversarial values i.e., that recreation only harms natural resources. The document doesn't acknowledge that people care about both and that people with dogs are often also good stewards of our environment. I believe I am a good steward of the environment and I believe that many of my fellow dog lovers are also good stewards. This bias extends to the overall document, pitting recreation vs. natural values rather than identifying and exploring reasonable alternatives where nature/recreation can work together. And as a matter of fact, if you do a word search in Chapter 4 of the DEIS, you will find that the word "may" is used approximately 3300 times and the word "potential" is used approximately 1100 times.

Further, the proposed broad limitations in the DEIS are largely without site-specific science that demonstrates that the perceived degradation of the quality of the GGNRA's natural resources are actually attributable to dogs vs. other factors. For example, much of the impact on native dune habitat that I have seen at south Ft Funston is due to non-native/invasive species, erosion, and equines and transients/homeless encampments vs. foot/dog traffic.

There are many other concerns that I have but I want to be clear that the Golden Gate National Parks Conservancy's "Crissy Field Center" as identified on page 361, is a TEMPORARY relocation due to the deconstruction and construction of the Doyle Drive seismic retrofit work. Please correct this misinformation. Cal Trans is using the Crissy Field Center as their headquarters during this work in a deal that Cal Trans would re-build the interior of the old Crissy Field Center and provide "State of the Art" technology after the Doyle Drive construction is finished. Doug Overton of the GGNPC "promised" that the move to the eastern portion of Crissy Field would be temporary until the Doyle Drive project is completed. In addition, because the Crissy Field Center has temporarily relocated, it has caused an increase in traffic and parking availability (a BIG negative) for all visitors at Crissy Field.

And for the other sites that may fall through the cracks, I am very concerned that there is no technical or scientific basis for change at all of the Marin sites, Baker Beach (beach nudity is the biggest concern-not off leash dog walking), Lands End/Fort Miley and of course Upper Fort Mason. Folks

have been walking their dogs off leash for years at Upper Fort Mason and even the late GGNRA Superintendent Brian O' Neill did not mind but actually enjoyed the dogs there. This area is primarily frequented by folks who live in the neighborhood who come with their dogs? a LOT of older people and working people who are very responsible and clean up after their dogs and there are VERY few dog conflicts. There is a very tight knit dog community at Upper Fort Mason as well as in the other areas under consideration in your GGNRA dog management plan.

For Fort Funston, I offer the following as a compromise:

Leash-only from the upper parking lot to the south edge of Fort Funston, inclusive of the parking lot, hang gliders' take-off area, and observation deck. Leash-only along the Sunset Trail (including the area west to the ocean and 20' along the eastern side), starting at the upper parking lot, going all the way to the center beach access (following the trail closest to the ocean).

Move the center water fountain further east (to the top of the John Muir trail sand ladder).

Here are the problems that get solved with this solution:

Eliminate the danger to hang-gliders of dogs chasing them at take-off and landing. Eliminate the danger to equestrians when they are riding along the south cliff area to get to the beach. Provide visitors who do not want to encounter off-leash dogs with a hike along the most beautiful trail at Fort Funston (overlooking the ocean).

And I think that all of the sites in San Mateo County have not been adequately analyzed, as there is no legal basis for what you call "New Lands". These "New Lands" in San Mateo County (and Marin County too) should be treated as "existing lands". There is no case law or anything in the GGNRA's compendiums or the current GGNRA General Management Plan to support your conclusions about treating these lands differently.

And one other point that needs to be conveyed is the fact that according to the GGNRA's PEPC website regarding the GGNRA's new General Management Plan (GMP) Newsletter #5, dated Summer 2009, states that "the new plan will not revise decisions made in recent management plans for the Presidio, Crissy Field, Fort Point or Fort. Baker". Simple logic should prevail that the Crissy Field Environmental Assessment will stand as is and 70 acres of off leash dog walking under voice control remains in place as was approved by the GGNRA/NPS. Clearly there is a discrepancy between the GGNRA's draft Dog Management Plan/DEIS and the new GGNRA

GMP.

Again, after careful consideration, I support Alternative A, the No Action alternative and would also include the "New Lands" areas in San Mateo County and Marin County. The DEIS is biased against the No Action alternative and failed to take a good look at this as a reasonable alternative. There are many areas in the GGNRA where the 1979 Pet Policy has been working and where sensitive species are not present and conflicts occur infrequently or not at all. The ways of improving how GGNRA carries out/administers the current 1979 Pet Policy should be considered and given a fair assessment. I believe that the current management plan will work for the many years if "tweaked" to provide clearer rules, improved compliance and reduced potential for conflicts. The majority of the "problems" with the current plan are problems include unclear or non-existence signage, inadequate management and implementation and a lot of specific education versus. access. If there are problems with access, then the DEIS doesn't provide a scientific or technical basis for the severe limitations proposed on continued off leash under voice control dog walking.

Thank you for your consideration.

Respectfully,

Martha Walters San Rafael, CA 94901

Frank Dean, GGNRA Superintendent Building 201, Fort Mason San Francisco, CA 94123-0022

Dear Mr. Dean,

Thank you for the opportunity to comment on this important document, the Golden Gate National Recreation Area's (GGNRA) Draft Environmental Impact Statement/Draft Dog Management Plan (Draft Plan/DEIS).

Introduction The Crissy Field Dog Group is a non-profit organization devoted to responsible off leash dog recreation in the San Francisco Bay area for over a decade. We have approximately 600 members distributed throughout California and many other states. We have worked with the GGNRA staff on off leash dog recreation issues throughout this entire period including as a member of the GGNRA Negotiated Rulemaking Committee for dog management. Our work has included working with the Golden Gate Audubon Society and the GGNRA staff on educational outreach for the protection of the Snowy Plover in the Wildlife Protection Area. We have also worked closely with other recreational groups including, the horse community, the windsurfing and the surfing communities as well as other dog groups to promote and facilitate co-existence among all park users and to protect natural resources. We have created sixteen educational videos promoting responsible dog recreation in the GGNRA as well as how to submit substantive comments. We work closely with the San Francisco SPCA and the Marin Humane Society and we are a member of the Eco-dog coalition promoting responsible dog ownership.

The Crissy Field Dog Group retained Kenneth S. Weiner, Esq. of K&L Gates LLP, a nationally recognized expert in the National Environmental Policy Act as well as Tetra Tech, Inc. independent environmental consultants to provide a review of the 2400 page Draft Plan/DEIS. Their review is included in the attached appendices.

After all of the time and effort that has been put into the development of a balanced dog management plan, CFDG is extraordinarily disappointed in the quality of the Draft Plan/DEIS. We are quite dismayed by: (1) the litany of undocumented assumptions throughout the Draft Plan/DEIS; (2) the lack of analysis by the GGNRA of the existing conditions; (3) the failure of the GGNRA to adequately explore the impact of application of existing management measures to the no-action alternative; (4) the failure of the GGNRA to acknowledge that the GGNRA is a recreational area in a major metropolitan area; (5) the failure of the GGNRA to address or acknowledge the scoping comments submitted by CFDG in April 2006; and (6) the failure of the GGNRA to include any of the reasonable alternatives suggested by the a coalition of interested parties at the end of the Negotiated Rule Making process (see Appendix K). The Draft Plan/DEIS improperly treats recreation and environmental interests as mutually exclusive rather than recognizing both as important values under the National Environmental Policy Act as well as the enabling legislation for the GGNRA. In fact, the Draft Plan/DEIS does not even include a section addressing the impact on recreational users. (See Appendix B) The Draft Plan/DEIS includes a

prohibition on certain recreational uses for all new lands without any justification or analysis. Finally the Draft Plan/DEIS proposes a punitive non-transparent compliance program to be internally administered without any public input with uncertain and undefined parameters. Set forth in the appendices attached, are specific comments on each of these points.

We are also very concerned going forward about the transparency of the review process for these comments, allowed under the National Environmental Policy Act, and the ability of the public to have a dialogue with the GGNRA about how to create a sustainable and balanced dog management plan.

The GGNRA plays a critical role in providing a home for many natural and cultural treasures, and, because of its proximity to a dense, urban environment, it provides special recreational opportunities to city dwellers. Recreation is called out in the 1972 GGNRA enabling legislation as one of the four outstanding values to be maintained and protected. In doing so, the enabling legislation recognized that the achievement of these outstanding values is not mutually exclusive. Our organization supports the National Park Service (NPS) in its mission to protect the GGNRA's important natural, cultural, and recreational values but, through this letter, we challenge the NPS work with its constituents and local communities to find solutions that are designed to protect all of the park's values and broaden opportunities to enjoy its diverse resources sustainably.

Our comments are described in two main sections: (1) Recommended Alternative, which describes our thoughts on how the NPS could balance the GGNRA's myriad resources and opportunities; and (2) Quality of Information in the Draft Plan/DEIS, which describes our thoughts on how the information in the Draft Plan/DEIS could be improved in order to support a better outcome for all interests involved.

Recommended "Hybrid" Alternative The NPS should consider a hybrid alternative that includes the following three interrelated items with a rational approach to balancing preservation of natural and recreational values: ? Adaptive Management Plan ? Management Actions ? Recreation Committee Further information on this alternative is included in Appendix A.

Quality of Information in the Draft Plan/DEIS My organization's major concerns with the quality of information in the Draft Plan/DEIS include: 1. Improper analysis of environmentally preferred alternative. 2. Omission of relevant impacts and impact analyses o Recreation (also see Appendix B) o Other impacts 3. Insufficient information needed to draw logical conclusions and evaluate alternatives: o Unclear enforcement data (also see Appendix C) o Lack of and inconsistent site-specific, scientific data on baseline conditions (also see Appendices D, E, and F) o Reliance on

undocumented assumptions o Flawed evaluation of No Action alternative o Resultant flawed alternatives analysis 4. Improper treatment of new lands 5. Lack of specificity in proposed action

These concerns are described in detail below and several are outlined further in the attached appendices. At the end of each section, we have provided recommended changes that we request you make to the EIS and the proposed action in order to move forward with a plan that is protective of all of the GGNRA's myriad resources and values.

1. Improper Analysis of Environmentally Preferred Alternative The Draft Plan/DEIS takes a narrow perspective that the alternative that most preserves natural values only is the environmentally-preferred option. Where you have a national recreation area whose mission is natural, recreational, scenic and cultural values in a great city ? and all of these values are part of NEPA's view of a quality environment ? the environmentally preferred alternative is the alternative that most promotes all of these core environmental values. Because the Draft Plan/DEIS does not recognize recreational resources as an environmental resource, the analysis of the environmentally preferable alternative is flawed. We point this out because it reflects a bias in the document that systematically does not yet recognize that this plan is for an urban recreation area that needs to ? in the words of GGNRA's own mission: 'preserve natural and recreational values unimpaired.' It fails to consider the range of resources afforded by the GGNRA that could be affected by the action alternatives. Recreation is called out in the GGNRA enabling legislation as one of the four outstanding values to be maintained and protected. In doing so, the enabling legislation recognizes that the achievement of these outstanding values is not mutually exclusive. The environmentally preferable alternative is one that would employ environmental design and adaptive management techniques to preserve all of the outstanding values of the GGNRA. Further detail on this issue can be found under our comments above related to our recommended hybrid alternative.

*Recommendation. In Chapter 2, starting on page 99, the discussion of the environmentally preferable alternative should be revised to reflect the value of recreational resources. Since protection of the environment includes protection of established recreational opportunities and facilities on GGNRA lands and nearby parklands, the Draft Plan/DEIS should consider such resources as part of its selection of the environmentally preferable alternative. Detailed recommendations on how to revise this section of the Draft Plan/DEIS are listed in Appendix A.

2. Omission of Relevant Impacts and Impact Analyses

Recreation Congress' original intent when it established the GGNRA is

stated in the bill reports for the 1972 legislation ? that GGNRA, "will ensure its continuity as open space for the use and enjoyment of present and future generations of city-dwellers" [House Report No. 92-1391, Sept. 12, 1972]. [emphasis added]. Similarly, as stated in the first section of Public Law 92-589, Congress established GGNRA to preserve for public use and enjoyment areas of Marin and San Francisco County possessing "outstanding natural, historic, scenic and recreational values" and to "provide for needed recreational open space necessary to urban environment and planning" and to protect the scenic and natural character of the area from incompatible development. Dog walking was well-known and recognized by Congress as part of this public use and enjoyment. Both the Senate and House reports comment that the proposed area:

"will satisfy the interests of those who choose to fly kites, sunbathe, walk their dogs, or just idly watch the action along the bay." [emphasis added]

The official legislative history notes:

"This legislation will, if enacted, capitalize on the availability of this important, unequalled resource in the San Francisco region by establishing a new national urban recreation area which will concentrate on serving the outdoor recreation needs of the people of the metropolitan region. As an urban recreation area, it must relate to the desires and interests of the people, but it must, at the same time, be managed in a manner which will protect it for future generations." [emphasis added] These were also the City's understandings in transferring lands to GGNRA. As you may know, GGNRA has a mission statement which states:

"The mission of the Golden Gate National Recreation Area is the preservation, unimpaired, of the natural and cultural resources, and scenic and recreation values, of the park for present and future generations to enjoy." [emphasis added]

The Draft Plan/DEIS not only fails to disclose and evaluate the impacts of the alternatives on recreational resources in the context of an urban environment, it dismisses the quality of the urban environment entirely on page 22 where it states, "the quality of urban areas is not a significant factor in determining a dog management plan." As recognized in its enabling legislation, one of the most important aspects of the GGNRA is the sharp contrast between its undeveloped open spaces and the adjacent developed urban environment. The GGNRA's open space and recreational opportunities are intended to provide refuge and relief for nearby urban dwellers.

The impacts on the GGNRA's open space and recreational opportunities should have been evaluated fully in the Draft Plan/DEIS, especially since a

NEPA analysis is not limited to the natural environment. According to NEPA, An EIS is required to analyze the human environment. The federal NEPA rules define the human environment and its scope in an EIS as follows:

"Human environment shall be interpreted comprehensively to include the natural and physical environment and the relationship of people with that environment." When an EIS is prepared and human and natural/ physical environmental effects are interrelated, the EIS should discuss all of these effects on the human environment.

*Recommendation. Any significant limitations on recreational uses proposed by NPS needs to be properly examined, as it impairs a fundamental value that must be preserved under GGNRA's charter. The Draft Plan/DEIS should be revised to include a stand-alone analysis of impacts on recreation resources in order to fully consider the potentially significant effects that the proposed action and action alternatives could have on these elements of the human environment. The section should give context to the important role played by the GGNRA in terms of its proximity to a dense, urban environment and the special opportunities it affords to nearby populations. It should describe existing recreational uses of the GGNRA and other parklands in the project vicinity, the impacts of the proposed action on recreation resources and urban quality (including direct, indirect and cumulative impacts), and the mitigation that the NPS will commit to in order to avoid such impacts. Although the analysis of impacts on recreation resources could potentially be integrated into the existing Visitor Use and Experience section, it is strongly suggested that it be incorporated into the draft EIS in a separate chapter. The rationale for this request is because the topic of "Visitor Use and Experience" is too limiting to encompass the broader range of recreation impacts that could potentially occur with implementation of the proposed action, including degradation of established recreational activities and facilities in GGNRA and nearby lands. A suggested annotated outline of the stand-alone recreation resources section is presented in Appendix B for your consideration.

Other impacts The Draft Plan/DEIS assumes but does not provide the required rigorous analysis that resource conditions result solely from dog use of the sites, discounting the contribution from other visitors and recreational users. The Draft Plan/DEIS does not address the contribution of other impactful activities, including special events, to the resource conditions and existing impacts at each of the GGNRA sites. The level of site use from a single special event is likely equivalent to the level of regular use that occurs over weeks, months or longer. These special events include the annual Fleet Week at Crissy Field and the future impact of America's Cup on GGNRA lands.

*Recommendation. To address this deficiency, the GGNRA should study the contribution that all visitors make to existing resource conditions and potential impacts. This information is obtainable and essential to a reasoned choice among alternatives. The preferred alternative should then be re-evaluated and modified to address only the issues that specifically result from dog use at each of the sites. The NPS should then pursue a comprehensive approach to managing all these uses to the benefit of the full ranges of GGNRA resources and values.

3. Insufficient Information Needed to Draw Logical Conclusions and Evaluate Alternatives

In many places, the Draft Plan/DEIS does not provide any data on actual impacts by dogs in areas being proposed for new dog walking restrictions. In places where data are provided, the Draft Plan/DEIS makes undocumented assumptions that there are unacceptable impacts and that dogs are the culprits. For example, in the Western snowy plover sections of Chapters 3 and 4, the Draft Plan/DEIS explains that people, as well as dogs, who traverse dune areas disturb shorebirds. Monitoring surveys observed 48 off-leash dogs chasing birds over a period of 12 years. However, in this case the birds continue to return to the area each year. Therefore, there might or might not be a problem ? the Draft Plan/DEIS does not provide substantive data to help the reader decide. If there is a problem, the Draft Plan/DEIS doesn't provide logical conclusions as to whether access should be limited for people, for dogs, or both.

The Draft Plan/DEIS is, in some respects, comprised of about 20 plans and EISs, because it examines each GGNRA unit. We can appreciate how difficult this is for GGNRA and the NPS to accomplish. But NEPA guidance and case law have consistently explained that difficulty does not excuse lack of adequate data and study in an EIS. And the bulk or size of an EIS does not equate to its adequacy. In many places, as described in more detail below, the Draft Plan/DEIS lack any description of actual site specific impacts on which decisions on dog-walking restrictions are being proposed. In other places, the Draft Plan/DEIS assumes species are present in areas where there is no record of their presence. In other places, there is inconsistent information about the presence of species. Unclear enforcement data Many of the findings in the Draft Plan/DEIS are founded on a reference included in the document as Appendix G, "Law Enforcement Data" (NPS 2008c). This reference document is critically deficient in substantiating statements made in the characterization of existing conditions and in the analysis of the environmental consequences. Per NEPA, "Agencies shall insure the professional integrity, including scientific integrity, of the discussions and analyses in environmental impact statements (CFR 1502.24)." Additional detail on this issue can be found in Appendix C.

*Recommendation. The Draft Plan/DEIS should be revised to provide clear evidence in the record to support all of its findings. The NPS needs to ensure the professional integrity, including scientific integrity, of the analysis and findings contained within its Draft Plan/DEIS. Detailed recommendations on how to revise the enforcement data in the Draft Plan/DEIS, and the ensuing impacts and alternatives analysis, are listed in Appendix C.

Lack of and inconsistent site-specific, scientific data on baseline conditions

The Draft Plan/DEIS does not address site-specific resources and the condition/health of those resources. This lack of information results in a vague baseline against which to assess the magnitude of impacts associated with implementing the proposed action and alternatives. With such a vague baseline, it's also difficult to assess the need to change existing dog management strategies. Select examples: a. The affected environment section mentions California Native Plant Society (CNPS)-listed species as having the potential to occur within the GGNRA but no data are provided as to where/if they are actually present. b. While some special-status species descriptions suggest a nexus between dog activity and the species and/or their habitat (tidewater goby, California red-legged frog), other species descriptions do not (San Francisco garter snake, Coho salmon), and there is a consistent lack of detail describing the existing interaction, if any, between the species and dog activity. c. There are inconsistencies regarding the presence of species in the text and in Table 8 in the Special-Status Species affected environment, the information in Appendix H, and the impact analyses in Chapter 4. d. In Table 8 on page 246, the GGNRA Location column contains the location for plants that do not exist there according to the text. e. For a number of the analyses of Alternatives B-E, the Draft Plan/DEIS states that the area of impact is currently undisturbed. This is not the case, as dogs and humans are currently allowed in those areas. f. Additional examples are provided in Appendix D, "Soils and Geology," Appendix E, "Water Quality," and Appendix F, "Biology."

*Recommendation. To address this deficiency, the Draft Plan/DEIS should provide site-by-site assessments of the conditions of the GGNRA resources and values at each of the 21 sites. The selected preferred alternative for each site should then be re-assessed and modified to address only those site-specific issues and to employ adaptive management (proposed adaptive management techniques are provided at the end of this letter) to ensure the goal of protecting those resources and values is achieved. Reliance on undocumented assumptions

The Draft Plan/DEIS assumes, but fails to demonstrate, the "cause and effect" relationships without site-specific supporting information. For instance, the Draft Plan/DEIS assumes but does not demonstrate that where

dogs are present within GGNRA sites, there is a disturbance of natural resources. The Draft Plan/DEIS also assumes but does not demonstrate that the disturbance of resources is attributable to dogs (versus other factors). These assumptions result in flawed conclusions that the mere presence of dogs is equivalent to adverse resource impacts. The findings of an EIS must be based on scientific accuracy and clear evidence in the record. This Draft Plan/DEIS is significantly flawed in that it does not rely on adequate evidence for the conclusions it draws, and in that it fails to clarify its methodology for drawing those conclusions.

Select examples: a. The text from Chapter 3 provides data on the western snowy plover, but beyond providing numbers of observations, the Draft Plan/DEIS does not provide evidence that dogs chasing the birds are likely to impact the survival of the species taking all relevant factors into account (see paragraph 1, page 799). b. The Draft Plan/DEIS presents no information supporting the finding that dogs are currently impacting shorebirds and marine mammals. Therefore, there is no scientific rationale for prohibiting dogs from beach areas under Alternative D to "protect shorebirds and stranded marine mammals," as stated on page 151. c. The Soils and Geology section (page 225) includes the following statements: "Dogs and dog walkers that do not stay on designated trails and venture off trail create social trails that become denuded of vegetation and result in increased soil compaction." and "Soil compaction is common along social trails that have been created by ? and are heavily used by ? bikers, hikers, runners, and dog walkers." The baseline for comparison throughout the Draft Plan/DEIS should not be an environment in which it is assumed that there is no impact unless dogs are present, but one in which the impact of dogs is added to the impact of humans. At about 200 pounds per adult, the force that a human exerts on the soil one foot at a time would have a significantly greater impact on soil compaction in a picnic area than the force exerted by even a large 70-pound dog distributing its weight on four paws. The failure to acknowledge that human use has more impact on soils and geology in this regard, compared to dog use, uncritically loads the analysis in favor of restrictions on dogs. While there may be areas in which impacts from dogs are unacceptable, the same criterion holds for impacts from humans, and in most of these areas, dogs and humans are already excluded. d. The Soils and Geology section (page 112) on Homestead Valley concludes that, under the No Action Alternative, there would be long-term adverse impacts from "soil compaction, erosion, and nutrient addition.., in areas off the trail since dogs would be under voice control," while under other alternatives it is concluded that the impacts would be negligible because dogs would be under physical restraint. This is an unsubstantiated assumption in support of the underlying bias of the analysis. The analysis does not attempt to connect intensity of use and impact and seems to be based solely on the incorrect assumption that humans and wildlife would have no impact on off-trail areas, and that all impacts can be

attributed to dogs. *Recommendation. To address this deficiency, the NPS should re-evaluate untested, assumed linkages and re-define the existing and potential impacts that specifically result from dog use at each of the GGNRA sites. The preferred alternative for each site should then be re-assessed and modified to address only those site-specific impacts and issues.

Flawed evaluation of No Action alternative

The impacts of the No Action alternative are substantially overstated because the Draft Plan/DEIS determines individual areas of compliance with existing dog management strategies without sufficient supporting data and assumes that noncompliance results in adverse impacts. This unsupported logic both overstates the degree of additional management required to address the resource issues, but also misrepresents the relative impacts of the four action alternatives; for example, the public is assumed to comply with management strategies under an action alternative, whereas the public is found to be noncompliant with those same management strategies under the No Action alternative.

Select examples: a. For many sites, including Stinson Beach, Crissy Field, Baker Beach and Bluffs, Mori Point, Oakwood Valley, and Muir Beach, analysis of Alternative A acknowledges noncompliance, while the other alternatives assume full compliance with dog restrictions. In some cases, the management strategy is the same, with the only difference between Alternative A and the preferred alternative being the assumption of compliance. b. On page 109 (Table 5, Stinson Beach, Soils and Geology) under Alternative A, the second bullet identifies long-term, minor, adverse impacts in areas outside parking lots and picnic areas. These impacts are not repeated under the other alternatives despite the fact that, except for Alternative D, the management strategies under all of the alternatives are identical for Stinson Beach. Each of the statements in the first bullet, except for Alternative A, No Action, includes the clause "assuming compliance." At least for the soils and geology evaluation, the analysis seems to take it for granted that the No Action Alternative is inferior. Both of these are examples of biasing the analysis against No Action. c. On pages 1147-1158, mission blue butterfly, Fort Baker and Milagra Ridge ? as with many examples in the Wildlife section, here Alternative A assumes noncompliance with leash laws (minor, adverse impacts) and the preferred alternative assumes compliance (negligible to minor, adverse impacts, with habitat restoration programs). d. On pages 1219-1240, San Francisco garter snake, Mori Point, Milagra Ridge, Cattle Hill, Pedro Point ? as with many examples in the Wildlife section, here Alternative A assumes noncompliance with leash laws (minor, adverse impacts) while the preferred alternative assumes compliance (negligible). The text states (page 1230) that there is no documentation. that the current level of compliance with on-leash laws (No Action Alternative) is impacting this species. e. In the Water

Quality section, the impact analysis for Alternatives B through E assumes compliance with the management strategies. However, the impact analysis for Alternative A does not make this same assumption.

*Recommendation. To address this deficiency, the NPS should re-evaluate unsupported assumptions and the analysis of the No Action alternative to ensure the methodology used for it is consistent with the methodology used for the action alternatives. The No Action alternative is a continuation of the current GGNRA management plan and policies ? not a continuation of existing conditions. The current plan and supporting documents include policies for good public information and education on GGNRA resources and partnerships with the community. The No Action alternative can and should include improved education and compliance measures (including accurate signage about voice control areas) to implement these current plan policies (which are also policies in the proposed GGNRA updated general management plan), including dog owner training, to raise the level of compliance. Resultant flawed alternatives analysis

As described above in this section, the Draft Plan/DEIS assumes but does not provide the required rigorous analysis to enable the reader to draw logical conclusions about impacts and alternatives. The Draft Plan/DEIS does not provide adequate information on which to "study, develop, and describe appropriate alternatives to recommended courses of action in any proposal which involves unresolved conflicts concerning alternative uses of resources" (as required by NEPA Section 102(2)(E); 40 CFR "1501.2 and 1502.1 and corresponding DOI and NPS implementing guidance), or to allow meaningful evaluation on the alternatives including reasonable mitigation measures, as required by NEPA (e.g., 40 CFR "1502.14(b) and 1508.25(b) and corresponding DOI and NPS implementing guidance). This issue in the Draft Plan/DEIS results in a bias in the evaluation of alternatives, contrary to NEPA's requirement that "Environmental Impact Statements shall serve as the means of assessing the environmental impact of proposed agency actions, rather than justifying decisions already made" (40 CFR '1502.2(g)).

Select examples: a. The impacts of the No Action Alternative are substantially overstated because the Draft Plan/DEIS assumes that noncompliance results in adverse impacts. This both overstates the degree of management required to address the resource issues, but also misrepresents the relative impacts of the four action alternatives; for example, the public is assumed to comply with management strategies under an action alternative, whereas the public is found to be noncompliant with those same management strategies under the No Action Alternative. b. On page 1264, bank swallow ? as with the western snowy plover, current impacts are considered minor to moderate based on occasional to frequent perceptible disturbances to the species from dogs; however, the description of

Alternative A mentions only that dogs have been seen in the bluff area. There is no apparent nexus between dog activity and actual impact to bank swallows ? is the presence of a dog in the bluff area assumed to disturb the colony? Have the birds been observed flushing from nests, or have crushed burrows been found? The language here suggests these impacts are possible, but that they haven't actually occurred. c. In Chapter 2, starting on page 99, the discussion of the environmentally preferable alternative should be revised to reflect the value of recreational resources. Because the draft EIS does not recognize recreational resources as an environmental resource, the analysis of the environmentally preferable alternative is flawed. It fails to consider the range of resources afforded by the GGNRA that could be affected by the action alternatives. Recreation is called out in the GGNRA enabling legislation as one of the four outstanding values to be maintained and protected. In doing so, the enabling legislation recognizes that the achievement of these outstanding values is not mutually exclusive.

*Recommendation. To address this deficiency, the NPS should re-evaluate unsupported assumptions and the analysis of the alternatives to ensure the methodology used for it is consistent and based on site specific scientific data. And, since protection of the environment includes protection of established recreational opportunities and facilities on GGNRA lands and nearby parklands, the draft EIS should consider such resources as part of its selection of the environmentally preferable alternative. Under NEPA, the environmentally preferable alternative is one that would employ environmental design and adaptive management techniques to preserve all of the outstanding values of the GGNRA.

4. Improper Treatment of New Lands The proposed action to close new lands to dog walking access conflicts with the GGNRA Enabling Legislation (PC 92-589) and with National Park Service Management Policies (2006) for determining uses and land protection plans. GGNRA is required to consider new lands in the same way that it considers uses and land protection measures on lands within GGNRA. The unprecedented "Closed until open" proposal would violate GGNRA's statutory obligation to preserve and maintain recreational uses, violate sound land planning with the community, and violate NEPA by prejudging alternatives before site-specific public and environmental review. There is no basis for treating new lands differently than existing lands under NPS regulations and policies. Furthermore, there is no such policy in the existing GGNRA General Management Plan and Compendium. The Draft Plan/DEIS notes (p. 36), the enabling legislation states GGNRA's purpose as follows (emphasis added):

"In order to preserve for public use and enjoyment certain areas of Marin and San Francisco counties, California, possessing outstanding natural, historic, scenic, and recreational values and in order to provide for the maintenance of needed recreational open space necessary to urban

environment and planning, the Golden Gate National Recreation Area is hereby established."

The phrases "preserve for public use and enjoyment" and "maintenance of needed recreational open space" set out a high standard for management actions that would limit or restrict this fundamental value and resource of the GGNRA. The words "preserve" and "maintain" mean the continuation of uses, recognizing that uses may be regulated to protect the other fundamental values of the GGNRA. NPS management policies expressly reflect this emphasis on continuing uses, measured by the yardstick of the unit's enabling legislation. Section 1.4.3.1 states:

In determining whether or how to allow the use, park managers must consider the congressional or presidential interest, as expressed in the enabling legislation or proclamation, that the use or uses continue.

When new lands become part of GGNRA, the recreational uses existing at the time of acquisition should be allowed to continue unless GGNRA determines, through the public land planning and NEPA process, that unacceptable impairment would occur (as explained in Chapter 1 and Appendix C of the Draft Plan/DEIS).

Section 3.3 of the NPS management policies make clear that protective measures are to be integrated in to the planning process -- "Planning for the protection of park lands will be integrated into the planning process for park management" -- not predetermined in advance of site specific the public planning and environmental review process. In preparing land protection plans, Section 3.3 requires: "A thorough review of a park's authorizing statutes and complete legislative history will be conducted as part of the land protection planning process."

Section 3.3 states that land protection plans should determine what "means of protection are available to achieve the purposes for which the unit was created." As noted above, recreational use is one of the basic purposes for which GGNRA was created. Dog walking was contemplated as a traditional use in GGNRA and was plainly discussed in both the Senate and House bill reports, basic legislative history documents.

In the Introduction to land protection, the NPS management policies state (chapter 3, emphasis added):

The National Park Service will use all available authorities to protect lands and resources within units of the national park system, and the Park Service will seek to acquire nonfederal lands and interests in land that have been identified for acquisition as promptly as possible. For lands not in federal ownership, both those that have been identified for acquisition and other

nonfederally owned lands within a park unit's authorized boundaries, the Service will cooperate with federal agencies; tribal, state, and local governments; nonprofit organizations; and property owners to provide appropriate protection measures.

To fulfill this obligation, GGNRA needs to cooperate with these entities, including nonprofit community groups and property owners adjoining GGNRA, to protect recreational resources. As Management Policy 1.4.3.1 directs:

Where there is strong public interest in a particular use, opportunities for civic engagement and cooperative conservation should be factored into the decision-making process.

GGNRA is aware of the strong public interest in dog walking access, and of the interest of San Francisco and Marin Counties and responsible community and nonprofit organizations in cooperative conservation. It is entirely inappropriate and contrary to these management policies to close new lands to dog walking access without first providing opportunities for this civic engagement and for cooperative conservation efforts.

In conclusion, there is no basis in existing law or adopted policy for the NPS and the GGNRA dog management plan to summarily reject and fail to preserve and maintain an important recreational use on new lands that is allowed on existing lands, particularly in advance of sound environmental review and land use planning. This Plan and Draft Plan/DEIS do not provide this review and planning, because by definition, new lands have not yet been fully studied, acquired or subject to the level of site specific review required of this EIS.

For reasons noted above, it is inaccurate wrong to treat dog walking as the establishment of a "new use" in GGNRA, which would be the result of the proposed policy. We understand GGNRA's desire to create a presumption against continuing this use, however, there is no factual, legal, or management policy basis for this approach.

*Recommendation. The preferred alternative should be revised to make clear that new lands will be treated the same as any other GGNRA lands and follow the same NPS management policies. Recreational uses should be allowed to continue except as may be regulated through site-specific public land planning processes and associated environmental review.

5. Lack of Specificity in Proposed Action The description of Elements Common to Action Alternatives (pages 63-67 in the Draft Plan/DEIS) describes the proposed 75% compliance standard and secondary management response, but does not provide details of the monitoring plan or

other elements of an adaptive management plan on which the management response would be based. The draft Plan/Draft Plan/DEIS does not propose an adaptive management component that meets applicable guidance and that can be meaningfully reviewed, as called for in NEPA procedures and current Council for Environmental Quality (CEQ) mitigation and monitoring guidance (January 2011), including but not limited to pages 9-11 and pages 13 and 19 (on the role of the public in the design and review of results).

Select examples: a. The Draft Plan/Draft Plan/DEIS states (page 1725) that "the compliance-based management strategy is an important and effective tool to manage uncertainty when proposing new action" and "has been created" to assure successful implementation and long-term sustainability. However, the detailed description of this critical element has not been conveyed and is not included in the document (as noted on page 64). b. The Draft Plan/DEIS doesn't establish how or why a special-status species that has been sharing habitat with dogs for decades will experience an actual, likely benefit from stricter dog management, given other factors affecting the species. c. Where management actions that limit recreational access are proposed or under serious consideration, the Draft Plan/DEIS should also disclose whether access will be limited for people as well as dogs. The evaluation of significance under NEPA requires consideration of context and intensity. Meaningful public comment on proposed management measures is not possible without full disclosure of the impacts to all users and potential management measures. *Recommendation. To address this deficiency, the NPS should fully disclose the details of the proposed action. It should describe how it will monitor compliance and resources and values at specific sites because the management measures are specific to GGNRA sites. In addition to assessing the condition of these resources and values, monitoring should also focus on determining the contribution to those conditions from other users and factors, including other human users and natural processes. This should be implemented as part of each alternative. Only through this objective monitoring approach can the GGNRA demonstrate that it has addressed the purpose and need on which the Dog Management Plan is based. Existing or proposed management strategies should be modified based on the objective monitoring results. Although it could be appropriate to use properly measured rates of compliance as an indicator, the draft Plan and Draft Plan/DEIS does not provide adequate information about the compliance-based program. To ensure objectivity, this monitoring should be conducted by an independent qualified third party with the results discussed with interested groups and made publicly available as part of a defined and technically-sound adaptive management program. Additional recommendations on management actions that should be considered by the NPS are provided below.

Concluding Comments

In conclusion, CFDG is committed to working with the GGNRA to implement a reasonable balanced dog management plan that is based upon accurate facts and science and that balances all of the values identified in the 1972 GGNRA enabling legislation.

Sincerely,

Martha Walters Chair, Crissy Field Dog Group

Correspondence: GGNRA's draft EIS/draft Dog Management Plan Supplemental Comment on Crissy Field May 30, 2011

VIA E-mail

This is a supplemental letter to accompany our comment letter which Crissy Field Dog Group hand delivered to your office on May 27, 2011 which will provide additional rationale and explanation to support our recommendations in Appendix A of that letter for Crissy Field. Background: Crissy Field Environmental Assessment The GGNRA released the Crissy Field Environmental Assessment (CF EA) in 1996, which found a Finding of No Significant Impact (FONSI) after going through an extensive five-year public involvement process. In the CF EA, the GGNRA increased the "voice command off leash dog walking" area from 38 to 70 acres at Crissy Field. In the CF EA, the GGNRA identified "dog walking" as a popular and valued activity at Crissy Field" (Page 2-30) and "would be a beneficial impact on recreation opportunities for dog enthusiasts" (Page 4-11). Current zones -- Areas that were identified in the CF EA Proposed Action for "Allowable area for off leash dog-activities" included East Beach, Central Beach, the Promenade, the Grassy Airfield, and the beach east of the U.S. Coast Guard station.

Moreover, the promenade had very limited wheelchair access before the restoration and a concerted effort was made by the GGNRA to "make the entire site accessible, ramps added at boardwalk, overlooks, picnic areas, promenade" (Page 10) to provide accessibility for people with disabilities. And many older citizens walk their dogs off leash here as it is a level surface and is easier to walk on than the beach areas. Designed for compatibility with restoration -- In addition, Crissy Field was intentionally restored, designed and constructed in a way that is complimentary for off leash, voice control dog walking. For example, on Page 2-23, the Proposal included the development of a 20-acre Tidal Marsh. "The tidal marsh was designed with a vegetated buffer zone ranging from 30-50 feet in width along the north side to 50-200 feet width along the south, east and west shoreline. This buffer consists of dune scrub species, which create a dense buffer between humans and wildlife as well as to provide upland habitat associated with the tidal marsh. Barrier fencing set within the vegetation deters dogs, cats, and visitors from getting into the marsh and disturbing wildlife. ?And there are two eastern overlooks that separate the promenade by fencing, barrier walls and a self closing gate to increase public safety and to ensure that off leash dogs do not have access to these areas."

Western Snowy Plover protection -- Since the CF EA, the GGNRA designated the West Beach (the beach east of the U.S. Coast Guard Station) a Wildlife Protection Area (WPA) in 2006 to protect the federally threatened

Western Snowy Plover who rests there for a portion of the year. There is a seasonal restriction in place that currently allows for dogs to walk on the water's edge on leash and for approximately two months, dogs may be off leash under voice control. As you are aware, CFDG has worked closely with GGNRA staff and the Golden Gate Audubon Society in developing and sustaining an educational outreach program to protect the Western Snowy Plover for ALL visitors since 2006. Cleanup -- As another element of our efforts to partner with GGNRA to protect the area's natural resources and visitor experience, CFDG provides thousands of doggie bags every year, which are distributed in the 17 dispensers at Crissy Field by CFDG volunteers on a DAILY basis. Every day is a clean up at Crissy Field for us.

Supplemental Comments

After carefully reviewing the GGNRA draft Plan/draft EIS, we were extraordinarily surprised by the preferred alternative for Crissy Field, which would drastically reduce the amount of off leash, under voice control areas without a clear technical basis or explanation for the proposed variance from the analysis in the CF EA. This DEIS does not provide any substantial new empirical or analytical information that would support changing the conclusions and recommendations in the CF EA. Visitor use ? Our recommended alternative (Appendix A) is based on two facts, one of which is stated in the draft Plan/DEIS, and one of which is indirectly acknowledged but not analyzed in the draft Plan/DEIS.

The first fact is that visitor use has remained relatively stable for the past 20 years and is not projected to increase significantly in the next 20 years. Therefore, the CF EA remains a sound foundation for designating zones appropriate for off leash dog walking at Crissy Field.

The second fact is that some recreational uses have intensified at Crissy Field even if overall Recreation Area visits have remained and will remain relatively stable for the foreseeable future. Those uses are mainly special events and bicycle use, with some additional types and diversity of waterborne recreation. The impacts of these uses, particularly on Crissy Field's beaches and the grassy field, need to be rigorously studied and integrated alternatives explored to achieve a fair balance that maintains and preserves traditional uses such as off leash dog walking.

As our other comments have explained in some detail, the impacts of use by people relative to the presence of people with dogs, and the consequent impacts and causes of any impairment of the integrity of the natural resources, have not been analyzed in the DEIS and do not provide a basis for the severe reduction in off leash dog walking area at Crissy Field in GGNRA's current preferred alternative in the draft Plan.

For example, Page 71 of the DEIS asserts: "Particularly on nice days, the high level and variety of visitor uses have resulted in conflicts, including intimidation, dogs knocking people over, dog-on dog fights and dogs biting people". We have looked through this 2,400-page document, and have found nothing to substantiate this anecdotal assertion. Examination of the enforcement data summary table in Appendix G of the DEIS (Page G-1 to G-2) frequently cited in the DEIS, indicates does not support this assertion and indicated limited problems (see Appendix C of CFDG comments). CFDG is not suggesting that conflicts never occur, whether among human visitors or among people and dogs. As noted above, CFDG understands that there are several hundred special events at Crissy Field totaling thousands of people who normally would not go to Crissy Field, as well as the safety hazard by bicyclists on the promenade. There are solutions that need to be examined and incorporated into the proposed plan, such as providing bicyclists with a clearly signed alternative route (and speed limit) in the bike path along Mason Street to access Crissy Field. We are likewise willing to explore reducing potential conflicts and improving access for off leash dog walkers relative to the promenade. Clear rules and signage? Our recommended plan includes better signage as well as effective outreach and education proposed by GGNRA. For example, CFDG is not aware of kind of signage other than the GGNRA has posted designating "Voice Control" areas for dog walking at Crissy Field. The only signage that has been posted is for the WPA at West Beach to protect the Western Snowy Plover, which CFDG supports.

In the CF EA, the Grassy Field (restored airfield) was designed and constructed for "active daily outdoor recreational use, including off leash dog walking" and "the airfield surface was vegetated with red molate fescue grass, a variety that poses a low potential for invasiveness to adjacent dune areas"(Page 2-13). The Grassy Airfield was designed not to allow traditional sporting events (such as soccer, ultimate frisbee, etc.) at Crissy Field.

The draft Plan/DEIS states that dogs contribute to soil erosion on the east portion side of the Grassy Airfield (Pages 364 and 365) but there is no specific documentation and a recent inspection (May 2011) by this author found no visible signs of erosion as described in this document and it is unclear how any dog would be able to create such a disturbance as, most, if not all dogs, run and play on top of the Grassy Airfield.

Conclusion

The only significant development identified in the draft Plan/DEIS since the CF EA has been the designation of the Western Snowy Plover Wildlife Protection Area. The continuation of the current management approach is being effective, as reflected in the draft Plan/EIS.

CFDG notes that the completion of the marsh restoration project proposed in the CF EA demonstrates that good urban and environmental design can protect diversity of visitor use and maintain off leash dog walking (along with voice control requirements).

And one other point that needs to be conveyed is the fact that according to the GGNRA's PEPC website regarding the GGNRA's new General Management Plan (GMP) Newsletter #5, dated Summer 2009, states that "the new plan will not revise decisions made in recent management plans for the Presidio, Crissy Field, Fort Point or Fort. Baker". Simple logic should prevail that the Crissy Field Environmental Assessment will stand as is and 70 acres of off leash dog walking under voice control remains in place as was approved by the GGNRA/NPS. Clearly there is a discrepancy between the GGNRA's draft Dog Management Plan/DEIS and the new GGNRA GMP.

The other development since the CF EA, not yet analyzed in the draft Plan/DEIS, is the increased frequency and intensity of special events and some increased recreational uses. Rather than reducing off leash recreation from approximately 70 acres to Crissy Field now to approximately 20 acres of Crissy Field under the draft Plan ? effectively assuring conflicts by concentrating use and therefore setting up a complete ban ? the impacts of these uses should be examined in the framework of the CF EA to formulate a fair and balanced plan.

Sincerely, Martha Walters Chair, Crissy Field Dog Group

Correspondence: Frank Dean, General Superintendent

Golden Gate National Recreation Area

Building 201, Fort Mason

San Francisco CA 94123-0022

Re: Draft Dog Management Plan, Draft Environmental Impact Statement

Dear Superintendent Dean,

My name is Juleen Konkel and I have lived in San Francisco for 14 years. I am writing this letter in support of Alternative A, the No Action alternative of the DEIS, as it relates to the GGRNA. Since moving to San Francisco, I have enjoyed the GGNRA daily with my dog Zorro on our morning runs. As a responsible dog guardian, I have always kept my dog under voice control and in my sight whenever in any area he is off leash. I am a daily user of the GGNRA and always clean up after him and keep him from passing into the fenced off areas.

EXERCISE AREA I have trouble with the GGNRA's preferred alternative plan in that it severely limits and affects the off leash dog walking area at GGNRA. There is nothing better than running from Fort Mason to Fort Funston with my dog next to my side.

SAFETY My dog is my running and outdoor partner. The GGNRA trails are part of an urban environment, and I know and have heard of many stories where single women have been assaulted. It is an unfortunate aspect urban life, but needs to be addressed. I do not use trails that do not allow dogs when I am hiking or running alone. I feel that the DEIS has failed to analyze the impact of restricting the off-leash area and its impact on single women users which comprise a large number of the overall users of the area.

RECREATION and SOCIAL FACTORS For People The GGNRA allows me and so many other urban residents the recreation that we need. The current availability of paved trail and off-leash running at Fort Mason, Fort Funston, Crissy Field, and Ocean Beach perfectly accommodates the recreational needs of people like myself, and allows us to keep ourselves and our wonderful companions healthy and exercised.

There is another social aspect to Draft Dog Management Plan that disturbs me. Our daily walks, necessitated by our dogs' need for exercise, also allow us to get out of our homes and socialize with others. One can, of course, avoid "chatting" with others, but at the same time and if one wants, it is always easy to begin conversations with other dog walkers. Always pleasant, often informative, never awkward, even brief ones, help one feel less alone, less isolated. Indeed, most of the friends and acquaintances that I have made have been made while pursuing canine activities. I treasure this aspect of my frequent dog walks and runs. I trust I speak for many, many other SF residents that I meet daily.

ENVIRONMENTAL IMPACT Bottom line the GGNRA in San Francisco is urban parkland with a mandate for recreational use. The balance needs to be better signage and enforcement of current rules not more restrictions which may or may not be enforced. I agree failing to pick up dog poop, allowing dogs to harass wildlife, planted areas, and other should not be allowed, however in the overall schema these "infractions" are few

compared to GGNRA's own statistics. It would be nice to see the current rules enforced before adopting more stringent rules against a large populace of park-goers.

I attended an Open House put on by the GGNRA (at San Francisco State University), and had an opportunity to observe the plans for changes. The allowable off-leash area currently available at Fort Mason, Fort Funston, Crissy Field, and Ocean Beach perfectly meet the recreational and social needs of people and dogs alike. I feel that the "preferred alternative" choice that I learned of failed to accurately analyze the need for residents of this urban area.

I trust that the GGNRA, in developing a general management plan, will take into consideration and respect the specific character and situation of the San Francisco GGNRA. I fully support Alternative A, the No Action alternative of the DEIS, as it relates to the GGRNA.

Respectfully,

Juleen Konkel

Correspondence: For thirty years, almost daily, I have been walking the Oakwood Valley Fire Road and Oakwood Valley Trail -- it is an elongated loop. I always go with my dog. We live nearby. I've always referred to this area as 'my backyard'. I take care of it like it is my own -- primarily by picking up trash left by

humans and removing the invasive vine that showed up there a few years ago which the Park Service has actively been extracting. I love this place. Walking here with my dog has been my sustenance.

I rarely walk further than the proposed second Double Gate because of the steep incline.

I hope you will leave these two parts of your trail plan untouched by new restrictions. My local neighbors and myself have been stewards of these trails for many years. I hope you will allow us to continue.

Fencing and double gates seem a disruption to the rough natural beauty, the sense of open wilderness, and rhythm of the place. Any fence that allows the bobcat, coyote, and deer to pass uninhibited will not stop a dog. We dog-handlers are quite aware of where the trail is and can keep our dogs on the trail. If a dog goes off-trail, I can assure you it doesn't go anywhere but on paths established already by the animals who live there because the blackberry bushes, poison oak, and other bushes form a thick undergrowth. I am also concerned about even constructing the fencing. The building process would destroy current habitat for small critters (birds, chipmunks, mice, rats, snakes, slugs).

If I must keep my dog on a leash, I will; however, there is protocol I follow for meeting other people with dogs and people without dogs so everyone is comfortable. In my thirty years I have met only one person who was afraid of dogs. My dog was on a leash & we gave that person the right-of-way to the trail.

I often meet people on the trail without dogs who are there specifically wanting to interact with the dogs who are taken there to walk the trail. These people usually either can't have a dog of their own or they've recently lost their companion. Of course, my dog is ever ready to cozy up to anyone who needs his attention. Dogs have a wonderful innate sensitivity to us humans.

I have tried to imagine a flexible schedule for potential rules applications. Since weekends and holidays increase usage of the trails by outside visitors to the park, having our dogs on leash could perhaps be a good measure. However, during the week the trail is so quiet. I would like to see the local people able to continue to use the trail in our relaxed manner. We've taken good care of this area for a long time. We have respect for the treasure in our midst. We love it.

I am grateful to you for taking my thoughts into your consideration.

All My Relations, Jane Perkoff

Correspondence: Frank Dean, General Superintendent?Golden Gate National Recreation Area?Fort Mason, Building 201?San Francisco, CA 94123-0022 Dear Mr. Dean, My husband and I are both "senior citizens" who live in the Sunset District in San Francisco. We have been bringing our dogs to Fort Funston for the past eleven years. Typically, we go to the "Fort" two to three times a week. Over the years we have found that the people who go to Fort Funston with their dogs represent a community. That community is very diverse: by age, by gender, by ethnicity, and national origin. This is a community that cares about dogs, the environment, and San Francisco. In our experience, the great majority of dog owners who take their dogs to the GGNRA are responsible individuals who pick up after their dogs and respect the environment. (As an aside, over the years I have seen very few dogs chase birds; however I have seen quite a few small children chase birds with their parents' encouragement. What is the remedy for that situation?) We go to Fort Funston for our health: our physicians tell us we must walk to remain healthy, and dog behaviorist tell us that vigorous exercise is important for our dog's health. In our experience, they are correct. Our blood pressure is down and our dog is calm. Walking with our dog is also a recreational activity for us. It has always been my understanding that the GGNRA has a mandate to support recreation on its lands. Eliminating off-leash dog walking would in effect end recreation in the GGNRA for us, and well as for others. Further, the DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents. Eliminating off-leash dog walking at the GGNRA will put put an enormous burden on off-leash parks in the Bay

Area; local government is not prepared to deal with that. The GGNRA does not appear to want to work with the community in developing a solution to the issues in the DEIS. The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal. I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off-leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions. It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option. After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program. Thank you for your consideration. Sincerely, Judy and Jerry Pelzner San Francisco, CA 94122

Correspondence: Dear Mr. Dean,

I live in the Presidio and absolutely love it - it is a treasure to the city and to all visitors! I am also a dog owner who frequents Crissy Field and other parts of the Presidio daily. Being able to have my dog off-leash on the beach to socialize with other dogs is an intregal part of my life. The dog owners that I see are responsible people and the dogs are well mannered and under control.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979

Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions. It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. Frank Dean, General Superintendent Golden Gate National Recreation Area
Building 201, Fort Mason San Francisco, CA 94123-0022

Re: Draft Dog Management Plan/Draft Environmental Impact Statement

Dear Superintendent Dean,

I have been a Bay Area Resident and have lived and worked in San Francisco and Marin counties since 1978. I have explored beaches and trails throughout these areas for many years with my current dogs Grace and Space and my former dogs. My girls and I are eager partners for our daily outings that connect us to the recreational pleasures of places like Crissy Field, Baker Beach, Lands End, Ft. Miley Upper Fort Mason, Marin Headlands, and Muir Beach. These daily outings keep us connected and balanced for the demands of a busy life.

My dogs and I have attended training sessions to learn basic obedience skills and recall. Both are well socialized to both people and dogs and are exceptional companions at home, around town and on the trail. I expect my dogs to be well behaved and responsive to voice commands on leash and off. I leash my dogs to keep them from sensitive areas and clean up after my dogs. As a dedicated hiker/walker/bicyclist, I also educate fellow dog and non-dog enthusiasts about canine/human//bike interactions. On walks, I educate friends about the native plant/animal communities.

I have worked professionally as an environmental scientist/senior environmental project manager for over twenty years in both the public and private sectors. During this time, I worked for the US EPA, National Park Service (on loan to the GGNRA for work on the Presidio Project) and the San Francisco Redevelopment Agency. I understand the complexities of developing a fair and balanced dog management plan within the GGNRA. In addition, I have been a long-term member and supporter of NRDC and The Nature Conservancy.

For the past ten or more years, I have been the chair (and co-founder) of the Crissy Field Dog Group and have worked extremely hard to work with the GGNRA (and with the late GGNRA Superintendent Brian O' Neill) and other environmental and recreational groups to figure out a reasonable and viable alternative/solution for this complex dog management issue.

So it was to my great disappointment and surprise when the GGNRA released your draft Plan/EIS. I do not agree with the GGNRA's current

preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (GGNRA's 1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions and do not provide a basis to change dog walking areas under voice control as identified in the 1979 Pet Policy. It is essential for the GGNRA to consider reasonable and balanced alternatives for off leash dog walking on existing lands.

While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting off leash dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option.

The additions I would add to what you call Alternative A (No Action) would be a Hybrid or Modified Alternative A which would include the inclusion of the "New Lands", in San Mateo and Marin Counties and the application of the following management measures that would support a reasonable, realistic and enforceable dog management plan.

The Hybrid Alternative, includes the 1979 Pet Policy (Alternative A: No Action-existing conditions), include the New Lands, and the implementation of management measures, which include but are not limited to more, better and clearer signage, a robust educational program that would include partnering with local animal welfare groups such as the San Francisco SPCA, Marin Humane Society and the Peninsula Humane/SPCA at a minimum. Other measures include the use of environmental or vegetative barriers, and low-level post and cable fencing to protect a plant species such as the blue lupine. I also support the creation of a "recreation team or panel" who can assist the GGNRA with issues regarding all recreational visitors in a public forum on a quarterly basis.

The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a scientific baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure as the goal. As a matter of fact, Eco-dog (with a letter from the San Francisco SPCA) has submitted a draft Compliance Based Adaptive Management Program that proposes a viable alternative to this approach that proposes a constructive and transparent compliance program to be

administered with public input with clear and defined parameters.

The DEIS also fails to consider that the GGNRA is the front/back yard for a large metropolitan area. I live in Marin County and have strong ties to the lands of the GGNRA, as do many of my friends and fellow dog enthusiasts that live in San Francisco/North/East/South Bay Counties and beyond. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area.. NEPA requires evaluation of impacts on the "human environment": the DEIS fails to do so by failing to adequately address how the proposal will affect "recreational" values as well as natural, scenic and cultural values on residents of the Bay Area..

This DEIS and Plan doesn't recognize that environmental values include both recreation and nature. In many places, the DEIS treats the environment and recreation as adversarial values i.e., that recreation only harms natural resources. The document doesn't acknowledge that people care about both and that people with dogs are often also good stewards of our environment. I believe I am a good steward of the environment and I believe that many of my fellow dog lovers are also good stewards. This bias extends to the overall document, pitting recreation vs. natural values rather than identifying and exploring reasonable alternatives where nature/recreation can work together. And as a matter of fact, if you do a word search in Chapter 4 of the DEIS, you will find that the word "may" is used approximately 3300 times and the word "potential" is used approximately 1100 times.

Further, the proposed broad limitations in the DEIS are largely without site-specific science that demonstrates that the perceived degradation of the quality of the GGNRA's natural resources are actually attributable to dogs vs. other factors. For example, much of the impact on native dune habitat that I have seen at south Ft Funston is due to non-native/invasive species, erosion, and equines and transients/homeless encampments vs. foot/dog traffic.

There are many other concerns that I have but I want to be clear that the Golden Gate National Parks Conservancy's "Crissy Field Center" as identified on page 361, is a TEMPORARY relocation due to the deconstruction and construction of the Doyle Drive seismic retrofit work. Please correct this misinformation. Cal Trans is using the Crissy Field Center as their headquarters during this work in a deal that Cal Trans would re-build the interior of the old Crissy Field Center and provide "State of the Art" technology after the Doyle Drive construction is finished. Doug Overton of the GGNPC "promised" that the move to the eastern portion of Crissy Field would be temporary until the Doyle Drive project is completed. In addition, because the Crissy Field Center has temporarily relocated, it has caused an increase in traffic and parking availability (a BIG negative) for all

visitors at Crissy Field.

And for the other sites that may fall through the cracks, I am very concerned that there is no technical or scientific basis for change at all of the Marin sites, Baker Beach (beach nudity is the biggest concern-not off leash dog walking), Lands End/Fort Miley and of course Upper Fort Mason. Folks have been walking their dogs off leash for years at Upper Fort Mason and even the late GGNRA Superintendent Brian O' Neill did not mind but actually enjoyed the dogs there. This area is primarily frequented by folks who live in the neighborhood who come with their dogs? a LOT of older people and working people who are very responsible and clean up after their dogs and there are VERY few dog conflicts. There is a very tight knit dog community at Upper Fort Mason as well as in the other areas under consideration in your GGNRA dog management plan.

For Fort Funston, I offer the following as a compromise:

Leash-only from the upper parking lot to the south edge of Fort Funston, inclusive of the parking lot, hang gliders' take-off area, and observation deck. Leash-only along the Sunset Trail (including the area west to the ocean and 20' along the eastern side), starting at the upper parking lot, going all the way to the center beach access (following the trail closest to the ocean).

Move the center water fountain further east (to the top of the John Muir trail sand ladder).

Here are the problems that get solved with this solution:

Eliminate the danger to hang-gliders of dogs chasing them at take-off and landing. Eliminate the danger to equestrians when they are riding along the south cliff area to get to the beach. Provide visitors who do not want to encounter off-leash dogs with a hike along the most beautiful trail at Fort Funston (overlooking the ocean).

And I think that all of the sites in San Mateo County have not been adequately analyzed, as there is no legal basis for what you call "New Lands". These "New Lands" in San Mateo County (and Marin County too) should be treated as "existing lands". There is no case law or anything in the GGNRA's compendiums or the current GGNRA General Management Plan to support your conclusions about treating these lands differently.

And one other point that needs to be conveyed is the fact that according to the GGNRA's PEPC website regarding the GGNRA's new General Management Plan (GMP) Newsletter #5, dated Summer 2009, states that "the new plan will not revise decisions made in recent management plans for

the Presidio, Crissy Field, Fort Point or Fort. Baker". Simple logic should prevail that the Crissy Field Environmental Assessment will stand as is and 70 acres of off leash dog walking under voice control remains in place as was approved by the GGNRA/NPS. Clearly there is a discrepancy between the GGNRA's draft Dog Management Plan/DEIS and the new GGNRA GMP.

Again, after careful consideration, I support Alternative A, the No Action alternative and would also include the "New Lands" areas in San Mateo County and Marin County. The DEIS is biased against the No Action alternative and failed to take a good look at this as a reasonable alternative. There are many areas in the GGNRA where the 1979 Pet Policy has been working and where sensitive species are not present and conflicts occur infrequently or not at all. The ways of improving how GGNRA carries out/administers the current 1979 Pet Policy should be considered and given a fair assessment. I believe that the current management plan will work for the many years if "tweaked" to provide clearer rules, improved compliance and reduced potential for conflicts. The majority of the "problems" with the current plan are problems include unclear or non-existence signage, inadequate management and implementation and a lot of specific education versus. access. If there are problems with access, then the DEIS doesn't provide a scientific or technical basis for the severe limitations proposed on continued off leash under voice control dog walking.

Thank you for your consideration.

Respectfully,

Martha Walters San Rafael, CA 94901

Correspondence: My name is Morton Stein; I am a medical doctor and I have lived in Mill Valley for more than 30 years. I work in San Francisco, but I spend a large amount of my recreational time with my dogs in the GGNRA.

It is important to me to be able to take my dogs to Muir Beach, Rodeo

Beach and on the Coastal Trail, among other places which offer the opportunity for me and my dogs to get exercise, "decompress" and enjoy the spectacular environment in which we are fortunate to live.

Two to four times every week I take the opportunity to hike and play with my dogs in these areas. They are crucial to me and my pets as places that offer an opportunity to run and hike and enjoy the outdoors of Northern California. It is one of the main reasons that I have chosen to live in Mill Valley.

I am a responsible dog owner, and I keep my dogs under careful voice and sight control at all times that they are off-leash in these areas.

It is my understanding that the "R" in GGNRA was put there to emphasize how important it is that this area was established as a "recreational" area for us all. In the highly urbanized area in which we live, this unique natural environment for me and my dogs is VERY important to my physical and emotional well being. If the opportunity to access this recreational environment is reduced or eliminated, I and my dogs will suffer greatly, both physically and emotionally.

I have read parts of the GGNRA's proposal and I do not agree with the conclusions that dogs are a disturbance to the environment. It is irrefutable that humans have a much greater negative impact on this environment than do our dogs.

The proposal that I have reviewed does not provide credible, legitimate scientific justification to show that dogs have a significant negative impact on the flora or fauna of the GGNRA. I believe that it would be unacceptable to alter the access to the limited areas that it is currently available for dogs and their caregivers without providing valid, scientific evidence to support those changes. Clearly the access to human walker, hikers and bike riders, as well as horses and their riders, and other forms of recreational activity in the GGNRA as well as people who choose to access this area with their dogs is why the "R" is a part of the naming of the GGNRA. It is an area which needs to be preserved for recreation for all of us.

Sincerely, Morton Stein.

Correspondence: I would like to add the following comments about the GGNRA DEIS for a Dog Management Plan.

The DEIS did not consider management strategies that could be added to the 1979 Pet Policy to address any problems that do occur. These strategies were also not considered with respect to the No Action Alternative and they should have. These strategies include:

1) Education -- not just education to tell people where they should not be. But rather education that actually addressed problems. For example, SFDOG has held dog-horse workshops to socialize dogs to the presence of horses. If these workshops were held at Fort Funston, for example, it would alleviate any problems between horses and dogs at the Fort. When these programs were held regularly in the East Bay Regional Parks, negative incidents between dogs and horses decreased by nearly 90% (private communication from Oakland Dog Owners Group). Similarly, education training programs that work on improving recall and preventing jumping would go a long way toward reducing negative interactions between people with dogs and other park visitors. If the GGNRA would work with dog groups, rather than just trying to kick them out, what few problems occur would be easy to address. The DEIS assumes conflict between park user groups, rather than encouraging them to work together to resolve problems. The latter is the way we deal with issue in San Francisco. The GGNRA should respect that way of dealing with problems and encourage different park user groups to work together.

2) Signage -- not just to say STAY OUT. But rather signs to explain why you should leash your dog in an area, or why the area has been closed.

3) Cliffs -- If the GGNRA argues that they must keep dogs off of the Sunset Trail at Fort Funston because dogs might go over the cliffs there, they should first consider planting low-lying vegetation barriers (shrub, bushes) along the cliffs to keep both people and dogs away.

In addition, the DEIS should add the following off-leash, voice control areas in San Mateo: 1) a voice control trail from the Bay-side to the Coast-side on Sweeney Ridge (e.g., Sneath Lane to Fassler) 2) Mori Point off-leash, voice control everywhere except on-leash around the frog ponds and traffic areas and no dogs on the the Upper Mori Trail 3) Milagra should be off-leash, voice control everywhere There is no justification presented in the DEIS to justify the restrictions proposed to off-leash in San Mateo.

In addition, the DEIS talks about preserving the natural soundscape at GGNRA sites, referring to bird calls, and the sound of waves. However, any discussion of soundscapes should be realistic, not an idealized version of what a soundscape in an isolated wilderness sounds like. For example, the soundscape at Fort Funston routinely and frequently includes: the sounds of jet airplanes that are climbing from taking off at SFO airport and are still

rather low when flying over Fort Funston; the sounds of Coast Guard, traffic, and private helicopters; motorcycles and police/fire/ambulance sirens on Skyline Blvd; frequent volleys of gun shots from the shooting range at Lake Merced. Assuming you can only hear the waves and birds at Fort Funston is pollyanna. As a result of all these unnatural sounds, the occasional dog bark is no major problem and preserving soundscapes cannot be used to justify restricting dogs anywhere at Fort Funston, nor anywhere else in the GGNRA.

There are not enough trails available for off-leash recreation in the Preferred Alternative. There must be more. Not everyone who goes to the GGNRA plays fetch with their dog. Many people enjoy hiking on trails with their dogs as their companions. The Preferred Alternative is not "balanced." The 1979 Pet Policy allowed dogs off-leash on less than 1% of GGNRA land. Given recent additions of large tracts of land in San Mateo County to the GGNRA, this number is now significantly less than 1%. Off-leash dog walking started from a position of great imbalance. One-third of San Francisco households have dogs, yet they currently can recreate with their dogs on this less than 1% of GGNRA land. The Preferred Alternative allows off-leash on even less, including no off-leash in San Mateo County. How is that balanced? By denying the possibility of off-leash on any new lands that come into the GGNRA in the future, the Preferred Alternative will ensure there is no balance between recreation and protection of natural resources in the future. The Preferred Alternative cannot be accepted. The DEIS should instead choose the 1979 Pet Policy (including the plover areas at Ocean Beach and Crissy Field because the DEIS provides no evidence that off-leash dogs in these places have any impact on the plovers), plus off-leash in San Mateo and on new lands.

The Preferred Alternative is based on a philosophy of separation and exclusion. It denies that different park users can co-exist. Rather than share space between different park users, the Preferred Alternative carves up park space into separate areas for different park users. This basic philosophy is the exact opposite of the way we approach problems in San Francisco. It flies in the face of the unique social qualities of San Francisco. The GGNRA needs to develop a new Alternative that will better reflect San Francisco values such as co-existence, shared space, collaboration, and education to address problems should they occur.

The Preferred Alternative discourages cooperation between different park users and will increase conflict between park users, as more and more people and dogs are crammed into smaller and smaller spaces. Park user groups can work together to resolve problems, when they come up. For example, Fort Funston Dog Walkers, SFDOG and the hang glider group Feathered Flyers of Fort Funston collaborated on a series of signs to warn dog owners to keep their dogs out of the hang glider take-off area. If the

Preferred Alternative is accepted, and especially if the Compliance-Based Management Strategy is adopted, there will be no incentive for dog groups to work with other park users. And that will not be good for anybody.

The DEIS holds dog owners to a standard of behavior that is impossibly high, and significantly higher than any other park users. For example, studies by GGNRA staff routinely show people without dogs "disturb" plovers, but there is no attempt to restrict people without dogs from the beaches where plovers are. This basic unfairness cannot be allowed to continue and any Alternative that assumes this unfairness cannot be accepted.

The DEIS does not adequately address dispersion issues. It does not address the environmental and social impact of forcing large numbers of people and dogs into much smaller areas. Reducing the amount of area available for off-leash will significantly degrade the park experience for people with dogs. This is not addressed in the DEIS.

In 2002, a panel of senior National Park Service officials concluded, in part, "[T]hat off-leash dog walking in GGNRA may be appropriate in selected locations where resource impacts can be adequately mitigated and public safety incidents, and public use conflicts can be appropriately managed." Adequate mitigations and management tools already exist -- target people whose dogs misbehave, or bother birds, or jump on people, but leave the vast majority of responsible dog owners free to recreate off-leash with their dogs on the less than 1% of GGNRA land on which they've been allowed off-leash for decades.

The GGNRA does NOT have to be managed in exactly the same way as pristine wilderness areas such as Yellowstone or Yosemite. Dogs are allowed off-leash to hunt and kill wildlife in national preserves and other units administered by the NPS. Surely if it's okay for a dog to be off-leash to chase, corner and kill a wild animal, it should be okay for a dog in the GGNRA to be off-leash to play with people and other dogs. The GGNRA is located in the densely populated San Francisco Bay Area. It is in a major urban area. Much of the land was highly modified by the military when they controlled the land before the GGNRA was created. There are missile silos, and artillery batteries throughout the GGNRA. The military planted huge amounts of iceplant to stabilize the sand dunes at Fort Funston and elsewhere. That iceplant has been there for nearly 50 years or more. Standards of management that treat much of the GGNRA, especially those parts in San Francisco, like pristine wilderness are misguided. During the 2/17/07 Negotiated Rulemaking meeting, Barbara Goodyear, the Field Solicitor for the NPS, made it clear that while all parks are managed to the same level (conservation of resources), there is flexibility in how that is done from park to park. She cited, as an example, the fact that you don't

manage Yosemite Valley with the expectation that people will have a solitary wilderness experience there. You manage it with the knowledge that people will bump into one another there. The GGNRA, an urban park located in and immediately adjacent to a major city, does not have to be managed in the same way as Yellowstone or Glacier National Parks.

The level of enforcement required by the Preferred Alternative is excessive and unsustainable. Targeting people walking their dogs irresponsibly and leaving responsible dog walkers alone would be a much more efficient use of GGNRA resources. The DEIS states that it will cost more than \$1 million to implement the Preferred Alternative through the hiring of more Park Rangers and Park Police. In an era of shrinking federal budgets, this seems a poor use of scarce financial resources. Existing Park Rangers could easily enforce existing rules such as picking up pet litter or no chasing of birds. These enforcement actions are all that are needed to ensure responsible dog walking with minimal impact on natural resources and other park visitors from off-leash dogs.

The NPS must arrange for an independent entity to evaluate the public comment on the DEIS. Assigning the comments to GGNRA staff, the very people whose research is being attacked by these comments, is a conflict of interest of the most egregious kind. There must be independent analysis of the public comments and an independent determination of how the analysis of any Alternatives must be changed to accommodate the comments.

The DEIS is fatally flawed. It must be thrown out and started over, with an impartial, science-based analysis of impacts and alternatives, with baseline conditions (quantified and studied) and site-specific information on observed impacts leading the analysis.

I have been walking in the GGNRA for 20 years or so with either my own or friends' dogs. I am an environmentalist who sees no conflict between off-leash dogs and resource protection. I have been a member of the Sierra Club since 1972 and I am appalled at the local chapters irrational stand against dogs in the GGNRA. The local chapter does NOT speak for me or for most of its members. I have been members of or supported environmental and wildlife groups for decades, including the World Wildlife Fund, Nature Conservancy, Environmental Defense Fund, Natural Resources Defense Council, Marine Mammal Center, National Wildlife Federation, and many others.

Correspondence Web Form

Type:

Correspondence: I have put off commenting for months now because I find the whole situation so frustrating, but I will attempt to keep it short and sweet. My children and I attended the informational meeting at Tamalpais High School and the rangers said I should keep the comments "practical," so that is how I shall start:

I live in Marin County and our yards (if you aren't the few who live in Ross or Tiburon) are very small but we are surrounded by gorgeous open space. Unfortunately, the majority of this open space, for example Baltimore Canyon, Ring Mountain and most of Mt. Tamalpais, is on-leash only or no dogs at all. So instead of leaving my house and walking up Ring Mountain, I have to get in my car and drive to Oakwood Valley Trail or Muir Beach or even Crissy Field to get some quality off-leash time. The off-leash hike or walk is as much for me and my sense of peace as it is for my well-behaved and friendly lab mix. Not to mention excellent exercise! Those days at the beach and on the trails are the days that I am happy and proud to be living in the Bay Area -- paying ridiculous prices for everything from milk to houses to enjoy the outdoors year round. There is nothing like watching one's children running and playing freely with one's dog. It's natural and beautiful and should not be treated as wrong and punishable by fine.

Need to protect the Snowy Plover? Absolutely, let's protect the Snowy Plover. I have no problem with the GGNRA designating some beach space as leash-only to protect the nesting sites IF it swaps in some other land, an EQUAL amount of land, as newly off-leash. The total amount of land within the GGNRA that is off-leash should remain the same, but perhaps just different areas and trails are opened up to off-leash use. These new areas

and trails should be made known to the community.

Too many dog walkers not picking up poop and watching their charges? Require a permit or a license. If people want to use the public land to make a private dollar, I am in agreement with the GGNRA requiring the purchase of a permit or license to walk more than three dogs. It may deter some dog walkers for using the space and the annual fee is a nice revenue stream in a tough time (it may even off-set the cost of printing up the 2,000 page document multiple times!) As for not picking up poop, my family and I pick up lots of garbage daily that has nothing to do with dog-walking. Plus we participate in the Coastal Clean-up and Earth Day Clean-up annually.

Some people just don't like dogs off leash? Too bad. I don't like cats off leash in my neighborhood, pooping in my yard and making my dog crazy, but I just shrug it off. Live and let live. Besides, there is PLENTY of hiking space where no dogs are allowed at all or dogs must be on leash. I would hate to think that all of this fuss is because of some whining adults. I don't reward whining in my children and I hope the GGNRA doesn't reward it in adults. I understand that dog owners are in the minority, but from what I understand of our country, the minority enjoys the same equal rights as the majority. Moreover, to RESTRICT one's rights is a big deal and not to be taken lightly.

Here is the non-practical part of my comment: Isn't this the part of the country where we embrace differences in lifestyles and differences in interests? Aren't the eccentricities of the people of the Bay Area the things that make us so special? We live in an area made up of gorgeous land with beautiful weather, incredible food and delicious wine. We live in an area made up of creative and intelligent people from all backgrounds who choose to live freely and without judgement. We live in an area where one can jog across town naked and drunk, but soon, I fear, my husband and I won't be able to play on the beach with our children and off-leash dog. Yes, the whole situation is so frustrating.

Correspondence: I am writing as a concerned citizen regarding the draft Dog Management Plan and Environmental Impact Statement (DEIS) for the Golden Gate National Recreation Area. I use and enjoy the GGNRA lands and am concerned about impacts from dog-related recreation on the wildlife, habitats and other park users at the park. I strongly encourage you to improve the plan by implementing the following steps: 1. All "Regulated Off-leash Areas" should be fenced, at least in areas where fences do not

pose risks to wildlife and habitats. Fences provide more security for all park users and create clearer boundaries so that dog owners are aware of how to comply with park rules. 2. The Park Service's proposed requirement of 75% compliance is too low. The Park Service should require a minimum of 95% compliance before initiating measures to improve compliance. 3. Commercial dog-walking should not be permitted in the GGNRA. This is a commercial activity in the park and the Park Service cannot legally permit it. 4. At least some trails in San Francisco should be entirely closed to dogs. Under the current plan, nearly every trail in San Francisco is open to at least on-leash dogs, meaning no trails are available for people who prefer to enjoy the outdoors without interacting with dogs. 5. While dogs are important parts of our families and communities, they are just one animal that is having a significant negative impact on thousands of other animals and plants that rely on the park to survive and many other human visitors. The parks should be maintained to be safe and accessible for all users and to protect their natural and cultural resources for future generations. Thank you for this opportunity to comment on the Dog Management Plan. I encourage you to adopt the best measures to protect the National Park's valuable resources for everyone and for future generations. Thank you, Katrina Olds

Correspondence: I've been taking my two (well-behaved) dogs to Fort Funston for nine years for off-leash runs. During that time, I've given birth to two children who consider FF to be their second home. As a family we have bonded with each other and with other similar-minded families. We even bring our 80-year-old neighbor every Tuesday because he loves to be around the unleashed dogs. It's a wonderful place that, if not for its off-leash access, we would not have had the privilege of knowing and appreciating. Please continue to allow families like ours to enjoy this special open space with our dogs off leash. It's a magical place--and if you're a parent who has ever tried to jog with a double stroller and two leashed dogs, you will really understand what kind of liberating magic I'm talking about. In the crowded world we call the Bay Area, I'm begging you to give families and dogs some breathing room when it comes to leash laws. Thank you for your time!

Correspondence: Dear Mr. Dean,

The GGNRA's draft dog management plan is provably based on speculation, exaggeration and misleading (or totally erroneous) statements. It reaches conclusions unsupported by either science or the law. For these reasons, I strongly oppose this draft dog management plan in all its variations! When I first read about the plan(s), I was shocked at what appeared on the face of it to be deliberate misstatements of known facts (effects of dogs on the environment, for instance, or what the original intent of the land use was - another example). Then I attended several of the public meetings and it became clear that the GGNRA was simply trying to railroad these changes through for no reason other than a belief in the right to do so! How easy it is once the public fails to watch dog (no pun intended) governmental actions for decisions to be made based on blind prejudice or simple expedience.

The GGNRA can accommodate both recreation and conservation. And, in fact, it has successfully done so for decades! It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

All alternatives of the current plan disregard this original intent as well as the health and well-being of people, dogs, and the community. They arbitrarily exclude the Bay Area residents who exercise regularly with their canine companions. The alternatives all discriminate against all people with dogs, including tourists, seniors, families, the disabled and minorities.

NO version of the GGNRA draft management plan provides evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

1. Honor the original 1979 Pet Policy which respects dog-walking as legitimate recreation and exercise.
2. Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. One percent of the whole is hardly taking the park areas over from other uses and certainly this percentage of space does not limit anyone who prefers to avoid dogs!!!
3. Exclude speculative, exaggerated, biased, or misleading statements and studies. (Which essentially destroys this outrageous, and outrageously expensive, report totally!)
4. Provide reasonable ways to address any significant adverse impacts from ALL recreational activities. Use objective standards applicable to other

recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, picnickers, etc.).

5. Enable professional dog walking and align any professional dog walking rules with county or city regulations. (This should include working with counties/cities to formulate reasonable licensure of dog walkers as well as limits on how many dogs can be walked simultaneously.)

6. Eliminate "compliance-based management" that allows implementation of additional restrictions without hearings. Such a system is open to arbitrary decision-making as it is designed to occur without review or public input and punishes those who are law abiding along with scofflaws.

As a senior citizen who has been enjoying the GGNRA lands with and without my dogs (and children and grandchildren) since 1977, I urge you to rethink this draconian, unreasonable, unsupportable plan and work with all of us who enjoy this area to ensure the lands we have been enjoying for decades remain open and available for all future generations to enjoy, too.

Sincerely,

Judith M Hedgpeth San Francisco, CA 94114-2662

Correspondence: I live in Pacifica CA and have been hiking with my dog in the GGNRA land around here for over 6 years. I hope to retire here in just a few years and make these hikes a daily event, as they are always the highlight of my day. Pacifica is a community with a lot of dogs. I am proud of the effort this community has gone to in order to preserve these open spaces so that they can continue to be enjoyed by hikers with and without dogs, as has been done here for generations. My main concern about the GGNRA dog management "preferred alternatives" is that it would BAN on-leash dog

hiking on most of these trails that we enjoy today. This will in fact ruin the lives of families with dogs that have lived here for decades, as well as people like myself who would like to retire in a dog friendly hiking area like we have now.

Here are my specific objections to the plan as it now exists:

1) It provides no proof, scientific or otherwise, that hiking with a dog on leash does any more harm to the environment than hiking with no dog. I hike with my dog on leash every week at Mori Point and Milagra Ridge. I see many on leash dog hikers like myself. The vast majority of us pick up after our dogs, and sometimes after others who are not so responsible. As a result I see more wild animal poop on these trails than dog poop.

2) It does not address the GGNRA's failure to enforce existing dog rules. There are no off-leash trails in these lands in Pacifica, but there are some who choose to ignore this. They are a minority of the dog hikers to be sure, but I do see them from time to time. And why is this? I can give a least 2 reasons. First, there are no legal alternatives for off-leash dog walking in Pacifica. None. The closest place is Fort Funston. Second, there is almost zero chance that they will be caught by a ranger. In my 6 years of dog hiking I have seen a ranger on only 3 occasions. This is a clear failure on the part of the GGNRA, and banning ALL dogs because of your failure to enforce the rules is just plain unfair to responsible on-leash dog hikers.

3) It does not provide any alternative trails for hiking with dogs, nor does it show what impact banning trails to dogs will have on other non-GGNRA lands in Pacifica or nearby. I suspect that Linda Mar Beach will become overrun with dogs, and how long will it be before dogs are banned there as well? Thus, your "preferred alternative" can have the result of creating new dog problems that did not exist before. And for what? My experience is that there is only very minor dog problems on these trails today. Your attempt to "fix" a minor problem can result in major problems down the road. Have you studied this? I did not see it in your report.

The GGNRA's current preferred alternative will significantly restrict and eliminate ON-leash dog hiking in many areas within the GGNRA. I object to this and consider it an overreaction to a minor problem that could be easily fixed with less drastic action. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site- specific conditions.

It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural

resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option.

The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal.

The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents.

After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program. Thank you for your consideration.

Sincerely,

Rick Rees

Correspondence Type: Web Form
Correspondence: May 30, 2011 Frank Dean, General Superintendent GGNRA Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean,

The proposed changes to policy for the Golden Gate National Recreation Area has prompted me to write. In the sixteen years that I have lived in San

Francisco I have never been so concerned for the state of our local recreational spaces. As a homeowner who is active in my local park, serving as a steward of Friends of Noe Valley Recreation Center and chairman of Friends of Upper Noe Dog Owners Group, I feel it is my responsibility to speak up on behalf of my local community. As a longtime member of the Natural Resources Defense Council, it my duty to speak up in defense of our national recreation area. As a dog owner, it is imperative that I speak up on behalf of my family, who often find respite from busy city and excercise at Ocean Beach, Crissy Field and Fort Funston.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off-leash dog walking areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions. In particular, the idea that dogs should be banned at Ocean Beach south of Sloat is beyond understanding. This is the area we visit the most often for the very reason that it has few visitors down on the beach, almost never any shorebirds and absolutely no nesting habitat for birds or small mammals -the parking lot crumbles directly onto the the high tide mark. What possible harm could dogs do in this location? The beach is swept clean twice a day by the tide! In addition, this location is hazardous for swimming because of the surf, the rocks and the lack of safety personnel. Only on the hottest of days does a crowd appear. Even so, in all the many years that we have gone to any of the local beaches as a family, we have never witnessed any altercations between dogs or between humans and dogs, or an attack on birds. And, while the Ocean Beach area directly north of Sloat has seasonal restrictions there is no evidence in the DEIS to support the closures of beach access because of the presence of snowy plovers.

The GGNRA must consider reasonable and balanced alternatives for dog walking on our public lands. Dog-walking is a recreational activity for people. However, dogs are faster than humans and need space to run free. Other alternatives need to be considered first before restricting access to beaches. We need an approach where recreational use, including dog-walking access, is balanced with preservation. The status quo effectively does that. Improvements in education, signage and barriers is far preferable to restriction as a first choice. And, face it, probably far less expensive than enforcement personnel. It is imperative that the DEIS include such an alternatives as a reasonable option. The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. I totally support efforts to keep our wild spaces wild, but San Francisco is not pristine habitat and cannot be made so. The fundamental purpose of creating the GGNRA was to provide open space for recreation that includes dog walking as a form of recreation for residents of the Bay Area.

The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and is not based on any documented impacts of non-compliance, just the mere fact that non-compliance occurs. Because it will change the status of areas from off- to on-leash or on-leash to "no dogs allowed" automatically and permanently if non-compliance is alleged, it will deny the public the chance to comment on these major changes when they occur. That violates the law that requires public comment when a change is either significant or highly controversial, as these changes would clearly be. It must be removed.

NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents. The physical and monetary impact on our county parks needs to be addressed.

I support a modified Alternative A (the "No Action alternative") that codifies the 1979 Pet Policy as it was originally written, and that includes off- and on-leash access on GGNRA lands in San Mateo and on new lands that become part of the GGNRA, especially those areas in both that have traditionally had dog walking.

Sincerely,

Christopher Faust San Francisco, CA 94131

Correspondence: I am a San Francisco resident and daily off-leash dog walker at Ft. Funston or Crissy Field. As a child I played with our dogs on the sand dunes at Funston. We had secret forts and playhouses in the trees. Now as I walk past the fallen fences or barriers I wonder what is the point of keeping kids and dogs from this natural playground. A shrinking population of snowy plovers is sad. Keeping dogs and taxpaying residents from off-leash recreation in a recreation area is sadder. My dogs have never been interested in birds unless made of latex. This is a free way for many to exercise and admire the scenery and flora. I have seen our accessible area shrink constantly and I have little faith that the common good is being served. My mother's favorite walk on the Sunset Trail at Funston, was eliminated as it was not kept walkable and now is barely a path. I would remind the GGNRA this is an URBAN park-not a shrine. Let it be used as it was intended in the transfer during the 70's-a place to recreate. People from all walks of life enjoy these areas with their dogs. Exercised dogs are responsibly cared for dogs. Let the restrictions stop!

Correspondence: Dear GGNRA,

I am writing to enthusiastically support leash restrictions on Alta Trail from Marin City to Oakwood Valley Trail.

As someone who lives near the entrance to Alta, my family and I are always surrounded by dogs off-leash as we try to walk or jog along the trail.

The trail is often used by 'professional' dog-walkers, who take many off-leash dogs of various sizes on the trail, without any voice control. Many of these dogs are intimidating types of dogs.

I was recently bitten on the thigh while jogging near the entrance to Alta Trail by an off-leash dog, and to this day, I am nervous around any dog-large or small.

It has gotten to the point where my wife will not walk on the trail by herself, even armed with pepper spray. And our 9-year-old boy, who actually likes dogs, will not leave my side while walking the trails.

One of our concerns is that from the end of Donahue to the trailhead, there seems to be no rules at all about off-leash dogs, even though it is "private" land. We would like to encourage more enforcement of the leash laws on the trail from the parking area to the trailhead.

Thank you for your help. Sincerely,

David Swope Jennifer Diessel Ethan Swope

Correspondence: I walk my dog every day at Crissy Field or Fort Funston. My infant son accompanies us. We are members of the Sierra Club, Wilderness Society and Greenbelt Alliance. We love the outdoors, the beach and fresh air. I have lived here my whole life and am dismayed at the restrictions and reduction

of usable space at these two sites. Off leash dogs are a happy part of my life and my family's. My young nieces and nephews are delighted when they accompany us on our walks as they do not have pets. Explaining the park's plan to further restrict dogs confounded the kids this weekend. If it weren't for coming to off-leash areas they would not be socialized to dogs, being city kids. Given our climate-it is mostly just the dog owners out walking at the beach on our stormy and foggy days. No more restrictions!

Correspondence: Frank Dean, General Superintendent

Golden Gate National Recreation Area

Fort Mason, Building 201

San Francisco, CA 94123-0022

Dear Mr. Dean,

This letter is in regards to the GGNRA dog management "preferred alternatives". As a responsible dog owner and on-leash proponent, I was shocked to learn that the "preferred alternatives" to GGNRA land would drastically limit on leash dog access.

Personally, our dog is part of our family and banning us from enjoying our tax paid rights, not only makes me angry but makes me want to move. I was just visiting Orange County, California and in particular, Laguna Beach. They are a very dog friendly community with hiking trails and beach access for on leash dogs.

Statistically in San Francisco, there are more dogs than children. (SF Animal Care and Control dog numbers from 2010-120,000 dogs versus US Census 2009-114,000 children.) Since our tax dollars pay for your

management, you must consider your constituency.

With regards to the Environmental impact, please consider that all lands in the SF Bay Area cannot be managed like the enormous and secluded lands of National Parks, ie. Yosemite. Otherwise, wildlife such as bears and mountain lions should be able to roam freely into our cities without consequence. Our urban park lands are different and need to be managed differently.

I believe the following needs to be addressed and made public:

-Thorough scientific evidence that On leash dogs disturb wildlife and the environment more than people.

-A proposal to strictly enforce on leash dogs and heavily fine off leash dog owners. These funds could be used to create an off-leash dog area or help mitigate the tax shortfall of Park lands in California.

Please do not ban on leash dogs.

Thank you, Lorrie Pendleton Pacifica, California

Correspondence: Dear Superintendent Dean:

My best friend died suddenly this week, and I am writing on his behalf, too, because this issue is so important. He loved seeing the dogs frolic on Crissy Field beach and went with me several times to Fort Funston. I don't agree with the GGNRA's draft dog proposal. It strikes me as a solution in search of a problem. What prompted the commission of the EIR?

GGNRA is supposed to be for all of us to enjoy. Almost 40% of all households own at least one dog, and almost 70% of all homeowners own at least one dog.* It is disingenuous to make it is dogs vs. people or dogs vs. birds. This is about people who wants to enjoy the parkland and beaches we pay a lot of money to support and exercise our dog at the same time. A dog doesn't care where he is, just who he's with. So this is about me, the human. Dogs off-leash are more comfortable for me because my hands are free. I've got a bit of arthritis in my hands now, so holding onto a leash for a long time is hard. Dogs are easier to handle, surprisingly, because they are friendlier towards other dogs they run into. They get more exercise without us to slow

them down.

I have lived in Marin since 1960. My father was instrumental in conceiving of and obtaining the first railroad rightaway for the bicycle paths, he was on the first BCDC (with Senator Feinstein), and is currently on the board of Audubon. I explain this to show our family has always had strong environmental appreciation/preservation beliefs.

I asked my dad how he thought dogs could harm the environment differently than other animals to warrant a special ban. He couldn't think of anything! We talked about ground-nesting birds, yet raccoons, coyotes, and humans are just as dangerous-more so for the first two-to the birds. All of the animals poop; only the dogs' are picked up and removed. The birds don't appear to be scared of or by dogs. If you ever watch a dog swimming or running towards one, they wait until the last minute before moving, and then only move a short distance away. The birds appear as if they're teasing the dogs, frankly.

Of all the animals allowed on GGNRA land-mountain lions, deer, raccoons, coyotes, rabbits, snakes, wild boar-will any of them: - Sacrifice their life to protect a human? - Help soldiers during wartime? - Help the Navy Seals capture Osama bin Laden? - Lead the blind? - "Hear" for the deaf? - Assist the physically disabled? - Capture criminals? - Stay with a toddler overnight until help comes rather than run home? - Jump through a car window, then lean back in to pull the baby out of a burning car rather than just run away? - love unconditionally, caring not whether I am rich, poor, fat, thin, pretty or plain, have a big house, or a fancy car?

No. So why are dogs the one species GGNRA wants to ban?!! There's no scientific evidence for this proposal.

Danger? No dog is born dangerous to humans; they can only be trained or mistreated into being so. It's extraordinarily rare when compared to the danger of humans to each other. I would never dream of going out on a hillside trail alone without my dog because I'd worry about the male humans hurting me, not a dog. Statistically, the odds are phenomenally greater that another person, not a dog, hurts a person. I'll never forget the Trailside Killer in Marin.

I cannot speak to all the areas encompassed by this proposal, only Crissy Field and Fort Funston. They both have separate areas already. Crissy Field has a long paved walkway for people to go on where dogs are on leash. I very rarely see people without dogs on the beach unless they're going out on the water to windsurf. It is usually very windy and cold there by the waterfront.

At Funston, the area is somewhat dangerous because of the cliffs; the beach is very hard and steep to get to and virtually deserted. The parasailers take off in a different area. Literally, everyone on the "dog side" is there with a dog. We have an entire coastline of beach access that is far easier to use where "dogless" folks go. The reason people started using Funston with their dogs is because it was deserted and rather undesirable as beaches go.

Please look into this for us and stop more regulations/rules being imposed on us. Thank you.

*as of 2009, per Humane Society of the United States.

Correspondence: [Please note that this is an electronic submission of a letter postmarked 5/28/11 mailed to Sup. Dean regarding the plan with the official comments of the Golden Gate Audubon Society. This will be submitted in two sections because the comments exceed the 10,000 word limit]

Dear Superintendent Dean:

Thank you for the opportunity to submit comments to the Draft Dog Management Plan / Environmental Impact Statement ("Draft Plan" and "DEIS", respectively) released on January 14, 2011. These comments are submitted by the Golden Gate Audubon Society ("GGAS") on behalf of its approximately 10,000 members and supporters in the San Francisco Bay Area who use and enjoy the Golden Gate National Recreation Area ("GGNRA") and are concerned about the continuing impacts of dog-related recreation on the natural and historical resources of the park.

There is no doubt that the National Park Service ("NPS") must enact new regulations to manage dogs and dog-related recreation in the GGNRA. All national parks are national treasures, intended to be used and enjoyed by all visitors, but only to the extent that their natural and cultural values are not permanently impaired. (NPS Organic Act) The GGNRA is a particular treasure, given that it is was created to serve urban residents, many of whom lack the opportunity to travel to more "wild" areas like Yosemite or Yellowstone. Moreover, the GGNRA is home to more endangered species than Yosemite, Sequoia, Death Valley and Kings Canyon National Parks combined, and one of the highest concentrations of sensitive species in the U.S. NPS has attempted to implement the 1979 Pet Policy with education, signage and enforcement, but its efforts have failed. Non-compliance with existing regulations is extremely high and the number of park users,

including those bringing dogs, is growing, resulting in greater impacts and more conflicts. The 1979 Pet Policy is both unsustainable and illegal.

Under the Preferred Alternative, the Draft Plan constitutes the largest accommodation of dogs into any national park in the country. This will undoubtedly result in significant, long term impacts on park resources and other park users. Indeed, 36 C.F.R. ' 7.97, which prohibits unleashed dogs in National Parks and restricts leashed dogs to only a few paved areas, was created because NPS recognized that dogs pose risks to park resources, visitors and employees. The wisdom behind 36 C.F.R. ' 7.97 has been supported again and again by an abundance of scientific studies and incident reports, which demonstrate that insufficient dog management in natural areas results in significant negative impacts on the wildlife, plants, and habitats, ,5 a diminished the park experience for other park users and risks for park employees, and the exposure to risks of attacks and other hazards for dogs.

GGAS is sensitive to the needs and concerns of dog owners and believes that effective dog management can be implemented in the GGNRA without impinging on the socialization or health of dogs in the Bay Area. We are also aware that many dog owners are responsible guardians and that they keep their dogs on leashes when required and pick up after them. Given that the City of San Francisco has more off-leash dog recreation areas than any other city in the United States and given that the GGNRA will continue to welcome dogs into large tracts of its land in San Francisco, we are confident that responsible dog owners will have ample opportunities to recreate with, exercise and socialize their dogs.

GGAS appreciates the effort put into the documents by the National Park Service staff and members of the community that participated in the negotiated rulemaking effort. While we continue to have substantive concerns about the Draft Plan and the DEIS, we believe the document represents a significant step in the right direction to protect the GGNRA's resources for perpetuity.

Our comments begin by addressing overarching concerns with the Draft Plan and DEIS, including:

- 1) All regulated off-leash areas ("ROLA") must be enclosed. If enclosures are inappropriate in a given area due to biological, cultural, aesthetic or physical limitations in an areas, then it should not be designated as a ROLA;
- 2) The GGNRA should provide more opportunities for visitors to hike in the GGNRA in San Francisco without interacting with dogs. Currently, the Preferred Alternative provides for only a single trail where visitors, including those with small children, may go without being forced to interact with dogs. This is not fair to community members that have a right to enjoy

the park without fear or discomfort due to the presence of dogs. 3) The Park Service should not permit commercial dog walking within the GGNRA. The Park Service may only permit commercial activities that further the park visitors' experiences. Commercial dog walking does not further any person's park experience. 4) The 75% compliance-based management threshold is too low. The very low threshold for compliance, essentially, a "C" grade, perpetuates the culture of non-compliance that has persisted in the GGNRA and resulted in the current and ongoing impacts to the park resources and visitors. Dog owners are more likely to comply with new regulations if a culture of compliance is developed by requiring a higher level of compliance. Moreover, allowing at least 25% non-compliance will result in continued negative impacts to park resources. 5) The DEIS fails to establish that "voice control" is a valid method of controlling off-leash dogs. As demonstrated in the Criminal Incident Reports produced by the Park Service's rangers, dogs that are ostensibly under "voice control" do not respond accordingly. GGAS is unconvinced that this is a valid means for protecting park users, wildlife, habitats and other dogs. [picture omitted]

Our comments next address the Preferred Alternative and potential variants in San Francisco County. In general, we endorse Alternative D, which is the most environmentally-protective alternative, with the caveat that all ROLAs should be fully enclosed. We have deviated from Alternative D for specific areas in San Francisco where we believe dog-related recreation may be less harmful to the park experience and resources in the hope that a reasonable compromise may develop in the final plan.

While many of our general concerns reach to the Draft Plan as proposed for the whole park, we have restricted our site-specific comments to areas in San Francisco. While our members have concerns about the alternatives and their elements in Marin and San Mateo Counties, we defer to the Marin Audubon Society and the Sequoia Audubon Society, respectively, based on their local expertise and representation of local community members. We join in and support the comments submitted by both groups, as well as comments provided by the San Francisco Bay chapter of the Sierra Club, Nature in the City, the California Native Plant Society, and the Wild Equity Institute.

I. GENERAL CONCERNS

A. The DEIS Should Better Document the Impacts Dogs Have on Native Wildlife, Plants, and Habitats and on Other Park Users.

While the DEIS clearly states that dogs have negative impacts on native wildlife, plants, habitats and on other park users, the Park Service failed to include an adequate and comprehensive reflection of the overwhelming body of evidence demonstrating these impacts.^{1,2,3,5} Frankly, had the Park

Service included a more comprehensive review of the reports and studies documenting the effects of dogs on biological resources, some of the speculation, rumors, and misinformation that arose regarding the DEIS could have been avoided. Perhaps more importantly, local elected officials would have had a better understanding of the need for effective dog management in the GGNRA to protect local citizens, and natural values and better decisions regarding support or opposition for the plan could have been made.

To remedy this deficiency in the DEIS, the Park Service should revise the portions of the DEIS that discuss these impacts to better demonstrate the significant and overwhelming evidence on this point and include citations to all available reports, studies and data on the topic in a comprehensive bibliography. As currently written, the language appears to provide conclusions without support. Specifically, Chapter 1 of the DEIS includes sections on the "Impacts of Dogs on Natural and Cultural Resources in the Park" and "Visitor Use and Experience", but both sections are very sparsely supported by citations to relevant studies, including studies provided by the public during the scoping period. (See DEIS at pp. 13-20)

The DEIS would be greatly improved if the Park Service conducted a year-by-year review of all reports of dogs interacting with wildlife, including all Criminal Incident Reports produced by Park Service rangers. The very brief review provided on page 19 of the DEIS is insufficient given the long history of noncompliance and other problems related to accommodating dogs in the GGNRA. A review of Criminal Incident Records for 2008 reveals almost 900 pages of reports of incidences involving dogs in the GGNRA, many of which involve (1) dogs chasing and harassing wildlife,¹ (2) dogs chasing and harassing park visitors and users,² and (3) dogs attacking and injuring other dogs.³

The DEIS would also be greatly improved if it provided a better explanation of why some park users are uncomfortable around dogs and clearly established that all park users have a right to use the park without fear of attack or harassment from other park visitors, including dogs or dog owners. The public discourse regarding the proposed Dog Management Plan has suffered because the DEIS does not reflect the reality that (1) dogs do attack and harass park visitors on a regular basis and (2) that some park users are justifiably concerned about unwanted interactions with dogs. Many parents of small children, community members with disabilities, and the elderly are all groups that are justifiably concerned about unwanted interactions with dogs. Concern for these user groups has largely been ignored in the public discussion of this issue.

B. All Regulated Off-leash Areas Must Be Enclosed. The Preferred Alternative of the DEIS proposed five "Regulated Off-leash Areas"

("ROLAs") in the GGNRA in San Francisco. Any ROLAs that are established must be fully enclosed. GGAS urges the Park Service to adopt a philosophy of enclosing practices that pose risks to the national park, rather than fencing off the other resources of the park, as if it were a zoo rather than a National Park.

Even the off-leash advocacy group SFDOG has endorsed the creation of barriers to "prevent potential conflicts between dogs, vehicles, organized sporting events, and other park users. Barriers must also be present to protect dogs from steep cliffs or other natural hazards." (Ewing, John. 1999. Managing Off-leash Recreation in Urban Parks. SFDOG. Available at http://www.sfdog.org/do/olrm_scan.pdf). Indeed, the establishment of an enclosed ROLA was the only productive outcome of the Negotiated Rulemaking effort. GGAS cannot understand why the Park Service elected to ignore the only point of consensus to come out of the Negotiated Rulemaking process in choosing to not enclose ROLAs.

A lack of fencing or physical containment will diminish the ability to achieve compliance with the leash rule in the surrounding areas without considerable oversight from law enforcement. Currently, there is a great deal of confusion over where dog owners may take their dogs either on- or off-leash within the GGNRA. By failure to clearly demarcate where off-leash activity will be allowed, the GGNRA will perpetuate some of that confusion resulting in the need for continuous education and enforcement efforts.

Fencing or similar physical containment will definitively delineate the ROLA boundaries and effectively eliminate the potential for off-leash dogs to conflict with park visitors and wildlife. The borders of the ROLAs must be clearly defined in a manner that will easily communicate the boundary lines to all park visitors. Well defined off-leash areas provide dog owners with greater certainty as to where on- and off-leash dog activities are appropriate. Moreover, visitors to the GGNRA should have a choice whether or not to interact with off-leash dogs. Many visitors who would prefer not to interact with dogs at all in a national park are, for the most part, forced to accept that inevitability, even under the Preferred Alternative. However, because of the wide range of problems that arise with off-leash dog activity, including unwanted advances by dogs and, possibly, threats or attacks, visitors should be given the option to "opt-out" of interacting with off-leash dogs. A fenced boundary would give all visitors ample notice before entering an off-leash area. It appears that the Park Service rejected requiring enclosures because of concerns regarding impacts to biological or aesthetic resources. However, the DEIS is woefully incomplete in its analysis of the kinds of enclosures that could be used to establish ROLAs. Fences need not be large or impermeable structures. For example, a "post-and-cable" fence would provide a well-defined boundary for dog owners

and other park visitors without creating a barrier that results in impacts to biological resources or aesthetic values. Other, more creative options are available, such as vegetation-based barriers that create habitat, keep with the park's natural aesthetic, and provide the clear boundaries that provide for a safer, better regulated park.

An area should only be considered as a possible ROLA if it can be fully enclosed or otherwise made physically distinct from other portions of the park. If it cannot be enclosed, the area should be considered for another alternative use (on-leash only or no-dog). The Park Service is under no requirement to provide ROLAs. Moreover, dog owners in San Francisco have again and again demonstrated an unwillingness to comply with rules in areas that were not well-defined. Enclosures are necessary to provide dog owners with sufficient warning about where on- and off-leash recreation is appropriate and to provide other park visitors with the assurances and safety they deserve when visiting a park.

GGAS provides more specific comments regarding ROLAs proposed in San Francisco in Section III below. C. The GGNRA Should Not Permit Dog Walkers to Have More than Three Dogs per Person and Commercial Dog-walking Is Not an Appropriate Activity in the GGNRA.

The DEIS indicates that commercial dog walking would be allowed under alternatives B, C and E. (DEIS, at 63) The allowance for commercial dog walking would come through a special permit allowing any person to bring up to six dogs into the park. First, we do not believe that allowing any person to bring more than three dogs into the park at one time is advisable, regardless of whether they are a commercial dog walker. In any event, it is our belief that commercial dog walking is currently not legal within the GGNRA and furthermore, does not meet the National Park Service criteria for permitting.

Currently, dog management guidelines for the GGNRA are set forth by the 1979 Pet Policy which the DEIS identifies as Alternative A. The 1979 policy provides guidelines for dogs to be within the GGNRA under the supervision of their owners and makes no reference to commercial dog walking. However, commercial dog walking within the GGNRA occurs on a daily basis, and though no permitting process has been established, it is tolerated by the Park Service. This commercial activity has significant negative impacts on the park and is in violation of 36 CFR ' 5.3 which stipulates that non-permitted commercial activity is prohibited on National Park lands.

[picture and caption omitted]

The DEIS states that the National Park Omnibus Management Act of 1998

provides guidance for the issuance of commercial use authorizations and concession contracts. (DEIS, at 39) Title IV Sec. 418 of this act specifies that authorization shall only be granted to commercial ventures that "provide services to visitors to units of the National Park System." Commercial dog walking services do not provide any services for park visitors. Their activities are more closely analogous to timber extraction or mining-essentially, a commercial venture profiting from using (and creating impacts on) park resources. Therefore, the activity does not qualify for authorization and should not be allowed under any alternatives of the DEIS.

GGAS understands that this is an extremely controversial position and that it may seem unfair to many commercial dog walkers that comply with leash requirements, pick up after their charges, and maintain control over their dogs at all times. However, we have seen commercial dog walkers again and again unload very large numbers of dogs at Ft. Funston and in other parts of the GGNRA and essentially letting the dogs roam uncontrolled. These activities seem only to be growing. Not only do these activities result in significant negative impacts on the park, they perpetuate the culture of non-compliance that leads other, more responsible dog owners to conclude that the regulations are not applicable, or at least enforced.

D. The Draft Plan Does Not Include Adequate Enforcement Mechanisms to Ensure Compliance with New Rules.

Even under the extremely lax 1979 Pet Policy, compliance with leash requirements in the GGNRA has been extremely poor. The failure of the Park Service to regulate its lands mirrors the "culture of non-compliance" that permeates in the City of San Francisco, where city officials have acknowledged that many dog owners fail to comply with leash and pet waste requirements.

Non-compliance with leash requirements is the status quo in the GGNRA, particularly at Ocean Beach and at Crissy Field. Volunteers monitored snowy plovers within the Crissy Field Wildlife Protection Area ("WPA") during the 2006/2007, 2007/2008, 2008/2009 and 2009/2010 snowy plover "wintering" seasons (July through March). In addition to counting all snowy plovers, observers recorded incidences of humans and dogs within the WPA and noted whether disturbances to the snowy plovers or other wildlife occurred.

During the 2006/2007 season, compliance with the leash requirement in the WPA was approximately 29%. During the 2007/2008 season, compliance fell to approximately 27%. Compliance improved to approximately 34% during the 2008/2009 and 2009/2010 seasons. Anecdotal evidence indicates that the non-compliance rate is even higher on Ocean Beach despite the significantly larger population of threatened snowy plovers and other

shorebirds that depend on the beach there.

[Data figure and caption omitted]

Golden Gate Audubon understands that NPS rangers have a wide range of responsibilities and that they are understaffed. However, by failing to police dog walkers within the GGNRA, NPS has contributed to the permanent impairment of the natural resources there. Moreover, it has created a sense of lawlessness and entitlement within the community that promotes even greater non-compliance.

The Draft Plan and DEIS would be greatly improved if it included more specific information about the extent of non-compliance in the GGNRA and in San Francisco. Data on non-compliance with leash (and other pet control) requirements in San Francisco is relevant to the analysis in the DEIS because it demonstrates the culture of non-compliance that exists in San Francisco.

Finally, compliance oversight should be required for as long as dogs are allowed within the GGNRA. We are concerned that the compliance oversight may be of limited duration and that once it is complete, non-compliance will likely escalate (especially if enforcement remains at historic levels). The compliance program should be considered as a cost of allowing dogs in the GGNRA in perpetuity.

Correspondence: [This is the second of two submissions and contains pages 11-19 of the GGAS comment letter postmarked on 5/28/11].

E. The Draft Plan Fails to Provide Adequate Opportunities for Dog-free Recreation on Trails in San Francisco.

Under the Preferred Alternative, dogs will be allowed on-leash on all but one trail in the GGNRA in San Francisco. Therefore, visitors to the park who would prefer not to interact with dogs will be restricted to a single trail. In short, the Park Service's overly generous effort to accommodate dog owners means that other users must endure a large number of dogs throughout the GGNRA in San Francisco or simply not visit the park.

The DEIS does not include adequate consideration of users that are less likely to use the park or have their park experiences diminished because of the presence of dogs. GGAS believes that a better study of the impacts of

dogs on other park users and potential users would improve the Draft Plan and DEIS and should be conducted and incorporated before the FEIS is produced.

F. The DEIS Does Not Establish that "Voice Control" Is a Valid Method for Controlling Off-leash Dogs in the GGNRA.

Many of the Alternatives, including the Preferred Alternative, rely on "voice control" a means for controlling off-leash dogs. While the DEIS provides a somewhat broad definition of "voice control", it provides no basis or evidence that demonstrates that visitors to the park (or their dogs) have adequate training and discipline for "voice control" to work.

Again, a review of the Criminal Incident Records is informative on this topic. Several Criminal Incident Reports from 2008 demonstrate that again and again, dog owners who let their dog off-leash in the GGNRA cannot control their dogs merely by vocal commands.

Moreover, the DEIS and Draft Plan are fatally flawed by determining that a dog is under "voice control" merely because it comes when called by the owner under casual or non-emergency situations. True "voice control" would require that a dog responds to vocal controls when excited or under duress. For example, a dog would stop when commanded when chasing wildlife, charging a park visitor, or attacking a dog.

The only way to ensure that dog owners visiting the park have the ability to vocally command their dogs is to require permits prior to entering the park. Each dog owner would be required to pass a test ensuring that they can verbally control their dogs to prevent illegal harassment of wildlife, trampling of native plants, or assaults on other park visitors or dogs. In the absence of a license or permit system for dog owners, the Park Service has no way of ensuring that a real "voice control" system will be in place in the ROLAs. At a minimum, the Park Service must acknowledge the limitations of relying on voice control in the FEIS and final plan.

Finally, the lack of true voice control by most dog owners in the GGNRA bolsters the arguments that:

- 1) all ROLAs should be enclosed to reduce opportunities for uncontrolled dogs to interact with other park visitors and wildlife;
- 2) park visitors should be restricted to no more than 3 dogs per person because it is highly unlikely that even a well-trained dog walker can keep voice control over more than 3 dogs at a time; and
- 3) the 75% compliance requirement set by the Park Service is too low, because that means approximately 25% (or more) off-leash dogs not on voice control will be tolerated in the park, resulting in ongoing impacts to other park visitors, dogs (especially dogs on leash), and

wildlife.

G. The DEIS Fails to Address Impacts to Other National Parks as a Result of the Preferred Alternative. Through the Draft Plan and the Preferred Alternative, the National Park Service is proposing for the first time to accommodate dogs off-leash throughout large portions of a national park unit. The DEIS does not adequately address the impacts to other National Park units. As a conservation organization, Golden Gate Audubon sympathizes with the mission and values of the National Park Service particularly toward protection and preservation of natural resources. As such, we believe that the best protections for natural resources would be to have park rules that are consistent with those of the nationwide system of National Parks.

We are very concerned about the public perception of national park values and the beliefs and behaviors that park visitors will take with them to other units of the National Park System. In recent years, GGAS members have observed an increasing level of on-leash and off-leash dogs on (and off) the trails of other National Parks including Lassen Volcanic National Park and Yosemite National Park. We believe that lax policies of the GGNRA could be contributing to public misperception of the standard nationwide rules pertaining to pets in our National Parks. We also believe that the Park Service has public educational responsibilities to instill park values and proper behavioral practices into the public mindset.

The DEIS should address the public perceptions of National Park values and the potential impacts of the dog management alternatives to the rest of the National Park System.

H. The DEIS Does Not Adequately Explain How or Why the Park Service is Allowing the Continued "Take" of Endangered Species and Other Protected Species by Dog Owners without Permits.

The DEIS acknowledges that harassment of snowy plovers by people or their dogs constitutes a violation of the federal Endangered Species Act, 16 U.S.C. " 1361 et seq. (See DEIS at 1240 ("Chasing of plovers clearly meets the definition of harassment and take under the ESA of 1973")) The DEIS also acknowledges that harassment of wintering birds may have negative impacts on the overall population of the species and individual survivorship and fecundity. (Id., citing USFWS. 2007. Recovery Plan for the Pacific Coast Population of the Western Snowy Plover, at 65).

The Park Service is a federal agency with responsibility for stewardship over these threatened species and many other species covered by the Endangered Species Act, the Migratory Bird Treat Act, and other applicable laws on park lands. Yet, the Park Service has never explained the legal basis

for permitting the ongoing harassment and harm to the snowy plover at Crissy Field and Ocean Beach. Specifically, the DEIS does not explain how the Park Service can knowingly allow dog owners to persistently and perpetually "take" snowy plovers in the GGNRA through harassment.

For example, the DEIS lists several of the impacts that dogs have on snowy plovers. (DEIS at 1240). However, the DEIS never explains why these disturbances do not constitute a "take" of snowy plovers under the ESA. Nor does the DEIS explain why the Park Service can perpetuate these illegal takings through the new Dog Management Rule.

IV. SITE-SPECIFIC COMMENTS ON THE PREFERRED ALTERNATIVES FOR SITES WITHIN SAN FRANCISCO COUNTY.

Unless otherwise specified, GGAS endorses Alternative D for sites in San Francisco. We defer to comments provided by the Marin Audubon Society and the Sequoia Audubon Society for recommendations in Marin and San Mateo Counties, respectively. Site-specific recommendations for GGNRA areas in San Francisco are provided below.

A. Fort Mason

Golden Gate Audubon supports the Preferred Alternative (Alternative C). This will leave the vast majority of Ft. Mason open to the current on-leash use. We note, however, that while under the current rule Ft. Mason is supposed to be an on-leash dog area, it is effectively an off-leash area due to lack of enforcement.

B. Crissy Field

Crissy Field has been one of the most controversial areas for dog management. It is a very active spot for local visitors and tourists. It is also an important wildlife area, adjacent to the Bay, the Pacific Ocean, and some of the largest woodland and coastal scrub habitat remaining in San Francisco. The DEIS should include a statement that wildlife viewing is an important activity at Crissy Field and that it should be considered in any decision about how dogs will be accommodated. The Park Service must consider all these values-not just the demands of dog owners-in deciding how to regulate dogs in the area.

Except as discussed below, GGAS endorses Alternative D for Crissy Field. Specifically, GGAS believes that any ROLA established at Crissy Field must be fully enclosed (see Section I.B above).

1. The DEIS underestimates impacts to snowy plovers from the Preferred

Alternative.

The DEIS does not fully describe the significance of the existence of snowy plovers in the Crissy Field area. The following information should be considered:

1) The DEIS states that there is no record of snowy plovers nesting within the GGNRA. However, there are records of bird and egg specimens collected during nesting season. (See Grinnell, J. 1932 and Smithsonian Institution collection data).

2) The DEIS states that snowy plovers have consistently overwintered at Crissy Field since 2005. However, there are no data to suggest that snowy plovers have not been overwintering there prior to 2005.

3) The USFWS Recovery Plan for the Pacific Coast Population of the Western Snowy Plover has identified Crissy Field as an expansion site for snowy plovers. (USFWS (2007), at 43-44, 140-141)

4) The Snowy Plover has cultural significance at Crissy Field. The Presidio of San Francisco is the Type Locality of the Snowy Plover, collected by Lt. William Trowbridge (Army Corps of Engineers, U.S. Coastal Survey), on May 8, 1854 (Grinnell, 1932)

2. The DEIS should estimate impacts under the Preferred Alternative under a scenario where dog owners continue to fail to comply with regulations.

The DEIS' endorses the Preferred Alternative by concluding that it would have "minor adverse impacts" and "overall negligible impacts" assuming compliance with leash requirements. (DEIS, at 1244-1245) Crissy Field has suffered due to dog owners' unwillingness to comply with leash requirements, even in the Wildlife Protection Area (WPA). (See, e.g. DEIS at 1241 ("Despite education and enforcement efforts, compliance with the special regulation establishing the seasonal leash restriction remains extremely low")) The DEIS should at least consider the possibility (which history indicates is likely) that compliance with leash requirements will not be achieved.

Moreover, given that under the Preferred Alternative the WPA would be closed to dogs, the Park Service has no method for further protecting the site if dog owners refuse to comply with the regulations there. It is impractical to assume that park rangers will be able to patrol the WPA adequately to ensure full compliance with the new rules.

The Preferred Alternative would permit at least 25% of dog owners to continue to fail to comply with the new regulations. The DEIS does not

discuss whether this potentially large number of non-compliant dog owners and dogs will have significant negative impacts on the wildlife, habitat, and other visitors in the area.

2. The Crissy Field Wildlife Protection Area should be off-limits to dogs. GGAS endorses the Preferred Alternative to the extent that it would disallow dogs in the WPA at all times. We do, however, have concerns about the placement of the east boundary fence. The DEIS states that the east boundary fence will be relocated 200 feet eastward at a position 900 feet from the NOAA pier. (DEIS at 60) We believe that the determination of fence placement should have more flexible parameters and that careful consideration should be given to the visual penetration effect and to the geographical conditions of the immediate area. Under the preferred alternative, off-leash dog activity directly adjacent to the east boundary fence will pose a visual threat that will penetrate into the WPA, effectively rendering a portion of the eastern WPA as non-viable habitat during daytime use hours. Given this concern, the fence should be placed a reasonable distance eastward, beyond the actual 900 foot border line, to allow for an adequate buffer zone. Additionally, the geography of the area of fence placement is somewhat complicated by non-uniform conditions which include a variety of substrates, varying elevations, several lobes of fenced dune habitat areas, and a variety of pedestrian pathways. Consideration should be given to all of these conditions and fence placement should be such that it will accommodate ease of pedestrian traffic flow while maintaining adequate protection of the WPA.

3. GGAS endorses the Preferred Alternative for the Promenade (East Beach to the Warming Hut)

The paved trail along the promenade is an appropriate place for on-leash dog activities at Crissy Field. GGAS remains concerned about undesired human-dog interactions, especially for joggers and disabled visitors and those with small children, but believes that with proper education and enforcement of leash requirements, the area can successfully accommodate leashed dogs.

4. Any ROLA on the Airfield must be fully enclosed.

The Crissy Airfield, a mix of native and non-native plant species, is the largest expanse of grassland on GGNRA lands in San Francisco. The airfield is an important area for birds and other wildlife and is used by park visitors for its wildlife viewing opportunities. In recent years, observers have recorded more than forty species of birds using the field, including rare, vagrant species such as Cattle Egret, Red-throated Pipit and Lapland Longspur. The continued use of the Airfield as an off-leash area constitutes

an impairment to the natural resources in the area.

However GGAS understands that the Draft Plan and DEIS represents an attempt to balance the competing interests of many groups. Therefore, Golden Gate Audubon does not oppose the creation of a ROLA in the Airfield, but only if the ROLA is full enclosed. Moreover, any enclosure must allow for other park visitors to cross the Airfield without being forced to interact with dogs. We believe it is possible to design the ROLA to be enclosed with post-and-cable (or a similar apparatus to distinctively mark the area) that will not impair the biological or aesthetic value of the Airfield and be removable for special events.

5. GGAS opposes off-leash dog activities on the Central Beach and supports Alternative D to prohibit dogs.

GGAS opposes the Preferred Alternative, which could create a ROLA on Central Beach. All of the shoreline beaches at Crissy Field are suitable foraging and roosting habitat for Snowy Plovers and other shorebirds. The US Fish & Wildlife Service, in its Snowy Plover Recovery Plan (pp. 43/44), has identified Crissy Field as a potential expansion site for Snowy Plovers. (USFWS, Recovery Plan for the Western Snowy Plover, at 43-44). Given this anticipated increase in snowy plover population, using the Central Beach as a ROLA will create a high probability of future conflicting beach uses. There is no question that off-leash dogs have a substantial impact on the habitat and wildlife that use the beach.

Moreover, historical use at Central Beach has demonstrated that off-leash activities on Central Beach inevitably lead to off-leash dog disturbances within the WPA. Given that even within the WPA, dog owners have failed to comply with leash requirements almost 66% of the time, despite years of publicity, education, signage and a fence asking dog walkers to put their dogs on leash in the WPA. The DEIS does not contain any evidence that dog owners will start complying with the new regulations and respect the WPA.

Finally, to the extent that NPS ultimately elects to allow off-leash activities at Central Beach, Golden Gate Audubon recommends (1) that the off-leash area be enclosed by fencing to clearly demarcate the boundaries of the ROLA, (2) that the ROLA be decreased in size to provide adequate buffer zones in relation to the WPA to the west and to the lagoon inlet to the east, and (3) that the Park Service invest in significant education efforts, followed by rigorous enforcement to undo the culture of noncompliance that exists at Crissy Field.

6. GGAS endorses the Preferred Alternative for the trails and grassy areas

near East Beach.

GGAS endorses the Preferred Alternative to allow on-leash dog activity in these areas as indicated by Map 10P in the DEIS with one caveat: the fresh water swale just east of the lagoon should be identified on the map and marked as a "no dog" area.

C. Fort Point Promenade/Fort Point NHS Trails

GGAS endorses the Preferred Alternative as identified by Map 11P of the DEIS. We note some concern for permitting large number of dogs (more than 3) on the relatively narrow paths in this area and reiterate our position that dog walkers should be limited to a maximum of three dogs per person within the GGNRA.

D. Baker Beach and Bluffs to Golden Gate Bridge

Golden Gate Audubon believes that the Preferred Alternative for Baker Beach is not a workable plan. While we support the upland elements of the Preferred Alternative, we have two concerns regarding the beach element of the plan. Firstly, as an area of freshwater flow into the ocean, the mouth of Lobos Creek is a sensitive wildlife area and is the most attractive area of use for birds along this beach. As such, it should be off-limits to dogs and buffered from off-leash dog activity. Secondly, we believe that designating an imaginary line in the sand to distinguish a no-dog area from a leash-only area is not an adequate means of communicating the rule to park users and compliance will be problematic. We believe that the most effective and enforceable choice would be to designate Baker Beach as a no-dog area.

However, should NPS proceed with implementing the Preferred Alternative; Golden Gate Audubon strongly recommends that NPS alter the configuration of the planned leash-only area to adequately protect the Lobos Creek zone. The leash-only area to be shifted to the North Beach as identified on Map 12.

E. Fort Miley

Golden Gate Audubon endorses the Preferred Alternative.

F. Lands End

Golden Gate Audubon endorses the Preferred Alternative for Lands End.

G. Sutro Heights Park

Golden Gate Audubon endorses the Preferred Alternative for Sutro Heights

Park as illustrated by Map 14-P.

H. Ocean Beach

1. Dogs should be excluded from the Ocean Beach Snowy Plover Protection Area.

Golden Gate Audubon endorses the Preferred Alternative to exclude dogs from the Snowy Plover Protection Area (SPPA) and to allow dogs only on-leash on the promenade. We recommend that the designation of Snowy Plover Protection Area be changed to Shorebird (or Wildlife) Protection Area, a term which will more aptly describe the need for year-round protection.

2. GGAS does not endorse the creation of a ROLA north of Stairwell 21. Golden Gate Audubon does not endorse the Preferred Alternative and instead recommends that the GGNRA not allow dogs on Ocean Beach at all. Given historic noncompliance with leash and off-leash regulations and the continuing impact to birds and other natural resources on the beach, dog-related recreation is not an appropriate activity on any beach within the GGNRA.

GGAS acknowledges that given the extreme political pressures put on the Park Service, it is likely that it will elect to create the ROLA on Ocean Beach. Given that, GGAS strongly urges the Park Service to erect post and cable symbolic fencing with adequate signage along the south boundary of the ROLA from the seawall westward as far as is practical to ensure that dog owners and other visitors know they are entering a ROLA. GGAS also strongly encourages that the area be monitored by rangers given the high likelihood of continuing non-compliance with regulations in the area.

3. GGAS strongly supports the closure of Ocean Beach South of Sloat to dogs.

Golden Gate Audubon strongly supports the Preferred Alternative to exclude dogs along Ocean Beach south of Sloat Avenue.

I. The Preferred Alternative Would Fail to Protect the Natural and Aesthetic Resources at Ft. Funston.

1. GGAS opposes the Preferred Alternative to establish a ROLA south of the beach access at Ft. Funston.

Golden Gate Audubon strongly opposes the Preferred Alternative, which creates a ROLA south of the beach access. Given the historic noncompliance by dog owners at Ft. Funston and the sensitivity of the

habitat, Golden Gate Audubon has concluded that dog-related recreation on the Ft. Funston beach is not an appropriate use of the park land. Because dogs should not be accessing the beach at Ft. Funston, Golden Gate Audubon further recommends that NPS not allow dogs on the beach access trails. The presence of dogs on the beach at Ft. Funston will adversely impact shorebirds. Additionally, the presence of dogs on the beach at Ft. Funston will adversely impact park visitors, including equestrians, some of whom have suffered attacks from dogs when riding at or near Ft. Funston.

To the extent that NPS proceeds in allowing a ROLA at Ft. Funston, it must be fenced and fully marked to provide adequate notice to dog owners and other park users about where on- and off-leash dog activities are appropriate.

2. GGAS opposes permitting dog recreation south of the main parking lot.

Dog-related recreation on the Ft. Funston beach is not an appropriate use of that park land, there is no need for dogs to be on the beach access trails, especially Sand Ladder Trail. GGAS recommends that this area be designated as a "no-dog" area.

3. GGAS does not oppose the creation of a ROLA north of the main parking lot provided it is fully enclosed. Golden Gate Audubon will not oppose the establishment of a ROLA north of the main lot at Ft. Funston provided (1) that the ROLA is not established on sensitive habitat, (2) that the ROLA is fully enclosed by fencing, and (3) that the ROLA and surrounding areas are adequately patrolled and leash requirements are enforced.

V. CONCLUSION Thank you for your consideration of our comments. It is our hope that the FEIS will reflect a comprehensive analysis of the impacts that will occur under the selected alternatives and that active education and enforcement is part of ongoing management in the GGNRA for dogs. With a reasonable regulation and adequate enforcement, we believe the GGNRA can continue to accommodate dogs while protection the valuable natural and cultural resources that make the GGNRA an urban national treasure.

If you would like to discuss these issues further, please do not hesitate to contact me at mlynes@goldengateaudubon.org or at (510) 843-6551.

Thank you, Michael Lynes, Conservation Director

Correspondence: I am writing to share my comments regarding the Golden Gate National Recreation Area's (GGNRA's) draft dog management plan. I have resided in West Sharp Park area of Pacifica, in San Mateo County, since 1996. I frequently walk along the berm behind the Sharp Park Golf Course and traverse all paths leading to, in and beyond Mori Point. I also enjoy other GGNRA areas in Pacifica, including Milagra Ridge and Sweeney Ridge. While I am not a current dog owner, I support those that are, and believe that on leash and some off leash dog walking should be well incorporated into the GGNRA plans. Some comments below are general in nature while others are specific to the proposed alternatives for GGNRA areas that I regularly enjoy and utilize.

General Comments 1. The GGNRA has a recreation mandate. Though the National Park Service generally does not recognize the walking of dogs within park boundaries, GGNRA preserves space in an urban environment. A sustainable approach for city residents, surrounding neighbors and visitors to the bar area to recreate safely with their canine friends that can reduce vehicle miles travelled, and support the local economy, is one that offers on leash and some off leash activity at multiple locations at GGNRA sites. 2. The walking trails / paths where leashed dogs and owners are permitted to enjoy together should be as accessible and well laid out as those offered for the public without dogs. 3. Changes to any plans determined as part of the current process should also include public review and comment session, versus becoming park rule as a result of park restriction enforcement mandates.

Specific GGNRA sites: 4. MORI POINT ? I support Alternative A, No Action (in harmony with 1979 Pet Policy). I have walked all areas of Mori Point for almost 15 years. Never in that time have I been impacted in my enjoyment of the area by individuals with on leash dogs. Watching dogs enjoy the area along with their caretakers has increased my enjoyment of the area. (I do not support off leash dog walking along the more popular trails, as I have on occasion observed unleashed dogs running through the brush including areas that are sensitive to other wildlife.) 5. MILAGRA RIDGE ? I support Alternative E, Most Access ? Most Management Intensive. 6. SWEENEY RIDGE ? I support Alternative A, No Action (in harmony with 1979 Pet Policy). This area is relatively infrequently used. Even if usage were to increase, it does not require a change in Policy.

Thank you for considering my input in the final dog management plan.
Sincerely, Cindy Abbott Pacifica, CA 94044

Correspondence: As a 14 year resident of Sausalito who lives near the Alta trailhead - at the end of Donahue, I am tired of the many "professional" dog walkers who consistently violate the limits on number of dogs per person/walker, do NOT put them on leash or have them under voice control when I pass by, and often don't even see when one of the dogs is pooping because they have too many to watch at once, thus they don't consistently clean up after the dogs!

Unfortunately, the ones who violate the rules and behave as described above, outnumber the ones who actually take their responsibility seriously, comply with rules, and try to minimize their impact on the rest of the trail or fire road users, and the surrounding environment.

In addition, the impact to the surrounding land area is being affected because the off leash dogs DO run off the fire roads and trails across sensitive habitat areas, again, because often these dog walkers are not controlling them or keeping them nearby.

I would like to see ALL "professional" dog walkers with more than three (3) dogs per person be REQUIRED to have the dogs ON LEASH AT ALL TIMES when using the Alta Trail, Oakwood Valley Trail, connected fire roads, etc in this area; or BANNED COMPLETELY!

In general, many of the dog owners who are out with their one or two dogs, are more careful about cleaning up after their dogs, keeping them under control, and easy to co-exist with for those of us who walk here regularly.

Please fix this problem by restricting the professional dog walkers by banning them completely, or enforcing on leash requirements, for the rest of us to enjoy this high use area.

Correspondence: Please listen to the Supervisors and to the community. Do not take away off-leash rights that have been in place since the 1970's with everyone coexisting quite nicely. Think of the amount of complaints versus how many people and dogs use Crissy field and Fort Funston every day! Think of the impact on the city parks if all of those dogs converge on the city off-leash areas. Think of the costs of trying to enforce such a ban on thousands of people who believe it is their right to walk dogs off-leash in those designated areas! Don't make a problem where none exists!

Thanks.

Correspondence: Dear Mr. Dean, My name is Tim Arata and my wife and I are both dog owners and environmentalists. We support numerous causes around the world including The Heifer Foundation, Save the Manatees, and the Sierra Club. The organizations that we support sensibly take into consideration the interactions of humans, animals, and the environment we all share. We usually take our dogs to Fort Funston and Stern Grove. I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions. It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option.

I admit to being a little bit angered by the lack of common sense that the current proposal contains. Dog owners and their dogs have it in our best interest to support/maintain the lands in question. Any degradation of these lands works directly against our interest and that of the community. Also, the current proposal does not account for the potential danger of removing so much land for free use by dogs and their owners. If you cite danger to other non-owners as a reason for doing this, you're creating a much bigger problem than you're attempting to solved by drastically diminishing available open dog areas. Thus, more dogs in tinier locations. Your proposal is drastic to the point of being antagonistic: You're asking elderly or physically challenged folks who take their dogs to Fort Funston to descend huge sand stairs or a lengthy vertical beach approach to let their dogs off-leash? The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make

the plan work, not assume an adversarial relationship with failure the goal. The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents. After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program. Thank you for your consideration. Sincerely, Tim Arata (name) (address) San Francisco, 94132

Correspondence: Sweeney Ridge Alternative C is far too restrictive. I have respectfully used these trails for 11 years with my dogs and it is a wonderful, peaceful place to walk. The number of people that use the trails is small, especially Notch trail, which until 2011 was open to dogs on-leash. Notch trail and the paved path off Sneath Ave are so close to residents in the Skyline college area, which is why I used it so often over the years. It is a place I can easily get to after a hectic day at work to unwind, exercise with my dogs, and appreciate the beauty of the Bay Area. I feel the 'preferred alternative' unfairly excludes local residents with dogs. Please reconsider closing Sweeney Ridge to people enjoying an outing with their dogs.

Correspondence: To the Park Service:

I am concerned that the Park Service represents a ham-handed and insensitive presence in these important lands adjacent to densely-populated urban areas. Nothing riles people up like unfair and burdensome restrictions on dogs being dogs -- enjoying some fresh air and stretching their legs off-leash in the way that best promotes their health and well-being.

The Park Service may be pursuing laudable environmental goals, but alienating a large portion of the adjacent population by taking away the last

opportunity for their dogs to run around and have fun being dogs in natural areas is not a smart move.

Sorry. I say this as a life-long environmentalist. You need the support of the population to make these parks work. This is not the way to do it.

Correspondence: Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022 Dear Mr. Dean, I am writing to oppose the GGNRA's draft dog management plan. The DEIS is not based on fact; instead, it relies on speculations like "may" and "could" through out the document concerning justification for alternatives. It exaggerates number of dog incidents vs actual law enforcement data obtained through FOIA, and is full of misleading statements. It reaches conclusions that are not supported by either the science or the law. The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet

policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

The GGNRA has had the opportunity to make a Section 7 Special regulation to codify this form of recreation in the reg's. However, the GGNRA continues to spend millions of dollars to force an end to a recreational activity that generations of Bay Area residents and visitors have enjoyed. The GGNRA was given this land on the premise of maintaining needed recreation within this urban area. This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others. Under NEPA the DEIS has failed to address the human element.

As an avid hiker, environmentalist and user of the coastal recreation areas (namely Mori Point, Ft Funston, Ocean Beach, Milagra Ridge, Sweeney Ridge) I have witnessed use of these lands by a broad based multicultural group of people which encompasses all age groups. These people along with myself utilize this recreation area to enjoy nature, find solitude and escape into "our backyard" away from the dense urban areas that surround us.

There is very little area within the GGNRA that we can actually hike with our dogs and the DEIS alternatives attempt to strip this away further. The alternatives for San Mateo County areas and new and acquisitions are devastating to the residents and communities who currently utilize this space. Diffusion is the key to conservation and preservation not concentration into smaller and smaller areas. The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to: ? Honor the original 1979 Pet Policy. ? Respect dog-walking as legitimate recreation. ? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. ? Exclude speculative, exaggerated, biased, or misleading statements and studies. ? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). ? Enable professional dog walking and align any professional dog walking rules with county or city regulations. ? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input. The "confusion" concerning dog-walking areas within GGNRA lands is fostered by lack of good signage, public outreach and education by the GGNRA. The draconian "compliance-based management" needs to be removed altogether and GGNRA just needs to enforce the present rules. Better signage, use of

proven vegetative barrier methods are some of the simple and cost effective ways to end this "confusion."

The alternatives state that additional staff must be hired to enforce the "compliance-based management" plan. Why is this necessary? The GGNRA does not even enforce or educate the public about today's dog-walking rules. Punish the bad apples not the entire dog-walking community at large. I do pick-up after my dogs and I do pick up other stuff that humans leave behind, glass, trash, etc. My dogs are under voice control when in off leash areas. They are not allowed to dig or disturb wildlife. The same is true when we are walking or hiking on trails within on-leash areas.

I disagree with the proposed trail usage reductions under the preferred alternatives for Mori Pt, Milagra and Sweeney Ridge. The trails and paved areas at Milagra Ridge protect both plant and wildlife, there is no need to reduce trail access at all. The other areas can continue to support access to people with dogs without disturbing wildlife. The red-legged frog is nocturnal and is well hidden during the day. Field biologists have a difficult time locating unless there is a radio transmitter attached to the frog. The SF garter snake is also very elusive and stays well within cover. I think there is a slim to none chance that my dog "may" or "could" disturb one of these animals. They would be gone long before hand at first human disturbance. The scientific community at large acknowledges the most critical habitat for these animals in San Mateo County is located on privately held lands.

Fort Funston is far from being a pristine wilderness area. The community who uses this area day in and day out even during the bleakest, windiest, sand-blown days is the dog-walking community. It wasn't always a safe place to visit because of drug users and other nefarious individuals who would frequent Battery Davis and surrounding wooded areas. Single women or seniors did not dare ever go there alone. The safety at Fort Funston is due in large part to the tight knit community of dog walkers keeping an eye (for free!) on things.

I would not feel safe as a single woman walking without my companion dogs at Ft Funston, Mori Point, Milagra Ridge (emphasis added) or Sweeney Ridge (emphasis added).

I have had the pleasure to travel to and visit all National Parks in the Western United States (including Hawaii). The GGNRA is not a National Park by any comparison. It truly is an urban recreation area that borders several million inhabitants. By enjoining the dog-walking community of people who use and love these areas rather than alienating them the GGNRA can find a successful dog management plan. The DEIS in it's current state and planned alternatives are not one.

The public would best be served by institution of the 1979 Pet Policy to include new land acquisitions as the Section 7 Special Regulation for the GGNRA. Sincerely,

Cindy DelCorto

Correspondence: Dear Superintendent Dean,

I am writing to oppose the GGNRA's Draft Dog Management Plan because the Visitor Experience section of the Draft Plan focuses on park users who don't want to be around dogs, including minorities, seniors and children.

I myself as a member of the minorities who visit GGNRA lands 4 days a week do not see such phenomenon described in the Draft Plan. In fact, many of my fellow Asian friends, with or without dogs, visit Ocean Beach and Fort Funston regularly.

Off-leash dog walking as a barrier to lower-income residents to visit GGNRA parks is also an irrelevant statement and even misleading. There might be more significant reasons that prevent lower-income residents from park visitation, such as financial burden, lack of public transportation vehicles, as well as their already-established community in their local parks.

If any racial data is to be included in the Draft Plan, the GGNRA must provide more details on park use by different races, which is information that the Plan already states it does not have. GGNRA can also expand the outreach to residents of a minority-majority city such as providing copies of the Draft Plan in different languages other than English.

Thank you for your consideration.

Sincerely, Tszsan Kathy Reichardt

Correspondence: I do not understand how the federal government can, on one hand, allow offshore drilling next to our fragile coastlines, and on the other hand tell us that the dogs of the SF Bay area are enough of a potential threat to the ecology that they should be banned from the natural recreation spaces. It doesn't make sense. People with dogs in the SF Bay area are, in general, very responsible and are very often the ones using the recreational spaces and cleaning up garbage that others have left behind. Children and teens are more destructive and disruptive of the natural species than the dogs.

I am writing to comment on the GGNRA DEIS plan regarding dog management. I agree completely with the writers below. They have stated

our case comprehensively.

Over the years we in the dog community have repeatedly commented, discussed, testified, written, lobbied, compromised, negotiated, and worked with the GGNRA to ensure fair and reasonable access to lands acquired with our help. We have raised money, volunteered our time, attended hearings, served on committees, and participated in negotiated rule-making in good faith.

Most of this has come to naught.

If you really intend to handle this issue fairly, you would scrap the whole thing and start over. You would do so for reasons articulated clearly in the following documents:

* Comments on the GGNRA Draft Environmental Impact Statement by Dr. Suzanne Valente and Stephen Golub of the Ocean Beach Dog Owners Group;

* Unleashed Fury by Julie Walsh;

* Letters from the SF/SPCA to the GGNRA dated July 13 and August 16, 2000, from Ed Sayres, the Executive Director of the SPCA at the time;

* SFDOG's Official Comment on the GGNRA DEIS by Sally Stephens, et al, SFDOG.org;

* Keep the R in the GGNRA: Environmental Injustice Suggestions and Comments, Public Comment on the 2011 GGNRA DEIS by Arnita Bowman, 5/23/11;

* Preserve Recreation for Dogs and People in the GGNRA: San Mateo County Specific Suggestions and Comments, Public Comment on the 2011 GGNRA DEIS by Arnita Bowman, 5/23/11;

* Preserve Recreation for Dogs and people in the GGNRA: Public Health and Safety Suggestions on the Draft GGNRA Dog Plan, by Arnita Bowman, 5/23/11.

Thank you very much.

Correspondence: Parks are to be a refuge. People need some space where we do not have to put up with dogs running wild. Parks should be a place where a person can enjoy the quiet peacefulness of nature.

