Correspondence: The problem is a significant percentage of dog owners have been behaving badly. There are current rules of lease use in the parking lots and picnic areas, no dogs in the bathrooms or the outdoor shower as stated in the superintendents compendium. The restricted area at Ocean Beach for the snowy plover. All being ignored and from what I have seen, no enforcement either. Poop not being picked up, to running dogs knocking over people. Peeing on personal property. And dogs that are obviously out of control of there master by voice command. Chasing and killing wildlife and digging wholes allover.

That east beach at Crissy Field is disgusting, the parking lot, picnic areas smell there is poop all over and many dog owners are using the shower as a dog grooming station, very unsanitary. The whole area is being used as a dog bathroom.

I am in favor of implimenting all aspects of the new dog managment plan.

I would like to see enforcement of existing rules until the new rules take effect.

Correspondence: I am a frequent user of the Crissy Field East Beach area, near the north end of the main Crissy parking lot by the concrete bathroom building and the windsock. I am fully in agreement with the Plan's recommendation that this area be made a no-dog area. While I love dogs, the dog owners who use the East Beach do not respect the current leash rules and often let their dogs crap on the beach and the lawn, creating a hazard for everyone else. Please register another SF native and 40-year resident in support of this plan. Thank you!

Correspondence: Please do not limit or diminish the off leash areas at Crissy Field. I walk my dog with my 2 year old almost everyday of the week and that beach and the

freedom to have such a large area off leash has been a huge part of my life for all the 22 years I have lived in San Francisco. The off leash area specifically was a deciding factor to not take a position in Chicago last year. Our family would have had a huge house and great public schools and lived a few blocks from Lake Michigan but there are no off leash beaches anywhere around there....My wife and I chose to stay here in no small part because of crissy field and the off leash freedom we enjoy everyday. Alternative C does is not large to be viable for all the dogs that use Crissy Field. Too small a space will crowd dogs and dogwalkers and exacerbate whatever problems the GGRNA is trying to solve. Much of the year the tide is too high to use the beach and will further reduce the space which all dogs will be forced to use. Whenever Family is visiting I am proud to show off the best off leash park in America and they are all amazed at how well behaved and the dogs and their owners are. Please leave the off leash areas as they have been for the last few years; they are a large part of what I love about San francisco.

Correspondence: As a regular use of both Crissy and OB I fully support the plan. I love dogs but things are out of hand at Crissy in particular. Last time I was their an off leash dog ran right over/through my water sports equipment - the owner was an idiot and claimed it was my fault for " being there ". Minutes later another off leash dog came over an peed all over it. The owner pretended not to notice, and when I asked him to clean it up he said " dogs are dogs " and told me to get lost. Good riddance to these people. Now the kids won't have to play in dog shit anymore.

Correspondence: Regarding proposal for Crissy Field: Small dogs like mine (<20 lbs miniature poodle) are not safe playing in the surf on the main beach. Having access to the tidal area for ball chasing and fetch is critical to teaching them to swim in a safe environment. The joy my dog gets from romping in the water(and the stress relief I get from watching him) is immeasurable and there is really no other place for him to do that, assuming I obey the laws. So for this area (again the tidal area) I would respectfully request this be changed from leash only to "voice control" or be off limits only to large dogs who are safer playing in the surf, maybe allowing access only to dogs <20lbs who are less likely to have an impact on children and families in the

area. Otherwise the proposal at Crissy Field makes sense. I will add that leashes have been required on the trails at all times and those are not enforced. As the owner of a small dog, I don't appreciate it when big dogs are allowed to roam free. So I would ask that laws be enforced otherwise the only people who suffer are the people and dogs who actually obey the law.

Lastly, please consider stricter regulation, licensing and fees for dog walkers vs. single or 2 dog owners. I was unemployed for six months this year and visited nearly all of these sites with my dog so I have seen first hand that dog walkers are often careless, rude and overwhelmed. Dog walkers need to pay for a license that covers the damage they do to the parks when they bring 6-10 dogs at a time to an area. It's dogs that are not well managed that cause problems, and There's a BIG difference in environmental impact of 5 dogs + 5 owners vs 5 dogs and 1 dog walker. One idea might be that during the weeks, when dog walkers are more active the rules are different than on weekends when owners are more likely to be out.

Thank you for your consideration.

Correspondence: Please leavethe Presidio and Funston open to off-leash dogs. If you don't, you will simply make the neighborhood parks more crowded with dogs/their walkers. Further, our family loves to "hike" with our toddlers and our 12-pound dog in the Presidio

San Francisco's warm and progressive approach to dogs is one of reasons its such a great city

Correspondence: Please, please, please do not implement this plan. My golden retriever and I run along ocean beach and thru Fort Funston daily. By inacting this plan, you'll take away the joy so many San Franciscan's enjoy. The dogs learn social skills and are able to interact much easier off leash. On leash, dogs become protective, often leading to altercations; the best way to avoid this is to keep the parks the way they've always been. Please, we are pleading with you, sincerely, karin sunden

Correspondence: After year of having dog run wild at Crissy like they own it I think this plan is great. I understand the needs for dog to run free but having them stay on leash until after the marsh is a great plan to keep use for all beach goers equal.

I am at Crissy with my family weekly and I go all most daily to Kitesurf, windsurf or stand up paddle surf. I have been doing this there for almost 21 years.

I love dogs but have had them piss everything from my kiting, kid and lunch because the owner is not in control of them. The worst thing that has happen is when a dog chased my then 3 year old into the Bay and the owner said that it was my son's fault.

Correspondence: I am extremely disappointed by the recommendation for Chrissy field, Fort Funston and the Presidio. As a responsible dog walker it is absolutely vital for my dog's health to continue to enjoy off leash dog walking in the entire Chrissy Field Area. Further, if the NPS kicks the commercial dog walkers out of the Presidio and Fort Funston they will all need somewhere to go. Neighborhood parks managed by the City will be flooded with dog walkers and that will most likely lead to increased crowding and degradation of these parks. By restricting off leash walking in the GGNRA they may inadvertently destroy my neighborhood park. I would like to see a full analysis of the downstream consequences of this decision.

There are over 100,000 dogs in San Francisco and they need somewhere to go. Fort Funston and the Presidio are wonderful places for dogs to run off leash. This is one reason San Francisco is beautiful and unique, frankly this is why I live in the city. Not only will you destroy quality of life for residents you will also be destroying property values as residents my move out.

Correspondence: Having so many off leash areas is hugely important to me as a San Francisco resident. It is part of what makes this city so attractive to my husband and I. Our dog is very important to us, as I know they are to other residents as well. The importance of the ability to run our dogs off leash cannot be understated. I always feel so bad for dogs in other cities where they don't have the opportunity to run off leash. I also understand the necessity of protecting wildlife and habitat, but there must be a balance. Not to mention that if we severely curtail where dog walkers can go in the parks, they will flood the city, which is likely to have negative unintended consequences. It is incredibly sad to me that so many of these options entail no dogs at all. We are a city that loves our dogs, and to restrict even further the parks we can go with our dogs would be a travesty. To that end, the following are my comments on some of the various areas under review.

Stinson Beach: Alt A.

Homestead Valley: Alt A.

Alta Trail, etc: Alt A.

Oakwood Valley: Alt A - I regularly use this area and it is a wonderful place to take my dog on an off leash run. I would be fine with fencing to protect habitat, but only if the whole area (Oakwood Valley Fire Road and Oakwood Valley Trail) remain off lease.

Muir Beach: Alt A.

Rodea Beach: Alt A or Alt C

Marin Headlands: Alt A, please please please not "No dogs."

Fort Baker: Alt A or Alt C.

Fort Mason: Alt C - It would be great if some portions were designated for restricted off-leash use.

Crissy Field Wildlife Protection Area: Alt B - protect this sensitive area, while leaving the rest of the Crissy Field area off leash, voice control.

Crissy Field: Alt A. Off lease use here (voice control), especially on the beaches, is hugely important to me. Please do not take this away. I use the Crissy field beach with my dog all the time. I cannot even express how terrible it would be if this became a leash only area.

Fort Point: Alt A.

Baker Beach: Alt A.

Fort Miley: Alt C.

Lands End: Alt A.

Sutro Heights: Alt E.

Ocean Beach Snowy Plover Protection Area: Alt C. Protect wildlife areas, keep the rest as voice control.

Ocean Beach: Alt A.

Fort Funstron: Alt A. Having this huge park as off-leash, voice control is really important for me and my dog, but also for the dog walkers of this city.

Correspondence: Your plan to ban dogs on the sandy part of ocean beach South of Irving St. is not acceptable to dog owners of San Francisco. Most people get dogs to have someone to walk with them on the beach. My dog died in May. Since then I havAt e walked the beach alone. It is not fun. I am about to get another dog to have someone to walk the beach with me. If you do not allow me to walk my dog on the beach on leash, I may as well stay home and become obese. I am 81 years old, I live at Ulloa St. and cannot get to the area North of Irving St. Yes, I can walk on the path with my dog, but I love being on the beach itself, at the water's edge. Please reconsider allowing dogs on the beach area. Thank you for your consideration. Sincerely, Jean Mont-Eton

Correspondence: we are muir beach residents and dog owners. we live adjacent to the beach alongside a highway. there is basically no place to walk our dog other than Muir Beach. period. Tamalpais State Park is closed to dogs as are large portions of GGNRA trails in our area. We are deeply committed to the restoration of Redwood Creek. It is saving the salmon and reducing our flood risk. We are daily stewards of the beach. Our labrador retriever is part of our family and community. She is not a risk to anything at Muir Beach at all. To close Muir Beach to dogs and their owners would be an

extraordinary blunder on the part of the GGNRA. Who do you think will be visiting and caring for this treasure in our community if people like us are not out there every day? Tourists? Please be realistic and considerate of the lives of people and animals in this community and DO NOT stop access for dogs at Muir Beach EVER.

Correspondence: Dear Sir or Madam,

We are furious about these proposed regulations.

There are over 100,000 dogs in San Francisco and they need somewhere to go. Fort Funston and the Presidio are wonderful places for dogs to run off leash. This is one reason San Francisco is so beautiful and unique. By restricting off leash walking in the GGNRA you may inadvertently destroy our neighborhood parks. There are just too many dogs and not enough parks already. Finally, as the owner of an active dog, we need off-leash places for our dog to recreate and we hope you reconsider these proposed changes.

Correspondence: For over 100,000 dog owners in San Francisco, a critical reason we live here is because of the dog-friendly nature of our community. We are responsible, tax paying citizens who enjoy the parks. We support the parks--and have an interest in keeping them pristine. Displacing us and our animals is not a solution. It is a means to divide the community and reduce the quality of life for those who own dogs and enjoy our friends and fellow community member's animals while in the parks. This is an issue for everyone and a community issue overall. If we can't take our dogs to the park, we will be forced into small, crowded community grass areas and that will affect everyone.

Correspondence: Dogs have been allowed on Muir Beach for many many years. People come from all over the Bay Area (especially from other parts of Marin County) to enjoy the beach with their dogs, especially in the morning.

There are many beaches in the Bay Area where dogs are not allowed. Muir Beach should remain as one of the few that are left where one can bring their dog.

I don't realistically see how dogs can adversely impact the environment. They're not jumping in the creek to eat salmon or frogs. They simply go from the parking lot to the beach and frolic and romp and chase balls and add to the recreational experience. The lagoon area remains as a wetland habitat for everyone else to enjoy.

Correspondence: As a resident of Muir Beach, the proposed ban on dogs at the beach is extremely upsetting to myself and most of the community. Dogs have been permitted at Muir Beach since the formation of the GGNRA (with the exception of a brief period that was soon overturned), so this is a distinct departure via this proposed rule. Though we supported the Redwood restoration project with both our volunteer work and tax dollars, it is especially upsetting that this is one of the reasons being mentioned for the proposed ban.

I walk my dog daily from my home down to the beach and up along the trail above the beach. Most week days the beach is completely deserted and it seems ludicrous to ban dogs during these times.

You can expect a very large public outcry at this proposed ban -- with petitions, flyers circulated throughout Southern Marin and a strong protest

presence at public hearings. I hope you will consider seriously the strong feelings of the community who have every right to enjoy this public space with their pets.

Sincerely, Joanie Wynn Muir Beach, CA

Correspondence: Dogs on Muir Beach are a wonderful thing. Having the beach available as an area where off-lease dogs, under their owners control is permissible should be preserved. In the several years I have lived at Muir Beach I have not observed any problems with the dogs of locals or visitors. People self police and a very respectful. Signage encouraging this would be appropriate as well as additional pet waste collection bag dispensers.

Thanks

Correspondence: I wish to submit my thoughts and concerns about your proposed new policy to keep dogs off of Muir Beach. I am in real estate and sell most of the homes here. I find that it's common for buyers to want to be surrounded by nature and to walk down to their beach to run their dogs (it's healthy for both the owners and the dogs and it's safer than just going alone and leaving the dogs confined at home). A brief walk to the local beach, letting our dogs run in the waves, saying "hi" to our neighbors is a wonderful, attractive community feature that buyers can request when deciding to purchase homes at Muir Beach (adding to our property values in a special way). And it doesn't make environmental sense to ask us to actually DRIVE our dogs to a dog park that's 6 miles away or to another beach that's 1/2 hour away. Using our local beach makes sense, and Muir Beach shouldn't be closed off to our dogs. I've seen ravens and sea gulls on Muir Beach, but our dogs seem more interested in just running and enjoying their brief freedom with their owners and neighboring dogs. Such a wonderful time together is happy and healthy for us all. Please don't ruin that. Thank you, Debra Allen, Realtor

Correspondence: The plan makes a great deal of sense and moves toward protecting both the wildlife and human safety in open park spaces. My wife, friends and I have hiked all over the Bay Area for many years and it has become a regular, expected part of our Nature experience to encounter dogs and their owners many of whom consistently and carelessly allow their animals to charge or chase us or wildlife. I have had many pets throughout my life and do not hate dogs. Yet, the situation has become intolerable when we are forced to carry walking sticks or pepper spray simply to defend ourselves from the thoughtlessness of others. Please implement these stricter rules and regulations for the benefit of the vast majority who simply wish to enjoy the beauty of the Bay Area in peace and safety. Thank you!

Correspondence: Look, it's all about the poop. That's really what it comes down to. We walk our dog every day and lucky for us, she actually only likes to poop at our house. But when she does poop in public, we pick it up. Plain and simple. When I see poop laying around it definitely angers me and is disgusting. I totally agree. That is completely irresponsible of the dog owners. NOBODY wants to step in poop, or see it. Rather than ban dogs from being off-leash, just create a much bigger fine for people who dont pick up their poop. SF cant afford to add police to areas, but if people have the fear of a steep fine they will think twice about not cleaning up. Thank you!

Correspondence: I would like to comment on the proposed rule changes on dogs within the CGNRA.

I am a former resident of San Francisco, and I am a frequent visitor to

various locations within the CGNRA, especially Ocean Beach. I have surfed Ocean Beach almost every single week since 1980.

In my opinion, the proposed rule changes have no merit whatsoever. From my personal experience, I would take issue with the rationale that is being presented to change the rules from the 1979 Pet Policy:

-Data presented for problems within the existing rules seem extremely low, and do not support any change -The main problem presented within the data seems to be for off-leash violations, however the problem with dogs present within restricted area are quite low. -Fecal contamination by dogs at Ocean beach is cited as a rationale for restricting dogs, however due to strong currents and wave action, the only time I can remember any problem with water quality at Ocean Beach is due to sewage overflow.

CGNRA seeks to impose more restrictive regulations on pets. In my opinion, such increased regulation does not take into consideration the CGNRA's unique location next to a major metropolitan area, and unnecessarily impacts historic and generational use.

As far as I can see, the only impact of increased regulation is a chance for the NPS to increase fining people for leash violations, which will not offset the \$1,500,000 budget cited for implementation.

We do not need more regulation nor increased budgets. Please allow responsible pet owners to continue to enjoy the area in line with the 1979 Pet Policy. I will support any legal action to prevent unnecessary restrictions to be put in place.

Correspondence: To whom it may concern:

Banning dogs at Muir Beach is a bad idea. (Federal plans would ban dogs... Chronicle Jan. 13, 2111). Who really comes up with these stupid and costly plans? It surely isn't someone who lives in Muir Beach. It's likely some bureaucrat sitting in an office in Washington that doesn't even know where Muir Beach is.

I'm a 25 year resident of Muir Beach, a member of the Muir Beach Volunteer Fire Dept. for 22 years and an EMT. I have never responded to Muir Beach for an emergency caused by a dog. Dogs may poop, but the don't drink alcohol, break bottles, litter, carry weapons, start fires, drown or

fall off cliffs. If the park service superintendent really wants to make Muir Beach a better place, he or she should ban people. Let the dogs have the beach. The people can sit in their cars and litter the parking lot.

The excuse that some how dogs effect the environment or chase or scare birds is a smokescreen. In 25 years I've never seen a dog catch a bird. At most they chase away seagulls and crows that are scavaging the trash and vomit left by humans. Is the park service going to ban horses? Ban fires? Ban alcohol? Are they planning to enforce littering laws? Are they planning to clean the disgusting porta-potties once in a while? In other words, is the park service planning to do something that really matters or just this petty bureaucratic crap?

In addition, I have always felt much better, when my wife and children are out enjoying the beach and trails, that they have our dog with them for safety. Our dog would only lick the would be bad guy to death, but he wouldn't know that. Women and children should be allowed to have this benign level of protection and companionship wherever they go in our parks.

Robert Allen, MBVFD, Muir Beach.

Correspondence Type: Web Form

Correspondence: I am writing about the proposed changes to allowing dogs in the various areas of the GGNRA, and what restrictions should be placed in various areas. As a dog guardian and resident of Muir Beach, I adamantly oppose any changes to the current restriction on dogs in the GGNRA. I prefer option A in the Executive Summary. I am sympathetic to the need to reduce conflict between dog owners and those who may be afraid of dogs, the preservation of habitat, and reducing potential liability of the GGNRA. Let me address these items in the order I have listed them. 1) Nobody can control the fear of others, but we can enforce leash laws that allow owners to control their dogs, even if the dog does not respond to voice control. I have encountered people who are morbidly afraid of dogs, either through personal experience, irrational fear, or cultural learnings. The solution is simple: I simply move my dog to one side and place myself between the dog and the person. 2) The biggest problems to habitat are restricting usage of the park to trail or public use areas and dog feces. Park trail access is also a problem for humans. I recently saw a family in Muir Beach that didn't want to use the pedestrian bridge, saw a shortcut through the lagoon and trampled through the newly planted area that park staff and volunteers have so carefully planted. They didn't have a dog. Should we also ban humans from

Muir Beach as well? If you value the habitat, that may be prudent. I see far more humans abusing habitat at the Muir Beach lagoon than people, including off-trail usage and littering. On the matter of dog fecal matter, why not require all people that are walking dogs to provide evidence of having poopie bags for removing litter? Anyone without a bag is obviously going to let their dog's fecal matter by the side of the trail and should be fined. 3) On the liability of the GGNRA, the only lawsuit against GGNRA was brought regarding Fort Funston access by dog owners. If the GGNRA bans dogs outright, does this increase liability risks? I think it does. I would like to see compiled statistics on the number of dog bites vs. number of people coming to the park. Is this a true problem? Is the frequency of dog bites normalized by visitors increasing? Or is the absolute number increasing while park personnel are decreasing? There are other matters to consider: Enforceability. If the park wants to ban dogs at this point, does GGNRA have the resources to enforce the policy? I frequently hike the hills in Marin and in the past 5 years I have only seen a ranger on a trail once. Some people may decide to take their chances with enforcement. Public access. As residents of Muir Beach, there aren't a lot of choices for walking a dog. Muir Beach is a small community that is ringed by state and national park land. Restricting to the options that allow no dogs would only mean that we have to use our greenhouse gas polluting cars to go somewhere that allows dogs, increasing traffic congestion needlessly on Highway 1. Is this the intended action of the GGNRA? I would posit that my car harms the environment more than my dog, unless the GGNRA has evidence to the contrary to present to the public.

I appreciate your time to hear my concerns about the proposed changes to dog access in the GGNRA.

Sincerely, Scott Crowder

Correspondence: I support your new regulations, WILL YOU ENFORCE THEM??? My small son has been knocked down by a dog, chased by dogs and I ALWAYS have to be on guard in GGNRA areas because there are always owners who are off leash letting their dogs come up to my son rambunctiously & sometimes I am not even sure what the dog's body language is. The dog owners always have an "attitude" about this when I fend their dog off my kid. I can not play catch with a ball or a Frisbee on ANY beach within the GGNRA without having an unwanted rambunctious dog join in and grab the ball or Frisbee at some point. Don't believe me? Go try it with some little kids. Are you guys going to enforce the leash law or are you just politely going to ask owners to follow the rules & have that go out the window as soon as the officer leaves which is what goes on now? You would think the GGNRA is *currently* running a big dog park. Don't even get me started on the birds that USED to be at Fort Funston. They are all gone now? It seems that every beach in the GGNRA is a bird rodeo for dogs too. How did it get this way?

Correspondence: One of the great pleasures of going to our beach is watching the obvious joy that dogs experience as they visit the beach. They always brings a smile to other beach walkers. What possible reason could there be for forbidding them? I've lived in Muir Beach for eight years and have NEVER seen dog feces left on the sand for others to deal with. Our dog owners are responsible and clean up after their pets. And the pets themselves are a delight for young and old alike. KEEP DOGS ON OUR BEACHES!

Correspondence: As a resident of Muir Beach and a dog owner I am very distressed by the news that the GGNRA is considering complete prohibition of dogs on Muir Beach. There are already significant limitations placed on where one is "allowed" to go with a dog and these regulations are becoming unpleasantly excessive in this community. I don't believe that GGNRA has in it's mission

statement the goal of preventing a whole subsection of the population the right to enjoy the hills and beaches of our neighborhood but that is in essence what this proposal will do.

I do not believe that anything good can come of absolutes and at the very least there should hours in the morning and late afternoon, early evening where there would be no limitations placed on dogs or their owners.

Nikola Tede

Correspondence: Hi,

I have lived in Muir Beach, CA for 14 years. I don't have a dog, but many of my friends and neighbors do. So much of my enjoyment on the beach and trails where dogs are currently allowed, is spent with my friends and their canine counterparts. Everyone I know here with dogs has been so respectful of the wildlife and environment as far as their dogs are concerned. Dogs are such a large part of our community, and, as we are such a close neighbor to the GGNRA with Muir Beach, I strongly encourage and support the NPS continuing their current policy of allowing our dogs off leash on Muir Beach.

Thanks,

Kathy Johnston Sunset Way Muir Beach

Correspondence: People who train their dogs to be friendly. voice and eye responsive, and who clean up after their dogs should not be penalized for the laxity of roughly 2% of those who do not train their dogs appropriately. Particular, and punitive laws should apply to those who leave aggressive, attack dogs off leash or out of their control. It has been my experience that any peaceable dog owner will immediately call law enforcement when they or their dogs are threatened or attacked by such dogs. It has also, unfortunately, been my experience that there is no timely response. Perhaps this is where the study should focus. It appears such a study would be far less expensive and the lack of reaction would be more accountable.

If any consideration of these laws is just to make money, it should come from harsher fines against those owners who do not register their dogs nor train them to respond peacefully in all circumstances while on public property - including respecting the space of other species.

Correspondence: The proposal to disallow Dogs to be off Leach on Beaches is another curtailment on our personal freedom. All Birds, Plants, Animals and People have interacted as long as there existence. How do you plan to control any other wild life that may show up on a Beach that does not have a Taxpaying owner to their credit? Birds have always coexisted with other Animals and thrived. Controlling the natural world has brought us to the imbalance in our environment we are now experiencing. I would strongly recommend reconsidering and finding some other project more deserving of the very scarce funding.

Correspondence: Dear Sir or Madam,

I am extremely upset about these proposed regulations.

There are over 100,000 dogs in San Francisco and they need somewhere to

go. Fort Funston and the Presidio are wonderful places for dogs to run off leash. This is one thing that makes San Francisco so beautiful and unique. By restricting off leash walking in the GGNRA you may inadvertently destroy our neighborhood parks. There are just too many dogs and not enough parks already. Finally, as the owner of an active dog, we need off-leash places for our dog to recreate and we hope you reconsider these proposed changes.

Sincerely, Peyton Grubbs

Correspondence: The proposed recommended alternatives for baker beach, fort funston and crissy field have access issues that question both the fairness and legal viability of the plan.

Given that the park service has proposed off leash dog walking, under voice control, as a valid recreational activity it has a responsibility to ensure that all users have equal access to partake in this activity. This means equal parking, facilities, and physical access.

For those with disabilities, pregnant, with young children, or elderly, it is often difficult to walk, even a very well trained dog, on leash for great distances. For example, at Crissy Field the parking is so limited near the acceptable off leash areas that it would make it essentially useless to these types of users. Plus there are no nearby facilities. The same goes for the beach access at Fort Funston.

How can you enable a recreational activity that only a few can use?

Continuous off leash access from parking lot, to facilities to off leash

designated areas is a must in all cases. Otherwise you are discriminating. It is an issues of law and fairness.

Correspondence: Part of your mission is to preserve the cultural history of the parks. Not the culture of the parks. I have had frequent dealing with the park service and it is the culture of the park service to limit or ban dogs in the parks. It has long been the culture of the park to have a robust off leash dog culture where people meet and great friends, family and nature. This culture long predates the parks. Any attempt to change this culture is a violation of the parks purpose.

Walking your dog off leash long predates GGNR. It is part of GGNR's history and culture and therefore it deserves to be preserved. This plan does not do that. It appears deliberately designed to limit access or provide access only where it is difficult or impractical to use.

Do your job, preserve the culture of the parks. You must provide much more off leash dog areas that provided in the recommended alternatives.

Correspondence: My concerns are with Crissy Field which I visit almost daily. Over the years it has been transformed into an off-leash dog park. During this time I have been injured, attacked, and threatened by dogs and dog owners. On one occasion while I was jogging a woman throwing a ball on the promemade to three large dogs hit me from behind while the dogs were running at full speed. I filed a report. Another time my 4 year old child was traumatized when he was tackled by a dog also on the promemade. I had numerous encounters with dogs approaching me in an agresive way. When I asked their owners to leash their dogs I was insulted and even threatened. Parking was increased over the original plan and it has brought SUVs with dogs to the park. Even if dogs have to be leashed on the promenade dog owners will let their dogs run off the leash from their cars to the beach. Other cities have designated fenced in small and large dog areas to go off-leash. The grass area on the other side of the parking lot would be perfect. Enforcement is also a concern. When there used to be an enforceable policy it was not. Residents and visitor to Crissy Field should have the right to enjoy it without being harassed, inconvenienced or threatended by dogs and dog

owners. Ideally dogs should be banned but this is San Francisco.

Correspondence: To whom it may concern,

We just became aware of the proposal to ban dogs from Muir Beach today and we are ADAMANTLY OPPOSED to such a ban. We have owned our home at Muir Beach for 5 years and are frequent users of the beach. At no point have we ever felt that there was an issue with dogs on the beach, and frankly I cannot imagine Muir Beach without our canine friends being permitted to also be present at this public, open space.

If there is an exception that needs to be granted, or extended, to continue to allow dogs on the beach, it should be extended. This is not merely a matter of whether or not people can continue to bring their dogs along with them to the beach, this is a "way of life" matter that frankly I am shocked to see up for consideration in the state of California and, more specifically, in the bay area.

Please let me know if there is something more that I can do to introduce balance and reason into this debate.

Sincerely, Steve Pattison Mobile: Email:

Correspondence: I AM A REGULAR VISITOR TO FORT FUNSTON BECAUSE IT IS ONE OF THE VERY FEW AREAS WHERE I CAN TRULY LET MY DOGS RUN OFF LEASH AND PLAY WITH OTHER DOGS. WHEN ALL DOGS ARE OFF-LEASH THERE SEEMS TO BE A WONDERFUL, NON-AGGRESSIVE ATMOSPHERE AMONG OUR PETS. IT ALLOWS THEM TO PLAY NATURALLY AND LET OFF STEAM. THIS CAN'T HAPPEN WHEN THE DOGS ARE ON-LEASH. IN THE SAME WAY THAT WE BUILD PARKS FOR CHILDREN TO RUN AND PLAY IN, SO SHOULD WE BUILD AREAS WHERE OUR BELOVED PETS (WHO SOMETIMES ARE OUR CHILDREN) CAN RUN AND PLAY HAPPILY. PLAN E FOR FORT FUNSTON IS BY FAR THE BEST ALTERNATIVE, IN MY OPINION. IT GIVES ALL PET OWNERS THE MAXIMUM AMOUNT OF OFF-LEASH SPACE WHILE STILL PRESERVING AREAS FOR OTHER HABITATS. I TRULY HOPE YOU CONSIDER HOW MANY DOG LOVERS FREQUENT FORT FUNSTON AND WEIGH OUT YOUR DECISIONS BASED ON THAT. THERE ARE MILES AND MILES OF COASTLINE WHERE DOGS ARE NOT PERMITTED ALREADY. THANK YOU.

Correspondence: I just received notice that your 'preferred option' regarding dogs at Muir

Beach might be a complete ban on dogs on the beach. I disagree with this option, and would like to oppose it in the strongest possible way. There are several reasons. I am a senior citizen, a taxpayer, and a decade long resident at Muir Beach. I recently acquired a small dog. She lives with us at Muir Beach. As you know, most of the week the beach is largely deserted. The dog loves to run on the beach. She also gets to play with other dogs. If she was banned, there is no other comparable open area within 5 miles. It would not be excessive to say that a ban on dog use would constitute cruelty. Many people use Muir beach for recreation specifically because of the access under voice control policy. There are many other beaches where dogs are not allowed, and where people who prefer not to associate with dogs could find what they want. But there are very few beaches like Muir Beach. Informally, on weekends I have counted as many as 8 dogs on the beach at a time. They socialize happily, and their owners also enjoy the social milieu created. By moving to a no dogs policy, you would be changing an established habit for those of us who abut the area. I would do all in my power to use whatever laws protect habitual and established use of outdoor areas to contest the policy. I am reasonably sure that I would have considerable support in this. I routinely look for signs of dog scat on the beach. I have actually never found any, although occasionally a coyote seems to feel compelled to leave her mark. I have never witnessed an instance of a stray or out of control dog on the beach. I support continuing the access off leash under voice control policy for dogs on Muir Beach.

Correspondence: I do not understand why your organization continues to restrict dogs off leash both on the coast and bay. There are more than enough areas both for dogs and their owners, and people who hate to see happy dogs. Fort Funston and Crissy field are perfect examples. It would be so simple to section off areas where dogs can run and play from areas where dog haters can walk. As far as the Snowy Plows are concerned.....these areas should also be sectioned off from both people and dogs. I do not understand, when this country has so many real issues of safety and concern...people continue to zero in on restricting dogs from beaches and trails as if by doing this the world will be a better place. Perhaps the GGNRA should look to the success of the East Bay Regional Parks.....both parties can be and are happy.

Maybe we should also restrict all people with blue eyes....?????????

Sad

Correspondence: Dogs belong on Muir Beach like kites belong in the sky. As a resident dog owner I see little negative impact from dogs running the beach. In fact more litter is left by families and young partyers than could possibly be left by dogs. And when you take into consideration the number of strangers that have met over watching their dogs play together it's a "no brainer" This would not happen if they just came to take in the sun and the scenery. Some people specifically buy dogs for this social activity. I personally like waking on a Sunday morning early to just watch all the fun the dogs are having running in and out of the waves sprinting up and down the beach chasing balls chasing each other it's all good. This place has been "dog heaven" since way before I got here 15 years ago and should remain so. The local volunteer fire department even has a dog as a logo. You may pass whatever law you want but you might then also start planning on how you'll deal with all the civil disobedience. I for one will not abide by anyone telling me I have to leash my dog on this beach. And I'll still tell every dog owner that I know to keep coming out to Muir beach with their pooch cause it's "dog heaven" respectfully John Koene

Correspondence: My husband and I are the proud owners of a sweet, energetic, fun-loving 2 year-old, 65 pound dog. We ensure he gets the training, nutrition and exercise he needs to be a happy, healthy dog. We walk him twice a day; he goes to playgroup or daycare 5 days a week and his absolute favorite place on the planet, Fort Funston every weekend. His health and welfare are of utmost importance to us. Dogs need places to run freely, sniff around and play, on-leash activity is not sufficient for a dog's needs. Not getting enough exercise can lead to behavioral issues. It's in the best interest of everyone to have sufficient areas for dogs to get the exercise they need. Due to the population density in San Francisco, there are not a lot of yards and a lot of people live in small places. It is absolutely essential to have places to exercise dogs. We always try to be cognizant of others that may not share our love for dogs and are understanding of that. That is one of the reasons we drive all the way out to Fort Funston every week so we can enjoy time with our dog and not disturb others. I can understand having restricted areas where there are a lot of people, such as Crissy Field. I think it is more than reasonable to have at least one area without a lot of restriction. I can't comment on all the areas since I haven't been, I will stick to commenting on my experiences. There so many beaches for people to go to, and many that don't allow dogs at all if people do not want to be around them and just a few places for dogs.

We take our dog to Fort Funston every week, all year-round. Ninety-five percent of the people here are there with their dogs and generally these people that are willing to drive out there to get their dog the appropriate exercise are responsible dog owners. I personally have never seen someone out there not pick up after their dog, never seen any disturbances between dogs, never seen a dog bothering a person. I'm sure there have been isolated incidents; however, I have never seen it and I've been there at least a 100 times. We are out there on cold winter days in our down jackets with only

other dog owners in sight. We are the main users of this particular park; we should be the ones whose enjoyment should be priority. The only other consistent users I see are horseback riders and a few times a year a hand glider or two. It's entirely possible all of the non-dog users go at different times from me or during the week but I feel very confident in saying that dog owners are the clear majority. I certainly am not saying no one else should be able to use the area, of course they should, but it doesn't make sense to restrict the use for the majority of people there to cater to a small minority.

This study also doesn't take into account the high-tide at Fort Funston. There are times when the entire beach is underwater. The preferred alternative would not allow anywhere for dogs to run at these times and we conscientious dog owners are there all year-round.

This study claims to be interested in the enjoyment of parks for everyone, except that the needs of non-dog owners are clearly priority. It is clear that the study does not understand the population of San Francisco. There was an article in the SF Chronicle that said there are more dogs in San Francisco than children, an estimated 120,000 dogs. The study doesn't appear to realize that we are also the users of the parks, and instead of trying to unreasonably restrict us; it should be focused on how to better serve dogs and their owners. We feel as though we are treated as second-rate citizens for having a dog.

There seems to be a concern about people being able to have a "no-dog" beach experience. I don't particularly enjoy having children screaming, running around, kicking up sand while I'm trying to have a relaxing beach day. I don't know of any child-free beaches. I don't see a difference between that and someone not liking dogs. Dogs are part of people's family's and if someone is in a public area, they have to deal with other people's choices of how they want to spend their day. Are you going to ban BBQ's because someone doesn't like the smell, beach balls because they might fall into someone's picnic? That's just unreasonable.

That people would want a no-dog experience at Fort Funston is unrealistic. I find it hard to believe that the people that wrote this study have been there. I have, every week, there is usually at least one dead animal on the beach (sea lion, bird, dolphin), sometimes several of them depending on the season and trails of horse dung everywhere. I'm shocked that people see dogs as more of a problem disturbing people there, rather than dead animals and horse dung. I love the place and it's beautiful, however, its definitely a "raw" natural beauty, its not exactly white sand beaches. I'm perfectly happy to take the less desirable beach to have as a haven for my dog, it seems like the dog haters aren't even satisfied with that.

Correspondence: I don't even know where to begin. i understand park land in the Bay Area is

meant to be shared with everyone, including local wildlife and plants, people and people with pets. Maybe I'm uneducated about current problems or issues occurring in the parks right now. I doubt anyone would go to this effort if there weren't some problems or complaints, so I understand there MUST be some reason GGNRA is trying to implement changes to the status quo.

That being said, I am heartbroken at the prospect of loosing the freedom and pleasure I have walking my two dogs off leash in some cherished areas. I have been bringing my dogs to Fort Funston for several years. Our walks there are occasional treats for both them and myself. We enjoy time at Ocean Beach and Crissy Field as well, but NOTHING compares to Fort Funston. Dog owners refer to that place as dog heaven on earth. The dogs simply walk and play and sniff and don't ever seem to bother anyone or cause problems.

I can understand wanting to establish some clear locations where dogs aren't allowed off leash or not at all, especially if the local ecosystem is of

concern. But I am begging you as a tax paying, voting, contributing citizen of this area who has worked as police officer in San Mateo County for five years and who plans to give another twenty of my best years working for, and serving, the public, do not touch Fort Funston!!!!!!!!!!!!!! Anyone who goes there a few times will see, its is THE dog place. People do not go there UNLESS they have a dog. So I can't see the logic in making dog restrictions to an area ONLY frequented by dog people??

Please note, I am not asking for "dog parks" around the area. That is not what I, or my dogs, or my friends, with or without dogs, want. We want to go for WALKS, along trails, up and down hills, through fields etc. etc. The places we like to go are Sweeney Ridge, Fort Funston, Ocean Beach and Crissy Field.....a few places that can be set aside for the many dog lovers in this area, compared to the relatively fast expanse of the GGNRA? I simply don't go places that my dogs can't enjoy with me, so if they are banned, I'm banned, and that's very frustrating.

I think part of what makes up the character and culture of the Bay Area, is its dog-friendly atmosphere. I love the cafes and restaurants that let my dogs sit on a patio with me. The people around me always seem happier to have a dog wag their tail at them, and people walking by smile at them a lot. The same thing applies when we got out on walks. People seem to appreciate the wags and happy faces. Please don't let a few very vocal anti-dog advocates convince you that they are so disturbed by a dog walking by, they can't enjoy a park.

I would even suggest imposing steep fines for owners who fail to clean up after their dogs if you're trying to address the dog waste issue. If your trying to address the wildlife issue, make clearly defined trails and impose fines for dogs leaving the trails.....there's a lot of room for compromise here if you look for it.

Thank you for taking my input into consideration. Sincerely, Katie Miller

Correspondence: I understand where the GGNRA is coming from, but there must be better ways to coexist without such extreme changes. I'm a dog walker and I respect the on leash laws in certain areas. I do, however, NOT agree to limiting dog walkers to 6 dogs. If we have to pay for a permit, we should at least be legal at 8 dogs. There essentially putting a cap on what we can make. I'll lose well over \$30K per year with this change.

If I'm licensed, insured, a member of Dog Tec and I can safely walk 8 dogs on or off leash, then I should be allowed to. My first time walking at Dog Tec, they gave me 5-6 dogs off leash to walk and I did so successfully. I've been doing this for 5 years and you're capping me at 6 when I can do at least 8? Walkers should all have to be licensed and insured, and we all need to be more responsible out on the trails and at the beaches. Owning/walking dogs is a serious responsibility and those of us who take our jobs seriously are being penalized by those that don't.

Correspondence: I would love to be able to enjoy the GGNRA lands without dogs that chase wildlife, run up me without my permission, or appear in areas where they are not permitted. Therefore I fully support any effort to create dog-free areas and enforce leash laws.

However, since I regularly encounter dogs in prohibited areas and see owners take their dogs off leash as soon as they are around the bend from posted signs, I seriously doubt you will get any compliance unless you issue citations each and every time a violation is seen. Dog owners know they are rarely going to be cited so their behavior does not change.

Thanks and good luck.

Correspondence: Our family have three dogs that we regularly take to many of the sites that will be impacted by this new management plan. The dogs need spaces like Fort Funston to run and exercise and socialize in order to maintain health and happiness. We need these parks for all citizens to enjoy and that includes dog owners. I am a senior citizen who visits and enjoys our national parks frequently. On extended holidays, I do not take my dogs but on regular non holidays, I take the animals out to these wonderful spaces that keep our dogs happy and healthy.

Keep these spaces free of leash laws.

Correspondence: I am opposed to any changes in dog policy and feel this is creating problems where there are none. The problem in our society lies much more with unleashed people than unleashed dogs! There are becoming fewer and fewer open spaces where people can enjoy outdoor recreational places with their dogs, and this is a shame.

Correspondence: This plan fails to address a key element of park management as it relates to dogs in the park. No where does the plan discuss training for park officials. This is a disaster waiting to happen. Any attempt to enforce the policy without adequate training will lead to lawsuits and possible death.

I do not exaggerate. A couple of years ago I witnessed a ranger pull a gun on a dog. There was a bunch of people and a few other rangers. It is one of the dumbest things I've ever seen. I highly doubt that ranger could hit a moving dog with his gun and more likely would have hit a nearby person. Whether dog or person it was an incident that could easily have ended in tragedy.

Here is the strange part. The dog was not being aggressive or threatening the ranger in any manner. Yes the dog was barking. But there is a difference between barking and threatening. It would take about 15 minutes of training to learn the difference by the type of bark, dogs body language, position of

the tail, etc. Most people who own dogs can discern this without any training at all. It obvious stuff.

Any plan that includes possible increased interaction, (ie enforcement), between park officials and dogs MUST include a comprehensive training plan and rules of engagement. This MUST include when it is acceptable to use lethal force versus pepper spray/mace or some other solution.

Be responsible. If not leave things as they are with very limited interaction between park officials and dogs.

My child was with me and could have been killed by that officer. 2400 pages and things are only more scary.

Correspondence: Ref your proposal for NO DOGS ON MUIR BEACH:

I'm astonished at this proposal, especially since Muir Beach residents have been extremely vocal in wanting to have dogs on the beach for years.... since the beginning of the GGNRA.

I am not a current dog owner, but love to have them on the beach and in our neighborhood. Most residents are deeply appreciative of our animal community and their welfare, and we welcome those who come to the beach with their four-legged friends.

I STRONGLY SUPPORT KEEPING THE POLICY AS IS!!!! Dogs can be off-leash, but within voice control.

Thank you.

Correspondence: I support the plan 100% The current situation is out of control. The park areas have been taken over by dog owners letting their dogs run wild, harrassing other people and wildlife. It is impossible to enjoy these areas now. The dog waste is unbelievable, discusting and unsanitary. I prefer

banning dogs outright from all areas, but support this compromise. Please impliment this plan and enforce it with stiff fines!

Correspondence: Thank you for the opportunity to comment on the issue.

National Parks are for people, not dogs.

Dogs should not be allowed in any National Park, National Seashore, National Monument, or National Recreation Area.

Exceptions should be made only for the following: law enforcement, search dogs, and guide dogs for the blind, not for utility dogs.

My wife and I hike throughout GGNRA and Pt Reyes. We often walk on many of their glorious beaches. We are not dog haters, we like dogs, just not with our nature. We have witnessed multiple issues and problems with dogs and their owners in the GGNRA and Pt. Reyes.

Dog owners have many other options for recreating with their dogs; they do not need to be on any of the trails or beaches in the GGNRA.

Violators should receive large citations.

Correspondence: I am opposed to further restriction of off leash Dog Access at Fort Funston. This area serves as one of the few natural open Spaces in the Bay area where dogs can run off leash. Dogs need off leash exercise for good health. And people benefit from healthy dogs. I have used Fort Funston for off leash walking for over seven years and have never seen any problems with

the dogs there.

However I would favor restricting commercial dog walkers, who bring up to 12 or more dogs a at time. There could be a rule that there would be a maximum of 2 dogs per person. I would not be opposed to a fee for use of the Fort Funston area.

Correspondence: It is unconscionable that any person or group would want to prevent unleashed dogs from running and playing at Ft. Funston. In all the years I have been walking my dog there, I have never witnessed a fight of even unpleasantness between dogs. Furthermore the owners are very observant about the rules, and they always pick up after their dogs. That's why the garbage cans are full!

Dogs are more than playthings; they guide and protect people. They need fresh air and exercise and Ft. Funston is ideal for that purpose. I don't understand what needs to be preserved there. Ice plants are not attractive! Only the trees contribute to our air, and the dogs do not defecate on trees!

And what about us dog owners? Don't we taxpayers deserve to walk in the beauty of the ocean and the surrounding skyline?

Correspondence: I was bitten by an off leash "friendly" dog, while running in the park in SF in an on-leash area about 10 years ago. Reasonably, I still have a fear of dogs. I now only run in on-leash areas. However, I really like some of the off leash areas and wish I could recreate there. To make matters worse, many dog owners disobey the law and continue to let their dogs off the leash in on-leash areas. This makes me very uncomfortable and I feel like I don't have the right to recreate without fear. Many dog owners have been disrespectful and aggressive towards me if I ask them to leash their dogs. Some have even threatened me and now I not only don't feel safe because of the dogs, but because of the dog owners.

Ideally, dogs would not be allowed in the park at all as even the sound of a dogs bark makes me jump, and causes my blood pressure and heart rate to rise. However, I there are ways to compromise and suggest the following changes:

1. The existing laws should be enforced and dog walkers with dogs off leash should be ticketed. 2. All dogs should be muzzled everywhere. In particular if they are off leash. 3. There needs to be dog free areas (in my case I would like to see some of these areas in SF). 4. Pit bulls and other breeds that are bred to be aggressive should not be allowed in the park. 5. One owner should be limited to 3 dogs on leash and if in an off leash area, one dog off leash.

Humans should be able to enjoy the parks, not only dogs. Thank you for considering this matter.

Correspondence: As much as I appreciate the effort to keep the GGNRA for the future, I believe it also must be possible to manage the use and enjoyment for all of us NOW including our dogs. I understand the importance of keeping it safe and clean for all visitors and the natural wildlife As a dog owner and regular visitor of the parks with my dog, I also really enjoy the option to let my dog run free without leash, especially at the beaches. Dogs love and need to run to exercise their bodies and release energy which is impossible to do on-leash. I can't run as fast as my dog or any dog. I am able to manage my dog with voice control and believe most dogs can be controlled that way. I probably would restrict the number of dogs private and dog walkers can control without leashes to a maximum of 3. We already live in an area with many restrictions for people with dogs and there are many people with dogs. We need some spaces for our group of citizens as much as we need spaces for people with no dogs. I am not sure whether this counts as a VOTE or how to VOTE for which option? I want to VOTE for Option A! no changes

Correspondence: We have a very well-behaved dog who loves nothing more than a run in the waves at Fort Funston. He is a border collie/cattle dog mix who needs daily physical exertion beyond what our small City yard and local park can provide.

Since we work full-time during during the week, we pay a dog walker to take him out daily with a group of other dogs. This gives our dog both socialization and exercise. Our dog walker is fantastic with the animals, and they respond to his commands exactly as they do to those of their owners.

While it is true that some dog owners are irresponsible, this is no different than some parents. Legislating such extreme restrictions to all dogs and their owners is unfair and unreasonable. We pay taxes and have the right to be able to enjoy weekend trips to the park with our entire family, which includes our dog.

Carmel is a city which allows dogs nearly everywhere. I am unaware of any significant complaints or problems that the city experiences as a result.

Please reconsider this draconian measure.

Correspondence: I strongly object to dogs in the GGNRA. People with dogs have effectively bullied the rest of us out of both our San Francisco city parks and the GGNRA. So much so that I have long since abandoned the use of both. Aside from dog urine and feces, the dogs' barking and wildness have completely wrecked the serenity that I formerly found in the natural world.

Not only have I been attacked multiple times in parks, but have had vicious, rude, and obscene comments leveled at me by dog owners and even professional dog walkers (who make a living abusing our natural spaces but don't pay a dime in their upkeep) in response to my courteous requests to keep their dogs away from me. Most dogs aren't even licensed or registered, so their owners are literally appropriating everyone's resources and giving nothing back. Wildlife reacts negatively to dogs. Not only on beaches, but everywhere that dogs pee on and mark as their own, just as their owners have ganged up on the rest of us and taken our own peaceful little bit of nature.

Whereas I object to any dogs in the GGNRA, I realize that the best I can hope for are dogs on leashes. But they must be rigidly monitored and any violation punished in proportion to the loss to the rest of us. Forget voice command; it's a total fiction invented by dog owners too lazy to socialize their dogs and too selfish to care about the dogs' impact on everyone and everything else. I have yet to see an off leash dog respond to its owner's command. And that supposes, of course, that the owner is even paying attention to what the dog is doing. They rarely are; they're on their phones, or talking to other dog owners, while their dogs are running around hundreds of feet away, defecating and urinating everywhere, and in some cases, chasing or attacking people. As an senior citizen, I feel at risk. My husband has Parkinsons and his walking is compromised. No way will we be in the GGNRA any time soon unless the dog owners are leashed. The majority of dog owners are selfish and irresponsible when it comes to their dogs and the rest of the world. Dogs are a huge liability to people and nature.

Correspondence: General Comments

My family owns a dog and lives in San Francisco. We visit the GGNRA at least once a week. The Draft Dog Management Plan would reduce our enjoyment and use of the park considerably.

In the plan the enabling legislation for the GGNRA is quoted: "In order to preserve for public use and enjoyment certain areas of Marin and San Francisco counties, California, possessing outstanding natural, historic, scenic and recreational values and in order to provide for the maintenance of needed recreational open space necessary to urban environment and planning, the Golden Gate National Recreation Area is hereby established". The plan also discusses the long history of off-leash dog access before and

after the creation of the park.

Because open space is so limited in San Francisco, and because the GGNRA controls the entire coastline I strongly support continued access to provide reasonable exercise and recreation for dogs and their owners.

I'm very concerned about the tone of the plan and some of the specific provisions.

The objectives listed in the executive summary all relate to controlling, reducing and restricting dog access. Given the park's charter to provide 'public use and enjoyment' and 'needed recreation open space' an important objective should be to preserve sufficient space for off-leash dog access.

The plan exhaustively lists real and theoretical issues related to dog access however there is no comparable section discussing issues with prohibiting or restricting dog access. These include wasting limited park resources on restricting responsible dog owners rather than cautioning the irresponsible, forcing dog owners to travel further to take their dogs for a reasonable walk and increasing the likelihood of aggression by concentrating dogs in increasingly small designated areas.

The plan also continually discusses dog access in the context of park-wide regulations preventing any off-leash dog walking. San Francisco donated properties to the GGNRA on the proviso that traditional recreation would be maintained. The tone suggests that leash-free access was a mistake, and that the park service is begrudgingly fulfilling the park's mission only when forced to do so. I'd have much more confidence in the process if the plan started from the position of accepting a variety of recreational activities, including off-leash dog walking, and then attempted to balance the varied needs of visitors, culture and wildlife from there.

Given this I find the adaptive management provision of the regulated off-leash areas (ROLAs) to be unacceptable. This provides the NPS with a mechanism to further erode dog access to on-leash only and even to prohibit dogs entirely without further consultation. The plan further states that under no circumstances will the reverse be true ? once dogs are banned the park will never consider opening up access again. This is a far greater threat to preserving the park for future generations than any amount of dog access.

Rather than penalizing the vast majority of responsible dog owners the Dog Management Plan should focus on enforcing existing rules and regulations.

Below I discuss the proposed plan for the sites we visit regularly:

Fort Funston

The preferred alternative is far too restrictive. When the closed section of trail to the north of Fort Funston is open again there should be off-leash access for the full length of the beach and alongside trails so that a loop can be made down the sand ladder and then returning via the central or northern access trails. Of all the GGNRA sites Funston would seem to be the best candidate for Alternative A ? maintaining current access ? especially if the preferred alternative is selected for restricting most of Ocean Beach. We visit Fort Funston weekly, rain or shine, and given how heavily the area is used I'm surprised at how rare it is to encounter any problems.

Crissy Field

The preferred alternative is a good balance. When the east beach is busy there can be far too many dogs and people competing for space. For this reason we usually visit Crissy field when the weather is too severe to walk on an ocean facing beach and so it tends to be just dog walkers anyway.

Ocean Beach

The preferred alternative is reasonable, provided that Fort Funston is not overly restricted (see above).

Marin Headlands / Rodeo Beach

The preferred alternative massively reduces the trail available for hikers with a dog. We often complete the loop up the coastal trail to Hill 88 and then down Wolf Ridge / Miwok to return to Rodeo Beach. The trails are rarely crowded and a well behaved dog has no more impact than a person. The Hill 88 loop should be kept open to off-leash dogs. The preferred alternative for Rodeo Beach is acceptable.

Correspondence: While recognizing that more and more people, as well as pets, create complications, I fully support a dog owners' and a dogs' right to enjoy our parks, walkways and exquisite beauty of the bay area. Dogs make us all happy, just to see their joy and to watch them interact with people, animals and life itself.

If they are banned in any way, there will be less joy and we will be lonely without our beloved creatures around us. I do not have a dog, but am thrilled to see them when out walking. They are every bit as pleasing as people, with individual and unique traits. They make their own friends along the pathways and greet those people that they like whether on leash or not. They beam their greetings to those of us who love and cherish the animals of the planet. Humans have a brotherhood with dogs.

I do not support pitbulls in public, as the one exception. That is because they have proven to be dangerous and lethal to so many people. Pitbulls are outlawed in Canada, while other dogs are not. They cannot be trusted and should not be allowed to attack other beings. All dogs cannot be placed in the same category and all dogs should not be punished because pitbulls are out of control.

I rejoice in the presence of canines and find that life would be cold and unbearable if we were not able to see and interact with them on a daily basis. Will we next ban butterflies, hummingbirds, ladybugs, felines and other life forms that create magic and give us reason to live?

Our dogs are our friends and family. If they cannot behave politely around others, they should be on a leash. Many dogs act intelligently and make no problems and should therefore be allowed to walk free of confinement.

Can we not let life express itself? Must we take all freedoms and comforts from life and live in barren landscapes with no love?

Thank you for your consideration,

Jean

Correspondence ID: 88 **Project:** 11759 **Document:** 38106

ID:**Received:** Jan,17,2011 00:15:15**Correspondence** Web Form**Type:****Correspondence:** Dear National Park Service,

I am a native of the San Francisco Bay Area and a lifelong dog lover and owner. I recently read the draft dog management plan and I would like to comment. I fully support conservation efforts but I also think it is necessary to recognize the fact that a large portion of the land in question has been used for a number of years as dog accessible land. I would like to request that the competing demands to conserve the land be balanced with the need to maintain the availability of dog accessible land.

My concern if the lands are closed to dogs or the access for dog is limited is that the amount of available land for dog exercise in the San Francisco will go down significantly. Additionally, placing limitation on the lands in question will push the dog traffic onto other land that currently does not have dog impact.

For instance, Fort Funston which I regularly visit with my dog has proposed dog use changes. I believe that changing the rules at Fort Funston will push dog traffic onto other lands. It would be better to leave the existing lands open to dogs with minor changes as needed to meet conservation goals than to make drastic changes.

Please do not close or limit dog access in the areas proposed.

Thank You, Ryan Jones

Correspondence 89 **Project:** 11759 **Document:** 38106**ID:****Received:** Jan,17,2011 10:21:39**Correspondence** Web Form**Type:****Correspondence:** The San Francisco Bay Area has always been a famously dog-friendly environment. It is part of the reason my family and I decided to move here. We have had many rich and rewarding experiences taking our dog out to Crissy Field, Fort Funston and other beautiful outdoor spots for years. Our dog is taken to Fort Funston everyday by his dog-walker and he has become a more socialized and better behaved dog because of that.

If our dog's ability to get natural exercise in an outdoor setting is compromised I truly believe that his, and thereby my families', quality of life would be severely affected in an adverse manner. We all benefit from the exercise and the community involvement we experience when gathered

with other dogs and dog owners in beautiful surroundings. It truly is one of the things that makes this such a special place to live.

There are plenty of places for the public to gather where dogs aren't allowed. I implore you to keep in mind the wishes and desires of those of us who own dogs. Please let us keep our open spaces to let our dogs run free.

Correspondence: Enclosed off-leash areas seems to me the only tenable solution. I used to live in San Francisco and would frequently visit Fort Funston or Chrisy Field. I loved walking in these areas and mostly enjoying watching the frolicking dogs. BUT... most times I visited, I saw some kind of undesirable behavior from the dogs (ex. fighting with other dogs) or their owners (ex. not picking up feces or not paying attention to their dogs). As such, I will never bring my young child to either of these beautiful PUBLIC places. I think it's very unfair the desires of dog owners are allowed to dominate over those of children and parents - especially when enclosed dog run areas are a perfectly workable compromise.

Correspondence: Fort Funston is our puppy's idea of heaven. We have been going to Fort Funston and Crissy Field for over 14 years, and have be impressed by the sense of responsibility and consideration demonstrated by 95% of dog owners. Example: we have rarely found excrement in the parks, because owners are prompt and conscientious about cleaning up after their dog. Dog owners are attentive to their pets, and willing to leash dogs when/as appropriate. We always respect the Snowy Plover restrictions because there is so much other space available, and because we are also ardent conservationists.

Off-leash dog areas are few and far between, and dog owners, grateful for those that do exist, are eager to ensure that these areas remain in good condition.

Please do not diminish opportunities for dogs to experience the freedom and beauty that their owners are happy to enjoy and share.

Correspondence: I support having dogs in *fenced* areas in the GGNRA. This would allow people who do not want to interact with dogs to avoid them, while giving people who *do* want to be with dogs a place to go and play/exercise with them. The current state of affairs in the GGNRA is that there are too many out-of-control dogs there, and too many dog walkers who have so many dogs on leash at once that the "pack" blocks the path for ordinary walkers. We all have a right to safely use this national park, it's not just for dogs.

Correspondence ID: 93 **Project:** 11759 **Document:** 38106

Correspondence: Thank you for being on the KQED show on this topic.

My husband (a scientist at Stanford) and I (a bestselling author and longtime community volunteer) love dogs.

We do not, however, love

smelling dog poop on a hike being unable to sit on the ground because of dog poop/pee watching dogs destroy habitat watching dogs chase birds

For these reasons, we have stopped visiting Fort Funston. Just thinking about it makes me feel nauseated from the poop smell on the trails.

The dog owners who are not mindful of their dogs will always spoil it for the responsible dog owners. Nothing will change that.

They cannot manage themselves or their dogs, so the environment must manage them. That means NO dogs at Crissy Field, or at best in a contained, fenced in area.

Thank you

Correspondence: We share the planet. People who do not want to be around dogs want it all. Their reasoning is, if they take their children to a dog designated off leash area, and there's trouble, the dogs should go. Cramming thousands of dogs into smaller spaces is going to create more impact on the landscape as well as more dog-related incidents. Dog owners would have more space in which to walk their dogs, not less. Non-dog enthusiasts have the whole coastline. In addition to being about dogs, this is also about people with dogs, people enjoying nature with their canine companions. I think the land GGNRA now stewards should be given back to San Francisco. I'd also like to know why GGNRA leaves dead carcasses of seals, birds, and fish to rot on the beaches???

Correspondence: Dogs should be kept on leash in areas where other people, birds and plants are located. I'm a resident of Duboce Triangle, where the park has a large off-leash dog section and a smaller space for people and dogs on leash. The rules are painted on sidewalks, but the majority of dog owners ignore the rules and allow their dogs to remain off leash after they leave the dog-appropriate area. This results in lots of dog feces & urine in the spots where people like picnicking as well as dogs roaming into and disturbing people who are resting, eating or trying to relax in the "people only" area. I think that fences are the solution. This prevents the impact of loose dogs' negative behavior from being imposed upon the public. Large, fenced-in area where dogs may run off the leash. This area should be separated by impermeable fences so that any humans who wish to enter must make the choice to do so. This will reduce dog feces that off-leash dogs create and also reduce the number of times that dog's behavior negatively impacts children, adults, and other animals.

Correspondence: This plan removes a recreation opportunity (off-leash dog use) from the spectrum of offerings at GGNRA and this approach is overly restrictable and regrettable, particularly as dogs are becoming more and more common as companions, and norms for acceptable dog behavior are improving.

In my estimation as a recreation resource planning consultant, the area at Crissy Field is a human-created, urbanized landscape that is appropriate for large off-leash dog areas. Ask any large dog owner about small, fenced dog areas and you'll hear they are entirely inadequate.

I would simply suggest that the plan be implemented with triggers for increased restrictions (e.g. reports of incidents/injuries) similar to the Limits of Acceptable Change planning process. While issues related to public safety are important I think that the SF dog/human community is affiliated and active enough that off-leash, non-fenced areas should be workable.

Best of luck in working with a difficult issue! Thanks for all your hard work, NPS staff people!

Correspondence: As a fairly new comer to the area (previously I have lived in Massachusetts and Tennessee), I find it a shame that these dog restrictions are being considered. The beautiful recreation/parks available to dogs is one of the unique and diverse aspects of this amazing state, and because these areas are open to and welcome dogs, it is the main reason my husband and I visit these areas. It is a shame, because if these restrictions are put in place - I do not feel that we will enjoy these areas anymore - as we tend to only visit parks/recreation area with our dogs. I understand that wildlife and other non-dog visitors must be held high in this decision process, but I would very much like to see less-extreme restrictions on dogs put into place.

Correspondence: I would like to urge you to adopt (D) ["Allows for the highest protection of "natural and cultural resources" and visitor safety] for the following reasons:

1) On- and off-leash dogs present a danger and an annoyance to children. We have a 4 year old and a 6 year old who love to hike in the woods, visit the beach, and generally enjoy the outdoors. The six year old, who has a sensory-processing disorder, is very afraid of dogs after being repeatedly chased and jumped upon by dogs while hiking. While a majority of the dogs are trying to play, it doesn't appear like that to a small child.

My requests to "please control your dog -- my child is afraid of dogs" is consistently met with assurances by the owner, from a distance, that the dog is safe. The assurances, which always include the phrase: "don't worry - he's/she's friendly" provide no comfort to a small child.

Additionally, dogs sometimes bark loudly at my children and we have had, on two occasions, dogs bare their teeth at our child. It is too dangerous to allow dogs in a public place with children.

As a result of this constant harassment we are no longer free to enjoy areas of the GGNRA that permit dogs in any way.

2) Dogs often run off trail through poison oak. I am very sensitive to poison oak. Having a "friendly" dog "say hi" is a real problem and ruins my visit to the park as I have to concern myself with whether the dog has poison oak on its coat after it has rubbed me.

3) Dog owners leave feces on trail or off trail on bags. This is unsanitary and disgusting. Leaving plastic bags by the side of trails for someone else to clean up is littering pure and simple -- just as if I were to throw an empty water bottle or empty bag of Doritos. We do not need more sources of pollution in our treasured parks.

4) Dogs consistently harass the fragile wildlife in the parks. Dogs enjoy chasing animals, especially birds, in the parks. I often also see dogs in streams and rivers. This is their nature-- they are not trying to misbehave; this is what dogs do. To maintain the natural resources dogs must not be allowed in the parks.

Again, I urge you to adopt (D) ["Allows for the highest protection of "natural and cultural resources" and visitor safety] for all the lands within

the GGNRA.

Correspondence: I am a long-time resident of San Francisco--a middle-aged woman with pets, and an active volunteer for a local animal welfare organization.

I AVOID and DO NOT USE Chrissy Field and other areas of the GGNRA which are overrun with off-leash dogs. It is scary, annoying, and full of dog poop. I know others who feel the same way and completely avoid those areas. By allowing off-leash dogs in areas of the GGNRA, you ELIMINATE those areas for use by people who are seeking a quality recreational experience--including very young children, the elderly, the handicapped, and people like me, who just like peace and quiet and views.

There is no such thing as reliable "voice control" for any but the most highly-trained dogs (e.g., military and guard dogs). Dog owners who believe they can stop their family dog fifty feet away from jumping on a toddler, chasing down a bird, or attacking another dog are delusional. It's not fair to the dog, and it's certainly not fair to those impacted by the dog's natural behavior. There is no right or entitlement to let your dog run free on any land but your own--not on public lands.

If the GGNRA chooses to establish fenced, contained, off-leash dog-run areas (preferably segregated by dog size), that's great. Otherwise, all dogs in the GGNRA should be on a leash. I prefer Alternative D in the EIS.

Thank you for considering my comments.

Correspondence: I am writing as a non-dog-owner. I like dogs and grew up with one on a farm in the Midwest, but I find that the use of public space by urban dog-owners presents a number of vexing issues. I wonder whether any study has been done on the increase of dog ownership among people in densely populated urban areas, whether a limited number of licenses should be issued, for instance. Because public spaces in urban areas ought not be taken over by dogs, something that quickly and easily happens because of the nature of that species. But that's perhaps an issue for another discussion: the overpopulation of urban areas with dogs.

More to the point: the insistence that I have heard from dog-owning groups that fenced-in spaces are not feasible exercise spaces has never been adequately explained or defended as far as I can tell. I listened to a radio program on public radio this morning, 1/17/2011, in which one of the leaders of the dog-owning group kept insisting that fenced-in areas would be unacceptable to her group, but she never gave a reasonable explanation as to why. A fenced-in area can be large enough to serve the desired purpose. Fenced-in areas for dogs are a must, in my opinion. Responsible dog-owners may be legion, and they are always the ones speaking on behalf of organizations, but I have experienced plenty of irresponsible dog-owners. "Under voice command" may be a real thing in dog training, but in many actual cases it is simply another way to say "no control," because many people have no voice control over their dogs, or at least, they do not exercise control. Poop bags are used by the majority, but even a minority of non-poop-bag users creates a noxious environment. As a jogger I have been chased by dogs, a dog has jumped up on me with muddy paws and scratched me with a dirty claw, I have been scolded by a dog-owner because I allowed my son to ride his bike on a trail shared with dogs (she said that her dog was nervous and became aggressive when he saw people on bikes and often wanted to chase them). It seems evident that dog-owners (such as the woman I mention in the last case) feel that the right to have dogs "under voice control" in a shared-use area makes dogs the dominant species in the park (we have to alter our behavior to avoid making the dog nervous or aggressive). Simply because dogs are what they are, they have a tendency to dominate and over-run any area where they are allowed to run free.

In the East Bay we have Point Isabel, where there is a large off-leash area that is also fenced off from the jogging path. There I have had great experiences as a jogger and cyclist, protected from curious and/or aggressive dogs but also able to watch them at play, which I enjoy. I think you should ignore the people who insist on no compromise. Areas used by dogs are inevitably less accessible to non-dog-owning humans, especially vulnerable ones like children, the disabled, the elderly, and the cynophobic (people afraid of dogs, of which I have several in my group of friends). My opinion, simply put: people and protection of environment must take precedent over rampant dog use of parks. And dogs, in this equation, are not

counted as "people."

Thanks for your attention.

Correspondence: I am a dog owner. I clean up after my dog, and keep her under voice control.

For decades I have been taking my dog to Muir Beach (I have been a dog owner in Marin since 1937). It is a happy scene, with many dogs and very few incidents of distress. Far better to let the dog owners work out a system of monitoring the situation than to ban dogs altogether.

Many people need dogs. Their dogs are a major element in a peaceful, sociable life.(Note the dog programs in prisons that reduce violence by something like 30%.) Dogs NEED to run---at least most big dogs do. The dogs will be nervous and unsafe if constantly keep under restraint.

Dog parks are insufficient for exercising dogs. Not all dogs are sociable enough to exercise in crowded spaces.

GGNRA has made it impossible for me to walk from my home in Mill Valley to the beach, unless I walk on the roads (very unsafe). Surely at least some of the trails (Diaz especially) should be available for a dog on a leash!

Of course, much worse than the situation in Marin County are the San Francisco restrictions. For shame, practically outlawing walking one's dog. On leash does not count for many dogs. I would expect lots more dog violence with this plan.

I hope you review this program and make allowance for Man's Best Friend (have birds ever been considered Man's Best Friend?). With thanks for your consideration, CM Kun

Correspondence: Firstly, I would like to say that this website and process was very hard to negotiate and understand. After spending an hour looking over the document I still don't really understand what exactly this plan is proposing. Given that, as a dog owner, I would like to comment. Open space (not

fenced) off-leash dog areas are very important to me. I take my dog to Crissy Field, Ocean Beach, and other open areas. Some times I have my dog off-leash and sometimes I have my dog on-leash. My main comment is that as a responsible dog owner I am very careful about how I use public areas and those areas are very important to me, my health, and my dogs health. On the other hand, I do see really irresponsible behavior of dog owners all the time. It is frustrating to me that I will be negatively impacted by others bad behavior. I feel that it is a given that regardless of how restrictive you get about off-leash laws, people who are irresponsible will do what ever they want anyway. Because of this I would request that rather than make more restrictions and laws, you step up enforcement and fines of people who are acting irresponsibly. In my own interest I would like to request that at least Chrissy Field Beach remain off-leash. I was under the understanding that when tax dollars were spent to re-furbish that beach that it was intended to be an off-leash spot. Thank you.-

Correspondence: We are occasional users of the GGNRA Park (typically Fort Funston with our two Finnish Lapphunds - medium sized herding dogs) and annual contributors to Golden Gate Park (\$250/year). We contribute an equivalent amount to Yosemite, where our dogs are precluded from joining us and as a result, we rarely visit even though it is a favorite spot. Our dogs are under effective voice control and will not enter habitat protection areas. There are too few places in the region where they can run, play and socialize with other dogs.

I can not effectively comment on the majority of the Maps/alternatives having not visited with our dogs.

I can comment on Fort Funston and my preference would be a variation of Map 16-A and the Preferred alternative. Generally voice control as the

priority with Seasonal closures, except for a boundary area along Skyline, to preclude car/dog accidents. I have never seen any real problems at this area, dogs for the most part know how to work things out. If there are issues, it is with owners. Problems, if any, typically originate when there is a dog on a leash (restricted maneuverability and therefor potentially vulnerable/fearful) and a free running dog which precludes them from safely working things out in terms of dominance within the "pack".

In terms of multiple use, as described on the KQED Krasny show this AM and concern about service dogs, they have the run of every Park location. I do not see the need to restrict every location to meet the needs of the .001% of the population that requires their assistance. They already are able to enjoy the majority of Park areas that "regular" dog owners are precluded from. Fencing, if required, around habitat protection areas makes sense.

If it generally becomes significantly more restrictive in terms of dog access, since I have seen little evidence that the current situation is broken, my solution will be simple ... no longer visit and no longer contribute funds.

Good luck trying to resolve what is clearly an emotional set of issues.

Correspondence: As a fervent supporter and user of our national parks, and a regular financial contributor to both the California state park system AND the GGNRA, I was dismayed to hear about the new proposed dog regulations on this morning's Forum program.

As an avid hiker, any semi-decent day typically finds me hitting a trail either up in the Sierras, or in any of the beautiful wild areas around the Bay. When my yellow lab came home five years ago, I envisioned the two of us taking long hikes throughout the mostly empty trails that I had typically wandered. What I had NOT realized, however, was how incredibly restrictive most Bay Area parklands are towards dogs. Not just leashed dogs - but ANY dog presence at all.

I basically don't visit the Peninsula anymore - formerly a frequent stomping ground for me - as there are essentially just a handful of trails that I can even take my dog on - leash or no. Perhaps a 1 or 1.5 mile leash trail with a square block of offleash area for Lucy to sniff around. Not quite up to the 6-8 miles hikes we're looking for. I don't visit national parks anymore - besides contributing financially to them, as I don't want to spend my time

stuck in a paved parking lot.

The ONE thing for which I have been grateful has been living near the Presidio and the GGNRA. Having lived in this area for almost 20 years, and being a frequent visitor to the Presidio before it was turned over the NPS, I was frankly worried. Would the NPS manage the park properly? Would they sell off pieces of property or buildings that would destroy some of the national beauty of the park?

But what I've seen has impressed me. Yes, some of the rough trails that used to be "secret" are now graded and full of tourists, but overall, the park has done an incredible job of developing and redeveloping the areas. On Sunday, as Lucy and I did our favorite loop through the Presidio, ending up down on Crissy Field for a beach romp before heading back to the car, I thought to myself how lucky I was to live near a beautiful area that allowed me to spend the day wandering with my dog. I gave kudos to the NPS and to SF for allowing dogs and working to keep the area open.

So I was surprised and dismayed to hear the radio show this morning, and in looking through the proposal to see the vast restrictions on dog access to this area and to other areas in Marin (where I've been forced to go now that most areas of the Peninsula are off limit to us now).

As a responsible dog owner, I DO get that not everyone likes dogs. I get the need to balance the disparate needs of the population. I get that some areas that I love my have to be banned due to sensitive habitats. And unlike some, I could see and would not oppose some dog restrictions on Crissy Field (such as restricting dogs to the middle part of the beach). What I'm more concern about is what appears to be wholesale restriction of dog usage generally across the GGNRA - leashed or not.

Where can a person who wants to go for a good six mile hike on a sunday take their dog in the Bay Area? Taking my dog to an enclosed dirt area filled with poo and skittish dogs is not her idea of fun and certainly not mine. The reason I live in SF, pay exorbitant local and state taxes, contribute to the parks system despite decreasing service levels and increased closures, is that I appreciate my ability to access them and believe generally in their mission. But now I'm not so sure.

A couple of things to note about the plan:

- 1) Fort Funston - requiring folks to leash their dogs on the sand ladder to Fort Funston is quite frankly dangerous. Clearly the writers have not walked up and down that ladder very often. It's very steep and frequently eroded - thus making it a slope. I believe that if dogs were leashed, you'd have quite a few more people taking spills head-first as their dogs eagerly pull them

down. If the concern is to keep dogs from romping on the hills, then simply restrict the dogs to inside of the fence.

2) Marin Headlands - Oh look - you've left me 1.5 mile flat fire road past the porta potties that I can take my dog - yeehaw. As i move to my wheelchair, this will come in handy i suppose. But for now, until Lucy and I lose the ability to actually use our legs, we'd love to be able to access a hill. Any hill. Anywhere.

I understand the challenge you all face in meeting the demands and requests of multiple constituencies and fulfilling your overall mission, but please please PLEASE do a better job of allowing parklands access to responsible dog owners. Surely you are capable of managing the land and being respectful of the wild areas without banning all of them entirely to pet owners or limiting us to the parking lot and semi-paved trails. In a city with more dogs per capita than children, it would seem that the park system has a vested interest in gaining pet-owner support and working to have them become advocates of the parks, not antagonists.

Correspondence: The current system works well and I support no substantive changes. I am particularly concerned about preserving Muir Beach and Ocean Beach to off-lease usage.

If the concern is irresponsible dog owners, the emphasis should be on greater enforcement of current rules. If owners are forced to leash their dogs, the most responsible owners will comply and the irresponsible ones still will not. Owners with aggressive dogs should be individually sanctioned and forced to leash their dogs.

Correspondence: Your outcome shall effect not just your region but other areas that are being destroyed by reckless dog owners...

My simple plan is to gate and fence areas surrounding a park area (circumferenced areas) so people can walk the distance around a park without interfering with others and dog people with leashed dogs. Let's take a portion of golden gate park a.d make part of it devoted to offleash dog.park

taking the traffic away from sensitive areas.....(stupidly pt isabel was planned to be adjacent to a bird sanctuary)...whoever did that must be sitting on their brains....!

I am and have always owned dogs...I realized there will always be irresponsible dog owners ...you must place your laws to protect the wild life by any means to take the worst human activity and violators into account...not the responsible ones..the dog walker association. Is the most vocal because of their political pull...but they are a minority voice ...they are not necessarily being rational....people once given privileges don't normally want to backpeddle...I love my dogs and love to walk them offleash but also know we need to protect what's left of our environment ..fences should be put up to protect environmentally sensitive areas near beach areas from all human traffic...I use the American river to walk my dogs and there are many off leash people responsible and irresponsible walking...you are right its not the #dogs causing the problems but the dog owners...these people that are dog walkers are not all great people are not altruistic agenda...but influenced by a very well organized group of people who make their living walking dogs...and dont want anyone prohibiting them from their new found livelihood...make sure you are aware of this when judging what they say to you in their defense..on the hand I am a member of the point Isabel dog org. And work together to keep that off leash area clean and help police and rangers keep an eye on activities there. I however seen a lot of dogs allowed to Chase and disturb the wild birds feeding and resting on threstricted areas which are not being watched closely by rangers art all....Is there a reason why the dog walkers can't walk dogs in Presidio and goldengate park? Can they be given an exclusive area of beach like parts of north beach to walk dogs? Thanks for listening go out there and start giving out tickets to violators and also unlicensed dogs!!!

Correspondence: Comment on GGNRA Dog Management Plan: I agree with the proposal for Milagra Ridge (Map 18). Please KEEP this park leash only, and do not listen to anyone wanting to extend the dog-allowed part of Milagra Ridge beyond the paved road that runs through this park. It is a locked gated road so there is practically no vehicular traffic to worry about. There are relatively narrow unpaved foot trails in the park which are used by small native slithering/crawling/burrowing animals and a few (feral?) rabbits, so these foot trails should be kept off limits to dogs. To protect this wildlife, leashed dogs should not be allowed in these unpaved foot trails, besides the fact that it is difficult to manage a leashed dog on these narrow trails, given the foliage bordering them. It would also be more difficult to pick up after a

dog on these trails. Unleashed dogs will go into these trails so there should be no unleashed dogs at this park. I live next to this park and see that virtually all dog owners who come to it seem quite used to the idea of leashing their dogs. Thank you. Jim Sarbeck, Pacifica

Correspondence: I feel that the public would be best served if the Golden Gate National Recreation Area took it's cue from every other national park and did not allow any off-leash dogs. We need an enforceable, consistent regulation to allay the disproportionate negative impact that off-leash dogs make on the ecosystem; they damage plants, chase birds, leave feces, and harass other creatures, while potentially destroying the endangered species that abound in this park. Off-leash dogs intimidate visitors without pets, people who bring leashed dogs, and small children. People and small dogs can be harassed and hurt by exuberant off-leash dogs who don't know their own strength.

Keep dogs on leashes--this will result in more enjoyable recreational opportunities for everybody.

Correspondence: I fully support the restriction of dogs, even leashed dogs, in the parks. I am retired and spend much of my free time hiking and much of that is in the parks. It is all too common now to find dogs running wild, non-responsive to voice commands. They tear thru the brush off trail, chasing each other as well as anything that moves. At Chrissy Field they terrorize the birds. It is often difficult to dangerous to just take a walk at Chrissy Field with the hundreds of dogs. It is not at all unusual for people to have two or more dogs at a time running off leash. There is no way you can stay on top of that many dogs or clean up after them. I cannot tell you the number of walks/hikes that have been ruined for me after stepping in dog feces. My friends who have small grandchildren have to be very careful where they take the kids because many of the smaller ones are frightened of dogs. I believe there are sufficient dog parks scattered thru out the Bay Area that can accommodate dogs, particularly off leash.

Correspondence: Hi There- I just wanted to request that you please allow for some beach access for dogs off leash. My dog has arthritis and one of the best forms of exercise for his condition is swimming. Running on hard ground puts too much pressure on his tender joints. There are no dog friendly pools, & I understand that some areas of the beach access may be cut off for off leash dog walking. I'm OK w/ that if its for the greater good. However, please allow for some area for dogs to swim. Another though I had was - perhaps you could partner w/ a dog trainer that could give classes to teach dog (and person) how to act responsible and considerate in the park. & maybe give certificates that would extend the off leash area for those specific certified dogs & person. Best regards, Jennifer Duetting

Correspondence: I live near the Park, and use it frequently. It is my opinion that the only off-leash dog walking should be in fenced areas. There are times that the Park is crowded, and off-leash dogs are a hazard. Voice control is not adequate. I am particularly concerned about the very young and very old.

I do not think that dogs should be allowed on the same beaches as young children play. Babies touch the sand and then their mouths, and there is a danger of e-coli, etc. even if the actual piece of poop has been picked up.

Both the young and old are in danger of being knocked over, even while the owner is calling the dog.

I understand that the proposed plan restricts dogs to certain areas, but they are not enclosed. They should be enclosed, and that should be the only place that dogs off leash are permitted.

Many cities have such dog parks, and everybody is happy.

Thank you Evelyn Jurow BTW, I heard about the plan in many ways: friend, newspaper, radio, NPS

Correspondence: This report appears to be far from complete. I for one am confused on the rational for suggesting all of Ocean Beach should be closed to dogs on and off leash. If the rational is to protect the snowy plover, why then is the beach not open in the summer months when the snowy plover is gone? Also, why not just keep it as is as an on leash only area during the months the bird is around? Additionally, if it really is an environmental concern, why do rangers drive their SUVs up and down the beach? Why are bonfires allowed? Why are the homeless allowed to camp? Why are revelers allowed to drink and litter the beach with their empty beer cans? Why is there no attempt to keep people from shooting fireworks off at the beach? There are so many things that the GGNRA is already failing at, please do not take the senseless action of banning all dogs from Ocean Beach.

I live one block from the beach and walk my dog regularly on the beach and it will be tragic if my dog is not allowed on the beach. The beach will become useless to me and my family. We will be forced to take walk our dogs on the paved path, which in turn will increase the potential for accidents to occur. That path is frequented by bikers (traveling at high speeds), joggers, walkers etc. Combine the increase in traffic and the narrow width of the path and you will see more dogs acting out at humans, more bike accidents/personal injury claims as they try to avoid the congestion, etc.

Did anyone who created this report consider the impact to the SPCA and ACS? By making dog ownership more difficult I would imagine adoptions will decrease and thus more dogs will be put down. An assault to human morality and fiscally a sure cost increase.

The other aspect sometimes presented as a rational for the closure is to make the area more accessible to non dog users. I'm not sure why a person would not be able to use the beach if dogs were allowed on leash. Is the goal to make the beach better for a group of people who will use the beach two days a year at the expense of those who use it daily?

Please, please, please, do not tell a member of my family that he cannot walk on the beach with me.

Correspondence: I fully support the proposed plan; however, I have the following comments in support of more restrictive dog use within GGNRA:

1. San Francisco is an international city, and far more people from around

the United State and the world visit GGNRA than locals. These park visitors also deserve a voice, not just vocal local dog owners. Unfortunately, the voices of local dog owners will undoubtedly unfairly bias the overall number of comments GGNRA receives, smothering the legitimate opinions of countless other citizens who visit GGNRA less frequently. If GGNRA policy makers were to solicit the opinions of these out-of-town visitors, say, through on-the-spot visitor surveys, they would perhaps have much broader basis upon which to justify their proposed plan. Again this issue affects all Americans, not just those who live in the local area. GGNRA is a NATIONAL recreation area.

2. Dog owner groups argue for "voice control". One does not need to be around dogs for long to know that this is little, if any, control at all. Dogs will obey only when they are not distracted. I have been approached and jumped on numerous times by "well trained" dogs that have disobeyed their owner's voice commands. Let a bird land, or any other wildlife happen by, and the distracted dog is completely out of control; hence, the reason for lease laws in our National Parks.

3. Dog owner groups claim dog problems are due to a small minority of (off-leash) dog owners. This might be true; however, it doesn't take but a few mismanaged dogs to disrupt or victimize lots of visitors. At times, a single abandoned dog poop on the beach or trail, can be witnessed by literally hundreds of Park visitors. On one occasion, I witnessed a dog pee on someone's kayak on the Crissy Field beach, and I have witnessed many people being approached and touched by these so-called controlled "friendly" animals, besides me.

4. When my local community created a dog park, the number of dog problems along the city streets and along the waterfront trails diminished enormously. As a result everyone is better able to enjoy our extremely scarce urban park resources. Even so, I still cannot walk along the nearby waterfront trail without finding dog poops, even within a hundred feet of complimentary poop bags and garbage cans.

5. Within an enclosed dog park, dogs are able to run free, their owners are able to socialize with others of like mind, the owners police the area, and most importantly, their pets do not disturb others. Our local city dog park is proof of that!

6. Dog owners claim that the amount of GGNRA area where dogs are allowed off leash is small compared to the overall GGNRA area (I've heard less than 1%). Were the comparison made to GGNRA beach area, however, the statistic would likely flip flop. Such unrestricted use by a few dog owners is blatantly unfair to the remaining majority of us GGNRA users

who seek a more natural outdoors experience.

7. Dog owners often sling yellow tennis balls into the bay for their pets to chase. Invariably, the dog tires of this sport, and the tennis ball floats away. I have retrieved these yellow tennis balls along remote beaches on almost every outing. This practice of throwing balls into the bay for dogs to chase should be strictly forbidden.

8. I constantly hear the term "responsible dog owner" used to describe city apartment dwellers who own large dogs. Clearly it is irresponsible to own such a dog in the city if the owner is not able to provide a suitable habitat for the animal to roam outside the city. GGNRA has no responsibility to provide this habitat and, in fact, should absolutely not do so to the considerable detriment and burden of all who enjoy and cherish this very special limited resource.

Although I do not think that the GGNRA plan goes far enough in curbing unconstrained use of the Park by dogs, I feel it goes a long way in abating the unfair abuses that have taken place in the past and continue to take place today. I sincerely hope that GGNRA policy makers have the courage and will to follow through with these much needed proposals, in spite of the enormous political pressure they will undoubtedly receive from the powerful organized San Francisco dog ownership community.

Correspondence: I consider myself a responsible dog owner and an appreciative user of public areas to exercise my dogs and exercise myself at the same time. This report and its "preferred alternatives" appear to consistently introduce many more regulations and restrictions without showing in detail any specific data to justify these additional restrictions.

I would like to see data showing a list of any actual incidents that necessitate these additional regulations. All I have found so far are generalized blanket statements and slogans that are not specific to the particular individual geographic areas under consideration. - I would like to be able to identify problems that may be occurring in specific areas. - Have dog biting incidents happened at specific locations on a more frequent basis than other areas? - Is soil degradation or habitat disruption occurring more rapidly in a particular area.

I cannot comment on all of the geographic areas under consideration. However I do frequently use the Marin Headlands and Rodeo Beach areas

of the GGNRA. The Coastal/Wolf Ridge/Miwok loop is the most valuable area to me. This loop offers me a challenging hiking environment as well as an off-leash opportunity for my dogs.

I would ask that consideration is given to maintaining ROLA's that offer not only flat walking areas such as Crissy Field etc., but also ROLA's that offer more challenging exercise opportunities for those of us who enjoy the hiking offered within the GGNRA.

Correspondence: Further restrictions on dogs and their owners are unacceptable. There are already so many restrictions and so few places where dogs are allowed, these new rules are unnecessary and, though I hesitate to use the term, unfair. The parks need rules and guidelines, and I am a supporter of protecting open space and the environment. However, if anything should change it should be in the direction of providing more areas that are open and accessible to dogs and their owners. That may not be perfect for maintaining open space in its perfect, pristine natural state, but compromise is necessary, and there are hundreds and thousands of park acres that can and are set aside for that precise purpose--no wheel chair accessibility, no bikes, no horses, no dogs, etc.--essentially only for the able bodied hiker. For instance, Tennessee Valley trail is already a mini highway. It even has a paved road. I see no reason why leashed dogs should not be allowed there. Muir Beach has a tradition of being open to dogs, and from the comments I see in our local paper, many residents are in favor of keeping it that way. (The renovations/modifications that have been done there are the subject of another letter. What were you thinking?) There are places in our parks that are going to suffer from use. That is inevitable, but not a good reason for these added restrictions. We have to hope that dog owners will be responsible. We don't live in a perfect world, so there will undoubtedly be problems--that's life and even the parks should make the best of it without punishing everyone.

By the way, I do not own a dog, but am willing to share my space with them and their owners. They are far more agreeable and less destructive than many other park users I have met in my 65 years on the planet.

So I say NO to the new plan.

I will be out of town on March 2 when the public meeting is to be held at Tamalpais High School, so I can't be there to say it in person. Thank you for your time.

Correspondence: This plan is overly restrictive and lacks many other variables that should be considered.

- As I walk the beach at Crissy Field, though I do see an occasional missed dog feces, I see much more human produced contaminants. I have seen everything from syringes, various plastics, bottles, cans. The Park Service was handing out collection bags last week. The VAST majority of the people who participated in the beach clean up were dog owners. Without the dog owners, the beach will be much less clean and safe. - The government is very concerned with healthcare of late, especially obesity. The main reason I get as much exercise as I do is because I walk my dog. - Dogs at Crissy Field stay exclusively on the beach or in the water. They do not go in any areas that are not allowed access by humans. -One of the main attractions of Crissy Fields are the dogs. Many non-dog owners that I have spoken with come to Crissy Field to enjoy the vista and see the dogs play. - owners with aggressive dogs rarely bring their dogs to Crissy Field. I have never seen a negative dog/human interaction that caused harm. Dog owners self-regulate the type of dog that comes to Crissy Field. If an aggressive dog is brought to the site, the many owners will make sure that that dog is banished.

Correspondence: Thank you for addressing the issue of dogs in the parks.

I have read the park document and I am in favor of option D - the most restrictive as far as dogs in public parks.

The over-population of dogs in San Francisco is putting all other living creatures at risk for disease or destruction. I realize there are many dog lovers in this city that want no restrictions on their pets, but that is in no way healthy for plants, animals or humans. Please consider heavy restrictions on dog access to parks before they destroy even more of our environment.

Thank you, Adrienne

Correspondence: I am writing this comment in support of keeping Fort Funston an off leash dog park. I take my dogs to Fort Funston on the weekends with my husband and my husband takes them every day of the week. I am trying to get some kind of logic to why would this Dog Management plan would take affect to somewhere as great as Fort Funston. This area is great to take our pets not really to me considered an area for kids to be around, the trails are perfect for dogs and horses. I also watch as my dogs learn more on interaction with other animals and people. We have very limited areas to take our dogs off leash and for anyone to take that away would mean we are feeling like being driven out. We as pet owners have always been told to make sure you train, get your dog to interact, and give them exercise but how can we do all of that if we can't even let them run around in a free space.

Correspondence: Some pet owners let their pets roam around without leash on Lands End. I try to remind the owners to leash their pets. Their usual responses are " Oh, it's harmless. " Well, until it bites.

I have nothing against pets except when they are not leashed. I feel threatened when the pets are not on leash.I do not want to feel scare when I enjoy a walk in the National Parks. I do not want to wear an armor or carry a stun gun to protect myself against pets.

There were one too many dog mauling cases in SF alone. If unleashed pet is a violation of the Health Code in SF, it should apply to the entire City Period.

The selfish behavior of the unleashed dog owners needs to be stopped.

The potential hazard of this dangerous situation needs to be mitigated before tragedy explodes.

There should be patrols and signs with dispatch phone number to report violators and to spell out the penalty of the unleashed pet owner including but not limited to prosecution and civil lawsuit.

Safety is my paramount concern. I prefer that pets are prohibited at Lands End.

Correspondence: I have lived in San Francisco for over 40 years and have enjoyed the use of the beaches and recreational areas with my dogs. I do not like to walk dogs on a leash and thus have taken them to Ocean Beach and the beaches near Fort Funston where it has been legal to walk them off leash. I feel that this new plan is not fair to the residents of San Francisco because we are used to having the full use of Ocean Beach and most of the areas under consideration. It seems that this plan not only takes away most of the area but also makes it off limits to dogs at all. This is a city where thousands of people live and at least 35% of them (in my estimation) have dogs. This is not a rural National Park, but rather a urban environment where the people use the beaches for relaxation and exercise, not to mention just sitting and looking at the ocean. I was just out at the beach near Irving Street watching dogs romp, children play and yes, the little birds running in the surf all in harmony with each other, no one disturbed by anyone else, all enjoying the freedom of a lovely day at the beach.

If this plan goes into effect, I believe the most people will just continue to do what they always do, take their dogs to whatever beach is convenient, only now they will have to be afraid that some park ranger may come up and give them a ticket.

I am firmly against this plan and I hope that you will reconsider and change it to leave our beaches to us, the citizens of San Francisco and our dogs to use in peace.

Thanks you

Linda Ost

Correspondence: As a neighbor of the GGNRA and a frequent walker/jogger on the GGNRA trails in southern Marin, I recommend that the Coastal and Miwok trails be limited to dogs on leash. Voice control is a joke in these areas, and it is an unenforceable standard. I have seen numerous altercations with dogs on the trails, and my husband was once attacked by a dog under "voice control." Dog walkers often bring 5 - 6 or more dogs onto these trails at one time. There is a great deal of human, bicycle, and animal traffic along these trails, and I believe that dogs should be more tightly controlled in this area.

Correspondence: After reading the documents on this site, I question the motives of the authors of these proposals, their merit and the legality of introducing potential regulations so clearly based on opinions, mischaracterizations and misinformation. The below quote is taken from the executive summary and depicts an environmental statement that must accompany any proposal the agency is to consider, and is followed by my rationale as to why none of the stated purposes of the action are adequately addressed by the proposal.

"The National Environmental Policy Act of 1969 (NEPA) requires an environmental impact statement (EIS) to briefly provide a statement of purpose and need for the action the agency is proposing."

Stated purpose for taking action, and why the proposals do nothing to address these "needs".

? Preserve and protect natural and cultural resources and natural processes

In all of the documents listed on this site, I couldn't find any scientific studies or facts stating definitively that dogs negatively impact the natural and cultural resources more than humans alone. As coyotes (wild dogs) are native to much of areas of concerns, dogs are simply an extension of nature.

? Provide a variety of visitor experiences

99% of the areas of concern are free of dogs under the current rules and regulations. If variety of visitor experiences are a priority, dogs should be allowed in a greater percentage of the available land.

? Improve visitor and employee safety

I did not see any documentation regarding decrease in visitor and employee safety due to off-leash dogs. In my opinion, an off-leash dog is much safer than an on-leash dog as the majority of dogs will attempt "flight" before "fight". However, on a leash the ability to flee is removed, and only the fight remains. In the absence of clear evidence that displacing off-leash areas with on-leash improves safety, how can this blanket statement regarding improved safety be considered?

? Reduce user conflicts

The documents cite confusing rules and regulations regarding off-leash and on-leash and resultant user conflicts. I have reviewed proposals B-E and find them as equally confusing and convoluted as the status quo (proposal A) if not more so. There is no chance yet another confusing set of changes on top of the current rules will improve comprehension of the policies and thus reduce user conflicts.

? Maintain park resources and values for future generations

The use of the term "maintain" here is out of place as only proposal A (status quo) maintains the current rules and values. As for resources, that was addressed in the first bullet.

I am shocked and embarrassed that my tax dollars have funded such a poorly executed and clearly biased set of proposals. Please leave the dogs alone and spend our tax dollars on something that actually improves society.

Correspondence: Oppose New Regulations

I understand the challenge the NPS faces in balancing many competing needs for use of the park and at the same time the overarching goal of protecting the environmental and natural features of the GGNRA for generations to come. Not an enviable task.

But the proposed new regulations regarding dogs are not the answer. Already there are many beaches and trails where dogs are not allowed or must be leashed. There are relatively few places where dogs can be off leash. The key is to make sure that overall balance is preserved and that in those areas where dogs are allowed off leash dog owners act responsibly.

That means requiring that dog owners pick up their dog's waste, have voice control over their dogs, and be mindful of small children or others who may be afraid of dogs. Regulating the number of dogs one person can have makes sense, including requiring permits for professional dog walkers who have more than three dogs at a time.

Stinson Beach, a state beach has it right - dogs are allowed off leash on one big stretch and not allowed at all on another. That way, there is an area for people who do not want to be around dogs, and for birds to be free from dogs. Many dog owners, in appreciation of the beach front use, pick up garbage that others leave behind.

There is hardly anything more joyful and that connects many to animals and nature than watching a happy dog run free. That is a beneficial use that NPS should recognize.

Correspondence: I am writing to object to the proposed 2011 Dog Management Plan for the GGNRA. In my view, the GGNRA has not gathered enough evidence of any sort to justify banning/restricting dogs from the GGNRA lands. Your science advanced is weak, and few surveys indicate that the majority of park users see any need for change.

I suspect your continuing with these policies which show so little regard for the preferences of the majority of the citizens will subject you to lengthy and vigorous law suits. Please don't waste my taxpayer money causing the GGNRA to be a target because of your poorly reasoned policies.

It is hypocritical to ban dogs -- why not then also ban people, kite flyers, bike rider, and your earth movers which have regularly torn up Ocean Beach?

Correspondence: To: Superintendent Frank Dean, GGNRA

Dear Mr. Dean,

I am writing to express my support for the tighter regulation of dogs on federally managed properties in Marin.

Protecting wildlife should be the highest priority, and for this reason, it is inappropriate for dogs to be off-leash anywhere in the GGNRA. Also, there should be more rigorous official enforcement of the law. Without enforcement, the change in the law will accomplish little.

Thank you for defending our beautiful, wild parks.

Katherine Wing

Correspondence: I have had one too many unpleasant encounters with unleashed dogs, not just while walking at Limantour Beach, Tennessee Valley, or hiking through Muir Woods but in many other places. I'm sorry, but I don't think GGNRA, NPS, State, Local, or any agency is responsible for the happiness of dogs or their owners. I've had unleashed dogs growl at me and come towards me in an extremely aggressive manner. I've also had unleashed dogs jump on me and, in some cases, they have torn my clothes. When I complain to the owner, I'm told to go "F" myself. Nice. Personally, I think dogs are a nuisance and don't belong in any of our state, local, or national parks. I've seen dogs chase deer, fawns, birds, and other dogs. I think we put enough stress on wildlife without adding dogs to the mix. Dog owners can put their pets on leashes and jog through the streets with them for exercise - it will benefit the owner as well as the dog. Finally, I will add that service dogs are excluded from my rant.

Correspondence: I am a dog owner (5 year old yellow lab) who visits GGNRA beaches once every 3-4 weeks. We have thoroughly enjoyed the off-leash, voice-control

policy at Rodeo, Muir and Crissy Field beaches over the last 5+ years. I consider myself a responsible owner - always cleaning up after my dog, not allowing her to roam freely without my close supervision, etc. I respect the need to protect the environment and to ensure that non-dog owners can enjoy their experience, and I also recognize that there are some dog owners who aren't as responsible as they should be. With that in mind, I make the following observations:

a) On a typical visit to Muir Beach, I find the remnants of barbeques, picnics, bonfires, parties where alcohol has been consumed, etc. I have literally filled bags with the leftover trash from these events - none of the damage done looked to have been made by dogs. The environment suffers most by the presence of people, not supervised dogs.

b) I am hard pressed to ever find dog poop on Muir, Rodeo or Crissy. I think this is because we dog owners understand we are under (deserved) extra scrutiny, and overall we act as stewards of the beaches because we cherish our ability to exercise our dogs there leash-free (having dogs on-leash on a beach is oxymoronic).

c) The proposed ROLA at Muir Beach is far too limited in size - dogs tend to have issues with each other in more confined spaces. The size of the beach prevents too many dogs from being in one place. I can see a problem with dogs being off leash on the busiest of weekend days, when space is at a premium. However, most days at Muir are pretty mellow - even on weekend mornings before 10, I am often there with less than 10 people. Perhaps there is a way to allow dogs during certain times of the day - say, not allowing them off leash during peak people hours.

I feel that, rather than implement on-leash restrictions (I wouldn't bring my dog to the beach in that case) or an outright dog ban, the GGNRA can study creative ways to reduce dog presence, if in fact they are deemed as hazardous to the environment. For example, they could be permitted on summer weekends before 10 am - that way they would not be an issue to non-dog owners during more crowded hours. Ultimately, I feel that people are the biggest environmental hazard. I would wager that dog owners care more for the beach (most are probably frequent visitors to their beach of choice) than the weekend picnicker.

Thank you.

Correspondence: I live in Brisbane but frequently visit the Ft Funston GGNRA to exercise my dogs. I also own property in San Francisco County and pay taxes so I have a financial investment and policy say in San Francisco County. The Ft. Funston area is used almost exclusively by dog owners who do an excellent job in self managing the area. We owners clean up after our dogs and also dogs who don't belong to us; we collectively manage the behavior of the animals and ensure that no animals behave improperly to other dogs or humans. Ill behaved animals and their owners are told to leave. Unlike Chrissy Field where the areas are utilized by non-dog owner families and dog owners, Ft. Funston does not attract non-dog adults; non-dog family with children; on non-dog sunbathers and picnic parties. Under the proposed plan the current beach area of Ft. Funston will remain off-leash. That's great. However, the walkways to the beach should remain off leash also. There currently exists barriers along the walkway to keep dogs away from the sand dunes that require protection; and if dogs do venture into those areas, they are quickly recalled by voice command. This plan while well intentioned is unnecessary and costly. We don't need government supervision in an area where responsible dog owners already have this issue under control.

Correspondence: Dear National Park Service, Thank you for allowing me the opportunity to comment on your GGNRA Draft Dog Management Plan. As a tremendous fan of the National parks and the amazing jewels of the GGNRA, I am dismayed at this proposal. I have a three year old child and a black Labrador retriever and we all love Crissy Field. The opportunity for our family to take a walk together, breathing the fresh air while taking in the splendors of the

Bay is a true benefit of living in San Francisco. Our dog stays on leash much of the time but loves the chance to run free on East Beach and swim in the water. I believe we can do this while respecting the environment and the fellow parkgoers. We love meeting the other dogs and people enjoying Crissy Field. Walking there with everyone makes you feel a part of something bigger- a community in the natural beauty of San Francisco Bay. Please don't eliminate this opportunity by drastically restricting the off leash sections and forbidding dogs on East Beach. A compromise is definitely possible. Far fewer people will come to the GGNRA if you enact these draconian measures. And aren't parks for people too?

Sincerely, Diana Gregory

Correspondence: At a minimum all dogs should be on leashes at all times. Banning dogs from many areas is also a good idea. I like dogs, but I don't feel comfortable taking my daughter to these parks and beaches because there are so many dogs that are not on leash and out of control. On more than one occasion I've seen small children bowled over by a dog. Also, I don't want to let my daughter crawl around, and I don't want to sit down where a dog has just defecated or urinated. I know the usual response is that most dog owners are responsible and that it is unfair to punish all dog owners;however, it is unfair to punish me and my family by making us deal with the bad owners or forgo the use of the parks.

Type:

Correspondence: To whom it may concern,

I am an active user of Crissy Field and not a dog owner. I have been frustrated over the years by the brash and borderline obnoxious behavior of many dog owners, particularly at the East Beach and the adjacent parking lot. That said, there are many dog owners in SF and I do believe that there needs to be addressed somewhere within the boundaries of Crissy Field.

I want to express my strong support for the Preferred Alternative in the DEIS that came out on 1/14/11. It is an extremely fair and balanced proposal that addresses the needs of all the park users and not just dog owners. I know that a lot of hard work went into tackling a contentious and often emotional issue. Off leash dog use is just not always compatible with other park uses, particularly parts of the park that are used intensely such as the East Beach. I believe the DEIS acknowledges this in how spaces are allocated. Trying to sit with your children or picnic on a beach full of off leash dogs is honestly impossible. We have a right to enjoy this place just as much as dog owners. By providing off leash, on leash, and dog free zones, ALL of us can pick and choose the quality and type of experience we want.

I know that some dog owners and their advocacy groups are already lining up opposition to your plan. They will be organized and are already spreading misinformation. They will show up at meetings like they did several years ago and drown out those who disagree with them. Just because you can yell the loudest doesn't mean that you speak the truth or represent the majority. I keep seeing them cite figures that 99% of the park is already off limits to dogs. In the case of Crissy Field, that is just not the case and certainly will not be the case under the preferred alternative. The Central Beach is almost > of a mile long. By my estimation more than half of the beach at Crissy would allow off leash dog use under the preferred alternative. Over half the large grassy field will be designated off leash. These two areas are huge and ideal for off leash dog use since they are used less intensively than other parts of the park. When described to my dog-owning friends, they are thrilled that they will still be able to come down to Crissy and run their dogs off leash with minimal restriction.

Until this alternative is adopted, please note that the 1979 Pet Policy requires that dogs be on leash in all parking and picnic areas at Crissy Field. Despite the action of the judge requiring the negotiated rulemaking, the 1979 Pet Policy still needs to be enforced relative to dogs off leash in and around the parking lot and picnic area adjacent to the East Beach.

Regards, Chris Apicella

Correspondence: I understand that there is a need to control dog access to some parts of GGNRA. I'm all for the protection of ecosystems, wildlife and people. I also understand that many dog owners are not particularly responsible. However, dogs are a very important part of our lives and being able to take them into nature off-leash is a valuable and healthy activity for owners and dogs alike. I have been taking my small dog to Ocean Beach every weekend for the past 3 years. I've never seen a problem - it appears to me that for that section of the beach all the people and pets seem to coexist quite well. It would be sad if a few irresponsible people would cause great joy to be taken away from so many. It would be better if there were a system that allows responsible dog owners to enjoy these areas while banning those who can not follow the rules. Unfortunately, in the meantime the problem people will continue to cause problems regardless of your policies.

Correspondence: Please do not further restrict dog-friendly areas of the Park. As a responsible dog owner, I truly value being able to enjoy the Park with my dog. I always pick up after him, and he is under excellent voice control.

As a lifetime resident of San Francisco, I urge you to not limit dog access further than it already is limited.

Thank you!

Correspondence: I agree with the proposed plan. It seems like a fair compromise for everyone, including dog owners. I own two dogs and a horse.

I do not visit the unofficial 'dog park beach' at Crissy Field because all of the dog owners are not as responsible as they should be. The problem of unruly dogs seems to stem from sedentary owners who have very active dogs that they just want to stand and throw a ball to. And many times the 'dog play' ends up across the walkway in the habitat restoration area. Yes, dogs need

exercise, but running or taking a long walk on leash should be the preferred exercise.

In terms of dog waste, I wonder what it does to the eco system of the bay to have what amounts to a small sewage dump at the beach?

Dog owners shouldn't be selfish in their demands. This is a fair plan for everyone.

Correspondence: As a frequent user of the federal parks in San Francisco I believe reducing the amount of off-leash access for dogs is a terrible mistake. One of the things that makes San Francisco so unique is it brings together people from all over the world. However, my experience over the last 6 years is that people are so busy with work and/or caring for their families that it is hard to meet new people and form new relationships. My wife and I have met a great detail of friends and built out our community in Cow Hollow primarily through interactions with "strangers" at GGNP because of our dog.

Beyond community interaction there are significant health benefits of off-leash dog access. The only exercise my parents get is long walks with their dog which is only enjoyable if the dog is not tied to owner. Considering how unhealthy and overweight our country is and financial impact it has on the federal government doing anything that reduces American's outdoor activities seems irresponsible.

Finally while I do not have the numbers I imagine that dog owners pay significantly more federal taxes than non-dog owners. Therefore from a equitable standpoint the proposed regulations are unfair and unjustifiable.

Correspondence: As a resident of the City of San Francisco since 1997 and a Bay Area resident since 1984, I am very grateful for our parks and open spaces. I have lived here both as a non pet owner and more recently for the past 5 years as a dog owner. I feel that most dog owners are responsible for their personal dogs and pick up after their dogs and abide by the rules outlined for parks. For many of us professionals, these animals are akin to children. It is with this great sensitivity that I ask you to consider the regulations being proposed. Limited use, off-leash areas in the parks are very beneficial to the neighborhoods of the Bay Area as it gives an acceptable way for us as urban residents to keep pets. These dogs add so much not only to our lives but to those in the neighborhoods around us. In order for pets to be well-behaved (watch any dog training show) they need exercise. It's the responsible pet owner who takes their dog to parks that allow off-leash exercise. That good pet-ownership behavior should be commended and not punished. Suggestions that may help both protect these park areas and allow respectful off-leash use within these areas are described below: Create a license for dog walkers who use the areas to ensure that these walkers are bonded and insured as well as licensed to use the recreation area. Limit the number of dogs any one walker can have at a given time to for example 5 dogs and no more than two visits per day by the walker to any one park. Post rules and regulations to allow violation reporting for dogs (such as unlicensed dogs, not picking up feces, aggressive dogs, too many visits per day to an area by dog walkers). Personally, I would be OK with Crissy field having a limited-us off leash period such as from 4-10pm. I do see this as a potential area of

compromise. This would allow residents to walk dogs and would eliminate the dog walker issue at Crissy Field which is limited in space as compared to Fort Funston. There are a lot of children there and so this would likely get rid of that overlap also. You are welcome to comment me with further questions or discussion.

Kind regards, Nicole Miller, PhD

Correspondence: I have been taking my dog out to Fort Funston since I moved to California in 1996. I have frequented Fort Funston ever since with my Siberian husky Zoey. My breed of dog was bred to run and explore. Fort Funston is a beautiful, beneficial, and unique place in that it provides the vast open space necessary to socialize, exercise, and conduct canine training for large volumes of dogs. My experience with training dogs tells me that dogs being pack animals require open space to exercise properly and socialize without any tension caused by a restraint or leash. You can't play ball or swim off excess energy with a dog lead attached. I've also made many friends over the years that share my interest and love for dogs. There is even a grassroots organization that was created to maintain the integrity of Fort Funston and to promote the continued use of the park for off leash hikes with our dogs (Fort Funston Dog Walkers). There are also other canine interest groups who organize to protect the past and current status of a dog friendly preserve at the Fort. The SFSPCA, ProDog, and SF Dog are all involved with the education and the promotion of our dogs' physical and mental health. After all, dogs are animals too and even though they have been domesticated over a thousand years, they still have strong drives and needs that need to be satisfied in order to avoid the development of behavioral problems and unsocial mannerisms. Dogs require a place where they can just be dogs, as do other species in the animal kingdom. Being essential parts and members of our families in San Francisco and the surrounding counties, I and many others feel that our family dogs will be very negatively impacted if Fort Funston is turned into a leashed dog park. After all, where else could hundreds of dogs go everyday to seek the social and physical stimulation that is required to keep them balanced individuals, as well as "good K-9 citizens"?

If the proposed plan passes, the inadequate small parcel of land allotted for "off leash" dog activity will create a dangerous and cramped atmosphere. The boundaries of bluffs, highway, and parking lot, will create a safety issue for dogs who need space to exercise and explore. This will adversely affect the quality of life at the surrounding local parks which can't provide the

adequate space necessary for the hundreds of dogs banned fro Fort Funston. The ripple effect will be devastating on the local community, as well as the physical and mental health of our beloved canine family members. Fort Funston has been a dog friendly park even before it was ceded to the GGNRA, under certain conditions and requisites, back in 1979. The dogs are an intregal make up of the spirit, character, and landscape at Fort Funston. If you do remove the dogs from Fort Funston, the vacuum will inevitably bring in nefarious and undesirable elements, such as crime and homeless encampments. Funston has served this community for decades and you will find that 90% of the park users and advocates own dogs. It is not in the interest of the federal government to go against the wishes of the local inhabitants, simply because it has the power. If it s not broke, then don t fix it.

Correspondence:

Dear People, I am appalled by the proposed limitations for dogs at our parks and beaches. There are already so few places where dogs and their owners can enjoy some freedom in the natural world that these new restrictions would make living in the beautiful Bay Area feel like bondage.

The restrictions are not in response to an actual problem. Dogs off-leash do not harm people or the environment or people's enjoyment of the environment. 99% of dog owners are very responsible, and the community is in general self-policing. If the rare dog owner neglects to pick up a poop, it's just as likely to happen on-leash as off-leash. And whenever I or my friends spot a stray poop, we pick it up.

It's a little like banning all food & picnicking at parks because one irresponsible family leaves their trash behind. It's overkill and makes no sense. There will always be jerks, but it's important to maintain our liberties. So we impose fines on lawbreakers and hire people to help keep the parks clean. And we encourage citizens to take care of their parks.

We all just need to learn to get along. I may not like it if some kid throws sand in my direction or runs across my towel, but that's just life at the beach. We need to share our resources, respect our neighbors as much as possible, and be tolerant of each other. We don't need knee jerk reactions like banning kids, or picnics or dogs, just to satisfy a few loud, uptight people who would prefer to have our parks to themselves.

I am a responsible dog owner. I deserve to have the freedom to enjoy the few remaining parks and beaches where dogs are allowed to go. Crissy Field

already has non-dog areas. Please do not bow to the minority opinion of control freaks and animal haters by unnecessarily restricting our rights and our world.

Thank you for your help.

Correspondence: Dear Sir or Madam,

It would be a complete travesty if anything other than option A was chosen.

There are over 100,000 dogs in San Francisco and they need somewhere to go. Not everywhere has to be off-leash, but Fort Funston, Crissy Field and the Presidio are wonderful places for dogs. This is one reason San Francisco is so beautiful and unique. The comments that dog waste could possibly cause the reduced enjoyment of the park for future generations is preposterous. From what I see, most dog people are extremely careful about cleaning up after their pets and self-policing those that do not. I would worry more about those locations with a lot of people, not dogs, as those

most likely to be degraded by over use.

Finally, as the owner of an active dog, we need off-leash places for our dog to recreate and we hope you reconsider these proposed changes.

Sincerely,

James R Newhouse

Correspondence: I have reviewed the proposed map for the Fort Funston area and have concerns.

1. The off leash area is NOT large enough for the volume of dogs on a typical day.
2. The beach is often unsuitable for recreation due to weather conditions. Limiting the pathways to leash only defeats the purpose of this park.
3. If you truly want to know how dog owners feel about this place - please check out yelp.com and see the 420+ reviews over several years of the intense usage of dogs and owners.
4. This is NOT just a park for those on the peninsula. We intentionally drive 45 minutes to come to this location. It is used by the ENTIRE bay area.
5. Please don't let the hatred of the few or the irresponsibility of the few create rules for the masses.
6. The pathway indicated for leash only down to the beach is IMPRACTICAL. It is extremely sandy and a MAJOR incline. I foresee the GGNRA being SUED for improperly maintaining that trail since dogs will DRAG their owners down this path/cliff. Injuries will happen!!!!!!

Correspondence: I am writing with respect to the proposed law changes regarding dogs on Muir Beach. Like many, if not all, residents who live here, we deeply value and appreciate the natural beauty and splendor that this area has to offer. For

many of us, it is the primary reason why we choose to live here. That said, we certainly do not take our habitat for granted, and many of us are actively involved in projects that better ensure that our surroundings remain clean, unspoiled and unpolluted. That said I strongly disagree that the current off-leash (voice control) laws need to be changed on Muir Beach ... and on many of the surrounding trails. Again, as a resident of the Muir Beach community, I strongly believe that I am able to provide some sound, on the ground perspective as to the reasons why I think these laws must not be changed. First, most of the dogs that enjoy Muir Beach belong to residents that live in Muir Beach. I say this with confidence and first-hand perspective as I frequent the beach on a daily basis. Speaking on behalf of myself and my fellow neighbors, the resident dog owners truly respect the privilege of having our dogs enjoy the beach....and dog-owners act accordingly to safeguard the more sensitive habitats from our pets. Second, there have been no dog attacks at Muir Beach. This fact speaks volumes as I have never seen nor heard about a vicious dog attack in our community. Of course, this also speaks very well about not only the owners that live here, but every dog-owner who visits here....not to mention the types of visitors that this area attracts. Third, we do not have a dog 'waste' problem on the beach. In other words, the concept of doggie bags is a quite familiar and respected...especially in an area as beautiful as Muir Beach. Fourth, the notion that dogs have threatened the wildlife in more sensitive areas is quite simply unfair and unfounded. The creek bed area currently has signs and fencing that indicate sensitive habitat. Also, it is simply not true that dogs roam freely in these sensitive areas eating endangered toads or fish...not to mention destroying their habitats. Never have I heard nor seen this happen. Never have I heard a neighbor recount a story that this happened. Further, the probability of foxes, coyotes or feral felines 'disturbing' this area is significantly greater than that of dogs. I say this because the overwhelming number of dog-owners appreciate the off-leash laws and see it as a privilege.

In light of all this, I understand that much work has been put into restoring and protecting the areas surrounding Muir Beach. I also understand that it is only natural to create new laws to further bunker proof this area from all and any threats. However, changing the current off-leash laws would create far further damage to the community and to all those that visit with their dogs. It would be unfair and unwarranted punishment to change these dog laws or enforce further restrictions without the burden of proof that dogs have been in any way responsible for any habitat destruction. Certainly, if the primary concern is safeguarding the creek and sensitive areas from predators, than I kindly ask that that your committee looks into better, more robust fencing and more signage as a pre-emptive measure. Also, posting signs with fines for non-compliance would be another effective deterrent.

I appreciate the time and consideration that you took to read my letter.

All the best, George

Correspondence: I have been walking my dogs off leash on Ocean Beach & Ft Funston for almost 40 years. These areas should be available for use by citizens who live in the area. What other uses are there? I understand the need to protect natural resources but for whom are you protecting them?

I have seen over the years more damage done to the environment by unsupervised children and adults than I have ever seen done by dogs. Most of the people now using these areas are doing so to enjoy spending time with their pets and those without dogs seem to be enjoying the interaction with the dogs. My worst experience on Ocean Beach for example was when a hang glider crashed on the beach and injured a pedestrian and scared several animals.

Do you also intend to ban people from using these areas altogether? You may extend your protection to this extreme if you consider it necessary. This is my fear. There are many people in this City who consider their pets as part of their family and in many cases as their only family. They have the right as taxpayers and citizens to use these parks for their recreation.

Correspondence: I am thankful for the GGNRA to put forth this plan and hopefully reign in some of the reckless dog recreation in the GGNRA. I no longer bring my 2 little girls to many of the sites mentioned in the plan, i.e. crissy field tidal lagoon, because of the out of control dog recreation. The Crissy field tidal inlet is the one of the best locations in the city where a child can experience the wonder of tidal influence. Although the few times I have brought my girls (1 & 3 yr old) to play in the water they have been either knocked down or intimidated by 'oh don't worry, he's friendly dogs'. Needless to say my little ones did not have the experience I thought they would.

I am also pleased that the plan recognizes the value of the natural world in the GGNRA. It is the responsibility of the GGNRA to protect not only the rare plants and animals, but also the habitat which creates the foundation for

our land to carry as much biodiversity as possible.

My only complaint would be that the plan does not go far enough in limiting off-leash dog recreation. Although I recognize it would not be a popular option, I personally would like to see all GGNRA lands leash only and no dogs allowed.

Thank you for the opportunity to comment

Correspondence: I am an active use of Crissy Field and not a dog owner. I spend at least 2-3 hours per day at Crissy Field, mostly engaged in running, biking, windusurfing, and paddling. I have been frustrated over the years by the behavior of many dog owners, particularly at the East Beach and the adjacent parking lot. While I do agree dogs should be allowed on East Beach, may dog owners do not behave like they are willing to share the wonderful resource that is East Beach with other recreational users. Over the years I have seen a great deal of obnoxious and sometimes dangerous dog behavior due to unsupervised dogs at East Beach.

I want to express my strong support for the Preferred Alternative in the DEIS that came out on 1/14/11. I feel this is a fair proposal that addresses the needs of all park users, including dog owners. By providing off leash, on leash, and dog free zones, all recreational users will be able to enjoy their park experience with minimal nuisance.

Correspondence: Dear GGNRA:

Some of the restrictions proposed in your draft Dog Management Plan seem reasonable and as a dog owner, I can understand why they make sense. What I do find alarming about your plan, however, is the severe limitations it places n off-leash dog walking. I am most concerned about the restrictions proposed on Crissy Field East Beach.

Crissy Field East Beach is one of the most gorgeous, peaceful areas of our City. There is nothing like a stroll down the beach or along the path at that location and it is one of the reasons I love living in San Francisco. Walking

there with my dog is a wonderful, stress free experience because it is a large, beautiful area where dogs, people (even non-dog owners) and the environment co-exist happily. As with everything in life, things are not always perfect - there are times where a dog owner will behave irresponsibly. But when this happens, another dog owner that is present is the first to point out the problem in an effort to correct whichever rule was being broken. The fact of the matter is that dog owners are very vigilant about acting responsibly, but they monitor those around them as well because they are very aware of the repercussions the group as a whole might suffer because a few dog owners aren't being careful. I also see the contributions dog owners...and their dogs...make to the area. They routinely pick up garbage that has collected on the beach, for example. Perhaps instead of prohibiting off leash dog usage, using the environment as the main reason, you'd consider making more restrictive barriers to the protected areas you're worried about. If cost is the issue, I am more than certain dog owners would be willing to pay a dog tax.

Thank you. Anna

Correspondence: I favor implementation of Alternative B, implementation of the existing NPS leash regulation at all locations. The mere fact that these regulations were not previously in effect at these locations is irrelevant. All national park areas were at one time prior to their establishment as parks completely unregulated. The point of making them national parks is to protect them, which by its very nature entails putting restrictions on how they are used. The existence of a vocal and litigious community of dog-owners does not change the facts.

Correspondence: Presently, there is no meaningful enforcement on Ocean Beach, Sutro Heights Park, or Lands End: I speak to these three locations as I am most familiar with them, but I suspect my comments would be true of all locations. The preferred alternatives fail to address issues with dogs that are not truly under voice command. I would accept voice command if it were real, but in reality it is rare. Consequently, I would prefer leash laws, and enforcement of those leash laws, at all GGNRA locations, or the development of a specific set of procedures for issuing citations: I believe

these procedures should simply be observation of an unruly dog, or observation of a dog that does not immediately heel immediately after being summoned once by its guardian. In sum, the most important of the plan is to have strict enforcement.

Correspondence: I am writing in support of Dog Management Plan Alternative D for all areas. As a regular walker in parks around the Bay area, I am well aware of the problem associated with off leash dogs. Unfortunately few dog owners have true voice control over their animals. This lack of control results in deleterious impacts on the environment and constitutes a potential danger to other park users. I have been approached countless times by aggressive snarling dogs who pay little heed to their owners attempts to call them away. I am truly tired of the tyranny of dog owners who think it is some sort of god-given right to do as they please without consideration of the environment or other people. Thank you.

Correspondence: To Whom is May Concern,

The proposed restrictions on where dogs may or may not run free in this city are shocking, appalling and overly restrictive. As a responsible dog owner in this city, who has taken the burden of unwanted animals off of the city's tax payers and on to ourselves, my family, friends (many of whom also adopt unwanted dogs from city shelters) and I are adamantly against the proposed changes.

San Francisco is in the unique position of having the majority of our city parks within the overly rigid and ridiculous National Parks System (which my husband and I support both with annual donations and the purchase of annual park passes). The dog-friendly nature of San Francisco is part of what makes this city unique and part of what keeps many dog lovers living here.

I am disappointed to see that my tax dollars and donations, which have probably gone to many of the conservation efforts that are being cited as the reason for this change, are not being used to my benefit.

I can understand places like Lands End which is a pedestrian walkway being limited on on-leash dogs as well as a portion of Crissy Field which is often heavily populated by tourists and families with small children. But Fort Funston and Marin??? Really?!?! When was the last time anyone on this committee visited Fort Funston? If it was in the last five years you would know that 99% of the people there are responsible dog lovers who worship and appreciate Fort Funston as a place to enjoy with your off leash dog. There is semi-annual cleanup of Fort Funston by an entirely volunteer organization dedicated to a dog friendly San Francisco. Further, Marin was established as a park for the people.

I think you will find that restricting the use of San Francisco parks to on-leash or dogless people will cause more trouble than good. You will have an increase in aggressive dog incidents and more people breaking the rules, quite frankly.

The proposal is far far far too strict and should be loosened. You argue that it is a compromise but, it is not. It is driven by special interest groups and clearly for the sole benefit of dogless people and tourists.

I have to say that should this pass, as is, in a year, my contributions both to the National Parks will stop and I certainly will have less reason to stay in this city.

Sincerely,

Allison Taylor

Correspondence: I am opposed to the proposal of limiting off leash dogs on many historically dog friendly recreational walks, particularly on Crissy Field's East Beach. Like many San Francisco dog owners, I support protecting the environment and I agree with restrictions limiting the negative impact of people and development on wilderness areas. However I view walking my dog on the beach at Chrissy Field as an opportunity to enjoy our beautiful outdoor spaces while getting needed exercise for both myself and my dog and do not see the conflict between protecting the environment and allowing dogs to run off leash in an already developed section of the beach. The beach at Chrissy Field is not a pristine wilderness. It is in a highly developed part of the Presidio which itself is in a dense urban city. It includes man-made jetties, piers, sea walls, gravel paths, cafes, boardwalks and benches. Gas powered Park Service vehicles and lawn mowers are allowed to operate feet

from the beach in addition to hundreds of tourist bicycles, runners and walkers. The beach has paved parking lots at both ends and US Highway 101 is within a quarter mile. Existing fenced sections allow for wildlife and dune protection without preventing dog owners from giving themselves and their dogs much needed exercise walking a several mile loop. Dogs, like roads, parking lots and cars, help us to access the outdoors and should not be limited unless the benefit outweighs the restriction of access to our public spaces, which it clearly does not in this case. If the issue is not the environment but the of quality of life, restrictions should focus on those issues, and fines should be levied for irresponsible dog/owner behavior not simply allowing your dog off leash. Most dog owners, myself included, are the first to insist on responsible dog ownership which includes training and voice control, and socialization, as well as picking up after your dog.

Correspondence: I approve of the plan. Currently dog owners act as if the whole area belongs to them. Many have poorly trained dogs walking off lease and to whom they are paying little attention. They wander in front of pedestrians on the promenade, and then into the lot in front of cars, and are often not cleaned up after. Any dog area should be enclosed by a fence, or limited. While dogs should share our parks, they should not control them, as has become the case.

Correspondence: To Whom it May Concern,

I moved to San Francisco five years ago and one of my main pulls to the city was how accommodating it was to our canine friends. I moved to a house that did not allow dogs, and when I was new to the city and felt alone, I would go to Fort Funston as a way to alleviate my sadness. Seeing dogs in their natural habitat and running free gave me a sense of security and belonging. It also cured my nagging pup fix, since I could not have one of my own.

Now that I have a dog, I cannot imagine the city without dog parks/beaches. It is my, as well as my dog's, favorite part of the day. If you choose to extinguish these dog friendly beaches, you will sufficiently detract from the

overall draw of this amazing area. The level of canine acceptance sets us apart from other areas of the country and, in my personal opinion, makes us a better group of people.

In all honesty, the issue that has always wedged itself under my skin has been the amount of kids left unattended at public beaches. Dogs, while some could consider them nuisances, are constantly cleaned up after and minded, while children run amok and leave trash and other rubbish in their wake. When I am relaxing on a beach, I am much more irritated by naughty children than I am with dogs. Are you going to restrict beaches to adults only? If you are trying to alleviate irritants and pollutants, then perhaps you can pass a bill that excludes children as well.

Please don't take away these beautiful animals' right to run free.

Sincerely, Kate Lauren Rosen Berkeley High School English Teacher

Correspondence: Banning dogs on Chrissy field and Muir Beach is a bad idea based on flawed reasoning. What are the possible reasons to ban dogs: Dogs have negative impact on wildlife: Dogs have a much lighter impact on wildlife than their human friends. On my many visits to Muir beach and Chrissy Field I am constantly picking up human waste. Humans invade wildlife habitats, pollute the water and leave their trash everywhere. Let's ban Humans from Muir Beach and Chrissy Field!!! Why not do the reasonable thing and have stricter enforcement of litter laws and trespassing on 'sensitive' habitats. Dog's ruin most people's trips to the park: Well behaved dogs coexist peacefully with beach goers. In fact, most regular beach goers in the Bay Area are dog owners. Dog's get their owners out to the beach where they can appreciate nature and learn to be better custodians of our resources. True, ill-behaved dogs can ruin a trip to the beach. However, so can a rowdy, drunken person, or somebody who's smoking, or somebody blaring a radio, or ... Banning dogs will prevent a large segment of the population from enjoying THEIR public resources. Let's not prevent a large segment of the population (perhaps the largest demographic) from enjoying the beach because some others do not like dogs. GGNRA and CSP heavy-handedness: The GGNRA knows what's best for our native ecosystems and will work to re-create the pre-settlement landscape. Having lived in the bay area for 15 years, I am constantly shocked by the heavy-handed destruction of healthy eco-systems in favor of 'native' vegetation. I have seen several lovely landscapes in the presidio and marin headlands ruined by clear-cutting, permanent fencing, over-the-top trails, and other construction

projects. Sometimes, the best solution is letting mother nature take care of itself, rather than ripping out, building fences to keep people out and building trails to increase access. Banning dogs is in perfect keeping with GGNRA's perception that they are the experts and will save us from destroying our natural resources, when in fact, they are excluding the people who OWN the space from using it in a responsible way.

Correspondence: Most of my life in San Francisco, I did not own a dog, and in that capacity, I understand the problems with dogs off leash. I have been approached by fierce dogs running towards me, while walking on Ocean beach, not knowing what they would do. I observed a dog peeing on my kid's sand castle they made at Crissy Field beach, while I was worried to take a nap there, in fear my feet would be sprayed on. I have stepped on dog poop in some parks and cleaned off my sidewalk and the area around my tree in front of my house multiple times.

However, I am now am a recent owner of a dog for my family (2 daughters) and I understand the value of having an area where our dog can run free. Anyone that owns a dog understands the need of allowing a dog run off leash, allowing them to sniff where they want to and get some good exercise running and playing around.

The places I take my dog are Crizzly field and Fort Funston, and I would be very upset seeing these places taken away or severely restricted as a place to let our dog run free. I feel as a dog owner, we are already very restricted as is where we can take our dog; there are a lot more places where dogs are not allowed or required to walk on leash. As a result, the places where dogs are allowed to run free have high concentrations of dogs, which feels threatening to non-dog owners, and this is something that will get worse if space is restricted even more.

Dogs are very important in people's lives. Their companionship and unconditional love are essential to many people's emotional health. Because of the cost and challenge of raising children in SFO, many couples chose a dog as a substitute to fill their lives with joy, love, and companionship. Those that do decide to have children often move out of San Francisco. I've heard that there are more dogs in San Francisco then there are children. Therefore, I feel you need to preserve the amount of spaces where dogs can run off leash and I vote for the status quo.

Thanks you,

Walter Van Riel

Correspondence: I am very upset to hear that dog access will be further restricted in the future. I will be contacting any and all elected officials to express my anger over future restriction. San Francisco has a substantial population of dogs and limited current locations where they can be exercised. Further restriction will lower the quality of life of the residents of the City who pay significant taxes compared to most cities in the nation.

Correspondence: I support your Draft Dog Management Plan EIS. The EIS protects wildlife and protects people without dogs. Muir Beach and Rodeo Beach have become "dog parks", people without dogs who just want to enjoy a quite walk on the beach are intimidated by dogs running at yourself and at wildlife. The term "voice command" means that the dog owner lets his dog run free, the dog can chase wild life and run up to people. After the dog has disrupted wildlife or people, the dog owner can call the dog "back" if he thinks the dog has done anything disruptive, but most often the owner will say "he's a good dog, he won't hurt anyone". Maybe so but just a dog running up to me scares me first, how am I to know the the dog is "people friendly". I see dogs chasing birds and ducks on both beaches constantly in full view of the owners who do nothing to stop the dogs.

Please return the beaches and trails to people and wildlife. Thank you for this plan.

Correspondence: I strongly support the plan's proposal to require dogs to be on-leash in the East Beach area of Crissy Field. I am the mother of two small children and my kids are sometimes scared of all of the dogs running wild in that area. That beach is ideal for families and children because they can play in the

shallow water and it is next to the parking lot. When families are enjoying that area of Crissy Field, they should not have be concerned about dogs (1) scaring or attacking their children, (2) getting into their snacks and picnic food, and (3) urinating or defecating in an area in which children are playing.

Correspondence: I support of Dog Management Plan Alternative D for all areas. Although we need a "big tent" of support for our parks including dog owners, hikers, horse riders and others, there has to be reasonable balance between the park users. Walking in San Francisco Bay Area parks for over 40 years, I do meet occasional people whose dog(s) are off leash and under voice control. By far the majority of dogs, however, ignore their owners calls and make straight for me, often running, mouths open and barking. The owners usually say, "Don't worry, he/she is friendly." But how do I know beforehand when sharp teeth are a few inches from me? I have been bitten before in my life and do not want a repeat. Sometimes there is no owner even in sight and when they finally catch up with their pets they seem indignant that I am upset by being assaulted by their dogs!

Possibly the reason why dog owners do not have such a problem with other people's dogs is that dogs run to another dog not the owners. I have no dog so become the dog's target.

The dogs I see off-leash naturally chase about and so we rarely see the wildlife in our parks. That is a pity for multiple uses and is not necessary. It is also certain that being chased by a dog reduces the life span of many birds and animals, especially in winter when food and energy supplies are low in wild creatures but not in well-fed domestic dogs. So keeping dogs on a leash seems the least we could do for our wildlife in our parks

There is also the problem with dog waste. Although many owners do now pick up solid excretion, the urine remains to pollute out soils and especailly surface waters. I see no answer to this problem excetp to keep all pets out of the parks as occurs in most national parks.

Please keep free-running dogs out of our parks. Let's have the dog owners walk their pets in our parks and run their dogs off leash in specially designed, fenced dog parks like the one at Point Isobel in Richmond, CA. Everyone seems happy with this solution.

ID:**Received:** Jan,18,2011 18:08:19**Correspondence Type:** Web Form**Type:****Correspondence:** The proposal to require dogs on lease in all areas of Crissy Field is ridiculous! As a resident of SF since 1983, I have visited Crissy Field almost daily with my dog.

It is the most wonderful part of the week - for me and her. My kids have grown up playing with our dog on the beach. I have a constant running partner. We are clean and pick up after her.

Do not take away such a joyous experience. It's the little things in life that make us rich - this tiny bit of freedom makes our lives better.

Correspondence ID: 173 **Project:** 11759 **Document:** 38106**ID:****Received:** Jan,18,2011 19:04:43**Correspondence Type:** Web Form**Type:****Correspondence:** I would like the exact cost of the 2400 page document made public and the number of employee hours involved'

Further,I would point out that the GGNRA is not a national park, but a national RECREATION area and importance should be placed on the large numbers of people, many older and/or disabled or merely not fit enough to ride 70 miles in orange spandex on their \$5000 bikes, whose recreation is walking the beach, interacting with other dogwalkers, and enjoying the unique beauty of free dogs at play.

There appears to be a disturbing trend by the NPS to overmanage the Muir Beach area in particular. An example is the expensive and totally irrelevant fencing at the Overlook resulting in a manicured "look" that apparently appeals to "planners".The wanton destruction of trees during the Creek project is a further assault on the community feel. Removing dogs from the beach and trails looks better on paper, but this area is a community as well as part of a recreation area and the beach is the center in many ways - complete with our dogs. Please show some respect for the character and charm of this unique spot and try to sublimate the urge to "manage" us.

Correspondence ID: 174 **Project:** 11759 **Document:** 38106**ID:****Received:** Jan,18,2011 19:48:28**Correspondence Type:** Web Form**Type:****Correspondence:** I am African-American and have family members with disabilities. Many of

my African-American friends do *not* patronize the recreation areas because dog owners have literally taken over the areas and make visits uncomfortable for us. For various reasons, many people of color already don't use national parks enough. Leaving the current untenable dog-running wild situation at the recreation areas is yet another impediment to our rights to enjoy the parks.

Additionally, the current situation denies our family members with disabilities a reasonable access right to the parks. I have two family members who are very sensitive about unleashed dogs and who we cannot bring to the parks for that reason. Just because a dog owner says his/her dog is friendly or "will not bite or hurt you" (a common refrain when we express concerns about unleashed dogs), we have no idea if that's true or not, and even if it is true, it's irrelevant to our family members concerns.

Of course, many dog owners are responsible, And dogs have a right to get exercise. A very, very reasonable compromise is to provide, as the plan does, for fenced dog areas. It is ironic and irresponsible that dog owners would reject such a reasonable compromise. It makes little sense and is totally inappropriate for owners to put dogs' needs ahead of human needs. The plan gives access to both non-pet owners and pet owners in a sensible fashion.

Correspondence: I have been walking my dog(s) at Chrissy Field since 1979. Since this time I have seen the beautification of this area though it has always been an incredible spot. Part of the beauty of this experience has been the relative peace, the overwhelming natural beauty and the sense of freedom that one enjoys while walking on the edge of the Bay. My dogs have always been

well trained, under voice control at all times and have been able to play with their friends off leash. This magical part of the day watching the unabandoned joy of dogs playing is one of the best parts of my day. The people that one meets in this fashion is also a wonderful way in which san franciscans of all ages and backgrounds can meet and share in the mutual interest of their dogs. There is no doubt that there are peak hours and days and generally I avoid those times as that is not what I am looking for.

I feel that other people's preferences may be different than mine, but we live in a society that tries to honor everyones point of view. I feel that mutual respect is demanded and I do not see why leashing dogs has become the panacea for problems with this issue. Recreational dog-walking and other peoples enjoyment of Crissy Field are not mutually exclusive.

Correspondence: I am glad to see this dog management plan as my family and friends have been always restricted to certain parks to visit safely especially with our small children. I prefer NO DOGS at all in any public parks. Dog owners do not respect or understand our dog fear issues. Even though their dogs may be friendly, it doesn't matter for children who fear any dogs. From our experience with off-leash dogs in the parks, they are not always verbally controlled. Worse than that, dog owners do not bother to control their dogs not to come to the children because they think their dogs are friendly, not understanding dog fear children may have. In fact, our children's dog fear has escalated because of irresponsible dog owners with off-leash dogs chasing our children.

Unleashed dogs have ruined our lunches by licking or jumping. Such dogs

were controlled verbally only after the incidents. But they did not put their dogs on leash despite our requests to put them on leash while they were letting the dogs play at the picnic area.

Leashed dog policy doesn't really protect public safely either. Nowadays dog walkers use extendable long leash with which dogs can freely walk right up to children unless thoughtful dog walkers control their leash short.

I hope NPS would advertise more about this issue so that more people who have been affected negatively by dogs are notified and can comment for NO DOG or most restricted policies. If you are getting more comments from dog owners, then that's not fair representation of public.

Of course, nature and wildlife should be protected for future generation.

| Correspondence: | Regarding the plans for Muir Beach, your Preferred Alternative totally bans dogs from the beach. There is absolutely no logical reason for this. | | |

My preferred alternative is Alternative A, which would require dogs to be on leash adjacent to the environmentally sensitive areas, but would leave the beach available for voice control. This would still be easily enforceable by park personnel. With appropriate signage, visitors w/ dogs for the most part would keep their dogs out of the sensitive areas. The higher dunes, lagoon area, riparian areas, and trails can easily be marked for banning dogs or keeping them on-leash on trails. Sensitive areas could also be fenced off in an environmentally friendly manner to keep people and dogs away. When fish are running in the creek, it could be posted to keep dogs out during that brief period.

Muir Beach has been known as a dog friendly beach for decades, long before GGNRA ever existed. People are much more destructive than dogs. Most dog owners are responsible, and are usually environmentally aware and supportive. If you go to Muir Beach on a weekend, dog owners have their dogs under voice control and clean up after them. The only problem I have seen is the trash left on the beach by humans. And I am not aware of any dog who has left a cigarette butt on the beach or dug fire pits in the sand - again, humans are the culprits, not the dogs.

The choice of having to go to Rodeo Beach is a slap in the face of dog owners. It is not safe for dogs near the water, whereas Muir Beach is frequently low-surf and dog-safe. Why not have two beaches as off-leash voice control areas?

A compromise for Muir Beach is the best alternative. A total ban on dogs, which is what your "Preferred" Alternative is, is just unfair. By the way, who "prefers" that alternative? What citizens who use the beach were asked to weigh-in on that plan? How many citizens were able to have a say in that alternative? As of this last Sunday, Jan. 16, 2011, there was no visible public posting about this plan. Why is that? I heard about this proposal through word-of-mouth, from someone who read an article about it in the IJ. This proposal needs to be posted at the beach, w/ directions for the public on how to respond.

| Correspondence: | The proposed plan to severely limit the amount of off-leash territory within the Fort Funston Recreational Area is, plain and simple, a terrible idea. I would imagine that most of the people who are using Fort Funston are dog owners who live in an urban environment. Lot sizes are typically 25' x 120' in San Francisco, so it is not like a pet dog will have sufficient room in a | | |

yard to run at full speed and just to be a dog. We have been going to Fort Funston for many years with the various dogs we have owned. While there may be a few dogs that have adjusting to the social situation out there, the vast majority of dogs are perfectly well-behaved off leash. If a dog cannot behave properly toward other dogs and humans, then he/she should be leashed. It doesn't mean that all of the dogs should be leashed. If people don't want to be near unleashed dogs, they should go to the 99.9% of the city that does require a leash.

The tiny off-leash area is a joke and is much, much too small given the available space out there. Dogs need to run in large open spaces and to have the room to socialize, leave a bad situation if it arises, and the proposed space will provide neither of those things. If anything, it will do the opposite.

Please leave Fort Funston the way that it is.

Thank you for listening.

Correspondence: While there may be a need to reassess the dog "zoning", the changes seem drastically skewed towards increasing on-leash restrictions and decreasing accessible areas. Of particular disappointment is the fact that many of the trails designated for on- or off-leash walking do not connect or do not create loops. It would be better to have a designated series of trails from a centralized starting point (e.g. Rodeo Beach or Donahue) that can provide owners with a variety of distances and terrain to walk their dogs. I urge you to reassess the proposed dog-friendly trails. It would be a travesty to see Fort Funston change from the dog-heaven it currently is.

Correspondence: As a dog owner, I am not fond of, nor do I support off leash areas for dogs in general, unless they are a dedicated dog park. I do however support increased National park access for dogs on leash only. Reponsible dog owners like myself should not be punished or excluded due to the lack of consideration of a few individuals.

Offleash dogs create a hazard for wildlife, hikers, bike enthusiasts, and other dog owners. While some owners may argue that thier dog is "well behaved", and causes no problems, that is entirely subjective. What is well behaved to one may appear out of control to others. Additionally, dogs off leash create problems for on leash dogs, as the dog on the leash may feel at a disadvantage, and become aggressive, which leaves the poor leash holding dog owner in a position to try and not only control thier dog, but the dog that is off leash as well.

In short, allow on leash access, increase the areas open to reponsible dog owners, and eliminate off leash access altogether. Enforce the law with fines, and generate some much needed revenue for the park system.

Correspondence: Access to beautiful beaches, parks and other outdoor spaces is a huge part of what makes living in the Bay Area so great. There are thousands and thousands of dogs living within Bay Area homes - in fact some statistics show that there are more dogs than children in San Francisco - and being able to share recreation with our dogs in these great outdoor spaces is both a

joy and a necessity for both the dogs and their owners. I understand that not all dog owners are as responsible as we'd like, but the vast majority of people understand the importance of responsible dog ownership and make sure that their dogs behave in an appropriate and safe (for everyone) manner while in public places. On-leash walks are okay in a pinch, but do not allow dogs to run and play and get real exercise. If anything, we need more places where we can let our dogs off-leash, under our supervision of course.

Taking away our access to leash-free recreation areas will greatly impact the quality of life of many, many residents (and their dogs) and I hope you seriously consider the bigger repercussions of this plan before implementing it.

Correspondence: Recently I decided to join and support the NPS through membership, but am very surprised and disappointed at the proposal to limit dog walking if not outright ban dog walking in certain areas. We live in Marin County and this is an extremely dog friendly area and is one of the best for families with dogs. We all believe in protecting wildlife but we also believe in protecting existing rights to dog walking. If other wildlife truly need protection, please do so in the least restrictive way regards to dog walking. If dog walking becomes terribly restrictive, then the pendulum will have swung too far the opposite way and will impact may family dogs and families themselves by not having places to dog walk which is completely unacceptable. In fact, more places should be open to responsible dog walking. We have a 4 month old dog that we have been taking to classes at the Marin Humane Society for obedience and will certainly have a dog under voice control and encourage that be a requirement, but will not support bans and greater restrictions. I know we feel as strongly as the majority here in Marin.

Correspondence: I am a San Francisco parent with kindergarten aged twins.

I am in favor of the proposed changes. There are many parts of GGNRA that we simply cannot use because they are overrun with off leash dogs. One of my kids is very fearful of dogs. Everywhere we go, we find that dogs are running up to us. As my daughter cowers in fear, the dog owner usually says something like "oh, he's very friendly." That doesn't matter, my daughter should have the benefit of using our public parks without fear of having her

personal space intruded upon by "friendly" dogs.

We can't even go to Chrissy Field, Ocean Beach, Baker Beach, etc. because of the off leash dogs. One time we tried the beach at Chrissy Field only to be overrun by dogs. As I carried my crying child away, one dog owner, said "don't come to this beach if you don't like dogs." I like dogs fine, I even used to have a dog, but this really has to stop. Give the dogs a safe enclosed area of their own to run off leash. They shouldn't be allowed off leash everywhere.

Thanks.

| Correspondence: | I applaud your efforts! I am not a dog owner, but appreciate responsible ownership. | | |
| | I approve of increased restrictions, especially in wildlife sensitive or heavy use areas. Having lived near Fort Mason for a couple of years, I am in favor of Alternative C - ROLAs. There are quite a few dog owners in the area who want to walk to an area for their dog, and I feel like the ROLAs would be appropriate. This would reduce the tendency to violate off-leash restrictions on the Great Meadow. If there are no ROLAs, I feel that people will be more inclined to ignore the rules unless there is heavy enforcement. | | |

Correspondence: Please keep the parks open and accessible to dogs and people who and care for them. So little of the city has space for dogs as it is, to further limit the spaces available for dogs to run and play would be a tragic loss of my rights as a dog owner and citizen of the county and state. Correspondence: As a long time resident of San Francisco as well as a dog owner for many years one of the things I love about living here is that despite being the resident of a city I still have the ability to take my dog out for real exercise within a few minutes walk or drive. This city is unique in that you never feel cut off from water, green or areas of outdoor activity. Many people--myself included--continue to live here in spite of the expense because these resources are available to us and our pets.

As the owner of a large dog who lives in the city I, like many, do not have a yard for the dog to get adequate exercise and no matter how many hours I walk him the amount of exercise he can get on leash is not enough.

I think it would be wise to consider the demographic that exists in San Francisco--many people who start families opt to move to the North Bay, East Bay , etc., leaving a large number of active, single or couples without kids, many of whom consider their dogs their children. This is the same demographic that spends a great deal of money going out to dinner, shopping and otherwise bringing much needed cash flow into the local economy.

In fairness, I think that irresponsible dog owners should be penalized--this includes those who don't clean up after their dogs, those with dogs not under their control and especially those with aggressive dogs. Aggressive dogs are not appropriate for off leash areas under any circumstances and those owners who put others at risk deserve harsh penalties. The suggestion of having a few small areas for off leash play is a recipe for disaster--the inevitable outcome is an overcrowded area with a bunch of hyped up dogs and not enough space...not a good situation for anyone.

I take my dog to Chrissy Field almost every day. He runs on the sand, swims and plays with other dogs. We also go to Ft. Funston on weekends. Without the ability to conveniently take my dog out I would seriously reconsider paying the excessively high costs of living in the city--if I were to need to drive over a bridge simply to let my dog play what would be the point??

I would strongly request that this plan be reconsidered. There are better alternatives that will allow non-dog people (because in reality that's really what this is about) to enjoy the park without feeling encroached upon.

Correspondence: I oppose the draft plan submitted by the GGNRA on the basis of the restrictions placed on dog owners visiting Chrissy Field. In the current plan, dogs will not be allowed off-leash along the best beach areas at Chrissy Field. I have two labs who love to fetch their balls and romp in the water. They get fabulous exercise at Chrissy Field, in part because they are so excited to be there and to run in the waves. The slope of the beach is perfect for the dogs, who can chase each other and frolic in the waves without the worry of a steep drop-off or dangerous waves.

We only visit Chrissy Field in the morning. At that time of day, unless it is a particularly warm day, the dogs and dog owners vastly outnumber sunbathers. Even so, I walk my dogs on their leashes down to the water, take them off their leashes when we have reached the water, and put them back on their leashes to travel back through the sandy area to the parking lot. We pick up after our dogs, make sure they do not enter any protected areas, and confine them to the shoreline to alleviate any concerns of sunbathers.

If it is determined that it is necessary to impose restrictions at Chrissy Field, I believe that a far better approach would be to confine off-leash access to certain times of day. For example, if dog owners had access to the beach from 8-11 am in the winter and from 7-10 am in the summer, and possibly for another hour at an appropriate evening time, everyone's needs could be met.

Thank you for your consideration of my comments.

Very truly yours,

Marta Cervantes

Correspondence: With off-leash areas dwindling everywhere, I have to come all the way from Oakland for beach access and good walking paths for my dog and I both to exercise. I am distressed to see it threatened, and for no good reason. The more we are forced to keep dogs indoors with nowhere to run, the worse their manners and social skills will be, leading to fewer and fewer pet dogs. Perhaps that's your intent (PETA, anyone?).

Dogs need to exercise, and for that they need room to run, and room to keep appropriate social distance from other dogs who show up. The smaller and more cramped it all is, the less useful and healthful it will be. Keep the fields open, and honor your many dog-owning residents near and far.

Correspondence: 1. Muir Beach: I prefer Alternative A. I have been using this beach for years to recreate with my dog and I see no problem with the current practice of voice control on the beach. I have never witnessed conflict between dog-owners and other users. I have never seen aggressive dogs or poorly controlled dogs. The beach is clean and owners clean up after their dogs.

"B" and "C" look identical to me. Is there a difference?

2. Rodeo Beach: I prefer Alternative A. The trouble with the ROLA

"preferred" option is that a few non-compliant individuals could ruin it for the rest of us. Management could decide to close the beach to dogs at any time due to non-compliance. Why let a few bad eggs ruin it for the rest of us? Instead, enforce the rules of voice control and punish only the wrongdoers.

3. Marin Headlands Trails: I prefer Alternative A. It is the only option that allows dogs on the Coastal Trail/Wolf Ridge/Miwok loop. There is no other alternative that allows for a loop trail experience of moderate length (about 4 miles). All other trail options, whether voice control or leash options, offer only shorter loops (.75 miles around the lagoon) or trails that require doubling back to approach the 4 mile desired length. The trouble with Headlands trails, in general, is that there aren't enough loop trails of moderate length. This is the only hike in the area that fits that bill. I would love to be able to continue hiking it with my dog.

"B" and "D" look identical to me. Is there a difference?

Thank you for the opportunity to comment.

Correspondence: My female shepherd-lab is 15 (I'm happy to report) and she has been my companion for walks at Baker Beach, Fort Funston, Chrissy Field, and Stern Grove for all of those years. I raised my three children in the city, and two of the three have also acquired dogs as companion animals now that they've reached adulthood; they also use these same off-leash areas, and we often enjoy walks together with our dogs and their children, as a family. I am an attorney, and would like to share a legal principle that I think applies to the alternatives proposed in the GGNRA Draft Dog Management Plan: Equitable estoppel. This legal doctrine serves to "estop" someone from making a legal argument or taking an action that affects another's rights when four elements are present. In this situation, I believe that the GGNRA is estopped from radically restricting off-leash access by residents of the affected areas and their companion canines because these elements apply, as follows: (1) the party to be estopped (in this case, the GGNRA) was apprised of the fact that dog ownership has been growing exponentially in all of the areas affected by this proposal; (2) the GGNRA intended that the liberal off-leash policy be acted upon, or acted so that the parties asserting the estoppel (in this case the dog owners) had a right to believe it was so intended; (3) the dog owners were ignorant of the true state of facts, that being that the off-leash area could be radically restricted; and (4) the dog owners relied upon the conduct of the GGNRA to their detriment. I don't

believe it is an exaggeration to say that 10s of 1000s of people in the affected counties, including me and my family members, have relied to our detriment on the amount of off-leash area available to us when we made the decision to acquire a companion dog. Many were ignorant of the fact that the GGNRA could effect the drastic curtailment of off-leash dog park area proposed here and, if the most restrictive alternative is adopted, will face a bleak reality. If the most restrictive alternative is adopted by the GGNRA, there will be severe, really unimaginable, overcrowding in the remaining off-leash areas (for example, Stern Grove). This is what causes problems -- too many dogs in too little space. I am a responsible dog owner. Ninety-nine percent of the dog owners I encounter on my daily off-leash walks are equally responsible. The only problems I see are with dogs who have not been spayed or neutered. Perhaps a less restrictive alternative would be to require that all intact dogs be on leash on GGNRA property. As a 60-year-old woman who relies on my daily off-leash walks as the centerpiece of my physical and mental health regime, I'm imploring you to retain enough off-leash, voice control area so that I, and the 10s of 1000s of other responsible dog owners in the affected areas, can continue to safeguard their own health and the health of their dogs with off-leash walks of sufficient length so that those health benefits can continue to be accessed. Despite severe arthritis in my elderly dog, and my own mild arthritis, both of us are active and healthy, primarily because we can walk on dirt or grass, rather than concrete, for a mile or two each day. Overcrowding in off-leash areas will effectively exclude older dogs like mine who cannot see or hear well, and therefore will, quite simply, be knocked down and quite possibly injured by the younger, more active dogs. My dog likes to sniff and explore. I like to keep up a steady, rapid pace so that I derive full health benefits from my walk. My needs and that of my dog can only be mutually met if we are not joined by a leash. Not to mention our social needs. My dog is running freely with another dog, getting the vigorous exercise she requires, while I am visiting with the dog owner. Many many residents of the affected areas, like me, derive the majority of their social contact from the dog park. Human connections are made there that benefit the community as a whole. Dog connections are made there that provide the essential socialization that ensures that the dog will function well in both human and dog communities. Leashes interfere with these connections, plainly and simply. Please...please, leave us the off-leash area we require to be happy and healthy.

Correspondence: I would like to see statistics of dog attacks in these areas, because my perception is that such issues are very rare, and we cannot legislate based on fear alone.

Even if there are official public safety data to sustain the theory that unleashed dogs present a constant danger to general population, I would like to see a proposal that offers alternatives and some level of compromise. Maybe some days of the week days could be with leash, some without. Or maybe we could split the areas, 1/2 on leash, 1/2 without leash...

It makes me very sad to imagine all dogs & dog owners condemned to lack of exercise and happiness...

Correspondence: Hello, I would like to add to your list of open areas where dogs should not be allowed to be off-leash. I'm talking about the beach at San Quentin. It is a very small beach and there are too many people bringing dogs to this beach where families and small children come to enjoy their day. My small dog has been attacked 5 times from dogs at this beach. I live here. Its not fair to me or to other small dogs that tend to be mistaken for a cat. I have seen a number of dog walkers bring up to 5 dogs on this beach. They don't pick up after their dogs. The beach is left filled with dog poop almost every day. I worry about little kids being exposed to poop. Most of the people that come down to the beach like to swim. I have seen dogs pee and poop right in the water next to small children. Its just not safe for people and dogs to mix together at this beach. Please consider making it mandatory for people who want to bring their dogs must keep them on leash at our small beach. Its just too small and too dangerous for dogs to be off-leash at our beach.

Thank you for your consideration

Correspondence: I am a frequent visitor to Crissy Field and Fort Funston as well as other GGNRA areas. I visit these places because of the restrictions in Sonoma County. There is only one private beach near me (Dillon Beach in Marin) that I can take a dog off leash. Dog walkers are also hikers, and we need places to walk and hike our dog off leash. Small dog parks are fine for small dogs perhaps, but I like to hike with my dog. So many places are already off limits to dogs such as all California state parks. The majority of dog-owners are responsible and clean up after their dogs. Some dogs do disturb wildlife, but in all my years of hiking with my dog, I've never observed any dog attacking birds. We can all share in the parks. Let's keep our off-leash areas!

Correspondence: As a resident of Muir Beach, I strongly endorse Alternative A (voice control for dogs). I also strongly endorse Alternative A for Marin Headlands Trails.

As part of your analysis, please understand the Muir Beach is a neighborhood with close communal ties. It is also a community with responsible dog-owners who very much respect and appreciate the surrounding natural beauty. As such, banning or restricting dogs from Muir Beach and the surrounding areas would have a harmful impact on the social ties of this community. Further, I have discussed these proposals with several environmental consultants. They agree that additional dog restrictions or bans would not significantly reduce the environmental impact....so long as dog-owners abide by the signs that indicate sensitive areas. As a daily beach-visitor, I can attest that dog-owners are overwhelmingly compliant and respectful?and they do abide by these signs. There is no need to implement new laws as self-policing as well as current

law enforcements are more than adequate deterrents.

Thank you, Brian

Correspondence: To whom it may concern, regarding the Draft Dog Management plan for the Golden Gate National Recreation Areas:

My dog and I have visited Fort Funston an average of two or three times per week for the last five years, while we have been residents of the Merced Heights neighborhood. As I have walked my dog literally over 1,000 miles on that beach, off-leash and under voice control, and as I continue to be a regular user of the recreation area, I hope that my comments will be given due consideration.

I appreciate the need for review of dog policy in our parks. Environmental protection and sustainability are crucial considerations, as is human safety. I deeply hope that the review board is able to institute new regulations that are beneficial to the preservation of the environments, while also not impinging on residents' ability to walk dogs off-leash.

It is critically important to provide large spaces in which residents can walk dogs off-leash. Most breeds of dogs (especially medium or large-sized dogs) are difficult or impossible to adequately exercise on-leash. Not all dog owners are able to run long distances with their dogs, including the elderly and disabled. Those people should still have a right to own dogs, and to take those dogs to places where they can run and play freely. San Francisco is a compact city where many residents have little or no backyard space of their own, and most private parks and athletic fields don't allow dogs, or are on-leash only. This is why it is so important to continue to dedicate a portion of

our public recreation space to dog owners.

Dogs that are inadequately exercised develop behavioral problems such as barking, digging under fences, and biting, as ways to burn off energy and stave off boredom. Dogs that are well-exercised are happy and well-behaved. I fully believe that this is why the frequency of bad incidents related to dog behavior at Fort Funston is extremely low: dogs who visit Fort Funston regularly are healthy, happy dogs. In five years of very regular visits to Fort Funston, I have never witnessed a violent incident between dogs. The vast majority of dog owners I see there either exercise responsible voice control, or keep their dogs on-leash.

Dog walking is also valuable exercise for people. In this day and age where obesity is epidemic, one of the most important services our local parks can provide is an incentive for people to get out and walk. This is why I think it would be tragic to limit the voice control portion of Fort Funston and other recreation areas to small spaces. Walking their dogs gives people a reason to get out of the house and get some exercise. It is a sad idea to take that incentive away, or to limit dog-walking to a small fenced area where there is no room for people to walk.

I also strongly oppose the limiting of voice-control areas at local parks other than Fort Funston, because reducing off-leash access at one place will only over-crowd the remaining options, leading to more rapid environmental wear-and-tear. If anything, we should expand the amount of space available for voice-control dog walking, thereby spreading out the environmental impact.

A quick glance at all local recreation areas and nature preserves makes it clear that most outdoor areas disallow dogs fully or are on-leash only. There are ample spaces available for non-dog-owners to enjoy. Dog owners have few choices already, and I sincerely hope that the new policy will not limit them even further.

The fencing and signage for habitat restoration areas at Fort Funston is inadequate. The fences are broken and buried in many places, and they are not dog-proof fences in the first place. People disregard the boundaries because the boundaries aren't clear. It does not seem to me that it would be all that difficult or expensive to build and maintain adequate fencing and signage in the parts of the park that are being reserved for habitat restoration or breeding of sensitive species. I would strongly support the allocation of park resources to determining and maintaining these boundaries.

I would also support limitations on the number of dogs that can be walked at a time by a single person. Professional dog walkers are pervasive during weekday hours at Fort Funston. While most of them are good at keeping

track of their dogs, I often see that it is hard for one person to keep adequate track of the waste produced by 10 or 15 dogs at once. Their environmental impact is also obviously disproportionately large, as compared to residents walking their own dogs. Since professional dog walkers are using the recreation area as a key component of earning their livelihood, it makes sense to me that they should pay a reasonable fee for that use, and that there should be permits required for walking more than a few dogs at a time.

Personally, I would be willing to pay an annual membership fee in exchange for the right to walk my dog under voice control at the recreation area. It's a hugely important part of my life. It is my dog's favorite thing to do, and the several miles we walk there two or more times per week are an important part of my weekly exercise regimen. Fort Funston helps keep me and my pet healthy, along with the hundreds of other dogs and dog owners who walk there on any given day. Please do not take that away from us.

Plan A for Fort Funston, which preserves the way that the space is used now, is the only alternative that is viable. Additionally, please note that the current and already large volume of traffic supported by Fort Funston would only increase if voice-control access was restricted at other areas. Therefore I am asking you to preserve voice-control access that exists now in all areas relevant to the Draft Plan, and to consider expanding access rather than restricting it. I also urge you to build and maintain adequate fencing and signage for restricted or habitat-restoration areas. Finally, I support the implementation of reasonable permits or fees, especially for professional dog walkers, if that is what is necessary to maintain voice-control dog walking access to the parks.

Sincerely,

Robin Gold

| Correspondence: | Having lived in San Francisco, visited the areas covered and having been a dog owner in some of those years and now recognizing the need to protect the environment of the parks, I clearly see the need for control of park land for future generations. I support the uniform adoption of Plan D, leash control for individual dog owners and no use for commercial dog walkers. Individuals must take responsibility for their dogs and the message must be clear, enforceable and respected. I did not read any mention of enclosed dog parks, but I do know that these are used in Sacramento and have served pets and people very well. Perhaps pet owners could organize to explore | | |

possibilities for having enclosed dog parks. For opportunities to enjoy the natural beauty of these areas with native plants, and creatures, young families, seniors and handicapped persons need safe access. Dogs on leash make it possible for pet owners to enjoy the same privileges. Golden Gate Recreation and the National Park Service needs to protect and plan for the benefit and safety of all users. Thank you for doing that job.

Correspondence: To whom it may concern: this draft is a complete load of garbage. You want to say it's about nature and the environment but, it's not. It's about uptight conservationists who don't like dogs. 99% of the parkland in this country is not dog friendly. The same goes for San Francisco. Don't try and tell us that the environmental problems at Fort Funston are a result of dogs and not the result of active bombs buried in the ground, military war construction or that giant pipe that's pumping sewage into the ocean. Please.

People who don't like dogs, which is what this is about, are free to go wherever they want in this city. You want to chastise dog lovers, and owners like myself, my wife and my friends by saying "hey, every other national park doesn't allow dogs so be grateful for what you have?" Well first, as someone who has an annual parks pass and has been to every National Park in this country, let me say, screw you! I love our parks and I hope to keep them pristine. Part of that love is a love for animals. I have adopted two dogs from the San Francisco SPCA. As someone who takes it upon myself to remove some of the burden of unwanted animals off of the city taxpayers, I would like to have somewhere to take those dogs and let them run around. Further, no other city in the country is as effected by the title "National Park" than San Francisco. You're basically saying that the majority of this city's parkland is subject to the same stringent rules and regulations as an isolated place like Denali or Death Valley. Again, give me,

give us, a break!

Do you know how many of the rescued and rehabilitated dogs from Michael Vick's dogfighting ring are in this city? Many of them. Shouldn't they have a place to go?

My family and I live in this city for a lot of reasons but, one of them is the dog friendliness. I honestly have to say that I will reconsider living here should this pass. This is solely about whining special interest groups and dog-hating morons who want the world to revolve around their inability to handle variety in the city.

I'm sorely disappointed and disgusted in this place and in the parks departments ridiculous agenda. I hope that this will not pass.

Sincerely,

Justin Jennings San Francisco Resident Dog Lover Dog Owner

Correspondence Type: Web Form

Correspondence: San Francisco has always been one of the most dog-friendly cities in the country. And having established dog-friendly policies, behaviors and customs, it is no surprise that many people living in this city have dogs. We have chosen to have dogs not only because it is our right in our pursuit to happiness, but because we live in a city that is, and has always been friendly and accommodating to dogs. We are committed to San Francisco and to our dogs and consider them members of our families.

That being said, having and caring for a dog in a city where most people do not have yards and live in small apartments is hard and very big commitment. It is a labor of love and sacrifice much of the time. It has been established and accepted for years that dogs are allowed at the currently designated state parks in the city. Essentially, this is the backyard that we all share. Taking dog areas and off the leash areas away now is like saying private boats are no longer allowed in the bay because a few of them are leaking oil and running into seals. Yes, those things are bad, but they are not the majority of boats who enjoy the bay everyday. People have chosen this city and built their lives around the values and choices in lifestyle it believes in and upholds. Taking the parks away from dog owners and dogs is essentially putting almost every dog in the city in a kennel.

I do acknowledge and agree that there are people that abuse the GGNP's dog

friendly policies. Namely, the "professional dog walkers" that bring 7-10 dogs to the park at a time in their small trucks several times a day. There is no way that one person can control that many dogs off the leash or even on sometimes. It is also these dog walkers that do not pick up their dogs waste. I have told many dog walkers that one of their dogs has defecated here or there, and most always they say they "did not see it" some just flat out ignore me. This is really unacceptable because is their JOB to see it and pick it up. It is what they are getting PAID to do. If they can't see that one of their dogs has defecated, even once, then they have too many dogs with them. There are also regular people who feel entitled to leave their dogs feces on the ground. These are the people that are ruining the enjoyment of the park for others including other dog owners. The majority of the people that use these parks and bring their dogs here, love these parks and keep these parks clean. I see dog owners that go along picking up other peoples trash along the beach as they walk their dogs!

I agree these problematic dog issues need to be stopped, but I propose that instead of banning all dogs or leashing dogs in parks, under the guise of an "environmental issue", when dogs have been allowed in these parks for years, we deal with the real problem of the bad dog owners and professional dog walkers.

Nobody (even those of us that have and love dogs)wants dogs at the park that are out of control, dig huge holes in the sand, defecate and have it not picked up, or run into others and disturb others right to enjoy the parks. These "bad" dogs are the product of and the responsibility of bad owners. These dog owners are the ones that should be punished. They give everyone else that treats these parks with respect and like their own back yard a bad rap. It's completely unfair and unjust to take away the rights of all because of a few who abuse their rights.

If the city imposed a maximum dog per person rule in parks and a very strict and expensive fine for not cleaning up dog waste, I believe this would change many of the issues that led to this proposed plan. Let's ticket someone \$100 for not picking up their dogs waste. Let's ticket them \$500 for a second offense. Let's ticket dog walkers \$1000 for bringing more than 3 dogs to the parks. Let's ticket dogs that are not licensed with the city.

For example, if the city imposed a fine of \$500 for leaving dog feces on the ground in a national park, a ranger could probably give out 50 tickets a day. That's \$25,000 A DAY. More than enough to cover the salary of someone appointed to oversee and fine bad dog owners.

I am fine with all these tickets because I am not going to get a ticket. I don't do these things, nor does the majority of San Francisco dog owners. Charge huge fines for bad owners because the majority of us think of these parks as

our backyards too and we grew up in them, we take our families to them (including our dogs) and we keep them the way we keep our homes. We respect the rights of others and keep our children and dogs under control. We respect the environment and other peoples right to enjoy the park and to walk around without looking at or stepping in dog feces. No one likes it. In fact we are the people that come with extra poop bags from home to restock the baggie areas.

We all know that the streets in San Francisco are crowded with cars and pedestrians and bikers. And we all know there are bad drivers on the streets. These bad drivers are dangerous and disrespectful to pedestrians as well as other drivers. What happens is that these drivers get tickets and punished AND the city makes money from these fines. We don't stop everyone else from driving around because some bad drivers hit pedestrians, pollute the air with bad exhaust, damage city property, double park during rush hour or hit other peoples cars and leave the scene.

This pendulum approach to problems is not working. We don't need to go from one extreme to the opposite fix issues at hand. This mentality has not fixed things in the past and it will not fix the current problems in the parks. Many people in the city have dogs. Wealthy people, poor people and even homeless people. Dogs have always been part of this city. Dogs need a place to run and play and interact. Taking away the parks or leashing dogs is not a solution, because it creates a new problem, dogs caged up in small apartments, on city streets or confined to small areas of city parks where the sod quickly become muddy and disgusting due to overcrowding too many dogs in too small an area.

Lastly, people who understand dogs, know many leashed dogs act completely different off leash. Leashes are not natural for dogs and create an environment in which a dog may feel threatened because they are restrained and cannot behave like dogs instinctively do with each other. The best thing someone can do if a dog is becoming aggressive with another dog while on the leash is drop the leash. This changes the entire dynamic and does not result in a dog fight, it results in a "conversation" between the dogs and everyone can then go on their way. Off the leash, dogs can interact, socialize, exercise in a natural way.

I understand and support dogs being leashed on the streets and public places for the safety of everyone including the dogs. However, I have been to Chrissy Field at least three times a week for many years and I have never witnessed a dog fight between dogs off the leash. On the contrary, I have seen dogs on leashes lunging and growling at each other walking down the streets as they pass one another everyday. Mandatory dog leashing at dog parks is not an alternative "solution" to the problem. In fact it creates more tension, more potential for aggressive behavior and deters from the

enjoyment of both dog and owner.

The solution is to target the people creating the issues such as the dog owners and walkers with too many dogs, not picking up dog waste and not training or bothering to keep their dogs under control. All people, including dog owners, would enjoy the parks more if these people were eliminated. And like traffic fines, it could even become a revenue stream for the city.

Correspondence: My wife and I support Alternative A. We've been visiting the Crissy Field east beach for many years, and find it to be one of the most spectacular urban recreation areas in the world. It's notable--and representative of San Francisco's unique character--for the diversity of its visitors and of their activities, from runners and dog walkers to kite surfers and even the occasional swimmer. The sight of dogs cavorting happily there adds substantially to this area's wonderful appeal. We've never encountered any sort of problem involving the dogs, and we urge that current practices in this regard be continued. It's not broken; we need not fix it.

Correspondence: As a dog owner, I am for a plan that clarifies where dogs are allowed, but ensuring there are places in a city--whose identity is in part to be a dog-friendly city-- where our dogs can play off-leash and be dogs. My two dogs absolutely love Crissy Field and whenever we bring them down we usually bring our baby with us too: it's a complete family outing. There is no other place north of SOMA where one can do that. In addition, why are there no hiking trails in the headlands where dogs are allowed to be off-leash?

Correspondence: As a San Francisco native and dog lover and dog owner (temporarily residing in Washington but in SF half-time) I'd like to comment on the latest plan.

In my view, the problem which requires regulation is not dogs, but dog

owners who are blind to the consequences of their failure to control their pets.

Were these animals truly under voice control, and accompanied by a caretaker who was actually taking care, there would be no need for regulation.

Unfortunately this is not the case. While one frequently hears "He won't bite," what the dog's custodian is right about is that their dog won't bite THEM. And, when a bite isn't the issue, having a dog thrust their muzzle into your crotch, or jump up, or knock down an infant (all of which I have experienced from dogs required to be under voice control) their assurances to the contrary, then government is called upon to remedy the absence of common sense on the part of the dog owner.

Fact: dogs are animals that don't always perform as expected.

Fact: dog owners are inordinately forgiving of their own transgressions of both the law and safety and freedom from canine harassment.

Fact: dogs are guiltless in this regard, since they cannot correlate expectation and appropriate behavior (one of the reasons they are so loved, but not by all).

Fact: If a human did what dogs frequently do in off-leash areas (and all too often in leash law areas where the owner thinks the laws don't apply to them) that human would be subject to arrest and prosecution.

Why, then, should we accept behavior in dogs that is inappropriate for all, in public spaces? The answer is that if we had a proficiency among dog owners as one finds in Europe, where animal custodians take their responsibility (to both dog and fellow human) much more seriously and conflict between dogs and between humans and dogs is virtually unheard of, regulation would not be needed and all could play in peace.

Since dog owner myopia is so frequent, the regulations proposed are minimal when public safety, recreation, and enjoyment of these resources are considered. These resources are meant to be SHARED, not ceded to the self interest of some. Since humans would not be tolerated who behaved as many off leash dogs do, dogs should, if need be (and need is) leashed.

But please don't blame the dogs. They're guiltless. It is the dog owner, careless when they should be careful that necessitates regulation and I admire the responsiveness of the G.G.N.R.A. to protect the recreational importance of these resources for ALL, not merely the loudest.

Correspondence: Regardless of decisions made, people will continue to allow their dogs to run off-leash in the less populated areas of the GGNRA. My concern is that when a mountain lion or coyote attacks somebody's dog that the wild animal will be seen as a nuisance and killed. (I've already watched coyotes stalk leashed dogs, so this is just a matter of time.) I'd like to see some sort of safeguard in place for the animals that belong in the parks rather than for those that only visit. Maybe posting warning signs. I don't want to see more signs, but some people don't believe that their dogs are seen as trespassers or moving snacks to local fauna. My main hope is that when somebody complains that Spot found one cat that it shouldn't have chased that the park sends flowers to the dog owner rather than a firing squad for the mountain lion.

Correspondence: My main experience is with Chrissy Field, where my wife and I often walk our 15 lb poodle mix under voice control. The majority of people with whom we interact come away with a positive experience from our dog, and we have never had a bad experience interacting with other dogs in the area.

From Appendix G, I see that there was only one report taken for dog bite/attack in Chrissy Field in all of 2008 (with no citations and no warnings). The only remaining reports from 2008 are all leash citations/warnings/reports (with the exception of one pet rescue), which leads me to believe that the Police are OVER-patrolling the area, if anything.

I certainly don't understand how these seemingly benign conditions could warrant a change in existing laws to a more restrictive leash environment. There were no complaints, so I don't understand the motivation behind a change in the Chrissy Field regulations.

If it is asserted that environmental considerations are the driving factor in a regulatory change at Chrissy Field, I would ask to see evidence that leash laws decrease the environmental impact of pets. My own experience is that negligent owners will allow their animals to harm the area through digging or through uncollected feces regardless of whether the animal is on a leash

or not.

You can count myself and my wife as generally opposed to any change in leash law regulations in and around San Francisco, and specifically opposed to a change at Chrissy Field.

Correspondence: I strongly oppose creating any restricted areas for dogs at either Chrissy Field or Fort Funston. As a dog owner, those areas are vital (and rare) spaces where my dog is free to interact with the environment. A contained space is simply not the same for a dog, or a dog owner. It would also significantly hinder my use and enjoyment of the space. In fact, although I am a frequent visitor to both parks now, I would be unlikely to go at all if the only option was a penned in space. We need places in the city that are free spaces for dogs and taking away those limited spaces is just unacceptable.

Correspondence: Running with our dog Rubicon freely on Crissy Field's East Beach is not only a true pleasure and joy, but critical to maintaining her physical and emotional well-being (as well as our own!).

By allowing Rubi to be off leash, she can get considerably more exercise than when tethered to her slower human counterparts. She is also able to socialize with other dogs of all ages and sizes easily. This also is good for her fitness and mental health. Leashes severely encumber the ability of dogs to intermingle as they get tangled, often around people legs, threatening injury to the dogs and their owners. The limitations that leashes impose will discourage the activity and socialization of dogs and our entire community, not just the dogs and their owners, will be worse off.

Off leash allowance encourages proper training and socialization of dogs. It affords greater physical and emotional health of dogs and their owners. And it therefore contributes to a better overall society.

Please support the happiness and health of our community by allowing dogs to be off leash.

Sincerely, Eliza Lochner

| Correspondence: | We are longstanding San Francisco residents with a dog in our family. Like most residents in the City of San Francisco, we do not have a lawn or yard. Our only chance to provide our dog with the exercise and activity he needs is to take him to places like Chrissy Field, where he can run off leash, play fetch and socialize with other dogs. In fact, one of our dog's favorite activities is to visit the beach at Chrissy Field, play fetch and go swimming to retrieve his ball. He can't wait to get out on the sand and in the water when we bring him down there. It is also one of our favorite activities. We are extremely responsible dog owners, as are the other dog owners down at Chrissy Field. We respect other visitors, always pick up after our dog and ensure that he does not bother anyone. We have never encountered any negative responses or feedback from other non-dog owners visiting the area. In fact, just the opposite. Most people's faces light up when they see our cute, happy, friendly black lab running along the beach. We are also very aware of how lucky we are to have a place like Chrissy Field to take our dog. Therefore, we pay particular attention to respecting the area, the environment and respecting other visitors. | | |

We are also fairly new dog owners, having just added our black lab to the family in May of 2010. That said, we have both lived in San Francisco for over 15 years and were frequent and regular users of the Chrissy Field and the Presidio long before having a dog. We even lived in the Presidio for 3 years. Neither of us ever encountered any problems with dogs during our years of usage and, in fact, always found the dogs and their owners to be extremely respectful. Not only that, but the presence of dogs and their games and happiness adds an element that would be sorely missing if dogs weren't allowed or were severely restricted in their areas of use and play.

Dogs make people happy. Dogs and people have happily coexisted at Chrissy Field for decades. Taking away this idyllic place for dogs and their owners harms everyone and the community at large. It means the world to us to be able to bring our beloved Bruno down to the beach and see the joy in his face. The city and Chrissy Field would not be the same if adopted the proposed policies. Please leave Chrissy Field as it is.

Thank you,

Darcy Manning, San Francisco Resident since 1994 Mother to Bruno
Manning 10 month old Black Lab

Correspondence: Please do not take away the pleasure of Fort Funston and Chrissy Field for our dogs. My dog Odie goes with his beloved dog walker to Funston every weekday, and most weekends my husband and I take long hikes there with him. It is his second home. There is nowhere else in the world he is allowed to run free with his dog friends, and being able to do so has been crucial to socializing him. I believe that if it were not for Funston, he would not be as happy and well-socialized as he is today. Some of my most treasured memories involve taking Odie to Funston on a gorgeous weekend and walking alongside the ocean throwing a stick. It's the simple things. Please don't take that away from us.

Correspondence: I would like to support restricting dogs in GGNRA and make sure that they are on the leash ALWAYS. I work as an outdoor educator in GGNRA and I

have encountered many dog incidents in the park while I was with my students. For example, a dog peed on my students backpack and a dog ran up to my student and took sandwich out of her hand. I have also seen dog chasing wildlife and disturbing its habitat. One time a buck deer died as he was running away from the dog in the lagoon. I think it will be solved if we can make a rule to put dogs on the leash just like we used to have it as a rule here in Marin Headlands.

I like dogs but we can never be sure that all dog owners are responsible dog owners. I think it is reasonable to make this rule.

Correspondence: Even though my dog is small - she needs to run a great deal. Fort Funston is one of her favorite places to go as it is the only park where she is not scared of the other dogs and that is not full of mud or mosquitoes in the winter. She cannot get the exercise she needs on leash. Fort Funston and the other parks are already packed full of dogs - restricting the size of off leash play would make it dangerous for small dogs and people protecting them as they would be confined in the same areas that aggressive large dogs also are playing. Thank you,

Correspondence: PLEASE do not approve this plan!

San Francisco is a dog-friendly city, considering its relatively small size and high population density. It is hard enough to have a dog in any city, but this new policy will make it VERY difficult on our local dogs, who need fresh air an exercise just like we do. There is very little privately-owned green space in the city. Our parks and our beaches are our yards.

The vast majority of dog owners are respectful, law-abiding citizens who clean up after their pets and follow the rules. Please don't punish these people and their dogs by implementing a plan like this, which is directed at those who are disrespectful and irresponsible.

Lastly, you might be surprised to note that there are more dogs in San Francisco than there are young children. Please keep this in mind before you

pass this bill.

Thank you, Marshall Smith

Correspondence: As a resident of San Francisco, I am extremely concerned to read about the proposed additional restrictions limiting off-leash dogs to small areas in Fort Funston and other recreational areas. For almost all of my friends and neighbors in Noe Valley, the current regulations allowing dogs on voice command at Fort Funston is one of the few reasons we are able to still live in the city. There is extremely limited space to allow "dogs to be dogs" and run extensively throughout the city. Fort Funston is one of those few gems that allow dog owners to ensure their dogs get the type of exercise they need. Some may argue that a smaller space for off-leash dogs would be a better solution - but they are wrong. With the number of dogs that use fort funston on a daily basis (as part of the economic infrastructure of the dog-walking community), a space the size of a football field will simply not work.

Please reconsider the changes to the off-leash policy and at least allow Fort Funston as this area in the city for the thousands of dog-owners and their dogs who enjoy it ever day and on the weekends.

Correspondence: I have raised, trained and handled dogs all my life. I don't currently own a dog, but go to Ft. Funston on a daily basis to be around dogs and hike. Since I "don't have a dog in this fight", I believe I am objective and can provide some insight. As a canine enthusiast, I still respect the fact that not everybody wants to be around dogs. I also realize that very few owners (or dog walkers for that matter!) actually have voice control of their dogs. I

think the limit of 6 dogs for walkers is appropriate. Regarding the "Preferred proposal": It seems workable and reasonable. The only flaw I see is that the "no dog area" North of the access trail is often inaccessible at high tide, due to a outcrop of rock from the cliff. I don't think this is fair to people who don't want to be around roaming dogs. I would keep the "no dog area", but make the beach (to the South) between the access trail and the sewer outlet pipe an on leash area. The beach from the pipe to the sand ladder trail could ROLA. This would provide a landmark (the pipe) to define the two areas. It would also allow dogs to access the "voice control" area from the North or South. I think it provides plenty of beach for ROL. Regarding Crissy Field; I don't think it is workable to have ROLA at the water line. I think sections of beach have to be designated as I proposed for Ft. Funston.

Correspondence: The new plan will more densely pack areas increasing the already horrific danger for small dogs. PLEASE like other places in the bay area and thruout the country, PLEASE PLEASE PLEASE, reserve some off leash spaces for SMALL dogs only and have them enclosed. There is no such area in san francisco. We desperately need them. New york has them, South peninsula has them, many places have them. why not san francisco? The danger to small dogs of predatory drift from larger dogs is real. All that needs to happen is that a bee can sting a small dog or a dog can get is foot caught, and if he runs yelping or bleeds, the primitive brain of the larger dog regresses and thinks "rabbit' attacks, the other dogs join in and the little one is finished. IT is horrible. It has nothing to do with good dog or bad dog, it can happen with dogs who have played together for years. IF you guys are going to increase this danger by packing more dogs into fewer spaces, you have the moral obligation to set aside some enclosed areas for SMALL DOGS ONLY. Thank you for your consideration. Why is san francisco so very dark ages on this issue. no enclosures for small dogs only in any park anywhere. plenty of other localities have them, why not us?

Correspondence: I appreciate the hard, and thoughtful work that went into this document. I am a dog owner myself, and know how others love their dogs. In the interests not only of today's environment, but that of our children, however, I wholeheartedly support, without exception, your alternate D.

We are preserving these parks and this parkland for ourselves and our children, not for ourselves and our dogs, not for our children and their dogs. We don't choose to be born. We choose to have a dog. With that choice comes some responsibilities, the least of which is obeying the law.

I volunteer for the Park Stewardship program when I can, I spend part of almost every weekend hiking/bird+bugwatching through the parks. I love them for what they are, the wonders of the juncus plant pressing through wetlands, or the black shouldered kite hovering above some hill are sights that I want to preserve for my unborn grandchildren. The pressure of dogs on the environment make this much less likely to occur.

If dog owners were courteous, if they obeyed the on-leash signs, if they obeyed the no dog signs, then I would reconsider. But almost every time I have gone out hiking, I have found a dog off leash where it shouldn't be. Or more than one. On the Bobcat Trail. In the Crissy Field Marsh. In Kirby Cove. Tennessee Valley Beach. Lobos Creek. Off leash on Milagra Ridge. You name it, I've seen it. Just as often as not, these are big dogs! Their owners, on the few times I have pointed out that their dogs are NOT supposed to be here, or at the very least, supposed to be on leash, act as if I am violating a god-given right to own a dog, and then to permit this animal to run free, "in nature." While it's nature that it's plundering, as it disturbs a plover's nest, destroys one of the few non-argentinian ant nests still around, or digs up a ceanothus in chase of some burrowing creature, thus permitting pampas grass to take over its recent excavation (this last I cannot claim to have seen fully, but over the course of years, have suspected it!)

In short, my vote is no dogs. A natural park is a privilege that we have maintained for humans, a natural park contains certain fragile environments. The dogowners that I have seen are willing to "let it go to the dogs." As a large population of dog owners - in fact, I would say the majority of dog owners I have encountered in my 25 years walking the parks break the rules, then they should not be permitted into the parks with their dogs. I realize that this will not satisfy a sizable population who do obey the rules, and who do want to give their dog an outing where there are wonderful smells to be had. And I also realize that they are not responsible for the aforesaid scofflaws. I am sorry for them and their dogs. But this doesn't change my decision. It is a pity that their access must be reduced, but in my view, it must. I hope that you will choose option D, and that you will have the resources to enforce it.

Respectfully submitted,

Owen Brown

Correspondence: I value California native species and habitats. I do not feel that dog walkers have the right to let their dogs run uncontrolled in these areas.

Voice control is NOT control. Enclosed areas would be acceptable for off-leash dog running.

I value children and people who are either disabled or fearful of uncontrolled dogs. That is another reason dogs need to be leashed.

Perhaps some owners clean up after their dogs. Unfortunately, a lot do not; and because of those unconscious people we have to deal with contamination in scenic areas. Another reason to keep dogs on leash.

Personally, I am tired of the strident demands of the dog owners and walkers. They are but one small but too vocal group.

For all the reasons above, I completely support the GGNRA Draft Dog Management Plan.

Sincerely,

James Zimmerman

Correspondence: I am writing in response to the GGNRA Draft Dog Management Plan / Environmental Impact Statement. I own and operate a dog walking service serving clients in Southern Marin, and have done so since 2006. I frequent many of the areas in the draft, including the Homestead Valley fire road, Oakwood Valley Trail, Coastal Trail in the Marin Headlands, and Rodeo Beach South. I have completed the Trail manners class at the Marin Humane Society and am a Certified Dog Walker through DogTec. In addition, I have been working professionally with dogs and the public since 1997. Professional dog walkers provide a valuable service for Marin dog owners. Regular exercise provides a positive outlet for their pet's energy, reducing behavior issues that cause dogs to be surrendered to animal shelters, and nuisance behaviors such as barking. Dog walking companies also create jobs within Marin County. GGNRA trails are one of the few

areas in which we are permitted to walk dogs off leash (under voice control). On leash walks do not allow dogs the freedom to run and effectively burn excess energy. For the majority of our clients, an off leash walk does not meet the exercise needs they have for their dog(s). Our company policy on walking dogs on public land allows our client dogs to run and play while having the least amount of impact on trails and other GGNRA patrons. We limit our groups to 5 dogs maximum, carry leashes for all the dogs, and clean up and remove dog waste on the trail. We call our dogs over and leash them when we see anyone approaching, though the most wonderful part about GGNRA trails is that we rarely see anyone. We keep our dogs on trails where dogs under voice control are permitted, and do not allow the dogs to damage vegetation, chase wildlife, or run off the trails. Prior to participation in group walks, we screen dogs for appropriate behavior and voice control. This includes an in-home interview with the owner and dog, and several weeks of on-leash walks to evaluate behavior. This allows us only accept non-aggressive dogs that respond well to voice commands. If there is no avenue for walkers to be responsible and legally walk dogs off leash, that increases the likelihood of dog walkers using GGNRA areas illegally. Walkers who violate on-leash regulations are also more likely to ignore common courtesy guidelines such as cleaning up after their dogs and keeping dogs under voice control. Being able to walk dogs at GGNRA is a wonderful privilege that I do not want to lose. I urge the National Park Service to consider keeping the current voice control areas open and available to both commercial and recreational dog walkers. The majority of dog walkers I see in GGNRA are responsible in their use of the trails with their dogs. I would encourage better enforcement of rules for dog owners not following protocols, including issuing citations where necessary. Thank you for the opportunity to provide feedback on the GGNRA Draft Dog Management Plan / Environmental Impact Statement, it is much appreciated.

| Correspondence: | As a dog owner and tax payer of this city, I am perplexed. Our off-leash dog space is already limited to a fraction of the Bay Area's open space. Why not try increasing fines for people who violate on-leash or no-dog laws already in place before the draconian move to make off-leash dog play more difficult than it already is? Why not move to limit the number of dogs a professional dog walker can take alone if unsupervised dogs are the issue? | | |

Bay Area dogs are as much a part of the environment as birds and flora. And

further, if not exercised correctly, which means sufficient off-leash running, even the sweetest of dogs becomes noticeably more irritable and aggressive. These dogs then become more than ever a danger to each other and to people as well, in the urban settings we share. If dogs cannot exercise, you put them, their owners, their owners' families, and their neighbors at risk.

Further, social and scientific studies show the benefit of dog ownership to humans: the companionship, the bond, the exercise both dog and owner get outside, in the sunshine- no one can deny these are healthy both mentally and physically. Of all animals in the environment, dogs are the creatures who have evolved to serve and live for humans. Why do we not do all we can to protect them? They should be granted everything they need to be healthy and happy, for they make their human counter-parts the same.

We must compromise on this issue. Increase as much as you need to the fines for off-leash violations, for not cleaning up after dogs. Consider dog walker-licensing and regulation. Try these less punitive measures first, before taking steps that in the end actually punish even those who claim to hate and fear dogs. Because one of the worst thing you can do to a dog's disposition is to prohibit the animal's instinctive, very real, need to run and play.

Finally, we are tax payers and supporters of the very parks we wish to use. We are also dog owners. We are hard pressed to see how our needs are not important in this study's focus. We trust with consideration, this proposal can be made more fair.

Correspondence: I am sorry to read this proposal which even further limits places for dog owners to allow their dogs any off leash activity. I agree that in sensitive habitat areas, or at certain times of the year, breeding or nesting seasons for example, it may be necessary to restrict access or enforce use of leashes. The recreation areas we have should be available for those of us who enjoy them with our pets, as well as those without dogs.

Correspondence: Dear Parks Service,

I am greatly disturbed by the thought of many of San Francisco's beaches becoming inaccessible for off-leash activities. Dogs, just like people, need exercise to stay healthy and happy. Leash walking in a confined area is a bit like putting a dog on a gerbil wheel- not really exercise and certainly not fun for anyone.

Dogs are a wonderful counterbalance to the stresses of city life. Being able to roam freely with them on Chrissy Field, Ocean Beach, and Fort Funston is invaluable, since most of the city's parks and trails, and of course all the state parks, are closed to dogs entirely. In a time when our society is struggling with the issues of obesity, environmental destruction, and social alienation, the ability to play with your dog on these beaches encourages personal exercise, new friendships, and a raised awareness of the necessity of environmental stewardship.

I urge you to adopt Option A, a continuation of the current status of these parks and beaches, so that all of us living in this beautiful city can continue to enjoy health and happiness with our dogs.

Correspondence: Hi, I stable a horse at Miwok Livery...ride trails on a daily basis. When riding the trails especially at a trot or canter it is totally unnerving to confront a dog off leach. There is no way to anticipate what the horse or dog will do....most dog owners feel their pet will not be aggressive toward the large horse...they have no idea how my horse will react or what will happen to me being in the saddle 5 feet off the ground! I realize the trails must be shared however it should be mandotary to have all dogs on leach on ALL Trails I contribute annually to the GGRA and appreciate the ongoing work that that has taken place over the past 5 years. Thanks Dennis Fluet

Correspondence: To Whom It May Concern,

I am very disappointed in our city, as a collective community, at the thought that we would further limit our commitment to our animal family members. I grew up in Marin and am now a home owner and small business owner in SF. I have three dogs, rescues, that I have adopted. Given my busy work life, my time with my dogs at Crissy field is very meaningful. I often equate it to church. As a bike rider and avid runner, I have trained my dogs where to walk and to come when called in the event that they are anywhere near an oncoming runner or biker. Although it would be hard to detail the degree of pure bliss my dogs feel when at Crissy field I can, with no hesitation, share the pure joy that my dogs bring to those at Crissy field when we go. Some days its hard to get the entire walk in as people are so taken with my dogs and they love to watch, pet, interact..with them and at times Ive thought to have a print out of answers to the questions people love to ask me about them. My dogs do not go into protective areas, I clean after them with great care and I have never seen an orphaned dog mess. This city is about its dogs and we need to pay careful to the decisions we make to limit our communities ability to interact with them. Such a considered measure does not represent us as city. I urge you to please consider this very carefully.

Correspondence: The proposed limits on dog offleash areas at Fort Funston and Crissy Field would be extremely detrimental to dogs and their owners. I have a boxer who needs to be given large open spaces for exercise and play. She is taken by a dog walker to Fort Funston while I take her to Crissy Field. There is even a boxer meet-up once a Month at Crissy Field.

By limiting these areas to off leash, would only crowd exercise areas making the whole exercise plan an impossibility. Dogs would only get in each others path causing potential harm to all dogs.

DO NOT MAKE THE PROPOSED OFF LESH AREAS AT FORT FUNSTON AND CRISSY FIELD LIMITED IN SPACE IN ANY WAY. DOG OWNERS IN SAN FRANCISCO AND THEIR DIGS NEED MUCH BETTER THAN WHAT IS BEING PROPOSED.

Correspondence: From my perspective, the bottom line is options. People who do not prefer dogs have MANY more options of where they can enjoy activities without dogs. Living in an urban environment, I think we have to protect access to areas that historically have been open to dogs to get maximum exercise off-leash. Dogs that do not get enough exercise can cause even more disruption to people who do not prefer dogs by way of barking & being a general nuisance when they are frustrated from lack of activity.

RE: environmental concerns, as I read the document the general impact seems to be low to moderate. Can't a buffer be created in those areas instead of limiting/eliminating access all together to those areas. Most people try to be very respectful if it is clearly communicated why there is a need for protection to endangered wildlife/ecosystems. People that utilize the areas with dog access have a vested interest in protecting that access. Better communication and asking users to call on their fellow users to respect the rules (access, clean up, etc.) so as not to jeopardize use for everyone.

Bottom line it seems that the biggest concern is for people who do not prefer dogs and I think they should avoid those areas that they know there is a possibility that they might run into dogs (and that doesn't mean that people who let dogs off-leash shouldn't be responsible for their dogs being trained to obey voice commands to leave people alone and generally behave politely) and go to the MANY other places that they can enjoy the same activities where dogs are not allowed.

No way to avoid the fact that the SF Bay Area is not going to see any fewer

dogs in the future as our population continues to age, families have fewer children, and the high percentage of families that move out of the urban areas for more suburban room.

Correspondence: First, thank you for posting these documents--it allowed me to have a much greater sense of the scope of the issues and the immense difficulty involved in resolving them to the satisfaction of all the interested parties.

As a San Francisco resident since 1993 (and dog owner since 1998), I am very grateful to have so many beautiful areas to escape to for recreation and exercise with my dog. In that time I have mainly utilized Fort Funston, although I have also visited Crissy Field and Land's End/Sutro Heights Park on rare occasions. I am also aware, having had many conversations with park rangers over these years, that maintaining these areas is a difficult, expensive, and time-consuming process. So, coming up with alternatives that address the need for balance between environmental and recreational uses, and lays out the different possibilities in an easy-to-understand and-compare format, is very much appreciated.

After having read the five alternatives you have listed, I would like to state that, IMHO, alternative C seems the most feasible, flexible, and (sorry, but it's the best word I could think of) humane way to deal with the issues involved in managing the GGNRA and the diverse needs of its users. I recognize that it will be a headache to deal with each park on a case-by-case basis, as this alternative seems to dictate, but I believe that, once it has been done, it is the best way to manage the usage of the parks in a way that will satisfy the most people. (Of course, being a dog person, I'd love to vote for alternative E, but I recognize that it's not the most realistic way to protect the interests of all the park users, nor would it be financially realistic to expect the NPS to provide MORE money to maintain park resources considering the current financial situation in our country.)

At any rate, thank you again for posting this, and for allowing the public to have their say. Sincerely, HL Waterman

Correspondence: While I recognize the need to balance several factors, the proposed changes

to Crissy Field and Fort Funston are particularly objectionable in terms of the new on leash areas. These two parks are some of the last refuges in the Bay Area for dog owners have to experience the beauty of these parks, get some exercise, and allow dogs to run. I have never encountered problems with the cleanliness of the area even with free-range canines present, and all of the dog owners take great care to clean up after themselves.

Correspondence: I frequently walk Chrissy Field and also the walk paralleling the Presidio Golf Course with my Cairn Terrier. At Chrissy I and my friend who also has an even smaller dog feel that our dogs get far more exercise off leash than on leash. It is not so much for our dogs that I am requesting that you keep at least the area of the East Beach of Chrissy an off leash area, but for the sake of the larger dogs who really need to be able to run and play leash free. On the whole, owners have been wonderful about picking up after their pets and keeping badly behaved dogs on leash. I believe the walk area just before the warming hut and on out to the fort is an on leash area. Dividing Chrissy in that way is acceptable I believe. But to restrict the whole of Chrissy Field plus the other places you are planning to limit, leaves owners virtually no place where they can go to exercise their dogs adequately. Cannot we be fair to both dog owners and to non dog owners? Compromise is the key to satisfactory living conditions. Thank you for your time Ceseli Foster

Correspondence: I do not own a dog. I am a resident who enjoys running, biking and hiking in

Golden Gate park and Crissy Field. At Crissy Field's beach and greenway, it brings me happiness to see all beings - humans and dogs - able to play freely. When dogs and kids are able to release their pent-up energies by running around, they become happy, healthy, and playful. I have NEVER once felt unsafe around off-leash dogs. They are too excited exploring and romping to pay attention to me. Alternatively, I HAVE felt unsafe around human beings. A public park is a public park. If you are not going to ID potential criminals who walk onto the beach, then why restrict the most playful, obedient companion of humans - the dog? I ask the GGNRA to please not overreact, just because of a few bitter people. Allowing dogs the freedom to romp, will only result in happiness and playfulness for all.

Correspondence: I have enjoyed most of the parks mentioned both before and after the National Park Service acquired them. I have enjoyed them as a dog owner and for the long period I did not have a dog.

I can understand the Service wanting uniform regulations in all its parks. However, this park was created as an urban park unique to the system and as such retained traditional practices and uses for the urban residents surrounding the park.

With respect to the increased management cost, is removing human litter any less expensive. Also what is the ratio of dog related confrontations as opposed to human related confrontations?

Also what about the positive aspects of dogs in the park? Most dogless people I encounter in the park smile when they see my dog, some ask to pet him, and children hug him. He has enhanced their park experience, and they love his.

San Francisco is a diverse community and will reject any plan that renders park usage less diverse. And let's not forget dogs have been part of this ecosystem for over 10,000 years.

To sum up: all of the adverse effects in the report are the result of increased number of visitors to the park.

Correspondence: While I am sympathetic with the need for dogs to have room to run, I find it very unpleasant to smell or step in the 'poop' that is often left where they do. A dog that has its own place to run will choose a spot, usually, for its bathroom. Not going wherever, whenever. However, dogs do like to mark that they've been there? wherever that is and, all too often, it's where I'm walking. :(I truly think that spaces set aside for dogs to run, where owners are responsible for clean up and are the one's who are most affected, is the best solution. Obviously, that can't be every park and path. I have no problem with setting aside areas for the dogs? I'll respect their space and not intrude. I'd like the same from their owners and the dogs themselves.

Type:

Correspondence: To Whom it May Concern: I have read parts of your huge EIS and tried to understand the Executive Summary, which baffles me. I wonder if you are trying to obfuscate the real reasons for your extreme position regarding dogs. I live in Muir Beach and this has been a dog-friendly beach for many (40+) years. I have lived here for 16 years and can see the beach from my window. Most of the times I see dogs frolicking at the waters edge and swimming. They are having more fun than the people and they are far less destructive than the people also. If a dog wanders into the "new lands" area, it is the responsibility of their guardian to call them back....if that doesn't happen it is the person who is at fault since dog's can't read signs. On a nice weekend most of the playing in the creek mouth is by children who often build dams (mostly boys) across the endangered salmon habitat. After a big weekend there is also a lot of trash that I pick up as do others in my community. I never saw a dog leave trash behind, unless you are talking

about their feces and again, a responsible pet owner picks that up. There is definitely far more destructive behavior perpetrated on this area by humans than by dogs.

Muir Beach is a wonderful place to live - surrounded by open space and vast hiking trails....unfortunately we have only one trail (the coastal trail) where we can hike with our dogs and you want to take that away from us too. If I understand your position, the only place dogs would be allowed is on Pacific Way and the beach parking lot. Really, that is absurd. Muir Beach is a small beach that is dog-friendly. People who do not like dogs can go to one of the many beaches in the area that are already dog-free. Why would you want to take away the one beach left for people to recreate with their dogs. I thought Golden Gate Recreation Area was for recreating - and that means playing at the beach with your children and/or your pet. Children are far more noisy and destructive yet you wouldn't think of banning them....so why are you picking on dogs? Especially here in probably the most dog-friendly area of the country. From what I read in your EIS you are suggesting that people and their dogs go to Little Beach! This is ludicrous. The road to and from there (sunset way) is not equipped to handle any more traffic. It is basically a fire road and needs to remain that way. There is no parking and what little there is on the roadside is usually residential parking. There are no facilities at Little Beach and during the winter months the beach is pretty much unusable as the sand washes out and it becomes just another bit of rocky coastline.

I read that 99% of GGNRA land is already dog-free - that means 1% is available for people and their dogs. If this is in response to people not liking dogs I find it difficult to believe that the NPS could not let us keep the measly 1% that we have to enjoy our pets. I actually feel that this whole issue should be turned around and dogs should have more off-leash areas when there is such a minute portion of federal lands where they are welcome. What's with the bad attitude toward dogs? I hope that the NPS and the GGNRA can see the error of this plan and continue the status quo here at Muir Beach or, better yet, open more of the trails to people and their faithful companions.

Correspondence: I live very close to the beach, and run or walk on Ocean Beach at least 3 times a week. I love seeing dogs playing and running around, and appreciate how many dog owners have good voice control of their dogs, and clean up after them with great care. Although I do not own a dog myself (allergies), I enjoy having friends with dogs come visit and often take them down to the

beach for some doggy fun.

I also recognize that not everyone shares my comfort level with dogs, and that some might not be able to enjoy the beach as I do if dogs are allowed everywhere.

And I also love seeing the sweet snowy plover running with the waves. We are so fortunate to have a range of amazing and beautiful wildlife so nearby. On days when I don't want to leave my cozy house to get some exercise I remind myself that I might get to see plover or some of my other favorite shorebirds, which gets me out and down to the water.

I think the park service has shown great sensitivity to the many competing needs and interests at Ocean Beach. The preferred alternative plan allowing dogs off leash on the northern end of the park, and then allowing for an area with no dogs further south appears to strike a good balance. Although it might mean that people who live further south would have to walk or drive their dogs the short hop up to the northern parking lot they would retain a great nearby place to play and enjoy, while allowing for some much needed dog free zones.

At the moment, although there are intended to be leash-only areas I very rarely see any dogs on leash at ocean beach. I have even seen dog owners encouraging their dogs to chase the birds to get more exercise, not realizing how vulnerable the snowy plover are. I have also seen disagreements erupt between dog owners and beach visitors who are uncomfortable with naturally friendly and curious dogs. Perhaps if there are clearly designated dog zones and dog-free zones some of these tensions can be more easily resolved.

Correspondence: I understand the need to balance and protect natural resources- but a balance does not appear when there are few to zero areas for which dogs can run off-leash. Dog owners and dog walkers rely on these areas to ensure the sanity and safety of our dogs. If these resources become only for humans- our city parks with small dog-runs will be overburdened with dogs who are not properly exercised. Without exercise, like humans, dogs will not only be mentally challenged but curbing their natural instincts for exercise will make for complicated gatherings at dogs parks already overrun and burdened with human excrement and trash. I am speaking of the two parks (Duboce and Dolores) near my house where it is not safe for my dog to play with other dogs. Appropriate percentages of off-leash spaces helps the communities in the cities and other humans- there are already extremely large areas of the city and surroundings dedicated to only humans-

cramming dogs into even smaller spaces because people want 100% all areas for people only is not sustainable or reasonable.

Correspondence: I am strongly against eliminating or further limiting access to GGNRA spaces for responsible dog owners and their pets. I pay taxes to use the areas just as others do, I abide by the laws set forth, my dog is well trained and under my full command at all times, I pick up after my dog. In contrast, parents that take their children to the GGNRA; I have witnessed many instances in which those people or their children do not abide by the laws--much less common courtesy to others who use the areas. I have personally witnessed dirty plastic diapers dumped on the ground or merely tossed into trash cans, infecting all open surfaces with fecal bacterial contamination where my dog's feces are completely picked up, securely bagged and disposed of properly immediately. On visits to the park, I see mostly candy wrappers and other trash from children and adults who do not bother to respectfully pick up after themselves. Most disturbingly, I have witnessed many instances in which careless adults have put children and other adults in danger by not supervising them properly. Put simply, if you expect me to leash my dog, the same should be asked of parents with children too young or knowledgeable or willing to behave appropriately. I am outraged that the GGNRA would consider putting me in a situation in which I would subsidize the recreation of only a segment of the population--in other words, financially support special interest populations. The right to the enjoyment

of public property belongs to everyone, including responsible dog owners. The behavior of a few "bad apples"--in this case dog owners, who do not act responsibly--should not dictate the behavior and limit the rights of others. A more balanced approach would be to greatly increase the negative consequences (e.g hefty fines, impound property, possible incarceration) to punish those who do not abide by the laws and to deter others who might consider breaking the laws.

If you are going to eliminate GGNRA access for dogs then you should also eliminate access for children because they too are capable of taking full financial or social responsibility for their actions.

Finally, the GGNRA eliminating or further restricting access for supervised, well-mannered dogs is short-sided. In a city with fewer and fewer children and a growing population of upwardly mobile childless dog owners, the loss of revenue from responsible dog owners would be more significant than the GGNRA is either willing to consider or able to estimate. The GGNRA cannot afford to alienate the population that delivers the greatest amount of financial and other forms of support.

I urge the GGNRA to rethink the current plan.

Correspondence: To whom it may concern, We are dog owners, tax payers, and home owners. This draft would restrict the off leash areas at Ft Funston and Crissy Field. Considering the hundreds of dogs that are at Ft. Funston or Crissy Field at any given moment during the day, this would be a disaster. Since I live in the Duboce Triangle, I know from first hand experience what limiting all dogs to a small space can do. Duboce Park has had a restricted area for off leash dogs for 2 years now and every time i take my dog there she gets covered in mud and becomes sick afterwards . I go to Ft. Funston and Crissy Field because of the wide open spaces and freedoms it affords allowing dogs to be dogs. My dog is never sick after playing at Ft. Funston or Crissy Field. My family has accepted the contained dog play areas in our neighborhood but please don't eliminate the privilege of largely unrestricted off leash play areas at Ft Funston or Crissy Field. I believe exercise is vital to healthy city dog living in San Francisco and having an off leash space such as Ft. Funston is critical to ensuring this.

Respectfully submitted, Barbara Maury Bonnie Johnson

Correspondence: Many of the objectives of the proposed dog rules would be BEST achieved by simply closing the (all) park(s). That is, allowing no one to use the park(s) would avoid "conflict." Ditto for many of the other objectives. I own a small dog, and frankly would like many of the human users of most National Parks I've been to (with or without dog(s)) to be "on leash" or "prohibited," NOT their dog(s). [Indeed, I've some incidental experience to possibly prove that (a) owners, not dogs, should be licensed and (b) that people with dogs are more sensitive to "the environment" than the average visitor, and "for sure," tour bus folk.] I've no clue as to WHY you need to go thru this drill at this time (gotta be better things to occupy your time), but hopefully it isn't just a response to some squeaky wheels.

It seems that a win, win for you might be to "do" you "thing" within a few hundred yards of parking lots and let, indeed, encourage MORE "off leash" dog use "far away" from the "tourist" (bus) visitation points.

In any event, PLEASE log in a very, very, very, strong objection to MORE

Correspondence: My previous statement was incomplete; please strike it from your record and replace it with the following statement.

I am strongly against eliminating or further limiting access to GGNRA spaces for responsible dog owners and their pets. I pay taxes to use the areas just as others do, I abide by the laws set forth, my dog is well trained and under my full command at all times, and I pick up after my dog. In contrast, I've observed parents with their children visiting the GGNRA and I've witnessed many instances in which those people or their children did not abide by the laws--much less show common courtesy to others who use the area. I have personally witnessed dirty plastic diapers dumped on the ground or merely tossed into trash cans, infecting all open surfaces with fecal bacterial contamination whereas my dog's feces are completely picked up, securely bagged and disposed of properly immediately. On visits to the park, I see mostly candy wrappers and other trash from children and adults who do not bother to respectfully pick up after themselves. Most disturbingly, I have witnessed many instances in which careless adults have put children and other adults in danger by not supervising children properly. Put simply, if you expect me to leash my dog, the same should be asked of

parents with children too young, knowledgeable or willing to behave appropriately. I am outraged that the GGNRA would consider putting me in a situation in which I would subsidize the recreation of only a segment of the population--in other words, financially support special interest populations. The right to the enjoyment of public property belongs to everyone, including responsible dog owners. The behavior of a few "bad apples"--in this case dog owners, who do not act responsibly--should not dictate national policy nor limit the rights of others. A more balanced approach would be to greatly increase the negative consequences (e.g hefty fines, impound property, possible incarceration) to punish all who do not abide by the laws and to deter others who might consider breaking the laws. If you are going to eliminate GGNRA access for dogs then you should also eliminate access for children because they too are incapable of taking full financial or social responsibility for their actions. Correspondence: Greetings,

The document is fine and a good start. In my opinion leashes required rules should be extended to all public parks areas without exception.

My reasoning is that the needs of guide dog users are being ignored entirely. With dogs roaming freely, the guide dog team can be endangered. Dogs like to test each other. The average unleashed dog has not been trained in the discipline it takes to be responsibly unleashed unless that dog is in a fenced dog park.

An unleashed dog rushing the guide dog team can make the guide dog skittish and afraid. That puts the guide dog team at risk. If the guide dog is more worried about being rushed by another dog, that guide is not doing its job and injury to both the guide dog and guide dog user could occur.

The risk to the guide dog team is only the beginning. The guide dog may be retrained, however the reinforcement training may not work. That means the \$70,000 guide dog is now useless and the guide dog user is left without a guide all because of someone wanting to allow their dog to run loose.

Most people with pet dogs are not aware that there are state and federal laws governing distracting a guide dog. An unleashed dog charging the guide fits that criteria. Perhaps leash regulations will help prevent the unleashed dogs owner from paying for that very expensive guide dog.

I would urge changes to be made to these rules to account for guide dogs and guide dog users.

Regards,

Steve Lewis

Correspondence: Dear GGNRA -

I am writing to you to express my disappointment in the new proposed plan with respect to the new dog leash rules. I am a local San Francisco resident

that uses Fort Funston on a daily basis. I respect the land and the other people who use it. I rarely encounter people who misuse the park and when I do it often results in a bit of intervention on my part. To be able to use Fort Funston as a place where my dog can run freely to release some much needed energy is such a great privilege. I know that places like this are rare near urban areas and I feel honored to live in a city that has such a bounty of natural beauty for access to nature lovers and dog lovers alike.

When I moved here in 2008 from the midwest Fort Funston was one of the first places I found to take my dog. Since then I have literally gone back almost every day. As the owner of a cattle dog that has a lot of energy, there really are no other places where I can take my dog to release some much accumulated energy. As a responsible dog owner, I know that when dogs don't get enough exercise they can get aggressive. Our walks at Fort Funston are an important part of her well being and my own. At the end of a long day working from home I find that a brisk walk through the park is just what we both need to feel the day's stresses are released. And on weekends my husband and I include Fort Funston as part of a regular exercise for us with our dog.

The new plan suggests the the area which would allow off leash activity would be limited to a small section near the parking lot and a stretch of beach. There are a few problems with this proposal. I'll start with the section by the parking lot - this would dramatically concentrate more off leash dogs into a smaller area thus leading to dog management. Dogs don't always like to be near other high energy dogs. Mine prefers wide open spaces and not necessarily large groups of dogs and activity. Furthermore, since the area is not fenced it may cause issues with dogs that run into the parking lot where there is traffic thus endangering the dog and drivers. Most people I know walk away from the lot before they unleash their dog but I fear that since they will not be able to go far they'll end up staying closer to the parking lot than is advised. The other issue with the proposed beach-only area for off leash activity is that it puts pressure on people to have to go down to the beach which does not always work. I for example don't often go to the beach because my dog will get wet. Some people worry that their dogs will get swept up in the waves or tide. Some hunting dogs cannot resist rolling in the dead birds, fish or seals that wash up on the beach nearly every day. And above all, the tides sometimes render the beach nearly impossible to use because of how narrow it can be.

In summary, I really believe that reducing the amount of options where people can exercise off leash with their dog just leads to more problems for dogs, dog owners, and the land. I would like to remind you that as a daily user of the park - the problems that I see are not nearly at the level of concern that warrant this stricter approach to land management. Naturally, I don't pretend that there are no irresponsible dog owners that visit the park.

But those are far fewer than many people realize. I feel the new leash-laws at Fort Funston in particular are overcompensating for a few irresponsible owners and a few visitors who don't have enough experience with dogs and parks in general. Rather than managing to the least common denominator let's allow this park to remain leash free so that it can be enjoyed by so many dog owners.

Thank you for the time you took to read this letter. I hope a more workable solution can be presented that will allow responsible residents and dog owners to remain users of the park and this great privilege.

Sincerely,

Natalia N. Baldwin

Correspondence: I'm writing to protest the overly restrictive elements of the preferred plan, particularly with respect to Fort Funston .The impacts of the proposed restrictions on my family's use of these resources would be moderate to major and adverse, to use your nomenclature.

One general comment is that GGNRA does not appear to take into account the negative impacts of restricting dogs on the alternative city and municipal parks.

A better alternative for Fort Funston would be: 1. ROLA on the beach, switching to on-leash during vulnerable periods for Bank Swallows. 2. On leash on the trails north of the beach access. 3. Improved demarcation and maintenance of trails to keep dogs off the vegetation.

I also request that you consider a dog license system with a reasonable annual fee that would allow dogs full use of the park and go into a fund used for restoration and mitigating adverse impacts.

Sincerely,

Matt Chanoff

Correspondence: As a regular user of Fort Funston with my three dogs spanning the last 25 years, I've seen the interest and use of the park increase dramatically over the decades. People flock to its beach, vistas, and open space to hike, lounge, and make memories. I go there most often to exercise and socialize my dog. Although I can accomplish some of this at a neighborhood park, I find my experience is greatly enhanced by the beautiful setting and the walking necessary to make the fantastic loop from the parking lot down to the trail junction near the Great Highway and the Coast Trail and back again. On the rare occasions I've seen dog-on-dog conflicts, owners and other people have quickly stepped forward to correct the situation, often educating the dog's owner on behavioral techniques in the process. Often the aggressor is the leashed dog since it's placed in an inferior position compared to the off-leash dogs. The better a dog--and its owner--is socialized, the fewer problems result. Restricting areas for the socialization of dogs and people is counterproductive. I can't overemphasize the importance of off-leash areas for dogs in the GGNRA. Clearly, Alternative A is our only option.

Correspondence: As a dog-owner, I feel the recommendations set forth in this proposal are an adequate compromise for all visitors to the GGNRA. I was left with the impression that dogs were banned in as few areas as possible, while maximized dog access through on-leash requirements. I believe on-leash regulations are in the best interest of all park visitors - it allows for dog-owners to enjoy their pet companions in our public lands while respecting non dog-owners and protecting the dogs themselves. Although all owners believe their pets are friendly and would never cause trouble, the truth is you can never be sure what unforeseen circumstances may cause a dog to act out of its usual behavior pattern. Moreover, one is never guaranteed of the responsibility and conscientiousness of OTHER dog owners or the temperament of their pet towards humans and pets alike. It is for this latter reason that I am cautious about taking my beloved dog into off-leash areas, and which brings me to my only recommendation for the new pet regulations in the GGNRA.

As ROLAs are to be permitted in some areas under the preferred alternatives, I would recommend the GGNRA follow the example of the City of Boulder, Colorado and establish a certification program for voice-control (i.e. off-leash dogs). The completion of such a certification program, and evidenced by a highly visible tag on the dogs' collars, would likely further reduce the potential for conflict between off-leash dogs and create a

safer environment overall. In addition, it would provide visitors taking their dogs to ROLAs an extra sense of confidence that the other dogs (and their owners) have demonstrated the ability - and more importantly the willingness - to abide ROLA guidelines and regulations. Such a program would also allow park rangers and law enforcement officers to more easily enforce the rules of the ROLAs. Although the ROLAs will allow for separation between those visitors with and without dogs, it might also offer benefits to the latter group by reducing their concerns, causing fewer complaints and perhaps even encouraging visitors who might otherwise avoid the GGNRA.

Correspondence: I wholeheartedly support the dog management plan. I often take my son to Crissy Field to play at the beach and practically every time we are there, a dog or dogs will come up to our picnic area and try to steal food or urinate on us and the owners do nothing. There is a sense of arrogance I get from the dog owners, they feel because the beach is a no leash area, we are there at our own risk. In fact, one dog owner did try and blame it on us for having a picnic in an area where dogs roam free. My son loves playing at Crissy Field, we spend almost all our vacation days there with his friends playing in the water, but the constant need to fend dogs from urinating or running through our picnic area is one experience I can definitely do without.

Correspondence: Dear Superintendent Dean,

I am writing to register my comments on the proposed changes for dog rules within the GGNRA. While I support reasonable and safe off-leash use of all of the GGNRA, I am specifically addressing the proposed "preferred" changes to Muir Beach and the adjoining Coastal Trail and Fire Road in the Marin Headlands. These new proposed "preferred" changes should not and must not be enacted. They are not what the public wants, they are a huge waste of resources, they are not supported by data, and they are poor and impractical policy. They attempt to "fix" problems that don't exist, and unfairly restrict the use of the park to a large segment of the public.

The park of Muir Beach exists within a community that has existed for over a 100 years, far longer than the Park Service's stewardship. This is a vibrant community full of families. Dogs are a part of many of those families. Dogs are a part of this community and the nearby surrounding communities and municipalities. While I acknowledge and appreciate that it is the existence of the park that protects the land around Muir Beach and preserves the open space, I feel the Park Service is overreaching. Muir Beach is not some remote pristine wilderness or wildlife refuge. This isn't Yellowstone or Glacier National Park. The GGNRA is effectively an URBAN park system for the Bay Area. These parks exist for the enjoyment and recreation of the public--a public that owns dogs. Our tax dollars support these parks FOR THAT PURPOSE. That's why the GGNRA was established. That should be the primary driving force of policy for the park.

Let's face facts. People do far more damage than dogs. And I don't see any drive to ban people from the GGNRA. I have had to, on MANY occasions, admonish adults for letting their children literally gouge away at the hillside and dunes, and letting them destroy or pull wildlife off of rocks. I am talking blatant, deliberate and somewhat viscous destruction of the flora and natural formations of the beach by ignorant people. I have pulled soiled diapers out of the sand. I have had to scold tourists for trudging under the ropes to shortcut through the estuary. My best friend's 3 year old son got 3rd degree burns on his feet because of hot stones not in a fire ring laying about in the sand. My dad had to distract my grandmother while two people had intercourse in the sand next to where my parents had set up their blanket with their children. Families play in the restored estuary on hot summer days, partly because Little Beach is inundated with nude people and they can't take their children there-even though the waters are calmer and it is their neighborhood beach. We tried to get the Park Service and the County to deal with that, but we were told very clearly that neither authority wants to police Little Beach to enforce existing law that prohibits nudity in Marin County. But I digress. As a very fortunate resident and DAILY user of the whole of Muir Beach, I can say unequivocally that it is the humans that cause most of the problems. And whatever problems dogs are perceived to be the cause of can be remedied by enforcing existing dog rules, by fine if

necessary. The last thing that is needed in this time of economic crisis is some draconian policy that punishes responsible dog owners and that requires expensive and heavy-handed changes to the existing rules. Maybe those resources would be better utilized keeping the beach clean and free of REAL hazards like lewd behavior, ignorant beach goers, dirty diapers, broken glass and rogue burning embers. Those are the things that really threaten Muir Beach.

Muir Beach has NEVER been a no-dog experience and beach goers visiting Muir have no reason or special rights to think or expect that it should be otherwise. Our society is not dog-free. Why is that suddenly a priority or goal??? Why is the NPS trying to change Muir Beach to be something for a segment of society who doesn't, for the most part, even come to Muir??? In all my years of living in and coming to Muir Beach as a life long Marin resident, I have never once, ever had an incident on the beach with someone bummed out about my dog. Muir is mostly full of dog lovers, or newcomers who either like it or they don't. Go on YELP to see how many people love Muir and how few people complain about the dogs. For those who want a completely dog-free beach experience, they can go to the park portion of Stinson Beach. It's big, wide, park-like and dog-free and way easier to patrol and enforce.

Why is there no suitable alternative/map for Muir Beach like having leashed dogs on the dry sand and then off leash and under voice control on the wet sand? Why are the alternatives for Muir Beach so all-or-nothing? It makes no sense to let dogs off leash at the lot, or even at the bridge, or on the path of dry sand that goes to the beach. Why not allow unleashed dogs down by the water, but leashed on dry sand? Dogs that don't stay engaged with their owners at the surf line would have to be leashed. This is what a "compromise" would look like. It would reinforce responsible dog ownership, and it would keep dogs away from the estuary, and away from people's blankets. The NPS presented no alternatives that offer any sort of reasonable compromise. Wedging a ROLA at the south end of the beach doesn't make sense because often there isn't even beach there. The whole point is to allow people to stroll and run with their dogs. The ROLA doesn't accomplish that.

To address the Park Services completely ridiculous assertion that dog owners and walkers can go to the little County-owned beach adjacent to the Park instead, let me put that notion to rest right now. Why is there no EIR or EIS for THAT proposal???? Little Beach is not accessible without crossing the main beach or driving along neighborhood private streets. Most of the time, the rocks are impassible because of surf and tides. There is NO PUBLIC PARKING WHATSOEVER on Sunset Way or Pacific Way. Both roads are private, with no shoulder parking and all spaces belong to homeowners. All lanes are fire lanes. Extra and illegally parked cars would

create a hazard for the surrounding community in terms of blocking access to emergency vehicles. For those who would arrive on foot via the road, there are no amenities or services for Little Beach. No public trash cans. No toilets. Sometimes, there's not even a beach. Pushing people over to that beach for use with their dogs is not an acceptable or desirable solution or alternative. Formally stating and implementing such a plan (see NPS Preferred Alternative, page 2), without the proper studies for the impacts will be met with a vigorous and serious challenge by the surrounding community. The fact that this is a published statement in support of the "preferred" alternative for Muir Beach seems like sloppy environmental consulting at the very least, and a violation of law or code at the worst.

The other major issue of concern is the proposed changes to the Coastal Fire Road and Coastal single-track trails within the Marin Headlands system. These changes are unacceptable. As it is now, those are the ONLY remaining trails from Muir Beach that are open to dogs. There is virtually no other trail for people with dogs to use, and there must be a trail system for people with dogs! The Owl Trail is a no-no, as is the Heather Cutoff, the new Diaz Ridge Trail, the Redwood Creek Trail, the Coastal View Trail, and the Green Gulch trails. As a woman who likes to hike alone, this presents a serious safety concern. Without my dog, I do not feel comfortable hiking by myself. In addition, there is not a legal way for a person needing to walk, for whatever reason, between Muir Beach and Mill Valley. There is no reason to not be able to walk to or from Mill Valley with a dog. My car broke down one day, and I had a friend drop me off, along with my dog, at the top of the Miwok Fire Road so I could walk home. En route, I was stunned to learn that I had no legal way to do this, but continued to walk with my dog down Coyote Ridge until I safely reached home in Muir Beach. There is no scientifically supported reason to ban leashed dogs from these trails. I will continue to walk with my leashed dog for my own safety, whether the law changes or not. One of the members of the fire department out here in Muir laughed at me and said that I shouldn't worry about needing to take my dog illegally on the trail because I could just carry a loaded gun instead. We laughed over that sad irony. It's just flat out wrong, and the NPS needs to address this serious problem with the trails in the GGNRA. At the very least, the Coastal Trail and Fire Road MUST remain dog-friendly. Map 7A, with an additional dog-friendly access of the Coyote Ridge Trail to Miwok Fire Road is a no-brainer as the minimum way to go.

The GGNRA was established for the protection of our splendid open spaces, and the enjoyment and recreation of the public. Whatever changes the Park Service proposes must accommodate ALL of us. We all pay for the park. It belongs to everyone. This is our commons. And these are our dogs. We need to make it work for everyone. Any solution put forth by the GGNRA has to meet that minimum threshold. The "preferred" plans do not.

Thanks for your consideration and time,

Sincerely,

Laura Lovitt Pandapas Muir Beach, CA 94965

Correspondence: As a San Francisco dog owner and off-leash enthusiast, I hope you will consider the following options:

1. Allow off-leash use at limited hours: before 10am and after 4pm
2. Limit dog walkers and the number of dogs allowed per person. When I see a walker with 10 dogs, 4 on leash, 6 off, I know there will be problems.
3. PLEASE consider the needs of dog owners in your plan. We love SF and its environs, 98% are very responsible owners and will happily comply with restrictions - - but don't take these amazing places away from us - give other plans a trial period but please - WORK WITH THE PEOPLE, FOR THE PEOPLE -

Thank you, Lori McKay San Francisco

Correspondence: I don't even own a dog, but think your proposal to limit dogs on park land is terrible. It's a joy to see the dogs run & play at Muir Beach. And dog ownership in Marin County is a big thing -- you are limiting access to people who want to enjoy the outdoors with their companions (their dogs) for what reason? How many more restrictions are you going to put on people? The dogs aren't hurting the beach. Maybe signs need to be bigger about cleaning up after their dogs, but honestly, I've never had an incident where I've found any dog poo on the beach. I don't think this is such a big deal.

Correspondence: In your overall statement, you state that "The purpose of GGNRA is to offer national park experiences to a large and diverse urban population while preserving and interpreting its outstanding natural, historic, scenic, and recreational values."

So your large and diverse population doesn't include the thousands upon thousands of dog owners in the bay area, nor those same dog owners that appreciate the 'recreational value' of the park perhaps more than anyone else. As a long time resident dog-owner of the area, we've been running our dogs at Chrissy Field and Fort Funston for over 20 years. They are just the types of places where you can only go with dogs if you go off-leash. Clearly you do not own dogs or understand the ridiculousness of taking a dog to the beach on a leash. Running is what dogs do best and you want to take several of the best places for them to do that away.

Dog owners, for the most part, are respectful of their environment and other people and dogs. As long as bags are provided and trails clearly marked, there is very little impact on the surroundings.

As for conflicts, yes, there are some that set a bad example, by not restraining dogs that are clearly aggressive, but perhaps you could deal with that in PARTICULAR, rather than ban ALL dogs on the whole. Look at places like Pt. Isabel, where signs clearly state that aggressive dogs must be on leash. They are on leash, and if not, they get reported and don't come back. It works. The same goes for commercial dog walkers that have too many dogs for one person to control. Try limiting the number of dogs per person to whatever the county limit per household is - that way you don't have one person with 10 dogs that aren't necessarily under control.

Just reading your report made me furious. It is so unfair that you feel the need to take away several of the best places in the area to walk our dogs. Places where the ENTIRE FAMILY can go to appreciate the natural, historic, scenic, and recreational value of the parks. How many places do we

have to go, where we can ALL go to spend the day together? Perhaps you think we ought to just ban dogs from our lives altogether? They are part of our FAMILY and should be allowed to go where we go as long as we pick up and control them. Children are allowed to go everywhere, make messes, destroy wildlife, and be completely out of control of the parents. Yet dogs, in your opinion, should stay home, on a leash, and be excluded from the family.

Correspondence: It is quite clear that the Park Service wants to force more restrictive dog laws in these areas regardless of what the public wants. In the Bay Area (especially) there are always people who will complain about anything that is not exactly the way they would do it...hence, complaints by a few about the many well behaved and well controlled dogs in the various areas where more restrictions are being contemplated. And the Park Service is quite willing to go along as it will make their jobs easier....the majority of the public be damned. These restrictions are unnecessary and unwarranted. The existing rules have worked for a long time...but the Park Service continues to show its determination to have its way including the manner in which the public hearing process is being managed without an open microphone for speakers at the various locations. DAMN YOUR PLAN! DAMN THE PARK SERVICE.

Correspondence: I am absolutely opposed to any restriction on access by off-leash dogs and their owners to GGNRA areas. San Francisco is a major city with thousands of dog owners, and our options for off-leash exercise and socialization (which is key to keeping dogs well-behaved) are limited. I am also appalled that the GGNRA is refusing to even hold public hearings on this issue. If the GGNRA does restrict access, I will certainly vote to elect officials who will reduce GGNRA funding as much as possible and replace current GGNRA officials with those who will better serve the public, and will encourage everyone I know to do the same.

Correspondence: Reducing the already minimal space where dogs can run off leash is simply unacceptable. Currently, dogs are allowed in approximately 1% of the GGNRA area. This is a ludicrously small percentage of space as it is. To reduce it even further is draconian. Dogs need plenty of space to run off leash, and dog owners are entitled to use the GGNRA. I would point out what should seem perfectly obvious, but apparently is not to some groups - that dogs and their human owners are as much a part of nature as any plants or birds, and have a right to enjoy the natural space around them. This plan must be reconsidered with the needs of dogs and their people in mind. Thank you.

Correspondence: I am writing to voice my great concern over the proposed plan to ban dogs from Muir Beach. Let me first say that I am one of the thousands of "responsible" pet owners. My dog is trained, friendly, on-leash at all times, and picked-up after. It may sound silly to some, but my dog is family. He has been in my life for 10 years. Muir Beach has been our place. In fact, I decided to move to the Washington neighborhood of the Presidio entirely because of him. We lived there so happily for years, and I passed on "nicer" housing options because the benefit to my dog was incomparable as was the beauty that surrounded us. Without being able to share the park with my dog, living in the park would never have crossed my mind.

In June, my fiance and I bought a place in Rockridge and we moved. Our dog has adjusted to the east bay, but it is the weekly trips back to Muir Beach that bring us all the most joy. It is hard to describe how special that place is to us, or the joy we derive from being able to spend time there together as a family unit. That is why, when it came time to choose a location for our wedding, Muir Beach was the natural choice. Our wedding will take place on Muir Beach in October and our beloved old dog, Redford, will be in the wedding. If the recommended policy is in effect by then, we

will have to begin a new search for another beautiful spot. One where the threat of litigation does not lead to fear-based and discriminatory policies. One that we can cherish with our pet as well as our children in the years and decades ahead.

It breaks my heart to know that we may lose this place and have to move on. Who will refund our deposit at the Pelican Inn? The members of this committee? If environmental concerns are paramount, why should people continue to be allowed to disrupt natural habitat and leave waste on the beach?

It has long been our dream to buy one of those little homes perched on the cliff, but if Marin County adopts this brutal and reactionary policy, the spirit of fun, love and acceptance that has long-endured in this sacred place will be lost.

Sincerely, Khori Dastoor Oakland, CA

Correspondence: The preferred alternative plan for Ft Funston is not a fair compromise for off leash dogs. Off leash dogs need space for proper socialization. Walking dogs on leash on the paved paths does not allow for dog play. Many leashed dogs feel threatened. I physically can't walk on sand to the proposed off leash beach area easily. The proposed small sandy area isn't large enough for exercising myself or my dog. Enforce dog neutering laws especially in parks. Limit the number of dogs per person. Those are probably fair changes. We don't have enough large open spaces for dogs as it is. Humans can have the rest of the world. Leave Ft funston as it is.

Correspondence: For the past decade, my wife and I have been regular visitors (at least once a week) to Crissy Field. Our use of the park is primarily to run, stroll, picnic and relax on the beach - particularly East Beach. We are not dog owners, but we love the mix of people and pets that this unique location brings together. My experience has been that the dog owners are a very responsible group and are attentive not only to their pets but the rights of non-pet owners to enjoy the park in their own ways.

I am opposed to the new proposal for Crissy Field. Specifically, I am opposed to imposing leash restrictions on dogs at East Beach. We enjoy the area as non-dog owners and find that the mix of people and pets using the area actually enhances our own recreational enjoyment of the park. We've spent countless hours on the beach and have never witnessed bad behavior on the part of pet owners. We urge you to revise the Crissy Field East Beach restrictions called for by this plan, to restore the rights of pet owners, and to preserve the opportunity for all these diverse groups to enjoy the area as they do today.

Correspondence: Excellent work in the plan to protect wildlife and birds. Domestic cats and dogs are responsible for the demise of millions of birds every year.

While every dog and cat owner is very attached to their animal, dog and cat

owners do not have the absolute right to impose their animals on wildlife, and people in public places that don't want to be bothered by off leash animals.

When a loose dog runs up to you, you have no idea whether it will ignore you, bite you, bite your child, or stick it's nose in your crotch!

Birds at the beach naturally know that dogs are predators and they try to fly away. There are too many off leash dogs interfering with wildlife and people trying to enjoy the area.

Dogs are not people! Dogs are dogs!

Every dog owner believes that their particular dog is a good dog, and would never bother anyone.

Dog owners who think they have the right to take over every public area are selfish.

I strongly support the plan's restrictions on off leash dogs. Congratulations on being brave enough to make the right decision, despite a vocal and angry crowd of dog owners.

People who want their dogs to run free should buy a farm in the country; they should not force their animals to live in a congested urban area.

The violence of some "animal rights" activists causes me to withhold my full name out of fear. Sadly, some "animal rights" supporters think animal lives are more important than peoples' lives. They are wrong.

Correspondence: I would like to express my support for the proposed new restrictions on off-leash dogs in the GGNRA. As a Sunset district San Francisco resident, I see first hand the frequent abuse of the park by dog owners. Too many owners allow their dogs to roam freely (when supposedly under voice control or on leash), chasing shorebirds and defecating freely. These areas are PARKS, and are intended to protect, preserve and showcase our natural resources and beauty, not to serve as convenience areas for domesticated animals. Thank you for your courageous stand in the face of very vocal special interests.

ID:**Received:** Jan,23,2011 10:33:37**Correspondence** Web Form**Type:****Correspondence:** Dear GGNRA,

I whole-heartedly support restricting dogs in our federal parks. Our parks and beaches have become over-run with off-leash dogs who's owners ignore signs warning of sensitive habitat. I support protecting wildlife, wild birds and native plants. I was born and raised in San Francisco, a bird-watcher and I thank you for addressing this problem.

~Jeanine Strobel

Correspondence 301 **Project:** 11759 **Document:** 38106**ID:****Received:** Jan,23,2011 10:38:03**Correspondence** Web Form**Type:****Correspondence:** Dear GGNRA. I'm not a dog owner, nor lover, but I LIKE the dogs running around Crissy Field and the East Beach, Presidio, SF. The owner's are responsible, clean up is diligent. I'm a native. My wife and I walk to the bridge every weekend we're in town and have at least a decade before the Haas built the promenade. It's a beautiful, wonderful area. Let the dogs alone. (I must add I'm appalled at how "extensive" your study is because it indicates how expensive it must have been). Tom Mitchell

Correspondence 302 **Project:** 11759 **Document:** 38106**ID:****Received:** Jan,23,2011 10:50:25**Correspondence** Web Form**Type:****Correspondence:** There is not enough off leash areas already. The San Francisco Bay area is a dog friendly area which should remain that way. That means providing plenty of areas where dogs can roam off leash. If other people don't like dogs they can go to one of the many places they are banned. Its ridiculous to complain about dogs being off leash in a couple of areas when people who don't like dogs have the endless other choices. If I didn't like children i wouldn't go to a playground park. Am I being discriminated against because that park is not for me?

To address the other issue in terms of nature: While I am sensitive to the environmental aspects of the plan realize that humans represent the same (or worse) disruption to wildlife and yet are allowed free roam throughout our national parks. The solution is not an outright dog ban, but to put in rules that punish those who are irresponsible. Don't punish the vast majority who

have good dogs, who clean up after them, and respect the rules.

Correspondence ID: 303 **Project:** 11759 **Document:** 38106

Correspondence: I strongly feel that the issue here is not so much the person who comes out and enjoys the parks with their one leashed dog, perhaps taking fido off for a quick run or ball/frisbee chase. The issue here is almost 100 percent the professional dog walkers who have more then two dogs and at sometimes up to ten that are off leash with no voice control over them. I have one dog and sometimes she does not listen to me so there is NO way that a dog walker has control over a large number of dogs let alone how they would ever know where the dog is littering. How do I know this? I see it everyday as a worker in the Presidio and sometimes even while far away from a trail I or my co-workers step in it. This goes far beyond having these dog walkers buy a pricey permit because they will and then continue to do what their doing. The parks are for all people just not people with dogs. Would this be an issue in Yosemite or Yellowstone park? I don't think so.

Thank you. Jeff Wright

Correspondence: As an owner of two dogs, I frequent Ocean Beach with my dogs on a daily basis. I understand that the Snowy Plover protection area needs to be protected, however banning dogs completely from this area is extreme. We keep our dogs on leash and when there are plovers around, we give them a wide clearance when passing. We keep our dogs on leash in this area during the appropriate months. Your Plan A (Map 15-A) seems the most reasonable for Ocean Beach.

Note the third paragraph in this article: http://articles.sfgate.com/2007-06-17/news/17250884_1_dog-hotels-dog-s-life-number-of-dog-licenses

In a town where there are more dogs than children, I think it is important you remember who is using these areas the most. Daily, I see so many dogs on the beach and in fact it is actually unusual to see someone out there *without* a dog at their side. While I know some people let their dogs off leash when they shouldn't, penalizing those of us who follow the rules is not the answer. Banning dogs entirely is simply unacceptable. Enforce the current regulations, don't create new ones that don't allow anyone to be there

at all with their dogs.

Most Sincerely, Corey Head Boomer Tippy

Correspondence: To Whom it May Concern:

It's about time! My wife and our four small children have been driven away from one of the most remarkable waterfronts in the world due to a small but arrogant group of dog owners. I love dogs and I own a dog but I don't let her run around without a leash where small children are playing near the water. There are dozens of dog owners who treat Crissey Field and Rodeo Beach as their private dog park and it's not fair. Leash laws and requirements that owners pick up after their dogs are routinely ignored by park rangers.

It's a NATIONAL recreation area. These plans address areas that are not just for neighbors who think the world owes them a scenic dog run. This plan includes MANY areas where dog owners can let their animals loose and that alone is an extraordinary thing for a national recreation area - in almost every other place in the country, dogs are not even allowed.

Please don't let the dog owners continue to bully their way on to beaches whenever and wherever they please. This is NOT about DOGS - it's about the small number of people who own pets that want to do whatever they like vs the vast number of people (including dog owners!) who want to experience these amazing landscapes without stepping in dog sh*t or being afraid for children who are especially vulnerable to uncontrolled dogs.

Owning a dog brings a series of responsibilities just like owning anything else. Please put this plan into place and ENFORCE the regulations so we can all get back to protecting and preserving these amazing places.

Thanks for listening,

Brendan Kelly San Francisco

Correspondence: I am concerned and disappointed that the NPS is considering banning off-leash access to dogs and their owners. We are fourth generation Marin residents, my husband works in the presidio and my family makes use of the many facilities and merchants in the area. We are also frequent visitors to the park and beach at Chrissy Field with our dog. In our many visits there I have never seen a dog fight or any conflict between dogs and people or animals. I have always been impressed by how many people use the park in different ways and all manage to get along. It is also one of few areas left where we can all go as a family with the dog off-leash. I recognize that concerns of fragile habitat can be valid, but I believe this concern has also sometimes, been used by the park service locally and historically as a way to remove what the park service might perceive as "undesirables" however, park use should be available to ALL citizens and in many different ways: walking, biking, water recreation and dog use. I think it is possible to continue to protect the snowy plovers and uphold the precedent of off-leash access. I believe that the 1979 Pet Policy should continue to be honored. The other reasons you list for the perceived need for this change is due to "a compliance-based management strategy to institute a range of park responses to non-compliance.." I think you can do this without the extreme and rash measures of banning off-leash access. I favor fines and expulsion of owners that abuse the rights of others. I don't feel that the park service should be abusing the rights of compliant dog owners and tax payers that use the park off-leash and respectfully. Thank you for your consideration regarding this issue.

Correspondence: Dogs off leash are a real problem in the GGNRA. I have personally seen dogs digging up wildlife in the GGNRA and harassing birds. I fully support more leash laws or banning dogs from certain areas (or from the whole park) to protect the wildlife. I also support leash laws or banning dogs from certain areas to create dog free space for people who are uncomfortable with dogs to enjoy. There are many parks/open spaces areas for Dogs outside of the GGNRA and the GGNRA could serve as a dog free area to enjoy and preserve nature. Please enforce these laws with tickets. The money from these tickets should go to paying for patrols and also towards park restoration.

Correspondence: I have walked a dog in Marin and Crissy Field for the thirty-five years I've lived in Mill Valley. I am very much against closing parts of Crissy Field and Oakwood Valley Trail all of Muir Beach, and any of the other leashed or voice-control dog areas open in the GGNRA. On the Oakwood Valley Trail, which I walk at least four times per week, I have only witnessed one dog fight. The only other dog versus human negative interaction was a story (dog bit human) perpetuated by a ranger. He started this rumor to convince people who use the trail of the validity of closure, the last time GGNRA attempted to close Oakwood Valley Trail to dogs. Most dog owners are responsible for their dogs and pick up after their dogs. What I have noticed, especially in Oakwood Valley, is that after a weekend - when non-locals use the trail - is when dog feces litter is apparent. Another problem in all areas is that some professional dog walkers have more than five dogs in their care. (Not good for the dogs, the people or the environment!) Though not unusual in the human condition, a few irresponsible people create problems for the many. In response, the bureaucracy (in this case the Park Service) responds with punitive rules which do not address the real and specific problems and which do not truly address the multiple use aspect of the GGNRA. I believe there are solutions. They are far less expensive solutions for land management and people management: 1. Require and enforce people to CARRY leashes for their dogs, especially on high use days. Monitor for voice control adequacy. 2. Require and enforce people to clean up after their dogs, especially on high use days. 3. Limit professional dog walkers to three

or four dogs per outing in all areas. 4. Add a fee onto dog licensure to pay for these services.

Finally, I want to note Peter Fimrite's 1/23/11 Chronicle article in which he says that the Park Service is trying to avoid protest from the "dog people" by setting its community meetings as "informational." This is the Park Service's political ploy to avoid confrontation from dog owners (read, NOT a community discussion.) Shameful! Sincerely, Laurie Cohen

Correspondence: Bravo on finally giving the parks back to the people. I walk on Crissy Field every day. Children are expected to play in sand where thousands of dogs have pooped and peed. In the summer we do not get rain for 5 or 6 months and it is unhealthy and unsanitary to have kids playing in a dog toilet. We desperately need a section reserved for people who want to use a clean beach without dealing with dried dog urine. As far as the wildlife, most dog owners ignore the nesting plover sites and allow their dogs to run through the nesting areas. The fences have helped somewhat, but rangers could easily earn their salaries if they gave hefty tickets to offenders.

Correspondence: We, my wife and I, are in strong favor of keeping things as they are insofar as letting dogs and their owners enjoy some portions of the Bay Area National Parks.

We see no reason to further restrict dogs from our parks. Human beings with their noise and intrusive natures create considerably more havoc on the wild life living in these parks than dogs and some of the wild animals such as coyotes and foxes and badgers and raccoons also cause more havoc on the bird life in our parks than dogs. Drawing the line to exclude dogs from these parks appears unreasonable and unnecessarily restrictive and politically driven to satisfy the extreme elements in the conservation movement.

Thank you for your consideration of our point of view,

Jeff & Bonnie Felix

Correspondence: Dear GGNRA-

I have been walking daily at Crissy Field with my dog/dogs for the last 13 years. We live near the Presidio, which we love, and we also enjoy outings to Stinson Beach, Muir Beach, and Fort Funstun with our 2 labs and our 5 yr old son. I have never once taken for granted the beauty of our surroundings and the delicate eco-system it sustains. I feel so lucky to enjoy these areas with my dogs off leash. Dogs and humans and other species can co-exist with education and ticketing if dog waste is not picked up. No one likes to see dog poop left anywhere. I feel like it is not the dog walkers who leave it behind. All of the dog walkers I know are very responsible in controlling their dogs and picking up after their dogs. If there was a large fine attached to anyone leaving dog waste behind then hopefully people will think twice in not picking up.

Each morning at Crissy it is the dog people walking the beach and picking up trash left from other people. I believe there is far more damage from the human species on the GGRNA areas than the dogs. On any given day at Crissy there are many dogs enjoying what they crave and what they need, excercise off leash, and socialization. This definitely makes for happy dogs living in this wonderful city. I also love the fact that I can take my son to Crissy Field on a warm beach day along with our dogs. I truly do not know what they would do if they could not swim in the bay each day. They are so happy and so lucky to live where they are allowed to excercise off leash in a natural environment. Please do not limit to an extreme as it appears in the draft, the off leash areas. We need this and our dogs need this. Thank you.

Sincerely,

Carolyn Geubelle

Correspondence: I am writing to express my support for new regulations of off-leash dogs and dog walking businesses in the Golden Gate National Recreation Area. As a frequent walker in the Marin Headlands, Crissy Field, Muir Beach, Mt. Tam and Stinson Beach, my safety and enjoyment of the Park is frequently disrupted by numerous encounters with off-leash dogs. I am also concerned by the destruction of Park resources and wildlife by these large volumes of dogs.

On a regular basis I observe the following:

Off-leash dogs running in fenced off habitat restoration areas. Off-leash dogs running on and defecating on playing fields trails and beaches. Off-leash dogs flushing birds from underbrush and grassy areas. Off-leash dogs rolling and bathing in the fenced off wildlife habitat areas and streams and lagoons (especially painful for a birder to see!) Off-leash dogs chasing joggers Off-leash dogs running at, jumping on and barking at people in the Park Areas where heavy usage by dogs has destroyed vegetation Large quantities of uncollected dog feces

I recognize that many dog owners are responsible and show appropriate respect and consideration for other park users and park resources. However, for dogwalkers looking after 8 or more dogs (which I see regularly), it becomes physically impossible for even the most responsible person to adequately supervise their dogs. Unfortunately, many seem to be unconcerned with the impact their business is having on others and on park resources. Further, in some areas of the parks, even responsible dog walking is incompatible with the Park's mission of preserving habitat and wildlife and with the park visitors who are seeking a quiet place to view wildlife.

Given the mission of the Parks system to protect resources and provide a place for visitors to experience natural lands and wildlife, I support OPTION D as the best alternative. However, recognizing the GGNRA is fairly unique in its proximity to large urban areas, OPTION C of balanced use (hopefully combined with vigorous enforcement) would be an acceptable alternative.

Many thanks for your consideration and ongoing stewardship of one of the Bay Area's most beloved resources.

Correspondence: Please restrict dogs. When a place has "gone to the dogs" it means it has gone to ruin. Don't let this happen. Dog owners have such gall; they act like it's a Constitutional right to own a dog. What a demanding group of people dog lovers are. Their dog comes first and to heck with everything else. That's their attitude.

The vast majority of dog owners do not pick up their dog's turds. And they think their dog is sooo wonderful that it can't possibly disturb others,or

disturb wildlife.

They think dogs have a right to run free. I say, if they don't have a big enough yard for their dog, then they shouldn't own this species of pet. Or get a treadmill for it. Or walk it on a LEASH. This off-leash demand is nonsense and gall.

One final comment: dogs are an eyesore. A bunch of domestic dogs running around is UGLY.

Thank you.

Correspondence: Thank you for this opportunity to comment on the GGNRA Draft Dog Management Plan. We appreciate the park spokesman's acknowledgement of the need to "balance the needs of a hugh variety of users while also protecting natural resources."

We are in our 60's and have enjoyed walking/hiking all of our lives. Yet, there are increasingly limited areas where we can walk due to unleashed dogs that are not controlled well by the humans who brought them to the park areas. (I.e., this is not an anti-dog stance, but a realistic appraisal of increasingly unsafe situations caused by humans who do not take adequate responsibility for their dogs.) This is a liability issue as well as a health & safety issue. If the GGNRA does not get increasing complaints about injuries from dogs, it is because persons (esp., seniors such as ourselves) have avoided areas where we would otherwise have wished to walk, but can no longer do so because of threats against our health & safety. Some may say that it is only a few humans who do not walk/exercise their dogs safely & responsibly, but one dog running & jumping upon us viciously (nearly biting us on the neck) is enough to require us to return home and avoid that area in the future. That was not an isolated incident, and in fact happen even though we always walk away from any areas where there are dogs off-leash. Even when we see a dog on-leash, we usually walk off of a trail in order to give the dog full use of the trail and to avoid any conflict. We even thank the human beings for having their dog on a leash (while we are giving them the "right-of-way"). I.e., we are courteous & responsible ourselves, but find that increasingly that is not enough to prevent problems with dogs &/or their humans.

Once a plan is in effect, please have adequate signs to indicate the limitations & locations of either "leash only" or "no dog" areas, as well as

contact information to report incidents. We have experienced humans who say that it is OK for their dogs to be unleashed, because they have seen other dogs unleashed, or because "he doesn't bite" or "he is a quiet dog" etc., only to see that dog become agitated when around increasing numbers of strangers, whether human or canine. On the other hand, we have experienced courteous dog-walkers who apologized when their dogs ran into us, and who have accepted our courteous reference to signs about dogs needing to be leashed, etc. For those responsible humans, sufficient numbers of signs would be helpful & informative; for the irresponsible humans, the signs will be helpful for other humans who wish to report incidents to the GGNRA administration.

Thank you.

Correspondence: To Whom It May Concern:

As a professional dog walker/trainer/and dog owner, I am very concerned about the proposed plan to close off these areas of the GGNRA to off leash dogs. I have walked my dogs at Fort Funston and Crissy Field for 10 years! I have seen my share of unfortunate incidents and encounters but overall think that it runs pretty smoothly on a daily basis. I agree with the fact that as professionals we need to be licensed and regulated. Although I think that 8 off leash dog per licensed professional is a little more reasonable, I am comfortable with the 6 dog limit. I feel it is imperative that we be able to use Fort Funston in the way that we are now. It is a huge open space and that makes it more manageable and safe for walking a pack of dogs. Why can't we as professionals pay a fee to use the park? That way the funds can be used to maintain the trails better, etc. I also feel that is a great way to "weed" out other dog walkers who aren't "professionals" and are irresponsible. Most of us take our careers seriously and count on it as our only source of income. I also would like to comment on the dog run idea at Funston. The reason I

don't take my dogs to enclosed dog runs is because the heightened level of dog fight risk when in an enclosed area. I for see this being a HUGE issue at Fort Funston; not to mention the risk of dog fights rising tremendously there. I agree that we all need to responsible pet owners and pick up after our dogs and control them when off leash. That is why I feel permitting is imperative. Please don't take away this precious area for giving dogs what they need; true off leash areas to run and do what dogs do! Without these areas, we will be forced to push into city parks making them extremely over crowded and rise of incidence. Thank you for considering my opinion.

Correspondence: As a nature lover, mother of a 4 months of son, and dog owner I'm often torn by my desire to balance the needs of all the creatures that love this city. I know there are people who are afraid of off leash dogs and nature that needs to be conserved. However, I'm concerned that if we loose the proposed off leash areas, we will create some unintended issues. Dogs without exercise are more likely to be anxious and possibly aggressive. Personally, I would be MUCH less likely to take my family to these locations if I wasn't able to allow my dog off leash and I fear we would all enjoy the outdoors much less. I adopted my dog specifically with the dream of spending weekend days outdoors with her, going for runs and generally living a healthy life. That has all come true but it will be a significant challenge and disruption to loose these spaces.

I'm also a social worker working with abused children. I work long hours and therefore have hired a caring and wonderful dog walker. She takes my pup to Fort Funston everyday. She takes good care of the dogs and of the park area. If my dog lost this as a daily routine, my life and my dog's life would be really challenging.

There are so many parks are beautiful spaces in SF and most of them are for people and children. These spaces are so essential for the health of our dogs. In my case, when my dog is happy, I'm happy!

Correspondence: San Francisco is known as a dog friendly city. The vast majority of dog owners cultivate a safe and sanitary environment by taking this responsibility seriously. We clean up after our dogs, leash dangerous dogs

and train their dogs to be obedient. It is a delight to walk the parks of San Francisco and experience the wonderful community of dog owners and dogs. Off leash allows dogs to run in a game of fetch and to play with other dogs getting that much needed exercise. It is good for the dogs, their owners and the community. Don't take this away from us.

Correspondence: I am writing to express my opinion about proposed changes to dog management in the GGNRA. I am a dog owner living in San Francisco and I jog with my dog every weekend and most holiday mornings on Baker Beach (within walking distance of my home), and I sometimes walk my dog at Land's End, Crissy Field or Ocean Beach. I allow my dog to play off-leash at Baker Beach, Ocean Beach, and in the big field at Crissy Field. I feel that it is important for dogs to be able to run freely under the appropriate conditions (i.e. under voice control and where they are not disturbing wildlife). At the same time, I consider myself an environmentalist and I respect the views of those people who do not enjoy dogs, and I control my dog accordingly, as well as pick up his feces. In my experience, most other dog owners are respectful and do the same. I see far more trash from humans that is unsightly and dangerous for wildlife on the beach and in Crissy Field than I do dog feces.

Although dogs are not allowed off-leash in most national parks, I feel that the GGNRA is unusual in that it is within a large metropolitan area and so its use should be balanced to accomodate the needs of local residents and visitors. It will never be a real wilderness area on the scale of other national parks. While I support preserving habitat for wild animals where possible, including excluding dogs from those sensitive areas, I hope that you will also designate certain areas on the beach in particular where dogs will be allowed to run free under voice control.

Correspondence: Dear people; I do not live near your park, but I will comment on the new governmental rules you are attempting to implament. Years ago, prior to MAMKIND living in the wilderness, all and I repeat "ALL" animals lived there. Not until mankind came in was there a problem. Our Creator has a balance for all wildlifew and they are well taken care of by our Creator, whom is the best as people destroy what is best. If you would know that

people steal the home for the animals instead of animals stealing the homes of human beings we all could enjoy what our Founding Fathers set this Country up for that our Creator let us have. I thank you for taking this into consideration and understand the birds are also protected by our Creator, not that much by mankind. I love nature, dogs, horses, deer, birds, and all animals, but not in a pen, or confined as you are looking to do by your lease law. Forget the law, and let the dog owners control there running are for exercise. Please STOP the idiotic governmental control which is dumb. My e-mail address is in this for you to keep me up-dated. I get my news on the Yahoo site of my computer. I am 61 years of age and I always watch the wildlife as well as the animals (some two legged animals also) I even place a 6'3" two legged man eaten dog back into jail. You can look it up on AMW.COM and read it, his name is Hornick, Scott Alan. This is the truth. Stop playing God.

Correspondence: I have reviewed all the options for Fort Funston and Ocean Beach, the two areas where I regularly walk my two dogs. I vehemently support Option A,

which allows me to keep my pets under voice control, and strongly protest all other options.

While my elderly dog no longer needs to run, and can walk sedately on leash, my younger dog can simply not be adequately exercised on leash. Part of the joy of living in such a beautiful location is that I can go to lovely coastal areas to exercise my pets and me. All the alternate proposals make that impossible. I simply don't have time to go one place to exercise my dogs, and then pile them in the car and go to Ocean Beach or Fort Funston.

GGNRA is not a wilderness like Yellowstone or Yosemite, but is adjacent to a dense urban population. It is not appropriate to treat it as if it were wilderness. I am a backpacker, and would not dream of taking my dogs somewhere inappropriate, but leashing all dogs even on paved trails, as if they can do some environmental damage to asphalt or concrete, is just silly! In fact, it is so clearly silly, that it makes the whole plan suspect, as if it were written primarily to accommodate those who fear or dislike dogs.

This is not meeting the needs of dogs and dog owners even a little bit, much less halfway.

Correspondence: Blanketly closing these parks to dogs especially such staples as Chrissy Field and Fort Funston would have a devastating effect on this very dog-friendly and well dog-populated city. It's been my experience over the 7+ years that I have lived here and visited these areas, that citizens who visit these parks with their dogs do so with safety, consideration of others in the community and respect for the surrounding environment and plantlife as major priorities.

It is a fact that there are somewhere between 100,000-200,000 dogs living within the city of San Francisco. And it is also a fact that the dogs that do not receive enough exercise, enough socialization with other people and other dogs are much more prone to aggressive behavior. Therefore depriving dog owners in the city of places where they can respectfully and safely give their dogs the exercise and socialization they need not only diminishes the quality of life for these animals, but it also potentially creates an environment where dog bites, dog fighting and dog attacks are more likely to occur.

As a resident of the city of San Francisco and a dog owner myself, I **STRONGLY URGE** you to work with the dog-advocate community to

develop a more workable solution than the one that is currently being proposed.

Thank you, Lisa Sussman

Correspondence: Frank Dean,

As a regular visitor to Fort Funston I appose to the proposal changing the dog laws of the GGNRA and absolutely support alternative A. I understand the concern for environmental protection of our planet but disagree that the current laws would do as much environmental damage as proposed. I very rarely see dogs in the protected areas of Fort Funston. Dog owners I have seen have respect for the protected areas of the park. As for wildlife, I have never seen a dog chase or harass any native wild life on the beach at Fort Funston (or Ocean Beach). In regards to visitors, I have many times seen dogs and people without dogs enjoying the parks together. I spoke once to visitors from out of state that commented how lucky we were to have such a wonderful place for our dogs. I have seen small children and dogs of all sizes enjoying the same beach without any problems. Dog owners do pick up their dog waste and there are group days for any waste that may have been missed. Finally, people have ruined areas of the park way more than dogs by defacing the Forts with graffiti.

I am personally very thankful that I have a place where my dog can run off leach. I am very respectful for the parks, as are other dog owners. Based on my experience with dogs and the parks I do not agree with the reasons for changing the law. There are so few places left for responsible dog owners to walk their dogs off leach. Please do not take away places where dogs can run free and enjoy our National parks just like everyone else.

Thank you for time

Correspondence: There are already too few options for dog owners to exercise their dogs and enjoy the outdoors with their dogs. Part of the reason we moved to Marin was to enjoy the outdoors with our dog. It's not fair to punish those who are responsible dog owners because of a few irresponsible people. Not all dogs

do well in dog parks so being able to exercise them at the beaches and trails is key for dog owners. Please reconsider the proposed laws.

| Correspondence: | I have read only the Executive Summary. In all of that I did not see any mention of what remains in places where dogs roam free or are walked on-leash or off. The main problem I see with dogs consists the remainder of their feces and the urine they spray. People and especially children can come in contact with these materials and get very ill. Where are regulations regard cleaning up after animals in public areas? There should be restraints on the presence of dogs on all government properties, especially beaches, playgrounds, picnic areas and other places where people may be sitting on the ground or playing in the dirt and/or sand. I so often see people walking their dogs and then letting them off of leashes to go and find a place to deficate. Dog feces carries as much bacteria and illness-bearing material as human waste. We don't let people deficate anywhere they wish so why should we let dogs? Do your regulations address animal waste at all? You don't mention cats anywhere. Cats waste, in addition to the danger listed above, carries something that can cause miscarriage in pregnant women. Where are regulations regarding cats? My concern about waste from cats and dogs adds to my fear of dogs. I like dogs, but when I see dogs and packs of dogs running together, perhaps towards me, I become anxious. I believe that domestic animals should be kept on leash or tether unless on their owner's fenced property. Leash regrlations are a must in public areas especially. We must maintain the pristine forests, beaches, trails, etc. We do sometimes see wild animal "scat" while hiking, but I just can't see that we must put up with cat and dog feces in our National Parks and National Recreation areas. I have a golden pass which allows me to enter national parks for free because I am a senior citizen. I often visit such areas. I have visited the Golden Gate National Recreation Area on every occasion when | | |

traveling to San Francisco. I will continue to do so and hope that I will find regulations in place and enforced.

Correspondence: To: The GGNRA I have been living in San Francisco as a dog owner for 26 years. Along with the great weather, great food (although I do wish that more restaurants would accommodate well-behaved dogs) and beautiful surroundings, I have spent some of my most memorable days in the city walking my dog at Chrissy Field. I have a small terrier and he thrills at the sand and surf and Labradors fetching sticks from the ocean. We meet friends that we only see at the beach and the dogs play together without causing problems for families picnicing, Seniors walking or runners enjoying the water's edge. The people that bring their dogs to Chrissy Field are a conscientious group and I have never seen a dog owner that did not pick up poop. In fact, many times I have witnessed a dog owner offer a pickup bag to a possible offender with a suggestion that they clean up after their dog in the future. For the number of dogs that enjoy Chrissy Field one would think that dog litter would be a problem, but I can walk for an hour without seeing a pile of dog poop. The dog walkers that I meet are very protective of the space and do all that they can to keep it clean for everyone. I am very aware of the need to preserve nesting space for the Snowy Plover. I am a conservationist and work at The California Academy of Science. My dog and I have respected the nesting area near the pier and never go there off leash. Dogs and their owners need space to run and enjoy the coastline. Many of the reasons given for imposing leash laws, such as dog attacks to beachgoers and dog walkers not being responsible for picking up, are not realistic and do not reflect the what goes on at Chrissy Field each day. San Francisco is known as a city that welcomes 'Life' in many ways and having the space to let a dog run free should not be something one needs to forfeit when living here. Saint Francis, the Patron Saint of Animals will be proud when this debate has ended and dogs are able to enjoy the public spaces in our city. Thank you for the opportunity to address this issue. Correspondence: Dear Federal Government, while I am a law abiding citizen - I vote, pay taxes, am fairly active - I seem to be completely out of step with your current plans. And to my way of thinking, your current plans are out of way of thinking of most Californians.

I guess I'm ultimately unclear why the Federal government can create pet rules that are different than the cities or counties where these parks are housed.

If San Francisco, or Marin is happy with supervised dogs running free, why do you get to set different more restrictive rules? and as citizens, that ultimately fund these parks, how do we get to vote?

I understand the process to work with local rules and legislature, but am baffled to learn the federal government can create rules that do not reflect local desires without having any process (beyond an email comment box) for locals to get involved.

we pay you - why don't we get to play a role in the rules that will ultimately govern our lives?

Put me down as one highly disappointed Californian pet owner. I wish there was a way to vote on your policies. I can't even see a way to vote you out of power, or to vote less funding for your controlling rules.

Correspondence: I have reviewed the maps and comments for preferred alternatives for all of the San Francisco GGNRA units. I believe that the preferred alternatives represent an equitable balance between those who prefer to bring dogs and those who don't. They also fulfill the mandate of the NPS to protect and preserve our wildlife and natural resources. I also believe that the preferred alternatives are realistic considering the limited amount of resources that can be used to enforce the adopted policy.

As a San Franciscan native, I personally have been dismayed by the ever-increasing use of both GGNRA lands as well as City parks by off lease dogs. I find it more and more difficult to have a "no-dog" experience within the City natural areas. When I was a child and young adult, I remember enjoying hiking through Fort Funston. Now I avoid it, as it is overrun with dogs. I think the NPS has done a fantastic job in designing Crissy Field. However, I can say in the days when it was mostly large asphalt air fields, at least I could take a peaceful walk on the beach without getting overrun by dogs. At this point, I am loath to bring my 5 year old daughter to East Beach, considering the density of big, uncontrolled dogs. Often one hears that since areas like Fort Funston are mostly used by dog-walkers, it should remain that way. However, this was not true years ago. I believe that the presence of so many dogs in areas like that have driven away those who find the experience greatly degraded.

Although City parks are not part of this discussion, the fact that leash laws are routinely ignored in City parks makes having non-dog areas in the GGNRA even more important. For instance, even though Pine-Lake park has a large, attractive and conveniently located off-leash area, the rest of the park also has off-leash dogs running all over the place. I have yet to see any enforcement of leash laws in San Francisco parks.

Many of those who wish for a better balance than what exists now are members of families with children. I would guess that those who are most likely to show up to make comments at public events do not have child-care responsibilities. So, despite the fact that public meetings tend to be skewed towards those wanting more dog access, please remember that many, many people are counting on the NPS to bring everything back to a more equitable balance.