While walking on Ocean Beach I noticed a woman whose dog was running loose. When I informed her that this was a protected area for birds she replied "It's ok. There aren't any cops around."

A man who I informed about the protected area at Ocean Beach said "My dogs never catch the birds so it's ok." He went on to say that he would let his dogs run loose wherever he wants.

Dogs seem to run wild everywhere. Why can't people have some space where we do not have to put up with dogs running wild? On Ocean Beach this would also greatly benefit the birds in the area and we would see more birds when they are not constantly frightened by dogs running after them.

Correspondence: I am writing to comment on the GGNRA DEIS plan regarding dog management. I recently moved to San Francisco with my Labrador Retriever. I have enjoyed taking him to Ocean Beach and Fort Funston. I am a responsible dog owner, and the dogs we have encountered are well-behaved with responsible owners. I have researched the proposal in depth and believe it is too drastic! I have found there to be many resources in the dog community who have over the years we have repeatedly commented, discussed, testified, written, lobbied, compromised, negotiated, and worked with the GGNRA to ensure fair and reasonable access to lands acquired with our help. We have raised money, volunteered our time, attended hearings, served on committees, and participated in negotiated rule-making in good faith. I agree completely with the writers below. They have stated our case comprehensively. If you really intend to handle this issue fairly, you would scrap the whole thing and start over. You would do so for reasons articulated clearly in the following documents:

Comments on the GGNRA Draft Environmental Impact Statement by Dr. Suzanne Valente and Stephen Golub of the Ocean Beach Dog Owners Group;

Unleashed Fury by Julie Walsh;

Letters from the SF/SPCA to the GGNRA dated July 13 and August 16,

2000, from Ed Sayres, the Executive Director of the SPCA at the time;

SFDOG's Official Comment on the GGNRA DEIS by Sally Stephens, et al, SFDOG.org;

Keep the R in the GGNRA: Environmental Injustice Suggestions and Comments, Public Comment on the 2011 GGNRA DEIS by Arnita Bowman, 5/23/11;

Preserve Recreation for Dogs and People in the GGNRA: San Mateo County Specific Suggestions and Comments, Public Comment on the 2011 GGNRA DEIS by Arnita Bowman, 5/23/11;

Preserve Recreation for Dogs and people in the GGNRA: Public Health and Safety Suggestions on the Draft GGNRA Dog Plan, by Arnita Bowman, 5/23/11. Thank you very much.

Correspondence: I am a San Francisco home owner, Fort Funston, Crissy Field, and Ocean Beach user, and dog guardian. I visit Fort Funston several times a week and Crissy Field and Ocean Beach monthly; I have been doing so for the last 8 years with my dog.

Being able to relax and enjoy the community and beauty of Fort Funston with my dog is very important to me. When at any of the GGNRA parks, I keep my dog under voice and sight control and clean up his waste. I do not go to the parks to play fetch with my dog; I enjoy hiking on trails with my dog and I am far from the only one. There are too few trails with off-leash access in the Preferred Alternative.

I disagree with the GGNRA's current preferred alternative since it greatly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County aren't based on sound science or long-term monitoring of site specific conditions. And they are in violation of the reason that the GGNRA was created in the first place: "The maintenance of needed recreational open space."

Urban dogs need regular exercise and socialization to successfully live within cities. Fort Funston is the primary location where I can take long walks and get exercise as well as exercise and socialize my dog. The land currently available in the GGNRA for off-leash use is crucial for the

exercise, recreation, and overall health of dogs and dog guardians of San Francisco.

Instead of the DEIS, I would support Alternative A, the No Action alternative and would suggest the inclusion of the "New Lands" areas in San Mateo county. The existing 1979 Pet Policy has been working well for many years and should not be altered.

Respectfully,

Kelly Winqvist

Correspondence: May 30t h, 2011 Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean, My name is Abby Tuttle and I share my life with two wonderful dogs in San Francisco's Duboce Triangle. We are frequent and grateful users of the off leash areas at the GGNRA. I am also a teacher with a degree in environmental education.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions.

It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is

preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option.

The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal. The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents.

After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program. Thank you for your consideration. Sincerely,

Abby Tuttle San Francisco, CA 94114

Correspondence: Having heard both sides of the dog management controversy, I urge that National Park Service to do whatever is necessary to protect Western snowy plover and native plant habitat from being further eroded by off-leash dogs. Field studies show that 2/3 of dog owners disregard leash laws and allow their dogs to roam free, regardless of the consequences to wildlife.

The NPS has been charged with maintaining this precious parkland for future generations to enjoy. Don't let the dog lobby - which is a very vocal minority, but still a minority - override a common-sense approach to this issue. Remember: dogs can live inside, or go to other parks, but wildlife has only one home: the wild.

Please make the GGNRA habitable for wildlife. Thank you.

Correspondence: I am a dog owner and San Francisco home owner who frequents Fort Funston, Crissy Field, and Ocean Beach. For the past 8 years I have been visiting Fort Funston several times a week and Crissy Field and Ocean Beach monthly with my dog.

Hiking with my dog at Fort Funston is very important to both his and my well being. While at the park, my dog is under both voice and sight control and I always clean up his waste.

The GGNRA's current preferred alternative greatly restricts and eliminates off leash dog walking in many areas within the GGNRA and violates the GGNRA's initial purpose: "The maintenance of needed recreational open space." For these reasons, I oppose it. The currently proposed changes to the existing conditions (1979 Pet Policy) aren't based on sound science or long-term, substantial monitoring of site specific conditions.

Urban dwellers, both human and dog, need open spaces where they can get exercise and enjoy nature. Dogs especially need regular exercise and socialization to be successful urban citizens. Fort Funston is the best place by far that I've found where both my dog and I can exercise and enjoy our recreational time.

I would support Alternative A, the No Action alternative, instead of the DEIS. The 1979 Pet Policy has worked well for many years and should not be removed or changed.

Respectfully,

William Summer

Correspondence Type: Web Form
Correspondence: Dear Superintendent Dean, GGNRA and NPS staff:

Thank you very much for the opportunity to comment on the proposed Dog Management Plan. I appreciate your efforts to engage the public over the

last several months and prior as this is an issue that affects us all.

I am writing to express my support for the preferred alternative, with some basic adjustments. I base my support on the following:

- the preferred alternative makes the best attempt to maintain dog walking, and general public enjoyment, in the park while respecting natural and cultural resources - the preferred alternative makes the best attempt to maintain dog walking in the park with consideration for the variety of public uses, particularly in heavily used areas - the preferred alternative makes the best attempt at clarifying the need for dog management in a national park in an urban area that does not have a gate or clear boundaries

The basic adjustments I suggest include a better loop at Mori Point, an internal loop at Fort Funston, and some modified alternative to the Muir Beach regulation that also ensures natural resource protection goals are met. At Muir Beach, I fear the residents and regular users will not abide to a "no dog" rule which could only create tensions at that site and elsewhere.

I primarily hike, and have rarely had trouble with dogs in the locations I frequent (Mori Point and Marin Headlands). It seems my fellow park users recognize the value of the resources that require protection and the value of sharing the trail, at least with hikers.

I often go to Ocean Beach with my young, 4-year old son and, unfortunately, feel less and less comfortable there. I can't trust the unleashed dog or its owner to keep him from my son. I can't stand watching an unleashed dog chase a snowy plover. I no longer go to Fort Funston because of these two reasons. I don't want to lose Ocean Beach too.

I know you and your staff have considered all options as far as communicating with the public in this current effort and over the past decade and more. If possible, I encourage walks and talks on site, perhaps at a pilot site or two, with relatively sympathetic onleash, off leash, and other advocates invited to meet GGNRA staff. I encourage better, more attractive and easy to read signage. I encourage some kind of public information campaign and wonder if funding is available? I know staffing is extremely limited. I am concerned this plan all comes down to an already put upon law enforcement staff and wonder how they and the Park might be better supported.

Thank you very much for your consideration and all you and your staff do to protect and manage our amazing National Park. all the best to you through this and more - Jennifer Greene Ringgold

Correspondence: May 30, 2011 Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022
Dear Mr. Dean, I am writing to oppose the GGNRA's draft dog management plan as outlined in the draft DEIS especially with regard to addition of new lands into GGNRA. The public has not had the opportunity to participate in the development of the Dog Management Plan. If it had and the wishes of the public had been taken into account we would not be dealing with a plan at this late date so out of touch with the wants and desires of the GGNRA main constituency: the residents of Marin, San Francisco, and San Mateo counties. The resistance of the NPS and the drafters of the DEIS dog management plan to hear and or consider the views of those of us who recreate with our dogs is strong indication of prejudice on their part.

It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law. The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded. This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others. The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to: ? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. ? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. ? Exclude speculative, exaggerated, biased, or misleading statements and studies. ? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

And finally, your action on this issue will largely define whether I, a life-long supporter of the national parks will remain so or ?

Ask yourself: would Gifford Pinchot approve of the plan as it is currently written? Or would he be asking himself: What has happened to my park service? Sincerely, Jeff Thayer Montara, CA, 94037

Correspondence: Re: Draft Dog Management Plan/Draft Environmental Impact Statement
Dear Superintendent Dean: My name is Nina Lescher and I have been a Bay Area resident for 16 years. I currently own a home in Marin County, and consider myself very lucky to be able to have The Golden Gate National Recreation Area in my backyard. I have been an avid fan of Crissy Field for years, primarily because all sorts of people come there to stroll, picnic, windsurf, kite surf, jog, and play Frisbee or football. Many people come to let their dogs run off leash and play. I haven't been a dog owner for very long, but I have always been really proud of the Bay Area for being conscientious enough to preserve places where people, off leash dogs, and nature could come together. I have traveled a lot and rarely found this anywhere else, and I believe the overall happiness and well being of Bay Area residents is so high because we have places like Crissy Field and Fort Funston where dogs, people and nature co-exist. Now that I own a dog, he and I visit Crissy Field, Fort Funston, Marin Headlands, Rodeo Beach, Muir Beach, Oakwood Valley and Homestead Valley a minimum of 1-2 times a week. So that is why I am writing to voice my disapproval of the Draft Dog Management Plan and request that it be entirely rejected, or that Alternative A be selected for all sites. The current Preferred Alternative Plan is so severely restricted that it is unacceptable. The available data concerning environmental impact is insufficient. As an avid environmentalist, I am very supportive of the work the GGNRA has done to curtail erosion and protect plant and wildlife in the parks. I make sure that neither I nor my dog goes into areas that have been fenced off and designated (with signage) for replanting or environmental protection. In my experience, all dog-owners I've come across in GGNRA areas have very effectively used voice control to keep their dogs off these areas. The GGNRA signage that informs visitors of the environmental work that's going on, and the alert to keep off those specific areas, shows everyone that we are a strong community working together to keep these areas beautiful for all. This is one reason why the Compliance Based Management strategy should be eliminated. It severely undermines the flow of communication between the public and the GGNRA, something that has been working effectively and can continue to get better. Ultimately, the Compliance Based Management strategy damages the collaborative relationship that makes the GGNRA a wonderful place. Lastly, if the GGNRA is going to continue being one of California's-if not this nation's-ideal recreational area, a new plan must be proposed that builds on what is already working so well for so many people. Since a new plan is not currently in place, Alternative A is the best plan. There are a huge number of dog owners in the Bay Area who depend on the GGNRA for off-leash dog recreation, and the number is only growing. Limiting their access

to less than 1% not only makes the GGNRA a less desirable place to go, it diminishes the Bay Area as a whole as a desirable place to live. Dog owners would have one less reason to put up with the high cost of living if their wonderful places to recreate are taken away. Returning to the 1979 Pet Policy, which had been working so well for so many years, appears to be the best solution for our active outdoor community. I do hope you'll consider returning to that as a template going forward. Let us not forget that the GGNRA's original mission, outlined in the legislation that created it, was "to provide for the maintenance of needed recreational open space." Regards,
Nina Lescher

Correspondence: Dear Mr. Dean and GGNRA,

I fully agree with this letter from my husband. I would also like to add, as a native San Franciscan, and true City girl this is as close as I get to nature! I immensely enjoy watching all the happy dogs frolicking with their owners and other canine friends!

Mary Ann Donohue

I am writing to you to let you know that I oppose your plan to limit dogs in the GGNRA.

I am particularly concerned with the plans to limit dogs at Fort Funston. As a native of San Francisco I have been going to Fort Funston for over 40 years, and my appreciation of it has grown immensely since I started taking my first dog there eleven years ago.

I see enormous value to the community to have an area where people can

enjoy the outdoors and have their four legged family members enjoy a little freedom. I visit Fort Funston every weekend, my wife joins us on Sunday, regardless of the weather; fog, wind, rain or shine. I look forward to this activity, partly because of the walk (takes my dog Sparky and myself 50 minutes to do a loop), the beauty and also the friendliness of the other dog owners and the sheer joy you see in dogs and people of all ages.

I do feel that things can be done to help preserve the area, but the plan put forward goes way to far. I would suggest:

? All trails should be off leash (voice command) this includes: beach, Chip trail, Horse Trail, Sunset Trail, Battery Davis Trail, Coast Trail, trails to the beach and the trail from the ranger station to the main parking lot ? I think most of the damage done by dogs are from their owners throwing balls in areas that dogs should stay out of. ? There should be a few designated area where dogs can chase balls (in front of the main marking lot, drinking fountain area by stairs, beach and on marked trails. ? GGNRA should repair the fences in the habitat protected areas and post signs with the fine amount. ? Rangers should patrol the area to enforce the new rules

I would like to see a reasonable plan put forward by the GGNRA, but the plans you have proposed would significantly reduce my enjoyment of the area and I think it would also reduce the benefit that the community gets from having an off leash area of this size available.

Have you ever been to Fort Funston on a weekend and seen this enjoyment?

Robert Valle San Bruno, CA 94066

Thanks

Correspondence: I am writing to comment on the GGNRA DEIS plan regarding dog management. I agree completely with the writers below. They have stated our case and my position on this issue comprehensively.

Over the years we in the dog community have repeatedly commented, discussed, testified, written, lobbied, compromised, negotiated, and worked with the GGNRA to ensure fair and reasonable access to lands acquired with our help. We have raised money, volunteered our time, attended hearings, served on committees, and participated in negotiated rule-making in good faith.

Most of this has come to naught.

If you really intend to handle this issue fairly, you would scrap the whole thing and start over. You would do so for reasons articulated clearly in the following documents:

? Comments on the GGNRA Draft Environmental Impact Statement by Dr. Suzanne Valente and Stephen Golub of the Ocean Beach Dog Owners Group; ? Unleashed Fury by Julie Walsh; ? Letters from the SF/SPCA to the GGNRA dated July 13 and August 16, 2000, from Ed Sayres, the Executive Director of the SPCA at the time; ? SFDOG's Official Comment on the GGNRA DEIS by Sally Stephens, et al, SFDOG.org; ? Keep the R in the GGNRA: Environmental Injustice Suggestions and Comments, Public Comment on the 2011 GGNRA DEIS by Arnita Bowman, 5/23/11; ? Preserve Recreation for Dogs and People in the GGNRA: San Mateo County Specific Suggestions and Comments, Public Comment on the 2011 GGNRA DEIS by Arnita Bowman, 5/23/11; ? Preserve Recreation for Dogs and people in the GGNRA: Public Health and Safety Suggestions on the Draft GGNRA Dog Plan, by Arnita Bowman, 5/23/11.

Thank you very much.

Kasie Maxwell Native San Francisco Bay Area resident Environmentalist; vegan since 1980 Former vet-tech, pet sitter/dog-walker Former professional equestrian (east bay) Wildlife rehabber (not in CA, while living in Oregon) 1991-1995 Permanently disabled since 2001 I have been visiting these parks daily with generations of dogs since 1995; I do not go hiking without my dogs. They are always under voice control. Webmaster, SFDOG from 2003-2007 Founder & past president, D5DOG

Correspondence: May 30, 2011 Frank Dean, General Superintendent?Golden Gate National Recreation Area?Fort Mason, Building 201?San Francisco, CA 94123-0022

Dear Mr. Dean, I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law. The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded. This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions.This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others. The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to: ? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. ? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the

GGNRA since 1979, especially in San Mateo County. ? Exclude speculative, exaggerated, biased, or misleading statements and studies. ? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). ? Enable professional dog walking and align any professional dog walking rules with county or city regulations. ? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

These are my personal comments and observations regarding this plan: I have enjoyed taking all of my dogs to Fort Funston, Crissy Field, and Ocean Beach (which I live 2 blocks away from) for the past 18 years. If I had not had these places to take my dogs they would not be the well socialized well mannered dogs they were/are. I can't imagine not being able to take my dogs off leash to let them run and play with other dogs. The off leash parks are few and far between and frankly too small for all the dogs that would go there if the GGNRA was off limits. If you ban off leash dogs in the GGNRA the city parks will greatly suffer, dogs/owners will suffer, neighbors will get angry etc, lawsuits the list goes on and on. Please do not impose bans in these areas its a bad idea, crime rates would dramatically increase in Fort Funston as a result of having no dogs etc, would revert back to what it used to be will all the drug dealers etc. NOT A GOOD THING for the Fort. If you try to ban off leash dogs at ocean beach all the people who have dogs will have no place to take their dogs close to where they live. I have never run into a ill mannered off leash dog at Ocean Beach. Dogs are not the ones destroying the bird area for the snowy plover. I've lost count how many times I've seen the Beach Patrol SUV driving over the areas higher up on the beach where the bird habitats are, dogs don't go to that area, they are at the lower areas near the water. PLEASE DO NOT BAN OFF LEASH AREAS IN THE GGNRA. You could be doing far better things in the reserve area than banning dogs and pissing lots of people off. Sincerely,

TL Winkler San Francisco, CA 94116

Correspondence: I walk my well-behaved dog on a regular basis in the GGNRA areas. She is on a leash and I always pick up after her. It is extremely important for her to be outdoors and on a walking trail for her health and well being and mine. Please keep the GGNRA open to walking dogs on leash. Our tax dollars are paying for this area and we all own it and use it. It is unfair to close it off to walking dogs especially since these are areas have been used for a variety of uses for many, many years. 99.9% there are no problems with dogs and dog walkers in the GGNRA. Please don't close this off to the majority when the problems are so few. Best, Peggy Ruse

Correspondence: Dear Mr. Dean,

I believe that this whole DEIS was started by Mr. Jarvis and now it is in your lap. I hope you have the good sense to see that the passage of any of the alternatives is a bad idea and not in keeping with the R in GGNRA. There can be exceptions to the NPS guidelines and this is the occasion. The original 1979 ruling in regards to off leash dog walking areas should be honored. The bad science in the DEIS doesn't prove that dogs off leash are bad. The plants are better than they have ever been, the wildlife is more abundant than it has ever been and there are more people enjoying the GGNRA. I walk my dog off leash at Crissy Field, Baker Beach and Ocean Beach. He is always under voice control and loves to chase his frisbee both in and out of the water. Both these activities would be impossible if he were on leash. I see nothing but smiling happy people enjoying the beach. Of course there is the rare unsmiling individual and those are probably the ones who don't like dogs. I think these people probably have other more severe problems as well.

Dogs came over on the Mayflower with some of the first settlers. The American Indians had dogs. Dogs are now and have always been a valuable ally to man. While their role has changed from more of a working dog to more of a companion animal they are still a dynamic part of our lives. Just look at what dogs are used for now; from helping to find Osama, to finding

survivors in Fukushima to guiding the blind, bringing comfort to the sick and even helping detect cancer, diabetic comas and epileptic seizures. Dogs make people happy, go for a walk on the beach and you will see the smiles and friendships that flourish around these man/dog relationships. Don't take away this great recreation area from the people and their dogs.

How many people who came up with the DEIS actually are from San Francisco and have dogs and aren't agreeing with it because they need the job? I bet none. I've been in the city for over 30 years and I love it. How can you outsiders come in under the auspices of the U.S. Government and decide you know what is best for our city? The city Supervisors agree with us, your plan is bad. The U.S. Government broke every treaty they ever made with the American Indians. Don't do the same to the dog owners of San Francisco, honor the 1979 pet policy and keep the R in the GGNRA. If you stand up to Jarvis it might mean your job but at least you'll have your dignity!

Correspondence: To the National Park Service/Golden Gate National Recreation Area Supervisor,

I walk with my two dogs every day in the Presidio and Crissy Field areas of the park. I am opposed to the DEIS and in favor of the preferred alternative dog plan. I am very upset that the park service has changed its mind in with regard to the importance of needed recreational open space for the general public and its especially egregious attack evidenced by the DEIS against dog owners. Off leash dog walking on Crissy Field has been a part of my life for over 40 years as a permanent resident of San Francisco. The alternative plan is a fair way to share this resource.

I would also like to point to the GGNRA's current plan to attract 20,000 children and their families (60,000+ new visitors)to Crissy Field next year. This plan is posted on signs at Crissy and is hypocritical to the NPS reasoning that restricting dogs will improve conditions for wild animals. Come on! These visitors will do far more damage. More money is spent cleaning up and addressing damage caused by people than dogs.

Another example of the NPS anti-dog agenda is the DEIS provision, that as

I understand it, will recind all off-leash rights for dog owners based on even one, single infraction. OMG! this is anti-american.

I suggest the NPS focus its attention on banning guns in national parks if it wants to truely protect wildlife.

Sincerely, Curt Smith

Correspondence: Dear Superintendent Dean,

I oppose the GGNRA's current preferred alternative to restrict and in some areas eliminate off leash dog walking in the GGNRA. I am a San Francisco resident who volunteered for five years in the dog behavior department of the San Francisco SPCA. I adopted a puppy in October 2010, and I frequently visit Fort Funston and Crissy Field with him. When I adopted my dog, he was afraid of other dogs. I have taken him to an off-leash dog park every day since last October, and he is now a well socialized dog who obeys my voice commands and is friendly with people and other dogs. I would not have a dog with these behavior traits if I had not been able to use areas such as the GGNRA lands.

I sometimes see dog owners who do not have their dogs under control, but the vast majority of the dog owners I see are responsible. I oppose the compliance based management strategy because it penalizes dog owners such as me who have invested significant time and effort to make my dog's off leash access a neutral or positive experience for other people using the GGNRA space. I would support a policy that requires dog owners using GGNRA space to attend and pass obedience classes. I assisted in such classes while volunteering at the SPCA and would volunteer my time for such a project.

I sometimes walk my dog with friends who live south of San Francisco, and we struggle to find off leash parks outside of the San Francisco areas. I donate to the World Wildlife Fund, but I also support the need for people to enjoy outdoor space.

Thank you for considering my comments.

Correspondence: I am in favor of the plan that provides the most restriction of dogs in the parks.

Over the years, I have seen the huge increase of dog owners believing that it is okay for their dog to be off-leash, no matter what the dog does. While walking in the headlands, I feel helpless as some off-leash dog meets me on the trail--all I can do is hope the dog will leave me alone, because the owner is often way behind, and out of sight. I have seen many owners who, believing their dog is under voice control, stand helplessly yelling at a dog who is being destructive. I have long ago given up going to Muir Beach because so many dogs run around making it impossible to sit and enjoy the beach. It is unpleasant to have dogs running up to you, spraying sand everywhere, while the owner--if there is one nearby--simply says a breezy "Oh, sorry" and continues on their way. This happens more and more at Stinson, as well, as many owners don't stay in the "dog" section.

When small children are involved, all this gets more than annoying--I have had experiences where little ones are in tears with fright or injury" because of an off-leash dog. Once, while my small son sobbed with a bloody skinned knee, after being knocked down by a dog, the owner stood and told me, "Oh, he won't hurt anyone." I had to ask him to please call his dog.

Not long ago at the Community Center in Mill Valley, a loose dog defecated on the lawn where children were playing. I asked around to find the owner, who otherwise would not have known, would not have picked up after her dog. With so many pets in our area, this growing attitude that "my dog" is entitled to "run free" is just irresponsible, harmful, and, frankly, selfish and rude. Sadly the number of such owners is growing.

Owners of pets have the responsibility to provide space at home for the pet to exercise or the owners need to be willing to travel to a dog park or other designated dog area, or walk the dog with a leash. I have many friends who do this and their dogs are happy and healthy. The national parks belong to people. Please don't let them become an open invitation for selfish dog owners to create problems.

Correspondence: Dear Superintendent Dean,

I am writing to oppose the GGNRA's Draft Dog Management Plan because it doesn't address the recreation component in the GGNRA enabling legislation which it must maintain and protect.

One-third of San Francisco households have dogs. There are more dogs than children in the city. As a rescue dog owner, my dog is a living proof that off-leash dog walking in an unfenced area has benefited and solved most of the issues for which she was first given up to the shelter in the first place. Without these less than 1% of the GGNRA parklands available, my dog will suffer major setbacks in her rehabilitation of behavioral issues.

The Visitor Use/Visitor Experience part of the Draft Plan should address recreation in the affected environment as well as the impacts of recreation BEYOND just dog walking. To improve the baseline conditions, they must first be addressed so that there would be a basis for coming up with a solution.

Thank you for your consideration.

Sincerely, Tszsan Kathy Reichardt

| Correspondence Type: | Web Form | | |
| Correspondence: | I don't understand why this issue keeps coming up in this very divisive way. In Chinese, an animal is a "moving object" as opposed to inanimate things which are called "standing-not-moving objects". It is a basic physical need for dogs to be able to run about off leash freely in the parks at least several times a week, if not every day. It is cruelty to a dog to not be able to provide this kind of exercise for it. Children need also to be able to play in the parks without any fears. And of course native plants, animals, etc. need to be | | |

protected.

I've never been a guardian to a dog but in the four years I took my granddaughter to the park when she was a baby, then a toddler, I never saw any conflict between the above three concerns. On the contrary, one morning I saw a young mother with a toddler and a big dog, off leash in Mountain Lake Park (a medium-sized park in the Richmond District of San Francisco with a little lake, lots of birds, children and off-leash big dogs who do not restrict themselves to just the off-leash dog run) showing her little daughter how to pick up their dog's feces and dispose of it responsibly, then after thoroughly brushing the dog for a while, she gathered his combed out fur and placed the soft furry ball behind some bushes surrounded by trees. Noticing we were watching her, she explained with a smile: "The birds like the fur for their nests."

Although this may have been a special incident that represented support by one person for all three concerns, the needs of the dogs, the children and protection of other species, it is typical that most people enjoying this park sympathize with all three and do not feel they are mutually exclusive. We certainly never felt the three conflicted!

If there is a real concern about off-leash dogs "attacking" children in the smaller parks, one simple way would be to restrict off-leash dog walking during the hours when children most often play there such as from 9:00 a.m. to 5:00 p.m. That would be a restriction working people could easily abide by since that is the time they are usually at work anyway. It is usually before 9:00 a.m. or after 5:00 p.m. that they have time to walk their dogs. As for children, especially toddlers, I've never seen a child in the park before 9:00 a.m. or after 5:00 p.m.

With regard to protecting endangered species from off-leash dogs, you need only to prohibit dogs from running near their home areas. If they are "Cliff Swallows" or something like that, then prohibit the dogs from running around near the cliffs, but why prohibit them from running in the entire or most of the vast park?

All the laws and restrictions being considered for the dogs will impact most the poorer people who have dogs, those who do not have a back yard or a car in which they can drive the dog to some off-leash run area. The result of that will be more abandonment of dogs and more left in shelters who will then be almost inevitably euthanized. Why?! Just so that some may show off how much they "care" about children or the environment?

All these problems and suggestions for resolution have been brought up again and again. Why do we keep rehashing them? It's a waste of time and money. There are simple common-sense solutions, so let's work together on

implementing them!

Correspondence: My name is Reid Reichardt, and I am a San Francisco resident. I frequently visit Crissy Field, Ocean Beach, and Fort Funston with my dog. Any restrictions or reductions on my ability to walk my dog off-leash in these areas would have a significant impact on my life. She is a high energy rescue dog that had numerous behavioral issues when I adopted her. Vigorous off leash exercise has been the most important component of keep her anxiety, aggression, and behavioral issues under control. There is almost nowhere left on the SF Peninsula to run a dog off-leash. Dog play areas are too small to promote comparable exercise. Furthermore, my exercise and well-being are limited by the limited placed on my dog. The GGNRA (in the DEIS) has not adequately investigated the impact that its plans will have on the human community surrounding the GGNRA lands.

Correspondence: I do not believe that there is adiqute scientific data to support many statements throughout this report. In order to properly determine the effects of eliminating off leash exercise areas to numerous parks across the GGNRA we should know how many dogs visit these parks and the freqesncy. Also if the alternatives are implemented where will thsesse dogs and their owners go. Where is this data? How can we determine no impact to the surrounding parks and community without this data?

Correspondence: May 30, 2011 Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022
Dear Mr. Dean,

I am a resident of the Buena Vista Neighborhood Association in San Francisco. Following my mother's example I have throughout my life contributed to Parks and Recreation, and Environmental causes. I established the Eleanor and Standish Meacham Jr. Park Trust for the Greater

Cincinnati Foundation, and am a member of several environmental groups: Natural Resources Defense Council, CA League of Conservation Voters and the Save Our Springs Alliance. For the past five years I have volunteered as a gardener in San Francisco's Buena Vista park. I am a senior citizen and for exercise and recreation, I walk with my canine companion "Hannah" at Fort Funston and Chrissy Field.

I strongly disagree with GGNRA's preferred alternative plan which would effectively eliminate my recreation in the GGNRA and relocate it to my interior city parks. Clearly the proposed changes to the 1979 Pet Policy and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions. It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. A multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction. The DEIS must include such an alternative as a reasonable option. The proposed "compliance-based" approach punishes me and many others for the perceived transgressions of a few. It is a set up for failure and must be modified to reflect current conditions and must measure impact vs. compliance. The GGNRA must partner with the community to make the plan work, not assume an adversarial relationship with failure the goal. The DEIS fails to consider that the GGNRA my city's beloved treasure. San Francisco is a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment." But the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for me and other local residents. After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan must be modified to provide improved vegetative barriers, and education and outreach as part of the overall program. Thank you for your consideration. Sincerely,

Standish Meacham San Francisco, CA 94117

Correspondence: I feel the Golden Gate National Recreation Area is an asset to nature lovers and pet lovers alike and we can coexist in the park. However, I feel that leash laws should be enforced and dogs should be leashed in all areas of the park that are designated natural areas where habitat restoration occurs or wildlife breed. Crissy Field is an example of an appropriate place to have dogs off leash, where there are no native plants or wildlife. I have frequently seen dogs running through habitat restoration areas destroying the plantings and these plants cost money to grow and it can be a financial loss to the Park Service, the Presidio Trust, and the Golden Gate National Parks Conservancy. I also feel that professional dog walkers should be limited to the number of dogs they can walk at one time to 6 because with more than 6 dogs they become very unmanageable which makes dogwalkers more inclined to let them all off leash.

Correspondence: (Reid Reichardt / City of San Francisco Resident) The DEIS's "compliance-based management" is severely flawed. First, there is no baseline from which to measure changes in compliance. Second, there is no requirement that there be evidence of negative environmental/social impact from non-compliance. I request that you remove the "compliance-based management strategy" from the DEIS altogether. It is unfair, as it gives the GGNRA power to punish the majority for the irresponsible actions of a minority. I suggest that you just give tickets, as is done in just about all other parks. Thank you, Reid Reichardt (San Francisco resident).

Correspondence: The Preferred Alternate Plan for Crissy Field and Fort Mason fails to consider 1.) time of day, 2.) day of week, and 3.) season.

1. Time of Day. During morning and evening hours there are often more people walking their dog than people without a dog.

2. day of week. During weekdays all day, the quantity of people at Fort Mason and Crissy Field is minimal. Dog restrictions on use during

weekdays is not warranted.

3. Season. During the cold, gray, raining, foggy months of the year the quantity of people at Fort Mason and Crissy Field is minimal. Dog restrictions during the wet season is not warranted.

As a comparison: At the beaches of Orange County there are some restrictions ("blackballed" times) on hard-board surfing, to protect bathers. The times of these restrictions are only the times when overcrowding warrants the restrictions. The restriction are placed only during the summer months, and only during mid-day hours, and only at certain crowded beaches.

Also, The City of Del Mar has a time-based policy on off-leash dog walking on Del Mar's beaches: Restrictions are increased in Summer, and decreased in Winter.

At Crissy Field or Fort Mason, if restrictions are to be placed on off-leash dog walking, these restriction should only be put in place during the days and time when overcrowding warrants it.

In my opinion, the only times Crissy Field or Fort Mason warrant any off-leash dog restrictions, would be during the weekends, and only between 11 - 4 p.m., and only in specific verified overcrowded locations (the air-strip at Crissy is never over crowded) I know this because I walk my Dog at Fort Mason or Crissy Field every day.

Correspondence: (From Reid Reichardt ? a San Francisco resident). The current Preferred Alternative is unreasonably restrictive, given that no data has been provided to justify such drastic measures. The only "data" present in the DEIS seems to have been selectively chosen by the GGNRA to support it's desired outcome. The GGNRA seems to have worked closely with environmental groups who support the same outcome. Many of their opinions and suggestions are based on speculation. The report by Nina Roberts ("Visitor/Non-Visitor Use Constraints: Exploring Ethnic Minority Experiences and Perspectives") appears to have been funded by the GGNRA. The DEIS references data from that report to argue that certain minorities will benefit from the elimination of off-leash dog walking. But the GGNRA appears to have made no attempt to quantify impacts on minority dog owners who visit the parks with their dogs on a regular basis.

I request that all current "data" in the DEIS be investigated by a third party audit, research, and legal review. I request that such entity oversee re-collection of data in a more balanced and objective manner.

Correspondence: I am writing to oppose the GGNRA's draft dog management plan. I have a degree in ecology and my first job was as an intern for the GGNRA at Fort Funston. I wanted to give you this information so you understand my commitment and knowledge of the ecosystem and plant community at Fort Funston. The current plan seems to blame dogs for all the damage and harm that comes to the native ecosystem life living there. This is false as anyone who works there or has worked there should be aware of. The real damage that you can see is the non-native invasive species such as ice plant, grasses, and other weeds which out compete the native species such as bi-color lupine, indian paint brush, and others that give our home part of its unique beauty. When I worked at Fort Funston in 1998, the GGNRA was able to restore two parts of the park. Both of these are thriving with native species and have not suffered damage from recreational use by the public or their pets. These remain to date the only parcels of land which have been restored and with budget cuts ending the visitor center and native plant nursery, I don't see much hope for future restoration projects. This land can and should be used for the enjoyment of the public including those with dogs, as well as for native species of the area. There are so many places dogs are not allowed, the GGNRA has been a shining example of management of to accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded. This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others. The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to: Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. Exclude speculative, exaggerated, biased, or misleading statements and studies. Provide reasonable ways to address any significant adverse impacts from

recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). Enable professional dog walking and align any professional dog walking rules with county or city regulations. Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

Please think and rewrite this plan to maintain it as a place where people and their pets can go to enjoy themselves. Thank you, Abigail Suter

(Submitted by Reid Reichardt ? San Francisco resident). The DEIS does not recognize that the GGNRA has a recreational mandate. To the contrary, the DEIS reflects an National Park Service agenda of trying to severely restrict recreational use of the GGNRA lands. Walking my dog off-leash at Crissy Field, Ocean Beach, and Fort Funston have been some of the most cherished memories of my life. I would have to drive over a hundred miles to find any comparable experience, which is not a reasonable commute distance for regular recreation and exercise (my exercise is often limited by the limitations place on my dog).

I would like the DEIS to be amended to evaluate the physical and mental benefits of such recreational opportunities, and quantify the impact that all aspects of the plan will have on the residents of San Francisco. Recreation, including off-leash dog walking, was an integral component of Congress's original intent for the GGNRA lands.

(by Reid Reichardt ? San Francisco resident) The DEIS does recognize that the GGNRA lands are located in an urban area. And it does not recognize that the human community relies on the GGNRA lands for recreation and exercise. Approximately 1/3 of San Francisco households own dogs, a significant fact that the DEIS also does not mention. The GGNRA has made almost no attempt to study the impact that the DEIS will have on the residents of San Francisco and the Bay Area.

I request that the DEIS be amended to address this issue of impact on the local human community. I request than a neutral 3rd party agency be hired

to perform the necessary research.

Correspondence: Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022 Dear Mr. Dean,

I have lived in San Francisco since 1996. I have owned a dog for six of those years. Yet I can honestly say that I've spent more time at Crissy in one year with my dog, than I ever spent in the entire span of nine years when I was not a dog owner. I am a busy professional, who lives in Russian Hill and works on average 50+ hours a week. My near-daily morning, and sometimes evening, ritual has been to drive my dog Stinson (named after Stinson Beach) to Crissy Field for some combined exercise. I am not a gym person, so Crissy offers me the opportunity to double-dip exercising myself and my dog. The dutiful "Chuck It" comes out, and my dog and I walk the length from the Warming Hut to the East Beach and back. Most weekday mornings, I see the same joggers, walkers and dog owners. I encounter less than a dozen people. We wave, or say "Good Morning" and there is satisfying comfort in the routine. Not to mention the fact that it's a stress-reliever for everyone involved.

Even in the evenings, and on weekends, I cannot recall ever witnessing an 'incident' of a dog biting a human, or disrupting a person's enjoyment of the recreation area. This is the pattern of usage at Crissy which is real and evident to me.

Nothing evidences to me that the use of Crissy Field is unbalanced, nor do I feel these issues of "unbalance" have been concretely stated or specifically cited in the the GGNRA DEIS for Crissy Field. As you may or may not have experienced, Crissy is subject to San Francisco's brutal west wind and fog in the spring and summer, and waterlogged field conditions with the winter rains. There is limited demand by locals and tourists for these natural resources until days when we are blessed with dry, windless (and if we're lucky, sunny & warm) days. The exception is possibly dog owners, who you will find recreating with their pets, rain or shine. Use of this water-front recreation area is a liberty that is not taken for granted by us.

After reading the documents which have been published for comment, I am in support of the No Action Alternative "A": What is really driving these decisions and massive time & effort? One can only speculate it's deep pockets??

Crissy Field is a cherished gift. It's more a benefit to me, than probably my dog to be able to recreate together. But one thing is clear: Crissy is not a National Park in the sense as Yellowstone, or the normal NPS areas. It's a recreation area, and to deem it a Park with strict limitations for humans, dogs, and cyclists ? the very people who love it and appreciate it daily - would be criminal.

Thank you for your time.

Sincerely,

Carolyn Suh

Correspondence: (Submission from Reid Reichardt ? City of SF resident). The DEIS is full of assumptions and speculation about negative impacts that off-leash dog walk could or might have. But there is no documented data to support any of them. The DEIS presents no solid evidence of negative impacts that have occurred. This is not science. I have never seen a dog attacking a wild animal on the GGNRA lands. While it's obvious that the growth in human population has had a negative affect on the natural environment of San Francisco in the last 200 years, it's unfair to now blame off-leash dogs for such human impact. In fact, dog owners and walkers seem to be some of the more environmentally conscious and concerned members of the community. If a dog is observed to be harassing wildlife, that irresponsible owner should be given a ticket/fine. But why punish an entire human population based on biased speculation about what might happen if dogs are allowed off-leash.

I request that all statements of speculation and assumption, those without supporting data, be removed from the DEIS.

Correspondence: May 30, 2011 Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean, I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law. The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded. This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others. The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to: ? Honor the original 1979 Pet Policy. ? Respect dog-walking as legitimate recreation. ? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. ? Exclude speculative, exaggerated, biased, or misleading statements and studies. ? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). ? Enable professional dog walking and align any professional dog walking rules with county or city regulations. ? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input. These are my personal comments and observations regarding this plan: I have lived in the Bay Area since 1979 and walk several time a week with my own dog in this area and it is a vital resource for all people as well as dog owners in San Francisco. We use it to exercise, socialize and as part of our routine. Our dog walkers also use this area for exercise and are responsible in this use of the area. Without this resource city parks will be over used and without the daily positive interaction of walkers, dogs, and people in these areas they will fall to the use of lawless and negative uses as they were before they were part of regular urban recreation.

Sincerely, Karen Brungardt San Francisco, CA 94116

| Correspondence: | (By Reid Reichardt ? City of SF resident). While speculating that off-leash dog walking presents safety issues, the DEIS does not adequately recognize | | |

the hard data that serious dog-related safety issues account for just 2 percent of the GGNRA's reported safety incidents. The GGNRA also did not consult any professional dog behaviorists in writing the DEIS. In fact, dogs who are restrained by leashes are much more likely to suffer from "leash reactivity" and "barrier frustration" that leads to aggression, dog fights, and dog bites.

I request that the DEIS be amended to include testimony, data, studies, and recommendations from professional dog behaviorists.

Correspondence: The DEIS does not recognize the sense of community that off-leash dog walking brings to the diverse Bay Area community. Walking at Fort Funston I encounter people of just about all ethnicities, social classes, and orientations, brought together by their interest in socializing their dogs and enjoying the outdoors. I have never seen any kind of altercation like I regularly encounter in other City environments. Off-leash dog walking fosters a very special sense of community, which the DEIS will destroy.

I request that the DEIS be amended to study this historically significant community that has evolved in Fort Funston and other pockets of the GGNRA lands.

Thank you, Reid Reichardt (San Francisco resident).

Correspondence: I was walking in a Bay Area park today on a beautiful rocky narrow trail. It was posted for no bicycles, but there were bicycle tracks and a little erosion. I was thinking about the similarities of mountain-biking and walking dogs in open space areas. They are both recreational activities beloved by people that have the potential in the wrong place and time to do damage or cause injuries. How would they deal with the bicycle riding in the wrong place? They would never close the entire park to bicycles, including fire roads. They might put up additional signs, or erect barriers, or if there were resources increase patrols. They would not ban it in the entire region. I feel as if the goal of the GGNRA from the beginning has been to ban off-leash dog-walking. The proposal is for the most restrictive option, and this is very important, for the entire elimination of off-leash walking in the future with no further discussion. I do not understand why dog-walking is not viewed as

a valid recreational activity. There is no other activity where the plan is to ban it entirely if someone breaks the rules. When many people and dogs are restricted to a small crowded area, it is inevitable that some problem will arise. Walking the dog is an important activity to so many people who are older and socially isolated. I was recently reading about how the population of San Francisco is greying and I do not understand why this is not valued. I feel that it has been clear since the beginning of this process that the goal is to eliminate off-leash dog walking. It makes me wonder why nearly the entire coast from Pt Reyes to the middle of the San Mateo peninsula has been given to the federal government to manage.

Correspondence: The starting point for this document is flawed. The existing laws and regulations need to be regularly enforced and then the resulting environment studied prior to determining the goals and scope of the dog management plan. I visit the GGNRA parks nearly 3-4 times a week and never see rangers providing education to the public about current park rules and regulations (providing this education is required in the document that gives the land to the GGNRA), enforcing dangerous dog laws, voice control or poop pickup. We have these rules for a reason and those of us that have well behaving off leash dogs should not be punished for the failings of a few. Why has the GGNRA neglected to supervise these parklands and then assume to be able to write a report that creates more restrictions and require more enforcement without doing any studies to try and understand the community that uses the facility and cares for it?

Correspondence: To whom it may concern, Thank you for all of your hard work in creating this draft plan, but I must respectfully disagree with your plan as it stands. For the past 20 years I have been walking up Sweeney Ridge with one of the several dogs I've owned in that time period, along with my wife, children, parents, family, and friends. It is fair to say that I have climbed up Sweeney Ridge literally hundreds and hundreds of times - almost never without a dog. Hiking with the dog(s) along is the reason we climb that ridge trail - dogs are experience enhancing companions, not just for the family walking the dogs, but almost always for the other visitors. Often I see the same families walking their dog(s) and it is consistently a respectful and friendly encounter. I must also add that in the twenty years that I've been climbing

the ridge (with dogs), the trail and fire road has not degraded in the least, in fact, as an intimately familiar, close observer of the trail, I must say that it has improved over time. Honestly, I was rather shocked (and extremely disappointed) to see Sweeney Ridge on the list. Clearly having dogs on the trail has had virtually no impact on the environment. In fact, the trail couldn't be a more perfect opportunity to walk dogs in nature and have almost no impact, as the great majority of the trail is paved road. Please reconsider your pending restrictions on dogs on Sweeney Ridge. I believe that the regular users of the trail have a deep and abiding love and respect for the beauty of the Ridge and the opportunity to experience the outdoors with their pets. Granted a few people may have their dogs off-leash occasionally, but do you shut down a highway because a few people speed? It is the same argument. Visit the Ridge sometime and you'll be hooked. Ready access to the Ridge was one of the drawing points to moving to this area twenty years ago and hiking it continues to be the highlight of my day - in fact I plan to hike it tomorrow morning with my faithful dog Theo, as I did the day before yesterday. The canine therapy session is priceless - the natural beauty and joy of hiking and running with my dog renews my stores of love, joy, peace, and patience and allows me to be an even better teacher (I teach middle school), father, husband, and human being. We both are completely refreshed by the experience. It is truly a quality of life enhancing experience. So would I (we) continue to hike the Ridge without a dog? There have been several months (over the years) when we have been without a dog and the honest answer is no, we don't hike it without a dog. The dog is our personal trainer, not only keeping us in shape, but also helping us truly appreciate the beauty of the Bay Area. With the dog we are connected to our environment, experiencing the outdoors, and active as a family. He is our incentive, encourager, bond, and reward. Going for a hike with him in the hills above our home is central to our family life. Please keep it open to dogs. Please. Thank you. Sincerely, Charles R. Tinkham (and family - Joanne (wife), children Dan (20), Sarah (18), Ben (16) and dog Theo (3) - and in memoriam: Yukon, Toby, and Sam)

Correspondence ID: 4183 **Project:** 11759 **Document:** 38106

Correspondence: (from Reid Reichardt ? a San Francisco resident) The GGNRA has skewed, misused, and selectively cited scientific studies to compile it's DEIS. The data mentioned to support protection of snowy plovers and bank swallows does not reasonably connect off-leash dog walking to the problem. If off-leash dog walking were in fact having a significant impact on the bank swallows and snow plovers, then I would request that the GGNRA fence off the sensitive environments. However, I suspect that off-leash dogs are not a significant source of the problem.

I therefore request that the GGNRA hire an objective 3rd party agency to research the true cause of the snowy plover and bank swallow issues, and to then suggest appropriate measures. That information should be incorporated into the DEIS.

Correspondence: I have lived in the bay area for more than 20 years and walk in the GGNRA lands about one time per month. I am also a long-term volunteer with Grateful Dogs Rescue and some dog-walkers volunteer to walk my foster dogs at Fort Funston on a regular basis. Having off-leash walking areas is essential for conscientious dog-guardians.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions.

It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option.

The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal.

The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for

these local residents.

After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program.

Received: May,30,2011 23:02:28
Correspondence Type: Web Form
Correspondence: (Contributor: Reid Reichardt ? resident of San Francisco)

The DEIS makes no attempt to resolve the perceived issues caused by off-leash dogs, other than by restricting them. However, there are several more simple and creative solutions that could be applied with minimal effort. For example, extremely sensitive habitats could be fenced off. Literature could be distributed to explain the importance of preventing dogs from disturbing wildlife. A low fence and signage could be installed on dangerous cliffs for the protection of park visitors. As for the horse-riding community, a much more harmonious co-existence could be fostered if programs were provided to help socialize dogs and horses.

I request that a 3rd party agency/company be hired to provide the GGNRA with more reasonable alternatives than what the DEIS is currently proposing.

I also request that the DEIS be amended to include more such creative and reasonable solutions.

Thank you,

Reid Reichardt (resident of San Francisco)

Correspondence: I have been a user of GGNR park lands in Northern California for almost twenty years, without a dog, and with a dog for just the last few months. As a windsurfer I have for years made considerable use of the beach at Crissy field in harmony with dog users. Having spent much more time as a user without a dog I believe I can impartially state that the dog use at any of the Crissy field areas has not posed a problem for me or anyone I know or have seen in the parks.

I am opposed to any additional restrictions on dog use within Crissy field or the Crissy field wildlife protection area.

I've seen that professional dog walkers at Fort Funstun have difficulty with voice command control given the number of dogs they are managing simultaneously. I would not be opposed to voice control restrictions on such users, but would be opposed to voice control restrictions on casual single dog walkers.

I do not have much experience with dogs at other ocean front areas (other than not having noticed any issues whatsoever). Given that I would not be opposed to restrictions on professional dog walkers as with Fort Funstun, but I would be opposed to the elimination of voice control at ocean front beaches.

I notice that much of the Draft Dog Management Plan claims dog restrictions are justified in terms of environmental impact. In the Crissy field area, it's clear that far greater environmental impact is being realized by projects such as selling off Presidio land to commercial enterprises, the widening of Doyle drive and connecting roads, and the expansion of park facilities at Crissy field (the Crissy field center).

I believe any environmental concerns in the Crissy field area should be focused on the above development projects, and on pollution, such as oil spills, from traffic in the adjacent shipping channel. Given the severity of the environmental impact from these commercial and industrial activities, I believe any attention being focused on dogs impact to the environment in the Crissy field area is entirely misplaced.

Correspondence: The GGNRA is a Recreational Area. I recreate by walking my dog in a responsible and respectful-to-others manner. It is a recreation. I have the same rights as joggers, walkers, people throwing the frisbee, etc., to use the GGNRA. There is little evidence dog walking is a significant nuisance to others, therefore further restrictions on off-leash dog walking is not warranted.

The GGNRA's proposals are taking my rights away without a strong reason!

Type:

Correspondence: May 30, 2011 Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022
Dear Mr. Dean,

I am a resident of San Francisco. I am a long-time advocate for the environment and financial supporter of municipal Parks and Recreation. My advocacy and financial contributions include the National Aids Memorial Grove, San Francisco Parks Trust, New York's Central Park Conservancy, and Natural Resources Defense Council. I am a disabled citizen covered under the Americans with Disabilities Act and I walk my dog in my local National Recreation areas, Fort Funston and Chrissy Field.

I am writing to register my strong disagreement with GGNRA's preferred alternative plan which eliminates my recreation in my local National Recreation Area. The proposed changes to the 1979 Pet Policy and to the new lands in San Mateo County are based upon sloppy science, not long-term monitoring of site-specific conditions. GGNRA should consider reasonable and balanced alternatives for dog walking on new lands and existing lands. The natural areas of the GGNRA are located in one of the densest urban areas in the United States. I am concerned about the long-term preservation of the GGNRA's natural resources, but it must not compromise long-term established urban recreation in GGNRA's boundaries. In fact, rather than limit the minute portion of GGNRA that is currently open to dogs, the GGNRA should substantially increase the available recreation areas for me and my family.

I favor an approach that provides greater space for our recreational use (including dog-walking access) and also preserves our urban gem. One that expands dog walking access and incorporates education and physical or

vegetative barriers is preferable to further restriction of my use of GGNRA. The DEIS must include such an alternative as a reasonable option as we seek to open more of the GGNRA to the enjoyment of me and my family. The proposed "compliance-based" approach punishes me for perceived transgressions of a few. It is designed to fail and must be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA must partner with the community to make the plan work, not assume an adversarial relationship with failure the goal. The DEIS fails to consider that the GGNRA my city's beloved treasure. San Francisco is a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for me and other local residents. After careful consideration, I support a modified Alternative A (the "No Action alternative"). The alternative must also include the "New Lands" areas in San Mateo County. The current plan must be modified to provide, improved vegetative barriers, and education and outreach as part of the overall program. Thank you for your consideration. As I continue to examine the policies of the GGNRA, I vow to keep you advised of the flaws in the preferred plan and all further GGNRA actions. Sincerely,

Steven M. Salzman San Francisco, CA 94117

Correspondence Type: Web Form
Correspondence: Dear GGNRA leadership,

"I know dogs can be such a distraction!" the lady with the large dog said with a friendly chuckle, a form of apology to several park visitors who were startled by the approaching animal. The people were doing tai chi in a grove of trees in the Presidio. The dog was off leash in an on-leash area. This happened several days ago.

Regarding visitor experience impacts, this brief incident sums up much of the problem being addressed by the new dog management plan. The plan makes it clear to everyone visiting the park what they can expect in a particular place. Here, dogs are allowed on leash (in a specific numbers per person). There, dogs are allowed off leash (with specific guidelines of appropriate behavior). Over there, dogs are not allowed at all.

Given the Presidio's nascent national parkhood, it's unfortunate that dog walkers have opportunistically established themselves as a primary park user. I can imagine the letter writing will reflect this, vs. the many would-be letters from those who have yet to become park users for reasons other than dog walking. After many years of active park-making the Presidio is poised to become a destination for many more people who have little or no relationship to this part of the GGNRA. However, in my experience living and working in the Presidio for more than 14 years, the ubiquitous and chronic presence of off leash dogs (and professional dog walkers with large groups of dogs) is now the most significant detractor from the quality of visitor experience the park faces. Needless to say, I'm gratified that the park is clarifying the rules on dogs in the park.

I'd like to emphasize that I am most concerned about the regulation of professional dog walking, namely the cumulative impacts of large numbers of dogs on wildlife, water quality and especially visitor experience. Please ensure that your plan addresses the following predictable scenario:

A group of schoolchildren visiting the park for the first time are walking on a park trail in a quiet natural area. On the same trail approach 3 professional dog walkers who are walking together each with 4 medium and large sized dogs, all on leash. The sum total of 12 dogs in the gauntlet of the trail results in contact with the children and the dogs. Some children are excited, some are nervous, all are distracted from their experience of the park. Given that this is a "first impression" visit to the park chances are good that those children now factor dogs into the equation of what a trip to (fill in the blank) part of the GGNRA entails. Does this inspire a return to the park?

When one considers the relatively small areas of the park that are accessible to recreation (i.e. trails and beaches) the near ubiquity of dogs means that an present experience in the outdoors in many areas of the Presidio and other parts of the GGNRA means an experience of dogs. In other words, whether

on-leash or off-leash the presence of dogs (sight, sound, smell, or evidence in the form of neglected dog feces to be avoided on trail or turf) is becoming a standard part of the character of the open space of the Golden Gate National Parks. This is not the national park experience that inspires the status of "America's Best Idea".

I strongly recommend the following:

7 require all off-leash areas be enclosed to protect park users, wildlife and other dogs;

7 limit off-leash recreation to areas where it will have no negative impacts on sensitive wildlife and habitats;

7 provide more trails that are free of dogs (currently, only 1 trail in San Francisco will be available for those who do not wish to interact with dogs);

7 limit dog walkers in the park to 3 dogs and do not permit commercial dog walking;

7 implement compliance-based adaptive management that requires at least 95% of dog walkers to comply with the new regulations.

Thank you for restoring order, wildlife protection and quality visitor experience to these extraordinary national park lands.

Gratefully,

Damien Raffa

Correspondence: Dear Mr. Dean, I live in SF, have two kids and one dog. We've lived in the city for over 15 years but have never been so happy since we got our dog 2.5 years ago and discovered new places to get outside, enjoy nature, and exercise. when we travel out of the bay area, we're always shocked at the lack of good places to take children and dogs for off-leash hikes. At home, it's become part of our regular exercise program and when I heard that Fort Funston and Chrissy Field's off-leash areas may be changed, I was very upset and concerned.

So many of the areas the GGNRA Dog Management Plan are aimed at protecting are only regularly used by dog owners-not because of that causality, but because the only people who want to use those areas are dog owners. I want you to know that I am against the GGNRA's draft dog management plan. When I reviewed the plans, it is clear to me that it's not been reviewed by dog experts. For example, the proposal that the south beach ladder at Funston be strictly-on leash is not safe for dogs or people.

Furthermore, the report is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law. The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

* Honor the original 1979 Pet Policy. Respect dog-walking as legitimate

recreation. * Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. * Exclude speculative, exaggerated, biased, or misleading statements and studies. * Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). * Enable professional dog walking and align any professional dog walking rules with county or city regulations. * Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

I urge you to consider the public's needs and input before implementing a plan that will discourage healthy outdoor exercise of people and their dogs. Sincerely, Joanna Schull San Francisco, CA 94110

Correspondence: Thank you for the opportunity to participate in planning for uses of the GGNRA. I am a daily hiker at Fort Funston. I moved up to San Francisco in 2009 and, I have to tell you, the opportunity to walk my dogs up and down the trails and on the beach each day is a dream come true. I have lost twenty pounds since moving here and spending an hour to an hour and a half a day hiking up and down those hills!

This is also where I have found friendship in San Francisco. I am sure you know, you must frequent the place yourself, that many of us who use Funston are in our later years. Thanks to my daily treks at Funston, I had places to spend the holidays this past year.

In 2008, I spent the summer studying in London. I walked through Hyde Park every day and was surprised to find dogs are allowed to run free throughout the park (they do have warning signs by the swan pond - don't want the dogs to get sick). Regents Park (including Primrose Hill), James Park - all were off leash for the dogs.

When I came back from London, I kept bringing up the freedom dogs experienced in the Queen's parks. That is how I found out about Fort Funston. So I moved. 100 miles north from Santa Cruz, so I could run with the dogs. Some run with the bulls, I run with the dogs!

Please allow us urbanites the opportunity to run with the dogs in this wide

open space. It is the perfect dog park.

Thanks for listening, Chris Quinn

Correspondence: To Whom It Concerns,

I am a senior citizen, a retired college teacher (30+ years in San Francisco) and have lived in the SF Bay area for 37 years. Currently, I live with my husband and a 7 1/2 year old dog. We are completely responsible for our dog and her behavior at all times, including always picking up her feces and controlling where she goes.

One of her favorite places in Crissy Field. She also like the trails and beaches on the Marin side of the GGNRA. Her pleasure in going to these places and running around is a wonderful delight to witness. It is a health-booster for her and for me. Off-leash, she has never damaged anything. She is within voice-command range at all times, in fact, usually beside me. When I walk with her in a highly populated area or a location near a "control area", I put on the leash without fail.

It seems obvious to me that the proposed restrictions on dogs in U.S. National Parks (specifically, the Golden Gate National Recreation Area) are the result of highly exaggerated claims and assertions about dogs' behavior. In all the pages of that costly report, there is NO PROOF that dogs, on and off-leash, harm the land, people, and other animals. In fact, they don't ! Has anyone even looked with their eyes at how dogs use the GGNRA lands? Most people with dogs are good, conscientious citizens. Of course, there are the few "bad apples" as with any collection--people without dogs, bicyclists, and so on.

Considering the proposed plan and its severe restrictions, it's as if a small contingent of dog-haters are in charge of administering for the vast majority of people and it's totally absurd. It is, at the bottom line, undemocratic.

PLEASE do not let something as trivial as "pride or arrogance" prevent you from reconsidering this proposal. PLEASE be willing to face the reality that there are numerous responsible people with dogs and that these dogs are an integral part of our lives. The GGNRA should include dogs, along with their people. The basic facilities of a civilized human life have included dogs for thousands of years. Let's keep it that way.

Correspondence: I live in Pacifica in San Mateo County. I walk my dogs at Mori Point and Fort Funston.

I oppose Preferred Alternative because it is too restrictive. There is no justification in the DEIS for major changes. Support formalization of 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future. The GGNRA is in a dense urban area, yet the DEIS is written as if the Bay Area and its residents don't exist just outside its boundaries. This is an urban area, not a pristine wilderness. The DEIS ignores impact on residents or area resources, especially city parks if restrictions take effect. Note that the SF Board of Supervisors passed a resolution opposing the Preferred Alternative because of the lack of study of impacts on city parks. The DEIS does not consider impacts on the health (physical, mental and socialization) of people if dog walking is severely restricted. The DEIS also does not consider impacts on social communities of people with dogs at GGNRA sites of severe restrictions take effect. Walking is one of my primary sources of exercise, as a single female, I prefer to walk with my dogs. When the citizens of Pacifica and the surrounding areas raised money to purchase Mori Point, we did so with the understanding that it would be preserving that land for our current recreational uses. On and Off leash dog walking has always taken place at Mori Point.

Thank you for your consideration,

Andrea Dion Pacifica Ca 94044

Correspondence: With all due respect, the plan that the GGNRA wishes to accept for all new lands has so many flaws, it is hard for me to write them down. Many of my neighbors have already pointed these out to you in many forums (alongside myself) including these comments that you want filed officially in writing (as a point of clarification, I have come to four open houses and comment forums but still feel that you are not truly listening to any of the community's comments).

The bottom line is, you are acting prejudicial against dog owners. Dog

walking is a recreation, and yet it is the only recreation you are trying to eradicate from your new lands, which is very ironic as it is many of the dog owners who have been the true docents of these lands for more than 30 years and have saved the Rancho Corral de Tierra from development from groups like CalTrans

I fully support a Recommended "Hybrid" Alternative: Instead of the GGNRA's preferred alternative D for New Lands, i.e. "No dog walking allowed unless opened by GGNRA Compendium, " we recommend a modified version of Alternative A, No Action. New Lands, however, do not fall under the 1979 Pet Policy or the GGNRA Compendium, and therefore existing uses, including off-leash dog walking, should continue to be allowed until scientific studies prove that they are harmful to the environment.

Supporting this is the only action that is morally responsible on your part, and I believe that the GGNRA - which is responsible for NATIONAL RECREATION AREAS, not National Parks, yes, you are part of the NPS, but your mission is to provide recreation areas - this does include dog walking.

Correspondence: I am 77 years old. I have been walking my dog(s) (at one time i had 2 miniature schnauzers) in GGNRA territories since before GGNRA existed. (Thank god for the Burton bloodline.) A major purpose of the establishment of such a wonderful entity is to provide recreational activity opportunity - for people. All the data show that SF has lots of people and lots of them have dogs. Also, they show that it is a healthy connection to have a pet, even a dog. I have attended numerous mtgs over the years re: dog off leash issues. I am now old and jaded.

I miss being able to walk a dog south of Lincoln (dont get me started on south of the Beach House) off leash. In the olden days, after work at UCSF I walked the 2 schnauzers from Lincoln to Sloat as long as there was daylight. I retired from UCSF in 2001 and walk with my dog about 4 miles a day. Our walks are not limited to GGNRA land, but Ft Funston, Crissy Field and Ocean Beach account for about 16 miles a week.

It is healthy for people and for dogs and thus for society to have space for both to meander off leash. I am so tired abt the rules of the NPS not

permitting such behavior: the local NPS should look into its soul, get a life on this issue , admit it is OK to rethink and stop attempting to strangle some really good, beneficial behavior.

Correspondence: Hello,

I live in Marin City and strongly support the leash restrictions.

The trail a couple of blocks from my house, Alta, has for years been used heavily by dog walkers who arrive with a large number of dogs and allow them to roam off-leash. I love dogs, however the sight of a large pack of off-leash dogs coming towards me frankly makes me nervous. Once, I was completely surrounded by barking dogs while carrying my baby. The dog walker, in the distance, called the dogs, but they were slow to obey.

My husband avoids the trail now, too, since an off-leash dog bit him.

We miss being able to enjoy that beautiful ridge -- the one we were so excited about when we moved to the neighborhood.

Another time, I was walking on the nearby Oakwood Valley Trail with a friend and her 9-year-old son. Unfortunately, we encountered numerous large off-leash dogs, which made for a terrifying experience for the boy, who had also been bitten when he was younger.

I hope a solution can be found that works for everyone -- human and canine. But it should be possible for people to walk on public trails without fear of close -- and possibly dangerous -- encounters with dogs they don't know.

Sincerely, Jennifer Diessel

Correspondence: 1. The Agreement that GGNRA originally entered into with the City of San Francisco stipulated that the City would have ultimate control over certain areas and that dogs & dog lovers would be able to enjoy those areas unhampered by leashes. Any change to this Agreement represents a breach of faith and a breach of contract-presumably actionable. (Must we go this route?)

2. Any attempt to make GGNRA areas off limits to unleashed dogs (except for areas enclosed for habitat restoration & for the safety of the dogs, say, from traffic) will ultimately put unbearable pressure on City parks-particularly Golden Gate Park. This pressure would not just be on professional and semi-professional dog-walkers; it would be an unacceptable hardship on dog owners and their dogs (some of whom rely on dog-walkers), who would be crowded into fewer and smaller spaces, which would embitter the current pleasant social interactions between people and between dogs, and where parking is already a problem. Golden Gate Park is already approaching the breaking point. I urge you to refrain from dealing the final blow.

3. If you've ever personally spent time walking in the Ft. Funston area or Ocean Beach or any number of open spaces, you would see, as I have seen, a lovely and serendipitous mix of dogs running free and parents with children (or single parents on their cell phones as their toddlers run into the ocean), people flying kites, surfers, picnickers, joggers, yogis, lovers, the elderly out for a stroll, and friends playing ball. Perhaps you have not noticed the lonely, the grieving, the disabled, the mentally ill-all of them finding solace in nature and, many of them, in the curative powers of a pleasant exchange with dog-owners, dog-walkers, and dogs-open and free, easy and non-threatening. The loss of the opportunities for these interactions probably do have fiscal consequences for the City, as well as financial consequences to those require them, but certainly they have other, immeasurable consequences. Free animals are songs of praise to the Lord, and almost anyone who witnesses this feels a bit of Glory Hallelujah at the sight.

4. People need outdoor time, leisure, and spiritual/physical/psychological renewal in nature and in relationship with free, non-human, non-verbal creatures. Some require more than others, some contribute more toward it than others, but the ever-increasing enclosure or circumscription of Man's

spirit, space, and social opportunities, and the encroachment upon them by an unending stream of consumers and consumer items, has contributed enormously to the ever-increasing rates of mental illness, spiritual disturbance, and/or social unfitness that now characterize American culture. Note that 70% of the San Francisco Department of Public Health's budget is spent on mental illness and chemical dependency.

5. Dogs and dog owners have the right to live and enjoy in relative freedom (within certain bounds that respect, to some fair and reasonable degree, some of the desires, not all, of others competing for the same resources). We have the right to breathe air, take up space, and enjoy God-given nature; we are not here to make unlimited sacrifices to parents & children, birds who can easily fly away, Frisbee golfers, SUV owners, City coffers, etc., ad infinitum.

Consider any and all of the points that I have tried to make and please: Do not take away our off-leash areas!

Correspondence: I wish to add my name to "Accept the Preferred Alternative" of the GGNRA Dog Management Plan. The increase of dog owners in the Bay Area over the last 10 years has been astounding and of course, with this change is the challenge of maintaining an all to stressed and underfunded Park system. The City and County parks bear the brunt of the dog and dog-walker activities, so the citizen who looks for an escape from the hardscape / urban scene must rely on the National parks for any hope for a moment to experience the natural world. The Park's Plan is long overdue in realizing the need for establishing stringent controls of our land we have set aside for that purpose.

The pet owners desire to share National park property with their animal, take away from those of us who want a chance of a different experience. Unfortunately, I've witnessed many of these occasions at our beaches, on trails and in meadows. I only wish the proposed plan, if adopted, could be adequately funded to be lawfully enforced. But, first things first!

Thank you, Barry Deutsch

Correspondence: Dear Superintendent Dean, I oppose the GGNRA's current preferred alternative to restrict and in some areas eliminate off leash dog walking in the GGNRA. I am a San Francisco resident who volunteered for five years in the dog behavior department of the San Francisco SPCA. I adopted a puppy in October 2010, and I frequently visit Fort Funston and Crissy Field with him. When I adopted my dog, he was afraid of other dogs. I have taken him to an off-leash dog park every day since last October, and he is now a well socialized dog who obeys my voice commands and is friendly with people and other dogs. I would not have a dog with these behavior traits if I had not been able to use areas such as the GGNRA lands.

I sometimes see dog owners who do not have their dogs under control, but the vast majority of the dog owners I see are responsible. I oppose the compliance based management strategy because it penalizes dog owners such as me who have invested significant time and effort to make my dog's off leash access a neutral or positive experience for other people using the GGNRA space. I would support a policy that requires dog owners using GGNRA space to attend and pass obedience classes. I assisted in such classes while volunteering at the SPCA and would volunteer my time for such a project.

I sometimes walk my dog with friends who live south of San Francisco, and we struggle to find off leash parks outside of the San Francisco areas. I donate to the World Wildlife Fund, but I also support the need for people to enjoy outdoor space.

Thank you for considering my comments, Daniel Ratner, San Francisco, CA

Correspondence Type: Web Form

Correspondence: Frank Dean, General Superintendent GGNRA Fort Mason, Building 201
San Francisco, CA 94123-0022

Dear Mr. Dean,

I live in Noe Valley with my 12 year old, very sweet, loving dog, Duff. We continue to enjoy visiting many parks and beaches throughout the Bay Area, as we have for the past 11 years together since I adopted her.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off-leash dog walking areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy)

and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions.

It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I want to protect the GGNRA's natural resources, I believe options other than restricting dog-walking access should be considered first. I favor an approach that truly balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternatives as a reasonable option.

The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and is not based on any documented impacts of non-compliance, just the mere fact that non-compliance occurs. Because it will change the status of areas from off- to on-leash or on-leash to "no dogs allowed" automatically and permanently if non-compliance is alleged, it will deny the public the chance to comment on these major changes when they occur. That violates the law that requires public comment when a change is either significant or highly controversial, as these changes would clearly be. It must be removed.

The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents.

After careful consideration, I support a modified Alternative A (the "No Action alternative") that codifies the 1979 Pet Policy as it was originally written (there is no evidence in the DEIS to support the closures of beach access because of the presence of snowy plovers), and that includes off- and on-leash access on GGNRA lands in San Mateo and on new lands that become part of the GGNRA, especially those areas in both that have traditionally had dog walking.

Thank you for your consideration.

Sincerely,

Brett Penfil (and Duff!) Noe Valley, SF

Correspondence: Frank Dean, General Superintendent Golden Gate National Recreation Area
Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean,

As a dog owner and as a lover of San Francisco's parks and beaches, I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was

designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. Exclude speculative, exaggerated, biased, or misleading statements and studies. Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). Enable professional dog walking and align any professional dog walking rules with county or city regulations. Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

I have visited GGNRA on numerous occasions with out of town visitors. Its the first place I take them, because of the wonderful view, the brisk air coming off the ocean, and because of the friendliness of the park to dogs and their owners. Loosing this space as a recreation area for my dogs, including dogs with professional dog walker, would significantly reduce my quality of life as a tax-paying San Francisco resident.

I urge you to reject the proposed dog plan, and let all of San Francisco's two-legged and four-legged residents enjoy this wonderful resource.

Sincerely,

Alan Brown San Francisco, CA 94117

Correspondence: Frank Dean, General Superintendent, GGNRA

Dear Mr. Dean,

I am a native San Franciscan (60 years old) who lives in the Sunset district. I have been taking my dogs to Fort Funston for several years, at least four (usually five) mornings a week. We typically stay for about an hour and a half, hiking the trails and socializing. These morning treks are a very important part of the day for both me and my dogs, and I strongly oppose significant restriction or elimination of off-leash dog walking within the GGNRA. My opposition derives not only from my enjoyment of off-leash dog walking, but also safety concerns of having a lot of dogs who behave differently on leash in a confined area. Also, it seems doubtful that city parks could accommodate the overflow from GGNRA. From my understanding, the proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions.

I believe that it is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of GGNRA's natural resources and want to protect these important areas (and have been a member of an environment group in the past), I believe that other options besides restricting dog-walking access should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I believe that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option.

The proposed "compliance-based" approach seems to punish many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work and not assume an adversarial relationship, with failure as the

goal.

The DEIS fails to consider that the GGNRA is the "back yard" for a large metropolitan area. The basic purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on "human environment," but the DEIS fails to do so by not adequately addressing how the proposal affects "recreational" values for local residents.

After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program.

Sincerely,

Janine Marinos

Correspondence: National Park Service: Yes, continue with your plans to protect the Golden Gate National Recreation Area by limiting (should be eliminating as in all other parks) areas for people running dogs. I served at the Presidio and have family in San Francisco so I have both a knowledge of the areas of the GGNRA and relatively long experience in them (hiking, visiting, working). As such, I can state that the areas have seriously deteriorated from both overuse and from dogs.

Most dogs are being run off-leash in all areas. The so-called guardians seem amused when their dogs chase animals, dig, run up to other people. The so-called "voice control"? Please! This is the favorite farce of the people running dogs. Some of the time, they cannot even see their dogs. I recently witnessed an incident on the Presidio at Crissy Field in which an unleashed (pretty much unaccompanied) dog chased a gull and in so doing galluped by a man in a wheelchair who was attempting to wheel down a slight slope. As the dog ran by, it bumped against the man's feet in the wheelchair, greatly startling him. No one was hurt, but we wondered if anyone was with the dog. After about 45 seconds, a man did appear who seemed, maybe, to be the dog's guardian. We could not tell as the only behavior indicating any relationship came from the dog, not the man who did absolutely nothing but ride by on his bicycle. By all means, yes, please, please control this out-of-

control homo sapien behavior.

Dog voice control is a ruse and a farce. The type of control required is not of the dogs, but of the homo sapiens. Dogs might require voice control, but people obviously require legal control. The problem is not dogs but people out of control. Since no amount of personal responsibility has worked, legal control is warranted. Do it. Henry Lowry

Correspondence: Dear Superintendent Dean,

I am writing to comment on the GGNRA DEIS plan regarding dog management. I agree completely with the writers below. They have stated our case comprehensively.

Most of this has come to naught.

If you really intend to handle this issue fairly, you would scrap the whole thing and start over. You would do so for reasons articulated clearly in the following documents:

1. Comments on the GGNRA Draft Environmental Impact Statement by Dr. Suzanne Valente and Stephen Golub of the Ocean Beach Dog Owners Group;
2. Unleashed Fury by Julie Walsh;
3. Letters from the SF/SPCA to the GGNRA dated July 13 and August 16, 2000, from Ed Sayres, the Executive Director of the SPCA at the time;
4. SFDOG's Official Comment on the GGNRA DEIS by Sally Stephens, et al, SFDOG.org;
5. Keep the R in the GGNRA: Environmental Injustice Suggestions and Comments, Public Comment on the 2011 GGNRA DEIS by Arnita Bowman, 5/23/11;
6. Preserve Recreation for Dogs and People in the GGNRA: San Mateo County Specific Suggestions and Comments, Public Comment on the 2011 GGNRA DEIS by Arnita Bowman, 5/23/11;
7. Preserve Recreation for Dogs and people in the GGNRA: Public Health

and Safety Suggestions on the Draft GGNRA Dog Plan, by Arnita Bowman, 5/23/11.

Thank you for your consideration.

Correspondence Type: Web Form

Correspondence: I am writing to oppose the GGNRA's draft dog management plan. I believe the plan will have a negative impact on the residents of the City of San Francisco, as it proposes extremely restrictive policies about where we will be able to enjoy off-leash hiking, running and other recreation with our pets.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily ignores the needs of Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

In my opinion, the GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area--and it IS an URBAN recreation area--not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded. I have also observed that when people and their families walk with their pets, they are more open to meeting other people, usually via inquiries about their pets. They also grow to appreciate and value our beautiful open spaces in a way that they would never have done if they were not out walking their dogs.

The GGNRA draft management plan does not provide tangible evidence that justifies such drastic changes to 40 years of healthy dog and human recreation. The Park Service should honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. Recognize that there are hundreds of uninhabited miles along the California coastline for wildlife to thrive, while we San Franciscans and our pets have a 7 x 7 mile peninsula on which to recreate. Please do not adopt the proposed regulations, but rather, honor the 1979 Pet Policy.

Thank you for your time and consideration.

Sincerely,

Sophie Ziegler San Francisco, CA 94110

Frank Dean General Superintendent GGNRA, Building 201 Fort Mason San Francisco, CA 94123

RE: GGNRA DRAFT DOG MANAGEMENT PLAN / ENVIRONMENTAL IMPACT STATEMENT

Dear Superintendent Dean:

As the State Senator representing the 8th District in California, which includes much of the Golden Gate Natural Recreation Area (GGNRA), I am writing this letter of public comment as a reflection of my constituents' concerns.

As a general principle, I understand the need to address the difficulties the GGNRA has encountered in managing the area and balancing the interests of preservation and recreation. Given the long history of controversy, I am supportive of the effort to modernize the GGNRA's management policy so as to best protect sensitive lands and species and balance this with recreational use of the area.

I am interested in resolving the issue in a way that collaboratively considers both environmental and recreational factors. I believe a balanced final resolution reached through collaboration is an important goal not just as a matter of policy, but as a key peacemaking tool in resolving this historically emotional and hotly debated issue in San Francisco.

I have two significant concerns with the GGNRA Draft Dog Management Plan/Environmental Impact Statement (hereafter "draft plan") that I believe should be addressed in the GGNRA's revised plan.

1) Compliance-Based Management and Public Comment Based on constituent concerns and on information obtained through stakeholder meetings, I am concerned the compliance-based management strategy does not yet a) include a proposed system monitoring and implementation, or b) adequately incorporate the principles of public involvement and comment in policy changes. Compliance with the eventual final version of the plan will undoubtedly be difficult; however, an open, transparent, collaborative approach will ultimately create far better results-better strategies, better

compliance, better protection of sensitive species and habitats, and better community relations. A heavy-handed approach, or even the perception of such, will only perpetuate the current controversy-and it appears the lack of a proposed implementation plan for the compliance-based management proposal has already created that effect. The GGNRA must go through an open, public process with stakeholders to construct that plan for compliance management, and I encourage the GGNRA to further consider alternatives to the current compliance-based management proposal that would better incorporate public collaboration in assessing and improving compliance outcomes.

2) Consideration of Impact on City Parks The draft plan does not adequately consider or evaluate potential impacts on city parks. Rather, the draft plan appears to concentrate on economic factors such as impacts on nearby businesses and commercial dog walking, while grazing over potential changes in park use behaviors and the effect on city parks. The ultimate conclusion that the "potential impacts on social and economic conditions [in San Francisco] would be highly unlikely to exceed a 'negligible' threshold, and are therefore eliminated from detailed consideration" (1) is incomplete and inadequate.

I believe the GGNRA is mistaken and misguided in its reasoning on this point, and that the impacts on city infrastructure should be fully evaluated and addressed in the revised plan.

It is reasonable to assume that potential consequences of dog management policies within one jurisdiction will indeed affect the other. The draft plan itself states that "visitation data on local visitors walking their dogs off-leash in the park are not available; however, reports from park staff suggest that use of GGNRA by dog walkers has been increasing as regulations limiting or prohibiting off-leash dogs in areas managed by other agencies have been increasingly enforced."(2) It must then be recognized that the same will hold true if the GGNRA itself limits allowance of off-leash dogs.

Limiting assessment of impacts on the city to the socioeconomic effects of changing spending patterns of visitors is shortsighted. The potential effects on the city extend far beyond that-specifically, the financial strain on city infrastructure to accommodate potential increased use of city parks. With over 100,000 dogs in San Francisco, there will be impacts-but without appropriate assessment, we cannot determine to what degree the city's infrastructure will be affected. Without that information, the City cannot adequately prepare itself to deal with or mitigate any impacts ? large or small.

It is not smart public policy to consider impacts of this proposal within silos of governmental jurisdiction. The public does not perceive the world

through federal versus local lenses, and public perception and buy-in are essential to a consensus outcome on this issue.

The only responsible action is for the GGNRA and the City to jointly assess the potential impacts and consider how best to holistically manage the potential migration of dog activity between the GGNRA and city parks. I respectfully request this be included in the GGNRA's revised plan.

Respecting The Process The most important and most useful tool in achieving the ultimate goal of a consensus resolution is a fair, open, transparent, collaborative rulemaking process. A collaborative problem-solving approach is indeed more difficult when there is a high level of disagreement amongst affected parties and stakeholders-but that is precisely why that approach is most necessary in order to achieve long term resolution. I appreciate that the GGNRA embraced that idea and attempted to go through the negotiated rulemaking process. While that effort was not successful, I encourage the GGNRA, in its ongoing efforts to be open, public, and fair, to continue to be as collaborative as possible as this process moves forward given the controversial nature of this issue.

I also encourage the GGNRA to extend that spirit of collaboration and work with the City to resolve this issue. The GGNRA, though federally operated, is a partner in the San Francisco community. To transfer responsibility of dealing with this problem to the city without assisting in an assessment of and plan to deal with it would be irresponsible and, more importantly, would not solve the problem.

Sincerely,

Senator Leland Y. Yee, Ph.D. California State Senate, District 8

Correspondence: Although I've already commented a couple of times, I have one last comment, especial y in light of my experience at Ocean Beach yesterday.

I was going to at least ask you to, if dogs had to be off-leash on part of the beach, to focus your "manpower" on the times that the dogs are the most likely to be there - early morning and after normal working hours. I no

longer think this is remotely workable.

I recognize that most dog owners are responsible. The problem is that there are enough dog owners on the beach who only care about their dog that it hurts wildlife.

Yesterday I went to the beach and saw one shorebird left. The beach was nearly empty of people, too. A man with a dog threw the ball almost directly at the bird, flushing it. When I suggested that he had the rest of the beach to throw the ball; it didn't have to be at the one remaining shorebird, his response was two-fold. The bird wasn't a plover, and his dog is allowed to be off-leash now.

There were Park Service patrolling but they can't be everywhere and they're very visible. It's too easy to carry a leash and put it on the dog when you see them coming, and watch your dog chase birds the rest of the time.

That incident yesterday wasn't about the dog getting exercise. The dog had the whole beach. It was about the owner wanting complete personal freedom no matter what the consequences to others.

I think the 75% compliance issue is a red herring. This means that 25% of the dogs can chase birds and the policy has to stay in place, and there are enough dog owners out there to have a negative. The birds are declining.

I'm sorry, but given some of the behavior I see on the beach I don't see how you can allow any off-leash dogs on the beaches and not impact the birds.

So, one last time I ask, please implement STRONG regulations. It's already been shown that nothing else works.

Thank you. I know that this whole process is difficult.

May 30, 2011

Frank Dean, Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123

Re: GGNRA Draft Dog Management Plan/ Environmental Impact Statement

Dear Superintendent Dean:

We are pleased to offer the comments of the San Francisco League of Conservation Voters (SFLCV) on the proposed Draft Dog Management Plan/DEIS for the GGNRA ("the Plan"). SFLCV was an official participant in the Negotiated Rulemaking Advisory Committee for Dog Management in the GGNRA process, and we are pleased to finally see this management proposal. The GGNRA is an extraordinary unit of the National Park system and its rich and unique resources are imperiled by the current levels of off-leash dog walking in particular. This draft plan is a major step toward ensuring better protection for these resources for future generations.

There are many threats to the irreplaceable species, habitats and historic resources of the GGNRA. Some, such as climate change, cannot be stopped on a local level and can only be adapted to as best as possible. However, those threats that are within the abilities of park management to control and prevent must be addressed firmly and aggressively, as islands of species diversity such as the GGNRA are the best hope for the survival of what remains of the planet's rich and varied ecosystems. Unfortunately, for a variety of reasons, the use of this park for recreational off-leash dog walking is long past the point of causing serious damage to the very resources this park was created to protect. We are hopeful the final Plan will reverse this trend.

In these comments, we will provide more general overarching comments on the plan as a whole and then address the site-specific proposals in the draft plan. While our strong belief as an organization would lead us to support Alternative D for all situations (and there may be a few instances where we might suggest that Alternative D does not go far enough), we recognize ? as evidenced by our participation in the Negotiated Rulemaking ("Neg-Reg") process ? the necessity of some compromise. Those areas where we find some disagreement with the proposed Preferred Alternative tend to have a greater impact on the visitor experience than on the habitat, though not in all cases.

There are several general concerns we wish to note here:

? There was an agreement by all parties in the Neg-Reg process that park visitors who desired to have a "no dog" experience of the park should be able to do so conveniently. It is our belief that the Preferred Alternative does not meet this goal in all areas, particularly in the portions of the park within San Francisco. We would encourage further examination and expansion of opportunities for those people desiring an experience of the richness of this

park without encountering canines to be able to do so.

? While we have deep concern about the precedent-setting nature of the proposed Regulated Off-Leash Areas (ROLAs), we accept this inevitability. We strongly request, however, that the park find clear ways of physical separation of ROLAs from non-ROLA areas, preferably by means of a clear barrier. We are not asking for an impenetrable barrier ? in most cases, a post and cable fence as is used in many areas of the park already would be acceptable. On beaches, other solutions may need to be found. We are simply concerned that for there to be sufficient enforceability of these rules, boundaries between areas must be abundantly clear and not open to any question or interpretation.

? Commercial dog walking has been a source of some of the worst resource-damaging abuses of off-leash activity. We strongly encourage that it be banned within the GGNRA. There should be steep fines for violations above those which are levied on dog owners for violations. If commercial dog-walking is allowed, which we oppose, it must be strictly regulated and fair fees must be required.

? The entire success of this Plan lies in the concept of compliance management. If compliance management fails, these rules become meaningless, and we are not just back where we started, but worse. A 75% level of compliance is simply too lax to be meaningful, or even realistically measured. We strongly recommend that the compliance rate be 95%. Anything less will be ultimately ineffective.

? We were unable to find an analysis of one probable effect of dog activity on mammalian wildlife, either on or off-leash. Most mammals use the production of certain chemicals and their sense of smell to communicate substantial amounts of information. One well known way that canids, whether domestic or wild, communicate is through chemical secretions in urine. The awareness of scent marking in urination is not limited to other members of the genus *Canis*, but is clearly perceived by other mammals as well, be they potential prey like rabbits or other carnivores such as a bobcat. The daily presence (and urination by) tens to hundreds of domestic dogs in areas of natural habitat create a profound stressor on other native mammals, and should be noted in the environmental analysis. An unfortunate brush rabbit finding itself at Fort Funston would "believe" that it had landed in the wolf pack to end all wolf packs.

? Site-Specific Issues

Marin County

We find the proposed Preferred Alternative either desirable or acceptable in

the following sites, assuming the incorporation of our general comments above: Stinson Beach, Homestead Valley, Muir Beach, and Marin Headlands trails. In particular, we commend the protection of resources at Muir Beach, and the no dogs policy on the South Lagoon trail, Smith-Guthrie Loop, South Rodeo Beach and the Coastal Trail in the Marin Headlands.

Oakwood Valley Trail and Fire Road, Alta Trail, Orchard Fire Road and Pacheco Fire Road ? We support the Preferred Alternative treatment of Oakwood Valley Trail and Oakwood Valley Fire Road, with the construction of double gates enclosing the ROLA. We prefer the Alternative D treatment of the Alta Trail, Orchard Fire Road and Pacheco Fire Road because of habitat concerns. If sufficient means can be found to protect the Mission Blue butterfly habitat along these trails, we would find the Preferred Alternative acceptable.

Rodeo Beach ? we feel that many visitors who may desire a no-dog experience at Rodeo Beach would be unlikely to make their way to Muir Beach. This is especially true of park visitors taking advantage of bus transit from San Francisco that only brings people as far as the Marin Headlands and Rodeo Beach. Therefore, we would propose a compromise version of Alternative D: make the beach area north of the bridge a ROLA, and make the area south of the bridge a no dog area. We realize the "line of separation" on the beach would not be able to be clearly marked; however, since the primary beach access is over the bridge, signage can indicate which area is which very clearly, and would be relatively easy to monitor. We support the construction of the proposed fence around the west end of the lagoon in any case.

Fort Baker ? We generally support the Preferred Alternative, with the exception of Battery Yates Loop and Drown Fire Road. We believe the primary focus of this area should be protection of the mission blue butterfly habitat and that this area be off limits to recreation with dogs. .

San Francisco

We find the proposed Preferred Alternative either desirable or acceptable in the following sites, assuming the incorporation of our general comments: Fort Mason, Baker Beach and Ocean Beach. We believe the ROLA described in Fort Mason Alternative D would be acceptable if an adequate means of physical separation of the Laguna Green area could be identified. We are very pleased to see substantial areas without dogs on both Baker Beach and Ocean Beach. This is good for wildlife, vegetation and people

Crissy Field ? we support the Preferred Alternative here also, though, we note that this area will require more intensive ongoing management than

most. Compliance based management is particularly important here.

Fort Point ? This is one of several sites in San Francisco, as noted in the general comments, where we believe there is a decided lack of opportunity to have a "no dog" experience or to even avoid unwelcome approaches by dogs, given the narrowness of many of the trails. We support the Alternative D treatment ideally, or at least a reduction in the number of trails where dogs are permitted than shown in the preferred.

Lands End and Fort Miley? There is some confusion, as the "Preferred Alternative" map does not match the "Preferred Alternative" description. In either case, we would note that this is another location where it will be difficult to avoid uninvited interactions with dogs. We believe that enforcement will be challenging for any allowed dog use in East Fort Miley.

Sutro Heights Park ? The Preferred Alternative, which would allow on-leash dogs through the park (with one small exception), amplifies the problem cited at Lands End and Fort Point (and Fort Funston) ? that is, the inability to have a no-dog experience. This park is a unique unit of the GGNRA, and so provides an experience not available in other units. Because it is a developed site, the environmental impacts of dog activity are far fewer. Nonetheless, we would prefer to see a greater accommodation to those visitors who would prefer a no dog experience, which could include a number of people with physical challenges that would find it more difficult to visit other units of the GGNRA.

Fort Funston ? We appreciate that this is a challenging unit for the GGNRA, and find most of the Preferred Alternative acceptable, and a big improvement over the status quo. However, as in other units we have named, this again is a place that will not allow an experience free of unwelcome interactions with dogs. We would propose that the Coastal Trail north of the beach access, or even north of the drinking fountain, be no-dog. We also propose that the seasonal beach closure be year-round. Both of these actions still allow two large ROLAs and ample access to both, but would also greatly increase the ability of bird watchers and other visitors to enjoy the wonderful natural resources of this important park unit without the interruption caused by the presence of dogs.

San Mateo

We find the proposed Preferred Alternatives either desirable or acceptable in all the San Mateo GGNRA units, assuming the incorporation of our general comments. While again, we would prefer full resource protection, we believe the proposed Preferred Alternatives provide adequate accommodation for dog walkers and adequate options for visitors seeking a

no-dog experience, or at least a dog interaction that is not welcome.

We would like to once again express our appreciation for all the hard work that has gone into the preparation of these plans to manage dog walking activity in the GGNRA. We are eager for the impacts of previous lapses in proper enforcement and communications to diminish, and to see the park fully live up to its Organic Act mandates. We look forward to visitors seeking experiences that do not include dogs to regain access to some of the amazing portions of the park that have been less desirable to visit as a result of unregulated dog activity. We will be happy to work with park staff in the future to assist in any way with the further final adoption of these rules and their subsequent enforcement.

We offer these comments on behalf of the San Francisco League of Conservation Voters.

Yours Truly,

Amandeep Jawa President

Dear Mr. Dean,

Please accept this comment in opposition to your proposed Dog Management Plan. I Have been a resident of the Outer Sunset/Parkside district for the last 10 years. I moved here specifically to be able to run with my dog on the beach. I wanted to be able to walk out my door and go running with my dog, surfing,and enjoy all that the beach has to offer. I recently bought a house in this area in order to maintain my lifestyle as an avid outdoorsman. It is a unique and wonderful setting to be so close to the outdoors in an urban environment. I am a daily visitor, not just once a day

but at least twice a day, to the beach. I have witnessed the constant revisions of restrictions for dog access on the beach and do not agree that limiting dog access to these urban coastal areas will dramatically change any purported environmental impact.

The DEIS report does not supply enough empirical evidence to support its conclusions.

The GGNRA was designed as an urban recreation area. The regulations of the National Park System do not readily apply. The courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. If this proposal is passed the surrounding areas will be negatively impacted. It is key to a dog's health and well being that exercise comes first. Ocean Beach provides a safe place for dog's to interact with their owners and their peers. One only has to look at the overcrowded shelters of dogs with behavioral issues due to lack of exercise and appropriate stimulation. Left to their own device in a backyard all day dogs become destructive to property, to themselves and potentially to those they encounter on the streets. I do not have any studies to cite but one only needs to visit a shelter, zoo or other place where animals are kept captive to see the result. The city streets will be filled with frustrated animals, leading to an increase in dog fights and dog bites. The surrounding parks and neighborhood streets are located near busy city streets. They are small confined spaces, overused, a haven for harboring infectious diseases.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation.

? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.

? Exclude speculative, exaggerated, biased, or misleading statements and studies.

? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers,

bicyclists, beach-goers, joggers, walkers, etc.).

? Enable professional dog walking and align any professional dog walking rules with county or city regulations.

? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

These are my personal comments and observations regarding this plan:
(here's where you fill in your own personal story and what you've seen when you've been out at the GGNRA)

Sincerely,

Cynthia Mott San Francisco, CA 94116

Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled,

minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. Exclude speculative, exaggerated, biased, or misleading statements and studies. Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). Enable professional dog walking and align any professional dog walking rules with county or city regulations. Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

Sincerely,

Correspondence: Lisa Vittori San Francisco, Ca. 94131 May 30, 2010

Dear Supervisor Dean:

I am writing to comment on the GGNRA DEIS plan regarding dog management. I write this letter as a formality.

A note: Whenever I refer to dog-walking, I am referring to dogs walking in cooperation with their people, sans leash. Well-behaved, responsible, off-leash dog/human companionship should be the default assumption in all comments I make.

Over the years we in the dog community have repeatedly commented, discussed, testified, written, lobbied, compromised, negotiated, and worked

with the GGNRA to ensure fair and reasonable access to lands acquired with our help. We have raised money, volunteered our time, attended hearings, served on committees, and participated in negotiated rule-making in good faith. Most of this has come to naught.

If you really intend to handle this issue fairly, you would scrap the whole thing and start over. You would do so for reasons articulated much better in the following documents:

* Comments on the GGNRA Draft Environmental Impact Statement by Dr. Suzanne Valente and Stephen Golub of the Ocean Beach Dog Owners Group;

* Unleashed Fury by Julie Walsh;

* Letters from the SF/SPCA to the GGNRA dated July 13 and August 16, 2000, from Ed Sayres, the Executive Director of the SPCA at the time;

* SFDOG's Official Comment on the GGNRA DEIS by Sally Stephens, et al, SFDOG.org;

* Keep the R in the GGNRA: Environmental Injustice Suggestions and Comments, Public Comment on the 2011 GGNRA DEIS by Arnita Bowman, 5/23/11;

* Preserve Recreation for Dogs and People in the GGNRA: San Mateo County Specific Suggestions and Comments, Public Comment on the 2011 GGNRA DEIS by Arnita Bowman, 5/23/11;

* Preserve Recreation for Dogs and people in the GGNRA: Public Health and Safety Suggestions on the Draft GGNRA Dog Plan, by Arnita Bowman, 5/23/11;

* Letter from the Peninsula Humane Society to Frank Dean, from Ken White, Executive Director, 2/8/11;

* 5 Letters from Keith McAllister to Frank Dean, submitted in the last 2 weeks of May, 2011, referenced on the SFDOG.org website.

All of these refer to the biases and broken promises underlying this controversy. All of these speak to the reasons why we find this DEIS to be, quite frankly, a fraud.

For a moment I am going to comment on my personal knowledge of this, from the perspective of someone who worked with the GGNRA from 1987

to 2001 as a Conservation Corps supervisor, as a volunteer, and as an employee and contractor.

In the late 1980's I started doing restoration work at Milagra Ridge with my CCC crew. We worked with the fledgling Site Stewardship Program, even before Sue Gardner was hired.

My crew and I pulled out thousands of invasive weeds, primarily pampas grass. We then planted thousands of native grasses, forbs, and shrubs, mainly seedlings, in order to provide habitat for endangered Mission Blue Butterfly.

We then worked at many other GGNRA locations, also doing habitat restoration. Specifically, we worked at Oakwood Valley, Muir Beach, Sweeney Ridge, Muir Woods, the Marin Headlands, Crissy Field, and Fort Funston, as well as the Presidio. We also participated in volunteer events, helped with trail reconstruction, and talked with community members.

During all this time dog-walking (as well as bike-riding and kite flying) were accepted forms of recreation. People walked by with their dogs all the time. We took steps as a crew to keep the public safe, and that included keeping the dogs safe from weed-eaters and other tools.

At no time did my crew ever express undue concern about dogs. Some expressed concern about everything, since they'd never been in nature before: bugs, poison oak, urinating outside. Dogs were the least of their concerns, and usually a total non-issue.

As a note, my crew was composed mainly of young people of color. Many were first generation Americans. It was truly a rainbow: Samoan, Fijian, African American, Salvadorian, Mexican, Nicaraguan, Philipino, Native American, Cambodian, Vietnamese. They enjoyed dogs for the most part, and often told me of their own family pets. This contradicts the idea that certain ethnic groups are afraid of dogs, and that dogs should therefore be restricted.

Park Service staff frequently brought their dogs with them. Up until the 1990's, Conservancy and park service staff were friendly and companionable with the dog walking community in all these places. I did many volunteer projects during that time, and again, heard no complaints from staff about people and their dogs. It is untrue that staff members felt afraid.

In fact, the dog-walking public was invited to participate in all these habitat restoration projects. For many of us, it was perceived as a way to get out with our dogs on the weekend and do good work at the same time.

This changed around the mid 1990's. I can tell you my experience.

I was working as a volunteer for Site Stewardship at the time, after my CCC day job. I designed and organized a study at Milagra Ridge on public use patterns in conjunction with staff at Site Stewardship. We'd mainly seen dog-walkers, cyclists, kite flyers, and birders up there, and wanted to quantify it for some upcoming trail planning. Staff members, volunteers, and I took turns watching people walk the trails. We made sure we had people of differing opinions about dogs and bikers, so that we wouldn't be biased.

We measured, among other things: 1) which trails people used, 2) whether they had dogs, 3) how many dogs and people there were in a group, and 4) how far off the trail dogs went. We found that most people who were there with dogs were walking "off-leash", but their dogs were staying close by. We also estimated that about 90% of dogs stayed within about 10 feet of the trail.

(For some reason dogs are often portrayed as running willy-nilly over these areas. In truth, unless they are active play areas, the dogs tend to walk in synch with their people. In fact, walking is one of the ways in which people manage their dog's behavior, because it keeps their dog moving.)

We also found that there was an observer effect...if people saw us looking at them, they'd put their dog on a leash.

Just as we finished this study and quantified the results using the new GIS/GPS technology, things changed at the GGNRA. Suddenly we were having meetings in which staff members were displaying "dogs-on-leash" signs. Sue Gardner and I had a meeting with Nancy Hornor, in which Sue was supposed to present the results of our study. Instead, Sue decided to suppress the study, because she saw that it didn't fit in with the direction the GGNRA was heading.

Unfortunately, that has been my experience since then. Many of us in the public, especially those of us who are both environmentalists and dog-folks, have supported the GGNRA in their efforts to acquire and restore land. After the GGNRA has acquired the land, they use restoration as an excuse to exclude us. It is a form of bait and switch.

I've seen this occur at Muir Beach, Rodeo Beach, the Marin Headlands, Crissy Field, Land's End, Ocean Beach, Baker Beach, Fort Funston, Mori Point, Sweeney Ridge, and Milagra Ridge. It is now happening at Rancho Corral de Tierra and Pedro Point.

One of the other things that I experienced as an employee and contractor in the late 90's was the emphasis on "community partnerships" and "inclusion".

Brian O'Neill had staff meetings where he touted again and again the fact that the GGNRA was forming partnerships with all these community groups.

However, the records from that period show that the dog groups were not permitted to form partnerships. Even in cases where the GGNRA and the dog groups made explicit agreements (like with Crissy Field), the GGNRA reneged on that agreement.

As an aside, Crissy Field is an example of the ways in which the GGNRA has created user conflicts and over-use. In the mid-1990's the GGNRA started enforcing leash laws on the Great Meadow at Fort Mason, a place neighbors had been bringing their dogs for decades. Dog folks were therefore forced to go to Crissy Field if they wanted to walk off-leash. This seemed environmentally contradictory; people had to drive somewhere in order to walk their dogs, and that area was becoming more crowded.

Crissy Field was also renovated during that period. The renovation forced the dog folks, the families without dogs, and the wind-boarders to enter using the same part of the beach. They had previously been spread out over a larger area.

The renovation/restoration was controversial among the staff members I knew. Some disliked the agreement the GGNRA had made with the dog community, promising full off-leash use of the beach and pathways. Some felt okay about that, but thought the drainage in the lagoon wouldn't work.

Now, any problems at Crissy Field are blamed on the dogs, even though it is a high use area for at least six intersecting groups: families, professional dog-walkers, recreational dog-walkers, wind-surfers, shorebirds, and tourists. Many people utilize Crissy Field because they belong in several of these categories.

On any sunny day you will find families with both children and dogs enjoying themselves. On hot days inland, regional tourists and their dogs flock to Crissy Field (as well as Baker Beach, Ocean Beach, Muir Beach, Rodeo Beach and Fort Funston). I know many surfers and wind-surfers who patronize Crissy and Ocean Beaches because their dogs can come along.

Crissy and Ocean beaches are also the staging ground for large community events: July 4th fireworks, marathons and charitable races, the Blue Angels, sailing's opening day, and special events like the Queen Mary and the America's Cup.

In the late 1990's, the same kind of duplicity was happening at Fort Funston, Ocean Beach, the Marin Headlands, Muir Beach, Oakwood Valley, and Rodeo Beach. I was working at that time with Sharon Farrell, who I

respected a lot. She constantly spoke of openness and inclusion. Volunteers of all sorts were welcome on projects; their input was invaluable.

However, I later found that she had written internal memos advocating changes at Fort Funston, changes which she hoped to keep secret from the dog community until it was too late to oppose them. That was personally heartbreaking to me, because I trusted her. The irony, of course, is that she was one of the staff people who took her dog on projects; Brie was always part of everything we did.

Other staff people were writing the same kind of memos about Muir Beach, Oakwood Valley, and the Marin Headlands. They complained about the children's camps, the recreational dog-walkers, and the old people who prevented the non-native plum tree at Oakwood Valley from being cut down. They wanted to use pesticides to remove non-native plants, and wanted to avoid having the public know. Sometimes it felt like the park was a preserve that only a special few should have access to, instead of an open space bordering a large urban area.

One of the saddest and most frustrating elements of this whole proposal is that there are many, many ways to do habitat restoration that includes recreation and the public. On Milagra Ridge, for example, dog walking is primarily confined to the road and trails. It's a great place to walk if one wants vigorous exercise with their dog, or if one is physically disabled (because of the paved road and the easy access).

If most plantings were 10 feet from the trail there would be negligible effects from dog-walking. If seedlings were protected by large downed branches and other natural protections, they would have a chance to flourish. If trails were lined with larger plants like coyote bush, sticky monkey flower, and ceonothus (like at Sweeney Ridge), few dogs or people would go off trail.

This is not a matter of science. This is not a matter of habitat protection. This is a social, political, and philosophical disagreement about who has the right to have access to these lands. Everything else is just lies and fluff.

The GGNRA states that children and elderly people are afraid, and that's why dogs must be restricted. Has the park service studied this? No. In fact, on any given day, I bet that a good half of the users of Fort Funston are over 50. On any sunny weekend, I bet that 1/3 of the families at Baker Beach, Ocean Beach, and Crissy Field have both children and dogs with them. This is an educated guess, based on years of observation and fieldwork.

The GGNRA states that the disabled are afraid of dogs. However, many of the people who use these areas are there because of disabilities. People with diabetes, arthritis, and depression walk to keep their conditions under

control. People with mobility problems go to Milagra, Funston, Fort Mason and other places because they can recreate more easily with their dogs on the paved surfaces. People with service dogs go to these areas so that their hard-working dogs can take a needed break.

The GGNRA states that people of color are afraid of dogs. When I go to these public areas, I see people of all races and nationalities. When I say this to people who are apparently of Asian, Hispanic, or Pacific Islander heritage, they roll their eyes. I'm regularly stopped in city parks by kids with parents in tow. If the parents don't speak English, we signal to make sure it's okay for their kids to touch my dogs. All their kids want to do is pet, play, throw the ball, and run.

I just received an e-mail from another dog person, who says it well:

I was walking in a Bay Area park today on a beautiful rocky narrow trail. It was posted for no bicycles, but there were bicycle tracks and a little erosion.

I was thinking about the similarities of mountain-biking and walking dogs in open space areas. They are both recreational activities beloved by people that have the potential in the wrong place and time to do damage or cause injuries. How would they deal with the bicycle riding in the wrong place?

They would never close the entire park to bicycles, including fire roads. They might put up additional signs, or erect barriers, or if there were resources increase patrols. They would not ban it in the entire region.

I feel as if the goal of the GGNRA from the beginning has been to ban off-leash dog-walking. The proposal is for the most restrictive option, and this is very important, for the entire elimination of off-leash walking in the future with no further discussion. I do not understand why dog-walking is not viewed as a valid recreational activity. There is no other activity where the plan is to ban it entirely if someone breaks the rules. When many people and dogs are restricted to a small crowded area, it is inevitable that some problem will arise.

Walking the dog is an important activity to so many people who are older and socially isolated. I was recently reading about how the population of San Francisco is greying and I do not understand why this is not valued. I feel that it has been clear since the beginning of this process that the goal is to eliminate off-leash dog walking. It makes me wonder why nearly the entire coast from Pt Reyes to the middle of the San Mateo peninsula has been given to the federal government to manage.

This writer said it as well as I could. Please reconsider your prejudice as well

as your plan.

Thank you. Lisa Vittori

The GGNRA's proposed restrictions on dogs goes against the Act of Congress and subsequent Public Law which established the GGNRA. This law encourages recreation. For many people, walking with one's dog is a recreation. It is a typical and normal American recreation. To re-strict a person of the right to walk his dog in this established recreation area goes against the will of Congress, and against what is a normal American activity.

Public Law 92-589 Subchapter LXXXVI - Golden Gate National Recreation Area 460bb. Establishment "In order to preserve for public use and enjoyment certain areas of Marin and San Francisco Counties, California, possessing outstanding natural scenic and recreational values, and in order to provide for the maintenance of needed recreational open space necessary to urban environment and planning, the Golden Gate National Recreation Area is hereby established..."

In my opinion: Dog walking on-leash should be allowed everywhere in the GGNRA in all cases. Dog walking off-leash should be allowed be default. If off-leash restrictions are to exist, then only minimally and where absolutely necessary, and by public demand, and after careful analysis supporting the restriction.

Correspondence:

My Wife and I (and our well behaved, non-destructive dogs) would like to respond to the GGNRA's plan to make changes to the off leash dog walking areas under their control in Marin, San Francisco, and San Mateo counties.

We Strongly oppose the GGNRA Draft Dog Management Plan for several reasons, but will limit this document to those that we feel make the most sense in an effort to save time and be read.

Primarily, we would like to address the document written in 1979 that provided that dog walking is a legitimate recreation, and as such, it should

be offered to recreational areas in the same manner as, but not limited to: Walking, Running, Surfing, Bicycle Riding, Horseback Riding, Shell Collecting, Stone Skipping, Gathering at beach fires and Sandcastle Building.

All of these "Recreations" are completely acceptable and it seems that walking a dog off leash is not. I would not want any of these activities to be removed from our coastal areas, even though they aren't the ones I participate in.

We have looked at your documentation as it relates to dogs being off leash, and find that it is sorely lacking in most assumptions, and that if the assumptions were to be accurate, they would have considered the following as being problematic to the environment:

1. Beach Patrol Trucks driving into protected areas. 2. Horseback riding in protected areas (personal and police/ggnra). 3. Off road vehicles ridden by GGNRA staff. 4. Surfers walking through the dunes. 5. Runners, running through the dunes. 6. Off leash Children chasing birds/throwing stones.

We could go on all day trying to document actual issues that might harm the environment, or scare the inhabitants, but they don't really make sense, as the dog issue really doesn't make sense (and carries much less validity).

Please take this into consideration, as we all wish to enjoy our area equally, and as you are soon to find out, there are several hundred registered dog owning voters in the bay area, and we are included. We all pay the ever increasing tax cost of living in the bay area. If you remove "recreation for a few" you may as well remove recreation for all.

Frank Dean General Superintendent GGNRA, Fort Mason, Building 201
San Francisco, CA 94123

Dear Mr. Dean:

I urge the GGNRA to adopt a plan utilizing the following hierarchy of priorities:

1. Protect natural resources and habitat; 2. Protect children and adults from

harm; and 3. Accommodate reasonable access for dogs where the access does not compromise either of the first two priorities.

Implementing the above priorities should result in dogs being restricted to a short leash when in an area shared by wildlife, as they can still threaten wildlife if on an extended leash.

Similarly, if dogs are permitted in an area shared by runners or bicyclists, the dogs should be on a very short leash so they do not trip a runner or get entangled with a bicycle.

In order to protect children and adults, dogs should not be permitted in areas where the public frequently is barefooted, especially sandy areas such as beaches or thick grassy areas where a dog's feces or urine might not be easily observed and avoided. If allowed in such areas, dog owners should be prohibited from allowing their dogs to defecate or urinate in such areas, and the owners should be subject to an initial warning following by increasing fines if their dogs defecate or urinate in these areas.

Also to protect children and adults, dogs should not be permitted to run loose where non-dog owners congregate, so the dogs do not run into and cause injury to humans.

The following are comments directed to specific areas:

1. As to Crissy Field and Fort Point, applying the above criteria, dogs should be restricted as follows:

Crissy Field Wildlife Area - prohibited entirely Promenade area - restricted to a short leash (6' or less) Picnic areas - restricted to a short leash All trails - restricted to short leash (6' or less) Airfield - prohibited entirely from the deep grass of the Airfield Crissy beaches - restricted to leash of 10' within 10' of the water; prohibited from beach area more than 10' from water's edge. A fenced dog run should be established south of the parking lots for off-leash dog activity with a dirt surface (not sand, asphalt or concrete) where dogs can run, socialize and defecate, with a gathering area for the dog owners to congregate including benches. There should be a substantial dog-run at the east end parking lot (perhaps 50' by 150'), and a much smaller one at the west end of the Crissy area in close proximity to a parking lot.

2. As to Baker Beach, Marshall's Beach and Golden Gate Bluffs south of the bridge, applying the above criteria, dogs should be restricted as follows:

All trails south of the sand ladder/steps - restricted to a short leash All trails north of the sand ladder/steps (including Battery Crosby and Battery to Bluffs) - prohibited entirely Marshall's Beach - prohibited entirely Picnic

areas - restricted to a short leash Baker beach - restricted to a short leash within 30' of the water; prohibited from beach area more than 30' from water's edge. A large, fenced dog run should be established adjacent to one of the parking lots for off-leash dog activity with a dirt surface (not sand, asphalt or concrete) where dogs can run, socialize and defecate, with a gathering area for the dog owners to congregate including benches.

Sincerely,

William R. Shepard San Francisco, CA 94121

Correspondence Type: Web Form
Correspondence: Dear Superintendent Dean,

I am a sixty year old native San Franciscan. I have been frequenting most of the GGNRA areas since before there was a GGNRA. Since 1970, when I got my first dog, I have taken daily walks (sometimes twice a day) in some part of what is now the GGNRA. These walks have always been the best part of my day and have helped get me through some pretty tough times in my life and always, accompanied by an off-leash dog or two. I attribute my relatively good physical and emotional health to these daily outings and know that without this exercise, my health and that of my dogs' would also suffer.

I very much oppose the preferred alternatives as presented in the DEIS as way too restrictive without any scientific backing. I know we are supposed to make substantive comments here but that is quite difficult when there is no scientific data to base comments on. I suggest that the whole DEIS needs to be reworked and presented again in a more professional form. As written there is no justification in the DEIS for the drastic changes that have been proposed.

As a resident of the Outer Sunset District for 40 years now, (grew up and lived in the Marina District first 20 years) Fort Funston is the area I visit the most. When my two daughters were born in the early eighties FF is the place we would go to run everyone...my children, their friends and always the dogs. A few trips up and down the big sand dunes and everyone would be happily tired out. Sadly they would not be able to do that today as that area is now closed off to everyone, people and dogs alike. A similar thing has happened in the Presidio, in the hills behind Julius Kahn Playground. I can't even see any of the places I used to play as a child, for all the fences. Is this the future of our recreational areas? Will my grandchildren have to view

nature from behind a fence? How are the children of the future supposed to develop an appreciation of nature if they can't experience it, touch it, explore it? I have serious concerns about what the real agenda of the GGNRA is. Seems as though they are forgetting that these areas were created as recreational areas. I should know, I was here at the time we voted in Prop F...seemed like a good idea at the time but has turned into a decades long battle. Please do not forget the GGNRA has a recreation mandate. Recreation and environmental protection are not mutually exclusive. Please do some real scientific studies.

Back to the dogs. The GGNRA's own statistics show that dogs are not a problem. It is precisely because we have open areas for dogs to run off-leash that San Francisco does not have an aggressive dog problem. SF Animal Care and Control can support that claim. The proposed ROLA suggested for FF near the parking lot was obviously created by someone who knows nothing about dogs or the reasons their people take them to FF. People like to go to the GGNRA lands to walk and get exercise, not stand around in a small space watching their dog stand around and get bored. My daily walks are at least 1-2 hours long. That's a lot of boring circuits around such a small area. In 40+ years of walking in the GGNRA I've never had a problem with any of my dogs. I've always worked with them to ensure they are good citizens, most have earned obedience titles and some have been therapy dogs, visiting seniors, children and AIDS patients at local hospitals. To think that all of a sudden we will need to be tied together is quite insulting. Also cannot imagine how seniors are going to get down that hill to the beach with a dog on leash. Very dangerous! If the preferred alternative is adopted I think there will be many unintentioned consequences.

The Compliance Based Management Strategy must go. This would seem to pretty much doom the future of dogwalking in the GGNRA and sadly doom the wonderful communities of people that have developed in the various areas over the years. I know, I still have friends that I first met all those years ago. The dogwalking community is probably about as diverse as you can get. All ages, all religions, people with disabilities, gay, straight, all ethnic groups, all social and economic classes. In these very difficult financial times off-leash dogwalking offers a real, affordable respite to be able to watch our dogs at least, run and have a great time, just for the love of running...there are few things more beautiful. The CBMS punishes the majority of responsible dog walkers for the actions of a few...NOT FAIR.

Finally, would like to see the 1979 Pet Policy formalized. I feel that the proposed alternatives are too restrictive and less drastic measures should be tried first. Try enforcing existing laws, better signage, education.

Thank you for listening,

Georgette Musante

Correspondence: Dear Superintendent Dean,

I have lived in San Francisco all but 5 of my nearly 47 years. As a child my family owned dogs - cocker spaniels - and my fondest childhood memories are of taking Jason, Crissy, and later Emma, to Baker Beach for some fun and recreation. Fast forward and now I have a husband and children of my own and we are a happy family with dogs. Our two dogs - Nova Scotia Duck Tolling Retrievers - get no greater joy than running, playing and swimming on Crissy Field and Beach, which is just a short jog from our house. We feel truly blessed to live in such a beautiful place and just a stone's throw from the GGNRA - a place where we can recreate with our family and our dogs on a regular basis. We are also members of the William Kent Society - a testament to our love of protecting and beautifying this beautiful land.

The DEIS makes us gratefully concerned and we do not find the GGNRA's current preferred alternative acceptable for many reasons. The proposal significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. Moreover, the proposed changes to the existing conditions (1979 Pet Policy) are not based upon sound science or long-term monitoring of site-specific conditions. Additionally, it seems the proposal would cost taxpayer money to enforce, which seems egregious to us since they are not even necessary in our opinion.

As presented in the DEIS, the proposed dog management plan eliminates dog-walking (on and off leash) access for all new lands (additions to the GGNRA sometime in the future). The GGNRA's mission applies equally to new lands as existing lands and it is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands.

We are concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, but other options besides restricting dog-walking access should be considered first. For example, it is not clear where dogs are allowed. I think the GGNRA should provide better signage and create more environmental barriers where necessary, such as the vegetative barriers surrounding the tidal marsh at Crissy Field.

Personally, I visit Crissy Field several times a week, on average, and I have

not seen a dog altercation in several years. I have never seen a dog be aggressive to an adult or a child. With the many dogs that are there on weekdays, and the hundreds that are there on weekends, I think that is quite remarkable, and certainly does not justify the restrictions being put forth in the GGNRA's preferred alternative.

We are a family of responsible dog owners. Our dogs are always kept under voice and sight control, we clean up after them, and keep her out of the fenced dunes and vegetative areas. It is important that areas like Crissy Field remain open for off leash dog walking access. I know it is vitally important that our dogs are well behaved and trained in order to peacefully co-exist in an urban environment and adequate exercise and socialization is essential for a well-behaved dog. Having places where I can take walks with my dog allows me to get the exercise I need while also meeting my dog's needs. Without access to the small amount of land in the GGNRA we currently have (approximately 1% of the total acreage of the GGNRA), I am very concerned that many dog and dog owners will not have sufficient opportunity to exercise and recreate.

Some specific problems with the DEIS include the following points. Please revise the DEIS to correct these errors.

This DEIS and Plan doesn't recognize that environmental values include both recreation and nature. In many places, the DEIS treats the environment and recreation as opposing values, i.e., that recreation only harms natural resources. The document doesn't acknowledge that people care about both and that people with dogs are often also good stewards of our environment.

The draft plan has the effect of punishing many people because a very small number are uneducated, insensitive, or irresponsible and because the current signage of off leash areas is unclear. The reasonable response to this problem is to educate visitors, improve signage and help park visitors follow the rules and learn how to respect the environment, not to ban the rest of us with dogs from the GGNRA. I wish that the DEIS would include an alternative along these lines.

The proposed "compliance-based" approach should be modified to create a baseline of current conditions, then measure impacts rather than compliance. It should include a robust public educational component and an objective, long-term monitoring program designed and carried out with the community. The GGNRA should develop partnerships with community, animal welfare, and conservation organizations to make this work. These partner groups could bring additional resources to limited federal resources. GGNRA should be a partner with the City of San Francisco and other communities, not an adversary.

I am also concerned that the DEIS doesn't take into account the potential effect of restricting off-leash dog walking on San Francisco's public parks, which could see a huge influx of dogs as a result. The GGNRA cannot do its planning without thinking of other neighboring recreation areas, such as the public parks, particularly in this time of limited resources.

The DEIS doesn't recognize that many areas of the GGNRA are located in or next to urban neighborhoods. The DEIS excludes the quality of the urban environment from its scope, saying it's not significant. The reality is that the GGNRA provides much needed open space in a major urban area. This omission is disconcerting because the fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) to serve the metropolitan Bay Area. The dynamic interrelationship between GGNRA and our neighborhoods is exactly the human environment that the EIS is required to study, but failed to do so. The DEIS notes some studies and general tendencies of dogs to harm natural resources, but with few exceptions, there is little documented site-specific impacts to support the restrictions of the preferred alternatives. Further, there is insufficient documentation that considers other impacts ? other park visitors that disturb and impair the natural resources, other wildlife, Mother Nature, boot camps, bicyclists, huge crowd attracting events such as Fleet Week, festivals and Walk-a-thons. The proposed broad limitations in the DEIS are without site-specific science that demonstrates that problems with the quality of GGNRA's natural resources are actually attributable to dogs and not to other factors.

The DEIS needs to provide full disclosure to the public and decision makers. If dog- related disturbances are having a significant negative effect on wildlife, for example, the DEIS needs to provide site-specific scientific evidence as documentation and undertake a scientific evaluation as to whether people or other factors are also causing or contributing to the problem noted. If they are, GGNRA needs to provide an analysis that considers whether people should also be restricted from these areas. We need this documentation in order to comment meaningfully on the draft plan and DEIS. The science needs to be sound and the consequences need to be fully and fairly disclosed for everyone ? so that an informed decision can be made. For example, there has been no study on the impact the passage of this will have on the greater city of San Francisco. We believe it could be seriously detrimental.

The DEIS is biased against and does not take a hard look at the No Action alternative or variations on that alternative. There are many areas in the GGNRA where the existing 1979 Pet Policy has been working, and where sensitive species are not present and visitor conflicts do not occur or are very infrequent. In addition, the DEIS does not provide site-specific

information that these areas are inappropriate for continued dog walking.

Many people have worked diligently both together and separately to study the DEIS and to make thoughtful comments on its findings, in hopes of encouraging the National Park Service to rethink and more carefully document its stance. The outcome of this plan will have a significant effect on the quality of our life as well as everyone in the Bay Area. In plain English, I believe that San Francisco should continue to be a successful dog-friendly city much like Carmel, CA rather than many other cities we have visited recently, such as Santa Monica, CA and Ashland, OR where it is hard to find any place to let your dog run off leash and recreate happily.

I urge you to support Alternative A with individual consideration for any new lands, for the sake of the health and recreation not only of thousands of Bay Area residents and their canine companions, but for everyone who enjoys the GGNRA. Sincerely,

Leslie Dicke San Francisco, CA 94123 Member, Crissy Field Dog Group

Correspondence Type: Web Form

Correspondence: My name is Katherine Buckley. I live in San Francisco's Mission District. I use Fort Funston and Crissy Field extensively, approximately 5 times every week, to get my exercise and walk my dogs off-leash (under voice-control).

For many years I suffered from depression. My therapist recommended more exercise and suggested I get a dog. The therapeutic effects were immediate and enormous. I want my dogs to be happy and healthy and the best way is with lots of exercise and running around a LOT off leash (under voice control at all times). Because of this I started visiting Ford Funston and Crissy Field almost every day. Not only do my dogs get a lot of exercise, so do I. And nothing lifts the spirits like a walk in these beautiful locations with my best friends (ie my dogs). My symptoms have been gone for many years now and these walks have become a mainstay of my life. I, like the vast majority of people walking dogs off leash in these areas, am

responsible (always pick up the poop, always have well behaved dogs, and always treat everyone I meet with respect) and I will be DEVASTATED if the proposed restrictions (especially those in the Preferred Alternative) take effect since my recreational opportunities will be severely diminished.

I am flabbergasted as to why such severe restrictions on off leash dog walking are needed. In all my years walking in Fort Funston and Crissy Field I have seen ZERO incidents of dogs fighting or attacking people. I have, however, run into many very frightening human characters - for example, some drunk and belligerent people camping in the bushes at Fort Funston. And I was at Fort Funston the day someone was shot and killed. Without dogs and dog walkers, I frankly think that these areas will be much more frightening to visit and I certainly would not feel so comfortable with fewer "dog people" there. Since 99% of dog walkers are responsible, I believe it is not right or fair to punish the majority for the actions of the very few irresponsible dog owners.

Things I do support in any dog management plan:

I fully support any efforts to license professional dog walkers or require them to be permitted. They use the parks very heavily for their own economic benefit and should have to pay a considerable annual fee for the disproportionate burden they place on the parks. The permitting requirements should also require that these professionals are certified or otherwise qualified and proven to have appropriate dog handling skills.

I fully support efforts to reduce the number of dogs that 1 person can walk at a time. I have seen some professional dog walkers with 12 dogs at a time. In recent years the number of professional dog walkers using the areas has greatly increased and I do not believe that they can possibly keep more than 4 or 5 dogs in their sight and under voice control at all times. Nor do I find it credible that they are picking up all the dog poop.

I would appreciate MORE off leash dog walking opportunities especially in San Mateo County.

Things that I strongly object to:

The Compliance-based Management Strategy is a very troubling proposal and cannot be part of any plan. It changes the status of areas () automatically and permanently if GGNRA claims not enough compliance with new restrictions. So that off-leash becomes on-leash; on-leash becomes no dog. I cannot frankly believe that this is a credible part of any plan. No evidence of impacts from non-compliance are required, only the fact that there is non-compliance. This could end off-leash access without giving people a chance to comment on the change. This punishes responsible dog owners for the

bad actions of a few irresponsible ones. This strategy should be completely removed - it is underhanded, appears to have an ulterior motive and frankly is something I would expect a dictatorship to use. I wholeheartedly oppose the Preferred Alternative because it is too restrictive. There is no justification in the DEIS for major changes. Instead I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

A few other points that I would like to make:

DEIS claims a major safety problem with dogs in the GGNRA. But their own data indicates dogs accounted for only 2% of serious safety incidents involving dogs. The vast majority of serious incidents involved people only. Even if you include non-serious incidents, dogs accounted for a mere 7% of incidents in the GGNRA. Dogs are not a major safety problem. As mentioned above, in all my years dog walking in the GGNRA I have never seen one serious incident involving dogs attacking people or birds but on the contrary I have heard about many serious cases, including murder, involving people-on-people incidents. I would like GGNRA to take into account the possible negative safety impacts of shrinking use by dog walkers if it was to be restricted further; including increased drug activity, prostitution, homeless encampments, assaults and robberies etc. Fort Funston in particular is relatively remote from other human activity and most people using it are dog walkers - without my dog and the many other dog walkers using it I would not feel safe there.

The DEIS does not consider impacts on the health (physical, mental and social) of people if dog walking is severely restricted. The DEIS also does not consider impacts on social communities of people with dogs at GGNRA sites of severe restrictions take effect. I personally have made some very good friends and meet regularly with them as we walk our dogs off leash at Fort Funston and Crissy Field. As iterated in my second paragraph above, I am healthier, happier and more fully engaged with community of dog walkers thanks to the current off leash dog walking opportunities at Fort Funston and Crissy Field. There are many elderly people especially who maintain an active lifestyle and who get to see people every day by walking their dogs in GGNRA.

The GGNRA has a recreation mandate and the DEIS treats recreation as an adverse impact, rather than a value to be preserved. DEIS should add section evaluating benefits of recreation. Thousands of people in the Bay Area have gotten dogs under the assumption that they can be off leash in the GGNRA and this is a primary source of recreation for many people I know, as well as myself. The Preferred Alternative in particular will severely lessen opportunities for recreation for thousands and thousands of people who have dogs. The GGNRA is in a dense urban area, but the the DEIS is written as if

the Bay Area and its residents don't exist just outside its boundaries. This is an urban area, not a pristine wilderness. The DEIS ignores impact on residents or area resources, especially city parks if restrictions take effect. Sites like Bernal Hill and Golden Gate Park will likely be overrun with dog walkers and this will put a severe strain on underfunded City Parks. This is concern has largely been why the SF Board of Supervisors passed a resolution opposing the Preferred Alternative since there has been a lack of study of impacts on city parks. Dog walkers constitute the most diverse group of people who use the GGNRA ? seniors, kids, people with disabilities, gay and straight, all ethnic groups, all religions, all social and economic classes ? all interacting in positive ways, bound by their common love of dogs. There is no mention of this diversity in the DEIS. Minorities are mentioned only in the context of being afraid of dogs. The DEIS incorrectly quotes from a focus group of people who had largely never been to the GGNRA as proof that minorities don't come to the GGNRA because of the dogs. DEIS did not consider negative impacts on minorities and disabled who lose access to dog walking. The people I know that walk their dogs are the most diverse group of people I know in my life - I am a gay immigrant and among my dog walking friends are Latinos, African Americans, people over 60 and a woman with a disability. Our common bond is our love of animals and particularly dogs. The DEIS uses misleading literature citations to claim dogs have negative impacts on wildlife and the environment. When examined closely, many of these studies do not say what the DEIS says they do. Other references cite non-existent studies. Claims of impacts on snowy plovers and bank swallows are not supported by available data. The DEIS must start over and study actual impacts documented to occur at each site in the GGNRA, and must consider whether there are simpler mitigations that can address any impacts that are actually found. Management Tools ? The DEIS does not consider simple management tools that could be added to the 1979 Pet Policy that could alleviate concerns without needing to ban people with dogs. For example, if concern is dogs going over cliffs at Fort Funston, a low-lying fence near the cliff and better signage could keep people and dogs away from the cliff. Education programs to socialize dogs to horses could help reduce negative interactions between horses and dogs on trails. The DEIS describes the visitor experience as focused on people who don't want to be around dogs. I can personally vouch for the fact that the a sizeable number of visitors, and the vast majority at Fort Funston, use GGNRA specifically because they will be surrounded by dogs and dog lovers. The DEIS considers dogs as if they are the only thing in the GGNRA. There is no context. For example, there is no discussion of impacts of natural predators on snowy plover birds and how that compares to those from dogs, or how do disturbances from people compare to disturbances from dogs. Without this context, the DEIS cannot say restricting dogs will have a significant positive impact on different species. The DEIS did not consider negative impacts on dog behavior caused by severe restrictions on off-leash in the GGNRA and by

resulting overcrowding in city parks. Dog behaviorists, including Ian Dunbar, Trish King, Jean Donaldson, and Veronica Boutelle, have said the loss of off-leash exercise will cause an increase in problem dog behaviors, including bites. This resulting increase in problem behaviors will lead to an increase in surrenders at city shelters, which cannot handle the increase. This is another impact on surrounding communities that was not considered in the DEIS. The SF Animal Control and Welfare Commission held a hearing on this and passed a resolution calling on the Board of Supervisors to oppose the Preferred Alternative because of that. Lack of Site Specific Information - The DEIS fails to document actual impacts on resources at each site. DEIS assumes that if an impact "could" occur, it does occur at each site, even though there is little evidence of actual impacts documented at each site. If the DEIS cannot document actual impacts, then they cannot restrict access. Non-compliance does not equal negative impacts ? The DEIS assumes that non-compliance with leash restrictions means there are negative impacts on environment by dogs. Yet there is no evidence that impacts actually happen. DEIS has to re-evaluate that assumption and must base any conclusion on actual documented impacts. San Mateo County and new lands should have off-leash too ? The DEIS mandates that there will be no dogs, either on- or off-leash on any lands that get added to the GGNRA in the future. Even if dog walking has taken place on those lands for decades.

Correspondence: In general, I support the Preferred Alternative, so that various needs are balanced.

But where possible, regulated Off-leash Areas should be fenced, for safety, and so that the boundaries are clear.

And commercial dog walking should not be allowed. This is an activity that does not belong in a National Park.

Correspondence: I would like to voice my opposition to the GGNRA's plan to ban off-leash dog walking in the areas around Pacifica and Montara. The ownership of many of these areas have been recently transferred to the GGNRA. Many people who supported this transfer, did not realize that the policy of off-

leash dog walking would be changed. These areas are remote and there is little need to restrict the activity in this area. People in the area have been exercising with their caning companions for many years and to ban this activity will adversely affect the culture of our communities.

Correspondence: At Crissy Field and Fort Mason dogs off-leash are not a significant nuisance. Most dog owners are respectful and clean-up after their dogs. They generally do not harm the landscaping. I know this because I walk my dog everyday there.

Much more significant are the adverse impact that the weekend barbeques have on Crissy Field and Ft. Mason. Grass is trampled and a large amount of litter is left behind. People with there dogs are comparatively not a problem, and seem like a much lower maintenance cost for GGNRA field staff. The GGNRA does not have adequate documentation showing that people with their dogs have an adverse impact.

Correspondence: 5/30/11

Frank Dean, General Superintendent Golden Gate National Recreation Area
Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean,

I use the trails on GGNRA in marin county (mostly oakwood valley) to walk dogs professionally. I have a permit to do so on Marin Open Space, and would be happy to go through the process to get a permit to walk dogs on the GGNRA. I usually only walk between 3-4 dogs in a group, making sure all dogs are under voice control or on leash, and always pick up after the dogs.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off-leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon

sound science or long-term monitoring of site-specific conditions.

It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi-faceted approach that incorporates education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option.

The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal.

The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the "human environment", but the DEIS fails to do so by failing to adequately address how the proposal affects "recreational" values for these local residents.

After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program.

Thank you for your consideration.

Sincerely,

Gina Chang Half Moon Bay, CA 94019

| Correspondence: | I am a middle teacher in the Sausalito Marin City School District. At least twice a year I bring students on hikes to Alta Ridge and Oakwood Valley to | | | | |

experience science and nature. Without fail we are greeted by people with dogs. The most stressful part of hiking and experiencing nature in our backyard is meeting the dogs that are off leash without an owner in sight. For instance, I led a group of 30 students up the Pacheco Fire Road to be met at the Alta trail by 3 off leash dogs. I yelled for the owner, "Dog! Please come get your dog!". While the 3 off leash, not in eyesight of their owner, dogs were friendly enough my students were freaking out. I had at least 4 students hanging on to me and some even took off down the hill to get away. I heard her calling dog's names but they were not responding to her. It had to be a good 20 seconds before the owner appeared with 3 other dogs on leash and another couple of dogs walking near her. I told her there were more children and adults further down the trail and she should leash all her dogs. Her response was they are friendly and harmless. It was a traumatic experience for those students who are afraid of dogs. To see a dog on a hiking trail-which is already unfamiliar territory, minus an owner is scary to say the least. My students should never have to experience dogs off leash AND not under voice control. My students were in an unfair situation that happens too often on Alta. I understood the panic my students felt and hope they don't have to continue to feel under attack when we head into our backyard to learn.

Correspondence: I am a taxpayer in San Francisco and I live at Ocean Beach. I walk my dog companion Madera Grace 4-6 times per week on the Beach. She is always on leash and we carefully avoid disturbing the birds or other wildlife. I always pick up after my dog and always add several items of trash into my "pooper" bag. This trash is deposited by careless humans who come to the beach to drink, party, set off fireworks (terrorizing wildlife and domestic animals) and then walk away leaving their trash. I moved to the outer sunset so I could walk and run with my dog on the beautiful beach across the street from my house. And it gives me joy to share this natural treasure equitably with my neighbors, other Bay Area residents, visitors -- and both the wild and domestic creatures who reside here.

The areas designated by your proposal are shared urban natural recreation sites, they are not pristine isolated wilderness areas. As city dwellers we are fortunate to be closely surrounded by extraordinary beauty and nature, and it is our responsibility to share it equitably -- as pedestrians, motorists, cyclists, children, elders, and humans in the company of dogs. Yes, guidelines and fair rules need to be established so that we can all feel welcome and safe in our urban recreational areas. However any final decisions excluding or limiting the presence of humans and their canine

companions must be achieved after careful weighing of facts derived from rigorous scientific study and an open inclusive discussion of what is best for all members of our small congested urban community.

Please think of dogs as family members You cannot just delete them from the equation, just as you cannot simply demand that people stop having children. Please understand that for many San Franciscans, animal companionship is an integral component to a happy life, that it contributes towards making life in the city "livable." Let us work towards the establishment of fair guidelines that allow humans and their dogs to enjoy nature responsibly and that allow nature to thrive and be alive on many levels. This also means the thoughtful designation of specific sites for specific use -- such as off-leash run and play areas, leash-only areas, and a small number of fragile impact areas where dogs and humans may need to be off-limits for certain periods of time. The goal is environmental and wildlife conservation while maintaining community quality of life and a shared greenbelt. Balance is everything.

Correspondence: May 30, 2011

I am writing to oppose the GGNRA's draft dog management plan. Rather than looking objectively and scientifically at facts about the actual impacts of the 1979 pet policy to determine whether any change is needed, the draft plan supports it "preferred alternative" of drastic reductions in voice-control areas and on-leash areas with speculation about what may happen if the current use is continued.

Fort Funston, the GGNRA area that I go to most often with my dogs, is not a natural habitat; the building of the batteries over 60 years ago removed the native vegetation and most of the native wildlife. This makes it an ideal area for dogs to run off-leash. The wildlife and vegetation that now exist are clearly compatible with such uses or they would not be there. Any effects of dog recreation on the snowy plover could be taken care of by a low fence that would keep dogs out of the nesting areas rather than by a ban on off-leash dog use over most of the park.

The GGNRA should be realistic and notice that the main reason people go to Fort Funston is to have fun with their dogs running and playing; they do not go for the area's scenic features. The proposed area near the parking lot where off-leash dogs would still be allowed under the draft plan is much too small to accommodate the number of dogs that visit this park. Any dog

behaviorist will confirm that dog "incidents" are much more frequent in crowded areas and between dogs that are on leashes. With plenty of space, the dogs and people all work it out. There is certainly no factual record of incidents in the draft plan that would justify the proposed limitations.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, and one of the biggest recreation needs in an urban area is dog-walking. Dogs such as my Irish Setter, and many other large breed dogs, cannot get enough exercise on leash; they need to be able to run.

The draft plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:(a)honor the original 1979 Pet Policy and respect dog-walking as legitimate recreation;(b)provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County; (c)exclude speculative, exaggerated, biased, or misleading statements and studies; and (d) provide reasonable ways to address any significant adverse impacts from recreational activities; and (d) use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).

Correspondence: May 26th, 2011

Frank Dean, General Superintendent Golden Gate National Recreation Area
Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean,

I am a resident of the Potrero Hill district of San Francisco, a regular GGNRA park bird watcher and NPS volunteer. I also serve on the conservation committee of the Golden Gate Audubon Society. I have spent the last three years trying to understand and expose the industrial pollution in San Francisco that kills hundreds of birds annually.

I worry about birds and spend many hours putting my health and safety at risk to save their lives. I also speak on their behalf before governmental and civic groups to raise interest and respect for the welfare of all wild animals.

I do not live with a cat or dog but I appreciate their important role and believe that they (and other animals) occupy a central part of our culture as well as social structure.

We are content to materially profit from their service to law enforcement; the military; security; search and rescue; healthcare and rehabilitation; and as aids to people with special needs.

For many of my neighbors these creatures are their family and friend; in some cases their only friend. They do not want to leave them behind when they enjoy their favorite park.

Many GGNRA parks, especially in San Francisco, are located directly across the street from our homes. In most other communities these areas would be the municipal neighborhood park or beach. In the case of San Francisco they belong to the federal government who prefers to enforce a common set of national laws. These laws do not reflect or appreciate the history or culture of the domestic animal in San Francisco.

The DEIS attempts to make arguments through objectifying the dog and blaming them for the destruction of elements our environment such as soil, native plants and birds. I do not believe that your position regarding shorebirds and threatened species is well researched. During my conservation work in San Francisco I have obtained much empirical data about populations of birds and the conditions that may be harming them individually and specifically. I believe that your staff should scrutinize this data before reaching the decision to implement your "Preferred Alternative" plan.

The remainder of these comments about your DEIS are snippets of information gleaned from databases and reports that I have discovered during the last few years. They point to larger questions and data about the actual effects dogs have on wildlife. They also question the prevailing truism promulgated by the modern conservation lobbyist. GGNRA vs. Point Reyes National Seashore (PRNS)

=====

It appears from the DEIS that GGNRA wants to behave and appear more like the PRNS. It seems fitting to compare the differing characteristics of these two parks in respect to their public use and the success of its avian wildlife.

PRNS provides four beaches (along its 27 Km of beaches) where on-leash dog walking is permitted (1). According to the PRNS park map off-leash dog walking is not allowed anywhere in the park(2). PRNS services the sparse residential populations of West Marin. Its beaches are long and deep, mostly free from human disturbance and are inviting grounds for wintering and migrating birds.

Activity and Disturbance =====

In contrast, the ten GGNRA beaches surveyed have 5.6 times (560%) more visitors (per Km surveyed) than PRNS (not including dogs) (3). GGNRA has 15 times more off-leash dogs per Km and 8 times more on-leash dogs. About half as many parkgoers bring their dog to PRNS beaches (6%) vs. GGNRA beaches (13%) (4).

On average over three times as many people are engaged in 18 named active sports on GGNRA beaches than there are at PRNS. This number does not include strolling, jogging or dog walking (on or off leash). Activities assumed to disturb shorebirds such as surfing is 42 times more common in the GGNRA with a density of 4.8 surfers per Km.; Boogie Boarding with 16 times as much activity, ATV riding 15 times; and kite flying, 7 times greater than at PRNS.