Correspondence: I support the plan and wish NPS well in its attempt to protect GGNRA.

Dogs need to be controlled to protect wildlife and visitors. Voice control means many things to many people and the bottom line is that voice control is ineffective in crucial situations. If a dog is to be allowed on NPS property it must be on a leash six feet or shorter with the other end of the leash held by a person at all times -- even service dogs. A loose dog accompanied by an owner is difficult to restrain when the dog is provoked, and a dog that has no obvious person connected is even more difficult to restrain or capture.

What will the NPS policy be if a dog is found harassing wildlife -- with or without its owner?

Good luck.

Correspondence: Dear GGNRA and folks reviewing the dog management plan: As a resident of San Francisco and a dog owner, it is shocking to me that we would be looking at passing a law that would restrict dogs from frequenting certain sites and running free in designated locations. Dogs are part of our households and have become part of our families Does it really make sense to make it even harder for residents of San Francisco to allow their dogs to get exercise? We pay enough taxes here to be able to enjoy the beautiful beaches and woods of SF with our canine companions.

That said, if this is not feasible, I would propose a fee and registration for dogs to run offleash and frequent certain areas. This could allow regulation of which dogs are allowed to be offleash and would bring revenue to the city to care for any dog related expenses.

Best regards. Mom to an eight month old human baby and 2 year old canine mutt

Correspondence: I support your Dog Management Plan. I agree that it better fits the "natural, historic, scenic, and recreational values" of the Park's mission better than the anarchic and anti-social behavior I see today in the GGNRA. I would only argue against allowing the so-called ROLA access to national park space. While many owners and the animals are responsible and can be trust with voice-only controls on their dogs, other owners who see these off-leash animals will believe that there are no on-leash rules in effect.

Type:

Correspondence: There are many flaws in this plan, but the most egregious is the idea to completely eliminate dogs from Ocean Beach south of the very northern end. Thousands of people walk their dogs responsibly on this 3 mile long beach, and it is ludicrous to propose that this wonderful place to walk your dog should suddenly become closed to dogs.

Many people like myself live in the Outer Sunset because of the proximity to Ocean Beach. One reason we love the beach is because it is a beautiful natural environment for dog walking. We respectfully abide by the leash regulations, and are some of the most frequent visitors to the beach. Who else is at the beach when there is terrible fog, wind and rain? I'll tell you: no one - which makes it an amazing escape.

The beach is basically my front yard, and the idea that I cannot responsibly walk my dog on leash on the dunes or sand is asinine. I pick up every piece of poop. I also pick up other trash, particularly glass, to protect all beach goers, both human and canine. My presence has an unequivocally positive effect on Ocean Beach, without doing harm to any bird or other person, so why do you seek to ban my canine friend and I?

The current regulations for OB are working fine, and the status quo is far preferable to the inane proposal from the NPS. And don't forget: San Francisco can take Ocean Beach back if you hinder the city's residents from their recreation. I promise you thousands of SF citizens who will take the issue to city hall if you try to implement these proposed rules.

Thank you for your consideration.

Correspondence: I find the proposed plan to be over-harsh and restrictive in an already overly restrictive plan where dogs are regulated to just 1% of our parks. The comments that some people don't like dogs is ridiculous in light of the fact that non-dog lovers have ****99%**** of the rest of the parks to enjoy. Why take the tiny bit that dog owners have left? We have so little as it is. And many of these areas i.e. Fort Funston are not and won't be nice areas (i.e. sewage runoff - ew)

With such a high population of dogs (and their owners) in ratio to children in SF, why squeeze them into an even smaller area? This will only further

the dog-related issues by compressing all dogs into a small area. Small, confined dog play areas are known for increased rates of dog/dog aggression. Dogs need large areas to play. I rely on these open expanses to give my dog room to run AND avoid less socialized or pushy dogs. More dogs in a smaller area will not allow for this. Have you ever considered that a number of the problems you are trying to mitigate is due to the limited space (considering the dog population) that dogs have now to run in?

With regards to the confusion and people who don't like dogs, limiting the dog-friendly areas is not going to solve the issue. The problem is lack of clear signage. I can't tell you how many times I have gone out on adventures with my dog, researched which trails I can go on, on/off-leash and tried to memorize the maps online and then get there and can't figure it out so I do my best from my memory. If trails and areas were well-signed and obvious, then dogs could be and do what they are supposed to. And non-dog fans could easily avoid those areas. But you guys make it too confusing by not-providing the information when and where it is needed.

For example, there is a point at Fort Funston on the beach where it becomes state park and dogs are not allowed. Horse riders stay to this area because of the threatening dog incidents to their horses. But the owners don't know where the line is. And horse riders get hurt being chased by dogs whose owner don't understand where the line is. Being both a horse rider on this beach and a dog owner who walks my dog at Fort Funston, I know but I am the exception.

I can't imagine that the confusion is going to change with the new policy. Because you are not going to clearly sign...I didn't see that in the document. So dog owners are going to be in violation even more often for bigger \$\$\$ revenues for you from fines AND make a bigger case for how "irresponsible" dog owners are. SF dog owners in general are quite responsible but I often have trouble figuring out where I can and cannot go. So sometimes I just take the lead of what I see other dog owners doing.

I ask that you please reconsider the extreme reduction that you are proposing. If you are having increased dog/non-dog people incidents, then sign better - make it clear so we can all avoid each other. But don't take away the meager 1% that we have. We just need a beach or two to run on and a few decent trails where we can loop around. And if we need to be on leash for a portion of those trails, its okay but don't eliminate the ability to do decent hikes with our dogs entirely. It's one of the best things about nature and having a dog is hiking...far more than running about in one tiny portion of a beach.

Correspondence: As a former Bay Area resident I was dismayed to hear of plans to ban dogs from Muir Beach. I now live in Switzerland where it is understood that dogs are part of a family and they are welcomed everywhere except grocery stores. It's really an outrage to deprive dogs and their owners from taking part in the majestic beauty and restorative properties of the Muir Beach area. What will be next? I sincerely hope that this matter is given greater consideration for all dog lovers and owners in the Bay Area.

Correspondence: As a past and future dog owner and freelance photographer I see the need for areas in which dogs and their owners feel free to run and get exercise. I also see the impact that dogs have on wild life both on and off leash. My opinion is this: It is necessary to keep dogs off the headlands completely leash or no leash. The impact to the natural environment, raptors, bobcats and coyotes and the small animals they feed on would forever change the attraction the Headlands bring as a natural feature. I had a number of photo shoots on the Marin headlands ruined due to dog owners having their pets in a "No Pets" area scare away all wildlife right in front of my lens. There are thousands of acres and hundreds of miles in the Bay Area designated as runs for dogs. Please keep dogs out of the Headlands. Owners will have to take the responsibility for owning their dog and caring for them in a way that does not force sharing the burden of pet ownership on the rest of those who would like to enjoy the Headlands in its natural state. The state in which it was reserved for.

Correspondence: My family (including my dog) would be devastated to see the reduction of dog-friendly spaces as proposed in this plan.

To be fair, however, if that is the most sensitive natural habitat in need of special care, then so it should be.

But then help us find a way to establish an equivalent amount of space for permanent, fenced and significant off-leash dog parks in San Francisco and our surrounding areas.

Just as certain locations are designated for the protection of local flora and fauna, it only makes sense to set aside a number of large tracts dedicated to the health and well-being of our area's lively and loved, leashed and off-leash, canine population -- and the humans who want to be with them.

Thank you for your consideration.

To Whom It May Concern:

I am unclear how my dog is more of an issue than the coyotes. She is on a leash or under voice control, being watched to make sure she stays on the trail, and we are picking up her waste. Further, she is socialized and obedient and certainly poses less of a risk to other people enjoying the area than a coyote would.

I am unclear why domesticated dogs are being banned in an area where wild dogs are part of the ecosystem, and I read the sections of the report which I thought might address that. I did not read the entire 2,400 page document, of course.

More regulations are only going to make things harder for the people who follow the rules, and the people who follow the rules have dogs that are far less dangerous to the environment and the other people enjoying the GGNRA than the coyotes. The people whose dogs are a problem now are just going to find places to run their dogs where they don't think they'll get "caught", and that would almost certainly be more destructive than what they're currently doing.

I cannot imagine why I, or any other dog owner, would go for a hike and enjoy the GGNRA without bringing my dog. If I do that, I will have to go

for another long walk when I get home for my dog's wellbeing. Why would I go on a long walk and not bring her with me? If I can't take my dog on a hike, then there's not much reason for me to hike. I cannot be the only person who feels that way.

I hope the public outcry surrounding these changes will make a difference. I understand that some of these changes may be necessary, but I cannot imagine that all of them actually are.

Correspondence: I am very disappointed and appalled by the proposed regulations regarding dogs in the GGNRA Draft Dog Management Plan. You are punishing ALL dog owners rather than the few irresponsible owners. Dogs need room to roam and to freely run off-leash. Dogs who get enough exercise tend to be well-behaved and happy. The ability for dogs to run on trails and on the beach is one of the best things about Marin. I have lived in Marin since 1986 and have never had an issue with an off-leash dog who is out of control or hurting wildlife. In addition, as a board member of bird research environmental organization, I am very concerned about bird populations and the protection of ecosystems. Nevertheless, I believe that dogs need freedom too. Please stop this Dog Management Plan and allow us to continue to enjoy the beauty of the GGNRA with our dogs off-leash.

Correspondence: I am a senior with a large dog. The joy I experience walking on a beach with my dog free to jump in the surf and dig in the sand is beyond description. I often drive to Point Isabel in the East Bay to enjoy another off leash experience. The East Bay and San Francisco both have very large unfenced dog beaches. Marin does not have this.

A wonderful compromise would be to set aside a large beach with extending dunes and walks similar to Point Isabel or Fort, I think it is Funston, in SF where dogs are allowed to be off leash. Both of those areas are a delight. Dogs are usually well behaved. The areas are large enough to allow exercise for owner and dog.

My dog does not like dog parks. Actually they scare her. It's unnatural to have so many dogs together in a small space with nothing to do but interact

there. Some dogs begin to bully. An open beach walk has wonderful smells to explore. Owners and dogs have a destination and purpose; we're on a walk. Dogs are generally courteous, happy and with their owner on an adventure. This experience is much more successful for everyone.

I walk my dog twice a day. A beach walk is a special walk for both of us, once or twice a month. I would love to have this experience close to home. If you close beaches to dogs I will also be deprived of this joy. I do not have time to take a third extra walk without my dog.

Hope you will consider my suggestion. Thank you, Corinne

Correspondence: Dogs already must be leashed in (or are completely banned from) the vast majority of local parkland, but the already scarce off-leash areas keep dwindling. Last year, we lost most of McLaren Park to a planned disc golf course. If this proposal goes through, the few off-leash areas left are bound to become over- crowded and unusable.

About 40% of US households own dog(s). This is a huge portion of our community that deserves the already miniscule number off-leash places available to take care of their dog properly. Dog owners of San Francisco are especially responsible and educated about managing their dog. I am in these parks for several hours every day, and I see owners in control of their dogs.

My dog needs exercise that he cannot get on leash. My dog runs 10-30 times the distance than I am able to run. He also needs to play with other dogs to

socialize and greet other dogs naturally, which requires being off leash. It would be impractical to have him on a leash.

On another note, dog owners are motivated to exercise with their dog, which improves the health of the owner and creates a higher quality of life for the owner as well as the dog.

LET 40% OF OUR RESPONSIBLE TAX PAYING COMMUNITY HAVE THE FEW THREADS OF SPACE LEFT TO EXERCISE AND ENJOY. THERE IS AN ENORMOUS AMOUNT OF SPACE LEFT OVER.

Correspondence: I fully support and encourage the directors to accept the dog management plan. I support this plan for two reasons: 1. Protection of birdlife and habitat 2. Protection of recreational beaches for enjoyment by children and adults.

For the thirty two years that I have resided in Marin County, I and my family have enjoyed the beaches and recreational areas of GGNRA. Over the three decades dogs have increased their presence on beaches and trails. Dog owners do not observe rules or common decency about allowing their animals to defecate and urinate all over beaches, in the waters, and on the sand dunes and trails. It is no longer possible to walk barefoot on the beach without risking a very unpleasant experience.

In my observation, the majority of dog owners also do not respect leash laws in place to protect bird and animal life. Not just the common gull, but also sea birds, herons, and egrets are chased, frightened, and if they don't get away, mauled by dogs. Owners have been consistently disrespectful about the behavior of their dogs.

Law and regulation is a last resort when common respect and decency is not observed in the natural resource areas that we all share. Unfortunately dog owners do not pick up feces, nor do they attend to their dogs; on the contrary many feel that the animals are entitled to roam free, kill and maim, deposit their excrement, as well as threaten humans with their barking and aggressive behavior. This attitude and behavior will be apparent as the process goes forward in hearings.

Yesterday I took a beautiful walk on North Beach at Pt Reyes Seashore. It was a magnificent winter day. Dogs were numerous on the beach and I personally witnessed several dogs running unattended defecating in the sand and water and urinating all over the driftwood that we all use to sit on. Many

large dogs ran by me, barking and being intimidating.

Two months ago at Abbott's Lagoon, I witnessed dogs running free, chasing the tiny shorebirds, barking and disturbing the peace of this pristine area. The owners were angry with me and personally insulting when I pointed out the rules concerning dogs at the Lagoon.

It is time that regulation and enforcement is needed to restore balance to the use of our pristine resources and habitat. Thank you for the opportunity to submit this comment. Good luck to you.

Correspondence: As a San Francisco resident and dog owner who regularly uses portions of the GGNRA, both with and without my dog, I wish to comment on certain aspects of the Draft Dog Management Plan. My comments will be limited to the two areas I use most, FORT FUNSTON and OCEAN BEACH.

Preliminarily, I support any restriction on dogs which has as its primary focus the preservation of sensitive wildlife habitat, whether located in either of these two areas or elsewhere within GGNRA boundaries. In my view dog owners should be willing to prohibit dogs from interfering with any other species that may be nesting or otherwise present on park lands.

OCEAN BEACH: I object to any effort to restrict off-leash access to any part of Ocean Beach from the Cliff House south as far as Ulloa Street, at least, unless a specific area has been identified as sensitive wildlife habitat. As far as I am aware, no such area exists. I can conceive of no rational reason to limit access along this stretch of beach solely to on-leash dogs. There appear to be no environmental bases for such a limitation, and there

certainly are no fragile resources of any cultural significance in this area.

In all of my experience spending time at the beach, whether with or without my dog, I have never witnessed any canine/human altercation which would suggest that there is any inordinate risk to human safety posed by maintaining the present off-leash policy. Of course, all dogs present on the beach should be under voice control and there is no question that dog owners must remain responsible for picking up after their dogs. Based upon my experiences and observations at Ocean Beach, at regular intervals over a period of years, I can conceive of no legitimate need or interest to restrict dog access in any way except in the case of specific areas of sensitive wildlife habitat.

FORT FUNSTON: For many of the same reasons I object to any effort to restrict off-leash dog access to any portion of Fort Funston that is not already off limits (i.e., fenced areas of sensitive habitat). The bases for my objection are the same as those set forth with respect to Ocean Beach. In addition, however, I wish to observe that, in contrast to Ocean Beach, which is widely used by dog owners and non-dog owners alike, Fort Funston's users are over 95% dog owners and it is the "go-to" place for dog owners seeking to exercise their pets off-leash in an extensive natural setting. Indeed, better than nine out of ten vehicles pulling into the Fort Funston parking lot unload one or more dogs in addition to people (and the other 5% are hang gliders who congregate in a specific location). As stated above, I support efforts to restrict all canine and human access to areas of Fort Funston that provide important wildlife habitat, but this can be achieved without requiring leash use. Depriving dog owners of a resource they have historically valued so thoroughly and so highly is an abuse of the planning process.

Each of these areas is without significant cultural resources and possess few, if any, sensitive habitats that are not already restricted. Human/canine altercations are, in my extensive experience of both areas, not a problem. Indeed, there are more dogs on any given day at Fort Funston than there are people, and I have never witnessed any notable dog vs. dog issues, let alone incidents involving humans and dogs. The fact that some people may harbor an irrational aversion to, or even fear of, dogs is in my opinion no basis at all, let alone a sufficient basis, for any on-leash restriction contemplated by any alternative set forth in the Draft Plan.

In summary, I object to the imposition of leash requirements at either Ocean Beach or Fort Funston except in limited specific areas known to be sensitive wildlife habitat. Thank you for considering my views.

Correspondence: Dogs and dog walkers are out of control in GGNRA. They don't plan to abide by the reasonable new leash restrictions. There are a couple of ways I would suggest dealing with this. 1. Tickets for off leash activity in an on-leash area and tickets for dogs in a no dog area for \$500 2. If someone gets three tickets, their dog should be taken away and given to the spca. 3. If the person wants to contest the ticket, any other people involved in the incident (person who reported the dog an dog owner) should be allowed to testify.

Correspondence: Please do not take away any hikes that currently allow dogs. If anything, we need to add more! Hiking with one's dog is a great way for individuals to get physical activity while also exercising their dogs. With so many beautiful places in the Bay Area, it would be a real shame to loose the opportunity to enjoy a beautiful hike with one's dog. I personally always want to take my dog with me when I go for a hike and only choose hiking trails that are dog-friendly. With the obesity epidemic on the rise in this nation, we should not limit the abiity for individuals to hike with their dogs. Without dog-friendly hiking trails, some people will resort to taking their dogs to dog parks for exercise which will not provide the dog owner with any exercise. Also, dogs need to walk as a pack for their mental well being (it's what they would do in nature). If dogs are just running around in a dog park, not walking with their pack (owners/family), then they can become agresive and misbehave. Please consider the health of your community and keep the trails dog-friendly!

Correspondence: To whom it may concern:

Thank you for providing the opportunity to comment on the GGNRA Draft Dog Management Plan.

Based upon periodic use and experiences at several of the selected National Park locations, and after review of the referenced draft, I respectfully request continued sensitivity to the needs and concerns of park visitors that

may not care for domesticated pets, particularly dogs.

In my experience as a frequent park user, dogs are an attractive nuisance due to their uncontrolled behavior, and often degrade the natural environment and park amenities due to deposited urine/excrement as well as physical destruction. In addition, dogs create considerable noise pollution which disrupts wildlife and the park experience for other visitors.

As mentioned in the draft report, I strongly support dog exclusions and/or prohibitions to designated parks or areas within parks. I believe these measures are appropriate as the attractive nuisances mentioned above are often acceptable to, and allowed by, the responsible party/the pet owner, without regard to other visitors and park rules.

Again, thank you for the consideration. I hope my comments are helpful. It is my belief that the Dog Management Plan is created and adopted to respect and enhance the enjoyment of both pet and non-pet park visitors for generations to come. If successful, this will provide the best possible experience for all visitors and will provide for the lasting benefit of all public recreation areas.

Correspondence: While I do not live in the bay area, I visit often. I have chosen San Francisco as a vacation destination several times specifically because of the many dog friendly locations. Even if I'm just passing through I always stop at Fort Funston for a lovely walk. I have never encountered any problems there.

My dogs are well behaved and under voice control. They do not wander off of designated paths and I am diligent in cleaning up after them. The ability to run loose and interact with other dogs and their owners is integral to their socialization and continued good behavior.

My town is one of the least dog friendly places in California and not a day goes by that it does not negatively impact our lifestyle. I am surprised that the GGNRA is considering such a drastic measure. Please reconsider.

Correspondence Type: Web Form
Correspondence: I have read over the proposed changes to the official policy regarding dogs in the GGNRA and there are three units within the proposal I wish to comment on, Stinson Beach, Crissy Field, and Baker Beach, as these are the three areas I use for exercising my dog. Regarding the changes in policy I don't have any strong disagreement with the new rules for Stinson Beach and Crissy Field, they seem to me to be reasonable, especially those concerning Crissy Field, as from my personal experience that is one of the more heavily used units in the GGNRA, and I have found some users, especially bicyclists, not very observant when it comes to looking out for dogs on the paths and the promenade. So it seems that there is a real need to separate dogs for off-leash activity to the Central Beach area and a designated off-leash play area in the central part of the Crissy Field Airfield, as stated in the preferred alternative proposal.

Now, regarding the preferred alternative proposal for the Baker Beach unit, I find the proposed changes to be most unacceptable, and feel that they will basically end the use of this area for recreational use by dog owners and their companion animals. Just so you know, this area is my favorite for taking my dog, who is a five year old female Parson Russell Terrier, weighting about 12lb., as it gives her plenty of space to chase and retrieve a ball, play in the surf, or simply walk unleashed by my side. I usually go there on weekdays, either early mornings or mid-afternoon, when this area is not crowded at all. There is always plenty of parking, it is a wide beach which provides for more then ample room for people who are there with their dogs and those who are not, and the physical location gives one a true break from the urban environment of San Francisco, with it's forested slopes, crashing surf, and magnificent views of the Golden Gate, the bridge, Lands End, and the Marin Headlands.

In reading over the preferred alternative proposal for Baker Beach it seems that dogs will be required to be on-leash in the parking lots and on the trails, which seems just fine to me, as that would provide for their safety when they are in the lots, and in sharing the narrower space on the trails other walkers/hikers. This sounds to me to be both a sound and reasonable policy. But then the proposal goes on to state that dogs will be excluded completely from the beach area starting at the north end of the north parking lot, which means that almost all of the beach area will be off limits to dog owners and their companion animals. In addition, in the beach area south of this point to Lobos Creek, dogs will only be allowed to be on the beach if they are on leash. So, any use of this beach as a place where dogs can exercise by running and playing will be lost, which for my own dog, who is a terrier, is very important for her physical, and I would say, emotional well being.

In addition, I personally prefer to walk my dog, and allow her to play unleashed on the north end of Baker Beach, since this is the part of the beach which usually has far less people than the south end, which is where the proposal wants to restrict dogs. This just doesn't seem to make sense to me if your aim is to provide an area where people who are not comfortable, or who wish not to interact with dogs, can enjoy Baker Beach too. In the five years that I've been taking my dog to Baker Beach I have not witnessed any dogs bothering people on the beach. Yes, there's been the occasional checking out of picnic site on the beach, but dog owners seem to be very good at controlling their dogs in these situations. Also, I've not seen dogs invading the areas set aside for dune/native plant restoration at Baker Beach, which is more than I can say for some human visitors, who I've actually had occasion to point out to that they shouldn't be entering in those areas, even with the posted signs. Dog owners seem to be very good about removing pet waste from the beach, and I've never detected a problem with dog urine either. One last item of concern, that regarding native wildlife, yes, I've seen and had my own dogs chase after shore birds, but the birds are usually in flight before a dog gets any where near them, and once we've passed, they usually land again and resume their search for food along the shoreline. Even the ravens that seem to hang out at Baker Beach handle their contact with dogs with little fuss.

So in closing, it seems that a better way to set policy concerning dogs at Baker Beach would be to require that they be on-leash when in the parking lots and on the surrounding trails, but that on the beach it self things be left as they are, allowing dog owners and their companion animals full beach access, with them allowed to be off-leash and under voice control, as from my own personal experience over the past few years, this seems to be working just fine, and that way dog owners and their companion animals can continue to enjoy the recreational value at Baker Beach. Thank you for allowing me the chance to voice my opinion on this important matter.

Correspondence: Dogs impact the environment a lot less than humans. Dogs do not leave bottles and cans, cigarette butts, and other trash scattered throughout the parks. If their people pick up their waste, then it is almost impossible to tell a dog has been there at all. At Fort Funston, people walking their dogs are the majority of park users especially in the winter. Banning them will result in a little used park waiting to be a haven for gangs and homeless people to hang out in.

Correspondence: I think that it's really sad that the few open spaces available for "off-leash" dog walking will be subject to the usual restraints of on leash/voice control. We often take our dog to Ft Funston occasionally to Crissy Field and she has the time of her life. I have noticed that other dog owners are respectful, pickup after their dogs and have never witnessed a dog fight. In fact I would go as far as to say, the canines at Ft Funston are very well behaved! I think its pitiful, that as a tax payer and law abiding citizen we cannot have a few places that we can go to where our dogs can be dogs and enjoy themselves and run/socialize with lots of empty space. There are lots of other public parks where people without dogs or who don't like dogs can go, so why choose Crissy Beach or Ft Funston? Go elsewhere! Dogs rule - leave Ft Funston and the few off-leash parks/beaches as they are.

Correspondence: To Whom it May Concern,

I'm sure you are going to read a thousand and one of these letters requesting that you NOT enforce more of an on-leash dog presence within SF's beaches and parks, however it would be unprofessional of me not to comment. I own and operate a small dog walking business in San Francisco. We enjoy walking our dogs within the Presidio (more specifically between Presidio Ave and Arguello Ave.) Chrissy Field/ Beach and Baker Beach. During our average group walks we will have approx. 7 dogs play off-leash. We are very prideful in training our dogs to respond to vocal obedience and recall.

It is our number one goal to have our dogs enjoy the parks and beaches (as much as we do) and it is not fair to make a dog a prisoner of their own leash if they can obey their handler's voice commands. I understand if people are not comfortable around dogs being off-leash, however most dog owners are very respectful and will not let their dog be a nuisance or unruly. What I am most proud of within our city is the fact that San Francisco is one of the most dog-friendly city's in the world. Tourists for example are always so fascinated by how dog's can socialize in an off-leash pack and follow their handler. There is so much to learn about dog's and since this is my profession I have the pleasure to learn more new things about what they can offer and what we can offer them each day. I vote against on-leash dogs (unless they are aggressive and/or unable to respond to a handler's vocal commands) within our parks and beaches and definitely not for more enclosed dog parks (which are at a rarity anyhow as this would just lead to more problems, ie. dog fights, unstimulated dogs, parking problems, and noise). I vote for more education for dog owners to handle their dogs on & off leash. I also respect the views for protecting forests and endangered species, however not at the expense of a friendly and trained dog who wants to enjoy being outside as much as we do. Please don't take away this right for them!

Feel free to share my comments and thoughts within any public forum.

Sincerely, Corey Vitale (& Voice of everydog that I walk and dog w/n SF)

Correspondence: Please allow responsible dog owners to bring their dogs to play at the beach and in an area or specific times in some manner. Most are responsible, but ticket the nuts who don't clean up or bring bad mannered dogs out in public. A huge fine, like \$1,000.00 to pay for the park security and ticket givers. We do not have children and for some of us our pets are our babies. We do not deserve to keep our babies indoors and on cement all the time. They keep us mentally sane and caring for others also. Some go to nursing homes and children centers. Some people with children also should be ticketed for not being responsible parents. It comes down to training before the animal or child is old enough so they will model their parents GOOD behavior. If you do not allow pets to run in some place they will turn mean and aggressive and not be social animals. We could pay to bring our pets and children to a park and have certain times when they are less crowded for dogs perhaps or pay for the children to come to play at the park as those play areas are expensive to build, dogs don't need that much prebuilding.

Thank you, a. darling

Correspondence: I have been a dog owner and dog walker in San Francisco for 16 years now. There are some parts of this document that I do agree with but much of it I do not agree with for many reasons. I only take 6 to 7 dogs and am very respectful of other people coming up the trails or down the beach who might not like dogs. I always pick up after my dogs and always move to the side of the trail or away from the person coming up the trail that might not like dogs. In addition, I would never let my dogs run wildly through and off the trails after wildlife. I have seen a coyote and have quickly leashed my dogs walking away from his or her area. The coyote was not disturbed in anyway.

I feel like that dog walkers and dog owners can coexist in many of these park areas and beaches with no problem but yes should have some restrcitions like not bothering other people. I believe the majority of people/dog owners are very respectful and responsible and there are a few that are not but majority are very responsible.

I also think that what the GGNRA is missing is the fact that the Presidio, Crissy Fields, Fort Funston, Marin Headlands etc are located in a city and urban area. I do not see dogs scaring off the animals but people. I remember way back when they banned dogs to an area of Crissy Fields for the birds to return and I have yet to see a bird since so many kids and people run up and down that beach. I think what the GGNRA is missing is the fact that this is a National Park but it is in an urban area not like Yosemite. It is crazy to think that wild life will suddenly return because of getting rid of dog walking. I believe it is getting rid of people, bikes, motorcycles, streets etc.

I am grateful for the privately owned areas in Marin that allow dogs to go off leash. Matter of fact I have seen over and over a wonderful bob cat that coexists quit nicely with everyone on the trails..dogs, people, bikers etc. Many have seen him and we stay away from him as he does us.

I have a hard time swallowing alot of this document as there are thousands of dogs in the city that need a place to run and have fun with their owners. There are more dog owners in San Francisco and Marin than non dog owners and these people need a place to take their dogs to have fun and enjoy things as do the dogs but yes responsibly.

I have kids who love going to the beach with our dogs to play in the sand and run around with our family dogs. Please do not take that way from my

kids who love all animals. I love all animals and have been raised to respect wild life as a dog owner and dog walker that is exactly what I do.

I think sure clean up some of the dog walkers that take 12 dogs or gather with other dog walkers so there are 16 dogs in one area...hate that but don't punish the rest of us who are responsible and respectful who only take well behaved dogs and respect others using the trails. There is a way to clean up dog walking but if you limit number of dogs per dog walker that will help but do not take away places to go or use. You will see a difference if you start with limiting dogs to each person but to do all of this at once is ridiculous and punishes all of us which is not fair.

Thank you for your time in reading this.

Lisa Gates

ps...my husband is a Phleger (as in Phleger acres) and his family are huge environmentalist hence the donation of pheleger acres to POST and then GGNRA. They are also huge dog lovers and would be very upset by this document. They are big believers (past Phlegers and present) in dogs coexisting nicely with the environment. My husband whose mother was Anne Phleger Gates (the bench at Crissy fields) and nephew of Atherton Phleger was very upset by this document and not happy at all.

Correspondence: Dear National Parks Service,

I am writing to comment on the EIS for dogs in GGNRA. I grew up in San Francisco, and return often. I have had many bad experiences with dogs in GGNRA, and I hope that you will have the courage to adopt a plan that protects the resources and visitors of GGNRA, despite the vocal minority of special interests (i.e., dog owners) who appear to be exerting pressure on you. (I saw the article in the SF Chronicle on 1/23/11.)

I went to your website and reviewed the EIS, and have the following comments:

1) You should ban dogs from all places where there are conflicts with natural resources. You should not fold/compromise by allowing dogs where natural resources may be impacted.

2) I do not like encountering dogs when i visit my national parks, including

GGNRA. I don't like the barking, the poop, the chasing of wildlife, the digging, and especially having any dogs off leash. I don't like dogs running toward me, with owners yelling "FIDO COME," followed by "DON'T WORRY HE'S FRIENDLY." Usually, the dog doesn't obey, and the dog runs right up to strangers, either veering off at the last moment, or (worse) jumping on strangers, shoving it's nose in strangers' crotches, and/or licking or putting it's wet nose on strangers' hands, etc. Fortunately, most dogs don't bite. But sometimes they do. My sister was bitten by one such dog, without any provocation, and the owner said simply (without any apology): "If i hadn't witnessed it myself, i never would have believed it." The bottom line is that dog owners are in DENIAL that others do not love their dogs, and do not want their dog running toward them, even if it is friendly. I don't like "friendly" dogs running toward me, licking or putting their wet noses on me, and/or sniffing my crotch, and we should not have to be subjected to such objectionable dog behavior in our national parks, including GGNRA.

3) I would prefer that dogs be banned entirely from GGNRA.

4) If a complete ban is not possible, i support Alternative D, to limit dogs to protect resources and protect visitors to the greatest extent that the Park Service is able.

5) If NPS lacks the political will to adopt Alternative D, then the "preferred alternative" would at least be a good improvement over the current situation, where dogs run wild and un-leashed throughout much of GGNRA.

The current situation is unacceptable to me, and i hope you will adopt (and enforce!!) a strong plan that at the very least keeps all dogs on leashes in GGNRA.

Thank you for considering my views.

Correspondence: Hi there, my name is Janine Marty. I live in WI, however, my brother is stationed in CA. I go to visit him, and his dog, often with my two dogs. We really enjoy catching up and taking walks together in the parks. Having the dogs remain off leash makes it so that we all can enjoy our time. I just love looking at the beautiful landscape and seeing the dogs enjoy their time as well. We are VERY in control of our dogs. They come immediately when are called and will remain on an off leash heal, if asked. All dogs have been

to obedience school and none are of a "bully" mix. We love our dogs and they are a part of our family. Please keep the parks as an off leash dog area.

Correspondence: I visit GGNRA once a year or so--my parents live in California--and have on occasion had my dog there. A few quick comments:

1. It's not clear from the language I read whether single dogs without permits will be allowed off leash in the ROLA.
2. It's not clear from what I read whether visitors would be allowed to walk their dogs to Tennessee Beach.
3. I understand that no-dog zones would protect fish, frogs and birds, but I'm less clear on how they would protect butterflies. This probably reflects my own biological ignorance, though.

Incidentally, I've been going to GGNRA off and on since 1987 and it's absolutely one of my favorite places in the world.

Correspondence: As a responsible tax payer, registered voter and registered dog owner, I am appalled by this proposed plan. Currently only 1% of all the National Golden Gate Recreational Area allows dog access and now to propose limiting that by 90% is an outrageous. I have heard your terribly misleading propaganda on the radio by your ignorant or purposely misleading representatives concerning the need to protect the general public from unwanted dog interaction. For those who do not want to interact with dogs, they have 99% of the rest of the NGGRA to enjoy. Many people who don't have the ability to keep dogs themselves, frequent these areas to interact. My dear friend who is in a wheelchair goes out to Fort Funston, just to see the dogs, and get out into nature. Many of the dogs will just sit next to her and let her pet them, this bring such great happiness. I plan to fight this until we get these draconian and malevolent changes repealed with the staff the proposed them.

Correspondence: We are frequent users of Crissy Fields, Fort Funston & SF Ocean Beach.

Currently there are limited off leash options in San Francisco. The proposals are huge reductions and specifcally for the under utilized beaches at Fort Funston and Crissy Fields. Did the elaborate survey reflect actual daily users timelines? Mon-Fri? Sat? Sun? Foggy days? Windy days? Special events? There's very low usage Mon-Fri.

My two off leash dogs are well behaved, and respectful. I often pick up trash. (plastic & glass bottles, cigarette butts, food & container wrappters) The human enviromental damage impact outweighs the dogs.

The proposal limits the current practices and activities. Accessibility restriction would limit our ability to breathe, run and dream. Dream, the Haas Foundation core value and gift intent for Crissy Fields.

Please please, please, reconsider and revise the proposal.

Regards, Shirley and my dogs Buster and Moo Moo

Correspondence: Hello,

Thanks for the good work.

I just glanced at the proposal (maps) and the few places like Alta trail. Barbara and I are laughing at "Voice Control". It is either on leash or off leash. Voice control is good in dog shows and for Lassie who is perfect. Unless you have full time dog rangers (we like our police state), the dog walkers can shout dog names while all dogs are trampling nature and harassing people and leashed dogs. These people are clueless and go out with several different dog breads (I have seen some with at least 10 dogs), that they can barely control. Many of them are petite women on their cell half paying attention. Dogs are excited protective and I know the bite of a German Sheppard... dogs are dogs and will act intuitively, are protective and do what dogs do... hunt for these yummy smells. My 12.5 years old Jax is great but he is only a dog... we have a few unstable people out there.

Few years back on some other trail, I could see one dog off trail happy hunting. The owner was pissed at me saying that we are under "Voice Control" area. My dog has never been off leash and the happy guy is fine. I make it and effort to be alone with Jax on these wonderful trails. I have been doing this since he was a puppy. We live in a very selfish and stupid society. So much entitlement and aggressive behavior. I have been told to leave Jax off leash like it was a revelation... They are spoiling it for the rest.

Very few nice people keep dog on leash... all these years running on trails I have seen dogs mostly off leash. I do remember the few people that are polite. I have to respect nature and the people that are afraid of dogs, trying to walk on these trails. We are not alone in the Universe.

I vote for no "Voice Control" and for people to take some courses in good manners and temper management. Good luck.

Have fun...

Rolando

Correspondence: Please reconsider the condensation or elimination of any off-leash dog areas. You must be aware of the high volume of usage. Where would you

intend that activity to migrate to? Without the ability to run off a dogs' pent up energy they become less than ideal canine citizens. To take away this critical function would only result in a cascade into a downward spiral with negative effects on many various levels of the Bay area: unhappy dogs and unhappy owners PLUS you realize this impacts the livelihood of hundreds of people who walk dogs for their living. Your justifications are not worthwhile when viewed in context with the detrimental effects this plan would have

Correspondence: The reason why San Francisco is so amazing, is that this city (and surrounding areas) allow responsible dog owners a place to bring their friendly dogs. We are respectful, courteous, and enjoy these parks and beaches as much as those without dogs. There is no sensible reason as to why we would not be allowed to continue having access to these specified areas. Please note, there are already many areas that are "off-limit" to off-leash dogs, so those who do not want to be around dogs have the opportunity to enjoy the parks as much as we do.

Please do not take away these few select areas that we deem precious. The dogs need areas to run free and tire themselves out...that is why they can live in apartment buildings without incident.

Regards, Lori

Correspondence: Gentle(wo)men: I would like to advocate for as wide as possible area for responsible off lease dog walking. I am old person who finds that my health and my dog's health improves when we can hike together but at our own speeds - not tethered to each other. I am fully supportive of an off-leash licensing program which could be run by animal control. Off leash licenses could be given to responsible dog owners. Responsible dog owners do the following: 1)license their dogs. 2) Have their dogs take all the required shots. 3)Have their dogs complete a certified (could be by animal control) obedience program. 4)Spay their dogs. 5) Dog owners could be required to carry liability insurance for their dogs. 7) Of course responsible dog owners pick up their dog waste. 6) Dog owners would have to pay a fee to NPS for the privelege of walking dogs off leash. Those who have the license to walk

off leash would have to carry proof of such licensing at all times. I think this would reward responsible dog owners. Too often we are always punished and restricted because of the actions of irresponsible dog owners. I agree that not ALL areas are for dogs. I do not actually see how dogs damage cultural resources. What can a dog do to a fort? Erosion does more than the dogs can ever do. Is there really some documentation about dog damage to cultural resources? You really do not say how the dogs damage such things. Also, I really think that people do way more damage to the environment than dogs. Dogs do not throw garbage and plastic litter all over the planet. As to dogs making more work for park personell: I personally have never seen a dog rescue. There have been plenty of people rescues, however. Also, I have never, EVER seen a park ranger removing dog waste. I hope you agree that restricting dog walking areas will necessarily make the area that is left to the dogs deteriorate. Any time an area has dense use be it by dogs or people that area is going to suffer. One dog per acre leaves a negligible impact but 100 dogs to an acre is a disaster. If the dogs are all shoved into smaller and smaller areas, that WILL destroy those areas. The San Francisco area is unique and wonderful because it does allow these great places for people to enjoy with their dogs. Please, don't take it away.

Correspondence: As a dog owner, I have always loved San Francisco for it being such an

ideal "dog city," so I am really upset about the potential implications of this plan. Walking my dog off-leash means so much to me and even more to the health and well being of my dog. Most dog owners I know and observe are very respectful of their surroundings and very good at cleaning up after their dogs. I just want to point out that protecting our environment, respecting other people's preferences, and recreational dog-walking are NOT mutually exclusive.

This plan displays an anti-dog bias--if any of the final restrictions are disobeyed, the Park Service has the power to revoke all privileges of either on-leash or off-leash dog walking. This would be devastating to me, to many other dog owners, and to the health and wellness of the dogs of the Bay Area.

Please preserve our ability to walk our dogs at Crissy Field and Ft. Funston off leash!

Correspondence: The GGNRA draft dog management plan places undo restrictions on dog owners who must have open spaces such as the GGNRA to freely exercise their dogs. I currently walk my dog at Ft. Funston -- either on the beach or along the trails. As proposed, the trails would be off limits to off-leash dogs. When tides are high, there would be no safe place for leash-free exercise.

I appreciate the need to balance the natural environment and the non-dog uses of the park. However, this can be done without the broad-sweeping restrictions that the proposal calls for. Smaller off-limited or leash-only areas would be more feasible. As proposed, large congregations of dog owners and dog walkers are going to be battling for the small number of open spaces where dogs will be allowed off-leash. This can potential make the situation more dangerous for dogs and dog owners if a great number of dogs are confined to a small space.

I urge the GGNRA to reconsider the proposal and continue to allow dogs to play off-leash in the majority of GGNRA territory.

Correspondence: I come from the East Coast where dogs are made to walk on leashes 24/7. It wasn't until I experienced walking with my dog off leash at Fort Funston that I realized how much more territorial and contentious dogs are when leashed. At Fort Funston I delight in the antics of the dogs running and playing together and marvel at the relaxed and joyous attitudes of dogs and owners. Given the sheer numbers of folks and dogs who walk there, I am impressed by the responsibility and care they show for the surrounding environment. Unfortunately, there are a few knuckleheads, and I'm always encouraged when I see them being scolded by more conscientious citizens. Whenever I have visitors from back home, the first place that I take them to is Fort Funston where we can walk, talk, and catch up while giggling at the antics of the various dogs. Afterwards, I am always thanked by my visitor for showing them a local place and activity that they would have missed if they had only chosen touristy types of activities. And each has gone away wishing for an area similar back home. Please don't erase these uniquely San Francisco hot spots.

Correspondence: I am very concerned about this proposal.

I live in Marin and value the right to walk my well behaved 5 yr old Airedale off leash in this beautiful landscape ~ without breaking any laws. I clean up after her, she doesn't chase cyclists, runners or children. We enjoy the trails every day and often go to the beach. There is no way she would be as healthy as she is if she was only exercised while on a leash. We occasionally go to dog parks, she can get exercise there..., but it doesn't do much for me.

It would greatly reduce the quality of our lives if we lose the freedom to walk together without the restraints of a leash. Who would take a dog to a beach on leash? That would just be mean if they couldn't run, enjoy the surf, a fetch a ball. Frankly, having my dog on a leash would be more dangerous to cyclists that speed by us if I'm on one side of the trail and she is on the other than if she is off leash. We try not to choose trails with a lot of bikes, especially on weekends. There are a million trails around here that don't allow dogs if a hiker, runner or someone with children would prefer not be

around dogs off leash - they have plenty of options.

Of course people with aggressive, non-responsive dogs off leash is not a good thing for anyone - but you know, I can't remember the last time I experienced one out there...

Please don't implement laws that would reduce our quality of life in this beautiful area. It seems to me things are fine the way they are.

Correspondence: I am writing to comment on dogs at Chrissy Field. I have been regularly walking my dog there for 14 years. Before that I did not have a dog and I used to walk there and enjoy seeing the dogs with their owners enjoying the beautiful surroundings. There are doggie refuse bags provided, although I bring my own, and garbage cans available for the used bags.

I have always observed dog owners to be respectful of the environment within the GGNRA, and at Chrissy Field and its beach in particular. I have never stepped in dog poop there, and I have never seen it left lying about either. I do not see dogs and their owners on the beach that is signed as a no-dog beach for the protected birds. It has been my experience that dog-owners are respectful of the closed of native plant restoration areas and careful about wildlife.

Basically, it seems entirely unnecessary to me to restrict dog use at Chrissy Field. There is enough room for everybody. I am a bird lover as well as a dog lover and an environmentalist. I love Chrissy Field and I hope that it can continue to be the recreation area I love so much, inclusive of dogs and their happy owners.

Correspondence: I am so anxious and vexed about the proposed changes. I have never understood how dogs are not part of nature. I have walked many dogs on Crissy Field and Fort Funston daily over 20 years without incident. Truly. It is a blessing. I am unclear why these restrictions are being suggested when we are all uniting in a lovely way. You may not have dogs, yourselves, so you may fail to understand that on-leash dogs cannot develop the social skills necessary to live among people and other dogs. I see dogs in the country where I grew up chained up and barking. So sad! This is what will become of dogs with no where to run. Then people will not adopt them. Then more will be gassed. Dogs - soulful creatures who literally keep so many of us going. I do not love dogs more than the natural life you strive to preserve. I love it all and think things are balanced now. Please do not feed hysteria about animals being dangerous, reckless, etc. In this world we need dogs more than ever before.

Correspondence: There are over 100,000 dogs in San Francisco and they need somewhere to go. Fort Funston and the Presidio are wonderful places for dogs to run off leash. This is one reason San Francisco is beautiful and unique. By restricting off leash walking in the GGNRA this will destroy our neighborhood parks. There are just too many dogs and not enough parks already. Off leash dog walking is so valuable to us as San Franciscans.

Correspondence: I really understand how eroded the dunes are getting from overuse by dogs, but believe the impact on local parks, enclosed dog parks, and any other recreation area that allows dogs will cause much worse damage. Ft. Funston is my dog walk of choice, and I can say in 12 years of going there, I've stepped in dog poo only once - people are extremely considerate because it's where they like to play (and for dog-walkers, it's where they work). It seems like if you regulated the number of dogs allowed to be in one pack by

posting one ranger in the parking lot, you'd cut down on much erosion and spend much less money paying rangers to be cops. Or, have us all pay \$5 to park - that would help your budget immensely, and that money could be put towards much-needed maintenance of trails, paths, and dunes. The off-leash rules in S.F. are one of the things that make this city unique and wonderful. There are fewer dog fights because there is so much space to roam and so much exercise to get. Ft. Funston, especially, would just become a homeless sleeping area without all of us dog walkers. Its use as an army fort was never disputed, so I think its use as a dog park should not be, either, Best,

Celia Sack

Correspondence: I applaud your improvement efforts and agree with the proposed leashing of dogs. As a avid photography hobbyist, I have met with many people from Crissy field to Lincoln beach the let their dogs run wild and many leaving feces to step over. Thanks for trying to control a possible problem of people getting bitten and perhaps a future lawsuit by and injured person.

Correspondence: Hello Committee,

I understand there is a discussion about removal of dogs from certain beach preserves. While I am not a dog owner (and never have been), I am a lover of the natural habitat along the beaches and in the bays of northern California.

I did recently visit both Fort Funston and Muir Beach with friends. In both cases, there were many people, dogs, horses, birds, and aquatic animals on my 2-3 mile beach hikes.

I was very impressed by the overall of the beach... I found only the natural ocean dropped kelp, sand dollars and crab shells... lots of birds and some horse manure. I was surprised that the relatively high proportion of dogs to horses didn't cause considerably more dog pollution. Certainly Fort Funston and Muir beach Dog owners managed the waste of their animals with perfect felicity in my several and extensive walks through those parks.

While I cannot say the same of the horse riders/owners on Funston beach, I did not find anything to be offensive or overly unnatural (out of place) on these beaches. In fact, I mentioned my surprise at the conscientiousness of the dog owners to the folks I was hiking with. In only one way did the presence of the dogs and horses on the beach (with their owners) detract from the overall setting... if I had been alone on the beach, my own private paradise would have been special.

However, we all share the open space and I understand that I cannot have my own private beach in California. Residents of these populated areas must be able to share the public resources without hurting them for others. This sharing is required of each and every one of the animals using the beach... wild or tame. Dogs and dog owners, citizens like me who don't have pets, Horse owners and riders, Birds, crabs, and wild animals can and do share the same space with little impact on each other.

I believe that we must be protectors of our planet, location, area, shared space. I believe that the use of these shared spaces needs to be open to all... otherwise, they are not shared spaces by definition. They must be shared with people who live with dogs, cats, horses, birds, and other humans.

If access needs to be regulated to preserve the space, then all of those categories should be eliminated. If dogs must go, then horses, people, domesticated birds, artificial birds (model airplanes, hang gliders, etc) should also be eliminated. However, I think that is unreasonable and unfair. If we eliminate those, we should eliminate the boaters on the water as well...

surfers, Kayaks, boats, ships etc... very impractical and unrealistic. However, there is no reason to single out a particular class or a set of classes of beings... whether they are wild, tame, humans, boats or types of users.

Sharing our environment is important. Protecting our environment is important. Balancing the two may be difficult but in my experience at both of the two beach environments mentioned did not show a problem... balance was maintained and protected by the very people who use and love those areas.

Please do not change the regulations relating to pets on the beaches. I don't believe this is a problem that needs to be fixed.

thank you

Dave Corbin

Correspondence: I'm a dog owner and walker upset about the changes in rules that have been in place for many years and have resulted in very few problems compared to the number of dogs in these areas.

Having small off leash areas connected by on-leash areas that used to be off leash is going to cause an enforcement headache for you because many people are just going to risk a ticket.

If you must restrict dogs, why not have it be time based, instead of area-based? Why not allow dogs in all the areas that have traditionally been allotted to them in the early morning and late afternoon, times not traditionally used by the average beach goer?

Or, alternatively, let us have Fort Funston and save your restrictions for Chrissy Field, which seems to have a much higher ratio of non-dog users than Fort Funston. (I can't speak to Marin as I don't go over there, but perhaps the same principle could be applied).

Thanks, Clare W.

Correspondence: I walk my dog regularly at Chrissy Field, the Presidio, and in a number of parks in San Francisco. Please do NOT take away our ability to enjoy the beauty of San Francisco, its parks, fields, etc. The residents and guests who enjoy San Francisco all love the ability to go to areas to let the dogs run, play and enjoy it.

Do NOT take away more of our pleasures. This will make San Francisco a less attractive place to live.

Correspondence: Dear Superintendent Dean,

As a person who has lived here their whole life (57 yrs) I have used every inch of our open space with the greatest of pleasure and do so on a daily basis. I have had dogs and horses most of my life and still do. I feel strongly that dogs should be able to enjoy the outdoors unleashed yet thoughtfully and on voice command. I can truly say I have never seen a problem though have heard of some. Instead of punishing the dogs that do behave on the trails why not set up a special license thru the Audubon Society or Humane Society. Dog owners could pay a small fee for a tag after they can prove their dog is under control by voice command. Dogs that can't pass have to be leashed. I respect our open space and want it protected but I don't think taking places away from dogs whos health and well being depend on getting out and having a sense of being free is the right thing to do.

Thank you for your time,

Jennifer

Correspondence: Every time I have been to Fort Funston, it appears there are more people there with dogs than without. I understand the concerns of those who fear dogs and of those who wish to preserve natural habitat, not withstanding the fact that dogs are a part of our habitat -- especially in San Francisco. Because of the very large population of dogs and dog owners in San Francisco, possibly a satisfactory solution would be to set aside one contiguous mile of beach for dogs. For my purposes and those of my dog, any beach within the city limits of San Francisco would suffice. There is a section near the southern end of the Fort Funston beach that almost nobody visits. Possibly this area could be designated as an off leash dog area.

Correspondence: it is so important to allow the dogs to be off leash on Chrissy Field. I am a native San Franciscan and am so sad that there are so few places for dogs to be of leash. Plus Chissy Field is so different now and such a more touristy place with so much more traffic. Chrissy Field seems liek the last place for the residents to go and take the whole family (including dogs). In my opinion, dogs are much more well behaved and less agresive without leashes. Thanks.

Correspondence: I would like to see stricter and more leash laws as well as areas where dogs

are not allowed. I would suggest that the majority of the land be dog free. (more than is outline in the EIS) The majority of dog owners I have interacted with have been rude and disobey these laws. Not only do they disobey the laws but they brag about how they get away with disobeying the laws. Dogs not only ruin nature by destroying native and non-native plants but also ruin the peace and tranquility of the park for other visitors. I also recently discovered that people with guide-dogs have not been able to enjoy the park due to attacks on the guide-dogs by other dogs. Because the laws are not enforced, disabled people are forced out of the parks. Please, protect this already discriminated against group. I urge the GGNRA to protect the wildlife and protect the park's visitors from dogs.

Correspondence: As a resident of El Granada since 1989, I have had the privilege and blessing of hiking the Rancho Corral de Tierra hills for 22 years now. In the course of those 22 years, I have always been accompanied by one my dogs: Brigit (in the earlier years) and Boomer, in the later years.

I can't begin to tell you the joy that I and my dogs have experienced in this WIDE open space. What I can tell you though, is that I have had the utmost respect and love for this land and have documented my respect via my photography. I encourage you to take a look at my website and see the images that I have taken along with my dogs. I think you'll begin to understand my passion for not only the land but what it has personally meant for me to have my dog with me while I hiked these trails:

<http://www.dianevarner.com/about.html>
<http://www.dianevarner.com/galleries.html>
<http://www.dianevarner.com/Boomer/index.html>

I consider the hills behind El Granada my backyard. Because of this sense of ownership, I have made it my mission to protect it as much as I possibly can. This protection has started with my dogs, making sure that they do NO HARM or DAMAGE to the wildlife or the environment.

During the many years that I have been hiking Rancho Corral de Tierra, I have seen more damage done by MAN than by dog. For instance, this past December (2010), I stopped a truck that was going up a muddy trail, creating deep tracks in the terrain. They told me that they worked for POST and were doing boundary work for the GGNRA sale. I politely asked them why they couldn't get out and hike rather than drive up and create damage to

the trail??!!

I have also witnessed NUMEROUS hunters on the trails and even called POST in 2009 to let them know that there were men up there with guns. If for nothing else, I would prefer my dogs with me for safety!

Bottom line, I would be heartbroken if I was no longer able to take my dogs with me while hiking these hills. It would change my life and my love for this area that I live in and call HOME.

As a longtime resident of El Granada, I ask you to please consider allowing myself and others the continued enjoyment and enrichment of bringing our dogs along on our hikes in Rancho Corral de Tierra. I urge you to please choose Alternative E rather than a complete ban of dogs.

Thank you VERY much for your time and consideration.

Respectfully yours,

Diane Varner (in memory of Brigit and Boomer)

Type:

Correspondence: Unlike most people likely commenting, I've read through the Dog Draft Management Plan, and have quite a few comments, both personal thoughts and practical comments on the proposal. I'll start with personal thoughts...

As a dog owner, it's obviously in my interest to reject the majority of this proposal. Many of the areas proposed for on-leash or outright prohibiting dogs have long been frequented by dog owners and walkers. In the proposal, you claim to attempt to represent the community. However, dog owners ARE part of the community, and those who most frequent many of the parks with tighter restrictions proposed. This seems to be a point you've overlooked. The fact is, dog owners/walkers with dogs in tow are those who visit many GGNRA parks the most; many visit daily. The sense of community at many off-leash areas is very strong - many who visit, with their dogs, daily as their main means of socializing, conversing with friends (other dog owners who they see daily), etc... Tightening restrictions would destroy this sense of community, as people would no longer have familiar areas to meet with old friends as their dogs play. In the proposal, many of the Alternatives are decided with the interest of tourists and other visitors who may visit said parks for an hour of their life, so it just seems ridiculous that they'd be given priority (as part of the "community", which they're not) over individuals visit parks such as Crissy Field, Fort Funston, etc... on a regular basis. I think it's a reasonable statement to say that, in fact, you're proposing these restrictions at the expense of the community (of which dog owners, in a city/region with more dogs than children, are possibly the largest group). Don't even consider the argument that "dogs deserve rights, too", but rather consider the argument that tax-paying members of the community deserve the right to visit parks in the way they enjoy most (in this case, with their dogs).

There have been anecdotal mentions of complaints from picnickers, etc... about dogs "ruining" their experience. This very well may be true, but I assure you it's rare. Most dog owners, myself included, are very responsible and wouldn't allow their dogs to do such a thing. If you personally go to any current off-leash area, you'd be hard-pressed to find even 1 example of dogs disturbing others on an average day. Regardless, this is largely moot; if someone decides to have a picnic in an off-leash dog area, it's equally (if not moreso) their responsibility if it's "ruined", just as it would be my fault if I were to have a picnic in a baseball field and get hit by a baseball. Off-leash dog areas are designated for that purpose, and should be respected as that, just as sports fields, childrens' playgrounds, etc... are designated for their purpose and should be respected as such.

Likewise, most areas of GGNRA already require dogs to be leashed, or prohibit dogs entirely. Those which prohibit dogs include all or most trails

in the following: Muir Woods, Marin Headlands, North Baker Beach (below the Presidio Bluffs), etc... Most other areas require dogs to be leashed, leaving off-leash areas already few. If someone were to want to have a picnic without being disturbed by dogs, they already have many options. Therefore, choosing to picnic at an off-leash area (which are already relatively few) and complaining that dogs are off-leash is no less disrespectful of the community and park policy than dog owners taking their dogs to an area in which people picnic and allowing them off-leash. It may not be illegal, but it is disrespectful, pure and simple.

As a large proponent of wildlife and habitat preservation, I'm also very unnerved by your claims of "sensitive habitat" as rationale for tighter restrictions. Considering the recent development funded by GGNRA, there seems to be a contradiction. Recent developments at Lands End, Mori Point, and several other parks have ripped up vegetation that has been there for generations (no, not native, but plants that were brought by settlers in the 18th and 19th centuries, which wildlife has adapted to since) in exchange for paved walkways and "quaint" planted areas. From personal experience, I can say that raccoons, foxes, etc... that once were plentiful in the area (never in danger from dogs) have all but disappeared since development commenced. Rob Hill has gone from a beautiful eucalyptus patch to what frankly looks like any generic rest area at the side of Highway 80, coyotes in the southern Presidio, near the Arguello gate, are notably distressed and displaced from recent construction, etc... Likewise, as a dog owner, I've personally rescued many birds, during the oil spill and after, which I encountered due to walking my dog on the beach. I've personally rescued cormorants, seagulls, and many others (including other animals, notably frogs) - some I took to rescues, others I personally paid out of my own pocket to get them proper veterinary treatment and eventually release them back exactly where I found them. I have always been an avid lover of wildlife (and animals in general, my love of dogs being an extension of that) and habitat preservation as a whole, so I feel personally offended by this assertion. So, I feel that pitting dogs and habitat against each other is a fallacy; dogs do not destroy habitat... if anything, they're genetically closer to a few species of wildlife in GGNRA than humans are. Likewise, as with the picnic issue, most dog owners are respectful of sensitive habitat... the many shouldn't be punished for the few, especially in respect for the community. If some violate that respect, they should be punished, I wholeheartedly agree (I'll elaborate on that later). However, most don't.

To further elaborate on that, I'd like to directly address the issue of habitat destruction and degradation. Recently, in partnership with Trails Forever and The Presidio Trust, the GGNRA implemented a number of projects which have all but destroyed habitat at Lands End, Mori Point, and many other places. These "restoration" projects have effectively destroyed vegetation that has existed in the area for well over a century, replaced

minor dirt paths with intrusive paved walkways, and displaced or killed any wildlife living in such areas. The area of Lands End closest to Sutro Baths was once dense forest - now, it's a paved walkway and constantly attended garden (note: volunteers may mean well, but wildlife obviously won't settle where people are constantly working). The same is true of many other places. In interest of sensitive habitat, it's deplorable that you'd cater to tourists who will visit for an hour or two of their lives above both wildlife habitat and the community (again, a very large portion of which being dog walkers), just to turn around and use "sensitive habitat" as a justification for tighter restrictions on the community (ie: those who visit regularly). Likewise, people are a far bigger environmental threat than dogs; trash cans and trash, parking lots and cars, paved areas, and encouraging heavier human traffic (ie: more trash, more cars) are undeniably more cumbersome and damaging to wildlife habitat than dogs.

On that note, I'd like to suggest that any truly sensitive habitat (the wildlife area at Crissy Field, etc...) be *completely* off limits to both dogs and humans (bird watchers can still view, via binoculars, from the promenade), in interest of truly preserving limited wildlife habitat. I honestly don't think shorebirds are less disturbed by people than by dogs. Essentially, if a habitat is so sensitive that dogs (under the current control laws) are a threat to that habitat, then so are people. Likewise, in interest of health concerns in other areas about dogs... I'd like to point out those concerns are scientifically unfounded, as I'm sure you're aware. According to the basics of zoonosis, dogs and dog feces pose no health risk to humans, except a small possibility of parasite infection should a dog have a notable infection (unlikely in a developed area with veterinary requirements, etc...) and then only if someone were to eat the feces. So, while it seems a popular complaint, it's moot (and there are already laws requiring clean-up, etc... which I'll elaborate on later).

Another of your "reasons" is to prevent user conflicts. This can be done simply by educating EVERYONE about current parks laws and rules, including respect for current uses and those who frequent certain areas (ie: inform picnickers that dogs are allowed off-leash in certain areas, and if they wish to avoid conflict, they should consider having their picnic at any of other plentiful options that disallow dogs or require they be leashed instead), rather than rewarding those who complain most at the expense of those members of the community who have come to frequent certain parks.

Another issue is that many of your Alternatives effectively seem to be at the expense of dog owners in favor of cyclists (it's noted specifically for the Marin Headlands and Fort Mason). First of all, cyclists are a far bigger threat than dogs - legally defined vehicles that crush any vegetation and animal in their path, at a speed preventing them from being able to quickly avoid any such obstacle. This seems like a clear threat to habit. Secondly,

according to 36 CFR 4.2, National Parks adhere to state traffic laws. According to California law, bicycles are prohibited from pedestrian walkways and pathways and only allowed on designated roadways. Therefore, the proposal is shafting dog walkers at the expense of people who are already breaking current laws, ie: currently illegal activity favored over currently legal activity. As a dog owner, I've very rarely been threatened by other dogs, but my dog and I are routinely put in danger by cyclists. So if public safety is truly an issue, shouldn't cyclists be a concern rather than a group whose rights outweigh that of dog owners?

In the proposal, you mention the cost implementing these restrictions will be approx 1.5 million dollars, with the largest expense being staffing officers to enforce the new laws. That's wonderful - jobs are needed. However, are new restrictions needed for those jobs to be implemented? As it is, there are many laws and regulations already in place to protect habitat, require dog waste clean-up, etc... So why not just hire more officers to enforce those pre-existing rules? Again, as someone personally interested in habitat protection and other environmental concerns, and as the owner of well-behaved dogs who don't violate these rules (and in interest of their safety from aggressive or out of control dogs), I fully support enforcement. However, as I've said, dog owners who allow their dogs to do such are in the minority, and the majority shouldn't be persecuted, especially if you already plan on staffing more people to enforce laws. So, by all means, hire more officers - but enforce currently existing laws when they're violated, which would protect habitat and send a message to irresponsible dog owners without negatively affecting responsible dog owners who are as much a part of the community as joggers, picnickers, etc... (and, in some ways, more a part of the community, or at least a larger segment, and the vast majority at parks such as Crissy Field, Fort Funston, etc...). As it is, options of those who wish to let their dog run, play off leash, and socialize with other dog owners is very limited (certainly a minority of GGNRA space), and further restricting that would only be detrimental to the community.

On another note, I would like to commend the proposal for limiting 3 dogs per person (6 with a permit). As a dog owner, I've at times been annoyed with commercial dog walkers who have more dogs than they control. I've personally had to keep dogs from eating things they shouldn't (note: the vast majority of these "things" have been left by people, not dogs), returning lost dogs to commercial dog walkers who didn't even realize they were missing, etc... I believe this is very much in line with my points above: don't persecute responsible dog owners and walkers who respect laws and habitat, but enforce accountability for the few irresponsible individuals.

Below is a list of alternatives to your "Alternatives" for a few key parks. These were done quickly (and I haven't included other parks that I felt required more debate) but I still feel they're valid and should be considered,

and I will work further on my alternative proposal and send it at a later date. I will also be at both San Francisco meetings to voice my concerns. Thank you!

Muir Beach (proposed Alternative D): Current proposal prohibits dogs from Muir Beach, in interest of the lagoon. Instead, I propose off-leash dog walking on the southern end of the beach, nearest the cliffs (opposite end from the lagoon) and in the area (currently popular with nude sunbathers) below the houses at the far northern end. On leash only on the rest of the beach, and no dogs in the lagoon.

Marin Headlands (proposed Alternative C): The current GGNRA proposal bans dogs from the Coastal Trail, which is the only trail (away from the parking lot/traffic) that currently allows dogs. Instead, dogs should be allowed off-leash on the Coastal Trail, on leash on the other mentioned trails, and off leash on Rodeo Beach. It does not seem logical that the Coastal Trail should remain a bike trail (nebulous under state traffic laws, more detrimental to sensitive habitat than dogs) but disallow dogs.

Fort Mason (proposed Alternative B): The current proposal requires dogs to be leashed, in favor of tourists on rented bicycles. The Great Meadow is a popular area for members of the community to meet and let their dogs run. Therefore, in interest of the community, it should be an off-leash area (at least the southernmost part, away from the main service road). All other specify areas (Laguna Green, grass, service road, housing, etc...) on-leash only. It's illogical to give favor to cyclists, as legally they aren't supposed to be riding on pathways through the Great Meadow, anyway. This would provide a largely on-leash park (since it is multi-use and already very developed) with respect to the prime area currently used for off-leash dog walking. Cyclists should NOT get priority, as they're the ones currently violating the law and, being on legally defined vehicles, a bigger threat.

Crissy Field (proposed Plan C): Under the current proposal, dogs would be banned from East Beach and the Wildlife Protection Area, but Central Beach would remain off-leash. Crissy Field is perhaps the most popular beach in San Francisco for dog owners, and where the dog owner community (as part of the greater community) is most prevalent. Therefore, Central Beach should, in fact, remain off-leash. East Beach shouldn't ban dogs, but instead require they be on-leash east of the stream, off-leash starting west of the stream (the course changes, so this would be a changing boundary). This would allow families with both children and dogs to have the East Beach for picnics, etc... enabling them to have an undisturbed experience while still having their dog with them (on-leash), as it can be a hindrance for families with both children and dogs to find a place safe and accepting of both. However, those who are there with just dogs would, by default, naturally forgo East Beach in favor of Central Beach (few would

want their dog on-leash when an off-leash alternative is just steps away, so even allow leashed dogs on East Beach would provide a relatively dog-less experience for those who choose). The Wildlife Protection area should, in fact, prohibit dogs, but should also prohibit people (in interest of snowy plovers). There is no need for either dogs or people to be in such a sensitive habitat, especially with so much other beach available. Bird watchers can watch from the observation areas along the buildings and promenade. Therefore, the WPA should be designated as the wetlands - off limits to all visitors. Dogs leashed on the promenade is reasonable.

Baker Beach (proposed Alternative D): The current proposal is for dogs leashed on most trails, banned from North Baker Beach. Instead, dogs should be allowed off-leash on the trails and old battery nearest the parking lots, as they aren't sensitive habitat and not too high traffic. On leash in the picnic area and all other trails, as well as North Baker Beach (ie: not banned, but leashed). South Baker Beach, near the stream's run-off, should be designated as off-leash. This provides concern for habitat (leashed) without banning dogs, and encourages dog owners to walk their dogs on the southern portion, which would limit dogs in other areas (again, if the alternative is there, most dog walkers would prefer that area), as well as concern for picnic areas.

Lands End (proposed Alternative B): Proposed on--leash in all areas. Lands End is a disappointment... whereas for many parks, the proposal limits dog access for conservation reason, at Lands End it limits dog access in interest of developing/destroying what was once wildlife habitat. This is against the GGNRA's mission for many parks, which seems a conflict. Ideally, development would cease in favor of maintaining what's left of wildlife area (ie: in favor of conservation). However, since development surely won't cease, I suggest requiring dogs to be on leash in the parking lot and the Coastal Trail starting at Sutro Baths/Sutro Heights Park through the currently developed/paved portion of the Coastal Trail. Where the Coastal Trail becomes a dirt path, dogs should be allowed off-leash, as well as on all other minor trails (down the cliff, toward the beach). This provides a leashed area for the most heavily traveled/tourist-directed area of Lands End, minimizing dog traffic, but still provides dog owners with a large amount of area to walk dogs off-leash (and effectively keep them away from the more tourist-focused area), which I believe would achieve the objective of making the most accessible overlook area more inviting for tourists, but without imposing too much on regular members of the community who enjoy walking with their dog. I personally have rescued a cormorant from Lands End, which I wouldn't have had the chance to do if not for walking my dog there (which wouldn't be as fun if not off-leash, and therefore wouldn't visit).

Ocean Beach (proposed Alternative C): The current proposal requires dogs

on leash throughout all of Ocean Beach, except south of Sloat where they're banned. Instead, I'd suggest North Ocean Beach (from the Cliff House to the dunes) require dogs be on leash, as this is the highest traffic area of the beach, and the most likley destination for tourists. The area along the dunes, which is less traveled, should be designated as off-leash. Again, it would effectively encourage dog owners to use that portion instead. South of Sloat should require dogs be leashed, perhaps banned during mating season (but only during mating season). This would ensure protection for plovers and convenience for tourists while still allowing dog walkers/owners a viable option for off-leash areas. The promenade should, of course, require dogs be on-leash in interest of their own safety. I'll also note I've personally rescued several wild animals at Ocean Beach, which I wouldn't have even come across if not for walking my dog off-leash (injuries caused by human trash and products, and once natural causes).

Fort Funston (proposed Alternative C): Current proposal recommends ROLA for North of the parking lot to the beach access trail, dogs banned from far north, leashed south. Instead, Fort Funston should remain as it is, with the exception that the beach north of the beach access trail adhere to the same restrictions and southern Ocean Beach (ie: dogs on leash, perhaps banned during plover mating season). Fort Funston is almost exclusively a dog park, and an oasis for dog lovers everywhere, and should rightfully, in interest of the community, remain so. However, perhaps requiring dogs be leashed within 100 feet of the parking lot, for everyone's safety, would be a reasonable change. If any park should be kept essentially as is and in favor of dog owners and walkers, it should be Fort Funston.

Mori Point: The current proposal recommends dogs be leashed in all areas. Mori Point, like Lands End, is another nebulous issue. The proposal claims it's in the interest of sensitive habitat, but for some time now the park has been under extreme development: vegetation destroyed, constant volunteer work, construction of a wooden walkway and stairs (hardly "natural"), etc... To claim dogs are a threat to sensitive habitat when people have been destroying it for some time is ridiculous, and Mori Point has seen some of the most human intervention and development recently. Instead, I propose dogs are allowed off-leash on the Coastal Trail, the trail leading from Bradford Way to the promenade, and Sharp Park Beach. All others, including the promenade, should require dogs be leashed (in interest of multi-use and any work being done). This allows sufficient multi-use areas while still allowing dog owners many off-leash opportunities, and protecting recent developments (not "sensitive habitat"... DEVELOPMENT). Please note: as a dog owner who allows his dog off-leash, I've rescued MANY wild animals at Mori Point (whose injuries were inflicted by humans' trash, oil, etc...).

Of course, with all of these you would still hire more staff to enforce clean-

up laws, respect for off-trail habitat, etc...

Correspondence: I take my two dogs to Ft Funston every day, rain or shine. They get their exercise there, and, additionally, they socialize with other dogs every day. BOTH activities are vital for their well being and overall health. In addition, my daily activities are my only exercise and outdoor time. The rest of the day, I am indoors working.

Walking them on a leash would be difficult for me, since I have physical disabilities which limit the use of my wrists. My dogs are well trained, very friendly, and do not cause any problems. They thoroughly enjoy the other people and animals they see every day, and trot up to them and wag their tails.

Your new plan would entirely eliminate our use of the area I have utilized for over forty years. A tiny area near the hang gliders is totally inadequate, and the walk down to the beach and, moreover, UP again is impossible for me at my advanced age.

My doctor tells me that my daily exercise on the level area of Ft Funston is vital to my health. Your proposal eliminates that.

My dogs and I BOTH use the area. You should not eliminate the area my dogs need to run freely in. As I said, I cannot control two leashes, or even one, for a two hour walk. I spend two hours at Ft Funston EVERY day, rain or shine.

I would not be able to continue to do so if your ill advised plan goes into effect. I believe San Francisco decided that land to you on the condition that the use remains the same. I object to your closure of an open space for dogs to run, as God intended.

I could say much more, but I wish to totally disagree with your "environmental" attitude to an area which has not been harmed in the least by my current use.

I demand much more open space for dogs to run, and could see you closing off, say, HALF of the park, but the WHOLE THING? That is totally unreasonable, and another example of government overreaching and dominating the public, instead of simply sitting back and letting the people

do what the majority want to do.

On any weekend day, you see hundreds of people and dogs enjoying the area, and all of the dogs are able to run free. THAT is the way the area has always been, and that is the way it should remain. You can fence off some critical sections, but a huge area of iceplant and sand seems to be a totally available area to me. It's just sand, for goodness sake. Sand and iceplant. I don't see how my two dogs, or any number of other dogs, can possibly hurt sand and iceplant.

As far as people picnicking and such, there are PLENTY of parks where dogs are not allowed. Ft Funston is a DOG PARK. Always has been, and always should be. Give us a break. My old body can't conform to your environmental requirements to have my dogs tugging on a short leash for two hours every day.

Don't take away something which is not yours to take. Obviously, you are not aware of your promise to the people you made when San Francisco signed the land over to you. As a matter of fact, except for the daily collections of the trash, nobody needs the United States Government there at all. The people are doing fine at keeping things clean and controlled as it is. That day I saw horse mounted law enforcement cops trotting around for a day or two several months back, I was appalled. Who needs that? Nobody. The area is well regulated by the citizens, and we don't need bureaucrats messing with it.

Correspondence: I OPPOSE the Draft Plan/Draft Environmental Impact Statement (Plan/DEIS) for Dog Management:

Reducing the off-leash area will make it more difficult for certain sections of the community to use the parks. The elderly, the disabled, and people with children rely on the wide open space for access and safety. Reducing the off-leash area at Fort Funston for example will concentrate dogs in a small area where those with mobility issues will not be able to walk safely.

A healthy community can only be achieved by keeping the off-leash rules as-is. If dogs are prohibited from getting exercise in these spaces it will affect their behavior. They need these outlets to keep them healthy. The result would be under-exercised and under-stimulated dogs that will have an effect on the city. Many dogs need to socialize in the wide-open space as-is now. Many dogs do not do well in small spaces. Small dogs need open

space in order to get the exercise they need. Small dog parks can be dangerous for small dogs. There are predatory drift issues and simply the size difference alone can make for dangerous situations where dogs can get hurt in cramped dog parks. The open space provides the only safe alternative in this city.

It will overload other city parks in SF and Marin as dog owners are pushed out of the GGNRA off-leash area. This concentration of dogs in small spaces will lead to environmental problems and social issues.

I have made many friends from all walks of life at Fort Funston and other GGNRA off-leash areas. I would never have met these important friends if it were not for this land being off-leash. The proposed plan will shut off a community.

People who use this open space are a diverse group who encompass every social group in society. It is one of the few spaces where everyone is included. Many people who do not have dogs go to these spaces to enjoy the meeting dogs. People with strollers, walking aids, kids on bikes come to Fort Funston with their dogs as they have plenty of room to walk on the trails. This will no longer be possible under the proposed changes.

There are many places to go if you do not want to be around dogs or want to be around on-leash dogs only. Every section of the community has choices. Do not take our right to this open space away.

Dog owners are concerned about the environment. It is the dog walkers at Fort Funston that organize clean-ups and promote education and responsible dog guardianship.

Correspondence: Your preferred alternatives seem to be "no dogs." How is this inclusive? It appears to exclusionary. You talk about "fear of dog bites," yet offer no evidence that this is a problem. While you talk about environmental concerns with dog waste there again there is no evidence that dog waste is polluting the waters of the state, and in fact if DNA were done, I think you would likely find the pollution, if any, would be from people and birds. Last, you talk about the enjoyment of the park but I would ask for whom? Certainly not dogs and their owners. Thank you, Liz Kanter, dog owner

Correspondence: Please consider an enclosed off-leash dog area, ideally with large and small dog sections, and keep the remainder of the park areas for on-leash use only. Sadly the actions of the few make off-leash dog use incompatible with high density mixed uses; no one should have fear of using the park. Yes the number of incidents is small statistically, but their impact and the cost of enforcement is great. Much easier to maintain a designated space. Trying to enforce "voice control" is ridiculously subjective. Every dog owner thinks their dog is under reasonable voice control, same as parents think of their kids.

Dear Sir or Madame:

When I moved to the Bay Area 2 years ago, a major selling factor was the "dog friendliness" and amazing off-leash parks. Without these parks, I would likely have chosen otherwise. It is reasonable to assume that you will hurt the local economy with this proposal, for comparatively little gain. A cursory review of market data for the pet industry in the Bay Area tends to show that the industry generates significant revenues, helping to stabilize marginal spending in a volatile economy.

Please do your part to keep the Bay Area a haven for responsible pet owners. Put a stop to these regulations with a firm hand. Protect our local economy, our local citizens and our local pets. Thank you.

Please feel free to contact me with any questions.

Sincerely,

Ryan McGraw

Correspondence: My name is Natalie Tondelli, and I am a graduate of the SF SPCA's Dog Training Academy. I am both pro- nature and pro-dog and I cherish the ability to enjoy and walk at Fort Funston and other areas on the GGNRA. I understand the need for their to be a comprise for the equal use of GGNRA lands for both dog people and non dog people. But I feel the proposed plan on the table now is unrealistic and unmanageable for all the thousands of SF Bay area dogs and their owners. San Francisco is such a special place because we are allowed the opportunity to enjoy such wonderful parks and scenery of the GGNRA, especially with out four legged family members. I have enjoyed taking my dogs to many of the off leash areas in the GGNRA for nearly a decade. Because SF is such a dog friendly city, is the reason I continue to rescue dogs and train them (as well as train their owners). The off leash access provided by the GGNRA has been so beneficial to the success and lives of these types of dogs who otherwise would not be able to find a home. Responsible dog owners have used the GGNRA for over 20 years and it has been so critical to the health and balance of such a densely populated city and the dogs that inhabit it. If we were to loose the small off leash areas that we have currently, all SF dog walkers and owners would take over and invade the even smaller number of legal off leash SF City Parks. These displacements will inevitable cause more problems for SF residents and neighborhoods due to the lack of other options to exercise their dogs. It is because of the GGNRA and other open spaces that we are able to have balanced and well behaved dogs in such a densely populated city. It is vital for the sanity of both dogs, their owners, AND their neighbors that we continue to permit off leash access for people to exercise their dogs. I understand (and have witnessed myself) that not everyone is a responsible pet owner and there have been conflicts brewing over use of space and the sharing of nature/ trails/ beach/ wildlife/ etc. with non-dog people. So here are some suggestions and possible alternatives that have been brought up by other pro-dog people over the past few years: 1 Why not let the dog walkers, dog owners and pro dog people police themselves? By allowing people a permit, they are granted access to the GGNRA and the

opportunity to run their dogs off leash? 2 Professional dog organizations and advocates are capable of organizing and CHARGING both business and individuals to use the land to exercise their dogs at. It is a luxury, and people get so much enjoyment from the GGNRA. And I am positive people will be more than happy to pay to be able to continue to use the land. 3 This will increase annual revenue for the GGNRA, and also allow responsible dog owners continued access to use the park. If people do not pay, or their dogs are unruly, aggressive or the owners are uncooperative with the standard policies, they lose their privilege of using the park. 4 If given permission from the GGNRA, why not allow pro-dog people the opportunity to fence off and dog proof restricted and sensitive habitat areas to reduce further eco-wildlife problems in the park? The park has limited and unsuccessful barriers now that people do not know where are the restricted areas and they do not keep dogs out of those areas. I hope you take my letter seriously, and I hope that you will come to a balanced decision regarding the off leash policies of the GGNRA. I hope to be able to enjoy it in the future with my future children and my future dogs.

I would love to be a part of the committee or decision-making process. If I can help please let me know.

Thank you for your time,

Natalie Tondelli Top Dog SF San Francisco, CA 94116

Correspondence: Thank you to the GOGA for finally enacting some type of plan to manage dogs in the park. For too many years regular park visitors have been bullied by DOG OWNERS. For some reason they feel their pets are more important visitors to the park than people. What ever the plan, the most important thing for the GOGA to do is ENFORCE the rules. Dog owners need to be held accountable for the actions of their dogs where ever they are in the park. This is not about animal behavior, its about humans not following the rules. I wish you the best. Sincereley, Pete Caraher

Correspondence: Reducing the number of areas where dogs can run off leash doesn't solve the problem. Protecting endangered plant and animal life is a priority, as well as

making our parks accessible to all. However, even on leash, some dog owners still violate all the rules. Proper enforcement of the EXISTING structure is what is needed. Enforce clean-up rules, enforce the on-leash rule in the areas where it is currently required. Enforce that owners must have an off-leash dog under voice control. Currently none of this is being enforced, leading to complaints that make it seem as if shutting down off-leash areas will improve the situation. It will not!

Correspondence: Why do dogs need to be restricted to a leash at Crissy Field. There's no reason why there can't be a specific area at Crissy Field specifically for dogs to run off leash. There's plenty of room to have part of Crissy field designated as an off leash area for dogs. San Fransico has plenty of dog owners and plenty of parents and both can co-exist at Crissy field. Making dogs stay on a leash at Crissy Field is completely extreme and unnecessary.

Correspondence: Kudos for this plan to restrict off-leash dog use at many GGNRA beaches. As a mother of a 2-year old who has been chased, barked at and snarled at by dogs on local trails and beaches, I firmly believe dogs are dangerous animals that need to be kept under control -- and "voice control" means nothing when the owner is not even in sight or paying no attention. (When sunbathing, I have been trod upon, disturbed, and forced to move by packs of dogs running wild on Baker Beach and Ocean Beach when they were supposedly under "voice control".)

I am also a birder, and want our coastal dune habitat preserved for local native species that nest in the sand and dunes. Birds such as Western Snowy Plover are already in severe decline and nest destruction and harassment by dogs is a serious issue in Point Reyes and GGNRA.

I know the dog-rights crowd is very opposed to this plan and unleashing a torrent of criticism, but in fact, you have restored some critical balance to a situation where dogs have been allowed to run wild for years, at the expense of other park users, including wildlife, young children, and people who do not wish to be disturbed by dogs. Thank you for your efforts on this issue.

Unfortunately, my experience on Mt. Tam trails shows that even where

leashes are required, many dog owners will disregard the rules. I hope that rangers and the public will step up to ensure that leash laws are strictly enforced.

Correspondence: These comments, which also reflect the views of my wife, are made in connection with GGNRA consideration of its policy towards dogs. We are very frequent visitors to the GGNRA and long-time members of the GG Parks Conservancy. We love to hike, ride our bikes and enjoy the beaches. Dogs significantly detract from our enjoyment of the park areas. Therefore, we support stringent regulations of dogs - they should be kept entirely out of most areas and, where they are allowed, they should be leashed at all times. The only situation where they should be allowed to run free is within a fenced off dog run area. Unleashed dogs are a safety risk, are bad for wildlife, defecate and urinate in areas used by the public, and are unwelcome by many park visitors.

About a year and half ago, (on "bike to work" day) I decided to ride my bike from Marin into work in SF. As I was riding through Crissy Field (on a designated bike path) an unleashed dog unexpectedly ran into my path, resulting in a serious accident, a call to 911 to summon an ambulance, and a trip to the ER. (I assume the Park has some record of this incident.) Fortunately, I was wearing my helmet and my worst injury was some cracked ribs, but my recovery took several months. Unleashed dogs present a substantial danger to bikers - I hardly know anyone who rides a bike who doesn't have a negative dog story to tell.

In addition, I have been bitten several times in my life - each time by an unleashed dog, and each time the owner said the same thing: "Gee, he's never done that before." (It is well known that dog bites are one of the most common forms of injury.) As a result of these incidents, I get very uncomfortable when approached by an unleashed dog, and it doesn't make things any better when the owner says "he's friendly."

There is no question that some people can control their dogs by voice command. However, for every person who can exercise voice control over his/her dog, there are several who think they can but can't. In this respect dog owners are like drivers - every one thinks they're a good driver, but there is often a disconnect between people's self assessment and reality. Perhaps such people can control their dogs in the privacy of their own homes or yards, but when their dogs are placed in an area with wildlife, other dogs and people, they seem to be overcome by instincts and urges that

quickly make them disobedient. And, regrettably, some dog owners just don't care that their dogs make others uncomfortable - they seem to think that if you don't like their dogs, well then tough luck.

Of course, dogs don't mix well with wildlife. Their natural instincts make them eager to chase and, thereby, harass birds and mammals. I have one friend who thinks it's "cute" to see her dogs chase squirrels - she actually encourages them to do it. Viewing of wildlife is a valuable and important part of the outdoor experience. It is important to protect the wildlife from being harassed - in my experience the native wildlife quickly abandons an area that is overrun by dogs.

A particular concern is with professional "dog walkers" who bring packs of unruly dogs to the park areas. There are no qualifications to be a dog walker and many of them appear to be incompetent. This activity should be prohibited or severely restricted. If allowed, dog walkers should be required to obtain a permit and proof of insurance. What's doubling annoying is that, from what I hear, most of the "dog walkers" do not report or pay taxes on their income - in other words they expect the rest of us taxpayers to provide them with free access to parks so they can make some tax free income.

It is regrettable that there are so many irresponsible dog owners, such that strict measures are required. Moreover, any policy that is adopted must be enforced.

Correspondence: I am a San Francisco resident and own 3 companion dogs. In San Francisco the dog-friendly parks are extremely limited, and finding access to open running space for dogs is difficult, save for the GGNRA. While I am fully on-board with conservation efforts, this plan to reduce dog accessibility to the GGNRA strikes me as an attempt against dog-owners, made by those who do not like dogs. I would like to see in large open areas that these public spaces remain dog-friendly so that our companions have open space to run.

My dogs are my children. They bring so much joy and vibrancy to my and my husband's life. To further restrict my ability to access the GGNRA with my dogs would be very saddening. Please keep the last 1% of the dog-friendly GGNRA accesible to all dog owners who visit the GGNRA.

What I would truly love to see are some fenced in areas within in the city where dogs can run. The park at Duboce Triangle would be great, except there are no fences in that high-vehicle-traffic area. Please keep the GGNRA available to us.

Thank you.

Correspondence: I am a long term resident of West Marin and hike frequently on NPS and GGNRA administered lands in West Marin. I am not a dog owner currently, although I have been in the past. In the last 10 years, the intrusiveness of dogs has increased significantly with the walking of dogs where they are not permitted and more dramatically walking dogs without leash where they are required. The dog owners often seem of the view that 'my dog is just fine' and raising the issue with them, however polite one tries to be, is very difficult and liable to result in a very defensive to actively hostile reaction. I have noted to several dog owners who have stated, in effect, "my dog would never bite anyone." Assumed, of course, is that the rules don't apply to them and even if they did, there is no harm. I stated on one occasion when raising the issue with the owner of a large dog, that if I had one of my younger grandchildren with me, the dog's muzzle would be at face height of the child and if the child had been with me, I would have filed a formal complaint against the dog owner. the dog was off leash in a prohibited area.

I am pleased that GGNRA is working through the process. Dog owners should have areas available for off leash recreation. And the ecological

values of park lands, e.g., the Giacomini Marsh, should be honored.

Thanks

Michael Mery

Correspondence: Dear GGRNA,

The open lands of Rancho Corral de Tierra is one the many reasons my family enjoys living in El Granada. We have lived here for over 10 years and walk our dog on the hills behind El Granada off leash since we adopted her 6 years ago. It is the last place on the coast where we can let her run off leash. The beaches either ban dogs altogether or require a leash. Other regional parks also ban dogs or require a leash as well. There are no places to take her and let her run off leash except in the Rancho Corral de Tierra space.

With all of these limitations where can dog owners go to walk their dogs besides the roads where cars an running up and down the street? We don't have many sidewalks in El Granada so you are forced to walk in the street. This is dangerous for both drivers, dog walkers and dogs.

Making walking a dog in the Rancho Corral Tierra a crime is a very extreme measure to levy against the residents and visitors using this open space. It is our neighborhood's local park and it is one of the few places outdoors that we can share with our dogs. Residents have been walking their dogs in this space for over 50 years and it is one of the reasons that we all enjoy living here with our dogs.

Considering the entire area of Rancho Corral, can't some space close to the neighborhoods be preserved for dog walkers? This land is not pristine as horses, bikes, people, motorcycles and sometimes even cars drive up on the lands close the neighborhoods.

Residents have been using this land for over 50 years and have been good stewards of the land under no formal directive from the county or state. We have raised funds for POST so that these lands could stay open and free of development. Yet GGNRA has not taken into consideration how the residents would like to use this open space. We are not being treated fairly by banning our dogs from this land.

The GGNRA Dog Management Plan for Rancho Corral is unfair and sets no space aside for dogs. There are off-leash areas allowed in Marin and San Francisco counties. Why can't we have this option for Rancho Corral?

Please consider the residents and our dogs when making your decision. It affects the well being of not only our dogs but their owners which are the tax payers and POST supporters who helped to keep these lands open and free from development.

Sincerely, Roxane Osborne El Granada resident

Correspondence: These policies are too restrictive, especially completely banning dogs from Muir beach and Stinson Beach.

I understand the reasons behind the preferred alternatives, but dogs - and their owners - have the same rights to recreate in public areas too. I was told by a park ranger that dogs were going to be banned from Muir beach because of environmental concerns, especially for the creek restoration.

A more reasonable solution would be to let the dogs be off leash on the southern part of the beach, and signage could be placed along the stream that specifically bans dogs from that area. Raising awareness with clearly posted signs is what is needed, not wholesale draconian measures that disenfranchise all dogs and their owners. This is what is proposed for Chrissy field, and there is no reason it cannot work on Luir and Stinson as well. Additionally, I might add that it can be a little crowded on weekends at Muir beach and that it might make sense to allow dogs off leash on weekends only in the mornings before 9 and after 5 pm.

Again, this kind of restriction can accomodate all users, instead of shutting out people with dogs who also deserve a piece of the publicly funded recreation options. And please do not ask dogs to stay on leashes on a beach - it just goes against the dogs' nature and is really inhumane.

Re: Stinson beach - I am not sure whay they want the entire beach to be closed for dogs, but really, there needs to be an area for dogs, and an area that does not allow dogs. A compromise is a real solution, not this kind of one-way proposal that keeps dog owners from having reasonable access to public beaches. Yes, my dog likes trails also, but they LOVE the beach when we go there and it is obvious they are very happy - as am I - when we

get to enjoy some beach time.

Dog owners pay taxes also, and should be accomodated on public lands. NPS, you've gone too dog-gone far on this one. Throw us a bone and let us have access to our public lands also. Don't shut out our dogs just because they can't vote or speak. I will speak on their behalf: "We love the beaches, and want to be able to keep going there."

Correspondence: My name is Rusty and I am a dog.

First of all, your Executive Summary was too confusing, even for my owner!

Here are my votes:

Homestead Valley: Alternative A

Stinson Beach: Where's the beach? - I got nothing!

Muir Beach: Alternative A - I will stay out of the creek; I like salmon too!

Rodeo Beach: Alternative A, or the preferred alternative would be OK, but better if I could walk the entire beach.

Chrissy Field: Alternative A

Baker Beach: Alternative A

Marin Headlands : Alternative A

Ocean Beach: ALternative A

These are my favorite places. PLEASE let me and my owners stay!

Here's a little song I howl sometimes:

Oh, give me a place, where us doggies can roam,
Where the dogs and our owners can play,
Where seldom is heard a discouraging word,
And our poop is picked up each time.

Roam, roam on the beach
Where the dogs and their owners can play,

Where we leave the wildlife alone, And don't bury any bones, And act friendly to all on our way.

Thanks NPS!

Give me a home, where the dog and the people play!

Correspondence: To whom it may concern,

I am very disappointed to hear many of the local parks currently off-leash for dogs is considering discontinuing this practice. I often bring my dog to Fort Funston and find it to be one of the absolute best assets in the area. It is vast space that is safe, beautiful and wonderful place for dogs and their owners. Crissy Field is another area my dog and I frequent. I believe they represent some of the best San Francisco has to offer in terms of outdoor space, kind and friendly people and safe environments. I truly feel changing the current policy would be a disservice to the city and its residents and dogs. San Francisco is known to be a very dog-friendly city and it will likely lose much of this cache with these changes.

Please do not take these beautiful facilities away from my dog, myself and all of the other responsible pet owners to truly love these spaces.

Kind regards, Jennifer Lake

Correspondence: Thank you for your work on this DEIS. I support the proposed alternative, with one major exception:

I am very disappointed that the proposed alternative does not require that all areas for off leash dogs be fenced or otherwise physically restricted. The foremost duty of the National Park Service in all units is to protect its units' resources. Off leash dogs that are not enclosed by physical barriers, whether natural or man-made, pose a serious threat to those resources. Dogs do not recognize human boundaries if those boundaries are not physically restricted, and off leash dogs will wander outside them. Once they do, there is a strong chance that they will negatively impact the park resources.

Physically restricting off leash dog areas is the only way to ensure that dogs will not run off leash where they will negatively impact people, wildlife, and even leashed dogs.

Voice control does not exist in reality; it is nothing more than a myth perpetuated by off leash dog advocates for the purpose of convincing people that dogs should be allowed off leash because they can be controlled by voice commands. Nothing could be further from the truth. A dog that is chasing another animal or a person will continue to do so regardless of any training or voice command. We've all seen out-of-control dogs being yelled at by their owners many times, with the dogs totally ignoring the owners and continuing to do whatever they're doing.

I urge you in the strongest terms to add physical barriers to your preferred alternative. I would support the preferred alternative if you do so.

Correspondence: I am a frequent user of the GGNRA, hiking and biking throughout for years. I am fully supportive of the NPS to bring dogs under more restrictive controls. Here are experiences I have personally witnessed:

- o At Tennessee Valley entrance, where signs are posted at the entrance ("No pets") regular violation of the restrictions.

- o At TV, When I've told people dogs aren't allowed, they get rude.

- o At Rodeo Beach, I have asked dog owners to clean up their dog feces and they've refused. In one case, leaving dog feces in the surf near where children were in the water.

- o Throughout the headlands biking trails I have passed people walking multiple dogs off leash, while the dogs were running off trail.

- o I have witnessed dog fights: arguments between dog owners and other users.

- o At several entrances near parking lots, there are locations where dog owners think it's "ok" to let their dogs defecate as long as it is off trail. When I've pointed it out, they've responded, "I don't see a sign."

Good luck . Those of us following the rules are with you 100% and recognize the difficulty of accommodating the dog owner user groups to the

GGNRA.

Correspondence: Preferred alternative should be E, not D

I have been a responsible dog owner for 20 years and walking my dog in Rancho de Tierra lands for many years. There are very few people accessing this land and most are with their dogs. There is simple no one, on a percentage basis, to bother. Please do not over regulate land that is suppose to be for the good of us all.

A total ban on dogs is not acceptable (or a complete ban on dogs is extreme). Use this phrasing as opposed to specifying off leash, or on leash.

No scientific studies were done of Rancho lands to justify banning dogs.

Residents in the bordering neighborhoods of Rancho (Montara, Moss Beach and El Granada) have been walking their dogs on Rancho trails for decades.

Residents have been self-policing: In Montara, dog-waste management (disposal cans and pickup bags) is maintained by Montara Dog Group volunteers. Neither fenced or patrolled, trail conditions are excellent given their heavy use. Residents report improper or illegal activity to officials. Montara Dog Group has had a good working relationship with POST.

Type:

Correspondence: I have lived in the Bay Area for a dozen years and enjoyed all of the GGNRA sites very much. Thank you for your attention to creating a mixed-use environment where all people and animals can enjoy themselves.

Two years ago, I rescued a dog from Mexico. We have lived in Moss Beach and in San Francisco together and enjoyed many GGNRA locations together (Muir Beach, Ocean Beach, Fort Funston, Chrissy Field, etc.) There are so many locations (especially State Parks) that are off limits to dogs and I am grateful to be able to take my dog to GGNRA areas.

I am especially grateful that we get to experience some of these areas with off-leash or voice-command. This provides an excellent environment for dogs to play and socialize in a way that is impossible while they are on leash. The dogs run up and down the beach together, tumbling in the sand - impossible on leash. We ensure that we pick up his waste and that our dog does not run up to strangers who do not wish to have his affection.

The closure of GGNRA areas to dogs - or even leash restrictions as presented in the Draft Dog Management Plan - would change the dynamic of GGNRA areas. There would be no spaces for dogs to play freely. There are so many places closed to dogs that visitors can choose if they do not want to interact with animals, but well-behaved dogs deserve a chance to run and play with their owners and friends in these beautiful outdoor spaces.

Thank you for hearing my comment. I hope that you will choose NOT to change the dog management and pursue NO ACTION at this time that will constrain dog access.

Correspondence: I am both a dog owner and a member of the Audobon society. I completely support protecting vital bird habitat. There is only one Pacific flyway and we need to protect this vital habitat for migrating birds. It makes no sense to allow a species to disappear just to give our dogs places to run. In addition, while many dog owners are responsible, many are not. They do not pick up feces or keep dogs off fragile areas. They had a chance to show they could

be good neighbors to the birds and they did not. Furthermore, I would like to see much better enforcement of violations.

Correspondence: My family has lived in San Francisco since 1974 and have gone to Fort Funston every 1-2 months since our children were infants. We have walked our dogs in the area for the same length of time. Our family has enjoyed this recreation area partly because the dogs are able to run and play with other animals. The animals are not aggressive - partly because they are able to run and not defend their owner.

As my husband and I work full time, we have employed a dog-walker who also takes dogs to this area. If we could not have access to this area, it would be very difficult to live in the city where we both work.

Please keep the area of Fort Funston open to dogs and their families, dog walkers and allow the animals to continue to enjoy the outside play off leash.

Thank you.

Correspondence: Hello, I am a 26 year local resident who has lived on the Coastside for 26 years. I currently live in Moss Beach. The Rancho Corral de Tierra has been my backyard growing up and is literally my back yard now, as I am typing this comment I can see where my backyard's mesh fence is allowing the wild grass and clover to take over my lawn. The loss of my manicured backyard comes invited because I prefer the spotty patches of clover with their yellow blooms and the various other grasses i don't know the names of. Since I have lived her I have had dogs, first with my parents while growing up and now as an adult with a child of my own. I take my Dog through the Rancho Corral De Tierra at least three times a week. I am owned by a 7 year old Pitbull Terrier that needs to run miles and miles. The area I call my backyard is very important to my dogs health and the pleasure I get while running her while enjoying the area. I enjoy hiking deep into the area and always feel safe with my dog because I know that she will help detour an praying mountain lion. I have read the GGNRA's plan for the Rancho Corral de Tierra area and feel that the best suited plan is alternative E. I truly feel

that dogs who are under control, whether by voice or by leash, pose less a threat to the beautiful habitat we all enjoy than the horse riding community. In fact I am surprised to hear nothing about the impact that the Equestrians have on the trails. Thanks for allowing me a place to voice my concerns and opinions. As an active citizen of the area I enjoy being able to influence the way my home gets treated and defined, so please don't take away the right to run my dog in my backyard.

Correspondence:

Dear GGNRA,

There has been nothing that has given my dog Daisy more joy than running free at various GGNRA parks. We love nothing better than to pack up a lunch and head out to the beach for a day of running and playing in the sand and water. We meet other dogs there and they play together with such joyous abandon. It would break my heart if this activity ceased to exist. Every dog owner I have met has been courteous. I rarely find that owners do not clean up after their dogs. And if they don't, I do it for them, and have seen other dog owners do the same. There are so many other places for people to go if they don't like dogs. We dog owners have fewer and fewer places to take our dogs off leash. Please don't take this freedom away. It means so much to our dogs to have a place to run free.

Sincerely,

Debi Thiel

Correspondence: I would be greatly saddened if you were to decrease the already limited amount of open space allowed to dogs and their owners in San Francisco. Please understand that the vast majority of dog owners here are law abiding and responsible. If there are concerns about irresponsible owners, they should be addressed through education and enforcement of current laws.

Off-leash recreation is critical to dog's good health, both physical and behavioral. Most dogs interact best with each other and with people when they have some freedom to move about as needed.

Please preserve the space and laws as they currently stand. Additional limits and restrictions will cause much more harm than good.

Thank you for your time.

Correspondence: My wife and I are both in our eighties and we walk our 4 year old dog at Ft. Funston. We were at Ft. Funston this afternoon and spoke with a gentleman who appeared to be our age and walking his dog. We chatted briefly and he said if he was not there at Ft. Funston with his dog, he would be home in bed.

As we age, walking a dog - off-leash - is a wonderful way to maintain our vitality. We pick up after our dogs and to watch them play brings joy to all the people that I meet there.

If dogs were barred from off-leash walking, Ft. Funston would not be used to any extent and what happens when a large park is not fully, unrully gangs take possession. That is what happened to GG park several years ago.

Dogs off-leash have a way of communicating with each other that we

"humans" should envy. They communicate very clearly to each other and I do not witness dog fights.

Please continue off-leash dog walking at all areas presently used at Ft. Funston

Correspondence: While I understand the growing needs to manage all types of foot traffic in these parks, the truth is I come here with my dog because it's a great place for both of us to enjoy the pleasures that come with these great spaces.

If bans went into effect, I would be less likely to come to the park and look for alternatives throughout the bay area or within the city. I feel restricting dogs from the current regulations would decrease attendance at these parks resulting in fewer advocates for when it comes time to really have to preserve/save these areas because of budget cuts, etc.

Thanks, Brian Mayer

Correspondence: I SUGGEST YOU KEEP FORT FUNSTON AS IS.

On paper Ft.F seems like a wonderful place to visit, especially in summer. In reality it is a windy and often bleak stretch of coast frequently masked in fog. Unlike "Fair Weather Fans," dog owners use Fort Funston on a regular basis, in all conditions. I'd bet that more than 85% of the area's use is by TAX-PAYING dog owners. Without "Fort Fundog" off-lease access, dog owners are only going to redirect their energies to places like Stern Grove overtaxing these public places. The constant comings and goings of dog walkers keep the parking lot safe from unseemly behavior. (and the homeless population out of the cypress.) I believe there is a simple alternative to these expensive proposals. Keep things as is but add large signs warning that Ft. Funston is an off-leash dog haven and fence off any

sensitive areas.

If one wants only the view without the animals, there are many alternative stops along the coast. There are no beach alternatives for our pets.

Correspondence: I am dismayed and astonished by your process in a couple of respects: 1) it seems profoundly disrespectful of the needs of Bay Area residents and history of the GGNRA to propose moving to a future that allows no areas within the vast holdings where dogs can be under voice control rather than leashed. 2) Your proposed course of action is certain to be contentious and unenforceable. I strongly urge you to create some areas where dogs can be under voice control as it will make enforcement possible in other areas. I believe you can forge this path despite NPS doctrine. 3) Consider the leashes bring their own risks for mixed use (tripping, falling, etc) and consider technological solutions as part of this. I urge you to consider remote training collars for dogs as the equivalent of an electronic collar that can achieve the benefits of control but allow greater freedom of movement for dogs and avoid some of the risks of leashes. 4) In these difficult economic times it seems remarkable to me that you'd consider taking away so much community control in a manner that will create an increased enforcement burden for you over time. I strongly urge you to consider a more balanced approach. Take Muir Beach for example. Insistent that people have dogs on-leash in all wooded or planted areas but allow voice control on the beach itself. Generally speaking I think the "we'll be cool if you be cool" approach is the way to go and people will accept more restriction if you make a clear effort to better accept the needs of dog owners.

Correspondence: Dear GGNRA,

I am writing to express my wishes that "Alternative A," which takes no further action in the matter titled "GGNRA Draft Dog Management Plan / Environmental Impact Statement" be enacted. As a resident and frequent visitor to several of the sites impacted by this plan, I am hopeful that my comments (which will be copied to our state members of Congress) will be considered in the matter that proposes banning dogs in the areas specified in this plan.

Many residents in the effected areas moved there specifically for access to local outdoor resources. In fact, my wife and I, who did not have a dog prior to moving to Moss Beach in 1999, were motivated to buy property in our community in the hope of getting a dog. We had previously lived in the East Bay, in a community that did not have access to more rural trails and recreation areas, and did not feel it was fair to a dog to raise them in a condominium complex, because their access to exercise would thus be limited. In Moss Beach, we can travel a mere 5 minutes and enjoy on- or off-leash walks with our active dog.

Indeed, if we had envisioned losing access to what are now GGNRA lands with our dog, we probably would not have moved to the area. In fact, we

would not have gotten a dog either. He is an Australian Cattle Dog, and needs copious exercise. This is beneficial for us because our frequent hikes with the dog also helps us keep in shape and keeps the dog healthy and happy.

I strongly believe that limiting access to the GGNRA lands with dogs will actually increase dog related problems within the community. With no access to reasonable means for vigorous exercise, dogs become bored and more easily prone to agitation and aggression. Certainly our dog exhibits a greater level of misbehavior if healthy outlets for exercise are not available to him.

Walking in our neighborhood is generally unacceptable for us, because there is a lack of open space in which to run, and we must be quite careful of encounters with other people and their dogs in neighborhoods as many people are uncomfortable with animals on or near their immediate property. There are also neighborhood cats that are tempting to chase, and of course auto traffic, which is also a danger to the animals should they manage to break free of a leash should they become excited by something they see on a walk.

Furthermore, I don't see any advantage to banning dogs from the area regardless of our dog's needs. Environmental impact from dogs is surely minimal or nonexistent. Furthermore, impact from horses, who frequent many of these areas, is likely greater, as their owners never pick up after their animals, and they are larger, heavier, and presumably cause greater wear on the land.

In summary, I would like to push for "Alternative A" to pass. The other alternatives are unfair to people and dogs who moved to these areas in hopes of having a life with greater access to outdoor resources. Changing the level of access to these areas is also inappropriate since many of the dogs who frequent the areas are incredibly active and may actually become problematic or aggressive around other dogs and around people if they are not exercised adequately. Finally, the environmental impact of dogs is insignificant and certainly less than that of horses, which are not being banned.

It would be extremely unfortunate for a vocal minority of residents who do not like dogs to dictate to the rest of us what we can and cannot do with our pets.

Type:

Correspondence: I strongly oppose the proposed plan. The recommended action would severely restrict the ability of responsible dog owners (and their pets) to use and enjoy what are already very limited recreation areas. Yet, there doesn't seem to be any factual support for why the recommended option was chosen beyond anecdotal reasoning.

If it's for employee safety, then how many employees have been injured? If it's for environmental reasons, then explain how dogs are the culprit, but surfers, tour buses full of tourists, horse riders, bikers and hikers aren't. If it's to reduce conflicts, then how many and how severe have those conflicts been? (I've been taking my dog to all of these places for a greater part of the last ten years and have rarely, if ever seen any major conflict.)

If, as you say, the number of dog owners has grown dramatically since the 90s, then your proposal will limit the ability of a huge proportion of the regular users of these areas, for very poorly supported reasons. If a small percentage of dogs are causing issues, then the answer is to cite the owners of those specific animals. Not to punish the thousands of responsible owners who frequent these areas.

This is a pet-owner-hostile dictate that seeks to act first and ask questions too late. I intend to do whatever I can to prevent this proposal from passing.

Correspondence: Regading Muir Beach: Against Preferred Alternative D

The plan to remove all dog access to Muir Beach is not fair to those of us responsible pet owners who have enjoyed taking our dogs there for years. At the very least, alternatives B, C, or E should be implemented if the current usage has been determined to be unacceptable to the environment.

I have no issues with keeping my dog on a leash if it is necessary, but telling me I can't bring my dog is unfair. Humans do FAR more damage to this beach with littering than any dog.

Correspondence: Re: DMP-EIS for transfer of POST land, Rancho Corral de Tierra, to GGNRA

I request that the Alternative E be used, allowing dogs to be walked on the Rancho after its transfer to the GGNRA.

I have lived in Montara for 11 years and have been walking on the Rancho lands and on the McNee State Park since I moved here, accompanied by my dogs for the last ten years. We walk there every day; in the past, we walked there twice a day. Now, we usually walk using leashes, but used to walk more often off-leash.

I have learned so much about the lands, seeing them through my dogs' eyes. Together, with our combined far-seeing eyes and far-scenting noses, we perceive far more wild animals that we would have seen alone. I've gained a deeper understanding of how dogs and humans came to live together.

My 7-year-old son is also learning to enjoy nature in this way, as he

accompanies me on our walks on the Rancho lands. My son has joined us on our walks all his life. It would be very sad for all of us, if the Rancho became yet another place on the Coastside closed to dogs.

I am also concerned that people who now have access to McNee State Park by walking through the Rancho will have their access cut off. This will put further pressure on the few parking lots available on the south side of the park.

Of course, if dogs are not allowed on the Rancho, all of us who currently walk from our homes to walk with our dogs on the Rancho trails, would have to drive to other trails, a far less healthy alternative for the global environment as well.

Mountain lions are visible on the Rancho, coming very close to the human communities every 3 to 4 years. Is it possible that the dogs walking daily on the trails discourage the mountain lions from visiting more often?

Thank you for your attention.

Correspondence: As a retired person, and a life long resident of Novato, I have enjoyed walking and hiking, much of Marin County and beyond, all my life. Here are some of my observations on dogs in the public...

Most dog owners say there is a small percentage of dog owners that are not responsible and give all dog owners a "bad name". My observation is that most dog owners are irresponsible and only follow the rules if there is someone of authority observing them. As an example, I hike Mount Burdell often, usually from the San Andreas trailhead. This is a popular place for dog owners to let their dogs run. When most dog owners arrive they open their vehicle and turn their dogs loose. With this found freedom the dogs usually take off and often the owners don't even watch where their dogs go. Often I have observed the dogs pooping everywhere, peeing on car tires, licking and jumping up on other hikers, attacking other dogs, etc. The area around the trailhead and the next 200 yards up the hill is a poop minefield. Some dog owners pick up after their dogs but not all that do, take the plastic bag with them. I guess their plan is to "pick it up on their way back". But the plastic bag is often still there the next time I hike. Other folks pile the plastic bags at the entrance gate so someone else can pick it up. There is usually a fresh sign at the gate stating that the dog owners "must pick up after their pet and remove it from the open space". If there is a Ranger there the

compliance goes up, so they know the rules but chose to ignore them. One morning I saw a Open Space Ranger parked on a hillside fireroad and observing the area below with field glasses. When I got to him I asked what he was doing. He said he was doing a survey to see how many dog owners were in compliance with Open Space rules so they could decide if there needed to be more enforcement. I asked how the dog owners were doing, he said not very good. This survey may be available for you to have to use in making your decision on dog use in the GGNRA. Another blatant disregard for the law is at the San Rafael Farmers Market. With posted signs throughout the Market areas stating "No Dogs Allowed", there are often many dogs there because their owners think those rules don't apply to them.

"Dogs, if off leash, must be under voice control". Most dog owners think this means that the dog should be able to hear the owner if the owner screams. More often than not the dog is not under control and the dog does as it please. It is not the dog's fault, it is the owner that has not properly socialized or trained their dog to follow commands. Here again if there is someone of authority in view the leash suddenly appears.

I have witnessed dogs jump deer and chase them for long distances as the owner, if they see the dog, yell at the dog with no change of behavior. Bird dogs have a natural instinct to sense birds and flush them and often the dog owners think this is cute.

Small children seem to be a magnet for dogs. The dogs want to approach children and I have seen many times where the child is terrified of the dog all the while the owner is yelling "the dog is ok". The dog is not ok as far as the child is concerned. As an adult I don't want strange dogs approaching me. I have had dogs jump up on me when on a muddy fire road all the while the owner is yelling "the dog is ok". Well it was not ok for the dog to put it's muddy paws on me. Or a dog coming up and lick your hand, to me that is dog spit and I don't want it on my hand.

While hiking I have seen, and also have had, a large dog come up from behind me, with out hearing it, and have it startle me. Sometimes the owner thinks it is funny all the while saying "the dog is ok".

Another observance of lesser occurrence is dogs allowed to run in sensitive areas that are posted "no dogs allowed". The dogs are often running ahead of the owners and are into the sensitive areas before the owner even knows it.

In the January 15, 2011 Independent Journal Newspaper, center of the front page, is a picture and accompanying article about a gentleman walking 8 off leash dogs on Muir Beach in the GGNRA. It is hard to believe that this man has all eight of these dogs under voice control at all times. Not to mention

that he picks up after all the mess these eight dogs create.

Upsetting is coming back from a walk to where you have set up to picnic at the beach and find that a dog has peed on your backpack.

Dogs are like members of the family for most dog owners and they get a lot of enjoyment from them. But they are animals and do not deserve to go everywhere their human owners can go. After having many encounters with off leash, poorly socialized dogs, my belief is that dogs should be on a leash anytime the dog is not on the dog owners property or in a dog park designed for running dogs off leash. They should not be off leash in common areas where other humans are.

If the GGNRA is going to allow dogs to run in some areas, I think there should be a fence designating where the dogs are allowed off leash as most dog owners "stretch" the boundaries.

Thank you for allowing input from the public.

Correspondence: I applaud the National Park Service for completing this comprehensive proposal for dog management in the GGNRA. I was born in San Francisco and now live in Marin County and spend the vast majority of my free time on the trails and beaches in the GNRA. The lack of a clear dog policy in the park has damaged park resources, negatively impacted wildlife, and caused a great deal of conflict between park visitors.

I strongly support the GGNRA Draft Dog Management Plan's preferred alternatives in all 21 of the areas that were studied.

I'm a dog lover but I also love the native wild animals and plants that continue to survive in the GGNRA. The GGNRA Draft Dog Management Plan presents a balanced approach. The fact that the Bay Area is home to so many passionate dog owners should not mean that the NPS accepts the unreasonable demand that all areas of the park be open to dogs, or the unreasonable argument that the needs of dogs outweigh the needs of wildlife. The preferred alternatives strike the best possible approach by allowing dogs to run free in the areas where they are least likely to cause damage, allowing them to be leashed in more sensitive areas, and restricting them from areas that are critical sanctuaries for native species.

I became a father last year and my young son smiles at every dog he sees.

He loves to be licked, nosed, and batted by wagging tails. But he also loves birds and has quickly learned that the best way to observe them is NOT to chase after them. I took great joy in pointing out a snowy plover to him recently. I'd like him to be able to do the same for his children. For that to happen, the preferred alternatives in the GGNRA Draft Dog Management Plan must be enacted.

Thank you, Michael Roberts

Correspondence: I believe that the use of the GGNR area would benefit from option C. It seems the most fair and balanced to everyone. The leash law should always be enforced. I believe that people should be able to use the GGNR to walk their dogs, but on leash always. My dog was attacked by a dog that was walking without a leash, on "voice control" and he had to be euthenized as a result of the severe injuries. Anyone walking their dog in public should be controlling it with a leash. The only exception should be a designated, enclosed dog park. To not use a leash is irresponsible, reckless, and immature. Everone thinks that they "know" their dog and it's capabilities....this included the woman who owned the dog that killed mine. The truth is, we are never going to be 100% sure of any animal's behavior. Why not save the GGNR area's time and money from dog litigation so that they can use it to conserve and improve the existing parks for our future. They are trying to keep the parks going in a time where goverment/tax dollar funding is slim...why can't we all be adults and clip on the leash.

Correspondence: I appreciate all the work that has gone into this document and the concerns

about managing wildlife while balancing the needs of dog owners. We live in Marin County and thoroughly enjoy being outdoors hiking with our dog and walking on the various beaches that are currently open to and available for dogs and their families. It is an experience that is healthy for dogs and human and contributes to less stress in a time when there is too much that adds stress to our lived. There are already many, many places in Marin County where it is not possible to walk or hike with a dog. The places that are available offer wonderful opportunities for personal health and wellbeing for both dog owners and non-dog owners.

I urge you to not change the rules and regulations in Marin County and keep the access as outlined in Alternative A (the current situation) in this area.

Dog owners who enjoy these special areas are largely responsible people who care about and respect the environment and the rights of others who are also enjoying these areas. It would be better to increase signage and educational outreach in these areas so that both people with dogs and those without dogs can be made aware of their responsibilities in these wonderful areas.

It would be a great loss to adults, children and their dogs to not be able to enjoy the freedom and relaxation of our wonderful beaches and trails if the preferred alternative is adopted.

Correspondence: Hello, I would like to strongly urge you to set aside an area of the Ranch Tierra land in Montara for off leash dog walking. Not all of it. Maybe the area from the beach to Tamarind St., behind Farralone View School. People have been walking dogs there for decades, with few problems, and a local dog group self polices the area, including garbage cans and bags. You have stated you want all people to enjoy the area; bikes, horses, people. Does that include people walking dogs? If you designated just that area for off leash dog walking, wouldn't that protect all the other areas, and types of use? After all these years, with no problems, are you now going to exclude 1 group of people? Tom Moore

Correspondence: Dear Park Officials,

Concerning dog accessibility plans for Rancho Corral de Terra in Montara, California, I would like to voice my support for continuing to have both leashed AND off leash access to the trails. I have lived on the coast for 11 years and have walked extensively on the trail system during that time - mostly without a dog (and never was that a problem). We have only had a dog for 2 years. During those 11 years I have witnessed neighbors getting to know each other while walking - because of their dogs! I think banishing dogs from the parks completely will only serve to put up bigger barriers between people in the neighborhood. In a place here on the coast that has maintained its "small town" appeal, it seems excessively regulated to banish dogs from our parks. Let's make room for dog owners and non-dog owners alike to enjoy our natural resources.

Thank you for considering my opinion and look forward to supporting your positive response!

Correspondence: I moved to San Francisco almost 10 years ago from the mid-west. I've known that I wanted to move to San Francisco for almost 10 years prior to moving here. Two of my favorite places to visit was Fort Funston and Ocean Beach where I always found locals with their dogs. Every visit I found myself stopping by both areas if even for a short time to watch the action knowing one day I would be a part of it. This was fairly influential on my decision to move to San Francisco.

When I did finally move here I started my own consulting business and found myself traveling to Southern California more often than I was actually in San Francisco. When I was finally home and I wanted to feel connected to the City I would spend my Sunday morning at Chrissy Field, Fort Funston, or Ocean Beach again watching the human-canine interaction. There is no where in the world quite like these three areas and it makes San Francisco truly special to have such places.

Now, obviously, I am a dog lover, but I spent many a weekend morning at all three of these places. I never had a bad experience with a dog or a dog owner. In 2009 I finally was at a place in my life where I could get a dog.

Since then I have spent even more time at each of these places and again have never had a bad experience with a dog or a dog owner. I also spend a lot of time in fenced in dog runs. There I have had numerous bad encounters with dogs and dog owners. I have encountered dogs who do not respond to their owner's voice commands. I have witnessed dog fights when the parks are too packed with dogs and the crazy energy drives the frustrated dogs into a frenzy. And I have also found myself playing with dog or two who seemed to have no owner; owners will actually drop their dog off at the enclosed park and spend their time in their car listening to music or talking on their mobile phone. So, yes, I do agree that there are many irresponsible dog owners in San Francisco. However, I would argue that the less responsible of an owner you are the less likely you take your dog to one of the large off-leash GGNRAs. The dog owners who are attracted to the off-leash areas are there to share an experience with their dog. Yes, I am sure that there are irresponsible dog owners who frequent the GGNRA. However, why would you punish all of the responsible dog owners just to control a handful of irresponsible dog owners?

It may be a little presumptuous of me, but I have a hunch I spend more time in one of the GGNRA areas than most San Franciscans. I would actually wager a guess that dog owners frequent Chrissy Field and Fort Funston more often than other residents. The more Bay Area residents visit these beautiful areas the more they will want to protect them. I would also guess dog owners are more likely to support the efforts put forth by GGNRA. When areas are reasonably put off-limits to protect wildlife I would respect that as do most of the other law-abiding rule following dog owners. I want these areas maintained and beautiful for generations to come. There just has to be a reasonable balance between conservation and recreation. I think one key to remember is within the name itself GGNRA - Golden Gate National Recreational Area. These are Recreational Areas near one of the most densely populated urban areas in the US. The NPS needs to work with the City's residents to establish the best use of these areas not dictate the use as though they were in some remote less accessible location.

The NPS has already increasingly limited the areas of the GGNRA where voice control off-leash. Please do not limit them any further. The GGNRA has vast amounts of land where no dogs at all are permitted. I have yet to see anything put forward by the GGNRA which would provide reason to limit them further at Chrissy Field or Fort Funston. Please leave these two areas as they are. If there are portions of these areas which need to be protected, protect them reasonably and allow the residents who have been using some of these areas for decades to continue using them as they have.

Correspondence: After recently becoming *certified as a dog walker through Dog Tec Dog Walking Academy, I strongly urge GGNRA to REQUIRE that dog walkers walking dogs off leash be certified. I do not work as a dog walker -yet- nor have I ever, but I went through the training because I want to be a professional dog walker who knows how to handle a small pack of dogs properly.

As a dog owner myself, I am constantly angered by the lack of professionalism and unsafe practices I see happening with many dog walkers. I recently interviewed with a very successful dog walker of 8 years and was appalled by his practices which are commonplace in San Francisco. There should also be a limit of 6 dogs maximum per pack. Safe dog walking demands technical skill, in-depth knowledge of everything from dog behavior and pack management to canine first aid and trail etiquette.

Before taking such a drastic measure as requiring all dogs to be on leash, consider a far better solution such as certification. I am certain that adopting such a requirement would drastically enhance quality of professionals who must respectfully share the trails, beaches and parks with other people and dogs, with safety as a primary concern.

Correspondence: I support the National Park Service's preferred option for dog management in GGNRA. Arrogant dog owners with unruly dogs have taken over public lands throughout California, to the detriment of wildlife, endangered species, and park visitors. My personal preferred alternative is to allow no dogs in GGNRA lands, or, barring that, option D, which is the most protective alternative listed in the Dog Management Plan. Given the well-organized and vocal dog owners groups, however, it is unlikely that a "no dogs" alternative is in the offing. Therefore, I support the NPS Preferred Option as the best practical alternative.

Correspondence: I am writing to protest the impact of the GGNRA Dog Management Plan/EIS on Rancho Corral de Tierra (the 4200+ acres of open space from north of Montara to El Granada.) As a member of Montara Dog Group, I am requesting your consideration and support on this issue.

Rancho Corral de Tierra was not a part of GGNRA when this report was prepared, so it falls under the category of "New Lands." Many (five) recommendations are available regarding the issue of sharing trails with dog owners, however the report finds in favor of Alternative D (no dogs allowed) because the property is a new GGNRA acquisition.

I request that Alternative E be the preferred alternative. Alternative E states that "New lands begin as 36 CFR 2.15 (dogs allowed on 6 ft leash) and new lands with existing off leash use before acquisition may also be considered for voice and sight control in the future." This alternative is much less restrictive than GGNRA's current preferred alternative, Alternative D.

I currently walk my dog once a day, on leash, and off leash when it is safe to do so, and have done this for the last 8 years. My neighbors have been walking their dogs on Rancho trails for decades. We are respectful of equestrians, cyclists, as well as walkers without dogs whom we meet on the trails, and leash our dogs when it is appropriate. Dog-waste management (disposal cans and pickup bags) is maintained by Montara Dog Group volunteers. Rancho supports a mix of users that works. We currently share trails, get along, and self-police. Rancho could be a model for what's being done right and how disparate user groups can co-exist.

No scientific studies have been done of Rancho lands to justify banning dogs. Neither fenced or patrolled, trail conditions are excellent given their heavy use. A complete ban on dogs is extreme. GGNRA's preferred alternative for the Rancho is not truly multi-use. Even though hiking, mountain biking, and horseback riding will be allowed, no area is set aside for dog walking. Creative, multi-use solutions have not been considered. For example, locations in Washington state and Santa Cruz set aside early morning hours for off leash dog walking; then starting at a posted time, all dogs are required to be leashed.

Off-leash options areas are allowed in Marin and San Francisco counties, Rodeo Beach, Crissy Field, & Fort Funston. No off-leash options areas are

offered in San Mateo county GGNRA lands.

The preferred GGNRA alternative will have a negative impact on our community's lifestyle and culture. Residents have socialized with their dogs in this area for the last 50 years. We have no community center or public park. Montara residents will be forced to drive to small parking lots at McNee Ranch or Montara Beach, and cross busy Highway 1 with their dogs, in order to access McNee Ranch, formerly a 10 minute walk through Rancho. Even more dangerous, Montara residents may elect to walk along Hwy 1 for 1/4 mile (there is virtually no shoulder on this stretch of highway) to get to McNee Ranch. A man walking his dog along this route was recently hit by a car and severely injured. His dog was killed. If dogs are banned from Rancho, hundreds of dogs will have to be walked on narrow rural streets with no sidewalks.

I believe this restrictive approach is not justified and request your attention and support in addressing this unfair, patently easy, blanket approach to mandated use of Rancho lands. Our voices should matter, and in a democracy, community input should help shape policies.

I thank you for your consideration and look forward to your response.

Sincerely,

Susan Verlander Montara Resident and Dog Owner

Correspondence: I have been hiking the Miwok and Coyote Ridge Trails for over 20 years and during that time I have seen a major increase in dogs off leash, both in "leash only" and "no dog" areas. The biggest violators, in my book, are the owners that allow their dogs to run off leash on the Coyote Ridge Trail, which is a "no dog" area. This happens on a regular, daily basis. The dog owners who live in the surrounding neighborhood that borders the GGNRA use the park as their own private backyard and ignore the rules, even though signs are posted everywhere. The rules are not for them, thank you very much. I have been jumped by dogs who are off leash, I have witnessed encounters between dogs and mountain lions/bobcats...believe me, the dog loses that battle, and I have seen them running rampant, running through brush, chasing rabbits, and digging up mole/vole holes. AND, not a park ranger in sight. Ever. Where is the enforcement? Rangers on mountain bikes on any sunny Saturday or Sunday afternoon would be easy pickings for citations and (hefty) fines. I fault the park rangers as much as the dog

owners. There needs to be better enforcement because I do not see the attitudes of the dog owners changing.

Correspondence: Please, please, please keep Muir Beach and other areas dog-friendly!

We recently moved here from Minnesota where our dogs couldn't be outside for almost 4 months out of the year. MN also has incredibly strict leash laws, etc. so our dogs could only go to dog parks to play and socialize. One of the reasons we were so excited to move back west was because of the great opportunities for us to be outside all year round with our pups!

We go to Muir Beach at least once a week and always have an amazing time meeting other dogs and dog owners, residents, kids and the elderly. Everyone shares the beach and there is mutual respect between non-dog people and dog people. I see dog owners with their dogs under control, cleaning up after them and most importantly, having fun with them!

The preferred alternative D is the most restrictive of all! California is known to be extremely dog-friendly and this option would be a complete reversal of what everyone who lives here has come to know.

PLEASE KEEP MUIR BEACH DOG FRIENDLY!!!!!!!!!!!!!!!!!!!!!!!!!!!!

Correspondence: Dear GGNRA, I am greatly dismayed that an area I have hiked with my dogs off leash since 1976 is now being considered as a leash only or no dog area. I'm referring to the area behind Coral Reef in El Granada. Over the years, on the coast and in the Bay Area, dogs have been banned or required to be leashed in areas that were once free areas to us dog owners. These include the state beaches, the schools, the parks, the ball fields. On the coast, the only areas remaining for dog walking, hiking and exercise off leash have been a few of the bluffs and the hills. The area GGNRA is now considering is not easily accessible to the public, mostly a neighborhood, locally known area. It has very steep hills, often overgrown trails and a lot of it requires a good pair of legs and lungs. I really don't foresee an upsurge in use. Restricting or banning dogs would, in effect, take away the privileges of the most prevalent use of this area for the past 30-40 years since I've lived on

the coast. All of us locals walk our dogs and give them a chance to run free in this area daily. When I lived in this neighborhood in 1985-1995, I walked my dogs twice daily there. It's quiet and well protected from the neighborhood, roads and highway. Dog walkers do not harm anyone there. Most people just don't go there. It's too tough of a climb. Over the years, I've run mostly into other dog walkers, very nice people with well behaved dogs just out for exercise. When I've spotted hunters, where they don't belong, or off road motorcycles, when they are forbidden, or homeless building encampments, I have reported these things to the local sheriff for investigation. Dog walkers, like myself, take care of this area and don't want it vandalized or set on fire by sparks from motorcycles or campfires by homeless. If you take this away from us dog walkers, and make it ridiculously restrictive by requiring leashes when the area is huge and wide open with nothing or nobody to harm, where can we now go? What is left to us? The quality of life on the coast will be diminished for so many of us. In a time and era that appears to be unfriendly to dogs, it devastating to those of us who survive because of our pets and the exercise we get with them and the pleasure we take in them running without a six foot leash to find ourselves banned from yet another open space. We can't walk beaches anymore. We can't walk anywhere except down Main Street with all the traffic and shoppers, on a leash with our pooper scooper bags! I urge the GGNRA to allow the traditional uses of this area to continue; and, at least, give it a chance to work. I've run into horseback riders before without any problems. It seems so drastic and unnecessary a step to just shut down the area to us dog walkers. If we can't walk our dogs there, then, in effect, we can no longer use this space. Few people have the energy to walk their dogs on leashes where allowed and then go for a big hike afterwards. It just wouldn't be fair to a lot of people, including the neighborhood and the locals. Plus, the area is remote and having one's dog along feels safer. It's been an off leash area for the past 40 or more years since I've been hiking that area, and I've yet to know or hear of any problems with the dogs or their owners there. I think it's important to assess each and every open space that the GGNRA operates on the basis of it former uses, its uniqueness and not impose severe restrictions that will only harm so many outdoor people who love the area and are dog owners.

Thank you for your deliberate and fair consideration of this issue!!!!

Sincerely,

Glenna Lombardi Dog Walker of Many Years Proud Supporter of Animal Rights The Humane Society The American Society for the Prevention of Cruelty to Animals

Correspondence: I feel sorry for dogs, who cannot possibly have a truly doggy life in a city (nor can humans have a truly human life in a city). But there is a general principle behind democracy: the weak must be protected from the strong, in order for justice to prevail. In this case, the weak are our native wildlife (plants, as well as animals). The wildlife **MUST** be given top priority, because they can't protect themselves from us, nor from our artificially subsidized pets. Our subsidized pets have no place in our wildlife habitat, including our natural parks. Ideally, wildlife should be left alone, or they won't survive.

There ought to be areas of habitat that are off-limits to all humans. Human access to wildlife habitat should be kept to a minimum. The same goes for pets, which are exotic species that don't belong there. **AT A MINIMUM**, dogs should always be required to be on leash, held in check by their owner. Otherwise, **REGARDLESS OF WHAT THE DOG OWNERS PROFESS**, dogs will obey their natural instincts and chase the wildlife.

Correspondence: Dear Sir: I do not own a dog so I have no axe to grind. However I would like to note the situation on the Tennessee Valley Trail from the horse ranch to the ocean. I have walked and run this trail for over 30 years (I am in my 77th year) when there used to be cattle all the way to the sea. It has never made sense to me that dogs are prohibited on this section of the trail and yet permitted on the pacific coast trails which are infinitely more harmful to wildlife than the T.V. trail. The Tennessee Valley Trail could not be busier on occasions than Times Square, with cars, trucks, horses and people all using this trail. For heavens sake where is the harm to wildlife on this trail with leashed dogs as compared to the pacific coast trail which in many cases travels a narrow rural area where there is a lot of wildlife. I have over the years written letters to the chief ranger on this subject without any effect at all. Since I work for Alameda County I am well aware of the inertia of

bureaucracy at effecting change however reasonable the arguments may be, I really do not expect any result from this letter, but hope springs eternal.

Sincerely

Correspondence: I'm a San Francisco homeowner and dog owner. I see the devastation that large numbers of dogs are having on our city parks and GGNRA areas. I have visited Fort Funston, Sutro Heights, Crissy Field, Baker Beach and Ocean Beach with my dog over the last 18 months. There are simply too many dogs for too little space in the city. I believe that anything more than sensible restrictions in ecologically sensitive areas will simply make the problem worse in the remaining areas, increasing the number of conflicts, requiring additional personnel to patrol and remediate these effects. Further, in these tough economic times, many people have taken up the occupation of "dog walker". Those residents that can afford to pay dog walking services (myself not included) are stimulating this occupation that is providing a livelyhood for many. Some of these dog walkers are very responsible, others are not. Therefore, I would recommend a new solution as follows: 1. Designate and completely restrict areas that are truly environmentally threatened 2. Keep current policies in place in other areas - there's no staff/money to enforce changes 3. Charge an entry fee for all GGNRA parks where dogs are allowed, \$1 per dog up to 3 dogs, then \$2 for each additional. (walkers are getting \$25 - 35 per dog, this is a tax deductible cost of doing buisness) 4. Create jobs for underprivlged youth supplemented by court ordered community service to collect entry fees, work as 'doggie valet', and work on environmental remediation efforts. Fort Funston alone could generate thousands of dollars per day.