Effects on Shorebird Population =====

Despite the sparse and undisturbed natural conditions for birds at PRNS as compared to the GGNRA, this park has the same number of regular species of shorebirds as the GGNRA. GGNRA beaches hosts about 2/3 of the total population of individuals as PRNS. This difference is explained mainly by wintering flocks of Dunlin, Western and Least Sandpipers that roost at PRNS in great number.

In comparison, GGNRA has 2.4 times more Willets; 2.5 times more Black

Oystercatchers; 5.7 as many Killdeers; 2.2 times as many Long-billed Curlews; 2.2 times as many Long-billed Curlews and 20% more Sanderlings than PRNS per Km. surveyed.(5)

Mortality =====

There were about 6 times more dead shorebirds found at PRNS (76 Vs.12) since the study began in 1993. Per kilometer surveyed there are 2.6 times more dead Willets found onPRNS beaches despite a 2.5 times larger (living) population on GGNRA beaches. (6)

Endangered Species =====

No dead Snowy Plovers, Bank Swallows or threatened Rails have been found by BeachWatch during the 18 year study period. Over 70,000 intake records (collected over 19 years) by our local animal rehabilitation hospital show that no Snowy Plovers, Bank Swallows have been admitted for treatment. Four Clapper Rails admitted were not attacked by a dog and were not found on NPS property. (7)

As of May 2011, 4.31 roosting Snowy Plovers (per Km. surveyed) have been found on unprotected Ocean Beach Central. This is about the mean since 1995 (8) and 30% higher than the median value even though San Francisco population has increased about 10% during this period.

Also, simple correlations (at the yearly level) between the number of Snow Plovers and 1) beach visitors, 2) off-leash dogs and 3) on-leash dogs are all positive (.30, .19 and .17 respectively). This indicates a positive association between the presence of the plovers, people and dogs. We would expect a significantly negative correlation if increased disturbance caused by a human / dog presence was driving the birds away and lowering their population

Monitoring Snowy Plovers at Crissy Field
=====

The correlations found at Ocean Beach Central compliments a study (8) that measures Snowy Plover disturbance rates on West Crissy Beach (Snow Plover WPA), during a 15 week study.

This study shows only a .7 Snowy Plover disturbance rate per Km. surveyed (i.e. less than 1 bird / kilometer). A "disturbance" is considered any event that causes a bird to take defensive action such as vocalizing, crouching, aggression, unfolding its wings or flying away. It does not imply threat, injury or death and can be caused by anything such as a wind-blown candy

wrapper, an unexpected sound or the sight of a predatory bird.

The .7 bird/Km. disturbance rate was caused by only 3.90% (n = 14) of the 298 people and 58 dogs visiting the beach during the 15 week study. Of these 14 disturbances recorded 93% (n = 13) were human involved disturbances; 7% (n = 1) was an off-leash dog and 12% (n = 2) was an on-leash dog (Please see (9) for explanation about the percentage discrepancy).

According to this data an off-leash dog would disturb a Snowy Plover once every 20 Km (12.4 miles) of beach. (10)

If this study has accurately sampled the activity on this beach then eliminating dogs entirely would lower the overall disturbance rate from .7 birds to .55 bird per Km. It would also increase the human visitor disturbance percentage from 3.90% to 4.58% (11/240) as at least 58 people would be effectively evicted from the beach.

In sum, it is the person (without dogs) who is creating the miniscule amount of disturbance taking place on West Crissy beach. If a theory holds that "disturbance" is threatening the Snowy Plover then it is human interference that must be controlled.

I am not aware of any large scale dataset that shows any relationship between the harm or death of shorebirds or threatened species and the presence of dogs on any local beach. Comparing GGRNA with PRNS shows the minimal difference in avian success between two parks with much different characteristics and uses.

I do not agree with the GGNRA's current preferred alternative as it significantly and unfairly restricts and eliminates dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions. The GGRNA should use readily available empirical data to prove its point and to interpret their findings to the people who will be most affected by any new rules. If people are hurting wild animals by their actions or life style they should be informed about the details of this offense.

After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program.

Thank you for your consideration.

Sincerely,

Richard Drechsler San Francisco, CA 94107

Correspondence: I am writing to oppose the GGNRA's draft dog management plan.

The GGNRA was designed as an urban recreation area that can accommodate both recreation and conservation, and that the existing 1979 pet policy should not be altered as time and again the citizens of San Francisco, Marin, and San Mateo Counties have shown that they support the existing pet policy, and it has been upheld by the courts, as the existing pet policy is consistent with the original mandate for recreation upon which the GGNRA was founded.

In my opinion, the GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. I strongly urge the National Park Service to revise the dog management plan to: honor the original 1979 Pet Policy, respect dog-walking as legitimate recreation, and provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979.

The GGNRA is a vital resource for the dogs of the Bay Area and their

owners - for exercise, for dog socialization, for forging the human-canine relationship, and for enjoying the nature and unique beauty of the GGNRA. The local municipal parks simply do not allow or cannot accommodate the huge number of dogs in the Bay Area, which makes access the open spaces of the GGNRA even more important to residents of a crowded, urban environment. Simply put, dog-owners depend on the resources of the GGNRA on a daily basis to keep their dogs healthy and well adjusted.

I am a regular user of Fort Funston, Crissy Field, Ocean Beach, Rodeo Beach, and Muir Beach, and ask that you do not change the current policy at these sites.

Sincerely, Edward O'Connell Tiburon, CA

Correspondence Type: Web Form

Correspondence: These are comments I've distilled from others over the course of this comment period:

We demand an independent review of the comments from the public. The GGNRA has said they will give the public comments to their own staff -- the very same people who did the flawed, biased research that the GGNRA uses to justify restricting off-leash -- to decide if the criticisms of that work is valid. This is an egregious conflict of interest.

The NPS must have non-GGNRA-staff or GGNRA-associated researchers to independently analyze and review the public comment and to independently determine how the Alternatives must be changed (or even if the DEIS should be thrown out and the whole process started over) as a result of the public comment.

Re: Healthy Parks, Healthy People. Below is directly from the NPS website. "The fundamental value of nature as integral to our health as a species is one of the precepts underlying the establishment of the national park system. As Director Jarvis pointed out in a recent speech at the Harvard School of Public Health, the connections between personal health and parks have been evident since public parks were conceived in the 17th century. A growing body of research has documented the significant health benefits of time spent in nature and exercising outdoors. While certainly not a panacea, parks have the potential to play a major role in addressing the nation's current health crisis reflected in the alarming increase in heart disease, diabetes, and obesity. In recent years,

examples of parks being utilized as places of health and wellness by medical practitioners have begun to appear throughout the National Park System, as well as in state, regional and local parks. The Healthy Parks Healthy People US forum at Golden Gate draws on some of the key points of emphasis in the recently released America's Great Outdoors report, and also reinforces First Lady Michelle Obama's "Let's Move" initiative. To further reinforce the parks/health connection, this year's theme for National Park Week (April 16-24) is Healthy Parks Healthy People." I think this beautifully speaks to why saving dog recreation is so important and why dog people should be commended instead of condemned for being out in the parks on a daily basis with our dogs. The Bay Area is an example of parks being actively used and the Bay Area currently being one of the healthiest places to live. The politicians just need to go to trails that allow dogs, and bicycles, and joggers and see that we are already living these fundamental values. We have to save active living for this generation and future generations.

Tens of thousands of us walk and play daily in the parks with our dogs. We often walk for an hour or more. Many of us are elderly, or people of color, or people with children. Many of us have disabilities which we keep in check by walking daily. Isn't this exactly what you want? Isn't this what "Healthy People, Healthy Parks" is trying to achieve?

Re: Social Justice:

*Dog walking is enjoyed by families, minorities, seniors, and the disabled and contributes to the health and well-being of all.

*Walking our dogs is a sport that everyone can play for free if the parks remain open. The poor can enjoy the same open space as the rich.

*The poor can afford to go to a public park to exercise and socialize where they may not be able to afford a gym membership or doggy daycare.

*Horses are for the more elite and the NPS is planning to build trails to accommodate horses. What have they built to accommodate dog walking by the less elite?

*Are the poor and minorities really going to want to go to Fort Funston to watch the lessingia grow or to search for the hidden Snowy Plover? Last time I checked, bird watching and gardening wasn't the poor and minorities top 5 fav recreational activities either. I'd guess they'd rather go have a picnic with the family on the beach with a game of soccer or have a campfire. Turning 80% of

Ocean Beach into a bird sanctuary doesn't support their recreational needs either. This feels like a few people high-jacking the parks with slight of hand and imaginary tales of mystical demons geared to keep the masses in line.

Is any other public sport or pastime that is subject to such a high expectation? The disrespect towards of our heritage and the imminent loss of our COMMUNITY is certainly going to be a major point in my public comment, and hopefully a part of everyone's public comment. ?

The Department of Interior, which the NPS is a part of, states: "Our Mission: Protecting America's Great Outdoors and Powering Our Future: The U.S. Department of the Interior protects America's natural resources and heritage, honors our cultures and tribal communities, and supplies the energy to power our future." Show us with deeds and not just with words. I'm still baffled by the NPS talking about preserving cultural heritage (e.g., the old batteries) for future generations in the DEIS when they are so disrespectful of the existing Bay Areas culture which is alive and well and embraces diversity, choice, and being active outdoors.

The dog community is a dynamic, active community that needs to be honored not demonized in the name of their NPS dogma. WE ARE A COMMUNITY too. I don't see the DEIS "Powering our Future"; instead our community is being systematically shut down with one cut after another.

??I am a longtime member of the Sierra Club, and I am appalled at the discriminatory bias that the National Park Service has against man's best friend. ??I love the outdoors and I'm a committed environmentalist. I also love my dog, and my favorite pastime is exploring our natural world with him.

We treat the resources with utmost respect. I do not at all appreciate this document which attempts to paint my dog as some type of villain.

I live in Florida but visit California with my dog. You can be assured that if these restrictions are put into place, the San Francisco area will no longer receive my tourist dollars.??

40% of American families include a family dog. It has been scientifically proven that owning a dog improves our health and longevity, but only if we can provide the right amount of outdoor exercise and stimulus for them.??The GGNRA has already restricted dog owners to less than 1% of its space. It

should be INCREASING the space available for this 40% of the population, not decreasing it.

Walking with and enjoying the outdoors with our dogs is a timeless human recreational activity; one of the simplest, most basic forms of recreation since the human and canine species formed their special bond 10,000 years ago.?? A friend of mine immigrated to America from Norway and he is flabbergasted at the puritanical attitude about dogs in the outdoors of the United States. He loves many of the freedoms America offers him, but doesn't understand why in Norway, dogs are an accepted part of public life, and are welcomed almost everywhere, but in America, the land of the "free", this basic need is taken away from our citizens.??

Please scrap or rewrite this document to increase dog walking on this public land (purchased with my tax dollars), instead of further restricting it.?

This was written about the EBRPD, but applies here, too:

I am a frequent user of the parks and walk there several times a week. I have been to nearly all the parks, including the remote eastern parks, which have very few visitors during the week. I am very concerned about the recent survey. There were several questions targeting dogs off-leash. This was the only user group singled out for negative comments. This amounts to soliciting complaints about a single user group and may result in a biased survey. I have been nearly run down and have been yelled at by bicyclists, have been chased by cattle, have stepped in horse and cattle droppings and have been accosted by teenagers. There were no questions in the survey about restricting any of these uses. I do not wish to restrict these people, because I do feel that we should share the parks and learn to get along and act responsibly. I hope people feel free to enjoy themselves even if sometimes they may bother me a little. I feel that my activity, walking with the dogs, is being targeted. I do support limiting dogs a few very sensitive natural areas such as marshes and Round Valley. I would like to see the current off-leash policy continued as it is. I hope that any discussion of this will be conducted in an open manner. I am very concerned, reading the survey, that decisions have already been made and that a biased survey will be used to support decisions that have been made behind closed doors.

City Of San Francisco:

SEC. 41.12. DUTIES OF OWNERS OR GUARDIANS. 5. ADEQUATE EXERCISE All dogs must be provided with adequate exercise. "Adequate

exercise" means the opportunity for the animal to move sufficiently to maintain normal muscle tone and mass for the age, size and condition of the animal. 6. PENALTIES Any person violating the provisions of Section 41.12(c) of this Article shall: (1) upon the first offense in any 12-month period, be deemed guilty of an infraction and upon conviction thereof shall be punished by a fine not to exceed \$50.00; (2) upon the second offense in any 12-month period, be deemed to be guilty of an infraction and upon conviction thereof shall be punished by a fine not to exceed \$100.00; (3) upon the third and any additional offense in any 12-month period, be deemed guilty of a misdemeanor and upon conviction thereof shall be punished by a fine of not more than \$1,000.00 or by imprisonment in the County Jail for a period of no more than 1 year, or by both such fine and imprisonment.

Urban parks should be parks and not terrariums! I love nature and want to enjoy it up close and personally. Dogs get us outside; it would be nice if all rare and endangered species had all the land they need, but I think that all-too-common humans and dogs need space to thrive as well. This is one the most populous areas in one of the most populous states. Perfectly pristine nature preserves, although important, are not practical in urban areas.

This anti-dog attitude is getting very worrisome. I feel we are being discriminated against. And that their studies are biased. Also by restricting the areas we have, forcing all of us into smaller areas causes much more habitat danger. Then they can point their biased fingers at dogs as the destroyers. We need more areas that are close to where people live so they don't have to travel to a few areas shared by too many.

Type:

Correspondence: I would like to respectfully request that you reconsider your plan to change the current GGRNA policy regarding dogs. My understanding is that the City of San Francisco handed over management of the coastal land of Chrissy Field and Ft. Funston to GGNRA with the stipulation that the areas continue to be open to off-leash dog use. This policy was later codified in the 1979 Pet Policy. How it is possible that the GGNRA now has the right to rewrite that legal agreement? Was an EIS not done initially in 1972? Has there been significant change noted in the current EIS? Official policy of the

NPS restricts dogs to campsite and visitor center areas. However, I understand that various national parks have relaxed such rules in order to allow for traditional uses in specific parks, permitting activities such as hunting and snowmobiling. The GGNRA land is in the midst of an urban environment and has been long open to dogs; thus it seems only reasonable and fitting to grandfather-in off-leash canine access. The GGNRA, by its very nature, is very different from most national parks given its proximity to a large urban setting with its roads and dense population. It is a park which is accessed by many people, as well as dogs. The GGNRA would be much more pristine without any human activity at all, but is this what we want? We have decided, as a populace, that the enjoyment of the visitors is more than worth the impact their presence leaves on the land. I am not clear that dogs do any more damage than their human counterparts do. For instance, one day, after dogs were newly restricted to leashes-only along the northern section of Ocean Beach, I witnessed a youngster throwing rocks at the snowy plovers. The adults who accompanied him, presumably his parents, did nothing to stop him. At Ft. Funston, I have, on various occasions, watched teenagers etch their names into the sand dunes along the beach or looked on as people without dogs slide down the large dunes up top, an area ostensibly cordoned off. On the other hand, volunteers comb for dog feces on a monthly basis at Ft. Funston. I would suggest educating the public, by signage and perhaps visits to schools, on the ways in which we might take better care of our natural areas in the GGNRA. We must learn to live with our environment in this case for I do not believe it to be an option to simply restrict all access in order to let the area revert to what it was before man initially came to live here. Regarding the argument that some potential visitors choose not to visit the dog frequented areas of GGNRA due to fear of canines, I would respond that I, in turn, am precluded from those areas of the park which allow mountain bikes, for walking on such trails and needing to keep constant vigilance so as to be able to dodge any bikes bearing down upon me dampens greatly my pleasure in the hike. Yet I do not insist that all biking be outlawed for I comprehend the enjoyment of the bikers. Certainly there is room enough for us all? One percent of GGNRA park land devoted to off-leash dog use is certainly cannot be deemed an onerous compromise. Fort Funston, and Chrissy Field are the only areas in San Francisco where dogs are officially allowed to meander off leash. This affords dogs the opportunity to trot along at their own pace with their many back and forths, which is not afforded them on leash, for dogs and humans naturally walk in different manner. As well, dogs have the opportunity to frolic and swim in the ocean and Bay, which is wonderful exercise for them. Certainly, dogs are able to range freely within the several fenced-in dog parks in San Francisco, but the areas are quite small and unless the dog is young and finds a fellow companion to chase or likes to retrieve a ball thrown over and over again, such parks do not afford the exercise, nor vistas, for either dog or human, that walking through Ft. Funston or Chrissy Field do. Being allowed to roam and investigate periodically off-leash adds much to a dog's

wellbeing. I have never forgotten the testimony given by the policeman in charge of dog bites at the last attempt to restrict dogs at Ft. Funston. He stated emphatically that he expected there would be more incidences of dog bites if the measure passed for the dogs would have less outlet for their natural need to run and socialize freely. If the GGNRA policy is enacted and I am unable to walk my dog off-leash for the ample distances afforded at Ft. Funston and the San Mateo parks, that would mean my driving over to the East Bay - where else am I to go as a hiker - for a dog owner cannot countenance embarking on an enjoyable trek, the meanwhile leaving her canine companion at home! I sincerely hope you will reconsider your Draft Dog Management Plan for the traipses that my dog and I take at Ft. Funston, along with our less frequent visits to Chrissy Field, have been a jewel in my residence in San Francisco - these parks have afforded scenic, meditative walks with my dog, relieving stress and providing exercise in a city full of stucco and concrete. Ft. Funston is an area where one can be completely free from the cacphony of traffic and vistas of manmade structures (but for a couple of bunkers). It would be a great loss for me to no longer be able range upon this land which I have grown up upon, for without my dog by my side, strolls along the beach would not bring the same anticipation and joy. Indeed, I would not take such a walk if it meant leaving him at home. But perhaps that is what this proposed policy desires - no people at all?

Correspondence: Thank you for the opportunity to comment. The most environmentally protective alternative: Alternative D: Most Protective Based on Resource Protection/Visitor Safety, should be the chosen alternative. Alternative D provides the highest overall level of protection for natural and cultural resources and the highest overall level of visitor safety. No allowance should be made for commercial dog walking as discussed under alternatives B, C, and E. This would set an illegal and dangerous precedent and would open the door to legal actions for equitable conditions in other National Parks. It is a waste of taxpayer funds, a potential violation of the Endangered Species Act and would result in numerous negative environmental impacts and costly mitigation. The GGNRA is an amazing resource to the entire population of the San Francisco Bay Area, but the current policy is inconsistent and confusing as is the proposed policy of allowing a mishmash of various alternatives in different areas. Allowing off-leash dogs in areas adjacent to any water source, including the ocean, has already proven to be the largest source of fecal coliform pollution in San Mateo County, but it is likely the same in other counties. I have witnessed countless observations of dog waste in GGNRA beach areas.

My personal public safety experience, as described below, does reflect on the above comments, but my primary concern is the environmental consequences of allowing dogs off-leash anywhere in the GGNRA. The potential environmental consequences of dog use in the GGNRA always result in negative impacts to soils, water quality, vegetation, wildlife, special-status species, and cultural resources. As a resident of San Mateo County, I have observed countless occurrences of dogs running off the trails, including through habitat restoration areas in Mori Point. In addition, dogs chasing birds on the beaches in all GGNRA areas is truly unacceptable and a huge significant impact to the various bird species, protected or not.

As a taxpayer, I find it difficult to accept that the Park Service must or should mitigate for all the negative environmental impacts as well as the cost of enforcement of leash laws. I would personally prefer to hike and recreate in areas where dogs are forbidden as I have encountered so many hostile dog owners who refuse to keep their dogs on leash. I don't understand how the GGNRA will be able to enforce the myriad of alternatives in various areas. I visit Mori Point on a regular basis and rarely see a park ranger. My attempts to remind visitors to keep their dogs on leash are often met with hostility, disregard or complete ignorance.

I have avoided visiting Fort Funston as the environmental damage, including dog waste, is unacceptable and depressing. It has become a dogs only park area and that is truly unfortunate to other visitors. This past January 6th, I injured my ankle moderately on the beach at Fort Funston due to my own actions. As I was walking with my friend's assistance up to the base of the staircase, a nice woman offered to help. She had an off leash dog. As I continued to hobble up the trail towards the staircase, I took a break and while standing there on my un-injured foot I was knocked off my feet by two off-leash dogs-one of the them belonged to the woman who offered to help. I landed on my injured ankle thereby increasing my injury to a serious ankle sprain, required an emergency room visit and four weeks on crutches.

Thank you for the opportunity to comment and please chose Alternative D.

Correspondence Type: Web Form
Correspondence: Dear Mr. Dean,

I oppose the preferred alternatives in the DEIS regarding dog walking in the GGNRA lands and future lands to be acquired. First, I mourn the loss of community that will result as I and other citizens that walk their dogs in the GGNRA are no longer able to meet and walk our dogs off leash together there. This will have a major impact on my life as nearly every friend I have is someone I met at Fort Funston. My social life revolves around walking my dog at Fort Funston. I have built up a network of friends that I see at Fort Funston as I and my dog take our daily exercise there. To lose that is to essentially lose my entire social life. As I understand it, the historic use of Fort Funston, for about the last 40 or 50 years, is as an off-leash dog park. Please allow this historic use to continue.

My dog and I have walked at Fort Funston nearly every day, sometimes twice a day, for the past 11 years. Based upon my observations over that time, it is my belief that the weather has the most consistent and dramatic impact on the land there. I have seen the changes in the land year after year and storm after storm.

Before you eliminate off-leash dog walking from Fort Funston, please consider fencing off the Bank Swallow area with solid fences that dogs cannot run through. Please consider educating the public and improved signage and more frequent ranger monitoring of the park.

I was born and raised in San Francisco and have lived here all my life. I can no longer run with my dog at Ocean Beach, a beach I had been going to since childhood. I can no longer take my dog on the trails at Lands End. Now I will soon lose access for my dog and I at Fort Funston. Where exactly will I be able to exercise my dog? Walking on a leash is not exercise for a dog. A dog needs to walk off leash, and frankly, Fort Funston is the only place left in San Francisco where I can, in a practical manner, go and actually walk for an hour and exercise with my dog off leash.

Sincerely,

Julie Kaufman San Francisco, CA 94132

Correspondence: Dear Superintendant Dean,

I am writing to ask you to stop the Golden Gate National Recreation Area from implementing its "dog management" plan, which would severely restrict dogs and off-leash dog walking in places like Fort Funston, Ocean Beach, Crissy Field, Marin Headlands, Muir Beach and other locations that have welcomed dogs for decades. The GGNRA's proposal will eliminate a main form of recreation that takes place at these recreation areas and negatively impact thousands of us who live in the San Francisco Bay Area. The GGNRA is not the same as Yosemite or Yellowstone ' it is in the middle of an urban metropolis and needs to meet the needs of urban residents.

Sincerely,

Correspondence: To: GGNRA comments

We wanted to comment on the proposed regulations concerning off-leash dogs in the GGNRA. Many times on Ocean Beach or Baker Beach we have been charged at or growled at by free-running dogs, supposedly under "voice command: of their owners.

The fact is that these dog owners exercise little or no control of their dogs, but certainly make loud protests whenever imposed controls are suggested.

We favor strict leash laws on all public lands, enforced as needed. While some areas, such as environmentally sensitive breeding zones, should be strictly off limits to any dogs, we realize some areas should allow off leash activities, but most areas should require that all dogs be on leash. One person walking more than 3 dogs should be discouraged.

Thank you,

David Hayes

Type:

Correspondence: Dear Mr. Dean,

I write in support of the Golden Gate Audubon's position regarding dogs in the GGNRA. -Some trails should be for people only. -Off-leash areas should be fenced. -Require 95% compliance of leash laws and restricted areas. I realize this would require enforcement personnel - an expense. -Some areas should be out-of-bounds for any dogs- to protect wildlife and habitat, and allow for a more natural environment. -Could commercial dog walkers go elsewhere?

Please limit the areas where dogs are allowed, for the protection of the natural environment. I speak as a lover of all nature - flowers, plants, birds- and dogs.

Thank you.

Sincerely, Ann Kadyk Berkeley, CA 94707

Correspondence Type: Letter

Type:

Correspondence: Dear Mr. Dean,

This letter is in response to what little I learned at the meeting held for the public at Cabrillo Elementary School, Pacifica, CA on Wed. 09 MAR 2011 regarding the Draft Environmental Impact Statement (DEIS) for dog management.

I say "little" because even though the meeting was held from 4:00-8:00 pm, I could not get there until after 5:00 pm and could not stay much longer thereafter. So in essence, I spent maybe 30-40 minutes there, looked over what I could, spoke to who I could, and collected what available information I could. As of this writing I still have not been able to access any information that was provided to the public on the free CD?/DVD?/CD-ROM? (I was informed said disc was a "DVD", it did not play in standard DVD or CD player so I assume now it is a CD-ROM meant for PC's only.)

I would have preferred to have been able to take home a copy of the (2400?)

page report and I now think that the report should have been more readily available to the public in its hard copy form. I understand that that would entail printing some extra copies, but in the future I recommend having extra copies available to the public anyway, then possibly subsequently charging them for it thereby recouperating the costs of doing so.

I am in fact a dog owner/walker and I do in fact walk my dog off leash in many of the areas currently managed/owned by the GGNRA. I do recognize that not everyone shares my enthusiasm over canine companionship for whatever reason(s).

Lets take the Ft. Funston area in San Francisco as an example. As a dog owner even I will admit that that area IS NOT an area for any people with an aversion to dogs. So if I wanted to enjoy a picnic, walk, bicycle ride, horseback ride (?) etc., without canine interference, that could very well be an impossible undertaking there. A REASONABLE COMPROMISE might be to have alternating days/weeks/months (?) for dog owners/walkers and those who would enjoy the same area(s) dog free. For example, if I wanted to walk my dog leash free there tomorrow on the 18th, and I know that the day or week was off limits for dog owners/walkers, I would have to make other arrangements. I do not recommend month long hiatuses, one week intervals would probably be more compassionate toward dog owners/walkers (Another thing to keep in mind: professional dog walkers use such areas as a source of income; to close such areas would force such people to lose income or perhaps livelihoods.) The alternating time frame idea, I believe, could work for ALL AREAS in question/dispute.

I am pretty much dead set AGAINST having certain areas LEASH ONLY (Ft. Funston being one of them) There MAY be some places and reasons I could support it. (A primary example would be for safety reasons such as cliffs where dogs [or people for that matter] can fall, and rescue of such dogs would be difficult or time/resource consuming.

What those who, for whatever reasons, are adverse to dogs being in certain areas at all or even just leash free need to keep in mind is the following:

1) Many designated dog parks simply do not work for many species/types of dogs, usually because they are too small. Also, my dog in particular generally DOES NOT like the "forced" socialization that such parks encourage. Many dogs do indeed do fine in such parks, mine, and perhaps other's do not.

2) As many dog owners/walkers will tell you, having a dog on a leash means having to stop very frequently so the dog can engage in its sniffing behavior which can be very irksom even for owners, due to the fact that depending on what the dog smells, literally means stopping every 5-10 feet

for periods of 5-20 seconds or more including every time one dog encounters another. As someone who, when walking his dog likes to keep moving at as constant a pace as is possible, I tend to let my dog off leash for this very reason.

I do have to take some issue with the "environmental concerns" regarding dogs. In your January, 2011 newsletter, page 2, its written that a plan/DEIS is needed for the following reasons:

"Under current conditions, park resources and values could be compromised to the extent that without action, these resources and values in some areas of the park might not be available for enjoyment by future generations."

I have to ask what EXACTLY are the "current conditions" and what EXACTLY are the park resources and "values" that are in danger of "not being available for enjoyment by future generations"? The Mission Blue Butterfly? A garter snake? The snowy plover? Coyotes? Certain plant species?

For example, I was informed by one of the NPS employees at the Cabrillo Elementary School meeting that a species of garter snake is "endangered" at Mori Point in Pacifica. I find this claim dubious at best. Even if true, I find that no reason for alarm. I have seen plenty of the snakes in question and I know that they tend to thrive near bodies of water due to the fact that the frogs these snakes eat also thrive there. I also know that these areas are already bordered or fenced off adequately enough, so that is no reason to make Mori Point dog free or even leash only. I think everyone needs to keep in mind that many of the areas in question did fine WITHOUT any environmental management for decades/eons, and the balance of nature is NOT going to be thrown out of equilibrium just because a few dogs like to chase balls, sticks, rabbits, etc., dig holes (which very few dogs engage in, especially if allowed to run free) run free, bark, or defecate randomly. To ban dogs completely from certain areas or even to make the same areas leash only is extreme, mean-spirited, pretty, selfish, and unnecessary.

I do realize that dog defecation is a problem (albeit more of a nuisance than a crisis). My personal attitude and actions are this: I carry up to five plastic bags of a size and convenience that allows me to keep them in my back pocket of the pants I'm wearing. The more prevalent are designated trash receptacles, the more I'm wont to pick up after my dog. I'll admit that I do not always pick up after my dog. On sandy beaches for example, I hardly ever pick up after my dog. What I DO instead is when I spot him depositing feces, I usually dig a hole approximately 4-5" in the sand and put the dog waste in it and leave it at that, sometimes even if a trash can is within 100 feet of the dog's waste. Also out in a vast field, I sometimes let the waster stay where it is because contrary to popular belief a dogs' waste IS NOT the

environmental equivalent of, say, nuclear waste. (If that was the case the EPA would have to make many dog owners' BACK YARDS off limits!) All sorts of animals are constantly depositing bodily wastes in outdoor areas without creating an environmental catastrophe. However even as a dog owner I am just as thoroughly disgusted when I step in or come in contact with dog waste as someone who may even despise dogs. I usually calculate the chances of someone other than myself coming into contact with my dogs waste and decide to act or not act on whatever I deduce. On trails or areas where many other people hike or engage in other activities every day, I'm more wont to pick up after my dog. Again, given the proximity and/or number of trash receptacles I'm more wont to pick up after my dog. I'll also admit that even as a dog owner I'm fairly disgusted with those who utilize a plastic bag to pick up after their dog(s), then leave the bag on the ground as if they have done everyone a favor.

I'm one of the belief that those people should have just let the dog waste alone rather than bagging it, then leaving the bag at the spot the dog did its business at. I DO understand that mindset of such people because I'm not entirely comfortable myself walking more than 200 feet with dog waste in my hand even if it is safely stowed away in a plastic bag. IF there is no trash receptacle close by and I DO think there is a chance that someone can come in contact with my dogs waste (especially in bare feet) than I make an extra effort to bury/cover it utilizing whatever tools, materials, and loose dirt is available. Otherwise, dog waste is GOOD for the environment! (Yes, good, even the bacteria in dog waste dies or gets consumed by other microbes in the soil, plus plants [even native species] thrive on the fertilizer such waste provides.)

Many people and dog owners/walkers in particular view the proposed ideas in the DEIS as nothing more than a "land grab" at best and "control freakery" run amock at worst. I daresay I'm beginning to agree with some of them due to what else I'm reading on page 2 of the January, 2011 newsletter that I picked up in Pacifica. The rhetoric, benign at first glance, actually starts to come across to me as somewhat authoritarian and threatening upon subsequent reading. To wit:

Under the Preferred Alternative section under bullet point #3 it says: "No dogs in areas of the park where impacts were unacceptable and could not be mitigated,". Here I have to ask: Unacceptable to whom? and WHY NOT be mitigated? Under bullet point # 4 is where the language really starts to sound threatening: "a compliance-based management strategy to institute a range of park responses to non-compliance, including further restrictions or elimination of dog walking where compliance is not achieved,". Even under bullet point #5 it sounds as if the main concern is pecuniary. Finally under bullet point #6 I have to ask: Designated ONLY by the Superintendent?

Also, WHAT criteria?

I do agree that litigation on these matters DOES need to stop. Also, dog owners do need to be responsible and not resort to needless litigation if their animals get injured/killed by wildlife, geography, machinery or even other dogs due to them not being on a leash (I would have to question the frequency of such events.) In the case of dog on dog death/injury, litigation should be between the owners NOT NPS/GGNRA/etc. Of course every negative incident regarding dogs should also be examined on a case by case basis.

In conclusion let me state that I'm NOT 100% against banning dogs from certain areas and/or making them leash only. I would support my own idea of alternating time frames for dog owners/walkers and those who would rather enjoy the area(s) dog free. IF such an idea were employed, then another area close by should be available to dog owners/walkers. (For example if Ft. Funston is closed to dogs than Ocean Beach or Lands End should be opened and vice-versa. Ditto for areas in Marin County) Finally, Mr. Dea, let me say "Thank you" for reading this letter in its entirety assuming it has actually made it to your hands and not been "dispatched" by a subordinate due to length, readability factors, or God forbid, simply because s/he simply doesn't agree with what I have to say.* Good day to you sir.

Sincerely,

Russell Parrish

Correspondence: Dear Frank Dean, Superintendent GGNRA:

I am a frequent user of the GGNRA, especially Crissy Field. My concerns are for the natural restoration. It is amazing. My worry is that dogs loving, lovable, and popular + polulous as they are will undermine this huge and successful endeavor. I see few birds there now which tells me they know dogs are everywhere - some leashed + some not. This seems an incomplete restoration because of dogs here.

I love dogs and dogs need parks and ocean areas to swim in. They need a big designated dog park of their own - in SF. To be allowed here and there

means they go everywhere - due to signage problems and owners lacking respect or whatever.

My point- Crissy Field area should not have dogs at all.

Wendy Weikel

Correspondence: I am a Senior citizen, a single woman, a dog lover, and owner. I support leaving the dog plan as is or adding more off leash dog areas. Because I am senior walking with dogs on leash especially on a Beach is dangerous to my health and safety. Being a single woman I would not walk my dogs nearly as much as I do now because I prefer open space for my health. Without dogs there I would not go at all because I fear for my health and safety without them as companions. My "girls" are part of my family, and leaving them home for family outings or walks on the beach is inconscionable.

Correspondence: Why do we need more rules for dog owners, when we don't enforce the leash law or the rules presently on the books? More rules won't change the abused present situation if we ignore and can't, or won't give the violators fines, or show animal owners they will not be allowed the liberty to endanger children, fecal droppings, dog fights in areas needing protections.

At a very young age, my face was attacked by a German shepard, almost losing an eye, my nose close to torn off from a neighbors dog unleashed. My grandson, while walking at Chrissy field had food snatched from his hands by unleashed dogs.

Can dog owners be thoughtful enough to limit their animals to run where people are safe and no small children present? Several areas, so limit some for dogs and owners who will not endanger other people and children - not Chrissy field.

Count animals not leashed, each day for a week, add up collected funds for violations, improve our safety, police the people parks, let animal lovers control their pets properly so everyone, not just the dogs can enjoy our

beautiful parks.

Thank you

Dee and Lee Frencholm's San Francisco, Ca. 94118-2609

Keep your best efforts and continuing beautification work. Not just complaints, but compliments to an admirable system of beautiful park areas. So proud to live in this area! Thank you!!

P.S. From an old retired pilot, noting not one real airplane and hundreds of dogs on a famous, revered aerodrome, has it indeed gone to the dogs?

Correspondence: Sherwin, I'm sending this to you BEFORE the deadline, because the PEPC webpage stopped accepting comment early. Please acknowledge receipt. Thank you, James

Comment: I support the Preferred Alternative for the simple reason that there are already too many dogs in certain areas of the park, and some regulation is necessary. I have seen the long, drawn out, Negotiated Rulemaking Process which takes into account every single comment, and forges a fair compromise.

I have seen about 30 dogs, minded by 5 pro dog walkers, simultaneously walking Crissy Field and Baker Beach. The likelihood that these pros can remove all the feces and urine that their charges deposit is nil. The plan regulates all dog & dog-handler use of the park, and balances different user needs with protection of wildlife and history. It proposes MORE "regulated off-leash area" than any other National Park. Urban dog populations keep increasing...their owners have to realize there are limits.

Correspondence: I am writing to let you know that I am opposed to the proposed GGNRA "Dog Management" plan and hope you will do what you can to stop it. The plan is extreme. I hope you can help stop this proposed plan. It infringes and picks away and the lifestyle we enjoy as San Franciscans. I witnessed today a National Park Police Officer scare off families enjoying themselves in the

Great Meadow of Fort Mason, in the shadow of Phillip Burton. They were playing with their dogs and enjoying the Memorial Day holiday. When the National Park patrol car came into site the entire park emptied. Families with children ran the other direction with their dogs. The Great Meadow was left empty. This is not the kind of place that I want San Francisco and California to be. Please oppose the GGNRA "Dog Management" plan. Thank you.

Correspondence: I went to submit my comments via the PEPC system and it closed before midnight. The document was open for comment at 11:00 pm, and by 11:20 p.m, the document was no longer open for comment. If the comment period is closes on May 30, it should close at the end of the day. Please accept my comment by email since the system was not functioning properly.

I am dog owner and also consider myself an environmentalist and I do not support the preferred alternative in the Dog Management Plan. I feel that is too restrictive and unfairly penalizes the majority of dog owners for the indiscretions of some bad ones. GGNRA is an urban park, centered in an area with more dogs than children, and dog owners and dogs need more open space, not less. Dogs are not permitted on state lands and the San Francisco city parks that allow dogs are small in size, limiting the length of stay. Many dog owners, like myself, love the privilege of taking long hikes or walks on the beach or on Marin County trails with our dogs. This plan drastically reduces - and in many cases - eliminates this option.

I particularly object to the proposed changes at Fort Funston. The restrictions here are drastic and reduce the amount of off-leash area by almost 90%. The small off leash area near the main parking lot is not nearly enough space for all the dogs and owners that utilize this part of the park. This reduction in space - and forcing too many dogs in a smaller area, could result in conflicts that this plan attempts to reduce. Dog walking at Fort Funston is a long standing recreational use, and it is perfect for it. It has wide expanses of sand, with little important vegetation or habitat (even prior to dog use) which provide open spaces large enough for everyone to enjoy.

The plan discusses a loop trail from the parking lot down the Beach Access trail, along the beach, and up the Sand Ladder. However, the majority of time, the outflow pipe blocks passage down the beach, making a loop impossible. This results in reducing the off leash area even further. One of my favorite places in the city to walk with my dog is south of the sand ladder. The proposed new rule banning dogs on this section of beach is

unfair and unnecessary. This section of beach is not overly used and I have never encountered any conflicts. It is a peaceful stretch of beach, and long enough to allow space for all users. Additionally, this section is proposed as off limits to dogs because of the bank swallows, but there research by California's Department of Fish and Game that found that the bank swallow is remarkably indifferent to the activities of people near nesting sites. Bank swallows frequently nest near intense human activity, including busy highways, construction sites and quarries. There does not appear to be scientific evidence supporting the claim that people or dogs on the bluffs far above the nests or beneath the flyover zone would hurt the birds.

I believe the analysis for indirect impacts to adjacent lands isn't accurate either- no impacts are anticipated for areas at Fort Funston, but when Fort Funston's proposed off-leash area becomes so crowded, dog owners may go to other areas, creating visitor and other resource impacts. In the 1970's and early 80's, Fort Funston was a cesspool of illegal activity. By walking dogs at Fort Funston, dog owners have transformed this part of the park into safe community of people who look out for each other - as well as the environment. Dog owners are not deviants; we are legitimate users of the park that should not be penalized.

The plan seems to set aside certain areas in each county for dogs (i.e. Rodeo Beach in Marin), and without a doubt, the majority of Fort Funston should be for off-leash.

I have similar objections and concerns about the proposed restrictions for Crissy Field. There is little habitat of value at East Beach. This area is very popular area for off-leash dogs, and to prohibit dogs from this area entirely is again, unfair and unnecessary, and forcing all dogs that use this area into the small section of central beach is a recipe for conflicts.

The NPS is changing a long standing tradition of being able to walk a dog - off leash - on the beaches in San Francisco. A better compromise needs to be reached.

Thank you. C. Scerri

Correspondence: Dear Supervisor Dean:

I write to appeal to you, to allow me to submit below comment -- inexcusably delayed until last hours of last day of comment period (despite,

or maybe because of, pages and pages of notes made on this, for me, painfully difficult subject)

(my attempt at submission had been, ironically, delayed until after dark in order to deal with most recent of innumerable petty crises forced on us by "neighbour" w/untrained neurotic dog)

I made the attempt at half-hour past midnight last night unaware that midnight, for which I was aiming, was too late anyway, designated cut-off having been 11:59 MOUNTAIN time

(midnight found me still struggling to articulate dispassionately three points I considered important, and abandoned, in order to complete and submit comment)

so if you can be lenient, my gratitude to you, with apologies for the trouble -
- barbara deutsch

here's what I tried to submit last night:

I endorse Preferred Alternative, and favor further restrictions in the future on pets in parks, whether captive or loose. I wish to acknowledge and express appreciation for all the hard work done by others, who have so helpfully alleviated my difficulties with formidable pertinent documents, and augmented my understanding. If I understand rightly, the national parks are charged with preserving and protecting the natural properties within them, for the benefit and enjoyment of both present and future generations. Then surely the ability to experience those natural properties ought also to be retained and perpetuated as fully, and in as undegraded and undistorted a state, as possible. Therefore those who wish to observe wild animals, along with the animals themselves, need to be spared the presence of dogs, who, whether on a leash or not, will be perceived as predators, especially if they derive from hunting breeds. Because pet dogs are deliberately prevented from full maturity, and obtain food, rest, and comfort with little if any effort on their part, they enjoy surplus energies unknown to wildlife, -- to whom interruptions of critically needed rest, awareness, and/or activities (also immune systems) represent costly perhaps fatal danger, and cause alienating experience on what should be home ground. Those disturbances and disruptions translate to deprivation for those who wish to engage in nature study, the one visitor activity that should never be denied. I can enumerate many attacks by dogs on wildlife that I or friends have witnessed; I and others I know have ourselves been chased or attacked by dogs; and for everyone of my acquaintance who visits parks, including dog owners themselves, both dog-droppings and the means to dispose of them, have become as customary as they are unwelcome sights -- or worse. Almost as ubiquitous: pet-owners, whether friendly, furtive, flagrant, or hostile, who

violate posted regulations. And there is an ecologically significant impact from the presence of dogs that impressed itself on me when I was the caretaker of a public pathway that passed through open land rich in species diversity of songbirds, plants, and insects. When I began to care for it, the path was used occasionally by one dog-walker. Ten or twelve years later, two dog-walkers being regular users of the path, both the dogs would mark it. Not only did I witness alterations in the composition and growth patterns of the plants but, because I tended by hand, whenever I bent down I gagged involuntarily from the altered chemical field: we don't often think about the delicate chemical signals transmitted among insects and plants -- and other animals too, but those insects and their interactions amount to, in E.O. Wilson's words, "the little things that run the world." Respectfully submitted, Barbara Deutsch

Re; Draft Dog Management Plan/Draft Environmental Impact Statement

Dear Superintendent Dean,

My husband and I are residents of Marin County living in San Rafael. We have been supporters of the Sierra Club and many other environmental

groups for over 50 years. Recently several of my colleagues and I formed Marin Pet Care Association, a non-profit organization whose mission is to 'improve the standards of pet care in Marin County' in conjunction with highly respecting the environment we live and work in. My husband and I enjoy various areas in the GGNRA almost every weekend along with our dogs and very rarely encounter people whose dogs are uncontrolled.

The human animal bond is very important to us. As responsible dog owners, we keep our dogs under voice and sight control, clean up after them, and keep them, out of the fenced dunes and vegetative areas. It is important for our dog walking friends and me that areas remain open for off leash dog walking access.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site specific conditions.

As presented in the DEIS, the proposed dog management plan eliminates dog-walking (on and off leash) access for all new lands (additions to the GGNRA sometime in the future) within San Mateo county lands. The GGNRA's mission applies equally to new lands as existing lands and it is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands.

We are concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, but other options (besides restricting dog-walking access) should be considered first. For example, it is not clear where dogs are allowed. I think the GGNRA should provide better signage and create environmental barriers, such as the vegetative barriers surrounding the tidal marsh at Crissy Field or the restored dunes at Fort Funston.

As responsible dog owners and advocates for animals, we know it is crucial that our dogs are well behaved and trained in order to peacefully co-exist in an urban environment and adequate exercise and socialization is essential for a well-behaved dog. Having places where we can take long walks with our dogs allows us to get the exercise we need at our age while also meeting our dog's needs. Without access to the small amount of land in the GGNRA we currently have, we are very concerned that many dogs and dog owners will not have sufficient opportunity to exercise and recreate.

Some areas within the GGNRA also serve as a place of solitude for us and provide us with a very important peace and safe outdoor space and

experience within the San Francisco Bay Area, a large metropolitan area.

Some specific problems with the DEIS include the following points. Please revise the DEIS to correct these errors. This DEIS and Plan doesn't recognize that environmental values include both recreation and nature. In many places, the DEIS treats the environment and recreation as opposing values, i.e., that recreation only harms natural resources.

The document doesn't acknowledge that people care about both and that people with dogs are often also good stewards of our environment. The draft plan has the effect of punishing many people because a very small number are uneducated, insensitive, or irresponsible and because the current signage of off leash areas is unclear.

The reasonable response to this problem is to educate visitors, improve signage and help park visitors follow the rules and learn how to respect the environment, not to ban the rest of us with dogs from the GGNRA. I wish that the DEIS would include an alternative along these lines.

The proposed "compliance-based" approach should be modified to create a baseline of current conditions, then measure impacts rather than compliance. It should include a robust public educational component and an objective, long-term monitoring program designed and carried out with the community.

The GGNRA should develop partnerships with community, animal welfare, and conservation organizations to make this work. These partner groups could bring additional resources to limited federal resources.

GGNRA should be a partner with the City of San Francisco and other communities, not an adversary. The DEIS doesn't recognize that many areas of the GGNRA are located in or next to urban neighborhoods.

The DEIS excludes the quality of the urban environment from its scope, saying it's not significant. The reality is that the GGNRA provides much needed open space in a major urban area. This omission is disconcerting because the fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) to serve the metropolitan Bay Area. The dynamic interrelationship between GGNRA and our neighborhoods is exactly the human environment that the EIS is required to study, but failed to do so.

The DEIS notes some studies and general tendencies of dogs to harm natural resources, but with few exceptions, there is little documented site-specific impacts to support the restrictions of the preferred alternatives. Further, there is insufficient documentation that considers other impacts ? other park

visitors that disturb and impair the natural resources, other wildlife, Mother Nature, boot camps, bicyclists, huge crowd attracting events such as Fleet Week, festivals and Walk-a-thons.

The proposed broad limitations in the DEIS are without site-specific science that demonstrates that problems with the quality of GGNRA's natural resources are actually attributable to dogs and not to other factors. The DEIS needs to provide full disclosure to the public and decision makers.

If dog-related disturbances are having a significant negative effect on wildlife, for example, the DEIS needs to provide site-specific scientific evidence as documentation and undertake a scientific evaluation as to whether people or other factors are also causing or contributing to the problem noted.

If they are, GGNRA needs to provide an analysis that considers whether people should also be restricted from these areas. We need this documentation in order to comment meaningfully on the draft plan and DEIS. The science needs to be sound and the consequences need to be fully and fairly disclosed for everyone ? so that an informed decision can be made.

After much consideration, I support Alternative A, the No Action alternative and would also include the "New Lands" areas (such as Cattle Hill, Sweeny Ridge, Mori Point, Pedro Point and Milagra Ridge and Rancho Corral de Tierra) in San Mateo county.

The DEIS is biased against and does not take a hard look at the No Action alternative or variations on that alternative. There are many areas in the GGNRA where the existing 1979 Pet Policy has been working, and where sensitive species are not present and visitor conflicts do not occur or are very infrequent.

In addition, the DEIS does not provide site-specific information that these areas are inappropriate for continued dog walking.

Respectfully,

Maud & Joel Trachtenberg. San Rafael, CA 94901

Re: Draft Dog Management Plan/Draft Environmental Impact Statement

Dear Superintendent Dean,

My husband and I are native Californians with long ties to the Bay Area. We are both committed conservationists; my husband helped draft the Endangered Species Act during his years in the U.S. Congress, and he co-chaired the first Earth Day. We must go on record as strongly disagreeing with the GGNRA's current "preferred alternative" in the DEIS. As the responsible owners of five dogs, we are very dismayed with the significant restrictions on, and elimination of, off-leash dog walking in many areas in the GGNRA. It is our opinion that the proposed regulations making changes to the long-standing 1979 Pet Policy are not fact-based. We do not see well-documented, scientific, monitoring-based facts that can accurately allocate blame specifically to dogs in a site-specific manner that differentiates, for instance, the significant impact of large events, bicyclists, boot camps, homeless people, teenagers, impacts of other species, weather events, etc.

For many people, the companionship of dogs is essential to their well-being, and the healing capabilities of dogs, for instance to veterans, is science-based and well-founded. Yet the new proposed regulations seem clearly anti-dog, and do not serve the public well.

Additionally, it seems unreasonable to eliminate ALL dog walking on any new land additions to the GGNRA. Such decisions should be based on monitoring data and be site-specific. As they are now proposed, such sweeping exclusions are arbitrary. We have hiked in the GGNRA and visited Crissy Field many, many times. We have rarely seen dogs stray into restricted areas- actually, children, teens, and homeless people are more likely errant in this regard. We have never seen any dog be aggressive to any human. There is the occasional very minor dog skirmish, which in our experience has never been more than a vocalization or body posture, which are totally normal and no cause for restrictions such as the ones you are proposing in the so-called preferred alternative. Since 99% of the GGNRA land is already off-limits to dogs and their humans, the restrictions are truly

objectionable. This document presents an "either-or" approach to the conservation of natural habitat and recreational uses. In fact, the vast majority of dog owners are good land stewards who understand the necessity of protecting natural resources. The "preferred alternative" dismisses the responsible majority of dog owners in order to attempt to eliminate a tiny minority of irresponsible ones. A far better approach is to provide clear signage that educates the public on areas of concern. Enlisting the animal welfare, conservationist and dog-owning communities in such an effort could create goodwill and be a constructive way to make the current rules more clear. Education and cooperation are always more effective in increasing compliance than prohibition and regulatory heavy-handedness. Frankly, the document as a whole has an almost adversarial feel to the very nature of the many communities the GGNRA was designed to serve, and sets itself apart from those communities. Because the Draft Environmental Study did not include in its scope the GGNRA's impacts on the urban world to which it is in many areas adjacent, it fails to embrace an essential part of what makes it unique: that it is the wild sibling to a dense, urban world. Yet that urban world is filled with lovers of the GGNRA- dog owners amongst them.

The GGNRA's DEIS and "preferred alternative" seems to miss a world of opportunity in creating communities of interest with those affected by it. This includes the City itself, whose parks will see much greater pressure if the GGNRA further restricts recreational use in the manner it proposes. Where alliances could be built, the proposed "preferred alternative" creates alienation. There appears to be a significant bias against the No Action option. We support Alternative A, with site-specific, monitoring-based analysis on any new land additions to the GGNRA.

Sincerely, Helen and Pete McCloskey

Correspondence: I write in firm support of the GGNRA's Draft Dog Management Plan.

My husband and I have two dogs and one cat (whom we keep indoors for her safety). We live in our own home near Ocean Beach on the Richmond side. Almost every day, we walk our dogs, on leash, in our beautiful neighborhood, usually in the west end of Golden Gate Park and on the promenade above the beach. Our small back yard is also very convenient for our dogs' hygiene and recreation.

On our usual neighborhood routes ' especially the beach promenade, we

encounter many other people with dogs, most on leash ' no problem. Dogs supposedly under voice "control" are almost always a problem, challenging our dogs, raising the issue of dominance. When the situation is threatening, we usually say something polite and clear to the "handlers" about leash requirements. Typically, they say nothing or else reaffirm their disrespect for regulations.

Looking beyond at the gatherings of loose dogs carousing near the surf, we are dismayed by the handlers' disregard for the safety and peace-of-mind of others: wildlife, birds, children, seniors, disabled, all law-abiding citizens, people seeking safe and relaxing recreation where laws and mutual respect are observed.

Many people are afraid of dogs, on or off leash, and should have areas where they can enjoy recreation, free of fear. Although I love dogs in general, I am often afraid of them in public encounters until reassured or out-of-range.

Once I observed to my husband, "We're so lucky to have a house with an enclosed yard. If not, I don't think I could in conscience have dogs in the city. We'd have to take them out on leash for everything, and they'd get no real exercise, no running and playing. It wouldn't be fair to them." Please note: I would cope by not having a dog, rather than insisting on "my rights."

Communities are, by definition, places where people co-operate, where they give up certain privileges in turn for others gained or shared. When problems of give-and-take arise in communities, people work out compromises and laws ' many for the protection of living things which cannot protect themselves. Many people in the community of SF forget that the GGNRA is a Federal park, subject to requirements distinct from those of a city ' e.g., protecting wildlife, vegetation, and humans.

I think that the GGNRA/NPS have done a good job of working out compromises on these particular issues and have gone far beyond the usual effort to balance the myriad concerns.

One other related issue that I'm not sure has been addressed yet:

In both City/County and Federal parks, a substantial problem is created by professional dog-walkers who pay nothing to use the public parks for their private livelihood. In the process, they endanger people and wildlife, and damage parks. I witness one of these "dog-walkers" who drives daily into Golden Gate Park, parks her van by a large open field, opens the rear door, and watches her charges (usually 6 ? 8 dogs) race to all corners of the field and defecate. She makes no attempt to pick up their waste (it would be impossible to do so), then leads them to a path, where they disappear into

the woods.

Such people should purchase licenses and pay fines for violations. In this particular city, it should be easy for different jurisdictions to co-operate in crafting and enforcing a universal license, then sharing revenues equitably.

Thank you so much for the thorough exercise in democracy which you are conducting.

Sincerely, Cheryl C. Arnold

Correspondence: Dear Mr. Jarvis,

No scientific studies were done by GGNRA, on Rancho Corral de Tierra (Rancho) lands to justify the validity of the EIS, as it applies to the "New Lands". Where is the soils and geology report? Where is the water quality report? Where is the vegetation report? Where is the wildlife report? Where is the special status species report? Where is the report on our cultural resources? Where is the report on visitor and use experience? Where is the park operations report? Where is the report on human health and safety? Where is the report on sustainability and long term management? In my opinion, this is an illegal EIS for the "New Lands".

Public hearings were promised but not held. GGNRA's preferred alternative for the Rancho is unfair and not truly multi-use. Marin and San Francisco have off-leash and on-leash areas for dogs, San Mateo is being given none.

I have walked my dog alone in the area north of Montara, east of Highway 1, and south of McNee Ranch State Park for 32 years, off-leash and on-leash. During this time there has never been an attempted, or a successful, molestation of a woman walking in this area. It is hilly with lots of trees and dense brush. Women often walk alone here because having a dog with you makes it safe.

Montara does not have a community park or community center for socialization. The area we use to walk our dogs serves both these purposes. If you ban dogs from this area, we will be forced to walk hundreds of dogs

in the narrow streets with no sidewalks, and on Highway 1, to get to the State Park, where dogs are allowed on-leash.

As over 300 residents who walk our dogs in this area, we have put in six poop cans, and keep them stocked with plastic bags. We are self-policing and there is virtually no dog waste on the trails. There is lots of horse poop, and some coyote poop.

If there are any endangered plants or species in this area, they have survived half a century with hundreds of dogs using the area off leash. They are hearty enough to continue to survive with dogs continuing to use the area.

I am requesting that the GGNRA's preferred alternative for New Lands, including Rancho, be changed from alternative D (No dogs allowed) to a "No Change" alternative. Current usage of the land, including dog walking, should continue to be allowed until scientific studies are done indicating that dog walking is harmful to park resources.

A total ban on dogs is unacceptable. Creative multi-use solutions have not been considered. In Washington state, and Santa Cruz, CA, there are off-leash days, or off-leash hours in park areas. We are asking to continue to use approximately 100 acres with our dogs, out of 4200 acres.

At a time when obesity is a national concern, GGNRA is forgetting that the main reason people walk who have a dog, is for the dog's well being. You are encouraging people to stay at home with their dogs, and not walk. Shame on you.

Sincerely, Peggy Bechtell Montara, CA

Correspondence: Hello,

My comment is that I am in favor of more restrictions on dogs because in my experience wherever dogs are allowed to walk trails on leash, 90% of dog owners will let them off leash. In Tennessee valley I have seen this more

times than I can count on the legal trail and the off limits trails. Dog owners always claim they didn't see the signs or came in from some mysterious trail entrance where there were/are no signs. The same holds true for Rodeo

valley. I regularly see dogs off leash on Rodeo valley trail, or on the illegal upper part (coming from the East parking lot across from the rifle range) where they can get to the legal Miwok trail. Some people I do believe are

genuinely confused, however I have seen on multiple occasions dogs/people crossing a meadow/saddle from Rodeo valley trail to get to Miwok trail, usually with the dogs off leash. I think the Miwok/Coastal trail/

Green Gulch should be off limits to all dogs for the sake of the Bobcats who live there. For me the rights of wildlife will always trump the rights of peoples pets. I am a dog owner myself, but would never think of

taking my dog for a hike on the legal trails because of the wildlife, particularly the Bobcats, as well as of course the Coyotes, Deer, Rubber Boas, native plants etc. I have also seen off leash dogs running through wintering

Burrowing Owl habitat in Rodeo valley. And of course I believe the shorebirds are entitled to rest and feed on the beaches, free from being chased by dogs who are "getting their exercise" because chasing birds is "natural" as it

has been explained to me by multiple dog owners.

I visit the Headlands regularly to photograph wildlife, but I have plenty of photos of owners walking their dogs in illegal areas or off leash in legal areas-maybe they could be useful as evidence.

Thank you,

Kirk McCabe

Frank Dean, General Superintendent Golden Gate National Recreation Area
Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Superintendent Dean,

As a Muir Beach resident, I want to go on the record to state that I oppose the Golden Gate National Recreation Area's "preferred alternative" of

banning off-leash dogs from the GGNRA ? particular Muir Beach.

My children are third generation Muir Beachers and we bring our dog Wanda down to the beach all of the time. The kids love it and Wanda absolutely loves it too! She loves socializing with the other dogs as much as she enjoys running free on the beach playing ball or Frisbee or whatever is in store for that day. I can't imagine what it would be like if this were no longer possible. Being able to spend quality time with my kids and dog at Muir Beach is one of life's greatest pleasures. The thought of leaving our dog at home while the rest of the family goes off to the beach is simply sad.

I understand the need to protect sensitive wildlife. I have always considered myself an environmentalist. I just do not think dogs are the problem. First off, there just is NOT clear signage stating the dogs and children should stay out of Redwood Creek. It's just not there. People do not know that it is sensitive habitat and they should stay out. Please consider adding signage to the area around the creek and lagoon and enforcing the laws that are already in existence. It seems a lot less costly.

I also wanted to add that I read in the DEIS that a part of Muir Beach known as Little Beach would remain dog friendly. This alternative would not work for us. My children at 7 and 10 and we do not go to Little Beach on nice days because it's a nude beach and we've encountered too many inappropriate things going on there. PLUS to expect that non-Muir Beach residents take their dogs to Little Beach would not work. As the website KeepMuirBeachDogFriendly.com states: Little Beach" is not accessible without crossing the main beach or driving along neighborhood private roads. Most of the time, the rocks are impassible because of surf and tides. The "social trail" from Pacific Way to the north end of Big Beach is a steep, hazardous, rocky pathway, with no handrails. There is no public parking on Sunset Way or Pacific Way. All spaces are on private property. All lanes are fire lanes. Extra and illegally parked cars would create a hazard for the surrounding community in terms of blocking access to emergency vehicles. For those who would arrive on foot via the road, there are no amenities or services for Little Beach. No trash cans. No toilets. In addition, Little Beach oftentimes has no beach at all during the winter or at high tide. Squeezing people over to that beach for use with their dogs is not a reasonable alternative. Formally stating and implementing such a plan would require appropriate impact studies and input from the surrounding community.

I hope that you will please consider the impact to families and dogs and the GGNRA's "preferred plan" would bring. I encourage you to please keep Muir Beach dog friendly as it has always been. I truly believe that with better signage and the enforcement of existing laws, dogs, dog lover and non-dog lovers can coexist in Muir Beach and other areas of the GGNRA.

Sincerely,

Denise Lamott Muir Beach CA, 94965

RE: Golden Gate National Recreation Area Draft Environmental Impact Statement

I reside in San Francisco.

I am one of the people most directly affected by the proposed Golden Gate National Recreation Area preferred alternative dog management policy for our beaches and other GGNRA land because I have a dog whom I take each day to Crissy Field. We do not need a preferred alternative to the existing rules; instead, we need to better support the current rules with clearer and better signage throughout the GGNRA about where dogs can and cannot be under voice control as well as a robust educational program partnering with the San Francisco SPCA. We also encourage the GGNRA to use environmental barriers where necessary to delineate and clarify areas.

We must also eliminate the compliance based management strategy that will allow the GGNRA to change the rules for off-leash and on-leash dog walking without further public debate if the GGNRA prevails in its current efforts to install its preferred alternative.

Because our San Francisco beaches (including Crissy Field, Aquatic Park, Baker Beach, and Ocean Beach) are now part of the GGNRA, people from all over the United States think they should have a say in how our San Francisco beaches are managed. When I was reviewing the GGNRA Deis, I noticed this:

In the Advance Notice of Proposed Rulemaking, January 2002, asking for comment on potential options for future dog management in GGNRA 88% of SF residents responding preferred allowing for off-leash dog walking while 95% of out of state respondents wanted to uphold the National Park restrictive laws

I can understand that people from all over the nation want to have a say in how national lands are managed. Yet, we have to be careful not to give too much weight to comments made by people who do not use our beaches on a

daily basis or we will get a distorted view of the issues regarding off-leash and on-leash recreation with dogs in the GGNRA .

People from out of state do not see the level of care of these beaches by dog guardians. They do not see us picking up the trash on the beach each morning. They do not see the ways that we interact with the community to be sure we earn our off-leash and on-leash privileges. They are not here to remember that these beaches were once San Francisco lands or that off-leash and on-leash recreation with dogs was part of the original plan for these lands. They do not know that local foundations have supplied huge sums of money to develop the recreational facilities that now exist and that these families also extended their intentions for use to dogs and their guardians.

Please consider the point of view of the dog guardians who use our beaches on a daily basis and who value the privilege of doing so. Please develop something that works much better than the GGNRA preferred alternative. Please recognize that San Francisco is an exemplary place and that our way is to work together with all the constituents to arrive at a solution that works. The proposed "preferred" alternative will not work.

Sincerely,

JoAnne Tybinka Blasko

San Francisco Resident

Correspondence: It's bad enough the state doesn't allow dogs in all of their parks(except the parking lot and restricted paved areas). PLEASE DON'T bar dogs from national recreation areas too. We won't have anywhere we can go. If you're worried that off leash dogs will molest wildlife - have a leash requirement JUST IN THOSE AREAS. People who love the outdoors love their dogs too. The number of parks that accepts dogs is too limited. If you're arguing that dogs make a mess - look at Baker Beach, which is very clean. All you need to do is provide enough trash cans and bags. Help us please! Don't lock us out.

Please keep all dogs ON LEASH in your park areas. Everyone thinks that their dog is harmless and alot of them are but .. many dogs attack other dogs, children and adults. Of prime concern is the animals that live in the parkland amd MUST be protected from these unwanted intruders and killers. Please do not succumb to DOG MILITANTS. You are guardians of this recreation area, of the people and of the wildlife. Someone or their child mauled by an off leash dog might be able to sue and get quite an award if your rules allow off leash dogs. Most of all, rules are only as good as their enforcement, and in times of budget cuts, we are always looking to save money and that might mean less enforcers of the rules on Federal lands. Please enforce ON LEASH rules for the public safety and for the wildlife in these beautiful areas. This not to mention the annoyance of stepping in dog poop as you hike down a rustic trail.

Thank you, Sean Buckley taxpayer

Dear GGNRA Superintendent Frank Dean and National Park Service Director Jon Jarvis, I am writing to express my concern about the new GGNRA Dog Management /Environmental Impact Statement (DMP-EIS) plan to exclude all dogs from "New Lands" which would apply to POST's Rancho Corral de Tierra property. I am requesting that this land be managed under Alternative E (allows dogs) rather than Alternative D (bans all dogs). I live in Montara and have been walking my dog in the open space next to Montara for many years. It is a wonderful community of hikers/walkers, mountain bikers, equestrians and dogs who for decades have shared the land and treated each other with respect and courtesy. For the decades of use and the large number of people who access it (including dog walkers), it is a

testament to the care and concern of the community that the land, water shed and wildlife are remarkable well kept and thriving. I was upset to see that GGNRA has decided, without inputs from the local community (other than one meeting at Farallone View where the majority of the people spoke overwhelmingly in favor of allowing dog access), to ban all dogs from the property. In my opinion, this is not only unjust to the local community and doesn't support the established mixed use, but is not founded on research or analysis. I am concerned that it will not be safe to force dog owners who want to access McNee State Park to walk half a mile on Highway 1 rather than walk across the old railroad grade or old roadway and trail from Montara. I have not seen reports that indicate that the pads of dog's feet are more damaging to the terrain than horse's hoofs, hiker's boots or mountain bike's tires. My husband, a botanist, was a "volunteer of the year" for POST for his many hours of analysis of plant communities on various POST properties. He has led groups on the Rancho and ironically, he and other volunteers often brought their dogs with them. Aren't there many options available for this property, from defining areas where dogs can't go, to areas where dogs must be on leash (like McNee), to areas designated for dogs under voice control? Please reconsider your decision to ban dogs because, with this ban, you ban hundreds of people from this land as well. Most of GGNRA land (and State and County parks as well) do not allow dogs. Given the unique nature of GGNRA's urban/park interface, the Rancho, with its established successful mixed use model, would be an ideal place to continue to allow dogs. It is important to have some percent of the park open to dog owners who make up a large portion of the local population. GGNRA is not only for the pleasure of overseas and out-of-state visitors but for the local community who support and care for it. Regards, Shelly Smith Montara, CA

Correspondence: I support the preferred Alternative to the Muir Beach portion of the GGNRA Dog Management Plan. The impact of dogs, especially off leash, to wildlife is real. There have been virtually no shorebirds or other marine birds resting on Muir Beach (in the 16 years in which I have lived in Muir Beach) except very early in the morning before dog walkers arrive (very early on Saturdays, especially). Without dogs on the main beach, there is a possibility of actual nesting of some shore species and those which could nest in the front lagoon. Dog owners have many other areas to walk dogs including all of the community of Muir Beach, the county "Little Beach", and of course nearby areas such as the Tamalpais Watershed and Oakwood Valley. I also appreciate the enforcement element of the plan, as there is currently almost no enforcement of the leash law on nearby trails, with

additional pressure on wildlife. As a lifelong dog owner myself, I understand the desire to let dogs roam free on the beach, but we need to keep the public US beach open to non-dog lovers and wildlife as well.

I am a dog lover and understand dog owners desire to take dogs anywhere they are allowed to walk. However, some areas are sensitive and need to be protected. There are plenty of nearby dog friendly areas to Muir Beach so closing Muir Beach to dogs is only a minor inconvenience to dog owners. Closing the beach will also reduce the number of professional dog walkers from other areas who bring many dogs at once to an area with children and people who are not fond of dogs. I support the preferred alternative recommended for Muir Beach.

Correspondence: Subject: Comments on the GGNRA Dog Management Plan

I am particularly qualified to comment on the Draft Dog Management Plan EIS for the following reasons. I am a professional ecologist with a doctorate in ecology from the University of California at Davis. I have over 25 years of experience assessing impacts to native plants and animals and sensitive habitats from a variety of projects. Some of my recent projects include newly constructed and upgraded trails.

I have a concern regarding the effect of dogs and people on the behavior of wildlife and use by wildlife of lands of the Golden Gate National Recreation Area. Because of a dog's acute sense of hearing and smell, they are able to search for and encounter wildlife that would ordinarily escape detection by humans. In addition, I have observed many times during my recreational use of open space lands, dogs flushing and otherwise disrupting wildlife behavior. The owners of the dogs are either oblivious or encourage such behavior. Off leash dogs are particularly destructive because they chase wildlife.

In addition to the direct displacement of wildlife, the odor of a dog can deter wildlife from using a particular area thereby reducing the size of the

GGNRA available for use by wildlife. Barriers to wildlife movement, by either the physical presence of dogs or the odor of dogs, are particularly detrimental when they reduce the movement of wildlife from one area to another.

I have examined the proposed alternatives for a number of the GGNRA sites and Alternative C appears to reasonable balance resource protection with access to dog walkers. I have the following specific comments.

OAKWOOD VALLEY FIRE ROAD AND TRAIL. Alternative B would be better for wildlife than Alternative C because of the absence of fencing proposed along both sides of Oakwood Valley Trail. A fence would prevent wildlife from crossing from one side of the trail to the other side thereby providing a barrier to the movement of wildlife. Especially for small areas of habitat, such as the Oakwood Valley area, it is important that wildlife have access to as large an area as possible and no area should be precluded from use by fencing. Dogs should be on leash along the Oakwood Valley Fire Road and Trail.

MUIR BEACH. Alternative B, in which dogs would be on leash, should be implemented for this area to protect sensitive habitat (tidal lagoon, dunes, beach, and Redwood Creek) and associated wildlife from disturbance by dogs.

MARIN HEADLANDS TRAILS. Alternative C appears to protect wildlife by removing dogs from some trails and allowing leashed dogs on other trails. Some areas of the Marin Headlands should be protected from dogs because of the value of the Marin Headlands to bobcats. In addition, the habitat of the endangered Mission blue butterfly should be protected by excluding dogs or restricting access to dogs on leashes.

HOMESTEAD VALLEY FIRE ROAD AND FUTURE CONNECTOR TRAILS. The Homestead Valley Fire Road and future connector trails should be restricted to dogs on leash, if dogs are to be allowed at all on this trail to protect wildlife habitat.

CRISSY FIELD WILDLIFE PROTECTION AREA. Dogs should be excluded from the Crissy Field Wildlife Protection Area because the presence of dogs is not compatible with protection of wildlife. As stated above, dogs disrupt wildlife and reduce wildlife use of areas.

OCEAN BEACH SNOWY PLOVER PROTECTION AREA. Dogs need to be leashed along the adjacent trail to the Snowy Plover Protection Area to prevent disturbance to and killing of snowy plovers by off-leash dogs.

OCEAN BEACH. Dogs should be prevented from entering the area south of

Sloat Boulevard to protect snowy plovers.

FORT FUNSTON. Alternative C should be adopted to protect nesting bank swallows.

SWEENEY RIDGE. Dogs should be excluded from Sweeney Ridge to protect the habitat of the Mission Blue butterfly and other wildlife.

MILAGRA RIDGE. Dogs should be restricted to leashes on the fire road, trail to overlook and Woorld War II bunker, and the Milagra Battery Trail future connector to lower Milagra) to protect the Mission blue butterfly.

MORI POINT. Dogs should be restricted to leashes on the Coastal Trail, Old Mori Point Road, and beach within GGNRA boundary to protect sensitive native grassland habitat and habitat of the California red-legged frog and San Francisco garter snake.

MONITORING COMPLIANCE. Compliance of the proposed Dog Management Plan should be vigorously enforced for the plan to be effective. Compliance would require staff to educate users of the regulations, monitor usage, and issue citations to offenders. If compliance is not enforced, then wildlife and sensitive habitat will be harmed.

Please contact me at the above address or at if you have any questions.

I am retired, and like to run and play ball at Crissy Field with my dog, who also loves to swim there. We go about 3-4 times a week, and it is one of the things that makes SF an enjoyable place to live. At Crissy Field, dogs AND people (walking, jogging, bicycling, sailboarding, etc) seem to get along quite well. I cannot understand why we should be restricted, since we have never caused any problem for anyone, or any THING. I always pick up after my dog and put her on a leash when we are around people picnicing. Otherwise she runs off-leash, and is able to get the exercise she needs. The time we spend at the beach is essential to our health and well-being.

Correspondence: Re: Public Comment in Support of Most Restrictive Proposed Revisions to GGNRA Dog Policy

Dear Mr. Dean:

Thanks for the opportunity to comment on the proposed revisitations to the GGNRA Dog Policy. I am urging you to go forward with the most restrictive proposed rules on dog access to these areas.

I am a twenty three year resident of San Francisco, living in the Sunset District with my wife and two elementary school aged kids, who attend public school here. I regularly surf at, and take my kids to Ocean Beach, and take my kids to the beach at Chrissy Field and China Beach. We also go to Stinson Beach on a regular basis. Additionally, I enjoy spotting and trying to identify the unique variety of coastal bird life we enjoy, especially at Ocean Beach and the new Chrissy Field marsh.

My concerns are based on numerous negative personal encounters, as well as concerns for preservation of the natural environment, especially related to bird life.

Last year I saw an off leash terrier sneak up on a tern standing at the surf line, near Sloat Blvd. at Ocean Beach. The terrier grabbed the Tern, shook it hard a few times, while the owner watched and ineffectually tried to call the dog off. After several shakes, it dropped the Tern. The bird's wing appeared to be broken, it could not fly, but limped to the water, dragging the broken wing, and then floated about in the surf. I called the Park Police, and about forty five minutes later a Park officer drove by, looking out the window, and kept going.

I regularly see people playing fetch with their dogs in the closed Snowy Plover area, sometimes while the owner remains aloofly on the concrete promenade, while the, dog runs around in the sand. Also, I have had countless experiences at the beach where dogs run up to me and my kids, off leash, and oblivious to the repeated calls of the ineffectual owner. Clearly most dogs are walking the owners, and not vice-versa. And then there is the dog poop in the sand, which, aside from being a hazard to barefoot walker, raises dangerous bacterial levels in the sea water, which is a danger to surfers, and kids playing in the surf-line alike.

Though many dog owners take the possission that there should simply be stricter enforcement of existing rules on controlling their animals, it's become clear to me over the years that it is simply unreasonable to expect law enforcement to respond in a timely manner to the multitude of violations of the rules by dogs and their owners. Dogs brought by their

owners to the City are unfortunate in having been placed in a cramped location with limited space and places to run. There is, and always will be a sizable group of dog owners that have no control, or don't care, about what their dogs are doing; many act as if they feel that their dogs are members of their family, and that others need to adjust their expectations to allow for their dogs unruly behavior. Consequently, when me or my wife has asked owners to leash or control their dogs, we commonly get dismissive or even aggressive responses. This spoils the beach for us, for the wildlife, and the minority of dog owners who exercise real control over their dogs.

I urge you to continue with your efforts to restrict dog access to the GGNRA.

Thank you for your attention to this matter.

Regards,

David Elliott Wise

Correspondence: Re: Dog Management Plan Draft EIS

April 14, 2011

Frank Dean, Superintendent Golden Gate National Recreation Area
Building 201, Fort Mason San Francisco, California, 94123-0022

Dear Superintendent Dean,

I want to add my voice to the draft plan. I strongly urge you to continue to allow certain areas (e.g. Crissy Field & Muir Beach) as "off-leash" areas and to allow on-leash all areas currently open to dogs. Please, no more restricted areas.

Director Jarvis calls for open space as a major source of public health. Walking dogs -under control- is an important way to provide public health!!

The GGNRA is just that -an urban recreation area- NOT WILDERNESS- so please maintain & promote urban recreation opportunities!

Thank you,

Barbara Boucke

Correspondence: To Whom it May Concern,

Thank you for allowing public comment on the DEIS. I completely support placing tighter restrictions on dogs using Golden Gate National Recreation Areas. I believe they are needed to protect the snowy plover and all wildlife in these areas. Dogs should be kept out of parts of San Francisco's Crissy Field, Ocean Beach and Fort Funston, and I agree with Michael Lynes that the proposed rules don't go far enough.

As a senior citizen, I don't feel safe when dogs are allowed to run free. I have been bitten, had my food taken, water shaken on me and had dogs running between my legs causing me to fall, while owners of the dogs did nothing to prevent these occurrences. And the owners disrespect posted signs and get defensive when they are pointed out.

I have never heard of any dog owners getting cited for violations. There has to be monetary fines for violations, especially repeat offenders. And all dogs should be licensed.

Sincerely,

Theresa Day

Correspondence: April 12, 2011 Mr. Frank Dean GGNRA Superintendent 201 Fort Mason Bldg. San Francisco, CA 94123

Re: Park Police/Ranger Patrol on Horseback Dear Mr. Dean:

I am writing as I am very concerned about a GGNRA (or Nat'l Park) park ranger patrol using horses at the Crissy Field beach area. This area has allowable off-leash dog use and the practice of patrol on horseback seems like an unnecessarily risky practice with potential for injury to dogs and/or their owners.

Many dogs (especially "city dogs") have not seen a horse before. Seeing a very large, unfamiliar animal in their midst is bound to create some interest or alarm, may cause the dog to run over to the horse to see it better and may include warning barking. Park rangers have warned dog owners whose dogs start approaching to keep dogs away to avoid getting kicked. In one incidence, a friend's dog was PEPPER-SPRAYED by a park ranger because the dog was approaching and barking. The ranger did not wait for the owner to come over and get the dog. I know this dog (a sweet, mellow Lab)he is not aggressive in the least'he was just alarmed. The owner subsequently got the pepper spray on herself as well as her two young children (in trying to clean off the dog at home). Completely inappropriate response by the park ranger.

Because of this, I am very alarmed when I see a mounted park ranger at the beach. I go to the beach about 5 times a week. I always grab my dog until the horse passes by to avoid anything happening to him. However, I can't always see the horse approach so sometimes the horse is close by the time I see him. My dog is a well-behaved, non-aggressive dog (a Lab) and also not familiar with horses.

I just don't understand why the park rangers would continue this behavior. I can only guess at a few options:

1) They consider the enjoyment of riding the horses by the beach more important than the welfare of dog owners and their dogs, who have a right to be there. 2) They are trying to limit dog use at the beach (via their formal proposal document), so they are purposely trying to incite "bad" dog behavior. 3) They think that people like to see the horses. I would agree however they can do it at another location where there isn't a concern about dogs being injured.

Whatever the thought is, the practice is completely irresponsible and unacceptable.

I would appreciate if you could send this along to the proper group. I love horses but respectfully request they discontinue horseback patrols by off-leash dog areas. There are many other ways to patrol that area (by car, bike or on foot).

Thank you for your time.

Correspondence: March 7, 2011

Dear Mister Frank Dean,

I'm writing you this letter urging the GGNRA to amend the proposed plans and to provide more off-lead recreation areas for dogs and their owners, open new lands to dog walking and take a more commonsense approach to enforcement without enforcing a new law against everyone, because of a small minority that are irresponsible pet owners.

We must Also encourage responsible guardianship of our environment and I know that we can protect endangered species and habitat by educating park users & enforcing laws in existing and new areas that have been sectioned off as "habitat preservation areas" without the need to section -off even smaller portions of the parks just for dogs.

I have learned that for over thirty years, the current Pet Policy has served the park, its users and the environment well. The GGNRA remains one of the best-preserved and much-beloved collections of open spaces in a major urban area. We readily accept that this plan should evolve over time to adapt to a changing population, After reading the proposed plan it is clear that the GGNRA's proposal represents a major departure from the current successful model and is overly-restrictive to dogs and their owners!

We should be seeking ways to make the San Francisco Bay Area friendlier to dogs and their owners. It is my strong opinion which is one of many thousands of people living in the bay area let alone the city of San Francisco

who agree that the GGNRA's proposal is a heavy handed, even draconian step backwards for animal and public welfare in the Bay Area.

Correspondence: Subject: Dog Freedom

Have been reading what the GG folk wish to do to dogs that enjoy unleashed freedom and I say: I have an 82 lb Lab Service Dog. I am unable to exercise him on leash via a bike or running or even a fast walk. He loves his swim and running on the beach chasing balls. He works hard and deserves his play time and needs his exercise. He is whistle trained and your area is among one of the very few that has, in the past, allowed this freedom. Northern Calif. is notorious for there bad attitude towards pet owners. It is embarrassing to try and explain to out of towners about our areas leash law. I encourage your group to consider the feelings of we the people that share our lives with dogs. They too deserve our best. Margie Sikes and Service Dog Joey

Correspondence: Dear Superintendent Dean: As a resident of San Francisco, CA, I am writing you to express my earnest concern regarding the Draft Dog Management Plan released by the Golden Gate National Recreation Area ("GGNRA") on January 11, 2011.

Currently, 1% of the GGNRA-controlled land allows for dogs to be off leash and under voice control. If the proposed plan is passed, it will effectively eliminate the off-leash areas of over 90% of that 1% and will significantly change usage and enjoyment of this recreational area for the thousands of dogs and dog owners in the city. If passed, it will also have an extremely negative impact on the population/usage of existing city parks and neighborhoods, which would be forced to absorb the overflow from GGNRA-controlled land.

I am asking that you please apply pressure to the GGNRA to revise their

current plan, for which a vote will be held on May 29, 2011. Imposing such measures will have significant negative impacts to my daily life and to that of my community.

I would be happy to discuss my point of view with you or your office. I can be reached at or at. Thank you very much for your attention to this matter.

Best Regards,

Julie Herman

Correspondence: Dear Mr. Dean:

I realize you will be under a lot of pressure in trying to please many people and organizations concerning the "Dog Management Plan" for GGNRA.

I have lived near the Presidio for over 30 years and utilize Baker Beach, Lake St. Park, Crissy Field, the hidden trails of the Presidio and the Marin Headlands at least once per week -

I encourage GGNRA to re-strict and regulate trails for dogs. They should always be on leash in these areas. I have seen dogs near seals on the beach. I am greatly concerned about the wildlife in the GGNRA. Dogs should be on leash and there should be designated areas for the dogs.

Thank you,

Kathryn Hyde

Correspondence: Dear Frank Dean,

I usually walk daily both in Crissy Field and Ft. Mason.

There is a large impact on both the Plant life + bird population especially in Crissy Field since so many dogs have taken over the area.

The general increase of usage of the area has also had an impact. I think it would be better for people to use Parks in their own area, so this would cut down on the impact on a few parks. Since they wouldn't have to drive as far it would also help with global warming.

I no longer enjoy using Crissy field due to all the Dogs, Boot Camp fitness groups and other scheduled activities. I was knocked down by a runner in the recent 1/2 Marathon race.

Correspondence: Re: Off-leash dog incident of violence occurring, April 8, 2011

Gentlemen:

I have reported the above-referenced incident to the Park Police, Officer Budd, but I wish to report an incident which happened on that day and call to your attention, in as strong a way as I can, the violence pedestrians are suffering as a consequence of unleashed dogs brought to the Presidio by dog walkers.

I regularly walk on the service road which connects Mountain Lake Park with the Presidio Golf Course. This was true at 10:00 AM on April 8, 2011. At the same time, a very large pack (between 10-20) of very large dogs (such as Labrador retrievers) , handled by only two dogs walkers, was unleashed and running at top speed on the dirt section of the area adjacent to the service road. The pack suddenly decided to veer onto the service road and became a virtual tsunami of dogs running down the road toward me. This onslaught could not be avoided. One of the animals which were running shoulder to shoulder hit me straight on at full force. (When I described what happened to Officer Budd, she commented that she has experienced the same thing on mounted patrol. She acknowledged how difficult it is to avoid such an onslaught and how hard it has been to keep her horse under control and herself from being thrown off the horse and injured.)

I was upended like a bowling pin, my body slammed to the pavement, with the entire front of my body taking the full impact. Everything hurt. I could not immediately assess my injuries because the entire pack of unleashed dogs swarmed me and I immediately had to cover my head with my arms to protect my head and neck from any other possible harm. It was a terrifying

moment. The dogs were not on voice command at all. I had to wait for what seemed an eternity while one dog walker pulled each and every dog away from me, leashed them and handed them off to the other dog walker. When the last dog was finally pulled away, I got up, dazed and in shock. To my amazement I had no broken bones, but I had plenty of bruises and a very bad headache. Only one of the two dog walkers identified herself: Aimee Porter. She apologized and then said that the animals had been "spooked" as a way of explaining why they ran into me. When she said that, I realized that I was not dealing with anyone who had the appropriate amount of skill and knowledge to be dealing with animals which can be. as we know all too well in San Francisco, lethal weapons. Dogs don't get "spooked". Deer get "spooked"; ducks get "spooked". Animals of prey get "spooked". Predators do not get "spooked". Predators engage in hunting and predatory activity. Running after prey is a predatory activity. That is what these unleashed, uncontrolled dogs were doing when they assaulted me. Dogs are predators.

When I picked myself up. I had a mouthful of dirt from the impact and from having to lie with my face on the ground to avoid the dog swarm. Since that is an area frequented by dog walkers, the area is a regular canine cesspool, where the dogs deposit urine and feces in heavy quantities. My clothing was covered in dirt. I have bruises on my chin, arm, knee and other areas. My glasses, which are expensive bi-focals, were scratched.

I was very lucky. Because I didn't hit a different part of my head on the asphalt, I am able to write to you instead of being on life support in San Francisco General hospital. I am only 5'1" tall. There are many far more fragile people than I walking that service road and the risk to them of severe injury from unleashed and uncontrollable dogs is great.

There should be no off-leash dogs in this area of the Presidio. There are just too many pedestrians on that service road and the dog walkers are not capable of keeping these incidents from happening. The dogs want to run and they regularly run at and upon pedestrians.

I have spoken with both the dog walker and with the woman who owns the dog which assaulted me. (Kelley Petersen). Neither seems to take this incident very seriously. The owner, in particular, seems not to believe her animal capable of this behavior and insists that her dog is a "happy dog". The dog walker seems to feel this incident is a fluke or an act of God. Neither woman was willing to give me her address so that I could mail her a copy of this letter. Both said don't feel comfortable doing that." This is cowardly and irresponsible.

This is the second time in two years that I have been subjected to violence from off-leash dogs in the Presidio. Two years ago, I was walking our family dog ON A LEASH in the Presidio. Our dog was a 17 pound mutt

which looked like a miniature golden retriever. She was smelling some flowers when she was attacked, out of the blue. by an off-leash Akita. I watched my animal get torn to bits by this vicious Akita. The Akita's owner happened onto the scene some moments into the attack and it took her a great deal of time, beating and screaming at her own dog before the Akita could be pulled off. We both sustained bite wounds trying to save my dog. The owner mentioned that she was surprised that the Akita attacked because the Akita hadn't attacked anyone for at least a year. (!!)"We have tried to train her to use her `soft mouth'"she told me. I rushed our dog to the veterinarian where emergency surgery was performed. Although the Akita's owner paid the vet bills, our pet never recovered and died a few months later.

When I tried to report this incident to the Presidio Police, they referred me to San Francisco Animal Control. San Francisco Animal Control insisted it was not their jurisdiction. Both agencies pointed the finger at each other and ultimately, nothing happened! The only thing that happened is that a dangerous, vicious Akita undoubtedly still runs off-leash in the Presidio.

In my opinion, the dog owner in the April 8th incident entrusted her pet to an unqualified dog walker. That dog did not run at me in a vicious way. That dog, like the other dogs, was having fun running around uncontrollably. The owner thinks that because she has such a "happy dog" that the dog is incapable of hurting someone. She claims the dog weighs "only 30 pounds" (something I question) but the weight of the dog is irrelevant if the dog projects himself like a guided missile. If I had been a brick wall instead of a human being. the dog would be dead. such was the force he exerted on impact.

I have not followed the controversy concerning unleashed dogs too closely, as time has not permitted. The press reports appear to be more concerned with the potential or actual damage to wild flora and fauna than to injury to humans. This is very disturbing to me. Unleashed dogs represent a major threat to walkers, hikers, children, the elderly, etc.

I am looking forward to working with Officer Budd on the specific April 8 matter. In the meantime, I would appreciate it if you would send these comments to any appropriate venue where the issue of off-leash dog running along the Presidio wall and that service road is being considered. I really don't want anyone severely injured or killed. but that is where this current policy is going.

I now walk with my Leki walking sticks, which I usually reserve for wilderness walks. but which I now feel I must walk with in order to use them in self-defense. Pedestrians in San Francisco and in the GGRNA should. NOT feel that they can only walk if armed. I hope that this matter

can be addressed as soon as possible.

Sincerely, CE Boots Whitmer

Correspondence: Attn: Dog Management Plan

Dear Sir:

We have visited many parks during our lifetime and we believe that dogs really should never be off a leash. In fact, it would be best if animals were not allowed at all, but that may be impossible to expect with the way people feel about their animals.

We are most concerned with the impact on the flora and fauna in our parks. There is much pressure on parks today from too many people, and then to have them bring their dogs too, is most disconcerting.

We want wild and untouched areas, in addition to the resident wildlife, to be available to be enjoyed by our children, grandchildren and others who come after us.

It is too dangerous to allow any dog to roam without a leash. One never knows when a dog may bite, especially a child whose face is close to the level of the dog's mouth. Even adults may feel uncomfortable when approached by an unfamiliar dog.

It is not fair to those who use the parks to have to deal with the issue of unruly dogs off a leash, who may be running hard and inadvertently knock a child or an elderly person to the ground. Also who wants listen to barking dogs or step in dog excrement and drag that around on a shoe to one's car? Nor is it fair to place a burden on the staff to ride herd on people who do not obey the laws.

If something must be done, then an enclosed grassy area, where people are obliged to pick up after their pets, seems like the best solution. If they don't pick up, then only dog owners will have problems. This way the dog owners may be the ones to enforce the pickup rule when they see others not complying.

Ideally the area would be located away from most of the people who come to visit without pets. That way, those who wish to enjoy the visit will not be bothered by the loss of peace and quiet caused by barking dogs, or the danger they pose.

Thank you for allowing us to comment on a problem we have had to deal with in the past in a campground. It is most unpleasant!

Sincerely, Judith & Gerald Arnold 418 Aiken Road Shelbyville, KY 40065

P.S. We sent the above statement to The National Park Service in April, 2006 and it seems we were correct in who was most likely to be injured by dogs according to an article from Consumers Reports on February 3, 2011, which stated that "hospitalizations due to dog bites have risen dramatically in the last 15 years: up 86 percent since 1993.

"The dog-bite victims most likely to be hospitalized were young children and seniors.

"The number one reason for hospitalization is infection, other injuries and complications range from open wounds on the extremities and wounds on the had, neck and body to fractures and blood poisoning.

"These dog bites are taking a real bite out of our collective wallets; the average cost is more tan \$18,000 per patient and \$54 million overall."

While the article states that those who live in rural areas were 4 times as likely to visit the ER and three times as likely to be admitted than urbanites, what about all the other victims?

Who would be libel if there were a lawsuit if someone was bitten or mauled? The National Park Service, and, ultimately the taxpayers?!

Correspondence: Comments on the Dog Management Plan Draft EIS

Dear Superintendent Dean:

Thank you and your staff for tackling this difficult and important issue. You have it right in my view. The public land manager must weigh the social and

environmental consequences of each decision and ensure that, while seeking to create quality recreation opportunities for as many visitors as possible, that the health of a thriving ecological landscape is restored and preserved.

I have a few points which I hope will contribute to support the decision:

-Dogs, even on leash, disrupt wildlife activity and relationships. The sight (and/or sound) of a predator species (including dogs) can significantly alter and damage predator/prey relationships.

-Dogs, even on leash, can cause a variety negative impacts on the "contact with nature" experiences of other visitors. Visitors are less likely to witness wildlife where dogs are present with the likelihood decreasing when there are uncontrolled dogs present. For many, encounters with dogs, even when the dogs are physically restrained, is a distraction and cause for fear and anxiety for self or for children.

-Dog waste can cause biological contamination.

-In defense of dog owners: for many of the 40% of Americans who own dogs, their pet is a member of the family and sharing outdoor experiences with it is a source of great joy and satisfaction. Places in the public commons for these types of human/pet experiences should be made available and maintained....but....because of the impacts both socially and environmentally, the share of public lands open to dog users, ethically must be kept small.

Public lands are to be managed to offer the greatest benefit to the greatest number in perpetuity. Many public lands uses are legitimate, but few of the many legitimate uses are legitimate on every acre of public land. In my career as a National Forest land manager, I came to see that an ethical land use allocation model existed for public lands....it goes like this "When allocating public land areas for recreation use, one's share of the commons is inversely proportional to the invasiveness of his activity" If a beautiful public space is occupied by dog users, there are many other potential visitors who will choose to self exclude from that area...leading to what many, myself included, would say is an unfair allocation to one group at the expense of others. Places for dog owners can be set aside, but they should be selected to avoid excluding dog averse others from the nicest and most scenic spots.

I should add that I am a dog owner. Our two lab mix dogs are friends and members of our family and we love to take them for walks and to share the outdoors with them in areas where it is legal and ethical to do so. Ethical dog owners choose to leave their dogs behind wherever encounters with numerous people is likely or where natural plant and animal communities

seem at higher risk....even when no legal restriction would prevent dog presence.

Thank you for your public service and for this opportunity to comment

Sincerely, BOB WETZEL Murphys, CA

Correspondence Type: Letter

Correspondence: Dear Superintendent Dean:

As a long time resident of San Francisco and a devoted dog owner, I want you to know I think your plan to severely restrict off-leash dog walking in Golden Gate National Recreation Area is a terrible idea. Please count me as strongly opposed.

While we visit a number of locations in the GGNRA our favorite spot is Crissy Field, and I think your Alternative C is unwarranted and unfair. Crissy Field is such a wonderful place to go to socialize with other dogs, other dog walkers and with people who just love being there. Living in a city like San Francisco there are very few places where I can take my dog to run and play. The East and Central beaches are wonderful for that and we never have any trouble with other dogs or with people who do not have dogs.

I have looked at the telephone survey that is a part of the environmental study and cannot believe anyone would rely on it for anything. When nearly 50% of the people did not know how long they had lived in the Bay Area, how reliable do you think they could be. Furthermore, if you wanted to have a fair survey why would you ever do it right after the trial involving the terrible death of Diane Whipple? Also, why did you have a survey conducted by Northern Arizona University, a state notorious for strange results? It is also curious that you included Alameda County in that survey; over 40% of those respondents had never been to Crissy Field. California is full of great state universities and colleges, why not support California and use one of them?

As a taxpayer and voter I am very concerned that you would waste our precious tax dollars on such an unnecessary effort.

Nevertheless, if you insist there must be more restrictions placed on dogs at Crissy Field then make dog walkers put their dogs on-leash while walking on the promenade. Leave everything else just as it is now (Alternative A).

Incidentally, if you would spend a small fraction of the money you have wasted, and will continue to waste on this study, to install some "keep-out" signs and maintain the fences around the dunes, dogs and people would not go on them.

I sincerely hope you will drop Alternative C and allow dogs and their walkers and owners to continue to enjoy the GGNRA in harmony with other visitors. If there are a few bad actors penalize them, not all of us.

Sincerely, Suzanne Ornelas

Correspondence: Re: GGNRA Draft Dog Management Plan/Environmental impact statement

Dear Superintendent Dean:

After spending in excess of 100 hours reading and analyzing the GGRNA's Draft Dog Management Plan/Environmental Impact Statement (hereinafter the "EIS" or "the Dog Plan") along with the 2002 Northern Arizona University Social Research Laboratory (hereinafter "NAU") telephone survey, I have decided to share with you observations, comments, questions and recommendations set forth in the pages to follow.

INTRODUCTION

First, allow me to digress briefly to provide some personal background. My wife and I are proud residents of San Francisco, unfailing taxpayers, conscientious voters, dedicated advocates for the preservation and restoration of the environment, grateful fans of our National Park System, frequent visitors to Crissy Field, and obedient dog owners. By profession I am a lawyer, mediator and arbitrator and as such firmly believe litigation should be the last form of dispute resolution. As a student of the law and the Constitution and a proud American citizen I steadfastly believe every citizen has the right and obligation to petition the government for change when it has or is about to embark upon an unjust or unwarranted course of action; and so I proceed.

Many of the observations I will share are from the perspective of someone who visits Crissy Field at least 200 times per year. As a senior citizen whose health care providers have long stressed the importance of regular exercise my dog and I visit Crissy Field four to five times a week. We typically spend 1 1/2 to 2 hours walking 4-5 Central beaches then up to and along the

Promenade out to Fort Point. Upon reaching the westernmost point we then basically retrace that route and then extend it as we leave East Beach going over to Mason Street up to the Marina, then over to the yacht club and back to the eastern parking lot. During each walk I make a token repayment to the NPS for our hours of pleasure by picking up and disposing of several pieces of debris, primarily non-biodegradable, and any unattended dog deposits we might find; the latter fortunately being an infrequent encounter despite what the authors of the EIS have suggested.

My walking companion and four-legged best friend is on-leash while on the walkways and Promenade and off-leash while on the beaches. We only go on to the Western Beach during the few weeks when off-leash walking is permitted. We also seldom venture onto the grassy sections of Crissy Field because in the winter they are like a swamp, and in the summer its uneven terrain and thousands of gopher holes are, for a senior citizen or anyone with an unsteady gait, a sprained ankle or broken hip just waiting to happen. I will comment further about the grassy area when specifically addressing your stated preference for Alternative C.

Except for some general provisions in the EIS, my observations, comments and recommendations will focus on Crissy Field. While I may disagree with several of the statements, conclusions and recommendations contained within the EIS and the NAU telephone survey, it is not my intent to be disagreeable or be culpable of "verbal abuse" as referenced in the EIS, Page 287.

OUR PREFERRED ALTERNATIVE

Of the five Alternatives listed we clearly prefer Alternative A as it maximizes the ability of dogs and their walkers' to exercise, socialize and enjoy many of the wonderful attributes of Crissy Field. In my experience as a long time dog owner, there is a far greater propensity for dogs on-leash to become combative with each other than when they are off-leash. Many dog experts refer to this phenomena as "leash aggression". Unfortunately humans sometimes wind up in the midst of those conflicts. Incidentally, as a frequent visitor to Crissy Field while reviewing Map 10, Alternative A, I was very surprised to see the West Bluff Picnic Area designated "Leash Required." The surprise came because there are no signs anywhere around the perimeter or within that picnic area designating it as a "Leash Required" area.

A review of Alternative C quickly reveals that it would severely limit the existing rights of dog owners and walkers. In many respects it appears to be engineered for failure. While readers are able to visually compare the various editions of Map 10, it is unfortunate the authors of the EIS did not include the square footage or acreage differences between the five

alternatives. I suspect if the area lost to off-leash walking was presented in the EIS in terms of square feet or acres the differences between the existing situation (Alternative A) and your preference (Alternative C) would be staggering.

Question: Do you have those numbers and are you willing to share them with the public?

As you probably know, at high tide, on Central Beach there is very little dry beach left between the water line and the fenced dunes. By sending all off-leash dogs into what will become a congested beach area you would substantially increase the likelihood of trouble that does not currently exist. Dogs like many other animal species, including humans, are known to become increasingly agitated and intimidated in crowded, confined spaces.

Alternative C would create or engineer adverse conditions at Crissy Field that do not currently exist; namely, two areas of "Intensive Use" by dogs where none currently exist, and a significant potential for adverse consequences thereof. Consider for example the following provisions of the EIS that appear at pages 14 and 15:

"Vegetation Issue. Dogs, particularly those off-leash and without adequate voice- control, can potential trample and denude vegetation and interfere with native plant species. Through intensive and prolonged use of park sites, dogs may reduce the abundance and diversity of native plant communities, resulting in the loss of rare or unusual plants (see the "Species of Special Concern" section below for listed species)..." EIS,14 (Emphasis added).

"Wildlife Issue. intensive dog use of an area could disrupt its use by wildlife or degrade the habitat, resulting in a multitude of possible negative consequences for wildlife population viability. The adverse effects of intensive dog use, such as chasing and flushing wildlife or disrupting nesting and foraging sites, can range from direct to less direct disturbance from physical effects such as trampling of habitat, degradation of water quality, and scent intrusion into predator territory. Off-leash dogs can potentially injure or even kill shorebirds or other wildlife..." EIS,15 (Emphasis added). Supporters of Alternative C might argue that in addition to Central Beach there would also be the center section of the Crissy Air Field for off-leash dogs. There are however significant problems with that argument. Those include, but are not limited to:

1. Alternative C substantially reduces the area within the Air Field that would be available for off-leash use;
2. Throughout the winter months the area is like a swamp and very difficult and unpleasant to use;
3. Its terrain is very uneven, and marred by literally thousands of gopher holes making it a dangerous place to tread, particularly for seniors and anyone with any kind

of walking disability; 4. Like the Central Beach, these are the most remote locations within Crissy Field from vehicular parking, again making it increasingly difficult for seniors and people with disabilities to use; and 5. By substantially reducing the on-leash space within the Air Field you would create an "Intense Use" area and with perhaps unavoidable instinctual violations of the Guidelines for ROLAs (Appendix E).

In view of the problems referenced in items 2-4 above it is little wonder the authors of the EIS at Page 106 have observed that it is "...a relatively underused section of the site."

As for item.#5 above, by concentrating dogs into a much smaller area of the Air Field you would create or engineer another opportunity for failure. Gophers currently far outnumber any other occupants in those fields. By closing large sections of beach and two of the three sections of the Air Field to off-leash dogs you would again create an "Intense Use" area that does not currently exist. And when you put a large number of dogs in an area heavily occupied by gophers, you substantially increase the likelihood the dogs are going to hunt for those rodents just as Mother Nature and humankind bred them to do. Such resultant behavior will then cast them as "uncontrolled dogs" and thus prohibited from the GGNRA.

The Guidelines for ROLAs (Restricted Off-Lease Areas) are set forth in Appendix E of the EIS. They provide in pertinent part:

"...Any uncontrolled dog is prohibited. Dogs in a ROLA are to be kept under control at all times. Dogs are considered under control when they are within direct eyesight of the owner/guardian/handler and when they have the ability to immediately return to their owner/guardian/handler. Dogs are presumed to not be under control if they:... intentionally or unintentionally annoy, pursue, hunt, harass, harm, wound, chase, attack, capture, or kill wildlife,... - dig, destroy vegetation, or enter fenced or closed areas.."

Query whether the criminal defense of "Entrapment" might apply to dogs?

Speaking of destroying vegetation, the potential for which is referenced in a number of places in the EIS, particularly as to the restricted dune areas, such potentials could all but be eliminated if the surrounding fences were adequately maintained and appropriate signage was provided. While few dogs are literate, people, unaccompanied by dogs, are frequently seen inside the poorly fenced dunes enjoying views of the bay, making cell phone calls, picnicking, frolicking, etc. (all occurrences I have personally observed). Fences not only make for good neighbors they also protect vegetation.

The following four photos were taken on the mornings of April 4 and 5, 2011 at Crissy Field. They depict a few of the many locations where the

fences intended to protect the dunes on the Central Beach are in a state of total disrepair. Photos 1 and 2 show areas where I have in the past seen families picnicking on top of the dunes. On April 4, 2011 as I was approaching the dune area in Photo 2 I saw a man standing on top of the dune talking on his cell phone; he was not accompanied by a dog. Please note the absence of and type of keep-out signs in any of those photos.

Recorded Incidents Involving Dogs in 2007 and 2008

As I read through the many hundreds of pages of the EIS and the NAU report I was frequently reminded of the words of Scottish poet Andrew Lang:

"He uses statistics as a drunken man uses lamp posts - for support rather than for illumination".

Consider first Table 6 in the EIS at Page 230 entitled "RECORDED INCIDENTS INVOLVING DOGS IN 2007 AND 2008." Of the 21 locations contained within the GGNRA 12 locations had recorded incidents involving dogs during the two year period 2007 and 2008. Crissy Field Wildlife Protection Area was one of those 12 areas. In that 24 month period it had a total of 20 reported incidents, 17 of which (85%) involved dogs entering enclosed areas. The other 3 were dogs "disturbing wildlife" whatever that means. Simply maintaining the currently existing fences and providing appropriate signage might well have eliminated most, if not all, of those incidents.

At Page 30 of the EIS under the heading "Encounters with Unruly/Aggressive Dogs" the authors paraphrase some portions of a 2001 task force study of the American Veterinary Medical Association (AVMA) about the number of reported dog bites in this country annually and estimated costs thereof, including workers' compensation claims. There are no reports or statements anywhere in the EIS of any injuries to park staff or employees due to dog bites or attacks. In the midst of all of those seemingly damn dog statistics appears one statement specifically related to GGNRA, and unfortunately it is misleading, if not outright false:

"...At GGNRA, reported incidents of encounters with unruly/aggressive dogs include instances of visitors being knocked down, intimidated, and bitten by dogs. In 2007/2008 a total of 52 violations were given for dog bites or attacks at the GGNRA, park sites as recorded by GGNRA LE and U.S Park Police". (Emphasis added).

The statement "... In 2007/2008 a total of 52 violations were given for 02 bites or attacks" is simply not true.

A review of Appendix G to the EIS, "Law Enforcement Data for 2007 and 2008", shows an entirely different set of facts. In 2007 GGNRA (LE) Law Enforcement Rangers issued one (1) Warning for a "Bite/Attack" and no/zero/nada (0) Warnings for "Bite/Attack" and two (2) Citations (one at Lands En and the other at Fort Mason). In 2008 the GGNRA LE issued no/zero/nada (0) Warnings and no/zero/nada (0) Citations for "Bite/Attack". In the same year (2008) the USPP also issued no/zero/nada (0) Warnings or Citations for dog "Bite/Attack".

Therefore the real number for the two-year period 2007 and 2008 of "total violations....given" was two (2) Citations and one (1) Warning, not the 52 as represented by the EIS. What the authors of the EIS did in coming up with their 52 number was to count all reports of "Bite/Attack", 50 of which did not have any LE or USPP direct knowledge or verification, and nevertheless were represented by the EIS authors as "violations...given."

I will also note that none of the Warnings or Citations were issued at Crissy Field; while five (5) unverified "Bites/Attacks" were reported over those two years. No information has been provided as to whether anyone was actually was actually injured in any of the recorded incidents.

In referencing the previously mentioned AVMA the authors of the EIS chose not to include other information that might be of interest to you and /or other readers. For example, nationally one-half of all bites are inflicted by the family dog, and only about 10% of bites are inflicted by dogs unknown to the victim. (AVMA Task Force, 1741).

Also, according to the task force "...Intact (unneutered) male dogs represented 80% of dogs presented to veterinary behaviorists for dominance aggression, the most commonly diagnosed type of aggression. Intact males are also involved in 70 to 76% of reported dog bite incidents." That is information that might actually be of some practical use to you in formulating your off-leash regulations.(AVMA Task Force, 1733).

Northern Arizona University Social Research Laboratory Telephone Survey

In support of the proposition that the presence of dogs needs to be substantially restricted within the GGNRA, the EIS makes multiple references to a 2002 telephone survey conducted by the Northern Arizona University Social Research Laboratory. This survey was reportedly conducted at the request of the administrators of the GGNRA. I say "reportedly" because as a review of the NAUSR's website for the period May 1999 to February 2006 reveals, their Clients List does not include GGNRA or the NPS. The clients listed are:

-US Forest Service -National Science Foundation -Metro Chicago

Information Center -National Loss Prevention Institute -Arizona State Supreme Court -Arizona Department of Health Service -Navajo Nation - Grand Canyon Trust

A search of their website also failed to reveal the NAU Dog telephone study referenced in the EIS. It did show that of all of the research and reports they performed in 2002 involved issues pertinent to some locale in Arizona, all but one which involved specific issues pending at the university or within Coconino County where the university is located.

A copy of the survey report can however be found through a GGNRA website. When considering that telephone survey it is important to keep in mind a number of facts that may bring into question its validity and applicability to 2011 and the future. This is not a current survey; it was conducted nine years ago, between May 20 and July 2, 2002. At that time existing park regulations prohibited all off-leash dog walking in GGNRA and the people surveyed were so informed (Survey Question #11).

The focus of the telephone survey was of off-leash dogs and the timing (May 20 to July, 2 2002) could not have been worse for Man's Best Friends. At the time the survey was underway Bay Area residents for over a year had been fed almost daily news reports about the tragic January 2001 death of Diane Whipple; a San Francisco woman who had been viciously mauled by two pit bulls as she attempted to enter her apartment. The dogs were living with two neighbors of Ms. Whipple; their owner, a skinhead gang member was at the time serving a life sentence in prison.

Publicity surrounding the Diane Whipple case was so intense that the trial, was moved to Los Angeles out of concern that the defendants could not receive a fair trial in the San Francisco Bay Area.

As reported in an October 13, 2001 article in the SF Chronicle: "Last month [Judge] Warren decided to move the trial after a survey by two professors at California State University at Chico found that 71 percent of potential jurors surveyed in San Francisco had concluded that the couple were definitely or probably guilty. The survey also found that 97.1 percent had heard of the case."

The trial commenced in January 2002 and a guilty verdict on all counts was returned on March 20, 2002 (SF Chronicle 03/21/02). In early April the police released recordings of the 911 call on which Diane Whipple's screams and dog barking could be heard (SF Chronicle 04/3/02). Those calls were played on numerous local TV and radio stations throughout the Bay Area and the nation.

As if the pre-survey publicity had not been bad enough, right in the middle

of the survey period two more major media events relating to that mauling death occurred; on June 16, 2002 the trial judge ordered a new trial on the murder conviction of one of the two defendants. (SF Chronicle 6/17/02); and the next day the prosecutor in the case was quoted as saying the reversal was "a travesty" (SF Chronicle 06/18/02).

With all of that publicity at that time in the Bay Area the majority of people might well have voted to put Snoopy on-leash and banned Lassie from the park for barking at Timmy who had inadvertently fallen to the bottom of a well.

But the timing and age of the survey, and the format and content of some of the questions are not its only apparent flaws.

For reasons that were not addressed in the NAU report or the EIS, the people surveyed included not only residents of the three counties in which the GGNRA is situated (San Francisco, Marin and San Mateo), but also residents of Alameda County. Of those Alameda County residents surveyed 58% had never been to Crissy Field (NAU p. 38). And although in the first page of the report it is stated that 1600 people in total were surveyed, 400 residents of each county from the actual call tallies that 457 of the responders (28.6%) were from Alameda County (NAU p. 147), and 412 (25.8%) (NAU p. 147) were from San Mateo County (of whom 43% had never been to Crissy Field. (NAU, 46).

We are also told that 76.4% of the people who had never visited the Golden Gate National Recreation Area were opposed to off-leash dog walking anywhere in the park. (NAU, 138): 70.8% of the people who had not been to the park in at least the preceding 12 months were also opposed to any off-leash dog walking.

Some of their math is also hard to rectify. For example consider the numbers in this segment of the NAU report:

"Results of the telephone survey showed that 28 percent of respondents owned or cared for one or more dogs. Among these dog owners, 50 percent had taken their dog(s) to a GGNRA site and 20 percent of that group had also hired a commercial dog walker to walk their dog(s) in a GGNRA site, which translates to one percent of all survey respondents using a commercial dog walker". (NAU 2007b, 16-17).

Using old time math: 28% of responders owned or cared for dogs; 50% of those had taken their dog to GGNRA (50% of 28% would typically equal 14%). When I was in school twenty percent (20%) of that number (14%) would equal 2.8% not one percent as stated in the NAU.

Another example of fuzzy math appears under the heading VISITOR EXPERIENCE:

"In a random telephone survey conducted by Northern Arizona University in the four-county area surrounding GGNRA (Marin, San Francisco, San Mateo , and Alameda Counties) respondents were asked a series of questions regarding their use of GGNRA. Of the 29 percent of respondents who either owned or cared for a dog about half (14 percent) had walked their dog(s) at GGNRA. Of the 14 percent of respondents who walked dogs at GGNRA, approximately 75 percent lived in San Francisco County and 69 percent lived in Marin County...." (NAU 2002b, 17). (EIS 279) [Old mathL $75\% + 69\% = 134\%$]

The weight to which the NAU survey might be entitled is further suspect when one considers that 42% of their Responders when asked if they had lived in teh Bay Area for periods shorter or longer than six years did not know (NAU, 51). Perhaps another reason the names of the Responders were not disclosed.

Does the EIS Reflect a Latent Anti-Dog/Anti-Dog Walker Sentiment/Slant?

In reading through the EIS and the NAU reports we were struck by a precieved bias against both dogs and their owners and/or walkers. As a dog owner who feels acceptance of Alternative C would have a significant detrimental impact on the quality of my Life and the life of our much loved family dog, perhaps I am simply being paranoid; but as a wise man once said: "Just because you are paranoid does not mean they are not out to get you".

In addition to the errors and misinformation previously identitled, a few other examples of this bias include the following:

Under the heading of "EXPECTATIONS AND VIEWS OF DOG WALKERS AND OTHER VISITORS" is set out a brief discussion of the January 2007 ANPR wherein an overwhelming majority (71%) of public comments supported off-leash walking in selected. GGNRA sites. In purporting to summarize the sentiments of opponents the authors included this very caustic and inappropriate partial quotation from an unnamed source:

"..Nearly half expressed discomfort or fear of off-leash dogs and over 1,180 felt that allowing an exception to the NPS rules would set a negative precedent in other NPS units, giving "dog owners the excuse they want to contine to not obey laws and create confusion and conflict" (NAU 2002a, 9-15) (EIS, 13) (Emphasis added).

I respectfully submit the included partial quote that I italicized was unnecessary and inappropriate because if in fact "an exception" was made to the NPS rules dog owners would not need an "excuse...to not obey laws" because the authorized exception would then be within the law.

Other examples of a perceived bias appears in the segments I have bolded and italicized in the section entitled Visitor Use and Experience - Aesthetics: Issue. Dog walkers and visitors without dogs often come into conflict. Walkers, hikers, joggers, bicyclists, horseback riders, wildlife watchers, and those seeking a quiet and natural experience can all potentially be disturbed by running and barking dogs. The potential for visitors to be bitten by dogs at GGNRA also exists and is discussed as part of employee, visitor, and dog health and safety, which follows this section...Although signs indicate that dog owners are responsible for picking up their dogs' waste, owners do not always comply. Various dog groups and associations have even organized dog cleanups, provided bags, and tried to influence their members; but despite these efforts, many dog owners still do not comply with picking up dog waste. (EIS, 18).

Questions:

-Where is the evidence to support the assertion "...often come into conflict"?
-The fact dogs, like many other animals have teeth, do present a "potential" for biting, but where from the evidence are we shown that "potential" has in fact been a reality that surpasses any other setting or circumstance in which man and dog are present together? -Is there any evidence that the incidents of dog bites in GGNRA is greater than in other areas of the City and County of San Francisco? -On the topic of picking up dog waste, the reader is first told "owners do not always comply" but in the next sentence we are told "...many dog owners still do not comply." Where is the evidence in the EIS to substantiate that statement? It is not in the TABLE 6. RECORDED INCIDENTS INVOLVING DOGS IN 2007 AND 2008 (EIS, 230) nor in TABLE 9. SUMMARY OF VISITOR USE AND PET-RELATED CITATIONS, WARNINGS, AND REPORTS TAKEN AT GGNRA (EIS, 271) where at the 11 San Francisco locations a total of four (4) "Pet Excrement" incidents were recorded, none of which were at Crissy Field. - Also on the topic of dog waste, the fact that dog groups have organized "dog cleanups," weren't those general beach cleanups? And "provided bags" and "tried to influence their members" seems to suggest that the efforts of those groups is evidence of culpability, and it further implies the groups' members are in fact the ones who are non-compliant. Is there any evidence the offenders were members of the dog groups that undertook to "influence" their members?

Further examples of a perceived attempt to skew the EIS appear in the section entitled "Crissy Field" (EIS, 276). The statements at issue have been

bolded and italicized by this author.

"...The NPS recently installed new fencing, gates, and signage at the eastern boundary of the WPA to better demarcate where dog walking restrictions start. Gates and signage were also installed at trail entry points to the WPA. Crissy Field is busy as early as 4 a.m. and receives moderate to high visitor use throughout the day. Visitors include individual and commercial dog walkers, cyclists, pedestrians, rollerbladers, runners, wind surfers, and kite boarders (table 9). Within the WPA, visitor use is high; however use is low to moderate for visitors who walk dogs. Park staff estimates that there are generally 5-10 commercial dog walkers per day (fewer on weekends than weekdays), and typically 3 present with between 4 and 6 dogs each at any given time of the day. These dogs are often off-leash, as are many of the dogs walked by owners. Compliance with seasonal leash restriction in the WPA is limited; varied iterations of regulatory signs have only been partially effective..."

"Maintenance is also demanding, with dog waste, urination on trash cans, vandalism of signs, etc. occurring regularly at this park site..." (EIS, 276).

In the first highlighted section the authors appear to have inter-mixed information about WPA (Wildlife Protection Area) and the other areas of Crissy Field in such a manner as to easily cause the reader to conclude there are "5 to 10 commercial dog walkers per day..." within the WPA and that there is frequent unauthorized off-leash violations within the WPA; when in actuality commercial dog walkers are not typically in the WPA nor is there any evidence there are "frequent unauthorized off-leash violations within the WPA".

TABLE 6 which is said to represent the total number of recorded incidents involving dogs for the two year period 2007 and 2008 shows at Crissy Field in that time frame there were a total of 17 incidents of dogs in enclosed areas reported. That means there were 17 incidents in 730 days or one incident every 43 days. It is hard to believe that an unbiased observer would quantify that as "frequent".

Referring back to the above highlighted portion of the "Crissy Field" section, we should also consider for a moment the statement: "Maintenance is also demanding, with dog waste, urination on trash cans, vandalism of signs, etc. occurring regularly at this park site..."

That assertion however does not appear to be supported by the record. Specifically, I refer you to table 10 of the EIS at page 285.

TABLE 10. "TOTAL MAINTENANCE AND LABOR HOURS AND COSTS ASSOCIATED WITH TRASH REMOVAL FROM OCTOBER

2006 TO APRIL 2008". A review of Table 10 contains the following information for four San Francisco locations within GGNRA: Maintenance Labor Hours Total Labor and Materials Costs Ocean Beach 814 \$26,102 Fort Funston 1,665 \$44,510 Lands End/Fort Mitey 539 \$13,592 Crissy Field 226 N/A For some reason the dollar costs for Crissy Field was N/A (Not Available) but we can generate some approximate numbers by taking the total Labor and Materials Cost For Ocean Beach, Fort Funston and Lands End/ Fort Miley (\$84,204) and dividing that number by the total Maintenance Labor Hours at those three locations (3018 hours). This gives us an average per hour cost of \$27.90. Applying that average to Crissy Field's 226 hours the total Labor and Maintenance Cost for Crissy Field would be approximately \$7,952 and for discussion purposes round it up to \$8,000 for that 18 month period. As we know Crissy Field is open 365 days per year; the approximate daily average cost at Crissy Field for trash removal labor and materials from October 2006 to April 2008, was \$21.92. Finally on the issue of bias let us look at the section entitled "STAFF" wherein we see that dog owners are now apparently profiled and presumed to be "confrontational" when approached concerning an alleged violation. In the final sentence of that section we see that administrators consider some public feedback they have received in meetings and in correspondence to constitute "abuse". Hopefully this is not the explanation as to why the administrators have chosen Alternative C, an alternative that appears to have several built-in opportunities for assured failure.

Park staff (particularly LE staff), volunteers, and partners have been targets of physical and verbal abuse by dog owners who have been contacted regarding pet violations in the park. Conflicts typically occur when a dog owner is contacted regarding violation of a pet regulation. Conflicts are more likely in park areas of high use and elevated conflict levels, such as Crissy Field and Ocean Beach. Due to the increase in LE and visitor conflict regarding compliance with pet regulations following the park's efforts to initiate enforcement of the NPS leash regulation parkwide in 2001 and for safety reasons, rangers now approach visitors in pairs when contacting them about enforcement issues. It is assumed by staff that any contact with a dog owner regarding dog walking regulation compliance will be confrontational, and it is the park's goal to reduce the number of these conflicts (Coast, pers. comm., 2006). There has been one reported physical assault of a federal LE officer by a dog owner (no injuries resulted). Conflicts also occur in the form of verbal abuse at public meetings, and through written correspondence. Park administrators, including the superintendent, have been subjected to such abuses. EIS, 286-287

From a reading of the EIS one might assume dog owners and walkers are perhaps nearly as suspect within the GGNRA as masked men brandishing assault weapons.

Question: How do the recorded incidents of warnings, citations and reports of dog owners and walkers compare with the total reember of warnings, citations and reports involving visitors to GGNRA? How many non-dog related warnings, citations, and reports were there of actual or alleged violations of park rules, regulations and laws during the same time periods?

Question: Is Alternative C in Conjunction with the Compliance-Based Management Strategy a Planned Two-Step Process to Eliminate All Off-Leash Dog Walking in GGNRA? Is This Simply Administrative Pay-Back Against Those Who Previously Sought and Received Judicial Intervention?

From what has been discussed in the preceding pages, we are quite concerned that Alternative C may have been engineered, either intentionally or unintentionally, to fail; or more accurately stated, engineered to assure the dogs and their owners and/or walkers fail. Putting a large number of dogs in very confined spaces creates a substantially higher risk there will be far more problems than currently exist. If in fact there are more problems than those in charge will then feel free to invoke the punitive aspects of the "Compliance-Based Management Strategy".

In chapter 2 of the EIS the CBMS process is generally described. Later in the EIS we are told in summary: "...Compliance-based management strategies has been designed to ensure that compliance with the Code of Federal Regulations (CFR) applicable to dog management is high to ensure protection of park resources, visitors, and staff. If noncompliance occurs at a site, compliance-based management strategies would be implemented to increase compliance with the new dog management regulations. Noncompliance would include dog walking within restricted areas, dog walking under voice and sight control in designated on-leash dog walking areas, and dog walking under voice and sight control outside of established regulated off-leash walking areas (ROLAs). When noncompliance is observed in an area, park staff would focus on enforcing the regulations, educating dog walkers, and establishing buffer zones, time and use restrictions, and special use permit (SUP) restrictions. If noncompliance continues and compliace falls below 75 percent in a management zone (measured as the percentage of total dogs/dog walkers observed during the previous 12 months not in compliance with regulations), the area's management would be changed to the next more restrictive level of dog management. Impacts from noncompliance could reach short-term adverse; but the compliance-based strategy is designed to return impacts to a level that assumes compliance, as described in the overall impacts analysis, provide beneficial impacts where dog walking is reduced or eliminated".

Unfortunately as described this process could be easily abused by those charged with administering the process. There does not appear to be any

systematic method planned, as opposed to "random"

Question: From a Cost/Benefit Prospective Does the Entire GGNRA EIS Process Make Any Sense or is it a Solution In Search of A Problem?

Let's look at the numbers. We have seen above that the average cost per day at Crissy Field for trash removal including labor and materials is somewhere in the range of \$23.00. We also find in the EIS that "...In 2006, total personnel cost for the natural resources staff was \$1,344,392 and total natural resources volunteer time was 142,890 hours. Approximately 5 percent of the natural resources budget was spent on dog management-related activities in 2006 (NPS 2007d, 1)". (EIS, 284).

In Table 11 "Current (Alternative Estimated Personnel Costs" are the total EIS estimated costs incurred by the GGNRA on an annual basis for "dog management". Personnel costs include labor related to resource monitoring, education and public affairs, enforcement, record keeping and data management, maintenance, and contract labor. Non-personnel costs may include equipment, vehicles, computers, etc., necessary to perform duties associated with dog management. The total estimated annual costs for the entire GGNRA is \$203,422. (EIS, 1567).

Question: What has been the total dollar costs incurred thus far by the GGNRA and other federal, state, and local agencies to this date for this EIS process; \$1 Million; \$2 Million; \$3 Million?

Question: Will United States taxpayers ultimately be responsible for paying these millions of dollars in costs?

Question: How could the GGNRA and other governmental agencies have applied that money to make the GGNRA even safer and more pleasing environment for the public without significantly modifying Alternative A?

Without knowing the answers to those questions we are told in order to implement a new dog management plan, Alternative B, C, D or E, even more money will have to be expended. Specifically we are told it would cost between \$1,085,169 and \$1,512,082, the equivalent of what the GGNRA would spend over the next 5 to 7 years under the current Alternative A for all costs associated with "dog management". Instead the money would be spent:

"To implement the dog management plan, the NPS would hire part-time and seasonal employees and full-time permanent employees in addition to the current staff at the park. Additional personnel would need to be hired in several divisions under all alternatives. Table 12 provides the total estimated costs associated with personnel and labor (including new employees) to

complete tasks necessary for implementation of the dog management plan. Personnel costs include labor related to compliance monitoring, education and public affairs, enforcement, record keeping and data management, maintenance, and contract labor. Non-personnel costs may include equipment, vehicles, computers, etc., necessary to perform duties associated with each alternative and are also provided. Overall, there is little difference in total costs for each action alternative due to the efforts associated with compliance-based management strategies and the variety of dog management under each alternative. The addition of new employees would create long term minor adverse impacts on the current park budget. Division budgets would also increase beyond the cost of new personnel to cover increases in current staff workloads and field and equipment costs, including vehicles, computers, etc., creating negligible impacts to long-term minor adverse impacts on current division budgets. If new funding becomes available, impacts would be minimized". (EIS, 1569).

Compliance-Based Management Strategy

When all is said and done, the future of dogs walking in the GGNRA will live or die based upon how the proposed Compliance-Based Management Strategy is established and administered. If administered fairly and efficiently it could work to the benefit of all visitors to the GGNRA. If on the other hand it is administered without transparency and a legitimate opportunity for public participation and verification, it will serve as a lightning rod for dissension and in all likelihood years of litigation. The cornerstone to all of this is the legitimacy of the planned monitoring for establishment of baselines and levels of non-compliance with park regulations.

The stated purpose of the Compliance-based Management Strategy is to: "...encourage compliance with sections of the Code of Federal Regulations (CFR) applicable to dog management, and ensure protection of park resources, visitors and staff. it will provide the framework for monitoring and recording observed noncompliance with the applicable sections of the CFR, including the new 36 CFR Part 7 special regulation, and will guide use of park resources to address those violations. Noncompliance with federal regulations related to dog management will be met with a range of management responses. (EIS, 63).

Under the heading of Frequently Asked Questions we are told how the baselines will be established and monitoring conducted:

"5. What are some examples of the compliance-based management strategy in practice at different periods in time? a. Month 15 of the plan implementation: The monitoring team visits a specific area at random times of the day and week. The team will count the total number of dogs, dog

walkers and types of use (on-leash, voice control) over a pre-set monitoring period, while also recording the number of violations in each zone contained in the area. This information will be compiled with the preceding months' monitoring data to develop a cumulative total number of dogs and violations. Information gained through monitoring will direct use of park resources to initiate primary management responses as required. In 3 more months the monitoring team will have 12 months of data to evaluate, to determine if a secondary management response is warranted.

b. Month 18 of the plan: The monitoring team has continued to visit this specific area - random times of the day and week, following the same monitoring protocols as noted above. If compliance falls below 75% based on the previous 12 months' monitoring data in one of the zones, in spite of the park's primary management actions, the zone will change to the next most restrictive dog management regulation." (Emphasis added). (EIS, 66).

Perhaps it is simply a matter of semantics, but because the establishment of baselines has such critical importance, one would think the National Park Service would want to be extremely diligent in using its very best efforts to assure the information collected is as accurate as possible, and that the data would be collected systematically and scientifically rather than performed "randomly".

As "the next most restrictive dog management regulation" below voice control or off-leash is on-leash followed by "no dogs," justice dictates this must be a fair and open process. Much like a death sentence, the proposed CBMS provides that once a restriction is imposed it cannot be reversed even if behaviors substantially improve.

RECOMMENDATIONS SPECIFIC TO CRISSY FIELD

RECOMMENDATION No.1: Adopt Alternative A; rather than further restricting dog walking in GGNRA use some portion of the hundreds of thousands of dollars that would otherwise be expended to implement the Compliance-Based Management Strategy to instead repair existing fencing and where aesthetically appropriate install additional fencing and signage to help protect vegetation, dunes and wildlife.

RECOMMENDATION No. 2: Should Alternative A be deemed unacceptable by the administrators of the GGNRA, then I reluctantly submit for your consideration an Alternative not included in the EIS. That alternative would contain all of the same elements for multiple user groups that have been heralded by the EIS authors (set forth below) as making Alternative C the best option:

"Overall, alternative C provides the best option for multiple user groups to

experience the site; space is available for dog walking on-leash, dog walking under voice control, and a no-dog experience. It is anticipated that clear geographical boundaries would aid visitor understanding and compliance with the regulations. Since alternative C provides multiple options, it would be easy for park staff to direct park users to a site that meets their use needs." (EIS, 106). (Emphasis added).

Under the proposed Alternative F the locations and proportions are somewhat different but the three elements (dog walking on-leash, dog walking under voice control, and a no-dog experience) are all present. It is also superior to Alternative C in that it would be far less onerous for seniors and others with mobility restrictions wishing to enjoy the experience of dog walking under voice control.

PROPOSED ALTERNATIVE F (as in Fair) for Crissy Field: On-leash: The Promenade; and all roadways, walkways, paths, parking lots, the West Bluff Picnic area, the multi-use trail along Mason Street, and the Wildlife Protection Area east of the old Coast Guard pier. Off-Leash/Voice Control: The Air Field (use could be restricted for special events), and the East and Central Beaches No-Dog Experience: The Wildlife Protection Area aka West Beach west of the old Coast Guard pier.

GGNRA-WIDE RECOMMENDATION

RECOMMENDATION No. 3: If the NPS selects any of the Alternatives B through E for GGNRA's 21 locations then it actively should enlist the assistance and cooperation of recognized and respected dog groups in the community to recruit responsible volunteers to participate fully in all monitoring projects in each of the 21 locations. Meaningful public participation and confirmation of the baselines and monitoring will go a long way towards achieving wide scale acceptance of the results.

CONCLUSION:

Contrary to the vehement assertions of my dog and his canine friends, I do not accept the theory that Garfield the Cat is the real author of the EIS. I also do not agree with their arguments that because children dig more holes and chase more birds than dogs do then children should be either leashed or banned from GGNRA. Clearly no rational human being would ever advocate for such a restriction.

Where we do agree however is there are a number of reasons to view the EIS and the NAU telephone survey with a great deal of skepticism.

After careful analysis the facts and numbers simply do not justify the major changes called for by the authors of the EIS. Alternative C would create

significant "intensive Use" problems that do not currently exist, and the accompanying Compliance-Based Management Strategy would provide far too many opportunities for unjust administrative abuse.

It is therefore respectfully submitted that the best and most responsible approach would be to adopt the current Alternative A; stop the unnecessary spending of hundreds of thousands, if not millions, more tax dollars on this process; and instead use a small portion of those funds to repair, replace and improve what is already in GGNRA.

Surely at a time when our nation and its economy is facing so many problems the management of the Golden Gate National Recreation Area has more constructive and positive things to do with its time and ever dwindling financial resources. The current EIS endeavor might cause some in Congress to believe the GGNRA was over-staffed and over funded. As friends of the GGNRA we know neither is true.

Sincerely yours,

Karl A. Keener

Correspondence: Re: Dog Management Draft Plan

Dear Superintendent Dean,

Firstly, let me say how grateful we are for the GGNRA. It is a rare and marvelous place enhanced by a multitude of creative and hard working people. I give thanks weekly to Phillip Burton and those who later conceived the Presidio Trust.

I have volunteered at the Maritime Museum, on trails, in habitat restoration and at the Presidio Nursery. We have been members of the William Kent Society/GGNPC for over 20 years. And thank you for your service to the country, the NPS and the GGNRA--some days you have a thankless task.

Current dog use of the GGNRA is unsupportable. At Fort Funston the spider web of dog trails has caused significant erosion. We have watched dogs chase shorebirds at Ocean Beach. Some people have a fear of dogs. I know

those who avoid Fort Funston and Crissy Field Beach because of the large number of unrestrained dogs running around. Most importantly, unrestrained dogs are a threat to wildlife, including endangered species like the Snowy Plover.

So I write to express our strong support for the recommended alternative in the NPS Dog Management Draft Plan. The Park Service's recommended alternative is a careful, reasonable, well researched and thoughtful.

We also hope the ultimate plan will address what Edward Abbey might have called "industrial dog walkers". On volunteer habitat restoration work in the Presidio we sometimes encounter people with 10 or more pooches in tow. Not only are that many dogs in a group intimidating to those who fear dogs, such treatment is unfair and maybe not humane for the dogs themselves. And one can only wonder how dog walkers of large groups deal with dog feces and urine. Packs of dogs must also be unsettling to wildlife, even if leashed.

We have written to our Supervisor Scott Weiner in support of the recommended alternative. We read of his critical comments in your appearance before the Board of Supervisors last week. San Francisco has been a leader in encouraging residents to change their behavior to benefit the environment (recycling/composting and parking restrictions/bicycling enhancements come immediately to mind). Change viewed as restrictive can be painful, but people with dogs should put other humans and protecting the environment first. And San Francisco should be in the forefront of encouraging such change.

Thank you for your consideration.

Sincerely,

Robert Cornwell and Cathryn Thurow

Correspondence: I was dismayed to hear about the plans to end the dog of leash selected areas.

There are so few areas for dogs to obtain the exercise they need in SF.

As a qualified animal behaviorist I know firsthand of the problems that are encountered when owners are not able to exercise their dogs in a manner

that allows them to use all their energy. More problem behaviors, more dogs ending up in shelters.

The problem is many of the dog walkers with unmanagable amount of dogs. I was at Fort Funston and wathed at 1 dog walker with 21 dogs was on the beach. This is where problems happen. Last Wednesday on Baker Beach a walker had 16 dogs. By not addressing the real issue + that is unlicensed dog walkers who will never be able to pick up after or control a large amount of dogs.

I am a responsible dog owner and behaviorist who knows the importance of exercise. I pick up after my dogs, they do not chase animal + are friendly to people + dogs. I should not be discriminated against due to irresponsible dog walker.

Ocean Beach has a good area where dogs can be off leash there is no nesting birds in this area and no reason what so ever to change it. Most of the beach is on leash + I think the balance works well.

Rules for the sake of it are powerless when there is no reason to implement them.

Correspondence: GGNRA must consider the negative impact restricting dogs would have on San Francisco city parks, dog owners, dog behavior + on the dogs themselves.

It is irresponsible + against the agreed conditions that formed this urban recreation area to dis-allow dogs + their humans from using the GGNRA to get true off-leash exercise.

The alternative I choose is NO change to existing usage, tho with increased implementation of existing rules - pick up after + control dogs by voice command.

Correspondence: Dogs need huge amount of exercise, especially bigger dogs. With little or no parks that are only for dogs in San Francisco, restricting dogs to be on leash

in parks like Fort Funston or Presidio will lead dog owners nowhere to bring their dogs to exercise freely, which defeats the purpose of having such a park. Dog owners do not need to drive all the way to these parks to walk their dogs on leash, when we can do the same around our neighborhood. Without adequate amount of exercise, dogs become depressed, overweight, and unhealthy. This also will raise another problem among neighbors that dogs are peeing everywhere in the neighborhood. Neighbors will even blame all dog feces in the neighborhood to dog owners because some irresponsible dog owners fail to clean after their dogs. Some neighbors would even cuss dog owners out for just walking their dogs around the neighborhood. There are already many places that do not welcome dogs and with the new restrictions of these few parks that allow dogs to run freely will bring many inconveniences to dog owners and their neighbors. Finally, please consider that even if this new proposal is enforced, it does not mean everyone will follow it faithfully. Then, it is necessary to hire someone to actually enforce it. This is wasting time and taxpayer's money to enforce something that is nearly as important. The money that has been wasted on this pathetic proposal could have been useful to hire someone to clean the park or even to protect the "native species" that are nowhere to be found.

Correspondence: GGNRA,

I already sent you my feelings about dogs, myself and Ft. Funston, but I forgot one very important point. People with-out dogs are quite curious about all the dogs at this location. They are not afraid and smile that a place like this exists. (Yesterday it happen again) I was walking into the parking lot when a parked car with 4 people inside asked me about this place. People also have mentioned to me they would have brought their dog if they would have known about Ft. Funston. My pets (many generations) and I have seen this place get crowded on weekends and I have seen nature take down your fences. Nature is also doing a job by eliminating the ice plants and creating wild strawberries for the wild birds and animals to eat.

Please allow this wonderful place to be dog heaven. Animals adapt, they did when the ugly bunkers were created.

Correspondence: To: Mr Frank Dean

I am totally opposed to dogs being excluded from GGNRA lands. Dogs are like family and leaving them home is a mutual loss of a good experience. I have walked my dogs in Oakwood Valley for 20 yrs. The dogs have a safe vehicle free trail. Bikers do a lot more damage to trails than dogs. If this passes I will be in touch with elected officials. I don't know if you're involved with the nice trees cut down between Golden Gate bridge and tunnel. The nicest group of pines were cut down for no apparent reason.

Yours, Brendan Burke

Correspondence: Dear Mr. Dean,

My wife and I are 72 years old. We love going to Cronkite Beach but too many dogs jumping on my wife - completely out of control. Dog people say their dogs just want to play - we hate it. I used to fish there until every time dogs pissed on my lunch box and fishing gear. By the time I find a ranger the dog and owner are gone. Dogs chase the birds, also. If mothers of small children know of all the dog feces in the sand they would put a stop to it.

Born in San Anselmo I feel I have lost something special - the right to walk a beach. Even Stinson Beach has dogs out of control- more dog feces there than Cronkite. The dogs go from the Federal Park to the County park area where there are no rules enforced. I have never ever seen a ranger issue a citation. We are about to give up.

I don't think this letter will be read or do any good. There are more dog lovers than people that want solitude and safety at our beaches. This is a disgrace. Mr. Dean - Thank you for accepting my letter and I do hope you read it.

Respectfully - Mel Colombo

Correspondence: Dear Frank:

In the late 60's when I was a college student at the University of San Francisco I worked to establish the GGNRA. The vision to create an expansive wild space near such a dense urban environment that would provide a "lung" for urbanites and their families was realized in 1972. The GGNRA has for decades provided open space for all to enjoy. And the "all" includes dogs because they are a part of families.

The small percentage of open space that allows dogs should be left unchanged because it provides for those of us who may not be able to otherwise use the area.

One of our sons and his family live in San Francisco. As families we frequent Crissy Field with our dogs. Those who are critics need only to observe the joy and happiness that prevails there. There have been several times when I have encountered dog-less families who go there to play with dogs or others there to scout out a particular breed. It has always been a civil and neighborly experience. To remove these dog friendly areas as you propose is to deny the purpose for which the GGNRA was established and for which I so diligently volunteered.

Sincerely,

Barbara K. Westover, Architect

ID:**Received:** Apr,26,2011 00:00:00**Correspondence** Letter**Type:****Correspondence:** GGNRA To Parkplanning authorities,

I have enjoyed the Bay area Parks and Beaches for forty years. I strongly believe that NO dogs should be allowed at our Parks and Beaches. If dogs are allowed it should be On Leash only and very limited. Voice command control is a joke ,not reality. There are simply to many inconsiderate and or irresponsible / unaware dog owners who view the beaches and parks as just another Dog park with no respect for nature ,wildlife or other people. They seem to think that the shorebirds and wildlife are there for their dogs amusement to chase ,bark at nonstop and harass with little regard to the detrimental effect on the park and other peoples experience.