Correspondence: Hello,

My girlfriend and I regularly walk our dog at Fort Funston. This is a great off leash area for dogs, and I feel it should remain this way.

First, there does not seem to be a huge public demand for Fort Funston to be

dog free. Virtually everyone there is there with a dog (maybe a few runners, but most of them are with a dog as well). I have never seen anyone their act disrespectfully and virtually everyone is responsible when it comes to cleaning up after their pets.

There are very few safe places to take our dog. Dogs, to many of us are akin to a member of the family. There are already lots of places in San Francisco where kids and families can run around and play together. Fort Funston is one of three places in San Francisco where I feel safe letting our dog off leash (Stern Grove and a park at 8th and Lake are the others). It also provides the people of Daly City, who also have surprisingly few safe dog parks with a place to exercise their furry friends.

Thanks,

Rory Dowd

Correspondence: It is important to me that Fort Funston remains as it is. There is no other place where we can take our dog for a walk off leash. There are many other beautiful places in the Bay area for people to take walks and enjoy nature without dogs, but Fort Funston is one of the few places were we and bring our dogs and let them run free.

Our dog is a part of our family and it is important that there is a place for her to enjoy a little freedom.

Correspondence: Contrary to the opinions of conservationists, dog owners do their part for the environment. I go to Rodeo Beach about five days a week where I meet other dog owners. While the dogs enjoy the exercise and each others' company, a friend and I pick up trash. I calculate that over the course of a year, we remove about half a ton of trash from the beach, mainly plastic that can cause marine and avian creatures sickness and sometimes death. Besides turning a beauty spot into an eyesore.

Our efforts make the beach a more beautiful experience for everyone, dog owner or not. I realize that the main part of Rodeo Beach is not on the list

for closure to dogs, but closing the south part of the beach makes no sense. Especially in the early morning, the south beach is almost solely used by dog owners. When the tide is low enough to permit access to the southernmost part of the beach, we focus our clean-up efforts there, sometimes filling our garbage bags to overflowing with all kinds of trash. And the dogs love running on the wide open stretches of sand.

In all the years I've been enjoying Rodeo Beach's southern extension, I have only seen dogs and humans getting along just fine. So even if it meant restricting the access time - say, Dogs Allowed from Sunrise to 11 am - that would make much more sense than an outright ban. And a total ban would probably inhibit our trips to Rodeo Beach, reducing the number of trash pickups. Not a good thing for the environment.

Correspondence: I'm writing to support Alternative D in the areas under discussion. Though seemingly "balanced", the multiple use alternative has too many areas open to dogs on leash. Since leash rules in the GGNRA are currently completely ignored and unenforcable, the "balanced" alternative throws much of the area open to uncontrolled dogs.

Dogs currently affect the visitor experience in the GGNRA more than most other impacts. In certain areas - such as the beaches along Chrissy Field - there is an almost constant interruption to visitors by unleashed dogs not trained to voice. This area is essentially denied to any quiet uses of the beach.

As well, the GGNRA is supposed to protect natural values as well as allow for public use. Ground-nesting birds and marine mammals are being extirpated from most of this stretch of coast, and dogs play a major part in that impact.

Please consider that the GGNRA, as America's largest urban protected natural area, is to valuable to simply sacrifice as a dog toilet and playground. Thank you for considering my opinion.

Correspondence: I strongly support the proposed plan. I am a dog owner and I think that dogs

should only be off leash in designated areas. Personally, I would take it a step further and require that dogs ONLY be allowed off-leash in FENCED OFF areas. But I think this proposed plan is a good compromise.

People should not have dogs if they are not willing to take the proper steps to make sure the dog does not adversely impact our environment or fellow citizens. People should understand what breeds of dogs require a lot of running and if they want a dog that needs lots of exercise and running they should be understand that they will need to take their dogs to very specific places to run off leash.

| Correspondence: | The off leash areas in San Francisco, especially Fort Funston provide critical outlet for exercising and socializing dogs in the Bay Area. I have driven across the country with my dogs and not encountered anything like Fort Funston. With two large sporting dogs, it is very difficult to keep them adequately exercised without acres of space for them to roam off leash. Fenced areas, even one acre of land are not enough. They are intelligent animals who get bored just as humans do of roaming the same small area day after day. San Francisco off-leash areas need to be maintained exactly as they are if they are not expanded. They also provide important opportunities for pet owners to socialize. | | |

Correspondence: This is a first for me. I don't often get involved, I don't often protest, and this is my first comment on the mess that is about to happen.

This makes me very sad. I am (was) a big supporter of the Park Service. I participate in beach cleanups, vote whenever funds for parks are involved, and have always felt privileged to live where we are blessed with wonderful urban parks.

I am a regular at Fort Funston, as are thousands of others. Relegating responsible dog owners to the meager area in this report will hurt the land within the park as it will be overrun. Dogs will go somewhere, so it will hurt other city parks and urban areas. Lastly, it will hurt the Park Service.

So much money and effort was spent against a clear public will, which could have been sorely used to pay for more rangers (or give them a decent wage) and improvements.

Yes, I will protest...supporting lawsuits and political candidates.

Yes, I will vote...the National Park Service seems like they have too much money, if \$900K can be squandered like this.

No, I will no longer support you guys. This is a nicely organized railroad attempt which will cause myself, and many others, to think differently. This makes me very sad.

Correspondence: I am a San Francisco resident and frequent visitor to the GGNRA, most frequently the Presidio. Other parts of the GGNRA that I visit on regular basis are Ocean Beach and Fort Mason. I support the general direction of the proposed policy change, because it would improve visitor safety and reduce user conflicts. The policy is also finely tailored, and responsive to the individual circumstances and priorities in dozens of specific locations across the GGNRA.

This policy change is important to me because of some of the problems I have experienced in the park. I visit the park to take part in programs and experience the natural environment. I consider these programs as a vital part of my life, and important to my overall health and enjoyment of life.

However, when these programs occur in certain areas, there are sometimes large packs of dogs running off leash. The dogs sometimes approach me and jump on me, and interrupt what I'm doing. Sometimes it takes some time before the guardians arrive to get the dogs away. The dog guardians walk about yelling the names of the dogs, attempting to keep them under voice control. Sometimes, when walking through an area of the park, I have stepped in dog feces left behind by the dogs' guardians. All of these occurrences are detrimental to the overall experience. They also place me in conflict with the dog guardians, a situation that I would prefer to avoid.

Correspondence: Hi,

I feel this is unfair to the general public who have enjoyed Fort Funston for over two decades to be able to take their dogs to an authorized No Leash park. I also feel it is UNFAIR to the Professional Dog Walker and their clients who utilize both these services. WHY THE CHANGE NOW?. If you make an enclosed dog park at Ft Funston you will Definately have Major dog fights!!. Dog like people don't like to be pend up and stressed out!! this causes dog fights!!. DOGS need to be able to run free under Voice control which would cause NO friction between dogs. DOGS have rights too!! DON'T TAKE AWAY DOGS FREEDOM TOO!!

DON'T MORE AMERICANS TO BECOME UNEMPLOYED!!

Thank you

Correspondence: Dear Mr. Superintendent:

My wife and I strongly oppose any changes to further restrict dogs from areas of the GGNRA. It's unfortunate that NPS has already wasted thousands of dollars and hundreds of staff hours on a flawed study and EIS statement. President Theodore Roosevelt was a champion of our National Park System and he would be ashamed of the direction that the GGNRA is headed by further restricting areas of the park to people and pets. What you need to understand is that by restricting dogs you are restricting people, too. This simple fact is not in the report--because the outcome was

predetermined by individuals who fail to understand and or recognize the serious impact it has on the park.

If the NPS wants support including funding from the public it should "wake up." The NPS is desperately under funded and faces more cutbacks in 2011-12. If this EIS and its recommendations are implemented you should expect less funding, support, and resentment from the public. Yes, the people behind the study will be happy because it has the potential to generate more revenue from it. President Theodore Roosevelt would have fired those in NPS who would even consider the utility of this report because of its absurdity. The GGNRA has wasted enough time and money on this matter. Drop it now! ReFocus on the improvements that EVERYONE can benefit from and you will see your budget increase, volunteerism, and support. Lastly, Abraham Lincoln said new laws/regulations are nothing but good advice, if not enforced. Fact, the NPS and GGNRA do not have the resources or public support to enforce new regulations.

Regards,

Nick Torres

Correspondence: I am writing to express my concern about the new GGNRA Dog Management /Environmental Impact Statement (DMP-EIS) plan to exclude all dogs from "New Lands" which would apply to POST's Rancho Corral de Tierra property. I am requesting that this land be managed under Alternative E (allows dogs) rather than Alternative D (bans all dogs). I live in Montara and have been walking my dog in the open space next to Montara and Farallone View School for many years. It is a wonderful community of hikers/walkers, mountain bikers, equestrians and dogs who for decades have shared the land and treated each other with respect and courtesy. There is a dog group that manages dog poop stations and has developed guidelines for owners who walk with their dogs off-leash. For the decades of use and the large number of people who access it (including dog walkers), it is a testament to the care and concern of the community that the land, water shed and wildlife are remarkable well kept and thriving. I was very upset to see that GGNRA has decided, without inputs from the local community (other than one meeting at Farallone View where the majority of the people spoke overwhelmingly in favor of allowing dog access), to ban all dogs from the property. In my opinion, this is not only unjust to the local community and doesn't support the established mixed use (targeting for exclusion just one group), but is not founded on research or analysis. Does it make sense, and

is it safe, to force dog owners who want to access McNee State Park to either drive, trying to find parking on the highway, or walk half a mile on Highway 1, rather than walk across the old railroad grade or old roadway and trail from Montara? Are the pads of dog's feet more damaging to the terrain than horse's hoofs, hiker's boots or mountain bike's tires? My husband was a "volunteer of the year" for POST for his many hours of analysis of plant communities on various POST properties. He has led groups on the Rancho and ironically, he and other volunteers often brought their dogs with them. Aren't there many options available for this property, from defining areas where dogs can't go, to areas where dogs must be on leash (like McNee), to areas designated for dogs under voice control? Please reconsider your decision to ban dogs because, with this ban, you ban thousands of people from this land as well. This is counter to the idea of GGNRA and to POST's mission to preserve land for the community for multiple uses. Most of GGNRA land (and State and County parks as well) do not allow dogs. Given the unique nature of GGNRA's urban/park interface, the Rancho, with its established successful mixed use model, would be an ideal place to continue to allow dogs. It is important to have some percent of the park open to dog owners who make up a large portion of the local population. GGNRA is not only for the pleasure of overseas and out-of-state visitors but for the local community who support and care for it. Regards, Shelly Smith Montara, CA

Correspondence: I would like to vehemently oppose any of the proposed restrictions to off-leash dog walking areas in the GGNRA. I have read a good portion of the DEIS and feel it is an anti-dog manifesto disguised as an environmental issue. This is a National RECREATION Area, not a National Park. Specifically Fort Funston and Crissy Field are not pristine natural areas... heck, they're former sites of military encampments in a densely populated city environment. The current dog walking area was promised to us in the 1979 Pet Policy when the park was transferred from the City to the the GGNRA, and there is no legitimate reason to renege on this agreement. This is not about dogs having more rights than people... this is about people with dogs having rights. 1% of the total area of the GGNRA is a very small but precious patch to us... and i oppose ANY reclamation of this land... and i will take to the streets to protest any attempt to do so.

Correspondence: I am a Guide Dog user as is my daughter and several of our friends. When we go to any beach, either regulated by GOGA or San Francisco Maritime NHP, we have had some problems with dogs off leash. Our dogs are never left to run off leash, one because they are working dogs, and two, because it is unsafe not only for them but for us as well. It is very disconcerting when you have a dog, who is not on leash, running up to your dog, sometimes causing trouble, or just wanting to play, and distracting our dogs when they are trying to work. I have had several dogs lunge, growl, and snap at my guide dog, even those who are on leash, and it makes me very upset that their handlers don't seem to care. I am an employee of San Francisco Maritime National Historical Park, so spend some time at the Aquatic Park Beach and have has several run-ins with people who refuse, either to keep the dogs off the beach, or who are just letting them run around with paying much attention to what they are or are not doing. Having a good plan, which is safe for all, is something I look forward to.

Remember, wherever the public is allowed to walk, so are people who use service dogs.

Correspondence: I like dogs and have a dog of my own and for several years have enjoyed walking the grounds of Rancho Corral de Tierra in Montara (I've lived here 20 years). However, I consider myself a responsible dog owner and keep my dog on a leash at all times. This is NOT the case for many others though (particularly the "professional dog walkers" that typically have packs of 3-7 dogs with them at a time). There have been many, many times when my dog and I have been approached by loose dogs and although my dog is friendly, it is the other dog(s) that sense something in her and react in an aggressive manner. Often, the owner is nowhere near or calling the dog without any

effect. Fortunately, we have avoided any serious injury, but it is frustrating to have my dog on a leash and controlled when it is the other dog that is off leash and the aggressor.

I also have a horse and enjoy riding in those same fields. Again, while mounted, I have been approached/charged by many dogs off-leash and their attitudes can vary from curious to aggressive because some have never seen a horse before. Several times, I have been swarmed by packs of dogs (again from the "professional dog walkers") who had no control over the dogs, but because my horse knew dogs and stayed calm, we were OK until she eventually called the dogs off.

It is frustrating and sometimes scary to be put in these situations where dogs are loose and out of control, but I don't want to exclude dogs from Rancho Corral de Tierra entirely. It seems to me that the best compromise is to have all dogs on leashes to make it safer for all of us - other dog walkers, equestrians, kids, etc. and perhaps stronger restrictions on these "professional dog walkers" that have packs of dogs with them. 4-7 dogs on that many leashes with one person is still not safe since the person can easily be overpowered. It may also be necessary to have someone out there regularly enforcing the use of the leashes because many of these dog walkers will not comply.

Correspondence: I live across the street (Great Hwy) from the beach and am VERY glad for these changes as proposed by the Dog Management Plan. I have owned dogs over the years and mine were NEVER left to roam neighborhoods without being on a leash at ALL times. It's a safety issue. I'm sure dog owners (some) will be up in arms about their dogs "rights" - which is an

insane idea from my point of view. As the dogs on the beach (or rather their owners) have stifled my right to walk safely along the beach without being barked at, snapped at, sniffed at and jumped on as their inconsiderate owners say, "Oh he/she won't bite!" Not to mention the dog shit I have to watch for. The problem, of course, are the owners. I have even had dog owners yell and give me the finger when I've asked them to please keep their dog on a leash and under control. I just hope there are enough reasonable people to make sure these changes go through. Of course enforcement will always be an issue and difficult, as there are "rules" already in place that aren't followed - which means "new" and more rules in the hopes of dog owners following them.

Correspondence: Dear Frank Dean,

I have waded through this document, and like many others, I'm a little surprised how harsh it is toward dog owners and dogs in general. Certainly dogs can have a negative impact on the GGNRA environment, but this must be weighed against numerous dog owners who live in this city and love to exercise their animals in a natural environment. The recommendations here seem unbelievably harsh and simply anti-dog. An example of this is the Park Service's power to revoke all privileges on on-leash or off-leash walking if any of the restrictions are disobeyed. I can't imagine in any other instance that this would be acceptable to any citizen and tax-paying individual.

We give a lot of money to the GGNRA, to the William Kent Society, to Trails Forever. We attend meetings about the future of Doyle Drive and what's going on in our Presidio. One, but only one, of the reasons we do this is because we have a dog who loves the East Beach and it gives her and us great pleasure to exercise her in this beautiful environment. We use this area frequently for hikes and walks without the dog, too. The GGNRA is San Francisco's own treasure, and we must accommodate all the people who live

here, not just the few that are the loudest or most obnoxious (I'm speaking of dog owners too, by the way). Please accept this recommendation to revise this proposal to make it more palatable to the dog owners, and avoid an all-out war of "us vs. them." We give money so everyone can enjoy this national treasure, dog owners and non-dog owners alike; don't cut out the latter just because it may be a little more inconvenient for the rangers and the environmentalists. I am certain we can come to an accommodation that everyone can accept, not just special interests.

Yours sincerely,

Courtney Weaver

Correspondence: I commend the National Park Service for developing a plan to protect GGNRA sensitive natural habitat while allowing visitors and local residents ample opportunity to enjoy this magnificent park. I know that the Park Service will receive complaints from professional dog walkers and individuals who do not want any limits placed on where they can let dogs run unleashed. They are a well-organized and vocal group who will make their demands heard. Please know they do not represent those of us who value the National Parks for what they were intended to be-a place to conserve the scenery and the natural and historic objects and the wild life therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations. San Francisco has 17 off-leash areas where dogs can run unfettered. That certainly should be enough. People have always wanted to use the parks for their own selfish desires-whether sheepherders in the high alpine meadows of Yosemite or snowmobiles in Yellowstone. We need the Park Service to take a firm stance in preserving these precious acres for future generations. Thank you.

Correspondence: I am very blessed. Every morning my dog and I get up and before work, go hiking in the Marin Headlands, Crissy Field, or Muir Beach. Every day I see something that takes my breathe away. I feel safe out there alone walking as I have my dog with me. I have friends who hike with us as my dog makes them feel safe. I do not believe my dog would know how to protect me, but people walking towards me do not know that. It can be very scary to be out in the middle of nowhere and see a stranger walking towards you. My dog is either on leash or voice command. I have never encountered another dog that is aggressive nor seen dogs chasing wildlife. There are always rabbits, birds and coyotes. Every owner I meet out there is responsible and picks-up after their dog. I have given bags to people who forgotten them. We have helped other hikers who are lost or hurt. I climbed down and helped a women who slipped off a hillside. I have called 911 when I heard a domestic dispute in a home in Tam Valley. I always give at least one set of tourists on bikes directions to Golden Gate bridge from Crissy Field (you should consider adding sign posts). My dog and I do not harm the paths by leaving big horse prints, horse manure or bike ruts. I consider myself to be a responsible user of the parks. I volunteer to remove invasive plants and try to keep our beautiful parks pristine. If I was unable to take my dogs I would not hike in these beautiful lands. Many people I have met in the last few weeks agree that we would not be on the trails without our dogs. If you ban dogs I believe you will loose more than half the hikers on the trails. Please don't take away this beautiful privilege from us.

Correspondence: I walk my dog (often off leash) in various city parks as well as the GGNRA, usually Ft Funston and Chrissy Field. The cleanliness and concern of dog owners who bring their dogs to GGNRA by far surpasses those who use the SF city parks.

I am constantly stepping in and around dog waste in parks because dog owners see those spaces primarily as their dogs toilets. However the GGNRA is different in that it is used for exercise and enjoyment, and dog owners appreciate the pristine land that we are privileged to call our home. At Ft Funston this morning, I saw a dog owner picking up another dog's waste. People care about that space and allowing dogs there, off leash and on, will encourage it's use and appreciation. It will be a sad day when Ft Funston is deserted because people can no longer bring their dogs there. I assure you that will happen.

If conservation and restricting dogs to certain areas is of the utmost importance, perhaps it is just a matter of signage. There are so many broken fences along the upper part of Funston that it is difficult to tell where dogs are allowed and where they are not. As a first step, clearer rules and signs are needed.

I urge you to consider the voices of perhaps the majority of users of the GGNRA and allow off-leash and dog-friendly areas to remain as they are.

Thank you

Correspondence: I am a dog owner and use Crissy Field to exercise her quite often. I think that carving up that area into on-leash and off-leash areas would wreck the space and create more confusion. To that end, I think that the alternative map, Map 10A, is preferable. There aren't many off-leash areas like Crissy Field, with its large area and easy accessibility. This latter point is especially helpful for elderly dog owners and people with babies or children (like me). And what is so special about Crissy Field anyway? It is an old airstrip in the middle of a Superfund site. The dunes and marshes are already protected by fencing; the beaches are already seasonally protected for bird nesting. What do you hope to achieve for wildlife (the purported reason) by carving up Crissy Field itself? Preserving the weeds? Protecting the huge population of pocket gophers?

I can't help but feel that you are picking on dogs in particular and using them as scapegoats for the many human users of Crissy Field who treat the

area irresponsibly, not just dog owners. I would like to see you impose (or enforce existing) rules about setting off rockets and flying kites, both of which often land in the dunes or on other people.

Correspondence: Hello, I write to you to register my strong opinion of allowing dogs to be off leash, including at Muir beach, Crissy fields and Fort Funston. Dog off-leash areas are critical to both dogs and their owners' health and well-being. A fenced in area at a park is not a replacement for running along a beautiful beach and playing in the waves and sand - for both our dogs and their humans. The wildlife are among my patients as well and I have a deep concern for them and the environment. I don't believe dogs do a significant degree of damage to wildlife and I do think having this huge group of people (dog owners) caring about the beaches is critical. We need the people to have an interest so they will take of the land. Thank you for your consideration,

Amy Allen, DVM, Dip ACVIM

Correspondence: I believe that dogs should be restricted in all national parks and recreation areas, including Golden Gate. I have a friend who took a picture of an off leash dog chasing a snowy plover. If you allow dogs access in all areas, you would be ignoring the needs of others, such as birdwatchers, hikers and

parties who just want to commune with nature. Dogs might be ok in certain less sensitive areas if they are ON LEASH.

I am frustrated with the dog lobby here in San Francisco. Their dogs seem to have more rights to parks than children. They are irresponsible, their dogs leave feces, destroy habitat, and annoy visitors without dogs. Then they resort to mob behavior when it is suggested that their dogs need to be under control.

One other concern: if dog people are allowed free rein in GGNRA, then they will begin to demand it in all the other national parks. It also opens the way for other special interests to demand their so called "rights" to these national treasures, such as off road vehicles, jet skiers, etc.

Thank you for setting out more reasonable rules that protect wildlife and protect the visitor experience in national parks and recreation areas.

Correspondence: I would like to voice support for Alternative A in your dog management plan. I feel that as a hard working tax payer,I have a right to enjoy the areas in the GGNRA with my dogs. I realize that every dog owner has the responsibility to train and control their dogs so that they can be part of the social life of a park. It is the people who don't take this responsibility that should have their dogs on a leash. Please don't punish the many who are in the right for those few who are in the wrong. I have lived here my entire life, almost 60 years. I have walked dogs since I was a kid with my Dad who lived here all of his 84 years. I can't think of a healthier lifestyle than "getting the dogs out". What is good for our dogs, "man's best friend", is good for us. I refuse to believe that the few are going to be allowed to manipulate the GGNRA into a decision that would be so unfair to so many. I think that the portion of your plan that is so important is the educating of the dog walkers as to how vital it is to be a responsible, respectful dog owner. Thank you for considering everyone's point of view. Peggy Klock

Correspondence: To Whom It May Concern, I am writing regarding the GGNRA DMP-EIS to voice my strong concern over the language as it affects especially 'New Lands', specifically Rancho Corral de Tierra. I'm also concerned over the potential restrictions on other areas in the GGNRA throughout the Bay Area. I have been a resident and dog owner since 1987 first in Marin then in San Mateo County. I have always enjoyed finding areas where my dogs can run free under voice and sight control. This allows them to socialize freely, exercise and achieve a healthy balance essential to their well-being. I am a responsible owner ? my dogs get leashed if anyone has a concern or appears fearful, and I always carry bags to clean up after them. For the last 20 years I've lived immediately adjacent to Rancho, on an access road that is used by many dog owners every day heading to the lands. Montara has always been dog heaven, and it is not right to change a decades-old practice merely because it is easier for GGNRA. The local dog group has improved the area, providing poop bag receptacles and bins which has made the area much healthier. Horse-riders, other walkers and even mountain bikers all co-exist here without any major issues, except of course when the bikers ride too fast and without heed to people or pets, and somehow it's always our fault! My understanding is that currently dogs are permitted on less than 1% of GGNRA lands ? at least leave us that much please! Alternative E should be the preferred alternative for new lands that have been used for dog-walking in the past ? a total ban on dogs is unacceptable. There are very few places left in San Mateo County to take them ? 'dog parks' are sterile manmade environments with little space and little to interest an eager dog. So few beaches in the Bay Area are open to them anymore ? it's so frustrating for responsible owners like me to be denied access to so many areas with our pets. I'm not able to take them twice a day to Fort Funston, which I understand may well also be severely restricted under the proposed plan. Muir Beach is another area I go to occasionally, I would hate to see that restricted. If necessary have specific times when off-leash is permitted, so locals without dogs or who are fearful may know when they can walk without concern. But don't cut off my one method of exercise and pleasure with my dog completely, I don't want to be a federal criminal!! At least recognize that your blanket statements regarding all new lands to be off-limits to dogs is draconian and completely ignores the efforts of responsible concerned dog-owners such as the Montara Dog Group which have improved the area and provided a wonderful experience to those of us with canine companions. Sincerely,

Grant Weiss, MD Montara, CA 94037

Correspondence: I am writing about the upcoming takeover of Rancho Corral de Tierra open space preserve (currently operated by POST, Peninsula Open Space Trust) by GGNRA, Golden Gate National Recreational Area. This land is 4200+ acres of open space from north of Montara to El Granada on the costal portion of the San Francisco Bay Area Peninsula (between Half Moon Bay and Pacifica). I have two concerns that I would like to voice and ask for your help to get my voice heard.

First ? I would like Rancho Corral de Tierra to stay exactly how it is with NO unnecessary management or development.

Second ? I would like to continue to be able to walk my dog on the trails.

Rancho is an open space preserve ? that means there is no development, no signs, no portable bathrooms, etc. From the beginning of time we, the community, have not needed management to 'help' us use its natural undeveloped lands. We do not need GGNRA to make any changes. I live within a few houses of the Coral Reef Avenue proposed trailhead. I understand GGNRA intends to funnel traffic to this trailhead, establish a parking area, as well as install signs and portable restrooms. As a neighbor I have major objections. Coral Reef Avenue is the one access road to the Clipper Ridge development and they do not deserve excess traffic and parking along their residential street. Nearby streets also do not deserve this traffic. As a property owner on a private road, we will individually incur the cost to repair and upkeep our street when it is damaged by extra usage for those coming to the trailhead. Currently the majority of people who use Rancho are neighbors who are on a walk from their homes and have an invested interest in our community. We do not need an excess of outside people flooding the area and walking at such close proximity to our homes that our privacy and security is legitimately challenged. It is obvious the reasons why nearby neighbors do not want permanent portable restrooms within the vicinity of our homes. We are all getting by superbly without any of these additions and we are able enjoy Rancho without them. There is no need for change.

Without spending taxpayer dollars and years developing a Dog Management Plan, the community has already established our own protocol on how we utilize Rancho lands with respect to dogs. The person who chooses to live on the coastside is typically more inclined to utilize the undeveloped beaches and hills in our everyday life. It seems that that same type of person likes to enjoy the outdoors with their dogs. This community has an incredible dog presence. We already have established our Dog Management

Plan and it says that dogs are welcomed and they are just as important as the human citizens of the coastside. This continues to work and there is no need to modify our welcoming of dogs to the coastside's beautiful beaches and hills. To ban dogs on Rancho will only be an exercise in government futility. It is simply not the way our community works, and how our community works should be an incredible factor in how GGNRA 'manages' our land.

GGNRA should simply leave Rancho exactly how it is today. Since I know GGNRA will never let this be the case, I suggest that we establish a buffer zone. I would like to see that within 1 mile of residentially developed property lines there will be absolutely no change whatsoever. This means no signage, no modifications, and no restrictions of dogs. This zone is probably the most used portion of land for the community. Since the community is doing just fine with this land exactly how it is ? let's keep it this way. The compromise is to let the community have our incredibly small portion of land to use how we have already established works for us, and let GGNRA do what they need for the portion of land that is less used. I realize the political game is in full force so with that I request, at least, that Alternative E is adopted for Rancho so that 'new lands with existing off leash use before acquisition may also be considered for voice and sight control in the future.'

Finally, I am astonished at how GGNRA is not involving or listening to the community. I am a property owner with a SHARED property line with Rancho Corral de Tierra and I also live a few houses from the proposed Coral Reef Avenue trailhead. I have never been contacted for my input or for notification of GGNRA's plans for Rancho. I have attended public meetings put on by GGNRA and they are a complete farce. It was so evident that GGNRA has their own agenda and the input of the community is of no concern or will our voice affect the predetermined path GGNRA has decided to forge. I write this letter in desperation that you will help our community's voice be heard. Please help us keep Rancho Corral de Tierra exactly how it is today without any changes that are not needed by, or asked from, our community.

Correspondence: Please do not change or limit the off leash dog area in SF - GGNRA. There are so many place where people who don't have dog can go to play and enjoy the parks, hiking trails and beaches that are OFF limits to families with dog, and this proposal to take away the recreation opportunities for those of us with dogs is just not right, and penalizes the happy dogs and

their owners who have come to know these places as places they can run and play without problems. By limiting the off leash areas, the GGNRA is just going to create problems as more people will be forced to take their dogs to run and play in congested areas that people who prefer not to be around dogs now frequent. There are so many dog owners in the Bay Area that have been enjoying taking walks with their dogs at Fort Funston and other off leash areas in the GGNRA, and there has hardly been any issues with allowing the citizens and their canine companions to spend time outdoors in these areas, limiting the off leash areas at a time where more and more people are owning dogs and living in the Bay Area is just contrary to the RECREATION area's goals, and puts undue hardship on the majority of the people who currently use these spaces to spend their leisure time and enjoy the outdoors with their family, friends, and yes, their dogs.

Correspondence: I find "Alternative D" as the only acceptable one of the proposals.

This is based on a decade of experience both working and recreating in the GGNRA and seeing the first hand effects that off-leash dog use, commercial dog walking and simply allowing dogs into sensitive natural areas has on the resources protect therein. I consider the adoption of ANY one of the other alternatives as an abysmal failure on the part of the GGNRA .

Correspondence: Hello,

I am a current San Francisco resident who grew up in this city and have lived here for the majority of my life. I believe one of the many things that makes our city great is the beautiful parks and scenic locations that the residents and visitors can freely enjoy.

San Francisco is also an extremely pet/dog friendly city which creates a great environment for dogs and their owners to enjoy those locations even more. Of course, I am one of those dog owners, and Fort Funston is hands down the best place to walk my dog. I know many, many people (dog owners or not) who agree with that.

I was shocked and in disbelief when I heard of the news that there were plans of possibly requiring dogs to be leashed at Fort Funston and many other great locations that are currently off-leash. I think it would be tantamount to a sin if suddenly all the people who currently enjoy walking their dogs off-leash at Fort Funston have that privilege suddenly taken away. I also know many people who make their living walking dogs at Fort Funston. Requiring them to keep their dogs on-leash could potentially put them out of work or at the very least, dramatically reduce their income due the fewer number of dogs they could walk.

PLEASE LET THE DOG OWNERS OF THE SF BAY AREA WALK THEIR PETS OFF-LEASH

Thank You, Rob Snavely

Correspondence: Please keep the Bay Area dog friendly.

S.F.'s off leash restrictions have already turned ordinary citizens into criminals. Decreasing off-leash areas, or dog parks in general, will not change dog owners behavior - many of us have well trained, well behaved dogs which physically require strenuous exercise multiple times per day which they simply cannot get on-leash. Denying them that exercise amounts to cruelty.

If you implement a policy that turns tens of thousands of San Franciscan tax payers and law-abiding citizens into defacto criminals, what have you actually accomplished and what does it say about your plan?

Already it is the norm to ignore off-leash dog laws throughout the city, to the extent that police literally apologize when they are on rare occasion forced to enforce them.

Creating mass civil disobedience by decreasing tax paying citizen's rights to public land use, and exposing them to what will be a sporadic, uneven and potentially discriminatory application of the law by pushing for a rule which simply is not logical or enforceable, will be largely ignored by law enforcement (other than at what even currently amounts to their personal discretion) and goes against the ethos of the city, hardly qualifies as good governance or a well considered use of our taxes.

Sincerely,

Ulrik McKnight

Correspondence: Since the proposed changes address less than 1% of the GGNRA area, the status quo should be preserved in order to facilitate a decent off-leash to dog area ratio. With any further restrictions more canines would be crammed into smaller spaces.

With over 300,000 registered dogs in San Francisco, there is a huge need for this space! What study has been done when the off-leash dog areas are increased? (more happy owners and canines, less congestion, more wildlife breeding, less infractions, less enforcement costs)

Correspondence: The Draft Dog Management Plan represents a disaster for dog owners in the bay area, effectively banning them from any meaningful interaction with the California coastline. I STRONGLY URGE you to DISMISS the draft policy and instead maintain the current policy or EXPAND the places to which dogs may enter. The banning of dogs in public parks is an act of scapegoating environmental problems on animals instead of considering the real and damaging effect of human civilization. Moreover, the banning of dogs is a capitulation to fear that is not reality based. Yes, many people are frightened of dogs, but this unsubstantiated fear does not necessitate action. Such action would amount to profiling an entire species based upon the misdeeds of a minority membership. Said misdeeds are marginal, and pale in comparison with the number of humans attacked by other humans. To say that all dogs much be leashed (or banned) because a small number have been problems utilizes the same flawed logic that would rationalize detainment of all arabs within our country because a small number of arabs were responsible for the 9-11 attack. The vast majority of dogs are happy creatures that spread joy to all they meet. They enrich our communities and encourage conversation among persons who would otherwise pass one another without a word exchanged. THIS IS INVALUABLE in creating community.

Correspondence: As a dog owner in the Bay Area we love Fort Funston and drive the 45 + min drive there to enjoy time with our furry family member. Sometimes we don't always go down to the beach so it's nice to have the trails on the bluff as off leash so our Stella can roam and enjoy time off leash as well. There are so few areas in the Bay Area that dogs can enjoy off leash with their owners. All the times we have been there we've never seen anyone with out of control dogs. You see lots of families and everyone seems to pick up after their furry family member. It would truly be a shame for you to change anything about the park at this point. Even to just parts being leashed areas seems to ruin why it is a main attraction for so many dog lovers around the Bay Area. If you read reviews on Yelp there are people who go there that don't even have dogs just to get in their dog fix. There are so many other beaches in the area that dogs aren't even allowed on please don't take away or limit this amazing place.

Correspondence: My concern is that so many Big Dogs are not on leash in the GGNRA. I ,almost, was attacked by a grey female pit dog once, while running on Ocean Beach, between Vicente and the Western edge of the Golden Gate Park. I did report it to the police at the station on the 24th ave. between Taraval and Santiago. I would like to see more enforcement of the leash law in the GGNRA. Sometimes weeks could go by without seeing a ranger. I would like the leash law not too be too onerous on Rangers, so that they must issue citations only to dogs that could cause damage. I have no problems with small dogs not being off leash, but big dogs that could cause damage to the body must be under leash. Unfortunately many of us don't understand how to react to big dogs trying to sniff us or just being curious. The onus is on the dog owner to keep them under leash. Thank you Nafiss Griffis

Correspondence: I am the author of two local trail guides, "Tamalpais Trails," and "Open Spaces, Lands of the Marin County Open Space District," and have been leading hikes and running in GGNRA and adjacent parklands for nearly 40 years. Decades ago, reckless and illegal bicycling was the #1 menace to the parkland and its visitors. But over recent years, the proliferation of off-leash dogs, where permitted and not, has become the greatest problem. Literally hundreds of times, dogs have jumped on me while I run or hike. I consider this a serious invasion of privacy. I have also been tripped, or dangerously nearly so, numerous times. I regularly see dogs chase rabbits and other wildlife. Whether they catch the animals or not, surely they wreak havoc on their lives and breeding. Professional dog walkers run their commercial business free of charge on GGNRA and other public lands, passing the cost on to other users. The sheer number of dogs and dog walkers overwhelms many trails and trailheads. And when rules and laws are so flagrantly broken, as dog owners--more than anyone else--so brazenly do, no one can really feel safe in the open space. I applaud the GGNRA draft plan's efforts to restore reason and science to this out-of-control off-leash dog problem. Other jurisdictions--my town of San Anselmo just one example--have wilted in the face of aggressive opposition by dog owners. Please, do what is right for the land, for its natural denizens, and for the peaceful, passive, law-abiding citizen users. Do not retreat from this plan, which already represents an enormous compromise from the restrictions other national parks impose.

Thank you.

Correspondence: As a resident of the Capehart Housing (located in Fort Berry of the Marin Headlands) I strongly support Alternative A or E for the Marin Headlands Trails. Due to increased traffic and construction in the park, roads have become dangerous places to walk with a dog. Since the elimination of the speed bumps in Capehart (between McCoullough and Menges St) motorists routinely travel over 40 mph through our neighborhood. For this reason I and the other dog owners in Capehart would like to preserve on-leash dog access to especially the Julian Fire Road so that we have more options for walking our dogs in the park. Residents in neighboring areas, such as Sausalito and Mill Valley, are able to safely walk dogs on residential streets, but since our roads provide the only access to Rodeo Beach, they become extremely crowded and dangerous on the weekends. We have few safe options for walking dogs in our neighborhood and access to the trails in the upper Rodeo Valley would provide safe opportunity for us and our pets.

Correspondence: Dear Sir/Madam: I used to live in Daly City (10+ years) from the mid-80's to late 90's. I took my then dog to Fort Funston (FF) on a frequent basis. I was a young man and the regular exercise kept both my dog and I fit. My beloved dog lived to 19 years old and I am currently in VERY good shape for a 40-year old. I moved from Daly City some time ago, but still return to Fort Funston with my two Weimaraners at least once a week. We go to FF for the nature, fresh air, safe surroundings, and to socialize with other outdoor enthusiasts (sportsmen, dog owners, dogs, joggers/walkers). I have noticed how wonderful the mood is there and how responsible the folks are that take their dogs to FF. Of course you have a few issues/spats between dogs (mostly due to their owners), but it is far fewer than the altercations outside of FF that I witness between humans on a daily basis in road rage or assaults, thefts, fights, etc. I heard somewhere recently that there is 1 dog for every 4 residents in San Francisco. That is a lot of people with a lot of dogs. These owners hire professional dog walkers to run their beloved pets so that they stay healthy and reduce waste pollution in the city. I am not a dog walker, but I believe these new restrictions on places such as Fort Funston will do more harm than good. Let's keep pets healthy, owners happy, pollution down and save some money by keeping things at the parks the way

they are. Thank you.

Correspondence: Hello and thank you for the opportunity to voice my opinion about dogs at GGNRA. My wife and I (and our two dogs) moved here to the Bay Area last June. We are very grateful to live in such an incredible place, and are especially impressed by the conservation efforts in such an urban area- both by government and not-for-profit organizations such as Open Space Trusts. Both of us are former National Park Service employees (SEKI, GUMO, and BUFF for I, and GRCA, BAND, and NOCA for her), so we understand concerns about resources, visitor protection, and public perception. Presently, I am a PhD student (geology) at Stanford and my wife is a GIS Analyst in the private sector.

That being said, we visited Fort Funston with our dogs yesterday (Sunday, Feb 6) for the first time. It was truly the greatest place we have taken our dogs since moving to California (the playas around Death Valley are a close second, however.) I am not sure what the specific language of the EIS states, but I would like to offer my advice:

The ability to bring dogs and allow them to walk/run leashless on the stretch of beach from the Fort Funston parking area south is fantastic. In my opinion it is a cultural highlight of the Bay Area, in that dogs and their owners are given both freedom and responsibility beyond the norm- and a very special environment is thus created. I strongly oppose any changes to the current language that allows the present environment at Fort Funston with respect to allowing dogs off leashes and having significant stretches of coastline for this sort of recreation.

That being said, I understand concerns about commercial use of the land (by dog walkers, etc) and think there needs to be a commercial permit process that could help fund maintenance/infrastructure. Additionally, I would not be opposed to a small fee for use (as long as an annual pass was available) to help with infrastructure needs.

Thank you for your time.

Respectfully,

Eric S Gottlieb

Correspondence: Please keep the dog walking areas of the Bay Area free! You are all missing the point! Too much regulation leads to more problems, more lawsuits and more conflicts, because you will always have someone that over steps the regulations! If your intent is to put in place rules that will be broken so you can issue tickets or fines in order to raise revenue I say shame on you! We use the Fort Funston and Crissy Fields areas daily with our dog and have never encountered any problems. Yes, all dog owners need to be responsible for their pets, and the majority of them are. Just as all drivers need to obey rules, but some drivers don't! Please leave the law as it is now, the "no action" alternative is just fine. The purpose of walking or running with your dog is to experience a brief moment of freedom - to interact with others that are enjoying their moment of freedom too. Leave well enough alone!

Correspondence: Re: Rancho Corral de Tierra - Draft Dog Management Plan

I am a 15 year resident and homeowner of Montara who has walked my dogs in the open space for nearly all of those years. My dogs are walked on the trails; 50% on leash, 50% off leash, but always controllable by voice commands. My dogs have never caused an issue nor have I experienced an issue with other dogs. And, I always pick up after them ? on or off trail.

Montara is unincorporated so there are limited street lights and no sidewalks

or designated crossings on Highway 1. Closing the open space to dog walking is not only unpopular, it is unsafe. There have been three dogs struck and killed by cars in the past several years, one walking near the road in front of his owner's house, the other being walked by his owner on leash (both on 4th Street). Only 3 weeks ago, a man and his dog were struck trying to cross Highway 1 in Montara ? the dog was killed.

Closing this space to dog walking eliminates any safe opportunity for dog walking in the community. Closing this space to dog walking will force me and many neighbors to walk their pets up and down residential streets (no sidewalks), many times in the dark (few streetlights). This would create unsafe conditions for the dog walkers, the dogs, and the car drivers (as most of us are).

I strongly suggest the GGNRA come up with a shared solution, i.e., dog walking hours, dogs on leash hours, dogs off leash hours, people only; some creative way to share the beauty of the space and the opportunity for healthy exercise for those with dogs, without dogs, and new visitors.

Many of us moved here specifically for the open space, the beauty and the opportunity to enjoy it unencumbered by regulation. Please work with the community to develop an alternative to eliminating dogs completely in the open space.

Thank you for your consideration and attention to this matter.

Robin Hesterberg

Correspondence: I grew up in San Francisco two blocks from the Presidio on Broderick street and further have volunteered in the Marin Headlands for the last 4 years. My comment is that off-leash dog walking needs to be severely restricted in the GGNRA. The majority of dog owners I have come across pay little regard for the rules and allow their dogs to run wild and trample native plants, invade the space of other users in the park and chase wild birds. I think that voice-control does not exist in reality as an excited dog off leash will always prefer to chase a bird over returning to its owner. I further have concerns about the amount of dog excrement I have found all over the park and on the beach where children play. I love dogs and have had several german shepherds. At the same time I understand that we need to preserve our important natural resources. Therefore, this plan should go as far as possible to restrict nearly all areas of the GGNRA to either prohibit dogs or to make dog owners walk their dogs on leashes.

I think that the GGNRA needs to increase enforcement of currently existing regulations as well as these proposed regulations. The GGNRA and City of San Francisco could earn a lot of money to pay to preserve the park from the income that would come from leash violation fines.

Correspondence: I appreciate the opportunity to comment. Thank you.

In part I see this document the result of the lack of regional management. That is, as more and more agencies listen to their lawyers and restrict dog use, less and less land is available for the walking of dogs. So, now GGNRA must protect itself as more and more people have been finding the only 'freedom' to be ahd is on certain GGNRA lands, that they in fact own (in a manner of speaking).

I will speak just of the Alta Ave-Oakwood valley area. What you have for Oakwood Valley is consistent with current regulations, other than now allowing leashed dogs on the stretch between fire road and Alta. I think this is a good decision. However, your plan doesn't seem to discuss Oakwood Valley Trail, though I admit I've not read the whole thing. I would hope that

dogs are allowed on OVT, as they seem to be now.

I am a wildlife ecologist (mostly specializing in birds), have worked for conservation non-profits as well as ecological consulting firms, have lived in Marin County for 40 years and at end of Alta Ave (Donahue) for 15 years. I have contributed 100+ hours per year to habitat restoration on Alta (weed removal) for the past 5 years. I have walked my dog, or had my dog accompany my weed removal, about twice per day on Alta Ave, more or less, on days when I'm present (mostly). I note that the DEIS states lots of 'could's and 'maybe's in terms of impacts from dogs. I don't see alot of data in the DEIS. Well, I do know about dogs vs snowy plovers but we're not talking snowy plovers at Alta.

Along Alta, in the past 15 years, I have seen mountain lions 3 times, coyotes every few weeks, and I know of where bobcats have dens in two places. I have seen the increase in ground nesting birds with the arrival of coyotes several years ago and the resulting disappearance of feral cats. Dogs haven't affected any of this. Positive actions, like exotic weed removal, has made a huge impact on return of native flowers. Please provide more funding to the Park Restoration program, that is if you're serious about wanting to see an increase in the 'wild' experience of park users. I don't see further restriction on dogs as being positive toward restoring this area.

My surveys indicate that 2/3 of persons using Alta do so with dogs, mostly off leash, if you don't include the joggers and bikers. If you include them, then its 50%. In fact, so high is the association of people with dogs, that my dog expects to see another dog when he sees a person. Alot of commercial dog walkers use Alta, and my survey does not include them. They are, however, very responsible, and I have never had any problems with them. In particular, they clean up the dog poo, including that left by less conscientious persons. The Park no doubt, sensitive to its lawyers, pays attention to the negatives received from people who want it all. I'm sure they have complained about the dogs in general, and the dog walkers in particular. If those people need a wilderness experience, then they should go to PRNS and its wilderness areas, or areas where dogs are already excluded. That's my definition of 'multiple use'. GGNRA is a wonderful urban park and should allow all kinds of recreation, including humans' interactions, positive ones, with their dogs.

Thanks for listening.

Correspondence: I own two large dogs who need at least one hour of exercise a day. I take them to Fort Funston every single day - sometimes twice a day. I am a responsible dog owner - I pick up after my dogs, ensure that they are not destructive (digging, chewing, etc.), not aggressive (to other dogs or humans), and that they don't enter restricted areas. In my experience, all of the visitors to Fort Funston (with minimal exception) exhibit the same level of responsibility as I do. There is rarely an incident between dogs - and when there is, the owners act responsibly. I rarely encounter piles of dog waste on or off the trails, and when I do - I pick it up.

There are very few areas in San Francisco where dogs can run off leash, and taking these few areas away will have a wide reaching negative impact. The already overcrowded, small, and poorly maintained "dog parks" will only worsen. Dogs will suffer - they will not get the level of exercise that they need to maintain a healthy lifestyle. Visitors to Fort Funston will decrease dramatically - I would estimate that over 95% of the daily visitors are dog owners.

Everyone should be able to access and enjoy Fort Funston and the other areas in question - whether or not they are a dog owner. For those who don't want to be surrounded by dogs - use one of the MANY parks where off leash dogs are not allowed - there are far more of these areas than the limited off leash areas.

Correspondence: I was shocked to learn that further reductions were being proposed in the open space where dogs are allowed. As it stands there are only a few trails and open space areas available for dogs which provide multiple social and physiological benefits to members of this community.

We had 1 year between dogs and it was amazing to me to learn how much more exercise and walking I did while having a dog vrs when I did not. Every day I walk my dog on the oakwood trail after dropping my kids off from school, or on the homestead trail in my neighbor hood. The ONLY people I encounter are other dog walking individuals whose dogs are able to visit with eachother, get great exercise, experience the open outdoors AND allow their owners the same benefits. I have lost 7 pounds in the past 6 months simply by virtue of taking my dog for a daily walk or hike and I have met some new friends along the way. On weekends, we take the kids and the dogs on certain dog approved trails and we all enjoy our family outings. It would not be the same without our pooch and he deserves to be able to join us on these outings. He cant come to the mall, cant come to many sporting events and cant come to school. There has to remain some places where families can enjoy their pets together and use the outdoors in good health. Being in Tam Valley there are few, if any sidewalks so street walking is not a great option. Additionally, my lab would not be well exercised if only kept on a leash. If I were to simply go to the disgusting dog park, not only would I not get any exercise myself, but I would not be able to take advantage of the gorgeous paths and wooded areas that I feel in love and caused me to move here. Also, the polluted water at the dog park would surely sicken my dog.

People who are not keen on dogs have hundreds of park trails to walk on as it stands. let the bird watchers and non dog lovers use those trails but give us

some space that we can enjoy with out loved ones as well. Fine those who are not responsible but dont let a few bad eggs spoil it for the rest of us who rely on these areas for our health and pure enjoyment.

Correspondence: I am outraged with the new anti-dog plan. Where do you expect people to go with their dogs? Dogs are called man's best friend for a reason. The idea that the GGNRA says it wants to clarify the rules is a bunch of horse manure. Your agency has given dog owners, who by the way are tax payers, less than 1 percent of the land to use. Now you are trying to take even more away? SHAME ON YOU! It won't work. You will see. People will rise up and show that we're not going to take it!

Correspondence: I never knew Marin to be unfriendly to dogs. As a matter of fact, we moved to Marin in 2004 because it is known to be friendly to dogs and kids...now I find NEITHER to be true. If you pass this measure, I will guarantee that people will move out of this area, which will cause the housing market to drop. Why have wooded areas if you can't take your dog with you on a hike? Unfortunately for us, there are a few dog and children haters that live in the area and try to use their power for their own "personal" agenda. Please take into account the numerous people that live here and have pets. Even if I didn't have a dog that likes to go on the trails, I would still feel very firmly that dogs should be allowed on the trails. Please keep the trails open to people, dogs and kids... we all live here together peacefully.

Thank you

Correspondence: It was so hard for me to hear recently that there was a drafted plan restricting where we can take dogs off-leash or even restricting where we can take dogs at all.

I am a responsible dog owner and mother that loves taking our eager 2 year old lab to all the corners of San Francisco where he can play, run freely, swim, chase, explore and soak in the sun (and of course fog!). He's a trained lab who comes when he's called. We pick up after him regardless of where he goes. We don't let him walk in the areas that have been marked for preservation. We love going to Crissy Field, Ft Funston, Lake Merced....

Our dog also has a dog walker that walks him three times a week and takes him to Ft Funston to do what he loves and takes him off-leash. When he first started getting walked by them, they kept him on leash to train and ensure his recall was up to snuff before they let him walk with all the others. We're at work all day, and for him to have this outlet and use his energy outside, is so wonderful. I love sitting at my desk during the day and knowing he's going to be picked up and have the time of his life with all of his dog friends and really get to use all of the energy he has bottled up. If you take this away, his walks will just be a bathroom break. Rather than a 2 hour romp, it might just be an around the block bit of air before he goes back in.

Our dog is part of the family, and for him to have this experience outside in such a beautiful city is invaluable to us. I strongly believe dogs and wildlife can co-exist, that dog owners can be responsible to pick up after their dogs, control their dogs, and that people, dogs and environment can all be a part of the same outdoor space and respect it at the same time.

San Francisco is such a dog-lover city - I hate to see it go down this path and be so dog-unfriendly....

Correspondence: Regarding your Dog Management plan, I have several comments:

1. First, in an era of budget shortfalls and cutbacks, the amount of time, effort and resources which you have misallocated to an issue as miniscule as this, both astounds and enrages me, from my own perspective as a tax payer.

2. That said, and under the circumstances of continued fiscal shortfalls for your budget, you and your organization would be best off in allowing the status quo to prevail...

3. Obviously given your mandate to meddle and your complete unaccountability to the residents of the city of San Francisco, that's not going to be the case.

4. So, I must request, that you NOT CHANGE any of the dog policies regarding Ocean Beach or what you call the Snowy Plover Protection area. This is an urban area of your park. As such dog owners have the right and the obligation to exercise their dogs in such an area. Your efforts to further restrict dog management policies to disallow dogs, or disallow off leash areas would challenge that basic right and be harmful to both individuals and our animals. Please dont do it.

There are plenty of places where the plovers can go to do whatever it is they do, or where individuals who have problems with on leash dogs can go. It is not a problem. LEAVE US ALONE!!!

Correspondence: Fort Funston has been a treasure for taking our dog where she can run with other dogs in a natural environment. The vast majority of people who walk the trails and on the beach are dog owners. I have never seen owners

allowing their dogs to go into restricted areas where there is vegetation growing. While I am sure there are some violators, even with new rules there will be violations. I understand that there must be rules in this park, but is there a problem currently that requires that you be more restrictive than at present.

Correspondence: Dear Superintendent,

RE: Appendix F

Thank you for the opportunity to make a comment.

I am a native to the bay area and live in San Francisco.

I'm making a comment today bc I happen to be off work, working on an independent project, and I went to Crissy Field, East Beach where I brought my lunch. Much to my surprise, while I was there, over an hour, 3 different Prof Dog Walkers (DW) came by with more than 6 dogs each. I have pictures. I counted 8 and 9 with two DW. One of them left 5 dogs in the car, while walking the 8 dogs.

I called the NPS line and inquired bc it seemed excessive. The dispatch line was helpful and directed me here.

I am surprised and disappointed by a number of the proposed terms in Appendix F:

- I believe the NPS land is for the US citizens to enjoy not for commercial use - therefore, I think the proposal as it stands is too lenient - I believe 6 dogs per DW is too many. 4 max is much more acceptable. - Again, I don't think the NPS land should be allowed for commercial use for DW. My preference would be none. My taxes are going to supporting their business on public land. - this is different than let's say a 10K run - this benefits a large number of individuals - DW are the only ones to benefit from their business while using public land

Times: I'd like to propose the following for Commercial Dog Walkers:
Midweek: 9 - 12 and 1 - 5. Weekend: 11 - 12 and 1 - 3.

Costs: I hope the cost of the permit includes wear and tear by their use, cost of dog poop bags, costs for enforcement, and for the disposal of the dog

poop they leave behind. Today, as I ate lunch, and NPS service truck came by collecting trash and had to pick up one of those nice blue dog poop bags.

Enforcement / Revocation: Are you serious? this is way too lenient. This isn't major league baseball where every agrees that 3 warnings for steroid use is a joke!

I propose: - 1st warning with fines at a level at which that will provide a deterrent. - 2nd warning 3 month revocation - 3rd warning permanent revocation - revocation can occur at any time depending on the offense.

In addition, Parking: - DWers shouldn't be allowed to park in front space stalls. they should have to park in the back of the parking lot since they are there for commercial use. - convenient and close parking stalls / spots should be saved for personal users of NPS land.

I personally find dog walkers use of public land annoying and a nuisance for the general population. I think they should find other locations to run their business than on community property.

Can I also suggest that you allow for picture attachments to the comment section. I have pictures of the events from today.

Thank you very much for your time. Best Regards Matt Richardson, PT,

Correspondence: Dear GGNRA, Please keep the beaches open for dogs. As a city dweller it is vital to our community to have public areas that are dog friendly. Most of the dog parks have in my area have proven to be dangerous for many dogs and not a healthy environment for stability. If the wildlife is threatened it is important that we preserve essential breeding areas with proper fencing and signs. As far as dog waste goes. We should all be responsible for removal regardless of its location. Littering is illegal. (And that should include horse feces as well.) San Francisco and the Bay Area is revered as the country's most dog friendly destination. Lets try to keep it that way so we don't loose our community. Thank You, Elizabeth Berger

Correspondence: I am a SF native and over the years have seen the number of dogs increase while the number of children has decreased. I have also seen the number of restrictions placed on dogs and their owners increase. While I do have children and am not a dog owner, it seems unfair to so severely restrict dog owners from public recreation areas. Yes, some dog owners are irresponsible, most are not. The same holds true for parents! When citizens use public multi-use recreation areas they should expect to see other people, families, environments and yes, animals including dogs. A more appropriate plan would call for great fines and enforcement of reasonable restrictions. More visible enforcement of pet waste clean up with large fines would eliminate the #1 problem with irresponsible dog owners. More visible enforcement would also encourage higher compliance with leash laws, increasing safety. The proposed plan with severe restrictions is estimated to cost over \$1million, more visible enforcement of current rules would not cost more than that. Don't deny people recreational experiences with their beloved pets, just make sure they follow the rules.

Correspondence: Although I may disagree, I understand the argument for less off-leash dog areas. Sites like Crissy Field are often overrun with dogs, making a picnic on the beach quite difficult. However, there are plenty of spots in San Francisco for a quiet picnic. There are less spots for dog owners to enjoy playing with their loved ones in wide open spaces.

Regardless, what frightens me about this discussion is that FENCED IN DOG PARKS ARE NOT THE ANSWER.

1. Dogs are territorial, and marking off territory for one to dominate is a really bad idea and will certainly result in a few bad dogs reigning. 2. All dog owners know that the best way to avoid dog conflicts is to "keep moving." In a fenced in dog park, there is no way to keep walking. 3. Dogs run and frolic less when confined. Dogs like to explore, smell different smells, and generally look around. The fenced in dog areas which now exist around the City do not contain the variety of terrain and smells that come with taking a long walk.

Furthermore, it is unclear that those who seek to limit off leash areas understand the importance of off leash walking. Like children, many dogs have a lot of energy to expend. Dog owners prefer that that energy be let out by allowing the dogs to run (like recess for children during school) instead of by acting out and eating furniture (just as children do with too much energy).

So please, while I recognize that there are some spots which attract a lot of dogs, and that further partitioning may be necessary, I urge you to consider the reasons why fenced in dog parks are no solution at all. Instead, delineating further on leash only areas is the best compromise.

Correspondence: Please keep off leash dog walking in the GGNRA and do not impose further restrictions.

As a long-time resident and member of the San Francisco community, I strongly support maintaining current and providing additional leash-free areas in San Francisco and its surrounding communities. One of the things that makes San Francisco such a wonderful place to live is that it balances between being a major metropolitan area offering the best of city life, but it also provides access to great neighborhoods, nature and the outdoors. Restricting access to these areas by certain members of the community is discriminatory, intolerant and downright unfriendly.

Off leash dog walking supports responsible dog ownership. Dogs need sufficient exercise and socialization multiple times a day every day. With that said, responsible dog ownership obviously includes keeping dogs under voice control at all times and picking up dog waste. The few individuals that do not currently exercise responsible dog ownership will likely continue to offend even in light of increased restrictions. In my personal experience, most dog owners DO act responsibly and are likely to police themselves by confronting individuals that do not follow responsible or acceptable behaviors. I would rather see greater deterrents in place to focus on offenders (such as increased fines for not picking up dog waste) rather than imposing restrictions that punish everyone.

Northern San Francisco (Marina, Cow Hollow, Russian Hill) is noticeably an area heavily populated by dogs and but lacking off leash dog parks. One of the few places that has been traditionally used for off leash recreation for many years is Crissy Field. Crissy Field should certainly retain the status quo and continue to fulfill this needed purpose. Fort Mason should also legalize off leash dog walking. So called "environmentalists" have argued the environmental impact that this would have on this park; however, I find these arguments weak as this is clearly a manicured urban park. Fort Mason lends itself well both geographically and functionally as an off leash dog walking option in an area that currently does not provide its surrounding neighborhoods with a dog friendly park. Overall, the community has clearly demonstrated that it needs off leash dog parks and areas of recreation. I have enjoyed spending quality off leash time with my dog at Crissy Field for many years, and have appreciated this right so much that I have been moved to "give back" by volunteering my free time to do landscaping work at Crissy Field. I am sensitive to my environment but do realize that dogs and their people are part of that environment. We need to keep the GGNRA accessible to all, not just special interest groups, and this includes not discriminating against dogs and their owners.

Correspondence: Off leash dog use is not compatible with general public use of a park. Off-leash dog use is only safe in a fenced-in area where it does not interfere with public use of a park. Dogs are annoying and dangerous and damaging to an environmentally sensitive area.

My family has endured 15 years of off-leash dog walking in our local West Cliff Drive and Lighthouse Field State Beach area. We have experienced many dog owners who feel that their dogs off-leash freedom is more important than public safety of my children, or anyone other public users of the public area.

Because our area is popular for dog walking, and the lax enforcement by (understaffed) city or State rangers, many dog owners just assume its ok and not bothering anyone to let their dogs run free.

But many people are bothered by dogs, and sometimes dog bites and injuries due to dogs being off leash do occur. After 10 years of our city allowing dogs off-leash here in limited hours, the city proposedg that, "because our experiment worked so well" to make it an all-day off-leash area.

I then attended city government meetings to protest this, having had many

bad experiences with dogs and their owners here. A local group of citizens formed, Lighthouse Field Beach Rescue to protest this. For 15 years we have struggled to inform local and state government agencies that off-leash is a dangerous policy in such a public area. OFten we were not heard due to the high number of dog off-leash proponents, organized through "Friends of Lighthouse Field" But we have held our ground in this issue and finally filed, and won, a lawsuit versus the City of Santa Cruz to prevent their turning LHFSB into an all-day off-leash area.

Please do not allow off-leash dog use except in a posted, fenced in area, or you will attract many users who are allowing dangerous and offensive behaviour that drives other humans and wildlife users out of the park.

Thank you for your consideration

Correspondence: We (myself & 2 dogs) are respectful and frequent users of Crissy Fields, Fort Funston and Marin Headlands. The exercise benefits health & social well beings. We have connected with other recreational users, both human and dog, and have developed community relationships.

I reviewed the EIS draft and preferred plan. The following statements from your report are not accurate:

Appendix K: Past Present & Future: "Failed Snowy Plover clutches failed to high mercury level" Mercury from the ocean? From humans? What is the corolation of dogs being off leash?

K-1 "Crissy Fields restoration involved 18 acres of tidal marsh. This increased dog walking" Oddly omitted the human usage of picnics and child building sandcastles, wading and swimming in the estuary.

Page 1569 Cost Impact of \$1.5 million. Are these current costs or projected? Has the current roles and practices been reviewed? Who would pay for the increases?

Appendix G Law Enforcement Data: Totals for 2007 was 1535 incidents. Totals for was 2008 889 icidents. Obvious heavy numbers for "off leash" and minor numbers or no incidents of enviromental protection. Incidents decreased by almost 50% in 2008. How and why did these numbers decrease? Most importantly what is the ratio of these incidents to the total usage? Is it less than 1 percent?

I oppose and request no changes be made with current guidelines.

Correspondence: This would be a very sad change to San Francisco, San Mateo, and Marin Counties. Having these designated areas for dogs to be off leash has been a very safe and fair way to allow dogs and their owners to get the exercise and socialization they need to thrive. By limiting these areas as it is being

suggested, it will severely limit the amount of space needed for many large and energetic dogs to burn off energy and get the exercise they need. It would be a travesty to the mentioned counties to slash the areas dogs are allowed off leashes. Please re-consider making these changes, as taking away these open areas will be devastating to both the dogs and the dog owners. Correspondence: I am writing to comment on the policy towards dogs in the GGNRA. The policy overview in the document strikes me as correct; you are working to balance many competing interests. I write in order to represent one of those interests.

I have never liked dogs. I didn't grow up with dogs in our family. I was bitten in a scary incident as a child that left me very wary of animals. When I see a dog, I feel myself get tense. My discomfort with dogs was validated earlier this year when I went for a walk in my Portola Valley neighborhood on a public path by a neighbor's house, and their dog - off leash and with no owner in sight - came barreling down the driveway onto the public path and proceeded to bite me in the ankle. The bite drew blood, and it is clear that I will have a scar and, as you can imagine, I was terrified!

One of my great passions is hiking. To me, experiencing our fabulous bay area on foot is one of the great privileges of living here. I've been a board member of POST for several years (and a longtime donor), where I volunteer my time in order to continue to protect more land for future generations. I marvel at the magnificent job our public agencies, with the support of private philanthropy, have done in making this landscape available to all of us. By far, my favorite weekend activity is to hit the trails.

Recently, my husband and I went to McNee Ranch State Park, where we went to climb to Montara Mountain. I know this is a state park, and not GGNRA, but the same situation applies. Over the course of a near three

hour hike, we saw many other hikers, the vast majority with dogs. Only one of these dog owners had their dog on a leash. Every other dog owner was walking with the dog off leash. As I walked along, the dogs often would run up to me to explore, and I would reflexively cower. Owners would reassure me - "don't worry; he wouldn't hurt anyone!" and I had to point out that I had just been bitten by a dog, making me very nervous around dogs, and that just because they are confident in the dog doesn't mean that I was. And, by the way, there is a leash law. Honestly, these owners just didn't care that their dogs made me visibly uncomfortable.

I felt that my experience of the mountain had been ruined. Indeed, I felt like I was in a video game, watching around every corner to see when next I would find myself confronted by a dog off leash, as if being attacked by asteroids.

To be honest, my preference would be to ban dogs altogether from our parks. However, I do understand how important dogs are to many people, and the great pleasure they take in having their dog accompany them on the trails. To me, the requirement that a dog is on leash is a reasonable compromise between dog owners and dog dislikers. While I don't love a dog on leash when I encounter him, at least I do not feel threatened. If we must have a place where dogs go off leash, let's have a specific place, well sign-posted, such that people like me can simply avoid it.

If you establish rules that open our parks to off-leash dogs, I strongly believe that you have tipped the balance too far towards one interest group. Dog owners simply are not good at understanding the possible threat of their dogs, or the impact on other people. I deserve to hike these hills without anxiety and without fearing confrontation with defensive dog owners. It simply isn't fair that dog owners get more say on this subject.

Moreover, I'd love for you to figure out some way to police the dog rules. I know budgets are tight, but rangers issuing citations strikes me as a revenue opportunity! Let's have a great big fee for getting caught with an off-leash dog. If you send a ranger to Montara mountain some weekend, you will easily pay for his or her time. At the very least, I feel there should be better signs at trail heads saying that dogs are required to be on leash (and, by the way, that owners must carry out dog waste, which is a separate, but related, matter).

Correspondence: As a 25 year resident of southern marin county and a dog owner for as many

years, I believe it is unacceptable that the GGNRA would consider prohibiting dogs and/or off-leash dogs from the few remaining trails in this area. We as residents are willing to take full responsibility for keeping our dogs under voice command and carry a leash at all times while traveling on these trails and roads or enjoying the beaches. Southern Marin is a unique area in that we have the GGNRA in our backyard and within walking distance from our homes. As a woman and daily hiker it is a matter of safety when hiking alone that my dog is with me. Dogs kept away would be attackers away, whether animal or human.

Dogs are allowed on less than 1% of park trails and roads and beaches in and around the GGNRA. Consider increasing the cost of a violation ticket from \$200.00 to \$1,000.00.

Correspondence: I am an African American Lesbian who uses off-leash dog areas in the GGNRA daily. I have been walking my dog off-leash at Crissy Field for 6 years. I am a local resident in Sausalito, Ca. Dogs that are not adequately exercised can develop behavior problems such as barking, destroying property in the home, etc. Behavior problems are one of the primary reasons that people surrender dogs at shelters. San Francisco has a "No Kill" goal that no potentially adoptable animal in a city shelter (SF Animal Care and Control, SF/SPCA, Pets Unlimited). Representatives of the SF/SPCA have said that the Preferred Alternative will make it harder for the SF/SPCA to perform their mission to reduce surrenders to city shelters and make San Francisco a truly No Kill city. Off-leash play decreases the likelihood of dog aggression in dogs. In comments to the SF Animal Control and Welfare

Commission on 2/8/07, Jean Donaldson, then head of the Dog Training Program at the SF/SPCA and a nationally recognized author on dog behavior said: "There is not only no evidence that allowing dogs off-leash for play opportunities increases the incidence of aggression, to a person, every reputable expert in the field of dog behavior in the United States is of the opinion that it is likely that off-leash access decreases the likelihood of aggression." She also said: "Interestingly, it could very well be that the safest dogs are those that attend off-leash dog parks." And she said: "There is no research demonstrating that dog parks or off-leash play contributes to any kind of aggression, including dog-dog aggression." The Preferred Alternative condemns every dog owners for the actions of a very few irresponsible owners. According to the GGNRA's own statistics, 94% of dogs do not chase birds (and most of those who did chased seagulls). Yet, all people with dogs will be excluded from a majority of Ocean Beach to "protect" birds. Focus enforcement on people who do not keep their dog from chasing birds rather than on excluding all people with dogs. The Preferred Alternative severely restricts recreational access for people with dogs, a fundamental violation of the reason the GGNRA was created. In the legislation that created it, the reason for the creation of the GGNRA is listed as "the maintenance of needed recreational open space." Off-leash dog walking is among the recreational activities listed as traditionally occurring in the land that was to become the GGNRA. There is no off-leash access in San Mateo County in the Preferred Alternative and that must be changed. The Compliance-Based Management Strategy must go. This poison pill that will allow the GGNRA to change the status of off-leash areas to on-leash or no dogs without additional public comment if there is not 100% compliance with the new restrictions will not work. The change would be permanent. A management plan should not come with a built-in nuclear option, which is what this is. It allows a relatively few bad players to undermine and destroy a traditional recreational use of the area. No number of responsible dog owners will stop what will become the inexorable removal of all off-leash access in the GGNRA if this strategy remains part of the plan. Tens or hundreds of thousands of hours of incident-free dog walking will not matter. There should be (and are) penalties for bad actors and these should be enforced. But the vast majority of people who do not act badly should not be penalized for the bad actions of a few. This strategy is unfair because off-leash status can be changed in only one direction (toward more restriction). It circumvents the legal requirement that management changes that are either significant or controversial must have a public process before they can be made. Critical information about how compliance will be determined ? by volunteers biased against dogs? by surveillance cameras? ? is not included in the DEIS.

Correspondence: I was born in San Francisco and have been visiting Fort Funston with my dogs for 15 years. I cherish the time that I spend with my dogs there. There is no place on earth comparable to Fort Funston. At least 95% of the people walking the trails and on the beach have dogs and I have never had an incident with any of them.

On the few occasions that I have tried to exercise my dogs in enclosed dog parks they have been harassed and attacked by other dogs. Many dogs can be aggressive on leash and making all the foot paths leash only can only lead more problems.

Please do not take away the best part of my city.

The Preferred Alternative severely restricts recreational access for people with dogs, a fundamental violation of the reason the GGNRA was created.

Save Fort Funston!

Correspondence: I am a 36 year old resident of the Marina District for over 10 years. I have been utilized some of the designated areas to walk and play with my dog for over two years. We especially enjoy using the green space at Bay and Cervantes. There is plenty of room to roam and to be able to share with others and not bother those playing football/soccer or just relaxing.

I believe the proposed changes to off-leash laws represented in your document have several issues. Primarily, the Preferred Alternative area is way to limited. The restricted area would be insufficient for the dogs/owners. This would likely lead to conflicts as there would not be sufficient space. Restricting space would cause more issues than the unsubstantiated risks the document cites. I also believe this is a one-sided view - there is no provision for enlarging the off-leash areas and instead focuses on restrictions. There is limited space currently for dogs to play and the thought should be how to secure what is currently available and where else dogs should be allowed. I hope you reconsider these plans and think of the benefit to dogs and owners of being able to have sufficient areas is important.

Correspondence: Thank you for the opportunity to comment on this plan.

I support Alternative D, with the exception that I would allow commercial dog walking, with permit etc as spelled out in the preferred alternative. I also support this alternative because it is the environmentally preferred alternative.

I could support Alternative B, which seems to place a lot of emphasis on leashed dogs, and I feel like this is a reasonable solution IF and only IF the vast majority of your law enforcement staff (the people on the ground) felt

confident that it was feasible for law enforcement to actually get dog owners to comply. I would like to know what level of involvement field-based law enforcement had in developing the alternatives and how realistic they believe the preferred alternative to be. In every place I have ever walked where there is a "leash law" it seems that the majority of dog owners are ignoring it. I fully support the concept of a compliance-based management strategy, wherein lack of compliance means a permanent change to a more restrictive management classification. Again, if I thought this was enforceable, I would support it. The enforcement records indicate that most non-compliance with dog-owners resulted in a warning rather than a citation. Warnings don't produce the same results that citations do, so I would hope that any enforcement strategy would allow a window of adjustment wherein warnings are issued (maybe a year), but then go to an all-citation based policy. Otherwise dog owners will not comply, and the experiences of other visitors and the resources will continue to be ruined.

Also, it is the very rare dog who is truly under "voice control", especially when animals or birds are involved (not the fault of the dogs--it is their nature), so I support the least amount of ROLAs possible, and support locating ROLAs only in areas with minimal or no wildlife. Non-dog walkers will avoid these areas, so they should not be in the middle of a main thoroughfare.

Thanks again for all the hard work and effort that has gone into this plan, and for allowing all Americans the opportunity to comment on the management of our national treasures. I do not live in San Francisco but I absolutely love visiting the area and have been to many of the beaches, parks, and walks listed in the plan. I also highly value the resources and the recreation that GGNRA protects. I am sure you will receive lots of comments from local dog owners, but I just want you to know that others have a stake, too.

Correspondence: I am writing to express my concerns with the dog management plan being proposal for Golden Gate National Recreation Area. I have been a resident of San Francisco for 8 years, the most recent year and a half as a responsible dog owner. My issues with the dog management plan:

- There are many conscientious pet owners in SF that will be severely punished by this plan, why wouldn't you instead institute a plan that addresses those owners who are not responsible (i.e. don't control their

aggressive dogs, don't clean up after them, etc.)

- I work full-time during the week and my dog enjoys a long dog walk with a group of 8-10 other dogs led by a passionate dog walker whose business would be jeopardized by the plan due to restrictions on the number of dogs he can have out with him as well as having a limited area to play (they currently go to Fort Funston every day to play).

If my dog is well behaved and I consistently pick up after him, I do not understand why our access to public parks should be so limited as proposed in the dog management plan.

Correspondence: I strongly oppose the proposed plan. The recommended action would severely restrict the ability of responsible dog owners (and their pets) to use and enjoy what are already very limited recreation areas. Yet, there doesn't seem to be any factual support for why the recommended option was chosen beyond anecdotal reasoning.

If it's for employee safety, then how many employees have been injured? If it's for environmental reasons, then explain how dogs are the culprit, but surfers, tour buses full of tourists, horse riders, bikers and hikers aren't. If it's to reduce conflicts, then how many and how severe have those conflicts been? (I've been taking my dog to all of these places for a greater part of the last ten years and have rarely, if ever seen any major conflict.)

If, as you say, the number of dog owners has grown dramatically since the 90s, then your proposal will limit the ability of a huge proportion of the regular users of these areas, for very poorly supported reasons. If a small percentage of dogs are causing issues, then the answer is to cite the owners of those specific animals. Not to punish the thousands of responsible owners who frequent these areas.

This is a pet-owner-hostile dictate that seeks to act first and ask questions too late. I intend to do whatever I can to prevent this proposal from passing.

Correspondence: As a dog owner in San Francisco, I am a regular and responsible user of the beaches at Fort Funston and Crissy Field.

Living in San Francisco is truly a wonderful city-living experience. An experience that I have been fortunate to have had for 33 years.

However, as a resident with a canine companion, there are so few places where it is acceptable for a dog to be off-leash. The City's dog parks attempt to meet this need, but falls short with the sheer number of dogs at each park.

Discovering the beaches at Crissy Field and Fort Funston was pure nirvana. Walking at the beach with my dog, rain or shine, is such a joy. To see her happy and free, bounding in and out of the water, lifts my spirits and makes me smile, no matter what else is going on in my life. We particularly relish the solace at the far southern area of beach at Fort Funston.

I don't know how we would replace this time together should these areas change to prohibit dogs off-leash. Getting in a car to cross a bridge, adding to pollution and traffic back-ups, not to mention stressful driving, would not be a great choice.

Please don't change the off-leash rules at Fort Funston and Crissy Field.

Correspondence: I have just come back from my weekly walk at Fort Funston with the my 3 dogs. Given the numbers of people out there with their dogs I cannot believe there is any justification for limiting access. It is obvious that we need more room not less.

I am a 30+ year resident of San Francisco. I own a home. I pay my taxes. I work in San Francisco, my employer pays taxes. I register my dogs -their licenses go to support facilities in SF. Walking my dogs is my recreation. It is in your charter to provide recreation for the people in the Bay Area.

I can understand with growing populations that you need to revisit your usage policies. But creating a 2400 page document for a policy that affects only 1% of the land you oversee seems misguided. I would think that being in the Bay Area you would have the same core values that those of us that live here have. We are a community, we want to meet the needs of each other, we care and we love our animals that now out number the children.

Alternative plans that I would like to see explore turn Fort Funston into a world-class dog-friendly park. Don't limit the space, instead make it a showcase. A park that others in the country would turn to for guidance in "dog management". Bring in other organizations to help.

- Tap into the California Academy of Sciences and Recology to create a dog poop to methane energy generator. - Tap into corporate dollars to help offset the costs of maintaining the park. The "pet economy" is sized at 41 BILLION dollars. Let sponsors contribute. Subaru, Toyota gets it - our park service needs a new model. And if it's not allowed in your charter, then maybe it's time to reevaluate or turn the land over to someone else.

For the spaces outside of Funston you should consider designated dog times. I've stopped going to Chrissy Field unless its before 8am. Just too many people. The "development" made it a destination area for families and less desirable for those of us seeking solace, time with nature and our dogs.

The "compliance" rule in the charter that says all designated areas can be revoked if you feel like not enough people comply (note the word "feel) does not meet the needs of the greater public and needs to be removed. You cannot take away my car if others speed down my street. It's the same line of thinking.

I truly hope a new alternative is drafted. We have an opportunity to become a model to the rest of the country vs creating division in our community and distrust of our Park services.

Correspondence: GGNRA,

As resident of Fairway Park (neighborhood adjacent to Mori Point), Sierra Club member for more than 20 years, former Youth Conservation Core member, concerned citizen and responsible dog owner, I am compelled to comment on the ill-conceived preferred dog policy for Mori Point as outlined on your website.

As many of my neighbors, part of my decision on choosing to live in Fairway Park was based on the proximity to open space, now GGNRA, Mori Point. I have walked my dog here on leash for 9 years, collected trash and reported illegal activity on this land to authorities on several occasions. These incidents have included off road vehicles and a dog attack by an uncontrolled, off leash dog. As encouraged by multiple GGNRA signs, I consider myself a steward of this land and most of my neighbors act in the same way. Fairway Park, by my most recent estimate, includes more than 40 dog owners many of whom frequently use Mori Point to walk their dogs. Unfortunately, I now feel my use of this space is threatened by a preferred policy which restricts on leash dogs to 2 trails passing through the space only. This policy is very confusing based on the environmental reviews on your website which state little to no impact on habitat by leashed dogs. Further confusing this preferred policy is the fact that trails which allow dogs on leash are all within 100-200 feet of trails which prohibit dogs even though they share the same watersheds and natural features.

Mori Point is bordered by the old quarry, Fairway Park neighborhood, Sharp Park Golf Course and beach promenade making it a multi-use recreational area, not a wilderness area. Restricting leashed dogs within Mori Point will likely not be well-accepted, making the regulation a difficult one to enforce. The enforcement plan of going to even more restrictive policy based on compliance rate of less than 75% is backward. If a regulation is not acceptable to a large percentage of people using the space, it is the regulation, not the people who are misguided. If dog policy is seen as inappropriate by many users, the land and habitat could be further damaged by people using the space during off hours.

I trust the GGNRA will take the above into thoughtful consideration when developing dog policy. I look forward to many more years of using this space with my dog and continuing to work with GGNRA to make this a safe place for people and animals while continuing to protect the habitat as all of these are possible.

Sincerely, Steve Alves

Correspondence: I am writing about the proposal to ban dogs and limit off leash activity at the Golden Gate National Recreation Area. The proposal will deny thousands of people in the Bay Area the ability to use these parks for recreation if this proposal passes. My family heads to Fort Funston at least once a week to enjoy the beach and trails with our dog. The parking lot at Fort Funston is jam packed on the weekends, where will these people go if they are turned away from using the park? Where does Frank Dean of the Golden Gate National Recreation Area expect people in the SF Bay Area to go instead? We still will need to exercise and socialize our dogs, and these off leash areas at the GGNRA have provided us a place to do just that. There just aren't enough spaces in the Bay Area that are open to people with dogs and taking away this vital and greatly appreciated recreation area is gong to contribute to new problems. Without a valid environmental impact report indicating that the current usage is having a negative impact on the GGNRA, there's no reason this proposal should be accepted. The proposal fails to consider how it will impact City parks and playground if people are forced off GGNRA land. It's just makes no sense to change the policy now, with more and more people living in the Bay Area and coming to the GGNRA with their dogs. Walking them on leashes around City streets is fine, but they need to run free with other dogs, and more importantly their OWNERS need spaces where they can go and enjoy their leisure time and bring the family. Please can you help stop the Golden Gate National Recreation Area from implementing it's plan to deny families like our access to the parks in the Bay Area? Thank you.

Correspondence: Dear Frank Dean, I am a healthy and responsible 75-year-old single woman with two well-behaved dogs. I live in Mill Valley. My principal source of exercise is walking my dogs off leash twice a day. I have never been to the dog park, it doesn't suit the needs of my dogs or myself for exercise. The DEIS provides me with more questions than answers. 7 Where's the science? The DEIS feels like a draconian measure imposed from On High.

7 What documentation do you have that dogs off leash degrade the environment? If you do have documentation, what are your numbers -- # of problem dogs vs. non-problem dogs? And what mitigation systems have you considered?

7 Have you considered addressing your enforcement resources at the problem situations rather than the needs of the majority of responsible dog owners?

7 Is this a political thing? Why else would you have come up with such a restrictive and undemocratic option (it would seem that responsible dog owners are in the majority on this issue).

7 On what observed basis do you propose these restrictions on the use of public open space?

The East Bay Park system seems to have a workable off-leash plan in place that has worked for many years. Colorado gives special licenses to well-behaved dogs. Why is Marin so hostile to dogs? I hope we can find a workable solution. Margaret Harding Mill Valley

Correspondence: It is important to adhere to option A. Dogs are an integral part of life in San Francisco. Its part of what makes San Francisco and the Bay Area so

special. People need their dogs and they need an expanse of natural space to enjoy and exercise their dogs. We can't afford to have children here - is there any wonder so many people have dogs. It is unthinkable that dogs would have to be on a leash as Chrissy Field. I walk there everyday and never witness any problems. If an owner doesn't clean up their dog's waste there are five people who will point it out to the owner. Professional dog walkers are another story. They have too many dogs at one time to take care of and they go into the airstrip where there are few people. In a sense they are running a concession on public land. There are other alternatives - control them! Don't punish all the people trying to get a little enjoyment in life because of them. As for individuals supervising their own animal, I don't see how its any different than bringing your child with you. I have been a non dog owner for most of my life. I believe that even non-dog owners benefit from the interaction of people and animals at Chrissy Field and other areas. Having a natural place to freely interact with animals is critical to the quality of life that is so important to living in the Bay Area. Do not allow any other option than A to be in force.

Correspondence: I consider myself a reasonable-minded dog owner, parent, and long-time citizen of San Francisco.

I have taken my dog, on- and off-leash, all around the city, including Fort Funston, Chrissy Field, and numerous dog parks. I have also spend time with my kids and family and friends all over the city.

My honest opinion is that many of these areas have been overrun by dogs, and are quite gross and unpleasant places--for anybody but a dog. My dog, and other dogs, deserve good outdoor spaces, and I love to see her run and enjoy the outdoors. But in Fort Funston, one of the most beautiful spots in San Francisco, it is impossible to avoid dogs. And dog poop. Same thing in many parts of Chrissy Field. Overwhelmed by dogs. It is irrelevant that most of the dogs and dog owners are well-behaved. These public spaces, many of them National Parks, have become dog playgrounds.

I believe that some limited, fenced portions of GGNRA should remain accessible to off-leash dogs. That is fair, appropriate, and pragmatic. Dogs need space. People need space. And wildlife needs space.

Furthermore, I believe I speak on behalf of the great majority of San Francisco residents, as well as tourists and other visitors. Most have neither the time nor the focused passions held by dog owners and dog professionals

regarding this issue.

Correspondence: My dog and I are frequent users of Crissy Field and Fort Funston. Although I am aware of some of the problems that have arisen due to off-leash dogs in these areas, I have personally never experienced them. The main reason, I believe, is that I go to these sites around sunrise, long before they are crowded and before professional dogwalkers arrive. My experience is that each place has a very regular and dedicated group of early arriverers. Because of the early hour and the low density of users, problems are extremely rare.

I urge those making this decision to consider the following:

1. Clearly posted guidelines help park users and enforcement personnel. When I first got a dog and began going to these parks, I found it very confusing that there were no posted guidelines for dogs and owners.
2. The patterns of use at these parks vary during the day. Please allow continued use of existing off-leash areas at these parks during low use hours, e.g. from opening until 8:30 am and for an hour or two before closing time. The more stringent regulations should apply during higher-intensity use since there is much higher potential for conflict.
3. Make and enforce guidelines for the number of dogs allowed per walker. It is reasonable that "professional" dog walkers, who are, after all, making commercial use of the parks for their own profit, should be held to a strict standard, perhaps including some kind of registration/licensing requirement, with the provision that violations could result in losing their license.

Thank you for your consideration of these comments.

Correspondence: This email is in support of OFF LEASH recreation for dogs (and their owners) in the Golden Gate National RECREATION Area. Until recently, the areas outlined for off-leash recreation in the GGNRA included all or part of: Ocean Beach Fort Funston Burton Beach Baker Beach Crissy Field and Beach West Pacific Avenue Rodeo Beach Oakwood Valley Muir Beach. These recreation areas are extremely important to the people of the San Francisco Bay Area as well as the visitors to the San Francisco Bay Area. Adequate space to recreate one's self (as well as our pets, companions, and/or service animals) is crucial to our, the People's, right and need to the pursuit of happiness. Currently, there exist no reasons (pertaining to safety, ecology, or otherwise) which should merit revision to the long standing policies concerning dogs, leashes, their owners, and the Golden Gate National RECREATION Area. Please give my views and needs, as well as the views of a great many San Franciscans and dog owners the world over, the respect our views and needs deserve. To do otherwise is to transcend our rights to enjoy our public lands. Most Sincerely, Christopher D. Raleigh

Correspondence: The proposed GGNRA dog leash regulation is far too restrictive. As a native of San Francisco and a dog owner I am saddened by the lack of vision this proposal brings to the table. 1 in 3 San Franciscans owns a dog and the impact upon our city would be great if off leash recreation were limited as proposed. Imagine all of the dogs overwhelming the city parks!! We need the national recreation areas and our dogs need the space to run and play. Please reconsider your proposal - police the bad seeds but allow the overwhelming majority of good dogs and good dog owners to enjoy OUR parks.

Sincerely, Mike Shaw

Correspondence: I have spent over 30 years enjoying the GGNRA - a priceless resource for the Bay Area. I have participated as a runner, hiker, biker and dog owner.

I believe the current rules adequately address the needs of all participants. The vast majority of GGNRA users are respectful of everyone's right to enjoy this wonderful resource.

The new rules for dog owners are not necessary - most dog owners are very conscientious of others rights not to be impacted by their pets.

There is always a small group from every user group that doesn't follow the rules but that is not a reason to punish the majority with new overly restrictive rules for dog owners.

Thanks you, Tim.

Correspondence Type: Web Form
Correspondence: Dear Sir or Madam,

I have been a long time resident of the city of San Francisco for the past 24 years and have to say that the proposed legislation to limit the current off leash dog policy for the GGNRA is very disturbing.

I have frequented many of the Park's dog management areas of concern over my lengthy residence in San Francisco and have never experienced or encountered any troubling issues between dogs, dog owners and the multitude of people enjoying the GGNRA park lands. I have biked, hiked, jogged and walked extensively throughout the GGNRA parks in the City and feel the current off leash dog policy is essential to maintaining the much needed open space areas for all San Francisco residents and their pets.

I feel that the push to limit the off leash dog walking areas in the GGNRA listed locations is an attempt by a few special interest groups looking to secure certain park lands for their individualized/ special interest use only. An example of one of these groups would be the "hand gliders" using the Fort Funston area for their sport specific activities.

I realize that certain dog owners are negligent in their control and command over their dogs and should be held accountable for any negative actions caused by their irresponsibility. To reduce the current off leash dog walking area by nearly 75% for all of the dog owners who are responsible and looking to enjoy the GGNRA parks to their fullest extent is not a justifiable response to the problems that exist with the current off leash dog walking

policy.

The amount of money proposed to enforce the new policy is simply ridiculous given the cash constraints plaguing most government agencies. San Francisco has always been a friend to its citizens who own dogs by providing ample areas within its borders for dogs and their owners to enjoy and experience some degree of off leash freedom. I strongly encourage any member of the GGNRA board attempting to rule on this decision to go to Fort Funston on a pleasant San Francisco weekend to see for themselves how many people are enjoying the park both with and without their dogs.

Please keep the current off leash dog walking areas available for dogs and their owners to enjoy the GGNRA. Please let San Francisco stand for a place that values its diverse population and will continue to be one of the few dog friendly major cities in the United States that will continue to preserve the precious few areas that remain designated for the use of all of their residents (dogs included).

Thank you for your time.

Kind regards,

Scott Bruner San Francisco, CA 94127

Correspondence: As a home owner in San Francisco, we have always paid our taxes. As with many dog owners in SF, we have a very small yard and depend on public spaces for exercising our dog. Inasmuch as I understand that SF is a city with about one dog for every 4 citizens, I believe that dog owners and dog walkers have proven to be very sensitive and respectful of public spaces. I hardly ever come across abandoned dog poop or viewed altercations between dogs. We pay taxes, we clean up after our dogs, we restrain our dogs on sidewalks, etc. WE HAVE WELL BEHAVED DOGS THAT ARE COMPENSATED BY THE OCCASIONAL RUN AT THE BEACH, THE SWIM TO GO FETCH THE BALL. PLEASE DON'T TAKE THAT AWAY FROM OUR DOGS. They are our best friends, they are the only ones we know who offer us unconditional love. They are a very important part of our lives. They deserve to not only be represented but also deserve to be compensated for their good behavior as good citizen. They do not pay taxes but they do make your dog owning taxpayers happier people.

ID:**Received:** Feb,14,2011 18:57:11**Correspondence Type:** Web Form**Type:****Correspondence:** Dear Frank Dean, I am a healthy and responsible 75-year-old single woman with two well-behaved dogs. I live in Mill Valley. My principal source of exercise is walking my dogs off leash twice a day. I have never been to the dog park, it doesn't suit the needs of my dogs or myself for exercise. The DEIS provides me with more questions than answers. 7 Where's the science? The DEIS feels like a draconian measure imposed from On High.

7 What documentation do you have that dogs off leash degrade the environment? If you do have documentation, what are your numbers -- # of problem dogs vs. non-problem dogs? And what mitigation systems have you considered?

7 Have you considered addressing your enforcement resources at the problem situations rather than the needs of the majority of responsible dog owners?

7 Is this a political thing? Why else would you have come up with such a restrictive and undemocratic option (it would seem that responsible dog owners are in the majority on this issue).

7 On what observed basis do you propose these restrictions on the use of public open space?

The East Bay Park system seems to have a workable off-leash plan in place that has worked for many years. Colorado gives special licenses to well-behaved dogs. Why is Marin so hostile to dogs? I hope we can find a workable solution. Margaret Harding Mill Valley

Correspondence ID: 606 **Project:** 11759 **Document:** 38106**ID:****Received:** Feb,14,2011 22:55:13**Correspondence Type:** Web Form**Type:****Correspondence:** I have been a resident of San Francisco for 17 years and enjoying the GGNRA off-leash dog areas for the past 6 years. I go to either Fort Funston or Crissy Field at least 2-3 times every week with my Golden Retriever. These trips to run and swim are truly special occasions for both of us and by far the happiest times for my dog.

I have serious concerns about the GGNRA's off-leash proposal, particularly, the "poison pill" of the Compliance-based Management Strategy. A management plan should not come with a built-in nuclear option, which is

what this is. This strategy is fundamentally unfair and unbalanced since it -

? Allows the off-leash status to be changed in only one direction (toward more restriction) with no possibility of increased access in the future.

? Circumvents the legal requirement that management changes that are either significant or controversial must have a public process before they can be made.

? Omits critical information about how compliance will be determined, allowing room for misunderstanding and misinterpretation.

? Permits the GGNRA to change the status of off-leash areas to on-leash or no dogs without additional public comment if there is not 100% compliance with the new restrictions.

? Makes the change permanent. While there should be, and are, enforced penalties for bad actors, the vast majority of people who do not act badly should not be penalized for the bad actions of a few. No number of responsible dog owners will stop what will become the inevitable removal of all off-leash access in the GGNRA if this strategy remains part of the plan. This component MUST be removed from the proposal.

Correspondence: This would be a very sad change to San Francisco, San Mateo, and Marin Counties. Having these designated areas for dogs to be off leash has been a very safe and fair way to allow dogs and their owners to get the exercise and socialization they need to thrive. By limiting these areas as it is being suggested, it will severely limit the amount of space needed for many large and energetic dogs to burn off energy and get the exercise they need. It would be a travesty to the mentioned counties to slash the areas dogs are allowed off leashes. Please re-consider making these changes, as taking away these open areas will be devastating to both the dogs and the dog owners.

Correspondence: I am writing to support stricter leash laws for dogs in the Golden Gate National Recreation Area. The GGNRA is a national treasure that should be enjoyed by all and we should use this precious resource to protect the wildlife that finds habitat there. Dog walking is a legitimate recreational pastime, just like many others, but it should not take precedence over other forms of recreation at the GGNRA. No one should ever have to worry about being bitten or knocked over by someone's pet when they visit the GGNRA. Visitors to the GGNRA should be able to find some peace and calm and not have to be vigilant about dogs running at them. Pets should not be put at risk to run into traffic or other hazards. The wildlife in GGNRA should not be harassed by domesticated pets.

Some recreational activities, like walking, birding, or sitting and reading, have very few impacts and we let them occur almost anywhere. Others, like mountain biking or golf, have much greater impacts on other people and natural areas and we rightfully regulate where they can occur. In my opinion, letting dogs run off-leash is one of these impactful recreation activities that should be limited to specific areas where I can choose not to go. Just as I wouldn't choose to go have a picnic on a golf course where I would need to be constantly vigilant to flying golf balls, I would not choose to visit an off-leash dog area where I would have to constantly be vigilant to

curious and rambunctious dogs.

Therefore, I think that off-leash dog recreation should be limited to a few sites that do not infringe on the other uses of the GGNRA and I would strongly support Alternative D in the Environmental Impact Statement. Alternative B has its merits, as I believe consistent policies across national park areas will make so everyone knows what to expect and how to act when visiting. No matter which alternative is chosen I strongly support strict enforcement so that all may continue to enjoy the amazing natural areas of the GGNRA.

Correspondence: I am a homeowner in San Francisco. I have served my county as a teacher's aid, teacher and social worker for more than 20 years. Being able to walk my dogs in the county's beautiful parks has been a way to renew myself so as to be able to go on contributing thru my work to the community. For so many people, dogs are a way to enjoy and treasure nature and to be personally invested in preserving the wildness and beauty of our parks. How about charging a monthly fee for an off leash dog-walking permit? This would create needed revenue for upkeep of the parks. I would be glad to pay a fee to be able to continue to use the parks with my dogs.

Correspondence: Frank Dean, General Superintendant Golden Gate National Recreation Area Bldg. 201 Fort Mason, San Francisco, CA 94123

Dear Mr Dean,

The "dog situation" has become horrible for many of the older population and children (more dogs than children in San Francisco).

I can no longer enjoy walking on ocean beach. Twice I have been attacked by unleashed dogs, and bitten once. No longer are there the seabirds there used to be. Barking, aggressive unleashed dogs are everywhere. Their owners are defensive and often nasty if I tell them to leash their dogs, or move away.

Crissy Field is like a mine field for me. Everywhere are barking aggressive

dogs -- often 3 or 4 on a leash. I can no longer bring my grandchildren there, they become too frightened and often are jumped upon by dogs.

The only place I feel safe and comfortable is the Botanical Gardens with its wonderful sign: "No Dogs Allowed".

Your Dog Management Plan can't come soon enough for me. Please don't be intimidated by the raucous dog owners who aren't too different from gun owners.

I'm looking forward to the day I can walk on the beach, Golden Gate Park, Chrissy Field etc. and not be intimidated by barking aggressive dogs and often their equally belligerent owners.

Please do not "water down your" Plan because of pressure from dog owners. They will flood meetings (as before), bringing their dogs and their demands.

Good Luck

Correspondence: Dear Mr. Dean

Please do not chance the GGNRC to a leash park.

It is not a case of dog against human, as some people put it. It's for dog owners and non-dog owners, and FUTURE dog owners.

A lot of people won't even go outdoors if it hadn't been for their dogs. The parks are there for the dogs to romp around, and for dog owners to exercise WITH their pets.

It is also very much for people who don't own dogs but would like to enjoy dog company. These are people for one reason or another cannot have a dog'cannot afford it, don't have the space or time, work too long hours. They go to these leash free parks to enjoy man's best friends.

As for the very small percentage of naughty dogs or irresponsible dog owners, it's like punishing every adult male because there are a few rapists lurking around in our society.

If there are issues need to be address, dog owners will be happy to chip in their part to make it work.

Please keep the dogs parks leash free, for human and for dogs. Sincerely,

Seik Yee Lau

Correspondence: Frank Dean Superintendent GGNRA Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean,

San Francisco shares its name with Saint Francis of Assisi, the patron saint of animals. Restricting the freedom of pets at Baker Beach, or any of the otehr GGNRA sites, would seem unfitting. Residents of Sea Cliff and neighboring areas of the City have been taking their dogs to Baker Beach and recreating for 40+ years, and we believe that the 1979 pet policy should be grandfathered into the current dog management plan. Traditional usage should play a crucial factor when drafting new policy, Baker Beach is a low conflict, moderate usage site.

The contiguous beach, China Beach, has a no dog restriction. I have been advised there are no endangered birds and no sensitive nesting habitat at Baker. Those whose dogs use the beach have been careful to keep their dogs off the fenced salt grass area. This ten-acre site has no snowy plovers. I consider myself an environmentalist, and there is no natural resource that is being damaged or destroyed at Baker. The dogs are running on sand. The dog owners pick up the trash on the beach and are not interfering with family activities (in comparison to the nude men running around at the far end of the beach). That overt behavior seems more disturbing to children than any dog. I have seen illegal camping with tents and fires, pot smoking, discarded cigarette butts and alcohol bottles (some broken and dangerous) at the beach which are cleaned up by dog owners.

There is a low level of visitor activity in the early hours when many people walk with their dogs on the beach in the early morning (especially as it is usually foggy). The only other people there are the occasional fisherman or surfers. How are dogs improper? Private dog owners are respectful of visitors, use voice control and generally avoid the beach at peak picnic/sunbathing hours.

The City has more pets than children. There is a valid fair argument for dogs recreating off leash on the GGNRA. Where will all the local residents go? In addition to practicing good dog etiquette, they are good stewards of Baker

Beach, Many clean up after high traffic weekends and party nights. One dog owner even facilitated the recovery of a drowning victim early one January morning. Baker has dangerous riptides..

I do not understand why dogs are singled out as a high profile controversy when natural resources are impacted in GGNRA by fireworks, Blue Angels, cargo ships spewing oil, cruise ships polluting the Bay, etc.

The key word in GGNRA is recreation. Walking with their dogs is how many get exercise and fresh air. It is a great tragedy that in the name of the National Park Service you would take away that privilege. San Francisco is a special case where these dog walking areas have become an integral part of the local and visitor experience.

Respectfully yours.

Correspondence: Dear GGNRA

I oppose Section 2 of H.R. 6305, a bill introduced in Congress by Nancy Pelosi, that will change the name of the Golden Gate National Recreational Area (GGNRA) to the "Golden Gate National Parks." While this seems innocuous, it is not. The GGNRA was created by Congress in 1972 to: "provide for the maintenance of needed recreational open space necessary for urban environment and planning." For decades, recreation and habitat restoration co-existed without conflicts. In recent years, however, GGNRA staff have instituted policies that have closed large areas of land to recreational uses, in direct opposition to the recreation mandates contained in the legislation that created the GGNRA. If the name change passes, GGNRA staff will claim that, by that action, Congress has authorized the overturning of the enabling legislation and removed the original protections for recreational access. Without these protections, GGNRA staff will be free to severely restrict -- if not outright ban -- access throughout the GGNRA to ALL recreational users.

The GGNRA controls 61% of the open space in San Francisco, including all of the beaches. The GGNRA is San Francisco's backyard, and provides much needed recreational open space for Bay Area residents. San Francisco is the second densest city in the US, and a tremendous need for recreational open space exists. For decades, the GGNRA has helped provide that. If the

name change is passed, however, that access will be lost.

Please oppose the name change for the GGNRA, and remove Section 2 from H.R. 6305.

Dear Mr. Dean,

San Francisco shares its name with St. Francis of Assisi, the patron saint of animals. Restricting the freedom of pets at Baker Beach, or any of the other GGNRA sites, would seem unfitting. Residents of Sea Cliff have been taking their dogs to Baker Beach and recreating for 40+ years and, we believe that the 1979 pet policy should be grandfathered into the current dog management plan. Traditional usage should play a crucial factor when drafting the new policy. Baker Beach is a low conflict, moderate usage site.

The contiguous beach, China Beach has a no dog restriction. I personally have spoken to a NOAA bird population field surveyor at Baker Beach, and he assured me that there were no endangered birds and no sensitive nesting habitat at Baker. We have been careful to keep our dogs off the fenced salt grass area. This ten-acre site has no snowy plovers. I consider myself an environmentalist, and there is no natural resource that is being damaged or destroyed at Baker. The dogs are running on sand. The dog owners pick up the trash on the beach and are not interfering with family activities in comparison to the nude men running around at the far end of the beach. That overt behavior seems more disturbing to children than any dog. I have seen illegal camping with tents and fires, pot smoking, cigarette butts and alcohol bottles (some broken and dangerous) that we clean up. When I have come across a dead or injured sea lion or seal, I have called the Marine Mammal Center. During the oil spillage crisis, we did our part to pitch in.

There is a low level of visitor activity in the early hours when I walk with my dog on the beach at dawn (especially as it is usually foggy). The only other people there are the occasional fisherman or surfers. How are dogs improper? Private dog owners are respectful of visitors, use voice control

and generally avoid the beach at peak picnic/sunbathing hours. The city has more pets than children. There is a valid fair argument for dogs recreating off leash on the GGNRA. Where will all the local residents go? In addition for practicing good dog etiquette, we are good stewards of Baker Beach. Many of us clean up after high traffic weekends and party nights. One dog owner facilitated the recovery of a drowning victim early one January morning. Baker has dangerous riptides and we have all tried to warn young swimmers. The Baker Beach dog group is self policing. If a dog exhibits inappropriate behavior the other dog owners step in.

I do not understand why dogs are singled out as a high profile controversy when natural resources are impacted in GGNRA by fireworks, Blue Angels, cargo ships spewing oil, cruise ships polluting the Bay, etc.

The key word in GGNRA is recreation. Walking with my dog is how I and many others get exercise and fresh air. Correspondence: Dear

I oppose Section 2 of H.R. 6305, a bill introduced in Congress by Nancy Pelosi, that will change the name of the Golden Gate National Recreational Area (GGNRA) to the "Golden Gate National Parks." While this seems innocuous, it is not. The GGNRA was created by Congress in 1972 to: "provide for the maintenance of needed recreational open space necessary for urban environment and planning." For decades, recreation and habitat restoration co-existed without conflicts. In recent years, however, GGNRA staff have instituted policies that have closed large areas of land to recreational uses, in direct opposition to the recreation mandates contained in the legislation that created the GGNRA. If the name change passes, GGNRA staff will claim that, by that action, Congress has authorized the overturning of the enabling legislation and removed the original protections for recreational access. Without these protections, GGNRA staff will be free to severely restrict -- if not outright ban -- access throughout the GGNRA to

ALL recreational users.

The GGNRA controls 61% of the open space in San Francisco, including all of the beaches. The GGNRA is San Francisco's backyard, and provides much needed recreational open space for Bay Area residents. San Francisco is the second densest city in the US, and a tremendous need for recreational open space exists. For decades, the GGNRA has helped provide that. If the name change is passed, however, that access will be lost.

Please oppose the name change for the GGNRA, and remove Section 2 from H.R. 6305.

Sincerely,

Tracy jung; Dog owner, Dog Lover, and VOTER

Correspondence: To Whom It May Concern: I am writing to express concerns about the current version of the GGNRA Draft Dog Management Plan / Environmental Impact Statement. I am a dog owner living in San Francisco. I had never visited the GGNRA before my wife and I got our dog nearly two years ago. Since then, the availability of off-leash areas in the GGNRA has improved our physical health through outdoor exercise, improved our appreciation of the city and the environment, and allowed us access to a rich and welcoming community of fellow dog-owners.

After reading about the proposed plan, I developed many concerns about the way in which the document was written and the information on which its conclusions are based as well as the potential ramifications of its implementation. Specifically, the document's suggestions for alternative locations for off-leash dog-walking suggests the authors did not fully research alternative locations as some suggested locations are currently not designated off-leash areas. Further, the cited scientific research does not consider numerous additional studies that reached dramatically different

conclusions about the impact of off-leash dogs on the environment.

Along those lines, my personal experiences in the GGNRA have revealed dog-owners and dog-walkers to be among the most environmentally conscious people in the city. Virtually all people who use the GGNRA value it very highly and take every measure to protect it and all of its inhabitants. Combined with evidence that off-leash recreation has little to no negative environmental effect, I am forced to conclude that the costs of restricting off-leash recreation far outweigh the benefits.

Finally, and most-concerning, the document is written in such a way that once enacted, further restrictions of public use of the space can be added without public comment based on little or no evidence.

The access to off-leash recreation is of critical importance to my family and me as well as thousands of other dog-owners who live in and around San Francisco. While I recognize that there are areas in which restrictions of these activities make sense, the precedent set by this document is that areas that have been designated for off-leash recreation for decades can suddenly be labeled as restricted with little or no reason or public discourse. Additionally, given the number of dog-owners in the San Francisco area and the demonstrated benefits of off-leash recreation and socialization both to dogs and their owners, the cost of such restrictions to the city and its residents has the potential to be dramatic. Public health and happiness will be severely affected and there is likely to be overcrowding in other areas of the city that will be overwhelmed by the sudden influx of dogs and dog-owners who will continue to seek areas that allow off-leash recreation.

While the protection of our environment is a key concern of mine, the GGNRA Draft Dog Management Plan / Environmental Impact Statement does little to nothing to accomplish protection while simultaneously adding the potential for significant downgrades to public health, civic pride, and public discourse.

Subject: Support for Restricting Off-leash Dog Walking in San Francisco Parks

Dear Mr. Dean,

I whole heartedly agree with restricting off-leash dogs in public parks to designated enclosed dog area.

I like dogs, but my experience has been that owners allow them to encroach into other people's space. When asked to please call or hold your dog, a typical response is "it's okay, he doesn't bite" and then the owner doesn't do it. The problem is that sometimes a dog takes a threatening stance, even if it doesn't go as far as biting. Sometimes the person making the request has fear issues, or has another animal with them that may have kennel cough, or not have all its shots, or even be dog reactive.

Also, I've seen dogs trip runners or even lunge at them. I've seen them sniffing people who are trying to sun bathe or snatching picnic food. I've experienced dog owners playing fetch inconsiderately by throwing the ball too close to me and their dog running across my things.

And nothing pisses me off more than seeing my 75 year old mother frozen in fear and trembling because her phobia is triggered by a dog coming up to her, all the while hearing the owner blithely saying "it's ok, he's friendly." No, it is NOT OK. I want them to hold their damn dogs away from my mother. She has a right to our parks and at her age needs the exercise more than ever.

Thank you for your attention. I appreciate all that you do for our parks.

Sincerely, Elayne Sara McBarnette

Re: Concerns with Allowing Off-Leash Dogs under the Preferred Alternative

Mr. Dean,

As a long-time user of the Golden Gate National Recreation Area and a dog owner, would like to express my strong concerns about the proposal to allow dogs to roam leash- free. The preferred alternative, as written, allows national park land to be used for an intensive recreational use that is

inconsistent with conservation and would result in public safety hazards and limitations on the broad community's enjoyment of the public parks, as well as limiting equal access for disabled communities and communities of color.

Most seriously, the proposal to let dogs go off-leash would have a significant impact on our efforts to preserve wildlife and habitat of the GGNRA. Dogs can cause extreme damage to the volunteer-driven restoration efforts across the parks. In Crissy Field, for instance, the off leash dogs have been a serious obstacle in the restoration efforts and have been detrimental to efforts to protect native species. Studies have shown that some native species, such as the Snowy Plover, refuse to nest in an area where dogs have been for up to 2 weeks following the presence of a dog. Although not always visible, this policy would have significant and irreversible impact on a species in decline.

The National Parks are "Parks for All Forever," and allowing a use that significantly degrades the landscapes, prevents use by a majority of visitors, and causes irreparable harm to the flora and fauna is inconsistent with this vision and should not be allowed.

Off leash dogs at Muir Beach

Sir,

It is a JOY to watch the dogs play at Muir Beach. All sizes, all breeds, free as the wind, they bound with such infectious exuberance. One marvels at their energy and laughs at their antics as they romp. The 'water dogs' splash into the waves. Camaraderie, if the word can be used to canines, is paramount. The beach is too much fun to go off hunting wildlife and except for the water-loving dogs, most do not really want to jump into the unknown, cold depths of the creek or lagoon where the waterfowl ply. Forbidding off-leash dogs on the approaches to the beach, if you like, would seem to take care of any possible canine miscreants on the way to and from the beach. I think the gulls on the beach can take care of themselves.

Why deprive the dogs of a free and wonderful place to romp? Why rob the

owners of the pleasure of watching them and those who are not owners but enjoy the spectacle too? Why, most of all, subordinate the enjoyment of the majority to the peevishness of the dog-disliking minority or the exaggerated zealotry of the protectors of wildlife? Most of us, dog owners or not, appreciate the presence of wildlife and will ensure it remains safe.

So, please, CANCEL your plans to impose a leash law and save places like Muir Beach from the stifling rules of urbanization.

Yours truly,

Sheila M. Davainis

RE: Rodeo Beach & Marin Headlands (dog walking proposals)

Dear Mr. Dean:

I understand about the GGNRA's (Park) concern about public safety, protecting the Park's land, and the need for balance activities of the Park's land and resources. However, as in most public recreational areas, the majority of people are law abiding and conscientious. Although, there are a few people "at times" who do not respect the privileges of public open space land (lack of proper dog control, littering, ect.).

Living in Marin County, I go to Rodeo Beach and run in the Marin Headlands at least once a week with my dogs and have been doing so for the past 20 plus years. Never have I seen a bad, aggressive, or disorderly dog. "If" there is someone with a dog, the dog is playing and having a good time without troubling anyone. Furthermore, every dog owner I've encountered has always been nice, responsible, and cleans-up after their pets. As for Rodeo Beach, off lease dogs are a part of the beach. People know and expect to see a dog running along the shore and frolicking in the surf. Everyone, adults and children, enjoying seeing a happy dog(s) playing at the beach.

Solution: Rodeo Beach & Marin Headlands My suggestion for Rodeo Beach

and the Marin Headlands (it is where I frequent and am most familiar) is to continue to allow dogs to be off lease and under voice control. However, if an owner is not responsible in adhering to the concerns/rules of the Park, then they should be ticketed and fined at a high monetary penalty to serve as a deterrent.

Having your dog off lease at Rodeo Beach (especially when the beach is 95% of the time vacant except for maybe a small handful of people) is a very special place for dogs and their owners. Please don't let the majority of us good citizens suffer and be penalized for the improper actions of a small few.

Thank you for your time.

Best Regards,

Gavin M. Blair

Correspondence: Mr. Frank Dean General Superintendent Golden Gate National Recreation Area Building 201 Fort Mason, San Francisco, CA 94123-0022.

Dear Mr. Dean,

Please allow the dog leash laws and dog-walking laws in the Golden Gate National Recreation Area to remain status quo. "Alternative A: No Action" will be the absolute best outcome for all parties involved.

Dog ownership is proven to help people's mental and emotional states. Almost equally important is the benefit to humans of walking their dogs outside, and allowing those dogs to get real exercise by running around off-leash. It does not provide enough exercise to most dogs to be walked on-leash all the time.

It is of critical importance to the health of our dogs that they be allowed to run off leash for a certain amount of time, every single day. Many San Franciscans, including myself, own condominiums which have no yards and no outside space. During the work day, we hire dog walkers to provide exercise and stimulation to our dogs, who otherwise would be home and confined in small quarters during the day.

Mr. Dean, please allow Fort Funston to remain as it is; open to dog walkers,

dog owners, sky- gliders, horseback riders, etc.

Please allow Crissy Field to remain as it is.

The idea of Muir Beach forbidding dogs to be off-leash entirely would be a tragedy for people who live nearby.

These parks are TREASURES that make living in San Francisco special.

Please do not cause every dog owner to be punished for the actions of the very few.

Please allow dog walkers to continue doing their jobs, walking up to 8 dogs at a time, on leash. The idea of banning commercial dog walking is completely devastating to me. If commercial dog walking is limited and/or banned completely, many of us will have to move out of San Francisco to an outlying area where we would be able to afford houses with fenced-in back yards.

I hope and pray that the proposed GGNRA dog management plan results in everything remaining status quo; "Alternative A: No Action."

Thank you for your consideration. Sincerely,

Laura Bauschard

Correspondence: In weighing the pros and cons of the GGNRA's proposed plan, one has to consider how the presence of dogs is any different than humans. Humans leave trash on the beach, can terrorize or harm wildlife, and can hurt other humans. Many don't, but some do. Similarly, most dogs and dog owners leave nothing but footprints on the beach. Thus, the question should not be "dogs or no dogs" but rather a question of impact.

What the GGNRA is better suited to do is keep the beaches safe by requiring all humans and dog owners to obey the rules. Should there be a violation, then action can be taken against a single individual, instead of changing the beautiful social dynamic of dogs running along the beach.

Please leave the beaches with unrestricted access to dogs and people of all ages, alike. It is one of the main reasons we love living here.

Thanks, Beth

Correspondence: Dog owners responses to this EIS shows why these changes are so needed. They feel they are entitled to land above others. They don't care about other individuals and don't care about the environment. They not only threaten individual but bribe city officials to be on their side and manipulate media for their personal gain. They don't care about being fair but rather only care about themselves and their dogs. This kind of behavior is intolerable. I believe that since the GGNRA is national park land, there should be NO dog off leash areas. Why should bay area national park land be any different than any other part of the country? Every square inch of other bay area land is treated as off leash. It would be nice to have an enforced leash refuge for people who are not comfortable with dogs. This would also maintain the beauty and environment for many generations to come.

If the GGNRA does decide to keep off leash areas, they should be muzzle requirements that are enforced. The maximum fine for breaking leash rules or muzzle rules should be \$1000 (minimum\$200). There should also be a fine for harrassment of people who do not like their off leash dogs in on leash/no dog areas. This maximum fine for breaking leash rules and harassment should be \$5,000 (minimum \$500.) Finally commercial dog walkers should be required to have a permit (\$500/month) to walk dogs in the GGNRA. They should also be required to wear identifying clothes such as a shirt with the dog walking company name or their own name if they are self-employed.

Correspondence: Our National Parks have policies about dogs for a reason. People DO NOT obey the rules that we have about a number of issues: approaching wildlife, feeding wildlife, staying on trails,etc. San Francisco is a city, I believe, that has more dogs than children. The GGNRA is used daily by professional dog walkers, some walking as many as 10 dogs at a time, often more than once a day. It is impossible to believe that these dogs are under voice control by someone other than their owners. The role of the NPS to protect our natural resources, IN THEIR NATURAL STATE, for ALL people to use and enjoy. Having to dodge dog feces left by owners who do NOT use designated areas and who fail to clean up after their pets or be harrassed by multiple dogs

"off leash" should not be an issue for visitors and regular users of the park. There should NOT be ANY "off leash" areas in ANY property under NPS control. GGNRA should not be any different than any other National Park, nor any other urban NPS facilities.

Correspondence: I strongly urge you to keep the existing off leash policy at Fort Funston. This has been a historically important haven for all the dog owners and their companions, and having the space there encourages dog owners not to let their dogs off leash in other areas throughout San Francisco. In addition, owners who use dog walking services would not have a place to go, and those businesses would suffer.

I consider myself a nature lover, and I don't advocate for dogs at the cost of other wildlife, so I do understand that there needs to be a compromise so that we can not lose areas where beautiful birds and ocean animals live. Of course we want that too. I believe that allowing the area at Fort Funston to remain as it has been since 1979 is within that compromise.

Personally I would be in favor of keeping all of Ocean Beach north of Sloat as on leash only (in other words, losing the area north of Stairwell 21), rather than lose Fort Funston.

Thank you for taking the time to read this, and consider my comment as a taxpayer and homeowner from the outer sunset district of San Francisco.

Sincerely, Kiran Malavade

Correspondence: I strongly oppose eliminating offleash access as you have proposed. One condition of your deal with San Francisco was that existing recreational uses be preserved. You tried to throttle San Franciscans ten years ago, and you are trying again now, hoping that people might have forgotten your previous perfidy.

I have written to the SF Supervisors asking them to oppose this land grab of yours as well, and I have urged them to hold public hearings on the topic of reclaiming the land from the GGNRA due to exactly such treachery as this.

Even in a good cause, it is folly to insist on having every last particle of beach cut off from one of the main user groups, and it is disingenuous folly to think that your actions will not have citywide impact.

I will continue to oppose this plan and will continue to encourage my neighbors, my friends, and my elected representatives to oppose your plan.

Correspondence: I will not bore you with an overly verbose letter. I can only specifically speak to the proposed recommendation for Fort Funston, as it is the only area I use frequently.

> I would not consider Fort Funston a multi-purpose area. It is "the dog beach". Yes it is also used by Hang Gliders and occasional toy planes and kites, but it is all about the dogs on the ground. > I walk my dog (well, she runs and plays with other dogs, but I walk) at Fort Funston weekly, sometimes twice a week. I have never seen any dog or person bitten. I have never seen anyone who is noticeably upset by the fact that there are dogs at "the dog beach". > There is *NO* alternative to Fort Funston for a dog to get adequate exercise in or around San Francisco (that I know of). Dogs cannot get adequate exercise when on lease, as they move much faster than humans. > A vast majority of the land >99% managed by GGNRA is already off limits to dogs. Why does it have to be >99.9%? > These areas have been socially designated dog runs for decades, even before the areas came under the management of the GGNRA.

Finally, I find the disconnect between the language of the document and the actual maps to be a bit odd. When I read your proposal descriptions, they sounded reasonable, but the maps shocked me. How can you justify destroying a recreational area that is being so heavily used and bringing so much joy to people and pets? How can this be the preferred option?

In short, at least for Fort Funston, I am heavily in favor of option A, and will do everything I can to pressure the city government of San Francisco to oppose these recommendations. They go way, way too far.

Correspondence: Hi All,

I hope in your consideration of the Dog Management Plan for Ranch Corral de Tierra on the Coast of San Mateo County you will consider Alternative E: "New lands begin as 36 CFR 2.15 (dogs allowed on 6 ft leash) and new lands with existing off leash use before acquisition may also be considered for voice and sight control in the future."

I am a resident of El Granada. I moved to the beautiful San Mateo coast in 1993 from Mountain View, California. One of the reasons I moved here was the outdoor recreation opportunities. Another was that this is one of the few "dog-friendly" areas in the Bay Area. Being able to enjoy hiking and walking with my dogs is a very important part of my life, and allows me some stress relief.

Soon after I moved here, I discovered the trails behind my neighborhood that I could access from Almeria and Coral Reef Avenues in El Granada. I've spent many days every week for the last 18 years hiking these trails. As a woman, I don't think I would hike every day if I couldn't have my dogs with me. They not only provide companionship and a reason to get outside, but they also offer me safety.

In 18 years I have never had a bad experience due to my dogs or other's dogs in the Rancho Corral de Tierra lands. I would say that 19 out of 20 people who I meet on the trails have a dog with them. 9 out of 10 people walk their dogs off leash. As many people are aware, dogs often behave better off leash. They do not feel as protective, and are more friendly toward other dogs and people. I've also seen very little evidence of dogs on the trails - very few piles of "poop", as the people around here are very conscientious about picking up after their dogs. I also do not see damage from dogs or the dog walkers. While I support both mountain biking and horse riding in Rancho Corral de Tierra - as I also am an avid bike rider and horsewoman, the reality is that both horses and bikes do more damage than dogs.

I've been to other areas that allow dogs in parkland, both on and off leash: The East Bay Regional Parks and parks in Carmel Valley. Again, it seems to work very well.

My suggestion would be to allow dogs on all of the Rancho Corral de Tierra trail system. If you do enforce a leash law, I would recommend it only during peak-usage, for example, on weekends from 10 AM to 4 PM in Winter, and 10 AM to 6 PM in Summer. On weekdays, allow off leash dog walking, if dogs are under voice command.

I believe the San Mateo Coast is the best place to live on the planet. It is uncrowded, we have wonderful weather, spectacular scenery, lovely people

and open space. Please allow us to continue to enjoy this with our beloved canine companions!

Lori Rhodes Morris

Correspondence: I have lived in San Francisco for 17 years and for the past 6 years have enjoyed the GGNRA off-leash dog areas with my dog. We go to Fort Funston or Crissy Field at least 2-3 times every week ? these trips are critical for the health and well being of my dog and myself.

I feel that the Preferred Alternative outlined in your proposal is overly restrictive, unbalanced and unfair.

The Preferred Alternative is not balanced. The Preferred Alternative allows dogs to be off-leash on even less land that provided for in the 1979 Pet Policy, including no off-leash anywhere on GGNRA land in San Mateo County. By denying the possibility of off-leash on any new lands that come into the GGNRA in the future, the Preferred Alternative will ensure there is no balance between recreation and protection of natural resources in the future. One-third of San Francisco households have dogs but they can currently exercise and enjoy time with these companions on less than 1% of GGNRA land.

The Preferred Alternative severely restricts recreational access for people with dogs and is a fundamental violation of the reason the GGNRA was created. In the legislation that created it, the reason for the creation of the GGNRA is listed as "the maintenance of needed recreational open space". Off-leash dog walking is among the recreational activities listed as traditionally occurring on the land that was to become the GGNRA. This new proposal is in direct violation of the GGNRA's original purpose.

The Preferred Alternative unfairly mandates that any new land that comes into the GGNRA cannot have dogs either on- or off-leash. This restriction goes against the recreational mandate that was a founding reason for the GGNRA. It is unfair, unneeded, and denies the traditional recreational activity of off-leash dog walking that has existed on many of these lands for decades. If new land is added to the GGNRA in the future, dogs must be allowed access both on and off-leash.

A different and more balance proposal that equally takes into consideration EVERYONE who uses the GGNRA must be created to replace this unfair

proposal.

Correspondence Type: Web Form
Correspondence: I support protection of ecologically sensitive areas through leash laws. South Rodeo and Muir Beaches (and others under review) should not be banned to dogs; leash laws, even if seasonal, are effective and dogs on leash do not impact sensitive areas any more so than humans.

Additional consideration should be made to provide humans and their canines as many appropriate off-leash spaces as possible. Complaints other than environmental matters should be dealt with through other channels; dog guardians should be responsible and held accountable for having their canine companions under voice control, cleaning up after them, and obeying rules and regulations. The many should not be punished for the transgressions a few, rather, the few should be held accountable.

The bay area and its beaches are known for being magical places for humans and their animal companions. Please don't change that. Banning dogs is no way to use taxpayer's funds responsibly, nor to set an example that humans and their animal companions CAN interact with the environment in a sustainable manner. A ban is an over-simplified attempt that fails at creating a sustainable future where humans are cultivated as environmental stewards: we can coexist sustainably WITH our canine companions. Better stewardship, not bans, please.

Correspondence Type: Web Form
Correspondence: I write as a Marin resident and frequent visitor to the GGNRA (generally at least once a week). I found out about the Draft Dog Management Plan (DDMP) from the Marin Humane Society, where my dog Rocky has volunteered as a therapy dog. My wife and I walk Rocky often at Rodeo Beach and the Marin Headlands trails, and we also occasionally visit Stinson Beach (on our way through to Dog Beach), Ocean Beach, and Fort Funston. I strongly oppose the DDMP's recommendations for these areas and request that the 1979 Pet Policy remain in effect.

During my many visits to these sites, I have not observed any of the problems described in the DDMP as having arisen since the 1990s -- no conflicts between visitors and dogs, no need for staff to rescue dogs or

owners, no staff cleaning up dog waste. I'm not saying these things don't happen, but I've never observed them. Before these allegations are used to help formulate a change in policy, we deserve to have some data collected and presented. Is this really a problem? My only interaction with the staff was when a ranger erroneously instructed us to put Rocky on leash while on Rodeo Beach (we complied -- not worth escalating a conflict).

Instead of presenting real data on these problems, the DDMP presents the results of a telephone survey taken primarily of people who do not visit the GGNRA. Should dogs be allowed off leash? That might sound scary in the abstract, even though the happy, prancing dogs at the beach would seem not the slightest bit intimidating in person (in canine?). Many visitors are delighted to pet Rocky and get kisses in return (he understands "go say hi" and is under voice control).

Here in Marin, the GGNRA constitutes a large part of local open space. Off-leash options are limited, much more so than in the neighboring East Bay, for example. So few of the hikes in my Hiking in Marin guidebook allow dogs off leash. How I would love to be able to take Rocky to see more of Point Reyes!

In summary, I request that you reject the DDMP's recommendations for changes to the 1979 Pet Policy, at least as far as it relates to Rodeo Beach and the Marin Headlands trails, Stinson Beach, Ocean Beach, and Fort Funston.

Correspondence: As person who was born and raised in the SF Bay Area and having lived in Fairfax for the last 28 years, I have been frustrated and upset by the ongoing plans to limit dogs and what they can and cannot do in public areas that I love and use and my tax dollars and donations support. I grew up with pets my whole life and dogs were members of my family, as they are of many people. The idea of being outside and active in the fresh air out in nature is a joy to both humans and dogs alike. As a woman, I also have felt safe with my dogs by my side whether I am at a park, open space, walking through my neighborhood or sitting on my couch. This feeling of safety is something most men do not have to consider most of the time. As far as staff and public safety goes, the vast majority of dogs are not dangerous or aggressive. You don't kick all the kids out of school because of a few bullies. And anyone who works out in nature with the park service cannot expect to be working in a controlled, completely safe environment, anyway. It is not possible.

I take my dogs off leash regularly on property off of mine that goes through 4 different "owners/stewards". And in the last couple of years, the Marin Open Space District made leashes required in one area I have had my dogs off leash for almost 3 decades! My dogs are on the trails and fireroads 99% of the time, do not harass wildlife and if they have not been ready to eliminate in my backyard before leaving on a hike, I bury any dog waste (rather than pollute with plastic bags, stopping the waste from naturally breaking down and adding to the landfills). Only people that live in the neighborhood use the area and there are not that many dogs at all but someone "on high" decided it was time to suddenly change the law. Do most people follow it? No, because it is ridiculous. I see more raccoon scats from the night before and people's used tissues/toilet paper littered around than dog waste. And these enforcement officers lie in wait and get a charge out of giving someone a completely overpriced ticket. I have been spared so far but have heard stories from others on the trails and now hike with a bit of nervousness in the background of what should be an enjoyable experience.

Bottom line is that I cannot hike or walk or run as fast as my dogs. They need to fully stretch their legs and let it all out. Nor do I feel the need like they do to stop and smell something or explore a spot for a while or play chase with each other or enjoy greeting and playing with other dogs they meet. I cannot move that fast or that way nor is my brain hardwired to operate in a way that makes certain things fun and interesting in the way it is for dogs. The joy they have in running and playing full out is something they never get to experience in their bodies or spirits when they are on a leash. Having a dog on a leash out in nature is like taking a kid to a park and putting him or her on a leash and restricting their movements and play. It is not natural for them or for dogs. I feel sorry for the dogs that live in apartments in the city and are walked on a leash 2x a day to relieve themselves...some life.

I am a huge supporter of environmental and animal rights. I do support seasonal protection in areas of nesting, for example, by limiting availability to dogs and humans. Most of the wildlife that a dog might chase or bother are creatures (prey) that have a history of that being done to them by mountain lions, bears, hawks, coyotes, wolves, bobcats, etc. that are no longer here or are few in number (thanks to us humans). It is the dog owners responsibility to stop any harassing behavior right away, of course, but it is not out of the range of many species to be harassed by some other (or several) creatures (because they are a prey species), and many are harassed less overall because their natural predators are few or gone. The bigger problem is loss of habitat by human encroachment rather than off leash dogs.

As far as people fearing dogs, that is their problem to make a choice to work

on and get over or not. But don't limit what my dogs do because someone has an issue they are not willing to address. That is like saying let's level out the hills or move the trails far from the cliff edges because a park visitor is afraid of heights. There are plenty of places to go where dogs are not allowed at all or only on leash and those places keep on being added to so if they refuse to work on their fears, go to those places. There are lots of them. As a dog owner, I know, believe me. I wish I could take my dogs (even on leash) on the Bear Valley Trail to Arch Rock in Point Reyes. I just hiked that 2 weeks ago. Everything cannot be made to appease the few on either side or either end of the spectrum. For those who have dogs, however, we are the ones that continue to have to be the ones that compromise and the areas we can have our dogs continue to dwindle. Some people do not like children running, screaming, crying, disturbing wildlife, throwing things, littering, hitting trees with sticks, trampling or picking wildflowers, etc. They spoil some people's experience of nature but do those people expect to outlaw children so their experience is more to their liking? No, they have to learn to deal with it and let it go. And what about horses? They do more damage to trails with their hooves and pollute with their waste but I don't expect them to be outlawed, either. We need to be more accommodating, tolerant and accepting of each other.

The one beach I do take my dogs is Stinson Beach. If you want to see humans and dogs off leash having the time of their lives and coexisting really well, go to the north end on the private property section of the beach and see it in action. There are people of all ages playing volleyball, jogging, napping, sunning, eating, playing in the water, looking for shells, surfing, making sand castles, etc. while dogs (and on a sunny day lots of them) run, wrestle, fetch, chase, play, dig, swim, etc. AND IT ALL WORKS!!!! Little toddlers to older folks do just fine and the dogs just love totally being free and themselves. It is a joy for me and my dogs every time I go and I just love seeing humans and dogs loving being at the beach. It can and does work. There are not user conflicts, problems with the natural processes or issues with visitor safety and it will be there for future generations. If you outlaw dogs from the Stinson Beach parking lots, picnic areas and beach area you control, you will create more problems for the private land owners and neighborhoods because it will force visitors to put more pressure on them to be able to enjoy the beach. Many more will lose than win.

Again, in the park I see more damage, disrespect to nature, the environment and wildlife, litter, unacceptable behavior, and problems for park staff due to HUMANS, not dogs. More human pressure and presence in the park with less resources to deal with the pressure causes park degradation. Focus more on these issues and stop making dogs the scapegoat. Please be reasonable and tolerant and do not take away the off leash areas or stop dogs from coming at all. Protect the sensitive species and areas from dogs AND humans as needed and the parks will do just fine. Thank you for your

balanced and fair consideration.

Correspondence: Mr. Frank Dean, General Superintendent, GGNRA Building 201, Fort Mason San Francisco, CA 94123-0022

Dear Mr. Dean:

Thank you for the opportunity to comment on the GGNRA Dog Management Plan and Draft EIS. I am writing to request that the plan be revised to include more areas that allow off-leash dog-walking.