I would estimate that 95% of the shorebrids have disappeared in the last 20 years at the dog friendly beaches. One year ago I began to make an effort to mainly go to parks or beach areas where dogs are not allowed.

Over the course of my life I have raised Three wonderful dogs that brought much joy. Dogs are a problem because of the entitled inconsiderate dog owners and the Only Way to control them is to NOT allow them to bring their dogs to our Beaches and Parks.

Thankyou, Jay Patsor Novato Ca. 4/17/11

Correspondence 4295 **Project:** 11759 **Document:** 38106**ID:****Received:** Apr,27,2011 00:00:00**Correspondence** Letter**Type:****Correspondence:** RE: Dog Management Plan I wish to comment on the portion of the proposed dog management plan that pertains to Crissy Field because that is where I most frequently take my two small children. I also take them to Golden Gate Park. We are residents of San Francisco, in the north part of town, and we love these parks. I am very opposed to the recommendations that allow dogs off- leash on the Crissy Field beach and on-leash on the walking path. My children have gotten frightened by dogs and one of them was traumatized by a vicious dog fight nearby. My kids wander around and like to pick up pebbles and sand. There is sometimes dog poop that is not cleaned up. It is not a safe environment for small children. I urge you to consider changing the proposed plan. Dogs should not be allowed off leash on the beach. Indeed, I think that dogs should not be allowed on the beach at all unless it is a designated, fenced area. And dogs should not be allowed on the path. It is too crowded, full of adults, kids, bikes. Children are

vulnerable and must be protected. Thank you.

Correspondence Type: Letter
Correspondence: April 25, 2011 To: Frank Dean, Superintendent, GGNRA RE: Dog Management Proposed Plan Dear Mr. Dean, I am commenting on the dog management plan. I am an older woman who lives near Crissy Field and that is the only park I can get to easily. So, my comments are going to be limited to that portion of the report. I am distressed at how much has been given over to the dogs. It has been years since I've been able to walk on the beach because of the aggressive dogs loose there. I was once knocked down and I am afraid to walk there. This is the only beach close to the heart of the city. It makes no sense to allow dogs free reign there when there are other places they can run that would not interfere with large populations of people. The plans' recommendation to allow continued off leash use on the beach is a clear statement of the priority of dogs and dog owners/walkers over ordinary people. Secondly, I am against the allowance of dogs on leash on the path that runs from the near parking lot to the fishing pier. Very large numbers of people use this path. The dogs, even on leash, jump, bark and poop. There are accidents with bikers. Furthermore, if dogs are allowed off leash on the grassy airfield, who will patrol their getting onto the path on-leash? The dogs will continue to run, as they do now, between the field and the path, back and forth. In all the years I've been walking on that path, I've never seen any enforcement, not once. I am distressed that the one park nearest to the largest concentration of people will be given over to the dogs. Let the dogs run free in a more remote area. There are plenty of people like me who are older, small children, frail or at least not very strong. We deserve to have a place we can get to and feel safe. Why are you choosing dogs over the safety and well-being of people? I hope that you will reconsider the recommendations in the proposed plan. Thank you. Sincerely, Mary Foust, San Francisco

Correspondence: Dear Mr. Dean:

I write this letter to you asking you to reconsider the proposal to further limit dogs in our local GGNRA parks. I was walking my two well behaved dogs on the beach early one morning last week, and I noticed I was not the only dog person there who was collecting a bag of trash in addition to our dogs poop.

Dog owners in general tend to be well connected to the environment, and pick up their poop, and other trash as well. I wish beach goers would be so kind after enjoying some of the wonderful weather we had had recently.

CONSIDER timed ususage? Keep the open areas the same, but limit the hours on the beach to early, and late. It'll keep a lot of people happy, and keep the beach much cleaner. Too.

Correspondence: Dear Mr. Dean,

Please preserve the decades-old tradition of off- leash dog walking in Montara's Rancho Corral property. I have lived in Montara since 1978 and have walked my vizolas there since then.

Most of the humans I meet on the trails have canine companions and most of the dogs are leash-free. In all those years, there have been only a couple of occasions when I might have wished a dog was on a leash.

In addition, I think you should reconsider the location of the parking lot. A parking lot adjacent to an elementary school seems like an invitation to pedophiles to come and lurk. I write as a retired elementary school teacher with thirty-eight years experience.

We are a small community and rely on you to make judicious decisions.

Correspondence: Our family dog, Callie frequents Fort Funston. Fort Funston is her playground where she play chases with other dogs and tennis balls. Many of the off-leash areas have been available for dogs and their owner's recreation

for so many years, we fail to understand why the need for changes (especially the severe restriction proposed by the NPS). We can understand the need to set dog management rules to the new recreational areas for public safety and wildlife protection. However the concerned areas have been off leash for many years.

If GGNRA is able to provide new recreational areas for dog off-leash recreation, it would be a great compromise to the proposed restriction. The present proposed small areas will cause conflicts for both people and dogs if they restricted to a small area. Though causing severe erosion/damage to the small limited areas from over use.

On the weekends, there are probably thousands of people and their dogs enjoying the off leash area there at Fort Funston. Many tourists frequent Fort Funston also because of the popularity of the dog off-leash area. A sign at the entrance informing of entering off-leash areas would be a great help to tourist to the area. With the proposed restricted area, many dog owners will probably be using public city parks. Frequent use of city parks will cause conflicts with non-dog lover users and more impacts on city parks. Any frequently used area - no matter GGNRA recreational area or city parks will require maintenance. If these concerned GGNRA areas are maintained, the next generation of Fort Funston users will be able to enjoy the area as much as we presently are.

A few years ago, many of the ice plants were removed by GGNRA because they are not native plants. Without the ice plants to help keep the sand dunes in place, the coastal strong wind has caused further erosion/damage to the area.

As we mentioned earlier, the Fort Funston Recreational Area needs to be maintained since it is such a popular recreational area for many and their dogs, and many of the tourists that frequent the area. We do believe that all wildlife deserves a safe area; however we fail to understand why another area cannot be used from snowy plover protection. There is the whole California coastline that can be preserved for the protection of the snowy plover; whereas there is only one Fort Funston that the dogs can consider as their big playground

Correspondence: I think the GGNRA should not change where humans are permitted to walk with thier dogs. Currently only 1% of the parks are available to us humans who include dogs in our family outings. They are very well behaved + go

everywhere with me! I would not be going hiking without them + it is good for me too.

San Francisco + the bay area has always been dog friendly. The GGNRA lands are mandated to provide recreational opportunities for this urban area. This is not a remote or pristine area - it is a highly populated active urban area + our needs for recreation for people + thier families - including dogs - is a planning priority.

Rules regarding usage of any facility need to be inforced, not have the areas fenced off with no rules. Dogs are not he problem- lack of rule following is the problem. Dogs are not the worst offender on terms of environmental destruction - humans are.

Dogs actually need room to run to stay mentally + physically healthy, as do humans. Thank you! In restricted area there is more environmental damage.

Correspondence: To Whom it May Concern: I have read parts of your huge EIS and tried to understand the Executive Summary, which baffles me. I wonder if you are trying to obfuscate the real reasons for your extreme position regarding dogs.

I live in Muir Beach and this has been a dog-friendly beach for many (40+) years. I have lived here for 16 years and can see the beach from my window. Most of the time I see dogs frolicking at the waters edge and swimming. They are having more fun than the people and they are far less destructive also. If a dog wanders into the "new lands" area, it is the responsibility of their guardian to call them back...if that doesn't happen it is the person who is at fault since dog's can't read signs. On a nice weekend most of the playing in the creek mouth is by children who often build dams (mostly boys) across the endangered salmon habitat. After a big weekend there is also alot of trash that I pick up as do others in my community. I never saw a dog leave trash behind, unless you are talking about their feces and again, a responsible pet owner picks that up. There is definitely far more destructive behavior perpetrated on this area by humans than by dogs. Also I notice that there are no signs to tell people to stay out of the lagoon area. If this is the reason to ban dogs, then I think its only fair to tell people what the rules are because they won't just pick it up telepathically.

Muir Beach is a wonderful place to live - surrounded by open space and vast hiking trails....unfortunately we have only one trail (the coastal trail) where

we can hike with our dogs and you want to take that away from us too. If I understand your position, the only place dogs would be allowed is on Pacific Way and the beach parking lot. Really, that is absurd. Muir Beach is a small beach that is dog-friendly. People who do not like dogs can go to one of the many beaches in the area that are already dog-free. Why would you want to take away the one beach left for people to recreate with their dogs. I thought Golden Gate Recreation Area was for recreating - and that means playing at the beach with your children and/or your pet. Children are far more noisy and destructive yet you wouldn't think of banning them....so why are you picking on dogs? Especially here in probably the most dog-friendly area of the country. From what I read in your EIS you are suggesting that people and their dogs go to Little Beach! This is ludicrous. The road to and from there (sunset way) is not equipped to handle any more traffic. It is basically a fire road and needs to remain that way. There is no parking and what little there is on the roadside is usually residential parking. There are no facilities at Little Beach and during the winter months the beach is pretty much unusable as the sand washes out and it becomes just another hit of rocky coastline.

I read that 99% of GGNRA land is already dog-free - that means 1% is available for people and their dogs. If this is in response to people not liking dogs I find it difficult to believe that the NPS could not let us keep the measly 1% that we have to enjoy our pets. I actually feel that this whole issue should be turned around and dogs should have more off-leash areas when there is such a minute portion of federal lands where they are welcome. What's with the bad attitude toward dogs? I hope that the NPS and the GGNRA can see the error of this plan and continue the status quo here at Muir Beach or, better yet, open more of the trails to people and their faithful companions.

Sincerely,

Lonna Richmond

Correspondence: RE: Dog Management Plan/Draft Environmental Impact Statement

Dear Superintendent Dean:

I am writing as a concerned citizen and avid birder and wildlife advocate regarding the draft Dog Management Plan and Environmental Impact Statement (DEIS) for the Golden Gate National Recreation Area. I use and

enjoy the GGNRA lands and am concerned about impacts from dog-related recreation on the wildlife, habitats and other park users at the park.

I strongly encourage you to improve the plan by implementing the following steps:

1. Where possible there should be designated off-leash areas for dog walkers. If possible these areas should be fenced off in order to provide more protection for all park users and create clearer boundaries so that dog owners are aware of how to comply with park rules. It is clear that SIGNS are NOT enough.
2. The Park Service's proposed requirement of 75% compliance is too low. The Park Service should initiate measures to improve compliance.
3. Commercial dog-walking should not be permitted in the GGNRA. This is a commercial activity in the park and the Park Service cannot legally permit it.
4. I think that the majority of trails in San Francisco should be entirely closed to dogs. Under the current plan, nearly every trail in San Francisco is open to at least on-leash dogs, meaning no trails are available for people who prefer to enjoy the outdoors without interacting with dogs.
5. While dogs are important parts of our families and communities, they are just one animal that is having a significant negative impact on thousands of other animals and plants that rely on the park to survive and many other human visitors. The parks should be maintained to be safe and accessible for all users and to protect their natural and cultural resources for future generations.

Thank you for this opportunity to comment on the Dog Management Plan. I encourage you to adopt the best measures to protect the National Park's valuable resources for everyone and for future generations.

Thank you, Norma Tannenbaum

Correspondence: Re: Dog Management in GGNRA

Dear Mr. Dean,

Please count our family as one that has waited for some serious re-evaluation of the dog situation in the parks.

Our experience has been that too many dog owners abuse / ignore existing rules which result in our family not frequenting the parks like we use to.

We are tired of:

1) Dogs off-lease rushing up to our children, as their owners often shout "Don't worry, he (or she) is friendly". Friendly or not, a big dog charging at a small child is unsettling and unwelcomed.

2) Dog waste. While many dog-owners might pick up afterwards, the fact is many don't and can't as their dogs are out-of-sight when off-lease. "Facts on the ground" betray them. The sheer number of animals is part of the problem.

3) Dog owners sense of entitlement. While this is a subjective thing, when I've attempted to ask dog owners to abide by the law, I've been met with disgruntled looks and words.

4) Interference with appreciating environment. Barking dogs is not that different then a blasting radio ' they are not the sounds we came to the parks to hear.

Somehow conveying to dog owners that they are impacting non dog-owners experience is crucial, much like the debate between hikers and cyclists on shared roads.

Good luck! Haydn Reiss San Anselmo / email:

Correspondence: General Superintendent,

Regarding the dog management issue I support Alternative D for all of the sites in the GGNRA.I frequent all of the sites and live near the Homestead Valley and Oakwood Valley areas. I feel strongly that on-leash dogs be allowed only on the fire roads in these areas.

I have witnessed damage to plants and land by dogs. Our natural resources need protection.

Thank you,

Elaine Drude Robert Drude

Correspondence: Dear Mr. Dean:

My take on Ft. Mason changes - let's keep dogs on leashes - have had several near bites this year.

Secondly, some days the flood of rental bikes is overwhelming - don't know how to control that but many seem unaware of pedestrians.

Perhaps pulling up the blacktop + returning the paths back to dirt trails would help. Also better on the knees. Thank you.

Larry Brown

Correspondence: Subject: Public Comments on the GGNRA Draft Dog Management Plan/EIS

Dear Mr. Dean:

I hereby submit the following concerns and comments on the GGNRA Draft Dog Management Plan/EIS regarding the proposed Preferred Alternative for the Sweeney Ridge Trail System located in San Mateo County:

1) I am a Pacifica resident who has been using the Sweeney Ridge Trail System for over 3 years. I typically hike and run the trails 4 days a week with my dog on-leash (6 feet in length) between the Mori Ridge trailhead and Portola Discovery Site or SFPUC Portola Gate. I have also used the trail system for regular hiking with my family without dogs as well as mountain biking. I am fully in support of continued multi use of the Sweeney Ridge Trail System for all uses including dog walking (leash only), hiking, trail running, mountain biking, horseback riding, wildlife watching, etc. I am opposed to GGNRA Draft Dog Management Plan's Preferred Alternative, which would ban on-leash dog walking on the Sweeney Ridge Trail System.

My preference would be for Plan adoption of Alternative A (Map 19-A), which would allow continued multi use (including on-leash dog walking) throughout the Sweeney Ridge Trail System with the exception of the Notch Trail, which would allow hiking only. I would also support Plan adoption of Alternative A with Modification by also limiting use of the Meadow Loop Trail to hiking only. By providing two trails for hiking only, this would help reduce potential user conflicts while protecting the most sensitive habitats within the Sweeney Ridge Trail System. The Notch Trail is a narrow single track trail located within an identified sensitive Mission blue butterfly corridor. The Meadow Loop Trail is also a narrow single track trail located next to a sensitive fresh water wetland that likely supports California red-legged frog and potentially San Francisco garter snake. The rest of the trails within the Sweeney Ridge Trail System are wide enough (8-12+ feet) to allow continued multi use while avoiding user conflicts. Further, these trails are heavily degraded from a habitat standpoint since they are old ranch roads or paved roads that were used to access the old Nike Missile Site. Can you explain why Alternative A or Alternative A with Modification as described above would not be suitable to avoid use conflicts and protect sensitive habitat from trail user degradation? Please explain. Please address the following observations that I've made based on my long term use of the Sweeney Ridge Trail System:

- a) The trail system is made up of mostly wide dirt ranch roads and paved roads (8-12+ feet wide) that can easily accommodate multi use and allow for safe passing by users. These roads are wide enough to allow park ranger and CDF fire truck use. Please explain the reasons why this was not considered when deciding to ban dogs on-leash from the Sweeney Ridge Trail System.
- b) Much of the trail system and surrounding area is degraded with abandoned and graffitied buildings, paved roads and ranch roads. These disturbed areas are not pristine in terms of sensitive habitat with the exception of the butterfly corridor at the Notch Trail and the freshwater wetland next to the Meadow Loop Trail. Please explain how banning dogs on-leash from the Sweeney Ridge Trail System would help reverse this existing degradation. There was no mention in the Dog Management Plan that the abandoned buildings would be removed and those areas restored with native vegetation. Wouldn't this be more effective in improving the trail user experience? Please explain.
- c) The existing ranch and paved trails are surrounded by thick coastal scrub/chaparral vegetation (4-6 feet high in most places) with poison oak. It is highly unlikely that trail users with dogs on-leash would desire to go off trail or let their dogs off-leash so that the dogs could go off trail. Please explain why this was not considered in the Dog Management Plan.
- d) Most of the small offroad trails appear to be caused by wildlife (deer,

coyote, etc.). Please explain why this was not considered in the Dog Management Plan.

The Sweeney Ridge Trail System's topography is steep and rugged and is not suitable for beginner trail users, small children, or people with physical disabilities. This limits the number and diversity of users on the trail system and overall user conflicts. Please explain why this was not considered in the Dog Management Plan.

In my experience, I have never had a conflict with another user while walking my dog on-leash and typically see between 0-20 people during my hikes on average. Considering this low number of user traffic, how can there be a case for significant user conflict to justify banning dogs on-leash from the Sweeney Ridge Trail System? Please explain.

g) I have never observed professional dog walkers with multiple dogs (3 or more dogs) on the Sweeney Ridge Trail System. Please explain if this was a consideration in proposing to ban dogs on-leash from the Sweeney Ridge Trail System.

h) The Sweeney Ridge Trail System is a multi-use trail system typically used by hikers, hikers with dogs on-leash, horseback riders, and mountain bikers. How can the EIS analyze the environmental impacts from hikers with dogs on-leash in isolation from the rest of the users? Please explain.

i) The Dog Management Plan and EIS make the assumption that most hikers with dogs don't have dogs on-leash while on the Sweeney Ridge Trail System. However, in my observations, most hikers with dogs have their dogs on a 6 foot leash as required by GGNRA regulations. Please provide additional factual support for these assumptions.

j) During my 3 years of use of the Sweeney Ridge Trail System and being on the trails approximately 4 days a week, I have observed park rangers only a handful of times. I think that additional ranger presence would help provide incentive for all users to follow the GGNRA regulations, including having dogs on a 6 foot leash. Please explain why this wasn't considered in the Dog Management Plan.

k) There is limited signage at most of the trail heads. For example, there is not much signage at the Mori Ridge Trail entrance and the Portola Discovery Site area (intersection of Sweeney Ridge Trail, Baquiano Trail, and Sneath Lane Trail). There should be additional signage that explains the important rules and regulations applicable to all users similar to the signage installed at the Notch Trail entrance within Skyline College and the Milagra Ridge Trail System entrance. This would significantly help in reducing potential user conflicts by educating trail users and reinforcing the

regulations. Please explain why this wasn't considered in the Dog Management Plan for reducing user conflicts.

l) In order to protect the surrounding habitat and make sure trail users stay on the designated trails, there should be additional signage installed at the trail heads explaining 1, v/illustrations the local habitat and wildlife. This signage should be similar to the signage installed at the Notch Trail entrance within Skyline College and the Milagra Ridge Trail System entrance. This would also help educate and reinforce GGNRA regulations. Please explain why this wasn't considered in the Dog Management Plan Inv reducing potential user conflicts within the Sweeney Ridge Trail System. m) Banning hikers with dogs on-leash would remove a significant user group from the Sweeney Ridge Trail System. Most of the hikers with dogs are local community residents and hike the trail often. Considering that the trails are steep and rugged and fairly remote, hikers with dogs serve as important eyes and ears on the trail system, especially since there is limited ranger presence. Please explain why this was not considered in the Dog Management Plan.

n) The Sweeney Ridge Trail System is one of the few trail systems left in the Bay Area to allow hiking with dogs on-leash. The trail system offers long and steep hikes that are great exercise for both the dog and dog owner. The Dog Management Plan does not provide an "apples to apples" analysis when describing alternative nearby locations to the Sweeney Ridge Trail System for hiking with dogs on-leash. Please explain this discrepancy.

3) Please address the following specific comments regarding sections of the Dog Management Plan/EIS:

a) Page 108, Chapter 2, the National Park Service Preferred Alternative section, Sweeney Ridge / Cattle Hill subsection--

i) Please elaborate on how not allowing dog walking within the Sweeney Ridge area would protect Mission blue butterfly habitat? Dogs are required to be on a 6 foot leash per the regulations and most dog walkers using these trails have their dogs on a leash. Also, there are other users on the trail system, including hikers without dogs, mountain bikers and horseback riders. How is it that dog walking can cause impacts to Mission blue butterfly habitat but hiking without dogs, mountain biking and horseback riding doesn't? Please explain.

ii) Considering that the Sweeney Ridge Trail System is made up of wide dirt ranch roads and paved roads and includes numerous abandoned structures and debris, how is it that this portion can be considered undisturbed contiguous habitat that is rare and contains wildlife that could be disturbed by the presence of dogs? Other areas outside of the designated trail system

are inaccessible to hiker and dog alike due to the rugged topography and dense chaparral and poison oak vegetation. These are the areas that should be considered undisturbed contiguous habitat and by its very nature is already protected from degradation by humans and dogs. Please explain.

iii) The Sweeney Ridge / Cattle Hill subsection states that "this site is contiguous with the San Francisco watershed, which also does not allow dogs." This statement is misleading and incorrect. In fact, the Sweeney Ridge / Cattle Hill Trail System is contiguous to the San Francisco Public Utilities Commission Watershed Lands, which is predominantly off limits to the public, not just dogs, since these are pristine lands that provide the Bay Area with 15% of its drinking water source. Please explain why this incorrect comparative statement was made to support the Preferred Alternative?

iv) This subsection states that "Alternative C would be clear to the public and would be easily enforceable by park law enforcement staff." This statement is incorrect since it's not clear how the GGNRA will notify the public that dog walking is not allowed within the Sweeney Ridge area. Not to mention, other nearby San Mateo County and San Francisco County GGNRA sites are proposing their own site-specific areas where dog walking will be allowed, including such nearby sites as Mori Point and Milagra Ridge. Please consider that the public can access the Sweeney Ridge Trail System from multiple access points, and that there currently is limited signage to help educate the public to the GGNRA rules and regulations at the major trail heads within the Sweeney Ridge Trail System. This all seems like it will be a nightmare to effectively make clear to the public where dog walking is allowed/not allowed and to enforce. Wouldn't it be more effective to educate the public with appropriate signage and ranger presence while still allowing dog walking within the designated trails as is currently allowed? Please explain.

v) This subsection states that "Alternative C would allow multiple user groups to experience the trail and provide balance." This statement is incorrect. By not allowing hikers to walk with their dogs on-leash on most of the trail system, you are not allowing a significantly large user group from experiencing the trail. Please consider that many of the users of the Sweeney Ridge Trail System live locally and access the trail system from 3 very different geographical trail access points. These include the Mori Ridge Trailhead at Shelldance Nursery in North Pacifica, the Sneath Lane Trailhead in San Bruno, and the Baquiano Trail in South Pacifica. Please explain how this will allow multiple user groups to experience the trail system and provide balance?

b) P. 203-207, Chapter 2, Sweeney Ridge and Cattle Hill section of Table 5'

i) There is a consistent argument made in this portion of Table 5 that Alternative C, the Preferred Alternative, which would not allow dog walking within the Sweeney Ridge Trail System, would have a negligible impact on most of the environmental resources because of the physical restraint of dogs via leash and dog walking only occurring on previously disturbed/designated trails. Why isn't this same argument made for Alternative A, the No Action Alternative? Under the No Action Alternative, dog walking with a leash would continue to be allowed throughout most of the Sweeney Ridge Trail System. The current GGNRA regulations require that dogs must be on a leash (6 feet in length) at all times and dog walking shall only occur on the previously disturbed/designated trails within the Sweeney Ridge Trail System. Per the GGNRA regulations for the Sweeney Ridge Trail System, off-leash dogs are prohibited. Therefore, wouldn't Alternative A have similar negligible impacts on most of the environmental resources because of the mandatory physical restraint of dogs via leash and dog walking only occurring on previously disturbed/designated trails? Please explain.

P. 273, Chapter 3, Table 9 '

i) For the Sweeney Ridge / Cattle Hill site, the percentage of visitors walking dogs is described as Low to Moderate. However, it has been my experience (using the trail system approximately 4 days a week for at least 3 years) that the percentage of visitors walking dogs out of the total visitors (hikers, dog walkers, horseback riders, mountain bikers, etc.) is Moderate (10-30 percent) to High (> 30 percent). This means that visitors walking dogs represent a significantly large proportion of total visitors using the Sweeney Ridge Trail System. Please elaborate on how this visitor data was collected and why there seems to be a discrepancy in the proportion of visitors walking dogs?

d) P. 278, Chapter 3, Sweeney Ridge / Cattle Hill subsection '

i) This subsection states that "Sweeney Ridge has low visitor use, consisting mostly of bikers and hikers, and low to moderate use by dog walkers (table 9)." Based on my experience using the Sweeney Ridge Trail System, I agree that Sweeney Ridge has low visitor use compared to other GGNRA sites. I disagree that visitor use is mostly bikers and hikers. In my experience, visitor use is mostly hikers and dog walkers. Please explain how this information was assessed and why it was assumed that bikers make up a large proportion of users on Sweeney Ridge? I also disagree that the proportion of dog walkers is low to moderate. Based on my experience, the proportion of dog walkers is moderate to high. Please explain this discrepancy.

ii) This subsection states that "the closest off-leash dog walking areas

outside park property are Esplanade Beach in Pacifica and the San Bruno Dog Park." First, why are off-leash dog walking areas provided as examples when the Sweeney Ridge Trail System only allows on-leash dog walking? Other nearby examples should include on-leash dog walking areas. Second, even though the City of Pacifica allows dog walking on Esplanade Beach, for several years, Esplanade Beach has been completely inaccessible to the public, especially for dog walking, due to significant coastal erosion and storm destruction of coastal access points to this beach. Please explain these discrepancies.

P. 279-282, Chapter 3, Visitor Experience '

i) This section provides a description and analysis of the visitor experience to the GGNRA sites relative to off-leash dogs. Please explain why this section does not also provide a description and analysis of the visitor experience relative to on-leash dogs? This would be especially applicable to the Sweeney Ridge Trail System (which currently allows dog walking on-leash only) since none of the Alternatives proposed for the Sweeney Ridge Trail System would allow off-leash dog walking. Please explain.

P. C-10, Paragraph 2, Appendix C, Potential Impacts to Vegetation from Dog Walking '

i) This paragraph discusses that to minimize impacts to coastal scrub, chaparral, and grassland plant communities that are found at the GGNRA sites (including Sweeney Ridge / Cattle Hill), on-leash dog walking would be required at all sites except Oakwood Valley. It further discusses that by restricting dog walking to a 6-foot leash, the impacts would be limited to a 6-foot corridor immediately adjacent to the trails. This paragraph concludes by stating that "overall, impacts would be limited to the trail and the 6-foot corridor, which is a relatively small impacted area when compared to the size of each site." Based on my observations using the Sweeney Ridge trails, the trails are located predominantly within coastal scrub, chaparral, and grassland habitat. These trails consist of dirt ranch roads or paved roads that are approximately 8-12+ feet in width. Using the same logic and analysis described in Paragraph 2, one should conclude that since the Sweeney Ridge Trail System already requires dogs to be on-leash (6 feet in length), and since trails are 8-12+ feet in width, the impacts to the predominant habitat surrounding these trails would be negligible. Therefore, why does the Dog Management Plan's Preferred Alternative propose to not allow dog walking on-leash within the Sweeney Ridge Trail System? As described throughout the Dog Management Plan, physically restraining dogs on-leash would protect habitat and wildlife off trail and would eliminate chasing after wildlife. Please explain. P. 293, Paragraph 4, Chapter 4, Potential Soil Impacts Common to all Alternatives '

This paragraph states that "on-leash dog walking is based on an allowed 6-foot dog leash. In general, and assuming compliance, impacts as a result of the action alternatives (B'E) would be limited to the existing trails/roads and the 6-foot corridors of land adjacent to both sides of the trail ("limit of disturbance," or LOD; LOD = width of trail plus 12 feet). Restricting dogs to trails would concentrate impacts on the already compacted soils of trails/roads, whereas dog walking off-leash may cause more dispersed impacts over a wider area." Based on my observations using the Sweeney Ridge trails, the trails consist of already compacted dirt ranch roads or paved roads that are approximately 8-12+ feet in width. Using the same logic and analysis described in Paragraph 4, one should conclude that since the Sweeney Ridge Trail System already requires dogs to be on-leash (6 feet in length), and since trails are 8-12 feet in width, the impacts to soils and erosion would be negligible. Therefore, why does the Dog Management Plan's Preferred Alternative propose to not allow dog walking on-leash within the Sweeney Ridge Trail System? Please explain.

h) P. 438-439, Chapter 4, Sweeney Ridge / Cattle Hill Alternative A: No Action '

i) It is stated that "this site has documented high visitor use by dog walkers and 55 leash law violations were recorded in 2007/2008 (table 9): therefore, off-leash dog walking is currently occurring along the trails of Sweeney Ridge.- I agree that there is high visitor use by dog walkers. Please make this correction in table 9 since it currently says low to moderate. I disagree with the assumption that because there were leash law violations over a two year period, that most dog walkers using the Sweeney Ridge Trail System have their dogs off-leash. Based on my experience of using the Sweeney Ridge Trail System (approximately 4 days a week for the past 3 years), I have observed that most dog walkers have their dogs on-leash. Rather than proposing to ban on-leash dog walking within the Sweeney Ridge area, wouldn't it be more effective to increase ranger presence (especially during busier times such as on weekends) and educate users of the GGNRA's on-leash rules in order to deter this behavior? Wouldn't it be more effective to provide better signage at the trail heads to explain the rules and regulations and why it's important to keep dogs on-leash and on trails in order to deter this behavior? Please explain.

ii) What is the total number of dog walkers that visited the Sweeney Ridge Trail System during 2007/2008? Without knowing this number, it is impossible to know what percentage of total dog walkers were not obeying leash laws. This makes the 55 leash law violations meaningless without a total number of dog walkers to base it on. Please explain this discrepancy.

iii) Is there more comprehensive data over a longer time frame (10 years) that can be evaluated to determine dog walking trends within the Sweeney

Ridge Trail System?

Making off-leash dog walking assumptions based on two years worth of incomplete data does not follow appropriate methodology. Please explain.

i) P. 440, Chapter 4, Sweeney Ridge / Cattle Hill Alternative C: Emphasis on Multiple Use, Balanced by County

i) It is stated that "under Alternative C, no dog walking would be allowed at Sweeney Ridge. Therefore, no impacts on soils from dogs would occur at this site, because dog use would be eliminated. Soil disturbance and compaction would no longer occur." I disagree with the statement that soil disturbance and compaction would no longer occur. Other users that would be allowed within Sweeney Ridge include hikers, mountain bikers, and horseback riders. These uses would surely cause further soil disturbance and compaction. Please explain this discrepancy.

j) P. 440, Chapter 4, Sweeney Ridge / Cattle Hill Alternative C: Emphasis on Multiple Use, Balanced by County '

i) It is stated that "on-leash dog walking is based on an allowed 6-foot dog leash. Since dog walkers may walk along the edges of the trails, dogs would then have access to the adjacent land 6 feet in both directions, resulting in an LOD area for soils that would extend 6 feet out from both edges of the trails. In general, impacts on soils would be limited to the existing trails and the 6-foot corridors immediately adjacent to the trails." I disagree with the statement that there would be an LOD area for soils that would extend 6 feet out from both edges of the trails. The Sweeney Ridge Trail System consists of 8-12+ feet wide dirt ranch roads and paved roads surrounded predominantly by extremely dense chaparral and coastal scrub (poison oak) vegetation. In most places the chaparral and coastal scrub vegetation is at least 6 feet in height. This makes the side of these trails inaccessible to both humans and dogs. Please explain how there can be impacts within these 6-foot corridors immediately adjacent to the trails due to this natural vegetative obstacle?

k) P. 677, Chapter 4, Sweeney Ridge / Cattle Hill Alternative A: No Action

i) It is stated that "under Alternative A, dogs would continue to contribute to physical disturbance at both sites through trampling, digging, and dog waste. In addition, since off-leash dog walking currently occurs at the sites, it is likely that dogs would continue to walk or run through other undisturbed areas. Therefore, impacts on coastal scrub/chaparral/grassland vegetation as a result of Alternative A would continue to be long term, minor, and adverse at these sites because effects would be measurable and perceptible, but would be localized in a relatively small area." I disagree

with this assessment. The Sweeney Ridge Trail System consists of 8-12+ feet wide dirt ranch roads and paved roads surrounded predominantly by extremely dense chaparral and coastal scrub (poison oak) vegetation. In most places the chaparral and coastal scrub vegetation is at least 6 feet in height. This makes the side of these trails inaccessible to both humans and dogs. Further, on P. 540 of the Dog Management Plan, a study by Andrusiak (2003, 3.2) is cited that suggests that dogs traveling quietly along a trail with screening vegetation on both sides are unlikely to disturb or even encounter wildlife. This study along with other studies were summarized in this section to provide a basis for discussing impacts on vegetation. Since the dense and tall chaparral and coastal scrub vegetation within the Sweeney Ridge Trail System acts as barrier and screening vegetation, how can it be concluded that dogs would cause continued measurable and perceptible impacts to coastal scrub/chaparral/grassland vegetation if its unlikely for dogs to trample through it or be triggered to trample through it by wildlife? Please explain.

l) P. 681, Chapter 4, Sweeney Ridge / Cattle Hill Alternative

i) It is stated that "physically restraining dogs on-leash would protect vegetation off trail. Therefore, assuming compliance, the overall impacts on coastal scrub/chaparral/grassland vegetation from on-leash dog walking at Sweeney Ridge and Cattle Hill would be negligible because impacts would result in no measurable or perceptible changes in these plant communities." Why wasn't this same assessment made for Alternative A: No Action? Alternative A would continue to allow dog walking on-leash and similarly should assume compliance. Further, why isn't this physical restraint with a leash' argument not applied for all environmental resources under Alternative A with a conclusion that there would be negligible impacts on resources? Please explain.

m) P. 698, Chapter 4, Wetlands and Aquatic Habitats ' i) Within the Sweeney Ridge Trail System, there is a freshwater wetland located adjacent to the Meadow Loop Trail. This section did not include an analysis for Sweeney Ridge and this freshwater wetland. Please address.

n) P. 1158-1159, Chapter 4, Part 2, Sweeney Ridge / Cattle Hill Alternative A '

i) This section states that "Alternative A would continue to result in long-term minor adverse impacts on the Mission blue butterfly at Sweeney Ridge through damage to host plants and habitat in the trail beds and adjacent areas as a result of dogs." Please explain whether there is a high occurrence of lupine host plants and habitat within the trails beds. In my experience, the Sweeney Ridge Trail System is made up of wide dirt and paved roads/trails. The only vegetation observed within the dirt roads are invasive weedy

species. Paved roads do not contain vegetation. Further, these roads/trails are used by park ranger vehicles, horseback riders, mountain bike riders, and hikers without dogs. Wouldn't these other uses also have a damaging effect on host plants and habitat in the trails beds? Please explain.

o) P. 1162, Chapter 4, Part 2, Sweeney Ridge / Cattle Hill Alternative E '

i) This section states "the long-term minor adverse impacts from dogs in the LOD would occur in a relatively small area when compared to the site as a whole; therefore, the overall impact on the Mission blue butterfly from on-leash dog walking at Sweeney Ridge would be negligible, assuming compliance." Why wasn't this assessment also applied to Alternative A? Please explain.

p) P. 1210-1211, 1213, Chapter 4, Part 2, Sweeney Ridge / Cattle Hill Alternative C / Preferred Alternative '

i) This section states "at Cattle Hill, dogs would be allowed on-leash on the Baquiano Trail from Fassler Avenue up to and including the Farallons View Trail. Physically restraining dogs on-leash would not allow dog access to any water bodies that support the frogs or nonbreeding or critical habitat. Therefore, assuming compliance, Alternative C would result in negligible impacts on the frog at Cattle Hill because no measurable or perceptible changes in frogs or critical habitat or nonbreeding habitat would occur." Since Alternative A would also require all dogs to be on-leash, physically restraining dogs on-leash would also not allow dog access to any water bodies that support the frogs or nonbreeding or critical habitat located within the Sweeney Ridge Trail System and would therefore result in negligible impacts. Why wasn't this assessment made for Alternative A? Please explain.

q) P. 1231-1232, 1234 Chapter 4, Part 2, Sweeney Ridge / Cattle Hill Alternative C / Preferred Alternative '

i) This section states that "although dogs would be allowed on the Cattle Hill trails, dogs would be physically restrained on-leash and the leash policy would be enforced. If dogs are physically restrained on-leash at this site, they should not gain access to dispersal habitat and should not affect the snake. Therefore, assuming compliance, alternative C would result in negligible impacts on the snake at Cattle Hill; no measurable or perceptible changes to individual snakes, the population, or designated critical habitat would occur." Since Alternative A would also require all dogs to be on-leash, physically restraining dogs on-leash would also not allow dog access to dispersal habitat located within the Sweeney Ridge Trail System and would therefore result in negligible impacts. Why wasn't this assessment

made for Alternative A? Please explain.

r) P. 1545, 1548 Chapter 4, Part 2, Sweeney Ridge / Cattle Hill Alternative C / Preferred Alternative '

i) This section states that "impacts on visitors who would prefer to walk dogs at the park would be long term, minor, and adverse. Adverse impacts would occur since dog walkers would no longer be allowed in the Sweeney Ridge site. Visitors would no longer be able to enjoy exercising, socializing, and playing with their dogs at Sweeney Ridge Impacts would be minor since this is a low to moderate use site for dog walkers. Some visitors in this user group may find a different area in GGNRA or a local city or county park to walk their dogs. As a result, visitation by local residents may decrease slightly in this area." Based on my experience using the Sweeney Ridge Trail System (approximately 4 days a week for the past 3 years), the proportion of dog walkers out of the total number of users is moderate to high and therefore adverse impacts should be moderate; not minor. Considering that most Bay Area state, county and local city parks do not allow dogs on-leash, there are not many options for dog walkers to choose from when they wish to hike with their dog on- leash. Dog parks are very limiting since they don't allow the owner to exercise with their dog. Other GGNRA sites are also limiting since they do not offer similar long and steep trails to hike that the Sweeney Ridge Trail System has to offer. Further, most dog walkers I've observed using the Sweeney Ridge Trail System are regular local community users. Therefore, visitation to Sweeney Ridge by local residents who wish to hike with their dogs on-leash would significantly decrease. Please explain how this information and analysis was derived since it conflicts with my experience and observations at Sweeney Ridge.

Please feel free to contact me via email at [redacted] if you have any questions regarding my concerns and comments. I would also like to request that you place me on your mailing list so that I may receive notifications of future public hearings and updates regarding the GGNRA Dog Management Plan/EIS.

Sincerely, Brett Becker, AICP Sweeney Ridge Trail User

Correspondence: Re: Draft Dog Management Plan/Draft Environmental pact Statement

Dear Superintendent Dean:

I am a senior citizen and have lived in the Sunset District of San Francisco for 45 years. For the past 40 years, I have been jogging at Ocean Beach and Fort Funston several times each week, sometimes with a dog and sometimes without. In the 1970's I took my children to these beaches. I am a member of the SF Botanical Garden, the International Palm Society, and a supporter of the SF Opera and Ballet.

Although I am a strong supporter of the environment and I love seeing the shorebirds, I am opposed to your preferred alternative because the evidence you present of environmental damage by dogs is not strong enough to support such a drastic change in policy.

-The DEIS looks only at the impact of actions of dogs and does not consider the impact of the actions of humans or other factors even though you admit that these exist. For example, it states that Ocean Beach has had an oil spill and will probably have another. Page 1114 states that "the total elimination of dogs in the park would still leave disturbance effects on special status species by other factors, such as visitors without dogs who would continue to visit the park". Since the DEIS makes no attempt to identify impacts related to an oil spill or other visitors, there is no way to assess whether eliminating dogs from an area would make any difference at all. This analysis needs to occur before alternatives can be developed.

-The DEIS states in many places that dogs disturbing wildlife is a reason for restricting or banning them. However, the GGNRA's own statistics in Table 6 show very few documented instances of disturbances and few instances of dogs being in closed areas. Only 2 cases of disturbances are documented at Fort Funston. This is clearly not enough to justify removal of off-leash privileges.

-On p. 1250 in the section on Alternative A, the DEIS cites studies that have found that dogs disturb birds but fails to mention studies that do not support that claim. It also fails to discuss conclusions or statements in any of the studies that do not support the view that dogs disturb the snow plover. This does not follow the NEPA process, which mandates that a conclusion can only be reached after a study examining all the facts has been completed. For example:

1. The DEIS does not cite Forrest and Cassady St. Clair (2006) which studied diversity and abundance of bird and small mammals at 56 sites in urban parks, similar to the GGNRA, in Edmonton, Alberta. Half of the sites were visited by off-leash dogs and half were on-leash or no dogs. On-leash sites had high public compliance with leash laws. The study discovered that

whether a site was on- or off-leash had "no measurable effect on the diversity or abundance of birds and small mammals."

2. The Hatch report, which you cite (The November 15, 1996 report "Western Snowy Plover (a Federally Threatened Species) Wintering Population and Interaction with Human Activity on Ocean Beach, San Francisco, GGNRA, 1988 through 1996" by Daphne Hatch) actually found that there was an increase of more than 100% in the number of snowy plovers in the years after the 1979 Pet Policy went into effect (allowing dogs off-leash on Ocean Beach and elsewhere). Hatch could not find any negative relationship between the number of dogs on the beach at a given time and the number of plovers on the beach at the same time. The 1996 Hatch Report states: "Factors other than the number of people or dogs, possibly beach slope and width, appear to exert greater influence over Snowy Plover numbers on Ocean Beach."

3. Although the Hatch Report makes the claim that "Disturbance [of plovers by dogs] results in lost energy intake due to reduced foraging and feeding efficiency, and increased energy expenditure as a result of fleeing from disturbance," it also says that "Little research has been conducted on the energetic expenditure as a result of fleeing from disturbance." Therefore one has to conclude that the first statement is a supposition, not a fact.

4. A follow-up 2006 Hatch Report considers effects on the numbers of plovers after two Federal Court rulings reinstated the 1979 Pet Policy, allowing off-leash dogs back on Ocean Beach. The maximum number of plovers ever recorded was in 1994, a time there were no restrictions on off-leash dogs on Ocean Beach.

In my own 40-year experience at Ocean Beach, I have not seen the number of shorebirds decline even though dogs have been allowed off-leash for most of that time. The DEIS agrees, stating that birds are numerous at Ocean Beach after many years of off-leash activity and recent "noncompliance" with leash laws. So it may be that you are "barking up the wrong tree" so to speak in restricting dogs in some places and banning them in others.

I believe the DEIS must examine all the studies, not just ones that support no dogs, and better analyze the impacts of other recreational uses and environmental phenomena before completing this plan.

Very truly yours

Joanne Scott

Correspondence Letter
Type:
Correspondence: Re: Draft Dog Management Plan/Draft Environmental Impact Statement

Dear Superintendent Dean:

I am a senior citizen and have lived in the Sunset District of San Francisco for 45 years. For the past 40 years, I have been jogging at Ocean Beach and Fort Funston several times each week, sometimes with a dog and sometimes without. In the 1970's I took my children to these beaches. I am a member of the SF Botanical Garden, the International Palm Society, and a supporter of the SF Opera and Ballet.

I do not agree with the GGNRA's preferred alternative for the following reasons:

-The DEIS does not consider recreational uses of the GGNRA as it is required to do in it's enabling legislation. The legislation that created the GGNRA states that, the "Secretary of the Interior shall utilize the resources in a manner which will provide for recreation and educational opportunities consistent with sound principles of land use planning and management". Yet none of the objectives in the DEIS includes recreational opportunities (Executive Summary, p.ii).

-The DEIS does not adequately address recreational components other than dogs and so one cannot logically conclude that it is the dogs/dog walkers that are causing the problems. Chapter 3, p.225, states that at Fort Funston "soil compaction is common along social trails that have been created by-- and e heavily used by--bikers, hikers, runners, and dog walkers " As a long-time Fort Funston user, I know this is true. I know also that horses are probably the biggest cause of soil compaction and feces. However, horses are not mentioned. At Ocean Beach, large foot races such as the "Turkey Trot" have taken place during the time the beach is closed to off-leash dogs because of the Snowy Plover's presence. The DEIS needs to do a more thorough job of identifying a full set of recreational components at each location where changes are proposed. Once this is done, it will be possible to do a quantitative analysis of the recreational components which are having detrimental effects.

-The DEIS does not address any of the beneficial effects of recreation, with or without dogs. For example, the Healthy People, Healthy Parks initiative encourages people to walk and exercise more. Statistics show, and I know personally, that having a dog encourages us to get out and to do just that. Recreational uses including dog walking have other benefits -- reduced stress, increased appreciation of the environment, better health, and

increased longevity. The GGNRA must balance these benefits against the benefits of reducing the amount of land available for recreation. But the DEIS has not done this; it only discusses the drawbacks of recreation and compares these to the benefits of increased preservation/conservation. A true analysis must compare the benefits and drawbacks of both recreational uses and preservation/conservation.

-The DEIS excludes the quality of the urban environment from its scope, but the GGNRA was established to provide needed open space for our large metropolitan area. Chapter 4, which discusses environmental impacts, should include a thorough discussion of the impacts to the San Francisco urban environment and to our city parks. However, these impacts have clearly not been analyzed. The discussion of each area contains essentially the same phrases, that there are 38 parks with a 10-mile radius and that the effects of increased use are not expected to be great. On p.424-, the DEIS states that impacts to Lake Merced, the closet off-leash park to Fort Funston, would be minor since not all dog walkers would stop using Fort Funston. But there are no numbers to support this. The DEIS must include the number of dog walkers currently visiting Fort Funston, the number expected to move to other areas, the acreage available to off-leash dog walking now and with the preferred alternative at Fort Funston, and the acreage available to off-leash dog walking in the Lake Merced area. Only with this information can a reasonable assessment of impacts to parks be developed.

In summary, I believe the DEIS is incomplete in its current state and doesn't have sufficient information to allow the GGNRA to arrive at an intelligent decision. It must: ? Provide for recreational opportunities as one of its objectives ? Identify all recreational uses and their impacts for the areas where changes to dog policies are contemplated ? Look at the benefits of recreation as well as the drawbacks when evaluating alternatives ? Clearly analyze the impacts to city parks using quantitative data

Very truly yours, Joanne Scott San Francisco, CA 94116

Correspondence Type: Letter
Correspondence: Dear Superintendent Dean,

The purpose of this letter is to provide comments on the GCNRA proposed Dog Management Plan. These comments apply to the Alta Trail/Oakwood Valley area of the park. I feel I am well qualified to Comment on this area because I live in Marin City and have been taking walks in this area several times a week for over 25 Years. I am very familiar with how the trails and

fire roads in this area have been used historically and how they are used today. I am also familiar with the flora and fauna of this area, and how these have changed over the years.

I understand the basis for the rules governing dog management in the majority of our national parks, most of which are in less urban areas of our country. The GGNRA post-dates the urbanization of the Bay Area, and is in many cases immediately adjacent to areas that were densely populated well before the GGNRA was created. For this reason, I feel that the historic usage of GGNRA land adjacent to these populated areas should be taken into consideration when formulating the dog management plan. It seems to me that the goal of the plan should be to protect the GGNRA lands as they now stand, but not attempt to turn back the clock to when the adjacent lands were rural and the GGNRA did not exist.

Among the goals of the plan are to protect the existing wildlife from the impact of dogs, prevent erosion of the land, maintain area access for fire fighting purposes, protect the endangered blue butterfly habitat, promote the access and enjoyment of the area by the public, and accomplish these goals without undue expenditure of park resources (budget and manpower).

In my opinion, based on my observational qualifications summarized in the first paragraph above, the Dog Management Plan proposed by the Park Service for the Alta Trail Oakwood Valley area is unnecessarily restrictive to achieve the goals put forth by the Park Service. I will go through these goals in detail now, presenting the basis for my positions in each case.

The Dog Management Plan proposes to designate the lower part of the Oakwood Valley Fire Road as a ROLA route. I agree with the proposed designation of this route. I feel that the designation of the Oakwood Valley Trail as a no dogs allowed route is acceptable because dog walkers will still have use of the parallel fire road to walk their dogs. Since the trail is narrower than the road, it will be easier for non dog walking users to use it comfortably since they will not have to squeeze by dogs when using it. My only comment on this section of the Fire Road is that I think it is rather a waste of money to build a fence on either side of it. I can't imagine what purpose it achieves. The road is lined on both sides by a wall of poison oak. The only thing sensitive about the habitat here that could be impacted by straying from the road is the skin of the straying humans to the consequences of contact with the poison oak. Certainly the dogs can and do run off the road, but their impact in doing so is nil. The wildlife adjacent to the road has been living with dog walkers for decades and are quite accustomed to making any accommodations for domestic dogs. You should forget the fence and use the funds saved for much more worthwhile park projects. I will address the adverse impact of the proposed fence on the local

wildlife later in this letter.

The Dog Management Plan proposes to designate the stretch of the Alta trail from the Donahue cul-de-sac to the Orchard Fire Road as a leash required area. It also designates the upper stretch of the Oakwood Valley Fire Road and Trail from the proposed Double Gate up to where it joins the Alta Trail as a leash required area. I am very puzzled why you have made this designation, instead of also making it a ROLA route. This route has been effectively used as a ROLA for decades now with no undue effect. It has the same habitat and usage as the Oakwood Valley Fire Road. I would have found it acceptable to designate the Oakwood Valley Road as ROLA, then there is no logical reason why the remainder of the Fire Road and this section of the Alta Trail (actually a road as you know-- it used to be called Alta Ave.) should not also be designated a ROLA. Impact on wildlife is again negligible since the birds, rabbits, mice, gophers, deer, and coyotes that live or hunt adjacent to the roads have been living with the unleashed dogs for decades, and just stay away from the road when it is being used by humans. Using the excuse that this is endangered blue butterfly habitat to impose a leash requirement is a red herring. The dogs do not trample the lupine (blue butterfly food source) growing in the area, and the humans generally stay on the road, where the lupine does not grow. You have also included the lower part of Alta Avenue (starting at the Donahue cul-de-sac) as a leash required zone, which surprises me since this stretch, although having an NPS easement, is not even within the Park boundaries. I would not think you would legally have the authority to impose a Dog Management Plan on this portion of Alta Avenue, which lies outside the park.

For some reason the short (approximately two city blocks long) stretch of Alta Ave. that runs from the Orchard Fire Road intersection to the New Gate has inexplicably been designated as a no dogs allowed zone. This makes no sense whatsoever since it prevents weekend hikers with dogs from making a loop trip along the Oakwood Valley Fire Road and Alta Ave. I can see no logical basis for designating these two blocks as a no dog zone since it has dog walking allowed zones at either end of it and has the same habitat as these dog walking allowed zones. This nonsensical designation should certainly be corrected in the final plan.

I now want to present a few more reasons why the leash required routes (plus the two-block long section described in the preceding paragraph) should be designated as ROLAs rather than leash required routes. One of the objectives of the GGNRA, besides protecting the environment, is to promote the enjoyment of the area by the adjacent human population. Based on my observations, the primary users of the Oakwood Valley Fire Road/Alta Avenue routes are walkers, followed closely by dog walkers, then to a somewhat lesser but still significant extent, bicycle riders followed by

joggers. The vast majority of these users, particularly, of Alta Ave., live locally. I would estimate that on weekdays over 95% of Alta Avenue users are locals, and on weekends over 90%. During the day some of the dog walkers are professional dog walkers. But the vast majority of the dog walkers on Alta Avenue are locals taking their dog out for their daily walk (often in the early evening after work). And the majority of them currently do so without the use of a leash. And why not? There is no good reason to use a leash up there. If you want to maximize the enjoyable use of the area by the public, you should have very, legitimate reasons for prohibiting unleashed dog walking on Alta Avenue. By requiring the use of leashes you will be reducing the enjoyment of the area by the public by a significant degree, and will be generating some very irate citizens who have been walking their dogs there for decades.

I now want to address a consideration involving erosion prevention. While this particular consideration is somewhat peripheral to dog walking, since dog walking does not cause erosion, it is a central consideration for preservation of the road for recreational use access and fire fighting purposes, and also has an impact on wildlife protection, blue butterfly preservation, and the park budget, all of which I believe adds some necessary perspective to the Dog Management Plan. This human activities impact is a case of "we have met the enemy and they is us." Or, to be more exact, they is GGNRA personnel and GGNRA contractors. The truth is that an impact on the Oakwood Valley Fire Road/Alta Avenue routes that dog walking may have is trivial compared to that perpetuated by GGNRA personnel and GGNRA contractors. Winter after winter I have seen park and contractor vehicle using Alta Avenue (and the adjacent roads) while those roads were still wet and muddy. These vehicles' wheels make ruts in the rain softened roads. The runoff from the subsequent rains run down these ruts and end up causing severe erosion of the roads. To mitigate the damage to the roads caused by your own vehicles using them in winter when the roads are wet, huge Caterpillar earth movers are brought in during the dry season, at significant expense I am sure, to scrape another 6-inches off the surface of the roads to attempt to correct the erosion. There is no need to allow park service or contractor vehicles to use these roads to perform surveillance or other maintenance activities in winter. Their use as fire roads is not required in the middle of winter. The GGNRA should create administrative rules that prohibit the use of these dirt roads by park and contractor vehicles when they are wet and muddy until they dry out, except in cases of emergency. The impact of your use of motor vehicles on these routes (and occasionally off road - I have seen it!) is exponentially greater than the impact of dog walkers.

And other human activities also make the impact of dog walking trivial by comparison. For example, the clearing, several years ago, of the large eucalyptus groves on the ridge slope between the Oakwood Valley Fire

Road and Alta Avenue, along with removing the lower branches of the Monterey Cypress trees along Alta Avenue, had an environmental impact on the flora and fauna in the area that was relatively enormous compared to that of dog walking. The ongoing well-meaning experiments with Scotch and French Broom removal and suppression along a stretch of Alta Avenue have had a much greater impact on the flora and fauna there than dog walking could ever have. Even the gas line surveying done last year along Alta Avenue had a relatively significant impact from wheel rut generation both on and off the road and the removal of plants and limbs to clear the lines-of-sight necessary to perform the surveys. I am not decrying these human activities (except their performance in the winter when the roads are muddy and susceptible to rutting). Certainly the road must be maintained passable to enable its use for fire fighting and recreational access. The eucalyptus removal was part of a federal program to reduce the threat of wildfires to housing in adjacent settled areas (which I directly benefited from), and PG&E must be allowed to survey and maintain their gas and electrical lines that pass through the area. I am pointing out these environmentally impactful human activities only to provide some degree of perspective on the relative impact of dog walking on the area. The point I am trying to make by bringing them up is the degree to which these necessary human activities trivialize to the point of vanishing any impact that dog walking could have on the area even in dog walking's wildest dreams. And yet the Park Service still wants to impose unnecessarily severe walking restrictions even though it will result in a significant loss or benign use and enjoyment of the area by the local residents.

Another consideration I would like to point out is the fact that the proposed fence that the Plan currently shows being built along the Oakwood Valley Fire Road will in all likelihood have a greater negative impact on the local wildlife than the off-leash dog walking that will be allowed there. Having a Fence there will not allow wildlife to cross from one side of the road to the other, which I am sure it currently does all the time when dogs are not present. In recent years we have become more and more aware of the severe impact that fenced roads have on wildlife and the environment. The infamous I-75 highway across the Everglades in Florida is probably the most egregious example of this. In the Canadian Rockies, the Canadian government is busy constructing under- and over-passes crossing the main north-south highway to allow wildlife to go from one side to the other. While it is true that the length of the Oakwood Valley Fire Road being fenced is much shorter than those examples, it will be a significant barrier for any animal smaller than a deer or coyote. Another adverse environmental impact of the plan as currently formulated will be the additional vehicular traffic by park police performing the surveillance needed to enforce the new restrictions. This added vehicular traffic will have a greater impact than the dogs being walked that they are trying to control. Those vehicles will rut the road in winter and may well run over more

wildlife than any dogs might catch; even a few blue butterflies are likely to end up on their front grills.

And finally I want to point out the impact that construction of the fence and gates and the requirement for ongoing surveillance by park police to enforce the policy will have on the GGNRA budget. I am under the impression that almost all national parks have a long list of projects and maintenance that require attention but end up being neglected for lack of funds. I am sure that must also be the case in the GGNRA. By imposing the Dog Management Plan proposed for the Oakwood Valley Fire Road/Alta Avenue routes, you will be diverting funds from other projects that would be much more worthwhile to the park and its users than the overly and unnecessarily restrictive dog management plan as currently formulated. In my opinion, the cost of gate and fence construction and the ongoing expense of park police vehicle and personnel time would be better spent on more worthwhile projects.

I do not own a dog and am not a dog walker, so my use of this area of the GGNRA will not adversely be affected if the Dog Management Program as currently formulated is imposed on the Oakwood Valley Fire Road/Alta Avenue routes. But on my almost daily walks in that area I encounter many people walking their dogs, and observe how much enjoyment both the dogs and their owners derive from that activity. So while I am probably as impartial as it is possible to be on this issue, as well as being very familiar with that area and its flora and fauna, I am inclined to default in favor of the dogs if there is not sufficient reason not to. I certainly would not favor or support slackening the dog management rules that exist in other national parks, where the natural environment does not, and historically did not, support the walking of dogs. Introduction of unleashed, or even leashed, dog walking in those parks would unquestionably have detrimental effects on the natural environment. However, I feel that the Oakwood Valley Fire Road/Alta Avenue routes of the GGNRA are a different situation and that the continued unleashed walking of dogs there will not have a negative effect and should be allowed to continue. In this letter I have tried to provide a logical, responsible, and well reasoned basis for this position, and hope you will take my arguments into consideration when making your final decisions regarding the dog walking plan for this area.

Thank you for your consideration,

Robert Hollingsworth

Correspondence: Re: GGNRA Draft Dog Management Plan / Environmental Impact Statement

Dear Superintendent Dean:

The purpose of this letter is to let you know as a resident of San Francisco and a frequent visitor to Golden Gate Park and Crissy Field, I really do not like your plan to further restrict dog walking in the parks. Although I do not personally own a dog I often walk my sister's dog and love to see dogs and their owners in the park having a great time. You must realize San Francisco is a "dog city" and we need to provide them places like Crissy Field to get some exercise, socialize and enjoy the beautiful beaches. Your Alternative C would be far too hard on dogs and their owners.

As a taxpayer I cannot believe how much money you have already spent on this and how much more you intend to spend to implement your choice. What a waste of time and money. Perhaps you are over-staffed and over-funded.

The telephone survey you rely on is a joke. Nearly half of the responders did not even know how long they had lived in the Bay Area. You must have known by conducting the survey right after the Diane Whipple trial a lot of people would be afraid of dogs off-leash. I grew up in Chicago so know all too well how local officials plan things to get the numbers they want. That reminds me of another problem with your plan. The idea you would send people out to count how many dog walkers are not complying with the new rules is just the kind of thing a government official in Chicago would do. The only way people will ever believe the count was honest is if members of the public, including numerous dog owners, are allowed to participate in that count to be verify the accuracy of the numbers.

If you feel there must be more restrictions placed on dogs at Crissy Field make the Promenade an on-leash area. Otherwise everything else in Alternative A alone. You should also repair the fences around the sand dune if you do not want people and dogs to stay out of there. Some signs would also help.

Finally, I have a very difficult time walking on the Crissy Field Airfield. I have had several foot surgeries in recent years and do not want to have any more. It is dangerous out there with thousands of holes. Why have you chosen the alternative that makes seniors and people with walking problems walk the furthest to enjoy off-leash dog walking? That really is not fair.

Respectfully,

Sally Hanson

Correspondence: Attn: DEIS for Dog Management

Dear Superintendent Dean:

As members of the Golden Gate National Parks Conservancy and frequent visitors to many of the wonderful areas in the GGNRA, we are writing to express our strong support for no change in the current off-leash policy for dogs at Fort Funston. We attended the Open House meeting held on March 5, which was informative and helpful to our understanding of the proposed changes. While there, with the help of a park employee, we were able to examine the data in the DEIS regarding annual reports of dog bites and related problems at Fort Funston. Based on information in Appendix G (Law Enforcement Data), it appears that in 2008 (the most recent year for which data are provided), only three reports of dog bites were taken by LE Rangers and four by USPP. (In addition, there were some reports taken for a category labeled as "Haz Conditions/Pet Rescues.") Surprisingly, we did not find estimates for annual numbers of visits to Fort Funston that could serve as a denominator for determining actual rates of adverse events. But based on our personal experience over many different days of the week and at different times of day, Fort Funston is very popular: the parking lot is often close to full, and dozens if not hundreds of people, with and without dogs, are enjoying the area at any given time. Presumably there is underreporting of problems, but even if the reported numbers were multiplied by a factor of five or ten, it would seem that the rate of dog bites per number of visits is extremely low.

On the other hand, the rate of "happy people with happy dogs off leash" is arguably very high. Given what appear to be large numbers of people who regularly frequent Fort Funston, it is obvious that many Bay Area residents thrive under the current policy. They take advantage of the opportunity to exercise by walking the trails of Fort Funston and, in so doing, to experience the very positive social interactions that spontaneously occur among people when dogs are in the mix. We believe that the "plus" side of maintaining the current off-leash policy far outweighs the relatively few negative reports.

As an older couple, we are concerned that the elderly and disabled who might have difficulty walking with a both a cane and a leash'and who therefore currently enjoy having a scenic place where they can safely and securely have their dogs off leash'will be discriminated against if they are

relegated to the much less desirable sandy area near the parking lot at Fort Funston, as proposed in the DEIS. The other proposed off-leash area at Fort Funston is down at the beach itself, but that is an area that many, if not most, elderly or disabled individuals are physically unable to access. The sandy area near the parking lot is difficult to walk in and will only become more undesirable if all off-leash dogs are required to concentrate there. Fort Funston, because of its openness and the large number of visitors at most times, is also a relatively safe place for women walking alone to give their urban dogs the freedom to run and play.

We frequently bring out-of-town guests (without dogs) to Fort Funston, and they invariably respond positively to the wonderful sense of outdoor freedom and enjoyment that comes from seeing so many happy creatures (human and canine alike) frolicking against one of the most beautiful natural backdrops in the world.

In short, the data in terms of public safety suggest that the current policy has resulted in very few harms to the public relative to its strong positive effects for so many. In addition we are concerned that the proposed limitations in the off-leash areas at Fort Funston will be disproportionately unfair to the elderly and the disabled. Given the tremendous "urban joy" that accrues from the current policy, is there really a need to change it?

It goes without saying that responsible dog ownership is critical, including keeping any potentially bad mannered dogs away from Fort Funston altogether and cleaning up after every dog.

Thank you very much for your attention.

Sincerely,

Martin & Virginia Ernster

Correspondence Type: Letter

Correspondence: Dear Mr. Dean:

Subject: Golden Gate National Recreation Area Dog Management Plan/Draft Environmental Impact Statement, Marin, San Francisco and San Mateo Counties

The Department of Fish and Game (DFG) has reviewed the Golden Gate National Recreation Area (GGNRA) Dog Management Plan draft

Environmental Impact Statement (EIS) and appreciates this opportunity to convey our comments.

National Park Service Preferred Alternatives

DFG recognizes the lengthy and on-going public decision making process conducted by the GGNRA in preparation of the draft EIS. In general, DFG believes that the National Park Service (NPS) Preferred Alternatives represent a reasonable consideration of biological resources in balance with other demands on GGNRA lands. DFG recognizes that the Environmentally Preferable Alternative (Alternative D) was selected for many sites as well as for New Lands. DFG also recognizes that in several cases where the NPS Preferred Alternative is other than the Environmentally Preferable Alternative, the NPS Preferred Alternative is indistinguishable from the Environmentally Preferable Alternative with respect to effects on wildlife. In general, DFG appreciates this opportunity to communicate our overall support for the project as proposed in the draft EIS. We encourage GGNRA to consider the following site-specific comments in preparation of the final EIS.

In cases where Alternative D is not the selected alternative, it is unclear if the Park Stewardship Programs Initiative projects will truly offset the differences in impacts between the selected Alternative and Alternative D as it appears that the implementation of these programs is unrelated to the Alternative adopted. It generally appears that the adoption of Alternative D is most consistent with the overall success of these projects.

Oakwood Valley

The NPS Preferred Alternative (Alternative C) differs from the Environmentally Preferable Alternative in the designation of a regulated off-leash area (ROLA) on the Oakwood Valley Fire Road. Under Alternative D, dogs would be required to be leashed. As stated in the draft EIS, the adoption of Alternative C at this site is likely to result in minor adverse impacts to vegetation. DFG recommends that Alternative D be selected as the adopted alternative as it, by requiring dogs to be leashed on the fire road, would largely avoid impacts to vegetation which may result from trampling, digging, and waste.

Rodeo Beach/South Rodeo Beach

The NPS Preferred Alternative (Alternative C) differs from Alternative D in the designation of an extensive ROLA on Rodeo Beach which under the Alternative D would be split between areas designated for on-leash recreation and areas closed to dogs. Within the ROLA, permit holders would be allowed to have up to six dogs off leash. As stated in the draft EIS,

the adoption of the Alternative C at this site is likely to result in moderate adverse impacts to coastal foredune vegetation due to the large size and location of the ROLA, resulting in long-term adverse impacts to marine mammals and birds. DFG recommends that Alternative D be selected as the adopted alternative as it, by a combination requiring dogs to be leashed and prohibiting dogs from portions of the beach, would avoid impacts to vegetation which may result from trampling, digging, and waste and avoid impacts to marine mammals and birds which may result from repeated flushing, barking, biting, or other pursuit or contact.

Crissy Field

The NPS Preferred Alternative (Alternative C) differs from the Environmentally Preferable Alternative in the designation of a ROLA along the shoreline of Central Beach. Under Alternative D, dogs would be prohibited in this area. As stated in the draft EIS, the adoption of Alternative C at this site is likely to result in minor adverse impacts to coastal dune vegetation; long-term moderate adverse impacts on shorebirds, gulls, terns and marine mammals; and long-term adverse impacts to the federally threatened western snowy plover. DFG recommends that Alternative D be selected as the adopted alternative as it, by prohibiting dogs from the Central Beach shoreline, would avoid impacts to coastal dune vegetation which may result from trampling, digging, and dog waste; impacts to birds which may result from repeated flushing; impacts to marine mammals which may result from biting, barking, or physical contact; and impacts to snowy plover which may result from harassment, including interruption of foraging and roosting behavior.

Ocean Beach

The NPS Preferred Alternative (Alternative C) differs from the Environmentally Preferable Alternative in the designation of a ROLA on the beach north of Stairwell 21. Under Alternative D, dogs would be required to be leashed in this area. As stated in the draft EIS, the adoption of Alternative C at this site is likely to result in minor adverse impacts to beach vegetation, long-term moderate adverse effects on shorebirds, gulls, and terns and marine mammals, and potentially limit use of preferred habitat by the federally threatened western snowy plover. DFG recommends that Alternative D be selected as the adopted alternative, as it, by requiring dogs to be leashed north of Stairwell 21, would avoid impacts to birds which may result from repeated flushing; impacts to marine mammals which may result from biting, barking, or physical contact; and impacts to snowy plover which may result from harassment.

Fort Funston

The NPS Preferred Alternative (Alternative C) differs from the Environmentally Preferable Alternative in the designation of a ROLA on the beach south of the Beach Access Trail and designation of a ROLA between the parking lot and Sunset Trail. Under Alternative D, dogs would be required to be leashed on the beach, dogs would be excluded off-trail between the parking lot and Sunset Trail, and a ROLA would be established at a site adjacent to the Habitat Protection Area. As stated in the draft EIS, the adoption of Alternative C at this site is likely to result in minor adverse impacts to coastal dune vegetation, long-term major adverse impacts on wildlife, and long-term minor-to-moderate adverse impacts to San Francisco lessignia. DFG recommends that Alternative D be selected as the adopted alternative, as it would, by requiring dogs to be leashed on the beach and excluding dogs off trail between the parking lot and Sunset Trail, avoid impacts to coastal dune vegetation and San Francisco lessignia which may result from trampling, digging, and dog waste; impacts to birds which may result from repeated flushing; and impacts to marine mammals which may result from biting, barking, or physical contact.

If you have any questions, please contact Mr. Richard Fitzgerald, Coastal Habitat Conservation Supervisor, at (707) 944-5568; or Mr. Scott Wilson, Environmental Program Manager, at (707) 944-5584.

Sincerely,

Carl Wilcox Regional Manager Bay Delta Region

Correspondence: Dear Supt. Dean:

I am writing to urge you not to implement the proposed changes to the off-leash areas in the GGNRA. I have lived in San Francisco for fifteen years and have a family including a young child and a three-year-old puppy. We especially love hiking as a family with our dog on Montara Mountain (where we usually only run into a few other people or dogs), as well as Ft. Funston, Crissy Field, Ocean Beach and Muir Beach. We enjoy seeing people of all ages, races, family units, and well-socialized dogs out at these beautiful places. I believe that part of the wonderful charm of San Francisco is the openness and tolerance of the people, which is reflected in how beautifully the dogs play when out in these open park spaces. In over a decade of using these spaces heavily with and without a dog I have not

encountered any dog fights in any of them. (The only violence at all that I can think of is hearing on the news that someone was stabbed in the Ft. Funston parking lot, by another person, of course, who was not a dog owner.)

This plan, if implemented, will make the Bay Area less healthy and more dangerous for both people and dogs. Everyone who works with dogs is well familiar with the fact that a dog who is allowed to run and play in open spaces and play and socialize with other dogs is less neurotic and much better behaved than dogs who are left at home or tied up in the yard--those dogs are the ones who become aggressive and hard to control. An excellent example of this is the great behavior of all the dogs who showed up at the protest march on Mar. 21.

Please keep the Bay Area safe and healthy for everyone, and resist these blanket changes that would sabotage something that should be a model for the rest of the state, if not the country. Thank you for your time.

Sincerely,

John Blair

Correspondence: Dear Sir ,

I would like to comment on the rush to judgment proposed in the new guidelines restricting off-leash access to the GGNRA. Rather than formalizing the 1979 Pet Policy, the proposed new regulations are draconian in their scope.

No concern appears to have been shown for those of us, whose main recreation is walking with our dogs in the GGNRA. Elderly dog owners and many others cannot adequately exercise their dogs while the dogs are on leash. As concerned, responsible citizens, we do all in our power to prevent any ecological damage.

The proposed Compliance-Based Management Strategy is much too far-reaching and should on no account be included in any final plan.

Finally, it appears that no credible scientific basis was used in reaching the conclusions of damage caused to wildlife and environment by dogs. Simple observation shows that children cause more damage and I see no mention of

children being banished from all these areas within the GGNRA.

Sincerely,

Peter Blumberg

Correspondence Type: Letter

Correspondence: Dear Sirs/Ma'am,

I am writing to convey my concern about the park's current policy of allowing off-leash dogs all almost all the Golden Gate National Recreation Area, and to request that any future rules or regulations require dogs to be on a leash in most park areas. I have a six year old son and I frequently take him to the Crissy Field Beach, and we are constantly over-run by off-leash dogs who have taken over the beach. The dogs urinate and defecate all over the beach, and while many owners do clean up their dog's poop, some do not and no one can do anything about all the dog urine all over the beach. Kids who play in the sand are constantly exposed to this dog urine and excrement, which is both unpleasant and unhealthy. On many occasions my son has been approached by a fast running dog, which has often frightened him. I have refrained from taking my son to Fort Funston at all, despite the beautiful vistas and the interesting hang gliders, due to that park being completely overrun by off-leash dogs that spoil the park experience for anyone who is not a dog owner. Again, dogs at Fort Funston urinate and defecate all over the park which can't be good for the natural environment and the species of animal and plants that live there.

My suggestion is that the GGNRA require all dogs to be on-leash, but that you request a waiver from the National Park Service from the current six foot leash requirement, and allow dogs to be on leashes up to 12 feet long, to allow more freedom to dog owners and their pets. A 12 foot leash permits a dog to run a little while still being under control by their owner. I also believe that the GGNRA should designate or develop two or more fenced off-leash dog areas on GGNRA lands in Marin County and in San Francisco, much like other jurisdictions, so owners who want to run their dogs off-leash can do so in these areas. Examples of these fenced off-leash dog areas exist in Golden Gate Park and in my own town of Alameda.

Thank you for your consideration of my suggestions. There is a reason that every other town, city, and county requires dogs to be on leash in their parks. Unleashed dogs pose a threat to each other, to children and adults visiting the parks, and to the natural environments, wildlife, and plants that

make our parks such wonderful places to visit.

Sincerely,

Jeff M. Wasserman

Correspondence: Dear Superintendant Dean,

I am writing this letter to express my serious concerns about the proposed changes to the dog management policy for GGNRA. Fort Funston is the area of the GGNRA that I am most upset about, since I have been walking my dogs off-leash there almost daily since 1982. For me, Fort Funston has been the quintessential park, an unsurpassed nature experience, actually within the city limits of San Francisco. The wildness of the park, the expanse, the beauty of the cliffs, beach, and ocean have been a refuge from city life for me and my dogs, that is incomparable.

Walking dogs off-leash at Fort Funston has been a reason for countless people with dogs to make Fort Funston a destination. I have friends and out-of-town visitors without dogs for whom the sole attraction of the park is the dogs themselves. It goes without saying that allowing dogs to be off-leash benefits both humans and dogs alike: it's much more enjoyable for both, and the dogs get proper exercise. People who know dogs know that a well-exercised dog is a good dog.

In the twenty-nine years that I've been walking at Fort Funston, I've never seen a serious dogfight among the off-leash dogs, nor have I ever seen a person attacked or harassed by a dog. I haven't seen vegetation destroyed by dogs, with the exception of areas of summer foxtails that get trampled. On the other hand, I have seen dramatic effects by wind and water over the years on the plants, cliffs, and hilly areas.

Fort Funston is truly a magnificent multi-use park with its hang-gliders, occasional horses, cyclists, joggers, hikers, families, professional dog-walkers, birders, model airplane enthusiasts, school groups for nature study, and of course, many off-leash dogs and their happy owners. All of these diverse groups have been very successfully coexisting for years. Why change it?

When I attended one of the GGNRA informational meetings at Ft.Mason a few months ago, I was told by one of the rangers I talked with that I could

"vote" for no changes to the present dog policy for GGNRA. Please accept my "vote": no changes to the current dog policy. If, however, changes are destined to be made, I hope that "one size fits all" would not have to be applied to Fort Funston.

Sincerely,

Janice McIntosh San Francisco, 9413

Correspondence: Re: Draft Dog Management Plan, Draft Environmental Impact Statement

Dear Superintendent Dean:

I am a native San. Franciscan, life-long resident, disabled, and do not have a dog. Last year I had to undergo grueling medical treatments. For both my mental and physical health I made a point to visit nearby Fort Funston of the GGNRA when I could. I knew getting out of my social isolation was essential. I knew watching dogs play would bring me joy. I knew encountering the occasional extroverted dog would give me the chance to pet a dog and get a few face licks. My medical team told me I had to start walking as often as I was able. Given my physical state and being a woman, I wanted to be safe. Fort Funston, with its open-air format and the natural comings and goings of people and off-leash dogs was the perfect place.

After not showing up at the Fort for a few days, a voice called out to me, "How ya doin'?...Haven't seen you lately." I was surprised and had no idea who was talking to me. She was a professional dog walker. I quickly learned there was a vibrant social community at the Fort and that I was welcomed into it. She continued to keep tabs on me and does to this day. She has driven me to doctors' appointments and surgeries. She has become a vital part of my social support network.

I have never encountered a more cohesive, caring, self-policing, and diverse community. I have met other disabled and senior folks who visit Fort Funston for many of the same reasons I do. One woman told me she knows if she collapses on the trail due to her health condition (as happened to her once before), she and her dog will be taken care of by the people there. Finding this unique community has been essential to my wellbeing and I don't want to see it disappear.

I oppose the Preferred Alternative because it is too restrictive. There is no

justification in the DEIS for major changes. I support formalizing the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future. At one point, I enjoyed Mori Point and do not want to see added restrictions there.

The DEIS does not consider impacts on the health (physical, mental and socialization) of people if dog walking is severely restricted. Additionally, the DEIS does not consider the impacts on social communities including people with dogs at GGNRA sites if severe restrictions take effect. The DEIS does not consider negative impacts on the disabled, as well as minorities, who lose access to dog walking. The DEIS should add a section evaluating the benefits of recreation. Please leave the "Recreation" in the "Golden Gate National Recreation Area."

Compliance-based Management Strategy cannot be part of any plan. It changes status of areas (off-leash becomes on-leash; on-leash becomes no dog) automatically and permanently if GGNRA claims not enough compliance with new restrictions. No evidence of impacts from non-compliance are necessary, only the fact that there is non-compliance. This will potentially end off-leash access without giving people a chance to comment on the change. This punishes responsible dog owners for the bad actions of a few irresponsible ones. It must be opposed and removed.

The GGNRA should develop a new alternative, the A+ Alternative, which will better balance the recreational needs of the Bay Area with protection of natural resources.

Thank you for your time.

Respectfully,

Lisa Kucukdogerli

Correspondence Type: Letter
Correspondence: TO: Frank Dean, General Superintendent

I am a 30 year resident of San Francisco, a mother of two boys and a dog owner. Walking our dog at Fort Funston is a regular part of our family's routine. I am there at least once a day and my two boys walk there every weekend and evenings in the summer. Our walks with our very well behaved dog gives our family a chance to exercise together, to learn about nature, to meet people, and to enjoy watching our dog bound along the hills

and play with other dogs. My boys and I have spent many mornings volunteering the monthly Fort Funston clean ups. And with all the thousands of how's we have spent there over last 5 years, we have seen exactly two serious dog vs. dog altercations, and zero involving, a dog and a person.

In San Francisco, we are blessed with a good deal of open space. With 220 parks in our Rec & Park system, and over 1000 acres in Golden Gate Park, there are quite a lot of places for people to enjoy nature and not to interact with dogs. While I live right next to Stern Grove and Ocean Beach, I do not take my dog there because of the "leash only and no dog" regulations of those parks, respecting those regulations are in place to protect certain species and people who want a dog free experience.

Fort Funston, which has been an off leash dog paradise since the US Army left, is the one place in San Francisco where dogs can go for extended runs off leash, a necessity for my dog. There are areas of Fort Funston that are already fenced off to protect birds and plants, and we respect those boundaries now. The problem is the lack of skilled rangers. I don't know how many park rangers you have up there, but they are NEVER around and NEVER doing anything. I have been at Fort Funston in the morning and chased out people illegally camping, sometimes in a Winnebago parked on the trail. If you really want to protect the park and the endangered species, why don't you simply provide competent park rangers to enforce the existing rules? And chase out the campers, the partiers and the other miscreants?

The Preferred Alternative is not acceptable. It is overly restrictive, and its restrictions are not justified by the totality of available data. It is based on separation and exclusion, a management philosophy that goes against the values of the Bay Area in which it is fully immersed. It violates the mandate for the "maintenance of needed recreational open space" contained in the legislation that created the GGNRA. The contraction of areas available for off-leash recreation will significantly compromise the park experience for people with dogs, and could lead to an increase in conflict as more and more people are forced into smaller and smaller areas. The impacts of people moving from the GGNRA into city parks is not adequately addressed in the DEIS. Any alternative must address these impacts on city parks and ways to mitigate them.

What is acceptable? From the south parking lot to the northern most end or the Coastal Trail, and the total area between the Coastal Trail and Horse Trail, the eastern slope down to Skyline as well as the beach and the access paths, should all be Regulated Off-Leash Areas. The hang glider area and the areas currently restricted areas should continue to be off limits to dogs. Please do not implement the overly restrictive Preferred Alternative. The Golden Gate National Recreation Area may be a National Park, but it is not

Yosemite. It is our backyard.

Sincerely,

Cammy Blackstone

Correspondence: Park Profiteers - Dog Drivers in GGNRA

This letter is in support of the DEIS for Dog Management in GGNRA.

Having watched vanloads of dogs unloaded onto park property, I support whatever means GGNRA needs to control them. To site one location, Baker Beach, I have personally watched vanload after vanload of dogs arrive as paid dog drivers open up their vans and allow unleashed dogs to run onto the beach without any controls. They are not so-called dog "walkers", they are dog drivers - they drive dogs to parks and dump them there.

Multiple groups of offleash dogs delivered by dog drivers join together. These uncontrolled packs of dogs run free and make it difficult to control my own dog and walk freely in the park myself.

Dog drivers have up to a dozen dogs and some bring multiple groups of dogs the same day. At the going rate of \$20 and up per dog, that's at least \$200 per delivery, which easily adds up to a six-figure annual income for doing nothing more than driving a dozen dogs to the park and dumping them on public lands. The parks earn nothing from this misuse of park land.

How many of the park plan protestors are dog drivers misusing public parks for their personal profit? They have monetary motivation to protest the reasonable response of the GGNRA to dog use and misuse of our public parks.

There is so much money at stake for dog drivers that I do not want my name on this public comment for fear of financially motivated retribution.

So I am signing this - from a "real dog guardian".

Correspondence: Dear Superintendent Dean,

My name is Dolly Ford. I am a tax payer and I have lived and worked in the Bay Area for over 7 years. My husband and I own a home in Redwood City and we have a 6 year old dog named Lily.

I consider Fort Funston to be one of the happiest places on earth. On any given day (fog, rain or shine) countless adults, children and dogs co-exist peacefully. The natural beauty and enthusiasm of the people and the dogs fosters a sense of joy and community like few places I've ever been. Strangers, humans and dogs alike, greet each other, play, relax and spend time together.

A visitor of mine from Kyoto recalled Fort Funston as her favorite memory of her trip; she kept a photo of her and my dog Lily on the beach as her computer desk top for many months. Everyone I've ever introduced to Fort Funston can recognize its unique spirit and beauty.

In over 7 years of visiting Fort Funston I cannot recall a single incident of conflict or of someone being disrespectful of the natural environment. Due to this I am skeptical of the draft EIS's claim that the presence of dogs is having a significant negative impact on wildlife. All such claims need to be substantiated with well documented, site specific, scientific evidence that also analyzes the impact of other recreational uses of the space (i.e. equestrians, boaters, fishermen, hikers, bikers, runners, hang gliders, etc). This evidence needs to be compiled and fully and fairly disclosed to all parties so that a well informed plan can be implemented.

The maps that I have seen of the proposed off leash dog walking area included in the GGNRA's preferred alternative plan For Fort Funston would lead to over crowding and unsafe conditions.

I respectfully ask that the GGNRA, in developing a general management plan, will take into consideration the unique spirit and community of the Fort Funston Area. It is such a small portion of public land, but it is very meaningful to the people, families and dogs that visit Fort Funston on a regular basis. I fully support Alternative A, the No Action alternative of the DEIS, as it relates to Fort Funston.

Sincerely, Dolly Ford Redwood City, CA 94063

Correspondence: Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation.

? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.

? Exclude speculative, exaggerated, biased, or misleading statements and studies.

? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).

? Enable professional dog walking and align any professional dog walking

rules with county or city regulations.

? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

Sincerely,

Jon Behar San Francisco, CA 94133

Correspondence Type: Letter

Correspondence: Dear Mr. Dean,

As a research scientist, a wife, a dog owner, frequent park visitor, and a client of a professional dog walker, I am writing to adamantly oppose the GGNRA's draft dog management plan. Sadly, this plan lacks a foundation in science; instead, it relies falsities and non-logical conclusions. In addition to lacking a foundation in the facts, this plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the tens of thousands of Bay Area residents who exercise regularly with their pets at these parks.

With community support and education, the GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite, Glacier, and Yellowstone. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation.

? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.

? Exclude speculative, exaggerated, biased, or misleading statements and studies.

? Provide reasonable ways to address any significant adverse impacts from

recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).

? Align commercial dog walking rules with county or city regulations.

From my personal experience, Fort Funston, Ocean Beach, and Golden Gate are a crucial component of my family's mental and physical health. We frequently visit (3-5 times per week) these parks with our 1-year-old Portuguese water dog named Fitz for obedience and water training, exercise, and fun. When rules permit Fitz being off-leash, we take that opportunity to practice recalls, wear out his puppy energy, and to socialize him with other adults, children, and dogs. Honestly, I do not know what we would do without these dog-friendly parks!

Sincerely,

Dr. Wendy R. Altman

Correspondence: Dear Mr. Dean:

I am writing to protest the proposed restrictions on dogs and humans in the GGNRA.

Allowing pet owners to explore our beautiful trails is a right. So long as my dog is well behaved...why would you take that away from me?

My dog is part of my family and has been for 13 years. Restricting my ability to enjoy the beautiful outdoors here with my dog is a shame and unfair. Please, please don't deny me the right to enjoy my town with my ENTIRE family...which includes my dog.

Thank you for listening. Please, reconsider this restriction.

Correspondence: Dear Mr. Dean,

This is in regard to the Dog Management Plan/Draft Environmental Impact Statement which outlines proposed rules for dog-walking on GGNRA lands.

The Black Point Environmental Action Committee endorses Alternative D which allows dogs only on-leash and then only on sidewalks, paved roads and some beaches.

Dogs off-leash are seldom controlled and endanger wildlife.

Please protect our endangered wildlife. While, I have two dogs, it is more important to protect wildlife.

Thank you for considering our request.

Correspondence: I BELIEVE GGNRA SHOULD RESTRICT OFF LEASH DOGS OR REQUIRE ALL DOGS ON LEASH. I HAVE BEEN WALKING AT FORT FUNSTON FOR 30 YEARS. DUE TO THE NUMBER OF DOGS OFF LEASH OR THE LACK OF RESPONSIBLE OWNERS, I AM NO LONGER COMFORTABLE WALKING THERE, ESPECIALLY ON A SATURDAY OR SUNDAY. THE DOGS HAVE TAKEN OVER.

RECENTLY A LARGE DOG JUMPED ME FROM BEHIND AND KNOCKED ME DOWN. MANY TIMES DOGS COME TOWARD ME IN A MENACING WAY AND THE OWNERS OR WALKERS SAY NOTHING OR SAY "THE DOG DOESN'T MEAN IT." A FEW YEARS AGO MY DOG WAS ATTACHED BY ANOTHER OFF-LEASH-DOG AND ENDED UP AT THE VETERINARIAN. THE OWNER HAD NO CONTROL OF THE DOG. RECENTLY, A SMALL DOG JUMPED ON ME AND THE DOG WALKER MADE FUN OF ME WHEN I CORRECTED THE DOG. CALIFORNIA HAS THE LARGEST NUMBER OF LAWSUITS FOR DOG BITES. HOW MANY PEOPLE HAVE TO GET INJURED OR MAYBE EVEN KILLED BEFORE SOME CONTROLS ARE PUT IN PLACE.

PEOPLE SHOULD BE ABLE TO FEEL SAFE TO ENJOY THE AREA FOR FRESH AIR AND EXERCISE. TO GIVE DOG OWNERS A RIGHT THAT TAKES AWAY A RIGHT OF OTHER PEOPLE TO FEEL SAFE IS WRONG. I HAVE GRANDCHILDREN AND NOW WOULD BE AFRAID TO TAKE THEM TO FORT FUNSTON. MANY DOG OWNERS SEE THEIR DOGS AS THEIR CHILDREN BUT FAIL TO TRAIN OR DISCIPLINE. A FEW YEARS AGO SUNNYSIDE PARK, MY LOCAL PARK, WAS OVERRUN WITH DOGS. RESTRICTIONS WERE PUT IN PLACE AND NOW IT IS A PLACE WHERE FAMILIES AND CHILDREN CAN SAFELY PLAY. THERE ARE SO FEW PLACES IN SAN FRANCISCO WHERE PEOPLE AND CHILDREN CAN ENJOY THE OUTDOORS.

THANK YOU FOR YOUR TIME AND CONSIDERATION.

Correspondence: RE: Dog policy

Dear Mr. Dean,

Before you make a decision on a dog policy for the GGNRA you need to determine the impact of your preferred policy on the residents of the impacted counties. This is a quality of life issue for thousands of citizens who need to use the GGNRA for both on- leash and off-leash dog exercise.

I want to be able to continue to walk my dog at Fort Funston, Crissy Field and Ocean Beach. His running on the beach and on the approved paths at Fort Funston do no harm to birds and other wild animals.

It is the humans who damage the dunes by walking on them. I think more education and enforcement of current restrictions on humans would be more helpful than banning dogs from these areas. People are ignorant. They need to know.

Also, the parks of San Francisco will be over-run with dogs if we can no longer use GGNRA. Sincerely,

Eve Thompson

Correspondence: Dear Superintendent Dean, My name is Karen Wing. My husband and I live in the North of the Panhandle (NOPA) neighborhood. We have two medium size dogs. Since we are both retired, we enjoy spending the mornings with them in different areas of the GGNRA.

As responsible dog guardians, we keep our dogs under voice and sight control, clean up after them and keep them out of the fenced dunes and vegetative areas. It is important for us that places like Crissy Field, Presidio, Ocean Beach develop a compatible off leash policy.

I do not agree with the GGNRA's current preferred alternative. It significantly restricts and eliminates off leash dog walking in many areas within the GGNRA, In addition, as presented in the DEIS, the proposed dog management plan eliminates dog-walking (on and off leash) access for all new lands. The GGNRA's mission applies equally to new lands as existing lands. I believe the GGNRA should consider reasonable and balanced alternatives for dog walking on new lands and not just apply restrictions

across the board.

I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, but other options (besides restricting dog-walking access) should be considered first. For example, in Vancouver B.C. they put a restriction of time when dogs and their guardians can have access and use of the water front and beaches. Early morning and early evening times allow for off leash recreation without interfering with children and families who do not want to interact with the dogs. They also clearly identify restricted protected areas.

GGNRA should be a partner with the City of San Francisco and other communities, not an adversary. The DEIS seems to be biased against and does not take a hard look at the No Action alternative or variations on that alternative. There are many areas in the GGNRA where the existing 1979 Pet Policy has been working, and where sensitive species are not present and visitor conflicts do not occur or are very infrequent. GGNRA is important for compatible use by everyone. Let's work together and come up with viable solutions that can work for all of us. Sincerely,

Karen Wing

Correspondence: I have been exercising my dog(s) and my self at Ft. Funston seven days a week since September 1981. During life's low times, it was often the only good part of the day. Being able to walk at a brisk pace, while my dog trots at his pace, has been extremely beneficial to both of us. When dogs are off leash they don't have to defend their owner or themselves, so are less likely to become aggressive.

I understand that the increase in use has made the situation complicated.

Three things would help: Don't block the paved path Don't block the water fountains Pick up two piles of waste per dog. (It is hard to watch all the time)

In almost thirty years, I have seen very few problems. Everyone I talk with considers Ft. Funston to be little bit of heaven. Please consider the social benefits of healthy exercise for people as well as dogs.

Sincerely,

Elizabeth Kunz Daly City, Ca 94015

Correspondence: Dear Superintendent Dean:

I would like to register my opinion of the draft Dog Management Plan and EIS for the GGNRA: As a photographer, I visit Ocean Beach about 50 times per year, where I have observed first-hand the damaging impact of dogs on this area's wildlife and environment. On almost every visit I observe several dog owners allowing their off-leash dogs to run freely through the Snowy Plover protection areas, which are clearly marked as areas closed to dogs. The owners never show the slightest concern, and often allow or encourage their dogs to chase the sea-birds. The dogs also roam freely in the littoral areas the plovers use for nesting, as explained on signs throughout the area. On a few occasions I have politely asked dog-owners to leash their dogs but this is nearly always met with hostility. In all the years I have visited Ocean Beach I have never seen anyone enforce the limitations on dogs. It is obvious that stronger regulations and enforcement are needed.

There are miles of shoreline where leashed dogs are permitted, but many dog owners obviously feel they should be able to take their dogs anywhere, unleashed, despite endangered species, laws, and the rights of others who want to enjoy GGNRA lands without interacting with domestic animals. If we must have "off-leash areas" they should be fenced off to protect people, dogs, and habitat. I also agree with those asking for full compliance and a ban on commercial dog-walking.

I know dog-owners are a vociferously organized group. They threaten mass demonstrations to "show us what it will be like" if their animals are banned from a few public areas. You have surely received many letters from them. I hope you will consider the rights and concerns of those of us who are not part of some organized pressure group, but care about the GGNRA and its mandate to protect wildlife. Non dog-owners deserve recreational opportunities at least as much as the small minority of visitors who choose to bring their domesticated animals onto our wonderful GGNRA lands.

Thank you for your attention,

Jonathan Clark

Correspondence: Mr. Dean,

I am very distressed to hear about the GGNRA plans to severely limit off leash dog walking in areas that have been approved for over 30 years. This has been an integral part of the urban environment here in San Francisco and to curtail it, as you propose, would have a significant impact on the community, probably unimaginable by the bureaucracy headquartered three thousand miles away who I suspect is putting you under pressure to get this done. The compliance based management strategy also proposed is making the situation scarier for our community.

I have not heard any rational reasons for changing this long running policy so I assume it is being pushed by the ego of those in charge of the organization from afar who want to control all aspects of their kingdom. However, I realize that I am not in this business and can very well be missing some very good points as to why the policy should be radically changed. Consequently, I look forward to a call from you to discuss those points. I can be reached at.

Talk to you soon, Jack Bernard San Francisco, Ca. 94123

Correspondence: Dear Sup. Dean,

In the DEIS, there is very scant reference to RECREATIONAL uses. We know that recreation was a major priority in the creation of the GGNRA. GGNRA was established for urban environment of the SF Bay Area. The DEIS however does not address a very crucial component: human recreational environment.

Please respond to this point. The DEIS is flawed, one sided and ridiculously verbose.

Sincerely,

Chris Moscone

Correspondence: Dear Mr. Dean,

I am a mother of two small children and I live in the Marina district. I have looked at the GGNRA dog management plan and I am very concerned about the part pertaining to Crissy Field. The dogs run around, some are aggressive. I don't feel safe with my children on the beach or on the walkway.

I think that it is the duty of GGRNA to protect the safety and well being of people over the needs of dog owners in a place where there are so many people using the Park. In particular, there is a duty towards those who are vulnerable like children and the elderly.

I do not think that is right to allow dogs to run free on the beach nor should they be allowed on the central path. I recommend that you fence in a portion of the meadow ' airfield and allow that to be used by dogs.

Please re-consider the draft plan. It does not protect the most vulnerable people in a heavily used Park.

Thank you,

Mary Gordon

Correspondence: GGNRA,

On this same day, after I had just deposited the first letter to you about dog encounters, I was nipped on the arm by a black laborador as I was walking on Pacifica's ocean front promenade. The dog was on leash and the owner who was holding the leash looked surprised that her dog had done that. She asked if the dog had bit me, as I was holding my arm and looking at the slobber on my jacket sieve. I said yes , and I told her she should short leash her dog. When I walk I swing my arms normally and not excessively.

I know how quickly these things happen because it happened with me and my dog on leash. It is a matter of police report that my dog bit a young person on the hand while he was passing on a skate board. We were on a four foot wide concrete side walk and my dog reacted to a hand swinging by and caught it. What I learned from that is that is from then on I had to anticipate and move my dog to the outside position and not have him in between moving people. So when you develop the rules about dogs being on leash ,you should also have suggested etiquette like place yourself between your dog and other people. Also when in tight quarters grab the leash to shorten it so that your dog is near you.

In my opinion reel leashes give the dog owner almost no positive control and they often stretch out across entire walkway or bike paths and frequently wrap around flustered reel holders legs. The best development is the muzzle leash which turns the dog's head.

As I continued my walk over the hilt of Mori Point GGNRA this day, I came upon another woman and her black laborador. This dog was off leash. The owner had the leash looped around her hand. It seems to be common mind-set to have the dog off leash if no official is looking . So please enforce the rules with monetary penalties. I'm sure that the word will get around.

Yes I want all dogs on leash every where except on private property and dedicated dog parks.

You may publish any of my comments.

Sincerely, John Meria

Correspondence: May 16, 2011

Dear Frank,

I am a responsible dog owner. I clean up after my dog. When I'm on my walks, I also clean up after other dogs and people who have left trash. I only allow my dog to go in areas where he is allowed to be off leash, and when he is, I keep him under voice control.

I am asking you not to change the current off leash laws we all enjoy with our dogs. Changing the current off leash laws would not only affect all of the dogs in this area, but also their owners. What follows is my story, my reasoning, for feeling so passionately about this as I do:

I had no idea how much Ozzie, our Irish Terrier, would improve my life.

As an artist who gets her inspiration from nature, I now begin every morning with a walk with Ozzie in one of the many beautiful, natural places in San Francisco where he can run off leash, We LOVE starting the day like this. Before Oz became part of our family, I rarely went to these places. Because of him, both my art and the quality of my life have been tremendously affected.

Watching Ozzie run free in our off leash parks honestly brings me as much happiness as it does him. Its hard to describe how much joy I'm filled with when I see Oz running down the hills of Fort Funston or on the grass of Crissy Field, with a huge smile on his face, knowing that he's just minutes away from jumping into the ocean. Its the same feeling I get when I watch my 9 year old son, Milo, do the same. I can imagine leashing Milo about as much as I can leashing Ozzie. It would not only rob them of their freedom and joy, but it would also rob me of the delight I get from watching them.

When we first got Ozzie, we took him to enclosed dog parks. He was a year old and we weren't sure how strong his recall was. We soon stopped taking him to these parks when we realized how aggressive dogs became when they were enclosed. I actually wound up with a herniated disc after I had to pull Ozzie away from a dog who was attacking him, which prevented me

from working, and walking him, for months. If you are to impose leash laws, these parks will become even more crowded than they already are.

On leash, Ozzie feels as though he needs to protect us. This makes him occasionally act aggressively toward passing dogs, and is the complete opposite of how playful he is when he's off leash. When Ozzie's on leash it's not a relaxing experience for either of us. He also doesn't get nearly the amount of exercise he needs. Our veterinarian recommends 4 miles a day, which he definitely gets when he's off leash.

I seriously hope we can continue to let our dogs run off leash. I would be more than happy to work with you on a solution that would benefit everyone involved in this issue. I feel incredibly fortunate to live in dog-friendly San Francisco where we have so many beautiful places to let our dogs roam free in nature. This has become such an important part of my everyday life that I can't imagine moving to, or living in, a city where this wouldn't be possible. Please don't take this away from me, Ozzie, and all the other dogs and dog owners whose lives have been immeasurably improved.

With hope and sincerity,

Carrie

Correspondence: To Whom It May Concern:

I would like to express my support for the maintenance of the off-leash status in The Golden Gate National Recreation Area.

I'm not familiar with all the intricacies of this specific case, but in general I have always maintained that it is best to work with Mother Nature, not against her. The need for outdoor stimulation is crucial to both humans and canines. It can help reduce the stresses of everyday life and act as a therapeutic release, not to mention, encourage joint exercise and bonding between owner and dog, Dog parks also act as a positive community setting, bringing fellow dog owners together into a pack of their own.

Overall, I think we need to reflect on how we choose to treat our animals. San Francisco is at the forefront of the animal friendly movement and keeping this park area fully open would be an important step in maintaining that tradition. I would encourage that other potential solutions and remedies be considered before the pending changes are made. In order to create a

more balanced society, I think we should start respecting our animals and their spaces as we would our fellow humans.

Correspondence: Dear Mr. Dean:

I am writing in opposition to the GGNRA's draft dog management plan.

The loss of these areas to Bay Area dog-owners would be a heavy and unnecessary blow to opportunities for recreation and enjoyment. The GGNRA was meant to be an urban recreation area. It has accommodated and can (and should) continue to accommodate both recreation and conservation. I have gone walking with my dogs (on leash where specified) in the areas around Pacifica, and have observed no problems occasioned by the use of those areas by people walking their dogs. The draft plan provides no evidence to support such arbitrary and draconian changes to policies that have worked well for 40 years.

I request The Park Service to revise the dog management plan to include dog walking on GGNRA trails and lands, particularly in San Mateo County.

Thank you for your consideration.

Very truly yours,

Correspondence: Dear Superintendent Dean,

My family has a new six month old puppy (small breed). We try to be responsible dog owners. Our dog is going to training classes in which our whole family participates. We keep our dog on a leash for her safety and well-being, and for the sake of other dogs and people (especially small children) she encounters. When she gets older, if we feel her behavior is predictable, we may want to let her off leash. We are glad of the possibility that in the future there will be some places for her to play off leash, as proposed in the current plan.

We often go to Crissy Field in the GGNRA. I have often noticed that not everyone else seems to keep their dog under adequate control. I think that if the Dog Management Plan is to be successful, there will have to be strict enforcement of the regulations that are finally adopted. Some people will not obey the rules unless they see that those who do not adhere to the restrictions are actually confronted and brought under compliance . Therefore, I urge you to try for a high level of adherence to the rules.

If licensing dogs will help the GGNRA achieve a high level of attention to the rules and restrictions, then. I urge you to develop a licensing program with the city. I think licensing could also help with the problem of stray or injured dogs. We want to make sure these animals get back to their loving homes quickly and safely.

Sincerely,

Sharon C. Meyer, M.D.

Correspondence: GGNRA PUBLIC COMMENT WORKSHEET

Describe how you use the GGNRA and how you benefit from recreating there with dogs (which areas do you go to, how often, what do you get out the experience?)

My 13 year old dog and I have been hiking in the GGNRA sinc 1996. I enjoy a good, healthy nature walk at Fort Funston and Crissy Field with my dog and other dog owners that have become friends over years. People and dogs are both mammals and require for their physical and mental well being to be part of our natural environment. Open spaces provide enough land to avoid confrontations, share use with other interest groups, and get a good workout. Meeting interesting people, this is perfect for the NPS "healthy

people health parks" initiative.

What parts of the DEIS do you disagree with/want to challenge?

The government position offers no empirical data to support any existing predatory relationship between canines and the birds. The two species exist on different levels and do not compete for the same space or resources. Arguably, dogs actually scare away the natural predators of birds, including feral cats. I have never personally witnessed any hunted, harassed, or dead birds in my 15 years.

Comment on the benefits of commercial dog walking to SF residents and dogs, and the lack of documentation that commercial dog walkers and the dogs they walk harm the GGNRA environment (wildlife, plants, other recreational users).

Dogs are the second best crime fighters. We can't have the police in every park, all the time when professional dog walkers are excluded from parks, the resulting vacuum will be filled with hoodlums, gangs, drug dealers, homeless, and other undesirables.

Describe what you want (what changes you want in the plan; what alternative do you support- and it doesn't have to be one of the alternatives offered by the GGNRA)

Maintain the 1979 Pet Policy supporting recreational use in the GGNRA and support new off leash areas in expanding GGNRA in San Francisco, San Mateo, and Marin Counties. Maintain the current 1% of GGNRA territories open to off-leash walks, and support adding more space as our population grows. No "Compliance based management!"

Correspondence: Dear Superintendent Dean,

I write in strong support of Alternative A, the No Action alternative, in the GGNRA and the "New Lands" areas (such as Cattle Hill, Sweeny Ridge, Mori Point, Pedro Point and Milagra Ridge and Rancho Corral de Tierra in San Mateo County). I strongly oppose those elements of the Draft Dog Management Plan/Draft Environmental Impact Statement and its "preferred plan" that would eliminate off-leash dog areas at Ocean Beach, Crissy Field,

Fort Funston, and the related areas. Now nearing retirement age, I am a life-long outdoor enthusiast and have been a member of the Sierra Club and various other outdoor activity and conservation/wildlife groups for all my adult life. The last 25 years-plus have been lived in the Bay Area

The GGNRA has a solemn regional trust, that will only be fulfilled if it respects and accommodates the grand diversity and tolerance that is a hallmark of the San Francisco Bay Area. This includes respect and accommodation for people of all ages and walks of life and cultures that come together here.

GGNRA policy has included for a very long time, respect and accommodation for people and their beloved dogs to play off-leash in a number of areas, that my extended family and friends have enjoyed along with countless thousands of others over the years. This is an important part of a healthy lifestyle for families and their dogs, for the dogs really are part of these families. We frequently visit Fort Funston/Crissy Field/Ocean Beach areas with our dog, and meet other family and friends there with their dogs, which is a wonderful healthy form of recreation for all of us.

While I do indeed support wildlife and habitat conservation, there also absolutely must be conservation of sufficient habitat for dogs and their people to play off-leash. Multi-use open space that includes off-leash dog walking is compatible and sustainable with all other recreational uses and with the preservation of habitat and wildlife within the GGNRA. The EIR "preferred plan" simply fails to conserve sufficient habitat for the dogs to play off-leash, the additional restrictions proposed lack common sense or factual support, and ignore the GGNRA mandate to truly serve the wide-ranging Bay Area community.

All users (including cyclists, hikers, people with kites and Frisbees, picnickers, festival-goers, the Fleet Week crowds, and even wildlife) clearly have some impact on the GGNRA. In the Draft Environmental Impact Statement the National Park Service inappropriately singles out dogs. Its conclusions are not based upon sound science nor long-term monitoring of site-specific conditions. Any impact that dogs may have can be effectively mitigated through better signage, creating environmental barriers, and education of park users. The GGNRA should partner with community, animal welfare, and conservation organizations on programs that could eliminate perceived problems and contribute much-needed resources.

Respectfully,

Marie C. Blits Lafayette, CA 94549

Correspondence: Dear Superintendent Dean:

Thank you for this opportunity to share my concerns about the proposed new dog regulations at the Golden Gate National Recreation Area (GGNRA) and the consequences of these regulations on San Francisco's low-income disabled and senior dog owners.

The AIDS epidemic devastated the Bay Area during the 1980's, taking thousands of lives and forever changing our community. It was during that period that the San Francisco Model, a diverse coalition of community based organizations created to provide comprehensive care for people living with AIDS, taught the world the true meaning of "San Francisco Values." Pets Are Wonderful Support (PAWS), an organization that advocates for the healing power of the human- animal bond and provides practical and emotional support services so people can keep the unconditional love of their pets in their lives, was established during this period.

Today PAWS is a thriving organization that owns its own building in the Mission and serves over 750 low-income, disabled and senior pet owners with a variety of practical and emotional support services. Over half of our clients are living with HIV/AIDS. In addition, we are nationally recognized for our work to insure public policy supports the psychological and physical

health benefits of the human-animal bond.

As we approach the 30th anniversary of AIDS in our lives, many people living with HIV in San Francisco find themselves facing new threats at the hands of the National Park Service and the proposed alternative as outlined in the Draft Environmental Impact Statement (DEIS) and the draft dog management plan. If implemented, this proposed alternative would severely restrict off leash dog walking in the GGNRA area and, in effect, reduce access for our disabled and senior neighbors who need safe, easily accessible areas to allow their beloved pets and support animals to exercise and run off leash. I remain deeply concerned that PAWS clients, some of our community's most vulnerable members, are being left out of this discussion. On behalf of our clients, and their canine companions who provided healing, hope and unconditional love, I am asking that the National Park Service address our concerns about the underlying assumptions behind the proposed alternative.

For example, the Crissy Field Dog Group retained an environmental consultant and an environmental attorney to conduct an independent review of the GGNRA's DEIS. The result of this analysis found that the report contains underlying assumptions that are undocumented by data and rely on stereotypes of dog behavior that are not based in fact. For decades dog owners have worked diligently to self police, model good canine citizenship, and have cherished their access to the small portion of the GGNRA (less than 1% of the overall area) that has been made available since the 1979 Pet Policy went into effect.

In an urban recreation area surrounding a community as diverse as San Francisco, environmental concerns and recreation access are not mutually exclusive. At the end of the day, the 1979 Pet Policy is still working ' protecting the environment and our citizens' rights to enjoy recreational activities in one of our country's most unique natural landscapes. It's important to understand that dog owners are not asking for increased access, only a reasonable request to maintain the access rights all of us currently enjoy.

As a dog owner and citizen of the Bay Area, I ask you to please take an active role in protecting my already limited right to access the GGNRA with my cherished dogs and to provide them the opportunity to run off leash, stay fit, and keep myself healthy in the process. As the president of PAWS, I ask you to consider the impact these proposed regulations would have on our low- income disabled and senior clients. Thirty years into the AIDS epidemic, the San Francisco model is evolving, but our San Francisco Values remain as strong as ever. John L. Lipp, President/CEO Pets Are Wonderful Support

Correspondence: I am writing because I am very disappointed and unhappy about the GGNRA Dog Management Plan to reduce protected dog areas in the Bay Area. Like the San Francisco Board of Supervisors, I am opposed to the plan.

Fort Funston is one of the FEW places that allows dogs on beaches, and the plan is to cut this area even further? Please remember that dogs are not allowed on MOST beaches or federal land preserves. For example, dogs are only allowed on the valley floor, and not in MOST of Yosemite, including most of the hiking trails and hiking areas. There are few places for dogs to run on and off-leash. Please do not take these areas away.

I myself am a responsible dog owner, as are my friends who own dogs. We always pick up after our dogs, carry around plastic bags, and dispose of our dogs' waste appropriately. We constantly supervise our dogs, especially if they are running off-leash, to make sure they are not disturbing people or destroying habitat.

We understand you are trying to preserve a natural habitat, but our dogs run on the trails and leave only as much of a footprint as people do in Yosemite and other national parks.

Please PROTECT these designated dog areas. They are very important and should not be cut or reduced.

Sincerely,

Christine Pirzadeh

We love and take good care of our dog! We clean up after him. We take Lucky hiking every weekend. Please don't take our parks away!

Please do not take these areas away.

I myself am a responsible dog owner, as are my friends who own dogs. We always pick up after our dogs, carry around plastic bags, and dispose of our dogs' waste appropriately. We constantly supervise our dogs, especially if they are running off-leash, to make sure they are not disturbing people or destroying habitat.

We understand you are trying to preserve a natural habitat, but our dogs run on the trails and leave only as much of a footprint as people do in Yosemite and other national parks.

Please PROTECT these designated dog areas. They are very important and should not be cut or reduced.

Sincerely,

Payton

Correspondence: I am writing because I am very disappointed and unhappy about the GGNRA Dog Management Plan to reduce protected dog areas in the Bay Area. Like the San Francisco Board of Supervisors, I am opposed to the plan.

Fort Funston is one of the FEW places that allows dogs on beaches, and the plan is to cut this area even further? Please remember that dogs are not allowed on MOST beaches or federal land preserves. For example, dogs are only allowed on the valley floor, and not in MOST of Yosemite, including most of the hiking trails and hiking areas. There are few places for dogs to run on and off-leash. Please do not take these areas away.

I myself am a responsible dog owner, as are my friends who own dogs. We always pick up after our dogs, carry around plastic bags, and dispose of our dogs' waste appropriately. We constantly supervise our dogs, especially if they are running off-leash, to make sure they are not disturbing people or destroying habitat.

GGNRA PROPOSED DOG MANAGEMENT POLICY' A PERSONAL REVIEW I am going to state first my only fundamental disagreement with this NPS document. While I am pleased with the wholehearted efforts, and in general the results achieved by NPS staff and citizens who reviewed thoroughly the management of dogs in the Golden Gate National Recreation Area, it is presented in a context that is profoundly wrong. In Volume I, on page i the following appears:

PURPOSE OF GOLDEN GATE NATIONAL RECREATION AREA The purpose of GGNRA is to offer national park experiences to a large and diverse urban population while preserving and interpreting its outstanding natural, historic, scenic, and recreational values.

The purposes of the GGNRA are clearly stated in the enabling clause of its legislation, P.L. 92-589: "...to preserve for public use and enjoyment certain areas... possessing outstanding natural, historic, scenic, and recreational values... the Golden Gate National Recreation Area...is hereby established. In the management of the recreation area the Secretary of the Interior... shall utilize the resources in a manner which will provide for recreation and educational opportunities consistent with sound principles of land use planning and management. In carrying out the provisions of this Act, the Secretary shall preserve the recreation area, as far as possible in its natural setting, and protect it from development and uses which would destroy the scenic beauty and natural character of the area."

I helped develop the legislation that established the GGNRA. It came into existence with a movement "to bring parks to the people where the people are," and yes, one of its objectives of this movement was to give the Bay Area's urban population (and a few other urban areas in other parts of the country as well) a chance to experience a national park close to home - the

key being a national park experience, not a city or county park experience. However, visitors come from all over the United States and all over the world to this park. It is not a local park and cannot be administered as if it were. Briefly, it was suggested before the legislation passed that it be called the Golden Gate Urban National Recreation Area, but Congressman Phillip Burton quickly pushed away that idea. Almost none of the GGNRA is urban. Our park at the Golden Gate protects a national icon and is rich in natural areas and a wide variety of ecosystems. The park also is home to one of the largest numbers of endangered species in the national park system.

The GGNRA is a national park in an urban area. It has to be administered to achieve the goals of its legislation. That includes managing it in the same way as all of the other 393 units of the national park system are managed. What is being offered here is a unique attempt to give a portion of the local population a chance to use the park in a way it has enjoyed for many years. This accommodation can be successful only if it does not diminish the values for which the park was established.

I have personally re-visited several areas of the park with which I am most familiar to see how they are being used by the general public, especially by those members of the public who bring dogs to the park. Most of all, I want the park to administer its lands so that wildlife and the habitat upon which wildlife depends are protected. In general, I am much in favor of having dogs able to be off-leash in areas traditionally used for this purpose' as long as their owners can control them and habitat and wildlife are only minimally affected. However, visitors, both local and those from far away who do not want to share their park visit with dogs, should have opportunities to have equivalent experiences in places of similar natural and scenic value. The park is big enough for that. Any changes in the national regulation' which permits only dogs on leash where they are allowed at all' must be done with the protection of the natural resources, and with the experiences and safety of all visitors in mind. I reviewed the proposed regulations for licensing dogs and for permits for commercial dog walkers. I watched group dog walkers at several sites and agree that a maximum of 6 dogs is the most that should be allowed under a permit. Those who try to walk more dogs more often have insufficient control over some of them. Dogs who come to the park should be licensed. It will take further thinking to figure out how NPS can enforce that requirement in this park when some people bring in dogs from outside this region.

Here is my view of the areas of the park I know best that are proposed to have leashed and unleashed dogs as an accommodation to the wishes of many local people:

LANDS END/FORT MILEY

I favor Alternative D for this area. It has steep topography with narrow trail corridors in most places. It is appropriate to have dogs on leash on the Coastal Trail so that all visitors may have a good experience. The people who use the widest portion of this trail between Pt. Lobos Avenue and the end of the improved area are often older, disabled, or appear to be visitors from other countries. The El Camino del Mar Trail up to the steps has little space for dogs to run off on either side owing to density of habitat and steep topography. It seems appropriate for a regulated off-leash area (ROLA).

I prefer Alternative D because it also allows dogs off-leash in the very narrow strip of land between the golf course fence and the drop-off to the bunkers.

Oddly, some trails are not shown on the maps, including one that connects the golf course fence line trail with the E. Ft. Miley picnic tables and one that continues the El Camino del Mar Trail past the steps to the parking lot behind the Legion of Honor. These areas have many opportunities for dogs to go off-trail into habitat areas. They should be on-leash areas. It should also be noted that the end of the fence line trail does not connect directly with the Legion of Honor parking lot and there is probably a 50' elevation difference between them. Walkers who try to connect in this area will be on San Francisco RPD land some of the time. Dogs should be on leash in all of these areas because of cars and museum visitors.

OCEAN BEACH

I am in favor of the GGNRA's Preferred Alternative for Ocean Beach with one addition. I have inquired as to why the regulated off-leash area (ROLA) ends at Stairwell 21 and have been told the stairwell marks a buffer zone for the protected area for the snowy plover directly to the south. However, I think this is drawing a line in the sand which is hard to patrol and is more likely to be disrespected. It would be more sensible to make the ROLA/snowy plover boundary at the south end of the esplanade, where dogs can go on leash onto the trail that goes toward the zoo. This is only several hundred feet of distance. It gives better continuity and still leaves a buffer zone for the birds.

FORT FUNSTON

The fort has a large number of people who have used it for dog walking and sociability for many years. It is severely eroded in large places. Watching dogs run and chase balls and sticks I see them move from denuded areas into areas which have been or could be rehabilitated for habitat, rather than given over to sand and ice-plant. Post and rail (coated wire) fencing such as is used on Milagra Ridge and Crissy Field is needed here, both to keep dogs out of vegetated or re-vegetating habitat and to give people and dogs a

definite place to be or a clear path along which to move. Such fencing does not have to dominate the landscape. I favor Alternative D which provides an upland area for the dogs and also a part of the beach as shown on the maps. There should be a connecting ROLA path between the upland and the beach, fenced as necessary to keep animals and people out of habitat. CRISSY FIELD, east, west, and central

The most uncaring, self-centered dog owners I have encountered walk on the Golden Gate Promenade. Many of them do not keep their dogs under voice control so that others can walk without being bothered. My grandson froze against my leg several times in the course of the three Tuesday mornings we were there, (I have not tried the area on a weekend or holiday.) My instinctive reaction is to suggest that the Promenade is no place for unleashed dogs because it is too narrow and because of the attitude of the dog owners. Also, I think the Promenade with its splendid views of the Golden Gate is an area that should welcome visitors from outside San Francisco, and I don't think it does at this time.

The dogs and their owners seem to do better along the beach, probably because the dogs have room to roam and seem to be more interested in the other dogs they meet and the balls or sticks their owners are throwing. However, the owners also seem to be more aware and respectful of other people on the beach that their dogs move to encounter and to call them off. My grandson may also feel he has more room to avoid them.

There are certain areas along the beach favored by the commercial dog walkers' two or three may congregate together. There may be 12 - 18 dogs at a time in one place. In general, these dog walkers seem to keep relatively good control over their dogs. Not having a dog with me, I don't really know how these small packs of dogs relate to single animals coming down the beach but I have not seen any incidents.

Therefore, I support maximum leash restrictions on the Promenade, while favoring a broad area for off-leash on the beach, consonant with wildlife protection. I haven't been able to observe the interactions of dogs with people on the former airfield.

Having written the above, I checked the Plan maps and find I support the Preferred Alternative. An additional note: A friend told me that she and her husband unwittingly wandered into the wildlife protection area on the beach side because the signage was not clear enough on that side so that they didn't realize they had entered it. If this has not been mentioned before, I hope someone will check this out at both high and low tide to make sure the signage is very observable along the beach.

MILAGRA RIDGE

This area has wonderful views and its scenery has a wild aspect. Its many different species of wildflowers contribute to that scene and I understand there is much wildlife. I was impressed with the protective post-and-rail (wire) fencing of sensitive areas; it did not dominate the scene but it would keep dogs and people out of habitat.

I was shown the transects of the people who do butterfly studies in the area, and was told of the many volunteers who work to keep out the exotics and help with restoration of degraded areas. All the dogs I saw on a sunny Sunday afternoon were leashed. I agree that anyone walking more than 3 dogs along the proposed trail, even on leashes, could affect the habitat and wildlife.

I think the Preferred Alternative is the right choice for Milagra Ridge. It has areas both for leashed dogs and for people who do not wish to be with dogs. Although I noted there previously have been citations for dogs off leash, I think this is a place where community cooperation and compliance could be fostered.

MORI POINT

On a Sunday morning with changeable weather there were fewer people on Mori Point than I have seen on previous weekday and Saturday visits. I saw the great progress in native plant restoration and trails since my most recent visit last fall. Mori Point is a poster child for the encouragement of park stakeholders through community activism. Many of the plantings on Old Mori Road are obviously just taking hold. There is some fencing but many of those plantings and the natural areas behind them as well as the ponds cannot be well protected from off-leash dogs.

When I paid a subsequent visit on a sunny Sunday afternoon, the situation was about the same except that there were more people and dogs. In general, the people with dogs paid attention to the behavior of their animals. I saw only small incursions into habitat. But I think dogs have to be leashed along Old Mori Road.

About half the dogs I saw were on leash. It is evident why they should be on leash on the Old Mori Road and the Coastal Trail and why they particularly should not be allowed on the Headlands Trail which is already beaten down just by human visitors. In the Preferred Alternative three trail segments have no dogs which should provide a good alternative experience for those who do not wish to encounter them.

I endorse the Preferred Alternative.

RODEO BEACH

There were relatively few people with dogs on the beach on a weekday morning. Several classes of elementary school children were there, probably from the Headlands Institute (NatureBridge). There was plenty of room for everyone who was there, and if there were a lot more people there, I think there would still be a lot of room. I favor the Preferred Alternative, which gives plenty of room for dogs off leash, but also allows some beach that is dog-free for picnickers and beach games.

CONCLUSION

I think there will be a continuing need for Education for some time to come concerning the status of the GGNRA as a national park. When I went with Howard Levitt to a neighborhood meeting, a man who said he is retired and loves to be out with his dog at Fort Funston said (paraphrased!) that he did not understand why the habitat could not be fenced so he could play with his dog wherever else he wanted to go. This lack of awareness of the special nature of a national park has unfortunately spread throughout the community during the 30+ years that dogs have been allowed off-leash, most of all in the last 10 years.

It is going to take a concentrated effort to educate, backed by an insistence on Compliance and provision of Enforcement to make this special rule work. Frankly, a 75% compliance is viewed as a "C+" grade. I think it is too low, because too many people in the most contentious places, especially Crissy Field but also Fort Funston, will see too many dog owners getting away with too much. The rule has to expect a higher level of compliance' like 90%' because there has to be a critical mass of acceptance of the terms of the Special Rule for it to work. Amy Meyer May 20, 2011

Re: Draft Dog Mgmt Plan/Draft Environmental Impact Statement

Dear Superintendent Dean:

I recently moved to San Francisco from the East Coast with my family and two dogs, and have to say, the best thing about San Francisco has been the off-leash parks. I am very much opposed to the DEIS, as it reduces the off-leash areas to such an extent as to ruin the beneficial aspects to dogs and dog guardians.

I take my dogs to Ft. Funston ("FF") every day'sometimes twice a day, and we love it. I am also a nature lover, and a member of the National Wildlife Federation. Every day I go to FF, I see hundreds of examples of people and dogs joyfully co-existing with nature and using the environment the way it is intended. I see responsible dog guardians, who closely monitor and control their dogs, pick up dog waste, and even volunteer to come monthly to clean up the park. Do you see how committed we are to keeping our parks

off- leash?

Allowing dogs to romp off-leash, but under voice control of responsible guardians, provides essential exercise, community camaraderie, and joy. Adequate exercise actually reduces aggression in dogs. When they are off-leash, they quickly resolve any hierarchy issues amongst themselves with their body language, whereas while on-leash, many dogs become territorial and aggressive. I have witnessed this many times with my dogs and others. It is simply not the same experience to walk dogs on-leash. In fact, it actually becomes more stressful and much less appealing to all.

In an urban area such as San Francisco, we need the parks to allow us adequate recreation. With the multitude of dog households in this area, taking away our off-leash parks would mean pushing hundreds of dogs into already crowded city parks. This increases conflict, aggression, trash, traffic, and all the attendant over-crowding ill effects. I do not believe the GGNRA has studied or documented this potential negative impact. I have attended hearings, meetings, marches, and read the DEIS in order to educate myself about why you want to make such a devastating change to our community. You may have heard of isolated problem incidents, but surely those problems could be addressed in a less draconian manner.

Setting aside certain sections of the beaches for certain activities, fencing, signage, educating the public, and enforcement of the rules would better serve the community as a whole, and enable your organization to fulfill its responsibilities. Engage the dog loving community in enforcing the rules in our existing off-leash areas, in exchange for continuing to allow dogs off-leash. We are a responsible and motivated group!

Most dog lovers are nature lovers too, and the vast majority would want to cooperate with a measure that is designed to balance all interests. The majority should not be punished for the actions of a minority. Don't forget: dogs were once wildlife too until humans domesticated them and made them dependent on us. We therefore owe them doubly to take care of their needs.

Please don't restrict our off-leash areas as you contemplate. I personally pledge my cooperation in enforcing rules to allow better co-existence if you will refrain from changing our existing off-leash areas.

Thank you for your consideration.

Re: Draft Dog Mgmt Plan/DEIS Dear Superintendent Dean:

My family and I live in St. Francis Wood, and take our dogs to Fort Funston 5-8 times a week. We are very opposed to the above-referenced plan for the following reasons, and urge you to take a more collaborative, balanced approach to addressing problems with the existing situation.

We are also concerned about the preservation of the parks' natural resources, but more balanced and reasonable options exist besides restricting dog-walking access. It is not even clear at Ft. Funston where dogs are not allowed. Better signage and the creation of environmental barriers would be a solution that could protect wildlife and vegetation, yet allow dogs off leash

and their guardians to use the park.

In fact, dogs and their guardians are best-suited to maximize the beneficial usage of these parks. Look at how many of them currently use these parks daily, the overwhelming majority of whom do so in peaceful, happy co,existence! Every situation is going to have its attendant problems, and there will always be a minority of people who don't take responsibility for their actions. But that does not justify taking away an environment that is so well-suited for so many responsible users.

The DEIS treats the environment and recreation as being at odds. We are not destroying the environment---we are using and enjoying it the way it ought to be. I wish the GGNRA would consider enlisting the help of dog loving park visitors, in exchange for keeping the parks off leash. Take a collaborative approach to solving the problems that exist. This would be an ideal way for the Authority and the community to come together to maintain our resources for the benefit of all. We appreciate that you have a difficult job trying to balance seemingly competing interests. But the best approach to conflict resolution is to find common ground among the parties as a starting point to solving problem in a way we can all live with.

Thank you for your consideration of our concerns.

Sincerely, John A. Schissel

Correspondence: Dear Mr. Dean,

The GGNRA draft dog management impact statements are not fact-based and do not address the health or well-being of people, dogs or the community. The GGNRA can accommodate both recreation and conservation. Regulations for Yosemite and Yellowstone are not appropriate for an urban recreation area and the courts have upheld the existing 1979 pet policy. The plan minimizes the one in three households in America with dogs; this plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and more.

I oppose the GGNRA draft management plan and all DEIS alternatives presented because the plan does not provide evidence of impacts that justify such drastic changes to 40 years of healthy dog recreation. The revised dog management plan needs to:

? Rigorously and fairly evaluate the benefits of dog recreation on the health, safety, and well-being of people, the community, tourists with dogs, and dogs

? Remove all speculative, exaggerated, and misleading statements and measure the actual beneficial and adverse impact of dog recreation on each site

? Provide site-specific need for action justifications and dismissals of suggested alternatives; use objective standards that would apply to any recreational activities such as equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.

? Remove any rules that allow for the reduction or elimination of dog recreation based on law enforcement violations (e.g., banning dogs because of 25% non-compliance with leash laws)

? Retain and formalize the existing GGNRA dog policy (aka the 1979 Pet Policy) and provide for balanced off-leash areas in San Mateo County and new lands

? Provide awareness programs, safety measures (e.g., signage, preventatives for cliff falls, barriers, etc.), land use measurements, and other measures to

address any valid adverse impacts from any recreational activity

? Align commercial dog walking rules with county or city regulations

My conclusions are supported by:

My family and I have made it a standard weekend outing to walk at Fort Funston. We have done this at least once or twice a week since our now 14 year old dog was born. She and her brother love it there. When Maddy turned 5 we added Seamus to the family. He is a standard poodle who has been walked by us or our walker every day at Fort Funston for nearly nine years.

We are careful and respectful of nature, and of the many others we share this beautiful space with - dogs, elderly, young, and everyone in-between. In all this time, we have witnessed a handful of situations where people have been careless. Yes, we need to take care of this incredible urban resource. But no, we do not need to so over restrict it's use tht we lose the unique urban/outdoor mixed use feel that a City like SF is built around. We all live here together. Let's try to do it well.

RE: Draft Dog Management Plan, Draft Environmental Impact Statement

Dear Superintendent Dean,

I have been a resident of San Francisco since 1977 and have lived in Bernal Heights almost all of that time. I am now 62 years old. Prior to owning a dog, I was afraid to walk in nature by myself. When I was finally able to get a dog, I delighted in taking her to Fort Funston, where she could get her needed off-leash exercise, and I could socialize with other dog lovers, all in an exquisite natural setting. It was an eye opener to me to see so many women alone with their dogs, and feeling safe.

My dog died over a year ago, and I still go to Fort Funston regularly because I enjoy being around dogs, and because it is a safe for me to go. In fact, I feel more freedom there as an 'older' woman than I ever did in my younger years. The reason for this is that the dog-owning community has made Fort Funston a vibrant, well used, well cared for gathering place. And it affects not just dog owners, but also families with children, frail and elderly people, and people who are not able to own a dog.. All of those populations feel safe, and many have told me they come so either they or their children can be around dogs.

In more recent years I have noticed the same thing at Crissy Field and Mori Point. It's wonderful to see people of all ages, abilities, and backgrounds come together to enjoy the best San Francisco has to offer. In fact, as a white female, the most opportunity I get to interact with people of other ethnicities is around their dogs. So often our dogs serve as the catalyst for conversations, giving us a feeling of community.

The draft Dog Management Plan and Environmental Impact Statement disturbs me for several reasons. The Golden Gate National Recreation Area is supposed to provide recreation for its urban residents, yet the report proposes to treat it like Yosemite or Yellowstone National Park. It views recreation as detrimental to the environment, yet people ARE the environment of a city. People need exercise, nature, beauty, and

socialization. Dogs need exercise as well as exposure to people and to other dogs.

The number of dogs in San Francisco, and the need for dogs to get regular exercise, means that if the GGNRA areas are closed or severely limited to off leash dogs under voice control, the impact on the city parks will be profound. The study did not assess the impact on city parks. Nor did it conduct surveys on this impact.

The study itself shows that only 2% of serious safety incidents involve dogs. Yet it claims that dogs present a serious risk. And it never even considers comparing this 2% with the numbers of women who would be accosted if they did not have dogs at their sides. Similarly, the study claims to be interested in protecting wildlife, but the data just don't add up. First, there must be data collection at the different GGNRA sites, and then, if there is a proven harm caused by dogs (as opposed to natural predators), you must enlist professional help in finding simpler ways to solve the problem rather than going first to banning dogs. The same is true of concerns about the cliffs; instead of banning dogs you could simply install low fences.

Finally, the Compliance-based Management Strategy should not even be considered in any plan. It goes against the fundamental principles we live by. It would punish the vast majority of responsible dog owners because of the actions of a handful of a few 'renegades'. It is comparable to saying that if the police catch enough people speeding on Highway 101, (what is enough?) then they will close Highway 101 to all traffic.

For these reasons I oppose the Preferred Alternative and the Compliance-Based Management Strategy and urge you to obey the recreation mandate of the GGNRA. - Laurie Salen San Francisco, CA 94110

Correspondence: Dear Mr. Deon,

I am writing to protest the proposed restrictions on dogs and humans in the GGNRA. The Bay Area is a model for enlightened co-use of our natural resources. The availability of nearby areas for the tax paying dog owners to exercise their animals and maintain a healthy lifestyle is necessary for a balanced society. Dogs have been living with humans as helpers and companions for countless generations. To deprive this natural pairing of the opportunity to enjoy nature together would be a mistake with unforeseen consequences

Sincerely,

Re: Draft Dog Management Plan/Draft Environmental Impact Statement
Dear

Superintendent Dean,

I have lived in the San Francisco Fillmore District for nearly 40 years and have never had a yard. The public park lands have provided me with many recreational as well as meditational opportunities. I strongly support the preservation of our environment and open spaces in this densely populated city. I typically spend several days a week at Crissy Field walking and playing fetch with our dog. When I am unable to take him to the beach, I have dog walkers do so. Our dog Sam is a gentle black lab who loves to swim and play ball. He needs his exercise to stay healthy. Coincidentally, this regular exercise keeps me fit and healthy as well.

Given this background, I read your proposed Dog Management Plan with great interest. My experience is that dog owners are cleaning up after their dogs and respecting posted restricted areas. I looked for site-specific data on damage to protected wildlife and the environment that would support your proposal to severely restrict off-leash dog areas. I could find no data of the extend of the damage or specific causal ties to off-leash dogs at Crissy Field. I also could not find any trend numbers correlating off-leash dog use to deterioration of the environment. I found no scientific study to support your highly-restricted conclusions.

Certainly, some compelling factual basis needs to be provided to change the current 1979 Pet Policy. I could find no numbers based on violations of the current policy that would support the need for any changes, let alone such drastic changes.

Your preferred alternative will dramatically alter the quality of my life and the life of Sam. Spending time at the beach with Sam provides me with an opportunity to get to know neighbors. Many children want to pet and hug

the dog, Some adults want to play fetch or just reminisce about dogs they grew up with. Surely, these are the kinds of interactions we need in the city. To disrupt this community experience, you need compelling data based specifically on the unique GGNRA lands. I cannot support your Draft Dog Management Plan; you have provided no site-specific data to support a change in the current 1979 Pet Policy. Considering that now the GGNRA only allows off-leash dog walking on 1% of its land, further restricting off-leash areas is both unnecessary and punitive to urban residents.

Respectfully, Joan M, Kaplan San Francisco, CA 94115

Re; Draft Dog Management Plan/Draft Environmental Impact Statement

Dear Superintendent Dean,

No doubt this letter is one of many you have received since the DEIS/The Plan have been made public.

I have attempted to state my case in a contracted but concise form, as, no doubt, you have heard and know all the arguments against the DEIS/The Plan. Please do not mistake the brevity of my words for the lack of "fire in the belly".

Sincerely,

Jocelyn S. Carter San Francisco, CA 94116

May 24, 2011 Background

I am a native San Franciscan of 62 years. I have had dogs in my house and around me nearly all my life. I am 100% Asian. I retired a retired Nursing Home Administrator after 38 years in the industry.

My family home is located in the outer Richmond District of San Francisco very close to several GGNRA sites. These are sites my family has used and still uses to walk our dogs, no less than daily, over six decades. My 91 year old father still walks his loveable Labrador retriever off leash three times daily in these areas.

I live near a small neighborhood San Francisco park and use this site as well as GGNRA sites to walk my dog off leash. In the past, when the knees were more willing, I used GGNRA sites to run not only myself but my dog as well.

My Position

The position of the GGNRA in its DEIS and Plan is to effectively eliminate dogs from its jurisdiction. The GGNRA has cited reasons in support of its position (preservation of the environment and wildlife to name two) yet the GGNRA has not effectively shown the same impact by humans, their events/activities and natural predators, to name a few.

The GGNRA has not fully considered urban impact (city parks, area

resources), human impact (physical, mental, social) and it grossly believes the DEIS and The Plan will better serve minorities (minorities fear dogs).

The GGNRA is charged to "provide for the maintenance of needed recreational open space". It is not charged with restricting, eliminating, isolating and closing recreational space by reason of alleged non-compliance. Recreation is not anti-environment nor anti- animals. People who recreate with their animals also care for the environment.

I wishthat the GGNRA would consider partnering with neighborhood/community groups, animal welfare and conservation organizations and the cities affected in order to more effectively exercise its mandate of providing "...for the maintenance of needed recreational open space."

.....that the GGNRA would understand that education, and not compliance based management, may prove to be the key to long term and peaceful success here.

.....that the GGNRA would keep in effect the 1979 Pet Policy. It works.

Correspondence Type: Park Form
Correspondence: Thank you for the excellent meeting on Mar 7th, 2011. Professional and educational meeting along with spokespersons that were informative and responsive to all questions.

Why is it permitted to have dogs on our beaches? For public hygiene they need not be on our pristine shorelines. These animals, on leash or off leash do cause sanitation problems by leaving behind practices of defecating and urinating where others walk and children play. In many parts of California some counties do not welcome or permit dogs on the beach. Here, I ask when dog owners, at times, pick up their dog's defecation and place hopefully in a plastic bag and eventually deposit it some nearby receptacle. Is this recycled? Is the plastic material recycled? I would like the GGNRA to find out what happens in this situation and can it be improved with hygiene in mind.

At Fort Funston a dear old friend is attacked by dogs while relaxing on the beach at her favorite location. Sometimes disrespectful dog walkers hit her when attempting to keep dogs away. Her name is Carol Schuldt at. Carol gave me permission to share her telephone number for GGNRA interviews. Please call Carol for testimony about dog(s) intrusion and violent contact

with dog walkers.

I was responsible for the signs at Aquatic Park that state No Dogs on Beach. Yet when seeing the signs many continue to off leash their dogs onto the beach. I have never witness proper enforcement or the issuing of citations. A telephone number to call when violations occur is absent from all postings. A suggestion is to have a visible number for reporting dogs on the beach.

In summary my concern is about maintaining pristine beaches with no health problems left behind with dog defecation and urination, since this smell brings other dogs to do the same hygienic problem.

I am a life memeber at the Swimming + Boating Dolphin Club and have been swimming at Aquatic Park since the 1950's. With the Rest Rooms (2) closed we witness people and dogs defecating on the beach. This is unhealthy. I am available to address the above comments. Best wishes with reaching a compromise that reflects a healthier environment.

Steve

P.S. Continue to protect the natural world as best as you can....

RE: Marin Horse Council comments on the proposed GGNRA Dog Management Plan

Dear Mr. Dean,

The Marin Horse Council (MHC) is pleased to offer comments on the Dog Management Plan/Draft Environmental Impact Statement (Plan/DEIS) that outlines proposed rules for dog-walking on GGNRA lands. Even though MHC is a non-profit "horse organization" devoted to preserving the way of the horse in Marin County, many of our members own dogs and tend to think of them as members of the family. Whenever possible, we enjoy taking our pets along with us on outings away from home. We enjoy seeing our dogs run free and enjoying themselves. Be that as it may, we all care about the environment and realize that the "natural" or instinctive behavior of dogs is not in the best interest of the natural environment and we realize that dogs may occasionally upset other park visitors. We want to emphasize, however, that dogs usually do not cause a problem for horses. Dogs with responsible owners and equestrians usually get along well as we pass each other on the trail.

Of the seven GGNRA sites for review in Marin County, most horseback riding is on the Oakwood Valley/Alta Trail and over the Marin Headlands and Fort Baker sites. We are, therefore, limiting our comments to those two areas. It is no surprise that our Board is not in unanimous agreement about the best of the Alternatives A through E. However, we have made an effort to balance no-dogs and on-leash-only areas, with "Under voice control" in regulated off-leash areas (ROLAs). We, therefore, go in favor of the plan's Preferred Alternative C. This, we feel, could reduce user conflicts, enhance safety of users and dogs, and protect the environment. The ROLA proposed for the Oakwood Valley Fire Road will be fenced along the sides, as well as gated at both ends. As equestrians, we would like to see the type of gate that could be opened from horseback. It has been noted that, aesthetically, a fence along both sides of the fire road will detract from the "wilderness" feeling of the trail. The fence would also block wildlife from crossing the trail. That said, alternative C remains most favorable. As for the single-track trail (across the creek and roughly parallel to the fire road), it would be desirable to see the trail improved so that it could be enjoyed by both hikers and equestrians.

The enforcement policy proposed by GGNRA relies almost entirely on voluntary compliance. We feel that without more stringent enforcement, many dog walkers will ignore the rules. The Marin Horse Council agrees

with Marin Conservation League that a compliance-based management strategy needs to be supplemented, from the beginning, by vigorous enforcement efforts that include (a) a visible increase in uniformed law enforcement presence; (b) increased issuance of citations, particularly to aggressive violations; and (c) tracking of repeat offenders. Clear and prominent signage is most important. Signs that are damaged need to be replaced quickly and persons caught vandalizing signs should be prosecuted vigorously.

If the proposed limitations on dog walking are observed by users and adequately enforced by GGNRA, they could reduce user conflicts, enhance safety of users and dogs, and protect the environment. MHC looks forward to working with GGNRA personnel as they strive to balance the goals of protection of the environment and an attempt to accommodate dog walkers and all who enjoy the treasure we have in GGNRA.

Respectfully,

Joel Bartlett President, Marin Horse Council

Correspondence: I am writing because I am very disappointed and unhappy about the GGNRA Dog Management Plan to reduce protected dog areas in the Bay Area. Like the San Francisco Board of Supervisors, I am opposed to the plan.

Fort Funston is one of the FEW places that allows dogs on beaches, and the plan is to cut this area even further? Please remember that dogs are not allowed on MOST beaches or federal land preserves. For example, dogs are only allowed on the valley floor, and not in MOST of Yosemite, including most of the hiking trails and hiking areas. There are few places for dogs to run on and off-leash. Please do not take these areas away.

I myself am a responsible dog owner, as are my friends who own dogs. We always pick up after our dogs, carry around plastic bags, and dispose of our dogs' waste appropriately. We constantly supervise our dogs, especially if they are running off-leash, to make sure they are not disturbing people or destroying habitat.

We understand you are trying to preserve a natural habitat, but our dogs run on the trails and leave only as much of a footprint as people do in Yosemite and other national parks.

Please PROTECT these designated dog areas. They are very important and should not be cut or reduced.

Sincerely, Sue Olsan

I'm a dog owner - We need to be open to 4 legged friends. Most of us obey rules.

Correspondence Type: Letter
Correspondence: Dear Frank and Howard,

It has been a pleasure working with both of you on important projects spearheaded by the Golden Gate Parks Conservancy and the Golden Gate National Recreation Area. In the last year, we made significant progress specifically on two initiatives'Food for the Parks and Park Prescriptions, and we have had fun at the same time.

Please allow me to share my thoughts with you on another topic dear to my heart and currently front and center for the Golden Gate National Recreation Area'the Draft Dog Management Plan. My request is that you choose Alternative A, the No Action alternative. I also request that you include the "New Lands" areas (such as Cattle Hill, Sweeney Ridge, Mori Point, Pedro Point, Milagra Ridge, and Rancho Corral de Tierra) in San Mateo County.

This request stems from the fact that I am an avid environmentalist, a dog owner, and a dog lover. I have worked as a conservation professional for 20 years, and I understand the challenges of balancing human needs with environmental protection. This task is particularly hard in our beautiful, urban setting that has a higher proportion of people and dogs than most National Parks. I understand how complex this issue is because your decision will impact the health of people, the environment, and domestic animals. I am hopeful that it is possible to find a way that we all can coexist today and in the future.

I know it is crucial that our dogs are well behaved and trained. Additionally, adequate exercise and socialization are essential for a well-behaved dog. Having places where I can take long walks with my dog allows me to get the exercise I need while also meeting my dog's needs. In fact, this reminds me of Dr. Daphne Miller's suggestion that one way to improve the health of people is to get veterinarians to write prescriptions for dog owners and their dogs to take walks. Just as Golden Gate wants to facilitate healthy activities for people, we need to make dog walking easy as well. Some people will prioritize the need to keep their dogs healthy while ignoring suggestions from their own doctors. Without access to the small amount of land in the GGNRA we currently have, I am very concerned that many dogs and dog guardians will not have sufficient opportunity to exercise and recreate.

It is also a priority for me that the final plan includes corridors from parking areas to off-leash areas. The preferred plan requires that dogs be on leash in order to reach the off-leash areas. It is essential to have some locations that allow dogs to release energy at the beginning of the walk (when they need it most). It also seems to me that there are many areas in the GGNRA where the existing 1979 Pet Policy has been working, and where sensitive species are not present and visitor conflicts do not occur or are very infrequent.

The GGNRA could develop partnerships with community, animal welfare, and conservation organizations to make this work. These partner groups could bring additional resources to limited federal resources. For example, in partnership with dog-associated businesses, perhaps it would be possible to create an annual permit system that includes modest education requirements in order for regular off-leash dog use. I could see that something like this could generate revenue for the National Park Service or the Golden Gate Parks Conservancy.

The draft plan has the effect of punishing many people simply because a very small number might need education or are insensitive and irresponsible. It is also possible that we could improve the current signage of off-leash areas. A possible response to this problem is to educate visitors, improve signage, and help park visitors follow the rules and learn how to

respect the environment.

Thank you for letting me express my support for Alternative A, the No Action alternative. I also hope that the final plan would also include the "New Lands" areas (such as Cattle Hill, Sweeney Ridge, Mori Point, Pedro Point, Milagra Ridge, and Rancho Corral de Tierra) in San Mateo County.

Thank you for your hard work on this issue. I am impressed with the care and consideration you have given to this important and highly emotional issue.

Respectfully,

Patty Debenham, Ph.D. San Francisco, CA 94115

Correspondence: Mr. Frank Dean General Supervisor, GGNRA Building 201 Fort Mason San Francisco, Ca. 94123

Dear Mr. Dean,

On the subject of dogs in the GGNRA, I have a few observations based on years of walking with and without dogs in Marin County. My experience is limited to the Miwok Trail from Tennessee Valley; and, from Shoreline, Countyview, Miwok cutoff and Oakwood Valley Trail . Overall, our society could dispense with many regulations, signs, and enforcement protocols IF civility, common sense, a little foresight, perhaps the Golden Rule, were the norm.

Several groups of park users perceive conflicts in their use of parklands. In rational discussion, no individual or group would boldly suggest that theirs is the only valid use, and others should begone. In practice, the clamoring "me, me, me" inner child can frequently take over. If I am loud and numerous, regulation writers will hear me and feel that they are serving the people.

Dogs should be mostly restricted to the fire roads and trails, and should not roam the chapparal at will and unleashed. There are dangers to them in the brush, and the wild animals should be free from predation by pets. Oakwood Valley Trail has delighted me weekly for years with deer, coyotes, bobcats, raccoons, rabbits, skunks, snakes and all manner of birds. My dogs are not allowed to pursue any of them. The proposal to close the "trail" side of Oakwood Valley Trail will dramatically degrade the experience; and, the suggestion of a double fence seems to be harassment of wildlife by interdicting free passage to drinking water.

Miwok Trail from Tennessee Valley starts from a parking lot that serves a stable. As the approach is very suitable for cyclists as well, this trail would be a good "no dog" choice, as it is steep and narrow and used by several classes of park visitors.

The Miwok Trail from Shoreline does not seem very conflicted - Limited Parking reduces congestion ,and walkers, dogs, riders and peddlers seem to have enough space. Countyview feeds Miwok above Tennessee Valley and would not appear to be crying for regulation.

Educational signage and enforcement of existing common sense derived regulations would be most appropriate.

Bicycles ought to have a bell and use it on turns and blind corners.

Bicycles should slow down on hills and use a maximum speed of 8 mph when passing. This is not a cyclocross or X games venue.

Single file is frequently wise for all groups.

Dogs harassing wildlife will not be tolerated. Use a leash and stay on the trail.

Groups of four or more ' bikes, horses, dogs, and people should be conscious of their impact on others and seek to ameliorate it.

Hopefully, we can take a realistic approach to solving these issues for ALL stakeholders by enforcing existing rules, using educational signage, and not wasting a lot of money on this subject. Very respectfully, Janey Schaefer Mill Valley, CA. 94941

Re: Draft Dog Management Plan/Draft Environmental Impact Statement

Dear Superintendent Dean,

I have been a Bay Area Resident since 1977 and have lived and worked in SF, San Mateo and, most recently, Sonoma County. I have explored beaches and trails throughout the Bay Area, enjoying them for the last several years with our family member and best friend, a Vizsla named "Maia". In my senior years, she is a joy and a willing partner for outings that connect us to the recreational pleasures the Bay Area offers. I enjoy the landscapes/vistas

and the social interaction/friendships that is the Vizsla "lifestyle". The outings keep us young in spirit, fit in our bodies, and balanced for the demands of a busy life.

Over the years I have enjoyed most, if not all, of the areas in the GGNRA on foot, horseback, bikes and, more recently, with my canine partner. We continue to frequent beaches and trails, especially in Marin and SF, with a favorite being Ft Funston. Most weeks we are at the beach or doing long hikes 2-3X's in addition to "urban" leashed walks and dog park romps.

I have been a long-term member and supporter of the Sierra Club and the Waldo Holt San Joaquin Wildlife Conservancy. I pursued post-graduate study in Ecosystem Management with emphasis on native species/ecosystems. I studied the native dune communities in SF and San Mateo Counties and mapped the endangered species, *Tanacetum Camphoratum*, the Dune Tansy. So, while I love my dog, I also love the native California plant/animal communities and respect the fragile ecosystems. One of the things I enjoy on our walks together is looking at the native vegetation and wildlife/birds. Many of my fellow canine enthusiasts respect the ecosystem(s) as much as I do and find the experience with our dogs in nature restorative on every level.

My dog and I have attended training sessions to learn basic obedience skills and recall. She has been well socialized to both people and dogs and is an exceptional companion at home, around town and on the trail. I expect my dog to be well behaved and responsive to voice commands on leash and off. I leash my dog to keep her from sensitive areas and clean up after my dog. As a dedicated hiker/walker/bicyclist and ex equestrian, I also educate fellow dog and non-dog enthusiasts about canine/human/equine/bike interactions. On walks, I educate friends about the native plant/animal communities. In short, if you were to encounter my dog in an urban or rural setting, you would very likely have a positive encounter that would leave you smiling: her enthusiasm and joy for life are hard to match!

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions. It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, I believe other options (besides restricting dog-walking access) should be considered first. I favor an approach that balances recreational use (including dog-walking access) with preservation. I think that a multi faceted approach that incorporates

education/improved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option.

The proposed "compliance-based" approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal.

The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. I live in Sonoma County and have strong ties to the lands of the GGNRA as do many of my friends and fellow dog enthusiasts that live in SF/North/East/South Bay Counties. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for RESIDENTS OF THE BAY AREA. NEPA requires evaluation of impacts on the "human environment": the DEIS fails to do so by failing to adequately address how the proposal will affect "recreational" values as well as natural, scenic and cultural values on RESIDENTS OF THE BAY AREA.

This DEIS and Plan doesn't recognize that environmental values include both recreation and nature. In many places, the DEIS treats the environment and recreation as adversarial values i.e., that recreation only harms natural resources. The document doesn't acknowledge that people care about both and that people with dogs are often also good stewards of our environment. I believe I am a good steward of the environment and I believe that many of my fellow dog lovers are also good stewards. This bias extends to the overall document, pitting recreation vs natural values rather than identifying and exploring reasonable alternatives where nature/recreation can work together.

Further, the proposed broad limitations in the DEIS are largely without site-specific science that demonstrates that the perceived degradation of the quality of the GGNRA's natural resources are actually attributable to dogs vs other factors. For example, much of the impact on native dune habitat that I have seen at south Ft Funston is due to non native/invasive species, erosion, equines and transients/homeless encampments vs foot/dog traffic. After careful consideration, I support Alternative A, the No Action alternative and would also include the "New Lands" areas in San Mateo County. The DEIS is biased against the No Action alternative and failed to take a good look at this as an option. There are many areas in the GGNRA where the 1979 Pet Policy has been working and where sensitive species are not present and conflicts occur infrequently or not at all. Ways of improving how GGNRA carries out/administers the current 1979 Pet Policy should be considered and given a fair assessment. I believe that the current

management plan will work for the many years if "tweaked" to provide clearer rules, improved compliance and reduced potential for conflicts. The majority of the "problems" with the current plan are problems of management/implementation/education vs access. If there are problems with access, then the DEIS doesn't provide a scientific or technical basis for the severe limitations proposed on continued dog walking.

Thank you for your consideration.

Respectfully,

Barbara Haushalter Petaluma, CA 94952

Correspondence: I am writing because I am very disappointed and unhappy about the GGNRA Dog Management Plan to reduce protected dog areas in the Bay Area. Like the San Francisco Board of Supervisors, I am opposed to the plan.

Fort Funston is one of the FEW places that allows dogs on beaches, and the plan is to cut this area even further? Please remember that dogs are not allowed on MOST beaches or federal land preserves. For example, dogs are only allowed on the valley floor, and not in MOST of Yosemite, including most of the hiking trails and hiking areas. There are few places for dogs to run on and off-leash. Please do not take these areas away.

I myself am a responsible dog owner, as are my friends who own dogs. We always pick up after our dogs, carry around plastic bags, and dispose of our dogs' waste appropriately. We constantly supervise our dogs, especially if they are running off-leash, to make sure they are not disturbing people or

destroying habitat.

We understand you are trying to preserve a natural habitat, but our dogs run on the trails and leave only as much of a footprint as people do in Yosemite and other national parks.

Please PROTECT these designated dog areas. They are very important and should not be cut or reduced.

Sincerely, Kim Galloway

Dog populations are growing and current plan is very short sighted.

Correspondence: Dear Superintendent Dean :

I am a long time San Francisco resident and live with my wife and our family dog in the Presidio Heights neighborhood. We live in a condominium and do not have a backyard. The Presidio and adjacent GGNRA lands are our backyard and playground. My wife and I walk our dog together and with friends who also walk their dogs at Crissy Field, Baker Beach and Fort Funston several times a week. Additionally, my mother and father who currently live in Palm Desert and are both in their 80's particularly enjoy visiting Crissy Field and walking with our dog as she runs, swims and plays with other dogs. Our outdoor activity, daily exercise and socializing revolves around our time with our dog at the GGNRA parklands. Because of this we financially supported the hugely successful renovation of Crissy Field 10+ years ago. We have been thrilled to see how Crissy Field has become better and better over the years as the plants have matured, buildings have been renovated and as more and more visitors enjoy the area ' those with and without dogs. Given the importance of the health of the Bay and its wildlife, we are also ongoing active supporters of the Farallones Marine Sanctuary Association and the Marine Mammal Center.

I have taken the necessary steps to ensure that my dog and I are both good citizens and responsible members of the community. My dog has been awarded her Good Canine Citizenship certification and is an Animal Assisted Therapy dog with both the SF/SPCA and with Delta Society. We observe all signs with respect to dunes, vegetation and wildlife. We walk on a leash were (and in the case of the wildlife section of Crissy Field, when) off leash is not permitted. When off leash, she is under voice and sight control. Further, not only do we clean up after her we try to leave the beach

cleaner than when we arrived. I have noticed that the vast majority of dog owners at Fort Funston, Baker Beach and Crissy Field, those areas we visit most frequently, are similarly careful and conscientious. Walking our dog with our friends is how we socialize, stay healthy and enjoy the outdoors. Access to these areas ' access that is equal for all visitors to the GGNRA parklands - it is critical to the quality of our life in the Bay Area

As such, it will come as no surprise that I am alarmed by and do not agree with the GGNRA's current preferred alternatives for Fort Funston, Crissy Field and Baker Beach as they significantly restrict and eliminate the already limited off leash dog walking in these areas. The proposed changes to the existing alternatives (those agreed to in the 1979 Pet Policy) and the virtual elimination of access to the parks for people and families with dogs to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site specific conditions.

As presented in the DEIS, the proposed dog management plan eliminates dog- walking (on and off leash) access for all new lands (additions to the GGNRA sometime in the future) within San Mateo county lands. This position is highly discriminatory and does not reflect that GGNRA's mission applies equally to new lands as existing lands and it is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands.

I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas. The GGNRA is a community resource and urban oasis that makes the Bay Area a wonderful place to live. Community and recreation friendly options that educate and direct all park goers, those with and without dogs and those on bikes, should be adopted. For example, environmental barriers and chipped paths, such as the vegetative barriers surrounding the tidal marsh at Crissy Field or the restored dunes at Fort Funston or the new paths in the Presidio, help guide walkers ' with and without dogs - as to the places where it is ok to walk.

We all share our urban environment. Those I encounter on our walks include people with and without dogs, people on bikes, dogs, horses on cliff paths to the beach and on the beach, coyotes in the parks, the sea birds and sea mammals, not to mention the plants and many other living creatures. I often see raccoons and skunks in the early evening hours. Suggesting that dogs are responsible for wildlife impact and vegetation degradation without any credible science is irresponsible and highly inconsistent with observable activity.

Adequate exercise and socialization is essential for a well-behaved dog. Having places where I can take long walks with my dog, my family and my friends, allows me to get the exercise I need while also meeting my dog's

needs. Without access to the small amount of land in the GGNRA we currently have, I am very concerned that many dog and dog guardians will not have sufficient opportunity to exercise and recreate. I am further concerned that the closure of GGNRA park lands to dog-walking recreation will lead to unpleasant and unnecessary friction with Park Rangers and personnel leading to bad feelings and bad press about the GGNRA parks and will lead to overcrowding in our city parks.

Further, walking in the GGNRA provides a unique opportunity for solitude in a safe, beautiful and un-crowded outdoor space. I am in the GGNRA parks with my dog rain and shine. Aside from the sunniest and warmest of days (few and far between in the Bay Area) the vast majority of people I see are those with dogs. To restrict these recreation areas to only people without dogs would be discriminatory and would leave the beaches and adjacent parks empty, literally empty, the vast majority of the time. People with their dogs make the Parks a safer and friendlier place.

In reviewing the DEIS specifically with respect to those places where I most frequently visit I have noticed some concerning errors and omissions. The DEIS and Plan doesn't recognize that environmental values include both recreation and nature. In many places, the DEIS treats the environment and recreation as opposing values, i.e., that recreation only harms natural resources. The document doesn't acknowledge that people care about both and that people with dogs are often the best stewards of our environment.

The draft plan has the effect of punishing the majority of park visitors ' dog guardians - because a very small number of park users, with and without dogs, are uneducated, insensitive, or irresponsible and because the current signage of acceptable walking areas and sensitive areas is unclear. With respect to treading on dune and other sensitive areas frequently see families and children playing in these areas, often for hours at a time. I rarely see dogs running on the sensitive habitats. Dog owners do their best to follow the rules when those rules are posted clearly. The reasonable response to this problem is to educate visitors, improve signage and help park visitors follow the rules and learn how to respect the environment, not to ban those of us with dogs from the GGNRA. I wish that the DEIS would include an alternative along these lines.

Further, the proposed "compliance-based" approach should be modified to create a baseline of current conditions, then measure impacts of all user groups. It should take a positive and community friendly approach, not a negative, punishment oriented approach. Compliance should start with a robust public educational component and an objective, long-term monitoring program designed and carried out with the community. The GGNRA should develop partnerships with community, animal welfare, and conservation organizations to make this work. These partner groups can and

will bring additional resources to limited federal resources. GGNRA should be a partner with the City of San Francisco and other communities and not act in an adversarial manner.

The DEIS doesn't recognize that many areas of the GGNRA are located in or next to urban neighborhoods. The DEIS excludes the quality of the urban environment from its scope, saying it's not significant. The reality is that the GGNRA provides much needed open space in a major urban area. As I mentioned in my first paragraph, we live in a condo and do not have any outdoor space. The GGNRA is our outdoor space as it is for the vast majority of people in the Bay Area. This omission is disconcerting because the fundamental purpose of creating the GGNRA was to provide open space for RECREATION for all residents and visitors to the Bay Area including for those people walking their dogs. The dynamic interrelationship between GGNRA and our neighborhoods is exactly the human environment that the EIS is required to study, but failed to do so.

The DEIS notes some studies and general tendencies of dogs to harm natural resources, but with few exceptions, there is little documented site-specific impacts to support this claim and to measure the impact of all users of the parks including hikers, families with children running on the dunes and cliffs, horses, and hikers. Further, there is insufficient documentation that considers and weighs the relative, and often significant, other impacts ' other park visitors that disturb and impair the natural resources, other wildlife, Mother Nature, boot camps, bicyclists, huge crowd attracting events such as Fleet Week, festivals and Walk-a-thons. Here is some quoted text from UpTake.com, a travel web site encouraging people to swarm to Crissy Field for Fleet Week :

Crissy Field may well be one of the most crowded beaches around the Bay Area seeing as how this Thursday is the beginning of San Francisco's Fleet Week.

And quite possibly the best place to view the Blue Angels is on the shores of Crissy Field. If you prefer to spread out a blanket on grass, there are large verdant lawns perfect for picnics. But if you would rather watch the show from the beach there is a rather nice beach, as well.

There are a myriad of paths that wind down through the Presidio and into the restored wetlands of Crissy Field, perfect for bikes, roller blades, strollers, even wheelchairs. The Blue Angels are scheduled to begin at 3pm; arrive early as parking is notoriously tough.

And here is a photo from Fleet Week 2010... note, the people on the fenced off dune and no dogs. The dogs are not the problem with preserving our natural resource. It is the people. The proposed broad limitations in the

DEIS are without site-specific science that prove that challenges with the quality of GGNRA's natural resources are actually attributable to dogs and not to other factors. In fact, the DEIS takes a default position, without science based evidence, that dogs are the only contributing factor. A stroll around these park and beach areas and you will likely see, as I have seen on my hundreds of walks, well behaved dogs enjoying swimming and fetching near the water while families are picnicking, hiking and climbing in the sensitive dunes, vegetation and cliff areas. My years of observation makes it clear that DEIS premise is deeply flawed and solid evidence of its claims is completely lacking.

The DEIS needs to provide full disclosure to the public and decision makers. If dog-related disturbances are having a significant negative effect on wildlife, for example, the DEIS needs to provide site-specific scientific evidence as documentation and undertake a scientific evaluation as to whether people or other factors are also causing or contributing to the problem noted. For example, the wildlife area of the beach of at Crissy Field frequently has hikers and families parked for the day in the dune areas where the snowy plovers are said to nest. These families have completely ignored the signs and often leave their trash behind. The dogs and their owners are by the water and on leash. Perhaps the GGNRA needs to provide an analysis that considers whether people should also be restricted from these areas or if recreating with and without dogs can only occur within X feet of the highwater mark, for example. This, of course, would include visitors for Fleet Week and other events. The science needs to be sound and the consequences need to be fully and fairly disclosed for everyone ' so that an informed community based decision can be made.

Recognizing that improving Crissy Field and other GGNRA lands is a continuous and collaborative process, I do support some of the modifications presented in the proposals provided that these modifications are made to the Existing Alternative. For example, I am in favor of an on-leash policy for dogs in all parking areas. However, after much consideration and review of the very large amount of material, and with the addition of on-leash rules for parking areas, I support Alternative A, the No Action alternative for Crissy Field, Fort Funston and Baker Beach. Additionally, I also include the "New Lands" areas (such as Cattle Hill, Sweeny Ridge, Mori Point, Pedro Point and Milagra Ridge and Rancho Corral de Tierra) in San Mateo county in my comments and support that these areas be open to generous on-leash (parking areas and other truly environmentally sensitive areas where people, horses and bikers are also restricted) and off leash dog walking as well.

The DEIS is strongly biased against and does not take a hard look at the No Action alternative or variations on that alternative. There are many areas in the GGNRA where the existing 1979 Pet Policy has been working and

where these areas have become safer and friendlier because of the dogs and their people. No site-specific evidence has been provided to support restrictions on dog walking or any other human activity. Until this happens, and a thoughtful and community based solution can be adopted, we should not change the existing status of things... an arrangement that seems to benefit people and the parks as evidenced by the increased usage of the GGNRA areas by Bay Area residents with and without dogs and by visitors on foot and bike.

Frank Dean, General Superintendent Golden Gate National Recreation Area, Building 201 Fort Mason San Francisco, CA 94123-0022

Dear Superintendent Dean:

I am disabled because I suffer from Bipolar Disorder. I have lived in Marin for over 35 years, and hiked every trail on Mt. Tamalpais, as well as the Marin Headlands, and I worked back in the '70s at Marine Mammal Center. In all those years, we have enjoyed taking our dogs to Rodeo Beach, Fort Funston, Ocean Beach and Crissy Field, as those are the only places they could run off leash. Every dog I've ever owned has been voice-control trained, well behaved, and I have always picked up their feces, plus any others I happen to see.

I now have two huskies, and since I got them, have had knee surgery and several other things which have made hiking impossible for me anymore. As a result, the only places I can take my dogs are the above and dog parks. Huskies need to run, especially young huskies, so I have always been grateful for the GGNRA areas where they can do so. I have learned of your plans to severely restrict off-leash dog walking in the areas I have frequented, and was dismayed to find out about it. I wanted to look into the issue before writing to voice my concerns, and have been even further

disturbed to read the Draft Dog Management Plan.

From what I have read, this plan is poorly written, contains inaccuracies and does not address important issues. For one, it doesn't take into account the quality of life in an urban environment where recreation is limited for those of us with dogs who are a large part of our outdoor activities. My quality of life has gone downhill for several years now, and the places I enumerated have become a larger and larger part of my ability to get outdoors. Being outdoors is vital to my mental and physical health, and without places where I can get out with my dogs, my outdoor activities become virtually nil. I can't just go out and sit, nor can I hike any longer; taking the dogs to the beach is important to my health and allows me to get outside without having to walk much. I have always loved the ocean; having been born in the Bay Area, it has always been a huge part of my life.

I was happy when the GGNRA came to this area, as it preserved places like the Marin Headlands, which are close to my heart. We've been frequenting Rodeo Beach all the years we've lived in Marin, I've rescued seals and sea lions there, released them there, and taken my breaks there in the years I worked for Marine Mammal Center. To have Rodeo taken away from my family and our pets is a huge blow. Given it is the Golden Gate RECREATION Area, I can't understand why there is a move to take these areas away from us.

For another, given my mental and physical condition, I live a relatively isolated life. I've been able to meet people, get to know them and their dogs, and now I'm at the point where the only socialization I get is within these groups. I value that highly, and I know most of us won't frequent these areas without our dogs and I will lose contact with those friends. I'm uncomfortable in most social situations and don't have visitors to my home, so I would be even further isolated if I couldn't take my dogs to the beach.

All my dogs have been well socialized from an early age, and I have trained them all myself to walk off leash and be good social inhabitants. If there are not places like this where people can take their dogs to learn to be good citizens, I can envision upcoming generations of pets, not having gotten the chance to be socialized from a young age, being less controllable and causing more problems for their owners and their neighbors. People love my dogs and children get the opportunity to learn not to fear dogs by meeting mine, which is healthy for both the dogs and the children. There are few dog parks available where this is possible and not many bring children to them, so I also fear for upcoming generations of children who miss the opportunity to meet well-behaved dogs. Pets are important to our well being; healthy, well-behaved pets especially so. I can't imagine, in my circumstances, being without my dogs, and my dogs would not be the good citizens they are if I

weren't able to socialize them and let them meet other dogs off leash.

Within the "dog management plan" I saw many references to detrimental impacts by off-leash dogs, yet I saw no backup or specifics to indicate their existence HAS been detrimental, only suggestions of how they "might" be. All the dog owners I know are very careful to pick up any animal waste, theirs and others', and we point out to others who might not see their dog eliminating that there is poop to be picked up. We self-police to a degree I find impressive specifically BECAUSE we don't want to impact the environment negatively or cause difficulties for others. My dogs have always been trained to not disturb wildlife and I never allow them to set foot on areas designated as protected. All the other dogs owners I know are the same, and I've yet to see any negative impact caused by dogs in the areas I mentioned, so I don't know where the evidence for deleterious effects by dogs was obtained. I would like to have actual facts taken into consideration before a Judgment is made that the environment has actually been affected.

I have personally never seen any dog harass wildlife at any of the places I listed. At Fort Funston and Crissy Field, for example, there are specific areas delegated for wildlife; I've never seen any dogs in those areas and I know personally that people who frequent those areas respect the wildlife and control their dogs. We love the environment as much as or more than most people and want it protected. I see people drop cigarette butts and litter all the time; I see dog people picking UP such things, as do I. People with dogs get out a lot more in places such as this and we treasure these environments.

I've seen very few people at Fort Funston BESIDES people with dogs. It's not an area that is or would ever be popular for many other activities; if people with dogs don't utilize it, I don't think it will be of much value to many other people. It's cold, windy, out of the way and many wouldn't consider it scenic, so I'm not sure how much "recreation" it would provide if it weren't for us. As for Crissy Field and Ocean Beach, if nothing else, I would suggest taking into consideration making perhaps HALF of them no-dog or leash area; they are huge, long beaches which could easily accommodate both those with dogs and those who don't want them around. Rodeo Beach is also not a popular place, partly because of the weather there as well. There are people with dogs out there in even the worst weather, when nobody else would frequent the area, and I've never seen any conflict between off-leash dogs and people there in all the years we have frequented it. GGNRA was set up as a recreation area; that should include all forms of recreation. Bicyclists, runners, equestrians and others have myriad places in the Bay Area for recreation; only a few places are available to dogs and dog owners. Our form of recreation is as valid as any other and that should be taken into account. The 1979 "pet policy" was set up to recognize dog walking as a legitimate form of recreation; to change that policy would have

a negative impact for many in an urban area where there are few "recreation" areas available for dogs and their owners. For decades my family and I have been grateful for the GGNRA; for me personally, it would become essentially useless if this proposed action is implemented. Please give ALL of us the use of the GGNRA equally. Thank you for your consideration.

Sincerely, Niki Beecher San Rafael, CA 94901

Correspondence: I am writing because I am very disappointed and unhappy about the GGNRA Dog Management Plan to reduce protected dog areas in the Bay Area. Like the San Francisco Board of Supervisors, I am opposed to the plan.

Fort Funston is one of the FEW places that allows dogs on beaches, and the plan is to cut this area even further? Please remember that dogs are not allowed on MOST beaches or federal land preserves. For example, dogs are only allowed on the valley floor, and not in MOST of Yosemite, including most of the hiking trails and hiking areas. There are few places for dogs to run on and off-leash. Please do not take these areas away.

I myself am a responsible dog owner, as are my friends who own dogs. We always pick up after our dogs, carry around plastic bags, and dispose of our dogs' waste appropriately. We constantly supervise our dogs, especially if they are running off-leash, to make sure they are not disturbing people or destroying habitat.

We understand you are trying to preserve a natural habitat, but our dogs run on the trails and leave only as much of a footprint as people do in Yosemite and other national parks.

Please PROTECT these designated dog areas. They are very important and should not be cut or reduced.

I'm not a dog owner, yet I'm concerned if dogs (especially larger ones) don't have enough space to run around since most people in the bay area have limited to no back yards. If it's necessary to cut some places can other places

not be added so dogs have adequate, public space to exercise?

Correspondence Type: Letter
Correspondence: Dear Frank:

The Presidio Trust (Trust) recognizes the importance of the National Park Service's (NPS) efforts to manage dog walking on national park sites and submits the attached comments on the Draft Environmental Impact Statement for Dog Management (DEIS) in the Golden Gate National Recreation Area (GGNRA) in support of this process. The Trust has a key interest in NPS dog management planning in the GGNRA and therefore in the adequacy of the EIS. It is for this reason that the Trust is participating as a cooperating agency in the National Environmental Policy Act (NEPA) process for the dog management project.

We commend the NPS's hard work to date in attempting to craft a thoughtful resolution to a long-standing and impassioned controversy to further the effective management of GGNRA public lands. However, as discussed in the attachment to this letter, we believe that further effort will

be required to thoroughly analyze potentially significant impacts. Until that work is done, it would be premature of the Trust to voice a judgment with respect to any of the alternatives, including the preferred alternative.

As the steward of the interior portion of the Presidio, known as Area B, which is adjacent to lands that are managed by the NPS, or Area A, the Trust brings expertise in managing diverse park resources in an urban environment. With more than 8,000 people living, working, or attending school in Area B of the Presidio, in addition to daily recreational users, the Trust understands the challenges of maintaining a balance among the differing, often competing needs of many users so that the Presidio's resources can be enjoyed today while also safeguarded for the future.

Experience over the past decade and more has shown us that major planning decisions made for Area A invariably affect operations, resources, and activities in Area B. Area B contains approximately 20 miles of trails and 1100 acres of developed areas and open space directly adjacent to Crissy Field and Baker Beach, both of which receive intense visitor use, including that from dog walkers. Tighter restrictions on dogs in these waterfront areas will almost certainly increase dog-walking activities in Area B, resulting in potentially significant impacts to Trust-managed parkland.

The Trust well knows that managing conflicting visitor uses on public lands while simultaneously protecting natural resources for future generations is a difficult task. In the context of a complex, controversial, and volatile issue such as dog management in a dense urban area, the task becomes much more challenging. The Trust also understands the demands faced by NPS staff and contractors in preparing the DEIS, and applauds the hard work that has gone into preparing the document and engaging the public.

Of necessity, the Trust's comments focus on areas in the DEIS that need augmentation, and we hope that our comments will be taken in the spirit in which they are offered: to improve the impacts analysis that informs the NEPA process and ultimately to support the formulation of a dog management policy for the GGNRA that wisely balances the mandates of resource stewardship, preservation, and public use. Craig Middleton
Executive Director

**PRESIDIO TRUST COMMENTS ON THE GGNRA DOG
MANAGEMENT PLAN / DRAFT ENVIRONMENTAL IMPACT
STATEMENT**

May 25, 2011

The Presidio Trust (Trust) provides the following comments on the GGNRA Dog Management Plan / Draft Environmental Impact Statement (project). Due to the length of the DEIS and limits on Trust staff time to review, the following comments focus on the NPS's preferred alternative and indirect impacts on Area B, but the comments generally apply to all alternatives.

GLOBAL COMMENT

DEIS Fails to Analyze Indirect Impacts of Dog Management on Area B in a Meaningful Manner

The Trust finds the DEIS deficient in its treatment of impacts of the various alternatives for managing dog walking activities on areas outside of NPS jurisdiction, particularly in Area B. In the Trust's scoping letter' for the DEIS, we specifically urged that "because the Trust has a stake in how dogs within Area A will be managed, the EIS should include a discussion of how the alternatives will impact Area B visitors and resources, and Trust staff" (page 2). Dog walkers using the Presidio do not necessarily distinguish between the two areas. The DEIS does not address the areas within Area B that are currently used by dog walkers, nor does it address the incidence of off-leash violations in Area B. The DEIS presumes under all resource topics and all alternatives being considered that no impacts would occur in Area B. The rationale offered is that the Trust does not have beaches under its jurisdiction and does not allow off-leash dog walking; therefore, there would be no change in current conditions in Area B. It is far more likely, however, that restricting or eliminating dog walking in Area A will substantially increase off-leash activity in Area B as a substantial number of dog walkers may seek more secluded trails in the Presidio to avoid crowded conditions and where there may also experience fewer law enforcement staff to enforce rules.

The analysis and conclusions offered by the NPS in the DEIS are not sufficiently supported and do not represent a fair consideration of the adverse environmental effects of its proposed dog management. The dismissal of impacts in Area B is especially perplexing given that the DEIS provides a site-specific analysis of the effects of on-leash dog walking in other parts of the GGNRA, even after assuming compliance with regulations. The DEIS must make a good faith effort to thoroughly consider all indirect effects that are "reasonably foreseeable"² in areas outside of its jurisdiction. The Trust is willing to provide data and information to the NPS. Under NEPA, if a significant issue is omitted and the advice and expertise of a cooperating agency ignored, the EIS may be found to be inadequate.³

I. SPECIFIC COMMENTS

CHAPTER 1: PURPOSE AND NEED FOR ACTION

Reference to Area B is Confusing

As stated in the Introduction on page 1, without reference to Area A, it appears to the casual reader that Area B is adjacent to the Presidio, which it is not. The discussion should distinguish between Area A and Area B, and indicate that Area B is a national park site under separate jurisdiction. Some background about why the Trust is a cooperating agency would also be helpful. Otherwise, the reader is required to sift through 1733 pages to understand the Trust's interests, authority, and responsibility in the NPS dog management project (as provided in Chapter 5: Consultation and Coordination).

Increased Conflicts on Adjacent Parks due to Tighter NPS Restrictions not Acknowledged

The second issue under Land Use / Long-term Management of Resources or Land on page 17 of the DEIS correctly states that dog management policy at GGNRA may result in changes to federal, state, and local policies elsewhere. However, the key issue that more restrictive dog management policies on GGNRA lands would increase pressure on adjacent parks (such as Area B) is not mentioned. Also, the topic of land use is included in the list of impact topics that were analyzed in the plan/EIS, but is not followed through in Chapters 3 and 4, as is customary for an EIS of this nature.

Information on Area B Dog Management Policies and Issues is Absent

The NPS's "goal of consistency" is commendable and should be made more explicit as a specific objective that the NPS intends to accomplish by this process. In the Summary of Background Conditions and Review of Literature beginning on page 25 of the DEIS, the discussion states that park staff "has amassed as much information as could be found on dog management-related topics" on lands adjacent to or near GGNRA sites. The discussion suggests that such information, including that provided by other jurisdictions, was used to "assist with the development of alternatives that meet the goal of consistency with policies on adjacent lands." However, nowhere is found any mention of Trust dog management regulations, or information on Area B visitor experience/dog management conflicts, enforcement success, or compliance issues. This information has been made available to the NPS in previous correspondence and is readily available from the Trust upon request. The information should be included so the public and NPS decision makers may have an understanding of potential conflicts in adjacent areas caused by changes in NPS dog-related recreational opportunities on GGNRA lands. The Upcoming GGNRA General Management Plan Should be the Principal Tool for Resolving Dog

Management Issues

On Page 37 of the DEIS, the NPS states that it is updating its General Management Plan (GMP) for the GGNRA concurrently with the Dog Management process and that the GMP will defer specific dog-management actions to the completion of the Dog Management EIS. Not only is decoupling the two processes inconsistent with NPS policy' on how a park's resources, visitors, and facilities should be planned for and managed, it forecloses the important opportunity of conducting the dog management planning process within a well-grounded and broadly understood framework. Park planning is intended to be a deliberate and transparent decision- making process that arrives at a rationale for management directions after several levels of increasingly detailed and complementary planning. The Trust strongly suggests that the NPS first determine what the desired conditions should be for natural and cultural resources as well as for visitor experiences, or in NPS's words, reach agreement on what should be the "blueprint for the park to move into the future" (page 37 of the DEIS). Only then should the focus narrow to how various dog management strategies throughout the GGNRA would contribute to achieving those conditions, and whether such strategies are consistent with the goals articulated in the GMP.

Analysis of Consistency with Trust Land Use Policies for Area B is Required

The Trust welcomes the discussion on page 38 of the DEIS that we provided in our scoping letter regarding the distinctions between the General Management Plan Amendment for Area A and the Presidio Trust Management Plan (PTMP) for Area B. At the end of the third paragraph, please insert the following:

Management objectives in the PTMP relevant to dog management include the following:

? Provide for safe and enjoyable recreational use of the Presidio. ? Identify and protect sensitive wildlife species, and restore and maintain their habitats. ? Provide diverse opportunities for both passive and active recreation. ? Maintain an atmosphere that is open, inviting and accessible to visitors. ? Consider activities best suited to the Presidio. ? Balance recreational opportunities with resource protection. To achieve this balance, consider the type and level of visitor use that can be accommodated while sustaining the desired resource and visitor experience conditions.

As required by the NEPA and as requested in our scoping letter, the EIS should include a discussion of the conflicts of the dog management project

with the Trust's land use policies provided above.⁵

Trust Regulations Regarding Dog Management are Absent

From pages 34 to 42 under Related Laws, Regulations and Policies, the DEIS fails to mention Trust regulations regarding dog management.⁶ This information was previously provided to NPS. Again, the DEIS should note that Area B is subject to the Presidio Trust's regulations, which the Trust adopted after publication for comment and which appear at 36 C.F.R. Section 1001 et seq. Also, it would be expedient but inaccurate to list the Trust with the 11 agencies listed under State and Local Laws, Regulations, and Policies on page 41 of the DEIS. Area B of the Presidio is a national park site within the GGNRA, and the Trust, like the NPS, is a federal government agency charged with representing national interests.⁷ The Trust's regulations are issued pursuant to the Presidio Trust Act,⁸ and as such are elements of federal law.

CHAPTER 2: ALTERNATIVES

Regulating Commercial Dog Walkers will Require Coordination with Adjacent Jurisdictions

Commercial dog walking would be regulated under all alternatives being considered. Various commercial dog walking businesses frequently use Area B to exercise dogs under their care. While the Trust currently does not require a permit for commercial dog walkers, such activity is subject to regulation under 36 C.F.R. 1005.3. Changes in NPS park policy that would restrict or prohibit use of Area A by commercial dog walkers would likely significantly increase the number of dogs brought into Area B by these businesses. This impact on Area B should be identified and evaluated. In addition, it should be acknowledged that creating and implementing an enforceable policy for commercial dog walking in the Presidio will require close coordination with the Trust and other surrounding jurisdictions to ensure consistency of the permitting process and the avoidance of unintended spillover effects.

CHAPTER 3: AFFECTED ENVIRONMENT

GGNRA Visitation Trends are Inflated due to Inclusion of Area B

The DEIS makes clear that Area B is not included in the dog management study area. However, park visitation information provided on pages 266 to 270 includes visitors to Area B. The entire Presidio currently accounts for approximately 29% (approximately 4.0 million) of the mean annual visitation GGNRA-wide (approximately 14 million). Visitor counts should recognize Area B's contribution to the GGNRA visitation, or be subtracted

from the total.

CHAPTER 4: ENVIRONMENTAL CONSEQUENCES

The Cumulative Impact Scenario Fails to Acknowledge Trust Actions under the PTMP

In determining what projects are necessary for a cumulative impacts analysis, the NPS should focus on the extent to which information is "relevant to reasonably foreseeable significant adverse impacts" and is "essential to a reasoned choice among alternatives." The DEIS on page 290 states that the actions, projects, and programs listed in Appendix K were compiled for the cumulative impacts analysis. However, most of the listed projects are irrelevant to decisions about the dog management project, and their listing adds no value to the analysis. Only a handful of the listed plans and projects are discussed in the cumulative impacts of the project for each resource topic. As encouraged by the CEQ,⁹ the cumulative impacts analysis should only "count what counts."

The Trust is implementing a number of historic building rehabilitation, landscape improvement, and habitat restoration projects under the Presidio Trust Management Plan. These projects include rehabilitation and reuse of approximately 100,000 square feet of space in 10 buildings along the edge of the proposed regulated off-leash area (ROLA) at Crissy Airfield, restoration of the Quartermaster Reach ecological corridor draining directly into Crissy Field Marsh that will allow expansion of the marsh, and new trails (including the Tennessee Hollow, Park, and Presidio Promenade trails) that will provide better connections from Area B to Crissy Field. These projects are highly relevant to the cumulative impacts analysis but are conspicuously absent. It is simply not possible for the DEIS to provide an adequate analysis of Crissy Field cumulative impacts without consideration of Trust projects, as they have and will continue to affect shoreline activities in Area A, including dog management, and will incrementally contribute to the cumulative effect on resources affected by the project. The cumulative impact analysis must incorporate information based on Trust planning and NEPA documents, notably the PTMP. Including relevant Trust projects would have added value to the cumulative impact analysis and would be more true to the letter and intent of CEQ's NEPA regulations. The addition of Trust projects to the analysis would also have been an easy task had the NPS consulted with the Trust.¹⁰

Impacts on Area B Soils are Underestimated

The impact analysis on page 369 of the DEIS assumes that no impacts on soils in adjacent lands would occur under the preferred alternative since ROLAs would be provided at Crissy Field. The Trust disputes this

conclusion. Tighter restrictions, including ROLAs, would inevitably increase visitation by dog walkers in other areas. Those areas in Area B that are frequented by dog-walkers, such as the Mountain Lake and Ecology Trails, would experience increased dog activity which would increase impacts that would be both long term and readily apparent.

Impacts on Area B Water Quality are Overlooked

The discussions on pages 503 and 509 of the DEIS conclude that there would be no indirect impacts on water quality in Area B since ROLAs would be provided at Crissy Field and Area B does not have beaches. Fewer areas available for dogs and more restrictions at Crissy Field and Baker Beach would likely result in an increase in dog walking activity in Area B. In addition, although Area B does not contain beaches, it does have important water bodies including Mountain Lake and Tennessee Hollow watershed, which are undergoing restoration. The areas surrounding these water bodies are already used by dog walkers. Indirect impacts on water quality from increased dog walking should be analyzed.

Known Impacts on Area B Vegetation are Summarily Dismissed

On page 657 of the DEIS and elsewhere in the vegetation section, the analysis concludes that "indirect impacts on coastal scrub/chaparral/grassland vegetation in adjacent lands from increased dog use would be negligible because it is unknown where and to what extent coastal scrub/chaparral/grassland vegetation in adjacent parks could be affected by dogs." This superficial analysis is not the "hard look" necessary to satisfy NEPA's requirements.¹¹ Put more simply, impacts cannot be deemed negligible because the analysis has not been done. Fortunately, site-specific information on native plant communities within Area B is readily available, mapped on page 14 of the PTMP, and retrievable through the Trust's geographic information system upon request. Several of these native plant communities, including serpentine and coastal prairie grasslands, represent the largest intact communities of their kind in the Presidio. Dismissing indirect impacts on important plant communities in Area B simply because "the Presidio does not allow off-leash dog walking" is erroneous and misguided. Even if compliance with the leash laws were assumed, impacts would still occur along trail corridors, affecting plants that grow in the soils immediately adjacent to the trails. Thus, even indirect impacts would be measurable, perceptible, and important to address.

Impacts on Area B Visitor Experience are Discounted

On page 1407, the DEIS candidly states that "some alternatives include restricting or eliminating dog walking at a particular site. In these cases, there is a potential for dog walkers currently using those sites to move to a

different location in GGNRA or to a location outside the park so that they can continue to exercise their pets." Nevertheless, the analysis on page 1480 of the DEIS concludes that there would be no indirect impacts on visitor experience in Area B despite a substantial reduction of off-leash area at Crissy Field. The Trust disagrees with this conclusion. We strongly believe that enhanced restrictions at Crissy Field will boost dog walking activity in Area B. Similarly, the DEIS assumes on page 1494 that dog owners and walkers would continue to use Baker Beach for dog walking activities even though leashes would be required, because some visitors enjoy the experience of dog walking at the beach. The DEIS concludes that no indirect impacts on visitor experience in Area B would be expected, since Area B does not have beaches. The Trust maintains that a substantial number of dog walkers at Baker Beach would seek other areas in the Presidio where they might face a lesser enforcement threat of the leash law than on the highly visible Baker Beach. Visitor incidents related to dogs in Area B would also be expected to increase. Some current visitors to Area B may begin avoiding areas of the park due to the presence of more dogs.

Impacts on Trust Operations Must be Considered

The U.S. Park Police (USPP) San Francisco Field Office with headquarters at Building 1217 in Area B is responsible for law enforcement at the Presidio. A substantial portion of funding¹² for law enforcement programs within both Areas A and B comes from the Trust through an interagency agreement. Law enforcement activities pertaining to dog management are costly and include resolving conflicts between dog walkers and other user groups, giving written or verbal warnings or issuing citations to dog walkers not complying with the current regulations, educating the public on dog management regulations, and preparing and filing reports related to dog and visitor incidents. Where violators are prosecuted, USPP officers may have to take paid duty time to appear as witnesses. As noted in the DEIS, changes in NPS dog walking policies over the years, court decisions regarding dog walking in the NPS-managed areas of GGNRA, and public confusion due to both these changing circumstances has led to varying levels of enforcement in the Presidio. The public confusion in Area A and current relaxed regulations on NPS-managed GGNRA lands has made enforcing the Trust's on-leash dog walking regulation in Area B difficult.

An increase of dog-walking activities in Area B would also result in higher operation and maintenance costs for dog walking areas, e.g. installation of added protection measures such as fencing, additional education (signs, brochures and public meetings), and response to more visitor concerns, questions and complaints. Noncompliance citations and visitor conflicts would increase, requiring greater USPP capacity to implement the NPS and Trust dog management regulations in a consistent manner.

The estimated costs to complete the tasks necessary to implement the NPS dog management plan provided on page 1569 of the DEIS do not take into account the Trust's additional costs or demand on resources. The DEIS should assess the impacts of the project on the Trust's annual operating budget. The evaluation should include financial requirements associated with short-term impacts that would occur during the initial public education period and the law-enforcement activities in Area B once the NPS begins the implementation of a new regulation. The additional operating and capital costs associated with long-term effects on Trust operations should also be considered.

APPENDICES

Area B Omitted from List of Adjacent Dog Use Areas

Appendix J of the DEIS lists over 140 parks/sites within and adjacent to NPS-managed GGNRA lands, and provides information such as dog use areas and leash requirements. Many on the list only allow on-leash dogs, such as Muir Beach, Marin Municipal Watershed District lands, and Glen Canyon Park in the city. However, no mention is made of Area B, even though it contains approximately 20 miles of trails and 685 acres of developed areas for on-leash dog walking directly adjacent to Crissy Field and Baker Beach. To correct this error, the following should be provided on page J-9:

Dog Use Area: Presidio Area B

Location: See GGNRA Map

On-Leash/Off Leash: On-Leash

Additional information: http://www.presidio.gov/NR/rdonlyres/A26635BC-AE79-4EDA-846BBF5700B926A5/0/PresidioTrailsMap_SEPT2010.pdf

Source: <http://www.presidio.gov/NR/rdonlyres/E5138135-A64D-4228-9912-C69CAF92CBBE/O/CFR1002.pdf>

No Trust Projects Represented in List of Actions Considered for the Cumulative Impacts Analysis Appendix K lists more than 80 projects and actions within and outside the boundary of the GGNRA that were conceivably compiled for consideration in the cumulative impact analysis. Only a small number of the listed projects incrementally contribute to the cumulative impacts on resources affected by the dog management project, and fewer still are discussed in Chapter 4 of the DEIS. Furthermore, only 2 of the actions are Trust activities (the Presidio Vegetation Management Plan and the Presidio Trails and Bikeways Plan), and these are presumably listed

only because the NPS was directly involved. Despite the questionable listing of such a broad array of projects, no other Trust projects or actions, including the PTMP, the Main Post Update to the PTMP, Quartermaster Reach, and the Main Parade, are represented in the appendix. As discussed above, the inclusion of Trust actions occurring in proximity to Area A is necessary to permit a complete analysis of cumulative effects of the project. The NPS should review the Trust's planning and environmental documents¹³ to determine those actions that contribute to significant cumulative effects of concern, and add them to the list in Appendix K for consideration in the analysis.

MAPS

Vicinity Map Should Acknowledge Jurisdiction of Trust in Area B

Map 1 in the Maps section of the DEIS indicates the boundaries of various NPS units, state, regional, county and city parks, and other land management agencies in the greater region addressed by the dog management plan. However, the Trust-managed portion of the Presidio (Area B) is left blank, leaving it unclear to the reader as to which agency has jurisdiction over the area. For clarity, the NPS should treat Area B the same way that the GGNRA northern areas (managed by Point Reyes National Seashore) are shown: with a leader line (arrow) followed by the text "Presidio Area B is managed by the Presidio Trust."

FOOTNOTES: 1 Letter of September 20, 2006 from Craig Middleton, Trust Executive Director to Brian O'Neill, former Superintendent, Golden Gate National Recreation Area. Re: Request for Written Comments on GGNRA Dog Management Plan/EIS. 2 CEQ NEPA Regulations Section 1508.8(b). 3 CEQ Forty Most Asked Questions No. 14b. 4 NPS Management Policies 2006, Section 2, Park System Planning. 5 See CEQ Forty Most Asked Questions No. 23a, Conflicts of Federal Proposal With Land Use Plans, Policies or Controls, which goes on to say: "comments from officials of the affected area should be solicited early and should be carefully acknowledged and answered in the EIS." 6 In fact, the first mention of any regulations on dog walking in Area B appears on page 369, and the oblique reference is only provided to rationalize a finding of no impact to geology and soils. 7 In the notice of its intention to establish the Negotiated Rulemaking Advisory Committee for Dog Management at GGNRA published in the Federal Register on June 28, 2005, the NPS erroneously reported the Trust as a committee member (since respectfully withdrawn) that would represent "the interests of local government." 8 16 U.S.C. 460bb appendix. 9 CEQ Handbook "Considering Cumulative Effects under the National Environmental Policy Act," January 1997. 10 The CEQ Handbook advises that the "first step in identifying future actions is to investigate the plans of... other agencies in the area." 11 See 40 C.F.R. 1502.22, Incomplete

or unavailable information. 12 \$4.3 million, which represents 42% of the total USPP budget GGNRA-wide in FY2010.

Correspondence Type: Letter
Correspondence: I am writing because I am very disappointed and unhappy about the GGNRA Dog Management Plan to reduce protected dog areas in the Bay Area. Like the San Francisco Board of Supervisors, I am opposed to the plan.

Fort Funston is one of the FEW places that allows dogs on beaches, and the plan is to cut this area even further? Please remember that dogs are not allowed on MOST beaches or federal land preserves. For example, dogs are only allowed on the valley floor, and not in MOST of Yosemite, including most of the hiking trails and hiking areas. There are few places for dogs to run on and off-leash. Please do not take these areas away.

I myself am a responsible dog owner, as are my friends who own dogs. We always pick up after our dogs, carry around plastic bags, and dispose of our dogs' waste appropriately. We constantly supervise our dogs, especially if they are running off-leash, to make sure they are not disturbing people or destroying habitat.

We understand you are trying to preserve a natural habitat, but our dogs run on the trails and leave only as much of a footprint as people do in Yosemite and other national parks.

Please PROTECT these designated dog areas. They are very important and should not be cut or reduced.

Sincerely, Melinda Loew

Responsible dog owners are good free security to watch out for our parklands.

Received: May,25,2011 00:00:00
Correspondence Type: Letter
Correspondence: To: Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022

From: Matthew Zlatunich San Francisco, CA 94118

Dear Superintendent Dean,

I write in support of adopting a Dog Management Plan for the GGNRA. I have been following this issue for many years, have reviewed the Draft DEIS and attended one of the public open house sessions.

My interests in the GGNRA are as a lifelong resident of San Francisco, a frequent park visitor and a volunteer participating in wildlife monitoring and stewardship activities. I enjoy the park for the unique opportunities to

experience the natural and cultural resources and I appreciate the values of our National Park System.

I concur with the assessment that the natural and cultural resources and park visitor experiences have been and continue to be negatively impacted by the presence of substantial quantities of domestic dogs, both on-leash and off-leash, within the GGNRA. On many occasions my own park experiences have been negatively affected by the presence of dogs. I have had personal conflicts with dogs and their owners/guardians as well as being witness to conflicts between dogs and wildlife.

While I am supportive of many aspects of the Preferred Alternative, I have the following comments to offer:

General Comments

Commercial dog walking should not be allowed. Commercial dog walking does not relate to the purpose and mission of the National Parks. Commercial dog walking provides no service or benefit to park users, has negative impacts on park resources and park visitors, and serves only for the capital gain of private enterprises at the expense of the American public.

Commercial dog walking will require additional annual expenditures for administering and overseeing a permitting process, additional law enforcement, additional resource maintenance and additional public relations.

The DEIS estimates that over 1000 dogs will be commercially walked within the GGNRA daily (p. 63 p. 276). Commercial dog walkers, with up to six dogs, will negatively impact the experience of park visitors on trails and in other areas of the park. If permitted, commercial dog walking activity will increase within the GGNRA and will displace park visitors, of all legitimate user groups, from areas of the park. Commercial dog walkers will dominate the ROLAs, displacing other park visitors. Commercial dog walking vehicles will occupy parking spaces resulting in fewer spaces available for park visitors. If allowed, commercial dog walking operations will have a dominant presence in some areas of the park thus affecting the overall character and ambiance of those areas.

Currently, commercial dog walking is not permitted within the GGNRA or any other National Park unit and there is no justifiable reason to do so. The NPS is well within the scope of its management directives to not allow commercial dog walking and I support this position.

Off-leash areas should be well defined and be contained by a physical barrier. It can be assumed that off-leash dog recreation will be the primary

activity within any established ROLA. ROLAs should be well distinguished by physical barriers and adequate signage so that all park visitors can choose whether or not to enter the area.

Park visitors should be limited to one dog per visitor. On trails, visitors with more than one dog have a wider space requirement and have the potential to impact other park visitors by impeding their progress along the trail. In ROLAs, it is not practical to allow voice control of more than one dog per person. With few exceptions, dog handlers are not capable of managing more than one off-leash dog at a time.

The proposed compliance percentage of 75% is too low. Given that many hundreds of dogs are walked within the GGNRA daily, a 25% non-compliance tolerance would create a situation where park resources are significantly negatively impacted. The expectation should be that non-compliance is a rare occurrence and the compliance strategy should reflect that in its standard. The standard of compliance should be the same as for any other park rule or law. An acceptable rate of compliance is somewhere near 100%.

A simple and effective reporting system should be established. The dog management plan should include a means by which park visitors can easily and effectively report non-compliant behavior. Park visitors are sometimes reluctant to report observed violations due to the time involved in making the report. A public reporting system should be incorporated into the plan that will be user friendly and workable. Such a system should require only a few moments of time and be an effective documentation of the violation.

The plan does not provide an adequate amount of hiking trails and picnic areas where visitors can enjoy a dog-free, National Park quality experience. Within San Francisco, the plan provides no significant area where park visitors can spend the day hiking and/or picnicking in a dog free environment. A solution to this problem would be to designate all of the coastal bluff areas, from the Golden Gate Bridge to and including Baker Beach, as a dog-free zone.

Wildlife viewing is a popular activity throughout the GGNRA. Wildlife viewing should be included as a visitor activity for Crissy Field. (p. 276 & table 9). Snowy Plovers - Nesting records. The DEIS states that there is no record of nesting (p.1240). However, there are records of bird and egg specimens collected during nesting season. Grinnell, 1932, identifies the Presidio as the type locality for the Snowy Plover with a collection date of May 8, 1854, a date that falls within the known nesting season for the species. Also, Smithsonian Institution collection data documents an egg specimen from San Francisco. See

<http://collections.nmnh.si.edu/search/birds/>

Potential nesting site. The DEIS fails to acknowledge that the USFWS Snowy Plover Recovery Plan has identified Crissy Field as a potential expansion site for snowy plovers; see USFWS Recovery Plan pp. 43/44.

Natural & Cultural Nexus. The Presidio of San Francisco is the type locality for the Snowy Plover, collected by Lt. William Trowbridge (Army Corps of Engineers, U.S. Coastal Survey), on May 8, 1854 (Grinnell, 1932). Trowbridge is also responsible for construction of the Golden Gate Tidal Gauge, which began operation in June of 1854 (Nolte, 2004). Given the location of the tidal gauge, it is quite possible that the type specimen was collected from what is now the Crissy WPA. Species of Concern - The DEIS does not fully describe the sensitivity of some habitat areas including Ocean Beach and Fort Funston. The plan considers species listed under the Federal and State ESA's but does not sufficiently describe non-ESA species of concern as listed by the IUCN, the American Bird Conservancy, National Audubon, and locally known species of concern. Species of local concern include:

Allen's Hummingbird Black Turnstone Brant Bryant's Savannah Sparrow
Burrowing Owl California Thrasher California Quail Clarks Grebe Elegant
Tern Heermann's Gull Hermit Warbler Loggerhead Shrike Long-billed
Curlew Long-eared Owl Marbled Godwit Northern Harrier Nuttall's White-
crowned Sparrow Nuttall's Woodpecker Olive-sided Flycatcher Pelagic
Cormorant Red Knot Sanderling San Francisco Common Yellowthroat
Short-billed Dowitcher Snowy Plover Surfbird Thayer's Gull Tricolored
Blackbird Varied Thrush Wandering Tattler Western Sandpiper Whimbrel
Wrentit Yellow Warbler

The EIS should estimate the actual number of incidents that occur within the GGNRA. Table 6 (p. 230) indicates the recorded incidents involving dogs in 2007 and 2008. It is stated that these numbers of incidents of visitors not complying with dog walking regulations is not equal to the number of actual violations occurring at the park. Being that many violations occur which are not observed or un-reported, some estimate of the total amount of violations should be included in the EIS such that each documented violation would be representative of a certain amount of actual violations. Sites Specific Comments

Ft. Mason - I support the Preferred Alternative with the following changes: no commercial dog walking, one dog per visitor, compliance rate of 95% or greater, and establishment of a simple and effective reporting system.

Crissy Field WPA - The DEIS indicates that the east boundary fence will be relocated 200 feet eastward at a position 900 feet from the NOAA pier (p.

60). The language of the plan should allow the National Park Service flexibility in determining the exact location of the fence and consideration should be given to the visual penetration effect as well as the geographical conditions of the immediate area.

Under the preferred alternative, off-leash dog activity directly adjacent to the east boundary fence will pose a visual threat that will penetrate into the Wildlife Protection Area, effectively rendering a portion of the eastern WPA as non-viable habitat during daytime use hours. Given this concern, the fence should be placed a reasonable distance eastward, beyond the actual 900 foot border line, to allow for an adequate buffer zone.

Additionally, the geography of the area of fence placement is somewhat complicated by non-uniform conditions which include a variety of substrates, varying elevations, several lobes of fenced dune habitat areas, and a variety of pedestrian pathways. Consideration should be given to all of these conditions and fence placement should accommodate ease of pedestrian traffic flow while maintaining adequate protection of the WPA.

When installed, the fence should extend to the water at extreme low tide.

Crissy Central Beach - The Central Beach ROLA should be fenced and gated. Fences at the west and east ends should extend to the water at extreme low tide. Adequate buffer zones (-300ft) should be included beyond the west and east boundary fences to protect the WPA and the lagoon outlet from the influences of excessive dog play activity. Access points from the promenade should be gated. Signs should be posted clearly identifying the area as an off-leash dog play area and stating the voice and sight control rules.

Crissy East Beach - Fencing should be installed to protect the lagoon outlet zone. Outlet areas from bodies of water into bays or oceans are of high habitat value. The outlet zone should be included as part of the protected lagoon area and similarly fenced.

Crissy East of the Lagoon - The Freshwater Swale should be designated as a no dog zone.

Crissy Promenade - I support the Preferred Alternative with the following changes: no commercial dog walking, one dog per visitor, compliance rate of 95% or greater, and establishment of a simple and effective reporting system.

Crissy Airfield - The foot paths that cross the airfield are multi-use trails and should be designated as on-leash areas. Allowing off-leash dogs on the

airfield trails will lead to user conflicts.

The airfield ROLA should have some type of physical barrier along the boundaries. A physical barrier will clearly define the ROLA area. Clearly defined boundaries will maximize compliance and minimize conflict. Consider a movable barrier that can be set up and taken down as needed. Signs should be posted clearly identifying the area as an off-leash dog play area and stating the voice and sight control rules.

The eastern portion of the airfield should be a no-dog area. The Crissy airfield attracts a wide variety of grassland bird species, including rare vagrants, and is a popular venue for wildlife viewing.

The following bird species have been observed using the Crissy Airfield as a foraging and/or roosting habitat in recent years: Canada Goose Greater White-fronted Goose Snow Goose Cackling Goose Mallard Red-tailed Hawk Cooper's Hawk American Kestrel Great Blue Heron Great Egret Cattle Egret Killdeer Black-bellied Plover Pacific Golden Plover Black-necked Stilt Least Sandpiper Wilson's Snipe Barn Owl Northern Flicker American Crow Common Raven Black Phoebe Say's Phoebe Homed Lark Barn Swallow Bank Swallow Cliff Swallow Northern Rough-winged Swallow Tree Swallow Violet-green Swallow American Robin European Starling Red-throated Pipit American Pipit Yellow-rumped Warbler Song Sparrow White-crowned Sparrow Savannah Sparrow Vesper Sparrow Clay-colored Sparrow Lapland Longspur Western Meadowlark Brewers Blackbird Tricolored Blackbird Red-winged Blackbird Brown-headed Cowbird House Finch American Goldfinch Lesser Goldfinch House Sparrow

Ft. Point - I support the Preferred Alternative with the following changes: no commercial dog walking, one dog per visitor, compliance rate of 95% or greater, and establishment of a simple and effective reporting system. Baker Beach - The Preferred Alternative for Baker Beach is problematic for several reasons. Splitting the beach into leash-only and no-dog areas will lead to confusion, non-compliance, visitor conflict and continued management problems. Furthermore, allowing dogs near the creek outlet, an area often used by shorebirds, will increase the potential for wildlife conflicts. As a means of eliminating these problems and of creating more opportunities for visitors to enjoy dog-free National Park experiences, I suggest designating the entire Baker Beach area as a dog-free zone.

Lands End - I support the Preferred Alternative with the following changes: no commercial dog walking, one dog per visitor, compliance rate of 95% or greater, and establishment of a simple and effective reporting system.

Sutro Heights Park - I support the Preferred Alternative with the following

changes: no commercial dog walking, one dog per visitor, compliance rate of 95% or greater, and establishment of a simple and effective reporting system.

Ocean Beach - I support the Preferred Alternative for Ocean Beach. To improve upon the Preferred Alternative, I suggest using symbolic fencing and adequate signage to delineate the south border of the ROLA. A simple post and cable fence could be placed along the border from the sea wall to the plover sculpture. A well defined border will help to reduce compliance problems and visitor conflict. Additionally, I suggest changing the name "Snowy Plover Protection Area" to "Wildlife Protection Area". A designation of Wildlife Protection Area would be inclusive of all wildlife species that use the beach habitat area.

Ft. Funston - I support the Preferred Alternative for Ft. Funston with the exception of allowing dogs on the beach. To improve upon the Preferred Alternative, I suggest not allowing dogs on the beach. The beach at Ft. Funston is used by a variety of shorebird species. Allowing dogs on the beach will result in dogs chasing shorebirds, which is not appropriate in a National Park. I support installing a fence, with access gates and adequate signage, along the border of the ROLA north of the main lot. A borderline fence will clearly delineate the boundary of the ROLA and will minimize compliance problems and visitor conflict. Signs should be posted that clearly identify the area as an off-leash dog play area and that state the voice and sight control rules. Additionally, I suggest aggressively restoring the coastal scrub habitat throughout Ft. Funston. Plant and animal species, as well as park visitors, have been displaced from Ft. Funston over time as dog play activities have increased. A proactive effort must be made to bring back the visitors who are interested in proper stewardship of this area of the park.

Correspondence: I am writing because I am very disappointed and unhappy about the GGNRA Dog Management Plan to reduce protected dog areas in the Bay Area. Like the San Francisco Board of Supervisors, I am opposed to the plan.

Fort Funston is one of the FEW places that allows dogs on beaches, and the

plan is to cut this area even further? Please remember that dogs are not allowed on MOST beaches or federal land preserves. For example, dogs are only allowed on the valley floor, and not in MOST of Yosemite, including most of the hiking trails and hiking areas. There are few places for dogs to run on and off-leash. Please do not take these areas away.

I myself am a responsible dog owner, as are my friends who own dogs. We always pick up after our dogs, carry around plastic bags, and dispose of our dogs' waste appropriately. We constantly supervise our dogs, especially if they are running off-leash, to make sure they are not disturbing people or destroying habitat.

We understand you are trying to preserve a natural habitat, but our dogs run on the trails and leave only as much of a footprint as people do in Yosemite and other national parks.

Please PROTECT these designated dog areas. They are very important and should not be cut or reduced.

Sincerely, Kim Wernicke Dog owner

Correspondence: Frank Dean, General Superintendent Golden Gate National Recreation Area
Re: Draft Dog Management Plan, Draft Environmental Impact Statement
May 2011 Dear Superintendent Dean,

My name is Karen Moise, age 62, and I am a practicing and certified Adult Nurse Practitioner, working for a large health maintenance organization in the Bay Area. I have worked in San Francisco and Marin County for the past 30 years. I have been a home owner in San Francisco for the past 23 years and suffer some chronic physical disabilities that require custom orthotics in order to walk. I also have frequent visits from my sister and her partner who have developmental disabilities and wear orthopedic braces. This doesn't stop us from meandering through Fort Funston or Chrissy Fields with my two active border collies. Our walks are slow but the dogs get their exercise retrieving balls or discarded plastic bottles (which we eventually recycle). They are always under voice or whistle control due to extensive sheepherding training. We have a grand time talking with other folks of all ages and interests. I'm not sure how we would survive emotionally or continue getting this physical exercise if these parks were closed to off-leash dogs. I know that I would return to work grouchy and rusty in the joints. My dogs would become more irritable as they do when they are forced into the smaller crowded city parks with pushy animals. My sister and her boyfriend would be saddened and would not understand.

Working in the mental health arena, I am very concerned with the impact of the Preferred Alternative on the wellness of our diverse community of dog-people. Which brings me to the details of the Draft Environmental Impact Statement for a new Dog Management Plan, which I frankly find bewildering. Why would you want to limit this healthful form of recreation that allows us with the problems of aging and handicaps and down-sized finances to socialize and exercise and utilize the outdoors with our canine families?

This is not a wildlife preserve akin to Yellowstone. It is an urban green space. What happened to your mandate to provide recreation to the people

of the Bay Area? What happened to the federal plan for "Healthy People Healthy Parks?"

This four- inch thick tomb (paid for with our tax payer dollars) lacks scientific studies and statistical documentation that could back its numerous assumptions.

One large assumption is that both the environment and the endangered species "could be" threatened by our dogs. These parks are not designated as critical habitat. The Snowy Plover doesn't nest or breed at Fort Funston or Ocean Beach. The endangered Bank Swallow burrows near the top of the cliffs at Fort Funston where no dogs can possibly go. These birds are probably more upset with the paragliders that are not being forced out of the GGRNA. As with most of the wildlife that can tolerate our busy urban spaces, it is the bicycles and the surfers and the people that are strange and frightening; not the dogs which appear quite like normal predators to them. (Just another coyote). And it is the hikers, bikers, and horses that cause erosion of the sand dunes far more effectively than the the canines due to the sheer size and continuity of their footprints. And it is the lawns and golf courses near the headlands that over-use the water table and pollute it with pesticides. The dog waste which we try to pick up is at least biodegradable. In the early 90's I helped remove ice plant from the dunes at Fort Funston to be replaced by the native plants which are thriving hardily. They are protected well from the encroachment of people and dogs by your fences and are not suffering. You could improve this protection by using downed logs around the bottom of the fences which would increase habit for lizards and insect larvae and be a better perimeter marking for the canine population which doesn't recognize wire or thin wood as a boundary. This would also protect the newer naturalized habit at Chrissy Fields.

You worry about safety in the GGRNA. I first wondered if you were concerned about our pets falling over the cliffs at Fort Funston. That couldn't be the case because it could be so easily solved by planting native bushes and creating hedging that could erode without much loss to the Parks. If you mean dog bites and aggressive attacks on visitors, there is vague evidence for 2% of the safety problems involving our canines. 98% of the danger comes from human crime and tourists being washed off the rocks in their naivete about the ocean waves. In fact I would worry if you eliminate dogs from Ocean Beach or Fort Funston or Baker Beach or Chrissy Fields where car break-ins do occur now. These would probably escalate to robberies with injuries to people and certainly the drug use would increase. People with dogs act as a deterrent. (30 years ago when I would visit the City and it's beaches, there was constant illegal drug use during even the daylight hours and we were afraid to walk in bare feet due to the number of syringes and needles thrown about. We also saw very few dogs).

There is no word in the Draft Management Plan about the effects on the local City Parks of these proposed limitations on canines in the GGRNA. We can be guaranteed that the numbers of dogs will multiply exponentially and the resultant crowding will cause behavior problems, human conflicts, and then erosion which will truly impact the quality of life of the entire urban community. This would also be a cost shift to the cities and counties.

The absolute worst part of this Plan is the Compliance-based Management Strategy which allows you to automatically and permanently discard the whole plan and restrict dogs from the GGRNA. This is draconian-no hearing, no judge, no evidence needed. What kind of democracy does this represent?

In summary, I oppose the Proposed Alternative and want to see an expansion of the current 1979 Pet Policy. All new lands acquired by the GGRNA should have shared use with people who recreate with canines under voice control. Further extension of signage and use of natural materials to restrict sensitive areas could be combined with education to enhance the experiences of all residents and visitors. The Park could actually increase its budget by charging groups to rent space for dog training . (Not just Good Citizen Canine Behavior Classes and Obedience, but also Search and Rescue, Hospital Visitation Dogs, Service Dogs, etc.) My family, my neighbors and I will be watching your progress closely and communicating with our elected officials at all times.

Yours in health,

Karen Moise San Francisco, CA. 94112-2146

Correspondence Type: Letter
Correspondence: Greetings Superintendent Dean,

I'm writing to you as a native born Californian that has spent nearly seven decades on or near our wonderful coastline. In my lifetime I have witnessed a nearly five-fold increase in population and the resultant, ever-increasing environmental stress that is felt throughout the state, but disproportionately experienced along the coast. These coastline developmental pressures became so obvious and acute that in 1972 California voters established the Coastal Commission, which gave great hope to those of us that saw the beauty of this resource eroding at an alarming rate.

When I moved from Southern California to San Francisco in 1966 I was shocked and bewildered when I first saw Ocean Beach and I couldn't understand why this stunning resource had been treated with such flagrant disrespect. Even though it was part of San Francisco's Golden Gate Park it seemed to be a place no one really cared about.

Then around the same time that the California Coastal Commission started to offer up a chance to slow coastal development, I heard about the newly formed Golden Gate National Recreation Area, and even though I had no idea what it really was, I did hope that this newly formed entity would also help mitigate some of the coastal damage I had witnessed throughout my life. Over the years I started to notice the positive effects the GGNRA was

having on such places as Ocean Beach, Fort Funston and Crissy Field and I had high hopes for the level of improvement these facilities might eventually receive, and for the most part my expectations have been greatly exceeded. The stunning improvement to Crissy Field was particularly dramatic, especially when contrasted with what the military left behind.

It was only then that it became clear to me just how destructive some previously acceptable activities were having on these newly revitalized parklands. Places such as Crissy Field and Ocean Beach began to reveal their amazing natural value making it clear to me that some formerly tolerated behaviors might finally have to be curtailed.

The history of dog walking in the areas under discussion here are subject to significant contrasts in interpretation, but I think we can all assume that in areas as neglected as these places have been in the past, dogs were but one form this abuse took, and for that reason, dogs didn't stand out as any worse than other forms of neglect. What was happening though was a further entrenching of a sense of entitlement dog walkers took on over those many years of neglect. It is only now that we are witnessing just how embedded this entitlement has become and just how deeply protective dog walkers are of their perceived rites.

As you might expect, dog walkers see little harm to wildlife that they ironically rarely see anyway, just as most environmentalist see significant and demonstrable harm to that very same wildlife. The fact that we are dealing with urban parks seems to indicate to dog walkers that cities aren't the place for endangered or threatened wildlife just as environmentalist struggle to allow endangered species to get a tow hold in damaged, long neglected or compromised areas. Dog walkers rightfully claim that they have been walking their dogs in these areas for many years just as environmentalists try to reintroduce wildlife systems not seen for just as many years. Our recent understanding of interlinking and interdependent ecosystems has broadened the need to protect areas once thought of as disposable, but implementation of such programs is anything but clear-cut.

Many pet owners (including some that consider themselves pro-environment) see their pet as a fully entitled, integral part of their family with all the rights and more as their human caretakers. They generally do not see these domesticated predators as capable of doing any significant harm to wildlife or other undomesticated systems our parks are charged with preserving or enhancing. Dog owners I have talked to see his or her pet as somehow "different" and "special" and they do not feel comfortable depriving them of anything, especially freedom. The family dog has taken on iconic, "Apple Pie" like status and owners can become a bit nonplused and defensive if others do not share those feelings.

Political Pressures

It needs to be acknowledged here that the dog walking community has been very successful in making their point of view heard, especially in and around the city of San Francisco. Our Board of Supervisors have held many public hearings to allow dog owners to vent their anger over this issue and have at times even entertained the idea of reclaiming the lands in question here. It seems that after many years of dogs running free and wild along our local coast, dog owners were not willing to relinquish what they saw as their rights and mounted a boisterous and effective campaign to continue allowing their pets free reign in local as well as federal park lands, and like many others, I was caught unaware of the level of passion that these pet owners could bring to the discussion. As of this writing, all parks in and around the city of San Francisco are de facto dog parks. This is due to a lack of enforcement in city parks and regulatory confusion in the GGNRA.

I fully understand just how powerful the political and public pressure has been on this issue and I fully expect that such pressure will only increase as this process continues, but none of this should distract you from your underlying fundamental responsibilities.

Popular Culture and its Dog Mythologies

The pervasiveness and widely accepted icon status of dogs has a very strong influence over any attempt to control dogs in parks and natural areas. It seems sometimes that next to "Mom and Apple Pie" the image of a dog chasing a bird into the sunset has become the consummate example of American life at its very best. Many television and print advertisers use such images to promote all manner of products from pharmaceuticals to life insurance. If an advertiser is attempting to promote an image of a harmonized healthy life, dogs seem to be the go-to image and wildlife is relegated to the distant, less important background.

It seems that our local major media has also adopted the opinion that dogs are an essential part of healthy life and seems more than willing to ignore the obvious harm they can do. I will include here one example, which came in the form of an illustration that the San Francisco Chronicle used to bolster, some Letters to the Editor that claimed the GGNRA's attempt to control dogs was in fact "criminalizing the dogs".

I wrote this letter (not published) in response to this Chronicle image.

Editor - One of the best examples of just how dire and out of control the dog situation is in the GGNRA was the photograph that accompanied the "Criminalizing the dogs" letters. The caption said, "A dozen dogs are taken for a stroll on the beach at Crissy Field" when in fact there are at least

eighteen dogs that are clearly on an explosive, free ranging romp. What you don't see is any hint of wildlife. You will also not see anyone that is rationally apprehensive of large groups of strange dogs or anyone legitimately requiring the assistance of a guide dog. It's imperative that GGNRA management heed their legal mandate and realign this park with it's underlying intent.

Personal Experiences and Useful Comparisons

Although I live in San Francisco, I do most of my daily recreating on San Bruno Mountain, a California State Park that is administered by the San Mateo Parks system. Like all San Mateo Parks, there is a strict no dog policy on San Bruno Mountain, and I think the history behind this rule offers up some useful comparisons relevant to this discussion.

After more than a hundred years of contentious land use wrangling, San Bruno Mountain State and County Park was dedicated on May 2, 1986. The fact that pets have never been allowed at any of the San Mateo County Parks meant that San Bruno Mountain was now a no dog park. Just like much the GGNRA, San Bruno Mountain has a long history of extreme abuse such as off road motorcycles and extensive trash dumping, and of course the people that lived near this massive open space used the area to recreate their dogs. Also like the GGNRA, the fact that the rules had changed did not immediately result in a change in dog walking behavior. Dog walkers kept coming into the park, either claiming ignorance of the rules, or in some cases simple defiance. Many others that I talked to claimed that since they lived there before the park was established, they felt exempt.

Several years ago I wrote an essay published by San Bruno Mountain Watch that I called "My Dog Loves It Here". The title came from a comment a woman made to me when I informed her that "dogs are not allowed" on San Bruno Mountain. I have been working with park personnel on these issues for many years now, and slowly we have seen a significant increase in compliance. The main reason for this improvement is really quite simple and can be attributed to much better signage and enforcement. Even though the San Bruno Mountain no longer has any full time on site personnel, they do have rangers do enough periodic drive-throughs to discourage most people from bringing their dog into the park. I always talk to people with dogs, some of which become belligerent, but most are never seen a second time. I would say that compliance is now quite good, with a vast improvement seen in the last five years. I would call these efforts a success story and I still hope to see a similar outcome for the GGNRA.

GGNRA Draft Dog Management Plan

I have to confess that I was in complete shock when my mailman dropped

this large box on my front step and the shock continued after discovering the bulk that was inside. The massiveness of this document is clear evidence of just how out of control this discussion has become. When I mentioned the size of this report to an out of town friend they said, "all that over dogs?" Even though this discussion is clearly about much more than dogs, the term overkill still comes to mind - so lets take a brief look at what's inside.

I suspect that you will have already figured out that I would want the most restrictive options possible, but I'm pragmatic enough to know that I will not get everything I want. Of all the options you present, I much prefer Alternative B: NPS Leash Reputation - it is simple and already completely understood by the National Park Service.

Failing that, there are several issues that urgently need your attention, most of which were either ignored or sidestepped by the Plan/DEIS.

? It seems to me that you have abandoned the very essence of a National Park by allowing on-leash dogs on almost every trail in San Francisco. There are dozens of reasons this is intolerable including the fact that this summarily excluded any visitors that have a healthy apprehension of dogs. There is also no chance to observe undisturbed nature along a trail if dogs are present. More trails in San Francisco must be completely closed to dogs.

? It is my opinion that off-leash dogs are the antithesis of the "preserve and protect" NPS mandate and should not be allowed. If such activities are being considered, off-leash areas must be fenced or well-marked and enforced to provide a clear boundary. If physical barriers would be detrimental to the park ecosystem or aesthetically displeasing, then no off-leash area should be considered in that location.

? The targeted Park Service's compliance rate of 75% is far too low and would send the wrong message to dedicated scofflaws. The environmental damage that will inevitably be done by 25% of our burgeoning pet population is completely intolerable. The Park Service needs to plan for maximum compliance through vigorous enforcement, which over time will build toward a high compliance rate. Park users have a right to demand that park regulations be enforced.

? There is absolutely no place in the GGNRA for any commercial dog-walking activity.

? I'm completely bewildered that there is no mention in any of your plans of people with disabilities such as people that may use a guide dog. I know that Guide Dogs for the Blind has made their concerns known to you but I don't see any mention of their legitimate needs. Off-leash dogs are a significant challenge for Guide Dog users and they must avoid any place where off-

leash dogs are known to roam. These concerns must be addressed in your final decision.

? Beyond ignoring park users with severe disabilities, you have also ignored a much larger constituency that includes the frail, the elderly, and parents with small children and people who legitimately fear dogs or those who simply want a dog-free experience in their recreation. It is the responsibility of the NPS to protect park resources for all its users, not to cater to pet owner preferences.

I will add that protecting natural areas that happen to be close to urban congestion is even more important as a buffer to human influence. I would also add that endangered species aren't the only wildlife in need of protection ' all birds and wildlife are in fact the proverbial "canary in a coal mine". Future generations are relying on you to save all that will fall if human pressure is allowed to set the agenda. While dogs may be an important parts of our families and communities, they are just one species that is having a significant negative impact on thousands of other animals and plants that rely on the park to survive. The parks must be maintained to be safe and accessible for all users and to protect their natural and cultural resources for future generations.

Wilderness is not the wide-open spaces, but the wild things that fill it.

Sincerely,

M. Bruce Grosjean

"We need another and a wiser and perhaps more mystical concept of animals. Remote from universal nature, and living, by complicated artifice, man in civilization surveys the creature through the glass of his knowledge and sees thereby a feather magnified and the whole image in distortion. We patronize them for their incompleteness; for their tragic fate of having taken form so far below ourselves: And therein we err, and greatly err. For the animal shall not be measured by man. In a world older and more complete than ours they move, finished and complete, gifted, with, extensions of the senses we have lost or never attained, living by voices we shall never hear. They are not brethren they are not underlings; they are other nations; caught with ourselves in the net of life and time, fellow prisoners of the splendour and travail of the earth " Henry beston, The Outermost House

We constantly supervise our dogs, especially if they are running off-leash, to make sure they are not disturbing people or destroying habitat.

We understand you are trying to preserve a natural habitat, but our dogs run on the trails and leave only as much of a footprint as people do in Yosemite and other national parks.

Please PROTECT these designated dog areas. They are very important and should not be cut or reduced.

Sincerely, Ziv Gigus

The peninsula has very few off leash areas. The areas under the GGNRA are part of a recreation space, not a park, and could accomodate off leash area as are currently available.

Correspondence: JAN LASSETTER SAN FRANCISCO, CA 94117

May 22, 2010

Frank Dean, General Superintendent Golden Gate National Recreation Area
Building 201. Fort Mason San Francisco, CA 94123-0022

Dear Superintendent Dean,

First let me introduce myself. I am a 74-year-old avid dog person and nature

lover. I love ALL nature and being able to enjoy many aspects of it is very important.

We are all creatures of God and all must share the planet equally. I do not believe in singling out one creature over another. Urban areas must be treated differently than wild areas. Wildlife should not be given quarter over domestic animals/life in the middle of an urban area. If that were the case, then none of us could live here.

I belong to the Marine Mammal Society, The Wood River Land Trust, World Wildlife Fund, Best Friends Animal Society and Crissy Field Dog Group to name a few.

I take my golden retriever to Ocean Beach and Crissy Field at least once a week. Having a water dog means having to be able to access water. Wacko loves to swim and infact, it is part of his well-being. As a responsible dog owner, I pick up after him and keep him under voice command. It is very important that these areas remain off leash dog walking areas, both for the health and welfare of the dog and of the owner.

Has the GGNRA studied the impact on the natural resources from ALL the other activities that occur in these areas, such as walkers, bikers, kite flyers, runners, picnickers etc. etc. Why has the GGNRA chosen to single out dogs?

Have there been studies done to suggest that the dogs do more damage to natural resources as compared to other activities?

Where there are very sensitive wildlife areas, they should be WELL marked. We responsible dog owners are concerned with preserving our natural resources and need a little direction as to where these areas are. I do not agree with the GGNRAS' current preferred alternative as it restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the 1979 Pet Policy and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions. I support Alternative A, the No Action alternative, which would also include " New Lands" within San Mateo County.
Respectfully submitted,

Jan Lassetter

Re: Draft Environmental Impact Statement for Dog Management on New
GGNRA Lands Dear Superintendent:

Please amend the Dog Management Plan for the Rancho Corral de Tierra
lands to allow for a balanced alternative which includes dogs.

We are neighbors of the Rancho Corral de Tierra POST land which will soon be GGNRA property. We bought our property in large part because it is adjacent to the open space, and built our home 15 years ago in this location where our kids and dog have space to run, play and create. We love the fact that many friends and neighbors enjoy the open space behind our house on a regular basis - they bike, ride horses, walk and run, with dogs on and off leash. We all enjoy the space not just near the neighborhoods that

border the property, but up into the green hills.

From our own experience, we know that parts of the approximately 4000 acres of Rancho land has been used in this way for at least 16 years. Of course, we are most familiar with our little corner of the Rancho. In the larger picture, we know we live in a vacation destination, and many people from around the Bay Area and beyond come to visit our beautiful San Mateo coastside. They bring their dogs to play on beaches and trails, and appreciate the open space the coastside has to offer. In many communities, there are just not enough spaces for people with their dogs, so where the spaces exist, they should be protected. The Rancho has been used for decades by people with dogs, and it still is a scenic, picturesque, lovely, natural place. It seems to me that continued similar use will allow it to continue in this beautiful condition and allow for the public's enjoyment for years to come.

I note that the mission of the GGNRA is the "preservation, unimpaired, of the natural and cultural resources, and scenic and recreation values, of the park for present and future generations to enjoy." And the purpose of GGNRA is "to offer national park experiences to a large and diverse urban population while preserving and interpreting its outstanding natural, historic, scenic, and recreational values." Both statements place value on recreational uses. And for many citizens, recreation includes their dogs. It is contrary to the mission and purpose of the GGNRA to ban dogs and therefore that form of recreation by their owners. Since the Rancho Corral De Tierra has not yet transferred to the GGNRA, I must assume that GGNRA has not closely studied the Rancho and the way it's used yet. However, the initial preferred alternative is to not allow dogs at all, which is not a fair and balanced initial stance. It does not take into account the well-being of people with dogs who currently use the space, but favors the few who might prefer no dogs. The study in August 2002 by the Social Research Laboratory states that 76% of those asked whether they agree with National Park Service policy which allows for walking dogs on-leash at most GGNRA sites, either strongly support or somewhat support that policy. This is a clear majority, so why would GGNRA initially allow NO dogs when they take over the land?

I spoke with Superintendent Dean at the public forum in Pacifica, and understood him to say that he plans to issue a compendium allowing for areas of on-leash dogs soon after GGNRA controls the Rancho. He also stated that he is open to working with other organizations to establish an off-leash area. While I appreciate his stated intention, I would prefer that the initial Dog Management Plan be amended to allow for a more balanced alternative, allowing on-leash dogs in the areas that are currently frequently used by dogs and their owners, and allowing for off-leash areas as well. Should the preferred alternative become part of the final plan, I respectfully request that Mr. Dean immediately issue a compendium stating that dogs

will be allowed in certain areas.

Please work with us as your neighbors as we do our best to cooperate with you. We appreciate your existence, and the existence of our National Parks. We want to be able to use and enjoy those lands that our tax dollars are paying to preserve.

Respectfully,

Kirsten Jaeb

Correspondence Type: Letter
Correspondence: Dear Superintendent Dean,

It was very nice to meet you in Pacifica at the Open House. I am following up to get my comments included in the decision making process for the Rancho Corral de Tierra and to offer my expertise in further planning efforts.

This letter is asking for your support in allowing continued access for dogs in the Rancho Corral de Tierra, soon to be part of the GGNRA. This large property is close to my home in Montara. As you may remember, I am a small animal veterinarian and I have been hiking with my dogs in the local open space area for the last 15 years. This is something I do daily and without it my quality of life would be compromised. Daily walks with my two well behaved dogs is the highlight of my day. In addition to walking our dogs, I often bike ride or ride my horse in this same open space. You can consider me a heavy user of this wonderful resource and I want to emphasize how well dog walkers, horseback riders, cyclists, and hikers get along and respect each other. The Montara Dog Group has encouraged responsible dog walking by starting a volunteer organization of people who remove dog waste from the mountain and by promoting leash protocols that respect all users in the park.

I encourage you to adopt Alternative E from the GGNRA Draft Dog Management Plan. This will allow continued on leash dog walking with off leash to be considered if certain criteria in the plan are met. Their proposed Alternative prohibits dogs from an area where people have been walking them for 50 years. This is unacceptable.

The reasons I want this alternative are:

Dogs do not harm the open space.

This is a very small percentage of GGNRA, yet a huge part of life in Montara. In fact, one of the reasons we moved here from southern California was precisely due to the opportunity to walk our dogs in an open space.

GGNRA is a RECREATION area, and walking dogs is a common form of recreation. As you proceed with revising and modifying the dog plan, please consider including me. I hope you plan to allow dogs based on site specific information for the Rancho. I would also like to see the rules depend on documentation of actual effects of dogs on the Rancho. I am a member of the Montara Dog Group as well as the Sierra Club. In addition to being a veterinarian, my college degree is in Biological Sciences. I do not want dogs to cause any harm, nor do I want to see them restricted without good reason. I am a good listener and I am willing to donate my time to this important issue. For a personal reference, please ask Chris Powell to vouch for me/she and have known each other since we moved to the area and we are bicycling and hiking buddies (when she is in California!)

Thank you for taking the time to listen to me on this critical issue.

Sincerely, Lisa

Frank Dean, General Superintendent Golden Gate National Recreation Area,
Building 201 Fort Mason San Francisco, CA 94123-0022

Dear Superintendent Dean:

My family and I have lived in Marin for over three decades. We have jogged and hiked every trail on Mt. Tamalpais, as well as the Marin Headlands, Rodeo Beach and Marin Water District. In all those years, we have enjoyed taking our dogs to Rodeo Beach, Fort Funston, Ocean Beach and Crissy Field, as those are the only places they could run off leash. We have trained all our dogs to be good citizens and we remove any pet waste, anywhere we go. Now I find there is a plan in process to make some of our favorite places either leash-only or no-dog areas. This is most distressing.

At the age of 72, I still work in San Francisco but my recreational activities

have been altered because of health concerns. I can no longer run trails or hike. Nowadays we take our dogs to the beach and various dog parks in the area. We have always enjoyed the GGNRA where our dogs can have the opportunity to run on the beaches and at Fort Funston. I have become concerned about the plans to severely restrict off-leash dog walking in GONRA. What I have read in the Draft Dog Management Plan has disturbed me greatly.

There is one major point which is not addressed anywhere in the plan., GONRA is NOT a national PARK. It was not intended to be. National parks have as their intent keeping the wilderness pristine and uncontaminated even by humans for the most part. GGNRA is a national RECREATION area; ergo, it was intrinsically intended as an urban recreation area. Yet the entire plan is written as if GGNRA were a national park and should be subjected to national park rules and regulations. This is very wrong. To put the same restrictions on it as on a national park defeats the purpose of recreation to begin with. National parks are to be preserved so people can go there and see the beauty of nature, walk specified trails and keep things unspoiled Urban environments desperately need recreation areas where people can use the land, play and get exercise. There is a huge difference, and land in an environment as heavily populated as the Bay Area is more important than ever as a place where people can actually enjoy the land, not keep it untouched by man.

Dogs are as much a part of recreation as horses are and their owners should be no more prohibited from recreational lands than horse owners. Urban inhabitants have few places where they can go with their dogs and as a result have even greater need for such places. This plan takes none of that into consideration.

In fact, nowhere in this plan do I see mention of the enhancement of both health and recreational ability of the GGNRA. The plan is written as if it WERE a national park. In which case, all these areas should be accessible only by specific trails and should prohibit bicycles in many (if not most) places. This obviously is neither the intent nor the current practice of GGNRA.

This plan is filled with misstatements, inaccuracies and suppositions which have no basis in fact. The plan also omits numerous important issues. The quality of life in an urban environment is Impacted greatly by peoples' ability to experience the outdoors and have outdoor recreation. For those of us whose recreation includes our dogs, many places are off limits and most others require leashes, so we feel strongly about the places which allow us and our dogs to enjoy nature at our own Individual pace'in other words, allows them to run while we walk. As we have aged, GGNRA has become a larger and larger part of my and my wife's ability to enjoy the outdoors. I

have several physical problems which I battle, and staying as active as possible is a vital part of maintaining my quality of life. Our dogs are a large part of our recreation.

We've been frequenting Rodeo Beach all the decades we've lived in Marin, and later the discovery of Crissy Field, Fort Funston and Ocean Beach gave us more opportunities to enjoy the beach. To have these taken away from us because our dogs cannot accompany us, or must walk at our slow pace, would be severely restraining. If this comes to be, my ability to stay active would be very negatively affected, as my outdoor life includes the dogs and I wouldn't be able to utilize GGNRA without their company. I need to BE active in order to STAY active and healthy.

I always thought GGNRA was intended as a place where people can engage in all different forms of recreation. Walking with our dogs deserves equal representation with other forms of recreation. Yet while other forms of recreation can be enjoyed in many, many places in the Bay Area, dog walking is limited to only a few areas, and off-leash dog walking is virtually nonexistent except for GGNRA.

I can see nothing but negative consequences for the proposed actions. We take responsibility for socializing our dogs and taking care of their waste, and we have never encountered any problems with our dogs. Dogs which aren't socialized can become aggressive and protective, which could only increase problems; untrained, leashed dogs can be more aggressive than dogs allowed to meet one another off leash. The Bay Area has a high population of dogs; dog parks provide socialization but little ability for real exercise.

I also don't understand, after reading the proposal, why there is no specific evidence presented regarding detrimental effects on wildlife and the environment by dogs. I haven't experienced this, nor have I witnessed any pet owners being irresponsible in allowing their dogs to chase wildlife or damage the environment. Our dogs have always been trained to not disturb wildlife and we have always kept them out of areas designated as protected. Given this, as well as the fact that no specific evidence is in the plan, only suppositions and speculation, I question the viability of the material. Marin and San Francisco have been fine with the policies already in effect; to change them would be deleterious in so many ways, I can't see why it is being proposed. The plan has a number of items I question. For one, I know of no "degradation of soil and water resources" because of dogs. Humans "degrade" the soil more than dogs just by walking on it, and the areas that concern me, being beaches, get no water degradation. I can't imagine how any place would experience such things'the only single "degradation" I can think of would be dog waste, and all the dog owners I know are careful to pick up not only their own dogs' waste, but that of others as well. I have

seen many places where dog waste is a problem; GGNRA is NOT one of them. Those of us who utilize it are more careful about this issue than the general population, by far.

The proposal claims that impacts to physical resources would be from negligible to ADVERSE because of dogs. That is a very open statement; to determine how to proceed, it would have to be more specific to be of any value. Rodeo Beach hasn't changed in all the years we have walked there, and I don't see how dogs have had any adverse effect on it, or how any "severe" effects could be envisioned. This needs more clarification as to exactly WHAT is meant by "adverse" impacts. Otherwise it sounds like someone who hasn't even been to these sites is merely imagining something. The same is true for Ocean Beach, Crissy Field and Fort Funston. PEOPLE walking somewhere erode the soil; dogs actually cause less erosion. Enforcement of dog-waste regulations would avoid any other form of degradation that I can imagine.

Impacts on health and safety is another unclear issue. How dogs could negatively impact health, as opposed to how they POSITIVELY impact health, both physical and mental, is nowhere taken into account. Considering the population involved, the issues of safety have been unquestionably minor, and nothing can completely prevent controversy, whether dogs are there or not. When it comes to safety, the places we go within GGNRA are far safer than the vast majority of urban areas; I would guess that is true of all GGNRA areas.

Dogs which are confined, don't get sufficient exercise or aren't socialized result in far less safety than those who receive proper exercise and training. People who regularly recreate with their dogs are the ones who bother to train and socialize their pets; as a result, we are promoting safety more than those who do not.

When it comes to native vegetation and the Snowy Plover, every dog owner I have ever encountered is careful to keep their dogs out of protected vegetation and the Plover territory. Certainly there are those who are irresponsible, but there are irresponsible people everywhere; they are in the minority, this I KNOW, because those of us in the dog community are quick to police them ourselves.

All in all, reading through the plan, it is entirely too generic; "negligible to adverse" covers a wide spectrum, and nothing I read, from what I have experienced personally, would lead to serious or adverse results if the 1979 policy were kept in place. I can't speak for many of the areas, but I would assume the same is true in most of the areas of GGNRA.

Impacts to the soil would be "long-term, major and adverse" at Fort

Funston, according to the proposal, if things remain the same. If Fort Funston were to be made into a leash area, or even worse, a no-dog area, it would be frequented by very few people. It's cold, out of the way, and not very scenic. Few people go there who don't have dogs. As a result, the very concept of Fort Funston as a recreation area would be useless, which goes directly against the intent of GGNRA as created. To defeat GGNRA as a recreation area WOULD make it just like a national park: something to be kept pristine, unaffected by even humans. Were it somewhere else, this might be of value, but in the middle of an urban area like San Francisco, where it is desperately needed for recreation, is absurd.

It is stated that the Department of the Interior has responsibility for fostering "wise use of our land and water resources" AND "for the enjoyment of life through outdoor recreation". In national parks, certainly this means keeping the land free of any contamination...by humans or anything else. Not in an urban recreation area; there "wise" use of land and water resources must be BALANCED against the enjoyment of life through outdoor recreation. If we enjoy the land and water for recreation, there will be degradation, it's inevitable even if only humans use it. The balancing act is necessary. GGNRA is not a national park. It's important that it be preserved for everyone's use, every form of recreation, in such a hugely populated area where enjoyment of life through outdoor recreation is needed more than anywhere else.

Enjoying life through outdoor recreation with our dogs is every bit as important as any other form of recreation, moreso actually, as anywhere you go where dogs are allowed off leash, you will see more dog owners with their dogs than you will almost any other form of recreation being practiced. All other forms of recreation can be done almost anywhere; recreation with dogs off leash can only be done in a few selective places. Please give ALL of us the use of the GGNRA. Thank you for your consideration.

Sincerely,

Jim Cunnington San Rafael, CA 94901

Correspondence: Dear Superintendent Dean,

My husband and I bought our home in Montara three years ago. One of our main criteria in our search for a coastside home was that we could step out our front door and go for a hike with our dogs. During our walks in Rancho Corral de Tierra we have met many other folks that moved to this little town for the same reason. We joined the Montara Dog Group, headed by Bill Bechtell, which has over 300 human members and over 400 canine members. This group, as well as the many other local residents, have used and cared for this land for decades, fending off developers, Cal Trans and others who would have harmed this beautiful area. Hikers, bikers, joggers, equestrians and dog walkers have enjoyed recreating in this area without interference or serious frictions (see attached letter from Ken White).

Our concern is not just for losing the privilege to use this beautiful area in our backyard but also for the other areas we enjoy with our dogs within the GGNRA confines. We do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog as well as on leash dog walking in many areas of the GGNRA. The rationale provided in the DEIS to allow for a change in the current 1979 Pet Policy areas (plus the San Mateo County GGNRA) does not appear to be based on sound science and long-term monitoring of site specific conditions. Many statements seem to be opinion vs fact based from actual impact studies.

This Draft Plan/DEIS is about making a change to rules about dog use. Therefore, in order to be useful in this regard, the Affected Environment discussion must present information about how the environment has been impacted by dogs, and not just by dogs but also by humans. The Draft Plan/DEIS does not present baseline conditions that require a change in the rules.

The baseline for comparison throughout the Draft Plan/DEIS should not be an environment in which it is assumed that there is no impact unless dogs are present, but one in which the impact of dogs is added to the impact of humans. At about 200 pounds per adult, the force that a human exerts on the soil one foot at a time would have a significantly greater impact on compacting the soil in a picnic area than the force exerted by even a large 70-pound dog distributing its weight on four paws. The failure to acknowledge that human use has more impact on soils and geology in this regard (and acceptable in many areas of a National Park), compared to dog use, unfairly and uncritically biases the analysis in favor of restrictions on dogs. While there may be areas in which impacts from dogs are unacceptable, the same criterion holds for impacts from humans, and in most of these areas, dogs and humans are already excluded. The Draft Plan/DEIS should attempt to provide illumination, rather than justification for a foregone conclusion.

We are concerned with long-term preservation of the GGNRA's natural resources and want to protect these important natural areas. We are active volunteers with the Marine Mammal Center and have actually found dog walkers around stranded marine mammals to be very concerned with the well being of the sick sea mammals and very cooperative in controlling their dogs around these animals. We also volunteer, as a foster home, for rescued dogs and know that it is crucial that our dogs are well behaved and trained in order to co-exist in an urban environment and for them to be suitable for adoption. Getting out, walking dogs provides exercise and socialization not only for the dogs but also for the humans. Many of the alternatives outlined in the new plan, for off leash walking especially, are not readily accessible for people with mobility restrictions (see proposal regarding Fort Funston).

The draft EIS excludes the quality of the urban environment from its scope, saying it is not significant but the reality is that the GGNRA provides much needed open space in an urban environment. This omission is concerning because the fundamental purpose of creating the GGNRA was to provide for open space recreation, and dog walking is a form of recreation, to serve the metropolitan Bay Area. This plan is based on Yosemite type conditions and must take into consideration the "R" for recreation in an urban environment. The San Mateo County area parks and preserves are particularly unfriendly to dogs and closing off Rancho to dog walking would make the area residents have to travel to Fort Funston or Crissy Field. The remaining, contracted spaces for designated off leash dog walking would experience increased impacts in smaller spaces which leads to more incidences of dog on dog aggression, creating issues where there were none before.

Please keep the GGNRA truly a part of "Parks for all Forever". The draft EIS is biased against dogs and does not take a truly scientific look at the No Action Alternative or variations on that alternative. There are so many areas where the existing 1979 Pet Policy has been working and where sensitive species are not present, visitor conflicts do not occur or are not frequent and dog walkers have been stewards of the lands. Hikers, bikers, skaters, joggers, kite flyers, stroller pushers and on and on have so many choices of where to go to enjoy the urban park areas of the Bay Area, please keep dog walkers options open too.

Respectfully,

Suzanne Hawley an Russell Rosenberg Montara, CA Mail: Rancho Cordova, CA 95670

Correspondence: May 24th, 2011

Frank Dean, General Superintendent Golden Gate National Recreation Area
Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean,

My name is David Heughan and I writing to oppose the GGNRA's draft dog management plan. I live in Noe Valley and enjoy a number of parks as a place of recreation for both myself and my dog. I visit Fort Funston on an almost daily basis and also regularly visit Baker Beach, Crissy Field and Muir Beach on weekends. Since becoming a dog owner 18 months ago I have really enjoyed having a daily reason to get outside and exercise my dog regardless of whether it is warm, cold, wet or foggy. This not only benefits my mental and physical health but also the health of my dog. As any dog trainer will say; a tired dog is a happy dog.

I have attended a number of information sessions regarding the draft dog management plan. I believe that it is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others. The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to: ? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. ? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. ? Exclude speculative, exaggerated, biased, or misleading statements and studies. ? Provide reasonable ways to address any

significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). ? Enable professional dog walking and align any professional dog walking rules with county or city regulations. ? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input or evidence of any adverse impact.

The Bay Area is such a special place to live because of the climate, outdoor lifestyle, natural beauty, job prospects and unique outlook on life. All of these aspects need to continue to be balanced (they are interrelated after all) so that all people who live in the Bay Area can continue to enjoy living here. This is particularly important given the reality of the area: we live in a densely populated urban environment. The draft proposal is overly restrictive and does not balance the different aspects that make the Bay Area so special. People from diverse backgrounds and with varied interests happily live side-by-side in the Bay Area by interacting with each other in a mature, respectful and responsible manner. These attitudes are an important foundation of our society and need to be demonstrated through all aspects of our lives. Draconian measures such as those contained in the draft proposal do not honor these attitudes. I fear that the draft proposal is another example of the green / environmental agenda, based on questionable "science", being used to force through policies that aren't wanted and aren't needed.

Sincerely, David Heughan

Frank Dean, General Superintendent Golden Gate National Recreation Area
Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was

designed as an urban recreation area, not a pristine wilderness area like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

- ? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation.
- ? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.
- ? Exclude speculative, exaggerated, biased, or misleading statements and studies.
- ? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).
- ? Enable professional dog walking and align any professional dog walking rules with county or city regulations.
- ? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

These are my personal comments and observations regarding this plan:

Since this issue has come to my attention, I have endeavored to fully appreciate both sides of the argument before drawing my conclusion. The proposals caused an emotional response from me initially, as I am a dog-owner and frequent visitor to Fort Funston and other sites throughout the region. However, I am also concerned about the environment, preserving it for future generations, and inclusive use of recreational areas. It has become clear to me that the proposed changes are not based on sound scientific research; and vastly overstate the impact off-leash dogs have on the environment.

The impact of the loss of off-leash recreational space on dogs and their owners, in my opinion will have far greater effect on the quality of recreation available in the city and surrounding areas. The impact of unexercised dogs in homes, on side-walks and in small cramped dog parks is a recipe for disaster in terms of maintaining the type of harmonious communities that San Francisco thrives on and is widely known for. While my dog gets plenty of on-leash exercise in the form of walks and runs, daily access to Fort Funston is the key to her overall sense of well-being (and

mine). These things cannot be measured easily, but the impact of the lack of them on both of our lives would be significant in terms of mental and physical well-being: surely this is the definition and purpose of recreation?

Sincerely, Mrs. Lee Heughan

Correspondence Type: Letter
Correspondence: Comments to the GGNRA regarding the dog management plan/Hemphill

As a member of the San Francisco Animal Control and Welfare Commission for the past four years, I feel the need to address this issue in detail and to be a voice for those who are not dog advocates, and who are not being heard, including older people, children, and other adults who for a variety of reasons prefer not to be around dogs. I also want to speak up for wildlife, who enrich our world, and who need supporters. Please be patient with lengthy comments.

I would like to thank the GGNRA for working to develop a dog management plan for the national park that is our immediate neighbor. The document produced is clearly the result of a project that has taken a great deal of time.

For years, San Francisco itself has had a lack of leadership in enforcing any laws regarding dogs. The result is that dog owners have been left to police themselves. As a result of this laxity, the guidelines for off-leash dogs are unclear and lead to a culture where dogs are off-leash where they should not be, dog waste is not picked up, and few dogs are licensed. There is no protection for wildlife in restored areas, as signage is ignored (Please see attached photo #1 of the wildlife area in Pine Lake Park with the dog in the lake with the ducks). Dog organizations in SF have loud voices and see the dogs as important, overlooking the numerous other animals in San Francisco. These organizations wish to extend this attitude to the GGNRA, where wildlife should be protected for all to appreciate, and where people should be able to have an experience that does not involve dogs.

At Fort Funston, I and a group of friends, while riding our bikes there, experienced a problem with dogs. We biked around Lake Merced and decided to ride up to the ocean overlook at Fort Funston. The path up was full of off-leash dogs and dog owners, standing and talking, making no effort to get out of the way, or to remove their dogs from the multiuse path.

Some of the dogs barked and growled. We had to get off our bikes and walk. Weeks later, we tried this a second time, wondering if we had just hit a bad day, but the experience was the same. If dogs are going to be in the GGNRA at Fort Funston, they need to be on leash or in a fenced area. They are not compatible with other users of our national park.

I know quite a number of adults, some with children, who have simply "given up" on Fort Funston as it is not possible to have a dog-free experience there. It seems very unfair to me that one group of users would be able to push the others out. In San Francisco, many elderly people have given up on going to our parks because of fear of being knocked over by off-leash dogs and suffering a broken bone. In Europe there are a lot of older people in parks, but not in San Francisco, even though more than 15% of the population is now over 65.

The other experience that many of us have shared is politely telling the owner of an off-leash dog that their dog should be on leash and then being insulted or cursed. If an enforcing officer arrives, the dog is then put temporarily on leash, but is quickly freed again as soon as the officer departs.

I personally feel that it would be best to have no dogs in the GGNRA, to protect wildlife and to save the large expenses of enforcement. I was surprised by how much money needs to be budgeted for the dogs. With no dogs allowed, bringing the GGNRA into line with the other national parks, enforcement would be easy. I also feel strongly that no commercial dog walkers belong in the GGNRA. I think that would legally open the door to all kinds of commercial enterprises operating in the GGNRA. However, since the proposed plan already includes dogs, I will direct my comments to that possible compromise.

On the following pages, I have tried to organize my comments into categories. I will begin with some comments about the dogs in San Francisco as they are being used to argue for more off-leash access in the GGNRA, and some of the information that has been presented by the dog advocates is simply not correct.

How many dogs live in San Francisco? How many people don't have dogs?

It is unclear how the estimate of dogs living in San Francisco is calculated, as dog licensing is voluntary and most of the dogs here are unlicensed. So, this does not give us any kind of an estimate. The number of 120,000 (dogs in SF) has been used for years with no explanation as to how this number was calculated. This would make approximately 15% of the 800,000 San Franciscans, dog owners, if one assumes one dog per person. However, many people have two or more dogs, so the percentage of residents with

dogs would actually be lower.

Lately, dog organizations have increased the number they quote, and now say that 25% of San Franciscans have dogs, which would give us 200,000 dogs in our 47 square mile city, with again no explanation for the data. I think both of these estimates are probably incorrect. If in fact, 25% of San Franciscans do have dogs (and the number is probably far lower even than 15%), then 75% to 85% or more of residents, do not have dogs, yet will potentially be users of the GGNRA. These non-dog-owners are not an organized group and cannot be contacted easily to solicit their opinions. But those who do not own dogs are clearly the majority of GGNRA users from San Francisco.

Dog spaces in San Francisco...

Dogs in the city...Historically dog owners have pressed for dog spaces in the city and there are now more than 30 in the city with two more on the way, at Heron's Head and at Beale Street. However, almost all of our more than 200 Rec and Park properties are used by off-leash dogs, despite signs saying "no dogs" or "dogs on leash". A trip to any of them will quickly validate this. The dog spaces (dog parks, dog play areas, etc) that have parking lots or lots of nearby parking are the ones that are most popular with commercial dog walkers. These include Stern Grove, the Northeastern Golden Gate Park area, and McLaren Park.

A fellow ACWC commissioner, and I recently toured all of the dog parks in San Francisco and found them to be very underutilized. Additionally, the designated areas are poorly demarcated, signage is poor, and leash laws are not enforced. The San Francisco Recreation and Parks Department, over many years, has dedicated money to building fenced dog parks and designating dog play areas. Only a few of these many dog areas are listed on the SFDog.com website, and these are often described as inadequate in comparison to the much vaunted glories of Fort Funston. If I looked at just that website, I would take my dog to Fort Funston.

Of the 30+ dog spaces, some, like the area in McLaren Park, cover many acres. After visiting most of them over the past few weeks, at many times of the day, weekdays and weekends, I can say that they are very underutilized. None were seen that were crowded, and many were almost completely empty. There is not a problem with not having many choices of spaces for dogs in SF, but rather a problem with distribution of the dogs across these spaces. And some dogs do not even use these spaces. In fact, many dog owners do not go to public parks at all, but rather walk their dogs in their own neighborhoods. They do not regularly get into the car to take their dogs, small ones and large ones, elsewhere.

I am attaching photos of 13 of the more than 30 dog parks in San Francisco. I have available photos from almost all of them, but have not printed them all out. The largest one, McLaren, is not attached here. All are hard to characterize with a single photo. These photos were taken in the afternoon on good days, and almost all were on weekdays. The commercial dog walkers are usually working during the week when the dog owners are at work. We did see an occasional commercial dog walker bring 8 to 10 dogs, but this did not crowd these dog spaces. However, when we went to Fort Funston, the commercial dog walker vehicles were lined up. As we arrived, I counted 18 one afternoon in the parking lot. If each brought 8 dogs and stayed for an hour or so, that is 144 dogs per hour at Fort Funston. But, these 18 dog walkers could easily be spread over the San Francisco facilities if schedules were coordinated. Clearly all could not choose Stern Grove.

I helped a friend walk his son's 3 dogs recently. It quickly became clear that the SF fenced facilities were the easiest to use for any off-leash activity. The dogs were safe and there was a culture of cleaning up waste and as all dogs were off-leash, there was no problem of the conflict between one dog being off-leash and one on leash. Some of these facilities were double-gated and this amenity kept dogs from escaping when the first gate was opened. In the unfenced dog areas, there was frequently dog waste that had not been picked up. Dog licensing in the GGNRA

I think that every dog in the GGNRA should be required to have a license. I watched a runner with a collarless dog being stopped by a GGNRA ranger on the beach to be cited for no leash on her dog. She had on a T-shirt and shorts and carried no ID. Runners often don't carry much with them, but a dog tag could identify the person with the dog. Otherwise, how will enforcement happen?

As one example, Houston, Texas has mandatory licensing for every dog and cat more than four months old. Enforcement can be a problem anywhere, but it is clear that San Francisco's voluntary dog licensing program does not work. The GGNRA could help encourage a mandatory program, which would protect visitors as licensed dogs have had their rabies shots.

Commercial dog walkers

In my opinion, commercial dog walkers need to be licensed, and should pay a business tax. I know that this is being considered by the supervisors in SF. They should be able to walk only a limited number of dogs. In my opinion, I think 6 dogs should be a maximum. (Picture trying to pick up the dog waste from 10 dogs.) Looking on the web, commercial dog walkers in San Francisco charge between \$350 to almost \$400 per month for walking one dog on weekdays (20 clients at \$370 per month = \$89,000/yr). Food trucks in our public parks in SF pay for being there. It seems that dog walkers using

our public spaces for their businesses should also.

These dog walking businesses could also be scheduled to use the facilities that have been created for dogs in San Francisco. If we can have smart phone applications for parking places in San Francisco, we can also reserve spots for commercial dog walkers in dog spaces in San Francisco in some equitable fashion, using the web, and distribute them so they do not all crowd into one space. They would have many choices.

It makes little environmental sense to have these businesses transporting dogs from all over San Francisco to the GGNRA. One advertised dog walker uses McLaren Park and limits business to dogs who live in that area. This is very reasonable financially, because travel time and gas both come off of the bottom line of the dog walker's business and a short transport is safer for the dogs. All dogs that are taken out by commercial walkers should be licensed.

Many of the dog walkers at Fort Funston, commercial and non-commercial, are not from San Francisco at all. Over various days signatures for a petition that was for San Francisco residents were collected at Fort Funston, by approaching dog walkers, and the person soliciting found that about 50% of people at Fort Funston were not from SF. It is not the responsibility of SF taxpayers to provide facilities for out-of-county dog owners currently using the GGNRA. They need to find space in their home counties. All of the dogs that come to the GGNRA with their owners or with their commercial dog walkers are not from San Francisco and will not end up using SF facilities if they are limited in their use of the GGNRA.

One way to control commercial dog walkers at Fort Funston would be to designate a small number of parking places for them in the parking lot, parking places with an hour time limit. Their vehicles should have an identifying bumper sticker that can be checked against their license plate and the dog walkers themselves could wear an ID tag. Once again I do not feel that they belong there, but if they are to be there and have dogs off-leash, they should do so in a fenced area. Landscaping with natives could help to disguise the fence. Enforcement would be easier and dogs would not be lost. Commercial dog walkers do lose dogs. The majority of people who come to the GGNRA without dogs could then have a dog-free experience in a national park.

Environmental damage from dogs

I remember when Fort Funston was covered in ice plant around the parking lot area. Ice plant is a very tough "bullet proof" plant. I have spent time pulling up this native in areas where the native habitat is being restored. This plant has literally been worn away by the presence of so many dogs.

Dogs dig and dog urine burns grass and other plants, probably due to the high nitrogen content. Grass in SF parks is crisscrossed by numerous dogs, and dead grass can easily be seen in circular areas where repeated marking from the dogs has occurred. These areas continue to enlarge as more dogs urinate there. I think this is another reason to limit the dogs to fenced areas.

I have often walked along the beach from Sloat to the Cliff House, and many times have seen off-leash dogs chasing the birds feeding and resting on the beach, forcing them to take flight. This problem not only affects endangered birds, but rather all of the birds on the beach.

Thank you for your attention. I know that my comments are long, but I do think that protecting all animals, including wildlife, is important. Dogs are not the only animal to be taken into consideration in San Francisco, despite all of the loud voices of dog advocacy drowning out a democracy, and this is especially true in the GGNRA, which offers a rich habitat for our wildlife.

Received: May,24,2011 00:00:00
Correspondence Type: Letter
Correspondence: Dear Mr. Dean,

Thank you for the opportunity to comment on this important document, the Golden Gate National Recreation Area's (GGNRA) Draft Environmental Impact Statement/Draft Dog Management Plan (Draft Plan/DEIS).

My name is Bill Bechtell and I am president of the Montara Dog Group. The group consists of approximately 300 people, mostly residents of the San Mateo County midcoastside, who regularly walk their dogs in the open space known as Rancho Corral de Tierra (Rancho), soon to become part of the GGNRA under the "New Lands" classification. The midcoastside includes the small unincorporated communities of Montara, Moss Beach and El Granada. It is bounded on the west by the Pacific Ocean, and on the east by Rancho. The area has long had the reputation of being a dog-friendly area, largely because of the numerous trails available in Rancho for dog walking. I, myself, have lived in Montara for 35 years, and regularly walk my dogs on the numerous Rancho trails. The midcoastside is also a tight-knit community willing to fight hard to preserve the cultural and environmental values that attracted us to this area in the first place. For many years the open space, now known as Rancho, was privately held by various development corporations. They tried to build condos and golf courses, and to subdivide the property into "ranchettes." We fought back all of these

attempts. Then Caltrans dusted off some 1960s- era freeway plans, and tried to put a freeway (the Devil's Slide Bypass) through the heart of Rancho. Again we mobilized to fight this freeway, and eventually convinced Caltrans that a tunnel behind Devil's Slide was a much better solution, again sparing Rancho.

Then in 2001, the Peninsula Open Space Trust (POST) purchased Rancho to save it from development. We dog walkers have had a very good working relationship with POST over the years. They have no staff rangers, so we have been POST's eyes and ears on Rancho, reporting off- road vehicle activity and illegal dumping. We have also installed and maintained dog waste disposal cans throughout the dog walking area at our own expense, and all done by volunteers from our group.

If the GGNRA's Preferred Alternative D for New Lands (No dog walking allowed) is put into effect, it will be very sad and ironic that those of us who have fought so hard to protect the land are now forced off the land.

One of my main concerns about this plan was lack of public involvement in the treatment of "New Lands" (see p. 32, Public Involvement with the National Environmental Policy Act Process). The public has not had the opportunity to participate in the development of the Dog Management Plan when it comes to the New Lands category. New Lands were not involved in the scoping process and the other activities required by NEPA, nor were they involved in the negotiated rule making process. When the GGNRA held a General Management Plan workshop in Montara in January, 2009, over 50 dog owners showed up to speak in favor of continued off-leash dog walking, and submitted a petition with 128 signatures to that effect. Our input was ignored! We were told that the GGNRA had no intention of addressing dog policy until the Dog Management Plan came out, and now we are not even recognized in the Dog Management Plan. The GGNRA worked with the horse owners during this period, and allowed existing stables to remain (although horse owners were informed that dogs are no longer allowed in the stables) and continued to allow horseback riding on GGNRA trails. The GGNRA should have worked with dog owners, too, since they knew that our concerns would not be addressed in the Dog Management Plan. We knew that the GGNRA had no information on dog walking in Rancho, so we tried to bring three maps showing the dog walking areas to a Dog Management Plan workshop in Pacifica on March 9, 2011, and were barred by NPS enforcement rangers from bringing the materials into the workshop! The maps are attached at the end of this report, for your information.

Another main concern is the paucity of data in the EIS regarding recreation impacts. Recreation impacts should be studied when developing a range of alternatives, and compared to environmental and other impacts. The Dog

Management Plan should be providing for visitor recreational uses such as dog walking, and not attempting to reduce or eliminate dog walking, as this plan makes every attempt to do, particularly in Rancho, where it is proposed to ban dogs totally (GGNRA's Preferred Alternative D). When congress authorized the establishment of the GGNRA, they recognized that much of the area was adjacent to or very near to urban areas, and that much of the area has been historically used for recreation. That is why the Enabling Legislation of the GGNRA clearly included recreational use in this urban national park, as it is not pristine wilderness like Glacier National Park. When the GGNRA tried to change it's status from "National Recreation Area" to "National Park" in 2008, there was a large public outcry from a coalition of the park's recreational users against that proposed bill, and congress, in it's wisdom, dropped discussion and decision on the bill. For a more detailed discussion of this issue, see page 5, below.

The tone of the EIS tends to pit dog walkers versus environmentalists, and that is not necessarily the case. Although a dog walker, I also consider myself an environmentalist. I have been a Sierra Club member for almost 50 years (former trip leader), and a member of Sequoia Audubon Society (former board member) for about 30 years. With proper education, signage and enforcement, there is no reason for dog walking to cause enviromental damage, either to wildlife or plants. Mr. Ken White, president of the Peninsula Humane Society & SPCA, considered the effect of off-leash dogs on Rancho near Montara, and came to these conclusions:

"Our professional wildlife rehabilitation staff completed a review/analysis of the site and the proposal, and we believe that there is no observable reason related to the protection of native wildlife which would juste denying access to off-leash dogs in the area."

"Please reconsider your plan to ban dogs and off-leash dog play from the small areas of Rancho Corral de Tierra which informally allowed this use for years with no negative impact."

The full letter is attached at the end of this report. Montara Dog Group certainly realizes and accepts the need to ban dogs (and people) from certain sensitive habitat areas and will cooperate fully to help protect those areas when they are identified by scientific studies. We also have issues with the "Compliance-Based Management Strategy" discussed on page 1116 of the report. Although we feel that this could work, if properly implemented, there is insufficient detail provided on how compliance is going to be monitored. The GGNRA should reach out to dog user groups for help in implementing a strategy of this type. As responsible dog owners, we do not like to see dogs and/or their owners misbehaving any more than others do. In fact, it upsets us more, because the bad behavior on the part of a few sullies the reputation of us all. We would be glad to accompany GGNRA

monitors to implement a program of this type, but it needs to be fair and well thought out. Otherwise, it will not receive public support, and be thought of as a "poison pill" inserted by GGNRA into the Dog Management Plan as a way to automatically avoid the necessity of public input before placing even further restrictions on dog walking.

The considerations in the Dog Management Plan are not fairly balanced, in that both Marin and San Francisco GGNRA counties have had off-leash dog walking areas as part of the 1979 Pet Policy. San Mateo county needs to be considered for discussion and inclusion for off-leash areas of dog walking as part of the DEIS Dog Management Plan now underway. There is a need for off-leash areas in San Mateo county as well as the other two counties in the GGNRA.

Banning dogs from Rancho will also pose a safety issue. Everyone who currently walks their dogs in the open space will be forced onto Montara's narrow rural streets, with no sidewalks. We can currently access McNee Ranch State Park, where dog walking is allowed, through Rancho. If that is prohibited the only way to get to the park will be to walk about 1/4 mile along busy Highway 1. One of our members was recently walking along the highway with his dog and was struck by a car. Fortunately he survived, but his dog did not.

The concept of applying this Dog Management Plan/EIS to "New Lands," i.e. unknown property to be acquired by the GGNRA sometime in the future, is illogical and probably illegal. Scientific studies have been done on the 21 individual sites in the plan on which to base the GGNRA's preferred alternative for each. No studies have been done for Rancho. All New Lands acquired by the GGNRA should have the benefit of the NEPA Environmental Assessment process, particularly if drastic changes in land use are anticipated, such as banning dogs from areas where off leash dog walking has been the norm for decades, as is the case with Rancho. Until these studies are done, existing uses, including off leash dog walking, should be allowed to continue. New Lands should be treated the same as all other GGNRA lands, and be subject to the same GGNRA management policies. For a more detailed discussion of this topic, see page 11.

The GGNRA plays a critical role in providing a home for many natural and cultural treasures, and, because of its proximity to a dense, urban environment, it provides special recreational opportunities to city dwellers. Recreation is called out in the 1972 GGNRA enabling legislation as one of the four outstanding values to be maintained and protected. In doing so, the enabling legislation recognized that the achievement of these outstanding values is not mutually exclusive. Our organization supports the National Park Service (NPS) in its mission to protect the GGNRA's important natural, cultural, and recreational values but, through this letter, we challenge the

NPS work with its constituents to find solutions that are designed to protect all of the park's values and broaden opportunities to enjoy its diverse resources sustainably.

Our comments are described in two main sections: (1) Recommended Alternative, which describes our thoughts on how the NPS could balance the GGNRA's myriad resources and opportunities; and (2) Quality of Information in the Draft Plan/DEIS, which describes our thoughts on how the information in the Draft Plan/DEIS could be improved in order to support a better outcome for all interests involved. Recommended "Hybrid" Alternative

Instead of the GGNRA's preferred alternative D for New Lands, i.e. "No dog walking allowed unless opened by GGNRA Compendium, " we recommend a modified version of Alternative A, No Action. New Lands, however, do not fall under the 1979 Pet Policy or the GGNRA Compendium, and therefore existing uses, including off-leash dog walking, should continue to be allowed until scientific studies prove that they are harmful to the environment.

Quality of Information in the Draft Plan/DEIS

My organization's major concerns with the quality of information in the Draft Plan/DEIS include:

1. Omission of relevant impacts and impact analyses o Recreation (also see Appendix B) o Other impacts
2. Insufficient information needed to draw logical conclusions and evaluate alternatives: o Unclear enforcement data (also see Appendix C) o Lack of and inconsistent site-specific, scientific data on baseline conditions (also see Appendices D, E, and F) o Reliance on undocumented assumptions o Flawed evaluation of No Action alternative o Resultant flawed alternatives analysis
3. Improper treatment of new lands
4. Lack of specificity in proposed action

These concerns are described in detail below and several are outlined further in the attached appendices. At the end of each section, we have provided recommended changes that we request you make to the EIS and the proposed action in order to move forward with a plan that is protective of all of the GGNRA's myriad resources and values.

1. Omission of Relevant Impacts and Impact Analyses Recreation

Congress' original intent when it established the GGNRA is stated in the bill reports for the 1972 legislation ' that GGNRA, "will ensure its continuity as open space for the use and enjoyment of present and future generations of city-dwellers" [House Report No. 92-1391, Sept. 12, 1972]. [emphasis added]. Similarly, as stated in the first section of Public Law 92-589, Congress established GGNRA to preserve for public use and enjoyment areas of Marin and San Francisco County possessing "outstanding natural, historic, scenic and recreational values" and to "provide for needed recreational open space necessary to urban environment and planning" and to protect the scenic and natural character of the area from incompatible development.

Dog walking was well-known and recognized by Congress as part of this public use and enjoyment. Both the Senate and House reports comment that the proposed area:

"will satisfy the interests of those who choose to fly kites, sunbathe, walk their dogs, or just idly watch the action along the bay." [emphasis added]

The official legislative history notes:

"This legislation will, if enacted, capitalize on the availability of this important, unequalled resource in the San Francisco region by establishing a new national urban recreation area which will concentrate on serving the outdoor recreation needs of the people of the metropolitan region. As an urban recreation area, it must relate to the desires and interests of the people, but it must, at the same time, be managed in a manner which will protect it for future generations." [emphasis added]

These were also the City's understandings in transferring lands to GGNRA. As you may know, GGNRA has a mission statement which states:

"The mission of the Golden Gate National Recreation Area is the preservation, unimpaired, of the natural and cultural resources, and scenic and recreation values, of the park for present and future generations to enjoy." [emphasis added]

The Draft Plan/DEIS not only fails to disclose and evaluate the impacts of the alternatives on recreational resources in the context of an urban environment, it dismisses the quality of the urban environment entirely on page 22 where it states, "the quality of urban areas is not a significant factor in determining a dog management plan." As recognized in its enabling legislation, one of the most important aspects of the GGNRA is the sharp contrast between its undeveloped open spaces and the adjacent developed

urban environment. The GGNRA's open space and recreational opportunities are intended to provide refuge and relief for nearby urban dwellers.

The impacts on the GGNRA's open space and recreational opportunities should have been evaluated fully in the Draft Plan/DEIS, especially since a NEPA analysis is not limited to the natural environment. According to NEPA, An EIS is required to analyze the human environment. The federal NEPA rules define the human environment and its scope in an EIS as follows: "Human environment shall be interpreted comprehensively to include the natural and physical environment and the relationship of people with that environment." When an EIS is prepared and human and natural/physical environmental effects are interrelated, the EIS should discuss all of these effects on the human environment.

*Recommendation. Any significant limitations on recreational uses proposed by NPS needs to be properly examined, as it impairs a fundamental value that must be preserved under GGNRA's charter. The Draft Plan/DEIS should be revised to include a stand-alone analysis of impacts on recreation resources in order to fully consider the potentially significant effects that the proposed action and action alternatives could have on these elements of the human environment. The section should give context to the important role played by the GGNRA in terms of its proximity to a dense, urban environment and the special opportunities it affords to nearby populations. It should describe existing recreational uses of the GGNRA and other parklands in the project vicinity, the impacts of the proposed action on recreation resources and urban quality (including direct, indirect and cumulative impacts), and the mitigation that the NPS will commit to in order to avoid such impacts.

Although the analysis of impacts on recreation resources could potentially be integrated into the existing Visitor Use and Experience section, it is strongly suggested that it be incorporated into the draft EIS in a separate chapter. The rationale for this request is because the topic of "Visitor Use and Experience" is too limiting to encompass the broader range of recreation impacts that could potentially occur with implementation of the proposed action, including degradation of established recreational activities and facilities in GGNRA and nearby lands. A suggested annotated outline of the stand-alone recreation resources section is presented in Appendix B for your consideration.

Other impacts

The Draft Plan/DEIS assumes but does not provide the required rigorous analysis that resource conditions result solely from dog use of the sites, discounting the contribution from other visitors and recreational users. The

Draft Plan/DEIS does not address the contribution of other impactful activities, including special events, to the resource conditions and existing impacts at each of the GGNRA sites. The level of site use from a single special event is likely equivalent to the level of regular use that occurs over weeks, months or longer. These special events include the annual Fleet Week at Crissy Field and the future impact of America's Cup on GGNRA lands.

*Recommendation. To address this deficiency, the GGNRA should study the contribution that all visitors make to existing resource conditions and potential impacts. This information is obtainable and essential to a reasoned choice among alternatives. The preferred alternative should then be re-evaluated and modified to address only the issues that specifically result from dog use at each of the sites. The NPS should then pursue a comprehensive approach to managing all these uses to the benefit of the full ranges of GGNRA resources and values.

2. Insufficient Information Needed to Draw Logical Conclusions and Evaluate Alternatives

In many places, the Draft Plan/DEIS does not provide any data on actual impacts by dogs in areas being proposed for new dog walking restrictions. In places where data are provided, the Draft Plan/ DEIS makes undocumented assumptions that there are unacceptable impacts and that dogs are the culprits. For example, in the Western snowy plover sections of Chapters 3 and 4, the Draft Plan/DEIS explains that people, as well as dogs, who traverse dune areas disturb shorebirds. Monitoring surveys observed 48 off-leash dogs chasing birds over a period of 12 years. However, in this case the birds continue to return to the area each year. Therefore, there might or might not be a problem ' the Draft Plan/DEIS does not provide substantive data to help the reader decide. If there is a problem, the Draft Plan/DEIS doesn't provide logical conclusions as to whether access should be limited for people, for dogs, or both.

The Draft Plan/DEIS is, in some respects, comprised of about 20 plans and EISs, because it examines each GGNRA unit. We can appreciate how difficult this is for GGNRA and the NPS to accomplish. But NEPA guidance and case law have consistently explained that difficulty does not excuse lack of adequate data and study in an EIS. And the bulk or size of an EIS does not equate to its adequacy. In many places, as described in more detail below, the Draft Plan/DEIS lack any description of actual site specific impacts on which decisions on dog-walking restrictions are being proposed. In other places, the Draft Plan/DEIS assumes species are present in areas where there is no record of their presence. In other places, there is inconsistent information about the presence of species.

Unclear enforcement data

Many of the findings in the Draft Plan/DEIS are founded on a reference included in the document as Appendix G, "Law Enforcement Data" (NPS 2008c). This reference document is critically deficient in substantiating statements made in the characterization of existing conditions and in the analysis of the environmental consequences. Per NEPA, "Agencies shall insure the professional integrity, including scientific integrity, of the discussions and analyses in environmental impact statements (CFR 1502.24)." Additional detail on this issue can be found in Appendix C.

*Recommendation. The Draft Plan/DEIS should be revised to provide clear evidence in the record to support all of its findings. The NPS needs to ensure the professional integrity, including scientific integrity, of the analysis and findings contained within its Draft Plan/DEIS. Detailed recommendations on how to revise the enforcement data in the Draft Plan/DEIS, and the ensuing impacts and alternatives analysis, are listed in Appendix B.

Lack of and inconsistent site-specific, scientific data on baseline conditions

The Draft Plan/DEIS does not address site-specific resources and the condition/health of those resources. This lack of information results in a vague baseline against which to assess the magnitude of impacts associated with implementing the proposed action and alternatives. With such a vague baseline, it's also difficult to assess the need to change existing dog management strategies.

Select examples:

- a. The affected environment section mentions California Native Plant Society (CNPS)-listed species as having the potential to occur within the GGNRA but no data are provided as to where/if they are actually present.
- b. While some special-status species descriptions suggest a nexus between dog activity and the species and/or their habitat (tidewater goby, California red-legged frog), other species descriptions do not (San Francisco garter snake, Coho salmon), and there is a consistent lack of detail describing the existing interaction, if any, between the species and dog activity.
- c. There are inconsistencies regarding the presence of species in the text and in Table 8 in the Special-Status Species affected environment, the information in Appendix H, and the impact analyses in Chapter 4. d. In Table 8 on page 246, the GGNRA Location column contains the location for plants that do not exist there according to the text.

e. For a number of the analyses of Alternatives B-E, the Draft Plan/DEIS states that the area of impact is currently undisturbed. This is not the case, as dogs and humans are currently allowed in those areas.

f. Additional examples are provided in Appendix D "Soils and Geology," appendix E, "Water Quality," and Appendix F, "Biology."

*Recommendation. To address this deficiency, the Draft Plan/DEIS should provide site-by-site assessments of the conditions of the GGNRA resources and values at each of the 21 sites. The selected preferred alternative for each site should then be re-assessed and modified to address only those site-specific issues and to employ adaptive management (proposed adaptive management techniques are provided at the end of this letter) to ensure the goal of protecting those resources and values is achieved.

Reliance on undocumented assumptions

The Draft Plan/DEIS assumes, but fails to demonstrate, the "cause and effect" relationships without site-specific supporting information. For instance, the Draft Plan/DEIS assumes but does not demonstrate that where dogs are present within GGNRA sites, there is a disturbance of natural resources. The Draft Plan/DEIS also assumes but does not demonstrate that the disturbance of resources is attributable to dogs (versus other factors). These assumptions result in flawed conclusions that the mere presence of dogs is equivalent to adverse resource impacts. The findings of an EIS must be based on scientific accuracy and clear evidence in the record. This Draft Plan/DEIS is significantly flawed in that it does not rely on adequate evidence for the conclusions it draws, and in that it fails to clarify its methodology for drawing those conclusions.

Select examples:

a. The text from Chapter 3 provides data on the western snowy plover, but beyond providing numbers of observations, the Draft Plan/DEIS does not provide evidence that dogs chasing the birds are likely to impact the survival of the species taking all relevant factors into account (see paragraph 1, page 799).

b. The Draft Plan/DEIS presents no information supporting the finding that dogs are currently impacting shorebirds and marine mammals. Therefore, there is no scientific rationale for prohibiting dogs from beach areas under Alternative D to "protect shorebirds and stranded marine mammals," as stated on page 151.

c. The Soils and Geology section (page 225) includes the following statements: "Dogs and dog walkers that do not stay on designated trails and

venture off trail create social trails that become denuded of vegetation and result in increased soil compaction." and "Soil compaction is common along social trails that have been created by ' and are heavily used by ' bikers, hikers, runners, and dog walkers." The baseline for comparison throughout the Draft Plan/DEIS should not be an environment in which it is assumed that there is no impact unless dogs are present, but one in which the impact of dogs is added to the impact of humans. At about 200 pounds per adult, the force that a human exerts on the soil one foot at a time would have a significantly greater impact on soil compaction in a picnic area than the force exerted by even a large 70-pound dog distributing its weight on four paws. The failure to acknowledge that human use has more impact on soils and geology in this regard, compared to dog use, uncritically loads the analysis in favor of restrictions on dogs. While there may be areas in which impacts from dogs are unacceptable, the same criterion holds for impacts from humans, and in most of these areas, dogs and humans are already excluded.

d. The Soils and Geology section (page 112) on Homestead Valley concludes that, under the No Action Alternative, there would be long-term adverse impacts from "soil compaction, erosion, and nutrient addition..., in areas off the trail since dogs would be under voice control," while under other alternatives it is concluded that the impacts would be negligible because dogs would be under physical restraint. This is an unsubstantiated assumption in support of the underlying bias of the analysis. The analysis does not attempt to connect intensity of use and impact and seems to be based solely on the incorrect assumption that humans and wildlife would have no impact on off-trail areas, and that all impacts can be attributed to dogs.