I have walked my two dogs at Crissy Field beaches from the east parking lot to the snowy plover fence around sunrise each morning (average 5 days/week) for over six years. At that time of day, there are very few people on the beach not walking dogs; most people without dogs at that time are running, walking, or cycling on the path. The dogs I encounter are often off-leash, well-behaved, and with responsible owners who pick up their dogs' feces. I feel strongly that continuing to allow off-leash dog walking in the areas currently permitted, and on-leash walking (except for snowy plover and other sensitive habitat) is the most reasonable, balanced approach for management.

I understand that more people without dogs use Crissy Field and the beach, especially on warm, sunny days and weekends, and that there are some dog owners who are not as responsible in controlling their dogs as the vast majority I have experienced there. However, restricting dog activity at Crissy Field and throughout the GGNRA as severely as currently proposed is, in my opinion, not a balanced or reasonable management plan. I have not observed nor heard about a level of compromised safety or degradation of either the environment or visitor experience. In fact, the people walking their dogs in the mornings are extremely appreciative of the environment and care for it very well. As I walk my dogs, I pick up beach trash every day, as do several others, especially in winter, when an appalling amount of plastic, Styrofoam, and other trash washes up on the beach daily.

If further control of dog activity in the GGNRA is warranted related to visitor experience, I would suggest that off-leash dog walking could be limited during certain peak-human use times, for example, between 10:00 am and 4:00 pm on weekends. However, the severe restrictions currently proposed in the "Preferred Alternative" plan, again, do not seem warranted.

Thank you for your consideration.

Sincerely,

Judith Schultz

Correspondence: The Superintendent, GGNRA Building 201, Fort Mason San Francisco, CA 94123

Dear Sir/Madam:

When writing my Christmas letter this year I had to search very hard for something uplifting to say in these dark times. Attached is a major paragraph of what I came up with in that letter ' something that always lifted my spirits that I wanted to pass on:

"There is a vast list of wonders in this city, but my most favorite place is the trail along the coast of SF Bay at Crissey Field (formally part of the US Army Presidio). You can just sit on a bench and watch a promenade of all sorts of people walking along this beautiful trail (that follows the Bay past the Golden Gate Bridge and winding out to the Pacific Ocean for about 8 miles). You'll see lot's of people Wind Surfing and Para Sailing out in the Bay out past Alcatraz and the Golden Gate Bridge. I've always loved Seagulls, but the pre-historic looking flocks of Pelicans that fly by are a sight to behold.

Many small children enthralled by the beach. Lot's of dog's who have been cooped up in small apartments are running with great joy along the beach, meeting up with other dogs and then dashing into the water to catch a ball. Total Happiness! While all of this is going on you'll see huge ships - sometimes a Cruise ship - coming into or leaving San Francisco Bay. When the weather is really magical - and it often is - you'll take in all of these sights as the fog rolls in like cotton candy over the Golden Gate Bridge and snakes along the bay and over Alcatraz. Truly spectacular!

I don't own a dog, but I so much enjoy watching them enjoy their nature freely and joyfully in this beautiful space. Please don't take that away from them or me.

Sincerely,

John T. Reed

Correspondence: Frank Dean,

I am writing this letter on behalf of myself and all the other dog and animal lovers in California. My name is Barbara. I am 63 years young, middle class, and have a passion for animals + the environment.

Ft. Funston has been one of my favorite places to visit, for over 30 years. I have fond memories of all the dogs I've taken there. It distresses me to think that more of it will be closed off to people with dogs. Many of my spaces have been closed because of housing or in the case of Sharp Park pond the endangered frog. My dogs swam in that pond many times over 30 years and I'm sure the frog was there then too. Now they don't have anywhere to swim because the ocean has a riptide.

Animals are my passion, not just dogs. THE new is always filled with 2,000 shore birds killed from Costco Busan oil spill, Sea lion blinded, wolves killed from helicopters, mustangs slaughtered after BLM sells them at auction, mountain lion killed because it was near a school and animals killed by cars. The list goes on and on. Pets and wild animals have no voice. We must speak for them.

Please keep more space open for people with dogs. Tourists can go anywhere and have a good time, but pet owners (taxpayers) will get tickets if not following the law. Our areas are getting smaller and smaller. Habitat is being sold for housing and there are alot of animal protection agencies (fish + game, environmental defense fund etc.) to speak for the wild animals, but not many for pet owners. Dogs need to run not walk. They have the DNA of wolves.

The caveman domesticated the wolf because it could help him find food and for protection. We use dogs in the same way, police, service avalanche, etc. They are man's best friend and deserve a place to play.

We are all on the planet together and we need to work together for the benefit of every living thing!

Sincerely,

Barbara Asaro

P.S. Think of the world we would have if everyone had the personality of a dog___ loving, forgiving, happy and always happy to see you.

Correspondence: To the G.G.N.R.A.,

To whom it may concern,

Please don't restrict the places our dogs can roam free. They just love to be with the other dogs, it makes them so happy, and I feel that when the dogs can be off leash, (at least for a while) they can learn how to be not so territorial or aggressive in some cases.

Most dogs only get "so much" fun in there lives. They are dependent on us for everything, when and where the eat, sleep, play etc. When they can be off leash for awhile, they are free! and happy. And I can say that most of the people who bring there dogs to these open areas are very, very responsible pet owners or walkers. There are very few confrontations, and everybody there is very greatful to be there.

My husband and I recently took our dog to a confined "dog park" and we found that there was so much more aggression between the dogs. May be it's because they and too confined, and feel that they area belongs to them, like doggie domain.

Thank you for reading my letter, please consider all that is at steak.

Yours truly,

Catherine Ginter, Pacifica resident

P.S. We live in Pacifica (and you know what that means) Quite frequently "after" our walk-run in "Fort Funston" (thats where we like to go) we go to San Francisco for lunch or shopping (with our dog) and that helps the city of S.F. too.

Type:

Correspondence: Superintendent Dean Golden Gate National Recreation Area Attn: ANPR,
Bldg. 201 San Francisco, CA, 94123

Dear Superintendent Dean:

I am writing to publically comment on the proposed rule for PET MANAGEMENT IN GOLDEN GATE NATIONAL RECREATION AREA. I have lived in Mill Valley, CA with my wife and two children for 19 years. When we moved to the San Francisco Bay Area in 1992, we chose Mill Valley as the place to live and raise our family specifically because of its close proximity to GGNRA, Mt. Tamalpais and Stinson Beach. During that time we have had three dogs, consecutively. As one died of natural causes, we would eventually get another; in part because dogs add a pleasant element to a family, in part because Marin County is so dog-friendly, and in large part because of easy access to GGNRC and the ability to exercise with our dogs.

For 19 years we have explored the various paths up and down Mt. Tamalpais and the surrounding area with our dogs. On some paths we have used a leash and on others, where permitted, we have not. Over time, the leash rule has encouraged us to use only paths that allow dogs off-leash. There are two distinct advantages of such a leash rule: (a) you can exercise with your dog without the owner and dog being restricted by a leash; (b) such paths generally are chosen by other pet owners who are familiar with and tolerant of dogs which minimizes unnecessary conflicts.

Similarly, when we first arrived, we visited all the local beaches (i.e., Muir, Rodeo, Ft. Baker, Stinson, etc.). However, over time we selectively chose the section of Stinson Beach where dogs were allowed off leash (i.e., the northern end). We chose this because we could relax and enjoy walks along the beach among other families who also had dogs and children, and, as such, were familiar with and tolerant of families with pets.

I believe that you need to understand and seriously consider the context in which you are proposing your new plan to severely restrict pet access to GGNRA. As I mentioned above, Marin County is very dog tolerant. I have lived in five other states, including Washington, DC and Northern Virginia, and I can say from considerable experience that there are more dogs per capita in this relatively small county than anywhere else I have lived. As a testament to this fact most retail stores, including higher end department stores, such as Nordstrom's, allow dogs in their business locations.

As a former federal official, I understand your need to balance the concerns of all citizens. I was a GS-13 in the Carter Administration and worked as an SES-I in the first Bush Administration. However, the restrictiveness of your

ANPR for PET MANAGEMENT IN GOLDEN GATE NATIONAL RECREATION AREA is not balanced and does not reflect the values of the community in which GGNRA is located. In my considered judgment, the current rules which allow dog and non-dog areas, leash and non-leash areas, are much more balanced and more closely reflect the values of the community in which GGNRA is located. I urge you to eliminate or amend your proposed rules.

Sincerely,

Nicholas J. Certo

Correspondence: Frank Dean, Superintendent GGNRA Building 201 Fort Mason, San Francisco, CA 94123

Dear Mr. Dean,

I oppose the proposed dog restrictions in Marin County. The Audubon Society does not represent the interests of most resident taxpayers and it certainly doesn't represent our country's pet owners. The GGNRA should respect taxpayers' interests before the objections of a bird group that would likely exclude people from the parks if they could.

Our society faces a never-ending onslaught of new restrictions that decrease - not increase - our quality of life. Progress isn't measured by the thickness of the rule book.

Before I moved to California 27 years ago, I saw this process occur in New Jersey. First, they outlawed dogs on the beach and then they imposed beach tag fees for visitors. My dog died, but I moved to California to get away from a seashore ruined by over-regulation.

Recreation areas belong to tax paying citizens. Let them enjoy it without further restrictions.

Dear Sir,

The proposed Dog Management Draft Plan has caused a great degree of consternation among all the many people that we have spoken to who use Crissy Field as a recreation area, whether for walking dogs or just enjoying a stroll along the beach. For all of us living in an urban environment the privilege of having an escape like Crissy Field is something to be treasured.

It seems to me that the time, money and effort that has gone into this 2,400 page report could have been spent on many more worthwhile issues. By all means, environmentally sensitive areas and endangered wildlife should be protected, but in the case of Crissy Field this has already been taken care of, and the new regulations are clearly over zealous. Limiting off leash dog walking to the small central beach area will not only be completely unsatisfactory to dog owners, but will certainly cause more environmental damage in that restricted area.

The issue is one of responsible dog management and well behaved dogs, under voice control, off leash are no more of a nuisance than 10 dogs on leash with a dog walker or for that matter a dozen or so visitors in a group cycling down the path.

The Crissy Field area was specifically designed to allow people with or without dogs to roam freely on all the non sensitive unfenced areas. I have no idea how you plan to enforce your new regulations, but common sense would dictate that only irresponsible dog behavior or any other disturbance of park visitors enjoyment should be punished.

Sincerely

Peter Blumberg

Re. Banning Dogs from Muir Beach

Dear Mr. Dean,

Banning dogs at Muir Beach is a bad idea. (Federal plans would ban dogs, SF Chronicle, Jan 13, 2011) Who really comes up with these ill conceived and costly plans? It surely isn't someone who lives in Muir Beach. It's likely some bureaucrat sitting in an office in Washington that doesn't even know where Muir Beach is. When was the last time you visited Muir Beach? If you lived here, wouldn't you like to walk your dog on the beach?

I'm a 25 year resident of Muir Beach, a member of the Muir Beach Volunteer Fire Dept. for 22 years, and EMT. I have never responded to Muir Beach for an emergency caused by a dog. Dogs may poop, but they don't drink alcohol, break bottles, litter, carry weapons, start fires, drown or fall off cliffs. If you, as the park superintendent, really want to make Muir Beach a better place, you should ban people. Let the dogs have the beach. The people can sit in their cars and litter the parking lot.

I think that the excuse that some how dogs effect the environment or chase or scare birds is a smokescreen. In 25 years I've never seen a dog catch a bird. At most they chase away the seagulls and crows that are scavenging the trash and vomit left by humans. Is the park service going to ban horses? Equestrians never clean up after their animals. Are you planning to ban fires? Ban alcohol? Are you planning to enforce littering laws? Are you

planning to clean the disgusting port-potties once in awhile? In other words, is the park service planning to do something that really matters, or just this petty bureaucratic crap that disrupts our lives?

In addition, I have always felt much better, when my wife and children are out enjoying the beach and trails, that they have our dog with them for safety. Our dog would only lick the would-be bad guy to death, but he wouldn't know that in advance. Women and children should be allowed to have this benign level of protection and companionship wherever they go in our parks. If you have a wife or child I believe you would agree. The bad guys carry weapons, but at least we have man's best friend at our side.

Thank you for your time and consideration in regards to this upcoming decision.

Best Regards,

Robert Allen, MBVFD, Muir Beach,

Correspondence: RE: GGNRA Draft Dog Management Plan

Frank Dean, General Superintendent Golden Gate National Recreation Area, Building 201, Fort Mason, San Francisco, CA 94123-0022

Dear Superintendent Frank Dean,

I live on the Great Highway between Kirkham and Lawton. I walk on the beach frequently. The entrances to the beach near my house are all clearly marked as Snowy Plover protection areas. The signs clearly state that dogs must be on leashes. Nevertheless, of the many, many dogs that I see on the beach, almost none are on leashes. I see them frequently chasing the birds, including the Snowy Plover. I sometimes ask owners whose dogs I see chasing the Plover if they are aware of the restriction and they always answer "yes". These owners knowingly disregard this restriction. I believe this occurs so frequently because this law is not adequately enforced.

I feel that protecting the Snowy Plover is more important than allowing dog owners to run their dogs unleashed. I hope that the GGNRA will give dog owners notice that if they continue to disregard the law, dogs will be entirely prohibited on Ocean Beach.

I also feel that fines should be increased to pay for better enforcement.

Sincerely,

Gene Thompson

Correspondence ID: 651 **Project:** 11759 **Document:** 38106

Received: Feb,16,2011 08:20:38

Correspondence Type: Web Form

Correspondence: I frequently walk and birdwatch in many parks, National, State, Regional, and

City. I have some mobility issues, but mostly fear being knocked over by large,

off-leash dogs. I usually walk with a stick for balance.

Although I understand the companionship dogs offer, I do not feel that dogs and

wildlife belong together. Besides chasing the wildlife, these domesticated wolves

must, by their scent alone, be stressful on wildlife.

Many parks require "Voice Control". This is a widely used rule, but it is unenforcable. 1) At a minimum, it should cause the dog to stop instantly any

current behavior, and if so directed (i.e. "COME"), should cause the dog to

return to its owner/handler. 2) It should control the dog's behavior, not allowing

the dog to chase wildlife, dig, or approach other visitors who do not desire such

attention.

Personally, I often ask a handler to "Please call your dog". After calling to the

animal with no effect, the response is "He/she won't bother you!" This

really is

confrontational. If I say it is bothering me, I am a Grinch, a dog-hater, somewhat

less than human. I usually repeat "Call your dog", but it doesn't get results.

Either the handler refuses, or cannot get the dog to respond.

Voice control, if enacted, will need a very clear definition, and enforcement will

be extremely difficult. Personally, I consider off-leash with voice control to be

the same as dogs running wild.

Any variation from National Park rules, i.e.

"<http://www.nps.gov/yose/planyourvisit/pets.htm>" will undermine those rules.

What is permitted in GGNRA should be permitted in all National Parks, and so

more dogs will be off-leash in Yosemite and other parks and monuments.

Service Dogs - In the last few years, mostly in Marin County, this has become a

standard response. "It is a Service Dog". I fully understand and appreciate

"Seeing Eye" dogs, any I suppose Hearing Dogs, and dogs attending a person in

a wheel-chair. But when the handler is on the phone, the dog is running free,

what is the service? I've asked, and always get the same response "I'm

uncomfortable discussing that with strangers". Who came up with that line and

distributed it to every dog owner in Marin County?

Signage - Signs stating the dog rules must be prominently displayed, and be

unambiguous. For example, in Jack London State Park (CA), the sign at the

trailhead reads "No Dogs Allowed on Trails". We saw dogs, but they were

running through the woods, not on the trails. Cezar Chavez Park (City of

Berkeley, CA) the signs say "Dogs must be on-leash in vicinity of this sign" So

how far away from sign is out of vicinity. Dimond Park (City of Oakland, CA)

has a sign "No Dogs Allowed" next to a sign "Owners must pick up after their

dogs". Which sign is correct? Do professional dog-walkers have to pick up the

dog litter?

Enforcement - Most dog owners know that even if caught violating the rules, they

will only get a verbal warning. In most parks, gardeners, maintenance workers,

naturalists, etc. will not speak to dog owners violating the park rules. These

employees often like dogs, and approach the dogs to pet them. This gives tacit

approval to the violations. I understand the reasoning behind not having these

people enforcing the rules, but to not speak to the owners does give approval.

Whatever rules you choose, the ability to enforce them must be

considered.

Therefore, these rules must be clear and concise. If you are going to allow

"Voice Control", then a handler must demonstrate, if called to do so, that his/her

pet will respond correctly even when distractions occur. A dog off-leash has to

return to its owner regardless of distractions. Instantly, not after it has greeted

me.

Correspondence Type: Letter
Correspondence: Frank Dean, General Superintendent Golden Gate National Recreation Area, Building 201 Fort Mason, San Francisco, CA 94123-0022

Dear Mr. Dean,

I'm writing in strong support of the Golden Gate National Recreational Area's need to curtail the impact of dogs on our valuable shared recreational resources (Alternative D).

It's true that dog owners are a very vocal, very organized group, unlike most pedestrians, families, and other users of parklands. I believe that is part of the problem.

Once an area becomes conventionally used as an off-leash dog area, people with children, people with physical frailties, and people who wish quieter, more contemplative settings avoid the area entirely. This certainly reduces the conflict between different kinds of users, but only because people with vulnerable children or who are vulnerable themselves to getting knocked over by racing, fighting dogs no longer have access to the park in question. There can appear to be fewer conflicts because vulnerable people have to quit coming.

I worked for years as a senior advocate, and watched as beach after beach, park after park became unusable to seniors because of the sheer volume of unleashed dogs. One of my clients suffered a hip fracture when tripped by a

dog running by with an attached leash, and spent her next six months in painful rehabilitation therapy. Her inability to move and live independently was costly physically, financially, and emotionally. She died within a year and a half of the accident.

In addition, the Bay Area is lucky to have an exceptional minority of people who deeply appreciate migratory birdlife and rare plant species, and I count myself among that group. Affected wildlife can't participate in fora or write letters, but need space to rest and thrive as certainly as the rest of us.

Our beaches and parklands are greatly diminished as wildlife is forced to retreat further from natural areas. Our lives are diminished by our inability to see the full measure of our natural world.

Please adopt the most protective option for our vulnerable parks, people, and wildlife. Responsible dog owners will celebrate this effort along with the rest of us.

Thank you,

Carol Denney (volunteer with the state and national parks)

Hello, I am in favor of the preferred alternative in the proposed dog management plan especially were it prohibits dogs on or off-leash at East Beach at Crissy Field.

The problem is out of control with Dogs chasing wildlife, poop everywhere, digging wholes, peeing on personal property, biting and knocking people over.

Also I am disappointed with that lack of enforcement of the current rules; specifically keeping Dogs out of the out door shower and bathroom at Crissy field.

Sincerely

Jeffrey Finn

I support the management plan for canines on Golden Gate National Recreation Area land - a proposal that would require dogs to be leashed in many areas where they once ran free and would ban them entirely from other areas.

As a 35 year San Francisco resident I've seen our city overrun by the canine obsession. Back before the Bush Administration destroyed our economy through wars of adventure, folks use to think about buying homes and settling down or spending their capital on glorious vacations. Now that no one has any disposable income, everyone's getting a dog to placate their loss of the American Dream. I see dogs off leash in commercial corridors, on MUNI, in coffee bars, in restaurants, etc. I see dog feces on every block of our city. I'm a taxpayer, property owner, registered voter, and I'm fighting back. These animals must be reigned in!

Correspondence: Mr. Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean:

I wholeheartily approve of the Plan proposed by the National Park Service on the Management of Dogs on Federal lands in San Francisco and the Bay Area.

A few years ago I was bitten by an off-leash dog in an unprovoked attack on Ocean Beach in San Francisco. I have given up walking on Ocean Beach, Funston Park and Crissy Field because of the danger of free running off-leash dogs.

There is no city in Europe which allows off-leash dogs. Cities also require

clean up by owners of dog feces in streets and parks.

Walkers are not organized like dog owners but we are a significant user of streets and parks. Stick by the rules and regulations of the National Park Service which are there for good reason.

Sincerely,

Nancy Elsner

Correspondence: Frank Dean General Superintendent of the Golden. Gate National Recreation. Area Building 201 Fort Mason, San Francisco CA 94123-002

Dear Superintendent Dean,

I would like to take this opportunity to completely support limiting off-leash dogs within the GGNRA. In fact if it were up to me there would be no dogs allowed inside the GGNRA even on a leash.

Due to years of organized groups of dog owners who have politically bullied the public and political leaders alike into believing that off-leash dog use is a legitimate form of recreation there is no where to go for a peaceful walk in any park. They have silenced anyone who dares object by using intimidating tactics. Anyone who complained that our rights to a respite from the daily living of an urban setting was conflicting with their desires to use every square inch of any place they want as dog toilets and exercise areas as their god given right is labeled a "dog hater".

You do not have to be a "dog hater" to realize that not everywhere is appropriate for off- leash dogs. Dogs often cause erosion, and upset the balance of nature and conflict with how others which to use a common space. It is often not compatible to have dogs running loose when it bothers others who want to use the same area.

Dog owners are the first to complain if bicycle riders or horseback riders want to use the trails.

Those of us who wish to use the GGNRA without having to put up with the conflicting use of limited space, unsafe running by their dogs, noisy barking and lack of respect by dog owners for the natural environment we want our

rights upheld to enjoy the GGNRA.

Use of this property should not be dominated by off-leash dogs, and their needs, as is currently the case. This public space belongs to all of us and it is about time that the rest of us got to use what our taxes have paid for without being made uncomfortable or kept out entirely by a single user group.

Sincerely, Miriam Moss

Type:

Correspondence: I, and everyone I know, loudly and enthusiastically applaud any decision to better regulate dogs and dog owners in these areas. But Baker Beach should ALSO be included in this regulation. Dogs there are out of control.

Dogs are out of control in the parks. Throw down a blanket or a towel and within minutes an unleashed dog is running over it and trying to eat your food. I was at Baker Beach last weekend (down the street from my house) and I literally stepped on dog poo TWICE! This is unacceptable. Dogs should be on leashes. Do let them roam free causes waste and poses a potential danger to others.

Dog advocates have historically contended that dog owners are "responsible and pick up after their dogs and keep their dogs in check from annoying others". This is patently not true. Any reasonable person who sits for even a short amount of time at Crissy Field, Baker Beach, Ocean Beach, et al will quickly see that some dog owners do not pick up after their dogs at all or keep them off of other park visitors. The reality is that even a small percentage of owners who exhibit this behavior ruins it for everyone.

Dog owners are organized, but their loud opposition to this does not mean that they are in the majority. Most City residents favor more regulation and better enforcement for dog owners.

RE: Dog Management Plan/DEIS

Dear Mr. Dean,

We appreciate being given the opportunity to comment on the GGNRA Dog Management Plan and DEIS.

We have long believed that unconstrained dog access to the GGNRA is inappropriate for the mission of protecting and encouraging native flora and fauna, and often very unpleasant for other recreational users of the GGNRA. Many dog owners suffer from the delusion that their pets, regardless of their behavior, are always lovable and that their attentions are welcome. Wrong. Most owners further believe that anyone trying to fend off their pets will be placated if assured that "he won't bite" or "she's just friendly." Though being marked with muddy paw prints from a non-biting dog is better than being muddied and bitten, it is still not an experience one goes to the GGNRA to enjoy.

Your January 2011 Newsletter makes reference to "on-leash and/or voice-control," perpetuating one of the most cherished illusions of many dog owners. That is the belief that voice-control actually works. There are some rare, highly trained dogs (guide dogs for the blind, K-9 Corps animals, possibly bomb sniffers) that do respond consistently to voice commands. However, the lovable family pet tearing around the GGNRA is virtually always utterly oblivious to voice commands, most of all when having fun jumping on unenthusiastic strangers or chasing wildlife. We urge that you require all dogs in areas where they are not explicitly allowed to be off-leash, to be always on-leash. If some dog owners are insistent that their animals can be fully controlled by voice commands, they should be required to demonstrate this by testing, under realistic conditions. (The owners of dogs should bear the full cost of the tests, and dogs that pass should be required to carry some form of identification, renewable annually for a fee.) The going-in assumption should be that voice-control does not work unless contrary proof is provided.

We could find no mention of requiring dog owners to pick up their pets' feces. Dog owners may enjoy the squish of dog droppings underfoot, and its rich aroma, but most other people don't. Why should anyone be forced to put up with dogs fouling the GGNRA?

Finally, we would like to say how much we welcome your statements to the effect that dog policies shall be enforced. That will involve both effort and expense, but without consistent, active enforcement, no dog policies are worth discussing. The Marin Municipal Water District (MMWD) has fairly strict dog restraint policies (to protect public health and water quality, non-

controversial goals) but they are weakly enforced. As a result, most dog owners appear to consider these policies to be optional, not mandatory, and elect not to follow them. When MMWD rangers do catch off-leash dogs, they nearly always offer earnest, sensible advice to the offending owner. This amounts to voice-control for owners, and is, predictably, ineffective. If GGNRA is going to have dog policies, they must be enforced, which will require adequate staff and a willingness to levy fines, high enough to get the owners' attention. This will certainly create an uproar. Are you ready to face that?

Controlling dogs ranks only second to controlling firearms in the outrage it provokes. We are very lucky that the Founding Fathers did not mention dogs in the Constitution.) Just raising the highly appropriate and timely issues you are addressing is courageous. We admire you and hope that your efforts will be successful.

Sincerely,

Sandra Guldman, Thomas Guldman

Correspondence: General Superintendent Frank Dean Golden Gate National Recreation Area Building 201 Fort Mason San Francisco CA 94123-0022

Dear Superintendent Dean:

I am writing regarding my concern about dogs in our national park.

I am a Golden Gate National Park supporter, user and lover. I swim at Aquatic Park in San Francisco? I walk, run and bird at Crissy Field several times per week, and I volunteer at Ocean beach once a month. During daylight savings time I like to head over to the Marin Headlands after work.

I am a charter Golden Gate Keeper, my donation is small, but it is monthly and will keep coming as long as I am living.

I like dogs, but feel that dogs should not have free run of our park.

Recently an unleashed hunting type dog named Dexter was in the lagoon at Crissy harassing birds. The owner was trying unsuccessfully to call the dog out, but the dog had a target and was going for it. Most dog owners are

responsible, but there are just too many dogs at Crissy Field.

I have had this experience at Aquatic Park, which is signed "No Pets on Beach". I witnessed a dog killing a western gull last summer. The dog's owner was upset about this, but there was just nothing that he could do to stop the dog.

Dogs run out of control at Ocean Beach and Rodeo Beach, and are often in the lagoon at Rodeo, which is signed "no dogs". Dogs are unleashed and not under voice control on the Miwok/Bobcat trail in the Marin Headlands. I recently, for the first time, saw a dog on Tennessee Valley Trail.

Our parks are not for dog recreation. We should all respect the beautiful place we have.

Dogs need to run, but it should not be in our national park. They need designated dog parks, away from wildlife and from humans that do not want to interact with dogs at play.

Please keep our park for the native plants and animals. I am worried that dog owners have already taken so much with their disregard of signed areas, and that if given more, there will be no place that is dog free.

Thank you.

Sincerely,

Mary Cantini

Correspondence: Dear Mr. Dean:

Greetings.

Thank you for the opportunity to express my comments on the proposed dogplan.

I live half a dozen blocks from Ocean Beach in San Francisco, near Rivera Street. enjoy going to the beach for leisure and recreation.

Generally speaking, some dogowners are very considerate of others. However, many allow their animals to run rampant, both on the beach and

on the sidewalks, ignoring posted signage, and frightening children, birds, and some adults. Many of the dogowners are scofflaws, just like many bicyclists ignore traffic laws in the city.

The careless owners also ignore the requirements to pick up excrement from their pets. These animals are hazardous to humans and deleterious to the environment, which is very fragile at best. Consider, for example, the recent erosion of Ocean Beach over the past few years, destroying portions of The Great Highway. Also, there are rare species of birds in the area, like the snowy plover and others.

I support a ban on dogwalking, off-leash, on fragile portions of the beaches in San Francisco, particularly Ocean Beach, plus Crissy Field, Fort Funston, and other locations, and an outright ban of dogs on the particularly vulnerable areas. The owners often complain their animals need to get exercise off leash. I say let them do so in their private yards, not in public space. Also, there are portions of Golden Gate Park where the dogs can be walked.

Sincerely,

Russell K. Carpenter, Ed.D.

Dear Sir:

I live in Pacifica and am sick and tired of dogs having more "rights" than people.

There need to be more places where dogs are not allowed off leash in Pacifica!! This idea of making hiking trails dog friendly is not a good idea!

I have been out walking in Pacifica, in various places and have had strangers' dogs come up and sniff me -- even when I've sat on the benches on the cliffs (by Nick's) that overlook the ocean trying to get in a peaceful mood only to find these annoying offleash strangers' dogs pestering me! Keep the dogs and dog parks away from where people walk. And insist that all dogs everywhere be on leash!

Save money. Avoid lawsuits. Keep dogs on leash! Keep dogs off Mori Point

and other pretty hiking areas (unless on leash).

Sincerely

Re: not enforcemnt of present leash law at Sutro Park Proposed new law for Sutro Park

Dear Park Planning/dog planning,

I live across the street from Sutro Park at the above addresss and have watched the dog owners overrun + ruin the foliage and ability of older people/children/adults to enjoy the park. I have called numerous times to ask the law be enforced to keep the dogs on a lease with minimal help. The signs are deformed or broken and the dog owners feel it is their park. My elderly mother was afraid to walk in the park as are many other older people for fear of the dogs that are running wild. I have seen the dogs run in front of children and bike riders with resultant injury.

The park is for all to enjoy not just the dog owners. I also see dog walkers coming and emptying out their vans with many dogs and letting them run wild. The park is small and beautiful and should not be a dog park because much of it already has turned into shit due to the dogs, constant clawing, defecating/urinating and digging. There shouldn't be explicit dog parks for this.

Thank you, Elaine Gedt MD

Correspondence: I am dog owner living along the Great Hwy.

1. I would like the Great Hwy dunes area open for off leash walking. The May-July off leash allowance seems unnecessary (what are the statistics of the snowy plover recovery??- I have never seen one) . What I do wonder is why the Ocean Beach area by the Cliff House is an off leash area. That is the area where people park and enjoy the beach. The area between Lincoln

& Sloat is not as populated with people w/o dogs. Why not make that area off leash? That way the open beach can be used by folks w/o dogs.

2. I would like Fort Funston to remain open to off leash dog walking. I go there 1-3 times a month and have never seen an incident where the dogs/people did not get along.

3. If you don't provide areas for dogs and their owners to enjoy - I believe you will have more complaints from citizens who will be walking their dogs on the streets. If you know dogs - they are much more friendly off leash when they approach other dogs.

4. I believe responsible dog owners are aware if their dogs are voice controlled - they leash them when necessary. If you allow voice control along the Great Hwy, that would be a good thing.

Re: Dog Management Plan

For years we have hiked the Bay Area parklands. Our keen appreciation and sense of responsibility makes it effortless to adhere to codes and regulations at each particular park. Presently we do not bring our small dog "Jimmy" to many areas in the GGNRA where dogs are allowed off leash simply because we detest seeing the 'ANYTHING GOES' mentality where too many dog owners allow their pets to have their way abusing, misusing, and damaging terrain, flora and fauna. Then too we resent the lack of enforcement by park officials. The accumulated effect of misuse and neglect are painfully apparent to all who care about the planet.

What about those of us who come to visit the GGNRA seeking only to enjoy an experience of being in harmony with the non-manmade world? Having acquired the quality of engaging nature on its own terms, we are open to peace and serenity beyond expression. Being emotionally one with our surroundings, we naturally treat it with utmost care and respect. Seeing misuse and neglect, and the prevailing sense of disorder is an intensely aching experience, which is why we wholeheartedly support the Dog Management Plan as well as unblemished enforcement. An intelligent approach to park management is to prohibit unlicensed dogs and unconditionally cite those violating park regulations. Let violators pay the citation or appear before a judge to explain why they have rights that exceed the rights of other living things.

This is our individual problem; it is not some speculative problem that doesn't concern each park visitor. If as human beings we do not know how to care for the earth, which includes our urban environment, if we are merely concerned with ourselves, we shall further desecrate our planet; for what is done or left undone in the short run determines the long run. Will we continue to sanction misuse merely because we have 'good' excuses? How degraded are we willing to allow things to become before action is taken to reverse the trend and restore sound practices? The easy excuse is a lack of money or resources when in fact it is a lack of responsibility and determination that is critically important. How long will we remain inept? What legitimacy do Park officials have when they sustain misuse through neglect? Sound policies, maintenance and enforcement are needed now!

RE: Dog Owner wanting More Restrictions for ESA T/E species.

Dear Mr. Dean;

I am commenting on a very difficult issue. I am a frequent dog-owner, user of Muir Beach, Stinson and Rodeo where I walk my dog on the legal trails for dogs. One of the reasons I go to the beach is to clean it. I have cleaned Muir, Stinson, Pirates Cove and Rodeo hundreds of times. A salmon ecologist and restoration expert, I have the utmost concern for cleaning up dog excrement and keeping my dog out of the creeks isolated to the shoreline and minimally impacting wildlife.

This is my behavior, because I am educated about the environment, species and habitat concerns, and cultural concerns. However, when I come to the beaches and walk on the trails, many of the rules are not observed by others. Dogs are off leash where they shouldn't be. They are in the Big Lagoon often, Redwood Creek and the riparian zone where they can impact salmonid and frog species recovery. Dogs run after shorebirds, which are disappearing at an alarming rate. Though I have observed all regulations, cleaned up after my dog, (he doesn't chase anything) and kept him leashed in restricted areas, I cannot condone the further permitting of dogs on Muir Beach. It has gotten too impacting. However if dogs continue to be allowed at these beaches, the responsibility lies on Park Service to provide better education and clarity about where and why dogs are restricted. With budget constraints, this is a difficult outreach and requires hyper-vigilance. Many times, I have talked to folks who have allowed their dogs into these restricted areas ,to explain the reasons. Sometimes met with anger, sometimes with shock about their own ignorance..... most people want to do the right thing. In this exact same vein, people without dogs have done damage to the sealed mouth of Big Lagoon, breaching it in summer and invading the sensitive dunes. Having lost our intrinsic ability to respect natural systems, it falls on the parks to propagate stewardship whether there are dogs there or not.

The human caused damage is just as significant. I know, I have cleaned enormous quantities of trash from the beaches, oiled debris from Cosco Busan, witnessed kids slathered with sunscreen playing in the lagoons, found birds strangled by fishing line, probably the very birds I worked to save at the International Bird Rescue and Research Center. I have found sea lions and seals with bullet holes, hundreds of carcasses of pelagic and shorebirds, watched people leave piles of garbage and food behind impacting wildlife and other beachgoers and the cf burning toxic materials, such as plastics, to create bon fires on the beach. Leave no trace use is a joke. I would just as quickly ban people as dogs.

Do what you need to do to save the birds, amphibians, marine mammals and sahnionids. You have my support as a friend of many NPS Park employees and great --- respect for what tasks you have. Me and my dog will just have to go somewhere else. Having a top predator as a pet is what it is. We are out of balance and need a return to such. However, it saddens me to think that those among us who respect the rules must pay for those that have not. This is a failure of education and a lack of respect for nature. For the wild animals struggling to survive in our world I would give it up.

Sincerely,

Laura Chariton

P.S. If dogs are banned I probably won't be cleaning beaches as much

Correspondence: My only comment is that the GGNRA dog policy should conform to the dog policy in the other national parks(dogs restricted to a small area and on a leash). I long ago quit visiting Fort Funston due to the excessive amount of dogs running loose there. I also do not visit Ocean Beach for the same reason. In turn, I stopped my financial support of the GGNPA years ago as the GGNRA,in San Francisco, has turned in to one big "dog park." As a taxpayer, I feel I should have the right to go to the park(that I help pay for) and not be bothered by dogs that chase birds and cause environmental damage.

Correspondence: Frank Dean, Superintendent GGNRA Bldg. 201 Ft. Mason, SF, CA 94123

Dear Superintendent Dean;

I strongly feel that the GGNRA 2400-page report on dog effects upon our recreation areas and their recommendations for future use is a waste of taxpayer funds toward an unprogressive goal: eliminating or limiting dog-friendly spaces for respectful, appreciative, dog-owning citizens. Shame on. GGNRA for using taxes for such a purpose! Take a long, hard look at the joy these open GGNRA spaces currently provide to residents. Some of my friends, young and old, recently remarked that their off-leash time with their

dog(s) was the most anticipated, pleasurable time they had all day.

Recall, that many areas in the hands of GGNRA were pioneered by dog owners who were not so picky about where they exercised themselves and their pets. Many GGNRA-held lands once privately owned, were also neglected. Fort Funston for instance, was filled with dark, military bunkers where homeless and party seekers spent their early mornings. Dog walkers exercised and thrived with these colorful, strange people without complaint. It is wonderful, open spaces like, Fort Funston and Mori. Point (once an old farm with dilapidated buildings, rotten tires and motorcycle trail wounds) where so many citizens of San Mateo and SF have exercised their adopted pets for decades. Heads-up GGNRA, the people your recreation areas serve live in the BAY AREA. Most of us don't have the time or money to have kids and if we did, we still live in cramped apartments or small, urban dwellings with a pet. We need open space to thrive! Thanks for accepting the guardian stance, many private landowners granted you, while offering lands for local recreation.

Sights you will see at GGNRA grounds: 1. Thousands of happy, socialized urban dwellers, including, people and pets 2. Expansive, untended lands put to beautiful use by regular visitors and residents 3. TONS of iceplant 4. No Garbage; frequent organized clean-up sessions 5. Remains of bunkers, missile sites with noticeable cement bags, blocks and unnatural military deposits. 6. Flimsy, dirty portable latrines serving thousands of visitors every week 7. Unnaturally high numbers of Ravens and Crows eating from "easy" garbage cans (a persistent threat to the Bank Swallow Colony) 8. Swallows flying for bugs in spring and summer 9. Great horned owls in the Cypress Grove 10. Centipedes searching for prey across the sand 11. Hanggliders, surfers and "flyers" enjoying the space with their area enthusiasts Maybe the thousands of visitors should be asking what kindness have you offered users of your precious GGNRA land lately? Have you tried to decrease the number of predators (crows and ravens) of the swallow broods?

Sights you will not likely see at GGNRA grounds: 1. Dogs fighting (unless leashed and hostile to free roaming dogs) 2. Regular wild life (not a single snowy plover) 3. Clean, comfortable bathrooms 4. Rangers

You couldn't dream up such a splendid use of urban/suburban space. These activities are worthy of a National Geographic article, describing how fabulous lands contribute to healthy lives of Bay Area residents.

Exploiters of GGNRA are/have been predominately, dog owners. Please respect our desire to have open spaces for our pet's and our own well-being. Historically, from Mori Point to Rodeo Beach, we accepted inhospitality, in exchange for dog and human peace. 20 years later, you should rejoice in our creative sense to make these places serene. Dog walkers are the ONLY

citizens I witness cleaning the beaches. We also provide a constant, educated eye on wildlife and important events, while walking our pets off leash. (Ask the Marine Mammal Society who their "typical" caller of distressed wildlife might be).

Please take the time to respectfully consider the People of Marin, SF and San Mateo who own dogs and need open, off-leash space to exercise themselves and their pets. These lands are our only refuge from the urbanization around us. We desperately need to escape (as much as our dogs), from stress.

Respectfully, Leah Conroy BS, CST Surgical Technologist (Stanford Medical) Former Research Scientist (Novartis) Pacifica resident for 20 years CA resident for 28 years

Correspondence: I visited Crissy Field with my son once when he was a toddler, 15 years ago, and we were both terrified of the packs of off leash dogs jumping on us. We never went back again, just as we never went back to Ocean Beach for the same reason. My son might as well have grown up in Kansas for all that he got to enjoy the ocean here in San Francisco.

I am really glad that GGNRA is finally taking steps to balance the needs of the environment and people who are not dog fanatics with those of the dog owners' whose sense of entitlement knows no bounds. It is too late for my son to have memories of playing at the beach as a child, but maybe other children will be able to go to the beach without fear.

I hope that you will choose the alternative that best preserves the environment and the rights of people who have had enough dogs, thank you.

Whichever alternative is most restrictive for dogs is the one that I favor.

Correspondence: Restricting off-leash areas in public parks such as Crissy Field is necessary for a number of reasons: environmental, safety (especially to children) and public health. While the majority of dog owners are reasonable and pick up after their dogs, many don't care or simply can't control their own pets. Our

children play in these parks. Why should they have to endure the potential dog-bite or frequent dog-doo? I am a dog owner. I leash my dog in the street, as I know that many people are afraid of dogs. Should we really restrict the use and enjoyment of public parks by taxpaying individuals for the sake of dogs? Dogwalkers should be required to get a license: it allows for greater control and also will generate revenue for the City. Thanks.

Correspondence: In the Dog Management Plan for Fort Funston, I support Preferred Alternative C, with a physical barrier to limit dog wandering.

I have been flying hang gliders for 10 years, 7 of them at Fort Funston. I have served on the board of the club as President, Vice-President and Technology Officer.

Hang gliding at Fort Funston is a huge draw for both pilots and visitors. We have hosted fliers from all over the world, all of whom have been drawn here by its pristine beauty, its view of the ocean wildlife from above, its proximity to San Francisco, its historic role in the evolution of hang gliding, and other reasons. Thousands of people each year are drawn to enjoy this treasure because they can watch a sport that lives in legend but is difficult for the average person to see in action.

When dogs attack pilots on launch or landing, it threatens the site for everyone. Pilots don't want to come, and visitors don't want to go anywhere near the attack zone. I don't exaggerate here - landings, already the most dangerous part of aviation, become life threatening when there's a hostile distraction going for your leg on the final approach. It's not fun.

Alternative C is a good compromise that allows flying to continue while co-existing peacefully. I would ask that you separate the off-leash dog walking from the other areas and that you erect a barrier to keep the dogs from wandering into areas where they shouldn't be.

Best regards,

Daniel Pifko

Correspondence: I am in favor of a plan that balances the needs of all users of GGNRA, both dog-walkers and non-dog-walkers. I like to walk my dog on leash in GGNRA sites, especially Land's End and Fort Funston, and I would like the opportunity to allow him to go off leash. But I also recognize the need to restrict dog-walking from some area of the parks, in order to preserve the parks for everyone. The devil is in the details. Here's a sentence that needs further clarification: "on-leash and/or voice-control dog walking in certain, specific areas of the park where impacts to sensitive resources and visitor experience were minimal, ? no dogs in areas of the park where impacts were unacceptable and could not be mitigated,"

We need to see a map of the specific areas in question. Also, since enforcement is likely to be a major issue, we need to know that there will be fences or other structures that clearly indicate where off-leash is permitted, and where it is not permitted.

Correspondence: I am writing to voice my desire that no changes be made in the "Leash Laws" that are current and already too restrictive in the GGNRA. We've had dogs in our home since 1970. We've spent thousands of dollars making purchases for them. Our taxes on those purchases contribute to the GGNRA. Dog walkers currently have enough restrictions. Adding more restrictions will cause many dog walkers to abandon San Francisco. These dog walkers also pay taxes and spend money in San Francisco.

Finally, restricting dog walkers to leash laws will force them to abandon the GGNRA and use more dog-friendly areas in San Francisco. This will place an unfair burden on the City Parks and Recreation Department. Thank you, R.J. Ovanin

Correspondence: Re: GGNRA Draft Dog Management Plan / EIS

Thanks for the opportunity to review the draft document. Appreciate the time & consideration you've put into it. After reviewing the options/alternatives presented, I would strongly support alternate B - maintaining an "on-leash only policy consistent with the rest of the National

Park System.

Its the simplest and most direct way to balance all the differing voices. Big dogs annoy my wife and other small dogs when running free. All dogs pose some form of threat to indiginous wild life & plants - whether large or small. The best way to contain the potential for damage / unintended consequences and still allow access for dogs is to require all to be "on-leash." There's no reason whatsoever to acknowledge or create a special category for San Francisco; just stay with the system-wide standard. It will save confusion in the long run.

Correspondence: I write in favor of your proposals regarding dogs in the national park. Unleashed dog areas in any public park are rendered pretty much unuseable for any other park visitors. The damage to the vegetation and animal waste from dogs ruin the park for the vast majority of park users. I simply want to voice my strong approval of your proposals and believe that my views represent the "silent majority" of park visitors.

I live a few blocks from Ocean Beach and visit the recreation area several times each week.

Thanks for your consideration.

Steve Connacher

Correspondence: I am a staunch environmentalist who believes in protecting pristine wilderness. I am also a dog lover and owner. I am writing to ask that you increase or, at the very least, leave as is the areas in which dogs are allowed in the GGNRA. Specifically, Ft. Funston, which is not remotely pristine wilderness, must be kept as an off-leash dog area. Dogs *need* to run and to socialize off-leash; these are some of their most basic instinctive behaviors. For the same reasons, Muir Beach and Ocean Beach should also remain dog-friendly.

People who don't enjoy off-leash dogs have 99% of the GGNRA to enjoy

without worrying about dogs.

I would also like to suggest that the PAVED road to Tennessee Valley Beach allow leashed dogs. Clearly, there is no ecological issue.

Furthermore, there is not a single loop trail in the Headlands area that allows dogs, despite one loop that I have hiked made up almost entirely of fire roads. The logical solution is to create non-pristine areas where dogs are allowed, so that pristine nature is protected and those who don't like dogs can easily avoid them.

Dog owners will happily abide by the rules if the rules are clear and reasonable. Barring dogs from a long-standing dog park and from paved roads is NOT reasonable or necessary.

Roughly 1 in 8 San Franciscans owns a dog. Dogs-lovers are not a small special-interest group. And dogs themselves help humans in countless ways every day, from providing services to connecting us with the natural world. The GGNRA cannot continue to pretend that dogs are merely nuisance that will go away if not allowed on its lands. Some dog owners and walkers will crowd into city parks, as the Chronicle reports, where those who don't like dogs can't avoid them. Others will throw up their hands and take their dogs with them on hikes into fragile wild lands.

The solution is a clear one: Don't shut dog owners out when you make your rules. Find places where we can go and we will happily adhere.

Correspondence: I am opposed to the proposal to make drastic changes to off-leash dog-walking in the 1% of GGNRA land that is currently used by dog walkers, both individual and commercial. Specifically I refer to the following areas: Ocean Beach, Fort Funston, Crissy Field, Baker Beach, Lands End, Fort Mason, and Fort Miley in San Francisco; and Rodeo Beach, Muir Beach, and various trails in Marin.

These areas are not wilderness, nor should they be. They are open lands that should be available to be enjoyed by the public, including people who want their dogs to have a place to run and play. There is plenty of pristine landscape up and down the coast that should remain intact, but disallowing off-leash dog walking in the above-mentioned areas will only create overcrowding and overuse in the few off-leash parks that would remain. Alternatively, dog walkers would be forced to look for other areas, which

are currently pristine and undeveloped. Dogs are not going away, and people will find a place to let their dogs play freely.

Furthermore, I am a tax-paying citizen without children, but I do own a dog and responsibly walk him off-leash in appropriate areas. There is very little that I see as a direct benefit of my tax dollars since I don't have children who attend public school. Having an off-leash place to enjoy nature with my dog is one of the few things I enjoy as a result of my tax dollars. I will be very unhappy if this is taken away from me and my fellow dog owners.

Recently, many public decisions have gone against responsible dog owners, not the least of which is a severe curtailment of usage of Sunnyside Park in San Francisco. This park was converted to almost exclusive use as a playground, in spite of there being a large group of devoted and responsible dog owners who developed a wonderful sense of community through playing with their dogs at this park.

Frankly, I'm tired of getting squeezed out. People with dogs deserve open spaces to enjoy with their pets as much as children deserve a playground.

Sincerely,

Steven Kacsmar

Correspondence Type: Web Form

Correspondence: I would like to comment on proposed dog access changes to two beach locations, Ft. Funston and Rodeo. I live in Concord, California. There are no off-leash dog areas here. We have a dog park, but it is small and has no trees. My dogs won't even run there. Mt. Diablo State Park trails are completely closed to dogs (even on a leash). So every weekend, we take our dogs either to Ft. Funston or Rodeo Beach to get some exercise. A nice off-leash dog area is extremely important to my family. It seems like dogs are already prohibited from going almost anywhere, so I love and greatly appreciate the few places that we can currently take them.

Please consider charging each dog a yearly "park entry fee" that would cover all Bay Area dog accessible beaches. That fee could help pay for maintenance and other dog-related expenses. As it is, I have to drive over one hour to get to a decent off-leash park. Please do not take these wonderful beaches away from my family and me!

Ft. Funston: The off-leash area would be limited to the beach between the

two parking lot beach entrances. This is a TINY area compared to what is allowed now. With the dogs spread out as they are now, the area is very enjoyable. With all of the dogs concentrated into one very small beach area, I can foresee problems. Add to that the influx of dogs from other closed areas, and I can see it being a real problem.

Please keep this entire area open to dogs. You could still preserve the current dune areas that are isolated with fences. I think that it is better to maintain a few really nice dog beach areas, so that people will continue to use them. Restricting every beach is asking for people to break the law. If people still have several really nice dog areas, they will go there and leave the other beaches to the people who do not like dogs.

As I said above, you could either charge a yearly fee for each dog that would allow them entrance into all Bay Area beach parks, or else charge a day use fee per car that enters this park. I would GLADLY pay either, and would be happy to support an activity that I love so much.

Rodeo Beach: I think that the planners got this beach plan backwards. It makes more sense to me to have a small section of beach near the parking lot that only allows leashed dogs and then allow unleashed dogs on the central and southern ends of the beach. I would prefer the entire beach to continue to have dog access. As with Ft. Funston, I would gladly pay an entry fee. This is the only beach in the area that allows dogs. Please allow a few beaches to remain dog-friendly. Then people without dogs can choose to go to one of the many dog-free or leashed-dog beaches.

Thank you.

Correspondence: GGNRA Dog Planning Commission:

I am concerned about proposals to limit voice-control dog walking in Crissy Field, Ocean Beach, Fort Funston and other parks in the Bay Area.

Dog walking is very important to me. When I walk my dogs, I can get out and enjoy Nature. Neighbors get together when we walk our dogs and this provides an important form of community bonding.

I am very concerned about protecting the environment. I am very conscientious about picking up after my dogs. I am concerned about protecting the tall trees and plants that grow where I walk my dogs. I am

also concerned about protecting the birds and small animals nearby, as are my neighbors.

Having people walking their dogs in a park adds to the safety of the park. Desperate people who are intent on doing harm to others have often kept away from the areas where we walk our dogs, because we are there. Some men were stealing purses from women with small children in a nearby park, because dogs and dog walkers did not go there. Dogs and dog walkers can be a deterrent to crime.

Last night an old man slipped and fell on the wet sidewalk. Because I was there walking my dogs, I was available to help him stand up. Dogs and dog walkers can add safety to an area.

Please endorse Alternative A (no action) so that the current dog walking practices can continue.

Correspondence: Dear Sir/Madam,

I am writing about the dog rules for Chrissy Field and it's beaches. The huge increase in dogs over the past five years has been truly amazing and the destruction these dogs cause to the delicate vegetation is very concerning. Furthermore I am very concerned with the large number of dogs urinating on the beach and some minority of owners burying their dogs feces in the sand as I have seen on a few occasions. These activities are very dangerous to children playing on the beach and I would encourage you to designate special beach areas for dogs to roam leash free and the main part of the beach(1)by Anita rock and (2)west of the old Coast Guard Station, dog free.

Thank you.

Correspondence: As a owner of a well trained 15 pound dog that is taken by a responsible dog walker to the beaches every day, and often time taken by myself or someone else close to the dog on weekends, I would like to say I disagree with this

act. I think it is very important to have off leash areas that dogs can enjoy in order to get their energy out in an effective manner. I do believe owners and dog walkers need to take responsibility for their dogs and be sure that dogs that are not safe off leash are kept on leash, but for those dogs that are well behaved I do not see a need to change the off leash areas. Dogs are one things that define this city and I do not think that should be taken away! It is going to cause tramedouse problems for the people that take care of our loving pooches every day if we restrict the areas the dogs can go.

Correspondence: Please keep chrissy field open to off leash dog play! I've gone there just about every saturday with my now 14-year-old dog, and 99% of the time have seen no issues with the dogs/dog owners and non-dog people. I'm not sure where the call for change is coming from, but if i was to guess based on typical SF politics it's from a very vocal super-minority.

Couple points: - most dog owners go in the AM, when there are few non-dog people there (typically a 1-10 ratio of non dog/dog people. - at least in Chrissy field, the dog owners are very good about picking up the poop - The only time it gets a bit crowded is on the handful of weekend days (3-4 a year, if we're lucky) when its actually warm enough to sit on the beach! Even then, most dog owners move the dogs down closer to the GG and there are no issues. - If there actually are real incidents (like a dog biting someone, etc) then those should be dealt with strongly and on an individual basis. do not punish the majority of responsible dogs/dog owners!

My Saturday mornings at Chrissy are at the very top of the list of why i love (and live in, pay property taxes in, etc) San Francisco!

thanks!

Type:

Correspondence: As residents of San Francisco for almost 2 decades, my family and I have enjoyed the GGNRA off-leash dog areas for many years. We go to Fort Funston about 3 days every week ? sometimes more. These visits for exercise and fun are essential to a balanced life for all of us.

The proposed changes to the GGNRA's off-leash dog proposal are very concerning to me. Dogs need exercise everyday. For dogs to be healthy and well behaved they have to regularly run off-leash and we need places that are safe and big enough for them to get this critical exercise.

The proposed changes ? especially to Fort Funston where we generally go ? seem illogical and arbitrary. I think they will be challenging to implement and open to a huge amount of confusion and potential unintended non-compliance. This leads to my second concern with the Compliance-based Management Strategy component of the proposal that allows the GGNRA to change the status of off-leash areas to on-leash or no dogs without additional public comment if there is not 100% compliance with the new restrictions.

The fact that the GGNRA can unilaterally circumvent the legal requirement that management changes that are either significant or controversial must have a public process before they can be made is also deeply troubling. There needs to be a protocol to address potential updates to the off-leash dog status in an open, public and inclusive way.

The GGNRA and federal government are stewards for the American people. These organizations must work equally and fairly with ALL constituents. They may not act unilaterally to further a partisan agenda but rather must act in the interest of everyone. The Preferred Alternative expressed here is not fair and equal and needs to be reconsidered.

Correspondence: Please do not limit the amount of off-leash park space in San Francisco or the general Bay Area. There is currently limited off-leash availability, and further limiting the space will only result in overcrowding of the remaining space. In addition, exercise and play time are important for dog health, mental well-being and social adjustment. Requiring dogs to remain on leash limits their ability to run and play freely and get adequate exercise. Furthermore, SF and Bay Area dog owners are extremely conscious about cleaning up after their pets and ensuring that their dogs do not bother or interrupt other park/beach users.

Correspondence: Dear Sir/Madame, Your proposals are a complete breach of the rights of a significant proportion of the Bay Area population, Dog and their owners. Mandatory leash only or outright dog bans in the extremely limited off-leash areas are cruel and unusual punishment of our canine friends who require free running to remain healthy.

Dog owners show more respect to the limited area where they currently can take their pets than most of the population. We use these spaces daily and show consistent concern that all people and pets have equal respect for each other for both safety and enjoyment. Less than 5% of our public lands are open to dogs for off leash exercise (ABSOLUTELY mandatory for a health dog). To ask these small parcels available remain so is an absurdly small ask for tax paying residents.

The ALTA Trail above Marin City is used by 100s of people and dogs every single day for exercise. How dare you suggest this should be leash only. I walk this trail everyday and 99% of the people out there are dog owners with their pets.

That you suppressed the demands to off a LANDSLIDE majority for some angry 2 or 3 dog haters is a complete breach of your responsibilities to the majority of tax payers enjoying this and other spaces.

Your proposals are misguided, and appear to be based upon hatred and ignorance a small set off angry racists.

Correspondence: Off leash dogs are out of control in San Francisco and in general in the bay area. I support the proposed leash law changes to protect the wildlife and people. Further, I suggest that the following steps need to take place:

1. The current leash laws and the proposed leash laws must be enforced. Park police should ticket any dog walker with a dog off leash. Also, civilians will call to report leash violations and the violators should get heavy fines. These fines should increase (double) with each violation. First violation \$50, second \$100, third \$200, fourth \$400, fifth \$800, sixth \$1600, seventh - 2 year ban from the park and \$10,000 fine for each violation of this ban.

2. All dog walkers should have to obtain a permit to have their dogs off leash (suggest having fenced off areas for this). Once they have this permit, their dog will wear a specific collar or something to identify them as permitted. To get a permit, a dog must pass a rigorous voice control test. This would mean simulating (or you could do it in the park) distractions and background noise. This test should be required annually and should cost \$3,455 a year. The dog must also be up to date on all vaccinations to qualify for a permit and have no record of aggressive behavior. This fine for having a dog off leash without a permit should be \$10,000.

3. All professional dog walkers should be required to have a permit to walk their dogs off leash or on leash. They must pay per dog. If they wish to get a permit to walk 2 dogs this means they pay \$3,455x2 a year. If they wish to walk 4 dogs (should be the max), this means they pay \$3,455x4 a year. Could consider increasing the cost given that they are a business. Also if the park decides that they want to let commercial dog walkers have more than 4 dogs, the cost for each additional dog over 4 should be \$4982 an extra dog.

4. Dog owners whose dogs are witnessed to be destroying the environment (digging in the park, going off trail, chasing birds/animals etc) should be subject to a \$5000 fine. These dogs may be seen by park officials or they may be reported to park officials by civilians. If they wish to contest the fine, they must show up in court on the date they are assigned.

5. If dog walkers are unable to abide by these rules within 6 months of their implementation, dogs should be banned from the GGNRA all together. There are plenty of city parks that don't enforce leash laws. (even though they should)

Thank you for considering these suggestions.

Correspondence: "Where conflicting interests must be reconciled, the question will always be

decided from the standpoint of the greatest good of the greatest number in the long run." Gifford Pinchot, Chief Forester, 1905

Fort Funston: Off-leash dog walking should remain as is.

I believe the use of this public land should be decided on the Utilitarian principle based on Pinchot's quotation above.

I am all for conservation. As a matter of fact, I highly recommend the US Forest Service Centennial film *The Greatest Good*. It is the epic story of the struggle to manage our nation's resources.

If you have ever been to Fort Funston on a weekend, then you have seen the overwhelming number of our citizens and their dogs who utilize this off-leash area. I estimate thousands weekly, although since there is no sign-in, I don't know if anyone has a true count of the usage. Based on that fact alone, I believe the land is being used for the greatest number of Bay Area tax payers.

Yes, it's nice to know the history of the land but without the dog community this area would be sorely underutilized.

Others besides dog walkers use this multi-purpose area without discrimination: Hang gliders, model airplane flyers, kids learning to ride bikes and scooters, parents with strollers, seniors and those in wheelchairs. My personal experience, at the park several times a week, is that everyone gets along just fine.

I don't believe that having dogs off-leash causes any measurable threat to the environment or to other's rights.

Over the years there have been many discussions regarding habitat restoration, permanent restroom facilities, as well as the protection and public usage of Fort Funston. Sadly, the federal government has no money to fund projects.

I was very disappointed in Californians in the last election when proposition 21 was defeated. For a meager \$18 vehicle fee increase, most California vehicles would have gotten free admission and parking at state parks and beaches. Obviously, the value of our parks was not a priority to the 57% of the population who voted NO on this measure.

That being said; those of us who use Fort Funston for recreation to walk and run with our dogs know what a treasure we have and greatly appreciate this area and all the citizens who use it. We take great pride, care and concern

over this space.

Donna Abbott & Roxie, the black lab hound - San Francisco, California

Correspondence Type: Web Form

Correspondence: My name is Russ Pritchett, a resident of Montara for 14 years, the San Mateo coast for over 20 years, and a member of the Montara Dog Group. I am a frequent user of the Rancho Corral de Tierra (Rancho) open space on the Northern boundary of Montara that is to be incorporated into the GGNRA. My primary use of the open space is for daily exercise with my family (including my dog): hiking; mountain biking; dog training; and, dog fetch games.

The Dog Management Plan treats the Rancho as New Lands, proposing a management system (Alternative D) that bans all dogs from the open space. I am writing to express my opinion that Alternative E of the Dog Management Plan should be considered as the default option for "New Lands" and specifically for the Rancho Corral de Tierra.

Alternative D for New Lands fails to recognize that in an urban recreation area, such as the GGNRA, New Lands will inevitably be adjacent to suburban areas where residents have long established dog walking practices. By default, New Lands are considered pristine wildlife areas worthy of most stringent environmental controls, regardless of location or history. With Alternative D, off-leash dog walking will not be considered under any circumstances. This alternative is not flexible or adaptable to unique situations that will inevitably arise with New Lands. Further, Alternative D uses a "closed unless open approach" that is the more stringent than the dog management approach used in "319 other NPS sites" across the country. Alternative E, on the other hand, allows dog walking in a manner that is consistent with other National Park Service (NPS) locations across the country and leaves open the possibility of off-leash dog walking in areas with well established practices. Alternative D is draconian, inflexible, and completely fails to accommodate many existing users of New Lands.

The reality of implementing Alternative D in the Rancho is that a majority of the Montara open space users will become federal criminals if they continue practices that have been followed for years. Members of the Montara Dog Group, in the future to be known as the dog-walking criminals, have voluntarily established and maintained dog waste cans at six locations on Rancho lands, bounded on the north by McNee Ranch State park and the south by Montara. It should be noted that human-generated

trash also ends up in these cans. Members who fail to clean up after their dogs are routinely called out by others who desire trails that are trash free (dog generated or otherwise). Additionally, recommended dog-walking practices have been established and posted on the Montara Dog Group website. These practices show respect for other users of the open space, whether they be dog walkers, joggers, bikers, or equestrian users. Are these the actions of criminals?

One public meeting was held in Montara by the NPS to solicit input for the incorporation of the Rancho into the GGNRA. A large contingent of dog walkers from the Montara Dog Group attended and presented a petition to NPS representatives that summarized our desires that existing off-leash practices be considered in a small fraction of the land that encompass the entire Rancho. This land is not a pristine, wildlife area. It has been previously used for agricultural purposes, slated for track home development, and was also targeted for the Devil's Slide bypass highway project. As instructed by NPS representatives, many individual comments were submitted in writing on small, post-it notes. We were told these comments would be kept in a record and considered in formulation of a plan. Park service representatives replied that no official responses could be made until the Dog Management Plan was released. Further meetings were promised; yet, no meetings have occurred. Apparently the official NPS response has been to lump the Rancho in the New Lands category and ban dog access with Alternative D, essentially ignoring the input of a large percentage of the local community that regularly uses the Rancho. Why has the input from the local dog walking community been ignored?

Although the NPS officials were unwilling to negotiate dog-walking usage of the Rancho with members of the local dog-walking community, they were willing to negotiate with other user groups prior to the incorporation of the Rancho into the GGNRA. A local equestrian group was concerned with the possible relocation of the stables located on the Rancho and with continued use of the Rancho lands. As should be the case, this groups' concerns were heard by NPS officials, and an agreement was successfully reached. If the NPS was willing to work with one user group, why was input from the local dog walking community disregarded? The dog walking community expects similar consideration and respect from the new stewards of the Rancho land, the NPS.

Alternative D will have a negative impact on the safety of local residents attempting to responsibly exercise their dogs. Montara is within unincorporated San Mateo County: there are no public parks within our boundaries; there are no sidewalks on local streets. A large number of Montara residents exercise their dogs on Rancho land because it is adjacent to our town and it is safe. Last year, a local residents' dog was hit by a car while being walked on-leash on a local street. In January 2011, a local

resident and dog were both hit by a car on Highway 1. In short, there is not a safe alternative to the Rancho for exercising dogs in Montara.

As mentioned, Montara residents exercise their dogs on Rancho land. Our family has been fortunate to socialize our dog from the age of 4 months with other dogs and people on the Rancho. I am certain that if our dog was confined in a small yard or indoors all day without access to Rancho lands, she would exhibit traits that people detest in dogs (aggressive behavior and incessant barking are two examples). Alternative D will have a negative impact on the ability of local residents to properly socialize & train their dogs.

The benefits our family has received from our dog has gone beyond the stereotypical characterization of "mans best friend." Since our dog requires regular exercise, we hike & bike more than we ever did before (with our dog, of course). We have lost weight and are healthier. Further as we have raised our dog, we have met more friends in Montara than in the previous 10 years we lived here. I know that I speak for many in our community when I say that the Dog Management Plan's preferred alternative for New Lands, Alternative D, will negate these positive aspects.

Correspondence: While I no longer live in the Bay Area, I grew up there and still visit my family. Leash laws are very important to communities as a whole, however, if there is a dog park that allows a dog to "stretch its legs" and socialize with other dogs, leashes should be optional. It's not the dogs that are the problem/issue, it's the owners of the dogs. Owners are the ones who should be educated on keeping the space clean. It's no more than they would do at their own homes -- I hope.

Correspondence: Regarding Mori Point dog walking. I'd like to suggest using two (2) areas for "off leash" walking. First site: Approximately 100 yards WEST from the Moose Lodge there is a small bowl (approx 3 acres) located between the service road/trail and upper hiking trail. That bowl would allow off leash dog walking away from the main park habitat/trails. Second site: Far west, adjacent to the beach, at the SOUTH end of the berm there is a small grove of Cypress trees (approx 1 acre). This site would require some fencing, but

it would serve the off leash dog walking community well. Steve Salisbury

Correspondence: To Whom it May Concern After reading the document i find it hard to believe that your group finds it effective to take away deemed recreational areas for people and their dogs. I frequent Crissy Fields and have a lovely time with my dog both on and off leash. I see other Guardians being very responsible for their dogs and for picking up after them and of course respecting on leash in the habitate guarded areas. We need to have out door areas to walk our dogs for so many reasons. It is heathy and safe in these areas. PLease dont take them away

Correspondence: FORT FUNSTON

The picture of my kids running with our dog, my daughter's hair flying, the dog's tail spinning, is to me, a sight of extreme beauty, exhilaration and joy. It's a picture of happy childhood days. I seek out these off leash places to recapture this picture. Every time, I feel immense gratitude that this is still possible, in a world where children are getting increasingly nature deprived. We got our dog, my first, a couple of years ago from a shelter. It was immediately apparent that 'walking the dog' is a terribly inapt expression. Anyone who has seen a dog sprint, scamper, play and run for balls and twigs, realizes this in a split second. Dogs were made to run. Children were made to run. After discovering Fort Funston, we've called it 'Disneyland for dogs'. It is worth a special trip. As we approach our dog will whimper with excitement. There are always tons of dogs of all different breeds and sizes. On sunny weekends it is packed. An enormous amount of JOY, in people and dogs alike, is generated at Fort Funston. It would be a sad day if that JOY was killed by restrictions.

Correspondence: This EIS is generally scientifically accurate but I don't think it clearly explains exactly how much damage that dogs do to crissy field, fort funston,

the presidio, ocean beach and all the other areas in the SF GGNRA. Dogs get away with way more damage than is reported. In my experience, I see dogs off leash tearing up the land, going off trail and leaving their waste behind. Most dogs i see are not only off leash but off voice control and even worse out of sight control. While, I generally support the preferred alternative, I actually think stricter leash laws and more dog free zones would ensure that the environment is preserved for those who come after us.

In terms of the impact on humans, this is also way understated. Most adverse events due to dogs are not reported and thus go undocumented and unnoticed by the ggnra. Dog walkers with dogs off leash (and even on leash) adversely affect the experience of many many people. This has been a problem for the decades that I have been in San Francisco. I get into an argument with a rude dog walker daily who doesn't care that their dog is off trail and destroying native plants. Why do we ask volunteers to plant these if they are just going to be destroyed by dogs?

Dogs, people who are not comfortable with dogs and the environment can obviously not co-exist. The last several decades at least has proved this. Dogs have been dominating and ruining the park for the rest of us. I have seen dogs on a daily basis destroying the park that I and many other people would like to enjoy. I have observed dog walkers yell and threaten other people who express any concern or even mention that their dogs are off leash. This means that people who are not comfortable with dogs are currently not welcome in the park. This includes certain cultures that are in generally not comfortable with dogs. This includes certain racial minority group and also certain religious groups that can not interact with dogs. Additionally the blind and the disabled also use the parks less because of dogs. There needs to be more dog free zones for these groups.

Correspondence: There are very few places in the city where dogs are allowed to run off leash. Fort Funston is a fantastic resource for dog owners to be able to exercise their dogs in a natural environment without having to worry about car traffic and other dangers of the city. I'll admit that if this plan is implemented, I have no reason to go to the GGNRA. Taking this option away would remove one of the main reasons I love living in the Bay Area. I understand the need to reign in abuses, but this measure goes too far.

Correspondence: I take my two dogs to Ft Funston or Crissy Field at least once, usually twice a week, year round, so I am very interested in the proposed reductions of off-leash areas. I heard one of your representatives on the radio just after the draft plan was released. He used the word "balance" an awful lot, which I suppose means balancing the needs and desires of various park users. So are the plans for Funston and Crissy balanced?

Crissy Field. Yes, you got that one exactly right. There needs to be a section of beach where families can picnic or just lie on the sand without being annoyed by dogs . Some dog owners may not believe it, but even a perfectly friendly, curious dog can be an annoyance to some. East Beach is the logical place for this. Central Beach and the airfield might get a bit more crowded, but for such an urban park that's a really large off-leash area. And yes, the main trail should be on-leash. There's just too much traffic for dogs to be running loose.

Fort Funston. Not very balanced. The plan for the beach is fine, but your objective for the cliffs seems to be to reduce the off-leash area to a bare minimum. And to what end? Where is the imbalance you are trying to balance? Unlike Crissy Field, where many dogless people recreate in various ways and people with dogs are clearly a minority, the majority of people who use Funston go there with dogs (you may have better numbers, but it seems to me 2/3 to 3/4 of the people on any given day) and many of those without dogs are hang gliders and model plane fliers who don't use the trails at all. You want to cram all the dogs whose owners/walkers don't want to go down to the beach into a tiny area that looks to be about the same size as the airfield at Crissy, where the dog density is much less. That's not a dog walking space, it's an unfenced pen in which my dogs and I will be allowed to walk in circles along with a couple hundred other dogs until we all get

bored and go home.

Call me cynical, but I think you must be getting brownie points from some bureaucrat in Washington for each acre of off leash area you eliminate so he can claim to have brought GGNRA more into compliance with Federal rules. Ok, so be it. My preferred alternative is "Ft. Funston ain't broken, so don't fix it", but you're going to do something, so here is a possible compromise: combine alternatives C and E. That would provide enough space to take a proper walk and would allow a mostly off-leash loop from the parking lot, down the sand ladder, up the Beach Access trail and back to the parking lot (my personal favorite route). This should include portions of the Horse trail that probably hasn't seen a horse since WWII.

A final note: part of the Beach Access trail should be off-leash. This "trail" (most of it is a swale or wash) provides very poor footing and it can be a bit tricky going up or down even without an excited dog on a leash. Better to start the off-leash area where the trail widens and becomes steeper, about 50 feet from the paved trail.

Correspondence: After reading a good portion of this document, The executive summary and chapter 2 as recommended, it seems to me that the options provided are going to be quite difficult to enforce. I understand the concern with the large volume of dogs and dog walkers around verses the visitors, but why not have specific dog beaches and trails that are off leash and the rest would be completely off limits to dogs. That way visitors know that there will be no dogs in certain parks that they are visiting, and dog walkers/dog owners will know which trails and beaches they can take their dogs to. Crissy Field in particular seems quite difficult to enforce in terms of specific areas being on leash verses voice control, but right now if you want to make the snowy plover area completely off limits to dogs then do it. There is a huge beach and grassy area for dogs to enjoy (which they do the other 10 months out of the year when they can't go in the restricted conservation area) otherwise.

When I moved to this city, one of the main thing that attracted me here (as I own two dogs) was the beauty of being able to walk my dogs at Crissy field right by the Golden Gate bridge off leash! It has proven to be better for my dogs as they are better behaved than where we used to live as they have to be to be under voice control. Now that we live in Mill Valley, I know there are certain trails that dogs can only be on leash and I just don't go there. I only go where I know they can be off leash as it is more enjoyable for me

and for them.

So if there are restrictions that need to be made due to wildlife concerns then don't allow dogs there. But don't make it harder on the people who actually have to enforce these laws by making each place a complicated series of laws per area. Also, to be able to explore the area with my dogs is a precious thing that I hold dear to living in this area. I hope that those of us with dogs will not be restricted to 2 or 3 trails and one beach, but can find many places to roam together.

Correspondence: To Whom It May Concern:

Please do not ban dogs from Muir Beach and other park areas. But especially Muir Beach and Chrissy Field. This is what the Bay Area is about.

The people that come to Muir Beach with dogs are lovers of the beach. They treat it with respect. We have been to the beach countless times with Willy, our yellow lab. Nothing makes him happier than running along the beach with a ball. I often see other visitors of the beach watching him and his joy and, in turn, smiling. He does not go in the areas that are restricted to dogs. That's not a problem. In all the times we have been to Muir Beach, I have never seen a dog violating the rules. It's much more likely to see people

throwing cigarettes and garbage onto the beach.

This is an important resource for dogs and their owners. Please do not take it away from us. I don't understand why dogs are being punished! Why don't we stop allowing the real damage-doers - people!

Please reconsider your extremely drastic dog cuts. Most dogs that come to the beach are good, well-loved dogs. We should not be treated like this.

Thank you, Kimberly

Correspondence: I beg you to change the dog leash rules as they are today. There are barely enough spaces in SF for people to walk their dogs as is. I love going to Crissy Field and Fort Funston on the weekends and getting some fresh air. If anything, impose stricter laws on owners who don't pick up after their dogs - that is fair.

San Francisco is a great city. I've seen a huge flux of my friends moving b/c they had kids and it's too expensive or impractical. I would hate to see them taken a step further with no area for dog owners. I believe we are a big community, right. Are there not more dogs than kids in SF. Please keep this a great place to live

Correspondence: Dear Sir or Madam,

PLEASE Do not further restrict Fort Funston and Land's End off-leash access!!!

While some of the proposals are OK, the Fort Funston restrictions I've seen go too far.

If Lands End is going to completely restrict dog access to one of the most beautiful dog walks in the city then you must at least allow greater off-leash access at Fort Funston. Being older I can not always walk all the way down to the beach at Fort Funston and need the large area available above the cliffs to walk my dogs.

Please save off-leash access for dogs in San Francisco. Dog walkers around my neighborhood in Bernal Heights make the neighborhood MUCH safer by patrolling our streets and parks. I'd hate to see these dog owners moving out of San Francisco because there is no access to a large area for an off-leash walk. If these dogs are forced out of San Francisco, then their owners will no longer be walking around our parks and streets making them safer.

Thanks, Michael Willingham

Correspondence: This would be a very sad change to San Francisco, San Mateo, and Marin Counties. Having these designated areas for dogs to be off leash has been a very safe and fair way to allow dogs and their owners to get the exercise and socialization they need to thrive. By limiting these areas as it is being suggested, it will severely limit the amount of space needed for many large and energetic dogs to burn off energy and get the exercise they need. It would be a travesty to the mentioned counties to slash the areas dogs are allowed off leashes. Please re-consider making these changes, as taking away these open areas will be devastating to both the dogs and the dog

owners.

Correspondence: I lived in San Francisco for over 20 years and now reside in Pacifica, but regularly use Fort Funston for it's off-leash dog allowance. I have a 5 year old well-trained yellow lab who is under both voice and hand signal control (yes, really - I spend a lot of time reinforcing his training, which is life-long). I always bring poop-bags with me (I use biodegradable poop bags from poopbags.com) and if I have left over bags I leave them in one of the kiosks for someone else to use. If I see a dog (not my own) leaving a mess and the owner is unaware, I point it out to them and/or pick it up myself. I try to be a good canine citizen (as does my canine). We love to come to Fort Funston to run and play in the surf and meet with other friendly dogs. Often, on cold and blustery San Francisco days (meaning more often than not, in other words) dog owners are the ONLY people in the Fort Funston area - everyone in sight has a dog with them. Therefore, if this area is dog restricted, I don't believe many people will use it (except for the hang gliders perhaps). This is an urban area - not some pristine wilderness - and has been a wonderful place for dogs and their human companions. Please do not take it away from us!

Correspondence: This DEIS is invalid because it fails to meet its legal obligation to take into consideration the negative effects the proposed changes would create for humans, their dogs and the surrounding environment (e.g. local parks). Further, the studies/science utilized to support allegations of damage to resources in the GGNRA are fatally flawed - the positive impacts are ignored and the negative impacts are unverified.

Therefore, I believe the 1979 Pet Policy should be implemented in its original form with no restrictions on off-leash recreation at Ocean Beach, and it should be institutionalized as a Section Seven Special Regulation. Further, I believe that all properties added subsequent to the 1979 Pet Policy and in the future should have historical off-leash recreational usage allowed. This would accurately reflect the enabling legislation for this National Recreation Area which GGNRA management has held in disregard for quite some time. I also believe the GGNRA's inclusion of a Compliance-Based Management Strategy as well as the GGNRA's failure to commit to a

Section Seven Special Regulation following this process indicates a lack of good faith and an intent to deceive the public as the GGNRA did following the implementation of the 1979 Pet Policy which the GGNRA later decried in Federal court as an "error".

Correspondence: As a young man I worked as a seasonal ranger with the NPS and have always been an avid hiker. I was also an elementary teacher for a number of years, and always reveled in taking my students into the wilderness. Now as a grandfather with 5 grandchildren, I enjoy walking with them in our wonderful National Parks throughout northern California, and especially the newest system in what was the Presidio in San Francisco. Our National Park system was created to allow our citizens and our children to enjoy the natural wonders they contain - wild vegetation and extraordinary wildlife - in a setting that is in contrast to the urban environment that surrounds most of us daily. As a National Park, the Golden Gate Recreational Area is a very special case because it's so close to a densely populated urban area, and it allows our urban children the opportunity to experience a different reality from that which they see daily. If not for this special National Park, thousands of San Francisco's children will never have a real park experience - an esthetic experience that stands in stark contrast to their daily concrete urban existence. Dogs are a part of that urban, concrete life. Dogs have no place in a National Park. They disturb the wildlife, vegetation, and those of us who come to our Parks as a respite from the concrete world of the city.

Please keep our dogs and all pets out of our parks.

Dogs have no place in our National Park paradigm.

Correspondence: As a dog owner, I love taking my dog on the Miwok trail and to Muir Beach. Many days we hardly see anyone on the Miwok Trail and sometimes the only people at Muir Beach are people with dogs. If you have a well-behaved dog and clean up after your dog, there is no reason at all you should not be able to have your dogs off leash both of these places.

Most trails do not allow dogs. My dog is blind and very frightened by cars on the road. He needs a trail where he can run with me. I think it is really awful that you are considering these actions.

I am originally from the East Coast and one of the things I always LOVED about Northern California- long before I was a dog owner, was its more relaxed attitude and freedom about where dogs were allowed. Please don't become more restrictive! Our dogs are our best friends. We need natural beautiful places like Muir Beach and trails like the Miwok where we can let them roam and be dogs! Please don't take these freedoms away.

Sincerely, Ursula Connolly

I support Alternative D because it offers the most protection to natural and cultural resources and visitors wanting a safe and most dog-free experience.

I lived in San Francisco for over 20 years and now visit frequently, including walking in many of the areas covered in the proposal in both San Francisco and Marin.

I stopped walking in the Crissy Field area because of the dog problem. I have been scared by aggressive dogs and their combative/defensive owners. Being able to have a dog-free or dog-limited (on leash only) experience would be wonderful. One of the many reasons for enjoying these beautiful places is to find a peaceful refuge from the stress of modern life. This is impossible under current circumstances.

Ideally, I would like to see dogs banned. However, at least they should be restricted to small fenced areas reserved only for dogs. Also, no matter what, dogs should always be leashed.

Type:

Correspon I agree whole heartedly with Sally Stephens, chair of San Francisco Dog Owners
dence: Group. Where She has concisely stated that "the park was never meant to be a
"pristine wilderness," but instead was created as a multi-use natural resource for a
dense urban population." These parks are on the fringes of highly urbanised zones.
The impact of human activity on native wild life is going to be inevitable whether
they are walking their pets or not.

Has any one actually completed any comprehensive studies covering the impact of off leash dog walking on wildlife and natural habitat? It seems that a few wellfunded organisations have come to wield influence that is ultimately going to effect the freedom of Bay Area residents. The National Park Service U.S. Department of the Interior Inventory and Monitoring Program Research Project Summary August 2008 details numbers of off leash dogs and "bird chasing events". Whatever a bird chasing event is..... Is that where a dog runs down the beach and birds take flight? What about patrol vehicles, equestrians, dogs, joggers, and kite flyers. Do birds take flight when these potential disturbances are

present....? More than likely this would be the case. If the birds had a serious problem with the human disturbance they would pick an area of the beach that is less trafficked. Or pick a beach that is hardly trafficked at all.

http://science.nature.nps.gov/im/units/sfan/vital_signs/snowy_plover/docs/GOGA_Plover%20Monitoring%20Brief.pdf

Included in the text of the report is a statement "that habitat loss and degradation due to development, beach recreation, and encroachment by non-native vegetation have contributed to a decline in Snow Plover numbers..... " That indicates to me that there are a broad number of factors that are at play here. The Graphical evidence provided in the report also provides no direct correlation that unleashed dogs and Snowy Plover numbers are related.....? It seems that information concerning exactly why numbers of native wildlife are falling is woefully inadequate. Until comprehensive studies are completed it would be premature to place all the blame on one potential disruption.

How have dogs become the number one issue? It seems incredibly single minded to focus specifically on Dogs as the main reason any of the negative impacts of intense urbanisation have occurred in the GGNRA. I would like to voice my concern to the current policies of the GGNRA with regard to Dog Management. I would also propose that restricting this segment of the Bay Areas population is a little bit one sided and will be a detriment to future generations. The ability of children and people being able to interact with their pets in the natural environment helps with development, confidence and appreciation of the outdoors.

Correspondence: While the protection of park patrons and designated environmental areas are important, severely restricting the options of dog owners is detrimental to the community at large. GGNRA parks are one of the few open areas that dog owners can let their dogs off their leash, ensuring an active lifestyle for the animal. Denying dog owners the ability to walk their dogs off leash will critically curtail the available areas where dogs can receive much needed exercise and play. One possibility is increasing the penalties for infractions on existing dog-leash restrictions, as well as ensuring protected environmental areas are off-limits.

Thank you.

Correspondence: I support the alternatives that are the most protective to the wildlife and for human safety. I have human safety concerns about dogs off leash. I am one of the many victims of dog bites. I want to see on leash requirement as well as muzzle requirments everywhere for this reason. No human should be banned from a part of the park because dangerous animals are allowed to run free.

Here are some of the stats quoted from
<http://www.dogbitelaw.com/PAGES/statistics.html>): 1. 2% of americans are bitten by a dog annually. I would guess that most people have been bitten in their lives given that over a 50 year period, I don't think it is the same 2% getting bitten - (Sacks JJ, Kresnow M, Houston B. Dog bites: how big a problem? Injury Prev 1996;2:52-4.) Keep in mind that i myself have been bitten twice but only reported it once, so I would assume that 2% is a vast underestimation.

2. 1 out of 6 dog bites requires medical treatment

3. Getting bitten by a dog is the fifth most frequent cause of visits to

emergency rooms caused by activities common among children. (See Weiss HB, Friedman DI, Coben JH. Incidence of dog bite injuries treated in emergency departments, JAMA 1998;279:53)

4. An American has a one in 50 chance of being bitten by a dog each year. (CDC.) (pretty high compared to other things we would consider risky)

5. The trend for fatal dog bites as well as dog bites in general has been rising yearly since the 80's.

6. "Dog attack victims in the US suffer over \$1 billion in monetary losses every year. ("Take the bite out of man's best friend." State Farm Times, 1998;3(5):2.) That \$1 billion estimate might be low -- an article in the Journal of the American Medical Association reported that, in 1995, State Farm paid \$70 million on 11,000 claims and estimated that the total annual insurance cost for dog bites was about \$2 billion. (Voelker R. "Dog bites recognized as public health problem." JAMA 1997;277:278,280.)"

7. "According to the Insurance Information Institute, dog bites cost insurers \$412 million in 2009."

So, contrary to dog owners phrase "don't worry he's friendly," I worry a lot! The stress of being around dogs raises people's blood pressure and adversely affects their health. It raises mine. It also affects my mental health. I want to go to the park to relax but instead it worsen my mental health. Many I have talked to that have been bitten by dogs in the past exhibit signs of PTSD and the dog owner and dog's enjoyment comes at the price of the well-being of human being.

Correspondence: Please do not move forward with the proposal to limit the off-leash

accessible areas in California.

As a respectful dog owner who strives to provide a healthy, satisfying life for my animal, I urge the National Park Service not to restrict off-leash dog areas in California. In addition to the positive effects they have on the physical quality of life of the animals and their owners, the area's off-leash dog parks strengthen the community by uniting residents in a casual, social setting that encourages interaction and dialog.

Correspondence: I support your rules limiting dogs running free. Dogs should be either leashed or excluded from multiple areas where they now run free, despite existng rules. Ocean beach in San Francisco is too full of dogs running wild, frightening off birds, children, the elderly and anyone who is not big, strong and totally alert. Crissy Field beach is full of dried dog poop and it is impossible to walk there without getting knocked over or having to make a major detour around dogs. My right to peaceful use of my limited free time in these beautiful areas is constently infringed upon by dogs. I am not going to these places in order to spend my energy to avoid, walk around, protect myself from or step in the poop of dogs. I am trying to enjoy nature and my life. I do not wish to, nor should I have to spend time asserting my rights to dog owners nor should I have to listen to rude talk or a long sad story about

their trouble with doggy diarrhea when I point out that they are not cleaning up after their dogs. I love to walk on the beach and be outside and as I grow older the dog issue has become more and more problematic. I do believe you are representing a silent majority by making reasonable rules about this.

Thank you, Teresa Palmer

Correspondence: I would clearly prefer alternative D which offers the most control of dog walkers and the most protection of wildlife and non-dog walkers. Although having dogs in our parks is a problem, the bigger problem is with the dog owners and walkers. Dogs can be trained in some degree, but apparently dog walkers cannot be trained. After all, they are the ones that claim confusion about where it is allowable or not. So, if this alternative (D) seems to be confusing, perhaps it would be best to simply ban dogs in all the Federal Park areas. The dogs won't care, as long as they get to be outside. The dog walkers may claim that their park experience will be affected, but they are free to enjoy their dogs elsewhere.

Correspondence: As a responsible dog owner, I would like to have continued access for my dog in the GGNRA, especially at Lands End, Fort Funston, Sweeney Ridge, Mori Point, and, Pedro Point.

I understand the impacts of dogs on wildlife and agree that dogs should be leashed in most places, but please don't completely outlaw the dogs. The "R" in GGNRA means Recreation.--It is not a National Park.

I feel that a portion of the beaches at Fort Funston and Ocean Beach should be open to off-leash use, with all other sites open to on-leash use.

Thank you for your attention.

Correspondence: I treat 100 dog bites a year in my job as Division Chief of Plastic Surgery at Oakland Children's Hospital. I've treated dog bite injuries in children from Stinson Beach and Mill Valley as well as from all over the Bay Area. I live in Mill Valley and we have dogs and children. I'm in favor of the new tighter restrictions because a sizeable portion of dog owners ignore the rules with regard to leashes and voice control at Stinson or in the NPS put children in danger of sudden, severe injuries. I can attest that while dog owners vigilantly maintain that their dogs would never bite, these injuries do happen unexpectedly and can be catastrophic. There are so many other places besides the NPS for dog owners to walk in Marin and all over the bay area. From my perspective treating an average of two dog bites a week for over 10 years and from living both at Stinson Beach and Mill Valley, dogs and people aren't coexisting well at Stinson and in the NPS and therefore restrictions are necessary and overdue. Please contact me if necessary. Thank you, Stephen Daane, M.D.

Correspondence: One of the things that makes San Francisco unique is its dog-friendly spaces. When I first got my dog Mango, a rescue, I was thrilled to find I could take my best friend with me to enjoy San Francisco's beauty- Crissy Field, Baker Beach, and Ocean Beach are 3 of our favorite weekend excursions. I can enjoy a walk looking at the beautiful scenery, and Mango gets to expel energy, socialize with other dogs, and smell all the scents. She gets to enjoy being a dog.

If the Dog Management Plan goes into effect, we lose a community. The dog owners in this city are, in general, a friendly group of people who enjoy getting to know each other and each others' dogs. Our dogs start playing together, and we start a conversation. Part of the reason I love San Francisco so much is because I feel bonded to the people, many of whom I've met while walking on the beach. Without dogs, I never would have met any of them.

I consider myself a responsible pet owner, and I am impressed with the other owners I see as well. I never see dog feces lying about, and the dogs are all under voice control. This morning I saw a boot camp group working out in the midst of several dogs, and the dogs were not approaching the people at all, as their owners kept them away from the group. Our dogs do not have heartworm or fleas, as we take them to the vet and keep them up to date on medication. They are just there to enjoy the space, not to have any negative impact on the environment.

Please do not create uptight regulations that prohibit our enjoyment of our city and all it has to offer. Please keep the 1979 Pet Policy in effect. Please keep San Francisco unique in this way, that we may experience the beauty of this place with our furry friends, who also have a deep appreciation for it. Thank you, Lauren Rolfe

Correspondence: Dear Sir/Ma'am,

I am a local resident of San Francisco and I regularly visit Lands End, Ocean Beach 4+ times a week with my dog. To keep my disability (chronic health condition) under control regular exercise is required.

I am not happy with the plans provided. While, I respect everyone's right to enjoy the scenic scenery, the GGNRA seems bent on giving off leash dog walkers a choice between, barely anything and nothing at all. The "Compliance-Based Management Strategy" is non-sense, if people don't obey the law then allow the GGNRA to ban off leash areas without public comment? Whatever happened to enforcing the law?

In addition, the forcing of all new areas given to the GGNRA to be on leash or no-dog at all, is slowly forcing all off leash walking of dogs to well.. nothing. As the GGNRA obtains more land for the public trust, the land should not be discriminated against dog owners from the get go!

By large and large, I haven't seen any problems with dogs, and for the problems that exist (poop), focusing GGNRA resources on ticketing those

people who don't pick up, is better than these countless documents!

Regards,

-daniel

Correspondence: As a long-time resident of San Francisco, I enjoying going to Fort Funston with my dog 2-3 times each week. This is the only place where she can run safely off-leash and get the exercise she needs. I am concerned that the changes being proposed will significantly affect the quality of life for both my dog and my family.

The new, proposed off-leash areas at Fort Funston seem unnecessarily strict and arbitrary. The plan at this location is confusing and illogical and has the potential to create a lot of unintentional non-compliance because it is so confusing.

This is particularly concerning since the Compliance-based Management Strategy component of the proposal allows the GGNRA to change the status of off-leash areas to on-leash or no dogs without additional public comment if there is not 100% compliance with the new restrictions. The fact that the GGNRA can unilaterally circumvent the legal requirement to have a public hearing for any future changes is seriously concerning ? it is not the way we do things in America!

At Fort Funston, open areas that are basically uninhabited sand dunes (like the area to the east of the "beach access" path or the area between the parking lot and the water fountain) should not be closed down to off-leash use. There is no reason why these open areas that are perfect for dogs to run in should be restricted.

Today the park was full of people with dogs off-leash, hang gliders and other visitors happily and safely enjoying the park together. There is no need to change the current situation at all! The new proposal will seriously, negatively affect the ability of U.S. citizens who have dogs to access and enjoy GGNRA parkland with their dogs.

Correspondence: I am writing to comment on the proposed plan for dog management. It is a shame that in an area where people and their dogs are a high priority that the government is considering reducing a major part of recreation that is unique to this region. My husband and I have been taking our dogs to Ft. Funston for many years, and it is evident that those that go there have a true respect for the area as well as for their dogs. The dogs have not had a negative impact on the landscape, and no scientific study has proven to the contrary. This area is well used because of the allowance of off leash usage, and freedom to enjoy nature with your dog. This area is not utilized by non dog walkers except for the hang gliders, and they co exist well together. This area would be a ghost town without the allowance of off leash walking as it currently stands. I hope you will not vote to destroy this natural beauty of man and beast.

Correspondence: I can count on one hand the number of nearby trails/beaches that I can take my dog with me today, with the number of off-leash possibilities even

smaller. This new proposal will do away with almost all of them- Homestead, Stinson Beach and Oakwood Valley. Where will I be able to take my dog?

I am a responsible dog owner- I clean up after my dog and she stays on the trail with me, even when off leash. Her impact on the trails and environment is no more and I would say even less than mine. Horses and even mountain bikers have a far greater impact on the trails and environment than dogs, yet they are allowed on almost all the trails and even beaches(!) in Marin.

I don't think it is fair to make a blanket sweep and ban dogs from almost all of GGNRA owned space when the dog access rights are already limited to start.

Correspondence:

I strongly support your efforts to control dogs in all National Parks, including the GGNRA. We live close to Miagra Ridge, Sweeney Ridge, Mori Point, and Fort Funston and walk in all these areas. We frequently see dogs off-leash, chasing wildlife and pooping where owners don't pick up after them. I urge you to adopt the strongest plan, probably Alternative D, to protect people, wildlife, soil, and the serenity of the Parks' surroundings.

Please consider the following factors:

1. Dogs do NOT have a "right" to wander off-leash. Owners have a "responsibility" to ensure that their dogs do not pose a threat to people, other dogs, wildlife, and to the environment.
2. Many owners ignore posted dog restrictions. About a third of dog walkers we see on our daily walks do not keep their dogs on a leash, even when we remind them of the leash law.
3. Owners underestimate the danger their dogs pose to people, especially children. Off-leash dogs can be hazardous to strangers, even if they seem docile around people they are accustomed to.
4. Voice command restrictions are NOT an acceptable alternative to a leash because dogs may not obey voice commands when they are stressed by strangers or other dogs. On many occasions, we have seen dogs ignore their owner's commands and continue to chase wildlife--or wander about, sniffing for something to chase.

5. The "default" for all park areas should be NO DOGS ALLOWED EXCEPT IN DESIGNATED AREAS.

6. Given the horrible state of our National and State Parks funding, it is very difficult for Park staff (and even volunteers) to enforce any dog restrictions. This problem should make it even more important to allow dogs only in the safest areas.

7. The fines for violation of dog restrictions should escalate quickly after the first offense. Scofflaws will no doubt flout any restrictions; heavy fines are the only deterrent to these people.

8. Certain breeds proven dangerous to people such as pit bulls should NOT be permitted on any Park property without a leash AND muzzle. The fines for violation should be heavy, including impoundment of the dog.

9. Since the Pacific Coast is part of the migratory route of many birds, restrictions on dogs should also take into consideration the locations where these birds nest, feed, or stopover. Dogs should not be allowed in these areas.

Please do not cave in to a strident, vocal minority of people who insist on inflicting their dogs on Park visitors and property. The national and state parks are owned by ALL people; no small subgroup has a "right" to insist on special privileges.

Please adopt the strictest dog restrictions so that our parks remain as special, protected places that we can all enjoy and hand to our descendents in great condition.

Thank you for the opportunity to comment on this important Dog Plan initiative.

Correspondence: I would like to comment on the dog management plan. I am particularly concerned about Chrissy Field in San Francisco. Also the other walking/biking paths throughout the Golden Gate Area. I favor restricting as large an area as possible along the coast to no dogs allowed. I found that on a recent visit that the presence of dogs was very disruptive to a normal walk along the path and very disruptive when we walked on the beach. Dogs were

everywhere and I noticed over 1/2 of them were off leashes and running in packs of 3-4 dogs. It was threatening to children and walkers along the path. Dogs were everywhere and no one was picking solid waste after their dogs. I found it to be very disgusting to be surrounded by dog feces and urine and finding dogs pushing their noses into your body. Owners seemed oblivious to the behavior of their dogs and it significantly diminished the experience of being near the bay. Any restriction that can be done to keep dogs away from these National Parks that all citizens support would be an improvement. Reading the documents the preferred alternatives seem to be as good as you can get, although I would prefer even greater restrictions (banning dogs from all National Parks).

Correspondence: The plan for Mori Point seems very inconsistent. According to the maps (which are very hard to decipher), Bootleggers Steps would be closed to dogs completely. Trails at the top of Mori Point would also be closed to dogs. I can see no reason for these restrictions. Bootleggers Steps are man made (earth moved, vegetation removed, wildlife disturbed in the process) and a dog using them would cause no additional harm. I climb those steps every weekend with my dog and closing those steps to our use would negatively impact my experience. I have lived in Pacifica for almost 30 years and have been walking Mori Point trails before they were sacred NPS trails, for the same period. I actually think I would prefer to go back to the days when you had to dodge cars and dirt bikes driving off road, they at least shared the space. Take a look around and see how many dog walkers, most of whom are locals, use Mori Point. We are the major users of the area and you are denying us the use of our backyard.

On the topic of dog waste, why don't horseback riders have to pick up their animal's waste? I run into piles of horse manure regularly and somehow, apparently, that causes no harm to vegetation, water quality or natural wildlife. I think fairness is needed here. All domestic animal waste is to be

removed by the animal's owner in NPS space.

You note that dogs barking could disturb birds and other wildlife. How about children chasing birds, digging holes, screaming loudly. Apparently that has no impact on wildlife. Spend a little time on a weekend and you will soon see the impact of children on the natural landscape. Watch gulls and other seabirds frantically fly as they get chased from area to area. And you mention dogs could trample on snakes, again, how about horses, or bikes. Apparently humans chasing wildlife, trampling vegetation, leaving trash and waste, is just the cost of doing business, but dogs are apparently the root of all evil. Have you seen the state of some of the trails due to bike use? Some of the wetter areas are almost completely eroded, with deep ruts from bike tires. Again, apparently the cost of doing business. I think you have picked the dog as your scapegoat for what you somehow believe are the problems within the GGNRA. You will find that you are mistaken, unfortunately probably not before you close every bit of GGNRA space to dog walkers.

Please change the plan for Mori Point to allow use of all trails and Bootleggers Steps to dog walkers

Correspondence Type: Web Form
Correspondence: to the nps.gov:

i am highly concerned regarding the fort funston off leash laws being evaluated as well as the other open spaces currently allowing dogs either on leash or off for dog owners, walkers, and caretakers to enjoy.

fort funston is an off leash adventure dog park that i bring my personal dog, wyatt, and other clients dogs to run free in a safe environment; allowing them to run for approximately 20-45 minutes, while maintaining recall via voice control, remaining in a segregated pack, and exercising diligence,

my concerns if the park closes are as follows:

1) if the park(s) chooses to restrict off leash dog enjoyment, i foresee more dogs possibly becoming:

a) aggressive, due to lack of routine 20-45 minutes of running free, off leash. case studies show that dogs who do not get proper exercise routinely can become aggressive, anxious, hyperactive, and destructive; both to themselves, their owners, other dogs, and property (i.e. digging and other

extreme anxiety behaviours).

b) escaping from yards, (due to above mentioned)

c) excessive barking a/or (due to above mentioned)

d) excessive damage to owner's a/or (due to above mentioned)

e) affect/become neighbors problems. (due to above mentioned)

f) abnormal incoming shelter rates and animals who may be aggressive or difficult to handle a/or adopt out due to lack of exercise, socialization, and healthy group play monitored by a dog care professional a/or the owners.

g) dog owners who are unable to provide exercise for their dogs who are doing the responsible thing by paying for a service to pick up and drop off their dogs and bringing them to funston will no longer have this option available for their dogs and will have further frustrations and concerns of their dogs pent up energy. some owners may surrender their dogs in order to have a better life for their dogs, and this may result in increased shelter rates and may reverse the no kill policy at some shelters to becoming kill shelters, a/or moving the dog via transport to a kill shelter for euthanasia, resulting in an increased city, county, a/or state budget that cities, counties and the state already are lacking.

h) wildlife adjustment. deer, skunk, raccoons, rats, other rodents, feral cats, cougars, bobcats, coyotes, and even snakes may re-enter current "dog zones" due to less fear of encountering both dogs and humans. these can be represented as signs of a healthier eco-system. however, the reintroduction of wildlife can become an endangerment to park visitors and eventually become a great tragedy and loss for not only park visitors, but also for wildlife. dogs have managed to keep wildlife at "bay" in most areas of highly traffic off leash dog use areas. if the park system elects to close off specific areas to re-habilitate the ecology, wildlife will eventually re-enter these areas and may cause more problems. deer may become a hazard in areas where once there were no signs. deer may cross roads, injure motorists; resulting in fatalities, both in humans and the deer population.

cougars may encroach these new deer populated areas, resulting in more cougar sightings, accidental attacks on humans or pets (primarily small pets and small children), eventually contributing to fish and game obligated to destroy our precious california mountain lion population.

coyotes and bobcats may follow suit and become entangled in an urban wildlife management crisis that is denied in the documentation provided in the nps proposal for eco restoration and management, resulting in even more

damage to our current wildlife endangered already from urban sprawl.

being a responsible dog owner and dog care provider, i hope that fort funston and the additional nps parks will come to a compromise where both dog owners and lovers can continue to safely allow their dogs off leash, while maintaining a healthy balance in our eco systems, communities and neighborhoods.

without the off leash Privileges we currently are fortunate to experience, i fear the above mentioned concerns will occur within a 2-5 year time frame. as a tax payer, supporter of public lands, and a registered voter, i propose there be alternatives to allow the continued enjoyment of the nps areas for our dogs to run free.

alternatives:

a) implement a dog permit for professional dog walkers and maybe owners who would like to continue to walk their dogs off leash at the nps park areas. these permits can come in the form of day permits (purchased online and printable), at an nps kiosk (much like a parking validation at self service parking lots), or annually, or monthly. the east bay has an excellent dog permit program in existence.

b) implement a citation fee for dog owners not carrying the permit, exceeding dogs per person ratio, and valid dog tags (rabies) and licenses for county of residence.

c) implement a voice control recall policy based on the honor system. (dog owners watch a short video online or at a local library, nps kiosk, station, city hall portraying voice control protocols). owners watch the video, agree that their dog abides by the recall system protocol, and pays annual fee (video will have ot be watch annually before registration can be completed and fees paid) . dogs would be required to wear a voice control tag in addition to rabies and animal license or a citation, warning or actual will be given. boulder, colorado has a voice control/recall video and the program has been successful.

Correspondence: Dear Superintendent. I emigrated from Europe 25 years ago where dogs are allowed in all parks and beaches. I lived in SF ever since. I have survived the 89 Loma Prieta earthquake, divorce, 2 businesses failing, serious illness, the dot bomb and now the Great Recession, but only just. Part of my

recovery process throughout all these tragedies has been for me to walk my dogs at the beach, mostly at Baker beach but also at Fort Funston at least twice a week over the last 15 years. That is at least 2,600 visits to the GGNRA. The pleasure, exercise and stress relief I get from taking my voice-controlled dogs has literally saved my life.

For those walks which I depend upon for exercise for me and my dog, to be threatened to be taken away is horrifying for me. Once you rule that dogs can only be off leash in certain parts of the beach, or not at all, then chaos will reign. The plan has to stay at its 1979 agreement for one simple reason: human health benefits! You work for us, the American taxpayer, we pay taxes, we vote and we can ask for and get access to OUR public lands with OUR (trained) best friends. The off leash areas only represents 1% of the entire GGNRA and the people who are pushing for the restrictions have no understanding of what these restrictions will do to certain people, including me.

Also, the Compliance Based Management Strategy is BLATANTLY unfair and remains a nuclear weapon in your arsenal. Certainly punish those dog owners who flout the law and who do not clean up after their dogs, but to ban ALL dogs after conceivably just one incident, is unconscionable. Maybe in the Soviet Union, but not in America sir.

Furthermore, the Preferred Alternative severely restricts recreational access for people with dogs, a fundamental violation of the reason the GGNRA was created. In the legislation that created it, the reason for the creation of the GGNRA is listed as "the maintenance of needed recreational open space." Off-leash dog walking is among the recreational activities listed as traditionally occurring in the land that was to become the GGNRA. There is no off-leash access in San Mateo County in the Preferred Alternative and that must be changed.

Lastly, I believe the DEIS does not adequately address the environmental and social impact of forcing large numbers of people and dogs into much smaller areas. Reducing the amount of area available for off-leash will significantly degrade the park experience for people with dogs. It will increase conflicts. Even more importantly, the DEIS does not address the environmental and social impact on small, neighborhood parks in cities like San Francisco next to the GGNRA. That is why I have written and telephoned my District Supervisor Mark Farrell and will be cc'ing him and Senators Boxer and Congresswoman Pelosi.

Please do NOT turn us into a Middle East dictatorship!

Andy Norway District 2 San Francisco

cc: Mark Farrell. Senator Boxer Congresswoman Pelosi

Correspondence: Dear GGNRA members

Thank you for the opportunity to comment on the GGNRA Dog Management Plan as it relates to the Rancho Corral de Tierra property in Montara.

I am a member of the Montara Dog Group and I strongly oppose the plan to ban all dogs from Rancho Corral. The GGNRA's current plan is unreasonable and unjust and will have a significant negative impact on my family's quality of life.

My family currently uses Ranch Corral to walk our Labrador Retrievers. We walk there at least twice a day and sometimes more. We generally walk our dogs off leash in Rancho as they are on voice and hand command, however, we always have their leashes in hand and either put them on or make them sit/stay should we approach people who have dogs on leash, a cyclist, a horse, etc. As unbelievable as it may seem everyone that uses the area shows the same respect ? it is a truly unique community in that sense.

We have been using Rancho Corral to walk our dogs for close to 4 years. During this entire time the people who use this land with us - either to walk their dogs, ride their horses, cycle or just go for a walk ? have gotten along swimmingly. We have all been respectful of each others use of the land and of the land itself. Certainly as a community we have come together and have done what needed to be done in order to ensure we respect the beautiful land of Rancho Corral as well as to ensure that all those who use it respect each other. The waste can management (for which my husband is one of the volunteers) is one of the many actions the dog community has taken.

Use of the open space is critical to the health and well being of my dogs and my family ? small backyards which are common in CA are prohibitive to exercise and walking on the street doesn't provide the same amount of exercise, pleasure or safety measures for the dogs or the people walking the dogs. Rancho Corral provides the perfect opportunity for dogs and their owners to get the exercise they need in a safe environment. It also allows for social interaction for owners and their dogs which is critical to the mental well being of both. We have met such wonderful people and neighbors through walking our dogs at Rancho which has enhanced our day to day living and allowed us to feel safe and secure in our community. All of this is truly invaluable.

To not allow dogs in Ranch Corral is preposterous - GGNRA absolutely needs to be respectful of the residents in an around Montara that have used this land for 50 plus years with respect for the land and each other and with little or no incident. I imagine it would be more then difficult to find a community that has banded together with such vigor and success. My family specifically moved to Montara for access to this green space so removing my right to enjoy it as I do now is unreasonable and prejudiced. Additionally, although before my time, I know that the community historically fought to preserve the land and defeat planned developments and freeways in order to allow the enjoyment that people and dogs have there today. If it were not for the community's passion, efforts and success it might be that there would be a Rancho Corral today.

Furthermore GGRNA's proposal to ban all dogs from the land does not show equitable treatment as dogs are permitted on other GGNRA lands ? some of which endorse leash free activity. In addition the GGNRA's process for planning land use for Rancho Corral has not been forthright ? there was one local meeting to discuss the proposal and it is quite evident from the GGNRA's current plan that the multitude of feedback provided by attendees at that meeting as it relates to dog walking was not acknowledged ? basically a lip service was provided by GGNRA to the local residents.

I am requesting that the GGNRA implement Alternative E for Rancho Corral. The community has supported a scenario similar to Alternative E for countless years proving that it is a successful model - so not only is there no reason to change it, changing it is immoderate.

Regards, Brenna Turner Resident of Montara CA

Correspondence: My comments concern Chrissy Field, an area I frequently enjoy walking and bringing visitors. It is a special place because it offers a mix of natural beauty, easy accessability and the pleasure of watching people and dogs enjoying all the activities this area offers. Although I do not have a dog myself, part of the pleasure of Chrissy Field is watching a wonderful variety dogs happily play on the beach and in the water. I understand the necessity of a leash regulation on the paths. It appears to be generally complied with. However, it would be an unnecessary restriction to inforce leash laws on the beach. Up until now, families and dogs have happily co-existed here and the quality of enjoyment would be considerably diminished if that priviledge would be restricted. Thank you for your consideration.

Correspondence: It was disheartening to hear that GGNRA plans to remove what is already such minimal space that is available for off leash dog walking in the Bay Area, Fort Funston in particular. I am not a San Francisco resident. However, I often make the drive out there so that I can provide THE BEST outlet for my dog to run free because there is NO other off leash dog walking area like Funston in the Bay Area. It's actually one thing that impresses me about the City of SF. I don't live in a major city and the dog parks we have are small, fenced off dirt areas. Funston has sand dunes that dogs can run and roll around in. There are trails that allow for a hiking experience. A lot of my friends even come from the East Bay (Fremont, Hayward, Oakland, etc.) on a regular basis because they don't have an area like Funston either. The other day I met dog owners who came all the way from Santa Cruz, and they are regulars. It's their weekend trip! I've been going to Funston for the last couple years with my dog and it's always been such a peaceful, relaxing and fun experience. It is truly a special place, and not only for dogs but for bikers, hikers, and children.

My uncle used to bring my cousins and me to Funston when I was young (when our family didn't have dogs). This was back when the bunkers weren't boarded up yet and people could still walk through them. The environment was NOTHING like the way it is now. It used to be so much dirtier and a lot of homeless people walking around and camping in the bunkers. Drug dealers did their business in plain view. It definitely was not as safe as it is now. I clearly remember my uncle telling my cousins and me, "I do not want you guys coming here unless you are with an adult!" So I was pleasantly surprised when I returned to Funston with my dog as an adult.

I was hesitant when my friend told me that it's the best off leash dog walking place. In my head, I was only remembering how unsafe it used to be. But when I arrived and saw all the dogs running free and people socializing and having a good time, I fell in love with the place! I was amazed how clean it was, not just garbage, but of dog waste. I was expecting dog waste to be everywhere but it wasn't. Dog walkers/owners at Funston are VERY responsible. It has been very rare in these past few years I've been going to see a walker not pick up after the dog. And if they don't, someone will make it noticed to the owner and provide a bag for cleanup. I know that dog owners and dog groups in the area often do their part and organize volunteer clean up days at Funston. I am very impressed about how clean dog owners/walkers have kept the park!

I agree that it's very important to keep our land clean and preserve land and animals that are truly endangered! However, it's not solely dogs that "litter and damage the parks." Humans are the biggest culprits. It's the human that doesn't clean up after dogs and humans climb and trample through restricted areas too! Just the other day at Funston, there was a female walking WITHOUT a dog but she wasn't on the pavement or the trails. She was

walking through a roped off area. She wasn't even trying to go after a dog, just walking through the plants. So does that mean GGNRA is eventually going to stop humans from attending the parks? I highly doubt that would happen.

The barriers that GGNRA have put up at Funston to block off land/plants for preservation are highly ineffective. They are basically wooden posts with rope. Often, these posts and ropes are buried in sand because of the constant changing and windy weather. And the ropes will not prevent dogs and humans from crossing them (just like the lady I mentioned earlier). I feel GGNRA should put a little more effort and funding into more effective barriers if they are truly concerned about preserving plant life.

GGNRA has stated that dog barking effects the "soundscapes" of Funston. Honestly, considering the number of dogs at Funston at a given time, there is hardly any barking at all. I hear more of the highway traffic off the Great Highway and Skyline Boulevard than I do dog barks! Not to mention the TWO shooting ranges (SFPD and skeet) across the street at Lake Merced. Constant gunshots are going off every time I'm at Funston. Is GGNRA going to propose moving those two ranges? They should if they are arguing that the soundscapes are being disturbed and need to be preserved. Last week on two different days, SFPD and Bomb Squad had to detonate things at the beach. I heard AND felt the explosion. That sure affects the soundscapes. And not to mention the loud, low-flying news helicopter!!

How about the hang gliders, parachuters and horses? Hang gliders and parachuters fly low. Doesn't that affect the birds and animals living there? I don't see many horse riders at Funston but I know there are horse trails open to them. I know for a fact that horses do go through the area though because I will find HUGE PILES of horse waste sitting on the floor. Horse riders don't clean up after their horses, so what is GGNRA plan on doing about that?

This proposal would take away a great thing from dogs with responsible owners. Yes, there are fenced in dog runs but they're often too small and too dirty. I honestly believe that most dog owners who take their dogs to these types of places can't control their dogs. That's why they have to be in a fenced off or enclosed area. I feel that my dog is a lot safer and better off at Funston! And I do believe that the irresponsible off leash owners will flock to numerous other parks in the city and possibly cause disturbances there if we take away the current off leash parks. If Funston and other GGNRA off leash dog walking areas remain open and available, it will help prevent future problems in areas where off leash dog walking is not allowed! I truly hope and wish that this proposal that GGNRA came up with will not go through because I can foresee much greater problems and issues than what

we have now!

It's going to be a difficult task to preserve anything and everything and satisfy everyone and everything at the same time. I hope there will be a day where humans, animals and plant life can coexist without having things being taken away from one of them.

Correspondence: Thank you for working so hard to provide safe, clean and conflict free usage of our beautiful trails. Marin County is home to thousands of dogs, owners and animal lovers and there must be some spaces to take dogs on trails. I strongly support measures to keep dogs allowed on trails but enforce better clean-up of poop!! I live close to the Oakwood Trail. I believe the use of the trail by a large amount of dog walkers with multiple dogs puts a strain on the trails. Walkers with more than 3 dogs often have more dogs than can reasonably be safe under voice control. They are not as focused on the individual animals and may leave feces on the trail as well. These large packs are often threatening to other dogs with owners and cause concern to walkers with children or walkers seeking a quiet time on the trail. Please keep off-leash/voice control permitted but potentially enforce a dog/person ratio rule. THANK YOU for offering your time on this matter and taking comments!!

Correspondence: My dog and I were out walking the Miwok trail this morning. I have always been upset that a lot of the trails were restricted to equestrians. I feel this is so unfair, instead of reducing these restrictions you are planning to increase them. I would like to share some observations.

1\ Mount Tam just announced that they had an increase in the amount of bird life. The MMWD has the most lenient dog walking rules and this has not hurt the wild life in any way.

2\ Most dog owners are polite and take care of their dogs. I am sure there are a few who are not, I can't remember running into any. I have run into a few ruse bikers and horse riders. None of these groups should be banned due to a few bad apples.

3\ It is fun to go up early into the wilderness. I would however not feel safe out there without my dog. I don't think he would do anything if I was attacked but would be attackers don't know this.

4\ Roosevelt started the public park system during the great depression. We are once again in a time of hard economic times. Depriving people of the rejuvenating feel of the open space now just seems so wrong.

5\ Taking my children out into nature has built there love of open spaces. If you restrict who may participate in these spaces you will hamper me in passing this love onto my grandchildren.

6\The majority of open space users I see (I hike a lot in the Marin headlands, Crissy fields and Stinson Beach)are dog walking hikers. Equestrians leave large piles of manure in the middle of trails, deep hoof prints when it is wet, bikers leave large rutts in the trails. Dogs tread lightly.

Please don't take this away from us and the dogs we love.

Karen

Correspondence: Please continue to allow off-leash dog walking in the GGNRA. I wholeheartedly support requiring dog owners to clean up after their pets and keep their pets under voice control. However, I don't believe dogs should be required to be on leash, especially at Fort Funston and Crissy Field. 99% of dog owners are completely responsible. Dogs need to be able to run free for their health and exercise. There is very little space to do this in SF. Thanks.

Correspondence: I just returned from walking on Crissy Field - and saw 4 packs of dogs, ostensibly with a dog walker, but running free without leads. One pack had 6 large dogs. There is no way one person in charge of six dogs running free on the beach can be able to keep her eyes on each dog all the time and make sure all faeces are collected. This is a public health nuisance - quite apart from the random behavior of the dogs intimidating small children and those of us who are wary of dogs. Unleashed dogs run freely over picnic blankets, through sandcastle construction, after the balls of children playing.

Dogs should, ideally, have places to run freely, but their presence on Crissy Field contradicts the tremendous job done in the last 2 decades of returning the edge of the Bay to more natural conditions. Unleashed dogs do not fit with the environmental thrust of reclaiming the habitat.

Correspondence: Please, please, please do not move forward with the preferred alternatives.

I am a reasonably new dog owner, having adopted my yellow lab in October 2009, but a lifelong dog lover. As I read through the summary of considered and preferred alternatives, I couldn't help but feel sad -- sad for myself and my dog, of course, but also for my children, who get so much joy out of running down Muir Beach or Chrissy Field with our dog while throwing a ball to her, and out of hiking on the Oakwood loop near our house in Mill Valley. It also made me feel sad for the tens of thousands of responsible dog owners and walkers whose daily lives and options for where to take their dogs will be severely impacted if the preferred alternatives are implemented.

I know that many people have put a great deal of time and thought into evaluating the alternatives, which I do appreciate. I also certainly don't approve of dogs threatening children or wildlife or any other creatures who cannot defend themselves. However, as a responsible dog owner who keeps my dog on leash or under voice control, picks up after my dog, doesn't let

my dog wander or chase birds, etc., I feel that the preferred alternatives selected are unduly and overly restrictive. My understanding is that dogs are currently only allowed on 1% of GGNRA land and that this will significantly reduce the areas where dogs are allowed at all and almost eliminate areas where dogs are allowed to play off leash. In my opinion this is tragic and unnecessary. My hope is that if changes do in fact need to be made (and I'm not sure they do) that alternatives closer to A or E can be re-examined. As a side note, I do wonder, whether other alternatives, such as allowing dogs off-leash at certain times or on certain days were considered.

Thanks for the opportunity to comment. I truly hope you will reconsider the preferred alternatives - for me and for many of the dog lovers I know they are really not alternatives at all.

Sincerely,

Julie Smith

Correspondence: Thank you for the opportunity to submit comments

My family has a 15 year old dog. He is a member of our family and should have the opportunity to visit beaches and park as long as he is meeting the rules. We live near Muir Beach- he has been going to this beach for over 11 years. Our community- the USA consist of all peoples and their pets. To restrict pets from all public areas and beaches is wrong and I am sorry the GGNRA which I have support in many, many ways my past 20 years in SF and Marin is purposing such an unrealistic measure!

I request that dogs be permitted on beaches - at tide level off leash and on leash at all other currently permitted areas!

Thank you,

Correspondence: I am very disappointed that the GGNRA wants to severely limit off leach dog walk areas. Dogs need to run to stay healthy and happy. These parks are Federal so everyone should be able to enjoy. The majority of Dog owners do pick up their dog's poop. Fort Funston has a group that actually has volunteers who pick up missed poop in the park. If you limit the areas you are talking about it will put more of a strain on other parks. The majority of time I walk my dogs at Fort Funston and everyone gets along and enjoys the walks. If we can't continue to walk our dogs in the same areas the dog owners will have decreased activity and start gaining weight! We already have an obesity problem. The park would be empty if it wasn't used by the dogs and their companions. There has to be other solutions but to take away from the free space we now have to enjoy with our dogs.

Correspondence: I am deeply disappointed in the proposed plan to restrict the use of our public parks and beaches. I pay my real estate taxes and am a responsible dog owner. Many of the proposed plans are not realistic. Dogs require safe spaces to run and be exercised. I agree that dog owners should be responsible and clean up after their animals, however, restricting dogs to confined spaces close to parking lots puts there welfare at greater risk. Part of the reason I live in Marin is to enjoy our parks and recreation areas with my dog. It is important for both of our health and welfare to be able to enjoy the outdoors, exercise, and enjoy the beauty of the area we live in. I do not have children, yet my tax dollars go to the upkeep and improvement of the schools in Mill Valley and the County. It is only appropriate that I be able to use our National Parks and beaches for recreation with my dog.

Correspondence: 2/24/11 RE: GGNRA Proposed Dog Management Plan Dear NPS,

First, I want to thank you for the thorough and informative treatment of this important issue. My comments will be limited to plans affecting the South Rodeo Beach area. As a resident of San Francisco and then Berkeley since 1963, I have visited this cove on countless occasions as a beach goer, fisherman, hiker and dog owner. One of the cove's main attractions for me has been its secluded location, accessible only by a medium difficult trail from behind, and only at low tide from Rodeo Beach proper. This seclusion offers ideal conditions for dogs to play and swim as the human population is never very great, and the cove is small, allowing visual and voice contact with dogs from any place and to any place on the beach. Also, dogs are not as tempted to harass the birdlife because the birds found there are mostly in the water; the beach is steep and wading birds do not find it useful for feeding as they do on a broad shallow shingle such as Rodeo or Muir beaches. All in all, I have found this to be one of the most dog-friendly places in the entire bay area, and certainly the best beach.

I am concerned, therefore, as to the reasons for further restricting dogs in this particular portion of the GGNRA. It appears that a great deal of thought has been devoted to other areas, and there has been a lot of public input over the issues of places like Chrissy Field and Fort Funston. But I don't see why South Rodeo Beach, possibly the least visited of all the sites, should have been included in the plans to increase dog management. If there are specific reasons behind this part of the plan, I might look favorably on a change of rules, but I have not seen any mentioned.

In conclusion, my request is that you consider treating South Rodeo Beach the same way you would other voice-controlled areas in the plan.

Thank you,

Peter Smalley

Correspondence: I am both a park service volunteer and a dog owner. As such, I am sensitive to the environmental impacts of both people and dogs and the responsibility to keep my pet out of restricted areas and off the berms. I pick up not only bits of plastic and styrofoam, cigarette butts, abandoned toys, miscellaneous trash but also pet droppings from my own dog as well as others while on my walks and on my volunteer work days. Although we have walked several trails in the GGNRA, we walk every day on the east end of Crissy Field,

along the promenade and on Central Beach.

I must commend the Draft for being comprehensive and for the efforts to take into account the various areas and different needs of the numerous areas affected. However, I do believe that some of the recommendations of the Plan are naively conceived, to wit: - early in the morning, except for a sanctioned triathlon or the like, I have never seen anyone using East Beach other than those with dogs. I would guess that before 9:00 a.m. there are no beach-goers and that dogs off-leash would not intimidate anyone. I do agree that attempting to sun or play in the sand would be difficult with dogs running around, but before and after certain hours would be a more reasonable control to accommodate those who do not want to have dogs around. - a designation "east of the eastern-most path and west of the western-most path" on Chrissy Field is silly and to my mind hardly the clearly designated areas to which park personnel can refer people. Are those who are dog-adverse really going to use the small areas designated as dog-free? The field is a large open space and most dogs don't stop when a paved path crosses their running area. I can only imagine that this delimitation is designed to aggravate enforcement personnel, those who are afraid of dogs and pet owners alike. - a word about enforcement. The compliance-based management strategy is by definition too vague. How will the total number of dogs be determined without some kind of license or permit that also designates how often the dog uses the area? Most of the time I am exercising, I never see park personnel. If I walk my dog daily for an hour along the promenade and some out-of-town visitor has their dog off-leash in the same area, will that count as 1 violation out of 8 "dog uses", will it be 50% of the dogs on the path at that time, or will there be some accommodation for the length of time I have been in compliance and the de minimus time the visitor is not compliant? And for those who object to dogs being in the space they feel should be dog free (but has been designated ROLA), will there be an easing of restrictions if there is less than 75% compliance with the dog-adverse being in a ROLA area?

I have read the letters from tourists who want to experience the beauty of this area without dogs. On some level, I can appreciate that accommodating the dog-adverse who will be positively impacted by all of the plans except A over the pet-owner who is minimally adversely impacted by all plans except A may be a good idea. But, will those who object to dogs on-leash coming up suddenly around the bend of a narrow trail, or off-leash in the middle of Chrissy Field be cited for not being in a dog-free area? I hope that as much effort goes into educating the dog-adverse to their advantage as to compliance of pet-owners with the new restrictions.

Correspondence: My wife and I are frequent users of the Crissy Field area since it is near our home, and although we no longer have a dog, we do occasionally have our daughter's dog accompany us on our visits to Crissy Field. Although I do appreciate the potential need to separate dogs from some areas, given the usage in the area during the week, I don't believe that you need to adopt an absolute no-dog zone for the East Beach area. It is a very convenient spot for us to park and we have not observed a problem between dogs and people, even with small children using this area, especially during off-peak usage periods. I suggest that if there has to be a no-dog area, that you limit the period to the weekends and holidays, during the peak hours periods - perhaps from 10:00 am to 4:00 pm.

Correspondence: I wish to support the DEIS alternative of increased restriction for dogs within the GGNRA, both on and off leash. As a birder/naturalist using the GGNRA since its inception in the 70s I have witnessed an explosion of off-leash dogs on trails, particularly within Marin County. The shortage of rangers to enforce leash laws, coupled with the staggering increase in recreational hikers with dogs has led to a dramatic decrease in abundance of birds within the GGNRA as measured by national audubon's christmas bird count numbers, and personal records. The specter of dogs running freely through the underbrush has resulted in a "bird-free zone" within at least 40' of most trails. It is rare to see a dog actually on leash. The usual sight is a dog running free, with the owner carrying a leash in-hand. Tennessee Valley trails are particularly abused, with owners claiming not to see the signs, or saying of their dogs "they never catch the birds". Harrassment of birds during any season disrupts feeding, breeding, and resting behavior, and deprives them of habitat critical to maintain population numbers critical to a diverse avi-fauna. Rocky Mountain National Park has resorted to volunteers with radios and cell phones stationed near entrances to turn back scoff-law pet owners. While I empathize with pet owners over the shortage of space to recreate with their dogs, they must understand the consequences of inappropriate use, and create alternative dog runs in space intended for that use. John Comstock

Correspondence: I completely oppose the changes that either require dogs to be leashed or prohibited from being on public lands. With open space, beaches, parks and trails being overly restrictive already for dog owners/dogs, if this is allowed to pass it will only get more restrictive and before you know it, we won't even be able to walk our dogs down public sidewalks! Seriously! Pet ownership should be encouraged as a way of removing feral cats and dogs from our communities, showing a little heart, and helping the economy. Therefore, as conscientious as we are about our dogs public behavior and our clean up habits, the few loud voices that want EVERYTHING their way are winning the battle and dogs will be banned nearly everywhere if we dog owners don't voice our objection to such restrictive ordinances. Shame on you if you capitulate. Sincerely, Diane

Correspondence: Dog policy within GGNRA is in critical need of revision, and enforcement. Inevitable small percentage of scofflaw dog owners (majority obey rules)

has resulted in: --Reduction in diversity of birds and other animals seen by naturalists. For example, see Peter Banks; Biology Letters, Dec, 22, 2007 3(6) 611-613, documenting up to 40% measured reduction in birds along trails used by dogs. --On daily nature walks, I have personally noted a reduction in threatened, endangered, and special status species within Marin Headlands, and Oakwood valley trails. Species of concern are ground dwelling birds (California Quail, California Towhee, Fox Sparrow, Swamp Sparrow, Virginia Rail, as well as species requiring secluded habitat and specialized cover, such as Long-eared Owl and Rufous-Crowned sparrow. -- Along upper reaches of Alta trail professional dog walkers are seriously disturbing habitat of Mission Blue Butterfly by allowing dogs to roam freely. --In areas signed for "Dogs on Leash" the majority of owners simply carry a leash to deploy should they spot a ranger. When reminded of the rule, many are hostile, or simply say "Yeah, right..." indicating scorn for any vestige of enforcement. --Rocky Mountain National Park currently employs volunteer "rangers" with cell phones and/or walkie talkies to inform non-compliant dog owners of the law, and to call in a ranger for a citation if they do not turn back. --At Tennessee Valley beach, where I lead the Christmas Bird count for Southern Marin Audubon, I see several dogs being walked on or off leash despite the new large "No Pet" signs. The culture of disobeying the signs seems to have become the common practice among this minority of scofflaw owners. --I urge that an increased level of restriction be adopted, and ENFORCED by the method used in Rocky Mt. NP, realizing that ranger resources are stretched thin. Sincerely John Comstock

Correspondence: My name is Mike Greenfield. I am longtime resident of the Bay Area who currently resides in the Outer Sunset. I am a committed environmentalist, attorney with a background in environmental law, former Park Ranger/Naturalist at Sequoia National Park, and am an avid supporter of policies designed to protect the natural environment. Being a surfer and a dog owner, I typically visit Ocean Beach and/or the area surrounding Land's End several times a week, which I believe may perhaps provide me a sound perspective from which to address issues pertaining to the USNPS's misguided management proposals for the GGNRA. In short, the proposed restrictions regarding where dogs shall be allowed within the GGNRA are ill-conceived and absurd. From the onset, the NPS has had a very clear notion of precisely the sort of policy that it wished to implement and since assuming management of the areas in question, has been doggedly (no pun intended) working backwards in an extremely transparent attempt to discover a sound basis for the policies that it had already agreed to adopt without first doing the necessary due diligence. As a result, this process has

now become a sham, since the policy was decided at the onset and as with most things the NPS does, no amount of logic is bound to get in the way of these policies being implemented. As I understand it, the stated rationale for essentially banning dogs throughout the GGNRA is: 1. The enact a deleterious impact upon the environment; 2. Their presence is unwanted and unappreciated by visitors to the area that do not like dogs; and 3. Because this is simply the policy that the NPS has adopted and implemented in all of the other mismanaged properties that it has been charged with administering. I will now address each of these points in order.

There is absolutely no question that dogs do exact an impact upon any environment and most certainly upon that which exists within the GGNRA. Everything in this world presents an impact upon the environment. The question however is what the impact is and how great is the degree of harm that this impact represents. This is precisely where the reasoning behind the NPS's proposals lack cogency. While it is impossible to state what the actual impact of dogs may be (since there exists no credible data upon which any such statements could rely), it is nevertheless remains an absolutely incontrovertible fact that humans have and continue to present an infinitely greater negative impact upon the environment than do dogs. I find it astounding that while the adverse impact of dog's is routinely touted as an accepted basis upon which to deny virtually all off-leash privileges within the GGNRA (and other areas), there is nary even the slightest bit of actual evidence offered in support of these claims. The proverbial "elephant in the room" is that NO empirical evidence in support the predetermined findings and/or claims regarding the environmental impact posed by off-leash dogs actually exists. This statement applies equally to proffered necessity of banning dogs in order to protect and assist in the recovery of the endangered snowy plover populations. Again there exists no empirical evidence to support the assertions that dogs pose any legitimate threat to the future existence of this or any other species existing within the GGNRA. Claims of the snowy plover's demise being in any way tied to the activities of off-leash dogs are both disingenuous, spurious and completely overstated to say the least. It has long been settled that the compromised status of this species is attributable to anthropogenic habitat destruction. The widespread decimation of sand dunes, estuaries and other wetland systems (all of which are critical to the propagation of the snowy plover), represents the long established cause of the species' currently low population numbers. Sand Dunes have been paved over and trampled; and wetlands drained, filled, paved over and otherwise destroyed not by dogs, but by humans, which are interestingly allowed unrestricted access to all remaining critical habitat. In my numerous ventures within the GGNRA I have on multiple occasions witnessed the presence of both foxes and coyotes within the littoral zone. I am aware of no plans to limit their access within the GGNRA, nor to limit access to raccoons, skunks, crows and seagulls, all of which exist within the immediate area and are known to consume eggs as part of their natural diet.