*Recommendation. To address this deficiency, the NPS should re-evaluate untested, assumed linkages and re-define the existing and potential impacts that specifically result from dog use at each of the GGNRA sites. The preferred alternative for each site should then be re-assessed and modified to address only those site-specific impacts and issues.

Flawed evaluation of No Action alternative

The impacts of the No Action alternative are substantially overstated because the Draft Plan/DEIS determines individual areas of compliance with existing dog management strategies without sufficient supporting data and assumes that noncompliance results in adverse impacts. This unsupported logic both overstates the degree of additional management required to address the resource issues, but also misrepresents the relative impacts of the four action alternatives; for example, the public is assumed to comply with management strategies under an action alternative, whereas the public is found to be noncompliant with those same management strategies under

the No Action alternative.

Select examples:

a. For many sites, including Stinson Beach, Crissy Field, Baker Beach and Bluffs, Mori Point, Oakwood Valley, and Muir Beach, analysis of Alternative A acknowledges noncompliance, while the other alternatives assume full compliance with dog restrictions. In some cases, the management strategy is the same, with the only difference between Alternative A and the preferred alternative being the assumption of compliance.

b. On page 109 (Table 5, Stinson Beach, Soils and Geology) under Alternative A, the second bullet identifies long-term, minor, adverse impacts in areas outside parking lots and picnic areas. These impacts are not repeated under the other alternatives despite the fact that, except for Alternative D, the management strategies under all of the alternatives are identical for Stinson Beach. Each of the statements in the first bullet, except for Alternative A, No Action, includes the clause "assuming compliance." At least for the soils and geology evaluation, the analysis seems to take it for granted that the No Action Alternative is inferior. Both of these are examples of biasing the analysis against No Action. c. On pages 1147-1158, mission blue butterfly, Fort Baker and Milagra Ridge ' as with many examples in the Wildlife section, here Alternative A assumes noncompliance with leash laws (minor, adverse impacts) and the preferred alternative assumes compliance (negligible to minor, adverse impacts, with habitat restoration programs).

d. On pages 1219-1240, San Francisco garter snake, Mori Point, Milagra Ridge, Cattle Hill, Pedro Point ' as with many examples in the Wildlife section, here Alternative A assumes noncompliance with leash laws (minor, adverse impacts) while the preferred alternative assumes compliance (negligible). The text states (page 1230) that there is no documentation. that the current level of compliance with on-leash laws (No Action Alternative) is impacting this species.

e. In the Water Quality section, the impact analysis for Alternatives B through E assumes compliance with the management strategies. However, the impact analysis for Alternative A does not make this same assumption.

*Recommendation. To address this deficiency, the NPS should re-evaluate unsupported assumptions and the analysis of the No Action alternative to ensure the methodology used for it is consistent with the methodology used for the action alternatives. The No Action alternative is a continuation of the current GGNRA management plan and policies ' not a continuation of existing conditions. The current plan and supporting documents include

policies for good public information and education on GGNRA resources and partnerships with the community. The No Action alternative can and should include improved education and compliance measures (including accurate signage about voice control areas) to implement these current plan policies (which are also policies in the proposed GGNRA updated general management plan), including dog owner training, to raise the level of compliance.

Resultant flawed alternatives analysis

As described above in this section, the Draft Plan/DEIS assumes but does not provide the required rigorous analysis to enable the reader to draw logical conclusions about impacts and alternatives. The Draft Plan/DEIS does not provide adequate information on which to "study, develop, and describe appropriate alternatives to recommended courses of action in any proposal which involves unresolved conflicts concerning alternative uses of resources" (as required by NEPA Section 102(2)(E); 40 CFR "1501.2 and 1502.1 and corresponding DOI and NPS implementing guidance), or to allow meaningful evaluation on the alternatives including reasonable mitigation measures, as required by NEPA (e.g., 40 CFR "1502.14(b) and 1508.25(b) and corresponding DOI and NPS implementing guidance). This issue in the Draft Plan/DEIS results in a bias in the evaluation of alternatives, contrary to NEPA's requirement that "Environmental Impact Statements shall serve as the means of assessing the environmental impact of proposed agency actions, rather than justifying decisions already made" (40 CFR ' 1502.2(g)).

Select examples:

a. The impacts of the No Action Alternative are substantially overstated because the Draft Plan/ DEIS assumes that noncompliance results in adverse impacts. This both overstates the degree of management required to address the resource issues, but also misrepresents the relative impacts of the four action alternatives; for example, the public is assumed to comply with management strategies under an action alternative, whereas the public is found to be noncompliant with those same management strategies under the No Action Alternative.

b. On page 1264, bank swallow ' as with the western snowy plover, current impacts are considered minor to moderate based on occasional to frequent perceptible disturbances to the species from dogs; however, the description of Alternative A mentions only that dogs have been seen in the bluff area. There is no apparent nexus between dog activity and actual impact to bank swallows ' is the presence of a dog in the bluff area assumed to disturb the colony? Have the birds been observed flushing from nests, or have crushed burrows been found? The language here suggests these impacts are possible,

but that they haven't actually occurred.

c. In Chapter 2, starting on page 99, the discussion of the environmentally preferable alternative should be revised to reflect the value of recreational resources. Because the draft EIS does not recognize recreational resources as an environmental resource, the analysis of the environmentally preferable alternative is flawed. It fails to consider the range of resources afforded by the GGNRA that could be affected by the action alternatives. Recreation is called out in the GGNRA enabling legislation as one of the four outstanding values to be maintained and protected. In doing so, the enabling legislation recognizes that the achievement of these outstanding values is not mutually exclusive.

*Recommendation, To address this deficiency, the NPS should re-evaluate unsupported assumptions and the analysis of the alternatives to ensure the methodology used for it is consistent and based on site specific scientific data. And, since protection of the environment includes protection of established recreational opportunities and facilities on GGNRA lands and nearby parklands, the draft EIS should consider such resources as part of its selection of the environmentally preferable alternative. Under NEPA, the environmentally preferable alternative is one that would employ environmental design and adaptive management techniques to preserve all of the outstanding values of the GGNRA.

3. Improper Treatment of New Lands

The proposed action to close new lands to dog walking access conflicts with the GGNRA Enabling Legislation (PC 92-589) and with National Park Service Management Policies (2006) for determining uses and land protection plans. GGNRA is required to consider new lands in the same way that it considers uses and land protection measures on lands within GGNRA.

The unprecedented "Closed until open" proposal would violate GGNRA's statutory obligation to preserve and maintain recreational uses, violate sound land planning with the community, and violate NEPA by prejudging alternatives before site-specific public and environmental review. There is no basis for treating new lands differently than existing lands under NPS regulations and policies. Furthermore, there is no such policy in the existing GGNRA General Management Plan and Compendium. The Draft Plan/DEIS notes (p. 36), the enabling legislation states GGNRA's purpose as follows (emphasis added):

"In order to preserve for public use and enjoyment certain areas of Marin and San Francisco counties, California, possessing outstanding natural, historic, scenic, and recreational values and in order to provide for the maintenance of needed recreational open space necessary to urban

environment and planning, the Golden Gate National Recreation Area is hereby established."

The phrases "preserve for public use and enjoyment" and "maintenance of needed recreational open space" set out a high standard for management actions that would limit or restrict this fundamental value and resource of the GGNRA. The words "preserve" and "maintain" mean the continuation of uses, recognizing that uses may be regulated to protect the other fundamental values of the GGNRA.

NPS management policies expressly reflect this emphasis on continuing uses, measured by the yardstick of the unit's enabling legislation. Section 1.4.3.1 states:

In determining whether or how to allow the use, park managers must consider the congressional or presidential interest, as expressed in the enabling legislation or proclamation, that the use or uses continue.

When new lands become part of GGNRA, the recreational uses existing at the time of acquisition should be allowed to continue unless GGNRA determines, through the public land planning and NEPA process, that unacceptable impairment would occur (as explained in Chapter 1 and Appendix C of the Draft Plan/DEIS).

Section 3.3 of the NPS management policies make clear that protective measures are to be integrated in to the planning process -- "Planning for the protection of park lands will be integrated into the planning process for park management" -- not predetermined in advance of site specific the public planning and environmental review process.

In preparing land protection plans, Section 3.3 requires: "A thorough review of a park's authorizing statutes and complete legislative history will be conducted as part of the land protection planning process."

Section 3.3 states that land protection plans should determine what "means of protection are available to achieve the purposes for which the unit was created." As noted above, recreational use is one of the basic purposes for which GGNRA was created. Dog walking was contemplated as a traditional use in GGNRA and was plainly discussed in both the Senate and House bill reports, basic legislative history documents.

In the Introduction to land protection, the NPS management policies state (chapter 3, emphasis added):

The National Park Service will use all available authorities to protect lands and resources within units of the national park system, and the Park Service

will seek to acquire nonfederal lands and interests in land that have been identified for acquisition as promptly as possible. For lands not in federal ownership, both those that have been identified for acquisition and other nonfederally owned lands within a park unit's authorized boundaries, the Service will cooperate with federal agencies; tribal, state, and local governments; nonprofit organizations; and property owners to provide appropriate protection measures.

To fulfill this obligation, GGNRA needs to cooperate with these entities, including nonprofit community groups and property owners adjoining GGNRA, to protect recreational resources. As Management Policy 1.4.3.1 directs:

Where there is strong public interest in a particular use, opportunities for civic engagement and cooperative conservation should be factored into the decision-making process.

GGNRA is aware of the strong public interest in dog walking access, and of the interest of San Francisco and Marin Counties and responsible community and nonprofit organizations in cooperative conservation. It is entirely inappropriate and contrary to these management policies to close new lands to dog walking access without first providing opportunities for this civic engagement and for cooperative conservation efforts.

In conclusion, there is no basis in existing law or adopted policy for the NPS and the GGNRA dog management plan to summarily reject and fail to preserve and maintain an important recreational use on new lands that is allowed on existing lands, particularly in advance of sound environmental review and land use planning. This Plan and Draft Plan/DEIS do not provide this review and planning, because by definition, new lands have not yet been fully studied, acquired or subject to the level of site specific review required of this EIS.

For reasons noted above, it is inaccurate wrong to treat dog walking as the establishment of a "new use" in GGNRA, which would be the result of the proposed policy. We understand GGNRA's desire to create a presumption against continuing this use, however, there is no factual, legal, or management policy basis for this approach.

*Recommendation,. The preferred alternative should be revised to make clear that new lands will be treated the same as any other GGNRA lands and follow the same NPS management policies. Recreational uses should be allowed to continue except as may be regulated through site-specific public land planning processes and associated environmental review.

4. Lack of Specificity in Proposed Action

The description of Elements Common to Action Alternatives (pages 63-67 in the Draft Plan/DEIS) describes the proposed 75% compliance standard and secondary management response, but does not provide details of the monitoring plan or other elements of an adaptive management plan on which the management response would be based. The draft Plan/Draft Plan/DEIS does not propose an adaptive management component that meets applicable guidance and that can be meaningfully reviewed, as called for in NEPA procedures and current Council for Environmental Quality (CEQ) mitigation and monitoring guidance (January 2011), including but not limited to pages 9-11 and pages 13 and 19 (on the role of the public in the design and review of results).

Select examples:

- a. The Draft Plan/Draft Plan/DEIS states (page 1725) that "the compliance-based management strategy is an important and effective tool to manage uncertainty when proposing new action" and "has been created" to assure successful implementation and long-term sustainability. However, the detailed description of this critical element has not been conveyed and is not included in the document (as noted on page 64).
- b. The Draft Plan/DEIS doesn't establish how or why a special-status species that has been sharing habitat with dogs for decades will experience an actual, likely benefit from stricter dog management, given other factors affecting the species.
- c. Where management actions that limit recreational access are proposed or under serious consideration, the Draft Plan/DEIS should also disclose whether access will be limited for people as well as dogs. The evaluation of significance under NEPA requires consideration of context and intensity. Meaningful public comment on proposed management measures is not possible without full disclosure of the impacts to all users and potential management measures.

*Recommendation, To address this deficiency, the NPS should fully disclose the details of the proposed action. It should describe how it will monitor compliance and resources and values at specific sites because the management measures are specific to GGNRA sites. In addition to assessing the condition of these resources and values, monitoring should also focus on determining the contribution to those conditions from other users and factors, including other human users and natural processes. This should be implemented as part of each alternative. Only through this objective monitoring approach can the GGNRA demonstrate that it has addressed the purpose and need on which the Dog Management Plan is based. Existing or

proposed management strategies should be modified based on the objective monitoring results. Although it could be appropriate to use properly measured rates of compliance as an indicator, the draft Plan and Draft Plan/DEIS does not provide adequate information about the compliance-based program. To ensure objectivity, this monitoring should be conducted by an independent qualified third party with the results discussed with interested groups and made publicly available as part of a defined and technically-sound adaptive management program. Additional recommendations on management actions that should be considered by the NPS are provided below.

Concluding Comment

In conclusion, we find this draft Dog Management Plan/EIS extremely biased against dogs, with insufficient documentation to support that bias. It appears that the GGNRA's goal is to restrict dogs to the maximum extent possible, in spite of congress' mandate in the authorizing legislation to preserve and encourage recreation, including dog walking. We hope that the final plan will take our comments to heart, and provide more areas for dog walking, both on leash and off leash, within the GGNRA.

Sincerely,

Bill Bechtell President, Montara Dog Group

Hybrid Alternative

Instead of the GGNRA's preferred alternative D for New Lands, i.e. "No dog walking allowed unless opened by GGNRA Compendium," we recommend a modified version of Alternative A, No Action. New Lands, however, do not fall under the 1979 Pet Policy or the GGNRA Compendium, and therefore existing uses, including off-leash dog walking,

should continue to be allowed until scientific studies prove that they are harmful to the environment.

Appendix B

Recreation Resources ' Suggested Annotated Outline

Affected Environment

Resource Definition. Urban recreation resources include public and private lands and facilities accessible to the general public in an urban environment. The recreational resources considered in this Draft Plan/ DEIS should include GGNRA lands and facilities. As a part of the region of influence, the Draft Plan/ DEIS should also describe and consider local recreation resources, which are generally considered within about 10-15 miles, or 30 minutes travel time, from the GGNRA lands that are the subject of the proposed action.

Project Setting. This section would describe the existing recreational lands and opportunities available to the diverse group of visitors of the GGNRA. Examples of such opportunities include dog walking, hiking, running, biking, picnicking, surfing, windsurfing, kite boarding, kite flying, etc. It would also describe the facilities available to park users, including restrooms, visitor centers, water fountains (for humans and dogs), cafes, and trails, including ADA-accessible trails. This section would also describe the local recreational resources within the region of influence, including city, county, and state parks, open space, and other recreation resources. The EIS should characterize the recreation opportunities available within the region of influence, and in particular the dog recreational opportunities available. To the extent feasible, the section would quantify the current acreage of land dedicated to the various recreational opportunities, both with the GGNRA and within the region of influence. The section would also include a summary of the history of the original recreational purpose and mission of the GGNRA and related acquired lands. All of this information is necessary to establish a reasonable baseline to enable a comprehensive analysis of changes from baseline conditions.

Regulatory Setting. This section would describe relevant policies and regulations related to recreation, and specifically relevant to dog recreation. The EIS should describe for both GGNRA and local parklands within the region of influence. Some of this information needed in this section is provided elsewhere in the document, but should be provided here. Any city, county, or state recreational plans or policies should be described in this section.

Environmental Consequences

Significance Criteria. Impacts to recreation resources could be considered significant if they result in a decline in the quality of existing recreational opportunities or in the quantity of available recreational lands/facilities.

Alternatives Analysis. This section should describe and evaluate the direct impacts of each alternative on existing recreational uses of the GGNRA and the surrounding urban environment for all types of park users, including impacts that substantially impair or diminish the features, attributes, or activities currently available to local residents. The impact analysis should consider the context and intensity of the proposed action, giving due consideration to the unique characteristics of the GGNRA, including its proximity to a dense, urban environment. The analysis should consider the ways that city and suburban dwellers use and need recreation areas. For example, many people, including seniors and children, rely on the GGNRA for access to unique recreational areas to walk and exercise themselves and their dogs as well participate in special events. Many urban residents are only able to have a dog and provide it an adequate quality of life because of the nearby recreation resources that the GGNRA provides. This connection between the GGNRA and the human environment needs to be disclosed. The analysis should consider the potentially adverse direct impacts of proposed action related to the loss of established recreational opportunities and how that loss would affect city dwellers and other park users who traditionally exercise themselves and their dogs in the GGNRA. Such impacts could include decreased health of these people and their dogs.

The section should also describe and evaluate the indirect impacts of the alternatives on areas in close proximity to the GGNRA, including indirect impacts that substantially impair or diminish the features, attributes, or activities currently available to nearby parkland visitors. Although the Visitor Use and Experience analysis provides some information on indirect impacts on nearby parkland, it fails to provide a detailed evaluation of the potential for an increase in visitor use of nearby recreational facilities. Such an increase in visitor use could lead to a decrease in visitor enjoyment of those areas, an increase in enforcement issues, and/or other related environmental effects. In addition, the Visitor Use and Experience analysis related to indirect effects on nearby parklands fails to provide a reasoned explanation for its conclusions. For example, on page 1412, the draft EIS states that the impacts on nearby parks under Alternative D, which prohibits dogs in the parking and picnic areas at Stinson Beach are negligible and "minor." Given that dogs would no longer be allowed in these areas under this alternative, it is unclear how the EIS authors determined this impact to be negligible and "minor" without a rational explanation for this conclusion. Not allowing dogs in areas where dogs were they were allowed previously would indeed affect the use of adjacent recreation areas and the EIS needs to

disclose this impact. Thus, the recreation resources section of the draft EIS should consider impacts related to the loss of recreational opportunities and access to nearby recreational facilities with detailed explanations for all conclusions.

This section should also evaluate the cumulative loss of established recreational opportunities and access to recreational facilities, especially within the context of a dense urban environment. The analysis should consider the contribution of the alternatives to this impact, both directly and indirectly. The list of cumulative projects should include a comprehensive list of past, present, and future actions that could affect recreational opportunities, including on- and off-leash dog walking, in the vicinity of the GGNRA. For example, this list should include the proposed San Francisco Natural Areas Management Plan, which includes the closure of up to 20 acres of land within San Francisco to dog walking. Coupled with the proposed action, these actions constitute a major, adverse cumulative impact on dog walking opportunities in a dense, urban area, requiring mitigation.

For significant adverse effects, the NPS should commit to mitigation of major adverse impacts. For example, the NPS should consider alternatives that employ environmental design principles to manage access to and use of recreational trails in a manner that avoids conflicts among competing uses. Environmental design is one key alternative way to meet the purpose and need of the GGNRA as it would allow the NPS to recognize that the GGNRA is an urban recreation area that serves a different needs and purposes than other NPS lands.

Appendix C

Additional Comments Related to Appendix G, "Law Enforcement Data"

Many of the findings in the Draft Plan/DEIS are founded on a reference included in the document as Appendix G, "Law Enforcement Data" (NPS 2008c). This reference document is critically deficient in substantiating statements made in the characterization of existing conditions and in the analysis of the environmental consequences. Per NEPA, "Agencies shall insure the professional integrity, including scientific integrity, of the discussions and analyses in environmental impact statements (CFR 1502.24)." The findings of an EIS must be based on scientific accuracy and clear evidence in the record. This Draft Plan/DEIS is significantly flawed in that it does not rely on adequate evidence for the conclusions it draws, and in that it fails to clarify its methodology for drawing those conclusions.

The Appendix G reference document consists of a two-page summary of the numbers of incidents for two years (2007 and 2008), organized by incident type and location. The document does not provide rationale for why it chose

those two years as being representative of existing conditions. The reference document is lacking in terms of only providing a very limited number of years of data. Moreover, it is inadequate in that it only contains numbers. Thus, Appendix G fails to provide any details or context for the incidents; nor does it contain any source documentation or records of communication. For example, the table shows how many "leash-law" violations occurred in a given area of the park per year, but does not provide the context of specifically where the incidents occurred, or provide context in terms of how many visitors visit the park, or otherwise provide a method to assess the significance of the number of incidents. In the instance of "bite/attack" or "disturbing wildlife" incidents, no details regarding the nature of the incident, its severity, or where it occurred are provided.

Any material incorporated by reference into an EIS should not only be cited but also summarized. The Draft Plan/DEIS fails to summarize the data provided in Appendix G, nor does it attempt to clarify the methodology for how it drew its conclusions based on the data presented.

Appendix G also noted that the violations recorded for the incidents of concern (i.e. bite/attack, closed area, disturbing wildlife, and hazardous condition/pet rescue violation types) appear very low, especially in consideration of the assumed large number (estimates of this should be provided in the Draft Plan/ DEIS) of dog-walking visitors that visit the park each year. Given the relatively low numbers of serious violations recorded, it is difficult to understand how the NPS can support its findings that major dog conflicts exist in the GGNRA.

NEPA further requires that, "When an agency is evaluating reasonably foreseeable significant adverse effects on the human environment in an environmental impact statement and there is incomplete or unavailable information, the agency shall always make clear that such information is lacking (CFR 1502.22)." When information is incomplete or unavailable, the agency must obtain the information, unless the cost to obtain the information is unreasonable. In that case, the EIS must state that the information is incomplete or unavailable and identify the relevance of the unavailable information to the evaluation. The Draft Plan/DEIS does not acknowledge the incompleteness of the data provided, or in any way factor in the limits of the available data to the findings made.

Appendix G is used as the basis for numerous claims throughout the document, as well as to support findings of adverse impacts. Appendix G is referenced 48 times in the document, in Chapters 1, 3, and 4. Resources topics relying on Appendix G for findings of issues with existing conditions and/or adverse impacts in the environmental consequences section include Visitor Use & Experience, Health & Safety, Park Operations, Special Status Species, Wildlife, and Vegetation. In the following paragraphs are some

examples of how this source document is misused, and as a result, the document's findings are flawed.

In Chapter 1, background information and a preliminary discussion of in the current dog issues is provided. In this section, the document indirectly references Appendix G (the citations are not provided, but the statements are in line with those made in later sections of the document relying on Appendix G). For example, on page 5 the document states, "At the same time, the number of conflicts between park users with and without dogs began to rise, as did the fear of dogs and dog bites or attacks." No reference for this statement is provided; therefore, it can only be inferred that it is based on the only referenced material that characterizes dog incidents ' Appendix G. The statement erroneously implies that there was a rise in the number of conflicts and attacks; however such a conclusion could not possibly be drawn from the two years of data presented in Appendix G. Moreover, Appendix G indicates that a majority of "incidents" are leash law violations, and comparatively, there were relatively small numbers of bites/attacks recorded. Lastly, no source documentation in the Draft Plan/DEIS substantiates that the "fear of dogs and dog bites or attacks" is on the rise.

On pages 19-20, in the Employee, Visitor, and Dog Health and Safety section, the document recounts data provided in Appendix G (though does not cite it), and characterizes dogs as a major health and safety issue in the GGNRA. For example, "At GGNRA, reported incidents of encounters with unruly/aggressive dogs include instances of visitors being knocked down, intimidated, and bitten by dogs. In 2007/2008 a total of 52 violations were given for dog bites or attacks at the GGNRA park sites as recorded by GGNRA LE and U.S. Park Police." The Draft Plan/DEIS characterizes dog attacks as a significant issue. However, the number of violations provided is aggregate over a two-year period, and cumulative over all the areas of the GGNRA. It would be much more appropriate to assess the issue on a site-by-site basis. Further, as noted before, no methodology on which to base the significance of these numbers is provided, or context (i.e. number of incidents relative to the number of visitors per year).

On pages 229-230, the document states, "In addition to vegetation and wildlife management activities, the park collects data regarding the frequency of disturbance to wildlife and habitats at GGNRA sites. Wildlife species and their habitats are currently being affected by dogs at this park, which has been documented by reports taken and warnings and citations issued (all referenced to as incidents) related to dogs in closed areas and disturbing wildlife at GGNRA (appendix G)." The conclusion that wildlife and habitats are "currently being affected by dogs at this park" cannot soundly be based on the numbers provided in Appendix G. Appendix G does not provide evidence of what type of disturbances have occurred, or the level of significance that the documented disturbance actually has. Again, a

methodology for how the document drew its conclusions based on the data presented must be presented.

On page 242, the document states, "Off-leash dogs have frequently been observed in Redwood Creek and Redwood Lagoon despite these closures (NPS 2008c (appendix G))." This statement (and other similar statements made in the Draft Plan/DEIS) is based on subjective opinions and untested assumptions. The statement that off-leash dogs have frequently been observed in these areas is unsupported by the evidence in Appendix G. Further, the word "frequently" is broad and vague and not meaningful in this context given that the data in Appendix G is only based on a years' worth of observation in 2007 and unsupported by records of communication. There is no methodology provided on which to base the significance of the data presented.

On page 253, the document finds that, "Both on- and off-leash dogs are routinely brought into the WPA by park visitors..." This statement is not referenced, but later in the paragraph the document does cite the warnings and citations included in Appendix G. Again "routinely" is a subjective qualification, and no methodology for determining the level of significance of the data provided is clarified.

Similarly, on page 254, the Draft Plan/DEIS states, "However, despite education and enforcement efforts, current compliance with the 2008 seasonal protection rule remains low, as described in the "Vegetation and Wildlife" section and the "Visitor Use and Experience" section under "Visitor Use by Dog Owners" (NPS 2008c (appendix G)). The Draft Plan/DEIS fails to provide the reader with a means of distinguishing between scientific evidence and subjective opinion. Contrary to the cited statement, no violations of the Ocean Beach SPPA are listed in Appendix G for 2007 and only 2 violations were cited in 2008. For Crissy Field, 17 violations were cited in 2007 and no violations in 2008. The NPS provides no basis for determining that this constitutes "low" compliance. The Draft Plan/DEIS must provide the reader with a methodology for determining the significance of the data.

On page 250, the Draft Plan/DEIS states, "However, these closures are not always followed; a citation was issued for a dog in the creek in 2006 (NPS 2008c (appendix G))." This statement is inaccurate/ unsubstantiated since the data in Appendix G is from 2007.

Correspondence: Comments on GGNRA Draft Dog Management Plan DEIS

To: Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022

From: Harvey Allan Ridley & Helen McKenna Ridley San Francisco, CA 94117

Dear Superintendent Dean,

We write in support of adopting a Dog Management Plan for the GGNRA.

Our interests in the GGNRA are as San Francisco residents, a frequent park visitors and a volunteers participating in wildlife monitoring and stewardship activities. We enjoy the park for the unique opportunities to experience the natural and cultural resources and I appreciate the values of our National Park System.

We concur with the assessment that the natural and cultural resources and park visitor experiences have been, and continue to be, negatively impacted by the presence of substantial quantities of domestic dogs, both on-leash and off-leash, within the GGNRA. On many occasions my own park experiences have been negatively affected by the presence of dogs. We have had personal conflicts with dogs and their angry/defensive owners/guardians as well as being witness to conflicts between dogs and wildlife.

While we am supportive of many aspects of the Preferred Alternative, We have the following comments to offer:

General Comments

Commercial dog walking should not be allowed. Commercial dog walking does not relate to the purpose and mission of the National Parks. Commercial dog walking provides no service or benefit to park users, has negative impacts on park resources and park visitors, and serves only for the capital gain of private enterprises at the expense of the American public. Commercial dog walking will require additional annual expenditures for administering and overseeing a permitting process, additional law enforcement, additional resource maintenance and additional public relations.

The DEIS estimates that over 1000 dogs will be commercially walked within the GGNRA daily (p. 63 p. 276). Commercial dog walkers, with up to six dogs, will negatively impact the experience of park visitors on trails and in other areas of the park. If permitted, commercial dog walking activity will increase within the GGNRA and will displace park visitors, of all

legitimate user groups, from areas of the park. Commercial dog walkers will dominate the ROLAs, displacing other park visitors. Commercial dog walking vehicles will occupy parking spaces resulting in fewer spaces available for park visitors. If allowed, commercial dog walking operations will have a dominant presence in some areas of the park thus affecting the overall character and ambiance of those areas.

Currently, commercial dog walking is not permitted within the GGNRA or any other National Park unit and there is no justifiable reason to do so. The NPS is well within the scope of its management directives to not allow commercial dog walking and I support this position.

Park visitors should be limited to one dog per visitor. On trails, visitors with more than one dog have a wider space requirement and have the potential to impact other park visitors by impeding their progress along the trail. In ROLAs, it is not practical to allow voice control of more than one dog per person. With few exceptions, dog handlers are not capable of managing more than one off-leash dog at a time.

The proposed compliance percentage of 75% is too low. Given that many hundreds of dogs are walked within the GGNRA daily, a 25% non-compliance tolerance would create a situation where park resources are significantly negatively impacted. The expectation should be that non-compliance is a rare occurrence and the compliance strategy should reflect that in its standard. The standard of compliance should be the same as for any other park rule or law. An acceptable rate of compliance is somewhere near 100%.

A simple and effective reporting system should be established. The dog management plan should include a means by which park visitors can easily and effectively report non-compliant behavior. Park visitors are sometimes reluctant to report observed violations due to the time involved in making the report. A public reporting system should be incorporated into the plan that will be user friendly and workable. Such a system should require only a few moments of time and be an effective documentation of the violation.

The plan does not provide an adequate amount of hiking trails and picnic areas where visitors can enjoy a dog-free, National Park quality experience. Within San Francisco, the plan provides no significant area where park visitors can spend the day hiking and/or picnicking in a dog free environment. A solution to this problem would be to designate all of the coastal bluff areas, from the Golden Gate Bridge to and including Baker Beach, as a dog-free zone.

Sites Specific Comments

Ft. Mason ' We support the Preferred Alternative with the following changes: no commercial dog walking, one dog per visitor, compliance rate of 95% or greater, and establishment of a simple and effective reporting system.

Crissy Field WPA ' The DEIS indicates that the east boundary fence will be relocated 200 feet eastward at a position 900 feet from the NOAA pier (p. 60). The language of the plan should allow the National Park Service flexibility in determining the exact location of the fence and consideration should be given to the visual penetration effect as well as the geographical conditions of the immediate area.

Under the preferred alternative, off-leash dog activity directly adjacent to the east boundary fence will pose a visual threat that will penetrate into the Wildlife Protection Area, effectively rendering a portion of the eastern WPA as non-viable habitat during daytime use hours. Given this concern, the fence should be placed a reasonable distance eastward, beyond the actual 900 foot border line, to allow for an adequate buffer zone.

Additionally, the geography of the area if fence placement is somewhat complicated by non-uniform conditions which include a variety-of substrates, varying elevations, several lobes of fenced dune habitat areas, and a variety of pedestrian pathways. Consideration should be given to all of these conditions and fence placement should be such that will accommodate ease of pedestrian traffic flow while maintaining adequate protection of the WPA.

When installed, the fence should extend to the water at extreme low tide.

Crissy Central Beach ' The Central Beach ROLA should be fenced and gated. Fences at the west and east ends should extend to the water at extreme low tide. Adequate buffer zones (-300ft) should be included beyond the west and east boundary fences to protect the WPA and the lagoon outlet from the influences of excessive dog play activity. Access points from the promenade should be gated. Signs should be posted clearly identifying the area as an off-leash dog play area and stating the voice and sight control rules.

Crissy East Beach ' Fencing should be installed to protect the lagoon outlet zone. Outlet areas from bodies of water into bays or oceans are of high habitat value. The outlet zone should be included as part of the protected lagoon area and similarly fenced.

Crissy East of the Lagoon ' The Freshwater Swale should be designated on the area maps as a no dog zone.

Crissy Promenade ' I support the Preferred Alternative with the following changes: no commercial dog walking, one dog per visitor, compliance rate of 95% or greater, and establishment of a simple and effective reporting system.

Crissy Airfield ' The foot paths that cross the airfield are multi-use trails and should be designated as on-leash areas. Allowing off-leash dogs on the airfield trails will lead to user conflicts. The airfield ROLA should have some type of physical barrier along the boundaries. A physical barrier will clearly define the ROLA area. Clearly defined boundaries will maximize compliance and minimize conflict. Consider a movable barrier that can be set up and taken down as needed. Signs should be posted clearly identifying the area as an off-leash dog play area and stating the voice and sight control rules. Ft. Point 'We support the Preferred Alternative with the following changes: no commercial dog walking, one dog per visitor, compliance rate of 95% or greater, and establishment of a simple and effective reporting system.

Baker Beach 'The Preferred Alternative for Baker Beach is problematic for several reasons. Splitting the beach into leash-only and no-dog areas will lead to confusion, non-compliance, visitor conflict and continued management problems. Furthermore, allowing dogs near the creek outlet, an area often used by shorebirds, will increase the potential for wildlife conflicts. As a means of eliminating these problems and of creating more opportunities for visitors to enjoy dog-free National Park experiences, I suggest designating the entire Baker Beach area as a dog-free zone,

Lands End ' We support the Preferred Alternative with the following changes: no commercial dog walking, one dog per visitor, compliance rate of 95% or greater, and establishment of a simple and effective reporting system.

Sutro Heights Park ' We support the Preferred Alternative with the following changes: no commercial dog walking, one dog per visitor, compliance rate of 95% or greater, and establishment of a simple and effective reporting system.

Ocean Beach 'We support the Preferred Alternative for Ocean Beach. To improve upon the Preferred Alternative, I suggest using symbolic fencing and adequate signage to delineate the south border of the ROLA. A simple post and cable fence could be placed along the border from the sea wall to the plover sculpture. A well defined border will help to reduce compliance problems and visitor conflict. Additionally, I suggest changing the name "Snowy Plover Protection Area" to "Wildlife Protection Area". A designation of Wildlife Protection Area would be inclusive of all wildlife

species that use the beach habitat area.

Ft. Funston ' We support the Preferred Alternative for Ft. Funston. To improve upon the Preferred Alternative, I suggest installing a fence, with access gates and adequate signage, along the border of the ROLA north of the main lot. A borderline fence will clearly delineate the boundary of the ROLA and will minimize compliance problems and visitor conflict. Signs should be posted clearly identifying the area as an off-leash dog play area and stating the voice and sight control rules.

Additionally, We suggest aggressively restoring the coastal scrub habitat throughout Ft. Funston. Plant and animal species, as well as park visitors, have been displaced from Ft. Funston over time as dog play activities have increased. A proactive effort must be made to bring back the visitors who are interested in proper stewardship of this area of the park.

Yours truly,

Harvey Allan Ridley & Helen McKenna Ridley

Frank Dean, Superintendent Golden Gate National Recreation Area
Building 201, Fort Mason San Francisco, CA 94123-0022

Dear Frank Dean,

How do I explain the pure joy of watching your dog run on the sand and in and out of the water on the beach? For so many of us our relationship with our dog is the strongest and often the first bond with the animal world. It is often from this relationship that we learn more of the non,verbal animal realm and deepen our respect for it.

When we consider the question of dogs on the beach running free, it is not an either or situation of the dogs or the environment. We are part of the environment and our dogs are also. All should be able to exist with care and balance. We are not on the outside looking at the environment behind a barrier. "We are all part of the environment. We have to learn how to take care of each other in order to learn how to take care of all that surrounds us."
(John Francis)

My dog is "my other" and caring for her is letting her run and play, in the sand, in the water, with other dogs. Again, all should be able to exist with care and balance. just as I treasure the plovers that nest in specific areas and don't want to lose this species, in the same way, I don't want to be in a world where there is only the artificial situation of dogs running the short length of a leash, never really playing with another dog but instead, getting tangled in twisted leashes between two dogs, (and often dogs on leashes because of fear are more aggressive) or eventually seeing only tiny dogs being carried or in protected strollers. There are fewer and fewer places where dogs can run free.

Dogs are one of the only species that help care for us. As service dogs for the blind, the deaf, the paralyzed, dogs take care of us. As search and rescue dogs, they take care of us. In the military, dogs help protect us, (a dog was part of the seal team in the Osama Bin Laden raid). As therapy dogs for sick children or the very old in convalescent homes, they take care of us. Dogs take care of us as much as we take care of them. For this reason alone, we should honor them and let dogs have places to play as dogs, running free as well as working, often putting their lives in danger for their humans.

"The 'environmental crisis' is an outward manifestation of a crisis of mind and spirit. There could be no greater misconception of its meaning than to believe it to be concerned only with endangered wildlife, human-made ugliness, and pollution. These are part of it, but more importantly, the crisis is concerned with the kind of creatures we are and what we must become if we are to survive." (Lynton K. Caldwell)

I think the more we truly understand we are part of the environment and our dogs are also, the more we will tread gently, being responsible with and to our companion dogs, as well as to all the wildlife that we thus understand we are connected to. "What is man without the beasts? If all the beasts were gone, men would die from great loneliness of spirit, for whatever happens to the beasts also happens to the man ' we are connected." Chief Seattle

Thank you for your consideration for all of the wildlife including the dogs and their humans. Very Sincerely,

Carol Molly Prier

Correspondence: Christina M. Gwatkin San Frnacisco, CA 94123

May 20, 2011

Dear Mr. Dean,

Our family has enjoyed the companionship of two dogs during our time in San Francisco, (one of whom died in 1989, and the other who is currently eight years old,) and have therefore had the pleasure of walking our dogs in the GGNRA at Chrissy Field, Ft. Funston, and Ft. Mason for almost twenty five years.

I have reviewed the proposed plan, and, although many aspects the so called 'preferred alternatives' appear to be fair and sensible, I believe the following restrictions to be arbitrary, illogical and unnecessary:

Chrissy Field AIRFIELD: It is both impractical and illogical to limit the proposed ROLA to the center section of the airfield. 1) The east section of the airfield lies between two proposed ROLA's which will cause confusion and require the park service to put up signs or fence off the area. 2) The walkways along and through the east section of the airfield provide access to the Central Beach proposed ROLA 3) It is impractical and illogical not to have a contiguous ROLA 4) The east section of the airfield is not a high traffic area for either people, dogs or wildlife (unless you count gophers) 5) Corralling all dogs into one section of the airfield will overtax that section of land 6) If the concern is simply to craft a compromise between those who wish to allow dog access to the airfield, and those who don't, then time restrictions, rather than area restrictions, would be a more sensible way to do so. (The area would only need to be patrolled for a portion of the day, which would, of course, result in some cost savings to the government.)

EAST BEACH: Time restrictions would accomplish objective

Although I personally don't walk my dog on East Beach, I again think that time restrictions are a better way to manage any perceived conflict in useage, particularly since there is rarely anyone there in the early morning (even on nice days!)

PROMENADE: Time restrictions would accomplish objective.

Again, although there are times (for example on a sunny week-end day) when the promenade is crowded, MOST of the time there are very few people there, particularly in the early mornings and late afternoons, when the majority of the people take their dogs out. Why not allow people to run or walk their dogs off leash during these times of day? Fort Funston

PAVED ROADS: Dogs do not cause damage to pavement Although it is

understandable for the park service to want to keep dogs out of a portion of the dunes, allowing dogs off leash on the paved roadways does not result in environmental damage. From my observation of people walking dogs in Ft. Funston, 99% of dogs and owners stay on the paved roadway.

PROPOSED ROLA AREA: Keep dogs away from cars The plan shows the proposed ROLA to be next to the parking lot. It makes no sense for dogs to be off leash in close proximity to cars, and on leash when they are away from them. The decision to limit the ROLA. to this area is absurd!

Ft. Mason

ELIMINATE LEASH REQUIREMENT IN THE GREAT CIRCLE

I have walked my dog on leash at Ft. Mason, and have no idea why dogs are required to be on leash in the great circle. At least during the weekdays, the area is practically unused, and would provide a great place to allow a dog to exercise off leash.

PROPOSED ROLA SHOULD BE SOUTH SECTION OF CIRCLE

I noticed that one of your proposals (although not the preferred proposal) would allow for a ROLA at a section of the park. I applaud that proposal, but would suggest that either, the entire circle be allowed for dog use, or that the section designated for the ROLA be the area of the great circle near the restrooms where the water fountains are located, as this area (in my experience) is less used than the section that leads between Ft. Mason and Aquatic Park.

In closing, the people of San Francisco have been walking their dogs off leash in the above areas of the GGNRA for over a quarter of a century. I, therefore, object to the fact that the Government is attempting to impose arbitrary and unnecessary restrictions on Off Leash Dog Walking in the above areas of the GGNRA. Clearly, if restrictions must be imposed, then time restrictions would be the most equitable. The fact that such a solution was not considered by those preparing this voluminous report highlights the arbitrary and capricious nature of these restrictions, and I therefore, respectfully request that they not be enacted.

Very Truly Yours, Christina M. Gwatkin

Correspondence ID: 4413 **Project:** 11759 **Document:** 38106
Received: May,24,2011 00:00:00
Correspondence Type: Letter

Correspondence: On page 496, the Draft Plan/DEIS states, "Dogs are currently prohibited in the tidal marsh at Crissy Field. Despite protection of restored tidal marshes by installed fences, dogs under voice control have been documented as gaining access to the tidal marsh through the tidal inlet that allows exchange of water between the tidal marsh and San Francisco Bay (Appendix G)." Appendix G provides no documentation of dogs in this specific area. Source documentation, containing details of incidents, must be provided to support such claims. Further, the discussion continues to imply that incident of dogs going into this area is a significant issue, and this is further unsubstantiated. The document needs to include appropriate analysis of the data to determine that a dog going into this area is a regular enough occurrence that it is determined to be a substantial issue. This consideration of the data has not been provided, and as such, the analysis is subjective, and the conclusions unfounded.

On page 568, the Draft Plan/DEIS states, "In addition, 17 incidents of dogs in closed areas were recorded in 2007/2008 (Appendix G)...In the restored dune areas, the shifting sand buries the fences, and dogs have accessed dune areas; there are also sparsely vegetated foredunes that have formed in the WPA that are frequently trampled by dogs." Again, Appendix G contains no details of the dog violations in the WPA. There is no evidence provided for the conclusion that dogs "frequently" trample the dunes. There is no evidence provided that any of the 17 incidents over the two-year period involved dune trampling. Moreover, even if there were evidence provided to that effect, 17 incidents in two years could not be considered "frequent." Again, methodology for interpreting the data and determining the significance of the data needs to be provided. Without this, the findings made are purely subjective claims.

On page 1631, the Draft Plan/DEIS states, "Due to the history of citations and warnings given for visitors neglecting the current regulations, confrontations between visitors and staff would be expected due to the restriction of all dogs from the site. It is anticipated that confrontations would be intense, which would place staff at a greater risk of injury. Due to the history of noncompliance and confrontation at this site, impacts on park staff during the initial education and enforcement period would be short term, moderate, and adverse." This quote is another example of how the Draft Plan/DEIS subjectively mischaracterizes the data presented in Appendix G. The conclusions make a presumption of significant confrontations, which is not at all evident from the data provided. Moreover, it mischaracterizes noncompliance as a significant issue, without providing any rationale on how that determination was made. The document makes inaccurate and unsubstantiated conclusions based on information presented in Appendix G.

The examples above are not an exhaustive list of all instances where

Appendix G is misused, but a sampling of the types of errors that were found in the document's reliance on Appendix G. In conclusion, Appendix G does not provide substantial evidence for many of the claims it makes, and as such, the analysis of environmental consequences is flawed. The NPS should revise the Draft Plan/DEIS and its findings in the following ways:

? Provide details for incidents in Appendix G (specific location, nature of incident) and source data. ? Where the first reference to Appendix G is made, the document should not only reference but also summarize the data contained therein. ? Clarify why 2007/2008 years were chosen. ? Provide data for a broader range of years. ? Provide methodology for interpreting/determining the significance of the data. The NPS should provide thresholds for analyzing the incident data, by type, and by GGNRA site. The NPS should clarify what number of incidents is considered acceptable or unacceptable, again, by site and by incident type. The NPS should describe their rationale for determining proposed thresholds (i.e. in context of number of visitors per year to each site). By providing a methodology for analyzing the data shown, the EIS will be able to properly describe the significance of the data, and use the data to support (or not support) its findings. ? Provide clear evidence in the record to support all of its findings. The NPS needs to ensure the professional integrity, including scientific integrity, of the analysis and findings contained within its Draft Plan/DEIS. ? Review all instances where Appendix G is referenced in the Draft Plan/DEIS and make revisions to ensure the findings are based on clear evidence in the record. Revisions to the methodology, the analysis, and the findings, as noted above, should be to be corrected throughout the entire document, wherever such analysis or conclusions relies on the data in Appendix G. ? The NPS should take all reasonable steps to obtain and disclose the information that the Draft Plan/ DEIS is currently lacking. Where there is incomplete or unavailable information, the Draft Plan/DEIS must clarify that the data is lacking, and identify the relevance of the unavailable information to the evaluation, and especially to the analysis of environmental consequences. ? As a result of the revisions to the analysis and findings noted above, the analysis of the alternatives needs to be reassessed where proposed alternatives are not substantiated by clear evidence in the record. Proposed management measure such as closures or significant reductions in access to people with dogs in areas of the GGNRA should be revised. As currently written, the data provided in Appendix G do not support the management measures proposed in the document, and therefore the alternatives need to be modified. Appendix D

Additional Comments Related to Draft Plan/DEIS Analysis of Geology and Soils

Chapter 3: Affected Environment

General:

Table ES-1 lists only areas open to dogs under Alternative A. Although this may simplify the comparison among alternatives (since the closed areas would remain closed under all of the alternatives), it does not clearly portray the existing extent of areas closed to dogs. Not only do the alternatives variously restrict dogs compared to the No Action Alternative, but they also increase restrictions on dogs relative to a baseline that is already restrictive. The Draft Plan/DEIS and Table ES-1 should compare the alternatives in terms of the area and miles of trails available to dogs under each alternative. This is a less subjective way of presenting the alternatives, and it could be useful in evaluating cumulative and synergistic effects. For example, Alternative C takes other available dog use areas within each county into account, presumably in recognition of the high demand for areas where people can take their dogs, and the desire to avoid over-concentrating dog use in any one area. Presenting the alternatives in terms of available area and trail miles would better allow the reader to appreciate the future impacts relative to current conditions.

Executive Summary, Environmental Consequences, pages xv-xxiii:

Page xv (Stinson Beach). The paragraph states that impacts to physical resources (including soils and geology) would generally range from negligible to long-term, minor adverse for all alternatives. However, dog use at Stinson Beach is limited to the parking lots and picnic areas only, under each of the alternatives. Although "minor" is less than "moderate," and "moderate" is less than "major" or "significant," making the distinction between the impacts of No Action and action suggests that the action alternatives would actually alter the situation, when actually no change in management is proposed. This bias of weighting the analysis in favor of excluding or limiting dogs exists uncritically throughout the Draft Plan/DEIS and should be corrected.

Table 5. Environmental Impact Summary by Alternative, pages 109-211:

Page 109 (Stinson Beach, Soils and Geology). Under Alternative A the second bullet identifies long-term, minor, adverse impacts in areas outside parking lots and picnic areas. These impacts are not repeated under the other alternatives despite the fact that, except for Alternative D, the management strategies under all of the alternatives are identical for Stinson Beach. Furthermore, each of the statements in the first bullet, except for No Action, includes the clause "assuming compliance," conveying the understanding that perhaps compliance can't be assumed under No Action. At least for the soils and geology evaluation, the analysis seems to take it for granted that the No Action Alternative is inferior. Both of these are examples of biasing the analysis against No Action. In the same table, under Alternative D, in

the rationale for a finding of "no impacts," it is concluded that because no dogs would be allowed within the parking lot and picnic area, no soil would be disturbed. This interpretation fails to take into account soil disturbance caused by people using the site, regardless of whether dogs are present. (Continuing this reasoning, and referring to Maps 2A and 2D, the reader might be lead to the conclusion that the impact would be greater under No Action than under Alternative D because dogs would be allowed in the blue-shaded area of Map 2A, whereas there is no blue-shaded area in Map 2D, when in fact the difference in effects on soils between these alternatives may be so miniscule as to be unnoticeable compared to the impacts of human use regardless of the presence of dogs).

The baseline for comparison throughout the Draft Plan/DEIS should not be an environment in which it is assumed that there is no impact unless dogs are present, but one in which the impact of dogs is added to the impact of humans. At about 200 pounds per adult, the force that a human exerts on the soil one foot at a time would have a significantly greater impact on compacting the soil in a picnic area than the force exerted by even a large 70-pound dog distributing its weight on four paws. The failure to acknowledge that human use has more impact on soils and geology in this regard (and acceptable in many areas of a National Park), compared to dog use, unfairly and uncritically biases the analysis in favor of restrictions on dogs. While there may be areas in which impacts from dogs are unacceptable, the same criterion holds for impacts from humans, and in most of these areas, dogs and humans are already excluded. The Draft Plan/DEIS should attempt to provide illumination, rather than justification for a foregone conclusion.

Table 5. Environmental Impact Summary by Alternative, pages 109-211:

Page 112 (Homestead Valley, Soils and Geology). Under the No Action Alternative, it is concluded that there would be long-term adverse impacts from "soil compaction, erosion, and nutrient addition.., in areas off the trail since dogs would be under voice control," while under other alternatives it is concluded that the impacts would be negligible because dogs would be under physical restraint. This is an unsubstantiated assumption in support of the underlying bias of the analysis. The analysis does not connect intensity of use and impact and seems to be based solely on the incorrect assumption that humans and wildlife would have no impact on off-trail areas, and that all impacts can be attributed to dogs. The analysis assumes, without the support of any evidence, that each of the options (off-leash, on-leash, no dogs) must result in a differentiable impact on soils and geology. This in turn requires the use of different adjectives to express the assumed differences. Instead, the impacts of dogs should be evaluated realistically and in context. If no positive basis can be identified for finding a difference between the impacts, then the Draft Plan/DEIS should conclude that the

impacts would not differ. In most areas, this is the only realistic conclusion. It should not be assumed that the imposition of more rules will lead to fewer impacts. And yet this is apparently the assumption underlying the soils and geology impact analysis.

Table 5. Environmental Impact Summary by Alternative, pages 109-211:

Page 115 (Alta Trail, Orchard Fire Road and Pacheco Fire Road, Soils and Geology). The same sort of bias exhibited in the analysis of Homestead Valley and Stinson Beach is exhibited in the analysis of the Alta Trail, and of every other area. The differences among the alternatives are not justified, and have no foundation other than perhaps the apparent editorial preference to break up the monotony of the impact analysis. For the Alta Trail, long-term moderate adverse impacts on geology are identified under the No Action Alternative, apparently in accordance with a general policy that says that dogs under voice control must, by definition, have measurably greater impacts on soils and geology than dogs on-leash, and that there would be no impacts to the environment at all if dogs were excluded from the park altogether. This policy is applied across the board, without reference to location or underlying soils and geological conditions. The possibility that the impacts of all of the alternatives on soils and geology might be indistinguishably small has not been considered. Yet it stands to reason that pedestrians and vehicles using a fire road, not to mention the impacts of natural processes such as wind and water erosion and insects and wildlife, would have a substantially greater impact on the soils and geology than the introduction of dogs that people might bring along with them as companions on their walk. Is there really any reason to expect that allowing dogs off-leash during daylight hours would result in any greater impact than allowing deer and coyotes to roam the area after the gates are closed?

Chapter 3: Affected Environment. Soils and Geology, pages 222-226:

General Comments

1. The Affected Environment discussion is overly general and does not provide a basis for understanding the impact analysis and evaluating the alternatives (40 CFR ' 1502.15). There is a discussion of plate tectonics, which has no apparent bearing on the relevant issues for dog management. Among the discussion of the complexity of the geologic environment is a statement that "soft formations are highly susceptible to...damage fromdog use." This is a gratuitous statement that does nothing to illuminate an understanding of the issues and serves to illustrate the bias of the analysis to come. This is followed shortly by the statement that "dune systems... are also very susceptible to artificial disturbance..." (read "by dogs"). To the side is a photo of a portion of what appears to be a trail through the sand bluffs at Fort Funston, with numerous tracks. The tracks look chaotic and

the message conveyed by the photo and the text is that dogs are impacting this fragile environment. This is propaganda, not science.

This Draft Plan/DEIS is about making a change to rules about dog use. Therefore, in order to be useful in this regard, the Affected Environment discussion must present information about how the environment has been impacted by dogs, and not just by dogs but also by humans. The Draft Plan/DEIS does not present baseline conditions that require a change in the rules. The Affected Environment discussion is silent. Perhaps an aerial photo of the bluffs at Fort Funston and the adjacent areas would help to provide perspective and tie in the discussion of plate tectonics and landforms. An aerial photo would indicate that these bluffs are undergoing slope failure and rapid erosion on a very large scale, such that the localized contribution from humans and dogs is insignificant. The impacts on geology should be presented fairly and impartially, with an eye toward using the information provided in the Affected Environment section as the foundation for the impact analysis and alternatives comparison. As it is written, the Affected Environment is little more than a catalogue of the soil complexes of Coastal California, which the reader can obtain from the internet or from browsing through Roadside Geology.

2. The Affected Environment section contains frequent allusions to generalized impacts that can be caused by dogs. For example, under the section headed "Alteration of Park Soils" is the statement at the end of the first paragraph that "Trampling and digging by dogs can lead to accelerated erosion of cliffs and dunes at GGNRA sites, which can also be exacerbated by high visitor traffic." This is an example of a truism. So, too, can and do gophers and rabbits contribute to accelerated erosion of cliffs and dunes, but the GGNRA is not proposing to put gophers and rabbits on leashes. The operational concern in this document is the issue of whether any noticeable change in the overall rate of erosion will occur as a result of a change in the dog management strategy.

Regardless of whether dogs are allowed on the bluff trails to the beach at Fort Funston, the GGNRA is going to have to address the coastal bluffs during a winter storm or as sea levels rise and erode the toe of the slope. One look at the aerial photo might put the notion of maintaining stasis into budgetary perspective. Instead of presenting truisms, the Affected Environment should provide the reader with information that would help dog walkers understand that taking an alternative route to the beach would have some beneficial effect on soils and geology. In fact, non-native Americans have been impacting the coastal dunes and bluffs for more than a hundred years. Perhaps, from a geological perspective, it is no coincidence that there is a broad, sandy beach below Fort Funston. Is the beach broader, or less broad, as a result of dogs accompanying their owners on the trails to the beach? The Affected Environment should discuss and put into

perspective the impacts that past uses have actually had and not leave off stating that the sand is soft.

3. The discussion of soils is especially generalized in the Affected Environment section. However, it suggests that within some of the sites there are specific areas underlain by fragile or vulnerable soils that could be impacted by uses, including dogs. In order to be useful, maps are needed that would indicate the areas of these vulnerable soils, as well as the areas with steep slopes that are prone to accelerated erosion. This information would also help to support the discussion of vegetation and perhaps other sections of the Draft Plan/DEIS. The soils maps should indicate the trails. If possible, areas of existing impacts should be portrayed. Maps would not only give the reader the ability to locate the vulnerable areas relative to use areas, but also to understand the size of these areas relative to the size of the areas where change in management is proposed. Areas of serpentine soils should be specifically shown on the maps, because they are called out in the text.

4. Rare Soils at Golden Gate National Recreation Areas, paragraph 2, page 225. The text indicates that serpentine soils can be found at certain locations that are listed. This suggests that these are the only locations where serpentine soils are found, and that should be clarified. The locations listed are Muir Beach, Crissy Field, Baker Beach, and Lands End. Showing these areas on a map would be helpful. In addition, it would be helpful to elaborate on which current dog use areas are specifically affected and why. At Muir Beach, for example, the serpentine soils are outside the study area. The Draft Plan/DEIS should discuss serpentine soils at Muir Beach and other sites only if the information is directly relevant to the study area and the impact analysis.

At Crissy Field, the text says that serpentine soils are adjacent to Marine Drive. Marine Drive is labeled on Map 11-A (Fort Point) but not on Map 10-A (Crissy Field). If the area of serpentine soils is limited to the vicinity of Marine Drive at Crissy Field, then this is important information that should be presented graphically in the Draft Plan/DEIS. Later, the EIS states that the preferred alternative for Crissy Field is Alternative C, which does not appear to provide any additional protection for the area of serpentine soils than does Alternative A. The Affected Environment section should provide enough information for the reader to understand why this should be the case, rather than implying that the presence of serpentine soils is always a reason for altering the dog management strategy. This information needs to be site specific, not generic background, so that alternative management measures can be developed and adequately evaluated.

At Baker Beach, the text says that serpentine soils are located on the coastal bluffs between Baker Beach and the Golden Gate Bridge. Looking at Map

12-A, it appears that this might be the area containing the trail to Battery Crosby. Under the preferred alternative (Alternative D), this trail would be closed to dogs. Presumably the closure to dogs is related to the environment supported by these soils. The Draft Plan/DEIS should provide some discussion of the nature of the actual impacts associated with dog use that may have occurred in this area. In the Impacts discussion (p. 376-377) there is no mention of any existing impacts by dogs, and the proposed closure seems to be to prevent future impacts rather than to correct existing ones. Given the mention of these soils in the Affected Environment section, it would be helpful to clarify this. Furthermore, the title of the reference cited, Recovery Plan for Coastal Plants of the Northern San Francisco Peninsula (USFWS 2003), suggests that some evaluation of this area may have been done prior to that time, which could be described in the Affected Environment section.

The text says that serpentine soils are present at the western end of the Lands End site, near Fort Miley. Given that Fort Miley is large, understanding more precisely where these soils are might greatly assist in understanding the selection of the preferred alternative (Alternative D). The vegetation community's map (Map 22) is at a scale that is not helpful in this regard. As with Baker Beach, the Impacts analysis (page 391) does not indicate that there are currently any impacts from dogs, and the preferred alternative seems to have been selected in order to prevent future impacts rather than to correct existing ones. This should be clarified in the Affected Environment section.

5. Alteration of Park Soils (page 225) The second paragraph makes the assertion that:

"Dogs and dog walkers that do not stay on designated trails and venture off trail create social trails that become denuded of vegetation and result in increased soil compaction. This has occurred at Homestead Valley, Alta Trail/Orchard and Pacheco fire roads, Oakwood Valley, Marin Headlands, Baker Beach, Lands End, Fort Funston, Mori Point, Sweeney Ridge/ Cattle Hill, and Pedro Point Headlands."

This is an important assertion and is presumably supported by observation. Yet no citations to report more specific information than the list of sites are presented. The area included within the areas mentioned above is quite large, and the subject is compaction of soils. It seems possible that the threshold for inclusion on this list is that dogs or dog walkers have created a social trail within one of these sites. It would greatly assist in understanding the need for the proposed changes in dog management if more specific information were provided. Furthermore, the sentence preceding the one about dogs and dog walkers says that "Soil compaction is common along social trails that have been created by ' and are heavily used by ' bikers,

hikers, runners, and dog walkers."

Based on the information presented, it is not at all obvious that the solution to the problem of social trails would be to change the rules affecting dogs. Somehow, the image of a group of dogs creating a social trail that results in soil compaction and vegetation loss seems less compelling than the image of runners, bikers, and hikers creating social trails that become visible and continue to be used by subsequent runners, bikers, and hikers. The Draft Plan/DEIS doesn't describe where dogs actually fit into this process, and how restrictions on dogs would reduce the use of social trails by runners, bikers, and hikers. The problem is that the assertion is just an assertion. Environmental impact statements are required to be supported by evidence that agencies have made the necessary environmental analyses (40 CFR "1500.2(b) and 1502.1)

In theory, it sounds reasonable that dogs contribute to soil compaction. But there is no evidence that restrictions on dogs would reduce these impacts, and that management restrictions that target runners, bikers, and hikers to prevent them from creating or using unauthorized social trails wouldn't be vastly more effective in preventing impacts than restricting dogs. More specificity is needed to enable the reader to understand and meaningfully comment on the impact analysis and alternatives. It is possible that agency and public reviewers may alter whatever pre-conceived notions they may have in regard to the causes of soil compaction and vegetation loss, the creation of social trails, the extent of the problem, and the relative benefits of restricting dogs, or they may propose better alternatives for addressing documented impact, which is a fundamental purpose of the NEPA process. "The information must be of high quality. Accurate scientific analysis, expert agency comments, and public scrutiny are essential to implementing NEPA." (NEPA Rules - Purpose - 40 CFR ' 1500.3).

The third paragraph cites a publication of the Connecticut River Coastal Conservation District (CRCCD 2009) in regard to dog waste as a source of nutrients in soil. Current CRCCD publications do identify dog waste as a significant source of nutrients to water bodies, and suggest that picking up the waste will alleviate or prevent the problem. However, it does not appear that the CRCCD publications currently available are concerned with the contribution of nutrients to soils as a problem that could alter the fertility of soils. Furthermore, while the theory that dog urine might increase soil salinity seems vaguely possible, the idea that it would have a significant impact in areas adjacent to the coast that daily receive aerosol droplets of sea water seems unlikely. Certainly, it seems likely that serpentine soils would require more intensive fertilization by dogs than currently occurs in order to justify a lengthy paragraph on this subject in the EIS. The previous comment regarding illustrating the areas containing serpentine soils applies to this issue as well. Based on the information provided, it does not appear

that intensive dog use occurs in the small areas containing serpentine soils. Unless better supported or more focused on the specific areas where it may occur, the discussion of impacts of dog use on soil chemistry should be abandoned, and replaced with more substantive discussions of the Affected Environment.

Chapter 4: Environmental Consequences.

Soils and Geology, pages 291-458:

General Comments

6. Study Area (page 291) The study area is defined as "the area that could be impacted by dog management activities..." Presumably, this means the entire area within the green line boundaries shown on the maps. However, in practice, the focus of the analysis should be on the specific areas affected by the alternatives, where impacts from dogs may change. In most cases, this is small percentage of the total park areas. Contrary to the statement in this paragraph, the individual study areas have not been described in detail in Chapter 3. It would be helpful to clarify that the alternatives would alter management in selected portions of the study area, and as indicated in earlier comments, to quantify those areas in terms of acres and miles of trails affected by management.

7. Duration of Impact (page 291) As described, the duration of impact does not seem to apply to the No Action Alternative. While this may seem like a small matter, it appears to be based on the unstated assumption or bias that the No Action Alternative is not feasible. It may be accurate to state that the existing conditions will continue during the education and enforcement period of an adaptive management plan. However, the assumption that impacts will become long-term (described as persisting for the next 20 years) is also not supported, given the lack of specific information on the Affected Environment and Environmental Consequences sections, as explained in these comments.

8. Assessment Methodology (pages 291-292) This section explains that professional judgment was relied upon in determining impacts, due to lack of site-specific scientific data regarding effects of dogs on soils within the GGNRA. However, in the last paragraph it is asserted, as an example of processes that would occur as a result of various management activities, that heavy dog use on interrupt natural dune processes and accelerate coastal bluff erosion. The choice of words (would, can), the degree to which professional judgment is involved versus knowledge of the impacts that dogs do have versus those that they can have, and the lack of quantitative analysis overall, is confusing. Even the reference to lack of site-specific scientific data is unspecific in its scope. Although there are degrees of

reliability of data, methods can be found to do a better job of quantifying the existing impacts of dogs.

For example, on a busy weekend day, it should be possible to observe and report on the areas of intense human and dog use. It should be possible to overlay maps of soils, outcrops, slopes and slope failures, and relate those to the areas selected for evaluation of different alternatives. Some, if not all, of the areas of damage could be identified and mapped, rather than relying on broad statements about the types of impacts that are possible. These methods should be attempted, and a more sophisticated methodology designed than strict reliance on "professional judgment" that appears to be the foundation for the impact analysis. Because this information is essential to a reasoned choice among alternatives and is obtainable without exorbitant cost, it is required to be included in the EIS (40 CFR ' 1502.22(a)).

9. Impact Thresholds (page 292) The impact thresholds are critical to the outcome of the analysis, and the impact thresholds described in this section provide a great deal of leeway to the analyst. In the first paragraph, a beneficial impact is defined as "a positive change in the condition or appearance of the resource." Presumably, an adverse impact would be a negative change in condition or appearance. However, no further explanation is provided as to how appearance of soils and geologic resources should be considered. The photo of the footprints in the sand on the bluffs (page 222) at Fort Funston provides an ominous clue as to how the appearance of the resource might influence the analysis. As discussed in an earlier comment, the photo is used to illustrate the soft sandy "soils" on the bluffs, which are obviously easily eroded by hikers, dogs, rodents, and reptiles. If appearance is a threshold criterion, then more footprints, however short-lived, could easily be equated with greater adverse impact. If appearance of soils is to be used as a threshold criterion then a great deal of discipline must be exercised by the analyst to avoid any tendency to associate footprints in sand with an adverse impact on soils and geology. It would be preferable to avoid the appearance criterion altogether, and to provide a more thoughtful definition of what exactly constitutes a "change in condition" of soils (whether adverse or beneficial).

Later the section explains that changes are to be evaluated in comparison to the "current condition" of the resource. Since the current condition of the resource has not been discussed or defined in Chapter 3, this change would presumably be observed during the monitoring period described under the preceding discussion of the Duration of Impact, in which it is stated that "it is expected that compliance with the dog walking regulations and associated adverse impacts would improve gradually..." As noted in comments on other sections, compliance should be part of every alternative and is not a basis for discounting Alternative A.

Considering that baseline conditions have not been quantified in Chapter 3 for any of the sites, have barely been discussed, and where discussed, have been discussed in a general, impressionistic, and broadly theoretical way (relying on suspect concepts such as the alleged adverse effects of dog urine on the salinity of poorly-defined areas of serpentine soil in a coastal marine environment, based on a brochure misapplied to this project that was prepared by a Connecticut agency to encourage visitors to pick up their dog's waste), this section does not critically evaluate available data and is not supported by evidence that the necessary analysis has been prepared. .

As revealed in the subsequent section (Potential Soil Impacts Common to All Alternatives), three types of impacts on soils and geology are identified, (although they all seem to be related to soils, so the addition of "and geology" is superfluous from this point forward). These are: soil disturbance; soil compaction and erosion; and soil function. Given that these are to be the attributes by which soils and geology are evaluated and the alternatives are to be compared, it would be helpful if these attributes were defined, preferably within the discussion of Impact Thresholds. It would also be useful to see, in the Affected Environment section of the EIS, a discussion of the current condition of soils in the study area based on these attributes and particularly as they might related to patterns of past dog use. It is also necessary so the reader can understand the impact attributable to dogs or other factors, so that the appropriate alternatives can be developed that are actually related to the impacts, and management measures can be evaluated for their likely effectiveness.

As discussed below, lack of a definition or bounds on what constitutes adverse soil disturbance is a weakness of the analysis, which might either be rectified by carefully defining the term, or by avoiding its use altogether due to its inherent vagueness. Soil compaction and soil erosion are distinct processes, though their causes and secondary effects may overlap. This might become clearer if each were defined. To conclude that in general, a decrease in soil erosion would be considered beneficial is far too simplistic. Under natural conditions, erosion is essential and inevitable on every surface exposed to weathering. Like wind and rain, rates of erosion can vary widely over time, as well as by material and location. For example, areas with rapid natural rates of erosion, such as the bluffs at Fort Funston, tend to support fast-growing, resilient vegetation. There are hollows and landings within the bluffs that are stable enough to support trees, but most exposed slopes fail so frequently that trees cannot become established on them. To simply assert that a decrease in erosion at Fort Funston would be a beneficial impact is not meaningful. The Impact Thresholds discussion should provide greater clarity. This level of specificity is also needed to consider, for example, why off leash dog access is prohibited even on an inland trail.

Soil function is a potentially broad category, which certainly needs to be

defined for the average reader, and might be conceived to include every attribute of soil. Soil has many functions, among which is to supply material that eventually becomes beaches. Among the important ecosystem functions of soil are supporting plant growth, providing habitat for an incredible variety of fauna, retaining moisture, and breaking down organic waste. Under natural conditions, because of their textures and locations, different soils support these functions to different degrees. Therefore, the impact that any particular use, such as dog use, may have on these soil functions depends on the characteristics of the particular soil as well as on the nature of the use.

10. Potential Soil Impacts Common to All Alternatives (pages 292-293) It is not entirely clear what this section is intended to accomplish, and it would be helpful if there were a brief introduction in this section to explain what it is for.

11. Cumulative Impacts to Soils that are Common to All Alternatives (pages 292-293) As with the preceding section, the purpose and direction of the cumulative impacts common to all alternatives discussion is unclear and unfocused. It does not discuss the cumulative effect of redistribution of dog use throughout the region in response to increased restrictions on dog use and changes in demographic patterns of dog ownership, which is perhaps the most important adverse cumulative effect.

As the document mentions, but fails to evaluate, impacts of dogs on soils is a function of the intensity of use. The discussion here should not ignore the concern of many readers of the Draft Plan/DEIS that a region-wide decrease in areas available for dog use accompanied by a higher demand for such areas, would concentrate dog use into increasingly smaller areas, resulting in greater intensity of use in those areas. This impact warrants discussion in the "common to all" section.

This may also be an appropriate place in the document to discuss the cumulative effects of the compliance-based management strategy, since the compliance-based management strategy is an integral part of the project alternatives. Increased restrictions and closure of areas due to noncompliance would further concentrate dog use in other areas, either within the GGNRA or outside the GGNRA. The Draft Plan/DEIS fails to address conditions that would result if, as a result of noncompliance, dog use is concentrated elsewhere.

12. Compliance-Based Management Strategy (pages 295-296) The compliance-based management strategy discussion is part of the project description and should be fully described there. Although it is useful to reiterate the components of the strategy in the resource impacts section, the section here does not adequately focus on impacts on soils and geology. As

explained in this section, the strategy would lead to increased restrictions on dog use if noncompliance exceeds threshold criteria measured by observation of noncompliance. 13. Marin County Sites ' Stinson Beach (pages 296-302) The following comments on the Impact discussion for the Stinson Beach area are generally applicable to all sites.

Alternative A: No Action (page 296). The text states that there is low compliance with the no dog walking restriction on the beach and refers to Table 9 (page 271) as support for this assertion. The information provided in Table 9 and its accompanying text could just as easily be interpreted to support the opposite view, however, that compliance is exceptionally high given the intensity of use. It is unclear what effect on compliance the use of the adjacent beaches might have. (The text accompanying Table 9 incorrectly identifies the Marin County beach adjacent to Stinson Beach - called Upton Beach - as allowing dogs off-leash. Dogs are allowed on this beach on-leash.) According to its website, dogs are not allowed on the beach adjacent to the southeast of Stinson Beach (within Mt. Tamalpais State Park). However, this short stretch of beach is poorly accessible except from Stinson Beach or Upton Beach.

Under the compliance-based management strategy, future dog use might become more restricted if noncompliance is incorrectly or inappropriately assessed, possibly leading ultimately to imposition of restrictions like those under Alternative D. Even though, based on the impact analysis, the impacts on soils and geology would not drive decision-making at Stinson Beach; more thoughtful analysis would improve the impacts discussion, especially in relation to cumulative impacts.

Alternative A: No Action ' Cumulative Impacts and Indirect Impacts on Adjacent Parks (pages 296-298). The cumulative impact analysis oversimplifies when concluding that because long-term and ongoing restoration and enhancement efforts, etc., would be beneficial to soils and geology, that the cumulative impacts on soils and geology would be low. Instead, the cumulative analysis should also consider the potential for concentration of effects within smaller areas, especially in the event that noncompliance monitoring leads to greater restrictions being imposed on dog use at Stinson Beach and other areas.

In the Indirect Impacts section, the text identifies 33 parks within a 10-mile radius, and 3 within a 5-mile radius, making it seem as though there are numerous alternative sites for dog users. However, this is an oversimplification of the actual situation. The only park on the coast and within the watershed is Mt. Tamalpais State Park. A summary description of the dog use areas at Mt. Tamalpais State Park, from a website called DogFriendly.com, provides the following information:

"While dogs are not allowed on most of the trails, they are allowed on the Old Stage Road. This path is about .5 to .75 miles and leads to the Marin Municipal Water District Land, which allows dogs on their trails. Dogs must be leashed on both the state park and the water district lands."

While this is certainly an option for some dog owners, it does not appear to provide anything at all comparable to the capacity or experience offered at Stinson Beach, and cannot be considered a reasonable alternative to Stinson Beach for most people with dogs. Therefore, although the cumulative impact section provides some mention of other areas, it does not provide a rigorous analysis of likely effects. Suppose, for example, that all of the people who are not able to walk their dogs on the weekend at Stinson Beach were to walk their dogs along the Old Stage Road at Mt. Tamalpais State Park. Very likely, the negligible impacts that currently apply to Stinson Beach would become significant impacts on the Old Stage Road. Furthermore, the management of these impacts would be transferred from federal to state responsibility. In this regard, the Mt. Tamalpais web site provides this warning:

ATTENTION Service Reductions in Effect 12/1/2010 - 6/30/2011:
California State Parks is facing an unprecedented budget reduction and you may experience service reductions during your visit. We hope that our loyal visitors understand and appreciate the severe budget reductions that have occurred and help us minimize the cost impacts to the system.

Because it is unlikely that Mt. Tamalpais State Park could accommodate these visitors, and also unlikely that visitors would substitute Mt. Tamalpais for Stinson Beach, the demand would be distributed somewhere else. A more realistic discussion of the role of Stinson Beach and other parks in meeting the demand for dog use opportunities is needed. Furthermore, the analysis of the indirect impacts on adjacent parks arbitrarily chooses to limit the range of other available dog use areas to parks. Instead, the discussion should include all public lands, and especially public lands within a similar area and environment, since those are the types of areas that visitors will be more likely to substitute if access is substantially reduced in given GGNRA units.

14. Mann County Sites ' Homestead Valley (pages 301-307)

Alternative A: No Action (page 301) The Homestead Valley impact analysis is the first unit in this section that presents a discussion comparing impacts of No Action (which allows off-leash use) with the action alternatives, (none of which now allow off-leash use). The text states that "Even though this site has low visitor use and low numbers of citations and incident reports related to dog activities, soil compaction and nutrient addition and possible erosion from dogs is assumed to be currently happening along the fire road/

trails and in off-trail areas throughout the site." This statement indicates that no evidence of impacts of dog use is needed in order to conclude that the No Action Alternative has adverse impacts on soils and geology.

Similar conclusions reflect a bias at many of the other sites discussed. The discussion of the No Action Alternative is based on little or no data (as indicated by the lack of data provided in Chapter 3). The facts that are presented indicate that there is no justification for a change in management to protect soils and geology.

Alternatives B and C and E all describe compaction of soils within a strip 6 feet adjacent to the Homestead Fire Road as an impact on soils. Given the low use of the area, the low level of risk from some slight amount of compaction that may occur adjacent to a fire road, and the fact that the 6-foot strip assumes that the dogs walk directly alongside the owner, who walks at the extreme edge of the fire road, the extreme precision of this analysis is notably inconsistent with the general lack of specificity and precision presented in the discussion of the Affected Environment. Presenting the impact analysis in such precise terms gives the misleading impression that the analysis is more accurate and more certain than it is. This generally applies to fine distinctions made between the impacts of the alternatives. At the level of accuracy possible with the information available, "no impact," "negligible impact," and "minor impact" should probably all be considered synonyms with respect to soils and geology.

Appendix E

Additional Comments Related Draft Plan/DEIS Analysis of Water Quality

Chapter 3: Affected Environment

1. General ' the Draft Plan/DEIS should include a map that shows both the locations all bodies of water discussed in the water quality sections and dog areas categorized by currently allowed activities. Add a "Marin County Sites Map", "San Francisco County Sites Map", and "San Mateo County Sites Map" showing both water resources for those areas and existing dog areas categorized by currently allowed activities.

2. General ' there seems to be a lack of historical or current information connecting dog use of the parks to resulting changes to water quality. The Draft Plan/DEIS should provide site-specific information documenting this connection. For instance, the Stafford and Home report cited on page 227 attributes high bacteria and nutrient levels to five sources, in addition to dogs. At the bottom page 227, the Draft Plan/DEIS asserts that the eastern third of Crissy Airfield "receives a moderate to high level of use by off leash dogs and has substantial amounts of pet waste", but there is no reference to

support this claim. There is no site-specific analysis linking the presence of waste to documented water quality issues at this site and no objective monitoring data that supports a moderate to high use of off leash dog use in this area.

3. General ' the water quality section in Chapter 4 discusses each of the 21 sites individually. The Draft Plan/DEIS should follow a similar format in Chapter 3. For example, provide a description and characterization of the water resources for each of the 21 sites.

Chapter 4: Environmental Consequences

1. General ' the Draft Plan/DEIS should be clear under all of the analyses for Alternative A that the impacts would not be new, but rather a continuation of existing/ongoing impacts due to the existing approach to implementing the current GGNRA general management plan.

2. General ' The Draft Plan/DEIS should also be clear in this and other sections that the impact analysis presented for Alternative A is different than the consequences of the No Action alternative were GGNRA to implement an education and adaptive management program under its current plan and policies, which GGNRA could choose to do. The No Action alternative for a management plan is not the same as a "do nothing" alternative. GGNRA can choose to implement its existing plan is a more effective way to meet the purpose and need for the proposal.

3. General ' when impacts are the same across various alternatives for a particular site, the Draft Plan/ DEIS should be revised so that the Conclusion Tables contain identical statements.

4. General ' the Conclusion Tables should be grouped together for each site. This would make comparing the various alternatives for each site easier and make the tables more useful.

5. Page 459, last paragraph, states "Impact at the most would be negligible; therefore, impacts to seeps and springs from dogs are not discussed further." If impacts to seeps/springs are not discussed further because the impacts are negligible, then why are there so many discussions in subsequent pages about negligible impacts involving other types of water resources? The Draft Plan/DEIS should be made more consistent by not discussing any negligible impacts in subsequent pages of the water quality section. 6. Page 460, Assessment Methodology the Draft Plan/DEIS should make an assumption under Assessment Methodology that the public would comply with park/dog regulations and requirements, then remove all of the "assuming compliance" (and similar) statements in the subsequent pages of the water quality section. Also, the Draft Plan/DEIS should provide

examples of park/dog regulations and requirements, such as being on leash or properly disposing of dog waste.

7. Page 460, Assessment Methodology ' the Draft Plan/DEIS should describe how impacts are analyzed qualitatively.

8. Page 468, Paragraph 1 ' is it possible for the increased use at adjacent parks to be concentrated at one adjacent park? Would "impacts on water quality in adjacent lands" still not be "expected to be higher than current conditions" if increased use was concentrated in a particular adjacent park? This comment should be addressed in all instances in the water quality section where this could occur.

Other Minor Corrections

9. Page 461, last two paragraphs ' the paragraphs beginning with "Dogs were determined..." and "A sub study..." seem more like paragraphs that belong in the affected environment section.

10. Page 462, Paragraph 3 ' delete "a" from "...from a many different sources."

11. Page 462, Paragraph 6 ' the Draft Plan/DEIS should provide citation(s) for information in the paragraph beginning with "Potentially adverse impacts..."

12. Page 465, Paragraph 5 ' the Draft Plan/DEIS should provide citation(s) for information in paragraph beginning with "Oil spills have..." This comment applies to all instances in the water quality section where this information appears.

13. Page 468-470, preferred alternative discussion ' this discussion seems unnecessary as it just repeats previously provided information. This comment applies to all instances in this water quality section where the preferred alternative discussion just repeats previously provided information.

Appendix F

Additional Comments Related to Draft Plan/DEIS Analysis of Biological Resources

Chapter 3: Affected Environment

General:

1. As stated in Chapter 1, use of GGNRA lands by humans and dogs occurred well before the GGNRA was established in 1972. This historical activity should have been considered as part of the Affected Environment. Many sections lack a description or quantification of baseline conditions of biological resources from long term use by people and dogs, or current impacts are assumed but no data or rationale are given (specific comments follow below). Without this baseline information, the impact conclusions in Chapter 4 and the basis for selection of the preferred alternative are not supported.

2. The affected environment section mentions California Native Plant Society (CNPS)-listed species as having the potential to occur within the GGNRA but without specific data as to where/if they are actually present, this claim is unsupported.

3. There are inconsistencies among the text and Table 8 in the special-status species affected environment, the information in Appendix H, and the impact analyses in Chapter 4. Examples include:

- o Presidio's manzanita. Table 8 states that it is documented within the GGNRA and the impact analysis states that it is found at Baker Beach, however Baker Beach is not identified in Appendix H as having potential habitat for this species.
- o San Francisco lessingia. This species is listed in Appendix H as having potential habitat within a number of San Mateo sites. Fort Funston and Baker Beach are not listed under San Francisco sites as having potential habitat; however, these two sites are the only two considered in the impact analysis of this species in Chapter 4.
- o Hickman's potentilla. There has been no documentation of this species within GGNRA. The table lists this species as having potential habitat at 5 sites within San Mateo County; however, the impact analysis in Chapter 4 is only for Mori Point and Pedro Point. What is the justification that these two were the only ones considered if habitat exists at many sites?
- o California seablite. Appendix H identifies this species as having potential habitat at Crissy Field and Land's End (which is missing from the table Key) and that this species has been documented within the GGNRA. The impact analysis in Chapter 4, only talks about Crissy Field and that reintroduction of the species has failed twice, so species is not currently present within the GGNRA.

4. Table 8, Affected Environment: GGNRA Location column contains the location for plants that do not exist there according to the text:

- o Lessingia ' does not occur at Fort Funston
- o California seablite ' does not occur at Crissy Field
- o Hickman's potentilla ' does not occur at Mori Point or Pedro Point

Also, the GGNRA location column in Table 8 does not indicate whether the species have been documented at these sites or just that potential habitat is present.

5. For wildlife species that are assumed to be impacted by dogs, the

Draft Plan/DEIS fails to establish the level of impact the species are already experiencing, apart from other factors that may be causing disturbances or population decline (within and outside of the GGNRA). This would include issues such as loss of breeding and foraging habitat, predation, climate change, etc. The Draft Plan/DEIS does not indicate how or why a special-status species that has been sharing habitat with dogs for decades will experience a quantifiable benefit from stricter dog management, given other factors affecting the species. For this reason, there is no support for the selected alternatives in terms of actual, foreseeable benefits to wildlife populations. Without this type of information, most impact conclusions in Chapter 4 are not supported. The western snowy plover section of Chapter 3 is a good example.

a. Additional comments on western snowy plover text from Chapter 3: The Draft Plan/DEIS does not adequately describe how dogs chasing the birds can impact the survival of the species. Birds may take flight readily and expend energy, experiencing some short-term disturbance, but there is no evidence of the GGNRA western snowy plover populations being directly impacted by dog activity in the long-term. The data provided in the Draft Plan/DEIS suggests a stable plover population; therefore, the selected alternatives would not be expected to differ from the No Action Alternative (see paragraph 1, page 799).

- Monitoring surveys from 1994-2006 observed 48 of leash dogs chasing western snowy plovers, which is a relatively low number of events over a 12-year period. As stated above, this information suggests snowy plover populations will not experience significant beneficial impacts from the preferred alternatives, and that the No Action Alternative does not significantly impair natural values. - The numbers of snowy plovers fluctuated between 1994-2006 "based on a variety of factors", but the presence of dogs on the beach has not prevented the birds from using their preferred resting areas at Crissy Field or their off-site nesting sites; therefore, there are no documented impacts to the population from a "chasing" incident.

The above analysis is not presented to suggest that a wildlife protection area at Crissy Field would be inappropriate to protect resting habitat from people as well as dogs. It is also not presented to suggest that only areas used by endangered species are worthy of protection. It is well documented in public material that Crissy Field Dog Group, Eco-Dog, and other groups have been and are active in educational efforts with the public, conservation organizations and GGNRA to respect snowy plover protected areas. For example, in 2006, the Crissy Field Dog Group participated in the Western Plover Community Outreach Program with the GGNRA and the Golden Gate Audubon Society in developing a brochure and other educational materials to make the public aware and protect the plovers' habitat at Crissy

Field and Ocean Beach. To this day, the Crissy Field Dog Group continues to inform their members and the public about protecting the snowy plover.

The comment is directed toward an example of scientifically unsupported assertions that the Draft Plan/DEIS as a justification for management actions. These become particularly critical when they are used as the basis for large closures of beaches and other areas where access has been allowed for the past 20-40 years without documented impairment of species.

b. Additional comments on mission blue butterfly text from Chapter 3: the text is not consistent with Table 8 ' text states that the species is found in Alta Trail and Tennessee Valley, but these are not listed in the table.

-There is no clear nexus between dogs and the mission blue butterfly habitat and host plant, and there is no evidence given of damage to the host plant from dogs. Because the area is fenced "but does not physically exclude dogs", the current and historic use of the area by does not appear to be detrimental to the mission blue butterfly or its habitat/host plant, therefore selection of the No Action Alternative is supported. -Mission blue butterfly habitat is "very near" closed social trails that are still used by visitors and dogs; however, there are no data to suggest alteration of the habitat. Because these trails are closed and their use by dogs is not quantified, the species' habitat does not appear to be impacted by dog use, and the No Action Alternative does not significantly impair natural values.

c. Additional comments on tidewater goby, Coho salmon, steelhead trout, California red-legged frog from Chapter 3: For each species it is indicated that the habitat areas are essentially closed to dogs, but that "these closures are not always followed". Presumably the use of these areas is rare. Because dog use of the habitat areas is not quantified, there does not appear to be a nexus between dog use and these wildlife habitat areas, therefore the No Action Alternative does not significantly impair natural values.

d. Additional comments on bank swallow from Chapter 3: The nesting colony is well monitored and closed to visitor access, and the nature of reported disturbances is unclear ("Fort Funston has moderate to high visitor use, and in 2007-2008 there were two pet citations, warnings, and reports taken related to wildlife disturbance at the site."). This small number of incidents over a two-year period does not appear to have affected bank swallow populations; therefore, the No Action Alternative does not significantly impair natural values, and no benefits from the draft preferred alternative are anticipated.

Vegetation and Wildlife, pages 228-244:

1. Pages 229-230, Paragraphs 4/5 and Table 6. The number of

warnings/citations/reports does not mean there on any potential impacts to wildlife. The raw data provided in the table raise many questions: What type of interaction between a dog and wildlife constitutes "disturbing wildlife"? How do incidents reported in closed areas necessarily "affect" vegetation and wildlife? Is the nature of the disturbance reflected in the difference between a warning, citation, and report filing? For example, 3 citations and 6 reports of dog disturbance in a park do not suggest any major adverse effect on wildlife populations, habitats, or individuals.

Considering the raw data here and in Appendix G, there appear to be very few incidents of dogs disturbing wildlife over a two-year period, even assuming not all incidents are reported. Furthermore, the Draft Plan/DEIS suggests that a lack of law enforcement contributes to the number of incidents of dogs disturbing wildlife (and therefore has impacts to wildlife). A wildlife disturbance incident is not "high quality information" (as required by NEPA) and cannot be assumed to impair natural values when the actual effects of the disturbance are unknown. It is not likely the species experienced any long-term impacts from these few incidents over a two-year period, nor is there any specific evidence to suggest even short-term impacts. There is also no evidence that the absence of law enforcement increases the likelihood of wildlife disturbance or harm.

The presence of humans and predators also typically "disturb" wildlife, as this term is used in the Draft Plan/DEIS. For example, shorebirds typically take flight when a human or a hawk or eagle is in their vicinity. This section of the Draft Plan/DEIS does not distinguish or evaluate relevant factors and impacts, but simply asserts that disturbance by dogs is causing unacceptable impairment of GGNRA's natural values. This assertion is then used as a basis for closing areas to access by dogs, which, given the lack of a thorough impact analysis, might or might not be an appropriate management measure. If people are disturbing the species, and this disturbance is resulting in an unacceptable impact that is impairing natural values, these impacts need to be fully disclosed to understand the consequences of the alternatives.

2. Pages 233-234. Part of the rationale for prohibiting dogs from beach areas under Alternative D is to "protect shorebirds and stranded marine mammals", but there is no information given here to support that dogs are currently impacting shorebirds and marine mammals; therefore, the No Action Alternative does not significantly impair natural values. Chapter 1 "Dogs and Wildlife" does not report any interactions between marine mammals and dogs.

RE: Draft Dog Management Plan/Draft Environmental Impact Statement

Dear Superintendent Dean,

My name is Pavla Sim. I am a resident of Mill Valley, County of Marin, California. I have lived in this area for 17 years. I have a MBA with 20+ years of experience in the high technology industry. I have built a successful dog walking and pet care business in Mill Valley after my management position was eliminated in 2005. My husband, Leonard Hand, and I deeply care about the environment. In 2009-2010, my husband was the Treasurer of the Environmental Forum of Marin, an educational and training not-for-profit organization. We have installed solar panels on our roof; we recycle and participate in a composting program; and we use our cars only when necessary. As a responsible dog owner and dog walker, I completed a number of training courses to learn how to keep multiple dogs under voice and sight control at all times and I became certified as a dog walker. I diligently clean up after dogs and keep them out of areas where they are not supposed to be. I work hard to make sure that dogs under my control do not harass people, other dogs and wildlife.

I have reviewed portions of the Draft Dog Management Plan relevant to Marin County. I do not agree with some of the analyses and conclusions stated in Alternative A, the No Action option. I also disagree with the choice and rationale for most of the GGNRA's Preferred Alternatives as detailed in the Draft Dog Management Plan. The reasons for my objections and alternative recommendations vary by site, so this letter will focus on just one location, Homestead Valley.

Chapter 4, Environmental Consequences, Alternative A describes a No Action choice which would continue to allow access to dogs under voice control throughout the entire Homestead Valley site. In contrast, the Preferred GGNRA Alternative C would limit dog walking to no more than 3 dogs per walker, on-leash only, restricted to the Homestead Valley Fire Road and neighborhood connector trails "that would be designated in the future". This Preferred GGNRA Alternative represents a dramatic reduction of access to dog walkers and their dogs in Homestead Valley. The analysis for not keeping Alternative A (No Action) is based on conjecture and flawed assumptions made by someone clearly not familiar with this area who may

not have even visited it once. Specifically:

? The description of Homestead Valley states that "even though this site has low visitor use and low number of citations and incident reports related to dog activities"... "soil compaction and nutrient addition and possible erosion from dogs is assumed to be currently happening along the fire road/trails and in off trail areas throughout the site." The damage which is presumed to be occurring has not been observed, just "assumed". This unsubstantiated assumption is later utilized as justification for significant restrictions in access in the Preferred Alternative. I visit Homestead Valley almost every day. I see very little dog waste which has not been picked up or damage to soil and vegetation caused by dogs. The main environmental damage I can report on is broken glass in certain areas where people congregate and drink, nothing caused by the presence of off-leash dogs.

? Alternative A for Homestead Valley reports that the site has low visitor use. From my personal experience, this is incorrect. Dog owners living within walking distance or 5 minute driving distance (totaling approximately 30 or more residents) hike and run with their dogs all over the site, mostly off leash and have been doing so for many years. This site has been established as the Golden Gate National Recreational Area. The reason that the Homestead Valley area is not utilized as heavily as other park areas is due to its distance from the center of Mill Valley.

? The analysis wrongly concludes that commercial dog walking in Homestead Valley is uncommon I have been hiking with small groups of dogs in the Homestead Valley area for 18+ months every weekday (since I was hired to walk a dog living in the vicinity). I have met at least 8 commercial dog walkers there. I estimate there may be another 8 who come at different times than I do. Assuming each dog walker brings a group of 5 dogs, this represents 40 dogs which I have seen there at various times and another 40 which come at a different time. Each dog coming to Homestead Valley with a dog walker has a dog owner who wants their dog to be exercised and socialized with other dogs. Please note that there are approximately 65,000 dogs in Marin County. Although there are vast open space areas in the County, there are very few areas where dogs are allowed and even fewer areas where dogs are permitted off leash. Homestead Valley is currently one of those places. There are many more dogs visiting Homestead Valley than is acknowledged in the report, yet the current impact on the soil, plants and wildlife is viewed as negligible.

? The section called "Indirect Impacts on Adjacent Parks" for Homestead Valley erroneously states, that there are "26 parks within a 5-mile radius of Homestead Valley". It is clear that the analysis of the "Adjacent Dog Use Areas" was done by on-line research rather than with knowledge of this County. In addition to including small community parks full of toddlers as a

place to take dogs, it lists Park Terrace, a townhome complex where I live, as an adjacent dog use area. Does any location with a "Park" in the name qualify for inclusion? Specifically, note that:

- o Many of the "26 parks within a 5-mile radius of Homestead Valley" are small neighborhood parks adjacent to playgrounds with leash-only rules for dogs. These are not valid alternatives to the "no action" Alternative A for Homestead Valley. It is a misleading statement which minimizes the real impact of the proposed changes on the community. This analysis needs to be corrected!

- o There are only 2 roads which lead to the Homestead Valley site from the City of Mill Valley. They are narrow, steep and windy. Although the distance may be 5 miles, it takes a minimum of 15 minutes each way to reach the nearest alternate park. Time is an essential factor for most people.

- o The closest parks listed as adjacent to Homestead Valley are Old Mill Park and the Plaza. Old Mill Park is a tiny park with a playground located next to a busy street, not an ideal place to exercise dogs. The Plaza is part of the downtown square in Mill Valley, not a suitable dog exercise area either.

- o Bayfront Park is Mill Valley's off-leash dog park. My clients pay me to take their dogs on hikes and to keep them safe. Bayfront Park does not meet those requirements. This park has no shade, thus it can be dangerous for dogs when it is hot. The park has access to the Bay which can result in a dog getting stuck in deep putrid mud during low tide which is an undesirable situation.

- o The Camino Alto Open Space Preserve is the only viable alternative to Homestead Valley. It takes 20 minutes to get there-from Panoramic Highway and 20 minutes to get back. Just consider the gas, wear and tear on the car and time spent by every current dog owner and dog walker if Alternative C replaces Alternative A in the Homestead Valley site. Compare it to the "Long-term minor adverse impact" on soil if Homestead Valley remains under the current rules (Alternative A).

- o Camino Alto Open Space Preserve is very popular with private and commercial dog walkers, so Alternative C for Homestead Valley may result in higher usage of this site and its ability to remain off leash in the future.

In conclusion, there are no acceptable alternate sites for Homestead Valley residents with dogs and their commercial dog walkers. There are miles and miles of land adjacent to their homes belonging to Tamalpais State Park from where dogs are banned and where vegetation and wildlife are completely protected. Homestead Valley is the only viable area available for

daily recreation, exercise and play with dogs.

In summary, I recommend keeping the rules for Homestead Valley as they currently are and changing the GGNRA preferred choice for Homestead Valley to Alternative A, No Action. Since there are more private and commercial dog walkers using Homestead Valley than the analysis assumes and the long-term minor adverse impacts are considered negligible for Alternative A, I do not see any reason why this land cannot be kept for recreation and for unrestricted dog walking as it has been for many years. Homestead Valley is a beautiful area with spectacular views of the ocean and the bay. Dog owners and dog walkers deserve to enjoy this beauty with their dogs without having to spend their precious free time driving 40 or more minutes round trip to another area which allows off-leash dog walking. In the 18-months since I have been taking dogs to Homestead Valley, I have never observed any dogs chasing birds, snakes or other wildlife. I have seen one coyote in the area and based on its size, this animal would pose a greater danger to the dogs than vice versa. There are many mole hills in the open grassy areas in the winter but it would take much time, speed and great skill for any dog to catch one.

If you feel that more regulation than Alternative A, No Action, is needed, I would recommend limiting the number of dogs under voice control to 6 per dog walker throughout the site. There are several open grassy knolls which are perfect for retrieving the ball which are currently utilized by private and commercial dog walkers. Dogs focused on the ball do not pay attention to wild life and do not dig. It is also necessary for dog walkers to have access to the wooded area below. This section of Homestead Valley provides protection to dogs from foxtail danger in the spring/summer months and as a shelter during sudden winter storms.

To increase public awareness and cooperation I would suggest clear signage at the entrances to GGNRA land and in sensitive habitat areas. I also believe that the delivery of educational training programs designed for dog walkers, private and commercial, in partnership with the Marin Humane Society and the San Francisco SPCA, would help GGNRA to get more compliance from the dog walking public. Finally, it may help to post signs such as "Off-leash dog walking allowed" in areas where dogs under voice control are permitted. This way, people who are afraid of dogs or do not like dogs can choose to avoid these areas and spend their time in the hundreds of miles of land where dogs are not permitted. I think that this would help to reduce negative encounters between humans and dogs, complaints made to your organization and liability.

Thank you for your consideration. I would be happy to answer any questions you may have.

Sincerely,

Pavla Sim Paws in Motion Marin LLC Marin Pet Care Association

Correspondence: Frank Dean General Superintendent, GGNRA Building 201, Fort Mason San Francisco, CA 94123-0022

May 19,2011

Dear Superintendent Dean:

I am writing regarding the draft Dog Management Plan and Environmental Impact Statement for the GGNRA. I would like to use and enjoy the GGNRA lands. I have resided in San Francisco since 1981. I no longer go to the Crissy Fields/GGNRA area as it is overrun by dogs and dog owners. It is very clear that a person out to enjoy and observe nature is not able to relax and enjoy the park area. It is necessary constantly to get out of the way of the dogs. The owners leave the dogs off leash. The dogs run wild; the owners go to the shore for a social outing. I have gone there with friends who are dog owners. I grew up with pet dogs. I used to love dogs. The situation in our parks and in this urban area has become intolerable. I do not wish to go to a beautiful natural setting to watch dogs defecate, to see them chase the few shorebirds left, to have to avoid them as they run wild. Animal and plant life of the area are obviously endangered by the dogs' waste. The park lands are a "public convenience" for dog owners who feel they are in a natural setting, that their dogs are part of it, and that they are released from responsibility. Years ago, it was considered polite for smokers to ask if others "minded" if they smoked. It was thought rude to say, "yes;" everyone had to breathe the second hand smoke. I believe we face a similar situation with the pressure group of dog owners now. A small, well-organized pressure group is able to exert force on the general public. I am saddened to think that a decision will be made according to how many letters or comments you receive on one side versus another. A group with a

focus and organization will always make a bigger noise than the general public, which takes a while to bestir itself. It worked for smokers for decades.

I would also like to share with you the truth about the "voice control" myth. On three occasions, I have narrowly missed hitting a dog with my car near the GGNRA and the Marina. This does not include my visits to Ocean Beach or Alta Plaza Park near my apartment. Twice the owners did not even realize that the dog was running in traffic because the owner was busy chatting with other owners. They then started yelling for the dog. The dog, being a dog, kept running. The other time, the owner ran into traffic while calling for the dog. The dog kept changing directions to get away. The owner told me that she always had her dog under voice control! It was extremely upsetting to be forced to steer around the human and the dog wondering how I managed not to be killed by other cars while saving the dog's life.

I feel that it is a great loss in my life not to be able to use the parks with the frequency or freedom of the dogs. I chose to live in this place because of my desire to be close to nature and yet I'm the one being fenced in.

I strongly encourage you to adopt the plan and consider improving it by implementing the following steps:

? All "Regulated Off-leash Areas" should be fenced, at least in areas where fences do not pose risks to wildlife and habitats. Fences provide security for all park users and create clear boundaries so that dog owners are aware of how to comply with park rules. I have ONLY. ONCE seen someone with a dog on a leash at Ocean Beach. The dogs do not know about limitations and the owners do not care. An "in your face" attitude has developed which seems to flaunt itself and dare people to say anything. Of course, no one says anything. It is very intimidating to try to speak to someone who has dogs running wild.

?The Park Service's proposed requirement of 75% compliance is too low. The Park Service should require a minimum of 95% compliance before initiating measures to improve compliance.

?Commercial dog-walking should not be permitted in the GGNRA. This is a commercial activity in the park and the Park Service cannot legally permit it. It is a convenience for the dog-walkers--one of the most beautiful spots on earth an open porta-potty.

?At least some trails in San Francisco should be entirely closed to dogs. Under the current plan, nearly every trail in San Francisco is open to at least on-leash dogs, and those dogs are rarely on a leash. This means no trails are

available for people who prefer to enjoy the outdoors without interacting with dogs and often being forced off the path by the dog.

?Pets are important to some families and communities, but dogs are just one animal that is having a significant negative impact on thousands of other animals and plants, and on many other human visitors. Dogs, no matter how loveable, are not a natural part of the GGNRA ecosystem. The parks should be safe and accessible for all users and protect their natural and cultural resources for the future.

Finally, I must comment on what I have read to be the plan of the off-leash agitators. Their plan is to take their dogs, off leash, into the streets in a "poop in." They intend to make the streets and sidewalks so disgusting that everyone will have to let them have their way. These are the actions of self-indulgent bullies. Only two-year-olds can do that with impunity. The future of a delicate ecosystem like that of the plants and animals of the GGNRA should not be decided in order to appease self-indulgent bullies. I have heard a lot about the dogs' need for great freedom. People who live in an urban area and choose to own dogs should not then impose on everyone else's freedom to enable them to do what they like with their pets. I would like to see the shorebirds back on the beaches in the numbers they used to have. I would like to feel as though I had as much right to walk or run on the beach as my neighbors' dogs. However, I do not have that right. I cannot take visitors to GGNRA. They don't get to run free with the wind in their hair, but the dogs do.

Thank you for the opportunity to comment on the Dog Management Plan. Please continue to be a good steward for the parklands and the myriad life forms that live there.

Sincerely yours,

Leslie Friedman, Ph.D.

TO: Frank Dean, General Superintendent, GGNRA, Park Planning Division

DATE: March 9, Cabrillo High School Public Meeting

I am writing as a Disabled Senior Citizen who uses the public off-leash dog

walking areas to exercise my service dog. I am requesting that you continue the current policies regarding dog use at public parks ' policies that have provided many otherwise unavailable opportunities for seniors and disabled people to use the beautiful, safe facilities..

Fort Funston provides one of the only opportunity for my service dog to get unleashed exercise. Also, like many other disabled seniors, I am able to enjoy being outdoors in our lovely ocean-side parks and to take advantage of the many social interactions we have while dog walking at Fort Funston. Many of the seniors who, like me, use Fort Funston several times a week, have found exercise and friendships along with a profound enjoyment of the outdoors and scenery ' opportunities we would not have without the current policies.

The professional dog walkers have provided me with much needed assistance on many occasions. For example, when I have been unable to exercise my own dog because I was either hospitalized or unable to leave my own house, the professional dog walkers took care of my dog. On days when I have gone to walk my dog, but had difficulty physically navigating the path, the professional dog walkers were always there to give me a hand. I have observed the professional dog walkers frequently encouraging seniors and providing a hand to older disabled people when needed.

There is absolutely no way any disabled senior could manage the steps down to the beach with a leashed dog. Well, there is no way we could manage the steps without a dog, as the stairs are inaccessible to any of us who have trouble walking. You can take a cane, walker, or wheel chair along the path at Fort Funston, as many of us do, but a walker or wheel chair can not go up and down stairs. I don't know what the ADA requirements are for a public park, but Funston is currently accessible as it is now, and will be completely inaccessible if the plans change as proposed.

I read one comment opposing the current of-leash dog policy in which the writer stated that there was no need for such a policy because dog owners could simply take leashed dogs jogging with them. I think I do not need to point out the obvious ' that many of us simply cannot move as quickly as a running, happily exercising dog.

The parks provide many valuable uses for our community, including uses for the human community. I pick up after my dog, keep her out of fenced areas, and make sure she presents no harm to any wildlife (such as birds). There are many of us seniors who count on the dog parks for our personal recreation. It is safe, healthy, and beautiful. Please do not make Fort Funston inaccessible to me, to others like me, and to responsible dog owners and walkers in our community. Seniors like myself are often living on restricted incomes, and it is important for our mental and physical health to have an

opportunity to safely socialize with a like-minded community. Fort Funston has resources, such as plants and geologic resources, but it is equally important not to ignore the social resources; the human social resource should be of equal value as the geologic resources.

This, however, begs the point that we users of the park are in conflict with the environment peculiarities of the environment (bird safety, care of the dunes, growth opportunities for specialized plants). To argue that we are in conflict is a false assumption, and to conclude that off-leash dog use (and the people to whom the dogs are attached) are a danger to the flora and fauna of the park is a conclusion that is ineluctably drawn from a false premise. We all guard the plant life, we clean up after our animals, we value the wild animal life (i.e. the birds); in the 5 years that I have walked, limped, or rolled on the path at Fort Funston, I have never observed a dog harming a bird. Someone posted a picture of a dog chasing an injured bird by the beach. That is a peculiar and one-time activity ' an activity that neither I nor anyone I have ever asked has seen repeated. Please do not draw a false and harmful conclusion from a one-time, media seeking photo op provided by those who look for ways to cause the GGRNA to change its policy.

Please think of the many seniors and disabled people who happily, safely, and carefully utilize the park opportunity, and continue the current off-leash dog policies that have served many of us so well this past decade.

Received: May,24,2011 00:00:00
Correspondence Type: Letter
Correspondence: Special-Status Species, pages 244-256:

1. General. Descriptions of critical habitat are missing for some special-status species that have critical habitat in the GGNRA and inconsistent in the level of detail provided regarding critical habitat among all species descriptions. For this reason, there is no clear nexus between dogs and critical habitat, and the preferred alternatives are not supported.

2. General. Some species descriptions suggest a nexus between dog activity and the species and/or their habitat (tidewater goby, California red-legged frog), but other species descriptions do not (San Francisco garter snake, Coho salmon). Where there is likely to be none, it is not stated. Where there is no nexus, the draft preferred alternative is not supported in terms of direct benefits to these species. Even where a nexus is suggested, there is no evidence of impact to these populations; therefore, the draft preferred alternative does not appear to provide a quantifiable benefit to the species

and the No Action Alternative does not significantly impair natural values

3. Page 245, Paragraph 3. States that "marine mammals are not expected to be affected by dogs", but that stranded marine mammals "may provide an opportunity for contact" with dogs. Given the relatively low number of marine mammal strandings within GGNRA over nine years (as shown in Table 7), it is not rational to assume a nexus between stranded marine mammals and dogs. There is no evidence of a harmful interaction between a stranded marine mammal and a dog. In fact, dog owners are often the first to notify authorities when marine mammals become stranded.

Chapter 4 ' Environmental Consequences

General:

1. On page 30, in Chapter 1, under "Safety of Off-Leash Dogs", studies are cited where data indicated off-leash dogs do not travel far from their owners or trail, and if they did it was a short time and the dogs were rarely seen chasing other dogs, disturbing wildlife and vegetation, or entering bodies of water. In addition, a survey was cited where both dog owners and non-dog owners believed that humans are more disruptive than dogs. This contradicts many of the impact conclusions made for vegetation, wildlife, and special-status species. The conclusions drawn in the impact analysis are not adequately supported by documented evidence of damage to resources (that can be attributed to dogs) in the GGNRA.

2. General habitat types and which sites they occur in are described in the affected environment section; however, the document lacks a map of the specific location of each habitat types within each site relative to existing and proposed dog use areas and trails. The impact assessments in Chapter 4 are divided up by habitat type, yet all of the actual impact assessments identify impacts on "vegetation" with no indication of whether or not a particular habitat type occurs within the area of discussion (LODs and ROLAs). Without documentation of the specific location of vegetation types relative to dog use areas, conclusions of impacts on these resources are not adequately supported. For example in the wetlands section the Draft Plan/DEIS describes impacts to vegetation along trails within six feet on either side; however, there is no evidence to support the claim that wetlands actually exist adjacent to the trails. In those instances, the wetlands impact analysis is inaccurate.

3. The analysis of the impacts to vegetation lacks empirical evidence of the current impacts caused by dogs. Information is given as to usage and the number of violations but does not site specifics about damage caused by dogs as a result of these violations. Without evidence of the occurrence of impacts caused dogs, impact conclusions made are not adequately

supported.

4. For a number of the analyses of Alternatives B-E, the Draft Plan/DEIS states that the area of impact is previously undisturbed. These claims are false as dogs are currently allowed in those areas and dog use would continue under Alternative A, the No Action Alternative.

5. The impacts addressed in Alternatives B-E are assessed based on the assumption of compliance. Alternative A is not assessed this way. For example, if dogs are required to be on leash under Alternative A, the impacts are assessed based on impacts caused by dogs which are off-leash and noncompliant. Alternatives B-E then assesses impacts based on the assumption of compliance and therefore the impacts are reduced even though the leash-law regulation is the same under all alternatives. Assessing impacts based on identical regulations with different assumptions is inaccurate. There is no information given as to why compliance under Alternatives B-E cannot be done under Alternative A. The current GGNRA management plan identifies public education of GGNRA resources as important and could be accomplished under Alternative A.

Introduction (pages 289-290):

1. The compliance-based management strategy assumes that noncompliance is causing negative impacts on GGNRA resources. As commented in Chapter 3, this assumption is not supported by adequate data from GGNRA sites. This strategy (page 290, paragraph 2) "is designed to return impacts to a level that assumes compliance" and "provide beneficial impacts where dog walking is reduced or eliminated". There has been no baseline given to quantify a "level that assumes compliance"; therefore, any potential impacts from dogs cannot be measured or used as a basis for selecting alternatives.

2. The Draft Plan/DEIS states that dogs and humans have been active in these lands for at least the past 40 years (pre-1970s), and that visitation has been consistent over the past 20 years, and will likely remain consistent in the next 20 years. Page 290, paragraph 5, also notes that visitation is not expected to increase over the next 20 years, and that this is "similar how it has been operating over the previous 20 years. Therefore increased visitation should not result in cumulative impacts to GGNRA resources." The basis for assuming that resources have been negatively impacted over the past 20 years and will therefore benefit over the next 20 years with substantially less access for people with dogs has not been established.

Vegetation:

1. Page 545, Paragraph 2 ' the EIS includes no discussion of what "additional actions" would potentially have adverse impacts on vegetation

and what types of impacts. Text also states that "mitigation for these projects would reduce the potential for impacts." However, there is no discussion as to what kind of mitigation would occur and how it would reduce impacts. Therefore, no measure of a quantifiable reduction of impacts can be determined by mitigation efforts. For projects outside of GGNRA, it is assumed that mitigation would be applied. There is no evidence to support this assumption. More specific information is needed to adequately assess and comment on impacts. This comment applies to this same text where it is repeated in the cumulative impact analysis throughout the section and the wildlife and special-status species sections.

2. Page 546, Alternatives B & C ' dog walking restrictions are the same as in Alternative A. There are no data that supports a change in the level of impact as a result of these alternatives.

3. Page 584, Alternative B ' states that the rocky intertidal plant communities have not been previously disturbed. This is inconsistent with Alternative, A which states that dogs could access the rocky intertidal areas. The inconsistency of the baseline level of disturbance prevents an accurate conclusion as to the potential for impacts caused by dogs.

4. Page 597, Cumulative Impacts, paragraph 3 ' this paragraph does not make sense. The text states that adverse impacts from dogs combined with beneficial actions balance out resulting in negligible impacts. Cumulative impacts should be revised to indicate they would not be long term, major and adverse.

5. Page 605, Alternative A, paragraph 1, states that dogs can affect the rocky intertidal vegetation. No evidence has been provided to support that dogs are presently having adverse impacts on this vegetation.

6. Pages 607-08 and 666-667, Alternatives B & C ' these alternatives mention the Polywog Path and ponds. There is no discussion of the significance of this path or the ponds or the potential impacts of these areas under Alternative A so the impact conclusions relative to the baseline are not clearly presented.

7. Page 619, Alternative A, states that physical damage and nutrient addition from dogs is assumed to be currently happening; however, there are no data presented that supports this claim. Other impacts described seem overstated considering low visitor use. Because current conditions have not been adequately established, there are no quantifiable changes expected from the Preferred Alternative over the No Action Alternative.

8. Page 632, Paragraph 2, states that dogs would impact coastal scrub, chaparral and grassland vegetation. There is no evidence provided to support

the occurrence of this under existing conditions and therefore, no quantifiable benefit expected from the preferred alternative over the No Action Alternative.

9. Page 634, Alternative C, paragraph 1 ' There is no evidence that dogs confined to a ROLA increase impacts to adjacent habitat. Without establishing the current level of impacts from dogs in ROLAs, no quantifiable change can be expected from the preferred alternative over the No Action Alternative.

10. Page 645, Alternative A, paragraph 1 ' "...viable plant communities exist." Data are lacking as to the type of plant communities that exist in the areas adjacent to the trails and fire roads in order to clearly describe suggested impacts.

11. Page 658, Alternative A, paragraph 1, states that several threatened and endangered plants grow in serpentine soils. There are no data to support the presence of these species at this site. This information is needed to clearly describe suggested impacts.

12. Page 698, Wetlands and Aquatic Habitats, General Comment ' many of the impacts to wetlands are based on six-foot corridors adjacent to trails. There is no mention of where exactly wetlands are located within each site and whether or not they occur within six feet of the trails. Each impact just says "vegetation adjacent to trails" which is not specific to wetlands or aquatic communities in which this section is solely addressing. Without evidence of the exact locations of wetlands and aquatic habitats within each site, no assessments can be made as to the level of impacts of the preferred alternative over the No Action Alternative.

13. Page 740, Native Hardwood Forests, General Comment ' impacts to this habitat by dogs would vary by maturity of the trees. All impacts seem to just state "vegetation" which does not clearly describe suggested impacts.

14. Page 740, Alternative A ' Data are needed as to the maturity of the trees in order to assess the level of impacts caused by dogs under all alternatives. Dogs would not be able to trample mature trees.

15. Pages 769-774, Alternatives B-E, states that riparian vegetation along trails would be impacted. There is no evidence to indicate that riparian vegetation occurs along trails and therefore, no quantifiable changes in impacts can be expected from the preferred alternative over the No Action Alternative.

Wildlife (pages 791-1108):

1. General. It is assumed throughout the analysis that marine mammals and shorebirds would suffer negative impacts from off-leash dogs and that birds would suffer negative impacts from on-leash dogs. There is no evidence to support this assumption. As noted in comments above, a disturbance is not the same as an impact. NEPA defines "effect" or "impact" as requiring a likely causal consequence (40 CFR ' 1508.8). Under NPS and GGNRA policy, as explained in the Draft Plan! DEIS (page 35), the impact would likely need to impair the natural values afforded protection under applicable plans or policies. Under NEPA, the significance of that impact needs to take into account context and intensity (50 CFR ' 1508.27). Because current conditions have not been adequately established, there are no quantifiable changes expected from the preferred alternative over the No Action Alternative.

2. General. For preferred alternatives in coastal areas that allow dogs on leashes, it is stated that on-leash dogs could still disturb shorebirds by barking or presence; however, the impacts are determined to be negligible. In other sections, it is suggested that barking and presence of off-leash dogs would result in minor to adverse moderate impacts. Again, because the potential level of disturbance has not been clearly established, there is no basis for assuming the presence of dogs will have significant adverse consequences relative to other factors (such as people or predators) or to quantify changes expected from the preferred alternative over the No Action Alternative.

3. General. In some areas, the difference between the No Action Alternative and preferred alternative is off-leash and on-leash use. Long-term minor to moderate impacts are expected for off-leash dogs, and long-term minor impacts are expected from on-leash dogs, although the difference in disturbance to wildlife between on- and off-leash dogs under voice control has not been established. Physical damage to nests and habitat and wildlife chasing is cited as a moderate adverse impact; however, the level of current damage is not known. The data presented in Appendix G further indicate limited interactions over time. This is noted for:

- o Homestead Valley, Alta Trail, Oakwood Valley, Marin Headlands, Fort Baker, Baker Beach and Bluffs, Lands End, Mori Point, Milagra Ridge, Pedro Point coastal scrub, chaparral, and grassland habitats.
- o Fort Baker forest habitat
- o Marin Headlands outside of LOD area riparian habitat
- o Fort Miley, other coniferous community

4. Throughout the analysis, Alternative A (No Action) assumes noncompliance, while the other alternatives assume full compliance with dog restrictions (which leads to a "long-term minor adverse impacts" conclusion for Alternative A and a "negligible" conclusion for the preferred alternative). In some cases, the only difference between Alternative A and

the preferred alternative is the assumption of compliance. When proposed dog management is the same for a given area under two or more alternatives, the impacts should also be the same. Many of the differences in impacts are based on assumed compliance under the action alternatives; however, as noted above, an unbiased comparison would assume compliance for all alternatives. This is noted for:

o Stinson Beach (coastal) o Crissy Field (outside of ROLA - coastal and wetland) o Baker Beach and Bluffs (outside of ROLA - coastal) o Mori Point (coastal and wetland) o Oakwood Valley (outside of ROLA - forest) o Muir Beach (riparian)

5. Page 794, Duration of Impact (same comment for page 1112 of Special-Status Species) "The assumption that "all natural resources" will experience short-term impacts during the education and enforcement period, regardless of the alternative chosen, is not supported. It may be accurate to state that the existing conditions will continue during the education and enforcement period of an adaptive management plan. The section goes on to note it is "expected that compliance and associated adverse impacts would improve gradually and impacts on wildlife would then become long-term." This expectation is not supported by the information provided in Chapter 3. There are little data or descriptions of current adverse impacts; therefore, there is no baseline provided that would indicate improvement under the preferred alternative. The assumption that impacts will become long-term (described as persisting for the next 20 years) is also not supported, given the lack of adequate, quantifiable baseline conditions.

6. Pages 796-797, Impacts Common to All Alternatives ' prey species are adapted to fleeing from predators, whether dogs or any other. Although the Draft Plan/DEIS labels this as harassment (based on a definition in the Endangered Species Act, which does not appear to be the appropriate standard), it would nevertheless not be expected to impact the species. Even if a species avoids near-trail areas because it has adapted to the presence of dogs (a potential predator), it does not mean that species is experiencing an adverse impact. The Draft Plan/DEIS states that "actual direct injury or mortality to wildlife by dogs (on or off leash) is rare," so any potential long-term, adverse impact from this "harassment" is not expected. The studies currently cited are not supportive of the preferred alternative ' it is not unusual for a rodent (marmot) or bird to react to a predator.

7. Page 797, Paragraph 3 ' a study is cited concluding that "off-leash dogs have no impact on the diversity or abundance of birds and small mammals because these species are fairly tolerant of... human activity," which indicates the No Action Alternative would not significantly impair natural values. o The results of the study by Shulzitski and Russell (2004), is cited in support of dog restrictions; however, this study appears to be biased. The

restricted area was restored with native vegetation, while the unrestricted area was not restored. Wildlife was more abundant in the restored area, but this may have been due to the re-planted native vegetation ' there is no evidence to suggest that restricting dogs caused an increase in abundance. The observation of a dog barking at a fox (whose behavior remained unchanged) at Fort Funston supports the argument that wildlife in GGNRA are acclimated to dog presence and that the No Action Alternative would not significantly impair natural values.

8. Page 800, Paragraph 2 ' "When compliance is assumed, management alternatives that would prohibit dogs from accessing wildlife habitats would eliminate disturbance to wildlife from dogs..." The Draft Plan/DEIS states that GGNRA visitors sometimes access restricted areas, but these occasions are not quantified, nor is are the baseline conditions in these areas provided. There is no evidence to suggest wildlife would experience benefits from prohibition associated with the selected alternative. Although compliance should be assumed for all alternatives, there will likely be some non-compliance by a various visitors, with or without dogs. Because perfect compliance cannot be assumed, and because the current conditions are not known, it cannot be concluded that the alternatives would provide a benefit to wildlife over the No Action Alternative.

o "Prohibiting dogs from areas also prevents habitat degradation and loss of species that are sensitive to the presence of dogs" this has not been supported in the text. Loss of species from dogs in the GGNRA has not been presented. While the Draft Plan/DEIS presents a few studies that suggest certain species are "sensitive" to dog presence, it presents other studies that found little or no sensitivity to dog presence; therefore, the preferred alternative is not supported.

9. Page 802, Compliance-Based Management Strategy

o Because some noncompliance is already occurring, it is unclear why supposed impacts would increase and potentially become "major adverse" if noncompliance continues, especially given the relatively stable visitor level in recent and projected years. Again, the baseline conditions, including 40 years of use by people with their dogs, have not been established and any impacts stemming from noncompliance have not been outlined; therefore, there is not adequate support to conclude major adverse impacts.

o There is no description of how or if newly restricted areas would be monitored for a change in natural resources. Because the baseline conditions have not been established, changes in management based on noncompliance should be approached with care.

10. Page 809, Alternative A ' it is unclear how shorebirds, gulls, terns, and

marine mammals would experience moderate adverse impacts from dogs, or how "occasional to frequent disturbances would occur", given the documented low shorebird abundance, and no historic incidence of dogs affecting marine mammals at Muir Beach. See prior comment on marine mammals (page 245).

11. Page 812, Alternative D ' it is unclear how species will benefit from total exclusion, because it hasn't been established that species are currently being negatively impacted on Muir Beach. There would likely be "no change".

12. Pages 825-826, Alternative A ' the rationale for the "long-term minor adverse impacts" conclusion does not mention mission blue butterfly habitat; however, for the preferred alternative, beneficial impacts are assumed because dogs would no longer be allowed on Battery Yates Trail (near mission blue butterfly habitat).

13. Pages 856-857, Alternative A ' the snowy plover resting areas have been monitored since 1996 with no evidence to suggest that preferred habitat use has changed (the snowy plover section of Chapter 3 states that birds continue to use the same two resting areas), or that roosting and foraging behavior is being adversely affected by dogs, yet this is given as rationale for long-term moderate to major adverse impacts.

14. Page 971, Alternative A, states that on-leash dog walking is currently allowed at Sweeney Ridge. There is no baseline condition given to quantify any supposed impacts currently occurring at Sweeney Ridge that would lead to a "no impact, beneficial change" under the preferred alternative (prohibiting dogs from Sweeney Ridge).

15. Pages 995-1001, Muir Beach Lagoon ' this analysis seems to apply only to the lagoon area for Alternative A, which is already restricted. Noncompliance is assumed and minor to moderate adverse impacts are cited for Alternative A. The preferred alternative (deemed negligible impact) prohibits dogs "from the Muir Beach site"(is this also referring to the lagoon area only?) and the only difference between these two alternatives is the assumption of compliance See first bullet under Comment 11 regarding noncompliance; the preferred alternative is not supported simply by assuming compliance.

Special-Status Species (pages 1109-1291):

1. General. Suitable habitat for the plant species discussed in this section occurs at other sites which were not analyzed in this section. The Draft Plan/DEIS lacks a discussion as to specifically why certain sites were chosen over others for analysis.

2. General. The microhabitats of the special-status plant species are very specific. The Draft Plan/DEIS lacks information delineating the location of the potential habitat within each site. This is necessary to establish a baseline for the current level of impacts by dogs in these areas and accurately assess the potential impacts based on the alternatives. This information is essential and capable of being obtained.

3. Page 1112, Assessment Methodology ' analysis of vegetation changes does not account for aquatic critical habitat loss. Was loss of critical habitat for aquatic species measured?

4. Pages 1117-1123, San Bruno elfin butterfly ' here, Alternative A and the preferred alternative do not differ (on-leash, negligible impact). The impact of Alternative A appears to assume compliance with leash law, and it is stated that "historical use of this area shows no indication that the host plant or butterfly is being affected by dogs;" therefore, the No Action Alternative would not significantly impair natural values.

5. Page 1124, paragraph 2, mission blue butterfly, cites localized, perceptible damage to habitat on trail beds, roads, and adjacent areas "as a result of damage to the vegetation from dogs", but there is no description of how this was assessed. These areas are used by hikers, runners, naturalists, bikers ' how is damage from dogs isolated from these other potential sources? The preferred alternative expects negligible/beneficial impacts by eliminating use of social trails by dogs, but it does not appear that continued human use was considered in this conclusion (same comment applies to conclusions for other analyzed mission blue butterfly areas: Oakwood Valley, Marin Headlands). As stated previously, baseline conditions on these trails have not been adequately established; therefore the negligible/beneficial impacts cited under the preferred alternative are not supported.

6. Pages 1147-1158, mission blue butterfly, Fort Baker and Milagra Ridge ' as with many examples in the Wildlife section, here Alternative A assumes noncompliance with leash laws (minor, adverse impacts) and the preferred alternative assumes compliance (negligible to minor, adverse impacts, with habitat restoration programs). This section should be revised to assume the same level of compliance. See previous comments regarding noncompliance.

7. Pages 1165-1172, tidewater goby ' Alternative A states that Rodeo Lake is currently closed to dogs, and the lagoon is closed to dogs and humans. The proposed fence "will deter but not physically exclude dogs". It is explained that dogs in voice-controlled areas are not very well controlled and have been observed in the lagoon. Impacts range from negligible to long-term, moderate adverse. Under the preferred alternative, Rodeo Lagoon

would remain closed and dogs are still able to access the area; compliance with leash restrictions and ROLAs is assumed. The impacts under the preferred alternative are expected to be negligible ' again, this conclusion seems merely based on an assumption of compliance, when the level of use and potential for noncompliance is the same as under the No Action Alternative. This section should be revised to assume the same level of compliance. See previous comments regarding noncompliance.

8. Pages 1172-1191, Coho salmon and steelhead trout ' as with many examples in the Wildlife section, here Alternative A assumes noncompliance with leash laws (minor, adverse impacts) while the preferred alternative assumes compliance (negligible impacts). This section should be revised to assume the same level of compliance. See previous comments regarding noncompliance.

9. Pages 1191-1219, California red-legged frog, Muir Beach, Marin Headlands, Mori Point, Cattle Hill, Pedro Point ' as with many examples in the Wildlife section, here Alternative A assumes noncompliance with leash laws (minor, adverse impacts) while the preferred alternative assumes compliance (negligible). This section should be revised to assume the same level of compliance. See previous comments regarding noncompliance.

10. Pages 1219-1240, San Francisco garter snake, Mori Point, Milagra Ridge, Cattle Hill, Pedro Point' as with many examples in the Wildlife section, here Alternative A assumes noncompliance with leash laws (minor, adverse impacts) while the preferred alternative assumes compliance (negligible). The text states (page 1230) that there is no documentation that the current level of compliance with on- leash laws (No Action Alternative) is impacting this species. This section should be revised to assume the same level of compliance. See previous comments regarding noncompliance.

11. Page 1240, western snowy plover ' states that walkers who traverse the beach area currently impact plovers. As described in Comment 6, it is difficult to distinguish between dog and human activity. The basis of the impacts conclusion is based on the assumption that dogs currently impact snowy plovers at Crissy Field, but there is no evidence to support that removing dogs from the area will result in a change in the plover population. The preferred alternative assumes compliance and negligible impacts by closing the site to dogs. This section should be revised to assume the same level of compliance. See previous comments regarding noncompliance. There are data provided of observations of dogs chasing birds, but no correlation between these events and impacts to the species (see prior comments on Chapter 3). These observations have been made since 1996, but the plovers' use of preferred habitat does not appear to be limited. There is no obvious nexus between dog chasing and loss of species or habitat, therefore the "moderate adverse impacts" under the No Action Alternative

are not substantiated.

12. Page 1264, bank swallow ' as with the Western snowy plover, current impacts are considered minor to moderate based on occasional to frequent perceptible disturbances to the species from dogs; however, the description of Alternative A mentions only that dogs have been seen in the bluff area. There is no apparent nexus between dog activity and actual short-term or long-term impact to bank swallows.

13. Page 1277 ' This is contradictory ' there is no evidence that the spotted owl exists at the site; however, impacts are deemed adverse under the No Action Alternative. If it is because potential habitat exists, then it seems (page 1282) that no change would occur under the preferred alternative, in which dogs remain leashed. This section should be revised to assume the same level of compliance. See previous comments regarding noncompliance.

14. Page 1291 ' according to the table in Appendix H, suitable habitat for the listed plant species exists at many sites. There is no discussion of what rationale was used to determine which sites were considered in this analysis.

15. Page 1292, 2nd paragraph ' there is no evidence of dogs currently accessing the dune scrub vegetation presented to support the impact conclusion. Without adequately establishing a baseline for current impacts, no quantifiable changes in impacts can be expected from the preferred alternative over the No Action Alternative.

16. Page 1296, Alternative D, states that impacts to lessingia adjacent to the trails in the LOD area would occur in areas that "have not been previously disturbed." However these areas are currently open to dogs, therefore any impacts from dog use would already be occurring. Therefore, the level of impact is misrepresented. Similar statements occur throughout this section including pages 1305, 1316, and 1323.

17. Page 1306, Alternative C, conclusion table, states "if potential San Francisco lessingia habitat is located in the LOD area." Locations of the potential habitat should already be known, and impacts should be based on whether or not potential habitat is actually present. Without data supporting the location of lessingia habitat, no conclusions can be made regarding the potential impacts.

18. Page 1311, Paragraph 1, states that the greatest benefit to the species would occur if the Daly City genotype is reintroduced at Fort Funston. There is no evidence given that the implementation of this is expected. This would be relevant to the proposed management of the area and concern for

potential impacts.

19. Page 1312, Alternative A, states that the widening of the Coastal Trail would increase impacts to Presidio manzanita. This is inconsistent with the cumulative impacts on page 1313, which states that the trail realignment would avoid the manzanita and provide long-term protection. 20. Page 1325, Paragraphs 1 and 2 ' these two paragraphs are inconsistent with each other. Paragraph 1 state impacts to Marin dwarf-flax adjacent to the trails would be long term, minor and adverse. In paragraph 2, it states that the plant exists in soil outcrops that are inaccessible and that physically restraining dogs would protect the habitat and restored population.

21. Page 1329-1332, Alternatives B-E ' dogs are prohibited from Crissy Marsh under the No Action Alternative as well. dogs are prohibited from the marsh under all alternatives, impacts should be the same. This section should be revised to assume the same level of compliance. See previous comments regarding noncompliance.

22. Page 1333, Hiclan's Pontentilla ' No justification is given as to why only Mori Point and Pedro Point were the only two sites analyzed if no mapped occurrences have been recorded there and potential habitat exists at other sites as well (per the affected environment and Appendix H).

23. Page 1336-37, Alternative C, conclusion table ' the rationale for impacts in the LOD area should be the same as the other Alternative B impacts, based on the text discussion.

24. Page 1342, Alternative C, conclusion table ' the rationale for impacts in the LOD area should be the same as the other Alternative B impacts, based

Mr. Frank Dean Fort Mason, Bldg. 201 San Francisco, CA 94123

Re: Dog Management Plan

Dear Mr. Dean,

I am writing to strongly protest the efforts of the GGNRA in restricting dogs from running off a leash. I 1) oppose the Preferred Alternative as it now stands or any of the plans contained in "Draft Environmental Impact Statement for Dog Management at GGNRA" and 2) strongly oppose including a Compliance-based management strategy (the "poison pill").

I advocate, instead, a continuing dialogue between the GGNRA and SF dog owners. That the number of dogs owned in the city is increasing is indicative that dogs are a vibrant and important part of the lives of residents of San Francisco. The elderly love their dogs as companions, families include their dogs as part of raising their children to know and love dogs; singles love their dogs as companions. Instead of limiting off leash, we need more constructive dialogue around good dog care and management, exercise and humane treatment. A healthy well- exercised dog, like a person, is healthier and happier animal. Limiting off-leash options for dogs limits options owners have for ensuring our dogs have healthy lives. It is ironic and unfortunate that the GGNRA believes that it is in everyone's interest to limit off leash in the GGNRA. Your EIS findings are misguided and will, if implemented, create more congestion for dog owners, less opportunity to exercise our dogs, and finally further undermine the special relationship between owners and their dogs.

The basis for my strong opposition to the proposed "off leash" controls are as follows: 1. Congress created the GGNRA in 1972 to: "to provide public access along the waterfront and to expand the maximum extent possible the outdoor recreation opportunities available to the region." The proposed dog ban appears to be in direct opposition to that mandate. 2. Throughout the plan, NPS calls for balanced use of GGNRA lands by all parties. Your Preferred Alternative and all other Alternatives do not strike a balance. In fact, the National Park Service already prohibits off leash in all National Parks. Many of the GGNRA areas already limit off-leash access to dogs. In response to concerns about the Snowy Plover, over 1/3 of Crissy Field Beach is closed to "off-leash" access. Your "Preferred Alternative" would take away another 1/3 of the beach area (East Beach) and limit used of the Green space. In addition, many of the other areas, such as Fort Funston, are already much limited in off-leash. Finally, it's hard to accept the balance argument when all National Park Service areas are closed to off-leash, the Presidio Trust is trying to enforce greater off-leash, and the City of San Francisco limits off-leash. Slowly but surely, dog owners are losing access to places to take our dogs off leash in San Francisco, the Bay area and across all National Park land. 3. Your EIS indicates that dogs at places such as Crissy Field effectively overrun beach goers and tourists. I take my 80-

pound Labrador to Crissy 5-6 times a week (or to Baker Beach). During the week at Crissy, the majority of users on East Beach or the open Green space are dogs and their owners. When it is foggy, there isn't anyone on the beach or green space except for dogs and their owners/ walkers. Even on weekends (such as yesterday- Memorial Day weekend- there were few tourists or beach goers before 10:30am/ 11:00am. On most weekends, the crowds are on the beach (on a nice day) between 11am and 4/5pm. Dogs are not overrunning these groups; they are enjoying relatively open space. 4. Dogs are important companions to many people in our city and dog walkers are custodians of the land. They walk on it, love it and look after it, picking up trash, reporting dead animals, and any other problems. Dog owners are law-abiding citizens who by their presence on the GGNRA lands discourage crime of all kinds. It is in the interest of anyone who cares about open space to work together - with dog owners, including, believe it or not, bird lovers in protecting our waterfronts. The beaches are largely deserted except for people and their dogs with the exception of weekends and then only when the weather is fine... rare in San Francisco! 5. The complaints from the Audubon Society and the Park Service that dogs are somehow a threat to the coastal areas is ridiculous and vastly overblown. Any instances of dogs harming birds are very rare and unusual; proper dog training can address this. As for disturbing the nesting sights this can be addressed through education and signage. 6. Plants should not take precedence over people in urban areas but live alongside people. We must not forget that we are a city and the same standards of preservation do not apply, as they would in a national park in the middle of nowhere...there must be balance between people and plants. 7. The GGNRA does not appear to be interested in making dog owners responsible for the behavior of their dogs and insisting that of leash dogs are well trained. Would you really rather take the easy path and just legislate against off leash dogs? 8. The GGNRA/ NPS proposal for a "poison-pill" compliance strategy demonstrates little respect for dog owners (who are taxpayers and citizens). Under the "proposed alternative" if no one was on East Beach, and I took my dog out there for a quick run at 7am in the morning, I would be in violation of the GGNRA proposed alternative and contributing to "non compliance". This is absurd and "in my view" and represents overreaching enforcement by the federal government. Big stick enforcement is not appropriate and is wrong.

Finally, I would rather see signs asking dog owners to always be respectful of the other users of the beach and not allow their dogs into the areas where the shore birds nest, an education campaign perhaps. Even a license system for owners to have their dogs off leash where they have to prove that the dog is properly trained (rather like a drivers license) might be a solution.

Another idea is to limit the amount of dogs' one person can take to the GGNRA. I can see the problems when you have 10 dogs per person! These people are running a business; perhaps they should be treated as such. The

rest of us are people who love the outdoors and love to walk in nature and we choose to do it with our faithful companions. We are the GGNRA's greatest allies.

Surely personal responsibility with freedom is better for our society than yet more restrictions and legislation!

This proposed plan is discriminating against one type of person, namely a dog owner; even the coyote has more rights in the Presidio.

Dogs provide so much love and support to humans in so many ways; they need places to run free. A tired dog is a well-behaved dog!

Thank you for your kind consideration,

Yours truly,

Lisa Carey

Frank Dean, General Superintendent GG National Recreation Area Building
201, Fort Mason San Francisco, CA 94123-0022 Dear Mr. Dean:

I am writing to oppose the GGNRA draft dog management plan and "all action alternatives" that further reduce or ban dogs in open spaces. Please keep our open spaces dog-friendly and plentiful.

The GGNRA draft management plan does not provide sufficient evidence to justify such drastic changes to 40 years of healthy dog recreation and does not address the health or well-being of people, dogs or the community. The GGNRA must accommodate both recreation and conservation. Regulations for Yosemite and Yellowstone are not appropriate for an URBAN RECREATION AREA and the courts have upheld the existing 1979 pet policy. One in three households in America have dogs and this plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and more.

Off-leash recreation optimizes exercise and socialization for dogs and improves human health and well-being. Dogs encourage people to walk more which reduces obesity and depression and encourages the flourishing

GGNRA social communities. Injuries or problems are rare particularly in comparison to these benefits.

The Park Service should revise the dog management plan to:

? Recognize dog recreation as a safe and healthy recreational activity and as important to the health and well-being of people, dogs, and communities, especially those in densely populated urban areas.

? Justify any changes with objective, reasonable scientific studies and findings and remove the many exaggerations, speculations, and misleading statements. Don't treat dog recreation as a hazard and nuisance despite facts to the contrary; it's compatible with other urban recreation. ? Keep the current GGNRA dog policy (aka the 1979 Pet Policy) plus add balanced voice-control areas in San Mateo County and new land.

? Start over and study actual dog specific impacts at each site in the GGNRA, and then consider whether there are simpler mitigations (e.g., awareness programs, signage, cliff edge deterrents, barriers, etc.).

? Remove rules that ban dog recreation for all people with dogs based only on violations by others; non-compliance does not equal negative impacts.

I am a mother and legal assistant; I live in Pacifica, California, and want more parks in America to accommodate well-behaved dogs and their families, particularly parks with long hiking trails. We travel with our dog and family and cannot go places that do not allow dogs so we certainly do not go to the typical National Parks. It is horrible that so few parks allow dogs on hiking trails when dogs make so many of us happier and get us out to exercise on a daily basis.

Almost all people with dogs control and pick-up after their dogs. Walking with our dogs is good exercise and makes us and our dogs healthier and safer. On the whole, I find family dogs to be far better behaved than people and have seen no serious safety issue with a well exercised, socialized, and trained dog. This plan only makes it more difficult for people to responsibly care for their dogs and themselves.

I am particularly concerned about my hometown of Pacifica. The main reason I love living here in Pacifica is because it is very dog friendly. Our everyday and favorite place to walk is Mori Point and Sharp Park beach. We have met a lot of other Pacifica residents and their dogs while on our daily walks, which makes us a closer community of people. This is also our dog's favorite place to walk and play and socialize with other people and their dogs.

Dogs actually improve a community and bring people closer. I would not know any of the nice people I now know if I did not have my dog.

Please keep San Mateo County, and particularly Pacifica and other coastal communities, dog friendly. Thank you for your consideration.

Re: Draft Dog Management Plan/Draft Environmental Impact Statement

Dear Superintendent Dean,

The "Compliance-Based Management Strategy" outlined in the DEIS is designed to eliminate dog walking on GGNRA land. It is not a "management" strategy at all; it is an "eliminate dog walking" strategy.

The "secondary management response" eliminates dog walking opportunities in a one-way "ratchet" manner. Management response moves in only one direction: Dog walking rights are reduced or eliminated; there is no way for dog walking rights to expand or to be restored under the DEIS. The medium term goal, and predictable outcome, is to have less dog walking in the GGNRA. The long-term goal is to have no dog walking in

the GGNRA.

There is no other recreational activity in the GGNRA subject to such a punitive "management strategy," in which GGNRA has a built-in mechanism to eliminate the recreation for all visitors if some visitors don't comply with regulations. Once again, GGNRA/DEIS demonstrates that off leash dog walking is still not accepted as a legitimate recreational activity within the GGNRA.

There are reasonable management strategies available to GGNRA to produce high levels of visitor compliance. The most effective: Do not eliminate most of the off leash area in the GGNRA. If reasonable areas exist for visitors to take real walks with their dogs, those visitors are not inclined to walk into unapproved areas. But in fact, all alternatives except Alternative A drastically reduce off leash area in the GGNRA, leaving small ROLAS where a walk is not possible. The small ROLAS also guarantee extreme crowding of visitors and their dogs, changing an important recreational activity into an unpleasant ordeal.

The drastic curtailment of off leash recreation in the proposed Preferred Alternative(s), combined with the punitive, one-way-only "Compliance-Based Management Strategy" is a cynical formula designed by GGNRA to ultimately eliminate off leash recreation.

Another important management strategy would be for GGNRA to examine closely what they perceive to be non-compliance. Why are people in a particular location not complying with a particular regulation? For example: Is signage incorrect? (It is often incorrect in GGNRA.) Is enforcement inadequate? Are the areas and trails not laid out well, contrary to natural foot traffic flow? Would it be more reasonable to connect two off leash areas with an off leash corridor? ... etc.

GGNRA-controlled conditions on the ground influence compliance with regulations. I visited Fort Funston May 14, 2011. There has been no apparent maintenance there for the last ten years: Fences are down or covered by sand; cables are missing; signs are missing, out-of-date, or illegible from weathering, etc. The breeding bank swallows are there, but the presence of the swallows is not indicated in any way; the bank swallow protection area shown on DEIS Maps 16 and 16A-E is not marked. A new visitor could easily be out of compliance and not know it, because GGNRA has not taken normal managerial actions.

GGNRA simply abdicates managerial responsibility when its only solution to perceived non-compliance is to further restrict recreational activity. GGNRA actually proposes to forbid itself to take any reasonable management action that would increase off leash area by even a small

amount.

The "Compliance-Based Management Strategy" incentivizes the GGNRA to do no enforcement or notification of restrictions. Less enforcement will mean less compliance, putting GGNRA in a position to impose further restrictions. Likewise, the less visitors know about restrictions, the less likely they are to comply, resulting in GGNRA's desired outcome of further restrictions.

GGNRA must remove the "Compliance-Based Management Strategy" with its draconian "secondary management response" from all alternatives. Adopt a reasonable and flexible management strategy that confronts problems as they arise and manages them.

Sincerely,

Keith McAllister Oakland, CA 94611

RE: GGNRA Draft Dog Management Plan EIS- I support Alternative D, throughout GGNRA parklands

Dear Superintendent Dean:

Thank you for the opportunity to comment on the above named Plan EIS. I am very appreciative of the time and care GGNRA took to make sure all stakeholders were part of the decision making process and that the Park provided the community with multiple options for dogs to visit the Park.

I helped plant Crissy Field and was both a Presidio Park Steward and a volunteer at the Presidio Native Plant Nursery for about a decade starting in 1998, and, as such, am very familiar with the rich cultural and astounding natural resources of the park. In recent years it has been very exciting to

learn that species thought gone forever from the Presidio are being rediscovered. And in the case of the Western Bluebird, habitat restoration has enabled this stunning creature to return to the Presidio. Habitat restoration all over GGNRA is an enormous enterprise, involving hundreds of thousands of hours by volunteers; an enterprise underlining the great regard the community has for the continuation and protection of the wildlife and the multitude of plant life, and all the biota, that this park shelters.

The Park is mandated to protect its wildlife and their habitat from detriment, and to preserve their assets, unimpeded, for the enjoyment of the generations to come. As a long term volunteer who has personally witnessed more bad behavior on the part of dog owners than I could have imagined, I have come to the conclusion that many people who own dogs don't all care enough to train or restrain dogs from doing damage to our National Park.

Therefore, I support implementation of Alternative D; the most protective alternative of the park.

In addition to my support of Alternative D, I would like to urge added ways protect the park and ask that the following factors also be placed into the Dog Management Plan: ? Wherever dogs are allowed on leash on pedestrian walkways, the dog must be on a leash short enough to restrain the animal to the heel of the dog walker (as opposed to be able to range out from the dog walker on a 6 foot leash). This restriction will reduce the probability of tripping other park users including, pedestrians of all ages and abilities, bicyclists, runners, and all other recreational users on pedestrian walkways, and increase the safety of everyone. . ? Implement compliance-based adaptive management that requires at least 95% of dog walkers to comply with the new regulation. A 25% rate of non-compliance will be difficult to monitor, is unfair to dogs and dog walkers who are well trained and frankly, sounds unenforceable. Additionally, in my opinion the time for allowing out of control dog walkers and their dogs more time is the last thing we want right now if the intent is to improve safety, to protect the species in the park, and improve the park user experience. ? Limit dog walkers in the park to walking 1 dog at a time as one individual is incapable of restraining and managing multiple dogs at the same time should a problem break out. ? Do Not Allow Professional Dog Walking at all, anywhere in the Parklands. Professional dog walking in a national park is not a precedent GGNRA wants to set and it is contrary to a premium visitor experience where protections and conservation of resources is the Mission. ? If the Park does allow professional dog walkers in the Park with up to 3 dogs (and I do not wish in any way for this to occur), the dog walker should be required to meet the following criteria: a. wear visibly, a current SF business license, in bold print, enabling them to walk dogs. b. Place a placard in bold print in their vehicle window, facing out, showing a current SF business license, enabling them to walk dogs c. Carry proof of current SF dog license and

rabies inoculation for each dog walked and show to park law enforcement on demand d. Be allowed to walk only those dogs who have been trained to voice, whistle or hand command and be able to demonstrate this behavior to park law enforcement on demand. e. Not be allowed to walk specified, notoriously aggressive or hunting breeds. f. Require a performance bond to be on file with the Park which will be used to defray all expenses suffered by the park by malfeasance, accidents, and rule infractions by the professional dog walker. g. The Park will provide a hotline/response team for the public to report infractions. h. The Park will provide the proper level of enforcemen to achieve their agreed to rules and goals ? Require all dog walkers to maintain proof of current license and rabies inoculation while walking dogs in approved areas of the park and show on demand to authorized park enforcement personnel as requested. ? Require all ROLAs to be enclosed to protect park users, wildlife and other dogs ? Limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitat ? Do not allow any dogs on trails anywhere in the Park. ? Post prominent signage educating the public about dog walking, the necessity of having limits and the rules around dog walking ? Set up a reporting/response system to handle citizen reports of infractions. ? The Park to provide the level of enforcement required to carry out the policies established. Jan Blum

Re: Draft Dog Management Plan/Draft Environmental Impact Statement

Dear Superintendent Dean,

Hello, I am writing today to express my concern about the proposed Dog Management Plan for San Francisco. I am a long time San Francisco resident. The fact that I am taking personal time, on a Sunday afternoon, to write to you should tell you how important this matter is to me.

I'm going to keep this letter brief, but I sincerely hope my words do not go unread or unheard.

I, along with many other people choose to live in San Francisco for several reasons including diversity and freedom. City life promotes diversity-

culturally, environmentally and otherwise. If I wanted my neighbors to be exactly like me I'd live elsewhere.

It has been proven that a well-behaved dog is a well-exercised dog. If we take away the few options currently available for pet owners to take their dogs for a daily run I fear we are going to have some rather unruly dogs. Then what? Have you read any of Temple Gradin's work? Others have voiced similar opinions about the domestication of dogs as well.

I agree that dogs should be kept from fragile vegetation and I understand that the future growth and development should not be impacted by the use of dogs and their owners. Perhaps some signs indicating where off leash and on leash boundaries are would be beneficial for all. It wouldn't hurt to educate users as to what specifically is at risk in the on leash areas.

I live within walking distance of Alamo Square and I walk through the park on a daily basis. I can attest that many visitors and San Franciscans go to the park "just to get their dog fix". Often times I hear people say, I can't have a dog in my building, so I come here everyday. Parents often show appreciation for the opportunity to teach their children how to appropriately interact with dogs of all shapes and sizes. The dog owners I see are responsible and clean up after their pets and watchful to ensure enjoyment for all at Alamo. It seems the proposed plan is one that will punish the majority of people (and pets) because of a very small number of uneducated, insensitive, or irresponsible minority.

As I understand it, the proposed dog management plan will eliminate dog-walking (on and off leash) access for all new lands. What a catastrophe this would be. It almost seems ludicrous to me to propose a plan limiting growth and development which will forever prevent, opportunities to foster healthy interaction between people and pets. Prejudice is born from inexperience and lack of knowledge. By limiting people's exposure to dogs we are not allowing people to develop the necessary skills to cohabitate with these domesticated animals. I agree that living in a city environment means that certain expectations must be followed. It is crucial that dogs are well trained and know how to behave in order to peacefully co-exist in an urban environment and still be allowed to get adequate exercise and socialization. Towards this end I have a few suggestions for your consideration: 1) Dog owners who enroll their dog into a reputable training course and pass the course requirements would get free dog licenses for San Francisco County (after providing appropriate health documentation from a licensed vet). 2) Reputable training courses would pay a fee (which they could collect in their program fees) to the city to run their dog training class here (ie: for each dog enrolled in Company X's Puppy 1 class there is a service fee of \$5.00-10.00/dog-most classes have about 5-10 puppies. For all dogs enrolled in Company X's Puppy 2 class there is a \$3.00-\$5.00 service fee-

for any dog enrolled in classes beyond the level 2 certification (ie: obedience training or Canine Good Citizen Certification) there is a \$2.00-\$5.00 fee. 3) Folks with dogs without a license would be fined. For each subsequent infraction the fee would increase.

I believe the plan I'm proposing (or something similar) would solve many problems. More dog owners would be inclined to take their puppy through a training course, which would foster better dog ownership and dog obedience. The city would earn some revenue (the majority of dog owners I encounter do not seem to have their dogs licensed with the city). Finally, we would be preventing (or at least reducing cruelty to dogs) by discouraging those who cannot afford to feed themselves (and their dependents) from taking on the burden of caring for a dog.

I fully expect that the San Francisco officials I've voted for can come up with some other solutions which would be of a similar approach to the ones I've proposed which would be beneficial for all. My experiences have shown me that there are many areas in the GGNRA where the existing 1979 Pet Policy has been working, and where sensitive species are not present and visitor conflicts do not occur or are very infrequent. Please won't you take into consideration some of the points I'm taken the time to outline here?

Respectfully,

Annemarie Rossi San Francisco, CA 94115

CC: Representative Nancy Pelosi, 8th Congressional District of California, House Minority Leader, U.S. House of Representatives Ken Salazar, Secretary of Interior Jon Jarvis, National Park Service Director

Let's get creative and make this a win/win for the City and residents of San Francisco!

Frank Dean, General Superintendent Golden Gate National Recreation Area
Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not

based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. Exclude speculative, exaggerated, biased, or misleading statements and studies. Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.). Enable professional dog walking and align any professional dog walking rules with county or city regulations. Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

These are my personal comments and observations regarding this plan: (here's where you fill in your own personal story and what you've seen when you've been out at the GGNRA)

Sincerely,

Steven Lyss San Francisco, CA 94107

Re: GGNRA / DEIS / Baker Beach

Dear Mr. Dean,

I am a sixties-something resident of San Francisco (Mt. Davidson area), and have been a very regular (almost daily) visitor to Baker Beach, where I walk my two small dogs early in the morning. I have been doing this for over 7 years. I have developed opinions about the state of Baker Beach based on those 7 years of experience.

I am very distressed to contemplate the changes which would arise if the proposed changes for Baker Beach were implemented. I love my dogs, and the dogs love the beach, but I also love our total surrounding environment and have given thought to changes to the present rules for Baker Beach which could satisfy many of the various demands from differing groups. I would propose:

Timed sessions for off-leash walking. Why wouldn't this work? I have never heard anyone give a response to this proposal. With this idea, dogs could play off-leash on Baker Beach from, say, 6 a.m. to 11:00 a.m. After that, the rule could be dogs only ON-leash, or no dogs at all. This would allow families who want to picnic without canine intruders, and any other people who would prefer to have little or no interaction with dogs to enjoy the beach. Patrols would not be necessary for those early morning hours. And during those early-morning off-leash hours, rules would be clearly publicized that all dogs needed to be under voice control. Off-leash dogs who were aggressive or behaving badly in any way could be banned or cited.

Protection of vegetation: It would not take much to make the vegetation which lies between the beach and the parking lots inaccessible to dogs. And it would not have to look ugly ' just a few more ropes. We have not been informed of any particular animals or birds that are threatened by dogs at Baker Beach. Nor has there ever been a study proving that dogs are more injurious to the, environment than their human owners,

My years of experience at Baker Beach have led me to the conclusion that it is actually the dog owners who have consistently been the true guardians of the beach. We are the ones who not only pick up our dogs' waste, but other debris off the beach and haul it to the trash containers. There are irresponsible dog owners, but they are few in number. A public relations -

public awareness campaign would be very valuable in educating all dog owners to their responsibilities.

It is difficult for me to imagine where all those Baker Beach dog owners will take their dogs if the proposed changes are made. We learned how closing just Ocean Beach (because of a tsunami alert) impacted Stem Grove ' from 60 dogs to over 200. Our dog runs tend to be small, and if their increase dog:populations were greatly increased, it seems only obvious that there will in dog aggression.

We live in a small geographical space in San Francisco, and we have a lot of dogs.. Baker Beach has very few visitors (remarkable for such a beautiful place) and neighbors a no-dogs-allowed beach next door (China Beach).

Please consider my suggestions, and also, please let me know if I can be of any further assistance.

Thank you for your consideration.

Kindest regards,

Janice M. Gonsalves

Re; Draft Dog Management Plan/Draft Environmental Impact Statement

Dear Superintendent Dean,

I am a San Francisco Resident that has, since moving to San Francisco enjoyed a number of the GGNRA areas under consideration ' in Particular Rodeo Beach in Marin, Lands End, Baker Beach, Crissy Field, Ocean Beach and Fort Funston in San Francisco.

I am also a ten year volunteer at the Marine Mammal Center in the Marin Headlands, I know and appreciate your work, and that of Brian O'Neill, for all the support the GGNRA has given to the TMMC over the years.

However I am dismayed at the DEIS and much opposed to the changes proposed for both generic and specific reasons which I will try to address.

? I have a very active dog, a Border Collie rescue Mix, and being active it requires DAILY running. This running is done by myself and/or our Dog Walker. She is insured and Bonded and, and I am sure of her professionalism. Everyone who knows dogs knows that a tired dog is a relaxed dog, and a relaxed dog is a well behaved dog. Off Leash exercise is so much more than on leash exercise. On leash exercise limits the dog to my level of fitness, and that means that by forcing on leash requirements you are binding the exercise of many dogs to that of handicapped, and elderly owners. My dog "forces me" to go out every day and take a walk, and although that can be in my local neighborhood it is nothing like our walks in the Marin Headlands, or Lands End paths, or along Crissy Field. Off leash walking is my time with my dog. He is always under voice control because my time at the park is my time with him ' we "work" together. These moments when my dog runs back and forth with a stick in his mouth are the reason I get in my car and go the GGNRA controlled lands. I always carry two rolls of poop bags on my leash and I will clean up other dogs poop if I find it when cleaning up after mine I also participate in dog owner's park cleanups, be it in the City or out at Funston.

? The concept of ROLA is astonishing. As far as I can understand The NPS self appoints itself to monitor a compliance level of 75% based on total dogs observed not in compliance . Who does the observing? A third party? When do the observing? Of course, for it to be legal I presume it will be done for 365 days every day from 5 am to 10pm when the parks close, because, if there is no one there to observe and 100 dogs use the park, and are in compliance they will not be tallied, which means your data is invalid. As you can see ROLA is non-sensical in the way you define it, in the way you set it up to self police, but even more so in the way you ascribe to yourself the powers to make reductive changes to the use of the park without proper due process. The Poison pill has to be eliminated from the plan as it is unenforceable and lacks any kind of scientific basis (unless, of course you

can observe all users all the time)

The fact that this NOLA Compliance based criteria is included in all options automatically disqualifies your alternatives ? The DEIS does not seem to consider demographics: Answer a question ' is dog ownership in San Mateo/San Francisco County/Marin increasing or decreasing? All the studies I have seen it is increasing. Therefore, as caretakers for lands given your trust for recreational purposes by those counties should you not take that in consideration and offer an alternative where you INCREASE off leash areas? Off leash areas, at the time of the 1979 Pet Policy was limited to only 1% of all the lands you administer. Since then new land has been added but you have DECREASED the percentage of those lands to below 1%. Why is there no alternative where you reflect demographics and the desires of the citizens of those counties who gave you the land and offer another alternative where you increase these lands? Alternatively, since you only have 1% of lands open to dogs, why not, if you take certain areas away can you not have an alternative where you give back other lands now currently closed? I would have loved to have seen somewhere in the DEIS something along the lines of "We are proposing removing XXXX from off-leash areas, but are opening up YYYY to off-leash use." You have the space. Why not use it?

? Your purposes, for the GGNRA is for RECREATIONAL purposes. These lands are NOT National Parks ' they are ex army installations and they were given in trust for you to administer in keeping with the original deed. You appear to treat Recreation as having an inverse impact on the areas under consideration, ignoring that Recreation WAS and IS one of the four outstanding values mentioned in the 1972 enabling legislation I quote : "maintenance of needed recreational open space". When Daphne Hatch your chief of natural resources management and science at the GGNRA says Quote: "Ocean Beach without the people is an incredible habitat, But people think of it as a sandbox or their backyard." I truly wonder if the NPS knows the difference between Yosemite and Fort Funston or Ocean Beach". When I attended one of you open houses I was told that I was told that NPS is mandated by Congress to "manage uniformly all its areas" she forgot also to tell me that Congress added "The authorization of activities shall be construed and the protection, management, and administration of these areas ... shall not be exercised in derogation of the values and purposes for which these various areas have been established". So there is no mandate to match the GGNRA's policies with National Park Service requirements that dogs not be allowed off-leash in a national park.

? Snowy Plovers: Your own research - Forrest Cassidy St Clair and Warren all demonstrate that dogs do not actually impact the diversity, abundance and feeding behavior of the birds. The Hatch report observed 5692 dogs and only 19 chased plovers. Your own studies prove that parents with toddlers,

surfers and other park users disturbed the plovers far more than dogs, yet I do not see anything in the DEIS that is further restricting their access. Why are dogs being singled out? Your environmental impacts are a whole bunch of "could occur" "may occur" but I do not see a single study that backs this up. You mention Bank swallows, and their nests, but they burrow in the cliffs, areas that dogs simply do not go to. . Ultimately your environmental studies do not seem to support your conclusions and you can be taken to task on this. I have tried to read the DEIS but I have failed to come across any actual solid scientific data that supports your premises. I see a lot of "coulds" and "mays" but no actual evidence and no baselines ' None. In fact, the one study I did read in full ' the one above ' demonstrated exactly the contrary to the "results you would have preferred. You had all the time to back up your claims with hard data. The fact is you have not been willing to do s - discrediting the scientific basis of this DEIS, or, worse still, the data contradicted your preferred solutions, and you have chosen to ignore it. I could not find an comparative analysis of the "No Action" option. The impacts appear based on on non-compliance to existing voice control and existing regulations. At some sites, the DEIS prohibits dogs from beach areas to protect shorebirds and stranded marine mammals, yet there is no documentation in the DEIS of current shorebird or marine mammal impacts caused by dogs.

? So if you have no sound scientific data to support the environmental reason to restrict areas to dogs let's look at the safety issue. Well in this case your data is overwhelming in pointing to what are the causes of serious safety incidents ' 98% DID NOT INVOLVE DOGS. The problem is people, not dogs. Only 2% involve dogs. This alone should really force you to re-think the whole reason for the DEIS.

? The DEIS is concentrated on dogs, and ignores impacts caused by people and their children, mountain bikers, fleet week, walk-a 'thons, feral cats, coyotes, horses, surfers, etc etc. In other words. The DEIS appears to be a targeted exercise. Not a 360 degree look at the panorama affecting the GGNRA

? Why is the current system not working for you? Are you able to enforce the current No 'off leash zones? They are 99% of the lands you administer. If you can do it now why the need to change? If you cannot do it now, what additional funding will you require to ensure the new areas will be enforced?

? You TOTALLY ignore the impacts that these policies will have on the surrounding areas. If you squeeze dogs out of GGNRA lands where will they go? To overloaded City Parks ? Have you involved the City in this plan? You also have totally ignored the beneficial and human impacts of off leash interaction with one's pet. As I mentioned above, My mother cannot run so

why are you wanting to limit the dog's exercise level to hers? She currently can play with our border collie and use a chuck-it with minimum effort for her and maximum effort for the dog. When I go to the park I see people playing with the dogs of all ages, races and, presumably, financial background. I do not see anything in your study except a rather curious reference to "minorities" not coming to the parks because of dogs - The DEIS cites a 2007 SF State study that claims all Latinos and Asians surveyed said that dogs were a problem but if you actually read the study you discover some things: a) the study was not, as the DEIS implies an "ethnic minority visitor use experience at the GGNRA" but was actually a study born to help connect minorities to the parks. But more damning the study was hardly a scientific one ' they interviewed fewer than 100 people and they were not randomly selected. It is this kind of "selective" scientific use that will have the words "Drake's Estero" popping up in people's minds.

In conclusion it appears that this is a misguided solution in search of a problem. Your data simply does not support the existence of the problem, and your attempts to squeeze a NPS agenda on local parks is misguided and contrary to the spirit with which these lands were entrusted to you.

The more I look at the lack of data, the more I fear that, what the Dept. of Interior report said about Drakes Estero can be applied to this DEIS and that it exhibits "sloppiness, from a protective approach to data, from a lack of vision, and from an insensitivity to the growing controversy, but not from any obvious intent to deceive, defraud or mislead." I really hope you are not trying to mislead but the lack of any evidence to your premises, causes great reason to wonder if the NPS does have an anti-dog which will be forced upon these Recreational Lands regardless of their negative impacts.

For all the reasons stated above, but in particular for: 1) The existence of a "Poison Pill" compliance override on all the alternatives 2) The lack of scientific data supporting your premises I support Alternative A ' the N i. ction-A-Iternative and would also include New Lands area in that

Mr. Frank Deon General Supervisor GGNRA Fort Mason Building 201 San Francisco, CA 94123

Dear Mr. Deon:

I am writing to protest the proposed restrictions on dogs and humans in the GGNRA.

I was born in Tiburon and grew up here in Marin. A large part of what I love about Marin is our amazing weather and the ability to enjoy the outdoors all year round. Throughout my life, I've had a number of dogs and love that I can share a walk and fresh air with them.

My dog is part of my family and restricting my ability to enjoy the beautiful outdoors with him is unfair. Kody, my dog, is well behaved and I am strict about cleaning up after him when we are out exploring. We follow the rules and are respectful of the land and other animals. Why would you penalize me? Please, don't deny my right to enjoy my town with my dog.

Thank you for listening. Please, reconsider this restriction. Sincerely,

Justin K. Clark

Frank Dean, General Superintendent Golden Gate National Recreation Area
Building 201. Fort Mason San Francisco, CA 94123-0022

Dear Superintendent Dean,

First let me introduce myself. I am a 72-year-old avid dog person and nature lover. I love ALL nature and being able to enjoy many aspects of it is very important.

We are all creatures of God and all must share the planet equally. I do not believe in singling out one creature over another. Urban areas must be treated differently than wild areas. Wildlife should not be given quarter over domestic animals/life in the middle of an urban area. If that were the case, then none of us could live here.

I belong to the Marine Mammal Society, The Wood River Land Trust, World Wildlife Fund, Best Friends Animal Society and Crissy Field Dog Group to name a few.

I take my golden retriever to Ocean Beach and Crissy Field at least once a week. Having a water dog means having to be able to access water. Wacko loves to swim and infact, it is part of his well-being. As a responsible dog owner, I pick up after him and keep him under voice command. It is very important that these areas remain off leash dog walking areas, both for the health and welfare of the dog and of the owner.

Has the GGNRA studied the impact on the natural resources from ALL the other activities that occur in these areas, such as walkers, bikers, kite flyers, runners, picnickers etc. etc. Why has the GGNRA chosen to single out dogs?

Have there been studies done to suggest that the dogs do more damage to natural resources as compared to other activities?

Where there are very sensitive wildlife areas, they should be WELL marked. We responsible dog owners are concerned with preserving our natural resources and need a little direction as to where these areas are. I do not agree with the GGNRAS' current preferred alternative as it restricts and

eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the 1979 Pet Policy and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions.

I support Alternative A, the No Action alternative, which would also include "New Lands" within San Mateo County. Respectfully submitted,

Michael Mead

Dear Superintendent Dean,

I am writing to ask that the GGNRA reconsider its position regarding the ability of dog owners to enjoy the park with their pets. I have lived in Mahn for more than 20 years, and have enjoyed taking our dogs to Muir Beach, where up until now they have been able to enjoy the beach without diminishing anyone else's enjoyment...indeed, they often bring smiles to those who can observe them at play. They are always under my voice command, and I have never encountered a problem with them being off-leash, and it saddens me to think that this special place may be off-limits to them in the future.

There is very little in the DEIS that makes a sound argument for banning dogs from practically all GGNRA areas...the threat to wildlife, for example, seems more imagined than real, as my dogs generally ignore wildlife and even those dogs that approach wild birds pose no real threat, as birds can easily escape harm and with real predators in their environment, it's hard to make the case that they are being disturbed to a degree that banning dogs is an appropriate solution. As for environmental damage, most pet owners are responsible for cleaning up after them. People, on the other hand, contribute far more trash and environmental damage than do their dogs, not to mention horses (although I have no problem with them and am glad that they're allowed). In the rare situations where a dog is disruptive to a person's park experience, I feel it is much more appropriate to handle these situations the same way as would be the case if a person is causing the disturbance (i.e., reporting the incident to a ranger or other official) rather than simply banning dogs. If this logic was followed to its conclusion, the GGNRA would have to ban people on the basis that they might cause a disturbance.

Please reconsider the draconian proposal to ban dogs from the many places in the GGNRA where they have historically been allowed access without causing significant problems. Give responsible dog owners the opportunity to demonstrate that they can coexist with non-dog owners so that the GGNRA can be enjoyed by all.

Sincerely,

Dan Reich, San Rafael, CA

Correspondence: Dear Mr Dean,

I am writing in opposition of the GGNRA's draft dog management plan. I live in San Mateo county and use Fort Funston and Ocean Beach areas with my 9 year old dog Bailey. We would be heart broken if the plan were to be implemented!

I am a nature lover who appreciates conservation of all flora and fauna. I also believe recreation of people and dogs can co exist with conservation.

Here are some things I would like to point out:

speculation and not supported by proper scientific studies or environmental

impact studies.

-The GGNRA was created as a nature AND recreation area. Please do not take recreation out of this equation. The 1979 pet policy states what the land should be used for and has been repeatedly upheld in court.

-Dogs are already prohibited in so many area like state parks, National parks and Peninsula open space areas. I have read that only 1% of local land is available for off leash activities. There are so many of us responsible and nature respecting dog owners and we truly need the GGNRA areas for off leash recreation with our beloved pets.

-When Dogs are on leash, they tend to be much more aggressive towards each other. This phenomenon would result in significantly more dog on dog aggression and human collateral damage when trying to break up their dogs.

-I agree that the cliffs can be dangerous. I believe the cliff and Snowy Plover areas should be fenced off and feature prominent and highly visible signage to keep people and dogs out of there.

Thank you for reading this and I hope it was informative and helps to save off leash dog walking in GGNRA areas. Sincerely,

Alexander Feldman

Dear Frank,

I am very concerned about the possible changes at Fort Funston, Ocean Beach and Crissy Field. Being a native San Franciscoan, I've enjoyed the many years spent at these beautiful spots with my family, guests from all over the globe, and of course my dogs. Have met many friends throughout these years. The terrain is unspoiled including birds & wild plants, giving us a time to relax and enjoy the environment. I see everyone smiling, relaxed, & doing their very best to keep all of these places clean and natural. In this

world of so much trauma, violence, & stress, we need to be able to look forward to spending time with people, animals off lease playing and God given beauty.

Sincerely,

Arline Roncella Daly City, CA 94015

To: Frank Dean, Gen. Supe. GGNRA, Bldg. 201 SF, CA 94123-0022

I am a senior citizen who walks at Fort Funston everyday. I do not have a dog. I feel safe out there becuase there are so many people walking dogs. I have seen nothing out there that justifies this horrible dog plan you have come up with. Restricting areas for dogs will lead to more conflict, not less conflict. Places like Ft. Funston are urban parks (no matter how much you deny it) not true wilderness like Yellowstone and Yosemite. The plans you have come up with are insane. You seem totally unaware of how to manage RECREATION areas. You denied true public comment opportunities. Your plan is set up to failbut that's what you want, isn't it? Then you can totally kick people and their dogs out with no recourse for the public to fight it.

p.2

If you wonder why people hate government it's because of actions taken by govt. You do not allow open public comment, you set up plans that will nto work. You are basically tyrants and should have no business running recreation areas in cities.

I OPPOSE ALL OF YOUR PROPOSED PLANS. You need to honor the 1979 Pet Policy.

Dear Mr. Deon,

I am writing to protest the proposed restrictions on dogs and humans in the GGNRA. The Bay Area is a model for enlightened co-use of our natural resources. The availability of nearby areas for the tax paying dog owners to exercise their animals and maintain a healthy lifestyle is necessary for a balanced society. Dogs have been living with humans as helpers and companions for countless generations. To deprive this natural pairing of the opportunity to enjoy nature together would be a mistake with unforeseen consequences. Sincerely,

Maria Ask-Hed Mill Valley, CA 94941

Correspondence: Dear GGNRA Directors,

I am a native San Franciscan. I was a responsible dog owner. There are over 120,000 dogs in SF. Thats lot of dog poop. While some believe their dogs are meant to roam free in our public spaces, I and many others don't. The GGNRA has many threatened and endangered species that need our help for survival. This should be of the highest priority.

People have the right to enjoy the outdoors with out dogs interfering with their experience. Especially at the beach or park with our families and picnics. Owners and their dogs don't have a right to interfere with people enjoying public parks and spaces. Most people don't like dogs and do not think they are "cute". Its very scary to be "hounded" by dogs on or off leash. I am rehabilitating a serious injury and am affraid of being injured by dogs running into me. My girlfriend is deathly scared of large dogs as are her elderly parents.

Owners of dogs need to educate and police themselves about common sense rules, policies and code requirements for dogs in the GGNRA. Dogs have been getting away with running free throughout the GGNRA for too many years. This may be why so many dogs are around. The beach is a great doggie bathroom. What happened to curbing your dog and being in voice command. Wiping dog poop off of grass or sand is not enough. Would you lay your towel or blankets near where someone just picked up dog poop? More signs or fences are visual blight and costly. What is needed is Park Rangers to aggressively ticket owners that ignore rules and codes.

Professional dog walkers need to be registered, insured and bonded for public safety. Paying a user fee is not off the table. Special Bright collars for registered dogs and pin on visual permits for walkers may be useful.

As Directors and stewards of the Golden Gate National Recreation Area you need to do the job of making tough calls to enforce current national codes and policies a priority. If your new proposal is more stringent then it is probably required. People that don't have dogs need places to relax too. No dog poop at the beach or other public spaces would please many. This is not a political problem. This is an over population of DOG problem.

Hi NPS,

Just wanted to let you know that one of the most beautiful places in the world is Marin County and I appreciate all that the Park Rangers due to protect the beauty of our precious landscape.

Marin County is an extremely dog-friendly area. We love our dogs, take good care of our dogs and we treat them like family members. Dogs are great for enjoying the outdoors and are great companions on when spending a day at the beach or going for a nice long walk.

To take away our right to have a companion with us in our beautiful great outdoors, is an absolute shame. No matter how people try to justify the reason for not allowing dogs, we all know it just doesn't make sense. Dogs don't hurt the land and the fragile eco-systems, humans do.

On behalf of every dog-owner in Marin County, please do not take away our right to have our companions outdoors with us, whether its on the beach, on a hike, or just sitting outside on a sunny day in the park. There is just no reason to take away this natural right to be free outdoors and be able to have your companion with you.. yes, that companion, is often people's dog. Thanks for your time!

Sincerely,

Caitlin Hevia

Correspondence: Dear Superintendent Dean:

I have lived in Mill Valley with my husband for the past 16years, and prior to that I lived in San Francisco for 10years. I am a Native Californian. Proximity to a National Park and Recreation Area for our family and our dog's recreation, played a major role in our decision to move to Mill Valley. It is critical for my husband and I to be able to exercise with our rather large (95 lb), 2.5 year old, Rhodesian Ridgeback, on and around Mount Tamalpais. We are on the Mountain, with our dog, Renzo, 3-5 times a week. We require a vast open place where we can exercise our dog and ourselves at the same time! We utilize Miwok Trail, Matt Davis Trail, Coastal Trail, Muir Beach, trails out from Tennessee Valley, Old Railroad Grade, Ocean Beach, as well as the Presidio, to name a few. Our dog is predominantly off leash, under voice control, and we are mindful to place him on a leash, whenever we approach bikes or horses and hikers/runners without dogs.

A key unique feature of Marin is the wonder of living within striking distance of a major metropolitan city, while being surrounded by open space for recreation and leisure. Recreation, was a major priority in the establishment of the Golden Gate National Recreation Area. The DEIS gives very little reference to recreational uses and in no way addresses the very important issue of the human recreational environment. Dogs and humans both need time to, "Run Free" and to be, "Off Leash." Dogs as well as humans who do not exercise become restless, anxious and aggressive.

We do not agree with the GGNRA's proposal. The DEIS rationale for the restriction of dogs is not based on scientific research. The document fails to provide documentation, or legitimate scientific studies, that demonstrate that dogs are having a significant negative impact on the animals and the environment. We believe that the GGNRA Commission must provide scientific evidence that the harm being done is due to dogs alone, rather than humans, horses, bicycles, and other forms of recreation taking place in the area.

Thank you for your time and attention to this very important matter.

Sincerely, Annette Sullivan

Frank Dean, General Superintendent, Golden Gate National Recreation
Area, Building 201 Fort Mason, San Francisco, CA 94123-0022

5/20/2011

Dear Superintendent Dean:

The Pacifica Shorebird Alliance (PSA) would like to salute you and your staff at GGNRA in your efforts to shape a reasonable and effective policy with respect to allowing dogs in the Golden Gate Recreational Area. No doubt there are other objectives in your policy revision efforts but protecting species that are federally listed as threatened or endangered species is obviously of primary concern. One would think protecting any species, which is moving slowly toward extinction, from untoward disturbance would be a non-controversial and accepted function of the National Park Service. However establishing or revising any policy with respect to dogs within any public space is always controversial. Dog owners collectively are a powerful and motivated lobby.

The problems for GGNRA in protection of the Western Snowy Plover, a federally protected species, in the Crissy Field area of the Presidio very much mirrors the problems we in PSA have encountered at Pacifica State Beach. Like areas near popular Crissy Field, Pacifica State Beach, located at the southern end of Pacifica, supports a significant numbers of over wintering Western Snowy Plovers and was once a nesting site. Over the years humans and dogs have led to habitat degradation and the population of snowy plovers has declined. Pacifica State Beach is a popular beach for surfmg, fishing, dog walking, picnicking and sunbathing (on warmer days), etc. Furthermore, unfortunately it is also adjacent to suburban housing on two sides with easy access to the beach. Consequently there is strong

resistance to any restrictions on activities especially with regard to dogs.

In terms of the specifics within the proposed rule changes, we would like to make two recommendations: 1) Areas allowing off-leash walking must be very well marked or fenced; 2) The NPS goal of 75% compliance should be raised to 95% compliance at least in the most sensitive areas, those adjacent to threatened species' habitats.

A properly implemented and publicly accepted policy by GGNRA within its lands and beaches with respect to dogs, leashed and unleashed, would certainly help us in our efforts here in Pacifica. Again, we would like to commend GGNRA on its efforts to strengthen protections of wildlife within GGNRA by revising dog walking rules.

Correspondence: Dear Superintendent Dean,

My name is Hannah Kornfeld and I am a twenty two year old Bay Area resident. My family has lived in Marin my whole life and our household has always had the love of our canine friends. Maxi and Shadow, our two Labrador retrievers, lived to be 18 and 16 respectively. They were a huge part of the family and I fondly remember going on bike rides with my mom, dad and sister at Crissy Field and having the two dogs trail loyally behind the family. This unique city experience was only possibly because there are

some areas with out leash laws.

Currently my mom and I have a young brown lab, Mabel, and we enjoy running and hiking with her around the Bay Area. We usually stay in Marin where Mabel can run around on the trails, smell to her hearts content, and not be restricted by a leash. It is very important that Mabel be able to move at he own pace and get some fits of energy out and also smell the exciting world around her. If you pass laws so there are no leash free areas in San Francisco, Mabel's city counterparts will not have space to explore and exercise at their own pace.

To keep a dog and his owners happy and healthy, the dog must have access to off leash walking. For many of my dog walking friends, going to Crissy Field is a necessary part of their day. They love the place and so do their dogs.

Instead of taking away off leash areas, I think the GGNRA should consider adding new areas, and providing better signage and environmental barriers like the ones at Crissy Field. The draft Dog Management Plan and the Draft Environmental Impact Statement does not evaluate the value of these recreational activities and does not adequately consider alternatives such as environmental barriers and providing better signage and education to the public.

Moreover, there is inadequate consideration of the impact of restricting off leash dogs on east beach at Crissy Field on the families that gather there for recreation. During many months of the year central beach is not safe because of the high tides. The proposal does not adequately investigate the impact on families of having to use Central Beach year round rather than east beach. There is also no science based explanation for moving off leash dogs off east beach. Please evaluate these alternatives and impacts. Major urban areas such as San Francisco need more places to recreate with dogs off leash, not fewer.

The GGNRA was created with the purpose of providing recreational opportunities for people. This includes off leash walking at sites like Crissy Field. The citizens of San Francisco benefit greatly from these opportunities. Please do not restrict off leash walking on these sites. Respectfully,

Hannah Kornfeld

Correspondence: Comments: Draft Dog Management Plan/Draft Environmental Impact Statement

Dear Superintendent Dean,

I am writing this public comment on the GGNRA's Draft Dog Management Plan/Draft Environmental Impact Statement (DEIS) as Chair and representative of the San Francisco Dog Owners Group. SFDOG is the largest citywide dog owners/guardians group in the city, with a thousand active members, and at least a thousand more that we reach regularly through our emailed newsletters and listserves. SFDOG pushes for responsible dog guardianship, and advocates for off-leash recreation for dogs that are under voice control. We are a 501(c)(3) nonprofit, and work to educate dog guardians, non-dog people, and elected and appointed officials about responsible dog guardianship and the benefits of having a dog in our modern, often isolated, society. We have organized workshops on how to deal with the three most common dog behavior problems seen in parks (poor recall, jumping, and resource guarding), and publish a Park Petiquette flyer (how to behave in a park with your dog) that has been posted in city parks for years.

We conducted a Dog-Horse Socialization workshop to desensitize dogs to the presence of horses. This workshop was conducted in conjunction with the SF Police Department's Mounted Patrol unit, who provided the horses and riders for it. We organized workshops on understanding dog body language and behavior for gardeners and rec center staff of the SF Recreation and Park Department. We helped design and implement a pilot "Kids Read to Dogs" program (called Pawsitive Reading) with the SF Boys and Girls Clubs to foster literacy in at-risk populations of children. We work with members of the SF Board of Supervisors, along with SF Recreation and Park Department staff and the Neighborhood Parks Council, on dog issues in parks and elsewhere in the city. SFDOG had two representatives on the GGNRA's Negotiated Rulemaking Committee, and has been involved in off-

leash (and other dog-related) issues in the GGNRA for over a decade.

This DEIS for a new Dog Management Plan is an extraordinarily flawed document. Indeed it is fatally flawed. Frankly, it should be an embarrassment to the GGNRA and the National Park Service. It is extremely biased against dog walking, not the impartial analysis of alternatives that a DEIS should be. It is full of mistakes, misrepresentations of data, and misleading literature citations, all of which lean in one direction ' "proving" dog walking is bad. Not a single misrepresentation or mistake would lead you to say that dog walking is beneficial or even that it is not a bad thing. Mistakes are bound to happen in a document of this size, but when they all push the analysis in one direction only (dog walking is bad), it's not just sloppy work. It is outright bias. And that kind of bias has no place in a DEIS.

The National Academy of Sciences evaluated the work of National Park Service scientists regarding an oyster farm in Drakes Bay at Point Reyes National Seashore. The NAS report found that NPS scientists "selectively presented, overinterpreted, or misrepresented the available scientific information" and "exaggerate[d] the negative and overlook[ed] potentially beneficial effects." The exact same criticism can be leveled at the way scientific information is presented in the DEIS. Because of this, the analysis of alternatives and selection of a preferred one in the DEIS cannot be accepted.

The DEIS focuses solely on impacts on the natural environment, ignoring the human and urban environments that a DEIS is required to consider. It does not consider negative impacts on the health of people walking dogs if they lose the ability to hike in the GGNRA with their dogs. It does not consider impacts on recreation of the various alternatives, despite the fact that recreation is one of four core values to be maintained and protected in the GGNRA, as described in the enabling legislation. An analysis of impacts on recreation must be done as part of a DEIS, but it was not done here.

The DEIS intentionally ignores impacts on the surrounding communities, even though a DEIS is required to look at that. Indeed, if you read the first 1,000 pages of the document, you would never know that the GGNRA is located within and immediately adjacent to a city of 800,000 people (not to mention the millions who live in the Bay Area). This gross misrepresentation of the surrounding communities is intended to give the impression that the GGNRA is just like isolated wilderness areas such as Yellowstone and Yosemite National Parks, and therefore to bias the interpretation of impacts in one direction ' against dog walking. That is not fair and has no place in a legitimate DEIS.

The DEIS is full of things that "could" or "might" happen if dogs are

allowed in areas, but provides no evidence that such negative impacts ever have or are now occurring at each site in the GGNRA. Actual documented impacts and damage are essential to make a reasoned choice between alternatives, and are required to be included in a DEIS. But they're not here, and their lack means this document cannot be considered a true DEIS, and its analysis of the alternatives is fatally flawed. There is no baseline data of conditions at each site in the document, something a DEIS is required to include. Indeed, there is no information about how many people visit each site, how many have dogs, how many acres are at each site and how many of those acres are accessible to people with dogs, how many miles of trails are available, what people with dogs do at each site, etc. Without this baseline information, including documented impacts at each site, an informed analysis of alternatives and selection of a preferred alternative cannot be made. The DEIS incorrectly assumes, in its comparisons of alternatives, that there is no impact on natural resources unless dogs are present. Any impact from dogs has to be considered in context with other causes of impacts ' people, natural predators, weather, etc. For example, you cannot say that making a trail "no dogs" will lead to less compaction of soil because people (who cause much more soil compaction than dogs due to their much heavier weight) will still be allowed to walk on the trail. You cannot assume that imposing more rules on dogs will lead to fewer impacts, yet this is what the DEIS does. You have to look at any alleged or potential impacts from dogs in the context of other causes of those same impacts. How much comes from dogs and how much from other causes? How much actual benefit will result from banning dogs? The DEIS does not do this, and therefore its analysis of alternatives and selection of a preferred one cannot be accepted.

The DEIS is based on the assumption that non-compliance with leash laws has a negative impact on the natural environment. But there is no evidence presented to back up this assumption. It is, therefore, unfounded, and should not be used in the analysis. However, it was used by the DEIS to "prove" that the No Action Alternative is untenable. The analysis of alternatives and selection of a preferred one based on this assumption is flawed and cannot be accepted. Impacts must be substantiated, not assumed. The DEIS must be based on science, not opinions.

The DEIS does not present a correct analysis of the No Action Alternative. Rather than just assume it cannot work (which the DEIS does, without proof), the DEIS should have considered management practices that could be implemented to address issues raised. For example, in part because there's no baseline of conditions at each site, the DEIS does not acknowledge that signage of areas that are closed to dogs is extremely poor (if not non-existent) at Fort Funston, and that improved signage could make a major difference in compliance. Because management practices to improve the No Action Alternative were not considered, the DEIS' analysis of it and other

alternatives cannot be accepted.

The DEIS calls for a Compliance-Based Management Strategy (CBMS), that will change the status of on- and off-leash to "no dogs" areas in the GGNRA based solely and simply on whether there is enough compliance with the restrictions proposed in the Preferred Alternative. The DEIS assumes non-compliance results in negative impacts on the environment, but provides no evidence to support this assumption. Without such evidence, the DEIS cannot say that the CBMS will result in any additional protection of resources. There is, therefore, no justification for the additional restrictions on dogs provided by CBMS, and it should be removed.

In addition, the DEIS provides no information on how this compliance monitoring will be done or by whom. That information is critical to evaluate the value and possible negative and positive aspects of the CBMS and must be provided in a DEIS that assigns it such an important role. Without it, any discussion of how monitoring will be done and by whom, the CBMS cannot be accepted.

The changes proposed in the CBMS will be automatic and permanent, with no opportunity for public comment at the time the change is made. Indeed, it appears to have been included solely to change the status of areas from off-leash to on-leash to no dogs without having to go through any public process when the change is actually made. This contempt for public comment has been a constant theme throughout the decades that the dog community has been dealing with the GGNRA.

When the GGNRA announced in the Federal Register in 2006 that it would conduct a DEIS for a new Dog Management Plan in the GGNRA, a private citizen, Suzanne Valente, submitted a FOIA request asking for the data, documents, and/or Staff Reports that substantiated the GGNRA's claims in the Federal Register that there was a controversy over the dog policy, compromised visitor and employee safety and resource degradation that warranted a DEIS. The GGNRA replied that: "The Staff Report and other documents you seek do not exist at this time." Either the GGNRA had no data and made an arbitrary and capricious decision to pursue the DEIS, or the GGNRA refused to give the information that it did have to a citizen who legally requested it. Either explanation is troubling and calls into question the very basis for the DEIS.

Two separate court cases, several years apart, found that the GGNRA ignored the need for legally required public comment periods when it closed access to land at Fort Funston to all visitors (not just those with dogs) and when it rescinded the 1979 Pet Policy. Indeed, several hundred people who attended a meeting of the GGNRA Citizens Advisory Committee in January 2001 to protest plans to rescind the Pet Policy were not given the chance to

speak at that meeting. They were told they would be given the chance to speak at a later meeting, but it was never held. The GGNRA and its Citizen Advisory Committee essentially denied hundreds of people the chance to speak, even though they were present and ready to do so. Similarly, during the public comment period for this DEIS, the GGNRA has refused to hold any public hearing to listen to people's public comment about the DEIS. The pattern of refusing to listen to what people have to say continues. Now we read about the CBMS's plans to change off-leash areas to on-leash and then to "no dogs" without any public comment on the changes. This is not the way government should work. It is not the way government should treat its citizens. CBMS has no place in a Dog Management Plan and must be removed.

Considered individually, each of these problems with the DEIS are damning. But when taken together, it is clear that the DEIS is so deeply flawed that it cannot be fixed. The analysis essentially needs to be thrown out and done over in an unbiased, science-based way. Given the lack of evidence of any impacts from dogs in the GGNRA in this DEIS, it is clear that if a DEIS is done in an unbiased, science-based way, it will be evident that there is no need to change the 1979 Pet Policy.

The GGNRA should choose the 1979 Pet Policy (including returning to off-leash access in the plover protection areas at Ocean Beach and Crissy Field since the DEIS does not present any evidence that the presence of dogs in these areas has any impact on snowy plover populations or survival rates) as its Preferred Alternative. In addition, dogs (both on- and off-leash) should be allowed on at least some of GGNRA land in San Mateo County (none of which was part of the GGNRA in 1979 when the Pet Policy was created) especially where it has traditionally been practiced, such as Sweeney Ridge. Dogs (both on- and off-leash) should also be allowed on land that becomes part of the GGNRA in the future, especially wherever it has traditionally been practiced. You can think of this as the A+ Alternative.

Note that despite the poor quality of literature citations and the lack of evidence of impacts by dogs provided in the DEIS, GGNRA staff claim the DEIS "proves" the need to severely restrict access to people with dogs. GGNRA staff have a demonstrated bias against dog walking and cannot fairly and impartially analyze the public comments about the DEIS that are submitted as part of the NEPA process, particularly those comments that are critical of their own work (like this entire letter). The National Park Service must arrange for an independent entity to analyze the public comment and to determine what changes must be made to the DEIS and Draft Dog Management Plan to address the comments or whether this DEIS is so fatally flawed that it has to be thrown out and started over. If GGNRA staff are allowed to decide which criticisms of their work are valid and which can be ignored, the public will lose confidence in the fairness of the NEPA

process with regard to a new GGNRA Dog Management Plan, and any resulting plan will be viewed as biased and illegitimate. Independent review must take place.

IMPACTS ON RECREATION

Recreation was at the heart of the creation of the GGNRA. The GGNRA began as part of the Nixon Administration's 1970 campaign "to bring parks to the people", and to increase outdoor recreation in urban areas (U.S. Dept of Interior news release, September 14, 1970). The first two sentences in the legislation that created the GGNRA are:

In order to preserve for public use and enjoyment certain areas of MarM and San Francisco Counties, California, possessing outstanding natural historic, scenic, and recreational values, and in order to provide for the maintenance of needed recreational open space necessary to urban environment and planning, the Golden Gate National Recreation Area (hereinafter referred to as the "recreation area") is hereby established. In the management of the recreation area, the Secretary of the Interior (hereinafter referred to as the "Secretary") shall utilize the resources in a manner which will provide for recreation and educational opportunities consistent with sound principles of land use planning and management. (PL- 92-589) (emphasis added)

The legislative history of the creation of the GGNRA (H.R. Rep. No. 1391, 92nd Congress, 2nd Session, 1972) provided the following additional guidelines for the GGNRA (emphasis added):

? "This legislation will ... [establish] a new national urban recreation area which will concentrate on serving the outdoor recreation needs of the people of the metropolitan area." ? "Action is required if ... the relatively natural areas within the city are to be available to satisfy the growing need for outdoor recreational opportunities." ? "The objective of H.R. 16444 is to assure the preservation of open spaces presently prevailing within the proposed recreation area, to provide public access along the waterfront, and to expand to the maximum extent possible the outdoor recreation opportunities available to the region."

Dog walking was specifically enumerated in the legislative history of the GGNRA's creation, along with sunbathing, picnicking, horse riding, hiking, and fishing. During Congressional hearings on the GGNRA, a letter from a seven-year-old San Franciscan was read:

"Dear Congressman Roy Taylor: I want a park so I can play in the park and my sister wants a park to and so my dog can play with another dogs and my Mom wants a park so she could take my dog out to play. I hope you will make a park. Elizabeth Linke" (Hearings before the Subcommittee on

Interior and Insular Affairs, House of Representatives, pg. 414).

This letter clearly referred to off-leash dog play since it is difficult for dogs to play with one another while on-leash. In addition, dog walking was identified as a recreational activity in the House Subcommittee report on the GGNRA statute:

"On a nice day, it will satisfy the interests of those who choose to fly kites, sunbathe, walk their dogs, or just idly watch the action along the bay." (House Report No. 92-1391, pg. 7) Note that the DEIS continues to misrepresent the history of dog walking and the 1979 Pet Policy. The DEIS continues the GGNRA's false claims that the 1979 Pet Policy was never legal. On page 5, the DEIS says:

...for more than 20 years, the park erroneously implemented the 1979 Pet Policy in contravention of Service-wide regulations.

However, Judge William Alsup, in his June 2, 2005 ruling in an appeal of a challenge to tickets received by three dog walkers for having dogs off-leash at Crissy Field, said:

In sum, for more than twenty years, the GGNRA officially designated at least seven sites for off-leash use. This was not accidental. It was a carefully articulated, often studied, promulgation. The responsible GGNRA officials in 1978 and thereafter presumably believed they were acting lawfully. Even now, the government concedes that the GGNRA had full authority at all times to relax the general leash rule at the GGNRA but argues it could have done so, at least after 1983, only via a "special regulation." In other words, the agency allegedly used the "wrong" procedure back in 1978 (and thereafter) even though a "right" procedure to reach the desired result was available and could have been used. The government has not revealed its internal justification for following the "wrong" process. Whatever it was, the justification was abandoned in 2002 with the two-word explanation that it had been "in error." With this ipse dixit, the NPS wiped away two decades of policy, practice, promulgations, and promises to the public. (Case Number: CR04-00408 WHA, p. 5)

True enough, the procedural requirements for a special regulation were not followed in 1978. Trouble is, when the off-leash areas were designated in 1978, a different and earlier set of NPS regulations applied, not the later revamped rules. See 26 C.F.R. Parts 1-7 (1978) Although the earlier regime still prohibited off-leash dogs as a general matter, there was nothing then that restricted the local authority of each superintendent to make activity designations on a park-by-park basis contradicting the national regulations. That restriction came later in 1983 ' when Section 1.5 (Closures and Public Use Limits) itself was introduced, among other changes. The 1983 change

cautioned that, going forward, the use-designation provision of the new Section 1.5 should not be invoked to circumvent a general regulation. 48 Fed. Reg. at 30262 (col 1). In the period leading up to the 1983 amendment, therefore, we must presume that the GGNRA designations were lawful. (The government has not shown otherwise.) Nothing in the 1983 regulations set aside then-extant use designations. (Case Number: CR04-00408 WHA, p.'7)

Based on Judge Alsup's decision, the statement on page 5 of the DEIS is incorrect. It must be changed.

Another misrepresentation of the history of the 1979 Pet Policy is on page 6 of the DEIS: In a public meeting in January 2001, the [GGNRA Citizens' Advisory] Commission acknowledged that the voice-control policy was contrary to 36 C.F.R. 2.15(a)(2), prohibiting off-leash dogs in national parks, and therefore illegal and unenforceable.

However the official transcript of the GGNRA Citizens' Advisory Commission January 23, 2001 meeting makes it clear that while CAC Chairman Richard Bartke did say this, the Commission itself took no position on the matter, and indeed took no action on the issue. The description of the meeting in the DEIS on page 6 must be changed to reflect the truth.

In the enabling legislation, recreation is listed as one of four values to be protected and maintained, along with natural, historic, and scenic values. Given the importance of recreation to the enabling legislation and the mandate that created the GGNRA, the DEIS should have analyzed the impact of all alternatives on recreation including off-leash recreation. Because it did not, the analysis of the alternatives in the DEIS cannot be accepted.

Indeed, the DEIS assumes that recreation is, by definition, bad. It does not acknowledge the balance between natural, recreational, scenic, and historic values that, according to its enabling legislation, any GGNRA management plan must consider. The DEIS made no attempt to identify, study, or report on any benefits of recreation. This lack must be addressed. The DEIS pits recreation against natural values, rather than exploring a number of reasonable alternatives where the two can work together. This bias against the very concept of recreation calls into question the analysis of the alternatives that was based on it. Therefore the analysis of alternatives cannot be accepted.

NEPA rules require that agencies consider impacts on recreation. This is especially crucial in the GGNRA because its location in the middle of an urban setting means that GGNRA lands serve as residents' backyards. Most of us who live in San Francisco do not have yards, and we rely on park open

space for our recreational needs. The GGNRA is where people in San Francisco, and indeed in the entire Bay Area, come to play. For example, the only beaches available to the people in San Francisco are controlled by the GGNRA. Removing recreation from the GGNRA will have a significant negative impact on the quality of life of the people of the Bay Area, and that impact must be considered in the DEIS. The fact that it is not means that the analysis of alternatives in the DEIS cannot be accepted.

The DEIS should have a separate section about recreation and impacts of all alternatives on recreation both on-site and off-site. The section should identify and quantify the recreational uses of GGNRA lands at each site, and also in the surrounding communities. Impacts to recreation resources would be considered significant if they result in a decline in the quality of existing recreational opportunities or in the quantity of available recreational lands/facilities. This section should also consider the cumulative effects of loss of recreational opportunities and access at all sites under discussion. It must also consider impacts of future actions by surrounding communities that would affect on- and off-leash dog walking. For example, the San Francisco Recreation and Park Dept's Natural Areas Program Draft Management Plan calls for the closure of 15% of currently available off-leash areas in city parks. This loss of off-leash access will be significantly amplified by and will significantly amplify reductions in off-leash access in the GGNRA. The GGNRA does not exist in a vacuum. It must consider impacts of its actions on city parks and actions of city agencies on it.

IMPACTS ON CITY PARKS

NEPA law requires agencies to consider impacts on surrounding communities. For example, an NPS DEIS for snowmobile use in Yellowstone National Park, issued in May 2011, considers impacts on the economy of local communities and small businesses if winter visitors stop coming because they cannot use snowmobiles in the park. That's the way things are supposed to be done.

The GGNRA DEIS, however, says, on page 22: "the quality of urban areas is not a significant factor in determining a dog management plan." In direct contradiction to that quote, the SF Charter states as a fundamental purpose of the GGNRA: "to improve the quality of urban life." The DEIS does not explain why, given this management mandate, the DEIS does not have to consider quality of urban areas. NEPA law (40 C.F.R. 1502.16) requires that an analysis of impacts on urban quality must be a part of a DEIS. Since that analysis was not done, the analysis of the alternatives that was done in this DEIS cannot be accepted.

The GGNRA DEIS made no effort to analyze potential impacts on neighboring parks if recreational dog walkers are forced out of GGNRA

sites by the action alternatives. The DEIS repeatedly says: "An increase in nearby parks is not likely..." when considering impacts of the action alternatives. There is no evidence given to support these assertions of no impact. The DEIS made no attempt to quantify how many dog walkers will be displaced by closures of so much off-leash access. For example, the Preferred Alternative for Fort Funston will significantly reduce off-leash access. All the people who currently walk with their dogs at Fort Funston will not fit into the remaining off-leash space. Yet the DEIS claims "an increase in visitation in nearby parks is not likely" if nearly all off-leash access is lost at Fort Funston. This seemingly absurd claim must be supported by evidence. Because there is no evidence to support the claim of no impact, the analysis of the alternatives cannot be accepted.

Tsunami Friday provided evidence to contradict this dubious assumption. As reported on the front page of the March 2011 West Portal Monthly, the GGNRA closed both Fort Funston and Ocean Beach the morning of Friday, March 11, 2011 because of concerns that a tsunami from the Japanese earthquake might hit the coast. On a busy weekend day, the maximum number of dogs at Stern Grove, the closest off-leash area to the beaches, would be about 60. Weekday mornings, like that Friday, would normally find far fewer dogs in Stern Grove. On Tsunami Friday, a Recreation and Park Dept staffer counted over 200 dogs in Stern Grove at 10 am. Parking was described as "chaotic." It is likely that closing such significant amounts of off-leash areas in the GGNRA as is proposed in the Preferred Alternative will inevitably lead to a significant increase in people with dogs in the much smaller city parks. Yet the DEIS does not consider this possible impact (while touting equally dubious and unsubstantiated possible impacts by dogs on the natural environment as a reason to kick people with dogs out of nearly all of the GGNRA). Because the impact of all alternatives on city parks was not considered in the DEIS, its analysis of the alternatives cannot be accepted.

Indeed, the DEIS is not consistent on potential impacts on city parks when considering different issues at the same site. For example, on page 1311, the DEIS says, while discussing potential impacts on lessingia at Fort Funston, that Preferred Alternative (C) "may cause some of the dog walkers to visit other locations." Yet when discussing potential impacts on visitor experience in nearby parks, on page 1530, the DEIS says of the exact same Preferred Alternative (C) at Fort Funston, that "an increase in visitation in nearby parks is not likely." This is just one example of contradictory claims of impacts, all of which must be carefully scrutinized and made consistent, and be based on documented evidence of impacts by dogs.

The DEIS must quantify how many people typically visit each site in the GGNRA, how many people can be accommodated in the areas remaining open to off-leash dog walking under each alternative, and how many people

will be forced to go elsewhere under each alternative. This was not done and must be added.

The DEIS also made no attempt to find out where people will go if they are kicked out of GGNRA sites. In sections on Fort Funston, for example, the DEIS states that the nearest off-leash area to Fort Funston is at Lake Merced. However, had they done even a little research, they would have found out that the SF Recreation and Park Dept's Natural Areas Program is calling for the closure of the Lake Merced off-leash area. In addition, the only way to access the Lake Merced off-leash area is after a long walk along a busy, dangerous street. Not the kind of place that people used to walking at Fort Funston are likely to want to use, even if it were not slated to be closed.

Nearly 80% of all off-leash acres in San Francisco city parks are located either adjacent to or within one of the Recreation and Park Dept's Natural Areas Program sites (NAP Draft Management Plan). Sending thousands of additional dog walkers into these much smaller city park areas will likely cause an increase in impacts on these sensitive habitats. Yet there is no discussion or even acknowledgement that such impacts are possible. The DEIS is written as if the GGNRA is not located immediately adjacent to (and within) a major city. To assume management decisions in the GGNRA will have no impact on the surrounding city parks is laughable. An analysis of impacts on city parks is a critically important part of any comparison of impacts from various alternatives. The fact that this was not included means that the analysis of alternatives in the DEIS cannot be accepted.

It is not enough to merely state that there are "27 parks with dog use areas within about a 10 mile radius" of a GGNRA site, as the DEIS does at almost every "Indirect Impacts on Adjacent Parks" section in the entire document. The DEIS should indicate conditions in those dog use areas (no grass, mud puddle in the winter, etc.), their size, availability of parking, and their current usage levels and other baseline information, all of which will influence whether people with dogs will use them if access is restricted in the GGNRA. If people cannot use city dog areas to replace areas lost in the GGNRA, then those restrictions will have significantly greater impacts on people, and those additional impacts must be considered. Because there is none of this information in the DEIS, the analysis of alternatives cannot be accepted.

IMPACTS ON HUMAN HEALTH AND SOCIAL COMMUNITIES

The GGNRA is required by NEPA to consider impacts on humans, including on human health and social community in a DEIS.

? Human environment shall be interpreted comprehensively to include the natural and physical environment and the relationship of people with that

environment. (see the definition of effects (1508.8).) 40 CFR 1508.14

? Effects and impacts as used in these regulations are synonymous. Effects includes ecological (such as the effects on natural resources and on the components, structures, and functioning of affected ecosystems), aesthetic, historic, cultural, economic, social, or health, whether direct, indirect, or cumulative. 40 CFR 1508.8 (emphasis added)

Yet this DEIS contains no mention of impacts on the health or social community of people who currently walk with their dogs if access to the GGNRA is severely restricted. Therefore, the analysis of alternatives cannot be accepted.

Information on the health benefits of dogs is easy to find. A pamphlet "Health Benefits of Companion Animals" (available online at the "Pets Are Wonderful Support" website (PAWS is a SF-based nonprofit): <http://www.pawssf.org/document.doc?id=15>) outlines the myriad of health benefits of having pets (and cites literature references for every benefit listed):

? Increased survival time after myocardial infarction for dog owners ?
Decreased heart rate from petting a dog ? Greater reduction of cardiovascular stress response in the presence of a dog in comparison to friends and spouses ? Enhanced hormone levels of dopamine and endorphins associated with happiness and well-being and decreased levels of cortisol, a stress hormone, following a quiet 30-minute session of interacting with a dog ? A significant reduction in minor health problems for at least 10 months after acquiring a dog ? Fewer doctor visits per year for elderly dog owners than for non-dog owners ? In bereaved elderly subjects with few social confidants, pet ownership and strong attachment were associated with less depression ? The mere presence of animals positively alters children's attitudes about themselves and increases their ability to relate to others ? Pets help children develop in various areas including love, attachment, and comfort; sensorimotor and nonverbal learning; responsibility, nurturance, and competence; learning about the life cycle; therapeutic benefits; and nurturing humanness, ecological awareness, and ethical responsibilities ? [E]lderly people who live in mobile homes and walk their dogs in the area had more conversations focused in the present rather than in the past than those people who walked without their dogs ? Disabled individuals in wheelchairs accompanied by service dogs during shopping trips received a median of eight friendly approaches from strangers, versus only one approach on trips without a dog

There are a number of additional health benefits specifically associated with walking dogs, as people currently do in the GGNRA. A study of 5,902 adults in Michigan (Reeves, Rafferty, et al, March 2010, Journal of Physical

Activity and Health, vol 8, issue 3) found that dog walkers were 69% more likely to engage in long-term physical activity than non-dog walkers. Among those who took their dogs for regular walks, 60% met the federal criteria for regular moderate or vigorous exercise. Only one-third of those without dogs had the same levels of exercise.

A study by Cutt, Giles-Corti, et al (American Journal of Public Health, January 2008) found that "the adjusted odds of achieving sufficient physical activity and walking were 57% and 77% higher among dog owners compared with those not owning dogs." Several other studies were cited in an article in the March 14, 2011 edition of The New York Times. One study of 41,500 Californians found that people with dogs were 60% more likely to walk for leisure than those who owned cats or had no pet at all. In another study quoted in the article, seniors in an assisted- living facility improved walking speed by 28% if they walked with a dog, but by only 4% if they walked with a human companion.

Walking with dogs has enormous health benefits for people, especially seniors. Yet there is no mention of these benefits in the DEIS. Nor is there any analysis of the impact that the loss of off- and on-leash space in the GGNRA proposed in the action alternatives will have on people's health. People who currently walk long distances in the GGNRA with their dogs will lose that ability if large areas currently open are closed to them. Walking on sidewalks on city streets or in the much smaller off-leash areas in city parks will not and cannot provide the same visitor experience that dog walkers have now in the GGNRA. It is therefore likely that people will find it harder to receive the same level of exercise outside of the GGNRA that they currently find walking their dogs in the GGNRA. The fact that these health effects were not considered in the DEIS means the analysis of the alternatives cannot be accepted.

The DEIS also makes no mention of the social communities that exist at nearly every site in the GGNRA where people walk with their dogs. Dog walkers are perhaps the most diverse group of users in the GGNRA. Go to Fort Funston and you will see kids and seniors, people with disabilities, gay and straight, every ethnic and religious group, and every socioeconomic class walking, talking, and laughing together, all united by their common love of dogs. There are few places in San Francisco where you will see so many different types of people interacting without rancor. Even city parks, which tend to be more neighborhood oriented, do not show the same level of diversity.

During Public Comment at the SF Board of Supervisors' Land Use Committee hearing on the GGNRA DEIS (4/11/11), Lisa Kiekdogerh said:

Good afternoon, Supervisors. My name is Lisa Kuekdogerh. I am disabled

and I do not have a dog. Last year I had to undergo grueling medical treatments. I am weak and even coming here to comment is an effort. I am grateful for getting the chance to speak. For both my mental and physical health, I made a point to visit Fort Funston when I could. I knew getting out of my social isolation was essential. I knew watching dogs play would bring me joy. I knew encountering the occasional extraverted dog would give me the chance to pet a dog and get a few face licks. My medical team told me I had to start walking as often as I was able. Given my physical state and being a woman, I wanted to be safe. Fort Funston with its open air format and the natural comings and goings of people and off-leash dogs was the perfect match. After not showing up at the Fort for a few days, a voice called out to me: "How ya doing? Haven't seen you lately." I was surprised and had no idea who was talking to me. She was a professional dog walker. I quickly learned there was a vibrant social community at the Fort and that I was welcomed into it. She continued to keep tabs on me, and does to this day. She has driven me to doctors' appointments and surgeries. She has become a vital part of my social support network. I have never encountered a more cohesive, caring, and self-policing community. I have met other disabled and senior folks who visit Fort Funston, and for many of the same reasons I do. One woman told me she knows if she collapses on the trail due to her health condition, as happened to her once before, she and her dog will be taken care of by the people there. Finding this community has been essential to my well being, and I don't want to see it disappear. This is the Fort Funston I have come to know and I wanted you to know about it, too.

There is no mention of this community, nor of the social (and health) benefits for people of this community in the DEIS To develop an understanding of the social communities of dog walkers that have developed in the GGNRA, staff and reviewers should read the public comment given at the April 11, 2011 meeting of the Land Use Committee of the San Francisco Board of Supervisors. This is not to submit those comments as those individuals' public comment for this NEPA process, but rather as expert opinions that can help staff and reviewers understand the social community of dog walkers, the benefits of dog walking, and the impacts of restrictions proposed in the alternatives on people and the community. The hearing can be accessed online at:

<http://sanfrancisco.granicus.com/ViewPublisher.php?view id=12> An analysis of the impacts on this social community of each of all alternatives should have been done in the DEIS. It was not, and therefore the analysis presented in the DEIS cannot be accepted.

BAD SCIENCE, MISLEADING CITATIONS, BIAS, AND LACK OF EVIDENCE

The findings of an EIS must be based on clear evidence of impacts. This DEIS is full of impacts that "might" occur or that "could" occur, but there is

no evidence presented in the DEIS that any of these impacts actually do occur in the GGNRA. You cannot base a management plan on hypothetical impacts when there is no evidence that, despite dogs being present for many decades, those same impacts have not been observed. That is just bad science. An EIS is supposed to be a site-specific technical planning document, based on hard information about actual effects. Generic background information about possible impacts, e.g., on serpentine soils, without any evidence that those impacts are actually occurring at sites in the GGNRA where people have walked dogs, is meaningless. Without site-specific information on impacts and a report of baseline conditions at each site, the analysis of alternatives as presented in the DEIS is incomplete and cannot be accepted.

Here are just a few examples of problems with the way the DEIS presents information that results in misleading and biased claims against dog walking, and incorrect and misleading analysis of impacts and alternatives:

? Wetlands ' The DEIS assumes negative impacts of dogs on wetlands, but the location of wetlands relative to the existing areas where dogs are walked is not shown. Mentioning impacts on wetlands when dogs aren't generally walked where they are is meaningless. Similarly, there is no data on how many dogs are actually observed in wetlands, or how frequently they are seen there. Is it one dog a year? 1,000? The numbers make all the difference in a site-specific analysis of impacts. Without such site-specific data, it is impossible to say that banning on- or off-leash dogs will have any positive impact on wetlands.

? Homestead Valley, Soils and Geology, p. 112 ' Analysis is based on the incorrect assumption that humans and wildlife have no impact on off-trail areas, and that all impacts can be attributed to dogs. Impacts of dogs should be evaluated realistically and in context with impacts caused by other factors such as humans. There is no clear evidence presented in the DEIS to support the assumption that imposing more rules will lead to fewer impacts. Any analysis based on this assumption but not backed by clear evidence must be removed from the DEIS.

? Alteration of Park Soils, p. 225 ' The DEIS claims that dogs and dog walkers create social trails "that become denuded of vegetation and result in increased soil compaction." There is no evidence presented that changing the rules about dogs will have any impact on creation of social trails since many are created and used by runners, hikers, and bikers without dogs. It seems likely that restrictions on hikers, runner, and bikers would be vastly more effective in preventing soil compaction on social trails than restrictions only on people with dogs, given the fact that most hikers and runners weigh at least 30 times more than most dogs and therefore cause more soil

compaction. However, there is no discussion of this in the DEIS.

? Alteration of Park Soils, p. 225 ' The third paragraph cites a Connecticut study with regard to dog waste as a source of nutrients in soil. However, the Connecticut study is not about how nutrients in dog waste can alter fertility of soils, as implied in the DEIS. The idea that dog urine would increase soil salinity significantly in areas adjacent to the ocean where salty aerosols from seawater constantly land and interact with the soil seems unlikely. But the DEIS makes no attempt to consider other factors present at the sites that could also alter soil salinity, focusing instead solely on dog urine as if it is the only possible cause of alteration. This makes it seem that dogs have a major impact, creating a bias against dog walking, when the reality may well be that the dog contribution to changes in soil salinity are minor when compared with other factors. Impacts from all causes must be studied in more detail at each site if any claim of impact is to be made.

? Assessment Methodology, pp. 291-292 ' This section says that "professional judgment" was relied upon in determining impacts, because there is a lack of site-specific scientific information on effects of dogs on soils in the GGNRA. However, NEPA law requires that agencies undertake studies to determine site-specific impacts if it is obtainable without exorbitant cost (40 C.F.R. 1502.22). These studies were not done in this DEIS, in violation of the NEPA requirements, although they could have been. The GGNRA instead took the easy way out and relied on unreliable (and biased) professional judgments of staff.

? Cumulative Impacts to Soils, pp. 292-293 ' The DEIS does not consider impacts on soils if, because of noncompliance, dog use is restricted further than in the Preferred Alternative, and therefore, dog use is concentrated into even smaller areas, both inside and outside of the GGNRA. This impact must be studied and included.

? Homestead Valley, Alternative A, pp. 301-307 ' The DEIS states: "Even though this site has low visitor use and low numbers of citations and incident reports related to dog activities, soil compaction and nutrient addition and possible erosion from dogs is assumed to be currently happening along the fire road/trails and in off-trail areas throughout the site." (emphasis added). The discussion of Alternative A, the No Action Alternative, is based on no site-specific evidence; it is based on assumptions. The evidence presented does not justify a change in management to protect soils and geology. This bias in the way the No Action Alternative is presented occurs repeatedly in the DEIS, and it must be changed to be based on site-specific evidence wherever the No Action Alternative is discussed.

? Inconsistencies within the DEIS ' In Appendix H, Fort Funston and Baker Beach are not listed as having potential habitat for the San Francisco

lessingia; potential habitat is listed in a number of San Mateo sites. But both sites are the only two considered in the impact analysis of lessingia in Chapter 4.

? Table 8 in Affected Environment ' The GGNRA Location column claims three plants exist at specific sites in the GGNRA when, in fact, they do not exist there (according to what is in the text of the DEIS). Lessingia does not occur in Fort Funston. California seablite does not occur at Crissy Field. Hickman's potentilla does not occur at Mori Point or Pedro Point. These inconsistencies should be corrected.

? Special-Status Wildlife ' The DEIS does not distinguish impacts on wildlife species by dogs from impacts by other factors that could be causing disturbances or population declines, such as loss of breeding or foraging habitat, predation by natural predators, climate change, beach width, etc. The DEIS provides no evidence that special-status species, who have been sharing space with dogs for decades, will experience any significant benefit if access for people with dogs is restricted, especially considering that these other factors will continue to operate whether dogs are present or not. Therefore, there is no support provided for conclusions that the action alternatives will provide actual benefits to wildlife populations.

? Tidewater goby, Coho salmon, steelhead trout, California red-legged frog ' Habitat for each of these species is essentially closed to dogs, although an occasional dog may be found in them. Because dog use of these habitats is not quantified, the DEIS cannot claim any impacts from current dog use/presence. Therefore, the DEIS should say that the No Action Alternative does not significantly impair natural values.

? Mission Blue Butterfly Habitat ' The DEIS provides no evidence of observed damage to the host plant for the Mission Blue Butterfly from dogs. The plants have shared space with dogs for decades, without problems. Therefore there is no reason to change the No Action Alternative.

? Wildlife Disturbances ' The DEIS does not contain any evidence to support the claim that the number of citations/warnings/incidents given for disturbances by dogs corresponds to a significant impact on wildlife. Impacts must be quantified, but the DEIS does not do that. A wildlife disturbance incident is not the kind of "high quality information" that NEPA law requires because the actual effect of that disturbance is not known. In addition, humans and natural predators also "disturb" wildlife The DEIS makes no attempt to evaluate disturbances by humans and natural predators, nor to compare actual effects of disturbances by dogs to actual effects of disturbances by people or natural predators. The DEIS simply asserts that disturbances by dogs causes unacceptable impairment of species, without

offering proof of that statement.

? Stranded marine mammals, pp. 233-234 ' The DEIS suggests banning dogs from beaches under Alternative D to "protect shorebirds and stranded marine mammals," but there is no evidence given to support the claim that dogs currently impact shorebirds and marine mammals. During Negotiated Rulemaking, representatives from the Marine Mammal Center stated that the first people to report stranded marine mammals were almost always people walking their dogs on the beach in the early mornings. They did not report any problems caused by the dogs to the mammals, and stated their preference that off-leash dog walking continue on beaches. There's no mention of this expert opinion in support of dog walking on beaches in the DEIS, another example of the bias against people with dogs that permeates the DEIS.

? The impacts in Alternatives B-E are assessed based on the assumption of compliance with regulations. However impacts in the No Action Alternative (A) are assessed assuming non-compliance with regulations. For example, at places such as Stinson Beach, Crissy Field, and Mori Point, impacts in areas where dogs are required to be leashed are assessed based on the assumption that dogs will be off-leash and non-compliant in those areas. Yet for the action alternatives, impacts in areas where dogs are required to be leashed are assessed based on the assumption of compliance and therefore are deemed to be reduced, even though the leash regulation is identical in all alternatives. In this case, all Alternatives have the same dog management strategy (leashed), and therefore any impacts should be the same. But they are not. Clearly, the No Action Alternative was not analyzed the same way the action alternatives were analyzed, and therefore the DEIS overstates impacts from the No Action Alternative. This imbalance must be changed everywhere it occurs.

? The DEIS says on page 290 that visitation has remained constant for the past 20 years and is expected to remain constant for the next 20 years. There has not been an increase in visitation over the past 20 years, nor is there expected to be a significant increase in visitation in the future. However, on page 5, in an attempt to explain the need for changing the dog management plan says that overall use of GGNRA sites has increased since the 1990s. These two statements are inconsistent.

? NEPA law states that the significance of an impact must take into consideration both context and intensity (40 C.F.R. 1508.27). Because current conditions at each specific site have not been reported in the DEIS, it is not possible to determine either context or intensity. Therefore it is not possible, to say that the preferred alternative will result in a quantifiable change in conditions compared to the No Action Alternative.

? Biased research, page 797 ' The DEIS quotes a study by Shulzitski and Russell (2004) to support restrictions on access for people with dogs. However this study compared wildlife in a restricted area where native plant vegetation had been restored to an unrestricted area at Fort Funston that had not had any new vegetation planted. Wildlife was reported to be more abundant in the restored area, but there is no evidence to suggest that restricting dogs caused the increase. It was more likely due to the replanted vegetation. The study also cites a dog barking at a fox, adding that the fox's behavior was unchanged. This indicates wildlife at Fort Funston has acclimated to the presence of dogs there, and therefore dogs are not causing major impacts on wildlife there. This study cannot be used to justify restricting access to people with dogs.

? Fort Funston soil chemistry, page 414 ' The DEIS says: "Nutrient addition to soils is at high levels at this site due to the high number of dogs at the site. Major impacts on soil chemistry would be expected at this site due to nutrient input from dog waste and urine." However there is no evidence presented to support this claim of major impacts on soil chemistry, despite the fact that dogs have been at Fort Funston for decades and such major impacts should be easy to detect. During Negotiated Rulemaking, GGNRA staff were repeatedly asked for evidence to support this claim. No evidence was presented then, and there's no evidence presented now. Clearly there is no such evidence. This claim should be removed wherever it occurs.

? Bacterial contamination off Ocean Beach, page 461 ' The DEIS says: "A substudy of the San Francisco Sewage Master Plan determined that bacterial contamination of waters off Ocean Beach was significant due to dog waste deposited along the shoreline (NPS 1999, 21)." The reference cited has is not a substudy of the SF Sewage Master Plan (it is instead Natural Resources Section, Resources Management Plan, GGNRA, December 1999). During Negotiated Rulemaking, SFPUC's representative challenged the GGNRA's claim of dog waste contamination at Ocean Beach. GGNRA staff replied that they asked the SFPUC Water Quality Bureau and were told the SFPUC was not aware of any such study. Yet the GGNRA continues to make this claim of bacterial contamination from dog poop at Ocean Beach. SFPUC monitoring data easily available from the SFPUC's website indicates that Ocean Beach is extraordinarily clean, while the count at "no dogs" beaches such as Aquatic Park and Baker Beach at the Lobos Creek outlet have very high bacterial counts. Clearly dogs have nothing to do with bacterial counts in the ocean. Indeed, the San Francisco Chronicle on May 26, 2011 reports that the environmental group Heal the Bay gave Ocean Beach a perfect score for water quality. The DEIS statement is wrong and contributes to a bias against dog walkers. Without any evidence bacterial contamination in water at beaches from dogs is even really an issue, discussion of it must be removed from the DEIS.

Although these are specific examples, the issues raised in each bullet point occur repeatedly throughout the DEIS. They must be corrected and changed everywhere they occur in the DEIS, not just at these few isolated instances.

The basic assumption throughout the DEIS is that the mere presence of dogs equals impaired natural resources. But no evidence is given for this broad generalization. Because this basic assumption is not proven, the analysis that assumes it to be true cannot be accepted. When the sum total of all these problems outlined above are taken into account, it is clear that the DEIS is riddled with poor science, and with claims of impacts and assumptions that are not supported by any data. Basically, the entire impacts section must be thrown out and completely rewritten, to ensure this DEIS is the science-based document that it is supposed to be. In addition, the entire alternatives analysis section must also be thrown out and completely rewritten because it is based on the fatally flawed impact analysis. The DEIS is so flawed it cannot be fixed. It must be completely redone.

THE SPECIAL CASE OF THE SNOWY PLOVER

The presence of the Western Snowy Plover at Ocean Beach and Crissy Field has been used to justify banning dogs from large sections of the beach at both areas. However, the DEIS does not provide evidence to support this restriction. There is no evidence provided in the DEIS to support the claim that dogs chasing the plovers has an impact on the survival of the species. There is no correlation between numbers of plovers and whether dogs were on- or off-leash on the beaches. Indeed, some of the highest numbers of plovers recorded have been when dogs were off-leash (1994 had the highest recorded numbers of plovers (54), at a time when there were no restrictions on dogs on Ocean Beach). Even Hatch (1996) says: "Factors other than the number of people or dogs, possibly beach slope and width, appear to exert greater influence over Snowy Plover numbers on Ocean Beach."

According to the DEIS, the presence of dogs on the beach has not prevented the snowy plovers from using their preferred resting places at Crissy Field. The snowy plover section of Chapter 3 (page 253) states that, since monitoring began in 1996, the birds have continued to use the same two resting areas, whether dogs were on or off-leash on the beach or not. There is no evidence dogs have any impact on plover population numbers. There is no evidence that plover populations will experience any significant benefits from the Preferred Alternative compared to the No Action Alternative. Monitoring surveys from 1994 to 2006 observed a total of 48 off-leash dogs chasing plovers. Given the fact that there are millions of visits by dogs to Ocean Beach every year, this is a minuscule amount. Similarly, Hatch (1996) studied 5,692 dogs at Ocean Beach, and observed 19 that chased plovers; 1/3 of 1% of the dogs observed chased plovers. There is no evidence in the DEIS that a dog has ever caught or harmed a plover. There is also no

evidence that these chasing incidents had any impacts on the plover populations.

There is no evidence cited in the DEIS that dogs adversely affect the roosting or foraging behavior of the plovers. Hatch (1996) makes the claim that: "Disturbance [of plovers by dogs] results in lost energy intake due to reduced foraging and feeding efficiency, and increased energy expenditure as a result of fleeing from disturbance." The very next sentence is "Little research has been conducted on the energetic expenditure as a result of fleeing from disturbance." This is another case of assumptions of impacts without any hard evidence that the impact actually occurs.

One study that did test this assumption was done by Megan Warren, as part of a Senior Research Seminar at UC Berkeley ("Recreation Disturbance Does Not Change Feeding Behavior of the Western Snowy Plover", UC Berkeley Environmental Sciences 196, Senior Research Seminar, May 7, 2007). In her report, Warren studied whether recreational disturbances changed the feeding behavior of the snowy plover at Crissy Field and two sites at Point Reyes. She admits that she had expected the data to show that as the frequency of disturbance increased, the birds would spend less time actively foraging and more time alert. Instead, she found no significant relationship between feeding behavior and direct disturbance by people recreating on the beach. "The Crissy Field study did not provide any relevant results, however, the data from the two Point Reyes study sites do not support the hypothesis that western snowy plovers in more heavily disturbed areas devote less time to actively foraging and more time to being alert." (emphasis added) Interestingly, the Warren study is not mentioned in the DEIS.

Again, the DEIS has to consider "disturbances" of plovers by dogs in the context of other causes of disturbances, from people walking in the dunes, joggers, natural predators, equestrians, special events like Fleet Week and the Fourth of July that draw hundreds of thousands of people to the GGNRA, and surfers. The April 2011 edition of the West Portal Monthly quotes Dan Murphy, a plover counter and local plover expert from the Golden Gate Chapter of the Audubon Society as saying, "Ocean Beach isn't really suitable for nesting [of plovers]. Not only is it overrun with people and dogs, it's loaded with predators." He continues, "There are typically between 15 and maybe 40 ravens in the plover protection area at any given time. There are additional birds that come and go during the day. Then there are the other predators that use the beach, mostly at night. In other words, there are way too many predators and disturbances to suggest Ocean Beach is a likely spot for successful plover nesting."

Disturbances from dogs cannot be considered in isolation, as if dogs are the only source of disturbances for the plovers (as the DEIS analysis assumes).

The analysis based on this assumption cannot be accepted.

Mitigations already exist to address the small numbers of dogs who chase plovers' citations to their owners. There is no need for additional actions, and especially no need to ban dogs from 2/3 of Ocean Beach or from the western end of Crissy Field. Actions as drastic as bans must be supported by solid scientific evidence, not assumptions about possible impacts. Indeed, this lack of evidence of impacts means that there is also no justification for the seasonal restrictions on dog access on Ocean Beach and Crissy Field. These restrictions should be removed.

Note that on page 252, the DEIS says: "In September of 2005, the USFWS published a Final Rule to re-designate critical habitat for the western snowy plover along the coasts of California, Oregon, and Washington (20 CFR Part 17)." The clear implication of this sentence is that the GGNRA contains federally designated critical habitat for the plover. The reality is that USFWS has refused to designate any land in the GGNRA as critical habitat for the snowy plover. USFWS continued to refuse to designate any critical plover habitat in the GGNRA in a 2011 proposal that doubled the acres of critical habitat on the west coast. The fact that there is no critical habitat for plovers in the GGNRA should be explicitly stated in this paragraph.

THE SPECIAL CASE OF THE BANK SWALLOWS

The DEIS claims (table on page 1265) that under the No Action Alternative (allowing off-leash throughout Fort Funston, except for the closed area) "continuing impacts from dogs and/or humans would include digging at or collapsing the burrows, flushing birds from nests, and causing active sloughing and landslides that may block or crush burrows with the young inside." The DEIS cites two studies for its claims of these impacts. However, neither study documents any impact from dogs on bank swallows. One study cited, USGS 2004, does not actually report any dogs in the bank swallow protected area (in this report, dogs are reported to be in a different area closed for native plant restoration).

In the other study, NPS 2007e, monitors reported that a few dogs (a total of three from 2001 to 2006) were observed in the closed area around the bank swallows. These few dogs were not observed to cause any problems for the bank swallows. A list of "potential impacts" is given at the end of NPS 2007e, including digging and collapsing burrows, flushing of birds, and landslides. But this is not a list of observed events. These "potential impacts" in NPS 2007e somehow were reported in the DEIS (page 1263) as: "Dogs could likely dig at or collapse burrows..." and in the table on page 1265 as "continuing impacts". There is no explanation of how things that could "potentially" happen became "likely" to happen, and then two pages later, became a "continuing impact." Note that no one has ever seen a dog collapse

a bank swallow burrow, flush a swallow, or cause a landslide in the bank swallow colony at Fort Funston. Nola Chow, a GGNRA researcher who monitored the bank swallow colony in 1994 and 1995, wrote an official report of her work (1994-95 Bank Swallow Annual Report, 1996). In it, she observed that dogs were present in areas around the bank swallow, but noted that they did not disturb the swallows. Her observations of no impact are not reported in either the DEIS or in NPS 2007e.

Given the lack of evidence of impacts, the presence of bank swallows at Fort Funston cannot be used to justify any restrictions on access for people with dogs, whether on the bluffs or on the beach. There is no evidence in the DEIS that the action alternatives would have any beneficial impact on the bank swallows compared to the No Action Alternative. The analysis of alternatives that does not acknowledge this cannot be accepted.

Correspondence: SAFETY ISSUES

The DEIS says (page 5) that: "Since the 1990s... the number of conflicts between park users with and without dogs began to rise, as did the fear of dogs and dogs bites or attacks." The clear implication is that there has been an increase in incidents involving dogs, and this is used to justify restrictions on access to GGNRA lands for people with dogs.

However, there is no evidence in the DEIS to indicate that dogs are a major safety threat. Appendix G lists Pet Related Incidents throughout the GGNRA for 2007 and 2008. There is no reason given for why the DEIS only shows incidents from those two years. Because Appendix G contains only numbers of incidents, there is no context for what actually happened ' where did the incident occur? What actually happened? How serious was it? There is no site-specific information provided to indicate where, if anywhere, safety might be a problem.

Even without knowing the details, it is clear that there aren't many incidents involving dogs. In 2008, Appendix G cites 16 dog bite reports out of the millions of visits by dogs to the GGNRA every year. The number for 2007 was 37. The total number of warnings, citations, and reports involving dogs totaled 889 for 2008 and 1535 for 2007, which represent a small fraction of the millions of visits by dogs every year. Given these small numbers of problems, there is no evidence that the action alternatives would have any more beneficial impact on safety than the No Action Alternative. Analysis that assumes a difference in safety among the alternatives cannot be

accepted.

Should problems occur, law enforcement can deal with them without needing to severely restrict access for people with the hundreds of thousands of dogs that do not cause any problems. At DEIS Open Houses, GGNRA staff have said that NPS law enforcement is not set up to handle issues with aggressive dogs. The San Francisco Police Department has a Vicious and Dangerous Dog Unit that investigates allegations of aggressive dogs and dog bites, and holds hearings at which evidence is presented. The Hearing Officer can order a dog to be muzzled when in public, or order its owners to work with a trainer to learn how to control the dog, or, in the most serious cases, order the dog to be euthanized. If the NPS is not set up to deal with issues involving aggressive dogs, perhaps any dog that is accused of biting or attacking a person or other dog in the GGNRA could be referred to the SFPD's Vicious and Dangerous Dog Unit. There is precedent in that juveniles who commit crimes in the GGNRA are referred to the San Francisco Juvenile Justice system. Treat people with aggressive dogs the same way ' refer them to the SFPD Vicious and Dangerous Dog Unit.

Given that Appendix G only includes data for two years, is there any evidence that there has been an increase in incidents involving dogs, as page 5 implies? During Negotiated Rulemaking, the GGNRA provided participants with incident and citation reports from 2001 to 2006. Analysis of this data (which was not included in the DEIS) shows that the numbers of incidents and citations are quite similar to those in 2007 and 2008. For example, the numbers of dog bite incidents from 2001 to 2006 were 26, 26, 23, 29, 23, and 24, respectively. These numbers are very similar to those in 2007 and 2008. There was no increase in dog bites in the GGNRA. While there appears to be an increase in total number of incidents in 2007 and 2008, the vast majority of them are leash law violations. There is no evidence given that leash law violations have any impact on safety for either people or birds and wildlife (see the discussions of the snowy plover and bank swallows above).

The DEIS does not include any context for the incidents enumerated in Appendix G. There is no information about how incidents involving dogs compare to non-dog related incidents. Without this context, it is impossible to compare the benefits of different alternatives. The data from 2001 to 2006 makes it clear that people without dogs cause significantly more problems than dogs do. The data is presented graphically below.

Clearly people without dogs represent the major safety problem in the GGNRA, not dogs.

ENVIRONMENTAL JUSTICE

The DEIS cites the need to restrict access for people with dogs because of concerns about environmental justice. On page 19, the DEIS says: "Minority or low-income populations may be more negatively affected by off-leash dog walking than Caucasian, middle-income, or high-income populations." To support this claim, the DEIS says (page 31): "In a study conducted by San Francisco State University in 2007 on ethnic minority visitor use experience at GGNRA, research found that dogs were a problem mentioned by all Latino and Asian groups (Roberts 2007, iii). Research found that these minority groups mentioned dogs, especially dog waste, as a barrier to park visitation, and overall, Latinos were the most concerned with dog owners' lack of concern or control of their dogs (Roberts 2007, iii)."

The Roberts study was not "on ethnic minority visitor use experience at GGNRA." It was a series of focus groups of a small group of non-randomly selected members of various minority groups intended to "realize the park goals of understanding how to improve 'connecting people to the parks' and how best to engage under-represented communities in plans and programs." The focus groups totaled less than 100 people, who were largely unfamiliar with the GGNRA (only 1/3 had visited at least one GGNRA site in the past year). There is nothing in the report to indicate how common a comment was ' did only one person say it, or was it mentioned repeatedly. Thus the focus groups' opinions reflect only the opinions of the people who participated and cannot be extended to indicate opinions shared by all members of the minority groups represented. Yet that is what the DEIS does with the Roberts study.

While dogs were mentioned, it is a misrepresentation of the study to claim dogs were a major factor keeping minorities out of the GGNRA. A major concern expressed was that there are not enough minorities represented in NPS staff. Common barriers to coming to the GGNRA included the lack of mass transit to get to the GGNRA, and fear of unknown plants and wildlife behavior. When asked to describe why they think San Francisco parks have become less safe, African Americans in the focus groups expressed concerns about finding used drug paraphernalia on the beaches, the danger of pedophiles/sexual predators at the park, and aggressive panhandling. Asians and Hispanics expressed concerns about cleanliness, defined as unclean bathrooms and dog feces. While Hispanics in the focus group did mention dogs as a constraint to park enjoyment, they also mentioned concern for personal safety, lack of mass transit, and fear of crime (fear of being raped, witnessing drug use, the presence of homeless people, and observing fights ' "it is only safe if enough people are around"). Asians similarly mentioned dirty bathrooms and dog feces in the same context as a barrier for access to parks. Two focus groups of Asians reported dislike for "dog owners [who] do not clean up after their pets," but also for trails not being well kept.

Out of the more than 30 recommendations at the end of the study, there is no

mention of dogs. While dogs were mentioned in the focus groups, it is by no means the indictment of dogs ' if only there were no dogs, Asians and Latinos would visit the GGNRA ' that is implied in the DEIS. The reference to this study should be removed from the DEIS. At the very least, an accurate description of the focus groups and what the report does and does not do must be included, so it can be understood in an appropriate context.

The DEIS contains no information on the ethnic makeup of people who do visit the GGNRA. Dog walkers are perhaps the most diverse group of park users in the GGNRA. Go out to Fort Funston or Crissy Field and you will see kids, seniors, people with disabilities, gay and straight, all ethnic groups, people from all religions and countries, and people from every social and economic class walking with their dogs. The restrictions on off-leash access in the action alternatives will have a serious negative impact on the thousands of ethnic minorities who currently walk with dogs in the GGNRA. This impact is not addressed in the DEIS. Analysis of alternatives that does not consider this impact cannot be accepted.

The DEIS also does not address the impact of the severe restrictions on off-leash access proposed in the action alternatives (and especially the Preferred Alternative) on people with disabilities who currently walk with their dogs in the GGNRA. For example, the part of the Sunset Trail, the only paved trail at Fort Funston that goes away from the parking lot, is designated as "no dogs" in the Preferred Alternative. People with mobility issues will be restricted to the parking lot, since there will be no way for them to walk long distances through the sand dunes to reach those parts of the paved trail farther north that are designated on-leash. Analysis of alternatives that does not address impacts on people with disabilities who currently walk their dogs in the GGNRA cannot be accepted.

THE COMPLIANCE-BASED MANAGEMENT STRATEGY

The Compliance-Based Management Strategy (CBMS) must be abandoned and removed from the DEIS. This strategy, which ratchets up leash restrictions in areas if the GGNRA claims there is not enough compliance with them, is designed to (page 63): "encourage compliance with sections of the Code of Federal Regulations (CFR) applicable to dog management, and ensure protection of park resources, visitors, and staff. It will provide the framework for monitoring and recording observed noncompliance with the applicable sections of the CFR, including the new 36 CFR Part 7 special regulation, and will guide use of park resources to address those violations."

There is no explanation of how the CBMS will encourage compliance with sections of the CFR applicable to dog management. What sections would that be? The DEIS does not say. There is no explanation of how the CBMS will "ensure protection of park resources, visitors, and staff?" The CBMS

will look at compliance, and only compliance, to determine whether or not to change an off-leash areas to on-leash, or to ban dogs from an on-leash area. There is no attempt to determine whether or not the non-compliance actually causes any impacts on park resources, visitors, or staff. As in the impacts and analysis sections of the DEIS, there is an assumption that non-compliance equals impact and impairment of resources. But there is no evidence presented in the DEIS that this equation is true. There is no evidence that CBMS will have any beneficial impact on park resources, visitors, or staff, and especially no evidence that it will be any more beneficial to any of them than the No Action Alternative without a CBMS.

The description on page 63 indicates CBMS will provide the framework for monitoring and recording observed non-compliance. That implies the DEIS contains information on how the monitoring and recording will be done. But there is absolutely no information in the DEIS about how the monitoring will be done. Who will do it? Will GGNRA staff who have demonstrated a repeated and long-standing bias against dogs do the monitoring? Will they be teaching volunteers how to do it? Will those volunteers be from groups who oppose dogs in the GGNRA such as Golden Gate Audubon? Will the GGNRA install surveillance cameras in areas with high dog use? There is nothing in the DEIS to prevent that. When asked about surveillance cameras, GGNRA staff answered that they were not specifically listed in the DEIS, but they did not rule out their use. Without a full description of exactly how this monitoring and recording of non-compliance will be done, there is no way for anyone to know whether or not the CBMS will be a problem or not, whether it is worth opposing or not. This denies people the ability to comment intelligently on the CBMS, and, therefore it must be removed.

In a fuller description of the CBMS process elsewhere in the DEIS (e.g., page 802 and 1116), it is clear that changes in leash status will be made automatically. As two different federal judges ruled in the Crissy Field tickets case, the NPS is required by law to seek the public's input before making a management change that is either significant or highly controversial. Changing an off-leash area to on-leash, or banning dogs completely from an on-leash area would clearly be both significant and highly controversial. But CBMS will deny the public the opportunity to comment on the change when it is made. It will happen automatically. Throughout the last 20 years, the GGNRA has repeatedly made it clear that it does not want dog walking on its lands, as for example, when it unilaterally rescinded the 1979 Pet Policy that allowed off-leash dog walking on 1% of its land. When viewed within the context of that history, the CBMS seems a cynical attempt to accomplish that desired ban while being able to claim that the DEIS allowed dog walking, albeit in very small areas, and that the GGNRA was therefore responsive to the public's demand for off-leash recreation. The ability to make management changes without

public input is an illegal and fatal flaw in the CBMS and, so the CBMS must be removed from any Dog Management Plan.

Traditionally adaptive management plans do not only go one way ' if there is a documented impact, additional restrictions take place, but where there is no impact observed as a result of the new restrictions, they can be eased. The CBMS as outlined in the DEIS is one-way only. The restrictions made will be permanent, with no chance to go back to the less restrictive leash requirements if no impacts are documented. This is another fatal flaw in the CBMS, another reason it must be removed.

The GGNRA has only suggested CBMS for the dog management plan. Are other recreational users subject to the same compliance monitoring and automatic and permanent changes in management policies, especially when there is no proof of actual impacts needed? Are hang gliders, equestrians, or bicyclists subject to the same process? They are not, and the implementation of CBMS only for dogs is biased and unfair, and it cannot be allowed to remain in the DEIS.

Management plans should not come with a built-in nuclear option or poison pill. Yet that is exactly what the CBMS is. It allows a relatively few bad actors to undermine and destroy a traditional recreational use of an area that is enjoyed by hundreds of thousands of people. No number of responsible dog owners will stop what will become the inexorable removal of all off- and on-leash access in the GGNRA Millions of hours of incident-free dog walking will not matter. There should (and there are) penalties for people who allow their dogs to enter closed areas, dig, jump on people, or chase birds. The vast majority of people who do not act badly should not be penalized for the bad actions of a relative few. The CBMS is too vague, unfair, and undemocratic (it denies the public the chance to comment on changes when they are made) to be allowed to continue in the DEIS or in any GGNRA Dog Management Plan. It must be removed.

SUMMARY

It is clear that the DEIS is a fatally flawed document. It does not provide the baseline or site- specific data needed to fairly evaluate the alternatives. Unsubstantiated claims and assumptions underlie most of the analysis of the alternatives. The No Action Alternative is unfairly analyzed, with assumption of non-compliance while all action alternatives assume compliance. The DEIS assumes there are no impacts unless dogs are present, ignoring impacts from people, natural predators, and other causes, and denying the context needed to evaluate fully and fairly whether restrictions on dogs will have beneficial impacts or not. It ignores impacts on recreation, people, and the surrounding communities (especially city parks). It is full of impacts that "might" or "could" occur, but contains little,

if any, documented evidence that those impacts are actually occurring in the GGNRA. It includes the poison pill of a CBMS, which will change permanently management status in the GGNRA while denying the public the chance to comment on those changes.

GGNRA staff have demonstrated a profound bias against dog walking in the past. They cannot be the ones who evaluate the public comments submitted as part of this NEPA process. In particular, they cannot fairly evaluate criticisms of their own studies that are contained in this and other public comments. NPS must arrange for an independent review of the public comments and an independent review of how the DEIS must be changed in response to those comments.

The DEIS is so fatally flawed it cannot be fixed. The GGNRA must throw it out and start over, doing the baseline studies required of it and fairly evaluating impacts and alternatives. SFDOG encourages the development of an A+ Alternative, one that is based on the 1979 Pet Policy, and that returns the plover restriction areas to off-leash access (given the DEIS' failure to prove any impact by dogs on plover populations or survival). In addition, areas in San Mateo that were not part of the 1979 Pet Policy but where off- and on-leash recreation has traditionally occurred, such as Sweeney Ridge, must allow that off- and on-leash recreation to continue. Similarly, off- and on-leash should be considered for all areas that become part of the GGNRA in the future, such as Rancho Corral de Tierra, especially where off- and on-leash recreation have traditionally been enjoyed. Sincerely,

Sally Stephens Chair, SFDOG

Note: Comment Submitted to the GGNRA includes an Addendum: Transcript of April 11, 2011 Land Use Committee of the San Francisco Board of Supervisors hearing. cc: Sen. Dianne Feinstein, Sen. Barbara Boxer, Congresswoman Jackie Speier, Secretary of the Interior Ken Salazar, NPS Director Jon Jarvis, NPS Pacific West Regional Director Christine Lehnertz, State Sen. | Correspondence: | I am writing because I am very disappointed and unhappy about the GGNRA Dog Management Plan to reduce protected dog areas in the Bay Area. Like the San Francisco Board of Supervisors, I am opposed to the plan. | | |

Fort Funston is one of the FEW places that allows dogs on beaches, and the plan is to cut this area even further? Please remember that dogs are not allowed on MOST beaches or federal land preserves. For example, dogs are only allowed on the valley floor, and not in MOST of Yosemite, including most of the hiking trails and hiking areas. There are few places for dogs to run on and off-leash. Please do not take these areas away.

I myself am a responsible dog owner, as are my friends who own dogs. We always pick up after our dogs, carry around plastic bags, and dispose of our dogs' waste appropriately. We constantly supervise our dogs, especially if they are running off-leash, to make sure they are not disturbing people or destroying habitat.

We understand you are trying to preserve a natural habitat, but our dogs run on the trails and leave only as much of a footprint as people do in Yosemite and other national parks.

Please PROTECT these designated dog areas. They are very important and should not be cut or reduced.

Sincerely,

I am a Sierra Club member & like the Audubon Society, but I oppose them on this issue. Dogs have such little protected areas as is. If you take away their space, you should add more elsewhere...

Correspondence: Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness area like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original reason that the GGNRA was established.

This plan disregards the health and well-being of people, dogs, and the

community. It arbitrarily excludes the hundreds of thousands of Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan provides no evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation.

? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.

? Exclude biased, exaggerated, speculative, and misleading statements and studies.

? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).

? Establish fair rules enabling professional dog walking.

These are my personal comments and observations regarding this plan:

I am a life member of the Sierra club, a hiker and a birder, and a member and docent at the Academy of Sciences, so I am well aware of environmental issues in our area. I am always disturbed, and I speak up when I see dog owners sending their dogs and children up the unstable cliffs at Fort Funston. I'd like to see much better signage and fencing at Fort Funston so that my dogs and I can run freely off-leash without disturbing important natural areas. As much as those other interests give meaning to my life, none comes close to the rich experiences I've had as the owner/guardian of mainly rescue dogs over the last thirty-five years. We have to strike a balance to care for the areas and species that require protection and allow our unleashed dogs their healthy exercise for the myriad ways they benefit us as companions. Let's be sensible and respect the recreational needs of us city-dwellers while monitoring the species we can perfect a clear compromise on the GGNRA plan is in order. Thank you for this opportunity to express my views.

Sincerely, Liz Rogers

Type:

Correspondence: Dear Mr. Dean,

I am a 50 year old Nurse Anestheist and live in Pleasant Hill with my 2 rescued, very well behaved weimaraners. I am in San Francisco a least 2-4 times a week and always take my dogs with me, especially so we can go to Fort Funston or Crissy Field. Even when I lived in the City many years ago, I always took my dogs to Fort Funston. When you live in the City, the options for letting your dog run and play off leash are very limited. When dogs don't get a chance to run, they are unstimulated and eventually get bored and destructive (and in some cases, have to be put down). Even though the East Bay has many off leash areas for dogs, I constantly have to worry about foxtails, ticks and rattlesnakes (plus it gets too hot out here in the summer to let them run around outside). Fort Funston and Crissy Field (those are the two that I frequent, but I include the other parks as well for these comments) provide a lot of serenity for me in their beauty, and in knowing that my dogs and I can have fun, get a lot of exercise, and not have to worry too much about getting hurt.

The majority of times that I am at either park I witness responsible dog handlers, and find that most of the dogs are highly socialized, allowing them to be off leash without getting into fights or not listening to commands. My dogs are always under voice control. Indeed, there are irresponsible dog owners and troublesome dogs, but I find that to be the exception rather than the rule at these parks.

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness area like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original reason that the GGNRA was established.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the hundreds of thousands of Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others. The GGNRA draft management plan provides no evidence to justify such drastic changes to 40

years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. Provide for extensive off and on-leash dog walking on all trails and other lands Acquired by the GGNRA since 1979, especially in San Mateo County. Exclude biased, exaggerated, speculative, and misleading statements and studies. Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).

A Compliance-based Management Strategy cannot be a part of any plan. It changes the status of areas (off-leash becomes on-leash, on-leash becomes no dog) automatically and permanently if the GGNRA claims that there is not enough compliance with the new restrictions. In this case no evidence of impacts from non-compliance are necessary, only the fact that there is non-compliance. This type of strategy will potentially end off-leash access without giving people a chance to comment on the change. Also, it punishes responsible dog owners for the bad behaviors of a few irresponsible ones. It must be opposed and removed.

I trust that the GGNRA, in developing a general management plan, will take into consideration and respect the specific character and situation of the Fort Funston Area. I fully support Alternative A, the No Action alternative of the DEIS, as it relates to Fort Funston.

Respectfully,

Jean Kusz

Correspondence Type: Letter
Correspondence: Dear Superintendent Dean,

My husband and I are long time users of the Crissy field Recreation Area.

For years we came over from the East Bay, often with out of town visitors to enjoy the setting and the uniquely San Francisco flavor of people of all ages and ethnicities enjoying a beautiful setting. During all of those visits we never encountered any issues with the dogs and bicyclists. As long time members of Audubon and Nature Conservancy, we took note of the restoration progress. My husband is 72 years old and we also appreciated that the area was accessible to friends and family members with limited mobility.

Last year, after 30 years of marriage, we got our first dog. Now we make the trip across the bridge twice a month on average to walk Fred at Crissy field. We almost always get lunch and coffee there and usually stop to pick up some other "necessity" on our way through the city. As new dog owners, we have been particularly aware of the behavior of dogs and their owners. During the past year of regular weekday and weekend excursions to Crissy field, we have never observed an issue of dog or owners violating posted signage.

We are concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, but other options (besides restricting dog-walking access) should be considered first.

Some specific problems with the DEIS include the following points. Please revise the DEIS to correct these errors.

This DEIS and Plan doesn't recognize that environmental values include both recreation and nature. In many places, the DEIS treats the environment and recreation as opposing values, i.e., that recreation only harms natural resources. To the contrary, it is our experience that when people use a recreation area, they care for it. The document doesn't acknowledge that people care about both and that people with dogs are often also good stewards of our environment.

The draft plan has the effect of punishing many people because a very small number may be uneducated, insensitive, or irresponsible. The reasonable response to this problem is to educate visitors, improve signage and help park visitors follow the rules and learn how to respect the environment, not to ban the rest of us with dogs from the GGNRA. I wish that the DEIS would include an alternative along these lines. The DEIS doesn't recognize that many areas of the GGNRA are located in or next to urban neighborhoods. The DEIS excludes the quality of the urban environment from its scope, saying it's not significant. The reality is that the GGNRA provides much needed open space in a major urban area. This omission is disconcerting because the fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) to serve the metropolitan Bay Area. The dynamic

interrelationship between GGNRA and our neighborhoods is exactly the human environment that the EIS is required to study, but failed to do so.

The DEIS notes some studies and general tendencies of dogs to harm natural resources, but with few exceptions, there is little documented site-specific impacts to support the restrictions of the preferred alternatives. Further, there is insufficient documentation that considers other impacts - other park visitors that disturb and impair the natural resources, other wildlife, Mother Nature, boot camps, bicyclists, huge crowd attracting events such as Fleet Week, festivals and Walk-a-thons. The proposed broad limitations in the DEIS are without site-specific science that demonstrates that problems with the quality of GGNRA's natural resources are actually attributable to dogs and not to other factors.

The DEIS needs to provide full disclosure to the public and decision makers. If dog- related disturbances are having a significant negative effect on wildlife, for example, the DEIS needs to provide site-specific scientific evidence as documentation and undertake a scientific evaluation as to whether people or other factors are also causing or contributing to the problem noted. We have never observed problems with dogs in sensitive areas. If they are, GGNRA needs to provide an analysis that considers whether people should also be restricted from these areas. We need this documentation in order to comment meaningfully on the draft plan and DEIS. The science needs to be sound and the consequences need to be fully and fairly disclosed for everyone - so that an informed decision can be made.

The DEIS is biased against and does not take a hard look at the No Action alternative or variations on that alternative.

Please choose the No Action alternative and continue the current off Leash policy. These spaces are filled with joy. The deepest needs of people are met when we gather outdoors, interacting with fellow dog lovers, savoring the spirit that is generated by enjoying dogs running, chasing, playing in the surf. This is not the enemy of conservation, it is the embodiment of the balance and cooperation necessary for quality urban environments.

Correspondence:

Dear Superintendent Dean,

I would like to introduce myself. My name is John Barnette and I reside in the Bayview district of San Francisco. 94124 zip code. I have lived in San Francisco for nearly 14 years and have lived in several neighborhoods. I have been a dog owner/guardian for nearly all that time. One of my favorite things about San Francisco is its park system of small neighborhood parks and huge spaces such as Golden Gate Park, The Presidio, Fort Funston, and Crissy Field. I appreciate the community atmosphere and great diversity of our great city evidenced by the people and pets who utilize the spaces.

I am a Realtor in San Francisco and often discuss the benefits of the parks and recreation spaces in the various neighborhoods of the city and greater Bay Area with clients and associates. It is elemental to the liveability of our great area.

The human animal bond is very important to me. As a responsible dog guardian, I keep my dog under voice and sight control, clean up after him and keep him out of the fenced dunes and vegetative areas. It is important for my dog walking friends and me that areas like Crissy Field and Fort Funston remain open for off leash dog walking access. This is especially important for me as my dog Clyde is a large Grayhound mix that needs large spaces to run and frolic.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo and San Francisco County are not based upon sound science or long-term monitoring of site specific conditions. As a responsible dog guardian and advocate for animals, I know it is crucial that our dogs are well behaved and trained in order to peacefully co-exist in an urban environment and adequate exercise and socialization is essential for a well- behaved dog. Having places where I can take long walks with my dog allows me to get the exercise I need while also meeting my dog's needs. Without access to the small amount of land in the GGNRA we currently have, I am very concerned that many dog and dog guardians

will not have sufficient opportunity to exercise and recreate.

The draft plan has the effect of punishing many people because a very small number are not educated, insensitive, or irresponsible and because the current signage of off leash areas is unclear. The reasonable response to this problem is to educate visitors, improve signage and help park visitors follow the rules and learn how to respect the environment and non-dog citizens enjoying the space.

An emphasis should be placed on education, policing irresponsible pet owners (and general public without pets), and specific protection of damaged lands, and preservation of endangered wild life in protected space. Respectfully,

John Barnette

Correspondence Type: Letter
Correspondence: Dear Mr. Dean,

My name is Mike Clogan, and I live in the city of San Francisco. I am writing to you today in connection with proposed changes to canine access, outlined in the Golden Gate National Recreation Area's ("GGNRA") Draft Environmental Impact Statement ("DEIS.")

While I am not currently a dog owner, I am very concerned with the changes outlined that would limit or prohibit dog access to many GGNRA sites. I believe that the proposed changes have not fully considered all impacts from limiting or eliminating canine access to the GGNRA.

San Francisco is, obviously, a highly urban environment. Most of us do not possess yards, and, indeed, many residents live in apartment dwellings. We citizens have come to view area parks, green spaces, and beaches as communal back yards. This includes GGNRA areas such as Crissy Field, Ocean Beach, and parts of the Presidio.

The proposed changes would have a negative environmental impact upon non-GGNRA parks and sites, as dog owners would be forced to use those areas once access is limited to GGNRA areas. This would be true even if the

pertinent GGNRA area was merely limited by adding an on-leash rule, as free-spirited San Franciscans would still migrate to off-leash areas in the city and county of San Francisco. I do not believe that the DEIS adequately considers this.

I often use Ocean Beach and visit Crissy Field several times per year. I have never witnessed a problem with dog use of those areas. Indeed, because most dogs in San Francisco are, as are their owners, apartment dwellers, dogs are well socialized and behave well. Limiting access such as an on-leash rule at Crissy Field or eliminating access, as at the vast majority of Ocean Beach, will likely serve only to force out dog owners from these areas.

Indeed, the proposed DEIS fails to consider the impact of the changes upon humans, in my opinion. San Francisco has large numbers of single people, who live alone (often with pets), including many gays and lesbians, elderly persons, and retired people, often with pets. For many of these people, their dog is more than an animal possession; instead, the dog is viewed as a companion member of their family. Limiting or eliminating canine access to GGNRA sites will serve to limit or eliminate their human owners use of the affected GGNRA sites.

For the foregoing reasons, I respectfully request that the proposed changes in the DEIS not be implemented, and that canine access remains as is. Thank you for your attention to this matter.

Sincerely,

Mike Clogan Attorney at Law San Francisco, CA 94112

Correspondence Type: Letter

Correspondence: Dear Superintendent Dean,

My name is Dzung Do, and I am an emergency room physician living in the South of Market neighborhood in San Francisco. I use the areas of the GGNRA 2-3 times a week, taking my small dog with me each time. I donate money each year to Greenpeace, drive a hybrid Prius and consider myself a staunch environmentalist. I am also a gay Vietnamese-American, and I go to the GGNRA because of the off-leash laws.

I am a responsible dog caretaker, I always keep her under voice and sight control, clean up after her, and keep her off the fenced off areas. It is important for me to keep Chrissy Field, the area that means the most to me, off leash for dog walking and playing.

I do not think the GGNRA's preferred alternative is acceptable, because it limits off leash walking in many areas within the GGNRA. The proposals are not based upon good science or long term monitoring of site specific conditions.

As shown in the DEIS, the proposed dog management plan reduces and eliminates dog walking access for all new lands within San Mateo county. the GGNRA mission applies equally to new lands as existing lands and it is important for the GGNRA to consider reasonable and fair alternatives for dog walk on new lands as well.

I am worried about the long term perservation of the GGNRA's natural resources and want to the protect the natural areas, but other alternatives need to be considered first. It is not made clear where dogs are allowed. The GGNRA should have better signs and barriers sourrounding the tidal marsh at Crissy Field.

As a responsible dog caretaker, animal advocate, tax-payer and voter, I know it is crucial for dogs to be behaved and trained in this urban environment, and exercise and socialization is essential for a well-behaved dog. Having areas where I can take my dog allows me to exercise as well - which we know is important too. without access to the small amount of land in the GGNRA we currently have, I am concerned that many dogs and their caretakers will not have enough opportunity to exercise as recommended by the American Medical Association.

Some specific problems with the DEIS include the following:

-does not recognize that environmentalists value both recreation and nature, and are not opposing forces. The proposal does not acknowledge that may dog caretakers are aslo environmentalists.

-the plan punishes those who do not train their dogs, are irresponsible and insensitive to the current signs. A reasonable response is to educate visitors, improve signs and help visitors follow rules, and not to ban the rest of us from the GGNRA. I would hope the DEIS would include an alternative along these lines instead.

-DEIS notes that dogs tend to harm natural resources, but there is little documented site specific impacts to support the restrictions. There is certainly not enough to suggest other impacts, such as other wildlife, acts of

Nature, bicyclists, huge crowd events which happen often in this urban city. They need to demonstrate more clearly the effect of off-leash dog walking and playing on the quality of the GGNRA's natural resources. -DEIS needs to provide complete disclosure to the public and decision makers. If dog related disturbances are affecting the wildlife, they need to provide better scientific evidence.

After much thought, I support alternative A, the No Action alternative.

As is, the DEIS is biased against and does not take a closer look at the No Action alternative.

Respectfully,

Dzung Do, M.D. San Francisco, Ca 94107

Correspondence Type: Letter

Correspondence: Dear Superintendent Dean,

There is a major flaw in the GGNRA draft DEIS proposal on dog use that needs to be addressed. This flaw needs to be addressed before any change in dog policy is enacted, or the door is open to major lawsuits (and major costs to taxpayers) due to a change in dog management policy based on this DEIS.

The study begins, Chapter 1, with Purpose and Need for Action. The Need for Action, however, is never scientifically or properly established. The DEIS makes many assumptions about the negative effects of dogs on the parks in determining its need for action, yet almost never backs up these assumptions with site-specific proof.

In the section "CURRENT DOG MANAGEMENT ISSUES AND IMPACT TOPICS" (pages 12 - 21) the potential adverse impact of dogs is

summarized, and almost all of the adverse impacts are written in the conditional tense -- "could" and "might" and "may". There is almost no hard proof that dog use damages the GGNRA or its mission, so the entire basis for the change in current dog management practices is based on a big "maybe." This is not scientific, and this conjecture does not support drastic changes to dog management policy.

Let's take page 14, Chapter 1, "Purpose and Need for Action" as an example. Under "Water Quality" we see three issues raised (italics mine):

- "Issue: dogs playing in streams, wetlands, lagoons and coastal areas can increase turbidity..." The study doesn't say they DO increase turbidity, doesn't prove or even try to prove they do increase turbidity, or that the negative outcomes outlined in this Issue point are realistic outcomes. - "Issue: Dog waste can increase nutrient levels..." Again, no site-specific proof, no backup, just a "maybe" with a lot of "maybe" negative effects. Without site-specific proof, this is not acceptable as a part of an EIS, since it is not based on science or proof, only conjecture. - "Issue: Domestic dogs can potentially introduce diseases..." This is yet-another example of a "maybe" that is not studied, not backed up with hard site-specific facts. It's a conjecture in lieu of a substantiated-reason for limiting dog access. Or, let's look at the "Wildlife" issue, page 15 (italics mine): "Issue: Intensive dog use of an area could disrupt its wildlife..." "Issue: Dog play can trample vegetation..." "Issue: Dogs or dog waste can infect wildlife..." "Issue: Habitat for all wildlife... may be affected by dog use..." Again, all conjecture about what might happen, without site-specific study or facts to prove that these problems are happening in the GGNRA due to dog use.

This untested, unproven conjecture continues throughout the "CURRENT DOG MANAGEMENT ISSUES AND IMPACT TOPICS" section, which is a huge basis for the change in dog policy. It's bad science, and makes for an incomplete and biased environmental impact study. Since the study BEGINS with faulty assumptions, the entire 1,500 plus pages of the study, including its conclusions, becomes meaningless. In computer terms, this is: garbage in, garbage out. Given that the study starts with a lot of unproven "maybes" about adverse affects of dogs on the GGNRA, the case could be made that the DEIS starts off as biased against dogs. It starts from an unproven assumption that dogs are causing problems, and moves towards extremely restrictive policies from there.

If you remain unmoved by my argument, let me offer you this: intensive human use of an area could disrupt its wildlife... child play can trample vegetation... infants or infant diaper waste can infect wildlife... Are you to omit humans from the GGNRA as well? The use of unproven conjecture to justify action is an unacceptable practice and a dangerous precedent.

The GGNRA should redo this study before attempting to change its current dog policy. If they can PROVE that dogs have all the negative effects that the study says they "could" "might" and "may" have, then the rest of the study could or might or may have some merit.

For the record, I am a dog owner who uses Crissy Field, Fort Funston, Baker Beach and other GGNRA areas for safe off-leash exercise and play with my dog. I support the "No Action" alternative.

Thank you for reading and considering my concerns. James Raymond cc: Nancy Pelosi, US House Of Representatives cc: Secretary Ken Salazar, Department of the Interior cc: Mr. Jon Jarvis, Director, National Park Service

Received: May,26,2011 00:00:00
Correspondence Type: Letter
Correspondence: Dear Mr. Dean:

We appreciate this opportunity to comment on the Dog Management Plan.

San Francisco is a city that has repeatedly demonstrated its commitment to our pets. We are the safest major city for dogs and cats in America ? where 87% of strays find new homes compared to a national average of only about 50%. The San Francisco SPCA has been integral to this success with the help of our 20,000 hospital clients; 12,000 active donors; 4,300 adopters; 1,000 active volunteers; and 200 sets of parents who have children who attend our youth camp.

The parks of the GGNRA ? with their openness, beauty and access to nature - have been used by dogs and their human companions for decades. Many of these people are environmentalists. Responsible dog ownership is entirely compatible with environmental stewardship. Thousands of people and their dogs walk and run peacefully in the park each day leaving nothing more than footprints (and paw prints).

The GGNRA's current pet policy limiting off-leash dog walking to less than 1% of the park area has worked well for park-goers and the environment for thirty years. We readily accept that policies should evolve to meet changing circumstances; however the National Park Service is proposing to drastically reduce the already limited space. This represents a major departure from the current successful model, and is grossly unfair to the thousands of people who enjoy walking responsibly with their dogs.

There are serious concerns regarding the integrity of the Draft Environmental Impact Study on which the GGNRA is basing its proposals. This study is the driving force behind the proposed changes yet does not provide site specific or adequate data linking dog walking to negative environmental impacts. The fact that the GGNRA is in the middle of one the most crowded urban areas in world is also not considered in the DEIS but yet, in the SF Charter the fundamental purpose of the GGNRA is "to improve the quality of urban life". We are concerned with the lack of detail on how the new rules will be monitored, how compliance will be tallied and the one-way direction further restricts our access to the GGNRA if compliance is not at 75% or greater. In addition, not allowing any new lands to be available the dog owning community is simply unfair and unwarranted. We recommend the GGNRA work with and involve local animal welfare organizations, dog groups and the community to ensure that dog guardians continue to have access to these recreational park lands.

We recommend that the GGNRA take a hybrid approach to the preferred Dog Management plan, starting with clear signage so that responsible dog guardians have clear instructions on how to use the park. We recommend that the decision on whether new lands are accessible for dog walking be made with the community and recreation needs in mind rather than the blanket proclamation proposed.

In the Preferred Plan for Ft. Funston, dogs are to be on leash on the sand stairs and pathway down to the beach. For public safety reasons as well as to improve compliance we recommend that dogs be allowed off leash on stairs and pathway.

We firmly believe the National Park Service's proposal is a step backwards for both the people and animals of the Bay Area for whom the GGNRA remains an essential and important part of our everyday lives with our dogs. These goals can be achieved through reasonable steps such as providing clear signage, implementing environment barriers, and continuing to engage the community in developing solutions that work for all parties, without resorting to such a draconian approach.

We ask that you support us and the San Francisco Board of Supervisors in urging the GGNRA to revisit its proposed Draft Dog Management Plan.

Thank you for your consideration.

Sincerely,

Jennifer Scarlett, D.V.M Co-President

Jason Walthall Co-President

Correspondence Type: Letter

Type:

Correspondence: Dear Sir:

Dog parks provide the largest daily grass roots meeting grounds for people that I've ever seen or heard about ' people of all ethnic and socio-economic backgrounds meet and interact in dog parks, brought together by their common love of dogs that many also consider to be bona fide family members.

My name is Carma Keats. I've become well known in Dogpatch (lower Potrero Hill) in my 25 years in San Francisco, as I became a community activist when our local dog park reopened after renovations with new rules that no longer allowed the neighbors to meet there to play together and with our dogs. A petition to San Francisco's Parks & Recreation Department restored use of Esprit Park to our large neighborhood demographic through a group I founded known as "Dogpatch Dogs."

San Francisco's overall demographics include a large percentage of people that do not have children or traditional families but do have dogs. Recent statistics state that over 107,000 dogs reside in our City.

I write to you today to plead with you to help the citizens of San Francisco and the Bay Area keep enough space open for off-leash dog recreation in the Golden Gate National Recreation Area (GGNRA) for our needs. As you know, the GGNRA is in an urban area, has a recreational use mandate, and the San Francisco Board of Supervisors passed a resolution opposing what for some (but not for us) is a "Preferred Alternative."

Simple common sense reveals the instant deleterious effect there would be on our City parks if tens of thousands of people and dogs are displaced from daily coastal access ' no scientific study is required to reach that conclusion. It is, however, scientifically verified that snowy plovers make their nests along 1500 or more miles along the Pacific Coast, from Canada to Mexico, so their usage of the GGNRA's 59 miles of coastline is NOT crucial to the species' survival.

Other indigenous California species (such as raccoons, coyotes, foxes and bears) are quickly removed from the GGNRA due to its proximity to the City and its urban population, so the GGNRA will never again be a true or balanced wilderness. However, the GGNRA does provide City dwellers enough access to nature to encourage and promote their support of wildlife

and environmental protection to be conducted elsewhere, in rural venues. Therefore, I sincerely believe it is counter-productive to wildlife protection goals nationwide to deny our City residents recreational access to the GGNRA.

Also, I don't believe the Compliance-based Management Strategy can possibly be constitutional since it punishes responsible people for the behavior of strangers. Yet the "Preferred Alternative" states that if the GGNRA independently claims there's not enough compliance with their new restrictions, then without notice or a public comment they can change an off-leash area into an on-leash area, and change on-leash areas into forbidden zones. If the "Preferred Alternative" is enacted, I would anticipate lengthy legal challenges to the entire GGNRA plan. While the impact of off-leash dogs on nesting birds does not harm the Snowy Plover's chances of survival, the impact of closure of recreational areas would be extremely detrimental to many people in the Bay Area. For example, although I have rewarding relationships, my lifestyle demands that I spend large periods of time without human companionship. If I was unable to walk with my dog, I would feel self-conscious and unsafe walking alone and would therefore become isolated from the society I enjoy. I've met many elderly people, including a notable ex-Nun, in the exact same situation as me ' they simply would not feel free to go outside and enjoy nature at all without the company of their dogs. People and dogs require fresh air and exercise for health; sufficient exercise simply cannot be provided to dogs that are unable to play since they are perpetually on-leash.

Also, my dog is in training to become a therapy dog. We will visit folks that are physically unable to leave the confines of hospitals or nursing homes. Having done this type of volunteer work in the past, I know first hand that many people dearly love dogs but are unable to have their own; when we visit, the elderly and infirm that are housebound can enjoy the health benefits of visits with dogs. People routinely stop me on the street, in parks and at the GGNRA to cuddle and coo and praise my sweet dog, thereby invoking the well documented benefits of contact with dogs upon their own health.

San Francisco has already developed its character as a dog-loving and dog-friendly City ' if they are denied coastal access, our people and dogs will not go away. They will simply be displaced. Some may consider it necessary to try to circumvent oppressive usage rules, causing ungovernable trouble for all.

Sir: Once again, I plead with you to serve our existing reality and our citizens rather than trying to restore pristine wilderness in the GGNRA. Please keep the GGNRA open and available for off-leash dog play so City dwellers can develop the love of nature required to support environmental

protection nationwide.

Thank you in advance for your kind ' and, I hope ' wise consideration

Correspondence: Dear Mr Dean:

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness area like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original reason that the GGNRA was established.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the hundreds of thousands of Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan provides no evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation.

? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.

? Exclude biased, exaggerated, speculative, and misleading statements and studies.

? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).

? Establish fair rules enabling professional dog walking.

These are my personal comments and observations regarding this plan:

I am a birder + see the need for protections of endangered species such as bank swallows + snowy plovers. Volunteers should be asked to keep dogs away from cliffs at Funston + certain beach areas during breeding. However, this is an urban recreation area + people + pets must be sensibly accommodated. Carmel e.g. is a beautiful California town where dogs run free + the beach is spotless.

Pay attention to the need of all the urban residents. If any one is not responsible, other owners quietly intervene for pick up of waste etc.

Correspondence Type: Letter
Correspondence: Dear Superintendent Dean,

I oppose the GGNRA current preferred alternative significantly restricting or eliminating off leash dog walking.

I am a senior citizen and responsible dog guardian who has lived near the Presidio of San Francisco for over 35 years. I've watched the transformation of the Presidio under the GGNRA with joy. I treasure my daily walks with my dog at Crissy Field Beach. I love my city and support efforts to make it more livable for all citizens, through such organizations as Friends of the Urban Forest and the Golden Gate National Parks, and with dog training classes at the SFSPCA.

By virtue of its location in or near so many urban areas, the entire GGNRA provides essential open recreational space for our metropolitan area. I certainly am concerned about preserving its natural resources. And to co-exist peacefully in such an environment, I know our dogs must be well

behaved. I'm concerned that without off leash access, however, responsible people and their dogs will not have adequate opportunity for recreation and exercise. Having places in the GGNRA where I can daily take healthy walks with my dog safely off-leash is an experience that cannot be replaced by standing in a small city park, or walking restricted by a leash.

From my observation over these many years of enjoying the GGNRA, I feel the existing 1979 Pet Policy has been working. However, the DEIS treats recreation and the environment as antithetical, as if recreation can only harm natural resources. In fact, most people including those with dogs care about both. The DEIS provides little documentation to support the restrictions of the preferred alternatives. It does not specifically demonstrate that problems within the GGNRA are actually attributable to dogs, and not to other factors such as crowds for special events, wildlife, and even nature herself. The DEIS and draft plan should provide documentation and full public disclosure for any informed decision making on contemplated restrictions. The DEIS should preserve our already limited off leash areas in the GGNRA. Most dog guardians are responsible persons who care about the environment. They should not be penalized for the insensitivity of a few people or for other factors unrelated to off leash dog use.

Sincerely,

Peter F. Jardine San Francisco, CA 94115-2512

Correspondence: Dear Superintendent Dean,

I am a resident at 3208 Pierce St, #407, San Francisco, CA 94123.1 am writing to you today to voice my opinion on the proposed changes to the current GGNRA off-leash dog areas.

My dog Ted and I utilize the off leash areas at Crissy Field virtually every day. This is one of the main reasons that I choose to live where I do and enjoy the close proximity to several (currently) wonderful areas for my dog to play. It would be extremely prohibitive if those areas were to become leash restrictive as the majority of folks living in San Francisco do not have the luxury of a yard where there dogs can play and get the exercise that they

need, thus an off leash area is imperative or the city will be full of hyper, ill behaved dogs. On any given day that the temperature is not above 60 degrees (which has got to be at least 80% of the time) the beach at Crissy Field is not used by anyone but people with dogs. It seems a shame as well as a waste of taxpayer dollars to maintain an area so large that would not be utilized if the dogs were no longer allowed. In addition the damage to the city parks will be enormous. On the day of the tsunami warning (3/11/2011) Stem Grove, as I am sure was the case with other parks as well, was literally overrun with dogs because they were not allowed on the coastlines. If this were a daily occurrence, the damage would become insurmountable without a huge expense and the parks are much more populated with people and children than the beaches are with the exception of the handful of sunny days in San Francisco.

I think it goes without saying that the majority of San Franciscans train their dogs to be well behaved and adapt to city life. If these same dogs are cooped up and not allowed to run off leash, it could have a terrible impact on every neighborhood in the city.

In a city where there are more dogs than children and known for being one of the most open, accepting cities in the world, we need to be as accomodating to our canine citizens as we are with the rest of the population.

As a resident of San Francisco, I think it is neccessary that we leave the current off leash laws as they are. Regards,

Diane Wales

Correspondence: Dear Mr. Dean,

This letter concerns the impact of dogs in the recreation areas of the city

and, in particular, the Golden Gate National Recreation Area.

I am a dog owner, so I see the need for outdoor recreation areas that are spacious for dogs to exercise and socialize.

However, I also realize that my canine is only a small part of the nature scene, including native plants and animals. I do not want to see such species harmed because of my carelessness in letting my dog roam outside of designated areas.

I often see people unleash their dogs in public park areas where on leash is a requirement. I have approached people to let them know, but they ignore the ruling.

Off-leash areas should be fenced or well marked. Some trails should be entirely closed to dogs, for some people do not wish to interact with dogs.

Owners who have their dogs off-leash do not take the time to pick up their animals' deposits.

I am more concerned about having the parks maintained as safe and accessible to all users and to preserve the natural plant and animal habitat for now and future generations.

Thank you for reading my comments.

Correspondence Type: Letter
Correspondence: Dear Superintendent Dean:

I am writing to provide my input on the DEIS for Dog Management in the GGNRA. I strongly reject the Preferred Alternative and instead support Alternative A, the No Action Option of the DEIS, especially with respect to Crissy Field, Ocean Beach and Fort Funston.

I am a 17-year resident of San Francisco, a long-time homeowner and property taxpayer in the Castro/Corona Heights/Buena Vista/Duboce area, a dog owner since 2008, an avid bird watcher, and a supporter of several non-profits working in the environmental and animal rescue areas including SF Nature Education, Cornell Lab of Ornithology, SF SPCA, Golden Gate

Labrador Retriever Rescue, and Muttville.

My current dog is a rescued 1-1/2 year old labrador mix, whom I have trained intensively to respond to my voice and hand commands. She requires and I provide her with substantial (2-3 hours) of vigorous off-leash exercise daily. Such exercise keeps her healthy and happy and discourages destructive behavior at home (inappropriate chewing, digging, etc.) We regularly exercise off-leash at Crissy Field and on-leash in the Presidio.

Any responsible, educated dog owner will tell you "A happy pup is a tired pup." I cannot run or walk with my dog enough to provide the required exercise on-leash. I expect that the same is true for the many other owners of young and active dogs throughout the city. We are urban dwellers and we choose to own companion dogs. We expect SF City parks and SF City land given to the GGNRA--with the proviso that it provide an urban park experience--to address our households' reasonable recreational needs, both for us and our pets. I believe the DEIS Preferred Alternative is unreasonable in several respects.

I believe the DEIS Preferred Alternative fails to address the legitimate exercise needs of dogs by recommending new, significant restrictions on regulated off-leash areas (ROLAs). These restrictions appear to be based on conjecture and opinion about off-leash dog impact on birds and the environment rather than any objective scientific observation or documented sustained destruction of sensitive flora and fauna. I also find the aspects of the policy that will permit GGNRA authorities to unilaterally alter or terminate ROLAs incredibly undemocratic. Any such proposed changes to ROLAs should be made only after significant enforcement action has been taken and documented, ongoing widespread violations continue, there is a strong case for environmental protection of the area, and all of this is put to public review and input.

The new plan would, I believe, inflict undue economic harm on dog-walker professionals, by setting an upper limit on the number of dogs in any off-leash group to 6 per walker. Although I am not a dog-walker, I have regularly observed dog-walkers managing packs of 8-12 dogs safely and effectively at Crissy Field and Fort Funston, and in SF City parks such as Bernal Heights. The economics of dog-walking requires these typically self-employed independent business people to walk more than 6 dogs at once to earn a sustaining income, and SF with its very large dog population needs these dog-walkers to be able to ensure the health and well-being of these pets. I have no objection to the licensing requirement for dog-walkers with 3 or more dogs.

Also, the new plan will drive more off-leash dog activity into SF City parks that are already crowded at times and not equipped to handle the influx. This

will have a negative impact on park users (with and without dogs) and add to SF park maintenance costs which are borne by city taxpayers. My federal taxes support GGNRA and I expect my household to be able to enjoy recreation there.

The Preferred Alternative will tip the balance strongly away from GGNRA's prime founding mandate, which is to serve its surrounding urban community. Again, I strongly urge you to adopt Alternative A, the No Action Option. Thank you.

Sincerely, Rhonda Vitanye San Francisco, CA

Correspondence: Thank you for hearing my concerns. I live at 43rd Ave and Clement St, at the base of the Land's End, Ft. Miley and Sutro Park areas of the GGNRA, and I am seriously concerned about the dog management proposals being considered for these areas. I strongly oppose ANY unleashed dog activity in these areas for a multitude of reasons but primarily because it is dangerous and destructive.

This debate comes down to two main factors: one, the restoration effort just taking root, and two, the danger of unleashed animals in such a rugged terrain. You can't begin and maintain an environmental restoration project here, one that has cost thousands of taxpayer dollars and years of planning and implementation, and then simply allow unleashed animals free reign over the area to defecate and destroy the work that's barely begun. That is simply ridiculous. I've spoken with several employees of the park management department and volunteers working on this project and every one of them have told me that there isn't a day that goes by under the current rules when an unleashed dog will wander into fragile land space and begin destroying the work they JUST finished.

Secondly, the danger of allowing unleashed animals into such a treacherously beautiful area, combined with countless hikers, joggers, cyclists, tourists, children, seniors, etc., should be a deal breaker for this proposal. If the GGNRA allows unleashed animals onto these trails, some of which are so narrow at points that only single file walking is possible above 400 ft cliffs, there will eventually be an unfortunate accident and potential loss of life. The GGNRA and NPS would do well to protect themselves from potential wrongful death lawsuits by nixing this idea altogether.

The current dog management formula being used in these areas known as

Voice Control needs to be understood for what it really means. It means that those of us without dogs have to rely on the variety of relationships that exist between owners and their pets, some of whom have no control over their animals. We have to trust them to restrain their animals in situations that typically emerge in an instance. Voice Control is not a preventative means of restraint, it is a reactionary formula that is unreliable at best and unacceptable in the potentially dangerous environment it's being applied. Once an owner feels inclined to verbally control their animal it is typically too late. My experience of the effectiveness of voice control has been this: when a runaway dog approaches too close to me and my baby daughter, which happens nearly every time I enter the park, I feel the need to "control" the animal verbally myself.