I suspect that there are no efforts being made to eradicate these species from the area because the threat that these natural predators may present to threatened plover populations (and other species) is considered to be nominal at most. So then, I wonder how it is that domesticated dogs, which generally lack the ability to constructively harness their natural foraging instincts are presumed to present such a significant threat to this environment, when all of these natural born killers are presumably non-issues. Furthermore, if not for the widespread destruction of coastal environment by humans, the numbers of all these species (save the crows, whose numbers have been unnaturally enhanced by the existence of human fodder) would exist in far greater numbers than they do at present. I mention this to point out that the plovers have always had to deal with a certain degree of stress and mortality at the hands of natural predators, which in turn helped to ensure that the population remained strong. This is not to insinuate that humans and their dogs should go out of their way to harass the birds in an effort to assume this role, but rather merely to mention that they have evolved in a manner which allows them to survive such non-threats. Again, the plover's threatened status is a product of habit destruction, NOT from dogs. In a society that has long been governed by forces that have adamantly opposed any application of the precautionary principle, we are now being asked (by a branch of this government no less) to accept that the NPS's rationale for eliminating the existence of off-leash dog sites is principally tied to the imagined potential of dogs to harm the environment. In other words, since it is currently impossible to say what harm dogs may present, the NPS has determined that it is necessary to eliminate dogs as to ensure that they cannot pose any harm, real or imagined. Mind you, there are again no such limitations being imposed to restrict the access of what is unquestionably the world's most destructive species: humans. Of course the reality is that all of these stated justifications for banning dogs are nothing more than a pretext for doing what the NPS had long since decided that it was going to do: eliminate all off-leash zones within the GGNRA. As to the concern over dog feces being left on the beach by irresponsible dog owners that fail to clean up after their pets, while it is an unfortunate fact that there do exist some idiots that presumably find it acceptable to leave their dogs crap, in my experience they represent an overwhelming exception rather than the rule. The vast majority of dog owners that visit the GGNRA with their pets are extremely conscientious about cleaning up after their dogs. I do not possess any data on matter, however I would confidently insist that the percentage of dog owners leaving crap on the beach is extremely small in comparison to the non-dog owners who visit the beach and depart without cleaning after themselves, leaving a trail of litter in their wake. I will discuss this issue in further below. In short, all claims regarding the environmental impact of dogs in the GGNRA are overblown and have been based on little more than conjecture and the otherwise unsupported opinions that together form a rather tenuous basis upon which to base the enactment of policies that will ultimately affect the people who most often use the areas in

question in a decidedly detrimental fashion. In terms of prohibiting off-leash dogs in the GGNRA on account of wishing to respect the interests of those visitors that do not like dogs and do not wish to encounter them within the area, I am confused as to why this minority interest should supersede that of the majority. Ocean Beach stands out as one of only a few public beaches in the entire state that do allow dogs to roam off-leash, which means that those not wishing to encounter dogs have numerous alternatives to visiting Ocean Beach, whereas the same cannot be said for dog owners, who have no other options for letting their dogs run freely and get the exercise they need (Note: fenced in off-leash dog park (crap piles), do not provide either the space or the terrain required). I am at the beach nearly every day, regardless of the weather, which incidentally, is usually pretty lousy in terms of beach conditions. On most days, virtually the only people at the beach are dog owners (with their dogs), surfers, the occasional jogger, a few kids drinking and smoking dope, and perhaps a random couple that might be better served in a motel room. Ocean Beach does NOT adhere to the vision of the prototypical California beach. It is rarely warm, sunny and conducive to "beach days." This is worth noting in terms of analyzing who it is that actually uses the lands that you are targeting with these needlessly restrictive new measures. On the handful of beach days that do occur within the city, Ocean Beach is of course inundated with the people coming out to enjoy the weather. Following any of these days, the beach is left in a total state of disarray: trash, bottles, and other assorted crap strewn from one end of the beach to the other, which stands in stark contrast to the dog walkers who are generally excellent about picking up after themselves, their dogs, and in the wake of the messes left behind by the constituency that you are clearly most interested in appeasing, the trash of others. Furthermore, in my experience, those that don't like dogs appear to be in an overwhelming minority. I have a very friendly dog, he likes to greet just about everyone. As such, I am very conscientious about making sure that he is not a nuisance. It is extremely rare that we encounter someone that is clearly made uncomfortable by his presence, and when it does occur it is never an issue, we simply move on and the person is left in peace. I am not sure why we need to be so over-protective of these people (who may or may not actually exist). Quite honestly, I regularly encounter lots of people and situations in this world that I am not particularly excited about, and when it happens, I extricate myself from the situation as to eliminate the annoyance. For what it is worth, I would much happier if all of the idiots who come to the beach and trash it, throwing cigarette butts, beer bottles and whatever else they bring strewn around (and incidentally trampling the areas most sensitive to the plight of the snowy plover) were restricted from accessing the GGNRA, but this does not appear to be a concern of the NPS. For my part, I understand that in living within a large metropolitan area I must accept the reality of having to encounter many such annoyances. I think it is unfair and entirely unreasonable to attempt to create a safe-haven for one minor constituency at the expense of a much broader one. It is not as though

we are talking about a wild pack of pit bulls attacking people on the beach. Most of the dogs out there are extremely well behaved and are with owners that are generally very considerate of whoever else is on the beach. If there is somebody that has an irrational fear of dogs, they should either get over it, or visit any one of the countless alternatives to Ocean Beach, where dogs are not allowed. Irrational fears should not be granted a higher priority than those which are rational. Ocean Beach has long been a bastion for dog owners in the city, many of which have acquired particular species of dogs (that require extensive exercise) with the availability of Ocean Beach and other areas within the GGNRA in mind. It is impossible to effectively exercise many species of dogs without giving them access to large spaces in which they can run off leash. Imposing a leash requirement is akin to banning dogs outright, insomuch as the reason that most dog owners take their dogs to the beach is so that they can get exercise (leash = no exercise). To now restrict access to these places will adversely affect the health of the a large number of dogs in the region which will in turn also negatively affect their owners. It does seem unreasonable to make such a drastic change in the rules at a time when so many residents have come to depend on being able to exercise their dogs within this area. There are countless options for visitors who would prefer to not encounter dogs.

It is an utter absurdity that the NPS is touting the fact that the GGNRA is the only park managed by the NPS that currently allows off-leash dog areas as a rationale for why the rule should be changed. This is a circular argument that at its core lacks any sort of reasoning (good or bad). Since the GGNRA is wholly unique from all other properties within the park system, it would seem to make perfect sense that some management policies would differ as well. Implementing within the GGNRA a catch-all policy that may make sense in other places, simply for the stated reason that this is what you have done in other places, is itself far from a credible rationale. The GGNRA is unlike any other property within the NPS and therefore deserves to be managed differently, and it may be worth pointing out that indeed, in most regards it is. For instance the Presidio is the only property within the Parks holdings that has been set up to be self-sustaining. This is such a radical departure from what is done in all of the other parklands, that under the same rationale being used to justify the proposed dog policies it should not have been allowed. Further it is worth looking at the geography of the GGNRA. It is within a huge metropolitan area and operates as much more of a local park than a National Park in terms of who uses it. While San Francisco may be a destination attraction, it would be a stretch to suggest that the GGNRA is itself. Certainly tourists visiting the city do venture into parts of the GGNRA, but these areas are generally limited, and constitute only small part of the typical visitor to San Francisco's itinerary. Additionally, none of these visitors are paying any sort of entrance fee to visit GGNRA, because again, it is being managed differently than all other parklands. So why then does the NPS find it necessary to maintain a

uniform management policy in this one narrowly defined area (dogs) when so much of how the GGNRA is operated already marks a huge departure from the NPS's normal procedures. The GGNRA is essentially a city park. The vast majority of its visitors are local residents. This stands in sharp contrast to every other property managed by the NPS, all of which are primarily tourist attractions. As such, rather than insisting upon the implementation of policies drafted with totally different context in mind, the NPS should be considering the historical usage of the property and the wishes of the locals. These lands have historically been open to use of dogs off-leash. Residents have come to depend upon these places and the vast majority of people who visit them seem to find the setup perfectly acceptable. It is unreasonable to implement policies designed to serve only the interests of a small minority ? at the expense of the majority, who is then left with no suitable alternatives. Why the hell should a small band of hypochondriacally minded bird lovers (with totally lacking in scientific evidence) be able to dictate the policy for the masses (yes we all know who is behind it) Furthermore, in closing these lands to dogs, you will produce a trickledown effect that will detrimentally effect city parks and other areas that dog-owners will then be forced to use en masse. In conclusion, the suggested adverse impacts that dogs have on the environment are grossly overstated and are presented without any scientific data to back up the claims. Further, there are numerous alternatives locations that people who are uncomfortable with dogs can visit, while there will be no such alternatives for dog owners, once dogs are banned from GGNRA. Lastly, the GGNRA is wholly unlike all other properties managed by the NPS and thusly deserve a policy that is designed to effectively serve the needs of the majority of those who regularly use it. I implore you not to eliminate the off-leash sites as you have proposed.

Correspondence: Please restrict dogs to on-leash only North of Stairwell 21 at Ocean Beach.

I am a long-time resident of the outer Richmond District of San Francisco. I am on the beach, or walking along the sea wall with my wife, most days in the year. Off-leash dogs are a nuisance and can detract from the enjoyment of the beach experience.

Most dogs are under the control of their owners when off-leash and know how to behave but many do not. My wife, like many people, is afraid of dogs and is made very uncomfortable when dogs come up to her. Dogs off-leash annoy and often threaten me when I am out picking up litter on the beach. Why should our enjoyment and use of Ocean Beach be curtailed by

these off-leash dogs?

It would be ideal if there were no dogs at all allowed on Ocean Beach North of Stair well 21. This is the part of the beach most used visitors and locals, and dogs do nothing but detract from the beach-going experience for most non-dog owners. Dog excrement and urine can also pose a serious health hazard to both beach-goers and surfers as anything deposited along the shoreline will pollute the ocean.

Dogs should not take precedence over people.

Thank you for taking my comments.

Correspondence: I am opposed to the proposed regulations which limit dog's off-leash activities and areas. Dog ownership, off-leash dog activities and protecting the environment are not mutually exclusive. Reponsible dog owners need the off-leash areas to exercise their animals and they can happily share these areas with other people. In stead of punishing all dog owners for the actions of a few people who cannot control their dogs, please focus only on those bad owners. Most dog owners are very responsible and care deeply about the environment. PLEASE OPPOSE THIS PLAN AND ANY PLAN WHICH ATTEMPTS TO RESTRICT DOGS IN THE GGNRA.

Correspondence: I support dogs ON leash in all areas of the GGNRA. There is an issue that has not been considered and that is liability. There should be no off leash areas that are not fenced off or otherwise clearly marked off as off leash areas. If this is not done, the GGNRA could be held liable for an injury/adverse event due to off leash dogs. In off leash areas, a person who is injured will have a difficult time holding the owner liable given the assumption of risk. If one goes into an off leash dog area, you are assuming the risks that go along with this, like dog bites or decreased mental health due to off leash dogs. Therefore the dog owner is generally not held liable for these events in these areas. Should the victim argue that they did not know that it was an off leash area (due to poor signage or not fenced off area), the dog owner is still not liable but rather the entity that sanctioned the area an off leash area may be held liable. While still difficult to argue, this would be the avenue a person would be advised to follow. The way to prevent people from injury and/or adversely affected mental health is to have fenced off areas with clear signs. However, I argue that creating a space that is off leash excludes certain groups and is a discriminatory practice. Since the park is asking that people accept the risk of being attacked by dogs, this area is off limits to people who are not comfortable with dogs and certain minority groups that can not interact with dogs (for example strict muslims). Parks should have clear rules posted in every off leash area that among other things should require voice control (which would help with making the dog owner liable). I also suggest that young children not be allowed in off leash areas given their higher risk of being bitten and/or scared. Therefore these areas should be a very small percentage of the GGNRA and should not prevent people from enjoying the majority of the park.

Correspondence: I am not particularly pro or anti dog. However an incident last weekend confirmed by opinion that all dogs should be on leash at all times when in public areas. I don't have a dog, so I don't know where on and off leash areas are, but after the incident I found out I was actually in an on leash area of the GGNRA. I was walking and I heard someone calling out the name "Leon". I came across a woman up a hill, calling to her dog. The dog was circling two young girls about age 8 or 9. They looked terrified and had their arms up in the air and kept backing away from the dog. The dog continued to follow them and did not look friendly. The dog was clearly not responding to the owner who then reluctantly descended the hill. Even when she got closer the dog would not responding but luckily she was able to grab

the dog by its collar and pull it away from the girls. The dog let out one last loud bark and the girls jumped. The woman did not apologize to the girls or even make eye contact with them. The young girls of course didn't complain to this adult and just seemed relieved for the ordeal to be over. I felt guilty that I just watched because the dog could have bitten one of the girls. I regret not intervening to get the dog away from the girls sooner, but I realized that I was also afraid of the dog. Still, no excuse. I also regret not saying anything to the owner. Hopefully sharing this story does some good and prevents this from happening to other children.

Correspondence: I am so sad as a 10-year dog-owner resident in San Francisco that there are still people out there that want no dogs anywhere. I have travelled the country with my pet and on our travels most people we met were very unhappy about the recreational options for their pets and they experienced more pet aggression. They were jealous of our wonderful options in the bay area.

My pet was trained off-leash at Fort Funston and is amazingly well-behaved and obedient. She learned these great behaviors and to be extremely well-socialized (and a much better pet and companion as a result) from being able to recreate off-leash in Marin, Crissy, and the amazing dog-friendly areas that we are so lucky to have in the bay area.

In other parts of the country they are not so lucky. They have strict leash laws, dog pens, and have increased dog fighting, dog aggression, dog misbehaviors (due to lack of great exercise and socialization), and dog illness (due to disgusting pens.) Dogs recreate in parks next to small children and have many more run-ins with people due to the simple fact -- they cannot properly exercise.

As a dog owner for the past 10-years I have witnessed that a well exercised dog is a calmer, happier, and a better adjusted pet that will be better in the community within which it resides.

Crissy and Funston are special places. When my dog goes there or on long hikes in Marin - she is so happy. I often hike with my friends without pets

who love my dogs' companionship on the trip. She often keeps us going. She is a member of our crew. Most dog owners love their pets and they are a member of the family. If they cannot recreate with them it is like saying you cannot recreate with your child or you cannot wind-surf (with your gear) at Crissy. It is plain all out unfair.

We are citizens too with a right to recreate in GGNRA sites too. I have seen happy dogs--and responsible owners who stay in the "known" areas to recreate with their pets responsibly. Most owners are super respectful of this so that we can all enjoy this "common space."

There are a lot of dog pens in east bay -- and I have personally witnessed dog fights, etc there. I was horrified. Also, the dogs just do not get the real exercise like they do at Funston, Crissy, or Rodeo. I have seen no fights at Funston EVER. Dogs are just too happy -- also as an owner I am happy too -- I get a great hike in or a bit of beach time -- because I recreate with my pet. I have a right to recreate with my pet.

On-leash for the entire walk at a place like Funston is a joke. The dogs love the hills near the parking lots -- they run fast and burn off the "energy". They love the paths on the way to the beach. They love the patch of beach and they play -- it is a joy to watch these animals have such fun and joy. As owners, we relax too. We see the beautiful San Francisco in the backdrop while we climb paths. We stay out of the areas that are blocked off for the habitats, and keep to the well worn paths on the back part of the main 2 mile path. I do not think that this is asking too much of GGNRA -- a fantastic special place for owners with their pets to recreate -- when there are literally tens of thousands of GGNRA acres to share.

I feel that if we outlaw animals on the "patch of space" at Funston, the small stretch of off-leash beach at Crissy, the off leash "patch" at Stinson and the allowable open spaces in Marin -- what is next -- outlawing PET ownership entirely? For the past 10 years I have seen harmony in these big spaces. At Funston the families who fear dogs go off to the other side, the windsurfers too. Why is this even a problem? There is already so little space for owners and their pets to recreate in SF yet there is so much GGNRA space -- whats the deal?

Bottom line -- we pet owners have rights too. And those rights include our pets. We should be able to recreate with our pets just like parents recreate with children and cyclers - cycle all over the place. Why are we singled out - - we deserve voice control/off leash recreation areas that are not small pens that will not nearly suffice.

We are the most progressive and cool city to live in with pets in the entire US -- possibly the world. My friends who visit envy us. Are we being

realistic to change this model that works to a "police state" against dogs. This is really horrible and unfair that dogs are singled out and that they and their pet owner citizens will have no rights to recreate and enjoy our state parks.

Times are tough. We are hard working citizens too who pay lots of taxes in this country that support things -- not to mention GGNRA. The land is public and it is only fair to for us all to respect one another and the recreational needs of all citizens not just a singled out group because some people "dislike dogs."

The change to the harmony we presently have is unfair -- due to one groups politics. We have rights too. And I believe that dog owner/taxpayers will fight this one at the polls and with our tax dollars...so lets try to work this out.

Correspondence: Very happy you are doing this assessment and opening comments to the public.

My comments address Upper and Lower Fort Mason.

We run through this area everyday and have done so for years. The current circumstance has been Heaven. That is, Alternative-A, dogs on leash at all times is the preferred choice. No dogs in the garden. The later police enforcement, with tickets being given, quickly got things under control. It was a model circumstance of good administration.

Briefly, the principal issue with dogs in this park is what you denote in your pdf as Visitor Experience and Safety.

For quite a long time dogs roamed the park as owners stood in a huddle in the meadow. This caused all sorts of problems. The owners were not monitoring their dogs and as to be expected, the dogs which were most troublesome were never under voice control. My wife and myself were entering the park from the east path near the community garden and a pit bull came charging over the hill toward us barking and snarling. When we shouted NO the owner, seen only later, as she was over the hill, called her dog back weakly. It took quite a while for the dog to decide to stop its snarling. When I called out to the owner to keep her dog on a leash she exhibited what I would call a Marjorie Knoller reaction: amused indifference. I regret to say that other experiences I won't recount now confirmed that there are a number of such irresponsible owners in any aggregate. It is not the dogs, it is the owners.

Just a few bad owners but a big risk for the public. You must keep the dogs on leash in this area. There is tremendous pressure from a minority of dog owners who see their dogs as extensions of their entitled egos to allow their dogs free reign and to heck with the public. This is unacceptable in a public space.

Correspondence: I am furious at the proposed restrictions on dogs in the parks and on the beaches. Areas such as The Presidio, Ocean Beach, and Fort Funston are located in one of the most dense cities in the country. For every eight people in San Francisco there is at least one dog. There are more dogs than children in San Francisco and there-for it is a necessary to have areas in which dogs can roam and play freely. Do you have a dog? If so is it athletic? Athletic

dogs can never get the necessary exercise on leash. We live in an urban environment and parks within the environment should at least have designated areas for dogs to play and roam freely while under the supervision of their owner. This whole issue is a complete waste of the government's time and money. It's a waste of my time and money because I pay your salary with my tax dollars. Enough is enough. Too much damn bureaucracy. What ever happens, nothing will change any how. We, the residences of San Francisco will letting our dogs enjoy life on leash wherever we please.

Correspondence: To Whom it May Concern,

Please keep as many public parks in the Bay Area as dog friendly as possible. I walk my dogs everyday at Ocean Beach and I have never seen any problems occur because of dogs running free. Close to 100% of the dogs that I have seen there are extremely well behaved and respond to their owners voice commands. All owners carry poop bags and promptly pick up all poops. Dogs will stay out of protected bird sanctuaries if they are clearly marked.

I beg of you to respect the rights of dogs to run free and get the exercise they need.

Thank you for taking the time to read my letter.

Sincerely,

Karen Tuttle

Correspondence: Being a long term resident of both Ocean Beach and Baker Beach in San Francisco I am shocked, appalled and despondent at the "preferred" option to change the rules for the GGNRA.

In addition to being a dog owner I am a staunch "environmentalist" and go out of my way to clean up the beach and do what I can to make everyone's experience on the beach great. Just so you know I am concerned about the

environmental impact of dogs and people on our beaches.

The draconian proposed new rules would be a serious impediment for any responsible dog owners who want to walk their families (that includes their dogs) on the beach, spend the day at the beach or just enjoy the GGNRA.

These rules would make people like myself want to move away from where I have lived for many, many years. I have a six month old son and I love to take him to the beach to explore and show him what we have come to love about this area.

If I am prevented from bringing our dog to any of the places we frequent so much now, it would seriously change our lives.

There are plenty of responsible dog owners that use and enjoy these beaches and to make this change is unwarranted and ridiculous.

Maybe you are simply trying to raise more revenue with writing tickets because through ignorance or choice people are still going to bring their dogs to the beach. Regardless of the motivation, this preferred new rule is absurd and a travesty for responsible dog owners.

I implore you not to adopt these rules. I could not be more impassioned that you are wrong plain and simple.

This is the wrong choice and should not be adopted.

Sincerely, Sean P. Joyce

Correspondence: In 1979, the GGNRA formulated its original pet policy, after extensive public hearings. The pet policy stated that dogs could be off-leash in a mere 1 percent of GGNRA lands. As the size of the GGNRA has increased over the years, the acreage in which off-leash recreation is allowed has actually decreased.

Now the GGNRA wants to severely curtail off-leash access to the park, even to the 1 percent. Dog owners are residents too. We would also like to be able to use the park for recreational purposes, which was its original charter. Somewhere along the way, GGNRA seems to have lost sight of its mission and of any sense of public accountability. How else can we explain the unilateral decisions they are making without consulting the public?

It will have an very negative impact on the dog-loving residents of the Bay Area to further close off GGNRA to dogs. We are residents and taxpayers too-please don't take away our 1 percent.

Thanks,

Katherine McCormick

Correspondence: To Whom it May Concern:

My husband and I currently have 3 dogs and live in Millbrae. Unfortunately, the dog parks in San Mateo County do not have much space and do not allow access to any water. Almost every weekend we take our dogs to Fort Funston or Crissy Field. We also enjoy day trips to other large off-leash dog parks around the Bay Area.

Considering how densely populated the Bay Area has become and the therefore lack of large open spaces not only for our dogs but also to commune with nature, it would be a huge mistake to take away the only parks dog owners have left to let our dogs run, socialize and play freely. There are plenty of protected parks and areas left. For instance Crystal Springs near the reservoir is a phenomenal trail near the water, but does not allow dogs. Please do not limit the little areas we have left for our beloved dogs as they need places to be themselves and have fun too.

Thank you, Lindy Cestone Figone

Correspondence: First, thank you for the opportunity to comment on this plan. As a dog owner, I appreciate and welcome those opportunities where my dogs can peacefully roam off-leash in the beautiful parks we have in San Francisco. I am also mindful that these parks are for the enjoyment of everyone - not just my dogs - and so make every effort to ensure they are not a nuisance and are safe for others to be around - especially children. And that is actually what I see more often than not in other dog owners too: going to the park in the early hours, staying to areas less frequented by families, etc. So - I marvel to see that the plan as put forth is as restrictive as it is - effectively eliminating any off-leash areas for dogs. As I understand it - the reason behind this plan is that there have been "some" dogs - no actual numbers given - that have been a problem. That there is so little real evidence to support this measure is a real problem. I can't emphasize that enough. The other aspects to this that I find troubling are: First, the solution that has been presented is an "either/or" as if there were no other alternatives or steps that could be put in effect to address the issue. Second, if there is a problem I have to believe it's less than a 1% problem - and you don't solve that kind of problem in this manner. A tiered penalty with enforced behavioral schooling is a much more effective means of addressing problem dogs and their owners. This plan as written should not go forth. Thank you for your time and attention, KD

Correspondence: My wife and I own 3 dogs and enjoy taking them out to dog parks that allow them to run free, and exercise in a large open space with access to open water for swimming. Since there aren't very many places in the Bay Area that allow for this, it seems ridiculous and unfair to our companions that you are considering drastically limiting our access/ability to continue doing this. There are enough restricted/protected areas in the Bay Area- I don't think that restricting access to these relatively small areas is going to make a difference in affecting these local natural ecosystems.

Please don't take this away from us and our loved ones.

Correspondence: It's estimated there are over 100,000 dogs and dog owners in San Francisco, alone, and over 1,000,000 in the greater Bay Area. While only a small fraction walk in the GGRA parks and beaches at any one time, this population should have rights to access these lands and have an appropriate portion of each set aside for that purpose. It is not too much to ask that two beaches be available to this population, specifically Crissy Field and Muir Beach.

Much has been made of the environmental harm and dangers that dogs pose in these areas. Inconsiderate owners who don't pick up after their pets, disturbances to wildlife, the potential for aggressive dogs biting humans or fighting other dogs. While it is true that any of these may happen, their occurrences are rare and have been grossly exaggerated. My experience in the parks and beaches is that the participating dog owners are self-regulating

and self-policing. Aggressive dogs are not tolerated. Waste receptacles are provided and used. Owners respect the sensitive, off-limits zones to preserve wild-life habitat.

In my experience, a greater threat to the environment comes with non-dog owners who leave litter on the beach and don't remain on the pathways. Should not, then, all people be banned from the parks and beaches, by the logic of a dog ban?

Correspondence: I have been walking my dog at Crissy Field for the past 4 years (she's 5 now) and it's her favorite place to walk. She loves playing with the other dogs and she gets a lot of exercise running in and out of the ocean. After 45 minutes on the beach I have a very content dog. Without access to Crissy Field she would miss out on important socialization and the exercise. There are fewer and fewer places I can walk my dog off leash and she needs a lot of exercise. Without this we'll be confined to dog parks which are not nearly as much fun for her. The public does not seem bothered by the dogs at Crissy Field as we, for the most part, gather in one area. Anyone wishing to sit or play on the beach merely does so a little further down the beach.

It would be a real tragedy to lose the GGNRA as a place we can watch our dogs run and play. Please keep it open to off leash dogs.

Thank you, Elizabeth Harvey

Correspondence: I am a frequent user of the GGNRA. I hike frequently in various parts of the park. I visit the Point Bonita Lighthouse, Tennessee Beach, Black sand

Beach, Rodeo Beach and other less-known parts of the GGNRA. I do not own a dog and do not plan to own one.

One of the great pleasures of the GGNRA is the near complete absence of regulation. It is a place where people are free to enjoy on of the most beautiful places in the world with very little restriction. I can understand how permitting dogs in a place like Yosemite N.P. would cause countless problems, let us not forget that GGNRA is almost an urban park.

In more then 33 years of visits, I have personally NEVER encountered a problem caused by the presence of dogs - leashed or unleashed- within the GGNRA. with plenty of signs for guidelines, I have found dog owners to be extremely responsible. If a large-scale problem ever arises, we could THEN re-visit the rules of the park.

Keep the dogs free; they are a pleasant addition to this beautiful park.

Correspondence: Thank you for your work on this topic.

In general I do not endorse off-leash access for dogs in GGNRA.

I would like to note by objection to the proposed ROLA areas at Crissy Field which is a heavily used area by children and others. A permit managed off-leash area would present a visual approval of off leash activity and enforcement would be confusing.

The GGNRA Presidio has sufficient unused playing fields which are not generally populated and which could be converted to open dog run areas.

Correspondence: I think you are on the right track for a solution to this issue with your preferred alternative that works to balance the visitor uses on GGNRA lands. Although I would prefer that on park lands, dogs be on leash, I understand that would be a political non-starter these days. Thus providing a number of areas, including some significant beach areas, where dogs can be off leash (but firmly under voice control per the new rule) and yet separate from other users - for the most part - is a good compromise. I will really appreciate knowing for sure where I can go to experience park lands without people's pets. Dogs are pretty much ubiquitous in the Bay Area; it's a treat to be able to put some distance between oneself and urban-ness so I really value the Bay Areas park lands. Additionally, I was injured by an overly active dog and am wary around them - guarding against another knock down that could put me back in the emergency room. Another reason why I prefer trails that are dog-less. Finally, I also agree with the concept of flexible management; if this user group consistently violates regulations, it should

absolutely be curtailed - especially in this case when a unit of the National Park system is pushing the envelope in trying to accommodate a use that is prohibited in all other national park units. Hopefully the responsible dog walkers will exert peer pressure to encourage others to follow whatever final rule comes out of this process.

Correspondence: The plans outlined here are far too restrictive. In general, dog owners are responsible and committed to maintaining the environment.

Dogs should continue to be allowed to be off-leash at Fort Funston at all times as this is a real asset and crucial to dog owners in the city. Current leash restrictions for dogs off leash at Ocean Beach, Baker Beach and Crissy Fields are fine as is.

If you do choose to restrict off-leash times for some beach areas, you should still allow off-leash dogs in the mornings (perhaps until 10 AM). This is done frequently on the east coast and works well.

Correspondence: As a life-time naturalist, animal and bird lover, I suggest that it would be irresponsible of the department, to choose any Alternative but A or instead to do nothing yet. This would provide additional time to create a more realistic and effective alternative than is proposed in DEIS Alternatives B-E. GGNRA needs to rethink it's victimization of off-leash dogs and any proposal that severely restricts the few off-leash dog areas left in the metropolitan areas. These areas are essential to the well being of thousands of citizens. Reduction of this space for off-leash dog enjoyment will not necessarily protect endangered species nor preserve areas for future generations. Constricting the space as much as most of these Alternatives propose is unacceptable.

It is widely suggested that the origin of these proposals are a result of the local Sierra club's refusal to agree with any proposal allowing dogs in recreation areas. If true, this perspective is fundamentally unbalanced and out of sync with the needs of many of this city's citizens. It is biased against dogs and owners and promotes the suppression of a huge part of our society. For the sake of possibly preserving the life of plants and animals that may or may not survive despite our best efforts; the DEIS Alternative complicates what could be a simpler, less expensive solution for enforcement. They would very likely lead to increased conflict as more and more people are forced into smaller and smaller areas. B-E Alternatives are all slanted to condemn dog-owners and therefore they do not appropriately serve a

majority of the community .

Furthermore I question the victimizing of dog owners and their dogs as an effective and realistic solution to preserving endangered areas, providing a variety of visitor experiences, improving visitor and employee safety, reducing user conflicts, nor maintaining park resources and values for future generations. The level of enforcement required by Alternatives B-E would be much more excessive and create a resentful and antagonist atmosphere. Alternatives B-E blatantly lack many other possible solutions that would not require such extreme restrictions to people and their dogs.

In support of my thoughts, please understand that I regularly visit Crissy Field on a minimum bi-weekly basis, and have since its makeover. In all my hundreds and hundreds of walks at Crissy Field I have rarely seen an aggressive altercation between dogs, and dog owners or dogs and other people. Nor have I seen a person in danger from a dog. I imagine that altercations have occurred since they are proposed in the DEIS summary, yet I have not witnessed them. This experience includes weekdays (when dog walkers have their packs), mornings and dusk, and weekends, (when children and families are prevalent). The majority of my time there has been peaceful and positive and I have observed that other people are enhanced by the experience of interacting with unleashed dogs. Even before I adopted my dog I too would go to the Crissy Field to be around the joy of dogs and their owners experiencing the freedom of open space in a beautiful setting.

For those irresponsible dog owners I am not ignorant, oblivious nor in approval. In fact I would love to find a way to severely penalize those who disregard rules and responsibility and ruin a beautiful situation for the majority of the rest of dog owners. In all my time spent at Crissy Field, however, I have very rarely seen a park ranger or an enforcement of park rules. It took years for the GGNRA to put up a more substantial barricade to restrict the protected plover region of Crissy Field. Yet it resulted in an immediate and dramatic lessening of unleashed intruders. Why then hasn't this approach been more widely used through out all the proposal areas of the city and beyond?

The bottom line is that this recreation area exists as an antidote to city life for all it's citizens, their children and their dogs. Appropriate wild life restrictions are in place and it is up to the GGNRA to enforce these restrictions more effectively, rather than discriminating against dogs and dog owners with restrictive plans. More substantial barricades, more signage and dog owner education, more public awareness and, more frequent enforcement by park rangers would go a long way to correcting any of the proposed problems.

In summary:

- Good fences make good neighbors. Install more substantial barricades to protected areas, this would go a long way to keeping people and dogs out.

- Why must the GGNRA victimize dogs and dog owners, by diminishing the size of off-leash areas, in order "to preserving endangered areas, providing a variety of visitor experiences, improving visitor and employee safety, reducing user conflicts, nor maintaining park resources and values for future generation" as is stated in their motivation for these plans?

- Currently the GGNRA does not consistently provide rigid enough fence boundaries around their endangered areas to prevent invasion, doing so would improve the safety of the areas with out having to diminish off leash areas. When finally a more defined fence was placed at the snowy plover area of Crissy Field I noticed a drastic reduction in people visiting the area or off leash dogs.

- During my hundreds of walks through out Crissy field I do not remember seeing an incident where people were endangered by dogs. If anything I've seen people in boats killing birds near the shore because they've come to close much too fast. Also, I have but once seen a conflict and this was between dog owners. The majority of dog owners are very aware of those around them, families, windsurfers alike.

- In all my years visiting Crissy Field I have seen maybe 3 rangers on 3 separate occasions. Put more rangers or police out and heavily penalize irresponsible dog owners who invade protected areas, don't clean up after their dogs and don't properly control them.

- Put the onus on responsible dog owners to act policing less responsible owners.

- The GGNRA currently bans dogs from many too park areas as it is. This deters dog owners from going to those areas and robs them of enjoyment. What if parents were told that they can not bring their children to walk on trails in the marin headlines or Mount Tam?

- This crowded metropolitan bay area needs to maintain more sufficient open space off- leash areas for dog owners and their dogs. It is essential to the quality of life here that sufficient recreational areas are that are not overly slanted by unrealistic vendettas against dogs for wildlife preservation.

Correspondence: Seems like some concessions for off-leash areas should be made. As city dwellers, we should be able to allow our animals some un-leashed access to nature paths and open space. I am still reading the document but do not see this type of compromises. I hope it will be in there somewhere but off leash dog areas within the GGNRA would be the least we could offer all residents of the local counties who have come to depend on the recreation areas available to us.

Correspondence: COMMENT ON DOG PLAN FOR MORI POINT, Pacifica.

I am a regular user and live in an adjacent area. I prefer Alternative A (on-leash walking for all developed trails) to the current preferred alternative. The Park Service preferred alternative seems to allow dogs in the most sensitive habitat (frog ponds) while prohibiting them from being walked on some of the less-used hill trails and also the Pollywog Path which runs along the back fence of Fairway Park residences, and is used very frequently for access by residents of that neighborhood. Because of its close proximity to the residences, family pets such as cats are frequenting the Pollywog Path area in any case -- the people most likely to be inconvenienced by the closing of that trail to dogs are the more elderly and sedate dog owners who will be forced to walk to the Mori Point Road entrance.

There also does not seem to be any useful purpose served by preventing leashed dogs from using Upper Mori Trail, Lishumsa Trail, the Headlands Trail, or the Bluff Grail-- all of which are quite far from the ponds & protected habitat. and also areas less likely to be used by families with small children or elderly visitors, as they are comparatively more rugged with a

steep upgrade.

Alternative A essentially preserves the status quo, allowing leashed dogs on all trails. I would note that I see no problem with closing the Bootlegger's Steps to dogs. Dogs don't need stairs and that particular path is more often frequented by new and infrequent visitors to the park rather than those who regularly walk their dogs in the area.

Correspondence Type: Web Form

Correspondence: I am deeply opposed to the "Preferred Alternative Plan for Ocean Beach" for the reasons listed below. I have lived by Ocean Beach for close to 25years and as an avid dog walker and surfer visit the beach at least twice a day. We need dog access on the middle and south ends of the beach.

1) The beach access for dog walkers needs to be maintained for the residents of the Parkside and Sunset neighborhoods. A significant number of the residents of these neighborhoods have chosen to live and buy or rent homes in this area so as to be able to have dog walking access. This would constitute major life changes for these residents. I understand that federal land is for all, but I believe that the needs of the people who live in such close proximity to Ocean Beach are worthy of special consideration. For the residents of Sunset and Parkside, ocean Beach is essentially our front yard.

2) The amount of dog walkers walking to the beach from the Sunset and Parkside neighborhoods is very high. On weekday mornings 25-50% of the beach traffic comes from these folks. If the preferred plan goes into effect, all of these people will now get into their cars and drive to the North end of the beach. The plan does not account for the increased vehicle traffic and parking requirements this will cause. Not to mention the increase in vehicle related pollution. Most of the beach use studies I have noticed have taken place on weekends in the middle of the day. I am not confident the plan has an accurate beach use assessment. I am afraid that the beach use in the morning and evening is not well understood.

3) The preferred plan limits dogs to the "Coastal Trail". This trail is not maintained nor is it contiguous. There is nothing in the plan or in the history of GGNRA management of Ocean Beach that makes me confident that the GGNRA has the resources to maintain this trail. For this reason I believe that the "Coastal Trail" should not be a part of the plan, making the Preferred Alternative not feasible. Also, please note that the "Coastal Trail" is extremely unpopular and gets very little use. People come to walk on the

beach note next to a highway.

4) Over the last year I have noticed more Snowy Plovers than any time in the last 24 years. This apparent increase should not be occurring if the current dog regulations are not working.

5) It is a very small percentage of dog owners that cause the dog related problems (chasing birds, disturbing humans and not cleaning after). The regulations should target these actions not the majority of dog owners that are conscientious. Just as we do not ban all driving of cars because the few red light runners.

6) Other possible stressors to the Snowy Plover have not been addressed. For example vehicles, motorcycle, horses, heavy sand moving equipment, litter, surface street runoff, construction spoils from the last century, dune erosion and non-indigenous species. I say fix all of the above before focusing on the dogs.

7) Regulating dogs in an urban setting is a challenge that the SF government tries to meet. It does not seem fair that the GGNRA in its' urban areas shirk that challenge and push it off to the City.

8) Dogs on ocean beach are a huge part of the culture, look and feel of the beach. I believe that that huge number of non-dog owners would miss their presence greatly. We want maintain the character of Ocean Beach as something that is uniquely San Franciscan.

Correspondence: Yesterday was another beautiful day in San Francisco and another reminder of the reason I moved here about 20 years ago. I have been visiting Fort Funston almost every weekend since I moved to the city and yesterday was no exception.

I visit the park to be with nature and with the many dogs that also enjoy the park.

Seeing the dogs running and enjoying their opportunity to play off leash with each other, investigate interesting smells and just get the exercise they need to be healthy and happy animals gives me extreme pleasure.

I worry that the plans that are proposed for the park to change the off-leash dog rules will have a very negative affect on the animals and the people who come to the park. The information I have seen about the off-leash and on-leash areas at Fort Funston is very confusing and doesn't make a lot of sense. The off-leash areas stop and start without any clear or logical reasons why and because it is so arbitrary could lead to people and animals not being able to follow the new rules.

From what I understand, if the rules aren't followed, then the ability for the animals to run, as they need to ? and for us to enjoy time with them ? will be taken away without any form of recourse. One strike and you're out!

This is wrong.

I agree with responsible dog ownership but the new proposal seems like it goes out of it's way to be unreasonably restrictive and has a not-so-hidden agenda to remove dogs from any GGNRA land. Since this is land for all Americans, that does not seem to meet the needs of all the Bay Area citizens.

I strongly believe that the proposal needs to be changed and should not be implemented in its current state.

Correspondence: I applaud the thoroughness of the studies the park service has conducted to come up with these recommendations, but strongly urge reconsideration of the recommended alternatives for both Muir Beach and the Marin Headlands. For the Marin Headlands I would hope that Alternative A would be considered. I live in southern Mill Valley and would be devastated to be prohibited from even walking my dog at all on trails that connect to my neighborhood. This is one of the reasons I bought a home in this area, and to be banned from using the Miwok and Coastal trails would be terribly sad for my whole family (children and canine members included). Today we can walk up the street with our dog and easily access and enjoy the great beauty of the Marin Headlands. Under this plan, we will be relegated to driving miles and miles in a car before we can even walk our dog off the pavement. That just doesn't seem right. Likewise I think completely banning dogs on Muir Beach would seriously deprive southern Marin residents of a major family destination that for many is one of the reasons we live here at all. For the same reasons I would strongly urge consideration of Alternative A on the Alta Trail. Thank you for your consideration.

Correspondence: Dear GGNRA Ranger,

I am a resident of San Francisco who along with my wife, two young boys and our dog Pepper, recreates in GGNRA almost every weekend. Please consider that when access is restricted from one member of our family, in this case Pepper, it means that the rest of the family can no longer use that park. This is because we want to do things as a family, but also because Pepper is a key driver to getting us outside. For or example, Tennessee Beach, China Beach and much of Point Reyes has never been seen by my two boys because Pepper is banned. This makes me very sad and sometimes angry.

Similarly, by restricting certain parks (banning off-leash areas or restraining dogs to fire roads, etc.) they become so uninviting that we no longer go (e.g., San Mateo Open Space preserves, most state parks). All this said I'm for protecting the sensitive ecosystems and wildlife. For example most beaches should have off-leash areas but most of the beaches should be on-leash. It just seems that the restrictions being proposed are just anti-family to satisfy irrational dog haters. There seems to be no other basis for these restrictions.

For these reasons please come up with a new alternative. In every proposal start with the assumption that dogs will be allowed everywhere off leash.

Only restrict access for highly sensitive habitats. Assume that most dog owners are responsible. Assume most park users are happy to interact with families that have a dog. Do not base any regulations on the input from a few problem people or you may be banning children from parks next.

Thanks you for your time.

Correspondence: Fort Funston 1. About the neon orange cones set up parking lot to "stairs." It's cute when a lovely little girl smears her mouth with mom's red lipstick. Not so when a "steward" organization for our parks smears a lovely beach with garish neon plastic "guides." So ugly as to seem hostile towards the park's users, as are the ugly fencing here and there on the trail to protect the (so far as I can tell) ice plant, a hardy weed nobody cares about. 2. About the "stairs" you want to restrict your park users to. I am an elderly woman with bad hips and a small poodle who needs a good run every day. I work at SF State as a lecturer, so I know how much a public employee needs to love his or her work. But again, the stairs feel to a senior with limited mobility hostile, even sadistic on the part of those who planned them. I took those stairs exactly once, and let me tell you, I had to hit the Aleve bottle heavy afterwards. You are discriminating against the handicapped who need to walk their dogs and want to enjoy nature. 3. Take away the porta-potties too and just let us walk our dogs in peace. All you are doing so far as I can see is costing the taxpayers money as you ugly-up Fort Funston (where I have walked my dogs for 30 years), assaulting its users, and now threatening to not share, like cranky little two year olds, the land you have been entrusted to . maintain for its users. Wake up kids.

Correspondence: Your proposed policies are in contradiction to the conclusions you draw in the study. To wit, you conclude that dogs have minimal impact on compacted trails. On the south loop of the Oakwood Valley Trail, where the GGNRA plans to mitigate dogs off-leash, the park service built a compacted trail (built by the Conservation Corps.) Also on the Oakwood Valley Trail, your policy indicates that you want to protect the Mission Blue Butterfly habitat. No lupine grows on either the north or south side of the loop (and I believe there was an attempt by the park service to grow lupine at that site.)

Correspondence: One of the things that attracted us to move from San Francisco to Marin County was the beautiful beaches and trails that we could enjoy with our family and our family includes our wonderful dog. After living here for a year, I find that the dog owners and dog walkers we often share the trails with are very responsible, environmentally conscious and with well behaved dogs. If I do see garbage on Muir beach it is usually in the form of sandwich bags, soda and water bottles, cigarette butts and other food/drink related items that PEOPLE bring to the beach, The trails that we hike with our dog are in great shape and the majority of people on those trails have their dogs with them also. We are already limited in the places we can go with our dog. Please do not limit that further!

Correspondence: I am a dog owner and I understand why non-dog owners do not want dogs on the beach. This is because there are some dog owners that do not pick up after their dogs. Rather than ban dogs on the beach, and discriminate against all dog owners, I recommend that the NPS require dog owners pay an annual licensing fee that permits dogs with a beach license on the beach. Revenue from licenses and revenue from fines for owners without licenses could provide the NPS with the funds necessary to monitor the beaches for dog owners that 1) fail to pick up after their dogs, and 2) fail to register the dog with a beach license.

I believe this is a fair compromise. It provides much needed revenue to the NPS. It also provides a process by which to police dog owners who are not in compliance. It also prevents discrimination against dog owners who do pick up after their dogs.

If the NPS decides to ban dogs on the beach, it limits the environmental value of the federal property because it will severely limit the number of people allowed on the beach. This is counterproductive to the mandate of the national park service which is to provide natural environments for the benefit of its citizens.

Correspondence: I have read the report and am opposed to the extent of the changes you are proposing. I believe you are overreaching in the amount of land taken from the dogs and their owners--particularly for off leash walking of dogs. Your report is full of comments, statements, dire concerns and issues that are nearly 100% of the time preceeded with "may" or "can" or "might" or "could". I would find your report more compelling if you had the data to support these concerns. "Can" you document the actual increase of dogs in the park areas and "can" you provide multi year trending statistics that demonstrate factually the damage that the dogs are actually causing, not theoretically causing at some time in the future. If you "may" or "can" it would be a more compelling argument than the report as written.

Yes, I am a dog owner and, Yes, I have a professional, licensed dog walker who uses the park for my dog.

Dogs and Humans have cohabitated for longer than any other species has been part of human life--thousands of years. The idea that they are such a tremendous threat as your report implies is ridiculous. We would all be

maimed or dead if the relationship was so dire.

Correspondence: Hi National Park Service -

Please reconsider the quick action you're taking on changing the dog rules across the GGNRA beaches. Where some dogs can be a nuisance and clean up be a frustration to beach visitors these decisions need to be phased in either beach by beach or possibly have half of a beach be dog friendly and the other half (where sun tanners & people who want to be away from animals) can sit on their own. This format is currently working at Stinson Beach and I ask that the organization responsible for making these final decisions consider the impact made once the vote is counted.

Dog owners and their dogs should have the right to run play & exercise on public lands. Granted this is if they and their owners play by the rules. There IS a hybrid program you can come up with please get a focus group, that includes dog owners, together to come up with a win / win solution

Correspondence: I've looked over the Executive Summary, and it looks fairly balanced and well-thought-out. I like that there will be some off-leash areas, some on-leash areas, and some areas dogs, and I like that these decisions seem to be based on the relative environmental impact of dogs in different areas (such as the Crissy Field wildlife restoration area, and the Ocean Beach snowy plover protection area).

It strikes me as potentially problematic that there are two different kinds of permits to have more than 3 dogs, one for private users, and one for commercial users, and that they are administered by different offices. If the prices of the permits are significantly different, I can imagine that professional dog walkers might apply for private permits, and that this would go un-noticed because of lack of communication between the two offices. Since both permits have similar requirements, I think the best way

to handle this would be to offer a single type of permit for a nominal price (only enough to cover the cost of the permit program), and have a mechanism for waiving the insurance requirements for private dog walkers.

Correspondence: In the eight years we have lived in Mill Valley, we have enjoyed the outdoors with our Golden Retriever, Cody! It was absolutely devastating to hear the news that our rights to enjoy the hundreds of trails in our community with our dog could be banned. I was raised in born in Marin and decided to move back to this area, so we could enjoy the beauty with our family and our dog. My three year old daughter, our 7 year old Golden Retriever and I hike the local trails in our Tennessee Valley neighborhood

daily. Not only do we enjoy seeing our dog enjoy the trails, but I feel a sense of safety with our dog by our side. We've had several encounters with less desirable people on the trails and our dog has always been there to protect us. In all the thirty six years, I was raised in this area I haven't seen one dog fight on the trails. I truly don't understand why dogs are being banned from the beauty of Marin. This area is truly "dog country" and it would be awful if they couldn't be allowed to hike along side of their owners. Please consider our plea to stop the ban to allow dogs on GGNRA parks and trails. We pay an exorbitant amount of money to live in this area and at the very least our dogs and children should be able to enjoy the land we help to pay and support! Michele Mickelson

Correspondence: This is a very detailed and lengthy document that, even in table summary, is difficult to understand with regard to the options available to those who would like to keep Muir Beach dog-friendly.

I do understand the need to keep unleashed dogs out of restored areas, and I do practice precaution when I walk my dog off-leash at Muir Beach. So, I do feel that I can continue to abide by the policies already in place at this location. I would not visit the Beach if I could not allow my dog off-leash there. It is the main reason I visit and support this area.

All that said, I am worried that some dog owners do not diligently abide by Muir Beach policies, mainly because not enough clear, no-nonsense, uncompromising signage is posted. Added or better signage, with posted consequences for non-adherence, I feel would be enough to re-train the public in keeping their dogs out of restored areas, if this in fact is a problem.

I have never seen any intentionally negligent behavior on the part of dog owners when I have visited Muir Beach.

Type:

Correspondence: We are avid hikers, mountain bikers, motorcycle & ATV riders and also have an Australian Cattle Dog. We fully understand that there is the need for multiple park/trail use throughout the GGNRA. We took significant time to train our dog for off-leash voice control, and the breed itself lends itself nicely to off-leash activity. The dogs are insane herders and tend to be virtual shadows of their owners most of the time. Additionally, we've heavily socialized the dog so that it gets along extremely well with both people and other dogs.

Generally it is the few bad apples that often spoil it for the rest, and this applies to everyone, including hikers, mountain bikers, motorcycle & ATV riders and dog owners. Human use of GGNRA is often the biggest spoiler, as the people factor is by far the largest impact on any of the use-areas, including trash/cigarette butts, walking/biking off trail, destroying facilities and overall degradation due to significant use by the sheer numbers of users. But, I don't think that restricting human use is part of this plan. I DO NOT want to see new restrictions added for dog owners at GGNRA parks, but understand that additional rules may need to be adopted at the more "heavily trafficed" parks.

I can understand regulating dog-walkers, as this seems to be abused regularly by a few bad apples, and it seems almost impossible to control more than 3-dogs at a time in heavily-trafficed areas.

We regularly take our dog walking in all the areas outlined in San Mateo county, including Mori Point/Pacifica Beach, Milagra Ridge and Sweeney Ridge. Additionally, we also regularly take our dog to Fort Funston to play with the multitude of other dogs on the beach. We believe that each of these areas needs to be addressed separately, as each has its own unique use characteristics of people and dogs:

- Mori Point & Pacifica beach: Mori Point should remain a leash-use area. Please do not add any new restrictions, as we use this area regularly and it is very popular with dog owners. There are enough people using this area that leash-use is justified. I've never seen any issues at this location, and dog owners all seem to be very responsible. The western end of Pacifica beach (from the Pacifica Pier to the mountain on the south) should be completely off-leash for dogs. The beach is virtually devoid of people except for the one or two occasional users, likely because the beach access is a significant walk, it is often foggy and cold and the undertow is incredible. In all the times I've taken my dog off-leash on the beach, I've only ever encountered a few occasional humans and a few occasional dogs on the actual beach. It is

a virtual no-man's-land and seems that off-leash dog use wouldn't make any material impact at all.

- Milagra Ridge: the parking at Milagra Ridge limits the amount of use. Generally only 6-8 cars can park there at any one time. I take my dog there regularly and might occasionally bump into 3-4 people during an entire hour-long walk. I think that this area should be relaxed to voice-control, but that didn't seem to be an option. Keeping dog restrictions to on-leash at this park should make no impact whatsoever on the use characteristics. All of the dog owners at this park seem very responsible, and I've never seen a single issue in years of use. Please do not make any changes to this park.

- Sweeney Ridge: like Milagra Ridge, this trail/fire road is virtually devoid of anything more than the occasional person. After traversing the steep up/down of the canyon up to the ridgeline, I have rarely ever seen another person at all. The trail is not for the faint-of-heart, and this generally scares off anyone except the most physical/avid hikers. I'd prefer to see this area completely off-leash and voice control for dogs for those reasons. It is one of the best places to have significant open-space with virtually no other human contact to walk dogs. Surprisingly, I've only ever seen 2 other dogs on this trail in my entire years of use, so I don't see any impact whatsoever on human use/environment.

- Fort Funston: this is really a unique location for dog owners. Due to the long hike to the beach from the car parking lot, it isn't usually frequented by regular beach-goers; they usually go to Ocean Beach just up the highway, which is much more accessible. This beach has become an institution for dog owners, because every dog owner knows about it and they all bring them there to play together. Please leave this as voice-control, and, if needed, make adjustments to the Ocean Beach policy instead. The kite flyers and dog walkers have used this beach area for years and don't bother each other. Please don't make any changes to the use-characteristics of this last haven of off-leash dog beach in the area. I'd much rather see some restrictions added to Crissy Field, Baker Beach and Ocean Beach, which are much-much more frequented by multi-use people and tourists than is Fort Funston.

- Stinson Beach: please keep this as on-leash access. We've only used this beach a couple of times, but appreciate being able to take the dog out to the water. I've not seen any issues with dogs/people any of the times we've been there. There are enough people using the beach that a leash-law is justified here.

Thanks, Glenn

Correspondence: I would like to express disagreement with the preferred alternative (alternative C) as it pertains to Rodeo Beach. I strongly advocate for the continuation of an on-leash policy not only on the surrounding trails of the Marin Headlands and South Rodeo Beach, but also on Rodeo Beach itself. I used to work for an educational organization in the Marin Headlands until 2009, and witnessed first-hand the disruption to visitors that off-leash dogs caused, including the following instances: While hiking on the bluffs above Rodeo Beach, an off-leash dog ran into my hiking group of 5th graders. Although the dog was not threatening, two of my students were terrified to tears because they had a fear of dogs from previous experiences and the dog was running among the trail group. The owner appeared a few moments later, and did not apologize but said over and over, "Don't worry, he's friendly." This seems to be a relatively common sentiment among dog owners that fails to respect the fact that not everyone is comfortable around dogs. These students in particular, who are new to the outdoors and national parks, need to feel safe. Will everyone truly feel safe to visit the park if dogs are off-leash? During an educational activity on Rodeo Beach, an off-leash dog ran in to my hiking group, disrupting the activity and distracting students. Although we are accustomed to any number of distractions in the field, this one is easily preventable. Thank you for accepting my input. I hope NPS will continue with their on-leash dog policies so the GGNRA can be enjoyed by all visitors.

Correspondence: The DEIS is so wrong in so many ways, it is hard to know where to start. First of all, No matter what plan is finally implemented, the compliance based management strategy is something that cannot be seen as anything other than a way to end dog use use in the GGNRA, and cannot be a part of the final plan. 75% or any other level of compliance is not something that can be accurately measured, and so what will happen is that there will be some degree of non-compliance(there always is), and that level will of non-compliance will be seen as sufficient to go ahead and end all off-leash use in the GGNRA, and that will be nothing but a first step towards a complete no dog ban.

This is not a National Park, it is an urban recreation area. It was created to save these lands from development so that the people of this area could continue to use these lands in the ways they had always used them. I have

lived in SF since the 1970's. I have always loved going to the beach and to our parks, but without a reason to go there, I found that I didn't get out to them as much as I would like to. Since becoming a dog owner again, I have become a regular user. When I was employed, I was at Fort Funston every weekend with my dog. Now that I run my own business, I am there every day. Other people use the area to surf, to fish, to hang glide. All of these uses should be protected. There is no value in a recreation area that is not used. Dog owners get outside, exercise, run their dog, hike, walk on the beach, and amaze our visitors, who come out to see this legendary spot, because there is nothing like it anywhere. Seniors and families with small children can all be found there every day. Pretty much everyone you meet has a smile on his or her face. It is a magic spot. There is a sense of community there as well. If you succeed in turning it into a museum for us to look at you will have killed that magic, and that community.

No consideration has been given to what will happen when these lands are taken away from the people who use them now. Right now we have a situation out there that is pretty impressive in that an amazing number of canines and humans use it together with very little conflict. GGNRA's preferred alternative for Funston would limit off-leash use to the area just north of the lot, and the beach. That area would be home to a huge number of dogs, and groups would be unable to avoid other groups (and therefore, conflict, because there would be nowhere to go. Things aren't perfect now, but a great deal of maneuvering is done by people with dogs and groups of dogs in order to keep things as peaceful as they are. That maneuvering would be next to impossible if we had no space.

The trails would be either leashed or no dogs. This is going to be a problem, especially when groups meet on the trail, and have to pass one another. Aggression is heightened for many dogs when the leash goes on, and getting your group off the trail, so another group can pass is going to be much more difficult with everyone leashed.

The beach will be available to us, but the walk down to it, no matter how you go will be on leash. That will not only be difficult, it will be dangerous. Once we are on the beach, they want us to walk only on the wet sand. I want to keep my dogs safe, and with smaller dogs especially, I want to keep them away from the surf most of the time. Also, the beach is not available to us at all times because of the tides.

Since places like Funston will be so unsatisfactory, the City's parks will be deluged with dogs that used to use the GGNRA. NPS doesn't seem to care. Also, the pack size limits are going to increase the number of walkers/packs, and some of the really good walkers will find other ways to pay the bills when they can no longer make ends meet because of the size restrictions. This will make room for more inexperienced, low wage employee walkers.

With experienced owner operators dropping in number, and inexperienced employees taking their place. Quality of care is not likely to be going up as a result of the new plan. I'm not in favor of huge groups, but making a living with 6 dog groups is going to necessitate a raise in rates that will most likely be unworkable, since there will be large operations with underpaid employees who are able to run enough trucks to do things at the old rates. Not your problem? Not yet.

Correspondence: I am deeply opposed to the "Preferred Alternative Plan for Ocean Beach" for the reasons listed below. I have lived by Ocean Beach for close to 25years and as an avid dog walker and surfer visit the beach at least twice a day. We need dog access on the middle and south ends of the beach.

1) The beach access for dog walkers needs to be maintained for the residents of the Parkside and Sunset neighborhoods. A significant number of the residents of these neighborhoods have chosen to live and buy or rent homes in this area so as to be able to have dog walking access. This would constitute major life changes for these residents. I understand that federal land is for all, but I believe that the needs of the people who live in such close proximity to Ocean Beach are worthy of special consideration. For the residents of Sunset and Parkside, ocean Beach is essentially our front yard.

2) The amount of dog walkers, walking to the beach from the Sunset and Parkside neighborhoods is very high. On weekday mornings 25-50% of the beach traffic comes from these folks. If the preferred plan goes into effect, all of these people will now drive to the North end of the beach. The plan does not account for the increased vehicle traffic and parking requirements this will cause. Not to mention the increase in vehicle related pollution. Most of the beach use studies I have noticed have taken place on weekends in the middle of the day. I am not confident the plan has an accurate beach use assessment. I am afraid that the beach use in the morning and evening is not well understood.

3) The preferred plan limits dogs to the "Coastal Trail". This trail is not maintained nor is it contiguous. There is nothing in the plan or in the history of GGNRA management of Ocean Beach that makes me confident that the GGNRA has the resources to maintain this trail. For this reason I believe that the "Coastal Trail" should not be a part of the plan, making the Preferred Alternative not feasible. Also, please note that the "Coastal Trail" is extremely unpopular and gets very little use. People come to walk on the

beach not next to a highway.

4) Over the last year I have noticed more Snowy Plovers than any time in the last 24 years. This apparent increase should not be occurring if the current dog regulations are not working.

5) It is a very small percentage of dog owners that cause the dog related problems (chasing birds, disturbing humans and not cleaning after). The regulations should target these actions not the majority of dog owners that are conscientious. Just as we do not ban all driving of cars because the few red light runners.

6) Other possible stressors to the Snowy Plover have not been addressed. For example vehicles, motorcycles, horses, heavy sand moving equipment, litter, surface street runoff, construction spoils from the last century, dune erosion and non-indigenous species. I say fix all of the above before focusing on the dogs.

7) Regulating dogs in an urban setting is a challenge that the SF government tries to meet. It does not seem fair that the GGNRA in its' urban areas shirk that challenge and push it off to the City.

8) Dogs on ocean beach are a huge part of the culture, look and feel of the beach. I believe that a huge number of non-dog owners would miss their presence greatly. We want maintain the character of Ocean Beach as something that is uniquely San Franciscan.

Correspondence: I basiclally support efforts by the GGNRA and National Park Service staff to keep the leash on dogs, literaly and figuratively.

IN particular, I am concerned about the shoreline along Crissy Field, Baker Beach, China Beach and Ocean Beach.

I think it is important to protect breeding grounds for wildlife, which can be

disrupted by dogs, off leash or on.

I also think that San Franciscans and Bay Area residents should learn that not all open space, large or small, automatically qualifies as a dog run.

In my own neighborhood, the local park, Noe Courts, has over the years been transformed from a no dogs allowed to a de facto off leash dog area. This resulted in some of my neighbors' and our own daughter and son in law being ptu off from using the grassy area for fear of contamination by dog urine and dog feces.

Correspondence: As a dog owner, a San Francisco home owner and a tax payer, I propose

Alternative A: No Action (36 CFR 2.15, 36 CFR 7.97 (d); 1979 Pet Policy; GGNRA Compendium)

for all sites.

There are so many dog owners in San Francisco like me that would never go for a walk, hike or run on any GGNRA site without my dog, so it is alarming to me that there are proposals to restrict dogs altogether from certain sites. While I understand the need for environmental protection of certain areas, it is my feeling that wherever a human is allowed to walk, a dog should be able to as well. Further restrictions mean that me and my fellow dog owners and tax payers would not get to enjoy GGNRA as intended: "The purpose of GGNRA is to offer national park experiences to a large and diverse urban population while preserving and interpreting its outstanding natural, historic, scenic, and recreational values". The proposed further restrictions would eliminate the "large and diverse urban population" portion of that mission statement.

I would propose that instead of further restricting dogs in GGNRA to on-leash, or no dogs, that fines be increased for breaking the current restriction laws, allowing out of control dogs off leash, and for not cleaning up after your dog. This would protect responsible dog owners rights to be able to enjoy GGNRA and properly exercise their dog, while fining the irresponsible dog owners that break the laws and ultimately cause the initiation of plans such as this.

My personal concern is for Fort Funston and Ocean Beach. I live 2 blocks from Ocean Beach and bought my house there primarily to be near a beach that allows dogs to run free on voice control. I am respectful of the Ocean Beach Snowy Plover Protection area and do not argue with the need to have seasonal restrictions of that particular stretch of beach, but do take issue with the proposal to change the rest of the beach to on-leash. Dogs need off leash opportunities and fenced in dog parks are not sufficient to truly exercise a dog. Dogs that are not exercised properly are more trouble to society than voice-control areas could ever be. Fort Funston Beach is an ideal off leash/voice-control beach because it is protected by the cliffs from the road and remote enough to ensure that dogs are safe; it is a valued place to take dogs and it would be a shame to lose that freedom. And that area is primarily utilized by dog owners and dog walking groups; once again, if that area is restricted to on leash or no dogs, the "large and diverse urban population" that makes the most and best use of that area would be eliminated.

I propose:

For Ocean Beach Snowy Plover Protection Area (Stairwell 21 to Sloat Boulevard): Alternative A: No Action (36 CFR 2.15, 36 CFR 7.97 (d); 1979 Pet Policy; GGNRA Compendium)

For Ocean Beach North of Stairwell 21 South of Sloat Boulevard:
Alternative A: No Action (36 CFR 2.15, 36 CFR 7.97 (d); 1979 Pet Policy; GGNRA Compendium)

For Fort Funston (excluding areas closed by fence or signs): Alternative A: No Action (36 CFR 2.15, 36 CFR 7.97 (d); 1979 Pet Policy; GGNRA Compendium)

It appears to me that the proposed further restrictions are alienating a very large portion of the tax-paying population and that those of us who pay taxes, are responsible dog owners, clean up after our dogs, and have very friendly, social dogs, are the ones that are being punished.

Correspondence: As a resident of San Francisco who lives one block from Ocean Beach I find it appalling to even consider banning dogs from being permitted at Ocean Beach. I am on the beach daily with my dogs, rain or shine, and apart from the occasional sunny warm day at the beach when everyone from the Mission come out to the beach, most of the users of the beach are walking dogs. This is not southern california and as much as everyone would like to encourage more visitors to this part of the city, having dogs on the beach is not why people don't go to the beach. Furthermore, Ocean Beach is one of the dirtiest beaches I have ever been to and this is not due to dogs nor to beach goers. The huge tidal flux twice daily constantly delivers and removes all sorts of debris from inside the bay to our beach. I challenge anyone to find evidence of a dog being on Ocean Beach and then return in the next few days and still see it on the beach. Between the large surf, large tidal changes and relentless wind the beach cleans itself. Dogs are not the problem. If the preferred plan is implemented I anticipate that the path relegated for walking dogs will become one of the most overused and dirtiest parts of Ocean Beach. I for one am for no change to the current regulations. This goes for all other areas also.

Correspondence: I favor the most open plan for each area including the off leash areas. As a dog owner, I am continually appalled at the trash left behind by humans and the rude, dangerous and offensive behavior of runners, mountain bikers and picnicians at our parks and on our trails. We only live here to enjoy the outdoors with our pets and if that is severely limited we will reconsider our decision to remain here. I am also disturbed by the amount of time and resources (2400 pages - really) spent on this project. I am a Trustee for the SF Maritime National Park Assoc and realize how much the state and federal parks have been cut - my husband and I are both big supporters of the park system. I can only snicker when I read about people being disturbed by dog barking and waste. How many times have I been literally run over by bands of men on mountain bike yelling and screaming as well as passed a rock where they have just peed. I know you are tasked with a difficult job here but dogs do not cause their own problems - people do - and we so loosely regulate people. Don't penalize the majority of law abiding dog owners to satisfy the whims of the vocal minority. Just watch the kids at Chrissy Field run right through the restricted areas and you will see what I

mean. Today's parents will not discipline their kids so well all loose. Again I favor the lease restrictive plan for each area and the maintenance of the most off-lease walking areas.

To Whom It May Concern,

For the past seven years I have hiked daily on the Marin Headlands trails, especially the Miwok trail, with my golden retriever, Sadie, whose photo is included. On occasion we also hike the Oakwood Valley trail. Our daily hikes are usually 3-4 miles in length and involve her chasing a ball ? in her mind the only reason for hiking. When other hikers or bikers without dogs approach, she is asked to go off trail, sits until they pass and is rewarded accordingly.

Almost every day I meet other people hiking with their dogs who are pleasant and whose dogs are cheerful and obedient. In all those years I have had only one unpleasant incident involving another dog. In that case, the dog was fiercely aggressive and went after my dog. I harshly criticized the owner for not leashing her dog and have never seen either of them again on my hikes.

I have never seen any dog chasing wildlife or doing anything that would damage the park in anyway; the dog owners I see ? and remember I am on these trails every single day ? are without exception respectful of the park and of others who are using it. We take great pleasure in these hiking experiences and know what is at risk if our dogs are not managed well.

By contrast, again on a daily basis, I see the effects of humans on the park. There is almost never a day when I have not picked up their trash on my daily walks. In addition, especially in the past two years, I am seeing the degradation of single-track trails by bikers. Some parts of trails are now so rutted and eroded it's difficult to walk on them. Most weekends I avoid hiking mid-day as I have almost been run down too many times to count by speeding bikers who seem unaware of the multi-use concept.

In summary, I would like to say that I suspect that my neighbors and I who use these trails every day have a better sense of what's going on than almost anyone else could have. I cannot see any justification for changing the current use guidelines for the Marin Headlands Trails and the idea of

fencing Oakwood Valley would despoil that park area far more than the current dog-walking.

I respectfully request that the current on-leash or voice control guidelines for the Marin Headlands Trails and Oakwood Valley Trails remain unchanged. Sincerely,

C. Christine Stuart Mill Valley, Ca. 94941

Correspondence: I do NOT agree on this proposal! The Marin Headlands and Muir Beach are my backyard, I walk my dogs on these lands everyday, and have yet to see any destruction of native plant species or any kind of disturbances between dogs and humans,in fact I have seen quite the other, dog owners are very respectful. Also, seeing what our state and federal economy is right now, I cannot imagine how you are going to fund the enforcement of this proposal! How and where do you expect the money to hire more rangers to come from??? I sincerely believe the public would like their tax dollars going somewhere else, maybe to our schools?! What a joke that our tax dollars are even paying for this proposal, and the time and energy you have put into it thus far! I am furious that this is my tax dollars at work! You should be embarrassed in this time of economic woe that you are worried about this!

To Whom it May Concern

I have for the past 11 years lived on the edge (WUI) of the GGNRA National Park at the trailhead of the Miwok Trail. I walk with my dog JAX both on the Headlands on a daily basis and on weekends at Muir Beach. In my many years of enjoying life in Marin with dogs and hiking with them on the NPS trails, my encounters both with dog owners and with dog walkers, has been incredibly positive and in all those years I have only had one negative experience. Most dogs on NPS land and beaches are very happy dogs indeed -well exercised and therefore mellow and playful. Relating with them is part of the wonder of living so near to the GGNRA and NPS lands and beaches. I have never seen a dog hunting or destroying any of the public

lands in anyway in all the years I have lived here and walked these trails.

I feel strongly that the singling out of dogs as the perpetrators of soil erosion and damage on NPS land is patently absurd. They no more erode the land and arguably do less damage than the myriad daily sightings of regular hikers, casual walkers, the 20 odd mountain bicyclists storming down the paths every weekend and holiday, the equestrians of the Miwok Stable, the runners of the meets held multiple times a year on NPS land, the families that pollute the beaches and leave trash in their wake, the fisherman that line up their rods on the rocks and the NPS contractors who have plowed up great furrows of earth, disturbed wildlife, destroyed dens and native plants and rearranged water courses in a vain attempt to right the wrongs of bad policy management made years ago and that similarly continue to be made today - and at what cost to the public coffers?

The absurdity of the current proposal to fund personnel to ticket dog owners to the tune of over \$1,500,000 a year is - in these times of recession cutbacks, threatened closures of parks and general neglect of existing parklands - an insult to tax payers and supporters of the NPS alike. Is this part of the management plan a simple revenue stream?

It is an ongoing battle to get some kind of sanity regarding the unfettered walking of our dogs. What is the point of all the training we do with our dogs to get them to be good citizens in their world if they and we are only to be rewarded for our efforts by being forced to walk them - unnaturally - on leash? Dogs must run and play and socialize and smell the earth and be allowed to be dogs. Dogs on continuous leash and not exercised enough are neurotic and very sad indeed...

Further, the proposed policy to restrict dogs only to certain areas will by definition force dog owners to congregate in very small areas which may in of itself cause problems and will create a false self-fulfilling prophecy currently engineered by the NPS that there are vast problems with dogs that require such draconian measures.

I urge the NPS to reconsider their plan and I request that the current rules relating to dogs - those of limited areas of leash control but mostly dogs under voice control - be upheld and left unchanged.

Thank you for your attention,

Betsy de Fries + JAX

Correspondence: I would like to comment on the GGNRA Draft Dog Management Plan / Environmental Impact Statement as a non-dog owner that uses and enjoys the GGNRA off leash areas, specifically Fort Funston, Crissy Field, Baker Beach and Ocean Beach. Like many residents of San Francisco I am not permitted to have a dog in my rented apartment; a situation I'm not particularly fond of. I enjoy going to the dog walking areas of the GGNRA to hike, enjoy the beach and as an added bonus to interact with dogs. The GGNRA stands out from other federal lands in that it is a park in an urban area designed to meet the needs of urban residents, one of those needs is having a safe place to exercise and socialize companion animals. Please keep in mind when you talk about restricting dogs on GGNRA land you are actually talking about restricting the humans that accompany them. I feel quite strongly that the proposals to greatly diminish the off leash areas of the GGNRA is bad for the people of San Francisco, dog owners and non-owners alike. I try to imagine Fort Funston without dogs, the park and facilities are quite run down, it's often cold and foggy, close to an urban area, all I can imagine is an empty, run down park that without the many, many, dog walkers I probably would no longer feel safe visiting. Thank you, Kathy Hentges

Correspondence: This is ridiculous. Do you have any idea how many dogs there are in San Francisco and the surrounding areas? To decrease the size of the off-leash area is just unfair! I am a resident of San Francisco, and for the past 5 years I have enjoyed taking my dogs to Fort Funston and Crissy Fields. We venture through Fort Funston almost everyday, rain or shine. On weekends, we go twice daily. Hundreds of dogs play at Fort Funston everyday, especially on beautiful sunny days. I, as well as other dog owners, love that we have all that space to let our dogs roam free and play. I love chasing my dogs around. It's a great way for me to exercise them and to exercise myself since I am too busy to hit the gym sometimes. San Francisco is supposed to be a dog-friendly city. Please do not reduce our off-leash areas. There will not be enough space for our dogs to exercise.

This new plan is overly restrictive and not well-balanced. You cannot punish all the responsible dog owners because of the few bad ones. Dog owners and non-dog owners can co-exist and share the space. I have seen it at Fort Funston and Crissy Fields. The new plan severely restricts recreational access for people with dogs, a fundamental violation of the reason the GGNRA was created. In the legislation that created it, the reason

for the creation of the GGNRA is listed as "the maintenance of needed recreational open space." Off-leash dog walking is among the recreational activities listed as traditionally occurring in the land that was to become the GGNRA.

To Whom it May Concern,

I am a long time resident of southern Marin and now a member of the HOA on Strawberry point: Strawberry Point Home Owners Assoc. (SPHOA). I oppose the full leash restriction of the BCDC open space area at Strawberry point: Strawberry Point Bayside Public Access Area.

After many years, generations of residents and dogs, a community was formed as they enjoyed this area. When developers approached the point this community of dog owners fought long and hard for open space and prevailed with the help of BCDC. Thank you! Now behind closed doors a handful of people initiated an approach to restrict the BCDC rules and historic use of this area. Yes, there was an accident and as terrible as that was after 30+ years that is not a bad record. Cars do speed down this road unchecked, boats far exceed the 5 mph speed limit in the channel along the point and bird refuge area, cars park after hours on the point, thefts have occurred, kids use alcohol at night on the Strawberry Point Bayside Public Access Area, and??? There are more than enough other things for the Sheriff to do here and in all of southern Marin.

Please don't take away the joy of off leash outside time with man's best friend. Off leash is necessary for dogs and as a community we have encouraged people to manage their dogs or to please take them somewhere else where they can run wild. With this scare of off leash these efforts will be heard, as no dog owner wants a leash law. There is a long time community who walks here which would have to go elsewhere if the leash law is put in place. Please allow us to continue to enjoy this property as we have and we will direct unruly owners and their dogs to another area away from people and dogs. Yes, our dogs do not even like other dogs to try to take over.

I will trust your conscience and good judgment, Linda Page

Correspondence: WARNING: TAKING AWAY LARGE OFF LEASH AREA'S WILL PRODUCE NEGATIVE AGGRESSION IN DOGS, PUTTING THE COMMUNITY AT RISK!!! I am a dog owner and I have lived in San Francisco for 10 years. I lived in a Jr. one bedroom apartment for the first five and a one bedroom apartment for the last five. I have very well balanced dog that gets exercise daily. It is extremely important that my dog and other dogs in San Francisco are given ample space to run in. Dogs need to be able to be off leash to run and play to expend energy daily. If you take away these off leash areas, I guarantee that there will be a rise in aggressive behavior in dogs around San Francisco. The argument based upon "preserving the environment" has no basis. Humans are much more damaging to the environment than any animal. Humans leave behind trash that will never decompose and most dog owners in San Francisco are very diligent in picking up after their dogs. I can understand that non dog owners would like to enjoy areas of the parks dog free, and I think that there is room for some compromise. However, I am strongly against taking away large off leash areas. I take my dog to Chrissie Fields weekly and the following is an example of what I feel would be a good compromise: If you are walking north/ west, off leash would be permitted after the small bridge; all along the beach, all the way down to the warming hut and also the large grass area on the left down to the warming hut. The first part of the beach (by the parking lot) would give people a dog free environment as well as the picnicking area by the warming hut, but dogs would still have ample space to run and play. I think that the individuals that want this law are not seeing the whole picture. It is good for the community to have large off leash areas and has very little damaging effect on the environment. If this law passes I believe that it would be putting the community at great risk for negative dog aggression.

Correspondence: I attended the meeting at Tam High this afternoon and discuss my views with Judy Walsh at some length. She encouraged me to submit my views, which follow. I would be happy to discuss them further at any time, with any NPS representative. You have my email address. My home phone is.

My name is Mark Trautwein. For 16 years, I was responsible for all national parks legislation and policy as lead staffer on the US House of Representatives Interior/Natural Resources Committees. In my tenure, we doubled the size of the parks system and tripled the wilderness system. The last legislation I managed established the Presidio Trust and completed the transfer of the Presidio to GGNRA. I say this to emphasize that I deeply respect the making of public policy and the difficult job of the NPS in refereeing fights between competing users of park lands, especially in urban environments. I devoted most of my professional life to the protection of park resources, and I'm very proud that I did. I think the Parks Service is one of the great institutions of American history and its mission is an intergenerational commitment. I represent no organization or interest.

Having said that, I also believe that the draft plan addressing dog management for the GGNRA is an abject failure. It makes the problem worse, not better. It resolves nothing. It is bad science and bad public policy. It is a betrayal of the best traditions of the Parks Service. This ponderous monster is built on a fundamentally false premise and represents a total failure of imagination.

That false premise is that in a place like GGNRA you can resolve differences between competing users by drawing lines on maps and imposing rules on those maps that say you can do this here but not there, you can do the other thing there but not here, except in the following cases, and you can't do any of it in this place and all of it in that place. It won't work. It is horrifically complicated, too hard for the average park user to understand. In this setting, lack of understanding breeds lack of respect and contempt, a sense that I'll do what makes sense to me, or worse, what I can get away with. That encourages people to violate the rules when no one is looking. You can't possibly police this yourselves ? it can only be policed by people who understand and accept the policy, and have a stake in its success. This plan creates none of those conditions ? in fact, it is a Petri dish of resentment.

Moreover, the aggrieved parties at this site or the other will continue fighting to amend the rules and the lines -- forever -- so its a prescription for unending grievance and conflict. The plan is an attempt to solve by map-driven fiat what can only be solved by better behavior.

Most fundamentally, the plan violates the first principle of ecology: that everything is connected to everything else, that we must manage everything on our landscape for the system that it is. This landscape in particular and everything on it includes people and their dogs. To chop and dice these lands into tiny bits and pieces is a 19th century management philosophy imposed on a 21st century landscape. It won't work because, by design, it can't. Ecology's first lesson is that everything must be regarded as a whole. To shove this problem or that group of users into one corner and that problem or this group into another corner is fundamentally unsound in this environment. It is especially true that trying to force dogs and their owners into spaces the Parks Service seems to regard as sacrifice areas will only breed bad dog behavior and worse human behavior. Instead of limiting space for humans and their dogs, NPS should be thinking of expanding it so the 'problem' can be diffused and the focus concentrated on the real problem ? human behavior.

Finally, the proposed program is a betrayal of the traditions of the Parks Service. It is written by a cop. The Parks Service is a lousy cop. At its best, the Parks Service is a teacher, and a terrific one. That's why people join the Parks Service. Cops can't solve this problem. Only teachers can solve it. It saddens me, really, to see what's become of one of the truly unique and special institutions ever devised.

So what do I propose instead of the current plan?

I would respectfully suggest that you rethink your entire approach here. Your problem is people. It is not dogs and it cannot be solved by your maps. Everyone must understand that we all need to respect each other for the different reasons we use these lands and behave accordingly. A truly ecologic approach would start with a premise that says people and their dogs are allowed everywhere, except places of truly critical environmental concern where neither people nor dogs are permitted. All dog owners are responsible for the behavior of their animals. That means that they are under control at all times and people are respectful of other park users and are partners in protecting park resources. The means of control are up to each owner and specific to each dog.

To demonstrate that you, as a dog owner, meet these requirements every dog owner using the park is required to have a permit issued by the NPS, issued after successful completion of a program designed, constructed and operated by NPS in conjunction with relevant and responsible local organizations. That program will teach dog management and control, as well as knowledge and respect of park resources and the others who use and enjoy them. Upon completion of such a program, people and their dogs would be certified to enjoy the park ? with or without leashes depending on their ability to control

their animals.

I fully understand that there are many details that would have to be developed to realize such a program. It would take time to implement, in phases. But in the end the only lasting solution to this problem is better human behavior -- more educated about people, about dogs and about the environment. Your plan is designed to fail ? to create winners and losers, angry and resentful constituents with no interest in seeing the plan succeed. My plan has the potential for the opposite ? creating an army of users with a stake in the plans success and a stake in being the enforcers of a policy that both protects park resources and accommodates park users.

Why not design a regime that addresses your real problem, human behavior, that is simple to understand and will succeed, instead of one with a proven track record of failure?

What you are doing won't make life better for people or dogs, won't make life better for all the other users of the park, won't make life better for the ecology of that park that we all cherish and have such a profound responsibility to respect, and, frankly, won't make life better for you as park managers, either. There is a better way, rooted in the traditions of the Parks Service and the truth of what ecology means in an urban setting.

I beg you to have the courage to choose it.

Mark Trautwein San Anselmo, Ca. 94960

Type:

Correspondence: I do not understand why there cannot be areas of each park that are dedicated to dogs off-leash. It would seem reasonable to pick an area that would cause the least amount of environmental destruction BUT would allow dogs to get the exercise they need in order to be balanced and happy. Not all of us are able to walk our dogs, on leash, the time and distance that would render them submissive and healthy. Getting to run and play is so much a part of a dogs social life that without it, we're liable to see more dog aggression and bites, which leads to fear of dogs, which generally leads to MORE bites.

Dog walkers provide a huge, important service to city-dwellers who DO have to work outside of their homes. Perhaps a licensing program is due. A training program through AC & C that they'd have to pay for. That could teach better dog handling.

This city could benefit from a lot more emphasis on teaching it's "new to dog ownership" how to be better and more responsible dog owners.

What about dog owners getting permit to actually have their dogs off-leash? Couldn't AC &C benefit from a training program that citizens have to pay for if they want to use this service???

Certainly there are more creative answers to these issues than simply banning dogs off-leash. I certainly cannot ever support the punishing of responsible people/dog owners because of the actions of a minority who cannot understand how important it is to be a responsible member of our society.

Hell.... we need a license to drive a car, be of age to drink & vote & smoke. Why not have a licensing program for being allowed to have your dog off-leash? I realize it would mean some enforcement, but a citizens group is worth talking about. I know many dog owners who would be thrilled to be empowered by the city to tell an irresponsible dog owner to "clean up the waste" OR that "this area is on-leash and that area is off-leash". Community groups can work if they are allowed to.

Please try to deplete all avenues BEFORE cutting off this important asset to us responsible dog-owners.

Correspondence: My brief review of your potential plans -- indicates an approach that attempts to put reasonable restrictions on the use of the beach. Prior to scanning this information - I was under the impression that it is an "all or nothing" plan. I understand we must balance public safety & protection of our public lands with freedom and responsibilities. Prior to my six year old Border Collie, I rarely went to the beach. The joy and beauty I have experieced - through the frolicking freedoms on the beach is spirit lifting. To take this away - entirely - would be a grave injustice and a loss of freedom that America proudly stands for. I hope we can find the common ground for the common good.

Correspondence: I support the most restrictive policies towards dogs on GGNRA lands.

From my experience (despite dog owners' assurances), there is no such thing as effective "voice command" when a dog is excited by other dogs or the appearance of wildlife.

Our visits to Muir Beach in particular have been marred by having to be on the constant lookout for dog feces underfoot and by unleashed, uncontrolled dogs running through our picnics.

PLEASE PROHIBIT DOG ACCESS TO GGNRA LANDS WHEREVER POSSIBLE.

Thank you.

Correspondence: What harm do well-behaved dogs do in these areas? I see no evidence that requires restrictions, that others are endangered. Shouldn't substantial and compelling evidence be required before limiting our freedom?

This is also a quality of life issue. People are allowed to go virtually anywhere, indoors and out, yet dogs are limited. Public space belongs to everyone, and pets and pet owners should not be deprived of their rights without serious reason.

Correspondence: I am a disabled gay senior citizen and the primary exercise I can do is walk my dogs off leash. I am unable to walk them on leash due to my disability. My dogs give me the motivation to exercise which my doctor says is necessary for my well being. I have been walking at Ft Funston for 20 years. These areas were established by Congress for recreational areas and should be kept that way in our highly urbanized area. Off leash dog walkers are the primary users of some of these areas and our presence keeps out unsavory eliminates like gangs and homeless. There is no scientific evidence that dogs harm the snowy plover or any other birds. People with their littering cause more damage to the environment than the dogs do. A well-exercised dog, is a well-behaved dog. Available off-leash areas are already scarce.

An alternative is needed like the A+ plan. The A+ Alternative would include everywhere that is currently off-leash, plus sufficient off-leash opportunities in San Mateo County to meet the demand, and more trails off-leash throughout the GGNRA. In addition, new land added to the GGNRA would include off-leash areas, especially in those areas where it has traditionally taken place. There would be no compliance-based management strategy in the A+ Alternative. Any dog management philosophy in the GGNRA, like that for any other recreation use, should be based on Bay Area values of co-existence, shared space, collaboration among park user groups, and education where problems arise. There must be off-leash access in San Mateo County and on new lands as they come into the GGNRA. Off-leash recreation is a traditional use of those lands, and it must be respected and maintained. That is in keeping with the GGNRA's mandate for the "maintenance of needed recreational open space" contained in the legislation that created the GGNRA. The restrictions on access for people with dogs contained in the Preferred Alternative are not warranted. They cannot be used to justify a fundamental violation of the recreational mandate that formed the reason the GGNRA was created.

There is no scientific consensus that severe restrictions on off-leash dogs are needed to protect natural resources and wildlife. Some of the most compelling research in the last few years has been by researchers such as Forrest and Cassidy St. Clair (2006) and Warren (2007) who admit that they

expected to find that off-leash dogs had a major impact on the diversity, abundance, and feeding behaviors of birds and small mammals. However, when they did the actual research, they found no such impacts. The GGNRA's own data show that off-leash dogs have no impact on the numbers of snowy plovers, a threatened species that roosts only (does not nest or raise chicks) on relatively small parts of Ocean Beach and Crissy Field. The GGNRA's own studies show that joggers and walkers, not to mention parents with toddlers, equestrians, surfers, and other park users "disturb" plovers, yet there is no attempt to restrict their access in the plover areas.

Off-leash dog walking is the most diverse recreation activity in the GGNRA, enjoyed by the widest variety of people ? seniors, kids, the disabled, every ethnic group, every sexual orientation, and every social and economic class. The military planted huge amounts of ice plant to stabilize the sand dunes at Fort Funston and elsewhere. Standards of management that treat much of the GGNRA, especially those parts in San Francisco, like pristine wilderness are misguided.

Correspondence: To whom it may concern,

As long-time residents of Marin, my wife and I as well as all of our friends and neighbors are appalled by these new proposed restrictions. We are dog owners and have happily used the beautiful trails in the area for almost 20 years. Our dogs have always been under voice control or on leash, and we have had no problems with our dog or other dogs. Part of the lifestyle here and of central importance is that our dog and many others have some space for running and being free.

We are also staunch conservationists and feel very protective of the forest, trails and open spaces, and are very careful to watch our dog. I have never seen any damage to the land or other creatures. These proposed ordinances make no sense- don't seem to add any protection to the area and feel very punitive to us dog owners and nature lovers who use and love these spaces. I have not seen or heard any sensible rationale for the proposed changes. All the dog owners we know are very supportive and careful about their use of the land.

We strongly urge to reconsider the ordinances.

Thank you, Glenn Fleisch

Correspondence: I regularly visit these park areas with my dog and am aware of both sides of the issue. On the one hand the wear and tear on the landscape, annoyance to those without their own dogs, etc. And on the other people and dogs that need a place they can let it out have fun and enjoy the landscape. I believe that without restricting dogs and their owners completely we can still accommodate everyone. Perhaps a permitting system for dog owners where they pay a fee/day. The fees would then be used to restoring, reinforcing habitat and other duties as the community requires.

Correspondence: Bringing the GGNRA into the same standard as remaining National Parks is a good thing. I can't imagine we would allow unrestricted dogs in Glacier, Yosemite or Bryce Canyon. Proximity to the urban environs brings a

slightly different demand. However, dogs are not people. And people always assume they can control their dogs by voice - and many cannot. Or will not. I have had to limit my use of the park because of the 25% of owners who do not control their dogs. I want clear and enforceable standards at each setting and this document tries to do that. And then I want them enforced with tickets and cost. Lastly, I wonder why we are compelled to provide a venue for commercial operations - dog walkers. We restrict oyster farmers, farmers in general, anyone who is commercially viable, yet we allow commercial dog walkers. This I dont understand.

Correspondence: Dear GGNRA --

As a responsible dog owner in San Francisco (and one who encourages it in others as well) I am writing to share with you my objections to the new dog plan. I will be attending the meeting on March 7th and have called my supervisor as well to register my objections.

I have always said what a wonderful city SF is for dogs and their people. The walks and hikes we take together on the paths are good for both of us. Certainly there are people that abuse their right to walk their dogs off-leash (we don't like that either) but for the most part, we are responsible and caring.

I cringe at the thought of limiting our dog time to dog runs (where actually more aggression is shown between dogs) and on-leash walks. Think about the increase in the amount of dogs in the allocated park areas creating crowded spaces and probably even more opposition from non-dog owners.

And let's not forget the sheer joy a dog gets running freely after a ball or romping with a pal. Healthy, happy and well-exercised makes for well

adjusted dogs (just like for people).

Again, for those of us that care deeply about our city and our animals and being responsible citizens, this plan that's on the books would be an unwelcomed change to our community. Please reconsider the plan! Thanks for your time and attention. Winn Ellis

Correspondence: I am a resident of San Francisco of Asian descent and I am a regular and responsible user of the GGNRA. My dog frequents GGNRA parks 5 days per week, on average. He is under voice control when off-leash; I leash my dog when needed for his safety or the safety of others, and I always pick up after my dog.

With respect to the Compliance-Based Management Strategy in the GGNRA, I strongly disagree with the proposal to change the status of park access, if compliance is not 100%.

The 'Preferred Alternative' plan is far too restrictive in restricting off-leash access to the parks listed, and with the threat of banning dogs altogether in

other parks.

It is unjust and unfair to penalize all responsible dogs and dog owners due to the actions of a minority few who may not comply with regulations. I would like to see enforcement for dog owners to comply with guidelines - punishing or restricting access to dogs.

Correspondence ID: 886 **Project:** 11759 **Document:** 38106

Correspondence: I have a 5 year old Border Collie and I take him to Rodeo Beach in the Marin Headlands every Saturday to run around on the beach. He has never had an incident with another dog, person, surfer, bicyclist, or hiker. I pick up behind him always and am a responsible dog owner. My dog, Domino, can sit, stay, heel, come, and lie down on command - I would say that he is more obedient than 80% of the kids I see running around the beach.

I strongly disagree with the GGNRA proposed change to dog friendly areas and leash laws. I'm pretty sure there are more effective ways of protecting habitats than by removing dogs from the equation.

Dogs don't leave empty soda cans and water bottles behind, dogs don't pollute the air with their cars, dogs don't traipse over vegetation with bicycle tires and hiking boots - so why punish them and their owners?!

Keep the beaches open to dogs under voice control! Increase the fines and punishment for people who litter if you want to make a positive impact, but do not change leash laws and keep our beaches open to friendly dogs.

Correspondence: Greetings GGNRA, I attended the public meeting at Tam H.S. last night. First off, let me say that all the Park Rangers and GGNRA representatives were very pleasant, patient, and engaged in open dialogue. I came to the meeting concerned that this plan was a fait accompli and that the meetings were just for show. Having now spoken with a number of people there, I am cautiously optimistic this is not the case. You know we love our dogs so I am doing to focus on the pragmatic issues I see instead of the passion I feel about this. Specifically with regards to Ft. Funston where I have been taking my dogs for 9 years and know like the back of my hand. My main issue is that your map if taken at face value could be misconstrued as providing a

generous amount of off leash area when in fact the area chosen is problematic in many ways. Primarily, the beach at Ft. Fun is very difficult to access. You either need to walk down/up an extremely steep/sandy/logged path followed by challenging access up/down from the beach. Additionally, after certain bad storms access has been impossible and much garbage has been on the beach as a result of sewer issues and tides. Also, during certain times of the year especially in the summer there are a lot of dead creatures (crabs, birds, sailfin jellie fish, even sea lions) which pose public health issues due to disease and decay. The other beach access point is at least 1/2 mile from the parking lot with another steep (albeit shorter) hill to access. This is going to limit those with any physical issues be it age, cardiac related, musculoskeletal issues etc. The other area up above the beach adjacent to the parking lot is primarily dunes with no discernible paths that also will be very difficult for people to access due to uneven ground and will increase the chances of injuries. Lastly, the weather in general at this park is not conducive (probably 360 days out of the year) for activities such as having a picnic, going to the beach for sunning etc. In the both the winter and summer months you will likely find me bundled up in fleece and down with hat and gloves and/or rain gear. The folks at Ft. Fun are excellent caretakers of this land - monthly 'depooping' is a mainstay and bag boxes have been put in place by the folks who go there as well as a contractor did work around the water fountains to cut down on the mud and standing water. I love all animals and want to protect those in danger - so put up better fencing to keep dogs and people out of the areas which are eroding if needed. If you need a place for school kids, how about making an area over by the ranger building and blocking dog access over there. From the parking lot north I believe access should remain off leash for the reasons I have identified and so more not the least of which is safety and equal access to all despite age or infirmity. I would be more than willing to be a part of any discussion group that includes the public to try to come up with solutions and ideas that will be equitable and fair. I thank you for time and efforts. Sincerely, Leigh Page

Correspondence: Hello,

I would like to register my support for restricting off-leash dogs in GGNRA. My recommendation would be to have a few clearly marked areas where dogs can run off leash while enforcing off-leash laws in other areas.

I cannot count the times that I felt threatened by aggressive off-leash dogs or seen dogs digging or chasing wildlife. Off-leash dogs are making some areas of GGNRA less usable by those without dogs.

Ocean Beach, for instance, is several miles long in San Francisco. That entire area does not need to be an off leash area. Put up some ropes. I think that the Cape May area of New Jersey does a pretty good job with this for comparison. I have never been chased by a dog there, and the one person whose dog chased some birds actually seemed embarrassed by the incident.

Correspondence: I am a pro-dog advocate, and avid political activist.

Those dog-owners who respectfully use such Federal recreation areas, such as Muir Beach, Rodeo Beach, and the Marin Headlands, deserve to continue the tradition. Many people have moved to such areas because of the advantages of freedom from excessive control, to allow their family members - dogs - to enjoy limited freedom.

It is fair to have limitations - for all areas, dogs should be on voice control. All owners should be required to carry with them dog poop bags, and clean up. I understand there's a permit system used for civil dog owners in Boulder Colo which could be adopted.

Correspondence: Although I do not live in San Francisco I do visit quite often. The main reasons that I visit are to visit a dear friend and to take our dogs to Fort Funston. Abolishing off leash hiking will effect countless people and their pets. I have seen every type of dog there and every age person, from small children to the elderly. Dog-owners are very respectful of each other, others dogs, and the environment. Dog excrement is picked up conscientiously by all. Rarely do dogs poop on the beach and if so it is quickly picked up. Dogs do not poop in the water, it's just not their thing. If there are endangered species I have yet to see them and dogs are more interested in each other than any animals or birds they might see. If anything is interrupting the "soundscape" it would be the constant noise from nearby cars and the rifle range. I believe that if a person is afraid of dogs they would not visit this park, especially when there is so much ocean front available for others to enjoy. Fort Funston and Crissy field represent less than 1% of all GGNRA land. With 100,000 dogs in San Francisco alone, one would think this 1% would be fair. This area is considered a National Recreation Area and is not a National Park. I strongly oppose GGNRA's Dog Management Plan for Fort Funston. The beauty and joy of dogs running free is a joy for all. Walk around San Francisco and then walk around Fort Funston (with or without a dog) - at the dog park smiles abound, strangers converse, friendships are made, multi-generation experiences enrich the lives of all. Please leave Ft. Funston alone. Thank you for your consideration of my letter.

Correspondence: I have been using the Fort Funston/Crissy Field area to walk my dogs for years. This area was designated as a place for all uses initially and there is no logical reason for it to change.

This "Dog Plan" is another attempt by GGNRA to move these green spaces

away from recreation use and towards preservation, which reduces uses for people too. These "recreational areas" were originally so designated by congress for urban areas and intended to be multi use.

The "Poison Pill" of a "Compliance-Based Management Strategy" is unfair since it can only reduce off-leash access and not increase access in the future, and is an attempt to circumvent the legal requirement of a public process when management changes that are significant or highly controversial are made. It will not work and must be removed.

Please respect the what the area was initially intended for. You are here to provide the public the ability to use these areas in a respectful way. That is where your focus must be.

Correspondence: Unintended consequences MUST be taken in to consideration when creating policy change that will affect human and canine citizens of the bay area. The plovers and children DO need to be protected from dogs, and some dog owners and walkers are irresponsible and inconsiderate However, by restricting the areas in which dogs can run, free of leashes, and maximizing the areas of leash restriction, the new policy could create unforeseen problems. Dogs, like humans need space and exercise. A poorly exercised dog is much more likely to misbehave and create problems for people and other dogs. By minimizing the area in which they can run free, the GGNRA may create problems they are trying to prevent. Will GGNRA help animal shelters which could see a large increase in owner surrenders?

Suggestions are as follows: 1. Require all dog owners and businesses to purchase a low cost permit to help fund GGNRA. The permit will include an agreement to pick up and dispose of dog waste and to honor boundaries of the plover territory. 2. Fine those who do not pick up waste. 3. Understand that this National park IS unlike any other, due to its urban setting, population density, and excerpting the plovers, has minimal potential for negative species interaction. How can dogs be a greater detriment than snowmobiles, cars, and ATVs, all of which are allowed in our National Parks? Thank you for your time

Correspondence: Hello, I am writing in favor of keeping dogs off leash in National Parks, such as Muir and South Rodeo Beaches. I have two dogs myself, who I love to take to any place they can run free, which is getting fewer and far between. Why is it that all other animals on this planet, can utilize their god given right to run free, except for dogs and/ or any unfortunate animal in captivity? Please save our freedom to take our beloved pets to the park and run free!!!!

Sincerely,

Diana Scheer of Novato, CA.

Correspondence: As a runner and hiker who frequents the trails and beaches of GGNRA, I support in the strongest terms, current leash laws. In fact, I strongly support expanding "no dog" areas within the GGNRA. It has been my experience that more often than not, the dog owners in the GGNRA are irresponsible. They do not heed the "no dogs allowed signs", nor do they keep their pets on a leash as required in areas where dogs are permitted. When I have reminded dog owners that their off or on leash dog or dogs are not permitted on the trail where I encounter them, I am at best ignored, or at worst, cursed. On a number of occasions I have had to defend myself against attacking unleashed dogs by employing a stick or water bottle as a club to threaten the attacking dog. On one occasion, I was bitten. That dog owner blamed me (I had not defended myself in any way, nor had I threatened the dog in any way), and stated that her dog had not previously bitten anyone.

The idea of "voice control" in lieu of a leash is ludicrous. I have yet to observe a dog that is 100% responsive to voice commands. If such pets exist, clearly they are not represented by those I have encountered in the GGNRA. And the idea of "dog walkers" permitted to bring multiple pets on or off leash is equally absurd. On a number of occasions I have encountered groups of dogs on single track trails running ahead of their "master" some 200 feet, and out of sight of said master. Where is "voice control" or any control for that matter in these situations? Dogs belong on a leash, and not on single track trails even on a leash.

Regardless of what decision is ultimately reached by the GGNRA, the most pressing issue is lack of enforcement to existing regulations. Virtually every weekend in the Tennessee Valley area, I observe dogs on the beach and on the road between the parking lot and the beach off leash. And rarely, perhaps twice a year, do I see a ranger patrolling these areas on weekends.

However, I do see rangers on occasion during the week, when the number of errant dogs and dog owners are few and far between. Bottom line: please get rangers to patrol the Tennessee Vally area on weekends. Also, please post LARGE "NO Pet" signs by the gate near the Tennessee Valley parking lot.

Correspondence: I have been in these areas many, many times, and found immense joy in the dogs on the beach. I have seen responsible pet owners pick up after their pets, and show people how to interact with them. I have never ever seen any bad behavior that was not swiftly taken care of, and I have rarely even seen any bad behavior. this area needs to remain off leash as one of the few areas like this for dogs to have this sort of recreation.

Correspondence: I appreciate a ban of dogs on beaches and leaching being required. I am not a dog fan and do not frequent the parks anymore because of the dogs. I do not feel they are safe enough to visit them with my small child because of the dogs. It's disgusting how many owners do not have control of their dogs, letting them kick up shore birds etc and then do not pick up after them. Im sure the already stressed shorebirds love the happy dogs. Dogs need to be in full control and the ONLY way to guarantee that is full leash all the time and the removal from many areas.

Sincerely, Eric Helmgren

Correspondence: My comments are to encourage you to enforce a leash law/requirement at Crissy Field. I have been doing my daily walk here for many years and here are a few things that I witness each day.

I have been attack or tripped during my walk several times. I see dogs attacking other small dogs, running in the habitat area, the lagoon, and generally ignored. The 25% of people who use a leash, or closely monitor their dogs are doing a good job, but the problem is the other 75% that do not

give that attention.

People walking and talk with others or on the phone, joggers, and cyclist, will get far ahead of their animal and have not idea of what the dog is doing. I have seen people so far ahead that they do not know where their dog is. They will look back, maybe call a name, but then just continue on their way as the dogs does all the things I have mentioned as well as leaving their poop that does not get cleaned.

It is usually the big dogs that are ignored, the small dog owners seem to use their leash or have the small dog with them and monitor them more closely, but the big dogs just run wild and do whatever they want. I have even had people get angry with me because I tripped over their unattended animal. I'm a senior, walk with a limp and really do not want to break a bone because someone does not care what their dog does to someone else.

Please enforce a leash requirement for Crissy, it will improve the safety and sanitation of the area that the majority of non-dog owners like to enjoy for their daily excercise. There are many people just like me that feel this way because they have also been attacked or triped, etc. Please give a leash law for everyone enjoyment. Thank you

Correspondence: PLEASE KEEP ALL AREAS OPEN TO OFF-LEASH DOGS!!! If anything, additional areas should be created. These areas are for 'recreation', removing the ability for people to take their dogs, essentially removes an area for people to 'recreate', since dog owners prefer to do this in conjunction with their pets. What's the point of setting aside 'recreation areas' if the end result will be that less people will use and enjoy them?!?

Correspondence: RE: Proposed dog ban on Muir Beach.

It is unfair and unlawful to exclude an entire group due to the bad behavior of a few. For example, we see many parents allowing their children to trample on the dunes and swim in the lagoon, but would not expect children to be banned from Muir Beach altogether. Or bikers who come barreling down the trail and run hikers off the road. It would not be fair for those few to ruin it for all of the rest of responsible bikers/parents/dog owners who wish to enjoy the lands supported with all of our tax dollars.

And for those who truly wish for a dog-free experience, there are many, many trails and beach areas that already offer that. In fact, most trails which border Muir Beach already do not allow dogs -- off leash or otherwise. Muir Beach and the Coastal trails are 2 of the last remaining dog-friendly areas in Marin.

In terms of enforcement, it doesn't make sense to spend almost 1 million dollars to enforce new rules when no efforts have been made to enforce the rules that already exist. All of the measures suggested to enforce the new rules (education, signage, ranger presence, fines) should be tried with the existing rules before implementing these overly restrictive measures.

In terms of environmental impacts of dogs, no hard data or monitoring studies have been performed to prove that dogs are any more harmful to sensitive wildlife areas than people. Without this evidence, it is unfair and unlawful to exclude dog owners from public lands.

Dog owners deserve to the right to responsibly recreate on these lands with their pets. NPS should support this right with appropriate enforcement of existing rules for ALL visitors to Muir Beach.

Correspondence: I support the leash plan for Milagra Ridge. As a Site Steward at Milagra, I was involved in developing the first management plan for Milagra and the first trail planning. I have put in many volunteer hours at the Ridge and consider myself very fortunate to have helped protect and preserve it. I am very aware of the sensitive areas and the wildlife that live at the Ridge (coyotes, deer, bobcats, fox, skunks, raccoons, Great horned owls, and many other birds). We also have Red Legged Frogs, several varieties of snakes including California red sided garter snake and possibly may be home to the San Francisco garter snake. Milagra Ridge is an area that must be protected for future generations. I actually live at the Spyglass Ridge HOA inholding at the Ridge. I have two dogs (Scottish Terriers) that I walk on leash at the Ridge every day. I have had problems with off-leash dogs in several ways: (1) Interfering with and harassing my dogs and me, (2) Harassing/chasing wild life, (3) littering the trails with feces, (4) running through sensitive areas, (5) approaching non-dog walkers who are fearful of dogs.

I believe in leashing my dogs to protect them from many hazards. Years ago, in the countryside/farmland of Massachusetts I had dogs that ran free. But, we have a different environment today. Dogs that run free can encounter many hazards from traffic, theft, poison to name a few. I care for my pets and want to protect them from potential hazards in our area.

I also believe that many dog owners and potential dog owners do not take their environment into consideration when they choose a dog breed. City dwellers that choose pets that require a lot of exercise and training do not think about where they will be able to exercise their dog without interfering with park use by non-pet people. They also do not consider how to protect their dogs against environmental hazards.

Thanks for the opportunity to comment on the proposed changes to the current leash law in my area.

Correspondence: I support the NPS preferred alternative for the GGNRA Draft Dog management plan. As a Mill Valley resident and daily user of many of the designated trails and recreational areas, I have had an ongoing concern about the environmental / wildlife damage done by dogs. Even in areas currently designated as leash required, I encounter more off-leash dogs than on-leash dogs. I see them scampering into the woods, chasing birds and critters - clearly not even under voice control. How many dogs respond to voice control when they're chasing something? I love dogs, and understand the need for places for them to run free -- but sensitive environmental areas are not appropriate. I believe that the preferred plan provides sufficient dog resources on public lands.

I am also in support of the preferred alternative for dog walking limits and dog walker licenses. It is not uncommon to see a dog walker with more than 6 dogs on the Oakwood Valley and Alta Trails -- with only a few on-leash. And then there are the poop bags that line the trails -- yes most dog walkers pick up after their charges, but they frequently just leave the poop by the side of the trail. This practice should be addressed in the licensing requirements.

Unfortunately, since many dog walkers don't follow the current rules, what

incentive is for them to follow the new rules? I hope the rules come with some meat for enforcement!

Thank you for considering my comments on this plan.

Correspondence: I moved to San Francisco in 2005 with my one-year-old golden retriever, Clementine. Since then my husband and I have adopted another dog, Ellie. Before coming to San Francisco, I've lived all over the country. One of the most remarkable qualities about San Francisco is its proximity to stunning natural environments. But what I love most about this city is its residents' willingness to coexist, to let each other pursue the lifestyles and passions they love without animosity. Part of the San Francisco lifestyle is dog ownership - I know of no other metropolitan area in which as many people own dogs and, in particular, as many people are concerned about the welfare of needy animals. Perhaps that's the most difficult part of these proposed rules: they are intended to protect other needy animals (butterflies, etc.), a cause that many of the dog owners upset by the rules want to support as well. In the end, I come back to the principle that makes this city so unique: coexistence. Certainly there is a way to balance the interests the proposed rules intend to advance and the happiness and welfare of San Francisco's dog-loving community. The three that immediately come to mind are (1) more narrowly drawing the no-dog/leash areas; (2) more strictly enforcing responsible dog owner rules (e.g., tickets for failure to pick up after your dog); and (3) limit the number of dogs that a single person can bring into the area (this would limit the problem of a single dog walker bringing 12+ dogs into an area at once and being unable to keep track of them all, (which by the way, is something many dog owners would support as well).

I also can't refrain from making one last comment: My dogs and I are frequent users of Ft. Funston and the Headlands; in fact, we live in the condos down the street from the headland for more than a year. In all of time utilizing these areas, I have *never* witnessed a conflict between individuals and dogs (or their dog-loving owners).

Correspondence: This "Dog Management Plan" draft is saddening. There are already so few spaces for dog owners in the Bay Area to enjoy the outdoors with their beloved animals. Limiting this even further to such an extreme extent would be exponentially more detrimental to the remaining areas. Limiting dog use makes no sense when you consider the amount of humans who litter, harrass wildlife, urinate/defecate, and destroy natural resources much more abundantly than our animal companions. I think an obvious place to start would be to more strictly enforce fines for littering or not picking up after your dog in these already limited areas to help reduce damage. The most destructive dogs and owners certainly do not represent all of us. Considering

the frequency with which I see violations of these simple rules (with major impacts), an intervention leading to stricter enforcement would easily pay for itself and have much more of an impact than the extreme action of barring dogs completely. Another option would be to enforce dog licensing, and even charging an additional fee for screening dogs'/owners' behavior before issuing a "national park license", which could be required for use of these areas. I am a dog trainer and a psychiatrist and have been interested in developing guidelines for licensing service animals (particularly the largely unregulated "psychiatric service animal"). Something like this would also make sense for National Park use, charging a fee for a training session that would notify the dog owners of the rules and help ensure that they are followed, which would also weed out a lot of the destructive dogs and dog owners, who would be ticketed if they did not have their "national park license". Again, if planned correctly, this measure would pay for itself over time. Please contact me using the e-mail above if you'd like to discuss further development of these ideas, I'd be happy to volunteer my time and resources to prevent a complete dog ban in the already limited off-leash parks in the Bay Area.

Correspondence: Please reconsider this excessively restrictive proposal, which does not take into consideration the full effects of banning dogs from most of the GGNRA. Crowding SF's dog population in the few small dog parks that exist in the city is outrageous, and would certainly result in more environmental destruction and chaos than the proposal suggests. The GGNRA, at least the parts where dogs are currently allowed, are in no way "wild nature". This is a major metropolitan area, and while efforts to protect what nature remains are admirable, they must also be reasonable.

I absolutely support increased punishments for dog owners with unleashed, unruly animals in public places, and for those who don't clean up after their pets. These people give dog owners everywhere a bad name. But PLEASE do not punish what is, on the whole, an environmentally conscientious group of people and their canine companions for the poor judgment of a few.

Correspondence: I am a dog lover, dog owner, resident of San Francisco, and frequent visitor

to GGNRA. The GGNRA plan is fair and balanced. The pet pressures on city parks and diminishing waterfronts is caused in large part because it is fashionable to have dogs in San Francisco and the surrounding urban areas. Keeping dogs in small apartments, lofts, and small homes without space to exercise and roam is selfish and unethical. It contributes to urban crowding, invasions of peace and quiet, and consumes local and state government resources.

A pragmatic public policy approach would encourage urban citizens not to buy or adopt dogs in the first place, or when they do, make sure the living conditions for the dog are compatible with the breed. If they truly love or want a certain type of dog, move somewhere that compliments their own and the pet's needs.

I fully support GGNRA's plan.

Correspondence: I believe it is important to change the dog rules to be in line with national standards, to protect the environment, and to protect the other park visitors. So I would advocate the most restrictive of the choices (Alternative B or D). That said, the compromise that the department seems to have chosen appears to be a reasonable alternative.

It is important to prioritize people over dogs in the parks. That doesn't mean eliminating all facilities for people with dogs, just making it so people with dogs don't monopolize the parks. Other people would like to use the parks too.

In my experience at these parks, dog owners have a tendency to be inconsiderate and act with an overweening sense of entitlement. The dog population in the city is growing at a rapid rate. And the situation at parks like Fort Funston has gotten quite out of hand. I won't even go there any longer because it is impossible to have any peace with all the dogs running around. The experience of the place has deteriorated so that unless you are dog owner, and the purpose of the place is to exercise the little beast, there is no use in going there.

I also think that enforcement is needed, not just a change in rules. There are leash laws that go unenforced all over the city with the result of bites, dog waste all over, bike accidents, etc. If the dog culture is going to change,

there has to be enforcement as well as reasonable rules.

I know from my experience of living in New York city that dog culture doesn't have to be so lawless and inconsiderate. It seemed to me that there dog owners tended to obey the rules, use the enclosed dog runs for off-leash play, and clean up the mess their animals made. It seems to me that the strict rules there have something to do with the good behavior.

Correspondence: With all due respect, this appears to be sloppy policy.

The completeness of this plan deserves scrutiny. The purposes, rationale provided are subjective and the plan does not present a balanced analysis of current and future state policies and enforcement.

If this plan were to be implemented, it would have to be considered poor practice until all the economic, social, environmental, cultural, biological, oceanic and residential impacts have been quantifiably measured and accurately assessed.

With a large percentage of the NPS land already off limits to canines, it is puzzlingly how noticable benefits will be realized by making 100% of NPS land off limits to canines. What is the return on investment of the cost of enforcement, monitoring and process? I assume tax payers will foot the bill for that cost?

As with all plans, there are "winners" and there are "losers". It would appear that, should this plan be implemented, the loser will be the NPS for pushing through an incomplete plan and most likely an incremental, unnecessary cost burden to tax payers.

Correspondence: My wife and I have been residents of the City of San Francisco since January 2010. We own one dog and have consistently visited Fort Funston three times a week throughout. We are members of the National Audubon Society and have read their position and comment on the GGNRA Dog Plan and strongly disagree with them.

Our comment is focused on and rejects the preferred alternative proposed for Fort Funston.

Issue

The letter R in GGNRA stands for Recreation. Currently, Fort Funston is an extremely popular destination for dog owners, and judging by the fullness of the parking lots, maximizes benefit to the public. We have personally contacted and spoken with at least one hundred dog owners and the implementation of the preferred alternative will drive most of them away permanently.

The preferred alternative purports to restore Fort Funston to a natural wild state. Even if this is possible, it will take many years. And even if it happens, how many people will be served in a Recreational manner by the Preferred Alternative? What surveys and data has the Park Service relied on in estimating this number of people? This data must be made publicly available for review.

We strongly contend that the preferred alternative will result in dramatically reduced public use and enjoyment in a recreational capacity of Fort Funston. If the number of people served is reduced, how can the Preferred Alternative serve the public interest? Why would fewer visitors be preferred to more?

If the Preferred Alternative cannot clearly and scientifically be demonstrated to result in serving a greater number of people, it should be replaced entirely. The status quo should be the Preferred Alternative.

| Correspondence: | I am a Bay Area resident with two standard poodles and I strongly support the leash requirement and banning dogs from wildlife areas. I live by the bayshore in Alameda where sometimes loose dogs (which are banned from the beach) harrass resting migratory birds and root out nesting plovers in the dunes. There are so few places in the Bay left for wild birds, which do not have the human-supplied food and health care enjoyed by domestic dogs. Dogs instinctively chase and kill critters, which is not necessary for the dog's survival or health. Marking with urine and flushing out creatures can reduce habitat and inhibit reproduction. Tragically, some dog owners encourage or turn a blind eye to such needless killing and harassment of dwindling wildlife. We are all responsible for maintaining our shared ecosystem and restraining our dog's instinctive destructiveness is a civic | | |

duty.

Correspondence: My husband and I have been residents of the City of San Francisco since January 2010. We own one dog and have consistently visited Fort Funston three times a week throughout. We are members of the National Audubon Society and have read their position and comment on the GGNRA Dog Plan and strongly disagree with them.

Our comment is focused on and rejects the preferred alternative proposed for Fort Funston.

The Golden Gate Audubon Society claims in their argument for the Preferred Alternative "Too often, we have seen dog-related recreation push out other park users and result in significant harm to the local environment."

Speaking specifically to the Fort Funston area, the Audubon position is completely without merit: ? Fort Funston was significantly altered by the US Government long before any dogs and their owners came to visit. The area has not hosted an indigenous flora nor fauna for many decades. ? Audubon claims about "thousands" of affected species are untrue to the point of being laughable at Fort Funston. Where is the inventory and/or surveys substantiating the impacted species and what reasonable standards were employed to ensure that these surveys were performed by objective parties in an objective manner? This information needs to be made available for public review and comment. ? Other park users have never been pushed out by dogs and dog owners at Fort Funston. There are no recreational facilities there suitable for use by families, children, organized groups or the disabled. And Fort Funston's historic lack of native flora and fauna have made it unappealing long before dogs for purposes of birdwatching. The few thriving bird species at Fort Funston can be easily found in most back yards, are not uniquely native to California and are not endangered. ? Getting rid of dogs will not restore a natural environment at Fort Funston. What dollar and human resources are committed without possibility of revocation to the massive restoration project implied by the size and scope of the Preferred Alternative? If you do not have the resources to accomplish the objective in a reasonable timeframe, the Preferred Alternative is only punitive to dogs and their owners while providing no real benefit to anyone else. ? If the Preferred Alternative is adopted, it is certain that it will push the current Fort Funston users out to other impacted parks and resources in San Francisco that already do serve families, children, groups and the disabled with functional recreational facilities. In short the preferred alternative eliminates

a non-existent conflict and creates a real one.

The Preferred Alternative at Fort Funston is deeply flawed, solves no real problems and is very likely to foster new real conflicts and problems.

Correspondence: My wife and I have been residents of the City of San Francisco since January 2010. We own one dog and have consistently visited Fort Funston three times a week throughout. We are members of the National Audubon Society and have read their position and comment on the GGNRA Dog Plan and strongly disagree with them.

Our comment is focused on and rejects the preferred alternative proposed for Fort Funston.

Where there are not vibrant, positive uses of public space, negative uses encroach. On the few occasions where we visited Fort Funston near to closing time, we have observed suspicious activity in the Batteries that a reasonable person would conclude involve drug sales and use.

The nearby Ocean Beach area has a very large homeless population that would find a vacated Fort Funston to be a very attractive, undisturbed camp site. As a former Park Ranger, I can tell you as I'm sure you already know, that long-term homeless visitors to public property definitely foul and degrade the environment, cutting trees for fires, leaving trash and human waste everywhere and scaring away innocent visitors. Dog owners by and large clean up any waste they are responsible for. Replacing dogs with homeless will degrade the environment.

The Preferred Alternative is an open invitation to criminals and homeless persons to come use Fort Funston without being disturbed. The Preferred Alternative does not address the encroachment of bad uses of Fort Funston that will occur as a result of moving the dogs and their owners out. The Preferred Alternative is deeply flawed and should be rejected in favor of the Status Quo.

Our comment is focused on and rejects the preferred alternative proposed for Fort Funston.

The GGNRA Preferred Alternative at Fort Funston contemplates a massive project to restore the site to a native natural state. Nowhere have we seen credible budgetary figures outlining how much this undertaking will cost nor how long it is expected to take. Especially in this climate of weak economy and declining government budgets we need to see proof that the objected purported by the Preferred Alternative is fiscally feasible.

Conversely, the status quo at Fort Funston requires minimal expenditure. Where will the increased budget come from and what assurance is there that It will be sustained long enough to accomplish the objective?

Without such proof and assurance, the Preferred Alternative is only punishing a substantial public contingent that is well-served by the Status Quo and replacing it with a much smaller served public. This is not fair, is not good deal nor good business. The Preferred Alternative is deeply flawed and should be rejected in favor of the Status Quo.

Correspondence: Areas that endangered species such as the snowy plover inhabit should be fenced and strictly protected from the intrusion of dogs.

In less sensitive areas, such as the Great Meadow at Fort Mason, dogs should be able to run free as they do now under responsible supervision by their owners.

I am responding to a physical notice I saw posted at Fort Mason soliciting comments on this document.

Correspondence: I am a dog lover but do not own a dog. My experience comes from Cesar

Chavez Park at the Berkeley Marina. A lot of dog owners are not in control of their dogs and disregard the rules. They do not leash their dogs when they are supposed to and even worse, very few dog-owners pick up after their dogs, despite their protestations to the contrary. Dogs are very destructive to other wildlife like hares and birds. The best solution is to have fenced in, dedicated dog areas in a park, where dogs can roam free and not escape. I think that nature needs protection and that dogs should not be allowed everywhere, only in controlled environments.

Correspondence: As a surfer at Rodeo Beach for at least 30 years and a previous dog owner and probably future dog owner. I think this is the wrong place for dogs to be allowed free or leashed. I have observed dogs chasing birds. Bothering marine mammals. I have also been in the ocean and observed dogs relieving themselves in the surf line. It is impossible to pick-up after a dog in the surf line. This is a health hazard we should not promote. I think it would be fair to allow them on some fireroads leashed.

Correspondence: I use Fort Funston and Rodeo beach regularly. I truly enjoy these beaches, because they are places where my family can go for walks without restriction. I have two beagles and I enjoy watching them run and play with other dogs on the beach. My family goes to one of these beaches once per week for recreation. We specifically choose these beaches because they allow dogs. My family also lives locally and we value being able to enjoy nature together in an area that supports our interests. These beaches cater to those with dogs, because there are very few areas available for off leash dog walking. All other beaches in the state are available for those who would prefer a beach without off-leash dogs. I believe that dogs and their owners deserve to have a few unrestricted areas where they can go for exercise and to be around other people and dogs with similar interests. Over one third of the households in the Bay Area own dogs, yet fewer than 1 percent of the parks allow dogs at all. Further restriction would be unfair to a cohort of people who tend to be more active and more likely to participate in outdoor activity with their dogs than the average household. The Preferred Alternative severely restricts recreational access for people with dogs, The dogs who go to these beaches are very well behaved and are controlled by their owners. People who are afraid of or would rather avoid dogs have

every other beach in California to go to if they chose. The dogs at these beaches do not get in fights and are not dangerous. Most dog owners are in complete control of their dogs. They are able to keep their dogs from areas which would cause a conflict with the environment or other park users. These proposed restrictions punish all dog owners, not just those who fail to walk their dogs responsibly. There are many children and teenage people who cause more destruction to the environment than the dogs or dog owners at these parks. Restrictions need to target specific actions rather than restricting all park use by dogs and their owners.. Signs can be posted stating that children and dogs should avoid running on landslide areas, not cross into fenced off areas, and follow posted rules to prevent destruction of land and protect habitats. Please leave the few dog walking gems alone. Please give the dog owners the ability to participate in a healthy lifestyle with their dogs. Do not restrict the few areas available to dogs and dog owners. Restriction of dogs would decrease use and enjoyment of parks. Residents have the right to use public land. A portion of that land needs to cater to the interests of dog owners. Further restriction would take away the rights of land use to the majority of the people who use these specific parks.

Correspondence: I would like to see dogs completely banned. On my last park visit, my 3 year old was accosted by two different dogs (within 10 minutes) which were running loose. My son is highly allergic. I was very concerned and upset that my son may have an asthma attack, as each dog owner was insulted by my non-love for their dogs. Ban them completely, or, at least restrict those "leashes" to 4 feet. If the latter, at least we can get out of their way.

Thank you.

Correspondence: My family and I love our dog, value nature, and love walking our dog (on-leash) in the GGNRA and other Bay area open spaces. However, my dog and I have been attacked and bitten by off-leash dogs while the owner was out of sight or unable to exert 'voice control.' Unfortunately some dog walkers irresponsibly let their dogs range freely with destructive consequences for other humans, dogs, and wildlife. The GGNRA needs clear and enforceable limits for dog visitation.

All off-leash dog areas should be fenced or clearly delimited for the protection of other park visitors and dogs. Park visitors should be given a choice about whether they will interact with off-leash dogs.

Also, there should be a limit of 3 (or 2) dogs per person, or even different rules based on size (consider the relative impact of two 15-pound dogs as compared to two fifty-pound dogs). It is not appropriate for the Park Service to create commercial permits for professional dog walkers. The laxer the GGNRA and other agencies are about the numbers of dogs per walker, the more people are encouraged to bring multiple dogs.

Leash requirements must be strictly enforced throughout the life of the policy. Otherwise, proposed on-leash areas will become off-leash areas, as has already happened under the old rules. In my experience 'voice control' is difficult to assess and often ineffective. Moreover, the goal of achieving 75% compliance with the leash and voice control requirements is far too low. The Park Service should not be creating a system that expects and tolerates failure by 25% of the dog walkers (recall that the consequences of failure can be very destructive). How about 95% compliance?

In conclusion, I support strong limitations on off-leash activity while retaining ocean/beach access and loop-trail options for leashed dogs and their walkers that are not destructive to habitat and wildlife.

Correspondence: Dog owners regularly ignore the restrictions that currently prohibit dogs on certain trails in the Marin Headlands, such as the Tennessee Valley trail and the Bobcat trail. And they can be very rude if politely reminded about the rules, so more restrictions seem like a good idea.

The Headlands is among other things a nature preserve and it is the wildlife that makes it special and dogs, leashed or otherwise, are not compatible with most wildlife. There is actually a larger issue here about owning a pet that requires space to run in an urban area. It is not fair to the dog to keep him inside most of the time except for a brief run in a dog park or wherever.

Type:

Correspondence: I believe that dogs should be ideally be restricted to fenced-in areas. A less desirable alternative would be to allow only on-leash access to restricted areas. No dog should be off-leash and running free in GGNRA.

I lived adjacent to GGNRA in Marin for many years, went to school at UCSF, and extensively used the recreation area for running, hiking, and photography. I have never enjoyed being chased by a large, barking dog as I ran, with the owner invariably yelling from a distance, "don't worry, he won't bite." I have also seen too many times an off-leash dog defecating with no owner in sight. These same off-leash dogs invariably are chasing birds, squirrels, and other animals. They disturb native animals and ruin native plants.

The feces left by dogs present an infectious disease hazard. They carry a number of intestinal parasites or worms such as roundworms, hookworms, and coccidia, some of which can infect humans. They also carry Brucella, Campylobacter, Cryptosporidium, Giardia, Lyme Disease, Coxiella, Rabies, Salmonella, and Rocky Mountain Spotted Fever, many of which can be transmitted by exposure to their feces or by dog bite. At San Francisco General Hospital, we have seen over the years innumerable dog bites and many of these parasitic and bacterial infections transmitted by dogs.

I understand that this is a very emotional issue for dog owners, who show up en masse for public hearings. I do, though, believe that there is a large majority of GGNRA users who would like to see dogs in fenced in areas or at least always on a leash, and do not enjoy dodging dog feces left by the irresponsible few. This majority does not attend public meetings or reveal their identities because they are intimidated by some of the more intense and uncompromising dog owners.

Correspondence: I am a huge proponent of off-leash areas for dogs. We shouldn't have to drive to Tahoe to find them.

Dogs provide tremendous service to many people and families, and to relegate them to on-leash walks at human pace, with little opportunity for native interaction with nature and with themselves is not adequate and not fair. Fort Funston in particular has been a fantastic place for my dog and my family. She has become socialized and ergo more safe, with people and dogs, and significantly more healthy. The small postage-stamp-sized dog

parks we have simply do not cut it.

Furthermore, these areas were specifically set aside with this use in mind. It is unconscionable to further restrict the tiny amount of free space that we make available for these wonderful additions to our lives. Providing for off-leash access makes our dogs and our families healthier, happier, and safer.

Correspondence: I live across the street from a park and do not have a dog. But I am against the new proposal to have dogs leashed at all times. Dogs need to run, fetch balls, play in the water...THEY'RE DOGS!!! With this new proposal, where will dogs be able to have an outlet for their energy? In tiny designated areas? That's like prison...small confined areas. That's so sad to me.

I believe the proposal is more harmful than good. Anyone making decisions should watch at least ONE episode of The Dog Whisperer. Dogs Need Exercise...not just mild walks on leashes, they need to RUN...FREELY. If not given this outlet, I think the harm comes in the dog possibly displaying destructive behaviors, possibly aggressive behaviors. I know that when I don't work out, I feel horrible and I'm NOT good company.

Dogs have rights, too...unfortunately, their voice is not heard. That's why a non-dog owner like myself has to get involved in issues like this so I can make sure those rights are not taken away.

Please focus on more important issues this city is having before taking away the rights of poor helpless animals. If this proposal passes, it will be a

shame. Shame on the people in favor of this. Please don't use your power to take your hatred out on the animals. Make this world a better place.

Of course, I understand where this is coming from, but the few bad dogs (irresponsible owners) should not represent the majority of responsible pet owners. Why should everyone get their privileges taken away?

Correspondence: I used to live and work there, literally there. I do not like dogs for various reasons. I find it entirely intrusive to allow dogs everywhere. Most people are not responsible. There is poop everywhere, they bite and bark, and yes this will happen. When I was bitten in SF years ago, the city authorities said they didn't have time to help when the dog reappeared on the street. Dogs do NOT belong everywhere. I don't care if they are their pet children as people can't seem to deal with life on their own. They do not belong in public space AT ALL! I still go to SF and don't want dogs in my space. I've been bitten, had neighbors whose dogs bark all day, stepped in poop, had dogs jump me everywhere--hikes, paths, streets, homes. They do all these things. There is no reason they belong in the public, esp. in natural settings. Deal with wildlife. Let people keep their dogs in their space which they never do. They would rather kill off wildlife than deny their pets. People, no matter what they say, are not responsible when it comes to their pets.

Correspondence: Subject: GGNRA (Golden Gate National Recreation) is proposing a plan which will limit all dogs on or off leash for a very large part of Ocean Beach in San Francisco

As this area is virtually all residential, I feel it is critical to maintain the right to have dogs on a leash at the beach. There is some environmental concern which may or may not be valid; however, there is more than adequate beach south of this area that is ideal for wildlife protection which has limited access due to the terrain. It would be environmentally and financially (the southern area is already conducive to species preservation and would be less expensive to create/manage) more responsible to use this area and allow members of the neighborhood to walk their dogs (many have been taking their dogs to the beach for countless years and would not have chosen to live there if they thought they couldn't). Thank you for your consideration and

hopefully support.

Correspondence: March 3, 2011

To Whom it may Concern;

Please choose Alternative A and keep things as they are.

I am a (soon-to-be senior) resident of Sausalito, Ca who goes to Rodeo Beach with my two dogs at least once a week during the winter and more often during the non-rainy season. I thoroughly enjoy time spent with my dogs at Rodeo Beach and, please note: I always clean up after my dogs, and have them under voice command at all times.

Please do not change the current policy at Rodeo Beach or in other areas governed by the GGNRA, for that matter. There has to be more space available for off-leash recreation, not less, given the huge demand for it in the Bay Area.

I believe that there is no factual basis for the argument that birds and other wild animals need to be protected from off-leash dogs. There seems to be no scientific consensus that severe restrictions on off-leash dogs are needed to protect natural resources and wildlife. Some of the most compelling research in the last few years has been by researchers such as Forrest and Cassidy St. Clair (2006) and Warren (2007) who admit that they expected to find that off-leash dogs had a major impact on the diversity, abundance, and feeding behaviors of birds and small mammals. However, when they did the actual research, they found no such impact.

It is my understanding that severe restrictions are not needed to protect other park visitors from dogs. Problems with dogs represent a tiny fraction of the total incidents and citations issued by the GGNRA over the past decade. Of those incidents and citations issued to people with dogs, the majority were leash law violations, or being in a closed area, and did not reflect any safety issues between dogs and other park visitors. Target enforcement on the small number of people whose dogs misbehave, not on excluding the entire class of people with dogs from most of the GGNRA. Jean Donaldson, nationally recognized expert on dog behavior testified before the SF Animal Control and Welfare Commission on 2/8/07: "Self-selection operates strongly, i.e., people who take the time to get into their car or walk to a designated off-leash area to exercise their dogs tend not to be the type who

are derelict in other areas of dog guardianship, such as training, socialization, or appropriate containment."

The Preferred Alternative severely restricts recreational access for people with dogs, a fundamental violation of the reason the GGNRA was created. In the legislation that created it, the reason for the creation of the GGNRA (NOT a national park!!) is listed as "the maintenance of needed recreational open space." Off-leash dog walking is among the recreational activities listed as traditionally occurring in the land that was to become the GGNRA.

In addition, the Preferred Alternative discourages cooperation between different park users and will increase conflict between park users, as more and more people are crammed into smaller and smaller spaces. Park user groups can work together to resolve problems when they come up.

Please note that a new plan needs to be developed that will be more balanced, supportive of recreation, and reflects San Francisco Bay Area's values of co-existence, shared use, collaboration, and education to solve problems.