When I moved to the area almost 5 years ago I became instantly enamored with the beauty and rugged setting that surrounded my new neighborhood. My mind was set at ease simply by walking out my door. However since the debate over this issue has gained momentum, I have honestly not been able to enjoy the benefits of the park, because I'm reminded of it every time an unleashed animal approaches and I'm forced to keep a watchful eye on it until it passes. To think that this might become the norm in an area dear to my heart frankly ruins my quality of life in the neighborhood I've come to love. I am actually baffled that the GGNRA is even being forced to consider allowing unleashed animals into National Park land, against their own Federal guidelines. I believe this issue is a result of an overwhelming and powerful dog owner lobby that exists in San Francisco that forces the position of a vociferous minority over those of a voiceless, disparate majority. My only hope for a reasonable outcome is an already established legal precedent prohibiting unleashed animals on Federal land. Thank you for your time.

Sincerely,

Edward Quigley

Correspondence: To Whom It May Concern:

Thank you for extending the public comment period for the new GGNRA management draft. This will allow more voices of the public to be heard.

We live in a densely populated and highly developed area and thank the National Park Service for having the foresight to develop and maintain our

Open Spaces.

Being surrounded by the beauty of nature and having the opportunity to exercise in these Open Spaces allows us all to have a healthy mind, body and spirit ...whether we are two legged or four legged.

I have closely followed the articles, editorials and web sites concerning the new Draft Management Plan concerning dog owners, leash laws, and the environment.

Being that I am a dog owner who loves the environment and is fortunate to walk on the beach everyday, I have started to be more aware of dogs and their owner's behavior. I have noticed over the past few months, it is not our four legged friends that have caused the most damaging impact on our beaches, trails and open space. It is man and his disregard for our environment. I have taken on not only cleaning up after my dog, but cleaning up after humans every day on our beautiful Stinson Beach. I have enclosed just two pictures to prove my point. They say a picture says a thousand words. Susan J. Nelsen Stinson Beach, Calif. 94970

Correspondence Type: Letter

Correspondence: Dear Mr. Dean,

The GGNRA draft dog management impact statements are not fact-based and do not address the health or well-being of people, dogs or the community. The GGNRA can accommodate both recreation and conservation. Regulations for Yosemite and Yellowstone are not appropriate for an urban recreation area and the courts have upheld the existing 1979 pet policy. The plan minimizes the one in three households in America with dogs; this plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and more.

I oppose the GGNRA draft management plan and all DEIS alternatives presented because the plan does not provide evidence of impacts that justify such drastic changes to 40 years of healthy dog recreation. The revised dog management plan needs to:

? Rigorously and fairly evaluate the benefits of dog recreation on the health, safety, and well-being of people, the community, tourists with dogs, and dogs

? Remove all speculative, exaggerated, and misleading statements and

measure the actual beneficial and adverse impact of dog recreation on each site

? Provide site-specific need for action justifications and dismissals of suggested alternatives; use objective standards that would apply to any recreational activities such as equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.

? Remove any rules that allow for the reduction or elimination of dog recreation based on law enforcement violations (e.g., banning dogs because of 25% non-compliance with leash laws)

? Retain and formalize the existing GGNRA dog policy (aka the 1979 Pet Policy) and provide for balanced off-leash areas in San Mateo County and new lands

? Provide awareness programs, safety measures (e.g., signage, preventatives for cliff falls, barriers, etc.), land use measurements, and other measures to address any valid adverse impacts from any recreational activity

? Align commercial dog walking rules with county or city regulations

My conclusions are supported by:

-For the health and well being of all dogs in San Francisco, we hope you will continue the present dog recreation sites as they are.

Thank you,

Correspondence Type: Letter

Correspondence: Dear Superintendent Dean:

We represent the Crissy Field Dog Group and are submitting these comments on its behalf. CFDG and Eco-Dog are also submitting comment letters, and the comments in this letter are meant to support and supplement those comments.

Introduction

Some of the comments identify deficiencies in the draft Plan and draft EIS (Draft Plan/DEIS), which our client believes is currently inadequate. We emphasize that the purpose of these comments is not to criticize, but is to

improve the proposed plan and to improve the environmental analysis that assists you in developing and making a decision on the plan.

We want dog management in GGNRA to be successful at preserving recreation and the natural, scenic and cultural values of the Recreation Area, without impairment, for current and future generations. We appreciate your stated objective to accomplish this goal too.

These comments pertain to both the draft Plan and draft EIS, which is an integrated document. Where appropriate, based on the comment, the proposed plan should be improved and/or the environmental analysis should be improved to enable an informed decision on the plan.

As you will see, this is not a typical attorney comment letter that takes issue with a statement on page x, requests you to revise section y, or presents a broadside against the draft. We could have written such a letter, but we believe you will likely receive hundred or thousands of such comments from groups and individuals. Instead, we would like to try to start a dialogue on how the plan could be improved. This is especially the case because, for reasons apparent from the background noted at the end of this letter, we do not know whether there will be a meaningful opportunity for dialogue. We request and hope that at a minimum, those seeking constructive solutions such as our client will be afforded that opportunity.

Polarizing Alternatives vs Integrated Alternative

The draft Plan/DEIS does not seem to recognize that environmental values include both recreation and nature. In many places, the document treats these as opposites - that recreation only harms natural resources.

This bias is initially shown in the purpose and need statement on the very first page, which does not include "recreation" as one of the resources to be preserved and maintained in the Recreation Area, while including natural, scenic and cultural resources - despite the fact that all four are core resources specified by Congress in GGNRA's enabling legislation (acknowledged on page 36). This fundamental omission is relevant because, under NEPA, the purpose and need statement is the basis for developing and evaluating alternatives.

This bias is further reflected in the way the alternatives are developed, described and evaluated. For example, the alternatives are classified as ones that maximize dog use or maximize environmental preservation, instead of alternatives that promote both dog walking and natural conservation. Although it is possible to mix-and-match components of different alternatives - or more specifically to use Alternatives A or C as the framework to produce a balanced plan, as discussed later in this letter - this

polarizing approach has two significant problems, which can be addressed.

1. First, the approach inhibits the development of solutions - whether plan elements or mitigation measures - that are designed to preserve recreational and natural resources and values. Mixing and matching flawed components is not the same as developing creative, integrated solutions. We ask you to take a fresh look at this and not be deterred or bound by the prodigious effort that went into producing a 2,400 page draft Plan/DEIS (see additional explanation and suggestion below).

2. The polarized approach tends to polarize stakeholders as well, which in turn puts senior agency officials and legislators, who ultimately must fund the plan, in a difficult position. These participants feel they must choose between protecting natural areas and preserving recreation - two of the core needs and values of the human environment and of GGRNA's mission.

There are many examples in sound environment and land planning principles demonstrating that separation of uses and exclusive uses have negative environmental consequences. In contrast, multiple use approaches and multi-species approaches often strengthen urban vitality and restoration of natural resources. This includes people, as humans are a keystone species in this ecosystem. The draft Plan/EIS lacks the development of this type of alternative, whether as an alternative course of action, an element in an existing alternative, or mitigation measures.

For example, there are areas - several of which were mentioned by citizens at the public meetings held on the draft Plan/DEIS - where trails could be designed to accomplish both native plant restoration and appropriate access to avoid potential conflicts between dog walkers and other visitors. The absence of truly integrated alternatives and a predominant focus on either allowing or prohibiting access reflects the lack of serious exploration of alternatives that involve conflicts concerning uses of available resources (as required by Section 102(2)(E) of NEPA) with a systematic interdisciplinary approach using the natural and social sciences and the environmental design arts (as required by Section 102(2)(A) of NEPA). E.g., 40 CFR 1500.2; National Park Service (NPS) Director's Order DO-12 (DO-12) Secs. 4.4 and 4.11; Department of the Interior (DOI) NEPA Handbook/NPS Handbook for Environmental Impact Analysis (DO-12 Handbook) Secs. 1.4.H-I.

More important than compliance with NEPA, however, the lack of these approaches stands in the way of developing a more balanced plan.

We ask NPS/GGRNA to identify some key areas of where public comments indicate a strong interest in preserving or providing dog walking access or where comments indicate conflicts or controversy that might be solved with good environmental design allowing multiple uses in the zone or area - and

to commission a design charette with a qualified professionals. Budget will understandably be a concern, which is why we suggest a focused approach for some key areas. Regardless, the agency has an obligation to take a "hard look" at alternatives that could resolve resource conflicts, and difficulty of compliance is not an excuse under NEPA. Better solutions will likely reduce costs, whether for defending against legal challenges to the plan or lowering operating costs for enforcement.

Compliance-Based Approach

The bias that recreation is not an environmental value but only an adverse environmental impact also misses the fact that people care about both of these resources and values, and that people with dogs can be - and most of are - good stewards of our environment.

The proposed plan has the effect of punishing many people because a very small number may not be responsible visitors. The reasonable response is to educate visitors and help them to learn how to respect the environment, not to ban the all dog walkers from areas in GGNRA where they have traditionally had access or additional areas where access is reasonable.

The proposed "compliance-based" approach has potential to work, if it is improved to include education and an objective monitoring program designed and carried out with the community. GGNRA should use partnerships with community, animal protection, and conservation organizations to make this work. This could bring additional resources to limited federal resources. GGNRA should be a partner with the San Francisco and other communities.

The compliance-based approach needs more development and definition, consistent with sound adaptive management approaches. E.g., CEQ Final Guidance on Mitigation and Monitoring (2011), Secs. II.A and II.D; DOI 522 DM1 and Adaptive Management Technical Manual (2008). Although some details of the program will necessarily be defined as it is being put in place, the essential structure and elements need to be part of the proposed Plan and discussed in the final Plan/EIS, at least at the level of detail as proposed by the Eco-Dog comments (incorporated by reference herein).

In the draft Plan/DEIS, the proposed compliance-based approach relies on compliance statistics as a 'surrogate' indicator of adverse environmental impact and unacceptable impairment of Recreation Area resources - namely, an overall percentage of compliance with rules based on observations of noncompliance. If that percentage falls below 75%, access becomes increasingly limited to the point of closure (secondary management response).

This may be a useful tool, but is not sufficient for a management response to close access altogether. A closure without actual impairment caused by dogs would reflect a bias and underlying motivation simply to get dog walking out of GGNRA. It would conflict with both GGNRA's enabling legislation and mission to preserve recreation and NPS's policies on evaluating impairment. To provide opportunity for public comment alone, before a secondary response or closure, would not provide the scientific or technical review needed to review impacts.

An adaptive management program that provides an impartial review available to the public, which is related to actual impacts and the integrity of the resources in the area in question, would provide the necessary basis for a decision on a secondary management response. As explained in the Eco-Dog comments, this should not require a new EIS or re-open the EIS process because it is implementing an impact-based adaptive management plan adopted as a mitigation measure in this EIS process.

Alternatives A and C

CFDG's preferred alternative is a variation on Alternative A, where some access to dog walking in some existing areas would be changed, and the elements common to all alternatives would apply to Alternative A.

The current GGNRA general management plan has policies that promote outreach and education about Recreation Area resources as well as clear rules and compliance. The No Action Alternative is a continuation of the existing management plan. The elements common to all alternatives, including clearer rules about regulated off leash areas (ROLAs) and access, public outreach and education, and compliance-based adaptive management program could all properly be part of implementing the current general management plan.

Another approach would be to develop a more integrated version of Alternative C, as described above, that more closely resembles Alternative A. We can understand that GGNRA wants to convey to the public that it is "taking action" and that people misunderstand the No Action alternative as meaning "nothing is changing."

CFDG agrees change is needed, but not change that substantially restricts dog walking, but change that provides clearer rules, better design (including better signage and physical barrier or cues), better outreach and education, and better partnerships with local governments and community groups.

The draft preferred Alternative C needs substantial work to be a balanced alternative, especially in light of the extremely small area (approximately 1%) within GGNRA where dog walking is allowed. We hope these

comments, CFDG's more detailed comments, Eco-Dog's comments on a compliance-based adaptive management program, and the many excellent and practical public comments submitted will provide a basis for improving the proposed plan.

New Lands

As discussed in more detail in the CFDG comment letter, when new lands become part of GGNRA, the recreational uses existing at the time of acquisition should be allowed to continue unless GGNRA determines, through the site specific public land planning and NEPA process, that unacceptable impairment would occur (a process described in Chapter 1 and Appendix C of the draft Plan/DEIS). The unprecedented "Closed until open" proposal would violate GGNRA's obligation under its enabling legislation and management policies to preserve and maintain recreational uses, violate sound land planning with the community as required by NPS Management Policy, and violate NEPA by prejudging alternatives before site specific public and environmental review.

High Quality Information for Decisionmakers

NEPA's purpose states that environmental information should be available to public officials and citizens before decisions are made and before actions are taken. It goes on to state: "The information must be of high quality. Accurate scientific analysis, expert agency comments, and public scrutiny are essential to implementing NEPA." 40 CFR 1500.1(b), 1502.6; DO-12 Handbook Secs. 1.4.G through I.

The draft EIS notes some studies and general tendencies of dogs to harm natural resources, but, with few exceptions, there is little documented site specific information that supports the specific bans on off leash dog walking areas. We can understand some well-supported changes - both some areas that should be more limited and some areas that should be increased - but CFDG objects to broad new limitations without site specific scientific evidence that problems with the quality of GGNRA's natural resources are actually attributable to dogs and not to other factors. Please see the detailed comments prepared by TetraTech, a well-respected firm of scientists and environmental professionals, appended to CFDG comments, for examples.

The draft EIS needs to provide full disclosure to the public and decisionmakers. If disturbances are having a significant negative effect on wildlife, for example, the draft EIS needs to take a hard look at whether people or other factors are also causing or contributing to the problem noted. If they are, GGNRA needs to be up front about whether people should also be restricted from these areas. For example, recent studies by NPS at other units of the national park system including Muir Woods National Monument

demonstrate that noise from human activities may be a crucial factor (<http://www.nature.nps.gov/parkscience/index.cfm?ArticleID=346>; http://www.nytimes.com/2011/02/22/science/earth/22sound.html?_r=1). If so, the EIS needs to disclose accurately - not merely assume - the cause(s) of asserted impairment and the impacts of visitors, and the plan needs to disclose whether the Park Service proposes to exclude people from the areas where dog walking is excluded.

The science needs to be sound, and the consequences need to be fully and fairly disclosed. The plan and proposed new significant restrictions on access for dog walking should not be based on unsubstantiated assumptions. Where there is uncertainty, differing points of view should be disclosed.

Urban Quality and Recreation

The draft Plan/DEIS has another pervasive bias (which is related to the polarization of natural and recreational values discussed above). The draft document views GGNRA primarily in a natural context and not in the context of a major metropolitan area.

The omissions discussed below are relevant both for the EIS analysis and the proposed Plan. NEPA requires that an EIS study impacts on the "human environment," that the significance of these impacts are based on their "context" and intensity, and that Plan alternatives be developed and evaluated in order to avoid or otherwise mitigate these impacts. E.g., 40 CFR 1508.14, 1508.27, 1502.1; DO-12 Sec. 4.3; DO-12 Handbook p. 4, Secs. 4.2.A, 4.5.G.2. An example of this bias is in the description of the "General Project Setting" in Chapter 3, which makes passing reference to the City and County of San Francisco. Nearly the entire description is about natural resources (the Biosphere Reserve, California Floristic Province, etc.). The proximity to and use by adjacent urban neighborhoods and the interrelationship with those neighborhoods is not described sufficiently to understand the human environment and resources (including recreation) that may experience an impact, and to understand the effects of the alternatives. E.g., 40 CFR 1502.15; DO-12 Handbook 4.5.F.

Another serious example is the determination to exclude urban quality from the scope of the EIS. EISs are required to provide "full and fair discussion of significant environmental impacts" including "urban quality, historic and cultural resources, and the design of the built environment..." 40 CFR 1502.1 and 1502.16(g); DO-12 Handbook 4.5.F.2(d). GGNRA is located in an urban area and contributes directly and indirectly to its quality, and conversely, is directly and indirectly affected by this urban area. The legislative history of GGNRA could not be clearer about the purpose of the Recreation Area to serve the recreation needs of city dwellers (see CFDG comments, incorporated by reference herein, including the need for adequate

recreation impact analysis). Further, the definition of "human environment" states: "When an environmental impact statement is prepared and economic or social and natural or physical environmental effects are interrelated, then the environmental impact statement will discuss all of these effects on the human environment." 40 CFR 1508.14. The cumulative impact analysis in Volume 2 is a start, but does not provide this direct, indirect and cumulative impact analysis and apply it to refining the alternatives including mitigation measures.

During the public meetings held on the draft Plan/DEIS, and the City of San Francisco Board of Supervisors meeting attended by GGNRA staff - both much appreciated - numerous citizens spoke specifically and eloquently about the importance of GGNRA to urban quality and to the social fabric of their neighborhood and lives, as well as the community cohesiveness related to dog walkers who use the recreation area. These are impacts routinely examined by EISs in urban areas. The fact that GGNRA is also a special natural area does not exempt it from a detailed analysis of urban quality, which is at the core of GGNRA's establishment and its environmental setting.

Urban design is relevant. The design of the built environment is not just about downtown architecture or plazas. The quality and design of open space and recreation areas - including their trails and the manner in which natural restoration and public access are integrated - are also fundamental to the quality of the human environment and urban quality. The bias toward treating GGNRA as a national park akin to a place like Yosemite, where the management principle is to minimize human intervention and allow natural processes to work unaffected by people if possible, is reflected in this summary dismissal of urban quality and urban design as irrelevant to one of the largest metropolitan parklands in the nation. We are not suggesting diminishing respect for GGNRA's natural values or departing from the principles of management for units of the National Park System. On the contrary, as described earlier in these comments, good land planning and design would recognize the urban setting and character of this area and consider urban design in avoiding or reducing potential conflicts among GGNRA's core values, so they can all be preserved unimpaired for future generations.

Request for Dialogue and Consultation

At the outset of these comments, we requested the opportunity for continued, meaningful public participation during the EIS process. CFDG and Eco-Dog believe there are ways to preserve dog walking in most traditional areas and in other areas in GGNRA without degrading natural values.

We can support a preferred alternative based on a scientifically and technical

sound analysis of the current baseline and the impacts attributable to dogs and not other factors, and on a technically-sound adaptive management program that focuses on compliance. We agree it makes sense in some areas to have separate trails or areas on and off leash, and with or without dogs.

As the new Superintendent, you may or may not be aware that - other than in the current official public comment period for which you should be commended - the National Park Service and GGNRA has not allowed any real opportunity in the course of this EIS process over the past 2 years (after unsuccessful negotiated rulemaking ended) to present ideas or to discuss the development of the plan and alternatives with GGNRA or NPS staff. The agency called these 2 years a "quiet period" which excluded public participation. While some reasonable period for an agency to do its homework is certainly appropriate, a 2 year hiatus resulting in a draft EIS is directly contrary to President Obama's policy of transparency and public participation in the NEPA process (Presidential Proclamation on the 40th Anniversary of NEPA (December 31, 2009) , CEQ guidance, and the Interior Department and Park Service's own directives to involve the public throughout the EIS process.

The fact that GGNRA tried, in a mediation process, to engage stakeholders should not substitute for or excuse the agency from engaging on the scope of the draft EIS with communities, groups or citizens who were excluded from that mediation process, or with participants who learned much from that process and had further constructive ideas.

This 2-year public blackout has been exceedingly frustrating to people of good will: (1) who made scoping comments when the Notice of Intent was issued five years ago in 2006; (2) who offered a wide range of reasonable alternatives to GGNRA in a compendium at the conclusion of the negotiated rulemaking process; and (3) who asked to provide additional alternatives and information to GGNRA in the past two years, such as CFDG - only to find that none of these appear to have been seriously considered in the draft Plan/DEIS (see CFDG Appendix K), as required by DOI/NPS NEPA guidance. (e.g., DO-12 Handbook Secs. 4.3 and 4.12).

We mention this by way of background here; we think these concerns can be constructively addressed.

The inadequacy of a scoping process or of public involvement in the development of an EIS is not generally subject to court review, although the agency's overall approach in the NEPA process may be relevant and influence reviewing judges. But CFDG is less interested in challenges than in moving forward on a positive basis with good public involvement.

NEPA intentionally uses the phase "consultation" and not just comment to

reflect a two-way communication between the agency and interested entity. The NEPA rules and CEQ/DOI/NPS NEPA guidance also use the word "meaningful" involvement, which likewise refers to the ability of the agency to engage with interested people to understand their concerns or comments and explore solutions. The word "dialogue" means an exchange, not just a one-way communication. NEPA uses the term "explore," not in the narrow sense of a desktop review only, but what the agency would do to see if a better alternative can in reality occur. Better alternatives are, after all, what NEPA is about.

Both the City and County of San Francisco and we have requested a continuing dialogue and exchange of ideas in the coming months as you consider comments and work on the plan. Specifically:

1. Understanding comments. We note our suggestion made at the public meetings that you, along with staff most involved in developing the alternatives and mitigation measures, meet with interested groups not long after the end of the draft document comment period. The purpose of the meeting would be a real working session for GGNRA to understand the comments made, particularly on the draft Plan, where you can ask questions and understand what a written comment intended. It would not "extend" the public comment deadline or provide commenters with "another bite at the apple." A few sessions could be held with different perceived interests, such as dog walkers, environmental groups, neighborhood groups, and local government. The sessions could be public; we are not afraid of access by other stakeholders to you or others hearing what we intend by our comments on the draft Plan.

2. Update on alternatives. We support the idea you have expressed to San Francisco of having a document and public meeting in the fall to discuss the direction of or a refined proposed Plan.

3. Charette. We recommend and would welcome participation in a design charette on integrated solutions for selected zones or elements of the plan. This technique has been used by public agencies successfully on many projects.
4. Adaptive management. We request an opportunity to participate in a work session with you on the development of an improved compliance-based adaptive management program. This is a key element of any plan, and, as emphasized by CEQ in recent guidance on monitoring and mitigation, it is important for many reasons to develop the bulk of the program now - and the partnership commitments that are essential to its success - as part of the Plan/EIS/ROD, not after-the-fact. This is also important to develop the constituency for its funding, which may require creativity and public-private partnerships as well.

5. Public participation in the NEPA process. We would be glad to participate

in a conversation between DOI/NPS/GGNRA and CEQ/EPA on other public involvement approaches that could be used as you further develop and refine the proposed plan. There are many options under NEPA that do not run afoul of the Federal Advisory Committee Act (FACA) or other laws.

Another extended blackout resulting in a final plan does not serve NEPA's purposes and mandates, NPS objectives for good planning, or the GGNRA's enabling legislation standard of sound land planning.

Thank you again for the opportunity to comment. Please do not hesitate to contact Martha Walters at or me at if you need more information or would like to discuss. Crissy Field Dog Group looks forward to working with you and your colleagues to improve the proposed dog management plan for the Golden Gate National Recreation Area.

Respectfully submitted,

FOOTNOTES:

1 The DOI/NPA NEPA Handbook provides the following example of context: "For instance, the temporary closure of a 1,000 acre recreation area may have minor impacts on the nation's recreation areas, but severe impacts on local residents who depend on the area as their sole source of outdoor recreation for many miles." Though not identical (e.g., the proposed closures to recreational dog walking would have more severe impact because they would be permanent, not temporary), it would be hard to find a more relevant example to the type of analysis still needed in this EIS.

Correspondence: To Members of the Negotiated Rulemaking Committee for Dog Management,

I have lived in the Outer Richmond for 4 years now and am a regular visitor to Lands End. I am writing because I have been in (and witnessed)

numerous dangerous situations with dogs and their owners while walking the Coastal trail and I fear it is only a matter of time before someone is seriously injured. This trail is heavily used by joggers, tourists and hikers of all ages. In several parts, the trail is narrow, uneven, steep and bordered by cliffs. There are blind corners, tight turns and several stair cases. When dogs both leashed and unleashed are being led through these sections, it creates serious congestion and apprehension for the parties involved, as well as the potential for serious injury. Alternative D is the best proposal, because it does not allow dogs in the above-mentioned areas. I have included some pictures I took the last time I walked the trail. This was after 3 minutes on the trail if that is any indication of how often these potentially hazardous situations arise.

Thank you for your time,

Maggie Dale - San Francisco resident and weekly hiker on the Lands' End Coastal Trail

Correspondence: When I was young I wandered all over San Francisco without noticing dogs. I suppose some of them were not on leashes, but I did not notice. But when I reached my sixties I began to have bad experiences with dogs. In the GGNRA I have been rushed at by unleashed, barking dogs on six occasions: in the Sutro Heights Park three times, on the Lands End Trail twice and once in the area below the Veterans Hospital. On three of these occasions I was not aware of the dogs before they rushed me. One reason why I am having trouble now in my old age might be that a person's posture and movements can signal weakness or aggression to a dog,¹ and peoples' postures and body movements change as they age.

Every day in the United States 12,000 people are bitten by dogs, and 2,400 come to emergency wards or hospitals for treatment of dog bites. Children aged 5-9 are most likely to be bitten and treated in outpatient facilities. ² Old people 65-84 most are likely to wind up in hospital.³ This happens because many dog owners cannot imagine their dogs biting anyone. They think that their dogs will be as gentle and loving to others as they are to the owners themselves. A highly educated woman in San Francisco said that her dog was "gentle and loving and affectionate." It probably was, to her But she said this in court, where she was on trial for murder, because her dog had ripped one of her neighbors to shreds in an apartment building. What we perceive as love, gentleness and affection are better understood as submission to the dominant member of the pack, the owners But this does

not rule out aggression toward creatures outside the pack, especially children and old people.

I sympathize with dog owners because the illusion that dogs are like humans is almost impossible to resist. I also understand that most dog owners are so puzzled when their dogs are aggressive that they sometimes blame the victim. None of the owners of the dogs which attacked me apologized, and one berated me when I turned and faced her barking dog.⁶ But lack of understanding is not an basis for policy. Most bad drivers think they are good drivers, and most alcoholics think they can control their drinking. We should not necessarily trust them.

There is also a matter a fairness to children and old people. I do not accept that because I am old I should stop walking in the parks. Now I carry a stick, and do not look at unleashed dogs. (I have learned from experts that staring at a dog is a signal of aggression)⁷. Dog attacks on me have stopped since I started doing this, at least when I walk alone. But when I am with my wife she sometimes cannot avoid looking anxiously at an unleashed dog. Twice I have had to interpose myself and my stick between her and an unleashed dog.

This is no way to enjoy the parks. I don't like going about armed with a stick. But I pay my taxes like everyone else, and walking is about the last exercise available to old people. I feel let down by the city of San Francisco and the Golden Gate National Recreational Area. I was on the island of Hawaii recently. Each of the many state parks I visited had a sign saying "No Animals", and there really were no dogs in those parks (and of course none in the federal parks either).⁸ In those parks you see little children running all over the place without their mothers watching anxiously when an unleashed dog comes close, and you see people spreading blankets on the grass and lying around or picnicking. In San Francisco about the only place you can spread a blanket and lie on the grass is in the arboretum. The very presence of unleashed dogs, whether or not aggressive, makes it impossible to use the parks in the way people in other cities use them.

I was also in Boston recently. All dogs in the parks in Boston are on leashes, except in designated dog areas.⁸ Not just in theory but in practice. I talked to a Park Warden. He said that after the leash law came into effect 15 years ago, it was hard convince people to leash their dogs. Now, he only occasionally finds someone with an unleashed dog. He first gives a warning, and the next time he writes a ticket.

People in Boston or Hawaii are not very different from people in San Francisco, but it seems to me that San Francisco has little regard for the rights of children and old people. I think there should be places for unleashed dogs, but in the city of San Francisco there is nowhere free of

unleashed dogs, except the arboretum. In the Sutro Heights Park near my house, there are signs saying "Pets on leash" at each entrance, but it is rare to be there without seeing at least some unleashed dogs, and on several occasions I have seen at least 30, right on the main pathways. Imagine a child or old person having to walk through 30 or more unleashed dogs.

On the Lands End Trail there is a vague sign that dogs should be under "control" but I have been fiercely barked at there twice by unleashed dogs. Lands End has narrow paths and staircases. A dog can feel threatened if approached by a stranger coming in the opposite direction on a narrow path, which is what has happened to me, twice.

I walk in the Marin Headlands each Sunday morning with a group of others my age, on trails clearly marked "No Pets", but over the past two years I have counted between two and 14 dogs each Sunday, about half of which are unleashed.

I would applaud the Dog Management Plan if it could provide some places for unleashed dogs, some places for leashed dogs and some places with no dogs at all. I like the idea that half of Ocean Beach would be for dogs to run free and the other half would be free of dogs altogether.¹⁰ But I am skeptical. I think there is a good chance that some dog owners will simply take over the whole beach, and no one will stop them. The Plan has little in the way of enforcement. The one true sanction it mentions could probably never be carried out. The Plan says this about enforcement:

When noncompliance is observed in an area, park staff would focus on enforcing the regulations, educating dog walkers, and establishing buffer zones, time and use restrictions, and SUP restrictions. If compliance falls below 75 percent (measured as the percentage of total dogs / dog walkers observed during the previous 12 months not in compliance with the regulations) the area's management would be changed to the next more restrictive level of dog management.

The plan depends, on having park personnel carry out the same tasks they cannot now carry out. Perhaps there is there a reason to think that they will be better able to do them in the future, but I don't see why that should be. Will there be more personnel? Will they be more motivated to enforce the new rules?

Most strange of all is the idea that if the situation deteriorates to the extent that 25 percent of dog owners ignore a rule, a more stringent rule is to be applied. I am sure there is some rationale here, but I cannot find it. Suppose you have a traffic intersection where people do not stop at the stop sign. The normal thing to do would be to put some police there and start issuing tickets. If one car in a thousand violates the law, that is too many. But under

this Plan you wait until one in four people violate the rule and then by the logic of the Plan close the intersection. If you cannot get more than 25 percent of the population to obey a rule, is there any sense in imposing a more stringent rule? What happens if 25 percent flout the more stringent rule? I cannot imagine any administrator moving to a more stringent rule.

And 25 percent is huge. In my experience only a small percentage of dogs are annoying, but those few are enough to make life unpleasant. I am afraid that an administrator who cannot or does not want to enforce the law will hide behind the fact that fewer than 25 percent of the dog-owners are violating the law.

I do not know if this plan has a chance of succeeding. It seems extremely complicated, compared to Boston where the rule is simple all dogs on leash except in designated dog areas, or in Hawaii no animals. If there is an effort to enforce the new rules, the Plan might have some merit and be fair for all concerned, but at present I do not see a willingness or ability to enforce the law, and I am afraid that this will continue.

Nonetheless, I have some advice for administrators trying to do the right thing. If you cannot enforce the law everywhere, at least try to enforce it in some places. In the Marin Headlands there are signs which say "No pets". Many people pay no attention to them. But these kinds of places where the park personnel try to remove invasive plants and preserve endangered butterflies, and where there are coyotes and mountain lions are no places for household dogs. I once heard a horrifying confrontation between a coyote and a dog. The signs there should say something like "No dogs dogs upset the natural ecology of the area penalty for violation \$250."

In places like the Lands End Trail, which has narrow trails and staircases, and is full of tourists, it would make sense to make a genuine effort to enforce a leash law. In the Sutro Heights Park, if you cannot make people keep their dogs on a leash, there is room for a fenced off area where dogs could run free.¹¹

But all of this depends on having the will and the means to carry out at least some enforcement. Thirty years ago it would have been impossible to keep people from smoking on a bus, but now it is unimaginable for someone to do so. I wish the park personnel success in their endeavors. And I thank them for allowing me and the rest of the public to comment on this plan.

The judge thought, that the phrase about being gentle and loving and affectionate was the only sincere thing the defendant said during the trial. 5 Patricia McConnell, *The Other End of the Leash* (New York, 2002), p. 155ff. 6 The Centers for Disease Control recommend not turning away and remaining motionless when approached by dog (Centers for Disease Control, cited in footnote 2). 7 Gladwell, *What the Dog Saw*, p. 219; "Avoid direct eye-contact with a dog": Centers for Disease Control, cited in footnote 2. Patricia McConnell, *The Other End of the Leash* (New York, 2002), p. 35. 8 The website of the Hawaii. Division of State Parks says "PETS and other animals are prohibited wherever posted, and are not allowed in restaurants, pavilions, swimming areas, campgrounds, lodges, or on beaches. Where permitted, pets are to be crated, caged, on a 6-foot or shorter leash or otherwise under physical restrictive control at all times" (<http://www.hawaiistateparks.org/parkrules/>). 9 "No person shall ... have or allow any animal, except a dog on a leash no longer than eight feet, or cat under proper control; or walk a dog in a designated Dog Free Zone" (Official Website of the City of Boston: <http://www.cityofboston.gov/Parks/rules.asp>). 10 Page ix of the Executive Summary says that the ROLA criterion applies north of stairwell 21, and that south of Sloat Boulevard there are to be no dogs. It does not say what the status is of the area between stairwell 21 and Sloat Boulevard. 11 The preferred rule for the Sutro Heights Parks is dog on-leash for "paths, parapet, and lawns" (page ix of the Executive Summary). There is no mention of the preferred status of other areas, or what these other areas might be. There is a path through a wooded area leading down from the Sutro Heights Park to Ocean Beach, which few people use. Is this what is not included among the "paths, parapet, and lawns"? This area is isolated. If something happened there, no one would know it. When I was young I once encountered a truly dangerous dog there. Fortunately it was on a leash. Do you really want dogs running around loose in such isolated, wooded areas? It is just above a narrow staircase where an unleashed dog would feel threatened if it encountered a person, and above some dunes planted with native plants. I would make all of the Sutro Heights Park a leashed area, as it is supposed to be now. People who want to let their dogs off-leash could go to Ocean Beach, which is close by.

Correspondence Letter

Type:

Correspondence: Dear Superintendent Dean;

Enclosed please find my comments about the Draft Dog Management Plan/Environmental Impact Statement (DEIS). Please note that these comments are in addition to those sent to you on March 6, 2011.

Historic Presence of Dog in Bay Area including GGNRA sites:

As noted in my comments, the DEIS should be revised to take into account the long presence of the dog in the Bay Area. The dog arrived in the Americas thousands of years ago. The Coastal Miwok people (and other native peoples) that lived here have been known to keep and rely upon dogs as a valued part of their way of life. As such, the dog has made an historic contribution to humanity from when the dog arrived with its humans until the present. The dog has also been a continuous presence in the ecosystem of the Bay Area. The dog is as native to the Bay Area as the wildlife and vegetation considered native today. In considering the role and effects of the dog at GGNRA sites, recognition should be paid to the dog's historic presence in these lands. Please see the enclosed Comments for further details. Thank you for your attention to these Comments.

Sincerely,

Katherine Pattison

Comments on Draft Dog Plan/EIS (DEIS)

May 5, 2011

1. Executive Summary: p. i, Chapter 3 Affected Environment; Chapter 4 Environmental Consequences and throughout document: The Role of Dogs in the Bay Area including the GGNRA sites referenced in the DEIS.

Throughout the document the DEIS characterizes the dog, particularly the off leash dog, as a destructive, exotic animal which, because its biology and behavior, is inherently detrimental to the local, native flora and fauna. The DEIS further describes the dog as having a negative impact on the human environment (visitor experience, cultural, health and safety, park operations). As a result, the DEIS completely mischaracterizes the role of the dog in the history and ecosystem of the Bay Area including the GGNRA sites. The DEIS also fails to document the long, valued and beneficial role of the dog in the human environment of the Bay Area including the

GGNRA. The DEIS should be changed to reflect throughout the document the ancient role and presence of the dog, particularly the off leash dog, in the GGNRA sites. The DEIS should particularly address the following aspects of the dog's role and history in the GGNRA.

? In the Executive Summary, the DEIS describes the Purpose of the Golden Gate National Recreation Area as

"The purpose of the GGNRA is to offer national park experiences to a large and diverse urban population while preserving and interpreting its outstanding natural, historic, scenic and recreational values."

In preserving and interpreting the natural and historic values of the GGNRA, National Park Service (and the DEIS) should recognize and support the long and continuous presence of dogs in this unique environment. Dogs in the company of ancient peoples inhabited the Americas thousands of years ago. In the Bay Area, the Coastal Miwok people kept dogs, which were integral to the survival of these hunter-gatherers. Dogs were used for hunting (large and small animals) for guarding, for transportation of goods and for food in special situations. Recent research on dog burials by Miwok people indicates that the dog was a valued member of the tribe. With the arrival of Europeans, dogs continued to play an important role in both native and European life, as working members and as companions for their humans. This role has continued into present day. During the use of the Presidio as major US military post, dogs were important to families, as evidenced by the "pet cemetery" located on the grounds of the Presidio. The tradition of walking off leash dogs in the GGNRA lands continued before and after the formation of the GGNRA. In short, walking off leash dogs in these lands is the oldest continuous human activity conducted on the GGNRA lands. Dog walking dates back thousands of years from ancient times to the present, and certainly predates other human activities supported by the NPS in the GGNRA such as horseback riding and bicycle riding which arrived with the Europeans.

Comment: The DEIS should be changed to document the long and valued contribution of dogs to the human population in the Bay Area in general and in the GGNRA sites in particular, in keeping with the purpose of the GGNRA to interpret and preserve the history and culture of these lands.

? Chapter 3 - Affected Environment and Chapter 4 - Environmental Consequences: The DEIS in each section on natural environment (soils, water, vegetation and wildlife, special-status species) asserts that dogs as a species alien to these lands have been negatively impacting the environment at the sites in the GGNRA. However, the DEIS fails to take into account the long presence of dogs (off leash) in the ecosystem and the lack of

documented, specific negative impact by dogs, as follows:

? In many sections (soil, water, vegetation, wildlife and special species) dogs the DEIS asserts that dogs have and will continue to disturb the environment by: i. trampling, digging, running through areas ii. Urinating and defecating in areas iii. Chasing wildlife iv. Disturbing habitats

Comment: The DEIS fails to take into consideration the long presence of dogs as an integral part of the ecosystem at GGNRA sites dating back thousands of years. Dogs are "native" to the ecosystem since they lived in it, moved through it and worked with their humans to guard and hunt as part of the hunter-gatherer lifestyle of the Miwok and other native peoples. By failing to recognize the historic presence of dogs, the DEIS should be changed to eliminate the mischaracterization of the impact of dogs on the following:

? The DEIS asserts that coyotes in GGNRA sites are disturbed by the presence of dogs, but the DEIS fails to take into account the fact that the dog predates the coyote in the ecosystem and should be changed to reflect the following: a. Coyotes are not native to the coastal habitat in northern California and arrived in a post European settlement expansion out of their original range into the California coastal areas as well as the eastern parts of the US b. Coyotes, as relatively new participants in the ecosystem, have had a negative impact on other native predators such as the gray fox and the bobcat (See, for example, reference to this impact of coyotes on the gray fox in the graphics next to the "fox sculpture" on the Presidio Habitats art tour.) c. Coyotes have shown an ability to expand and to thrive in highly suburban and urban areas throughout the US (including the City of San Francisco) despite the heavy presence of dogs in these areas. For example, there are signs throughout the Presidio and GGNRA sites in San Francisco warning of the presence of coyotes which have been seen in these sites as well as the Golden Gate Park and even local city parks such as Lafayette Park.

? The DEIS incorrectly asserts that the presence of dogs disturbs the habitat of the mission blue butterfly, both its host plant the lupine, and the grasses. (p. 1123) The DEIS should be changed to take into account the following:

a. Dogs have been moving through these areas for thousands of years, so the mission blue would be adapted long ago to their presence and effects of dog movement b. The host plant, varieties of lupine, is dependent on disturbance which was historically provided in large part by grazing herds of tule elk moving through this habitat. The impact of herds of tule elk on the lupine as host to butterfly larvae as well as on the adjacent grasses would be far greater than the occasional presence of a dog running through the environment. If the larvae of the butterfly can survive the effects of a herd of tule elk passing through, the larvae can survive the occasional dog brushing

past. c. The DEIS states that the nutrients added to the soil by dog waste have a negative impact on soils and vegetation. The DEIS fails to acknowledge that the tule elk would have deposited large amount of waste as they moved through this environment, comparable if not exceeding the effects of dog waste in adding nutrients to the soil. d. The DEIS fails to acknowledge that the mission blue has been seen all along areas where dog walking has been taking place for decades, suggesting that dog walking is either not adversely affecting the mission blue or, perhaps, even positively affecting the mission blue.

? The DEIS in several references to the impact of dogs on soil and on water quality should be changed to take into account the following:

a. Dogs have been in the ecosystem for thousands of years, trampling, running, digging, as well as urinating and defecating. Dogs are not new elements in this ecosystem. Moreover, other wildlife historically prevalent in the area, including large animals such as deer and elk, grizzly and greater numbers of smaller mammals and birds would have had a much greater impact on soil compaction and disturbance than a dog today. All of these animals were once busy digging, running, chasing through the habitats. b. While there may be more dogs in the ecosystem today, there is considerably less wildlife. The Bay Area was once teeming with wildlife. Historically all of this wildlife was urinating and defecating, adding nutrients (and occasionally pathogens) to the environment. Dog waste is no different from the waste of other animals in terms of these effects. The impact of dog waste today is no greater than the impact of wildlife historically.

? The DEIS refers to the negative effects of dogs chasing wildlife. The DEIS should be changed to recognize that in this ecosystem historically, there were a variety of predators including dogs assisting humans busily engaged in predator-prey activities (such as chasing birds, small mammals, etc.) The native animals were all adapted to the predator-prey interactions, so dogs chasing wildlife today is hardly a new, exotic activity for birds or other animals. While there may be more dogs today, there are fewer other predators such as foxes and bobcat, that would have chased and hunted small prey animals.

? The DEIS makes a number of statements throughout the document which mischaracterize the behavior of dogs in a variety of situations.

Comment: The DEIS should be changed to eliminate these statements, as follows:

i. The DEIS states that dogs make social trails. There is no support for this statement and, in fact, people (not dogs) make social trails. To the extent that dogs contribute to the creation of a social trail, it is because their human

companions are leading them. People use the social trails to take shortcuts on foot or on bikes. Prohibiting dogs from the area would not eliminate the presence or use of social trails.

ii. The DEIS inaccurately states that off leash dogs go off trails and trample the surrounding area because it is "in their nature." (Chapter 4, p. 314) To support this statement, the DEIS provides some conflicting research data which both supports and contradicts the assertion that off leash dogs routinely go off trails. Comment: Based on the conflicts in the research, the DEIS should be revised to eliminate the reference to dogs having it in their "nature" to go off the trails. Further, my personal experience of walking extensively on trails with my own dog off leash and encountering other dogs off leash indicates that the vast majority of dogs range up and down the trail but not off the trail when accompanying humans on a walk. Dogs that do go off the trail are often encouraged or lead by humans.

iii. The DEIS states in several sections of the document that water quality in a variety of sites is affected by dog waste because dogs have access to these water bodies. Comment: In making these statements, the DEIS should be changed to recognize that dogs do not typically urinate or defecate in water bodies for a variety of behavioral and biological reasons. The only way that dog waste would get into the water body is through run-off, which is limited by the effects of the Bay Areas seasonal rainfall patterns. The DEIS also fails to recognize that water quality is more likely affected by a variety of other sources of contamination, from wildlife and from human activity. For example, children (who often play in these water bodies) do urinate in water.

iv. The DEIS states that the barking of dogs disturbs the contemplation of natural sounds for visitors. P. 18. Comment: By making this statement, the DEIS suggests that most dogs at GGNRA sites are continually barking. The DEIS fails to recognize and should be changed to reflect that barking by dogs at GGNRA sites is extremely limited, as follows:

? A survey of all the GGNRA sites in which dogs are present would indicate that most dogs moving through the site are not barking. The barking dog is the exception. ? Barking by dogs tends to be a territorial response, so dogs bark when they are signaling their territory, including their home, their car, or, occasionally, their owners on the other end of the leash, or sometimes their pack (or group). Individual dogs, particularly off leash, that are moving through an area typically do not consider it their territory and will not bark. ? Since dogs have been present in this ecosystem for thousands of years, the bark of a dog is a more natural sound than the yip of a coyote.

2. Executive Summary: p. zii, p. 45, and throughout document.

Characterization of Alternative C

In various tables the DEIS refers to the Alternative C as "Emphasis on Multiple Use-Balanced by County. In describing this alternative on page 45, the DEIS states that the alternative "emphasizes the diversity of users of GGNRA sites and apportions dog walking geographically across Marin, San Francisco and San Mateo counties by allowing a variety of options in each county."

Comment: The DEIS mischaracterizes this alternative since it is not balanced by county and does not provide emphasis on multiple use for dog walkers. The DEIS should be changed to address the following. The label for this alternative should be changed to reflect the actual impact of the alternative. An appropriate label would be: "Major reduction of dog walking -addition of no dog options to every site in GGNRA."

? At each site the DEIS looks at reducing the options for dog walking and at adding no dog options for other users, despite the fact that in the GGNRA, particularly in Mann County, dogs are already not allowed on the vast majority of the trails, roads, etc.

? The DEIS has no numerical data on number of dogs and dog walkers at each site in relation to the number of other users, so there is no basis for suggesting that the alternative provides for balance among users.

? The DEIS provides NO overall assessment of impacts by county of its proposals. There is no review of the cumulative effects of reducing dog walking options significantly at every site in the GGNRA.

3. Environmental Impact Summary by Alternative (Chapter 2) and Environmental Consequences (Chapter 4)

a. Crissy Field: i. Soils and Geology, Alternative (Alt) A and Alt C, pp.149,291, 293, 360-365.

Comment: The DEIS provides no scientific basis for the negative effects of dogs on soils at Crissy Field and other sites in the GGNRA. The DEIS should be changed to remove any reference to the impact of dogs on soils and should address the following items. ? Assessment Methodology: The DEIS states that "impacts on soil resources as a result of dogs were analyzed qualitatively due to a lack of site-specific data regarding the effects of dogs on soils at GGNRA." There is no scientific study of the effects of dogs on soils at the GGNRA and, consequently, the effects attributed to dogs are based on assumptions and speculation.

? Soil Compaction and Erosion: In the section on soil compaction and

erosion, the DEIS states: "Dog traffic can compact soil" and "Soil compaction also is impacted by multiple other sources, including human foot traffic, bicycles and horses". At Crissy Field, as in much of the GGNRA, dogs are only allowed to walk in areas where human activity is present in a variety of forms. Without a specific scientific study and documentation, soil compaction and erosion cannot be attributed to dogs. The impact of the average dog (weighing 50-60 pounds) and moving on four feet is far less than the impact of the average human, who may be running, riding a bike, dragging a windsurfer, riding a horse, digging a hole, etc. At Crissy Field on the beaches, on the grassy field and along the promenade, there is far more soil compaction from human activity than from dogs. Banning dogs from the GGNRA sites such as Crissy Field would not eliminate soil compaction which is due primarily to other human activities than dog walking.

? Soil Function: The DEIS states "Dog waste contains nutrients and phosphorous, which are nutrients required by plants for growth ...An increase in nutrients from dog excrement in concentrated areas could result in some areas becoming overfertilized and lead to changes ... Comment: There are many sources of nutrients entering urban ecosystems such as the Crissy Field site. Without specific, observed and measured data, it is difficult to determine impact of any one source.

? "It is assumed that future management alternatives of leash control and/or voice and sight control would reduce dog waste" Comment: The DEIS should be changed to remove the above statement. There is no correlation between having a dog on a leash and the human picking up the poop. Based on my multiple daily walks in local parks and at GGNRA sites, I have observed humans with dogs off leash regularly picking up poop, and humans with dogs on leash ignoring poop. Picking up poop is a question of focus and commitment on the part of the human. I am personally extremely offended by those that leave dog poop behind without proper disposal; I would like to penalize those who do not pick up poop but forcing dogs to be on leashes will not solve the problem.

? Alternative A: No Action/Soils: o Referring to the fenced restored dunes, the DEIS states: "dogs often access these fenced areas...Impacts occur from dogs digging in the sand, disturbing dunes, as well as nutrient addition to the soil from dog waste; dune restoration areas at Crissy Field continue to be at risk." Further, "dogs walking or running through dune areas interrupt the natural dune building... Comment: The DEIS should be changed to remove the preceding statements since the DEIS provides no support for the statement that dogs "often" access the fenced dunes and are running, digging, in these areas. I personally have been walking along the Crissy Field area since the renovation project was completed. I have been impressed at the degree to which humans and dogs have respected the

fenced off areas. In the last five years, I have visited Crissy Field on a weekly basis and have seen dogs in dunes less than five times, and then only briefly. I have observed children playing in dunes as often as I have observed dogs. Both trample and dig, regrettably, but fortunately both are rarely allowed to go into dunes. In fact, the Appendix G law enforcement data reflects only 17 examples of dogs in "closed area" at Crissy Field. Over a two year period having 17 brief incursions by dogs into the large amount of closed area which includes the marsh and the fenced dunes cannot account for any measureable impact on dunes. Moreover, there is not documented evidence of specific impacts, as noted in the introduction to the soils section.

o The DEIS further states: "Crissy Field marsh is currently closed to dogs." The DEIS further states, referring to Crissy Marsh, "there are high numbers of citations (over 500 in 2007/2008) related to dog activities (table 9)." Comment: The DEIS should be changed to remove this reference to 500 citations in relation to Crissy Marsh, since 485 of the citations were for "dogs off leash" and only 17 were for dogs in "closed areas." While detail behind the citations is not provided, the "closed area" designation can only refer to either the marsh or the fenced dunes, while the "leash" violations can refer a variety of areas. Most likely, the leash violations during that period (primarily recorded in 2007) reflect the confusion on the part of both dog walkers and GGNRA personnel about the WPA policy'confusion created by both litigation results and poor graphics and boundary designation.

o The DEIS states: "The Dogs can also disturb soils in Crissy Marsh and the marsh inlet." Comment: The DEIS should remove the preceding statement based on the following: As noted above, there is limited evidence of dogs in the marsh, based on Law Enforcement statistics cited above. On my weekly visits I have only seen dog(s) in the marsh once or twice over a five year period. The rare and brief incursion of dogs in the Crissy Marsh would not result in measureable impacts on soils in the Marsh. In fact, referring to the impact of dogs on soils at Crissy Field, the DEIS states. "impacts would be readily apparent and would cause noticeable changes in soils or soil function". The DEIS offers no examples of these "readily apparent" and "noticeable" changes. Absent the documentation of these changes, the DEIS should be changed to remove any references to speculative impacts.

o In the Alt A Conclusion Table the DEIS states that the cumulative impacts would be "long-term, minor, adverse". Comment: The DEIS mischaracterizes the impacts from Alt A since the DEIS has failed to provide scientific, documented support for the impact of dogs on the soil at Crissy Field. The reference should be changed to a "no effect" status.

ii. Water Quality, Alternative (Alt) A and Alt C.

Assessment Methodology: p. 460. The DEIS states, "The analysis of water quality impacts considered the effects of dogs on the water resources of the park, primarily from waste material and direct entry into the water. Impacts were analyzed qualitatively."

Comment: By relying on "qualitative" analysis, the DEIS bases its conclusions on assumptions and speculation without providing any documented, specifically observed impacts from dogs on water quality. As a result, the conclusions on effects of dogs and cumulative impacts are flawed, and the DEIS should be changed to remove any reference to negative effects of dogs on water quality.

Crissy Field Alt A: No Action: pp.496-497. ? The DEIS states "dogs under voice control have been documented as gaining access to the tidal marsh..." Comment: As noted in the above comment on soil impacts, the Appendix G referenced as "documentation" reflects only 17 incursions by dogs over a two year period in a broad area that includes the tidal marsh and other areas. On my weekly visits over a five year period, I personally have only observed dog(s) in the tidal marsh on one or two occasions. The DEIS mischaracterizes the situation, suggesting that the presence of dogs in tidal marsh is a frequent and regular occurrence. The DEIS should be changed to reflect that the presence of dogs in the tidal marsh is extremely rare.

? The DEIS states that dog incursions in the tidal marsh create "intermittent and localized turbidity". The DEIS should be changed to reflect the fact that dog presence in the tidal marsh is extremely limited; and that other sources are far more likely to be factors in turbidity such as: work of the GGNRA in periodically opening the inlet to the Bay using heavy equipment; storm action from run-off flowing into the tidal marsh from inlets on the south side to the marsh; vigorous tidal action when inlet is open to the Bay and water flows rapidly into or out of the Bay. ? The DEIS also refers to "episodes" of turbidity affecting water quality in the inlet and adjacent Bay waters due to the presence of dogs. Comment: The DEIS mischaracterizes the impact of dogs on turbidity based on the other, human and natural activities that have far greater and long lasting effects on turbidity, including: action of winter storms; action of tidal movements on beach and on inlet when inlet open to tidal action; action of children playing; action of windsurfers and equipment; action of GGNRA equipment periodically dredging open inlet. As a result, removing dogs from the inlet would have no measureable impact on decreasing turbidity in the inlet, the marsh or the Bay waters.

? The DEIS also states that the presence of dogs in the inlet and Bay waters increases "the addition of nutrients and pathogens from dog waste." Comment: This statement (as well as many other references to "dog behavior in the DEIS) completely mischaracterizes the typical behavior and activity of dogs. The DEIS should be changed to eliminate all the inaccurate

references to dog behavior. Dogs do not typically urinate or defecate in bodies of water for a variety of biological and behavioral reasons. Moreover, the waters of the Bay and, as a result, the Inlet, reflect the issues of runoff on water quality throughout the Bay'this runoff represents a major source of pollution to Bay waters and contains nutrients and pathogens from a variety of sources including human sewage, agricultural runoff, marine activities, etc. Removing dogs from the inlet would have no impact on the presence of nutrients and pathogens in the waters of the Bay and the inlet.

? The DEIS refers to the "Cummulative Impacts" of Alternative A at Crissy Field as "Negligible to Long Terms minor adverse" Comment: As noted above, the DEIS lacks support for this characterization and should be amended to state "no effect."

iii. Vegetation, Alternative (Alt) A and Alt C, p. 150, pp. 537-767.

? The DEIS refers to the impact of dogs on vegetation in fenced dunes based on 17 citations for dogs in "closed areas" over a two year period. Comment: While regrettable, the brief incursion of dogs over a two year period would not have a measurable impact on vegetation. In fact the DEIS provides no examples of vegetation specifically affected by dog activity. The DEIS should be changed to reflect No Effect from dogs on vegetation in the fenced in dunes. The DEIS fails to account for the impact of children playing and trampling dunes. Removing dogs would not remove impacts on vegetation from human activity.

? The DEIS refers to the negative effects of dogs on the foredunes in the WPA: "there are also sparsely vegetated foredunes that have formed in the WPA that are frequently trampled by dogs" The DEIS should be changed to eliminated this reference based on the following: o With improved fencing and graphics, the presence of dogs in the WPA has been greatly reduced and the dogs that do visit typically walk along the hard sand next to the waters. o The trampling of the foredunes occurs most often due to human activity from families with children playing in the area or other activities (sail boarders practicing, etc.) o Grasses on foredunes at WPA are non-native European due for removal.

iv. Visitor Experience, Crissy Field and All Sites, Preferred Alternative Conclusion Table: pp. 109-220. The DEIS fails to characterize accurately the Cummulative Impacts of the Preferred Alternative on visitors who prefer to walk dogs at each GGNRA site by suggesting that the impact of the Preferred Alternative on dog walker is "minor to moderate adverse." The Cummulative Impact should be changed to Major Adverse based on the following:

? The area for dog walking on or off leash is reduced by over 50% at

GGNRA sites throughout San Francisco (and Marin). ? The opportunities for dogs to enjoy a variety of play areas is greatly reduced. ? The options for a variety of experiences by dog walkers is greatly reduced. For example, the elimination of dog walking on five beaches in San Francisco, the elimination of dogs from virtually all trails in Marin, particularly the Oakwood Valley trail; the fact that in Marin dogs are largely limited to fire road walking where difficult and dangerous encounters with bikers and equestrians will be a regular occurrence. ? The opportunity for families with dogs to enjoy a beach with nearby facilities is eliminated ? The overcrowding in permitted areas for dog walking will increase conflicts between dogs, dog walkers and people involved in other activities who will still have access to all the areas where dogs are permitted ? The impact of dog activity on greatly compressed areas will result in negative effects on vegetation, etc. giving GGNRA a reason to further reduce dog walking in GGNRA ? The boundaries for on versus off leash walking, particularly on the grassy airfield at Crissy Field, are unclear which will lead to inadvertent violations by dog walkers. ? The "Compliance Based Management Strategy" threatens all dog walkers with severe and immediate further elimination of dog walking opportunities based on infractions from a minority. This threat will increase conflicts and animosity, resulting in further deterioration in relations with between dog walkers and park staff. In the criminal justice system there has been discussion about the negative effects of applying harsh penalties for minor infractions. The result is not compliance but defiance. This certainly has applied to the focus of the NPS on enforcement of leash laws in the GGNRA, where the anger, threats by law enforcement to having a dog off leash appears completely inconsistent with the actual behavior of the dog/owner at the time. v. Human Health and Safety: Crissy Field and all Sites: pp. 109-220; pp. 1401-1531.

In describing the cumulative impact of the Preferred Alternative the DEIS states: "Having dogs under voice and sight control at the site would increase the risk for dog bites/attacks and user conflicts." Comment: The DEIS fails to characterize accurately the behavior of dogs in this statement. The DEIS should be changed to show that the Preferred Alternative is likely to increase the rate of dog and user conflicts based on the following:

? Dogs on a leash are often more aggressive due to the constraints of the leash and the proximity of the human on the other end of the leash. It is generally better to let dogs meet each other off leash than on leash. ? Dogs that are kept on leash due to aggressive tendencies are as likely to frighten, attack other dogs and visitors. Some of my most frightening experiences have involved meeting aggressive dogs on a leash. The humans handling aggressive dogs may lose hold of the leash. Simply requiring a leash will not solve the problem of aggressive dogs. ? Compressing the dog walking into greatly reduced areas at all GGNRA sites in San Francisco is likely to

increase significantly the conflicts due to overcrowding in permitted areas.

b. Baker Beach :

i. Soils and Geology, Alternative (Alt) A and Alt D, pp.375-376 The DEIS describes a number of theoretical impacts by dogs on the beach, dunes and bluffs of Baker Beach including:

? Presence of social trails giving dogs access to sensitive coastal scrub habitat ? "Heavy off-leash dog use increases deterioration of native plant communities" ? Impact of dogs walking, running and digging in dunes and foredunes ? Impact from dogs digging in beach sands

Comment: The DEIS provides no support or documentation for any of these impacts specifically taking place at Baker Beach and Bluffs under current conditions or Alternative A. In fact, the DEIS provides information that is directly in contradiction to those statements, as outlined below. As a result, the DEIS should be changed to eliminate any reference to the negative impact on soils from dog activity.

? The DEIS states that dog walking at the site is low to moderate which contradicts the reference to impact of digging, trampling and running by heavy off-leash dog presence anywhere on site, and particularly, in fenced off dunes and on leash required trails ? In Appendix G, over the two year period there are only 5 citations for dogs and none of these is for being in closed areas or harassing wildlife. ? The DEIS provides no support for the presence of dogs on social trails; further, social trails are created by humans (not dogs) and many nude sunbathers and hikers may choose to access that end of the beach by "social trails" ? Most of the "low to moderate" dog walking activity takes place on the beach, not on the trails. ? There are no "foredunes" at Baker Beach ? The beach is very large and the dog presence low to moderate, so the modest amount of digging by dogs will not change the composition of the soil; further, there are children digging and playing in the soil which will still be present if dogs are banned from the beach ? The presence of humans with picnics and fishing in the area down from the two parking lots reflects the impact of human activity in the area, including soil disturbance (playing and digging in sand) and nutrient addition to sands from picnics and fishing (bait, fish, etc.). Evidence of this human impact can be seen in the presence of large numbers of crows that hang around the beach in that area, looking for human food.

ii. Water, Alternative (Alt) A and Alt D, pp.503-504

The DEIS mischaracterizes the impact of dog waste on water quality at Baker Beach as "adverse, and minor to moderate". The DEIS states:

? Referring to Lobos Creek, dogs "may stir up sediments and contribute pathogens and/or nutrients to into the water from dog waste..."dog waste ... may also enter the ocean from tidal and wave actions." "The effects on water quality as a result of dogs would be detectable..." Comment: The DEIS provides no support for the characterization of a "detectable," negative impact of dogs on water quality and the DEIS should be changed to eliminate those statements based on the following: ? The dog walking activity is characterized as "low to moderate", so the amount of dogs engaged in stirring up sediment in the creek is limited, since the creek represents a small portion of the area used by dog walkers. In fact, banning dogs from the creek would not keep sediment from being stirred up by children playing in the creek which is more invasive (visitor use is characterized by low to high and most visitors stay in area close to creek and parking lots)

? Dogs do not typically urinate or defecate in bodies of water (children do).

? The water quality in the creek is already poor due to run-off as evidenced by signs at the culvert which warn of problems with water quality and advise against playing in the water

? Dogs do not necessarily carry pathogens'dogs from San Francisco and Marin benefit from extensive array of veterinary services including services provided for free to support low income dog owners. Pathogens are more likely to come from wildlife including coyotes, raccoons, etc. that may frequent the creek.

? The beach area is quite large, the amount of dog waste small, and the presence of humans and there activities contributing as much to nutrient additions and soil disturbance as dogs.

ii. Wildlife, Alternative (Alt) A and Alt D, pp.937-939.

The DEIS states that dogs have a "minor to moderate adverse" impact on wildlife due to dogs accessing dunes and coastal scrub areas off trails and along social trails.

Comment: The DEIS provides no support for the presence of dogs off trails or in dunes disturbing wildlife. As noted in items above on Soil and Water, the information provided in the DEIS contradicts the assertion based on the relatively low to moderate incidence of dog walking; the fact that most dog walking takes place on the beach itself; and the relative few number of citations involving dogs (most off leash citations and none related to dogs in closed areas or harassing wildlife). The DEIS should be changed to eliminate the impact of dogs on wildlife to no effect.

iii. Visitor Experience, Alternative (Alt) A and Alt D:p. 166; pp. 1401-1531.

The DEIS selects Alternative D as the preferred alternative primarily because "it provides a second beach for visitors to have no dog beach experience." This statement is completely inaccurate and the selection of Alternative D as the Preferred Alternative should be changed based to the selection of Alternative A based on the following:

? The DEIS provides for five beaches to be completely dog free in the Preferred Alternatives selected for San Francisco as follows: o Ft Funston WPA; Ocean Beach WPA; Lands End small beach at end of trail leading down to ocean; Crissy Field WPA; Crissy Field East Beach. ? The DEIS fails to consider that those seeking a dog free beach can also go to beaches in Marin and Pt Reyes. Further, all California state beaches, many state parks and all other national park lands in California severely restrict presence of dogs and require leash on dogs. Visitors who do not want to have a beach experience with dogs have many other options; dog owners have very few options for taking their dogs to an off leash beach. ? The DEIS provides no other justification for not selecting Alternative A since the DEIS fails to document any negative impact from dogs on the beach itself

c. Fort Mason: Visitor Experience: pp. 1463-1464.

In describing the effects on dog walkers from the Preferred Alternative, the DEIS mischaracterizes the impacts by stating that with dogs on leash, dog walkers can use the site for "playing" with their dogs. Comment: The DEIS should eliminate this reference since it is physically impossible (and dangerous) to attempt to play with a dog on a leash. The dog cannot chase the ball, its owner, or another dog and cannot engage in a variety of "play" moves without risking entanglement in the leash and injuries as a result to both dogs and humans.

Correspondence ID: 4466 **Project:** 11759 **Document:** 38106

Correspondence Type: Letter
Correspondence: Dear Mr. Dean,

I am writing to strongly protest the efforts of the GGNRA in restricting dogs from being off leash on GGNRA lands. Dogs are important companions to many people in our city and dog walkers are custodians of the land. They walk on it, love it and look after it, picking up trash, reporting dead animals, and any other problems. Dog owners are law-abiding citizens who by their presence on the GGNRA lands discourage crime of all kinds. It is in the

interest of anyone who cares about open space to work together with dog owners and find a way to coexist.

The complaints from the Audubon Society and the Park Service that dogs are somehow a threat to the coastal areas is ridiculous and vastly overblown. Any instances of dogs harming birds are very rare. This concern can be addressed with proper dog training. As for disturbing the nesting sights this can be addressed through education and signage.

Plants should not take precedence over people in urban areas but live alongside people. We must not forget that we are a city and the same standards of preservation do not apply, as they would in a national park in the middle of nowhere...there must be balance between people and plants.

I would rather see signs asking dog owners to always be respectful of the other users of the beach and not allow their dogs into the areas where the shore birds nest, an education campaign perhaps. Even a license system for owners to have their dogs off leash where they have to prove that the dog is properly trained (rather like a drivers license) might be a solution.

Surely personal responsibility with freedom is better for our society than more restrictions and legislation! This proposed plan is discriminating against one type of person, namely a dog owner; even the coyote has more rights in the Presidio. Dogs provide so much love and support to humans in so many ways; they need places to run free.

Thank you for your kind consideration

Sincerely,

Phyllis Swindells

Correspondence Type: Letter
Correspondence: Dear Mr. Dean:

I am writing in defense of dogs and the people who love them. I am a Mill Valley native. I remember when we took our dogs on hikes at Pt. Reyes. Although I understand restricting dogs at that unique, rural park, I do not agree with further restricting dog access to the parks near the urban core of the San Francisco Bay Area.

My 80 year old mother has 2 dogs that she takes out twice every day for a

walk in Mill Valley. This is vital exercise for my mother and her dogs. Typically we do the Oakwood loop in Tennessee Valley or walk on Muir Beach. When we get more adventurous, we go along the coast trail between the beaches. As all of these locations are threatened by the dog management restrictions in the DEIS plan I would like to strongly urge you not to further restrict these locations.

The Oakwood loop is just that, a loop. Dog owners, like us, are hikers, outdoor people. We have dogs because we like to experience nature while we get our exercise. Dogs are our 'excuse' to get out regularly. They are our companions and hiking buddies. We do not want to walk back and forth on the same stretch of path; we would never go to a dog park. We want to experience the nature that surrounds us and get some exercise ourselves. Already the patchwork of trails in GGNRA that allow dogs is incredibly difficult to chart and does not offer distance hiking or loops that allow dogs and their owners to get significant exercise.

It makes me very sad to think of Muir Beach without dogs. Aside from the joy of frolicking dogs, the history of Muir Beach would be lost. Muir Beach has long been one of the alternative beaches where the hippies and others from the counterculture would enjoy the ocean. The rules and restrictions you propose are anathema to this tradition. I know that there is sensitive habitat at the beach but believe that people, not dogs are a far more serious threat to that habitat. I have seen river otter, herons, egrets, starfish, anemones, crabs, bi-valves and various marine mammals while visiting Muir Beach with our dogs.

If you must further restrict off-leash dog access in GGNRA, please consider conditional restrictions. In the city of Boulder they have a Voice and Sight Dog Tag program that permits dogs to be off-leash if they have been certified to be under voice control. If habitat is the primary concern, consider seasonal restrictions only to protect sensitive times for endangered species. If you further restrict dogs in the GGNRA parks of the urban core, those dogs and their people will be displaced into the other parks in these areas. Restricting the exercise options will cause people to have to drive further and cause greater impact on the other parks in our area many of which are designed for people, do not offer expanses for hiking exercise or off-leash frolicking for our dogs.

Please do not further restrict off-leash dog access to GGNRA. Thank you for your consideration,

Marabeth Grahame Mill Valley, CA 94941

Correspondence Type: Letter
Correspondence: Dear Superintendent Dean:

My name is Mary Ann Campbell. I live in Berkeley, in Alameda County. I am also a senior citizen who visits many of our local parks that allow dogs.

I strongly believe that multi-use open space that includes off-leash dog walking is compatible with all other recreational uses and with the preservation of habitat and wildlife within the GGNRA. All users (including cyclists, hikers, people with kites and Frisbees, picnickers, festival-goers, the Fleet Week crowds, and even wildlife) clearly have some impact on the GGNRA. In the Draft Environmental Impact Statement, the National Park Service inappropriately singles out dogs. Its conclusions are not based upon sound science nor long-term monitoring of site-specific conditions.

Any impact that dogs may have can be effectively mitigated through better signage, creating environmental barriers, and education of park users. The GGNRA should partner with community, animal welfare, and conservation organizations on programs that could eliminate perceived problems and contribute much-needed resources.

The GGNRA was created to provide open space for recreation (including dog walking) for the metropolitan Bay Area. The existing 1979 Pet Policy has served the community extremely well for more than 30 years. I strongly support Alternative A, the No Action alternative, in the GGNRA and the "New Lands" areas (such as Cattle Hill, Sweeney Ridge, Mori Point, Pedro Point and Milagra Ridge and Rancho Corral de Tierra in San Mateo County).

Respectfully,

Mary Ann Campbell Berkeley, CA 94707

Correspondence Type: Letter
Correspondence: Dear Superintendent Dean:

Here are my comments on the draft dog management plan:

I don't think dogs should ever be allowed off leash in a National Park. City parks are for recreation and that is where off-leash areas should be. Why are we asked to comment on which spaces that should be allowed to run wild in 'they should not be allowed off leash anywhere in a National Park.

National parks are created to save places of special beauty and history, and to protect wildlife and flora. Dogs are wonderful pets but their place in national parks is very secondary, and often harmful, to the protected sites, wildlife and citizens who are enjoying these special places. I often see dogs running wild, trampling plants and chasing birds and other wildlife which are supposed to be protected. I have seen only 2 or 3 dogs who are well-trained enough to respond to their owner when off-leash. I see dogs running wild daily everywhere in the park while their owners yell at them and the dogs ignore their shouts.

I walk daily because of a medical condition. I have been knocked down twice by off-leash dogs. They meant no harm; they were just out of control. Once dogs are in an area, it becomes a dog area and no other use is safe or enjoyable. How many areas like Fort Funston are you going to turn over for dog use, which essentially excludes all other uses?

With the many areas in the park that propose a use by dogs, will you have enough rangers to enforce the regulations? You can't leave it up to the public; people are very hostile if you ask them to control their dog.

There is already chaos of running packs of dogs on park beaches. Your new regulations are just going to cement that bad behavior for all of the future.

Please withhold my personal information from public review.

Thank you.

Correspondence: Dear Sir:

As a biologist I would like to comment on the new rules being proposed for dogs in the GGNRA. Our environment becomes more degraded every day. The National Parks are one of the last refuges of wildlife. Any area with dogs running without a leash is not safe for wildlife and never will be. This

plan will create zones that will never be useable habitat for the wildlife that National Parks are supposed to protect. They will be zones barren of any life except dogs.

As you know, the GGNRA has many threatened and endangered species including the SF garter snake and red-legged frog. Please protect all the wildlife in the Park, the way National Parks are supposed to, by not allowing dogs to run loose. Dogs have other places to run; the wildlife does not. Weren't the National Parks created to save animals and plants for the future?

Sincerely, Jens Vindum San Francisco, CA 94118

Correspondence: Dear Superintendent Dean, My name is Bruce Tompkins. I live in San Pablo, in Contra Costa County. I am an environmentalist who also happens to have a dog. We love going to Crissy Field and Fort Funston. I strongly believe that multi-use open space that includes off-leash dog walking is compatible with all other recreational uses and with the preservation of habitat and wildlife within the GGNRA. All users (including cyclists, hikers, people with kites and Frisbees, picnickers, festival-goers, the Fleet Week crowds, and even wildlife) clearly have some impact on the GGNRA. In the Draft Environmental Impact Statement, the National Park Service inappropriately singles out dogs. Its conclusions are not based on sound science or long-term monitoring of site-specific conditions. Any impact that dogs may have can be effectively mitigated through better signage, creating environmental barriers, and educating park users. The GGNRA should partner with community, animal welfare, and conservation organizations on programs that could eliminate perceived problems and contribute much-needed resources. The GGNRA was created to provide open space for recreation (including dog walking) for the metropolitan Bay Area. The existing 1979 Pet Policy has served the community extremely well for more than 30 years. I strongly support Alternative A, the No Action alternative, in the GGNRA and the "New Lands" areas (such as Cattle Hill, Sweeney Ridge, Mori Point, Pedro Point and Milagra Ridge and Rancho Corral de Tierra in San Mateo County).

Correspondence: Dear Mr. Dean, Thank you so much for taking time to read this letter. I was born in San Francisco, and have lived here with my husband and two children all of my adult life. I grew up wandering through the Presidio, and believe that the Bay Area open space is some of the most beautiful in the world. In fact as a high school student I volunteered for the GGNRA. Six years ago I adopted a small white rescue dog, and two years after that a toy poodle intended only as a foster joined the household. When my children left home, and my husband passed away they became a very important part of my family. One of my greatest joys is walking and hiking through our open spaces and watching my dogs prance along the paths. I would be devastated to see GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA and don't think I would bring dogs into my household again under these proposed exchanges. While I absolutely understand the importance of balancing recreational uses, children and wildlife, I believe that the course you have chosen eliminates off leash in areas that have been created specifically as open areas for human activities and are already highly trafficked. These areas back up against our urban existence, most have army structures, and in the case of the Presidio, renters. These are not wilderness areas; they are areas where we must all find ways to use the lands as well as steward them. The plans presented simply do not offer a reasonable solution. After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, financial development, education and outreach as part of the overall program. Thank you for your consideration, Patricia Bransten CC: Representative Nancy Pelosi, House Minority Leader, U.S. House of Representatives Ken Salazar, Secretary of Interior Jon Jarvis, National Park Service Director Crissy Field Dog Group

Correspondence: Dear Mr. Frank Dean,

I am a life-long supporter of GGNRA and the National Parks.

It is disturbing and unacceptable that dog laws are not enforced effectively to protect people, wildlife, and lands.

Dog-walkers are out of control damaging GGNRA lands on multiple levels though misuse and overuse.

Dog-walking business are businesses ' using public resources for their own profits - NOT legal. These businesses also create a disproportional negative impact on these environments and lands.

Enforcement and additional signage are necessary - immediately. Please enforce the existing laws.

Please take action on these fundamental points:

1. Unleashed dogs threaten/damage people, wildlife, and habitats.
2. Dog walkers ignore leash rules and area boundaries ' destroying the habitat we have worked hard to protect.
3. No business should have unregulated access

to our parklands. Dog-walking businesses profit from our public lands and while destroying them through misuse and overuse. 4. No business should be allowed to continue to violate protected areas. 5. Tickets must be issued - when will enforcement begin?

Please take these points to heart.

Thank you for your service, and good luck with the dog plan . Sincerely,
Andrew

Correspondence: RE: Comments on Dog Management Plan

I am responding to the dog management draft plan as an individual user of park areas. I know that the dog owners are really well organized and have the backing of certain politicians who are using their influence in a heavy-handed way. I fear that the GGNRA will be pressured by these interests.

I feel very strongly that dogs must be on leashes in areas used by the public. The Park that I use the most is Crissy Field. The dogs run freely and are aggressive. It is a fundamental safety issue for the rest of us to be able to walk there without fear of being jumped on and frightened. Some dog owners do not clean up the waste left behind by their dogs ' another safety issue.

At Crissy Field, if it is necessary to create a space where dogs can run free, then it should be a fenced in portion of the airfield, not the beach and not the main path. Indeed, I think that dogs should not be allowed at all on the main path. Crissy Field is a major urban park. Dog owners have no right to trample on the safety and comfort of others. There are other places they can take their dogs.

I really hope that you will not be pressured by the dog owners against the interests of others.

Thank you,

Sincerely,

John Martin

Re: Draft Dog Management Plan / Draft Environmental Impact Statement

Dear Superintendent Dean,

My name is Robert Petersen and I currently live in Oakland, in Alameda County. However, I previously lived in San Francisco, plan to move back to San Francisco in the next three months and attended San Francisco State University. I visit Ocean Beach, Fort Funston and Crissy Field's on a somewhat regular basis. I have lived at 43rd and Santiago, and 38th and Ortega so these areas have been great locations to go with my two dogs.

It is my opinion that multi-use open space that includes off-leash dog walking and exercise is compatible with all other recreational uses and with the preservation of habitat and wildlife within the GGNRA.

All users (including cyclists, hikers, people with kites and Frisbees, picnickers, festival-goers, the Fleet Week crowds, and even wildlife) clearly have some impact on the GGNRA. Why single out dogs? In the Draft Environmental Impact Statement the National Park Service inappropriately singles out dogs. Its conclusions are not based upon sound science nor long-term monitoring of site-specific conditions.

Any impact that dogs may have can be effectively mitigated through better signage, creating environmental barriers, and education of park users. The GGNRA should partner with the community, animal welfare, and conservation organizations on programs that could eliminate perceived problems and contribute much-needed resources.

The GGNRA was created to provide open space for recreation, including recreation by people with dogs, for the metropolitan Bay Area. The existing 1979 Pet Policy has served the community well for more than 30 years. I strongly support Alternative A, the No Action alternative, in the GGNRA and the "New Lands" areas (such as Cattle Hill, Sweeny Ridge, Mori Point, Pedro Point and Milagra Ridge and Ranch Corral de Tierra in San Mateo county). Type:

Correspondence: Dear Mr. Dean,

My name is Lindsay Kefauver, I live in San Francisco and have been walking my dogs at Ft. Funston since 1978 for 33 years. I am a senior whose health and mental well-being is enormously benefited by being able to walk the trails at Fort Funston where I usually go 5 afternoons a week .

My vote is for Alternative A + or the status quo of the 1979 Pet Policy. The plus is because we desperately need more access for off-leash dog walking on the GGNRA managed lands not less. When the GGNRA adds land then you must open up to more off-leash access. The GGNRA's preferred alternative is clearly too restrictive. There is no justification in the DEIS for major changes to the legal 1979 Pet Policy - yes, twice a US Federal Judge has found your 1979 pet policy to be legal.

Please retain and formalize this existing GGNRA dog policy. The Park Service has not provided any measurements showing that dogs at Fort Funston, Ocean Beach or Crissy Field have a significant impact on the sustainability of threatened and endangered species of wildlife or native plants.

Then what about the NPS's May 31st conference on The Healthy Parks Healthy People US being held in the Golden Gate National Recreation Area? This is being billed as "the first of its kind in the United States...The forum will help forge a vision for the role of parks in contributing to a healthier nation."

I suggest that the GGNRA stand behind what you are promoting as a national program. By choosing to restrict where health enthusiasts can walk in the GGNRA lands, many of whom are women and seniors who might not walk without the company & protection of their dog, you are denying a large group of Bay Area citizens what you pretend to be promoting for the US. Instead of punishing responsible people with dogs who benefit so much from these recreational areas, why don't you try promoting educational awareness with new adequate signage and initially have park rangers out with good will and information instead of acting as a police force. The fact that the NPS is promoting Healthy Parks Healthy People US at the GGNRA headquarters but working to restrict its own local citizens from the benefits of this program makes the program a total sham.

Please work to make the Bay Area a true proponent of Healthy Parks Healthy People US or the program will come back to embarrass the GGNRA.

Sincerely,

Lindsay Kefauver

Correspondence: May 27, 2011 Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean, My name is Julie Feldstein and I live in the outer Richmond District. My family has been San Francisco dog owners for 12 years and we currently own 2 yellow labs. We take our dogs to run everyday, either at Crissy Field, Baker Beach or in the Presidio. I am strongly opposed to the proposed changes to the dog leash laws. It is my understanding that the GGNRA feels that dogs damage the beaches and park land and bother other wildlife, such as birds. Although there are a few irresponsible and inconsiderate dog owners, my experience is that the vast majority of dog walkers are, MORE environmentally aware and considerate than most non dog owners. If you have ever gone to Baker Beach after a warm sunny weekend, you will see lots of trash. It was not dog walkers who left it there ' it was the general population of non dog owners. Guess who picks that trash up on Monday morning - dog walkers! Most dog walkers also play a major role tidying up the beaches and paths they walk on EVERY DAY! I am a member of the Crissy Field Dog Group (as well as Save the Bay) and part of our dues are used to provide plastic bags so that all dog walkers can pick up after their dogs. Doesn't this show that the better course is to work with responsible groups like Crissy Field Dog Group, who are already working with their own money and time, to create a compromise that works for all parties. The dog associations have proven with their actions they are willing to do what it takes ' how about the GGNRA showing that same kind of interest and involvement? I also strongly object to the idea of paying park police to sit and monitor the beaches with the intended purpose of issuing tickets to owners with dogs off leash. What a waste of time and resources! In this day of restricted budgets ' it is unnecessary and a big waste of money. would propose that beaches and parks be open to dogs off leash during restricted hours of the day. I have seen this program work very effectively on a beach where my parent's live in Massachusetts. Why not allow dogs off leash before 10:00 am and after 5:00 pm? This allows people to enjoy the beaches without worrying about dogs, yet give dog owners plenty of time to

enjoy the beaches and parks as well.

In closing, I would like to add that the proposal for restricting the area dogs are allowed to run off leash to certain small areas, such as a portion of Crissy Field, is going to create aggressive dog problems. Does the GGNRA not realize that forces too many dogs into one area creates problems? This is a prescription for dog fights and worse. The proposed changes will undoubtedly create more problems than they solve.

Please work with the population of responsible dog owners - we should be all in this together. Sincerely, Julie Feldstein San Francisco, CA 94121
Member, Crissy Field Dog Group.

Correspondence: Dear Mr. Dean,

My name is Lindsay Kefauver, I live in San Francisco and have been walking my dogs at Ft. Funston since 1978 for 33 years. I am a senior whose health and mental well being is enormously benefited by being able to walk the trails at Fort Funston where I usually go 5 afternoons a week and once a week to the beach. I believe that most dog guardians in the Bay Area are as much environmentalists as those of you who aim to ban dogs from our shared, public open spaces.

My vote is for Alternative A + for the status-quo or 1979 Pet Policy. The plus is because we need more access for off-leash/under voice control especially in San Mateo where there is currently no off-leash access and a request to add off-leash areas as more lands are acquired.

The GGNRA's compliance-based management strategy - commonly referred to as the "poison pill" - of the preferred alternative must not be part of any plan. I'm not convinced that this GGNRA strategy is legal. If the GGNRA decides there is not enough compliance with their new restrictions, the status of areas in the GGNRA will automatically and permanently become more restrictive - off-leash becomes on-leash, and on-leash becomes no dogs at all.

How will the GGNRA determine compliance? Will they use volunteers biased against dog walkers? Will it be staff who have gone on record as opposing people with dogs in the GGNRA.

The DEIS does not offer an opportunity for the public to comment on these

changes. The rules will be changed essentially at the whim of a GGNRA official. And no reverse process is offered by the GGNRA - if there is good compliance then more areas are opened up for off-leash, etc.

The GGNRA presents no guarantee of fairness. In fact the DEIS is saying that it is okay for the GGNRA to exclude one group of citizens from our public lands. Isn't this discrimination?

Thank you for your attention.

Sincerely,

Lindsay Kefauver

Correspondence: Dear Superintendent Dean,

1 My name is Garret Goo and has lived in Mill valley for over 25 years. It is important to me to take my dogs Daisy & Millie who are miniature dachshunds on hikes in the GGNRA. I am a responsible dog owner who respects our native fauna and wildlife in the GGN.RA. I am also a frequent mountain bike rider and am thankful for having access to the GGNRA especially in the Marin Headlands. I frequently see coyotes, bobcats and rabbits on my hikes & bike rides. Obviously with my dogs being so small they are no threat to the wildlife but nonetheless am respectful.

2) In the DEIS, there is very little reference to RECREATIONAL, uses. Recreation was a major priority in the establishment of Golden Gate National Recreation Area. Very little reference was made to recreational use. GGNRA was set up for urban environment of San Francisco Bay Area. The DEIS does not address a very important component: human recreational environment.

3) I do not agree with the GGNRA 's proposal to ban dogs. Please reconsider this proposal, Most individuals that walk their dogs are responsible and we would like to continue this privilege.

4) The DEIS rationale for the restrictions is not based on scientific research.

5) The document fails to provide documentation or legitimate scientific studies that show that dogs are having a significant negative impact on (birds, environment, etc.). I believe the GGNRA Commission needs to

provide scientific evidence for what you are claiming. When you do, you need to provide that the harmful impact is due to dogs rather than (humans, bicycling, other forms of recreation, other animals).

Best Regards, Garret Goo

Correspondence: Dear Mr. Dean,

I am writing you with a heavy heart after Much consideration and attending 3 open houses. I oppose the GGNRA's draft dog management Plan. I am a 57 year old professional. dog walker that enjoys Fort Funston 5 days a week for the last 12 years.

Allowing 200 square yards next to the parking lot is not enough for dogs to be off leash with their people. Your trade mark "Parks for all Forever" needs to include the hundreds of humans that value off leash recreation with their dogs for their own mental and physical health as well as their dogs. I have met many people including a man this week that said that his dog and Ft Funston had saved his life because he was a recluse and dog got him to this beautiful place where he socialized with people. The GGNRA can accommodate both recreation and conservation. More sign age and education would be helpful . I ask you to listen to the courts that have upheld the 1979Pet Policy. I am against the Compliance -Based Management Strategy. Any restrictions should be based on actual impacts of the dogs. You are assuming that the dogs have a negative effect on the environment and the birds and the studies do not show that . You say the dogs "could" bother the bank swallows even though they never have.

Your Plan does not take into consideration that the GGNRA is in an urban location and limiting off-leash will have a huge affect on the cities and parks where people will be forced to go if you close us out

I love my job. I perform a service for my clients so that they can go to work knowing that there dog is socialized and exercised . The city parks can in no way compare to usefulness and beauty of Ft Funston.

Dog walking community are a diverse group of people that speak and enjoy the environment and each other as well as our dogs. We are community. Don't break us up we love the parks and want to remain. We want to work with the Park Service. Educational programs and low-lying vegetative barriers at cliffs would be good. Meeting the rangers at the open houses

made me hopeful that this could be worked on so that we could all be happy with the outcome.

Preservation is a fine goal but it must be based on data and science not maybe might's. Please don't throw out Recreation for the thousands of Off leach dog walkers in the GGNRA .

Correspondence: Dear Mr. Dean,

I am writing to oppose the dog management proposal for the GGNRA. I don't even own a dog and love to go to Ocean Beach and watch the dogs on the beach. Seeing the dogs play and run free gives me a sense of freedom and wistfulness. Watching the dogs gives me the vicarious feeling of walking and running up and down the beach even though I have a disability which keeps me on the sidelines.

As I travel around the Bay Area for work I go to Fort Funston, Crissy Field, Marin Headlands, and San Mateo during breaks . Even on days of the most inclement weather there is a ray of Sunshine when a dog goes by (although the human may not be in a chipper mood) and willing to engage with a wag of a tail.

The "R" in GGNRA is for recreation. For me, and a lot of others, we get our recreation vicariously. As scientific as the study tried to be, there is no quantifying the elation of a puppy wagging its tail, maybe a good sniff, or if really lucky, a lick. According to the NIH, (National Institute on Health) the

act of getting out and getting a good laugh can be some of the best forms of therapy for depression, including SAD (Seasonal Affective Disorder). Off-leash, and on voice command, allows our dreams and aspirations (freedom and unencumbered love) to be channeled through the dogs for a wonderfully good time.

In all, the dogs don't take much but give a whole lot. Let the dogs have their piece of the GGNRA and provide a vital amount of recreation for those of us unable to partake in the physical acts of recreation.

Sincerely, Andrew Lipsett

Correspondence: Dear Mr. Dean,

I am a San Francisco resident and am writing to oppose the GGNRA's draft dog management plan. As an individual with limited mobility, I must point out that the plan discriminates against handicapped dog owners, and is thus in violation of the ADA.

At Fort Funston, all of the proposed alternatives, including the preferred alternative, close the upper trail area to off-leash dogs, thus effectively robbing the handicapped dog owner of the recreational use of one of the few wheelchair-accessible walking trails in the nation. Instead, the authors of the DEIS propose that handicapped individuals hike down a steep incline in order to exercise our dogs away from speeding cars and unfenced cliffs (i.e. away from the blatant dangers inherent in the proposed ROLA), and then hike back up again when done. Since I can only presume that the authors of the DEIS are unfamiliar with what it means to be physically handicapped, it

means that this foolish recommendation (i.e. the "preferred alternative") is a physical impossibility for many of the regular park-goers at Fort Funston and it is thus discriminatory.

To make matters worse, the only support to be found in the entire DEIS for this radical and discriminatory act can, at best, be described as hypothetical rhetoric. The DEIS references "continuing impacts" from dogs upon the bank swallows, yet provides precisely zero documentation and zero proof of any such impacts. Instead, the theoretical belief that such impact "could occur" is illogically transported into an assertion that such impact does occur. This is utterly unacceptable and completely unsound from a scientific level.

Accordingly, I cannot with good conscience support the "preferred alternative," nor any of the other proposed alternatives, and instead must recommend that the current off-leash status at Fort Funston remain unchanged.

Sincerely, Tracy Adamo San Francisco, CA 94105

Correspondence: Date 05/28/11 Karen Teitel Berkeley, CA 94702

Re: Draft Dog Management Plan/Draft Environmental Impact Statement
Dear Superintendent Dean,

My name is Karen Teitel, I live in Berkeley in Alameda County. I strongly believe that multi-use open space that includes off-leash dog walking is compatible with all other recreational uses and with the preservation of habitat and wildlife within the GGNRA.

The dog community is special in that they're always present, regardless of weather; we are out with our dogs enjoying the environment. While it's a given that dogs need to run and be socialized with other dogs, what should be remembered is that for many of us, this is our chosen recreation. And with that recreation we have community with other dog people. We clean up after our dogs (most of us) and do not litter (compared with human-only parks). Many of us stop and pick up litter as we walk and deposit it in the appropriate dispensers. Compare a park that welcomes dogs to a human only park and notice the difference; dog friendly parks are cleaner.

All users (including cyclists, hikers, people with kites and Frisbees,

picnickers, festival-goers, Fleet Week crowds, and even wildlife) clearly have some impact on the GGNRA. In the Draft Environmental Impact Statement the National Park Service inappropriately singles out dogs. Its conclusions are not based on sound science or long-term monitoring of site-specific conditions. Any impact dogs may have can be effectively mitigated through better signage, creating environmental barriers, and education of park users. The GGNRA should partner with community, animal welfare, and conservation organizations on programs that could eliminate perceived problems and contribute much-needed resources.

The GGNRA was created to provide open space for recreation (including dog walking) for the metropolitan Bay Area. Surely there must be a way to share the GGNRA so we can all enjoy our recreation of choice.

The existing 1979 Pet Policy has served the community extremely well for more than 30 years. I strongly support Alternative A, the No Action alternative, in the GGNRA and the "New Lands" areas (such as Cattle Hilt, Sweeny Ridge, Mori Point, Pedro Point and Milagra Ridge and Rancho Corral de Tierra in San Mateo county).

Respectfully,
Karen Teitel

To Whom It May Concern

It has been brought to my attention that there are potential plans to close Fort Funston, Krissy Field and the Ocean Beach to people who enjoy walking and running their dogs freely in these public places.

I grew up in and spent most of my adult life including raising my five children in that area. When I return to visit with relatives we still frequent the area, also with our dogs. From what I can see everybody conducts his or her selves very nicely. They seem to keep the landscape undisturbed and clean up after their selves.

These days there are so few places one can take their animals already. Both young and elderly as well frequent these places and make friends of like minds. This is good exercise, fresh air and therapy especially for the elderly

and their dogs.

In closing I want to say that I think this is a gross usurpation of our freedoms and would be a big mistake.

Please reconsider !

Correspondence: Dear Mr. Dean,

I believe that the off leash dog run area's in GGNRA should remain open for the people and the dogs of San Francisco Bay Area. The people need a place to take there dogs and enjoy the ocean. We do not believe that the area should be for human's only.

Thank you WM Gary Young

Correspondence: RE: Dog Management Plan/Draft Environmental Impact Statement

Dear Superintendent Dean:

I am a native California who grew up in the San Francisco Bay Area. I am writing as a concerned local regarding the draft Dog Management Plan and Environmental Impact Statement (DEIS) for the Golden Gate National Recreation Area (GGNRA). I use and enjoy the GGNRA lands and am

concerned about impacts from dog-related recreation on the wildlife, habitats and other park users at the park. I am a responsible dog owner as well as a wildlife advocate. I believe regulated off-leash areas are an appropriate management tool for the GGNRA.

I strongly encourage you to improve the plan by implementing the following steps: 1. All "Regulated Off-leash Areas" should be fenced, at least in areas where fences do not pose risks to wildlife and habitats. Fences provide more security for all park users and create clearer boundaries so that dog owners are aware of how to comply with park rules. 2. The Park Service's proposed requirement of 75% compliance is too low. The Park Service should require a minimum of 95% compliance before initiating measures to improve compliance. 3. Commercial dog-walking should not be permitted in the GGNRA. This is a commercial activity in the park and the Park Service cannot legally permit it. 4. At least some trails in San Francisco should be entirely closed to dogs. Under the current plan, nearly every trail in San Francisco is open to at least on-leash dogs, meaning no trails are available for people who prefer to enjoy the outdoors without interacting with dogs. 5. While dogs are important parts of our families and communities, they are just one animal that is having a significant negative impact on thousands of other animals and plants that rely on the park to survive and many other human visitors. The parks should be maintained to be safe and accessible for all users and to protect their natural and cultural resources for future generations. Thank you for this opportunity to comment on the Dog Management Plan. I encourage you to adopt the best measures to protect the National Park's valuable resources for everyone and for future generations.

Correspondence: Dear Superintendent Dean,

My name is Marla Itinshiro. I live in San Pablo, in Contra Costa County. I regularly donate to environmental/gettre-twiented groups such as the National Parks Conservation Association, WildCare, the Natural Resources Defense Council, and the Marine Mammal Center. I am also a member of a minority group. I'm writing to you because I believe that off-leash dog walking in the Bay Area is important for people's health. There's nothing like getting exercise and fresh air with one's best friend.

I strongly believe that multi-use open space that includes off-leash dog walking is compatible with all other recreational uses and with the preservation of habitat and wildlife within the GGNRA. All users (including cyclists, hikers, people with kites and Frisbees, picnickers, festival-goers, the Fleet Week crowds, and even wildlife) clearly have some impact on the GGNRA. In the Draft Environmental Impact Statement, the National Park Service inappropriately singles out dogs. Its conclusions are not based on sound science or long-term monitoring of site-specific conditions. Any impact that dogs may have can be effectively mitigated through better signage, creating environmental barriers, and educating park users. The GGNRA should partner with community, animal welfare, and conservation organizations on programs that could eliminate perceived problems and contribute much-needed resources.

The GGNRA was created to provide open space for recreation (including dog walking) for the metropolitan Bay Area. The existing 1979 Pet Policy has served the community extremely well for more than 30 years. I strongly support Alternative A, the No Action alternative, in the GGNRA and the "New Lands" areas (such as Cattle Hill, Sweeney Ridge, Mori Point, Pedro Point and Milagra Ridge and Rancho Corral de Tierra in San Mateo County).

Respectfully, Marla Miyashiro San Pablo, CA 94806

Correspondence: To Frank Dean,

As a native of California, I have always walked my dogs on the beaches. Most of the people that I saw recently at Chrissy Field had dogs with them. Dog owners were cleaning up after their dogs, I didn't see any dog poop on the beach or surrounding park areas. Closing beaches to dogs is un American + unfair to the people + dogs of California.

People who say dogs scare birds are crazy. I have flown up + down the California coast in small planes. and there are thousands of miles of beaches where birds have the place to themselves. If they are bothered by dogs (or even people), then they they can fly there. Dogs and taxpaying dog owners

have a right to access to all California beaches!

Thank you!

Correspondence: I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against people with dogs, including tourists, seniors, families, the disabled, minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to: ? Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation. ? Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County. ? Exclude speculative, exaggerated, biased, or misleading statements and studies. ? Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, kiteboarders, etc.). ? Enable professional dog walking and align any professional dog walking rules with county or city regulations. ? Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

These are my personal comments and observations regarding this plan: This is an over correction to a problem. The actions being considered are too

excessive and will create other problems in their wake. Many dogs need to run and play off energy to be good canine citizens. If these areas, (the one I frequent is Fort Funston) are no longer able to feed a dogs mental and physical being the results will be a great setback for our community. I hope you will reconsider this action and consider the health of both people and their pets in this decision. Act from love, not fear!

sincerely, Annalisa Guthridge SM, CA 94402

Correspondence: Dear Mr. Dean,

I have been a resident of the Marina District in San Francisco since 1997, and my company has our office on the Main Post of the Presidio. As a result, I spend a considerable amount of time in the Presidio and around Crissy Field. I am a runner and a biker and use a lot of the trails/open space in the Presidio.

I am not a dog owner, but wanted to say that in all my time spent in the Presidio, I have never encountered any trouble with any off leash dog or even seen any issues. The dogs and their owners are very much a part of the landscape of the Presidio, and I strongly disagree with any attempt to place additional restrictions on the amount of space available for dogs.

There is no need to change the current plan, and if for some reason the plan is changed, the current proposals I have read are much too restrictive and not in keeping with the open space use that best serves the community

Correspondence: Re: Draft Dog Management Plan, Draft Environmental Impact Statement

Dear Superintendent Dean

My name is Arnie Jackson and I am writing to oppose the proposed changes to our coastal access. My dog Shimon, and my dog Schlomo before him, have used and enjoyed these areas along with many thousands of other San

Francisco Bay area dogs. We have not harmed the habitats of the snowy plover or bank swallow, and we will continue to use these areas until I can no longer walk the beach due to my advanced age! (I am 80 years young!)

Should this plan take effect, be assured that there will be a mighty protest from seniors such as myself who have come to love and care for these beautiful coastlines. Do yourselves a favor, and find a way to make these areas safe for the wild animals AND the urban animals!

Thank you

Arnie Jackson

To Superintendent Dean;

I have gone to great lengths to train our dog to be courteous to other people, dogs, wildlife, and habitat while he is off-leash. He is a high energy Australian Shepherd working dog, he nor I enjoy hikes with him on-leash. I have two young kids, and the only way I have found for myself and my dog to get the exercise we need is to get up in the morning before everyone, and to hike up the Oakwood valley trail up to the Alta Trail and back. It is the hill that provides the exercise, as my knees don't allow running. I implore you to keep that trail open to dogs off-leash.

Thank you, Wendy Gallo

Correspondence: Dear Mr. Dean:

I do not believe the GGNRA draft dog management impact statements are fact based. The GGNRA can accommodate both recreation and conservation. Regulations for Yosemite and Yellowstone are not appropriate for an urban recreation area and the courts have upheld the exiting 1979 pet

policy.

I, personally, own two beautiful Boston Terriers. I am single, and am a finance executive in the Bay Area. I work long hours. I manage a balance by having an extremely well trained and professional dog walker. She has received training from numerous resources, including the SF SPCA. She takes my two boys for 2 hours each day to Fort Funston. The group of dogs is small (8) and are very tightly controlled. This adventure 5 days a week gives them a chance to be the dogs they are and socialize with their friends. Losing places like Fort Funston would be devastating to the dog walkers and their furry friends who are very respectful of the recreational area.

Offering more training and information for individuals who might not be aware of the importance of the lands they get to take their furry friends to would be a great step. Quite frankly, whenever I'm at Fort Funston, every dog owner I've seen is extremely respectful of the land and off limit sections to the park.

Creating draconian rules with poor and misleading data does not solve anything. I respectfully request you revisit the proposal, focus on facts and implement changes that will make everyone feel there is a win/win.

Best regards,

Mark Meagher

Correspondence: To Superintendent Dean;

I have dedicated my career to the conservation of biodiversity. I'm sure you are well aware of the magnitude of this challenge. I am able to bolster the requisite courage and fortitude by retreating to wild nature to replenish my soul. To my trained eye as an ecologist, single track trails are much wilder and more replenishing than fire roads. My wife and I have gone to great lengths to train our dog to be courteous to other people, dogs, wildlife, and habitat while he is off-leash. He is a high energy Australian Shepherd working dog, he nor I enjoy hikes with him on-leash. The only feasible hike I have been able to find in all of Marin that allows this replenishment is the single track trail in Oakwood Valley off of Tennessee Valley Road, all the way up to the Alta Trail. I implore you to keep that trail open to dogs off-leash. There are hundreds of single-track trails in Marin that are off limits to us, please keep this one open!

On a broader scale, I encourage you to identify and explore innovative approaches for allowing the 98% of dog owners that are responsible to not be penalized by the 2% of dog-owners that are irresponsible, ineffective and/or disrespectful. In my opinion GGNRA is a national leader in the DOI for its progressive dog policies, so this approach seems especially apropos. I'd be happy to suggest my ideas if you are interested.

Thank you,

John Gallo Landscape Ecologist

Correspondence: DOG POLICY COMMENT

I BELIEVE THAT NO OFF-LEASH DOGS SHOULD BE ALLOWED ON ANY SAN FRANCISCO BEACHES FOR ENVIRONMENTAL AND HEALTH REASONS CITED BY THE AUDUBON SOCIETY AND OTHER ENVIRONMENTAL GROUPS.

I THINK THAT A POINT THAT IS NOT GIVEN SUFFICIENT ATTENTION IN THE DISCUSSIONS OF THE ISSUE IS THE SHEAR, ASTRONOMICAL AND EVER- INCREASING NUMBERS OF DOGS IN SAN FRANCISCO. THE FREQUENTLY CITED NUMBER OF 120,000 DOGS IS LIKELY A VERY LOW ESTIMATE SINCE IT IS BASED ON DOG REGISTRATIONS AND A VAST NUMBER OF DOGS ARE NOT REGISTERED.

THE HUGE NUMBER OF DOGS HAS TRANSFORMED THE QUANTITATIVE IMPACT TO A QUALITATIVE IMPACT. THE AMOUNT OF FECES AND URINE ARE MASSIVE AND WITH MANY PROFESSIONAL DOG-WALKERS, THE RATIO OF DOGS TO HUMANS HAS CHANGED DRASTICALLY OVER THE YEARS. DOG WALKERS SOMETIMES HAVE 5-12 ANIMALS AND IT IS IMPOSSIBLE TO CONTROL AND CLEAN UP AFTER SUCH NUMBERS OF DOGS REGARDLESS OF HOW CONSCIENTIOUS THE "COMPANION" IS.

THE ENVIRONMENT, PUBLIC SAFETY, (ESPECIALLY THAT OF CHILDREN) AND PUBLIC HEALTH ARE AFFECTED ADVERSELY BY UNREGULATED ACCESS OF DOGS. PLEASE DO NOT YIELD TO THE PRESSURE OF THE DOG LOBBY AND PLACE PUBLIC INTEREST AND HEALTH FIRST.

THANK YOU,

HARVEY ROBB

Correspondence: Dear Superintendent Dean:

I am writing concerning the proposed Dog Management Plan.

I urge the GGNRA to adopt the policies for each site that would be most protective of natural resources and wildlife, especially endangered or threatened species. I believe the top concern for national parks should be preservation of the environment and of wildlife.

I also am concerned about the many times I have been approached, touched, or jumped on, whether playfully or aggressively, by off-leash dogs in some areas, especially Crissy Field. Off-leash dogs represent some amount of injury that is just waiting to happen. I would prefer that leashes be required in all of Crissy Field, but if off-leash areas are permitted, I believe they should be fenced. It is plain that neither dogs nor many of their owners or walkers will voluntarily obey leash laws at Crissy Field. Furthermore, the Park Service should vigorously enforce full compliance, not just compliance at a 75 percent level.

Thank you for considering my views. Sincerely, Charles S. Klein Resident of Oakland, user of GGNRA

Correspondence: I was not going to comment, because I feel I no longer have a stake in this issue since I am too old to make it up to the GGNRA with my present dog, Khana.

Still, I often recall the times I walked the old mutts in Fort Funston, and I am upset at the thought of others being forbidden to do the same. And, I resent the notion that I would be barred from using the GGNRA. (How can I go for a walk and leave my dog behind? Besides, without Khana to prod me, I would become a total couch potato.)

Incidentally, when young, I belonged to some six conservation organizations. Now, because of the increasing pressure of conservationists to close dogwalking areas in large urban areas, I belong to none. The theory of evolution depends on the fact of extinction. How can new species keep emerging without crowding some pre-existing species into extinction? The ongoing expansion of the human species has the same effect. The only way to save the present variety of species is for the human population to cease expanding.

As for the present, all residents of urban areas need nearby open spaces that

they can use in a variety of ways to cope with life in a stress-filled world. For me, that means dogwalking. Dogwalking in Fort Funston gave me the periods of respite and relaxation I needed during the nearly nine years I cared for my parents, both of whom died at home (aged 95 and 98).
Sincerely,

Barbara A. Broaddus

Correspondence: My preference for the dog management plan is to have all dogs on leashes. However, to obtain a solution I endorse the preferred alternative plan suggested by the NPS.

During the last twenty years I have witness the degradation of Fort Funston from an ice plant covered area, still supporting native vegetation, to a weedy wasteland. Even the restored fenced in sections are not spared due in part of their state of disrepair. The biggest offenders are the professional dog walkers that do not have control over their dogs and let them run freely all over. Dog walkers cite that the plastic bag and a pick needed to weed and collect seeds as well as bending while working and even my gray hair makes their friendly dogs act more aggressively. That is why dogs should be on a leash!

Responsible dog walkers want to see the presence of park personnel at Fort Funston to keep aggressive dogs under control.

Please protect our natural environment. Ensure that the NPS mission is fulfilled!

Correspondence: Dear Mr. Dean:

I have been living in the San Francisco Bay Area since 1976. Over the years I have come to enjoy many outings with my friends and their dogs both off

and on leash at Chrissy Field, Ocean Beach and Fort Funston to name a few areas. Because of my love for dogs I became a pet sitter and take the dog or dogs (dogs that live together) to these areas after work and on the weekends. In my daily life I recycle, compost and take great care to make sure the world I live in stay clean and protected and I do not take exception when I am out in any part of the bay area with the dogs.

I like to recreate in the outdoors and want to be with the animals I love. I understand that the existing conditions (1979 pet policy) only gives 1% of the GGNRA for on leash and off leash dog walking. 1% is already such a small percentage and the GGNRA preferred alternative significantly restricts and eliminates off and on leash dog walking in many areas within the GGNRA.

As professionally trained evidence based dog trainer I must tell you that it is important for dog's mental and physical well being to be able to get proper exercise. Dogs by nature are social animals. But I am concerned that if the areas dog guardians can go with their pets are reduced that the city parks will become over crowded.

After careful consideration, I support a modified Alternative A (the "No Action alternative") and would also include the "New Lands" areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program. Thank you for your consideration. Correspondence: Dear Mr. Dean:

I am writing to ask you to please keep the rules that let my family walk with our dog on the beach in San Francisco.

I am 16 years old, a sophomore in high school, and have lived in San Francisco all my life. As long as I can remember, I have walked on the beach on weekends with my parents, my brother, and our dog. It is a great thing we do as a family. We usually walk at Ocean Beach or down the sand ladder from Fort Funston to the beach that is below the stables and if the weather is good we go to Crissy Field. My brother always takes a tennis ball that he throws for our dog to chase and we also throw sticks into the water

for the dog to retrieve.

I think it is crazy that some people think dogs and kids are an incompatible use of the beach in San Francisco. Dogs and kids belong together ' we understand each other and play together. And the long weekend walks on the beach with our dog are some of the best family times I've had in San Francisco. Please don't take that away.

I hope you are listening.

Sincerely,

Emilia Omerberg International High School, Grade 10

Correspondence: Mr. Dean, I am writing in regard to the proposed changes to the off-leash walking areas in the GGNRA. I find this new proposal draconian and totally unnecessary and unacceptable. The areas currently in use for off-leash dog walking comprise less then 10 % of the entire area. Additionally, it has been demonstrated that the beach area along Ocean Beach is not a nesting area for the Snowy Plover or any other bird species. It appears to me that the proposed changes are an attempt to lighten the burden of an already under assigned Park Range staff.

Correspondence: Dear Superintendent Dean:

I am writing to express my opposition to the proposed GGNRA Dog Management Plan. I have been a Marin residence since 1980, and have long enjoyed walking my dogs off leash, under voice control, in various GGNRA sites. These outings important for my dog's heath and well-being, and they are very important to my health as well, as they are my principal source of exercise.

I am currently walking at Oakwood Valley trail, the fire road above Mann City, and Muir Beach. My dog and I visit one of these sites almost every day.

In all the 31 years that I have been frequenting the GGNRA, I have never seen a dog interfere with wildlife. In fact, I rarely see wildlife, as they do not like to go where there is human traffic. I see most dogs running off leash, but they virtually always run back and forth on the trails. I rarely see them go off the trail. Does the Commission have scientific evidence that dogs are having a significant impact on wildlife and vegetation?

The provision to allow dogs on leash is not satisfactory. A dog needs lots of exercise. And unless the dog is owned by a marathon runner, there is no way that walking on leash can provide the amount of exercise a dog needs to stay physically and mentally healthy. For every mile the owner walks, the off-leash dog probably logs three miles running back and forth on the trail. As dog trainers often say, " a tired dog is a good dog".

Surely with all the many, many hundreds of acres of land controlled by the GGNRA, there must be room for off-leash dogs on the trails to co-exist with the wildlife and vegetation that occupies the vast majority of the remaining acreage?

Thank you and the Commission for your public service. And I sincerely hope that you will carefully consider the wishes of your dog-owning constituents. Regards,

Marianne Michael

Correspondence: Dear Superintendent Dean,

1) My name is Ryan Jung and have lived in San Francisco for 7 years and Berkeley for 3 years. It is important to me to take my dog to with me to the Golden Gate National Recreation Areas where we play frisbee, ball, and surf. We utilize mostly Fort Cronkhite as well as Ocean Beach, and Crissy Field. However all areas of the GGNRA are important to our mental and physical health. I am a responsible dog owner, my dog is well trained and responsive to voice commands we also are sure to clean up after each other. Having these areas open to dog recreation is a unique feature of our social geography that sets the bay area apart from every other major urban area in California and the United States of America, it is one reason why we moved here. Please continue to allow dogs in the GGNRA and allow off leash areas

for responsible pet owners.

2) In the DEIS, there is very little reference to RECREATIONAL uses. Recreation was a major priority in the establishment of Golden Gate National Recreation Area. Very little reference was made to recreational use. GGNRA was set up for urban environment of San Francisco Bay Area. The DEIS does not address a very important component: human recreational environment.

3) My week is busy, having off leash areas allows both myself and my dog a mental and physical break from urban life. Without these areas I would have to make two trips to two different areas whereas now I can make just one trip 3 times a week. Without these areas my dog would see me packing up the beach gear and bark the whole time I am gone, possibly becoming destructive. He is more well behaved when he gets outings with his pack, we would drive less creating less traffic and smog and I would lead a much more content life.

4)I don't agree with the GGNRA's proposal to alter the current dog rules in its districts. The GGNRA Commission needs to provide scientific evidence for what they are claiming. Thank you for your considerations Ryan Jung

Correspondence: Dear Supervisor Dean,

I am writing in response to the call for public comments regarding the Golden Gate National Recreation Area's (hereafter abbreviated GGNRA) call for public comments regarding its 2011 dog management plan. To provide context for my comments, it is important to note that I am a homeowner with property in the Pedro Point district that adjoins the Pedro Point Headlands (hereafter abbreviated PPH) in Pacifica. My wife and I bought our house in 2007 mostly for the location: we were thrilled that the land on which our house resided was adjacent to open space that was going to be deeded to the GGNRA, which has had a history of dog-friendly policies. About a year after we moved, we adopted a dog and regularly (almost daily) take her for walks in the Pedro Point Headlands.

Thus, we were dismayed when we saw the proposed preferred alternative for the Pedro Point Headlands that would allow on-leash dog-walking on only a small portion of the PPH trail system located next to Highway 1. There are several neighborhood trail access points to the PPH lands, one at the top of Grand Avenue where we live and another on Olympian Way.

Those access points do not connect to the PPH anywhere near the GGNRA-designated dog-walking trail, however. To access the GGNRA-designated trail, almost all residents of the Pedro Point district of Pacifica would need to get in their cars and drive to the designated trail to walk their dogs or drive elsewhere to walk their dogs, which would contribute further to traffic congestion (already a problem on Highway 1) and cause harm to the environment through pollution. Also, there is no parking area near the GGNRA's designated dog walking trail. One wonders if trail users would park illegally and/or dangerously near the trail entrance. Finally, because the GGNRA-designated trail for dog-walking in the PPH is so close to the highway as to be unpleasant and because no nearby parks are dog walker-friendly, I expect that most Pedro Point residents with dogs, including us, would drive down the coast (e.g. Montara or beyond) to find a place to walk our dogs.

Consequently, I would like to recommend that the GGNRA recast its dog-walking plan for the PPH to permit dog walking on the South Ridge Trail, Bluff Trail, North Ridge Trail, Middle Ridge, and the Arroyo Trail. This change would enable Pedro Point neighborhood residents who walk dogs to access the PPH lands on foot, without having to drive to a single trail head near Highway 1. Moreover, this change would also allow dog walkers to make a loop within the PPH trail system (as a general policy, I recommend that all GGNRA parks have loop trails where dog walkers are able to make a loop).

I would also like to recommend that GGNRA consider allowing on-leash dog-walking with leash lengths longer than 6 feet because in my experience at PPH a 6-foot leash is very short and somewhat dangerous when negotiating the steep slopes on the PPH.

If modification of the existing options along the lines of what is proposed in the paragraph immediately above is not possible, I would choose the current policy option that preserves unregulated dog walking over the proposed alternative that restricts dog walking to a greater than it is at present.

I thank you very much for your consideration of my views on this important topic.

Sincerely,

Tor Neilands

Correspondence Letter

Type:**Correspondence:** Dear Superintendent Dean,

I was born and raised in San Francisco. Living in the Marina District, the shore area of the Presidio was my playground, even during the WW II years. It would not be exaggerating to say that I have walked those shore for most of my life, and almost always with a dog. At 75 I still get over to the Crissy beach at least four times a week, keeping both of us healthy.

I financially support a number of environmental organizations, including the GGNRA. I support , as well, the Crissy Field Dog Group for assuring city dwellers that there can be accessible open spaces where dogs run free, and that this is not in contradiction to best utilizing the magnificent gift of the GGNRA. I am a witness to the fact that the vast majority of dog owners using Crissy Field and Beach do not in any way abuse the privilege. In point of fact, the great majority of days at Crissy Field and beach are populated overwhelmingly with dogs and their owners. The handful of "warm" weather days are truly the exception to weather that keeps most people away. On any average day the number of folks with dogs far outnumber those without.

I often marvel at the reasoning behind most of the environmental impact studies that keep getting thrown at the situation. It seems to preclude the common sense observation that Crissy Field and beach lie within a tightly packed, limited space that must serve the needs of an urban (key word) environment. The rules make sense both south and north of the "city" boundaries, but within the city the various needs of the population, and keeping that population's beloved dogs healthy, must come first. So often it seems that a monolithic "one rule fits all" is the primary GGNRA reasoning. I would expect a more reasoned approach from the GGNRA.

I truly hope that, using common sense, the decision to maintain off leash beach use is not restricted more than it currently is.

Correspondence ID: 4513 **Project:** 11759 **Document:** 38106**Received:** May,27,2011 00:00:00**Correspondence Type:** Letter**Correspondence:** General Superintendent Dean,

I was raised and have lived and worked in the Bay Area my entire life. For many years, I have sought recreation and relaxation with my dogs at local Bay Area Parks, particularly Fort Funston. Presently, my faithful and treasured companion's name is Lucky. I thoroughly trained and socialized him; he has passed the rigorous Canine Good Citizen Test and is certified by

the American Kennel Club. He is the most gentle, big hearted and fun loving companion, and we've been going to Fort Funston his entire life. This unencumbered open space has allowed for off leash recreation, and has provided a wonderful source of community and fellowship for many years for dog owners and their dogs alike.

The EIS Dog Management Plan would have terrible impact on Fort Funston. The institution and enforcement of the oppressive restrictions proposed against dogs and off-leash recreation would destroy the wonderful, harmonious and unique community that exists there, and deprive us and our dog companions the use of the few parklands available for such activities.

Through my study of the GGNRA proposal, and attendance of Town House meetings and hearing, I believe the EIS is scientifically insufficient to justify proposed restrictions, and proper impact studies have not been performed, nor an assessment of the critical value of these open parklands for dog owners and their companions living in metropolitan areas. In fact, I feel the draft EIS disregards the health and well-being of people, dogs, and the community by excluding Bay Area residents such as me who exercise regularly with their canine companions. In so doing, I believe the plan discriminates against all people with dogs, including families (of which dog companions are an important member of), seniors, minorities, and the disabled.

In many cases, the allegations in the EIS are directed at a small number of uneducated or irresponsible individuals. Wouldn't the most reasonable response in these cases be to educate these visitors and help them learn how to respect the environment, as opposed to sweeping restrictions that would devastate the rest of us with our dogs? I encourage that the draft EIS would include an alternative along these lines.

I also feel strongly the GGNRA should integrate development of a management plan with a robust public educational component in collaboration with local animal welfare organizations such as the San Francisco SPCA, Marin Humane Society and the Peninsula Humane Society/SPCA. These experienced and dedicated groups would prove invaluable in providing training for dog owners and provide educational advice about being a responsible dog owner, and would help generate a fair proposal to balance protection of the environment with the needs of the metropolitan community.

I agree with GGNRA's efforts to protect specific areas found to be important wildlife breeding grounds in the form of clearer rules, education and signs. In areas where this has been performed at Fort Funston, I think you would be gratified in the efforts of most people to respect and comply with these

protected areas.

However, the extreme severity of the EIS proposal is an unnecessary and extreme overreaction to control the entire parklands at the expense of the local populace. The draft EIS does not recognize that many of the parklands of the GGNRA impacted are located in or next to urban Bay Area neighborhoods that are dependent on these open parklands. The draft EIS excludes the quality of the urban environment from its scope, suggesting that it is not relevant. As attorney Ken Weiner made clear at the S.F. hearing on April 11, this is an inaccurate and surprising ideology since the fundamental purpose of GGNRA is to serve these urban areas; Original congressional intention and mandates clearly indicate GGNRA was given these urban parklands in large part to provide needed recreation and open space for the local metropolitan population. It is unacceptable the EIS does not examine the adverse impacts to our community with the drastic restrictions imposed on dog owners and their companions. I would find the severe restrictions in the preferred plan at Fort Funston extremely oppressive and would destroy the serenity and fellowship of this park, and I would be compelled to try and find somewhere else to go with my dog for the freedom, open space and solitude we need.

The draft EIS is comprised of many allegations against dogs and their tendency to harm natural resources, but there is little documented site-specific information that supports the specific bans on off leash dog walking areas. The staggering scope of the sweeping new restrictions is without site-specific science that proves that problems with the quality of GGNRA's natural resources are actually attributable to dogs and not to other factors. If dog-related disturbances are having a significant negative effect on animals, plants, species diversity, erosion, ground water contamination, etc., the draft EIS needs to provide site-specific scientific evidence and peer review that documents and proves these allegations. Also, honest assessment must be made whether people or other factors are also causing or contributing to problems noted. The science must be sound, controlled, and peer reviewed, and the consequences need to be fully and fairly disclosed for everyone so that an informed decision can be made.

An additional disturbing observation I have made is with regard to new lands within the GGNRA. In the draft EIS, dog-walking access is eliminated for new lands within the GGNRA. I feel strongly that GGNRA's mission applies equally to new lands as existing lands and it is essential for the GGNRA to consider fair and reasonable alternatives for dog walking on new lands. In conclusion, having studied the EIS, and from all I have learned and witnessed at Town Hall meetings and the San Francisco Hearing, I found there to be serious lack in substantive scientific or impact studies to justify imposing restrictions, as well as a disregard for the needs and welfare of local metropolitan communities the GGNRA is obligated to

serve. I therefore strongly support Alternative Plan A for Fort Funston, and appeal to you not to implement this severe and destructive proposal.

Sincerely,

Mark Armanini

Correspondence: Dear Mr. Dean,

I am writing to oppose the GGNRA's draft dog management plan. It is not based in fact; instead, it relies on speculations, exaggerations, and misleading statements. It reaches conclusions that are not supported by either the science or the law.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation area, not a pristine wilderness areas like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

This plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled,

minorities, and others.

The GGNRA draft management plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation.

Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.

Exclude speculative, exaggerated, biased, or misleading statements and studies.

Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers, etc.).

Enable professional dog walking and align any professional dog walking rules with county or city regulations.

Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

These are my personal comments and observations regarding this plan:

Superrintendent Dean:

I am opposed to the proposed changes to the rules for dogs in the GGNRA. I

have a dog, but do not go to the GGNRA often. However, when I have, I did not notice any problems with the current rules, so I am not sure why the changes are proposed. Most dog owners seem to be responsible in taking care of their dogs. I understand that this is a contentious issue, but dogs and dog owners need a place also. As they say, if its not broke, don't fit it.

Thank you

I would like to weigh in on the dog management plan on which you're working at this time. I like most dogs but am not a dog owner. I feel that if you live in an urban area, you shouldn't own a dog. I do a good amount of walking and hiking both in Pacifica, where I live, and the surrounding areas. My experience is that the vast majority of dog owners with whom I have contact are very reasonable and care about protecting both the wildlife and the surrounding flora. I am involved in protecting endangered species (the snowy plover at Pacifica State Beach and San Francisco garter snake at Laguna Salada) and threatened species (red-legged frog at Laguna Salada). When presented with the information about the species most dog owners move both themselves and their dogs out of the area. The exception is a small group of dog owners (5%?) who feel that their dogs have absolute rights. If the choice is between degradation of an area, the loss of a species, even the disruption of an area or their dogs right to run free, to them the choice is obvious, dogs first. I have seen some dog owners even threaten people who do nothing more than point out their dog is in a sensitive area.

What I would like to see is as many dog-free areas as possible in the parks. In all other park areas where dogs are allowed, they should be on leash only within clearly marked paths so trampling of plants is at a minimum. Any areas where there could be disturbance of the wildlife, absolutely no dogs allowed. There should be off-leash areas for those that can't live without them and these need to be fenced for obvious reasons. I feel strongly that we don't need to pander to a small, vocal and, at times, obnoxious minority.

Furthermore, because the government is so shorthanded these days, picking up after dogs is a waste of money and time. Perhaps you could instigate a penalty system. After a certain amount of litter, the area is closed to dogs for a certain amount of time. In other words, make the dog owners responsible for their dogs litter.

Thank you for your consideration

Correspondence: Dear Superintendent Dean,

I am writing in support of the Draft Environmental Impact State-ment for Dog Management in GGNRA.

My grandchildren have not had access to the beach at the tidal entrance to Crissy Marsh due to excessive dog use in that area.

My grand-daughter, then age 7, stepped into dog feces hidden in the grass of Crissy Field. I would like to see the future dog area on Crissy Field fenced.

Having recently walked at Mori Point, I have seen how leashing can control and protect habitat and humans. I hope similar management will happen through out the GGNRA in the future.

Sincerely, Nancy Ream (Mrs. James Ream)

Correspondence Type: Letter
Correspondence: Dear Superintendent Dean,

Thank you for the opportunity to provide input to the Draft Environmental Impact Plan/Statement regarding the Golden Gate National Recreation Area.

I have been a resident of the San Francisco Bay Area for 34 years. I have lived and worked in San Francisco, Contra Costa, and Sonoma Counties. I have extensively explored and enjoyed the natural and recreational resources in this highly urbanized metropolitan area. In particular the natural and recreational resources of the Golden Gate National Recreation Area are a major reason I choose to live in the Bay Area.

The biggest failure is the disconnect of the DEIR proposal to the geographical context of the GGNRA. Within 40 to 50 miles of the GGNRA headquarters at Fort Mason are millions of people and probably hundreds of thousands of dogs. The GGNRA is not Yosemite NP or Yellowstone NP. Reading the document one is left with the impression that the GGNRA is a wilderness area, and not a part of the urban parklands in the San Francisco Bay region. The DEIR needs to reevaluate its conclusions and plans in this context of an urban parkland in the San Francisco Metropolitan Bay region. The DEIR needs to reconsider and address the relationships of natural and recreational harmonies in a dense urban context.

Without this reconsidered context the DEIR's implied impacts and recommendations are not based in scientific analysis. Conclusions are based on an inaccurate assessment of the actual overall conditions of where the GGNRA exists. The uses of the GGNRA are wide ranging in an urban context. Special events (i.e. Fleet Week, Bay to Breakers, major Golden Gate Park events) are given less emphasis as to adverse impacts to natural resources than alleged canine impacts. There is no specific sited scientific studies or analysis. The DEIR need to address these issues.

The Environmental Consequences (Section on Special-status Species) in Chapter 4 is inadequate because it fails to provide adequate scientific evidence connecting dog-related activities with impacts on snowy plover populations or other wildlife populations. Are documented snowy plover populations nesting or resting, and no site-specific scientific evidence is given to the impact of canine interactions? I applaud and support protection of endangered species. But, are interaction impacts between dogs and the endangered actually more or less significant than other activities in the GGNRA. No comparative evidence or analysis of varied activities is addressed. Do we cancel Fleet Week activities because masses of spectators inundate nesting or resting sites or impact other wildlife? The DEIR gives no comparative analysis or evidence to these varied events and activities and there impacts on wildlife occurring in the GGNRA. The DEIS should be revised to provide such analysis and evidence.

The Section on Special-status Species is inadequate because it fails to disclose and consider the scientific controversy related to the impacts of dogs on wildlife, as compared to other major events occurring in the GGNRA. This failure demonstrates a bias of the DEIS authors and should

be revised to include this information in order to provide a balanced description of impacts to decision-makers.

Given the lack of scientific evidence, analysis, and improper site context, I do not support the "Preferred Alternative" of canine related impacts on their presence in the GGNRA I support Alternative A, the No Action alternative and would also include the "New Lands" areas in San Mateo County. The DEIS is biased against the No Action alternative and failed to take a good look at this as an option.

There are many areas in the GGNRA where the 1979 Pet Policy has been working and where sensitive species are not present and conflicts occur infrequently or not at all. Ways of improving how GGNRA carries out/administers the current 1979 Pet Policy should be considered and given a fair assessment.

The existing 1979 Pet Policy management plan is a good plan. It addresses the natural and recreational values of the GGNRA, and it embraces the original intents in of natural and recreational assets in the GGNRA, an URBAN National Park.

Improved signage, education, and community involvement, (already a goal of the existing dog management plan) can rectify present day conflicts, which arise. The current "No Action" plans only needs improved signage and mapping that will go a long way to improve the natural and recreational assets of the GGNRA.

The GGNRA offers unique outdoor recreation resources to urban residents with dogs. The document needs to recognize, acknowledge and describe the important benefits to human and canine health the GGNRA provides, and therefore contributes to the health and well-being of all bay area residents and its natural beauty.

Over the many years I have enjoyed and explored the GGNRA I have never witnessed a serious encounter between people with their dogs and the native wildlife. Dogs may chase birds for a while, but I have never seen a dog catch a bird. Nor have I seen an owner encourage the behavior. Generally I have witnessed dog owners intervene, restrain and discourage their dogs from endangering wildlife.

I treasure my special human canine relationship and my access to unleashed areas of the GGNRA. My dog and I embrace the wonderful off leash opportunities the GGNRA affords us. We visit and partake of these experiences on a weekly basis. I expect my dog to be well behaved and responsive to voice commands on leash and off. I leash my dog to keep her from sensitive areas and clean up after my dog. As a dedicated

hiker/walker/bicyclist, I also educate fellow dog and non-dog enthusiasts about canine/human/bike interactions. On walks, I educate friends about the native plant/animal communities. In short, if you were to encounter me and my dog in the GGNRA, you would very likely have a positive encounter that would leave you smiling: her enthusiasm and joy for life are hard to match!

Thank you for your consideration.

Respectfully,

Steven Brooks

Correspondence: Subject: GGNRA Dog Management Plan Dear Mr. Dean:

I am a long time dog owner in San Francisco, and have for many years responsibly walked my dog at Ft. Funston and other lands belonging to GGNRA where off-leash dog walking is allowed.

I strongly object to the position of GGNRA expressed in its Draft Environmental Impact Statement that will greatly curtail dog walking on GGNRA lands. This is completely unfair. Under current laws we can only walk our dogs on a tiny portion of GGNRA lands. The new policy will restrict our use of these lands to the point where there will be almost no place where people can hike with their dog.

The EIS did not consider the cultural, recreational or social impacts of the proposed restrictions, or historic uses. The studies it quotes also did not establish dogs as a negative impact on natural resources.

I am against the "preferred alternative" of the EIS and every other alternative but the "no action" alternative.

Correspondence: Re: Dog regulations

Dear Mr. Dean, I live in the Marina district, one of the dog friendliest places I have ever lived. I walk my dog through the neighborhood everyday and all of the merchants and shopkeepers on Chestnut Street are always very welcoming. People stop from all over to pet my beloved American Eskimo and to say hello.

As a former horsewoman and a cat lover I had never known the magic and special bond that people described when talking about their dogs being their "best friends". Don't get me wrong, horses, cats and other animals are equally important but this dog means the world to me. He has been there through some very difficult times.

Chrissy Field is a special place where dog owners and dog lovers can allow dogs to run free. All around me at the beach, I see responsible dog owners carrying blue bags and picking up after their own dogs and making sure that other people are aware of their dogs. There is a special camaraderie between dog owners and a gentle, playful atmosphere amongst the beach enthusiasts with and without dogs.

I look around at the very limited access that GGNRA has provided for dogs and it saddens me that a group that is so defenseless and so dependant on the

kindness of humans needs letters like mine to remind you that the simple pleasure of running free on the beach can bring such happiness to man and his best friend. Please do not take that away from us.

Sincerely yours,

Mrs. Sheri Bargman

Correspondence Type: Letter

Correspondence: Dear Superintendent Dean,

I have been a resident of San Francisco since 1976. I have lived next to the Presidio for most of my time here and have been very impressed with the Park Service's transformation of the Presidio from an army base into a National Park. I am an active environmentalist and am a member of the Sierra Club, the NRDC, and Earth Justice.

I believe that the GGNRA is an absolute jewel of a resource and is generally well run. I believe that the Presidio and the rest of the GGNRA should be managed, however, as urban parks and that their management should be guided by a set of principles tailored for urban parks rather than the principles that guide the remote wilder lands that comprise the bulk of the National Park system.

I am a dog owner and have been so for fourteen years. I run with my dog in the Presidio daily, most often along Crissy Field out to Fort Point. I also hike with my dog in those areas of the Marin Headlands that permit dog walking. Of course I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas. However, I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) are not based upon sound science or long-term monitoring of site-specific conditions.

As presented in the DEIS, the proposed dog management plan eliminates dog-walking (on and off leash) access for all new lands (additions to the GGNRA sometime in the future). The GGNRA's mission applies equally to new lands as existing lands; it is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands as well as for existing.

The DEIS doesn't recognize that many areas of the GGNRA are located in or next to urban neighborhoods. The DEIS excludes the quality of the urban environment from its scope, saying it is not significant. The reality is that the GGNRA provides much needed open space in a major urban area. This omission is disconcerting because the fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) to serve the metropolitan Bay Area. The dynamic interrelationship between GGNRA and our neighborhoods is exactly the human environment that the EIS is required to study, but failed to do so. In all my time at Crissy Field, I have seen very few incidents of dogs going beyond the fences that enclose the dunes or the marsh, and even fewer incidents of dog aggression. I have never seen a dog be aggressive to an adult or a child. With the many dogs that are there on weekdays, and the hundreds that are there on weekends, I think that is quite remarkable, and certainly does not justify the restrictions being put forth in the GGNRA's preferred alternative.

Many people have worked diligently both together and separately to study the DEIS and to make thoughtful comments on its findings, in hopes of encouraging the National Park Service to rethink and more carefully document its stance. The outcome of this plan will have an important effect on the quality of life for everyone in the Bay Area. I urge you to support Alternative A with individual consideration for any new lands, for the sake of the health and recreation not only of thousands of Bay Area residents and their canine companions, but for everyone who enjoys the GGNRA. Sincerely,

Stephen Koch

Correspondence: Dear. Mr. Dean

I am strongly opposed to your proposal to change the dog policy at Crissy Field/Beach and the rest of the GGNRA. Playing on the beach and in the water with your dog is one of life's great pleasures, as well as great, healthy exercise.

I have lived in the Marina District and Pacific Heights for the past 15 years and take my dog to Crissy Beach about once a week. I see families both with, and without, dogs coexisting happily 99.9% of the time. 99% of the time I also see dog owners pick up their dog's droppings.

There are far more dog owners than bird watchers in America. There may be 7 million bird watchers in America but about half of the U.S. population have a dog in their household, that is about one hundred sixty million people with a dog in their homes. Reportedly, 90% of the GGNRA is already off limits to dogs.

I understand that the GGNRA was meant to be a recreation area and not to be a National Park where restrictions and activities are more stringent. I also understand that the Presidio portion of the GGNRA was given to you with the proviso that dog walking would not be changed.

Therefore, it is extremely unfair and unjust to remove families and their dogs from playing at Crissy Beach. Thank you very much for your attention to this very important matter.

Sincerely yours, Alan Bargman, M.D.

Correspondence: Dear Mr. Dean

I am writing to express my concerns about the Draft Plan/Draft Environmental Impact Statement (Plan/DEIS) for Dog Management in the Golden Gate National Recreation Area.

Even though I am an Oakland resident, I visit Fort Funston with my partner and 2 year old dog every Saturday and Sunday morning. We keep a close eye on our dog and ensure that her activities do not have a negative impact on other users nor the environment. Her off-leash experiences at Ft. Funston have been crucial to her socialization and training. We have developed strong friendships with other Ft. Funston patrons and their dogs.

I read the draft plan and appreciate its intent to reduce user conflicts and promote the preservation and protection of natural resources. I also agree with proposed limitations on commercial dog walkers and would even understand a limit of the number of off-leash dogs per human. Nevertheless, I am disappointed that the preferred alternative for all 21 areas within GGNRA severely restricts or eliminates off-leash access and thereby fails to support a key part of GGNRA's mission: to preserve the natural and cultural resources, and scenic and recreational values, of the park. My weekend visits to Ft. Funston are fundamental to my recreation.

The DEIS includes many unsubstantiated generalizations about the negative impact dogs have on GGNRA's natural resources. I believe there needs to be more fact-based arguments to support this hypothesis. I witness more impact from human users of Ft. Funston: small children chasing birds and littering or "boot camp" participants destroying native vegetation as they run through the park. However I realize that leashing restrictions on children and joggers are not the answer but rather improved communication and enforcement of GGNRA rules. This same reasoning should apply to owners of off-leash dogs.

I have never witnessed the types of conflicts at Ft. Funston described in the DEIS, neither dog vs. dog nor dog vs. human. This could be attributable to the time of day I visit Ft. Funston but I believe Ft. Funston's location and topography make it uniquely suitable for off-leash dogs. It is not adjacent to a major neighborhood like Crissy Field in the Marina. Also, Ft. Funston does not have Crissy Field's diverse user-base (e.g. roller-bladers, cyclists and beach-goers). Therefore, I don't believe the same draconian restrictions that have been proposed for Ocean Beach and Crissy Field should apply to Ft. Funston.

I enjoy the natural beauty of Ft. Funston but mostly appreciate the ability to walk my dog there off-leash. If the proposed leash restrictions are imposed, I would no longer visit Ft. Funston.

Thank you for your consideration. Douglas Lee

Correspondence: Re: New Dog Access Rules for GGNRA

Dear Mr. Dean:

There are few places in San Francisco where those of us, who for various

reasons cannot be around dogs, can avoid them. Dogs, leashed or not, are on every public sidewalk, in parks, stores and with increasing frequency, in restaurants and museums I recently had to leave an exhibit in the Legion of Honor after encountering a three-foot tall labradoodle wearing a service bib.

I walk Crissy Field most days of the week from the Golden Gate Bridge to the St. Francis Yacht Club and back. I am writing in support of your organization's plan to require leashed dogs on all sidewalks and paved roads in the GGNRA and limited, regulated off-leash areas as indicated on your Map 10, Preferred Alternative: Crissy Field. This plan appears to offer balanced solutions for dog owners, dog-less walkers and out-of-town visitors. I would love to take that walk without concern for free-running dogs while enjoying the protected plantings, wildlife and the amazing scenery.

I ask also that you develop more rigorous enforcement designed to keep dogs out of the public lavatories along Crissy Field. In spite of adequate signage, too many dogs are taken into the stalls or are lounging inside the buildings while the owners use the facilities.

Thank you for the work you and your staff have invested in developing protections for this extraordinary park and the experience of the users.

Sincerely,

Anne Mackenzie

Correspondence: Dear Superintendent Dean,

I have enjoyed walking on GGNRA lands for the past thirty years, primarily in the Presidio and at Crissy Field in San Francisco.

Eight years ago, I chose to live right next to the Presidio for its beauty, solitude and recreational opportunities. I walk my dog Max, mostly off-leash, twice or three times a day either on the trails in the Presidio forests (what's left of them) or down at Crissy Field. It truly is one of my favorite daily activities! Though I live in an urban area, exploring nature is extremely important to me.

ENVIRONMENT

I have long been an advocate of environmental and animal causes including the Golden Gate National Parks Conservancy, League to Save Lake Tahoe, NRDC, Yosemite Fund, Marine Mammal Center, San Francisco SPCA, and Friends of the River. As well, I truly do care about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas. The DEIS/Plan concerns me because it doesn't recognize that environmental values include both recreation and nature. Reading this voluminous document one is left with the impression that recreation and the environment are opposing values. The document fails to acknowledge that people care about both and that people with dogs are often also good stewards of our environment.

As a responsible dog owner, I keep my dog under voice and sight control, clean up after him, and keep him out of fenced dunes and sensitive wildlife areas at Crissy Field. While my dog is active, when he's off leash he circles back and is well-behaved. Generally, I have observed that dog owners at Crissy Field are responsible and clean (thanks in large part to many strategically placed waste bag dispensers which are filled every day by Crissy Field Dog Group volunteers) and really do respect the "Wildlife Protection Area.". (SUGGESTION: The dunes on the Central Beach at Crissy Field are in great need of a higher, dog-proof barrier on the ocean side.)

The DEIS/Plan has a lot of undocumented assumptions including statements such as what dogs "could" or "might" do if dogs are off-leash. These are hypothetical claims and are not backed up by data. For example, this document does not provide a correlation that dog waste is affecting the water quality at Crissy Field.

I have some concerns about other recreational activities at Crissy Field that are not addressed in your DEIS: Do kids swimming in the lagoon affect water quality? Do humans impact the environment at the (almost) weekly airfield special events? How much vegetation is destroyed from these numerous special events? Are berms trampled? I have seen picnicking families, Kites and NPS tractors, etc. in the Snowy Plover WPA. It appears that there is a double standard here: you have a seasonal restriction for dogs but allow humans who probably cause more impact in this area than dogs and dog owners do. I am also concerned that bikers, hikers, etc. can contribute to soil compaction. Will the GGNRA measure the impacts of all recreational users? (SUGGESTION: Provide scientific data that includes and measures the impacts of all user groups.)

CONFLICTS