Thank you for your attention.

Nancy (Sausalito, CA)

Correspondence: Hello, Thanks for taking the time to view my comment. I would like to introduce myself, Darcie DeLashmutt, a San Francisco resident, Landscape Architect, and dog owner. While there are many great aspects to the GGNRA Dog Management Plan, I am writing to express my concern over the portions which impact dog areas and leash requirements.

I am concerned for many reasons, some of which include: - Off leash dog areas are already highly utilized and will likely exceed capacity under the management plan. - Many dog owners will be required to drive great distances to properly exercise pets. - Given our urban setting, the advantages in the Management Plan simply do not outweigh the constraints; it is not an appropriate plan to apply in an urban setting. - As a dog owner I understand that there are legitimate issues to integrate owner's needs with the needs of other uses, and feel that there are more effective ways to achieve this balance than through the plan.

I appreciate your consideration and welcome any questions. I hope we can all work together to keep the plan appropriate for an urban environment and allow everyone to use these public spaces in a positive way. Sincerely,
Darcie DeLashmutt

Correspondence: Due to international travel I was unable to attend any of the open house forums set up for comments, so I offer this response instead. I am a local dog owner that currently greatly enjoys weekly and sometimes daily access to the canine-allowed areas of the public lands of the GGNRA.

There are some elements of the proposed plans with which I agree. Some limits on off-leash dogs where environmentally necessary is fine. And providing more areas with no dogs is fine for park users that do not want contact with dogs.

However, in general the preferred alternatives at many sites are needlessly restrictive, especially in terms of restricting any dogs (even on leash). Many trails that are currently open to dogs on leash -- and where the majority of park users are dog owners -- would be permanently off limits to all dogs. Most disturbing is that there is no scientific environmental argument for these punitive restrictions (by the way I am a PhD level educated scientist from an Ivy League Graduate school). Although marketed as an "environmental" impact report, in most cases there are no good

environmental arguments for restricting dog access. The report is simply being used to advance an unbalanced agenda of wholesale restrictions on the access rights of dog owners.

For example, consider the Bluff Trail at Mori Point. This trail is heavily disturbed by generations of human impact. It is littered with concrete debris from various military installations, many covered with graffiti. Invasive species of ground cover are rife. The trail is short and leads directly away from park property. The trail is extensively used by current dog walkers as a way to complete an easy loop back into Pacifica property. No alternative exists for this loop. There are simply no environmental grounds for excluding dogs from this trail. However it appears that since the "Preferred Alternative" is simply to exclude all dogs wherever possible then with a stroke of a pen all dogs will be excluded. Why? That is entirely against the mandate of the Park Service. Have the authors of the report even visited the site? I would happily show them the widespread, long term, and ongoing human (not canine!) disturbance to the site if they actually want some hard facts to add into the report. But instead the authors just seem to follow the unbalanced agenda of canine restrictions at any costs.

Likewise why is the Upper Mori Trail now forbidden? And the heavily impacted Sweeney Ridge, entirely off limits to leashed dogs with no good reason.

Another example -- the Miwok trail in the Marin Headlands. Wide, accessible, only one step removed from being a fully paved trail. Plenty of room and width for all users. If you want to require dogs on leash, fine. But why forbid all dog access on this impressive and underused trail? I have walked the length of that trail and seen hardly one other trail user. What is forbidding on-leash dogs achieving here? It simply makes no sense. To whitewash this as "environmental" is utterly disingenuous. Why not just ban ALL PEOPLE entirely from the Headlands. By the proposed arguments that would have a HUGE beneficial environmental impact! So seriously, why not do that? Just have everyone stay at home on their couches and never come near these public lands. I'm sure the writers of this report would be delighted if only they could make that happen and just throw razor-wire around all public open space.

Milagra Ridge: why is the Loop trail off limits to leashed dogs? The trail has barriers on both sides. What is the argument for not allowing on leash dogs?

Baker Beach: Sand and no threatened species. What is the environmental benefit of the "Preferred" Alternative? Certainly there is not one that can be justified. The report calls for restrictions just to be restrictive with no justification. Same could be said for Muir Beach.

New Lands: Apparently a blanket ban with no consideration at all of past use and the access rights of long time users. For example the property in Montara (and most of the new lands in San Mateo County) is used at times almost exclusively by dog owners. And yet GGNRA considers it necessary to prohibit them all with the stroke of a pen. Again restrictions for no articulated environmental reason. Simply restrictions for the sake of being restrictive. Why? The preferred alternative as currently written in this report is clearly a violation of the GGNRA mandate for continued public access.

To conclude. Some level of dog restrictions in areas of environmental sensitivity, and to separate dog owners from other users, is fine. But the aims of this proposal are clear: restrict almost all access to a very large portion of current park users simply because they want to walk their dogs. This is direct restriction on access rights of dog owners masquerading as an environmental impact report. And it is in violation of the Park Service mandate.

Furthermore, as I have detailed above the report is not balanced or scientific: it simply aims to restrict dogs as much as possible while attempting to have a scientific basis. It should be rethought and a new Alternative entirely proposed that properly balances environmental considerations with the recreational needs of the one third of Bay Area residents and visitors that are dog owners. That is the purpose of the Park Service ? not wholesale restrictions on access.

Correspondence: The Draft Dog Management Plan seems like the start to the end of off-leash dog walking. The city first gave the NPS Fort Funston with the clause of allowing off-leash dog walking. And this is what people use it for because there are not many areas in the city that will allow for this type of recreation. People will walk their dogs in ALL types of weather so the few areas are in constant use. Because of this there is an "environmental concern" about these areas. The NPS thinks the best way to handle this is to restrict the activity of off-leash dog walking. By doing this the area for off-leash dog walking is smaller, yet the number people/dogs remain the same. What do you think the impact on these areas will be in a year? 5 years? And what do you think the solution will be to the impact? Smaller areas for off leash dog walking? The problem the NPS has with the recreation activity of off-leash dog walking is that people use the parks often and consistently. This has an impact on the parks being used. The NPS wants to keep the parks unused so there is no impact on these areas. And what good is a park that no one can use?

Correspondence: I don't agree with closing Muir Beach to dogs altogether. Muir Beach is not only part of the NPS, but is also part of a community, and the Park should take into consideration the community needs as well as the public at large. For many residence of Muir Beach, the beach is the only safe public area to walk dogs. I actually wouldn't object to allowing dogs on-leash if it is a viable alternative to banning dogs altogether. Allowing dogs on leash would mitigate many of the safety and habitat concerns that seem to be the main objections to allowing dogs in areas that are both wildlife habitat and public recreation. I hope the NPS will realize that to many dog owners their dogs are as much a part of the family as children and it would be a great loss to many families not to be able to enjoy family outings with the "whole" family.

Correspondence: I agree with the principles set forth by the Golden Gate Audubon Society:

1. All off-leash dog areas should be fenced for the protection of other park visitors and dogs. Park visitors should be given a choice about whether they will interact with off-leash dogs.
2. There should be a limit of 3 dogs per person. It is not appropriate for the Park Service to create commercial permits for professional dog walkers. Also, it is unlikely that most visitors with dogs will be able to keep control of more than 3 dogs at one time.
3. Leash and voice control requirements must be strictly enforced throughout the life of the policy. Otherwise proposed on-leash areas will become off-leash areas, as has already happened under the old rules.
4. The goal of achieving 75% compliance with the leash and voice control requirements is far too low. The Park Service should not be creating a system that expects and tolerates failure by 25% of the dog walkers. Golden Gate Audubon recommends a goal of 95% compliance with leash and voice control requirements.
5. While dogs are important parts of our families and communities, they are just one animal that is having a significant negative impact on thousands of other animals that rely on the park to survive. It is fair to ask dog owners to accept certain limits for areas where their dogs may play when the survival and wellbeing of so many wildlife animals and plants is at stake.

Correspondence: There should be a pragmatic approach to this issue which includes proof of harm or potential harm to specific species from dogs whether on a leash or not. My personal believe is that a few areas for dogs to run off leash is reasonable and should be permitted. I would be in favor of dogs being licensed for this activity as a compromise.

Correspondence: I have lived in San Francisco for over 30 years, twenty of them with dogs. We have always enjoyed living here because of the generous access to the outdoors, beaches, parks etc. in our opinion, the new dog restrictions are too severe. We have experienced, for the most part, extremely responsible dog owners in our outings. I believe that the current policy works well and doesn't need changing, people coexist with dogs, children quite well from what we've seen throughout the years. Please leave well enough alone. Thank you.

Correspondence: In a city where dogs are revered and outnumber child per capita, I feel as

though this widely sprawling new leash proposal is unnecessary. While I can understand the need for dogs to be on leash in preservation areas, I don't see a need to insist dogs be on leash in all parks and beaches. Allowing dogs to be off leash and to run freely, and respectfully, is something that is truly unique to San Francisco - we are a dog loving community!

I am regularly at Crissy Field and many other surrounding parks and beaches with my dog and see many other dogs and people interacting peacefully and with respect. It is one of the great joys of our fine city. As a dog owner and lover, with many dog owner friends, and as someone who takes advantage of our great parks and beaches with my dog (and cleans up after both of us), I strongly am against this new proposal.

Sincerely, Laticia Headings

| Correspondence: | I would like to comment on the folks who think dogs belong only on leashes and do not deserve to be off leash because of dog messes left by irresponsible owners. I often take my dog to Fort Funston and find that dogs get along well with other dogs off leash - in fact - if you walk your dog on a leash anywhere - you will find they are more aggressive as they are more protective on a leash. I live along the Great Hwy and feel dogs should be on a leash along the path - but truly feel there is no need for leashes on the dunes or on the beach. Two months out of the year is ridiculous as the notion that the Snowy Plover is being threatened by dogs is, I believe, unproven (have you seen the dunes after a storm - the sand is all over the Great Hwy - maybe we should restrict Mother Nature from the beaches for destroying the 'natural habitat' of certain animals). Humans are replanting the vegetation along the GGNRA - who is to say this is what it is supposed to be - if we left things undone - we would have sand covering most of the Ocean Beach homes. If you are going to make restrictions for dogs - then I think you need to restrict humans too. Irresponsible dog owners do not pick up after their dogs. Irresponsible humans don't pick up after themselves. On weekends (especially wonderful weathered weekends) I see trash left behind along the curbs by irresponsible humans who can't seem to find a trash can (trash cans are plentiful along the Great Hwy). Do we restrict humans from using the beaches and recreational areas because they leave trash behind? What difference is it for the irresponsible dog owners who don't pick up after their dogs? I believe humans and dogs can coexist in the GGNRA - Please keep offleash areas for those of us who enjoy running with our dogs. Don't punish responsible humans for irresponsible human behavior!! | | |

Correspondence: Hello,

My husband and I have been bringing our Sheltie (Simba) to Fort Funston for the past 3+ years. We go almost every weekend and it's one of the highlights of our weekend. Simba loves being at Fort Funston. He loves to wander around, explore and play with us and other dogs.

I understand that people who are not dog owners may not find the park as great but they have the option of going to another park or even Lake Merced which is right across the road. We, as dog owners and our pets do not have many options.

I hope Fort Funston stays as it is, a place for dogs and dog lovers to walk and enjoy the park.

Thank you for your time.

Correspondence: To Whom It May Coicern,

I would like to express my complete dissatisfaction with the proposed dog management plan for the GGNRA. It is extreme and does not make any sense.

First of all, we all know that many of the areas you are planning to restrict were given to the federal government with the express stipulation that the historic uses would be left intact. We have been able to have off leash dogs at Fort Funston, Ocean Beach, and Crissy Field for scores of years. The

GGNRA, and in particular, the areas in San Francisco, are URBAN parks. I would agree to some restrictions, but the restrictions you pose are draconian. It will destroy the quality of life for thousands of residents and visitors who have enjoyed the recreation these areas have provided with their dogs their entire lives.

I also want to point out that you cannot think that people will believe you are doing this to preserve environmental quality. In the past few years, you have turned Crissy Field into an event center. It is not run like a national park. It is run for profit, and that is completely evident by the tens of thousands of people you bring in for events like the 'Cold Splash' event last weekend. I saw those people trample plants and leave litter all over the place. No one did anything about it. And you have events like this on a regular basis. How can you possibly justify eliminating dogs because it is a 'national park' but keep having fun runs, swims, regattas...all of which bring in people who have no respect for the park or any kind of environmental aspect to anything. It's incredibly hypocritical, and just shows that you have an agenda against dogs....not an agenda to save the environment or provide a pleasant national park experience. If you would ban these events, which I would think are probably frowned upon in a national park, then maybe I would believe that you care about the environment. I don't see Yosemite telling thousands of runners to come over for a 'fun run' up to half dome. Isn't that how you are trying to sell this? That you need to manage these parks like the rest of the parks?

Crissy Field and Ocean Beach are basically amusement parks now, due to your mismanagment. Everyone...families, swimmers, boaters, residents, visitors, and dogs, have historically gotten along just fine in these areas. Now you want to eliminate dogs. The dogs are not the problem.

Sincerely,

Dianne Younger Rosse

Correspondence: There should be no question that if there is a threatened species that may be extinct if dogs continue to roam free, that dogs should be on leash or banned from those areas. Furthermore, where dogs are allowed in the GGNRA, dogs should be on leash. They not only destroy endangered and threatened species but also destroy the non-threatened vegetation and life that the rest of us would like to enjoy. Additionally, dog owners are not close enough to them and often don't notice when their dog poops, so this increased the

amount of dog waste in the park for other park users to step on. It also makes the park smelly and less enjoyable. I notice the destruction of our beautiful park lands on a daily basis. I also notice dog walkers not pay attention to their dog(s) and thus leave dog poop for the rest of us to deal with. I've noticed when dogs are on leash, the owner generally notices when the dogs stops to do its thing and I've noticed that they thus pick up the dog poop more often than owners with dogs off leash. Further, the current off leash areas are getting totally destroyed with dogs running off trail and digging up plants. Dog owners think it's cute and not destructive. I have pointed it out to dog owners who do not respond politely and do not stop their dog from destroying the park. Other dog owners even come to the defence of the owner. And the few owners that do say they are sorry and know that they are breaking the rules, will call their dogs and the dogs don't respond. Then the person has to go off trail and chase after the unleashed dog. There really should be no off leash areas for these reasons. However, dog people won't be happy with this. So if you must appease his unruly group, please have off leash areas completely fenced off. Let's keep the damage in one place.

Correspondence: CRISSY FIELD COMPROMISE

Stephen S. Noetzel 5 March, 2011

As an advocate for retention of off-leash dog-romp areas, I'll start with a bold admission. After considerable personal experience, I'm willing to concede that there are areas of the CRISSY FIELD public recreation complex, that should be restricted to 'NO PETS ALLOWED'.

Further, I believe there are additional areas that should be restricted as; 'PETS ON-LEASH ONLY'.

But that is not to say there is no area left for OFF-LEASH BEACH DOG-PLAY. There is, and that is the essence of the CRISSY FIELD COMPROMISE, as follows.

EVOLUTION OF THE "CRISSY FIELD EXPERIENCE"

At the outset, one must recognize that along with the entire Presidio, the 'Crissy Field experience' has changed dramatically over the past decade. The transition from 'quiet military enclave' to 'full public use' has been nothing short of stunning. I have no empirical 'park usage' statistics to cite (does

anyone?), but by my own anecdotal observation, I'd venture to say that the number of park users on a chilly, overcast weekday afternoon, exceeds by far the number of 'weekend sunny-day' visitors one might have counted in the spring of 2000.

Ribbon-cutting ceremonies for new facilities and improvements were hardly required. Marina residents watched the windblown tundra of the ancient bay-front airfield blossom to a unique urban park that never missed a note in protecting original flora and fauna, while at the same time inviting unprecedented growth in recreational usage.

By word-of-mouth alone the news spread like wildfire. There was a new beachfront park in town, and it had everything. It was no longer necessary to cross the bridge to find a family-friendly beach on a warm weekend. It was sitting right under the bridge, with easy access, plenty of parking, clean user-friendly restrooms and picnic areas, and a safe walking/jogging trail with a world-class view on one side; a stunning bird-sanctuary lagoon on the other. The Crissy Experience was 'in', and everyone wanted a piece of it.

At first, a few kite-flyers moved onto the Crissy beach from the Marina kiting Mecca. Out on the blue bay, the wind surfers soon came in droves. At some point, an inventive observer must have gazed admiringly at the juxtaposition of kites in the air and wind surf sails on the bay, and without skipping a beat, a flock of kite-surfers was soon added. With all that dramatic and colorful athletic activity, the observing crowd on the beach doubled, then doubled again in short order.

And here, in my opinion, TWO critical points arise. First: Every new user took 'ownership' of their particular 'Crissy Field Experience'. Second: Not every 'experience' is universally compatible at all times

MY PERSONAL DOG-PLAY EXPERIENCE AT CRISSY FIELD.

I first came to this awareness shortly after taking ownership of my own off-leash Beach Dog Romp experience at Crissy. It was the spring of 2007 and Glicka was only a year old. Enjoyable as they were, looking back now I can point to those warm-Sunday-afternoon puppy-romps' on a crowded Crissy Beach, as my first recognition that there was an element of incompatibility here.

And of course, we were not alone. The problem becomes acute when it's warm and sunny. That's when the parking lots fill up and the beach becomes crowded with users. To begin with there are families, with kids. The shallow Tide Pools are a perfect resource for giving young children and toddlers their first 'water experience' in a beautiful natural environment. Of course, the same holds true for young dogs. One would hope that the two

experiences might be compatible, however, in fair observation one must conclude that they are often not. Young children trying to gain confidence in a natural water environment, are not compatible with a quartette of young puppies exuberantly splashing in circles around them.

On such picture-perfect days on the Crissy beach, one can also count on a myriad of other enthusiasts. In addition to the families setting up their blankets on the beach, there are wind-surfers, paddle surfers, kite-surfers, and aqua-sports athletes in every possible combination thereof. Some of them in need of great stretches of beach to lay out their lines and gear, before taking to the bay. Add to this colorful array the picnickers, settling onto the beach to take in all the action and the ever spectacular view.

All of these activities seem to fit, sometimes just barely, into compatibility. Much as I'd like to add my unleashed dog to the scene, I must regretfully conclude that it becomes a bit "too much". On a busy sunny day at Crissy Field beach, I must conclude, the addition of off-leash dogs is simply not a reasonable addition to the venue.

I therefore offer: THE CRISSY FIELD COMPROMISE.

To start with, I would support a NO PETS policy for the beach area EAST of the tide-pools. That is, the beach itself, from the Tide Pools area, stretching eastward all the way back to the Pedestrian Beach entry, at the San Francisco Marina.

I would support the establishment of On-Leash Only regulations for the mile-long walking path stretching westward, from the Marina area, all the way to Ft. Point.

And, most vigorously, I would support the establishment of a designated Off Leash Dog Play Area, on the long strand of beach, starting approximately 60 yards immediately west of the Tide Pool Outlet, and continuing westward, for roughly a half-mile to a point approximately 60 yards east of the US Coast Guard Station jetty.

HOW TO MAKE IT HAPPEN

Adequate and communicative SIGNAGE is the key.

I would recommend a modest barrier, of some sort, at both ends of the Off-Leash beach strand, to demarcate the boundaries. Not a fence, but some sort of obvious intermittent barrier material (a series of attractive boulders come to mind).

Most important, along the line of demarcation, and in numerous other

places, appropriate, definitive SIGNAGE is the key to control and compliance. Between the 'boulders' demarcation line (for example) there could be 'two-sided' signs.

One that says: ENTERING OFF-LEASH DOG PLAY AREA

While the opposite side of the sign says: DOGS ON LEASH ONLY

A series of 'NO PETS ALLOWED on THIS BEACH AREA' signs could be strategically placed to define the beach areas from the tide-pools, running east, to the Marina.

By use of adequate and instructive SIGNAGE, the entire practice of park-users bringing dogs to Crissy Field could be SHIFTED somewhat westward. A parking lot, marked 'PARKING FOR ACCESS TO BEACH DOG PLAY AREAS' could be established on the south side of the beach-front road (i.e. Mason Street), just WEST of the point where HALLECK STREET terminates (at Mason) as it emerges from the Presidio.

The existing Stop Signs at the intersection of Halleck and Mason already provide for safe passage for pedestrians and canines entering the already existing pedestrian bridge (right at that point) that leads across the lagoon and onto the aforementioned Beach Strand.

The lagoon-spanning footbridge could be marked with prominent signage stating: 'THIS WAY TO OFF-LEASH BEACH AREA'

All of the above would serve to alleviate congestion; spread out parking for designated park use; reduce canine intrusion in areas of 'family beach use'; preserve and enhance existing bird-sanctuary areas, and generally?..give all segments of the public fair access to the unique natural resource gem called CRISSY FIELD.

WHY STRUGGLE TO RETAIN AN OFF LEASH BEACH AREA AT CRISSEY?

One quickly realizes that this long strand of almost secluded beach?.is far more of a 'strolling beach' than a 'blanket beach'. Indeed, even on perfect summer days, sitting sunbathers are few and far between. In short, it's a perfect place to let Glicka's ball fly?in long and graceful arcs, and to watch her race along the water's edge, and 'crash the surf' to retrieve it. She is a strong runner and an even stronger swimmer. A supremely trained 'urban athlete' in the prime of her life. She needs lots of un-encumbered space to stay in shape. A long walk in the beach sand (as we slowly make our way toward the end of the beach near the Coast Guard Station) is good for my

health as well.

Obviously one can find other places to romp. In fact I have traveled extensively with my dog ? all over the western states in the past half-decade. We've found many lovely off-leash beaches, forests and fields to romp and ramble in. I can tell you that Crissy Field is unique. I can vouchsafe that there is no strand of beach in America as perfect as this for a man to commune with his dog; to share with other friendly, active people and their dogs; to gaze at a stunning world-class view; and to recognize that all this exists within the boundaries of the great city that is my own home.

In my seven decades on this earth I have traveled far and wide - experienced many wonderful things. As I live and breathe, there is absolutely no other activity I can think of, that tops an exuberant summer evening 'cool-off romp' - with my dog (companion), at Crissy Field, in San Francisco. And I am not alone. Every time I walk that long strand of beach, I meet others along the way. Occasionally their dogs befriend my own, for a fleeting chase or swim. The comments exchanged with strangers along that strand are largely the same. "Spectacular"; "Unique?.one of a kind"; "Perfection!"

Should the bark of a dog interrupt, I'm convinced they are only adding their full concurrence. This place; this time; this strand of beach at Crissy Field, is enjoying its best possible use. It would be criminal to take it away.

Correspondence: We as human beings ask much of our canine companions, we ask them to provide assistance to blind persons, to provide therapy for the sick and aged, to detect health compromises such as cancers and other life threatening illnesses, to detect drugs at our borders, to detect bombs in airports, schools, ports and other sensitive areas. We have domesticated these wonderful animals for our benefit not theirs and as such we must provide for their health.

Off leash areas are not simply a place to let your companion run wild, they are a fundamental necessity for their health. If we are to compare the needs of wildlife and domesticated animal life, I argue that deer populations and snowy plover populations to name two wild species are not more important than our canine companions. If anything our obligation to an animal species we've domesticated exceeds our obligation to the animals we have not. Dogs have become our lives and we live our lives with them and in many cases as

stated, because of them.

On the need for regulation, I agree. Noting incenses me more than encountering un-retrieved feces from a public place or an aggressive dog whose owner is the blame for that aggression. In that regard let us call for permits, fines and whatever other means necessary to curtail irresponsible behavior by a dog owner. But let's not ban dog areas en-masse for these reasons. That simply shifts the burden to another area and punishes all responsible persons. In a comparison, people litter on the beach and in parks and yet other people form committees to clean it up, but we don't ban people from beaches and parks for littering, but in this proposal dogs are being singled out unfairly for such reasons.

The need to protect the environment is an easy thing to yell out, well let's also yell out for the need to have an environment for our companions. One species is not above another, all should be cherished, especially the ones we teach to save and enrich lives.

Simply stated... In a community where the number of dogs exceeds the number of children, it is patently obvious of the need to provide healthful services for the community. In a recreation area such as the GGNRA, the fact that less than one percent of land is designated R.O.L.A. to the welfare of dogs is wrong and reprehensible and thus this proposal is fatally flawed. I would like to see a proposal that accounts for the facts I have spoken here today and increases R.O.L.A's not decreases them.

Correspondence: I think that trying to provide on-leash and non-dog experiences in the same areas confuses dog owners. Many dog owners do not adhere to the non-dog portions of a beach or trail if there is a connecting on-leash area. And they often do not adhere to the on-leash restriction in the allowed area. If you are depending on on-leash restrictions to protect wildlife you are wildly optimistic.

I think you should completely ban dogs in some areas - anywhere there is sensitive wildlife habitat, and allow on-leash and off-leash in distinctly separate, high use areas.

Some specific comments: I understand the dog restriction on East Beach - there are so many dogs there you never know what you're going to find in the sand! But having a on-leash area right next to the Plover habitat is risky. I would stop the on-leash area further east.

I think your suggestion for Ocean Beach is good and will work, because of the size of the beach.

Dogs are all over the Marin Headlands, often off leash on trails that are non-dog. It is too confusing, not posted, and there is no monitoring. Let there be dogs on Rodeo Beach and one trail loop, and that's all.

Thank you for your efforts to protect the wildlife in our beautiful GGNRA.

Correspondence: Please keep the recreation areas open to dogs to run around in. Dogs need exercise as much as humans, if not more, and must run to get the full extent of the benefit of exercise. By banning dogs or keeping them on leash, not only are you mistreating them but you are effectively committing a preemptive strike, declaring them guilty before any problem arises. We are morally obligated to care for those creatures who cannot care for themselves.

As Arthur Schopenhauer declares, "The assumption that animals are without rights and the illusion that our treatment of them has no moral significance is a positively outrageous example of Western crudity and barbarity. Universal compassion is the only guarantee of morality."

Correspondence: I'm very happy the dog problem is being addressed.

I'm a runner, and an environmentalist . . . and am long tired, tired, tired of seeing people with dogs off leash in on-leash areas, and unwilling to respect the wildlife preserves by bringing their dogs there. Mind you- I don't hate dogs. I know they can be walked and run with on-leash-happily for both dog and owner. I've done it. But keep them on leash in public. This is the law and it's about public safety. I've been attacked by a dog while riding a bike, and another dog charged 2 of us while on horseback-causing the person I was with to fall and be injured. The owners of the dogs in both cases cared more about their dogs' "freedom" than about our safety. (I can provide more details on both incidents- if you like.) Amazingly, someone I know, a yoga instructor, was running with his large (scary looking) dog around Phoenix Lake. The dog was nowhere near him. I called out and asked him to leash

his dog- and he refused. This last, especially, was yet another example of Marin County residents' overly-developed-sense -of-entitlement; is it generational? Cultural? I'm from Georgia and this kind of attitude did not fly where I came from. Basically, if you don't want a dog encounter, don't go on the trails in the water district land, or on any of the trails in open space whether state or government land- the dogs are off leash- at least half of them. This is not fair to people seeking to enjoy the area, nor is it legal. It seems to me if you want to let your dog run free, you need to purchase acres of land, and fence it and let them go there. Otherwise- people need to grow up, behave, take responsibility and follow the rules.

One final note: I hear the the water quality on at least one trail/fire road are in Novato has been seriously degraded due to dogs, off leash, running free and defecating in the creeks. I am sorry that I did not write down the exact location, and if it is again brought to my attention, will send it along.

Correspondence: RE: Fort Funston

I was born and raised in San Francisco and used Fort Funston frequently as a child. I had at least two birthday parties there that I remember vividly. We played capture the flag! In high school, I often took walks there, both with friends and with my parents. It is one of the beautiful places on earth.

Since having children myself, I have discovered, to my dismay, that Fort Funston is no longer a safe place for them. Where there were once a few dogs off leash, there are now dozens upon dozens, possibly even a hundred on some days! We tried to walk there once when our children were toddlers and were approached by bounding dogs at every turn. The owners would sometimes call out "don't worry; he's friendly" but we were still sufficiently intimidated not to return. My parents, who are not steady on their feet, have

given up walking there for the same reason.

There is also the issue of poop, which is everywhere. It is often left on the ground or on the steps to the beach in bags, presumably to be retrieved later, but the effect is the same: it is both unsightly and unsanitary, and a particular risk for small children.

I would like to raise an important point, which is that many of Fort Funston's visitors who are not dog walkers have by now completely given up using the park. I almost never go there myself and my parents don't either, though it was, at one time, our favorite park in San Francisco. I presume that a majority of current park users are dog-walkers but this is not because the rest of us would not LIKE to use Fort Funston. It is because, under current conditions, we can't (or find the experience so unpleasant that we choose not to). This is important to note because people who have stopped using Fort Funston or any park are very difficult to locate, much less organize. Dog-walkers, on the other hand, congregate daily and can present themselves as majority users, when in fact they enjoy that status only because other users have been forced out.

I strongly support adopting the new dog plan, which will allow Fort Funston to be shared, once again, by families, by children, by the elderly... by people of every kind.

My thanks to the National Park Service for undertaking this monumental (and no doubt contentious) task.

Correspondence: I would have liked to side with Alternative E, but because of some of the limitations provided I'm forced to go with A. No action. It's upsetting to see that throughout E there was almost no effort to try and keep areas as voice-controlled. Throughout the entire plan, there is 0 effort, zilch, nappa, zip, to try and CREATE areas for off-leash dog walking that would supplement the closure of any of the areas the initiative aims to protect.

I wish that I could have done something here to try and protect natural resource and wildlife areas. But there was no option that attempted to do that while keeping dog owners as happy as possible. About problems the general public has with dogs in these areas, I could care less, because I'm sure they account for a minority of the people that use these areas heavily.

You can't just go around entertaining the minority. Let them hate dogs somewhere else. We dog owners are an extremely large part of the user base of the areas.

In the vast majority, visitor experience is enhanced by dog laws as they stand. Go to the areas and watch people smile as they watch dogs and humans enjoying the freedom of the beautiful areas. If there is conflict, I'm sure it's in the very very bottom parts of the minority.

If you want to maximize dog walker compliance, keep things as they stand. What could be more clear and enforceable than saying this whole park at Chrissy Field is off-leash. If you are scared of dogs go somewhere else, because you are the one with the problem we shouldn't have to conform to you.

If you want to ensure a safe and healthy work environment for park staff provide simple training, it's not hard when the dogs have an owner nearby anyway.

Commercial dog-walking creates jobs and an entire industry that not only provides happiness for dog's and for dog-walkers, but half the city that works and needs their dog to get healthy exercise.

Natural Resource areas are already off-limits to people and dog's. if someone breaks that law, and enters or tampers with the zone, they should be punished by the laws as they stand now. If anything, increase the off limits boundaries with extra signage and public awareness of punishments. I don't enter the no-dog zone's if I clearly see a reason not to. And I would frown upon anyone taking themselves or their dogs into one of the areas that are obviously for protecting resources and wildlife.

Correspondence: Dear GGNRA,

I am a law-abiding tax-paying positive contributor to the local community we call the bay area. I am also a graduate of Gunn High School in Palo Alto, an alum of UC Davis and a resident of Redwood City with employment tied to Silicon Valley.

I am also a responsible dog owner!

My Vizsla named "Diamond" is a graduate of numerous dog training classes and a dog show champion. She has been socialized to the maximum. She loves everyone and is a threat to nobody. She is also very well behaved under voice control.

But, she needs off-leash exercise!

For this reason, we visit Fort Funston weekly. It's heaven on earth for us. We visit with a smile treating the park and all visitors with respect. We pick up after ourselves and others. We always leave the park as good as we found it or better.

So, please do not punish the responsible dog owners by reducing the precious few off-leash parks found on the peninsula. Please keep Fort Funston off-leash legal!

Thank you.

Dane Mrazek of Redwood City.

Correspondence: My husband and I moved to the Bay area from the East Coast a few years ago, and one of our primary reasons for the move was the potential to enjoy the huge swaths of forests, trails and beaches. As the owners of 3 dogs, that enjoyment is only complete with their company.

We exert a great deal of energy in our dog-training, and in the course of our extensive use of the GGNRA's dog-friendly trails and beaches here in Marin, we have always encountered similarly-minded, responsible dog owners. This has been our experience, without exception.

It is lamentable that there is a minority of dog owners for whom responsible pet management and respect for the environment are not priorities. However, I implore you not to punish the overwhelming majority of us who

are truly respectful of the bounty of our land.

In particular, one of our favorite retreats is the beach at Muir Beach ? a tiny, gorgeous beach that is truly a local treasure. And while I myself have enjoyed many an hour on the sand, watching the waves, my joy at this beach is surpassed only by that of my 3 dogs. They love nothing more than to play in the (cold!) waves, chasing and playing with other dogs and children, and to stand guard with the wind in their ears. Some of our fondest memories with our dogs are from our time at Muir Beach? our new puppy being passed from child to fascinated child? our geriatric arthritic dog re-discovering her ability to run? our shy middle dog making careful friends with a like-minded hiker.

Our votes are to keep Muir Beach dog-friendly, off-leash and under voice control.

Of note, I have seen littering, destruction of flora, and disruption of fauna. And the few times I have observed this willful neglect of GGNRA stewardship have been at the hands of unfettered humans, not dogs.

Correspondence: Please keep GGNRA beaches and parks open to off-leash dogs. We rescue hundreds of dogs every year who have been mistreated or abandoned. They are NOT the dogs running & playing in GGNRA. These good dog-owners deserve to have a place to take their dogs for fun & exercise off-leash, in a well-defined area. I agree that not all beaches & trails should be open to dogs, but the ones that are most popular with dog-owners should remain open.

Thanks for your consideration.

Correspondence: Since man has been a man dogs have been an integral part of his household and a preferred companion to the family. The owner should have the judgment to determine if the dog is educated/trained enough to graduate to walk parallel to him. If the dog however became a menace to others certainly the authorities will have authority vested in them by the common will of the community to act. The exercise of individual liberties end when

they begin to affect the rights of others, but they do not always do. To assume that will be an exaggeration of a police state that does not empower and trust its citizens, and I do not share that view.

Sincerely,

Correspondence: I fully support your plan to require dogs to be ON leash in park areas.

Chrissy field is a virtual dog run at this point. Overrun with dogs off leash.

Dogs are never under voice command, despite what owners think.

My daughter has been jumped by dogs a number of times, being knocked down as well as receiving large scratches on her legs.

This has happened both at Chrissy field and Ocean beach.

We are also tired of finding dog excrement at the beaches.

Dogs do not have the "right" to run off leash unless they are on private property.

Please put them safely on their leashes.

Correspondence: I support dogs on leash everywhere in the GGNRA. Dogs should not be allowed to disturb wildlife in their natural habitat. Every time I go into the GGNRA, I see dogs off leash and destroying the park. Dog walkers feel that their dogs have rights above people. They believe that their dogs have a right to chase wildlife, and dig up the beautiful plants of the GGNRA. The GGNRA is a national park and thus it should not be a question that dogs should be on leash everywhere and banned in areas that are particularly vulnerable. In order to enforce these rules, volunteers should be utilized to give offenders tickets. If you decide that it is not appropriate for volunteers to actually give the tickets, they can volunteer to monitor the GGNRA and

call the park police to report offenders. Then the park police would give the tickets.

Correspondence: Mr Dean:

I am writing to ask you not to ban off leash dog walking in Rancho Corral de Tierra. I live in Clipper Ridge off Coral Reef Ave., in El Granada California. I have lived in Clipper Ridge since 1976. For the past 35 years, I have walked my dogs daily off leash in the hills above Clipper Ridge. I may spend as much as 2hrs a day walking them along the trails, in any kind of weather, at any time of the day. Most weekends are spent, hiking with them (off leash) along the trails that surround the area within the boundaries of Rancho Corral de Tierra. It is not unusual on a weekend, to load a day pack with water and food, and spend upwards of 6hrs in the back hills hiking with my dogs off leash. The majority of people that I come across while hiking in the hills, are hiking with their dogs. It is not unusual for me to only see hikers with dogs, and horse riders with dogs. If I do happen upon anybody hiking in back hills without a dog, my dogs are leashed immediately. In the 35 years that I have lived in Clipper Ridge, I do not know of any instances of off leash dogs causing a problem, we usually "police" ourselves. I am requesting that Alternative E be the preferred alternative. Alternative E states that "New lands begin as 36 CCFR 2.15 (dogs allowed on 6ft leash) and new lands with existing off leash use before acquisition my also be considered for voice and sight control in the future"

Thankyou

Correspondence: My issue with the plan is that I feel it doesn't include a balance between recreation, the environment and the small business in san francisco. I have 2 dogs and they have a dog walker 2x per week that takes them to the off leash area in fort funston. If the off leash area is restricted there will be more dogs in a smaller space and this will affect the dogs and the dog walkers business. More dogs in a smaller space could mean a greater chance or communicable diseases amongst the dogs, and possibly more dog injuries to

dogs and the dog walkers alike. The existing off-leash dog areas may become too crowded which could mean the dog walkers have to cut back on the dogs they accept resulting in a decreased income. Currently the justification for the plan is for environmental reasons, and while the environment is key, it's only part of the equation. I believe all parts of the equation must be better balanced so I opposed the off leash restrictions in the plan.

Correspondence: I actually do not own a dog, but do live on 48th Avenue at Ocean Beach and go to Ocean Beach daily. I actually adore dogs, and do not mind them running freely on the beach. However, one bad apple spoils the whole bunch—I have seen things like a dog run up to a horse and nip at them, dogs charging at unsuspecting children, etc. Feel like they should be on a leash, but the only way to enforce that is to get more police enforcement. Allegedly, that's the rule now, but believe me, no one does it. The main idea I support is that dog walkers get permits and the number of dogs should only be 3. I'm serious—any more than that is impossible to pick up their litter, etc. Again, you are going to have to hire more people to enforce this. There has to be some beach for dogs to run free. I purpose part of Ocean Beach, and have it CLEARLY marked. Same with Stinson Beach and Crissy Field. Thank you for letting me comment. Mrs. Nancy Hinze

Correspondence: My concern is with the restrictions proposed for Muir Beach, Rodeo Beach, and Oakwood Valley.

Oakwood Valley: It sounds as if the major problems associated with providing access to dogs are caused by dog walkers. Would it be possible to keep the access the way it currently is, which is my STRONG preference, if dog walkers were regulated?

I can see no reason why their commercial enterprise would be given any more latitude than, say, a hot dog vendor. I think that a maximum of three dogs per person, which is the maximum number of dogs allowed in Marin County, should be applied to everyone without exception. If dog walkers want to make more money than that per hour, they can walk the dogs on

leash elsewhere.

As for dog owners... there are hundreds of trails in the Marin Headlands that people can access with their small children, trails on which dogs aren't allowed, one only a mile or two farther down the road from Oakwood - a lovely trail that leads to Tennessee Beach, which I used to walk with my dog before it became part of GGNRA. Now, I never walk that trail, sigh.

To limit dogs to on leash only for any part of Oakwood trail, the only one in the entire Marin Headlands that is a dirt trail through the woods on which dogs can run free - under voice control, seems overly restrictive. To do so because some special species might be discovered and impacted some day, seems unduly forward thinking. And, it doesn't take into consideration that dog owners are your constituents, too.

I live in this neighborhood. I know it's a National Park, but it's also my neighborhood park. It has been sad to me to see how, though the Park's publicity, the numbers of people using it have increased over the years I've lived here. If you stopped promoting Oakwood Trail, the problems would decrease.

Muir Beach: It would be so easy to fence off the riparian areas, which would give dogs full access to the beach. Much easier than fencing a corridor up the hill from Oakwood Valley! My dog is not interested in the creek or the bushes. We run at low tide. Again, no more than three dogs per person, period, would be great. Beyond that, I can't see why dogs are or should be a problem. If people want a dog-free beach, they can drive a couple more miles down the road to Stinson any of the other beaches up the coast. Where is the next dogs-allowed beach?

I go to Muir Beach often during the week, and few people are there, even during the summer, and of those who are, most are people WITH dogs.

Rodeo Beach: Even in the middle of a summer weekend, the beach is relatively uncrowded and there are few people walking the loop up around the beach. Again, I see no reason to restrict dogs to on-leash only. The dogs I've seen at Rodeo run in the area near the water and the people are up higher.

Coastal Trail: I fail to understand how a dog on leash causes any problem. There are so few places someone can hike with a dog. Why remove yet another? I'm a woman and I often hike alone with my dog. I don't hike on any trails without my dog because it's so isolated in many places that I don't feel safe. My dog is my protection. You have removed most of the Headlands from me. Please don't take one of the last trails left to me.

Correspondence: Proposed Comment This DEIS is invalid because it fails to meet its legal obligation to take into consideration the negative effects the proposed changes would create for humans, their dogs and the surrounding environment (e.g. local parks). Further, the studies/science utilized to support allegations of damage to resources in the GGNRA are fatally flawed - the positive impacts are ignored and the negative impacts are unverified. Therefore, I believe the 1979 Pet Policy should be implemented in its original form with no restrictions on off-leash recreation at Ocean Beach, and it should be institutionalized as a Section Seven Special Regulation. Further, I believe that all properties added subsequent to the 1979 Pet Policy and in the future should have historical off-leash recreational usage allowed. This would accurately reflect the enabling legislation for this National Recreation Area which GGNRA management has held in disregard for quite some time. I also believe the GGNRA's inclusion of a Compliance-Based Management Strategy as well as the GGNRA's failure to commit to a Section Seven Special Regulation following this process indicates a lack of good faith and an intent to deceive the public as the GGNRA did following the implementation of the 1979 Pet Policy which the GGNRA later decried in Federal court as an "error".

Correspondence: As a dog owner for most of my life (65 years), I am saddened by these harsh restrictions that the GGNRA is proposing for some of the most delightful places I have visited with my dogs (2 Rhodesian Ridgebacks and a Cardigan Welsh Corgi). I was born and raised in San Francisco and have taken such pride in the dog friendliness of the City of St. Francis, patron saint of animals. Marin County has always been congenial towards man's best friend

as well...now all these positive feelings I have are being threatened.

I have enjoyed all these areas that GGNRA is planning to restrict to dogs, no longer allowing them to run and play as dogs should be able to under voice control. We meet up with friends and their dogs at all these places: Muir Beach, Rodeo Beach, and Oakwood Trail in Marin County, and Chrissy Field, Ocean Beach, Fort Funston and other places in San Francisco.

For food, shelter and love, dogs give back so much to humankind, helping the blind, handicapped, epileptic, the deaf to live fuller lives; in law enforcement to help officers in keeping citizens safe; in search and rescue, to find lost people and children, in disasters to seek out the injured and the dead under rubble. My dogs help me control my high blood pressure and weight by getting me out each day to walk and run them off leash at select places on the Peninsula where we live. Their companionship is priceless. Dogs need off-leash running and socializing with other dogs. Places like Fort Funston are so unique. I have been many times with my dogs and I have never seen dogs jumping up on people or squabbling amongst themselves and there are often hundreds of dogs and their people out enjoying the sea breezes and fresh air on weekends. It is simply amazing.

Correspondence: Please don't further restrict dogs and their owners--

Dogs impact the environment less than cars, mountain bikes or litter. Many people have jobs and don't have the time to both walk their dog and take a separate hike in nature. If they can't do them both simultaneously, they won't be able to enjoy the nature at all. When it then comes time to vote, they will be less invested and not vote to protect the environment.

There are other measures that could be taken, like increasing the penalty for leaving dog droppings, that might actually benefit park users.

Imposing these further restrictions would be a mistake.

Correspondence: I have already commented but wanted to add a suggestion.

Many off leash advocates are throwing out the statistic that they are only allowed to run their dogs off leash in 1% of the GGNRA. Nobody knows where that number came from and it is carried around like an ultimate truth. My experience is that the percentage of off leash areas in pedestrian accessible areas is way above 1%. I would suggest that you guys come up with the following statistics to refute these falsehoods.

% of GGNRA area that is accessible to humans % of that area that is accessible to off leash dogs in each of your alternatives.

Correspondence: I have been a resident of the outer sunset district of San Francisco for 5 years, and while that is not a considerable amount of time I have chosen to live in this neighborhood for the open space and dog friendliness of both the neighborhood and Ocean Beach. I am completely aware of the leash laws on ocean beach and at which times of the year I am allowed to have my dog off leash. I find it very hard to understand the environmental impact study in

relation to the natural wildlife or disruption of the natural habitat when the rangers are driving 4 wheel drive vehicles up and down the beach polluting the neighborhood as well as the beach. The ocean liners at sea put more garbage on our beaches every day than our beloved dogs can possibly disrupt the environment.

The outer sunset is a dog lovers dream neighborhood and Ocean Beach is a huge part of the reason we chose to live here. Please consider alternative versions to the draft of the proposed Dog Policy on Ocean beach and other currently dog friendly beaches in the SF area.

Regards,

Evan Nielsen

BTW. I have raised my beautiful black lab at ocean beach his name is Rallie, and he has never even looked at a Plover.

Correspondence: I assert that my right to dog-free space is equal to any right a dog owner has to bring his/her critter with him/her to the GGNRA. "Variety of user experiences" is an interesting term. For example:

1)We assume "Pleasurable" or at least "non-harming" experience, right? But dogs have ruined many visits for us in recent years. My partner and I are really sad and genuinely angry at being continually faced with off-leash dogs in the GGNRA! Unfortunately she has been afraid of dogs for most of her life. We love and respect the beauty of GGNRA; we feel lucky to have structured -- not unlimited --access. We accept parameters that support the wellbeing of the whole ecosystem in GGNRA. This appears to be not true of people who would support bringing dogs -- particularly, off leash dogs -- into these areas. Dogs are not native animals to the GGNRA; their impact is NOT negligible.

2)Who are the "users?" Dogs are not people, they should not have nor do they deserve the access rights that humans do. Users include those for whom unpredictable, off-leash dogs present a fall hazard (me during rehab!) and those who for whom rambunctious dog is worse than an annoyance but an actual threat.

Correspondence: The Preferred Alternative the DEIS report recommends for Fort Funston would keep an off leash dog on the sand.

My dog, for physical and health reasons, cannot walk on the sand for long. She has to be on a paved area. You are effectively excluding my dog, and us, her human companions, from recreation activity at Fort Funston by keeping us off the Sunset Trail.

The report does not address the needs of citizens with physically disabled dogs who have a right to off leash recreation.

The contract with the city of San Francisco in 1979 guarantees that recreational use in this urban park by all its citizens be preserved.

I strongly oppose the harsh restrictions GGNRA recommends in their DEIS report.

Type:

Correspondence: To the NPS,

I'll start by saying that I strongly protest banning dogs from the SPPA at Ocean Beach.

As an individual with a BA in Biology from Princeton and a Masters in Environment Management from Duke, I feel highly qualified to make the following comments. In addition, I spend 2007-2010 working as an ecological risk assessor for a Bay Area environmental consulting firm, so the planning and execution of documents like the GGNRA Draft Dog Management Plan / Environmental Impact Statement was my job during that time. I am very familiar with the process required to create an EIS, and I am disappointed with the negligence the NPS has exhibited with this particular effort.

I live on Ocean Beach, and it is on the beach where I run with my dog (on a leash) every morning and walk with him in the evening. I have had ample opportunity to observe shorebird behavior on the beach, and I feel like the shorebird "situation" on the beach has been grossly misrepresented by the NPS.

To quote the EIS, "the seasonal leash restriction is often violated in the SPPA; dogs would continue to disturb and/or harass the birds, potentially limiting their use of preferred habitat, and to interrupt roosting or foraging behavior, which causes the expenditure of energy and could affect migration and breeding; shorebird numbers are high, visitor use is high, and coastal habitat is extensive at this site."

I will not argue that dogs, both on and off-leash, occasionally disturb the shorebirds along Ocean Beach, but so do ALL of the following: - the hundreds of thousands of human visitors to the beach each year - how can you possibly blame the dogs for disrupting the shorebirds without putting even more blame on the small children running around screaming, the kids kicking the soccer ball, the teenagers leaving trash and debris all over the beach, the runners running through flocks of feeding birds at sunset, etc. I would argue that just this one group has a far more negative affect on shorebirds than the dogs on Ocean Beach ever would. Are you going to ban humans from the beach as well? - the kites that fly over the beach every day - the silhouette of an airborne predator is far more disruptive to a flock of birds than a land-bound passing dog would ever be. Are you going to ban

these too? - the bikes/buggies/strollers/etc that roll along the water each day - do these not resemble dogs and/or other land-bound predators? Are you going to ban these too? - horses - Again, highly disruptive to a flock of feeding shorebirds at sunset. Are you going to ban these too? - the homeless - I can't tell you how many times I have see human feces, drug paraphernalia, tents, and trash along with homeless individuals in the dunes at Ocean Beach. There is no doubt that activities from this group are highly destructive to both the environment and cultural resources at the beach.

I think I have sufficiently made the point that banning dogs from Ocean Beach will not come close to solving the perceived "problem" of use and snowy plover protection at the beach. You are unfairly punishing responsible dog owners for something that is not at all our fault. There's at least 50 people that use Ocean Beach to every dog out there...yet you choose to blame the dogs. Again, I will say this is negligent and disappointing coming from the NPS.

For those of us who have well-behaved canines and moved out to the beach to join a outdoor-loving community of like-minded people, I again want to reiterate that I strongly protest banning dogs from the SPPA.

I would welcome questions or contact with regards to my comments. Thank you, Dale Maffett

Correspondence: I agree with the proposed dog management plan. I like dogs but I do not enjoy being run over by them or having to step over their feces in the parks. Many dog owners seem to think that they do not need to pick up after their dogs because they are "in nature." My family and I were spending time at Point Reyes' North Beach one day a few weeks ago when we saw another family arrive with two dogs that were running off leash in and around the dunes. One of the dogs was digging up the native plants, while the other one was digging a tunnel in a dune. This kind of behavior is typical in my experience: out of 5 dog owners, there are usually two who allow their dogs to run all over the space, regardless of the other people or the native plants in the area.

Bottom line: There should be special open spaces specifically for dogs.

Correspondence: After reading the reasons behind the proposed changes to the GGNRA's pet policy, I am outraged that such arbitrary, illogical and ridiculous plans have been put forth to the people of San Francisco. I walk my dog everyday at Crissy Field and witness nothing but well behaved, happy dogs and happy owners or professional dog walkers walking their dogs. The off leash dog areas is a major reason why me and my husband chose to move here in July of 2010. We are both devout environmentalists and would never engage in behavior that would harm any natural resource. I am particularly concerned with the plans for Crissy Field but would also like to voice my concern now that I think the plans for Fort Funson, Fort Mason, Ocean Beach, Baker Beach are equally as ridiculous.

The fenced off animal sanctuary areas already keep dogs and people out and I have always thought that that was a good trade-off. Protected areas and areas where people and dogs can walk and run (off leash). Can you please tell me how an on-leash dog has less effect on the area than an off-leash dog? All of the dogs run straight from the airfield down to the beach anyway and the ones that might not, just run and roll around. How are they hurting natural resources for future generations!?

We take great pride in training our dog and she is always under voice control when she is off leash. This is the case with almost every other dog and owner at Crissy Field. Of course there are some dogs that aren't trained or are aggressive and shouldn't be allowed in public or off leash at all but you can't take this privilege away from everyone else when the amount of "bad" dogs is so small. Perhaps you could work with the city to increase the punishment for "unruly" or "aggressive" dogs instead of banning off leash areas for everyone?

If you limit the amount of off leash areas to what you have proposed (your preferred alternative) then you're going to have too many dogs and people in one place and that will cause way more problems than what you perceive to be occurring right now. Have you been to Crissy Field? Do you have any idea of what a great place it is? A large reason for that is because dogs and people can run and play on the beach in the water.

Many people who bring their dogs to the beach use the parking lot west of the tidal marsh. All of your plans make that part of the air field "leash required" so, there is no place that you can go from the parking lot to the beach that is all off leash. Even if they use the larger parking lots to the east, there is no off leash areas near the beach so we all have to deal with leashes no matter what with your plans. We never have our dog on a leash now because she doesn't need one but now you wish to legally force us to put one on her for no reason. She's never exhibited any bad behavior ever and is

always under voice control.

Now I'm going to address your ridiculous and short sighted "reasons" for proposing your plans.

1.) preserve and protect natural and cultural resources and natural processes

I mentioned this above but, how exactly do dogs diminish natural resources? They run on grass and play in the water. What affect could they possibly have on "cultural resources"? This is so ridiculous.

2.) provide a variety of visitor experiences

There is currently a wide variety of visitor experiences. That is why the GGNRA is one of the most visited parks in the U.S. Again, how do dogs take away from this?

3.) improve visitor and employee safety

There are some dogs that are overly aggressive. Many of them happen to be Pit Bulls. I think that some dogs should be banned from public areas but most dogs. Almost 100% of dogs are good natured, loving animals who just want to run on the air field and play in the water. It's not fair that that small number of dogs ruin it for everyone else. How about you just ban dogs that have official complaints about them? There has to be a better way to deal with this than what you have proposed.

4.) reduce user conflicts

This is a lot like #3. There is a small number of dogs who cause conflicts but again, most dogs don't. The VAST majority of them are good natured, full-loving animals.

5.) maintain park resources and values for future generations.

How does a dog running on grass and playing in the water have to do with any sort of natural degradation?

I know that these plans are in the interest of environmental protection but honestly, you're not going to protect anything by forcing people to put leashes on their dogs. How about focusing your attention on the serious environmental circumstances in this country rather than spending your time making a bunch of San Franciscans put leashes on their dogs.

Sincerely,

Lindsey Guest

Correspondence: I feel very strongly that the proposal to limit off-leash areas in the GGNRA would be a dangerous and ill-advised plan were it to be enacted. I have lived in San Francisco the past 27 years, the last 13 of them in the Marina district and just blocks from Crissy Field. I own a 7-year old Vizsla dog, Czar, and use the GGNRA areas almost daily for our walks and for my fitness routine which usually involves Czar and I both running together. Czar is a well-trained former show dog that responds to all voice commands and, in seven years, has NEVER had an "incident" of any kind with another dog or a human.

In recent years I have been struck by how fewer and fewer areas in the Bay Area are being made available for off-leash dogs. It has been proven that dogs that receive proper exercise and socialization with other dogs are better behaved, happier, healthier and bring greater joy to the lives of the people that own and love them. Restricting more areas from being off-leash will directly infringe upon this. Dogs need vigorous exercise. Walking alongside an owner while tethered to a leash is not adequate exercise by any reasonable definition. Additionally, dogs need to interact with other dogs and other people to remain well-socialized. By removing more and more opportunities for dogs to exercise properly and be socially acclimated to other dogs and other people breeds a vicious cycle that results in dog "events" such as fights or bites. Ironically, a plan to remove off-leash areas due, in part, in an attempt to reduce dog events such as a fight or bite will only ensure more such events. The facts support this and are not in dispute.

The Bay Area is a model envied the world over as a place of tolerance, diversity, and shared responsibility. Part and parcel of this reputation is the core notion of peaceful co-existence among different peoples, among bikes and motor vehicles, and among humans and animals sharing our beautiful natural resources. However, this proposal to limit off-leash areas effectively dismantled this worldview and installs a worldview that says, "No. Humans and dogs cannot peacefully coexist." I reject that wholeheartedly. There are already appropriate remedies to deal with poorly trained dogs and irresponsible owners. Those laws and ordinances should be enforced.

I ask you to reject this proposed measure and to protect areas in the GGNRA that are currently off-leash from any further infringements or threats of removal.

Correspondence: Don't deplete the few trails that you already have open to us with dogs. We only visit the Marin Headlands because there are trails available to dogs, and removing the trails close to the water means that we will be stuck on trails with no view of the ocean and the SF Golden Gate Bridge. HOW ABOUT YOU OPEN UP EVEN MORE TRAILS TO THE DOGS!!!! I was on the trails today with my dog and we passed other folks on the trails, and I counted a total of 33 dogs that we passed in the 90 minutes that we were on the trails. It would be RIDICULOUS and a poor choice to take away the option for us dog-owners to take our dogs on the trails.

If you take away the current trails, you will lose my support and my cash donations that I currently give. CA already sucks with allowing so few trails to dog owners, don't join the other idiots who closed off other trails to us.

Thank you.

Correspondence: With all the amazing parks that are in California, there are so few that allow dogs. Marin Headlands is one of those great parks that allows dogs and it would be a shame if the limited amount of trails that dogs are allowed on is further reduced. Owning a dog means that when I go hiking, my dog comes with me. The only reason that I visit Marin Headlands is because it allows dogs. I will not return to the headlands in the future if trail access for dogs is diminished.

Correspondence: The current enforcement of dog leash laws in the Fort Mason area has been an improvement. Previously there was little control by dog owners of their pets.

The leader in San Francisco of a dog owner demonstration said on TV today, 3/5/2011, that "it is just a few dog owners." That of course is true. The reporter did not ask the question the NPS must ask: did anyone who owned a dog go over to an inconsiderate owner and say something to the irresponsible owner.

I can tell you from personal experience that this never happens. We have been in groups in that area and noted many occurrences of dogs disturbing people. It often accrues to borderline chaos with a chance of real injury for children or elderly adults. Even with dogs on leash a common sight is an owner on a narrow park path with their dog on the other end of the path coming toward you with no effort to allow you to pass. Owners more than their dogs need training in simple human consideration.

Dog owners want to be accommodated in *their* needs - it really isn't about dogs at all - but feel no responsibility collectively to monitor their cohort. This is a familiar form of narcissism and adolescent thinking in American society that causes this to be a hot issue.

Laws exist to protect the public, as do rules governing behavior in public spaces. The only authority that can protect the public from irresponsible dog owners is the NPS. Keep the current rules in place. Enforce those laws with regular patrols. All dogs on leash except in the currently prescribed areas - this is the only realistic solution.

If people want to own dogs in the city it is fine. Dogs are wonderful companions. But there comes with it a responsibility. One of those responsibilities will require of the owners is that they exert themselves and their pet a bit, inconvenient as that may be; Fort Mason is but a mile from Crissy field. The precious dog and privileged owner can use the exercise. The public can use the peace of mind. If dog owners are unhappy they can freely choose to live in another locale. Move or adhere to the current public friendly rules.

Alternative-A must be adhered to.

Correspondence: I fully support the Preferred Alternative Plan for Ocean Beach. As a resident of the Sunset/Parkside neighborhood AND an owner of a young mixed breed hunting dog, I find there are plenty of alternative off leash options to take my dog that are convenient to get to. Stern Grove and numerous areas of Golden Gate Park (not to mention the many small neighborhood parks) are just a couple of the many alternatives where my dog can get sufficient exercise off leash while not harrassing, threatening, or trampling on native species of wildlife or plants. Many people own a dog because they enjoy and appreciate the outdoors. Dogs are also a manner of obtaining exercise and maintaining good health for oneself, i.e walking an extra mile to the North end of the beach. It is disheartening to see so many dog owners not willing to compromise and unable to see the big picture. Even with decreased access in some areas of the GGNRA, San Francisco would still be one of the most dog friendly cities in the country while also maintaining natural habitat and protection for wildlife. That is the city I want to live in.

Correspondence: Hello,

I strongly object to GGNRA's Dog Management Plan/EIS preferred alternative D, which would ban dogs from all new lands, including Rancho Corral de Tierra. A total ban on dogs is extreme. Alternative E makes more sense: "New lands begin as 36 CFR 2.15 (dogs allowed on 6 ft leash) and new lands with existing off leash use before acquisition may also be considered for voice and sight control in the future."

For the past 10 years, I have walked my dog on the Rancho trails behind my El Granada neighborhood at least daily and often twice a day. Hiking these trails with my dog is how I met most of my neighbors, and not incidentally, my partner. Some neighbors, including me, moved here specifically because this area has a dog-friendly reputation: residents from Montara to El Granada have been socializing with our dogs on Rancho for over 40 years and have formed a whole community around dog-walking.

My dog provides the motivation to get up and out on the trails every day, as well as companionship and protection: as a woman, I do not hike alone. The trail time doubles as walking meditation and fitness training, getting my mind set for the day ahead and, at day's end, providing an often-needed perspective re-set. My dog benefits in that he's well-exercised and socialized with other dogs and people. A well-exercised, socialized dog is a happy, well-adjusted, and non-aggressive dog. In fact, my dog is a certified therapy dog.

Rancho currently supports a mix of users that works. Equestrians, cyclists, and dog-walkers share the trails, get along, and self-police. Rancho could be a model for what's being done right and how disparate user groups can get along. If GGNRA is concerned about management of multi-use trails, please

consider creative solutions such as setting aside early morning hours for off-leash dog walking, then starting at a posted time, all dogs required to be on-leash. Such solutions have worked well at locations in Washington state and Santa Cruz.

GGNRA is treating all "new lands" as pristine wildlife areas worthy of the most stringent environmental controls, regardless of location or history. Christine Powell, developer of the draft plan, is quoted in San Francisco Chronicle columnist Tom Stienstra's column of January 21, 2010; she refers to Rancho as "virgin". It is not. The northern end of Rancho, encompassed by Montara, Highway 1, and McNee Ranch State Park, is historic ranch and farm land. The southern end, behind El Granada, was slated for development and includes graded fire roads and hills graded for building. The land is scarred by dirt bike tracks; one area was used as a shooting range for many years. An area known locally as "Flat Top" is a popular party location for teens from Montara to Half Moon Bay. As to the effects on native wildlife, Ken White, president of the Peninsula Humane Society & SPCA, stated that the Humane Society's wildlife rehabilitation staff reviewed and analyzed the Rancho site and proposal and concluded that there is "... no observable reason related to the protection of native wildlife which would justify denying access to off-leash dogs in the area. If there was impact on wildlife, it happened long ago. Wildlife continuing to use this area are most likely well versed in people, bikes, and dogs and probably avoid the area during the day. The overall area is very large and wildlife have adequate space to avoid people and dogs."

The neighbors -- those of us who walk our dogs on the land -- are the ones who keep an eye out, notify POST and the sheriffs of incidents or problems, and clean up the messes left by partyers. It seems ironic that dog walkers are the ones who are out there every day, keeping watch on the land, and we're now being kicked out.

We just want to walk our dogs!

Thanks for your consideration.

Sincerely,

Risa Galant

Correspondence Type: Web Form
Correspondence: Dear GGNRA Officials:

I am a 20 year San Francisco resident. I recently rescued a lab mix puppy (now 7 months). I spend approximately one hour, 5-6 days a week at either Baker Beach, Chrissy Field, or Fort Funston. Use of these areas with my dog is part of the great quality of life of San Francisco and is a fantastic community building tool.

I have read the materials, and understand that I should be specific about registering my objections to the plan and the draconian clawbacks (which frankly seem a bit absurd to me); instead I would simply like to share what I view as the tangible benefits to both dog owners and non-dog owners of allowing off leash use.

Community Building 1. Human interaction and community building. The dog areas are very social for the human companions. People share a common interest and chat while the dogs play. I cannot think of another forum or activity in San Francisco that has allowed me to meet many neighbors that I would not otherwise meet. I then run into these neighbors at the car wash, the grocery store etc. -- it has been a remarkable experience in making our City feel more and more like a community.

2. Learning from dog owners. The things I have learned about raising a happy dog from the other dog owners at the beach have been invaluable. These conversations take place as the dogs wrestle and chase balls together.

3. Full use of areas. 90% of the time when I visit Baker Beach - the only people on the beach are dog owners walking or running with their dogs, and perhaps some fishermen. There are many drizzly mornings when I am the only person on the beach. I cannot recall any people, other than hanggliders, using the wind blasted dunes of Fort Funston, and few, if any, families make the walk down to the beach. To prohibit dogs would be simply clearing the beach. That does not seem to be a good result.

I cannot comment on the behavior of dogs or humans on the handful of sunny Saturdays when Baker Beach is crowded. As a responsible dog owner, I simply avoid taking the dog to the beach after 11am on those days. I would guess that the folks that allow their dogs off-leash on those days, are not the same dog owners that I encounter every morning. Perhaps restrictions and punishments should be limited to those dog behaviors and owners.

Benefits to my puppy that also benefit the community: 1. Exercise to keep my dog well behaved and happy when she is leashed on the sidewalk (and at home) 2. Socialization to prevent dog aggression 3. Training from older dogs. As a responsible owner, I have invested in 12 weeks of training classes to teach Olive the basics; however I have found that when it comes

to perfecting the manners of recall and interaction with humans - the most effective and fastest training for my puppy is mirroring the behavior of older dogs. This happens at the beach.

Before I rescued Olive, I regularly exercised at Chrissy Field and Baker Beach as a non-dog owner. In my opinion, the presence of the dogs and their owners- socializing and playing enhanced my experience. I find it much more pleasant to be around people enjoying their day and their community than to see an unused beach.

I support enforcement and education. I support charging dog walkers a permit fee to pay for upkeep to the beaches and parks, enforcement of regulations, and education. I employ a walker 3 days a week and would gladly incur the incremental cost of the walker to support these programs. I would not oppose time restrictions on the popular beaches, such as Baker Beach.

I hope this letter has been helpful.

Nancy Egan

Correspondence: To have spent this much time, and to have come up with something as unsatisfactory as this draft is truly amazing, unless one takes the view (as I do) that the needs of users were never taken into consideration. The Park Service wants this area of ours to be something we don't have access to, except as something to look at. This can't be the kind of place that the Bay Area calls it's own, and it is ours. I am not saying that the sites covered in the DEIS should be used only in the way they are used now(though from my point of view that would not be a problem), What I am saying is that no alternative in this proposal is taking into consideration what really needs to be taken into consideration: ways to better share the lands between its users who might not have the same idea about how best to use it. It was not entrusted to the NPS so that they could lock us out and sell us coffee table books with pictures of what we cannot use or touch.

I have seen and heard people saying that the one percent we now have for off-leash use is the same land that people want to use for other uses, but no attempt has been made to come up with ways for us to better share the space, or to increase the amount of GGNRA lands that we have access to (unless you count relegating off-leash users to a truly tiny area where the kind of use we now engage in would be impossible, and where the

concentration of users would be so dense that conflicts would inevitably develop between dogs and between humans). There is a ton of land in San Mateo County, but no off-leash areas. What little space there was in Marin would be taken away in the planned alternatives. I have been trying to shy away from saying that that the NPS is out to get us dog owners and walkers, but if I start taking a good look, I can come to no other alternative.

Off-leash exercise cannot be done in over-sized playpens (fenced or not). The main idea (for active dogs at least) is to let them behave naturally, and run, over good sized distances. These behaviors are in them, and have to be allowed come out, if you want to avoid neurotic crazy-dogs that will indeed act badly. The trip out to the park is completely different from the trip back, because on the way back, they have been allowed to run that pent up energy off. In other words, they are tired and happy.

You may not care about dogs' exercise needs, and you may not think that a description of those needs is relevant here. But it is. This is our land, and these are our dogs. There are ways that we could come up with to meet the needs of our human and canine park users, but the Park Service has spent decades (and a fair amount of money no doubt) to come up with several alternatives that only try to meet the needs of groups that don't want us to use the lands, but instead want it to be a little museum-like space where native plants and species can be allowed to rebound and where people are only allowed on paths, behind ropes, and where dogs are allowed restrictively and temporarily, the final goal being the no dog policy in place in most national parks. Once again, this not a national park. We shouldn't have to tell you that over and over. That knowledge should be required of you as part of your job description if you have anything to do with this decision making process. I can say that because I am one of your bosses. I am a Bay Area resident (SF), and a frequent user of the GGNRA. I am there even on the days that not many people show up due to the weather. You ought to have to listen to people like me. Maybe you will if enough of us say it loudly enough.

Now as far dogs and their effect on the area is concerned, you simply can't begin from the position that the canine presence there is detrimental. You have to prove it. You have to prove that dogs harm the environment, and you also have to show evidence of that fact. I would argue that you also have to convince the people that that harm (once proven) outweighs the benefits that canine companionship and fellowship provide, and that the only thing you can do about it is kill dog use. Otherwise, dog use should be allowed to stand.

As a daily user at Fort Funston, I have seen a great deal of what goes on there. As far as dogs and plants are concerned, that space is mostly ice plant and a few trees. I would have to admit that I have seen dogs playing with

sticks, and that those sticks probably once were parts of those trees. I would also have to admit that there is one tree in particular that the dogs like to climb into, and that they have worn a little bark off of it. I would have to admit that occasionally you see a dog running around with a piece of dried up ice plant in its mouth, and that some of them like to charge groups of crows to see them fly away. I'll even cop to the fact that every once in a while one manages to dream the impossible dream, and catches himself a gopher (I have never seen it but I know it has happened). Ice plant and gophers are not endangered, nor would we miss them to awfully much if their numbers were reduced, but I doubt that's happening, and the crows are playing an age old game with the dogs which I have watched dogs and crows play over my many years. As far as the bark on the tree is concerned, don't blame the dogs. Their owners told them to get up there because it's cute, and they do it repeatedly because they got a sausage or something. The sticks are lying around on the ground.

The bank swallows burrow into the top part of the cliff, where even the best cliff climbing dog cannot get to them. Dogs are not allowed in the area above the burrows, and even if they were, would not dig down deep enough to disturb the nesting birds. The Snowy Plover as I understand it nests on the beach itself, and I have never seen the nests though I walk the beach at Funston daily. This could be seen as a reason not to allow people on the beach so that the plover can establish some nesting sites, but instead it is seen as a reason to keep dogs out. There is plenty of beach for the snowy plover to use elsewhere, and if there are established nesting sites at Funston or elsewhere, they can be protected with fencing as has been done elsewhere. Instead what the NPS has done(this at Ocean Beach)is to destroy more snowy Plover habitat than our dogs will ever have a chance to disturb by moving sand around with bulldozers as has been documented on the Ocean Beach Dog website, complete with before and after pictures.

Every once in a while I hear about how my dog is causing cliff erosion at the beach at Funston. That one really makes me laugh. Do they think that off-leash dogs caused the former batteries and their gun racks to end up on the beach.

That's enough for now. See you next time.

Correspondence: Dear Mr. Dean,

With regard to the proposal to limit or ban dogs from the local federal park

areas in the GGNRA; I am a native to Marin county a life long dog owner and COMPLETELY SUPPORT THE PROPOSAL TO LIMIT OR BAN DOGS FROM THESE PARKS.

I have enjoyed hiking, biking, horse back riding, picnicing, in every park in Marin County for the past 50 years and have become disusted with the smell of dog feces that has practically turned these local jewels into toxic waste sites.

I see single professional dog walkers with five or more dogs off leash; how can they possibly clean-up after five dogs? The answer is they don't. The majority of dog owners are just as bad . . . if this segment of the population cannot be responisble, which they have proved not to be, they must be banned. The only other option is to hire a corps of poop-police to hand out tickets.

Thank you for concern and for being a steward of our local federal parks.

Kind regards, Jill Janson

Correspondence: I believe that the GGNRA is not truly taking into account what an off leash site means to dog owners. I have a dog that needs a good long run to be happy as being a working dog breed it is not able to get this on a leash. But also beyond that the space at Fort Funston in particular is good for a human's body and soul. There are so many areas around here that either restrict or don't allow dogs this small percentge of the GGNRA is not affecting those who want to be without dogs. I am including what I think should be down. I do not agree with this plan at all!

The GGNRA should develop a new alternative, the A+ Alternative, that will better balance the recreational needs of the Bay Area with protection of natural resources. The DEIS calls the "No Change" Alternative "A". This is the 1979 Pet Policy with some restrictions, particularly restrictions on off-leash at Ocean Beach, Fort Funston, and Crissy Field because of the snowy plover and native plant restorations. More than one-third of Bay Area residents have dogs and we now know the importance of off-leash recreation for dog's physical and mental health, as well as the importance of the significant social communities that develop where people recreate with their dogs off-leash. This large segment of Bay Area residents should not be restricted to significantly less than 1% of GGNRA land (that is how much GGNRA land is available for off-leash recreation in Alternative A) to have a

satisfactory park experience, especially since there is little scientific evidence supporting restrictions on off-leash. There has to be more space available for off-leash recreation, not less, given the huge demand for it in the Bay Area. The A+ Alternative would include everywhere that is currently off-leash, plus sufficient off-leash opportunities in San Mateo County to meet the demand, and more trails off-leash throughout the GGNRA. In addition, new land added to the GGNRA would include off-leash areas, especially in those areas where it has traditionally taken place. There would be no compliance-based management strategy in the A+ Alternative. Any dog management philosophy in the GGNRA, like that for any other recreation use, should be based on Bay Area values of co-existence, shared space, collaboration among park user groups, and education where problems arise. Enforcement of already existing regulations should target irresponsible dog owners who create the few problems documented by the GGNRA, while allowing responsible dog owners to continue their traditional off-leash recreation without harassment.

Correspondence: I am a senior citizen and have live here for 30 years. I and my dogs have walked in the Ft. Funston unleashed dog area for many years. It is the best place in our urban area for all of us to breathe fresh air and get some healthy exercise. The dogs and people do not harm the area. Ft. Funston was not a 'pristine' area, but was a military area long before dogs and people began using it.

It is disdainful of our citizens to attempt to squash the current use of Ft. Funston. The proposed policy is arrogant and ridiculously rigid. It is a very bad idea. Do not implement it.

Correspondence: Re: Fort Funston

Argument in favor of the status quo with room for compromise. Please read on:

I believe that the GGNRA thought they did their best to try to meet the guidelines set forth to examine the environmental impact on these National Park Areas but I am not sure they considered the other possible problems

that would occur if they go with their recommended options?outcomes that would likely have a more extensive negative impact. Please read on:

1. I have been visiting Fort Funston for 17 years, 10 without a dog and 7 with one. During that time, I have brought my children there to get exposed to dogs and develop affection for them as opposed to fear. The dogs there are so friendly and non aggressive that this was the perfect place. I have brought out of town guests and they have stood in awe and envy of this wonderful place to enjoy, nature, California vistas and dogs and people? in a City to boot. Cities tend to isolate people from one another and here is one of those rare, and special places where you almost feel like you live in a small town with a sense of community?everyone running free and getting along. I get to know people who live in completely different parts of the City and we get to greet one another like neighbors when we do our ritual dog walks. Do you really want to destroy a San Francisco icon? When is the last time you visited?

2. One argument I have heard concerns the dangers of dog bites and dog fights. I am skeptical that the instances of dog bites are greater or worse than those in the community at large. Of course they are greater than in places where there are no dogs?.but this is not grounds for eliminating off leash dogs. I mean do we restrict teenagers from parks because they create a risk of broken glass?, or men from the parks because they increase the chance of rapes occurring?, or restrict children because they chase birds (and they do) or because of the litter they leave behind? In fact, I would argue that dogs who are socialized at places like Fort Funston?socialized off leash being key here?this opportunity for dogs to socialize with humans and other dogs makes them better canine citizens and reduces any potential dangers they might pose in the community. I feel pretty safe in saying that the "vicious dogs" are not dogs that are socialized at Fort Funston. It keeps our City safer and our people safer and healthier by providing a place for dogs and people to run free and get exercise. Dogs as pets improve the health of the people who own them?and it is the obligation of the community to provide a place for those dogs and people to exercise together. On leash exercise is often insufficient and holding a leash can cause elbow and shoulder problems for owners.

3. What will happen to Fort Funston if you put these restrictions in place?even the shared plan? Because of the wonderful opportunity it provides, Fort Funston is heavily utilized by people and their dogs. Given the numbers that enjoy this wonderful place, it is always relatively spotless, free of litter and safe. This is because canine owners are some of the most civic minded, environmentally aware, concerned, involved and caring citizens. They do their best to take care of the place that they use so that it will continue to be there, they take responsibility for their animals and they pick up the feces, they do not litter, and they take enormous pleasure in

nature. These people come because it is OFF LEASH and provides an opportunity for them and their dogs to roam free. If these restrictions go into effect, they will no longer come except occasionally. While at best I will be able to say I told you so, Fort Funston will not then be visited by all the people who have been waiting to come for the time when dogs are eliminated. There will not be loads of dog fearing kids and adults, dog fearing elderly and dog fearing physically challenged people wandering the trails of Fort Funston. It will be empty and deserted; in short time it will provide the perfect location for shady deals, drug users and homeless encampments, and it will not be a safe place nor a clean place to visit. It will no longer be a place of civic pride. And as for environmental impact, I am sure the litter, broken glass, beer bottles, syringes etc. that are left behind will have its own sad environmental impact. Which of these options pays a greater price? Has anyone considered this? Are you really convinced that lots of people will come to use this park when you severely restrict off-leash dog use? These are the same people who currently do not use all the other parks available to them where dogs are not permitted at all. Or if they do use the other parks, then they are satisfied to have other places to go.

4. The argument about disabled people? Okay, my backup is anecdotal but so is yours. I have a number of disabled friends who have dogs and use wheelchairs. They adore Fort Funston and not only are they unafraid of dogs?they need their dogs and they need a place to walk their dogs off leash. Have you ever tried to walk a dog on leash while in a wheelchair?

5. A COMPROMISE? I would argue for all of the above reasons that we should maintain the status quo but I am a reasonable person. Is there a way for Fort Funston to be shared: to offer a place for off-leash use and a place for on-leash only (or no dogs at all)? My walk currently encompasses a grand loop from the parking lot and all the way around to the horse trail and back or all the way down the trail to the north side of the beach and back on the beach. This makes use of the entire span of the trails from the parking lot and north. But okay lets find a compromise?. The current shared use preferred plan has a number of problems:

a. People in wheelchairs have almost no options. Under this plan they are being forced to park their cars and let their dogs run around a small square area. Anyone who has a dog knows that they like to walk with you and are best behaved in this context; besides, the whole idea is to walk with your dog. Someone in a wheelchair has no way of getting over to the north side with their dog. They must sit in the chair and hope the dog will walk itself around the off leash "square" ? a ridiculous concept. This is why the paved western trail must be left open to allow someone in a wheelchair to move around the perimeter. (In fact I would argue that the eastern side should have a paved trail as well to allow a full square to be traversed) I realize that the reason for this part of the plan is to keep dogs away from the cliffs. A

barrier along the western side would help this situation. It need not be a complete physical barrier? just a small fence would create enough of a barrier to keep most of the dogs off the cliffs.

b. There is no loop walk that can be made by owners. The small square perimeter identified as off leash just in front of the parking lot is insufficient. Minimally, there should be a full loop that takes one from the parking lot north to the beach trail, down to the beach, and then south to the access stairs and back up again. Currently the preferred plan requires that you leash your dog on the paved trail and all the way down the beach access trail. Trying to walk your dog on leash down this trail that is steep would be dangerous and lead to accidents and injuries. Most dogs stay on the trail anyway. Making this and the path leading to it on-leash only is unreasonable?

In addition, there are times of the year when the beach is high tide and dangerous for both people and dogs who have drowned. So an alternative must be provided; I would propose that the off leash area loop allow 2 options. One down the beach path and back as described above and the other would allow off leash access from the the parking lot down the paved trail up to the beach access road and back again (including the path back up on the west side (again a small fence to discourage dogs from the cliffs would help). This way someone could have an entire off leash loop. Though I would hate to lose my ability to walk off leash further north and along the horse trail, at least this would be a somewhat reasonable compromise.

I urge you to consider the options above and would be happy to discuss this further.

Yours truly,

Nina

Correspondence: As budgets continue to get cut, and parks continue to close, it is becoming harder and harder to find open places to have meet ups, and let the the dogs socialize, along with the humans, without having to pay RENT. Dogs are a large source of revenue for vendors, grocers and pet supply companies, PLEASE keep some areas open to "pet recreation". It is essential to the dogs and people alike. Thank you, Sue C.

Correspondence: The Golden Gate National Recreation Area (GGNRA)'s Draft Dog Management Plan is overly-restrictive, unfair, short-sighted, and a HUGE step backwards. We in the Bay Area are supposed to be leaders in diplomacy and progressive attitudes. Many of us love our companion animals just as persons love their human children. For GGNRA to strip the rights of responsible dog owners and punish canines and the humans who love them by shrinking the exercise and socialization areas down to near nothing is shocking and truly a travesty of justice. Not only is the GGNRA's proposed plan a major departure from the current, balanced use of the park, but it is a slap in the face to those of us who have systematically removed trash from beaches, sand dunes, ice plants, etc., - trash that is there because of HUMANS - not dogs! Many of us who use the canine friendly lands work hard to keep the areas clean and free of debris because we so appreciate them and want them to thrive. It also strikes me as odd that this is the fight the GGNRA wants to take up when there is no research to support the suggestion there has been ecological impact over the past 30 years of the use of the lands for dog walking. What is the true motive here? Ironically, I'm sure the same people endorsing this overly-restrictive plan have no objection to paving the world with roads so they can drive their cars around. This proposed plan is unduly harsh and restrictive. GGNRA - go back to the table and discuss the needs of everyone involved before you make a very, very big mistake.

Correspondence: I am a dog owner, supporter of natural habitats and "birder". I support all efforts to further control dogs. Wildlife should take precedence over pets. There are ENDLESS places that a person can walk their dogs in the Bay Area. There are NOT endless places where wildlife can thrive. I find it disheartening that dogs may win over natural habitats that are shrinking. It was always my impression that Marin County was ahead on preservation....clear that it is also ahead in self-interest.

Correspondence: I already do not support or use National Parks due to restrictive practices regarding dogs. While I support appropriate dog control laws- and enforcement of such, which would prevent many of the problems this document is designed to address- I do not support drastic limitations such as this that prevent a large portion of the citizenry from enjoying our parks and recreation areas. Many of us travel with dogs and therefore have no choice but have them with us when visiting the parks and recreation areas.

The problems- waste not picked up, vicious dogs, etc, are all easily managed by enforcement of existing regulations. There is no need for draconian measures. Dogs create no more environmental impact that people- in many cases much less. Responsibly-handled dogs are much quieter, safer, and more advantageous than allowing teenagers in parks! Dogs do not leave dirty diapers under bushes and broken bottles in parking lots- and neither do the responsible dog owners who are being treated like second class citizens.

I will vote and argue against any funding for public lands as long as restrictions like these exist.

Correspondence: I walk my dog (on a leash) at Ocean Beach between Noriega and Lawton daily, where we live. This area is supposed to be a leash-only area because of the (precious!) snowy plover habitat. Every single day, without fail, there are unleashed dogs, frequently chasing the plovers -- and I have never seen any sort of ticket or warning issued.

If the laws are not enforced, further restrictions will not help to address the problems and will only punish those that voluntarily comply. I don't think the current policies are a problem, though lack of enforcement is a concrete, solveable problem.

Correspondence: As a San Francisco resident and dog owner for over 50 years I feel strongly that the GGNRA should maintain the current amount of off leash areas. By reducing the off leash areas, it will reduce everyone's ability to enjoy a

public space and the majority of responsible dog owners and walkers should not be punished for the irresponsibility of a select few. If the GGNRA wants to put its officers on the beaches and trails to cite those who are acting inappropriately that would be welcomed. In my experience the majority of dog owners are conscientious and responsible with their dogs in observing and respecting the natural plants, animals and visitors in our parks. It is more commonly observed that other people are damaging the habitat, not dogs. I am not alone in feeling strongly that the status quo should be maintained.

Correspondence: I support the ban on dogs in GGRNA, but I am also concerned about the impact of the law on other parks in the city. I used to love to walk on the beach at Chrissy Field, but have stopped visiting the park because of the large numbers of dogs there. My husband won't go there either, because of the dogs. A few weeks ago I did go there, in the middle of the day on a Wednesday, and counted over 30 dogs on the beach, most of them with dog walkers, many of them out of voice control of the walkers. It was an unpleasant experience to walk on the beach, dodging dogs running and barking. Overall it was an unpleasant experience and I won't be inclined to go back to this treasure of a park, because it is completely overrun by dogs.

On so many occasions I have seen dogs digging unsupervised in the dunes populated with fragile native plants through the work of volunteer workers, and when I ask the dog owners to curb their dog, they ignore me.

Why should dogs and dog owners be given ownership of the natural treasures of the Bay Area -- shouldn't these natural areas belong to the species that LIVE there, and be for the enjoyment of humans after that?

I am concerned that the public parks in the center of SF will become more populated with dogs than before however. I live within walking distance of Duboce Park and Alamo Square park, where the dog owners often flaunt the leash rules for the areas of the parks where dogs should be leashed, creating unpleasant experiences for me and my husband. My husband likes to run in Alamo Square park, and was bitten by a dog last year, whose owner was unconcerned that my husband had blood dripping down his leg because of the dog. Dogs are predators and should be controlled!

New York City has a great model for dog owners and parks. Mostly parks are for the enjoyment of people and children can play safely, because dogs are given fenced-in dog runs in a smaller area of the park. In SF, the dogs

have free run of the larger part of many of the parks. This ruins the parks for anyone who does not own a dog.

Thank you so much for the opportunity to make a comment on this important issue.

Correspondence: I am vehemently against the proposed restrictions proposed in the draft dog management plan. Ft Funston used to be occupied mainly by drug dealers and derelicts and today it is a vibrant area that many dogs and dog owners enjoy. The trails in the Presidio and Lands end are also safer because of the increased visitation due to dog owners that want their dogs to get exercise. If the leash laws are implemented, most of these dog owners will just go to their neighborhood parks which will increase traffic in those small parks that are not equipped to handle more people and dogs, Currently, small neighborhood parks are generally used by families with small children and the larger parks are used by pet owners. That balance will be greatly disrupted if the leash laws are imposed. San Francisco has a tradition of being a great place to live and where the quality of life is very high. These proposed restrictions threaten to change that- we are not a city like Manhattan where people can never enjoy their pets off leash. We are blessed with so much open park space in and near our city- that is why many of us choose to live here. Please do not take away our freedom, as the benefit gained by leash laws is far outweighed by the harm and burden it will place on pets and pet owners in this city. According to the American Pet Products Manufacturers Association (APPMA) 2001-2002 National Pet Owners Survey:

There are approximately 68 million owned dogs in the United States. Four in ten (or 40 million) U.S. households own at least one dog. (63% of households).

For San Francisco, that is about 60,000 people that will be burdened and unfairly harmed by these proposed regulations!

Correspondence: I am very distressed by the proposed GGNRA "preferred option" to ban dogs on Muir Beach. We live in Muir Beach and are responsible dog

owners. Our dogs are always greeted and fussed over by strangers on the beach. The dogs on Muir Beach help to make the beach a friendly, joyful experience for everyone. They create a feeling of neighborhood and community and are an indelible part of the experience of the beach.

There are many options for dog free beaches in Marin. There is only one dog friendly beach. There are other ways to protect sensitive habitat than to ban dogs altogether. The proposal to allow dogs on Little Beach but keep them off the main beach is not a feasible alternative. One of our dogs is fourteen years old. For several years he has not been able to scramble across the rocks to Little Beach. There is an occasional low tide that allows him to cross on the sand, but those times are few and far between. There is no parking anywhere near Little Beach. As a resident living on Sunset Way, the access road to Little Beach, I can assure you that vehicular access and parking for access to Little Beach would cause a significant problem for the residents.

I strongly urge you to continue to use education rather than segregation. I am a birdwatcher and a naturalist and appreciate the work that has been done on the lagoon. I love to see the otters and look forward to a time when the salmon are breeding. I do not feel that banning dogs from the intire beach is necessary or warented. Post more signs regarding the restoration of Redwood Creek and its sensitive habitat clearly stating the rules. There are usually more children than dogs playing in Redwood Creek. I support Map 5A which continues off leash beach access for dogs and Map 7A which keeps the Coastal Fire Rd and the Trail at Muir Beach open for dogs.

I find dog owners at Muir Beach to be very responsible. We always carry poop bags and rarely see dog poop that has not been taken care of...but on the rare occasion, I do collect any dog poop that I see. A receptacle at the beach would be helpful.

The cost to patrol the beach would be far more than signage and education. Do not put an end to this long tradition of playfulness and freedom in a community that prides itself on being inclusive and responsible.

Sincerely,

Sarah Brightwood

Correspondence: Please make the GGNRA dog free. Do not cave in to the vocal minority.

Dogs in a National Park is a bad idea which is contradictory to the long term health and welfare of the native plants and animals which have been marginalized by urbanization.

Show some environmental backbone in the spirit of the NPS's founding principles and stand up to the well intentioned but short sighted, entitled and egocentric enthusiasts.

True land stewardship does not allow adverse impacts from domesticated animals on the land which will alter it's natural state; thereby depriving future generations the ability to experience the undisturbed or restored land we have remaining, as we the current generation does now.

Correspondence: I am very concerned about the upcoming vote to take place on April 14 concerning on/off leash dog areas in GGNRA. I am an avid walker and take my dog to many of the areas that are under consideration. I love living in SF partly because of how friendly and open the spaces are. I watch regularly how dog owners pick up litter as well as their dogs feces. We have happy dogs and people living here and I think that is really special. To take the off leash option away would change a lovely, unique culture that is not harming anyone. Dogs off lead are better behaved, dogs that are exercised are better behaved and dogs socialized are better behaved, and not in a closed in area, but where they can run and play without being confined.

I believe we are a respectful, thoughtful and caring group of dog owners in SF and what a shame it would be to not fully enjoy the areas we and our dogs have come to consider part of our daily lives.

Correspondence: Re: Chrissy Field, Central Beach I am very unhappy at the ROMA proposed for Central Beach - it is one of the best places in the city to walk in nature, and is already marred by the large numbers of dogs and dogwalkers there, over 30 dogs last time I was there. There would be even more dogs there under the proposed plan. The dogs should be ON lease in this area! I love and cherish this beach, walking on it is one of my favorite things to do in SF, but the peaceful nature of the place is destroyed by large numbers of dogs. In addition, the dogs tend to destroy the dunes there when they are not

under adequate voice control by their owners. I have repeatedly asked dog owners to control their dogs who were digging in the dunes (populated by rare native species of plants), and was ignored by the dog owners. Please preserve this jewel of San Francisco! Thank you for the opportunity to comment on this important issue.

Correspondence: To the Federal Bureaucrats who Want to Take away our Dog Parks:

Paws off! This isn't Iran or Libya where government hypocrites do whatever they want in complete disregard for the very people who pay their salaries. The people have spoken, are speaking, and will continue to speak: we love dogs and we love our off precious few leash dog spaces. We expect more, not less off leash space and now that you have galvanized us on this issue you will see more passion, not less, for off leash dog spaces in the future.

If you don't believe me, go to Crissy Beach just about any day of the year and you will see lots of dogs off leash. It's what people here want. We love dogs. We have more dogs than children (although we love children too, they're just very expensive if you live in San Francisco). If you can't handle that, go back to Washington DC before our local ELECTED representatives take control of the Presidio away from you.

Correspondence: Let me say that I am insulted as a scientist. You have insinuated that research indicates that dogs are bad for birds or the environment or something vague like that, without providing any scientific evidence. Liars. Shame on you. There is no scientific evidence that dogs are bad for the birds or the environment or anything else like that. That sounds just like George Bush using science for political means - and he's not a very popular guy in this country right now. There are many well educated technical and scientific and legal people here in the Bay Area so you're not going to pull an intellectual fast one on us like you have pulled on the American people at large. Not surprising from our federal government who lies to us often (weapons of mass destruction in Iraq, really? Show me evidence). I challenge the federal bureaucrats to come up with a shred of scientific evidence that shows that dogs are in any way bad for the environment. If you look into it, you will find that it is an undisputed scientific fact that dogs do not harm the environment in any way (see what I just did there? So easy). But seriously, cats are the ones attacking birds. Just ask any animal shelter or SPCA or animal care and control office. Ask them how many birds come in each day injured with dog paws or dog bites. And of course, the number one threat to birds and the environment in general are HUMANS. Don't blame the dogs. If you really care about endangered birds, start by banning the Blue Angels. What bird is going to want to stick around with dozens of mega ton eardrum piercing killers flying over every year? Then go after the construction down there - pounding on Doyle Drive day an night for a few years sound like a nice cozy environment for birds?

Correspondence: Dear GGNRA,

Please do not restrict designated off-leash dogs areas in San Francisco! Your proposal not only hurts our reputation as a city, but the health and sanity of our residents and tourists, both human and canine. The very idea is ludicrous!!

Instead of your trumped up "litigation" costs, why not use those funds to promote the health and happiness for all who enjoy GGNRA parks with

their companions. Isn't that the purpose of recreational parks? Perhaps you could redirect all your negative energy toward enforcing the obvious: those who do not have control of their dogs and/or do not "pick up" should be cited, fined, and banished. The rest of us (mostly taxpayers) would like to enjoy a little exercise and a nice walk with our well-behaved friends.

Correspondence: As a member of the GGNP Conservancy, I encourage the GGNRA to incorporate the recommendations of the Golden Gate Audubon Society in the Dog Plan that it is developing.

Specifically:

1.) All off-leash dog areas should be fenced for the protection of other park visitors and dogs. Park visitors should be given a choice about whether they will interact with off-leash dogs. 2.) There should be a limit of 3 dogs per person. It is not appropriate for the Park Service to create commercial permits for commercial/professional dog walkers. Also, it is unlikely that most visitors with dogs will be able to keep control of more than 3 dogs at one time. 3.) Leash and voice control requirements must be strictly enforced throughout the life of the policy. Otherwise proposed on-leash areas will become off-leash areas, as has already happened under the old rules. 4.) The goal of achieving 75% compliance with the leash and voice control requirements is far too low. The Park Service should not be creating a system that expects and tolerates failure by 25% of the dog walkers. Golden Gate Audubon recommends a goal of 95% compliance with leash and voice control requirements.

5.) The Park Service should keep in mind that while dogs are important parts of our families and communities, they are just one animal that is having a significant negative impact on thousands of other animals that rely on the park to survive. It is fair to ask dog owners to accept certain limits for areas where their dogs may play when the survival and wellbeing of so many wildlife animals and plants is at stake.

It's very important that the off-leash dog situation improve for the protection for the wildlife in the GGNRA. We can't let the situation as observed at the Crissy Field Wildlife Protection Area persist where often as many as two thirds of the dogs there are off leash and threatening the area's natural inhabitants.

Respectfully, Tim Montgomery

Correspondence: My family and I walk our dog Mazzy (black and tan coon hound) under voice command on a daily basis .We clean up heer poop,keep her on the trail,and insist she respects other people and their pets.We do not want to give up this natural way to excersize our dog.She is spirited and truly enjoys her walks off leash.We got her from a rescue center, a shy and fragile female who was found hungry and abandoned in a field near Modesto.We believe her walks off leash have brought her back to her natural self reliant ways. She does not do well in a dog park with the frantic stick and ball tyoe dogs,frankly they intimidate her and make her feel uneasey, she prefers the open space of our Marin Headlands trails. Please leave the trails open for off leash use. This is our dogs fondess times and we will surly miss this oppertunity to share the natural surroundings with her if we are forced off these trails with these new rules. I recommend the rules for dogs at Oakwood Valley REMAIN as they are now. Thank You Carmack McCormick

Correspondence: I find it a shame that people keep trying to limit the areas where dogs are allowed to run off leash. I truly find it ridiculous. I come from a country where dogs are allowed in restaurants. So hearing about trying to keep dogs on leash on beaches or off of beaches is simply cruelty to me. Where are dogs supposed to get their exercise??? Should we keep them locked up in the apartment all day and drive our fellow neighbors insane, because our dogs can't get enough exercise anymore? Why is this such an anti-dog country? Dogs do not get enough exercise just walking on a leash-they need to be able to run and stretch their legs. I find this new attempt of limiting dogs' ability to exercise very disturbing, cruel, and anti-dog.

Correspondence: Dear National Park Service:

First, I commend the NPS for taking on this important issue. For far too

long, dog owners have been allowed to let their dogs roam off leash without consequence. As a frequent user of many of areas analyzed in the Draft Plan, particularly the Lands End, Ocean Beach, and Crissy Fields areas, I have often been harassed or annoyed by off leash dogs.

For instance, I have been growled at and barked at by off leash dogs. It is a very frightening experience to be confronted by an aggressive dog that is seemingly not under its owner's control.

I have also witnessed off leash dogs harassing wildlife, frightening young children, and barking at and chasing bicyclists. Off leash dogs can also interfere with guide dogs relied on by disabled persons.

Current regulations regarding off leash dogs are insufficient to protect the public and sensitive species that reside in the Golden Gate National Recreation Area. The current state of off leash dogs at GGNRA has hampered my enjoyment of these areas on numerous occasions. Dogs should be required to be on a leash and under the control of their owner's at all times, with the exception of limited and fenced off specific areas.

As such, I encourage the National Park Service to adopt Alternative D in order to afford the maximum protection to the general public and wildlife, while only saddling dog owners with a minimal and completely reasonable responsibility (keeping their dogs on a leash).

Thank you very much for considering this issue.

Sincerely,

Shanna Foley

Correspondence: NPS:

The Golden Gate National Recreation Area is not a pristine wilderness that must be protected from the intrusion of civilization.

Your dog management plan does not serve the needs of San Franciscans seeking to enjoy outdoor recreation with their children and pets. These areas are urban parks, not remote wildlife sanctuaries that must be protected from families and their pets.

San Franciscans from all walks of life have successfully shared these urban parks with each other and their dogs, horses, bicycles and children for decades. It is unfair to take away these privileges now after so many have come to rely on them and incorporate this access into their way of life.

I do hope you will reconsider your plan.

I am a nature lover, dog owner, taxpayer, and registered voter.

Sincerely,

Victor Bartolotta

Correspondence: I have been living in the East Bay since 1993. The reason I live here is because I can enjoy the privileges of urban living, and still have access to undeveloped areas where I can walk with my dogs. For a living I provide alternative medicine to people and animals. I see many dogs with anxiety disorders and skin conditions that have developed simply because the dogs are not able to release the stress of urban living by being dogs. Being a dog means being able to run and sniff and explore. A loving guardian, good food, and time to romp are the top three things that make a dog healthy.

I am also a conservationist and have managed nature centers in the bay area and run watershed awareness programs for Alameda County. If I thought dogs were seriously endangering wildlife, I wouldn't advocate for their off-leash privileges. The Bay Area is full of people who have trained their dogs to have good recall, to come when they are called, so that these people and dogs can enjoy the outdoors together. If I'm walking with my dogs at the Albany Bulb and I see shore birds, I leash them. If we're Point Richmond and there are wild geese, I leash them. When we're in Redwood and I see a horse approaching, I leash them. If we're in Roberts and a mountain biker is

coming down the trail, I call them and have them sit while I give them treats until the bikes pass. The majority of people who take the time to travel to these areas with their dogs are equally responsible in their stewardship of their dogs.

Lastly, for three years I ran a dog-walking business. During that time, I walked dogs off-leash in the East Bay Regional Park with my dog walking permit. During that time, I never saw one of the dogs in my group hurt a wild animal or destroy habitat.

The Bay Area is unique in the great gift we have in the Regional Parks and National Recreation Areas. Part of this great gift is the immense pleasure of being able to hike with one's dog in the off-leash areas of these parks. If you reduce the off-leash access in these parks, you will be greatly reducing the gift that the bay area gives her residents.

Correspondence: Hi,

I am wrting in regards to the possible restriction of dogs being off leash and the designated area of dog run at Fort Funston. I think this is the biggest mistake GGNRA is making and breaking agreement which was put in place over 30Years Ago.

The new plan to restrict dogs to a dog run is going to cause Major dog Fights in a small enclosed area. Dogs need to have room to run and blow off their energy. I know 90 people that walk their dogs at Fort Funston are responsible dog owners, and keep Fort Funston beautiful and clean!!.

I also think it is unfair to Dog Walkers which would take away their lively hood, because they won't be able to adequately exercise clients dogs. GREAT you will Make more Americans unemployed.....

RE Think this GGNRA you are making a BIG MISTAKE!!..The people and dogs that use this land RESPECT IT.....

Thank YOU,

KatieChance's MOM :)

Correspondence: I am writing to ask that you keep and increase all dog off leash areas and trails in regional parks in Alameda and all other county's in CA. Dogs need places where they can run in order to stay healthy and happy, and their owners need a respite from the constrictions and stress of walking dogs constantly on leash.

It seems to me that a humane and conscious government makes and keeps laws that allow not only people but animals the chance to exercise in safe and healthy environments.

I implore you to please keep the off leash areas we already have and increase them in all regional parks and trails.

Correspondence: Please DO restrict the areas where dogs are allowed in the Golden Gate National Recreation Area. But then you have to enforce it. Right now, regardless of the regulations, it seems like no place on Ocean Beach is safe from loose running packs of dogs.

I live in the outer Sunset. It's not bad enough that when I'm heading down to the beach (or on my way to cafes or grocery shopping) the sidewalks are strewn with feces. But once I'm at the beach, it's no longer possible to relax and walk along the water's edge, watching the waves. Now a person has to keep an eye out for wet running dogs that come rushing up out of nowhere. It only takes the occasional badly trained dog that jumps on me or leaves a trail of slobber on my clothes to make me tense up every time I see one running toward me. Needless to say, a walk on the beach is not as pleasant

as it used to be.

I used to love walking on the bluffs at Ft. Funston. They offer a particular elevated view of the beach that can't be had anywhere else. But I've had to completely give that up - it's a nightmare these days. It feels (and smells) like a giant dog run. Ocean Beach is heading in that direction, too.

Correspondence: I use Crissy Field Beach 3-5 times a week for walking, birdwatching, and swimming. I love dogs, but off-leash dogs do not belong in a National Park. I frequently see off-leash and out of control dogs in supposedly protected areas. There is no reason that this should be happening.

Not only should this proposal be adopted, it should be strengthened to higher compliance goals. The mission of National Parks is to protect the natural resources. Birds and the last wild areas in San Francisco should not be sacrificed - especially given that most of the dogs at Crissy Field are being taken there by a commercial dog-walking service. It is not incumbent upon the National Parks to sacrifice endangered or threatened birds for private profit.

Correspondence: I support the proposal to limit the areas where dogs are allowed off-leash. Too many dog owners abuse the rights and adversely affect the enjoyment of other GGNRA users. As it is, there are many dog owners that refuse to deal with the waste that their animal deposits. Letting dogs run loose all over the place leads to a much greater amount of uncontrolled dog waste and other behavioral issues. If this plan is implemented, please ENFORCE it.

Correspondence: The plan doesn't go far enough. Dog walkers, particularly professional ones are making our national park areas in the GGNRA smelly and filthy from all of the feces and urine from the dogs. This is particularly true at Crissy field and Fort Funston. These parks have been essentially taken over by free

roving dogs. I've often seen young children being run over by dogs at Crissy Field and am sure that there have been numerous incidents and near misses between dogs and children there.

Even if the NPS does ban free-roving dogs from these sites there will be no enforcement so the dogs will continue to run wild at these sites.

Correspondence: As a dog owner I take my dog to Crissy Beach almost every day. It's one of the nicest places in the Bay Area where dogs can roam freely. The proposed plan is a radical departure from the current policies and will severely restrict the amount of off leash areas in the Bay Area, not just at Crissy Field / Beach but elsewhere too. I see no need to change the current policy. If people behave irresponsibly they should be cited, but do not let the vast majority of dog owners be punished by a few incidents. San Francisco has the reputation of being a dog friendly place, let's keep it that way.

Correspondence: Please consider the dog-owning community as responsible adults and post signs where dogs - and people - should be kept out of sensitive areas. Allow trails and Muir Beach to be available to responsible dog owners under

current rules. For example, when visiting Muir Beach, I see children run amok in sensitive areas as dogs play in the surf or lounge with their families. Where is the signage to protect recently restored riparian areas and the mouth of the salmon stream? It is not being threatened by responsible dog owners, but by irresponsible or uneducated people.

My comment is against these new rules, tho I favor education and signage to protect wildlife and sensitive areas.

Thank you.

Correspondence: It would make it easier if you had a simple summary that the public could read. And a simple way to email you instead of this form. The process you have favors the dog coalition in the City that is organized, and not individuals like myself.

I'm for more restrictions on dogs in the Golden Gate National Recreation Area. I'm a 63 year old San Francisco resident. I used to frequently visit Crissy Field but haven't been there in a long time. A few weeks ago I did make a new attempt but as I drove up saw two dog-walkers with 5-10 dogs each, and thought to myself this is not a place to enjoy a walk.

There are just too many dogs. A person with several dogs cannot keep them under voice control.

Too many people let their dogs run loose along the main walk ways. They may think their dogs are nice and well-controlled but not all people think that.

Not everyone likes dogs. Some people have had very bad experiences with dogs attacking them, biting them, even mauling them.

I think we have a group of people here ("I Have A Dog and I Vote") who believe the Constitution has a clause in there protecting rights for their dogs but that isn't so. The parks should be enjoyable for all people.

Thank you.

Correspondence: Chrissy Field

It is a Sunday Morning around 8:30. I and my dog Finn load up in the car to head in to his favorite place, Chrissy Field in San Francisco from across the bay in Berkley. Finn is a 4 year old Golden Retriever who has a love for Swimming. We get off the Bay Bridge and head down the Embarcadero as we turn onto Marina Blvd. Finn, sitting in the back starts getting excited. He knows where he is going now. Finn starts by staring out the front windows and then he start whimpering a little. Culm down Finn. I say. "We are almost there." We park at the West end of the main parking lot at the beach. I hook him up to the leash and let him out. Before he can be let free to swim I have him sit and stay until I give him the command "OK". Immediately he heads for the water. Before I can even throw his favorite toy he jumps right in and swims around on his own. Then he rolls arounds on the beach in the sand. I can see the smile on Finns face. Does a dog smile,, there is no doubt in my mind. A dog, mans best friend. As I walk down the beach towards Fort Pt. and the Warming Hut I Take a deep breath taking in the salt air from the sea. And take in the Breathtaking view of the Golden Gate Bridge which helps to wash away the stresses from the previous week. This is the Bay Area a place I love and a place I call "Home". Even on a rare hot summers day I rarely see many beach goers using the west end of the beach. There are very few places in the Bay Area and in California where one can take their dog off leash and walk along the beach. Finn's first love is Swimming and I would hate to see this taken away.

Correspondence: I'm disappointed to see the proposal to eliminate dogs on most of Muir Beach, my wife & I take our dog there regularly. In the times I've been there I've seen humans doing more damage than dogs, especially the ones that trample through the brush & break off branches to use in fires on the beach.

The Preferred Alternative document, in the section on Muir Beach, says "Off-leash dog walking can occur at a small beach area on county property adjacent to the NPS beach," however, that area does not seem to be identified on Map 5 Muir Beach. Looking at that map, I have to assume it's the southern-most end of the beach, the area outside of the green boundary line. If that is the area, how is it to be accessible? The only allowable way out of the parking lot (with a dog) as shown on the map is the Pacific Way Trail, which is "to be built." The map doesn't show the path a dog-walker would have to take via the Pacific Way Trail to reach the south end of the beach, but it appears it could be several miles, which is hardly a practical option, especially for the elderly or handicapped. So what is the proposed access method for this beach area with a dog? Boat? Helicopter?

I've looked at Maps 26 27 Adjacent Dog Use Areas but I don't see the adjacent county property identified on those maps either. Please let me know if I have missed something. I look forward to clarification on this.

Thank you.

Correspondence: I have lived in the Parkside are since 1973. During my early years here I walked the Fort Funston area with my wife once a week. After many somewhat threatening encounters with aggressive-looking dogs, that were never on leash, and where I did not trust voice control by the dogs' owner,

we decided to discontinue our walks there. Recently I walked through the Fort Funston area and noticed that the landscape looked desolate-pure, bare, chewed-up hills of sand, and although I was not intimidated by any dogs, my memories are such that as a walker, I will not go there any more, unless I am passing through on the coast side.

Every week, for some years now, I walk Crissy Field from the Golden Gate Bridge vista point to Fisherman's Wharf via Fort Mason. I encounter numerous dogs each time, but have not had any bad encounters. As I sit often at the Haas Overlook to the Golden Gate Bridge, I notice the numerous dogs freely running on the beach, and wonder how any mother can let their child play in the beach sand.

I do not understand the oft militant stance of many dog owners-that their dogs must run free to properly exercise, and that they are not prepared to compromise at a park that is visited by numerous tourists and walkers/joggers like me, who have no dog, and want to just enjoy the beauty and serenity of the park.

Sincerely,

Carl T. San Francisco

Type:

Correspondence: 1. All off-leash dog areas should be fenced for the protection of other park visitors and dogs. Park visitors should be given a choice about whether they will interact with off-leash dogs.

Dog owners often assume that everyone has the same comfort with dogs as they do. This is far from true and many people feel threatened by off-leash dogs and have legitimate fear of our sometimes unpredictable canine friends. This can quickly escalate if a dog senses fear in someone and things spiral out of control.

So while dog owners might think this is over caution, it is a fact that people DO suffer mauling and injury from off-leash dogs.

2. There should be a limit of 3 dogs per person. It is not appropriate for the Park Service to create commercial permits for professional dog walkers. Also, it is unlikely that most visitors with dogs will be able to keep control of more than 3 dogs at one time.

Professional pet service activities should be done in places with guidelines in place for this kind of work. A public park should be a safe space for people first, not one dominated by professional service activities.

3. Leash and voice control requirements must be strictly enforced throughout the life of the policy. Otherwise proposed on-leash areas will become off-leash areas, as has already happened under the old rules.

4. The goal of achieving 75% compliance with the leash and voice control requirements is far too low. The Park Service should not be creating a system that expects and tolerates failure by 25% of the dog walkers. Golden Gate Audubon recommends a goal of 95% compliance with leash and voice control requirements.

5. Remind the Park Service that while dogs are important parts of our families and communities, they are just one animal that is having a

significant negative impact on thousands of other animals that rely on the park to survive. It is fair to ask dog owners to accept certain limits for areas where their dogs may play when the survival and well being of so many wildlife animals and plants is at stake.

Correspondence: Dear Parks,

I am a ten-year-old boy who has practically grown up in the Golden Gate National Parks. I was born just a few blocks from the Presidio, I go to school just outside of the Presidio, and my mom takes me to the parks all the time. My favorite places are Crissy Field, Lands End, and Rodeo Beach. I volunteer at Lands End, go to the Crissy Field Center summer camp, and regularly see movies at the Disney Museum.

I have been raised with dogs, and I love dogs. I think the dog plan that the National Park Service has proposed is very reasonable, because I don't think that dogs should have exclusive rights in the parks. Really, I don't think that dog WALKERS AND OWNERS should have exclusive rights in the parks. Why should they have priority over kids and babies and snowy plovers and lizardtail and monkeyflower? We all have to live together and in harmony, and the dog owners should not be the boss of everyone else.

I really love the parks, and I want them and their plants and animals and habitats to be around for everyone to enjoy.

Correspondence: 2ND SUBMISSION - ENCOUNTERED PROBLEM

Let me first say that I think Crissy Field is the Crown Jewel of San Francisco and that you have done a fabulous job with it's design and management. With that said, let me point out that you probably don't get a lot of praise; you are most likely apt to hear from people who are unhappy and have something to complain about. Which is a real shame, but unfortunately, the way of the world.

I think Crissy Field could be described as about the most perfect, multi-use park in the United States. The fact that it accommodates beach goers, hang

gliders, picnickers, joggers, dogs, walkers, bikers and everything else is wonderful. I truly believe that absolutely nothing needs to be changed at Crissy Field. As I said above, it is a true gem!

I don't own a dog and so it is a treat for me to go to Crissy and frolic with the many dogs that are allowed to run off-leash on the beach. This is how I get my "Fur Fix." Never have I come across an aggressive dog that if off-leash. Friends of mine from Novato and Oakland, who have dogs, frequently drive to Crissy just because it is such a special place for both humans and dogs. Other friends from Napa always make Crissy Field a stop on their way home after retrieving out-of-town guests at the SF Airport.

On my many trips to Crissy I rarely see dog poop on the beach? most dog owners are very vigilant about picking it up. The last three times I visited, I took extra bags just to generally pick up trash that had floated in off The Bay and while scanning the beach I did not see any dog poop. There will always be bad owners and it is unfair to paint the majority with the same brush.

Being rather outgoing, while at Crissy I'll strike up conversations with anyone who is willing. I've spoken with people from all over Europe, the United States and people who live in the neighborhood. I have heard nothing but glowing comments about what a special place Crissy is and then people go on to comment that they wish their dogs were traveling with them. Not too long ago I met a family that was traveling in an RV and they were thrilled that there was this beautiful beach that their kids and dogs could run on. The dogs had not had a good run for days. I've also spoken with people from the immediate neighborhood who walk there frequently. A lot of the elderly people will approach people with dogs just to pet the dogs. Then they will chat about how they use to have this or that dog but the dog had grown old and passed on. This is a wonderful change for the elderly to get out, get a little exercise, get their "fur fix" and chat if they are lonely. As I said above? a true gem!

I've only written about Crissy Field here because I love the place and think it is perfect as is. My wish would be that you take what you have done at Crissy and implement those things at many more places.

Please don't listen to just the complainers. There is plenty of space for wildlife, humans and dogs to share. If we don't tell you often enough what a great job you are doing? just ask.. you will get nothing but praise from me.

Correspondence: I have walked one dog or another on Ocean Beach almost daily for the past 25 years. There are dog-owners who neither supervise nor clean up after their dogs, but the vast majority of local dog walkers are responsible and do not allow the dogs to harass the shorebirds. I have read a Bay Bird Survey that indicates the real problem with the Western Snowy Plover is that the California Gull is eating their eggs in the nesting areas. This seems consistent with what I have observed on Ocean Beach where the smaller birds are harassed more by gulls and ravens than dogs and people. I think the shorebirds are also more disturbed by the Park Police vehicles on the beach than pedestrians with leashed dogs. I believe the GGNRA is acting more out of fiscal preference than really trying to balance the needs of the shorebirds and the residents. It's just easier to ban dogs altogether than to work directly to fine and remove the minority of beach users who are irresponsible. Why doesn't the GGNRA show us some scientific basis for this proposed regulation? Probably because none exists.

Correspondence: I have two dogs that I walk at Fort Funston about twice a week. Each time I have gone over the past several months, the hang gliding area has gotten larger and larger. I get it. They need more room for safety and the variations in wind and so forth. At times, I see one or two men with little motorized planes in the area south of the hang glider landing area. The vast majority of people who frequent the Fort are individuals who walk their dogs for pleasure. Commercial dog walkers are present as well and I personally think that more than six dogs at one time is risky. I have rarely seen any incident of fighting or disputes between owners or their dogs. I am aware of an incident that took place when a crazy person attacked a dog with a knife but there are crazy people in every neighborhood in town. You cannot regulate that.

What I cannot understand is why anyone else would use Fort Funston unless they just wanted to walk on the beach. Why such severe restrictions on the

ROLA size is what puzzles me. It also seems that having a dog on the beach is just about eliminated in your preferred plan.

I do like the idea of having commercial dog walkers get permits. I realize this is a difficult task but the plan is too restrictive for my needs.

Correspondence: I am completely opposed to the plan to ban dogs from some of the GGNRA sites and require leashes on others. I am for ticketing irresponsible dog owners who do not pick up their litter or who allow their dogs to chase birds or animals in the parks.

Dogs are the reason many of us get out and hike as much as we do. Some dogs need more exercise than we can provide them while they are on a leash. Well trained dogs and responsible dog owners should not be punished for those that are not. Responsible dog owners are often the ones picking up the litter, restoring habitat, and caring for these special places.

I hike the GGNRA Pacifica parks, including Mori Point, Sweeney Ridge, Milarga Ridge and areas destined for GGNRA, Pedro Point Headlands, and Cattle Hill at least 4-7 times a week. I organize beach cleanups, litter cleanups throughout Pacifica, and habitat restoration events too. The dog people are some of our best volunteers in keeping Pacifica beautiful because they do go on daily walks. Keeping them off of the beach or our parks is a disservice if you ask me.

Please change the proposed plan to include dogs - offleash and in control at all park locations. Our parks need them and their responsible owners. As for any irresponsible, fine them, fine them big time!

Correspondence: I have had dogs all my life and know the importance of giving them the time they need off-leash to get all their energy out. I also have had experiences with dogs that have owners that cannot control them.

My suggestion is to make areas on-leash unless visitors have acquired an official permission ID card from the rangers. I think the park could make quite a bit of money from having headquarters with dog behavior specialists

that monitor a dog's behavior before giving it a year-long pass. Passes could cost \$5 or so each. Dedicated and local dog owners would have the freedom to use the parks at little cost annually, with out being harrassed by unruly dogs and underskilled owners. The GGNRA could use the money to balance their costs for the program and for bettering the parks.

Correspondence: 1. No off-leash dogs should be allowed in the GGNRA. 2. Any dogs that are allowed in the GGNRA should be leashed on a tether of six feet or less, and should be required to stay on a small number of carefully designated trails. Dogs must not be given full access to trails. Trails are for humans.

I am a medical doctor and have seen the adverse results of both uncontrolled and leashed dogs upon humans. I have also observed the environmental damage caused by dogs in our coastal areas. If off-leash dogs are allowed, they must be contained within small, supervised, fenced areas, which repersent a negligible portion of the public lands.

Correspondence: I appreciate efforts to improve the circumstance in GGNRA with respect to dogs. I love dogs and share my life with a dog, but I think the impact of dogs on the GGRNA is widely apparent. If you look anywhere that dogs are in practice off leash you can quickly see where they are having an adverse impact on the vegetation and wildlife in that area. I would especially encourage that in areas where endangered or threatened species are known live, nest, stopover during migration that dogs be completely banned during times when they might disrupt the activities of wildlife.

Correspondence: I walk my dog at Ocean Beach in the area approved for off-leash dogs. Out of all the miles of beach, this is a relatively tiny area and it is much appreciated. I go every week at least once and sometimes 3 times a week. I have never seen any misbehavior of any dogs over the past 4 years. Furthermore, it helps socialize dogs so that they are not a problem in contact

with other dogs and people. We now have more owners of dogs than parents of children. We pay taxes for education and recreation for families...well our dogs are our families and they deserve a place to play and interact, as well. PLEASE do not revoke the current privileges of off-leash access for our dogs where we can currently go...ie, Ocean Beach, Crissy Field Beach, etc. If possible, please confirm receipt and acknowledgement of this message. Sincerely, Jane Alexander

Correspondence: Option "D" (with the most protection for wildlife) is the most practical. Dog owners do not realize the damage caused by their pets beyond the immediate effects. There needs to be areas set aside where dogs are not allowed at all, including signs educating dog owners why their pets are not allowed, describing the damage that dogs cause. But any dog policy is useless if it is not rigorously enforced.

Correspondence: I am a dog owner and a supporter of wildlife and nature. I frequently visit the GGNRA lands and I strongly recommend more stringent control of dog access to GGNRA lands. I have witnessed dogs harassing wildlife, including listed species such as the Snowy Plover. I have also experienced loose dogs running up and jumping on my leashed dog when I am trying to take a quiet walk through the park. I have also seen dogs digging and destroying vegetation off trail and in some locations I have seen large amounts of dog feces which are not cleaned up.

I love dogs and think they should have space to run and interact with other dogs. But wildlife and wild areas must be protected on the GGNRA lands

that are so popular will decline in beauty and species diversity. I think dogs should have specific areas where they are allowed off leash and other areas where dogs on leash only are allowed. I also strongly support restricting dogs from any areas where listed species are present (whether resident or migratory). Dogs should not be allowed to harass wildlife or to destroy habitat, this includes flushing birds.

Dogs are predators that can directly and negatively impact species and even a leashed dog can discourage species. Birds tend to flush with greater frequency even near leashed, well behaved dogs. I enjoy walking my dog on GGNRA lands but I also enjoy the wildlife and natural area. I am willing to leash or restrict my dog where necessary in order to protect wildlife.

Correspondence: I am a Berkeley resident who frequently visits GGNRA sites for hiking outings on weekends. I have been hiking and picnicking at Muir Beach since 1978 and have seen many changes in that area over the decades.

Most disturbing to me is the overabundance of dogs off leash. I no longer feel comfortable picnicking or even sitting on the sand, as I've watched too many dogs urinate and defecate on the beach, with no owner in sight. Even when an owner is responsibly monitoring their dog's behavior, there's not much an owner can do when a dog has a loose bowel movement that cannot be picked up with a plastic baggie and tossed in a garbage can.

In addition, dogs off leash are a danger to toddlers and small children.

Please restrict all off-leash dogs to special, fenced areas within the GGNRA. And please make tiny, gem-like Muir Beach a completely dog-free area.

I support Alternative D of the Draft Dog Management Plan.

Thanks

Correspondence: I would like to see Crissy field continue the way it has been with a loose leash law except in the areas where the snowy plovers spend the winter. This area should be protected more and be closed to both dogs and people. I

often go to Crissy field with my little dog and my binoculars. She needs the exercise and loves being off leash. I fret about her loss of freedom which she will feel as any person would. We walk the blue area. I also walk around Julius Kahn, the baseball field, lover's lane and the ecology trail. I found this dog; she went to ACC but needed to be rescued. I could see myself easily on the other side of this issue except I have this dog. I have had her for 4 years and we walk in the Presidio nearly every day. My real concern is about the dog walkers who I have found for four years to be responsible, thoughtful and genuinely good people. They pick up their dog's poop and any other they find. They like and some love the dogs in their care and know that their actions will affect their livelihoods. They are the one's I would hate to see get hurt. I walk 7 days a week and can testify that 5 days a week the park is being used and used well (that is the purpose of an urban park, isn't it) and rather empty without the walkers and their pals on week-ends. Almost lonely. I like the way things are and hope they stay that way for everyone.

Correspondence: Dogs should not be allowed in the GGNRA period. The reason is that dog owners will completely ignore any rules. That is exactly what is happening now. Further, the authorities will not enforce the rules against the politically well organized dog owners.

I often visit Marin county and hike in the GGNRA. I have complained to the authorities many times, including photos, and they never do anything. It would be easy to enforce their own rules by making an example of a few of the flagrant rule breakers, but nothing ever happens.

The so called voice control areas are a complete joke. I have seen dozens of dogs running wild, jumping on people and barking in a threatening fashion. The owners call the dogs but the dogs pay absolutely no attention. The dogs of Marin county are spoiled and untrained. I have never seen a dog actually under voice control, but I have seen hundreds of wandering loose dogs.

There are professional dog walking businesses that use the GGNRA with impunity, bringing 10 or 20 dogs at a time, many off leash. I've complained about that too, but no action.

Dog owners often seem less intelligent than their dogs. One small (thankfully) dog hounded me, barking and snarling. The owner said don't worry, he's friendly. Mostly when you call out their law breaking behavior the dog owners say he's not bothering anyone or get a life.

I really think that most dog owners have zero objectivity about their dogs. They treat their dogs like cute spoiled children. They think that everyone must love their mutts.

Any dog running loose in the GGNRA should be captured and sent to the pound. This should be done right in front of the owners nose, just like when they tow your car. The owner can then pay \$500 to get their dog that they love so much back, or the dog can be sent to doggie heaven. That's a much better solution than citations. Instant justice.

Correspondence: I live in the city. I am a responsible dog owner. I pay taxes. And I am strongly opposed to this proposal. This is a major city with a large population of dog owners and we use these recreational areas daily. This is not Yosemite.

The proposal is heavy handed and does not make sense. It forces all dogs leashed and unleashed into a small section of Ocean Beach, which is heavily used by families and tourists. Has anyone looked at the beach and how it is used? This is the most populated section of the beach. Also, if the beach is being closed to protect the snowy plover, why is it closed year round?

This proposal will decrease our quality of life. Walking your dog on the beach is a healthy pleasure that people have enjoyed for centuries. It is one of the joys of living in San Francisco. Don't take it away!

Correspondence: Concerning Dog Management Plan w/in GGNRA, respectfully requesting consideration of the decades status quo off-leash allowances at Fort Funston and other key GGNRA areas. Notwithstanding the essential nature of conservancy and the need for balanced protection of the environment, the GGNRA sites in and around San Francisco are within and part of a major urban environment -- and the balance MUST include due consideration of

just how the parks are fully enjoyed by the people of San Francisco (the purpose of the parks, after all). Namely, the parks under consideration are places -- the only places -- where urban dwellers can enjoy time with family and with pets, and the value to us of doing so is a sense of freedom and fun that is increasingly rare in modern society generally and yet of increasingly importance given the stresses to us all. The additional proposed constraints with regard to parks use with dogs places the very real burden of those constraints upon the very people who support and use those parks, and goes against the spirit of these urban parks and the purpose for which they were intended (to be enjoyed). Please, do not curtail usage of the GGNRA sites with dogs; Seek to raise awareness of environmental concerns or fully eliminate foot traffic in select sites within GGNRA as may be required for species protection. But please do not implement restrictions on the parks in the current measure as this will serve only to make the lives of Bay Area residents worse, a poor decision even if carried out in the name of environmental protection. In striking a balance between views and constituents, laws affecting these parks must place the concerns and well-being of those people who routinely use the parks foremost. Thank you.

Correspondence: I STRONGLY OBJECT to Map 4 Oakwood Valley and Alta Trail's "Preferred Alternative." It's almost worse than closing the entire area to dogs (which you seem to want to do on Map 4-D). In your "Preferred Alternative" dogs are on-leash for the whole of the Alta Trail from Donahue to the new gate! This is a horrible idea! There is no reason whatsoever to require a leash on the Alta! None!

The second part of this plan is even worse. The Oakwood Valley Fire Road and Valley Trail form a perfect leafy, shade-and-sun, peaceful forty minute loop walk for my dog and myself, yet you want to ban dogs completely from the best part of this walk--the Valley Trail. Once again, why?

I find Map 4-A the least objectionable simply because you deign to allow dogs on the Valley Trail, but this is not good enough. The whole of the Oakwood Valley / Alta Trail should be "Voice Control."

I have been walking my dog in both areas for over ten years and have never once encountered out-of-control dogs (although quite often out-of-control mountain bikers!) My dog and I have encountered much wildlife--numerous harmless snakes, bob-cats, several coyotes and twice a mountain lion at a distance--and we have shown respect in every case.

NEVER in ten years have I come across a dog that was off-leash that I thought should be on-leash. Never once did I think that my dog or other dogs I encountered were harming wildlife, frightening away birds, or destroying foliage in the surrounding area. Never once did I think my dog or any other shouldn't be allowed to walk or trot at their own pace, stopping to sniff the ferns when they felt like it, then running to catch up with their human, perfectly at home in the wild as they love to be.

Not one of your Map 4 plans is satisfactory to me as an owner of a very civilized, nature-loving dog. Indeed, your plans are truly insulting, not only to a dog-person, but to me as a tax-payer. I must wonder how much of my tax revenues went to planning time for these truly horrendous maps. Was there anyone working on them who actually cares for a specific dog? Or cares for dogs, period!

I think not.

Your maps are only slightly more insulting than your "Alternative Dog Recreation Areas" or whatever you call them. Dog parks? How can I run or walk with my dog in a dog park? She simply stands in the middle of all the dust and dog excrement utterly bored. As do I. No, dog parks do not stand in well as substitutes for the mossy, ferny scent-laden trails of the GGNRA.

Please rethink your plans entirely. Please rethink them with REAL dogs in mind, not the squirrel-chasing, yapping, brainless, slobbering, out-of-control dogs the Audubon Society would have you believe are wrecking the GGNRA.

Thank you, Laurel Bunce-Polarek (who is holding off on rejoining the Parks Conservancy until this dog-hating nonsense is over.)

Correspondence: Don't give in to the crazies who treat their dogs as if they were children just because they shout the loudest. GGNRA is unique. It was made protected space for that reason. To give in to demands for non-conforming uses is to give up the protections that were so hard won. We do not build in GGNRA simply because people want to. We do not develop there simply because people want to. We do not introduce predatory non-native species in off-trail areas simply because people want to. That is what makes it a park!

Stand firm against non-conforming uses! That the point of having a park!

Correspondence: Please let us continue to exercise our dogs off leash at Muir, Rodeo and Stinson Beaches. Dogs and their owners really enjoy the freedom of off-leash play in the sand and water. We have far too few places where a dog can play off leash as it is. Most dog parks are small and confined spaces without adequate shade trees and access to water (e.g. Larkspur and San Anselmo). Dogs on leashes are also more likely to display fear aggression as they feel at a disadvantage to protect themselves when on leash. There are hundreds of miles of protected coastline for the wildlife. Please let us use a couple of beaches for recreational pleasure.

Correspondence: I've attended one of the GGNRA public open houses (SF State) regarding the dog management plan. After attending, I got a better idea of how much of current off leash dog areas are actually being taken away, especially at Fort Funston. The only areas that will be off leash is the sandy area near the parking lot and a section of the beach.

The area near the parking lot is not an area for dog WALKING. It is more of a dog run. Families who want to walk their dog off leash would no longer be able to receive the hiking experience from the trails. I go to Funston with kids now and they love the fact that they can run free on the trails with the

dog.

The suggested plan for Funston would not be accessible to disabled people on wheelchairs and canes and for families who bring their kids in strollers. In order to get to the trail where dogs will be only allowed on leash, everyone would have to go through the sandy area or the Chip Trail because the Funston suggested alternative map that was presented at the meeting shows that the paved area that leads to the rest of the trail (Sunset Trail) is off limits to ALL dogs, whether on or off leash. How is someone with a cane or wheelchair who is there with a dog supposed to get to the trail where dogs are allowed on leash? How are people in wheelchairs going to be able to utilize the proposed off leash sandy area when they can't even maneuver in it?

Beach access for off leash dog walking will be extremely difficult for those with canes and inaccessible all together to those who are wheelchair bound. The only access to the beach is down the flight of stairs near the parking lot and down the VERY STEEP sandy beach access trail. That is not practical or safe to anyone who is disabled. So in reality, someone wheelchair bound with a dog really has NO place in Funston to be with an off leash dog. GGNRA should do a review of their plans for Funston to consider disabled people.

Also, the section of the beach that is suggested for off leash dog walking is only from the staircase of the parking lot to the beach access trail. This stretch of the beach includes the outflow pipe. More often than not, the tide is high at that area and there is no way to get around that outflow pipe. So when tide is high, there's more space that is lost for off leash walking. Sometimes the tide is so high that you can't even access the beach safely in the proposed designated off leash section of the beach.

Considering the amount of use that Funston gets with people, dogs, hikers and hanggliders, it really isn't in as bad of a condition that GGNRA keeps reporting it to be. In my experiences in the past 10 years, it has been kept CLEAN, SAFE, and PLEASANT. Dog owners and dog groups organize numerous clean up days, in which they technically don't have to, since it should be up to National Park Services to maintain the recreational areas (which I do not see them at Funston often). And please clarify that these areas that GGNRA are trying to make changes to are RECREATIONAL AREAS, not national parks or the wilderness. With any type of RECREATIONAL AREA, whether dogs are allowed or not, there is bound to be wear and tear of the land.

At the meeting I asked a park ranger what is GGNRA's plans regarding more effective barriers for the plants that they want to conserve/protect and the answer I got was very disappointing. I was told that it takes a long time

for GGNRA to come up with the funding to replace the barriers and blown down fences, and it's not the priority at the moment. The current barriers now are posts with ropes, which are often covered up by the sand when the wind blows. Those barriers do not do a good job of preventing dogs OR HUMANS from crossing them. There were 4 teenagers the other day WITHOUT a dog who were able to easily step over the ropes and walk all over the plants. PLEASE STOP MAKING STATEMENTS THAT IMPLY THAT IT'S ONLY DOGS THAT DO "DAMAGE"! If GGNRA is able to find the time and funding to create this 2400 page plan for almost 10 years, why is it so hard to spend some time and money to replace the barriers to PROTECT the plants and environment you want to conserve? Isn't that GGNRA's main goal of all this? Also, by not taking immediate action to the fences blown down at the trail near the cliffs, human safety is at risk too! Maybe GGNRA can consider compromising, and instead of taking away off leash walking areas from dogs and people who visit the park the most, put some time and effort into improving the barriers and fences.

Please reconsider your plans and also take into consideration how your plans will affect the future of other public areas.

Correspondence: I am strongly in favor of the draft plan. I am in favor of strong leash laws, and even limits on the number of dogs that are allowed in some areas. Dogs stimulate fears and that destroys the enjoyment of serene environments. For example I am thinking of the beautiful stretch of beach at Crissy Field, from the Marina to Ft. Point. It is really terrible for walkers to encounter so many dogs there, especially those that are not on leashes. Also the dogs are dirty. And they scare the young children that are brought to the recreational areas. Put simply they simply destroy the experience.

It is simply not a right for a dog owner to "run a dog" in these areas. Indeed it is an infringement on the rights of others to enjoy our parks.

GGNRA is doing a good thing. Please continue to fight for your principles. Don't let the protests of the dog owners wear you down.

Correspondence: our family would encourage the park service to choose alternative a.

dogs should always be on leash except in the areas now designated as leash free zones. there should be no extension of those zones.

when our family first moved to san francisco we realized dog owners were quite different than those from where we had moved. sf dog owners would walk the streets without leashed dogs and the spillover into parks was inevitable.

our enjoyment of Fort Mason quickly turned to concern as we saw dogs running without supervision while their owners engaged in conversations. twice one of our children was aggressively approached by a large growling dog.

we've been forced to find other areas of the city to enjoy the outdoors with our family. the Fort Mason area in particular is a gem that deserves better management by the park service. later, we've been told, dog owners were ticketed and things have quieted down. until there are rules proscribing dogs off leash we will not be able to enjoy an area so close to our home.

frankly, large dogs should be forbidden in the city limits as should known aggressive breeds. it is a form of animal cruelty for a large dog to be confined in an urban environment. owner self indulgence and loving a pet are very different things.

Correspondence: I really don't understand how dog threaten the environment at Chrissy Field. I take my dog down there twice a day and see more human waste (sand buckets, kids wrappers, toys, trash) then I see dog waste. I also see more people walking in the roped off area then dogs. Having the ability to have our dogs off leash is truly a treat and one of the reasons this is such a great city to live in? Where else can you let your dog swim, socialize, and be happy? Quality of life for both the owners and their dogs. Yes, there are irresponsible dog owner but there are also irresponsible parents and people in general. Do we prevent these irresponsible parents from not having children? Do re prevent them from playing in the park if they leave their trash behind? No, we enforce rules of parks by giving tickets or other help/volunteer their time to clean up/ over compensate for these irresponsible people. Why isn't it the same way for dogs?

Keep the parks open to off leash dogs!!!!

Type:

Correspondence: I strongly support protecting wildlife by restricting off-leash dogs. I am a native San Franciscan and I an inspired by seeing wildlife thriving in nature. To my dismay, even areas with signs requiring dogs to be on-leash, have been over-run by off-leash dogs. I have seen wildlife chased by dogs. The areas where I can go birdwatching have become so limited, I have resigned myself to hour plus drives to go to remote areas where no dogs are allowed. I applaud your efforts to create a sanctuary for wild animals in the GGNRA. Thank you so much!

Correspondence: Like thousands of other residents of San Francisco and adjacent communities, I regularly walk my dog OFF LEASH at Fort Funston. Your proposed plan would so severely limit the off leash area at Fort Funston that it would effectively shut down OFF LEASH walking at that location. There is no other suitable location for off leash dog walking in the area.

I oppose any change to the existing rules permitting off leash dog walking at Fort Funston.

Most of the GGNRA is off limits to dogs. Most of the areas open to dogs do not permit off leash dog walking. The off leash legal areas are already quite limited. Please do not further limit the off leash rules at Fort Funston.

People who don't like dogs already have 95% of the GGNRA where they can go without being affected by the dogs they hate. Leave the tiny area where dogs are permitted alone so that we and our dogs can have a few small areas.

The GGNRA should share the park with dog walkers and dog haters. The dog haters are a tiny minority but they have control of 95% of the park. Leave the other 5% alone.

Correspondence: Too often, dogs on leash end up off leash, with bad consequences for native wildlife which have already lost much of their habitat.

Considering how humans have ruined so much habitat for wildlife, some sacrifices are in order to keep natural areas natural. It's selfish for people to disregard the needs of nature.

These are not city parks, but natural lands.

I used to run my dog on the beach when I was young and didn't know any better. My dog and I had fun but she did chase birds. I wouldn't do that again.

There are some beaches where people can run their dogs off leash. It's only right that birds have a bit of safe beach where they can feed, rest and raise their chicks.

Correspondence: It's pretty clear just how "park starved" we are here in San Francisco. The second that even a "pocket park" is opened, throngs of people rush to it. There is not enough places for people to go to just simply sit, relax, and enjoy nature be it in the city or along the coastline.

Our pets are like our children. Limit or refuse them, you refuse us. Dog owners are like any other group. There are good ones, and there are bad ones. Just like parents, some of them control, monitor and discipline their children, others are completely irresponsible.

To lump all dogs and their owners into one group is not fair and it certainly does not include me. I take great pride in behaving like and controlling my dog like a good citizen and member of my neighborhood.

What we will see if this legislature goes through, is a major increase and movement into the even smaller city parks thus forcing even more crowding, and the neighborhood groups and committee's will be forced to deal with this same issue again.

I vote that the policy stay as is, no changes are made, and continued dialog and communication be held in case such issues continue to come up. But to take away this much needed, loved, and respected area from all of those with dogs is a major mistake.

Correspondence: BAN THE DOGS. Here's why. Dogs that go off leash violate the core purpose of the GGNRA by harming wildlife and wrecking the park experience for the large majority of other visitors. We do not have the funds for the level of enforcement that would ensure dog owners obey ANY leash laws. Even though it is only "some" of the dogs there are enough problem ones, and the damage THEY cause is large enough, that the only affordable

way to prevent that damage is to ban the dogs. If those who want dogs, on or off leash, in this area that belongs to ALL the public, care to come up with enough money to reliably fund an enforcement staff, the picture will change. Absent such funding, the rights of THE MAJORITY, and the core purpose of the GGNRA as stated in the executive summary, REQUIRE that the harm done by dogs be ended in the only practical way, by a ban.

Correspondence: I have been going to Ft. Funston for almost 4 years. I live in Pacifica, within walking distance to a great trail that does not allow dogs - leashed or unleashed. I've been lucky to never have witnessed all the problems the GGNRA reported on a local radio program. A local photographer harasses a bunch of us residents that get together at a future dog park site. I really don't have anywhere to run my dog that is close. Unfortunately those of us with big dogs have to run our dogs. My back and knees don't allow me to run with her. This can't be an easy decision but it seems the current draft mostly penalizes people with dogs. People adverse to dogs can go most places and not be burdened by off leash dogs but those of us with dogs have very few options for areas close to us. Now it appears even thos options will be restricted.

Correspondence: I currently enjoy the GGNRA with my dogs at least once every week. If these "preferred" plans were enacted I would probably not go to the GGNRA at all. I thought the GGNRA was supposed to be for urban recreation? How does this plan help? It is unbalanced and has no clear agenda other than to decrease usage overall. How can the Park Service justify that as part of their mission? The plan is unbalanced, unfair, discriminatory, and not in keeping with the Park Service mandate as an inclusive public agency. It needs serious revision, especially for the areas where LEASHED dogs would be excluded where they are currently allowed.

Correspondence: I AM TIRED OF ALL THESE DOG OWNERS NOT SEEING REASON.

And I'm not the only one. GGBRA has a good plan for the park and for everybody, and I think it should pass. I used to live in SF for many years, and love dogs enormously, but was not always happy seeing dogs everywhere. Too many dog lovers are very selfish and very passionate and can easily dominate the conversation - to the exclusion of all others. It would seem more fruitful for them to work to find other, less-sensitive, areas that they could keep their dogs off-leash. All their arguments for the beauties of off-leash walks are valid, but are beside the point here. NOT HERE, at the GGRA, please.

Correspondence: Please don't let the ability for my dog to run free in these park areas be taken away. There is so little available space in SF for him to run free, I feel his life will be much less happy and healthy if this freedom is removed from his and our lives.

I realize some people think 'they are just dogs'. My husband and I do not have any children, so our dog is our 'baby'. We are concerned with his well being and happiness. We feel very fortunate to have places in SF where his dog walker can take him, where he can socialize with other dogs and exercise and get some fresh air. Taking away this part of his day/life would be a huge change, and not a positive one. Please do not allow this to happen. I would imagine this would also have an impact on the many dog walking businesses around the city, as we would probably not pay for the service if it did not include the 'running free' activity during the daily walk.

Thank you for your time and consideration. Susan D'Amours SF, CA 94102

Correspondence: I strongly support the GGNRA Draft Dog Management Plan.

Numerous times, we have visited areas of the GGNRA and found dog owners violating either leash restrictions or areas off limits to dogs. This experience includes dogs running unleashed at beaches clearly marked as nesting areas for endangered shore birds in Marin County. Stewardship of our scenic heritage should not include providing access to people's pets so they can run amuck and prevent shorebirds and other wild species from reproducing. We do not need to provide beaches and trails for the pets of citizens. That is poor use of our public lands.

Correspondence: I am deeply disappointed by this effort to severely curtail off leash dog walking areas by the GGNRA. As an owner of two dogs in San Francisco, I utilize the services of a dedicated dog walker, who I am completely dependent on. He takes my dogs on a walk every workday, and uses the enclosed dog parks in the city. I also live close to an enclosed dog park area (Berry St). If the GNNRA draft dog management plan is passed, there will be a number of serious negative impacts upon not only myself, but also upon my neighborhood, including the following: 1. My dog walker, although he does not go to the beaches on a work day basis, will be directly impacted because the many dog walkers who do take their clients to the beach will no longer be able to do so, and will therefore go to the already limited enclosed dog park areas. As a result, his normal parks will become overcrowded. 2. My local dog park area will become increasingly overcrowded, thus increasing the likelihood of an possible incident, as well as noise and management difficulties. 3. If there are limitations of 3 dogs/dogwalker, walkers will be forced to limit their time and schedule with their clients. As a result, each dog will receive less time outdoors, and possibly be scheduled at increasingly unreasonable times. This will lead to less exercised, more neurotic dogs in the neighborhood, and will be detrimental to everyone.

At the end of the day, I feel like this is a misguided attempt to recharacterize the purpose of green spaces, which should be designated in urban areas for recreation. While it is true that recreational use requires more upkeep and maintenance, I believe that green space should be for enjoyment through recreational use, which includes a safe place to play with one's dog, rather than simply observation, which is what strict preservation policies such as this plan suggest.

Correspondence: My name is Mary Juliani and I am a resident of New Mexico although I had lived in San Francisco, CA for 23 years. At the time I lived in S.F. I took my dogs to Fort Funston for 12 years. and had always found it to be a safe and beautiful place for both me and my dogs.

I wanted to add my comment because the DEIS report fails to quote from respondents who had positive opinions about off-leash recreation to the same extent negative comments were quoted.(DEIS,chpt 3,p 279). 49% of people surveyed responded negatively, which means 51% responded poitively. I would like the report to be revised so that more than half of the comments from visitors and non-visitors to the park be quoted from positive respondents, as reflected in the survey.

My experience with my dogs at Fort FUNston was always fun and exciting. My dogs always met me at the front door for their trip to the beach. To be able to play on the beach with their friends (just like children) was certainly not only fun for them but certainly for me.

Won't you please reconsider the leash law. It would break my heart and certainly our four legged friends if they were not allowed to have that freedom.

Thank you.

Correspondence: I attended the open house last night and learned that one of the criteria is that the rules be easy to understand. More specifically that this was a barrier to some plans not included in the options presented to date. To me this is a joke and simply an excuse to rule out very functional solutions that have no other justification for ignoring.

For example. Specifically, allowing extra off-leash room during set times of day. This was deemed to complicated and not an easy rule to understand. That is a joke and frankly a sad excuse to eliminate a good solution to balancing park usage.

Currently many areas of the park have the rule park closed from dusk to dawn. The signage does not clarify the definition. This is hardly a rule that is easy to understand. When exactly is dusk or dawn? Even if you have a legal definition the average park user has no idea what time that is on any given day.

Alternatively, a simply sign that says off leash under voice control ok from 6am - 9am seems pretty clear.

Clearly the easy to use rule is a fake standard not currently enforced. Or worst yet is a subjective standard manipulated to suit a purpose. Please reconsider both the application of that rule for all solutions and more specifically for timed off leash access.

Correspondence: To Whom It May Concern:

I am a local resident and have been a dog owner for almost 2 years. Every single morning and evening my dog, Smokey, and I frequent different off-leash areas controlled by the GGNRA. We run down to Chrissy Field Beach every morning and Smokey enjoys his time romping and swimming in the waves. He also gets healthy socialization with other dogs there. We always run through Fort Mason and along the Marina to get there. We used to live one block from Ocean Beach and would be down there every morning and

evening walking. Once every weekend (and when we're both lucky - sometimes twice) we always get to Dog Heaven (Fort Funston). We both love the exercise and natural beauty we get to enjoy with other animal lovers. I am deeply concerned and upset that the GGNRA is trying to take away the off-leash space we currently have. The compliance based management strategy is far to restrictive and the majority of responsible dog owners should not be punished by the actions of a very few irresponsible dog owners. And, it is not clear how compliance would be regulated - by cameras? by police force? How are my tax dollars going to be used to enforce this change? Why isn't that clearly stated?

The preferred alternative is not acceptable and seems to go against all of the values San Francisco as a place exudes. All of the dog owners will be segregated into smaller spaces and inevitably create more conflict. And what will happen to city parks? This issue is not being addressed.

Let's create a new alternative with a balance between recreational use and protection of natural resources. And what is the GGNRA doing to address all of the studies that show people without dogs disturb protected species? The snowy plovers are a good example of this and only roost at Ocean Beach; they do not nest because the dunes were not built large enough for them to.

This issue is an emotional one. I know Smokey is well-behaved when he is exercised. We both need this in our lives. Please do not take this freedom and basic right away from us.

Sincerely, Marcelle Miller and Smokey

Correspondence: Fort Funston and other dog friendly territories within the GGNRA provide the needed space, as well as a conducive atmosphere for canine socialization, exercise, and rehabilitation. Fort Funston is and has been for decades, a successful model of a shared space for public use. Hundreds of responsible dog owners, dog walkers, and their dogs co-exist peacefully with birds, horses, handgliders, children, seniors, the handicapped, and other nature lovers, on a daily basis.

Without proper exercise and space to release energy and socialize, our dogs will develop many physical and behavioral problems. The proposed Dog Management Plan is unfairly restrictive to dog owners, and does not match or serve the needs of the surrounding community. The community can only

be served by having more urban parks and more open space, not less. We should oppose the federal government's position of eliminating the "recreation" from OUR parks and territories. If it's not broke, than don't fix it.

I have had the same dog walker here in San Francisco for 15 years. He hasn't missed a single day during that time. He is very conscientious and great with the dogs. Most dog walkers are. To require the extensive certification and training is an extreme hardship on these people. Why should 80% of the dog walkers pay for the 20% who are suspect? San Francisco cannot exist without their aid. Dogs need a place to run freely while respecting the environment. In my 17 years here in San Francisco, I have never seen an individual at Fort Funston WITHOUT a dog.

I am a nature lover, dog owner, taxpayer, and registered voter. Thank you for your consideration. Donna Riley Hoppes

Correspondence: The GGNRA should develop a new alternative, the A+ Alternative, that will better balance the recreational needs of the Bay Area with protection of natural resources. The DEIS calls the "No Change" Alternative "A". This is the 1979 Pet Policy with some restrictions, particularly restrictions on off-leash at Ocean Beach, Fort Funston, and Crissy Field because of the snowy plover and native plant restorations. More than one-third of Bay Area residents have dogs and we now know the importance of off-leash recreation for dog's physical and mental health, as well as the importance of the significant social communities that develop where people recreate with their dogs off-leash. This large segment of Bay Area residents should not be restricted to significantly less than 1% of GGNRA land (that is how much GGNRA land is available for off-leash recreation in Alternative A) to have a satisfactory park experience, especially since there is little scientific evidence supporting restrictions on off-leash. There has to be more space available for off-leash recreation, not less, given the huge demand for it in the Bay Area. The A+ Alternative would include everywhere that is currently off-leash, plus sufficient off-leash opportunities in San Mateo County to meet the demand, and more trails off-leash throughout the GGNRA. In addition, new land added to the GGNRA would include off-

leash areas, especially in those areas where it has traditionally taken place. There would be no compliance-based management strategy in the A+ Alternative. Any dog management philosophy in the GGNRA, like that for any other recreation use, should be based on Bay Area values of co-existence, shared space, collaboration among park user groups, and education where problems arise. Enforcement of already existing regulations should target irresponsible dog owners who create the few problems documented by the GGNRA, while allowing responsible dog owners to continue their traditional off-leash recreation without harassment.

Correspondence: I just wanted to chime in on this topic from a different perspective then many dog owners - I am all for requiring dogs to be on leash in the GGNRA outside of enclosed special areas for the protection of the wildlife as well as safety and sanitary issues. I am a longtime dog owner and have had no problem taking good care of them, all happy healthy and long lived, without allowing them to run around willy nilly in national park areas - it honestly seems to be more about the owners and dog walkers preferring to let dogs roam and be in the natural area vs a dog park. Considering the ramifications though, of dogs harming the wildlife (and they do all the time, especially all kinds of birds and their nests), dog poop all over and other issues with dogs being loose and not controllable the leash restrictions make the most sense. The balance would be to add some more, and good quality in good locations, enclosed dog parks and let people walk with dogs on leash in natural areas - this way there will be places for dogs to play and you can still enjoy walking around the beautiful areas with your canine buddy.

Correspondence: Further restricting the already too limited areas in the Bay Area where dogs can be off leash is a bad, and wrong-headed idea, and runs very much against the rights and interests of Bay Area dog owners, dog professionals, dog lovers and especially, dogs.

Sufficient public space MUST remain available in those areas that currently allow it to ensure that dog owners and walkers have accessible local places within reach of our urban communities to exercise and socialize their dogs in a way that supports the proper physical and social needs of these animals. Dogs require sufficient levels of physical exercise and socialization in their

daily regimens that cannot reasonably be attained unless they are permitted to be off leash in outdoor environments that support positive interaction with other dogs and people. Dogs lacking in sufficient exercise and socialization skills are at greater risk of developing poor behavior and social skills that runs counter to the animal's and the public's interest.

MOST DOG OWNERS ARE RESPONSIBLE guardians and neither they, nor their beloved pets, deserve nor can afford to suffer the negative impacts this measure will have on the health and well-being of their animals, their families and their communities.

Shame on any person, politician or business that supports these measures to restrict off-leash access for dogs in our friendly community. You will not enjoy my vote, my patronage or my friendship.

Correspondence: Dear Sir or Madam, I have read parts of your draft as well as some of the news coverage around this issue. I hope to make points quite clear:

1. I am a dog owner. I do not wish to see the GGNRA put these leash laws into effect.

2. I do believe there is a simple solution. Just as you would ask a disruptive, intoxicated and/or annoying person to leave and/or ticket them, I believe the same standard could be used for dogs. If the dog is not being aggressive, obtrusive or annoying to others (including other wildlife) then let the dog run around off leash. If the dog is a nuisance and the owner has failed to do re-leash the dog, then I believe they should be ticketed and/or asked to leave.

Thank you.

The DEIS calls the "No Change" Alternative "A". This is the 1979 Pet Policy with some restrictions, particularly restrictions on off-leash at Ocean Beach, Fort Funston, and Crissy Field because of the snowy plover and native plant restorations. More than one-third of Bay Area residents have dogs and we now know the importance of off-leash recreation for dog's physical and mental health, as well as the importance of the significant social communities that develop where people recreate with their dogs off-leash. This large segment of Bay Area residents should not be restricted to significantly less than 1% of GGNRA land (that is how much GGNRA land is available for off-leash recreation in Alternative A) to have a satisfactory park experience, especially since there is little scientific evidence supporting restrictions on off-leash. There has to be more space available for off-leash recreation, not less, given the huge demand for it in the Bay Area. The A+ Alternative would include everywhere that is currently off-leash, plus sufficient off-leash opportunities in San Mateo County to meet the demand, and more trails off-leash throughout the GGNRA. In addition, new land added to the GGNRA would include off-leash areas, especially in those areas where it has traditionally taken place. There would be no compliance-based management strategy in the A+ Alternative. Any dog management philosophy in the GGNRA, like that for any other recreation use, should be based on Bay Area values of co-existence, shared space, collaboration among park user groups, and education where problems arise. Enforcement of already existing regulations should target irresponsible dog owners who create the few problems documented by the GGNRA, while allowing responsible dog owners to

continue their traditional off-leash recreation without harassment.

Correspondence: From the executive summary: ---Protect native wildlife and their habitat (including sensitive species and their habitat, and federally or state listed, unique, or rare species) from detrimental effects of dog use, including harassment or disturbance by dogs. >>> this can be addressed with signage / low easy to install fencing. This solution works really well at Crissy Field to protect specific areas and could work well in other areas as well. --- Minimize degradation of soil and water resources by dog use. >>> Will bicycle usage also be addressed? The damage from bike usage is typically much greater than damage from walking (People or dog) ---Commercial dog walking. >>>Here I have a problem, it would seem that four dogs is about the maximum number that a commercial dog walker can control at any point in time. Saw a woman with 13 dogs off leash at Crissy Field last weekend - that appears unmanageable. There were numerous walkers walking 6 dogs off leash, this number as well seems excessive. It would appear that 3 to 4 dogs is about the maximum that any commercial dog walker can effectively handle and still keep control of the animals. ---Permits would restrict use by time and area. Permits would be issued for the following sites: Alta Trail, Rodeo Beach, Fort Baker, Fort Mason, Crissy Field, Baker Beach, and Fort Funston. >>>Timing of commercial dog walking becomes important - during peak pedestrian (weekend, early morning, late afternoon) usage the number of dogs being walked by a commercial dog walker would need to be curtailed to ensure proper control.

Overall Options C & E seem like a good compromise and will protect the GGNRA for future generations.

Thanks

Correspondence: I am not a dog owner but I do not agree with this dog management plan. I honestly don't see many dogs on city streets off leash currently and if this plan goes through, I feel all that will change. I enjoy not having dogs running free on city streets. And this is probably because most dogs in the city go to the off leash dog areas like Funston and Chrissy Fields so dogs can run free and safely away from traffic. I think if the off leash areas are

limited and/or taken away, there WILL be more dogs on and off leash walking on city streets. That can potentially lead to more problems and incidents.

I feel that the current off leash areas in San Francisco should remain the same. I do know some dog owners and they say that Funston is the most popular off leash dog area. If limitations are going to occur regardless, I suggest maybe leaving Funston the way it is and limit all the other off leash areas in the city so that the regulars in the smaller areas can all divert to Funston. At least they will still have a large area for the dogs to run around instead of in city streets and small city parks.

Correspondence: Currently residing in Sausalito, my well behaved, large dog and I frequent Marin dog parks as well as the beautiful San Francisco dog parks + dog / people parks. I am baffled by the want or the need to "curb" /place restrictions on dogs and dog owners in these areas. Not once have we experienced any type of mishap-- dog based or people based.

Having lived on East Coast, Rockies, and Midwest-- never have we experienced the sophistication and friendliness that we have experienced here.

It seems unbelievably unnecessary and backward in my mind!

Why is this happening to this beautiful, free, pet friendly area-- it is mind-blowing and completely backward!

Please reconsider such an unnecessary restriction.

Sincerely, Jennifer and Lola

Correspondence: I am a regular at Funston. I take my dog there for off leash dog walking. I also go to Ocean Beach for morning walks but without my dog. It's hard to believe that dogs cause more harm to the environment/land/wildlife than humans do. At Funston, I always see people crossing the barriers, walking across the plants that are trying to be preserved. Most of these times, the

people don't even have dogs with them.

At Ocean Beach, there is always trash left by humans like bottles, bags, food containers and wrappers. And how about the mounds of burnt wood people leave from bonfires? That has to be harmful not only to the land plants and animals but also to the ocean life when these burnt pieces of wood drift out into the ocean!

And the snowy plover...alot of accusations that dogs are chasing them away and digging up their eggs! I see kids chase the birds on the beach more than I see dogs doing it. The high winds at Ocean Beach often blow the sand in all different directions and off the beach completely. Has GGNRA considered that as the source of eggs being uncovered and moved?

This plan has a lot of finger pointing towards dogs and it just seems like the blame for any kind of environmental damage is being put on the dogs even though humans do way more harm! How come GGNRA doesn't compose a "Human Management Plan" to stop humans from "disturbing plant and animal life?"

Correspondence: March 8, 2011 ? Frank Dean

General Superintendent Golden Gate National Recreation Area Building
201, Fort Mason San Francisco, CA 94123-0022 Or, email comments here:
<http://parkplanning.nps.gov/projectHome.cfm?projectId=11759> Laura H.
Ward San Francisco, CA 94127

Dear Mr. Dean: I believe that the recommendations in the GGNRA Draft Dog Management Plan are overly-restrictive and represent a major departure from the current, balanced use of the park. Currently, off-lead activity is restricted to less than 1% of the park's land. This proposal would drastically reduce the land available for off-lead recreation. The plan is difficult enough in San Francisco and Marin counties, where beloved areas like Fort Funston and Muir Beach will be restricted or off-limits to off-lead dogs. Worse, the plan leaves San Mateo with no GGNRA land that permits off-leash use. In addition, the proposal that any new lands added to the GGNRA allow no dog walking of any sort (even on-lead) unless a specific exception is made is draconian and ignores the needs of future generations of dog guardians as the region's population grows. The GGNRA's proposal in the event of "noncompliance" with its rules are heavy-handed and do not engage the community to find solutions. The proposal indicates that if noncompliance is

observed, "the area's management would be changed to the next more restrictive level of dog management. In this case, ROLAs [regulated off-lead areas] would be changed to on-leash dog walking areas and on-leash dog walking areas would be changed to no dog walking areas. This change would be permanent." This approach unnecessarily punishes responsible dog guardians for poor behavior by a small minority. Further, the idea that no area could ever be changed to less-restrictive rules, such as when compliance is good and environmental protection needs are reduced, is one-sided and unfair. Responsible dog guardianship is entirely compatible with environmental stewardship. I recognize that there are guardians who should be more responsible with their dogs. But they are few in number ? incidents involving dogs in GGNRA are less than 4% of all incidents in the park. Penalizing all dog guardians for the behavior of a truly small minority is not the right approach. It is unfair. The dog lover's community actively works hard to educate and encourage responsible dog guardianship. Examples include: ? Community volunteer efforts to stock dog poop bags and other amenities ? Launch of the Eco-Dog website (www.eco-dog.org), a community-funded online resource encouraging and educating about responsible guardianship ? Community educational collateral and workshops distributed and conducted by local dog walking and advocacy groups ? Community policing and "peer pressure" ? Low-cost and free dog training classes at the SF SPCA, Marin Humane Society and Peninsula Humane Society/SPCA. I believe this collaborative, community based and educational approach is best and encourage the GGNRA's partnership in these endeavors as a viable alternative to simply closing areas to dogs or placing new unfair restrictions. The GGNRA's goal has always been to bring the park into compliance with a federal rule (36 CFR 2.15) which bans off-leash dog walking in national parks. But the San Francisco Bay Area has a unique culture, history and community. Instead of trying to force the GGNRA to look like every other national park, the GGNRA board should respect the citizens' commission of 1979 and the unique history of the land. The proposal also ignores the needs of dog guardians with limited transportation options or with special needs, such as wheelchair access. As evidenced by the work of organizations like Pets Are Wonderful Support who support low-income disabled and senior pet owners and document the health benefits of the human animal bond, this proposed plan would limit access for an entire class of people who have few other options and depend on the current off-leash areas to keep their dogs exercised and healthy. In closing, I believe we should be seeking ways to make the San Francisco Bay Area friendlier to dog and cat guardians. The GGNRA's proposal is a step backwards for animal welfare in the Bay Area. I look forward to working with the GGNRA Board to modify its proposal to be more balanced and friendlier to dog guardians.

Sincerely,

Laura Harrison Ward

Correspondence: I am a Montara resident and a homeowner. I have lived here nearly 14 years. We have always walked our dogs on Montara mountain, and most everyone I see has a leash. I believe you need to see this issue from the perspective that this is our neighborhood. This is the back area of where we live, and it is where we walk our dogs. How can you expect us to go for a walk and not take our dogs with us?

I want to be able walk my dog on the trail that I have always walked my dog, and I don't care if a leash is necessary. I always have one. 99 percent of the dogs out there are friendly, but of course there is always a chance that someone will have a dog that is not, so we have our leashes with us. To be honest, not everyone has the dog on them at all times, but when we see someone coming toward us, we put the dog on the leash while we pass by. I think that is a very reasonable way to do this, but I understand if we need to keep them on the leash. That is reasonable change. What is not reasonable is to tell us that we cannot take our dogs with us when we go for a walk.

In Montara, it seems that every other home has a dog. We walk a lot of dogs every day. I probably see 20 or more dogs walking every day. This was and is a part of the lure and benefit of living here, and one of the reasons we decided to live here.

Correspondence: As a San Francisco Resident and Small Business owner I am writing to express my opposition to The Golden Gate National Recreation Area's proposal to eliminate off-leash dog areas in many Bay Area parks.

Before owning a dog I visited areas such as Muir Beach, Fort Funston and Crissy Field often and without notice or concern for any problems incurred by careless dog owners. In fact, the existence of such pets with owners at these locales brought an element of friendliness and camaraderie that always served to increase the regions' approachability and sense of destination value.

Now, years later as a responsible dog owner I continue to frequent these parks as many as 5 times per week. I keep my dog on leash the majority of the time, that is along the paths and in and out of the facility, and we always clean up after ourselves, without exception. Frequent visits of these nearby parks are a major reason why I choose to continue residing in San Francisco.

I certainly understand that there are those who favor closing these areas to dogs all together or requiring that all dogs remain on leash at all times. Is there not some sort of agreement that can be reached in the form of higher fees and penalties for careless owners that neglect to clean after their dogs? As for aggressive canine misbehavior, these parks don't appear to be the type of environment that represents a destination for the careless and irresponsible owners of violent or otherwise aggressive dogs.

There are so many of us who practice daily responsible care for our pets and appreciate all these parks have to offer. On behalf of this group I thank you for your time and ask you to please consider rejecting these current efforts at GGNRA canine restriction.

Thank You and Regards, Sky Wegman

Correspondence: Please let us continue to exercise our dogs off leash at Muir, Rodeo and Stinson Beaches. Dogs and their owners really enjoy the freedom of off-leash play in the sand and water. We have far too few places where a dog can play off leash as it is. Most dog parks are small and confined spaces without adequate shade trees and access to water (e.g. Larkspur and San Anselmo). Dogs on leashes are also more likely to display fear aggression as they feel at a disadvantage to protect themselves when on leash. There are hundreds of miles of protected coastline for the wildlife. Let us use a couple of beaches for recreational pleasure.

Correspondence: I am an active hiker and kayaker who enjoys the use of the GGNRA both with and without my dogs. We live in a highly urban area. Luckily there are park options for many different segments of users. One of these segments should be dog owners who want to hike/run/exercise with their well trained and socialized dogs.

only 1% of parks allow for this type of exercise. Those who do not want to interact with owners and their dogs have 99% of the other GGNRA to exercise, enjoy or not go at all if they feel that wildlife might be impacted by their presence.

I hike/vacation all over the US and the world - we are about the only country/area that is so dog unfriendly. In Europe dogs are allowed in restaurants, trains, parks etc.

An urban park is just that - urban and meant to be USED and ENJOYED by everyone. Trying to make it a wilderness or untouched by humans is unrealistic and frankly a poor use of my tax dollars.

If money/time is to be spent - spend it on enforcement - people who do not pick up after, maintain control of or manage their dogs should be fined every time they do so. THAT will correct problems - not banning them.

Correspondence: Regarding proposal to severely restrict off-lease dog walking at Fort Funston:

Map 16-A appropriately marks the areas where off-lease dog walking is permitted including the fenced areas which are off limits; this map reflects the parameters of the 1979 Dog Policy, which the US Federal Court upheld in 2009.

What the Draft Dog Management Plan fails to do is provide CONTEXT for Fort Funston. This is an URBAN recreational area, not wilderness, and it is surrounded on 3 sides by 2 private golf courses, a gun club and a city sewage treatment plant. None of this surrounding highly developed land will ever be incorporated into the GGNRA and it is sheer folly to pretend to preserve plants and wildlife that are acclimatized to the current off-lease uses at the Fort.

For further CONTEXT, over the last 15 years since this issue of dog "management" was first raised, the GGNRA has been slapped down in court for failing to follow its own policies and attempting to nullify the 1979 Pet Policy. As a frequent walker at the Fort, the only aspect of it that has changed is due solely to the acts of wind, rain and surf on the place. The "habitat restoration area" is now covered in tons of sand, not one blade of native grass remains. Dogs have nothing to do with this. The cliffs are collapsing because of wind, rain and surf, not dogs (perhaps the bank swallow burrows destabilize the cliffs, but that was never investigated in your 2,400 page report).

One note about birds. The ravens chase the dogs, not vice versa. Any birds on the beach need only fly 50 yards in any direction to be free of dogs.

The dog people have abided by rules of having dogs under voice control, picking up after our dogs and leashing them when necessary; we have also abided by the temporary closures, illegal fences and other restrictions. There is no reason to penalize the many lawful dog owners for the errors of the very tiny minority which GGNRA rangers should police.

Correspondence: Please do not pass this more restrictive leash law. There are fewer and fewer places we can take our dogs to run. My dog after coming back from a run on the beach is calm and well behaved- a model of good dog behaviour. As great as walking her on a leash is- she simply cannot get the same level of exercise as when she's allowed to run free- with supervision of course. While I understand there are reasons to restrict dogs- surely there's room enough in the Bay Area to allow our dogs to run with some freedom. It's one of the reasons I live here, it's one of the reasons I have a dog. Please don't enact this more restrictive leash law.

Correspondence: I have enjoyed using GGNRA sites at Sweeny Ridge, Milagra Ridge, and Mori Point for a wide variety of activities including hiking, jogging, mountain biking, and dog walking for the past two decades. For the past decade, I have recreated in these areas daily. Access to these areas is was a major influence in my choice to move back to Pacifica and teach at Terra Nova high school after college.

I would be deeply saddened to see adoption of any sort of "no dogs" policy in these areas (as at least a few of the "B, C, and D" alternatives propose). This is for the following reasons:

1. I enjoy walking my dog in these places.
2. I am not bothered by other people walking their dogs in these areas.
3. To me it seems like these places get very little use considering how many people live very close to them. I'm out there for about an hour a day and I usually bump into one or two other people. A fairly large portion of these people are walking dogs, so it seems that by adopting a "no dogs" policy you would be choosing to affect in a negative way a large portion of the area users.

All these places have clearly posted leash and litter rules for dogs. It is my impression that most of the "controversy, litigation, compromised visitor and employee safety? and resource degradation" of concern here is the result off-leash dogs, which is a violation of the current rules. I don't think any additional rules are required, and the problems perceived could be solved simply by enforcing the current rules. I would prefer options A or E for Sweeney ridge, Mori Point, and Milagra Ridge.

Correspondence: Hello, although I live in Berkeley now, I've been to Fort Funston with my dog many times. The DEIS report accuses dogs of degrading the land and compacting the soil. (DEIS, p. xxi, p. 225) On our walks at Fort Funston, I have observed many other forms of recreation that "degrades" the soil: hikers, bikers, joggers, kite flyers, hang gliders, surfers, children rolling down dunes, horse back riders, and remote control car hobbyists. The DEIS report fails to show what soil degradation can be attributed to these activities as well as the effects of nature: wind, rain, ravens, raccoons, seismic activity, and burrowing animals. The restrictions which would confine off-leash dogs to a few acres is overly severe unless restrictions were placed on everything that affects the environment, and then only in proportion to the extent of the effect. Dogs should not be singled out as the only cause of soil degradation. The document should be revised to provide scientific evidence that shows the impact of all the contributors of soil degradation and the percentage of impact each contributor is responsible for. Until that time, I strongly oppose any change in the leash laws at Fort Funston.

Correspondence: Since I live in San Francisco I will address the preferred alternatives for this area. While I can appreciate and understand striving to maintain balance between varying visitor interests and land/wildlife maintenance and preservation, complete or drastic removal of off-leash privileges is cause for concern in an urban area where there are so many people with dogs yet very few homes with large back yards for exercise.

In San Francisco, the preferred alternatives for Crissy Field and Ocean Beach seem balanced leaving a good amount of accessible area for off leash enjoyment. However, these alternatives are still removing quite a bit of off leash access.

Add the above to the preferred alternative for Baker Beach that removes all off leash access and the percentage of overall off-leash areas becomes even more significantly reduced. Why not keep at least half of Baker Beach off-leash to help balance the closing of other areas in San Francisco?

And the upper area of Fort Funston, one of the most utilized spaces, would be severely reduced. The climb up and down to the beach area is steep. What about the elderly and disabled with dogs to exercise? Or families with small children and dogs? Not to mention the wind can be rather brutal right off the parking lot.

In San Francisco, the cumulative effect of the current preferred alternatives would bring a drastic reduction in the percentage of overall off leash areas leading to over-crowding of remaining off leash areas and an increase in the risk of dog related issues and injuries. Please reconsider, especially at Baker Beach and Fort Funston.

Below are some other ideas for help with land preservation without the complete shut-down of areas:

1.) License or use fees for dog walkers/more than 3 dogs contributing funds for maintenance/preservation 2.) Use fee per dog for certain areas contributing funds for maintenance/preservation 3.) Temporarily closing sections for maintenance, re-growth, etc.; Shifting land use to help preservation

Thank you for your consideration. I look forward to seeing more balanced alternatives and perhaps ideas other than shut-down as the proposal is refined. We love both our pets and parks in San Francisco and want to keep them happy and healthy!

Correspondence: I have read the plan in depth and wish to convey my support for the plan to manage dogs in the GGNRA. I have extensive experience with dogs and also with wildlife and resource management. While dog walking is a very popular activity in the Bay Area, we should not sacrifice natural resources to provide off-leash recreation everywhere. I understand the need to balance recreation with restoration, and I feel that this plan provides a sufficient balance in terms of off-leash space.

I also understand the desire for dog guardians to give their dogs "freedom". However, that freedom should not come at the expense of plovers, plants, or the experiences of other visitors. Where the freedom of companion animals begins to usurp the freedom of wild things is a tricky intersection that most would rather avoid. I appreciate the GGNRA's attention to this matter and hope you hold your ground and adopt, then enforce your plan.

Dear Mister Frank Dean,

I'm writing you this letter urging the GGNRA to amend the proposed plans and to provide more off-lead recreation areas for dogs and their owners, open new lands to dog walking and take a more commonsense approach to enforcement without enforcing the law against everyone , because of a small minority that are irresponsible pet owners.

We must Also encourage responsible guardianship of our environment and I know that we can protect endangered species and habitat by educating park users & enforcing laws in sectioned off habitat areas without the need to section -off even smaller portions of the parks just for dogs.

I have learned that for over thirty years, the current Pet Policy has served the park, its users and the environment well. The GGNRA remains one of the best-preserved and much-beloved collections of open spaces in a major urban area. We readily accept that this plan should evolve over time to adapt to a changing population, After reading the proposed plan it is clear that the GGNRA's proposal represents a major departure from the current successful model and is overly-restrictive to dogs and their owners!

We should be seeking ways to make the San Francisco Bay Area friendlier to dogs and their owners. It is my strong opinion which is one of many thousands of people living in the bay area let alone the city of San Francisco who agree that the GGNRA's proposal is a step backwards for animal and public welfare in the Bay Area.

Regards,

Doyle McCullar

Frank Dean General Superintendent Golden Gate National Recreation Area
Building 201, Fort Mason San Francisco, CA 94123-0022

Mr. Dean,

The Draft Plan/Draft Environmental Impact Statement (Plan/DEIS) for Dog Management in GGNRA, which evaluates the impacts of six alternatives (A ? E and the preferred alternative) for dog management in 21 areas of GGNRA unfairly discriminates against people who exercise with their dogs and none of these proposals are acceptable. The only reasonable step is to maintain the 1979 Pet policy as it stands now.

The natural beauty and splendor of the GGNRA is unique to the San Francisco Bay Area. Holding these areas as protected for recreation is very

important for wildlife, residents and visitors. The present use does not conflict as shown by the E.I.R. This region has been diversely used by many entities over the generations; the most impactful of these has certainly been the United States Military particularly in building fortifications and roads. Despite all of these changes, the beauty persists and nature even reclaims much of the landscape.

People with dogs who frequent Baker Beach, Fort Funston and Crissy Field Beaches when I am there are diligent and self policing as to correct behavior and waste collection; as such these places are left cleaner than they were found. Responsibly exercising dogs is certainly the best use of recreation areas I can imagine. Please leave it this way.

Some visitors and policy makers object to the presence of dogs in parks, on trails and beaches. I do not feel these objections are well founded. As a society, we must not suspend the free rights of the many for the misbehavior of the few. There are policies already in place to deal with problems. The argument that dogs are in conflict with nature is unsupportable. Places where bank swallows are nesting and dogs have been banned appear to have no better swallow density afterward. If the argument is that the domestic dog is not natural in these areas, I respond: humans, in present numbers, are unnatural to these areas.

Please suspend further action on this matter and leave everything as it stands.

Correspondence: The document's purpose is to prove why dog walking should be restricted, rather than an unbiased examination of the needs of both sides. In other words, someone wanted dog walking to be restricted, and gave a directive to write up a proposal to do so, ignoring other courts' decisions.

There is no evidence given as to how these beaches have deteriorated over the past 20 years, only how they may deteriorate over the next 20 years. Further, on Baker Beach for example, soil and vegetation are behind a blocked off area. Dogs are allowed off-leash on beaches, where there is sand. There is no soil disruption if there does not exist soil. Why block off-leash dogs on sand, then? This doesn't seem to make sense.

Dog owners and walkers are responsible persons. Would there be increased alcohol consumption or drug use at these beaches by persons who do not need to be responsible (since they are not with dogs) and conscious of their

surroundings? Would these people go to the bathroom in vegetative areas?

The proposal removes off-leash dog walking on all governed beaches. Why do this in a recession when people, who cannot find work, need things to keep up their spirits? The function of government should be to work towards the betterment of its people. This proposal benefits visitors, not residents.

One could solve the problem by charging people to walk their dogs off-leash. The money created would help off-set the alleged environmental impacts.

Do not do this. Breaking people's spirits during these tough times is not the right decision.

Sir or Madam:

I am writing to support the new policy to restrict off-leash dog walking. The behavior of dogs at GGNRA beaches is not only disruptive to the enjoyment of the area but is also threatening and potentially hazardous to people, especially children.

I have visited GGNRA beaches regularly for the past thirty-two years. Since the birth of my children, I have been particularly aware of the problems dogs pose to other beach users. When my children were infants, they were routinely bothered, terrorized, or knocked down by a dog chasing a ball thrown by its master or by a pack of out-of-control, "happy" dogs playing. This is not a live and let live situation - there are victims here. I grew tired of having to console my crying daughter after she was chased and/or knocked over by a dog at the beach. If, after each such incident, I had a dollar for every time a dog owner said that their dog was friendly and loved children, I would be a very rich man.

I think that dogs should be banned from the GGNRA beach areas or be required to be on a leash. There are hundreds of acres in the nearby parklands for dogs to run free. Unrestricted off-leash dog access to the beaches is unacceptable due to the disruption and hazard it poses to individual users (especially children) of these natural areas.

Very truly yours,

Harold A. Ball Mill Valley, CA 94941

Correspondence: The No Action alternative should be selected.

Proper enforcement of existing requirements for dogs to be under voice command would eliminate all the purported significant impacts associated with existing policies without significantly reducing the recreational value of the GGNRA areas in question by unduly restricting opportunities for off-leash dog walks.

The GGNRA is set within the larger San Francisco Bay Area community, and the values of that community should be given due deference when establishing park policies. The emotional and physical health-related benefits of dog ownership are well-documented, but dogs require areas where they can run free (subject to voice control) in order to be healthy and happy. GGNRA units are among precious few areas in this larger community where that is still possible. Providing off-leash access to scenic areas, subject to voice control requirements, is one of the key benefits currently provided by the GGNRA and withholding that benefit now will significantly impact this community.

I am a land use lawyer and often hear communities or individuals complain that government agencies and their NEPA and CEQA analyses tend to value "bugs and bunnies" over human beings. In many cases, the "impacts" to humans of concern are more imagined than real, and the impacts to protected species and other environmental resources are serious. In this case, however, it is the environmental impacts that are overstated. In fact, those impacts can easily be mitigated through measures far less harmful to the community than the proposed restrictions on off-leash use of GGNRA units. By contrast, the impacts of the proposed changes to the daily life and emotional health and well-being of Bay Area residents and their pets are real and significant.

The NPS was established in large part to provide citizens in the communities in which its parks exist with opportunities for recreational, scenic, and natural enjoyment. In this community, thousands of dog owners will be deprived of such opportunities should the proposed changes be adopted. The purported environmental benefits of the change, by contrast, are speculative and slight, and can be mitigated to less-than-significant

levels by other means such as enforcement of existing voice control requirements.

My wife Laura Bremer and I respectfully urge you to adopt the No Action alternative, and preserve some of the last remaining opportunities in this community for dog owners to responsibly care for their beloved companions.

Correspondence: The proposal to greatly reduce the already greatly-reduced off-leash areas available to dog owners is misguided and discriminatory. There is so little land available for these activities, and the areas currently available are ideal, but limited. If there is a sense of over-crowding, that is because the need is great and the available areas so limited. So many people own dogs in these crowded urban areas, and they need places to let te dogs run, for their health and well-being. If you take away more than half of the available areas, as is proposed, it will be devastating, and cause even more crowding. In addition, some of the best areas are slated for removal, such as Crissy Field East Beach. I don't think the people drafting this proposal really understand the needs of dog owners, and over-compensate to protecting wildlife or other assets, but don't account for the fact that there are already so few areas available for these activities.

Enough is enough! Save what little we have!! This is a terrible plan, and grossly unfair to a significant segment of the community. We will really hate you if you go ahead with this plan.

Correspondence: Read the article in the Chronicle about yesterday's meeting at Fort Mason where "hundreds" of mad dog owners showed up to protest the new proposed dog restrictions. I can only imagine how terrifying it must be to meet that group. So I am inspired to write to support your efforts. I hope that there will be a successful conclusion that protects the GGNRA from the increasing presence of unleashed dogs and the damage they do to the flora and fauna. I love dogs too but there can just be tooooo many. There ought to be licensing for professional dog walkers and limits to how many can be in one group. Many people who are quiet about this hope that the dog people don't cause the GGNRA proposals to collapse.

Correspondence: To Whom It May Concern:

I take the prospect of losing off-leash privileges very seriously. I am an active person and I have an active dog; it brings me a great deal of joy to be able to run around without a leash at such nice parks like Crissy Field. There are already so many non-dog areas in the city, must they ALL be governed by leash laws? I understand the concern for insisting owners use leashes, but living in an urban area can limit dog-friendly activities. Where are we supposed to go? My dog is happy to walk on a leash, but he also really likes chasing a ball. Can't we do both? Why is this such a big deal?

As a 27 year old male, I feel like more than a third of my income is taken for taxes. At the end of the day I am sure the National Park Service is not responsible or to blame for this, but it still reflects this underlying resentment that I feel like I still have to pay into a system that is of less and less value to my needs. People need a place to take their dogs. San Francisco is a beautiful city, and I can't help but wonder why this is all of a sudden an issue.

Please do not impose stricter leash laws on dog owners.

Thank you, Rory Mauro

Correspondence: I have Diabetes and walking improves my health. I take my dogs to Fort Funston and allow them to play with other dogs while I walk briskly for my health. Having the dogs off leash allows me to get a brisk workout. It brings me great pleasure to see my dogs interacting with the other dogs. When dogs are on leash, they naturally act more aggressively toward each other because they can't negotiate in their natural way. This is the best part of my day because it's so beautiful there at the shore. I would be dismayed if this was taken from me. This ability figured into my decision to live in the Bay Area. I support many , pet related, businesses including pet supply stores, veterinarianians, groomers...at one time... dog walkers....so...my pets and I contribute to local economies.

Correspondence: While dogs are an important part of our families and communities, there needs to be balance between unrestricted access that negatively impacts wildlife and a total ban that completely restricts dog access. It's also important that whatever systems are set up are enforced. All off-leash dog areas should be fenced for the protection of other park visitors and dogs. Park visitors should be given a choice about whether they will interact with off-leash dogs.

Leash and voice control requirements must be strictly enforced throughout the life of the policy. Otherwise proposed on-leash areas will become off-leash areas, as has already happened under the old rules.

The goal of achieving 75% compliance with the leash and voice control requirements is far too low. The Park Service should not be creating a system that expects and tolerates failure by 25% of the dog walkers. The goal should be 100% compliance with leash and voice control requirements.

Correspondence: I can't open up the section on the Marin Headlands and I would, as a dog owner who loves those trails still available, would like to know what's happening in my "back yard."

I have been a charter member and contributor to the GGNPRA for years and value places where my dog and I can go together. Dogs are a valuable, nay, an invaluable part of owners' lives and contribute to their health (lower blood pressure, fewer heart attacks) and well-being (lower stress levels). It seems to me that it would be better to punish bad dog owners than to ban all dogs. To be able to romp unleashed in these beautiful hills is a great joy and to go alone would be a great sadness and I probably would not. I am growing elderly and I feel safer with my dog as well.

The great stretch of beach along the Pacific Ocean in Carmel, California is a great example of a place open to dogs off leash. One of the cleanest beaches around and lots of happy well behaved dogs and owners. I think we need similar places here.

Can you send me a printed copy of the section on the Marin Headlands? I

have an Apple computer and usually have no problem opening PDF files.
Thank you.

Correspondence: Dear GGNRA People, Public lands are just that, public. It's up to the citizens to decide how such lands should and could be used. The Bay Area is home to thousands upon thousands of dogs. These animals need space to run, play and be free; to just be dogs. Part of the reason that many people adopt dogs into their family is because they enjoy being outside with their companion animals. Without some public lands being open to off-leash dogs, these vital parts of our families cannot be free to play the their DNA dictates. It would be like only allowing children to play indoors. Please listen to the throngs of people in the Bay Area who have, for decades, responsibly enjoyed these public lands, and keep them open to our companion animals. Sincerely, Russell Tenofsky

Correspondence: I have been walking dogs off-leash at Fort Funston on almost a daily basis for the past 10 plus years - my personal dogs, rescued foster dogs, and client dogs as a professional dog walker. The ability to do so makes me a better caretaker of my own dogs, helps make them calmer and better behaved canine citizens. They are healthy, well-socialized and well-mannered. Over the countless hours spent at Fort Funston, I have had or witnessed issues or

problems only a handful of times. The vast majority of time I am there I see a harmonious situation and strong community. I bring every out-of town visitor to there and they all spend their time with huge smiles on their faces and are shocked and impressed by all the happy dogs running free and enjoying their exercise. Fort Funston as it stands now is a treasure. If we lose it, I can not imagine being able to continue to live in this city with my dogs.

I do not take my dogs to fenced-in dog play areas. My dogs find them stressful and I see more problems in those areas than I have ever seen at Fort Funston. I strongly believe that is what would happen at Fort Funston as well if the dogs are forced to stay in smaller, confined spaces.

Correspondence: We have occasion to be at beaches, both at GGNRA and elsewhere, and observe people and their dogs. Some owners are responsible, some dogs are well-behaved. However, we've seen some terribly irresponsible behavior by owners, and unfortunately they ruin it for everyone.

We've seen an off-leash dog chasing an injured bird while the owners laughed, off-leash dogs attack on-leash dogs, off-leash dogs run up to people and terrify them -- the owners say "oh they're not dangerous" but when you don't know the dog and it's not under control why wouldn't someone be scared? Not to mention dog poop. If more people cleaned up after their dogs there would be a lot less anti-dog people. Most people want to go to the beach or out into nature to get away from the stresses of urban living -- and then you end up with it all over your shoe.

We are dog lovers/owners ourselves, and we would never take our dog on a public beach unleashed. We see absolutely nothing wrong with the GGNRA plan to require dogs to be on leashes on the beaches and in GGNRA. The fact that some areas will still allow off-leash dogs is, quite frankly, generous to dog owners.

Correspondence: In my almost 3 years of hiking on these trails daily with my canine companion I have only come across kind, respectful and happy dogs and owners alike. These trails that we are talking about are essential for many of

us to feel whole and healthy. Not only humans need this daily recharge the trails offer, dogs do too. To be a well balanced dog one must allow for time off leash not only play (many dog breeds don't fetch and play) but space to use their nose the way they were intended to do. My dog has on a few occasions been my protector and alarmed me at such early stat that I myself could never have known that we were up against Mountain Lions. She just stopped, locked at me and turned around to go back home. Thats how we live in harmony...Pet protects her human, and wildlife goes on with there day in their territory. We live in a community were a vast number of dogs have been rescued this is a wonderful example of the coexisting mentality we have here in Marin County. And that is why may of us has moved from afar places to settle here in Marin. We care for each other we respect all life alike and we continue to teach our children to do so as well. I like to see that this beautiful and humble way of being will survive here in our beautiful heaven we have created for ourselves. MY DOG AND I WOULD LIKE TO SEE THAT THE EXCISING RULES TODAY WILL NOT CHANGE!

Correspondence: The GGNRA contributes to the enjoyment of the citizens of the SF Bay Area and to visitors from all over the world. I visit GGNRA nealry everyday. It is crucial that GGNRA be protected from dogs because they make it difficuly =t for other users to enjoy these areas. Conflicts with digs happen everyday and are counter-productive to the goals fo the GGNRA.

I understand the goals of this study are to:

? provide a clear, enforceable policy to determine the manner and extent of dog walking in appropriate areas of the park;

? promote the preservation and protection of natural and cultural resources and natural processes;

? provide a variety of visitor experiences, improve visitor and employee safety, and reduce user conflicts; and

? maintain park resources and values for future generations.

I have comments on these items.

1) While dog owners are a vocal group, those of us who try to enjoy these areas without dogs and without being attacked by dogs feel like we can only carefully voice our opinions. Many dog owners are very hostile regarding this issue. Therefore I have only used my initials

2) Many dog owners are irresponsible when walking their dogs. They suggest that their dogs are under voice control while they are scratching my wife's legs for example. They say they are watching their dogs, but in the meantime their dog(s) are chasing the birds on the Beach.

3) Many dog owners allow their dogs to poop in the sand on Ocean Beach, making it difficult for others to enjoy. Dogs poop all over the trails making enjoyment of a routine walk on any of the trails less likely

4) 15 years ago I used to walk with my family at Fort Funston, but I feel that it is not safe and frankly it has become quite disgusting with all of the dog poop and dogs off leash all over the place. This is simply an area that I can no longer enjoy visiting. Perhaps this should just be turned over to the dogs because in effect it already has been.

5) I do still visit Ocean Beach, but I have to be very careful when visiting with my family because there are so many dogs running wild on the beach. Dogs seem to get quite excited on the beach and engage in much roughhousing with other off-leash dogs. Dogs should be required to be on leash at Ocean Beach to protect the birds and to allow others to enjoy the area.

6) I frequently visit Crissy Field Wildlife Protection Area, but have had several unpleasant encounters with dogs and dog owners so now limit my visits to very early in the morning when it is less crowded. I strongly recommend rules requiring that dogs be on leash or banned completely from Crissy Field Wildlife Protection Area. Dogs frequently jump on strangers trying to enjoy that area, they run wild on the beaches, they climb through or jump over the fences and dig up the new plantings, and they chase birds. Crissy Field Wildlife Protection Area is at risk for being over-taken by dogs like has happened at Fort Funston. The most important parts that need to be protected are the walking paths and the beaches. These areas are used heavily and are not conducive to dogs off leash. Protecting Crissy Field Wildlife Protection Area from dogs is critical to the success of GGNRA. Letting dogs run off leash harms the ability of users to enjoy GGNRA.

7) I frequently go to Lands End and Sutro heights park. These too are areas that are not well-suited to off-leash dogs. Other users and migrating birds need to be protected from off-leash dogs.

8) Mori Point also needs rules banning dogs or requiring dogs to be on-leash. Dogs routinely chase migrating birds and shore birds on the beach and along the trails above the newly constructed stairs. On many occasions I've seen dogs digging up the wildflowers out on the point above the stairs at Mori Point.

Please please please do what you can to protect these areas for the enjoyment of everyone currently trying to visit GGNRA. In most of these areas dogs off-leash are a serious impediment to others trying to enjoy GGNRA. In order for the GGNRA to remain enjoyable for future generations, we need to be sure that migrating birds and shore birds continue to visit and thrive in these areas. That can't happen when these birds are constantly being chased by dogs. WE also need to protect the fragile plants in many of these areas (Crissy Field, Lands End and Mori Point in particular) from being killed by dogs peeing and pooping on them and from dogs that dig up these plants.

Thank you, VM

Correspondence: I live in SF and try to enjoy GGNRA weekly, but it has become more difficult with the proliferation of off-leash dogs at Crissy Field, Ocean Beach and Lands End. I have been attacked by dogs on numerous occasions. Last month I was yelled at by a dog owner after her dog attacked me. She told me that I must have food in my pockets. This is ridiculous. It has become so contentious on these walks that people definitely have a harder time enjoying these areas than they used to. last week I watched in horror as a dog owner allowed his large on-leash dog dig a 2 foot deep by 1 foot wide hole in one of the man-made grass-covered fenced-off dunes at Crissy Field. The dog must've been searching for a ground squirrel or something like that. But the dog was so big and strong, that the owner couldn't control him. The biggest problem is that owners can't control dogs that are off-leash, but some can't even control them when they are on-leash.

Do what you can to protect GGNRA for the enjoyment of users today and in the future. The issue of dogs has become a huge problem and is seriously impacting GGNRA in a negative way.

Thank you.

Type:

Correspondence: San Francisco has the highest pet per household ratio of any city in the US! People need dogs for health and stability, and dogs need a place to walk and run. Dogs will not go away - we need a management plan that acknowledges the number and the needs of our dogs.

Allowing dogs only in the most populated area of ocean beach, that is between gate 21 and the cliff house, will push the dogs and the people who don't like them together. This seems an obvious mistake. The dogs are as much a reality of city life as the people - we need a realistic management plan that allows areas for dogs to run free, areas where people who don't have dogs are less likely to go. Areas that allow dogs on leash are also needed, though it makes more sense to combine these with populated areas such as ocean beach near the cliff house and muir beach.

As I am sure you all know, the City was assured that dogs would have use of the beach when they turned the property over to the GGNRA, so all of this is in violation of that agreement. We have already made changes to accomodate the snowy plover, which is now recovering, so these changes cannot be justified on that basis.

We are only 4 people here, with 1 dog, but we will be highly impacted by these changes. We have many friends and neighbors with dogs. Again, dogs are here in high numbers, and must be reasonably accommodated!

Currently we walk our dog on leash at ocean beach and muir beach and rodeo beach. To have all these places removed is intolerable. Funston is already overcrowded and smells of dog poop because so many dogs go there. This plan will force many dogs into the City parks which are already over-used.

Why is this issue such a blind spot for GGNRA management? Please please open your eyes, realize that dogs will not go away. Please do not make the problems worse! This document needs revision; our dogs need more space, and more kinds of spaces, than this plan currently allows. Please reconsider. Thank you!

Correspondence: To whom it May Concern:

I have lived in Mill Valley all my life (40+ yrs) and have enjoyed the wonderful time of hiking with my canine companion(s). I have had several over the time. We have enjoyed playing at Muir Beach and Hiking Oakwood Valley Trail, Alta, Miwok and Mt. Tam. All of which have been a source of joy for me as well as my dogs. Given that we do not have a huge back yard to romp in the ability to run and stretch their legs. My dogs have protected me when a predator has been near - ie mt. lion, coyotes and bobcats...all of which I have encountered. To a point where they will just stop dead in their tracks and make me go back. Dogs require the ability to stretch and romp and use their noses the way God intended them to do as well as being a hiking companion for me. There are not that many locations where I can bring my dog to enjoy the outdoors without multitude of restrictions or not at all. Over the course of my time of using the trails, I have come across only respectful and courteous dog owners and people alike all enjoying nature harmoniously. I understand that Parks and Rec would like to alter the current Dog rules, and I respectfully request that they be left the way they are currently. These locations are part of many daily routine. Mostly from walking out my door down tennessee valley through Oakwood Valley up to the pond and then alta to the cemetary loop which brings me back to my house. It is a wonderful 1 hour loop which I and many others enjoy with our dogs and to restrict it in any way would be truly a detriment to all. This is the reason why we live here- to enjoy our hiking trails in peace and harmony.

Respectfully,

Alex Rodriguez

| Correspondence: | I request that Off Lease areas in Fort Funston and Crissy Field remain available to all responsible dog owners and dog walkers. I do understand restricting the number of dogs one person may bring at a time although I have not experienced any problem when I bring my dog to those areas for walks. I am not familiar with the other areas that are up for review, but if their utilization is similar to Fort Funston and Crissy I would support fellow dog owners in their bid to keep these areas off leash. We all understand that overpopulation of people as well as dogs is taking a huge toll on our environment, but snowmobiles in Yellowstone, ATV's in desert areas, guns and hunting in National Parks seems to me to be greater threats to native flora & fauna. | | |

Correspondence: I am in support of the proposed GGNRA Dog Management Plan. I am home owner near Lands End. As both a runner and parent to a young child, I have had many concerns over the years regarding dog areas, and I'm happy to see a new plan that takes into account all types of San Francisco residents, not just dog owners. I was attacked and bitten by a dog when I was a child, so this issue is very poignant to be. I do not like the fact that I cannot truly enjoy beautiful areas of San Francisco because they are run rampant with dogs.

I frequent Lands End, Sutro Heights, and Ocean Beach on a nearly daily basis. I've been chased multiple times while the owner stands idly by - even though the dog is supposed to be under voice control doesn't mean the owner or dog will obey. My two-year-old son has been chased multiple times while playing in Sutro Heights while the dogs owners are chatting with friends 50 meters away. These are just a few examples.

Another very upsetting point is regarding Fort Funston. The place is completely taken over by dogs - not just a single owner with a dog or two, but dog walking "services" with 5-10 dogs each. I decided to go running on the trails there a few weeks ago and couldn't take more than a dozen steps without being surrounded by dogs. It looked like a kennel and was just a complete waste of a beautiful property. I had to turn around and leave. I won't be going back there, or even recommending it to friends, until something is done.

I sincerely hope the Dog Management Plan moves forward so San Francisco residents can enjoy land that has since been taken over by dogs.

Thanks for reading,

Joe G.

Correspondence: I fully support adopting NPS leash regulation (Alternative B) outlined in GGNRA's Draft Dog Management Plan.

As a long-time dog lover and dog owner, I avoid GGNRA off-leash areas,

partly because of the obvious degradation to the landscape wrought by dogs and their less-than-attentive owners, but mostly because I am sick and tired of dealing with people who don't have their dogs under control.

It is not cruelty to walk a dog on a leash or to train it to be a good citizen, and it is not the responsibility of the NPS to maintain its parks for the convenience of dog owners who are too lazy to go on a real walk with their leashed dog or train it to always come when called.

I know my dog trainer will not be happy with me, but I say a three-dog-per-walker maximum in GGNRA areas is more than reasonable. The City and County of San Francisco maintains plenty of off-leash dog play areas. Dog walkers and owners who want to let their poochies romp "free" can take them there.

Don't let lazy dog owners and dog walkers get you down! You have the full support of many dog lovers in San Francisco and Marin County!

Correspondence: I have lived in San francisco for years and have observed the destruction of parks by dogs. I love land end but it is now ruined due to dogs. Not only is nature being destroyed but I can no longer go there due to off leash dogs and rude dog owners. I don't even go to on leash areas of the ggnra because the sounds of dogs barking ruins nature for me. I don't think dogs should be allowed in national parks or in nature in general. Definitely no off leash dogs and no on leash dogs would be ideal. You can walk a dog anywhere. You don't have to destroy nature to walk a dog.

Correspondence: GGNRA, first off, thank you for overseeing the public beach area near our home for the last 40 years. As a homeowner (1478 43rd Ave) and business owner in the city of San Francisco, the rules regarding the enjoyment of our local beaches with our pet are VERY important to me. I have two Beagles that I walk to Ocean Beach nearly every day. I understand the need to protect our beaches, but we need to do so without destroying the inherent value of the land for the local population. The number one reason I bought an extremely expensive home in The Sunset, was to be able to enjoy my family, including my dogs, at the beach. Please don't apply restrictions that

will destroy my lifestyle.

I would ask you to take a step back and understand that the GGNRA is the most visited National Park land in the united states for a reason - because it is located in an Urban center. This land is not Yosemite, or Yellowstone - land we have intelligently protected as a living museum, but land sanctioned for use by the population. I make a request that you not only disengage future plans, but actually reverse any leash laws you currently have in place.

What the rule makers are missing is the reality of the situation. There are responsible pet owners and there are irresponsible pet owners, just as with anything else. With the current leash laws, I always leash my dogs in leash areas, but irresponsible owners do not. Do you know what it is like to walk dogs on a leash with other dogs running free, it is maddening to the owners and dogs alike.

There are more dogs than school age children in the city of San Francisco. The rules don't hurt the dogs they hurt the people who own the dogs. As a pet owner, I can only go where my dogs go - can you imagine the number of dogs that will be in the few off leash ares that would be left after your plan? The area of Kelly's Cove will smell of urine, just as all of the small fenced in Dog Parks in the city do.

There has got to be a way we can protect the lifestyle of all living things in the area without limiting the use of the land with leash laws. After the recent debacle with the Sloat shoreline, please take this issue more seriously. The future of OUR beaches depend on it.

Best,

Tom Jagger SF, CA 94122

Correspondence: Re: Sweeney Ridge Trail

I was alarmed to see that the Golden Gate National Recreation service has proposed making Sweeney Ridge in San Mateo County a dog-free trail. I moved to Pacifica six months ago in part to take advantage of the natural beauty of the San Mateo coast. I naturally started exploring the hiking trails in the area and was particularly impressed by the beauty of the Sweeney Ridge trail which I was so pleased to be able to enjoy with my dogs.

I have been on the Sweeney Ridge trail a number of times since, mainly on the weekends and holidays. I rarely encounter other hikers. Many, probably a majority, of those I see hiking also are in the company of their dogs. Such is also the case for virtually all of the inland trails I have traversed in my 20+ years living in the bay area.

I cannot understand the motivation of the park service. Sweeney Ridge is all shrub and brush. The trail is wide and well maintained. It is clearly infrequently used. Many of those who do use it appear to be conscientious dog owners who keep their dogs on leash and on the trail (and since there is no water or other dog diversions up there, dogs have little inclination to leave the trail anyway - most dogs like being with their owners).

I seriously doubt that the parks people have studied the trail's use. If they had, they would know what I know from my months of walking it: cutting dogs off from this trail will reduce its use by humans to even lower levels (dog owners do not typically go on walks without their dogs). This will in turn further erode public support for federal and state parks at a time when the parks are already struggling for a share of government spending.

The biologists who work up these proposals are, to put it politely, working in an ivory tower. Yes, the wildlife would perhaps do better without any dogs in evidence on Sweeney Ridge. But the same goes for removing people from the park scene. Truly sensitive areas should not have trails through them. Once you build a trail and have to pay for its maintenance and operation, you have determined that the benefits of use outweigh the costs. When dog owners walk, they walk with their dogs - if their dogs aren't welcome they will not come, and they will resent the heck out of the agency that is keeping them out. The benefits of keeping dogs out of places like Sweeney Ridge are, I would suggest, more theoretical than demonstrable. Places like Sweeney Ridge may get so little use if dogs are excluded that there will remain no justification for the costs of keeping them open to the public at all.

As all studies show, dogs ownership encourages people to get out in nature. If we want to take proper care of our dogs, we have to ensure they get exercise. Many of us get our own exercise as a result of the obligation we feel to get our dogs exercise. We enjoy knowing we are helping our dogs and this goes a long way toward motivating us to help ourselves stay physically active.

Much of the trail use in the bay area is therefore directly attributable to dog ownership. Cutting out dogs may strike some in the park service as an unalloyed good. But they are dealing with a fantasy world, based on an ideal they conjure up from within their ivory towers. The reality is that the public's use of these trails will markedly decrease if the CGNRA proposal is

enacted.

I do not pretend to speak for all lands under the CGNRA. It may be that some parcels of land would actually benefit from reduced or eliminated dog access. However, the draft dog management plan proposes across-the-board cutbacks in dog access to virtually all CGNRA land. This approach to dog management seriously undermines the individual findings contained in the report. In other words, CGNRA greatly loses credibility when it makes the same recommendation for so many parcels of land that are clearly so different from one another.

Very truly yours, Jonathan Lipsky

Correspondence: Thank for this work. It is long overdue. Dogs are not inherently bad. However, the GGRNA, and the Ocean Beach - Fort Funston areas in particular are adversely degraded by the sheer number of dogs whose owners insist on using these fragile beaches as a dog park. Just yesterday while coming out of the water from surfing I witnessed a woman watch her dog defecate in the shallow water and then just walk away. It happens all the time, virtually everyday. This is middle of the beach, where we have snowy plovers and where dogs are SUPPOSED to be on leashes. As someone who uses the middle of Ocean Beach virtually everyday, I can assure that dogs are rarely leashed.

Similarly, most dog owners have no idea their dogs chase endangered plovers because they never actually see the chase since the dogs are generally far off ahead of them. When confronted, dog owners are generally not reasonable or educated about the rules, instead they yell obscenities and get aggressive with anyone who doesn't allow their dogs complete freedom to roam.

I personally have seen dogs run up and pee on innocent bystanders - children even - who just happen to be sitting on the beach.

Worst of all by far is the dramatic proliferation of professional dog walkers using Ocean Beach and Fort Funston as a free, publicly subsidized dog run for their private profit gain. Two weeks ago I was surrounded at Fort Funston by over 30 wild, unleashed dogs. Two women were sunning themselves about 100 yards away. I was physically attacked by a foaming, vicious dog. I picked up a stick to defend myself. Suddenly one of the

woman ran screaming at me to get off the beach and go somewhere else.

What is happening in the GGNRA is horrible. Unruly dog owners have virtually taken over the beach for single purpose tax subsidized uses, and the beach is disgusting and dirty. Wild animals and non-dog business operators feel as though we've been kicked off the beach.

We look forward to reasonable limits being placed upon dog owners so that the public and wildlife may once again enjoy the beach and public property.

Correspondence: I'm writing to ask you to continue to allow dogs to be off leash at the GGNRA parks. It's difficult for humans to live in a city without access to parks and greenery, and it's also the same for dogs. My dog is very well behaved, under voice command and enjoys socializing with other dogs at the parks. It's especially important for dogs to have access to socialize with both people and other dogs to be well-behaved and well-rounded. It's especially difficult for many residents of San Francisco who do not have access to backyards to have a place where their dogs can run off leash and get well needed emotional and physical exercise.

If the national park system is for the enjoyment of all, then we should all be able to find a way to enjoy the parks together. Dog owners and non-dog owners alike.

Correspondence: I would like to comment and hopefully get you to reconsider the plan

1. I do not walk my dog, I walk myself and my dog joins me as a valued member of my family. The thought of me standing around watching my dog play is not recreation for me. I am a 66 year old senior and walk 40 minutes with my dog at fort funston. So I challenge dog walking. It is recreation for people with dogs who in my view are an underserved community.

My dog is my child and I need a place to exercise along WITH my dog and the form of exercise I choose is walking. So I want you to reconsider the dog area and allow me to walk as I do now...down the paved path with my dog.

I also agree that dog walkers who do this for a living are out of control and i agree with your 3 dogs (maybe 4 or 5) but the number of dogs right now are too many per person. Plus they drag their leashes all over the property. If you solve this problem dogs will be much less of an issue for you.

2. I would like to see how big the universe of people with dogs are....bet it is bigger than people with bikes and maybe even people with children.

Thanks

Correspondence: While I understand and am in favor of rules/restrictions for each individual area, I am not in favor of a "no dog policy". I am an avid hiker, nature lover, environmentalist to the best of my ability and rabid DOG LOVER. We have a dog that we are lucky to take just about anywhere we go. While she is fun loving and adores roaming freely, she is very much under voice control and leashed when necessary.

To be completely dog restricted in these beautiful hiking/walking/beach areas we have available would not only be a sad burden for our pooch, but

for myself and my husband as well.

Unfortunately, there are always some bad apples that destroy the enjoyment of us all but frankly including the park service, I believe dog owners need to police themselves and other dog owners! It's not just our dog we need to be aware of but everyone else's too. That's part of being a responsible dog owner.

Additionally, the SINGLE MOST threat to any ecosystem, open space preserve, nature preserve, and over environmental impact is simply: HUMANS. It is irresponsible people that bring trash, unauthorized bikes and motor vehicles, unauthorized tramping around off trail, etc. to these areas. Furthermore, what about the animals that live in the wild already? Do they not, also, have some (if not a BIG) impact on some environments as well? Should we propose carting all the deer, rabbits, racoons, skunks, bobcats, etc., etc., etc. away to an exiled island? Certainly not! There has got to be a middle ground that we can all work with.

I am most in favor of the LEAST dog restrictive areas but at a minimum would consider the status quo and/or some additional dog restrictions on the most fragile of areas only.

Thank you.

Correspondence: I believe responsible pet owners should have the right to access the GGNRA without additional restrictions. There are plenty of laws on the books now to discourage bad pet owner behavior--we do not need more. The NPS should be focusing on more important issues such as illegal hazardous waste dumping in parks rather than wasting my tax dollars with this nonsense. Perhaps a drastic reduction of staffing would help the NPS focus on the important issues than layers of regulation which duplicate existing laww. Go attack a real problem--and make sure we taxpayers get some real value out of your overfunded pensions.

Correspondence: My wife and I purchaed a Beagle last year and are pretty new dog owners compared to many. However, it does not take long to undestand the value and necessity of having urban areas where dogs can play off leash. Most urban dogs have been socialized over the early months of their puppihood and are well behaved in dog parks and beach areas. Those dogs that are not socially behaved are soon scorned and the dogs are removed quickly. To remove access to dogs to run freely would be against everything San Francisco represents: Free speech, open arms to diversity, and a general care for living beings. Please support keeping beaches and dog parks open to dogs.

Thank you,

PKx

Correspondence: The areas in question are State of County or City owned, correct? The State parks were set aside for protection. To allow dogs off leash seems to counter act that protection. I love dogs, I'm a "free spirit" in many ways BUT how dogs came to be allowed to chase birds, dig into protected ground, bushes, sand, etc., escapes me entirely. Then there is dog poop. Dog owners in general are sloppy about picking up their dog's poop, except when over seen at dog parks. A dog off lease would be impossible to pick up after. Sorry for the dog owners, they need to use a dog park that is destrpoyed by the activities of dogs running all over. People bring their children to parks, dogs are often not careful, they jump on people, some time they instill fear by their behavior. There is no sane solution other than requiring dogs to be on leash in parks. Our Parks should be protected. Please set in place the Resolution proposed. Vennie Yancy

Correspondence: To Whom It May Concern:

While I'm fortunate enough to have a small dog that can be exercised around my neighborhood, I don't feel that there are sufficient dog parks in my city. Sure, there are limited dog runs, but there are RARELY any dogs there because the areas are so small and not conducive to dogs socializing and getting the much-needed exercise on a daily basis. Going to a place like Fort Funston gives my dog the opportunity to play freely, meet other dogs, socialize and get her exercise while walking with me. It's a place where many friends meet on a regular basis (both humans and dogs).

While I agree that some dogs and their respective owners need to have better control, regulations should be implemented to penalize the violators, not the entire dog population. Most people who take the time to bring their dogs to an off-leash area love their animals and do their part to maintain the property and surroundings. Most dogs aren't a threat to the environment and other people so please reconsider the penalties and limitations these new regulations will bring.

Sincerely,

Rita P

Correspondence: As time has passed GGNRA has become more and more restrictive to off-leash dog access, yet dog ownership in the city has increased- leaving us with fewer and fewer places to exercise our dogs, and ourselves. As a huge supporter of environmental sustainability, I understand the importance of preserving natural spaces and protecting endangered animals. However, we

must find ways to use our open spaces in a way that benefits all species, including humans and dogs. We have an obesity crisis in this country, and our health clinics are overflowing with people suffering from chronic diseases, many of which are caused by excessive weight. We should be doing whatever we can to make exercise an easy part of every day life. People often care more about their pets than they do their own health, and they will get up and walk for the sake of their pet. We should have places where people can walk or run for miles with their pets to improve their health, rather than forcing pet owners into neighborhood parks with no room to run for any distance. While the plight of the snowy plover may be dire- so is the plight of the health of San Franciscans. An investment of political will now could potentially save our city millions in future healthcare costs.

Correspondence: I am commenting specifically on Crissy Field and Fort Point in the GGNRA, where I walk everyday. I support the GGNRA plan as outlined on the map. It is very important to have dogs on a leash on all sidewalks and paths. I have been knocked to the ground by a rambunctious dog once and on several occasions have had dogs jump on me with dirty paws, leaving dirt on my clothes. Dogs off leash frighten little children, and for those small children who are learning to ride their little bikes at Crissy, dogs running around them often scare them and cause them to fall off their bikes. Even adult bikers are often chased by dogs and get in accidents trying to avoid them. Dogs should be on a leash on all the beaches at Crissy Field and Fort Point area since the birds can be anywhere along the shore there. I have seen too many dogs chase the gulls, sparrows, and blackbirds while their owners look on. They also chase the Great Blue Heron and Great Egret which are often on the grass hunting for the little rodents on the airfield area. The dogs should be completely banned from the area where the snowy plovers are. Despite the signage there, I still see dogs off leash on that part of the beach.

When the dog leash policy is finalized and put into regulation, it must be enforced with stiff fines for ignoring the leash rules. Otherwise, dog owners will continue to be oblivious to the wildlife. There also needs to be much more signage re need to keep a dog on a leash.

Correspondence: I am an amateur bird watcher. I do not have a dog. And I support allowing dogs to have off-leash areas. I believe that if you post signs saying "Caution: Dogs Cannot Chase Wildlife or the Off Leash Status Will Be Revoked". Peer pressure will be far more effective than issuing tickets to stop errant behavior.

Having numerous off-leash areas for dog recreation is important for both humans and dogs. Both get to socialize and exercise in a healthy manner. At off-leash areas it is remarkable on how fit both the dogs and the owners are at all ages. Please do not let a few sour grapes ruin the passion of so many.

Currently 29% of homes have a dog. Many of these people vote and are politically active.

One day I hope to have a dog again. It would be very sad for me not to be able to enjoy the wonderful outings off-leash. Currently, I get to visit the dogs off-leash which has brought me great joy as I bird watch. There is plenty of room for birds and well behaved dogs. 97% of the dogs are very well behaved. I won't venture a guess on the percentage of well behaved humans.

Correspondence: I have provided written comments at the informational meeting in Pacifica on March 9 and also provided comments to your paid consultant at that same meeting. However, I wish to make three additional comments. (I have been walking my dogs at Fort Funston for 21 years.)

After reviewing all of your proposed plans for Fort Funston, enforceability is a major issue. Having said that, I would suggest an easier plan to enforce - use the parking lot as a dividing line. Limit, not only off leash walking, but

dogs altogether in all areas south of the parking lot, leaving all areas north of the parking lot to off leash dog walking. Families who wish to picnic and enjoy the beach could do so without dogs. It is much easier to access the beach down the stairs than to access the beach through the paths at the north end of Funston. Remember, you have no restrooms other than those in the parking lot. Families walking their children down to the beach via the north end of Funston discover no restrooms. We all know what happens then.

In reviewing all of your proposed plans for Funston, "C" seeming to be that plan to which the GGNRA is leaning, there is an accessibility issue for handicapped individuals and individuals with mobility problems. Proposed Plan C's off lease area is all sand, which is not compact and is slopped on the east side making it impossible for access for handicapped individuals and individuals with mobility problems.

My third point is that making the area at the north water fountain an on leash area would only encourage dogs to be more aggressive when vying for a spot at the water dishes. Dogs are known to be much more defensive and aggressive, when on leash.

Correspondence: Banning dogs from Ocean Beach is unrealistic and will only cause more problems. You will be punishing the people who use the beach the most. Sure, thousands of people use the beach on a sunny day, but who is out there when its raining, and windy? Dogs. Just people with their dogs, not bothering anyone. I the aim is to prevent litter and protect birds, why not ban picnics? Plastic kills far more birds than pet dogs do. If people want peace and quiet, you really should ban children and teenagers from the beach, anyone can tell you they make a lot more noise than the dogs do. If the dogs digging is the problem, you better ban sandcastles. too. If you succeed in banning dogs on Ocean Beach, I will ignore the law. So will most people. If you are going to give me a ticket for walking my dog on a public beach next to my house, I am not going to bother leashing him, since you are going to give me a ticket anyway. I will still clean up after my dog, because I care about my beach. Like a lot of dog owners, I pick up trash on the beach when I'm out walking my dog. My guess that we probably pick up more trash than we leave as a whole. When I see another dog owner not cleaning up after their dog, I speak to them. I don't like dog waste and litter on the beach either. I love my beach. I love my dog. I'm not giving up either without a fight.

Correspondence: People who own dogs regard them as members of their family. There are many people for whom their dogs are their only family members. When people go to the beach, they like to bring their family members with them. It would be discriminatory to prevent access to the beach to family members who, through no fault of their own, happen to have four legs and bark. I thought our society was moving toward a greater appreciation for diversity, but you want to take us backward toward intolerance. Dogs have a greater need for recreation and exercise than do most humans. These needs are well met by water access, as evidenced by the thousands of dogs who use the Bay at Crissy beach and the ocean below Fort Funston. Because they cannot lobby your personally, because they don't know how to talk, are poor reasons to deprive dogs of the right to have their needs met, especially when they are harming no one and causing no trouble. I have been to Crissy beach so often that I know that any reported instances of problems caused by dogs, in comparison with the use of the beach by dogs, are statistically insignificant. The only place dogs can be adequately exercised is in a public venue. While you are planning to severely restrict off-leash public access, bear in mind that at least 40% of American households include dogs. (NBC Nightly News referenced a survey that determined that as many as 60% of American households have dogs.) Dog-owning citizens are taxpayers, who pay your salaries. If you do not fairly represent us, you will be acting like Middle Eastern dictators. If the beaches are to remain usable for everyone, according to their needs, this means adequate off-leash areas for people with dogs. The current situation meets this criterion. Your plan is an outrage.

Correspondence: Thank you for the opportunity to comment on this document. I strongly support stronger management and control of dogs and other companion animals in the Golden Gate National Recreation Area. Dogs are certainly important parts of our families and communities, but they are only one part of the community and ecosystem that is the GGNRA. It is more than fair to require dog owners to accept certain limits for areas where their dogs may play when the survival and wellbeing of so much wildlife and so many plants are at stake.

I have two general comments on the proposal.

1. Off-leash dog areas should be fenced for the protection of both park

visitors and dogs. Park visitors should be given a choice about whether they will interact with off-leash dogs.

2. Leash and voice control requirements must be strictly enforced. Without strict enforcement, this effort is meaningless. In that vein, I believe the goal of achieving 75% compliance with the leash and voice control requirements is far too low. I would recommend a goal of 95% compliance with leash and voice control requirements.

I would also like to comment more specifically on some of the particular areas under discussion.

1. In Fort Mason, I support the preferred option, requiring leashes in all areas. 2. I strongly support the exclusion of dogs from Crissy Field. There have long been issues with dogs and the Western Snowy Plover habitat. 3. Similarly, I feel that dogs should be excluded from the Ocean Beach Snowy Plover protection area.

Thank you, Mimi Calter

Correspondence: We strongly support keeping Muir Beach open as a ROLA and the trails south of it (coastal and to Pirates Cove) for leash access. Accessible ROLAs are a required part of our Bay Area culture and lives. The vast majority of trails and areas in the RA are closed to dogs. Muir is a traditionally precious exception as a dog-friendly area for decades. We use it often--it is the closet beach for we Mill Valley folks, and unique in its character and beauty (including the trails). No-dog options are available at Stinson and Baker. Balancing multiple options is best served by keeping Muir open.

Correspondence: Thank you for offering this chance to comment. I support the "preferred alternative." It appears to me that you have thought through these issues carefully and have attempted to balance the various needs. I have been a resident of San Francisco for many years and I've grown increasingly concerned about the number of dogs in our park lands. Some dog owners are respectful of the native plants and animals but others are not. The fact is, dogs are pets. They are not wild animals and should not have the right to degrade our natural environment. I do hope the preferred alternative is adopted as suggested. I will feel better that we are protecting our natural environment.

Correspondence: Plan/DEIS provides for all its listed purposes. It provides a clear and (I hope) enforceable policy to determine the manner & extent of dog walking in GGNRA land. Dogs, unleashed or not, should be strictly controlled in the land entrusted to GGNRA. It serves your own goals of promoting the preservation & protection of natural features, to provide for visitors and employees, and maintain park land for future generations. To achieve all these goals dogs should be lawful, and according to GGNRA rules. Off leash dogs absolutely destroy the natural features GGNRA is mandated to maintain, for the reasons listed above.

Dog owners & friends love their pets more than they do any plants or animals, including other humans. It's natural that they would unite strongly for the greatest pleasure & convenience of their beloved dogs. They will fiercely demand the fullest extent of their dogs' pleasures. They must be resisted by GGNRA for all the good purposes you've defined, for the visitors who use park land for the many reasons other than to walk their dogs. Natural features such as plants & animals, historical natural features that the GGNRA is mandated to protect. Protect the land. You are not mandated to protect "dog rights". Jack L. Dodson

Correspondence: As a dog-owning user of Fort Funston, Mori Point, and Rancho Corral de Tierra (soon to be part of the GGNRA), as well as a paraglider pilot flying in Fort Funston and Mori Point, I am very concerned about the proposed changes to dog access in GGNRA-managed lands.

I visit these lands on a near-daily basis, and it seems impossible to attribute environmental damage specifically to the presence of dogs. Horses, bicycles, and hikers all enjoy these lands, and also contribute to the environmental state of these areas.

I do not want us to lose these precious resources, but fencing everything off and preventing access is a bigger lose to the entire community - and the only way to "preserve" the land completely.

Given the preponderance of ice plant (a non-native invasive species), clearly there have been many changes from the pristine condition of the GGNRA land. The amount of debris between Fort Funston and Thornton Beach from the failed golf course is truly criminal.

People with their dogs along fully appreciate the beauty and bounty of these areas. We carry stinky poop to preserve the area (can you say the same for equestrians?). We tread lightly on the paths (unlike bikes and horses). We note the changes and needs of the area, and protect it as our own.

Please choose Alternative E and continue to provide as much access as possible.

Correspondence: Has GGNRA ever considered having more park rangers patrol the park/land/beaches so that they can regulate the actions and activity going on? I have been a regular at Funston for the last 3 years and I have only seen a ranger out on the trails ONCE!!! Once in three years!! And that was only recently when SF Bomb squad had to detonate flares. Ranger was only out to block the road. I know they have their station and I see their trucks parked

there, but what do they do? Shouldn't they be patrolling the grounds to check on any unsafe activities.

I feel that instead of taking away the off leash dog walking area in Funston, to find other alternatives like better barriers, have the rangers patrolling the area and fine those who are breaking the rules! RESPONSIBLE dog owners do not like the IRRESPONSIBLE just as much as other people don't. Now if the park rangers were out patrolling, then we responsible dog owners would be able to point out any violators and the ranger can cite them! Money collected from citations can go into funding for GGNRA land upkeep and improvements.

There are other alternatives to make this work and keep a balance between dogs, land and people. Please do not take away or change this very RARE and SPECIAL place for dogs to run free and be happy. There is nowhere else in the Bay Area like it!

Correspondence: My preference is to keep the dogs from having free range of the parks. The most important element is that the birds, animals and plants that are natural to the area, proliferate and are not disturbed.

I do think that people with dogs do not belong on the beaches. However, I can see some accommodation to having dogs on leash on some trail. Sadly, most dogs that I see on the trails are not on leash.

Thanks!

Correspondence: I oppose off-leash or "voice control" access in any of the areas. As an avid runner and hiker, I can testify that a dog under "voice control" is a myth. Once a dog decides to chase something--animal or human--the owner can scream as loud and as long as he or she is capable, and the vast majority of dogs will not respond. I have been jumped on, nearly tripped, nosed, and even nipped by dogs that were "under control." I cannot understand the argument that dogs must be allowed to race around off leash in order for the

dog and the owner to get some exercise. That is absurd. For all of the reasons that the document presents, including human safety, dog safety, and protection of the environment, I urge that only on-leash dogs be allowed in the fewest areas proposed. There are plenty of other areas in both counties where dogs can be walked on leash and some controlled areas where they can roam unleashed.

Correspondence: Dear Stewards of the Land,

As a Dog owner and a lover of national parks I am distressed at this attempt to curtail off leash access at in the GGNRA.

While this may be an attempt to "preserve" the parks for future generations, I feel that it is in fact a denegration of the relationship that people might have with the land. By asking us to so extensively limit our use of the space you place further distance between the public and the land itself, making it a museum rather than a familiar back yard. Furthermore if the goal is simply to protect the wildlife contained wherein, I fear that this attempt will fail, as humans are an equally disturbing presence to dogs.

Please do not criminalize responsible dog owners-- there is a covenant between this city and her dog lovers. San Franciscans are among the most responsible citizens in the country and because of this I believe that education as to their dogs impact will go a long way to positively impacting delicate ecosystems without shunning these important and numerous members of society. Please reconsider the implementation of this plan, it will negatively impact the relationship of the people to the land forever.

Sincerely,

Emily

Correspondence: We have been visiting Crissy Field for more than 10 years now with our dog, Xosa. It's a breath talking place and we feel so lucky to have it in our back yard. We usually go every Saturday morning and occasionally on a week day to walk on the beach and let our dog enjoy running around off

leash. This is the only place that's safe from traffic where he can roam around untethered. We love our neighborhood parks but they tend to be too crowded and fertilize the grass with fish emulsion, something that is quite tasty to dogs, but not good for them.

I can't guess the amount of trash we've picked up over the years, disposable diapers, plastic cups, soda bottles, cigarette butts as well as feces from neglectful dog owners. There will always be people who don't care or don't maintain these beautiful places. I'm not sure why dogs are singled out and not all people. If you want the place pristine, then no one should be allowed to visit, but if this park is for everyone then dogs should be allowed to stay, free and off leash, the same as all other visitors to the Crissy Field.

Thank you for keeping this a place for everyone and not singling out a small segment of the visiting population.

Leslie Ernst

Correspondence: If the issue has become increased population and visitors to the GGNRA space and therefore crowding and safety concerns as well as habitat damage, then perhaps instead of closing off part of the 1% of land currently available to dogs, the GGNRA should increase the amount of land available to dogs. This would decrease the burden, both in terms of overcrowding and safety, and of habitat destruction of those few areas which are becoming more highly trafficked by dogs. As the population grows, as does the population with dogs, it does not make any sense to decrease the space availability. It either must stay the same and suffer from the increase in population, or expand. It seems that there is plenty of room in this instance to expand the space availability for dogs. The current proposal seems very backwards.

Thank you, Maral

Correspondence: 5 Ways Pets Can Improve Your Health Can a "pet" prescription lower your blood pressure? Owning a pet can ward off depression, lower blood pressure, and boost immunity. It may even improve your social life.

By Jeanie Lerche Davis WebMD Feature Reviewed by Brunilda Nazario, MD

A pet is certainly a great friend. After a difficult day, pet owners quite literally feel the love. In fact, for nearly 25 years, research has shown that living with pets provides certain health benefits. Pets help lower blood pressure and lessen anxiety. They boost our immunity. They can even help you get dates. Allergy Fighters "The old thinking was that if your family had a pet, the children were more likely to become allergic to the pet. And if you came from an allergy-prone family, pets should be avoided," says researcher James E. Gern, MD, a pediatrician at the University of Wisconsin-Madison, in the *Journal of Allergy and Clinical Immunology*. However, a growing number of studies have suggested that kids growing up in a home with "furred animals" -- whether it's a pet cat or dog, or on a farm and exposed to large animals -- will have less risk of allergies and asthma, he tells WebMD. In one study, Gern analyzed the blood of babies immediately after birth and one year later. He was looking for evidence of an allergic reaction, immunity changes, and for reactions to bacteria in the environment. If a dog lived in the home, infants were less likely to show evidence of pet allergies -- 19% vs. 33%. They also were less likely to have eczema, a common allergy skin condition that causes red patches and itching. In addition, they had higher levels of some immune system chemicals -- a sign of stronger immune system activation. "Dogs are dirty animals, and this suggests that babies who have greater exposure to dirt and allergens have a stronger immune system," Gern says. Date Magnets Dogs are great for making love connections. Forget Internet matchmaking -- a dog is a natural conversation starter. This especially helps ease people out of social isolation or shyness, Nadine Kaslow, PhD, professor of psychiatry and behavioral sciences at Emory University in Atlanta, tells WebMD. "People ask about breed, they watch the dog's tricks," Kaslow says. "Sometimes the conversation stays at the 'dog level,' sometimes it becomes a real social interchange." Dogs for the Aged "Studies have shown that Alzheimer's patients have fewer anxious outbursts if there is an animal in the home," says Lynette Hart, PhD, associate professor at the University of California at Davis School of Veterinary Medicine. "Their caregivers also feel less burdened when there is a pet, particularly if it is a cat, which generally requires less care than a dog," says Hart. Walking a dog or just caring for a pet -- for elderly people who are able -- can provide exercise and companionship. One insurance company, Midland Life Insurance Company of Columbus, Ohio, asks clients over age 75 if they have a pet as part of their medical screening -- which often helps tip the scales in their favor. Pet owners with AIDS are far less likely to suffer from depression than those without pets. "The benefit is especially pronounced when people are strongly attached to their pets," says researcher Judith Siegel, PhD. In one study, stockbrokers with high blood pressure who adopted a cat or dog had lower blood pressure readings in

stressful situations than did people without pets. People in stress mode get into a "state of dis-ease," in which harmful chemicals like cortisol and norepinephrine can negatively affect the immune system, says Blair Justice, PhD, a psychology professor at the University of Texas School of Public Health and author of *Who Gets Sick: How Beliefs, Moods, and Thoughts Affect Your Health*. Studies show a link between these chemicals and plaque buildup in arteries, the red flag for heart disease, says Justice. Like any enjoyable activity, playing with a dog can elevate levels of serotonin and dopamine -- nerve transmitters that are known to have pleasurable and calming properties, he tells WebMD. "People take drugs like heroin and cocaine to raise serotonin and dopamine, but the healthy way to do it is to pet your dog, or hug your spouse, watch sunsets, or get around something beautiful in nature," says Justice, who recently hiked the Colorado Rockies with his wife and two dogs. Good for the Heart Heart attack patients who have pets survive longer than those without, according to several studies. Male pet owners have less sign of heart disease -- lower triglyceride and cholesterol levels -- than non-owners, researchers say.

Correspondence: San Francisco residents have more dogs than children. We pay our share of tax for public schools, please let us continue to have the opportunity to play with our 'kids' off-leash. I'm looking at the proposed map of Chrissy Field--hundreds of dogs and their owners enjoy this beach every day. If this regulation is approved and we are only allowed a little strip of beach, it will be grossly congested and not enjoyable for anyone. Thank you for your consideration.

Received: Mar,10,2011 13:39:04
Correspondence Type: Web Form
Correspondence: Please consider the importance of the following points before considering the drastic measures in your drafted proposal.

1. The Health of our Elders: Fort Funston and other off-leash areas in the Bay Area has become a haven for older people to walk their dogs, socialize with other seniors, and form a community that makes their lives more fulfilling. The vitality of this community will be greatly diminished if your proposal goes into effect. People look out for each other and their pups. There is virtually no discord among the regular dog walkers. Their health and vitality is greatly increased as a result. If anything, off-leash dog

walking ought to be encouraged, especially for seniors, as a way to lead more healthy and fulfilling lives.

2. The Health of our Canine Friends: Dogs, especially in the City, absolutely need a place to playfully engage with each other and enhance their socialization skills. Dogs on leash are more aggressive than those off leash. On leash dogs cannot run, catch, play, scamper, visit each other in a healthy canine manner. They become frustrated; they bark; they have no way to expend the vast amount of energy that they generate. As a result of your proposed plan, dogs in the city and likely in suburban areas as well, are much more likely to be less than model citizens. Again, as above, older people (perhaps more than any other people) will be affected adversely by living with pups who no longer are calm, sated, attentive and well behaved. Older people simply cannot walk long enough to give their canine friends their due!

3. The Health of the Environment: Bringing (of all things) more horses onto the trails of Fort Funston, brings with it a population with a horrific sense of entitlement - and no sense of responsibility. The regular dog walkers of Ft Funston clean up after their animals not only on a daily basis but also on a monthly clean-up. Those who bring their horses up to Ft Funston 1) do not stay on the horse trails, 2) frequently do not know how to ride a horse, and have little control of their animals, 3) never clean up after their horses, and 4) leave trails more heavily eroded, more covered with manure, vermin and flies. Turning our trails into 'Horse Trails' makes both the official trails and the adjacent areas unfit, unsafe, and unsanitary for human walkers (with or without dogs). The horse riders have been by far the most inconsiderate and destructive population at Ft Funston.

I urge you to reconsider this proposal. I agree that setting standards and procedures for use of public spaces is important. But the drastic expansion of banned areas for off-leash walkers is punitive for the vast majority of citizens who use, love, respect, and protect these wondrous outdoor spaces. The unintended consequences of your proposal to both human and canine members of the community cannot be underestimated.

Correspondence: I support the alternative that is most protective to the environment. This area should be maintained to preserve nature rather than being turned into a dog park. I have witnessed dogs going off trail and eating and digging up plants and chasing and injuring animals. I am particularly worried about the snowy plover. There are way too many dogs in this area. I think dogs should be

banned from this area. Making dogs on leash only doesn't work because people will just disobey that. They will put a leash on when they see a police officer/ranger but then will take it off once the officer has left the area. I have seen this numerous times and reminding them only seems to make them want to break the law more.

Correspondence: Comments on the Fort Funston maps of proposed alternative plans.

Please consider that all but one of your alternate plans for Fort Funston discriminate against seniors walking the trails.

MAP 16: This proposal is the second most restrictive of those proposed. It is punitive to seniors in particular, who cannot navigate easily or regularly up and down the steep cliffs to the designated off-leash area below.

MAP 16A: The Voice Control alternative is by far the most reasonable and responsible of your plans. It makes it clear to all that open spaces are open only to those who have taken care to train their dogs as good neighbors and citizens. This plan is fair, even handed, and a good reminder that humans on the trails should always have their dogs under voice control.

MAP 16E: This plan is a poor second plan choice to 16A. Its advantage is that it allows a contiguous area for walkers. However, because of its reduced area, it is likely to be eroded quickly through over use. My greater concern is that this plan also discriminates against those seniors who cannot navigate the steep, deep sandy trails of the prescribed areas.

Of your plans, if changed must be made, Map 16A is a compromise alternative that is viable and fair to all. It is also the only plan that will work well for seniors.

Please take seriously the detrimental effects the more severe restrictions will have on the health and welfare of seniors who have so long diligently and reverentially cared for Fort Funston.

Correspondence: Please, first of all, know that I am a (loving) dog-owner, that I have many

friends who are dog-owners and have no agenda here other than to convey some opinions which will probably not be welcomed by many fellow pet owners, however....I am entirely supportive of the proposed changes to the off-leash areas which GGNRA is considering. I have been increasingly offended and amazed by the lack of respect shown by many in SF concerning the responsibilities of dog-ownership. Living near Alta Plaza and Lafayette Park, I can not possibly walk my dog in the parks because they are taken over each day by packs of mostly large, off leash dogs. Many with walkers who are chatting or on cell phones, and not mindful of the fact that others should also be able to enjoy the parks. My dog is a rescue terrier who,even after 12 years of attempts to correct, is terrified of off-leash, large dogs. What do small dogs do when scared? Attack/bite usually. Not a nice picture.I have spoken at length to others who have this problem as well. When we first moved from East Bay to SF 6 years ago, I was delighted to find Crissy Field and walk him there, always on leash and mindful of the areas where a nod to leash laws was in place. I learned to avoid the beach area as well as the long field, as more and more dogs ran free. Rarely do I see owners cleaning up in the grassy areas. Nor at the beach near the Warming Hut, where children often play in the sand. I now feel comfortable in the Presidio only in Lucas' outdoor area where security guards insure that dogs are on-leash. It seems unfair to me that so many in SF feel free to ignore the rules--be it red lights, pets-on-leash areas or..I could go on too long here, that is not the point.There are many options still being left for dogowners who wish to let their animals run free--why can't we have a similar amount of space for those of us who prefer leashed areas? And I also have spoken to many volunteers in the replanting areas of Crissy as well as the Presidio. The off leash dogs wreak havoc on many native plantings and wildlife areas,and can frighten people out hiking who aren't expecting a loose dog at their heels when rounding a corner. Please consider that many of us feel over-powered by the off-leash voices, but that many of us with dogs, who walk them ourselves every day, welcome some reigning in of conditions and hope for enforcement of any changes. Thank you!

Correspondence: My name is Danielle Satinover and I am a resident of San Francisco and a dog owner. I would like to voice my concern regarding the issues of park land and dog use. It is a vital part of not only my health but that of my dog and my son that we have space to walk with our dog off leash. For myself I have high blood pressure and my doctor has told me that a crucial part of maintaining my health is to walk vigorously and often. I am not very motivated on my own and this is a large part of my owning a dog which gets me out and moving. My dog is extremely well behaved and very active, (I

often take her to meet my toddlers at the child care coop in which I work as she is so gentle with the children and they love her). She loves to run and needs room to do so. I have tried taking her to the fenced in dog areas but there is not enough room in them for her to run freely and she always feels trapped by the fence and will act defensively because of it. This is never a problem in open off leash areas. Finally, my six year old son recently started a hiking club where he invites friends from school and weekly we go out for a hike somewhere in the city. He loves it and so do his friends. I am so happy that he is choosing a healthy active life style on his own. Part of the joy of these hikes for all the children who join us is our dog who has been made a member of the hiking club. She often leads the way and the children follow. Having her be able to run off leash makes these hikes fun for her and the children as they can all play together. I have to say there is nothing sweeter than seeing a boy and his dog run and play freely. As you can see having off leash areas for our family is vital to our maintaining a happy, healthy, life style for myself, my son, and our dog.

Thank You, Danielle Satinover San Francisco, CA 94124

Correspondence: I am a member of the National Parks Conservation Association, and annual contributor. I frequently visit Yosemite, Yellowstone, the Grand Canyon, and GGNRA.

I totally oppose the proposed Dog Management Plan for GGNRA. GGNRA is an Urban park, not a wilderness area. Dogs are cultural and natural resources also--and need our protection. There are many more places throughout the Bay Area for humans to find recreation. We do not need to have the lands available for dog recreation and dog walking limited further.

Correspondence: Dear Mr. Dean,

On behalf of my husband,myself and our two dogs, I am writing to decry your current proposal to further limit off-leash dog areas. As long-time, responsible dog owners (almost every pair of slacks I own and several of the jackets too ALWAYS have a couple of plastic poop disposal bags in them), we are here to tell you that unless you are a triathlete, dogs cannot be

properly exercised on a leash! Surely you know the amount of sales tax revenue created by all the dog owners buying kibble, dog beds, treats, toys , flea and tick medicine; all the people employed in the dog grooming businesses, and the sale of licenses, just to list a few of the benefits the city receives from dog owners. There is also property taxes and the independent jobs created by dog walkers. We have driven over from Oakland just to walk our beautiful dogs @ Crissy Field and Muir Beach! PLEASE re think this plan. People who do not appreciate dogs have sooooo many other places to go, but there are few places dogs can frolic with other dogs and run full out. Remember, we are tax payers and voters too. And don't forget all the scientific evidence of the health benefits of dog ownership! They do so much to help mankind, sniffing for drugs and bombs, assisting the handicapped, and just providing love and companionship. Do not infringe on our ability to walk on a sandy beach and watch our canine companions enjoy running and swimming freely.
Sincerely, Cathy Broder

Correspondence Type: Web Form

Correspondence: I have lived in San Francisco continuously since 1972. My husband and I currently have a Jack Russell terrier that we walk each morning on Crissy Field. We tell our dog every morning how lucky he is to be able to use Crissy Field and we know how lucky we are to have Crissy Field and the whole GGNRA. It is a priceless resource for all of the citizens of this area. I understand the need for a dog policy that takes into account multiple uses and their environmental impact, but that also takes into account the many dogs in this area, who need reasonable access, both on leash and off leash in the GGNRA. I support responsible dog owner and commercial dog walker behavior. My husband and I are also members of GGNRA. With this in mind, I would like to make the following comments on the draft GGNRA Dog Management Plan:

Comment #1: Crissy Field, Airfield: Instead of Alternative C, which is too complicated and very difficult to enforce, you should select Alternative E, which allows dogs off leash on the whole airfield, except as dictated by special events. Trying to enforce C, would be extremely difficult and very management intensive.

Comment #2: If under this policy there will be no areas off leash in San Mateo County and fewer than at present in Marin County and San Francisco County, those areas that would still be off leash would be more heavily used than at present, causing control problems for both dog owners and GGNRA staff. Solution: Be certain that there are some off leash sites in all three

counties.

Comment #3: The draft does not address the possibility of time of day use in some areas. For example, it would be possible to have some sites open to off leash dog walking until 10 am. This would be much easier to enforce than some of the options offered in the draft.

Comment #4: Crissy Field, East Beach: All of the alternatives on Crissy Field beach use mention East Beach except Alternative C. As worded, I am left asking under this alternative would there be no dogs on East Beach, either on or off leash?

Comment #5: Compliance-Based Management Strategy: As described in the draft, it is unclear how GGNRA staff would be able to demonstrate with valid data that "compliance has fallen below 75 percent (measured as the percentage of total dogs/dog walkers observed during the previous 12 months not in compliance with the regulations. . .). This strategy has the potential to create a lot of law suits and acrimony between GGNRA staff and dog walkers.

Comment #6: There is no opportunity for an open hearing/meeting on this issue. Park users have been allowed to submit comments and to informational sessions, but not to have an open meeting.

Comment #7: Commercial dog walkers should be allowed. I strongly prefer Alternative E for dog walkers because it offers good, solid rules for what they can and cannot do and the rules are restrictive enough.

Comment #8: The report fails to address the urban nature of Crissy Field. Crissy Field is not a wilderness site. It is part of a large city with a lot of dogs.

Final comment: When I attended the public meeting at Ft. Mason on Monday, March 7, I was pleased to be able to chat with GGNRA staff. They were polite and helpful and the information there was helpful too, but there were a lot of people there who are not willing to compromise in order to make multiple use possible. I hope that the final policy is reasonable for all concerned.

Thank you for this opportunity to share my ideas.

Correspondence: Just a quick 2 point followup regarding the New Lands alternative, specifically as it relates to Rancho Corral de Tierra on the San Mateo Coast. 1. I prefer Alternative E as it relates to Rancho - Most of the dog walkers use a small area immediately north of Montara and east of Hwy 1, approx 1 square mile or slightly less, as well as a small area in El Granada to the east of Coral Reef Ave. Such a small area of Rancho, as well as just a tiny percentage of the Bay Area GGNRA lands, that has been used for off-leash walking for decades, by me personally for 20 years. If we could at least keep these small areas to enjoy, as there are really no other areas on the San Mateo County Coastside. 2. In the last 2 years the local dog group has installed and maintained a half dozen small poop cans and bag receptacles, and the area is now much cleaner and healthier than it was - it is rare to see a dog owner not pick up after their pet now. Surely such responsible care deserves to be taken into consideration? Thank you.

Correspondence: I have been reading about the Dog Management Plan and the controversies aired in the Mill Valley area. I live near Tennessee Valley and walk the Oakwood Valley several times a week, usually in the morning when the crowd of dog walkers are also on the trail. I'm not a dog owner, and I don't walk my cats on the Oakwood Valley Trail. My observation over the past few years is that the dog walkers are very respectful of and grateful for the dog rules and leash limits, and of course the trail draws dog owners who have well-trained dogs who behave themselves (or try to) when off leash. I enjoy greeting others on the trail, including the dogs who regularly sniff my hand to check me against their catalog of people scents, and to detect whether I might have a treat (which I never do).

The Oakwood Valley Trail is a short easy trail that is ideal for the "brisk 30-minute walk" recommended to people like me to keep in shape in our 70s, and the many dogs are an additional pleasure. With the exception of less skilled or responsible professional dog walkers who have too many dogs and limited voice control (who have virtually disappeared this past year after a series of complaints in Mill Valley parks the year before), I see no reason to change the off-leash rules for this trail. It is very rare to see any plant digging, or for dogs to roam much off the trail (except in the grassy winter marsh near Tennessee Valley Road). Oakwood valley is a valuable social site in southern Marin and should stay that way. I cannot speak to the issues of GGNRA trails in more remote areas. But Oakwood Valley Trail is at the edge of an urban area, even if it is in the GGNRA, and functions very well as a trail in that type of environment. It is a credit to the management of the GGNRA that they have explored new ways to be an integral part of an urban

environment while also protecting the park for the future.

Correspondence: Of the multiple areas evaluated in this plan, I have only visited the Fort Funston area and I have visited Ft. Funston approximately 30 times over the past two years.

Use of any natural area by humans results in degradation of the resource, either by the direct impact of the human visitors or by intentional improvement of the area to improve access, parking, sanitation, and view shed, amongst other reasonable goals. Specifically, there are NO examples of ANY human visitation to ANY ecosystem that have not caused change and degradation of the native environment.

To resolve this dilemma, there are several conservation areas and a few government projects that exclude human visitation. Such restrictions have merit from a global conservation perspective, but little or no value from a local use and enjoyment perspective.

Next, if there is merit to enjoyment of park areas by humans, then concomitant degradation of the natural environment, however minor or major, must be accepted as a universal consequence of achieving this benefit. From a global use and enjoyment perspective, human visits to natural areas have merit, but human impact has a negative value from a local conservation perspective.

Confronted with this universal and axiomatic conflict of perspectives, organizations, such as the GGNRA, draw lines and create regulations which are theoretically based on many pages of documentation; in fact, they reflect a biased and unspoken, political objective.

If Fort Funston is 'suffering' under its current use, then it is suffering because of its success in drawing many people for many uses. From my

perspective: (1) Dogs get along with each other and with people better than people get along with each other: leashes or restricting dogs won't change that. (2) The vast majority of environmental impact at Fort Funston is from people walking (with or without dogs) over the dunes and down the cliff sides, not from dog paws or dogs digging. (3) Intentional projects at Funston (wastewater management, gun batteries, parking lots, roads, landing zones, etc), while well-intentioned, have done much greater damage to the environment than the absence of leash requirements. (4) The cliffs at Fort Funston (and in neighboring areas) are inherently unstable and will continue to erode with tectonic certainty, with or without dog leashes. (5) Fort Funston, because of the absence of leash requirements, is a HUGE success, drawing lots of people with their dogs to one of the few places both species can enjoy together. From both global conservation and global use and enjoyment perspectives, it makes much more sense to concentrate off-leash use (with its concomitant environmental impact) in one area, than to spread it out over a larger geographic footprint. The high utilization success of Ft Funston alone should convince you that the proper path is not to take away the basis of the success, but to make it a better, safer experience for dogs, owners, and dog walkers. Success deserves support: more planting should be initiated, focal sensitive zones should be fenced off, park workers should be educated to interact wisely with dogs and people, commercial dog walkers should be educated to be responsible, facilities should be improved, walking paths should be improved and expanded to keep humans off the dunes, beach access should be improved, and multi use should be encouraged. Signage could direct people seeking to avoid dogs to other areas and walks.

Fishermen deserve some water /beach access; hang gliders deserve landing areas; kite or model airplane fliers deserve air space; artists deserve view sheds; tourists deserve photo opportunities; businesses deserve business parks; the environment deserves protection; and dogs deserve an outside place off-leash. If there were not such a need, you would not have created a 2400 page document trying to prove that there is no need. Please think beyond a selective perspective or political agenda. There is a need for off-leash areas and such use should be supported at Fort Funston.

Correspondence: My wife and I strongly support the Dog Management Draft Plan. Our national parks' foremost mission is conservation and it is critical this is prioritized.

I believe:

- All off-leash dog areas should be fenced for the protection of other park visitors and dogs. Park visitors should be given a choice about whether they will interact with off-leash dogs. - There should be a limit of 3 dogs per person. It is not appropriate for the Park Service to create commercial permits for professional dog walkers. Also, it is unlikely that most visitors with dogs will be able to keep control of more than 3 dogs at one time. - Leash and voice control requirements must be strictly enforced throughout the life of the policy. Otherwise proposed on-leash areas will become off-leash areas, as has already happened under the old rules. - The goal of achieving 75% compliance with the leash and voice control requirements is far too low. The Park Service should not be creating a system that expects and tolerates failure by 25% of the dog walkers. Golden Gate Audubon recommends a goal of 95% compliance with leash and voice control requirements.

Type:

Correspondence: Dear Sirs,

Please place me on your emailing address.

We have a dog -- she loves the water and Crissy Field. However, I am also a parent.

My experience is that the dogs simply take over on the week-ends frightening small children, disturbing people on the beach, and people fail to clean up after their dogs ("she/he is just a small dog, I forgot a bag, etc."). So, I am sympathetic to the direction things are going. However, the restrictions go too far.

It seems to me I should be able to have my six year old and my child on the same beach near facilities for both of them. The big problem for us is access to the stream which runs from the lagoon to the Bay: Claire, the six year old, really likes to play there -- and so does the dog. There should some time during the week when when these are accessible to both -- without dog walkers, please.

My suggestions are:

-- Ease up the proposed restrictions during the week when families are less likely to be there.

-- Dog walkers are a real problem: the last time I was there three dog walkers accounted for 21 dogs. They tend to hang out and talk to one another so they are like a tornado running down the beach. Basically they are a commercial enterprise and should not be treated the same as an Owner with a dog or two walking on the beach.

-- Really tough enforcement of cleaning up the poop when it is in the sand.

-- If Central Beach is to be the main location then facilities for washing down the dog, bathrooms, etc. should be put into place -- when one's child wants to use a bathroom it is a long walk.

Respectfully,

Michael Austin

Correspondence: When people ask us why we moved to San Francisco from the East coast ten years ago, we always say "We did it for the dog". The much higher cost of living was worth the dog friendliness alone. We have had many amazing days hiking and walking along the beach admiring the beautiful scenery and watching our dog frolic happily, wagging his tail and making new friends along the way, leash free. San Francisco has a wonderful and responsible dog community. We are passionate about our dogs and will fight for their rights, since they cannot speak for themselves. But as much energy as we spend protecting the welfare of our animals, we also put as much thought into who we vote for, where we spend our money and what organizations we support and donate to. There are more dogs than children in San Francisco, yet dogs only have the use of less than 1% of the GGNRA lands. It is extremely disappointing that the GGNRA now wants to restrict dog's use of these lands even further. In all my visits to Crissy Field and Fort Funston, mostly on busy weekends, I have never witnessed any tension or incidents between off leash dogs. I have only seen residents and visitors, with or without children, of all races, speaking all languages and of all sexual orientations, co-existing and often bonding over the one thing we have in common, our love for the innocence of dogs. The GGNRA's DEIS

Dog Plan is more than unfair to one of the largest populations in San Francisco and goes against what the GGNRA was supposedly created for. There will always be irresponsible dog owners just like there will always be criminals in this world. But you cannot punish everyone for the bad deeds of a few. I encourage the GGNRA to rewrite the dog management proposal by not viewing dogs as the enemy but keeping in mind their needs to socialize and exercise, just like everyone else's and how they have enriched the lives of the residents of San Francisco whose tolerance and understanding make it the best city in the nation.

Correspondence: The proposed changes to the current situation appears to be draconian at many sites. Many sites have few documented instances of citations or problems arising from dogs off leash (e.g. Muir Beach), yet the preferred alternative and the other alternatives all severely limit the amount and quality of space available for walking dogs off leash but under voice control.

Additionally, those people who live close by to a current off-leash site would have to drive substantially further in order to access the few remaining off-leash sites in the alternatives being proposed, thereby increasing gasoline consumption and need. This is the wrong direction for change in energy issues and makes us even more dependent on oil.

Correspondence: Sirs, I am a forty year Marin resident and a member and donor to the California Parks Association. I have used Muir Beach regularly during that time. Since the 1980's I have walked my dog there. I did a recent 20 day survey to assess the use. Dog walkers represent greater than 70% of the use. On the usual cold windy day dog walkers represent 80 to 90% of the use. On the rare warm sunny day people bring their children and the dog walker

percentage drops to 50%.The people and children appear to enjoy the interaction.Dog walkers thus represent the majority of traditional users.Since this is a National Recreation Area,I feel the people should be allowed to keep their traditional use.I feel there are compromises that can protect the environment and use by the people.1.Walk dogs on leash only to the beach,dogs allowed only within 100 feet of ocean.2.Dogs allowed only before 10 A.M. and after 5 P.M.3. Dogs banned during Salmon spawning.4.Another solution devised by the Park Service. I realize any of these solutions may be more difficult to enforce but if it is clearly signed and there is a significant fine I feel the people will obey the rules. Sirs, please preseve the major use of this beach.

Hayden O. Evans, M.D.

Correspondence: I am very discouraged to hear of the GGNRA plan's to revoke off-leash dog walking within the GGNRA. It has been a very special part of my life here to be able to take my dog on beautiful exercise runs in places like Fort Funston, Ocean Beach, and Chrissy Field, and it is part of what has made San Francisco a very special place for dog owners. The GGNRA is not a national park, it is rather a recreation area that must be able to accommodate the needs of the city's residents. Boo to you, GGNRA, for towing an official line that doesn't seem to be hurting anyone, and that brings great pleasure to a great many residents. If this happens, I will no longer hold the same respect that I have had in the past for the National Park Service.

Correspondence: I found out about this from a friend and would like to see less off leash dog areas and enforcement of the leash and no dog areas. I was told that if I get bitten or in any way harmed by an off leash dog in an off leash park, most of the time the dog owner can get out of paying for my medical bills. This is completely unfair. This means that I can't go to off leash areas as I'm not willing to take this risk and I think if others knew about this, they wouldn't take the risk either. I also really want to know exactly where these areas are, so that I can avoid them in the future. I see off leash dogs everywhere right now, so I'm assuming the entire GGNRA is off leash at the moment. I

looked at the maps for the preferred alternative and the space for off leash dog walking seems ok. These are some of the nicest areas of San Francisco, but it looks like there will still be some nice areas that are not off leash. I'm annoyed that I won't be able to go to the off leash areas, but I'm ok with giving up access to that space (and no more) for the well-being of dogs.

Correspondence: Frank Dean March 11, 2011 Golden Gate National Recreation Area Building 201, Fort Mason San Francisco, CA 94123-0022

Dear GGNRA, The following letter represents my concerns with the new proposed Dog Management Plan issued by the GGNRA.

I have been a resident of San Francisco for over 14 years and I am currently a homeowner in the Outer Sunset Neighborhood. I consider myself an active concerned citizen with regards to our environment and especially towards the beautiful parks and reserves that make up the Bay Area. Typically I stand behind any movement to improve our open spaces and increase protection of such valued lands. Your current plan however for dog management has major flaws that I explicitly object to. I chose the area in which I live specifically because of the open areas allowed for off leash Dogs. Both Fort Funston and the already small areas of Ocean Beach are such valued treasures to my lifestyle as well as to my dogs lifestyle that if they did not exist I would seriously consider moving. The Bay Area's off leash dog parks and areas should be models for other cities to follow not ones to abolish. Why are you trying to take away such a cherished component of city living? In your messaging you state "Action is needed because under current conditions, park resources and values could be compromised to the extent that, without action, these resources and values in some areas of the park might not be available for enjoyment by future generations."

We have had a very effective plan that has enabled 30 years of enjoyment for generations of people, children, and dogs. Your proposed plan directly eliminates the enjoyment of these areas by future generations by disallowing them to go in them. Dogs contribute to a healthy lifestyle they inspire activity, community bonding and for many people are the only companions that exist. To take such a drastic measure and further reduce the already meager 1% of land available for off leash dog enjoyment is not only a lazy irresponsible measure its embarrassing. As a citizen of the Bay Area I am deeply disappointed that an organization such as yourselves who used to have my respect now holds my suspicion. What are the main motives of

your stubborn efforts to eliminate responsible off leash dog areas? Do you wish for more funds? Why not ask or propose a fund to compensate for the so called "reduced resources" that you state. As a dog owner I would pay for the use of the land for me and my dog if that is what things have come to. You also state " a dog management policy inconsistent with NPS regulations and increased public expectations for use of the park for dog recreation have resulted in controversy, litigation, and compromised visitor and employee safety, affecting visitor experience and resulting in resource degradation" Dogs are not causing these carefully worded statements. Poorly run governments with reduced funds are. Why not solve the homeless population problem or the cruising problem near the soccer fields of Golden Gate Park or the selling of drugs at the Ocean Beach Parking lot? I am afraid to go in these areas during daylight hours due to human activities and the dangerous element that they attract. I have never encountered these fears in any of the proposed areas of your plan and I am never afraid dog or no dog to walk in these areas. If I walk into an off leash dog area that is posted as such and I am afraid of dogs and I get bit then shame on me. I don't expect my local parks and recreations department to pay for any repercussions that may result from my presence in there. This is why we have a judicial system. Let it solve the problems of litigation and controversy. I do however expect you to police illegal activity, why stick with what is illegal already and leave dogs alone.

If there is truly an "environmental impact" that is caused by dogs I urge you to try to work with and come up with a fair solution between the group of people (the dog owners as well as the non dog owners) that you are so directly affecting with this poorly conceived overly restrictive plan.

Be an inclusive, reasonable, responsible organization not an oppressive, restrictive, arbitrary one. There are other issues you can solve and cause a direct benefits to your lands than by making it illegal to walk a dog off leash in an area that it's been legal to walk a dog in off leash for 30 years. Thank you for your time.

Regards, Heather DeLoughrey San Francisco, CA 94122

Correspondence: I am a native San Franciscan. I raised my daughter here, in North Beach, and currently help to raise my 3 and 5 year old granddaughters here in the same neighborhood. And, I have always been a pet owner. I have enjoyed the beaches and parks extensively, raising my daughter on them after school and on weekends. Crissy Field has for decades been a destination of ours, as it continues to be today. For children the beach is peaceful and safe, and is the only beach venue in San Francisco that children can stand in the water without fear of treacherous waves and undertow. However, our 'enjoyment' has been diminished by the population of dogs on the paths and on the beaches. Commercial dog walking--which has become a most lucrative venture at around \$20 an hour per dog -- has impeded our family's ability to enjoy our public space. Some walkers are 'in charge' of 10-11 dogs, who are off leash and galloping along madly, easily able to tackle and topple little kids. My granddaughters are fearful of the large packs of dogs, and the dogs sense their fear and then the dog panic becomes contagious; dogs growl and are poised to attack. Having to navigate this potentially dangerous situation is stressful and frankly, very upsetting. A further concern for health and safety is the urine and feces that is halfheartedly picked up. Understandable, because how can one walker meticulously clean up after 10 dogs, no matter how conscientious? [even if they are making \$200 an hour.] Management of this situation is absolutely crucial. I support the proposed regulations but would beg for more stringent ones: a) limit the number of dogs to the walker, to 3 dogs per walker; b) certify/license dog walkers; c) enforce IRS and State income tax requirements, and SF City&County business license fees; d)do not allow dogs to roam free at any point on the Crissy Field beach, for the reasons stated above [Crissy beaches are the safest beaches for children; children should be provided priority access and protected from dogs.] e)fence in other non-beach area selected for dogs to roam off-leash; f)conduct close monitoring of dog walkers and ticketing walkers who fail to meticulously clean up after the dogs. Thank you very much.

Correspondence: Off leash dogs should not be allowed in the GGNRA. Dogs destroy plants. I

have plants outside my house in San Francisco. Owners who have their dogs off leash don't pay attention to what their dogs are doing. They destroy my plants and I have to replant about once a month. I have also seen dogs off leash doing the same thing in the GGNRA and I imagine there aren't people or resources to keep replanting in the GGNRA.

Correspondence: Dear Park Managers:

I write to support the preferred alternative for dog management.

As I see it, there are significant groups of people whose enjoyment of the off-leash areas of GGNRA are severely impacted by free-roaming dogs. It's not right that their use of such areas should be prevented or inhibited by people's pets.

First are the blind who use service dogs. Service dogs cannot function properly when off-leash dogs are frolicking around, so my blind friend (and other blind people) can't use those portions of the park.

Second are small children who can easily be knocked over by romping dogs, are frightened by large groups of dogs running around together (as happens when dog-walkers bring many dogs in a group), and can be seriously traumatized by being bitten, scared or knocked over. It's been my experience that some dog owners fail to stop their animals from jumping up on people, adult or child; they simply don't see anything wrong with such behavior.

Third are runners and cyclists, who get tripped up and sometimes injured by dogs that run right in front of them. Some dog owners speak sharply to runners, saying that of course a dog will chase a running person, what do they expect? This is not right.

Fourth are endangered species in the park--snowy plovers and others--that get chased by off-leash dogs. We need to encourage the survival of threatened species, and dogs--as your own studies show--are detrimental.

Moreover, it's been my experience in more than 30 years of running, biking and walking in GGNRA that "voice control" is as real as the tooth fairy--a nice idea, but doesn't really exist. No plan that results from this process should contain the words "under voice control." If you don't believe me, go out to an area where dogs run free and ask the owners to call their dogs in.

Watch how many obey....

In conclusion, some dog owners seem to believe that GGNRA is obligated to provide them with space for free-running canines. This is not part of the park's mission. If people want to own dogs that need to run free, they should go to dog parks set aside for that purpose. Their convenience should not take precedence over that of the blind, the very young, athletes and endangered species. I hope you will see beyond the noise, demonstrations, signs, costumes and appeals of those who oppose the proposed new regulations: just because they are more vocal and more organized doesn't mean that their arguments make sense.

Sincerely, Eve Pell

Correspondence: Dog owners often complain about having no space for their dogs to run off leash. They say there are a lot of dog walkers in the bay area that want to use the GGNRA. I wasn't aware that having a dog put them into a special category that means they get land devoted to dogs. If they really wanted to share space as they often state, then they would advocate for more on-leash shared space. But this is not what they want. They want land just for themselves. As they are aware, on leash areas drive other visitors (like myself) away. I am even driven away from on leash areas due to the large number of off leash dogs in on leash areas. Runners can not run in areas with off leash dogs because dogs run after them and also often dart in front of them and cause them to stop running. It is very disruptive and makes it impossible for off leash dogs and runners to share the same space.

If the GGNRA is going to have any land that is for off leash dogs than there should be land just for people who enjoy the same recreational activity that I like. It is only fair. I am a runner and a hiker. There are at least as many and likely many more runners and hikers (without dogs) than there are dog walkers that would like to use the GGNRA. I would like to see 5 mile (or more) uninterrupted trails for runner and hiker use only. That means no dogs at all. I am particularly interested in at least one five mile trail in SF, one five mile trail in marin and one five mile trail near to palo alto. I am not asking much. The total area of those trails would still be way under 1% of the total land in the GGNRA.

Correspondence: I live in Larkspur California next to Marin County Open Space District land so I am very familiar with the entitlement of dog owners, particularly the ones who claim to have their dogs under voice control. It is a narcissistic conceit held by two thirds of the lazy dog owners I encounter on the trails. They call fruitlessly to their dogs as their dogs have barked and chased and jumped on me as I run or bike. When I express terror, they claim that their dog is only a puppy or is really very friendly or some other excuse which doesn't fix those moments of terror or those falls caused by avoiding their dog or the ruining of my outdoor experience just so their dog can run free. There is one third of dog owners I've encountered who see me coming along a trail and wisely call their dog to their side or leash their dog if they are not sure that their dog won't get in my way. Those owners I always thank. The others get angry and hostile and profane when I suggest their voice control is lacking and a leash is called for. By the way, all the trails I'm referring to require dogs be leashed, but that rule is openly ignored by dog owners as various as parents with young children all the way up to elderly owners. Enforcement is nonexistent and the law is openly flouted.

I must admit I am so very tired of the attitude that a dog's freedom is the most important thing on trails and outdoor lands, more important than anyone else's enjoyment, more important than any other species of animal or plant. I am tired of seeing native grasses dug up by dogs on our GGNRA beaches and our native birds being endlessly chased by off leash dogs. I am tired of all the dog waste left behind either in or out of those commonplace plastic bags. Every trailhead in Marin near a neighborhood reeks of the smell of dog waste.

I would love to see the GGNRA buck the trend of kowtowing to loudly entitled dog owners and just say no and then enforce it. I would love to have some trails and beaches off limits to dogs and the rest requiring leashed dogs because voice control is in the entitled lazy mind of more than half of the dog owners. You and I both know that's true.

Correspondence: I visit Mori Point at least 5 days a week. I love dogs, but I support prohibiting them completely from Mori Point for the following reasons:

- Some pet owners cannot control their dogs from impacting wildlife, even when they are on a leash. I saw a woman lose her dog off a leash and subsequently the dog chased a fox up and down the hill adjacent to the

Bootlegger stairs, obviously exasperating the fox and potentially harming it. I saw a woman with a dog on leash, let the dog trample into the pond where red-legged frogs were clearly present.

- More than a few dog owners do not clean up after their dogs. If owners were so convicted as to allow dog-walking there, it would be reasonable to pick up after someone else's dog in the interest of maintaining the privilege of walking their dog there. I have never seen this happen. The potential for disease to impact native wildlife is obvious.

- There are migrating birds, at least two are threatened species, which are not listed in your report. I have seen Phalarope and Terns in the Mori Point area, and of course, I have seen dogs harass both. Furthermore, I have seen dog-owners play fetch into the areas where these species are inhabiting.

- There are well-known studies (http://www.dfw.state.or.us/wildlife/dog_training/docs/dogs_MT_wildlife_society.pdf) which prove the negative impact of the presence of dogs, leashed or not, on an ecosystem.

- While Sharp Park is not a GGNRA land, it is adjacent to the Mori Point area. Within days of a fence being erected to keep dogs out of prohibited areas, dog-owners, who often use Mori Point as access, broke the fence so they could put their dogs off-leash in those very sensitive areas. NEVER have I seen this area enforced, even after several phone calls, because it is under San Francisco jurisdiction and will never be patrolled for enforcement.

- Ticketing does not result in the decrease of dogs off-leash in prohibited areas. I know more than a few people who have received tickets, but do not change behaviors, except to leash their dog if they see an enforcement agent. With budget cuts, there are even less enforcement agents available, albeit the potential for revenue.

As someone who witnesses the heart-breaking impact of dog-owners on the very few areas where wild animals and plants can exist, I beseech the GGNRA to prohibit dogs from Mori Point. Those plants and animals at Mori Point do not have a voice to counter the boisterous entitlement of dog-owners who have many alternative areas to go, but it is my hope that GGNRA listens to those who try to speak for their welfare.

Sincerely, Summer Lee

Correspondence: One of the biggest surprises to me in becoming a dog owner, was my increased awareness and love of our local park resources. In fact, I almost felt like had become part of a secret society. As a non-dog person I only went to Fort Funston once, and that was because of the reputation for sand dune sliding (an activity that I'm convinced does more harm to the environment than the dogs ever could). I appreciate that the park system is looking out for the little birds that don't have a strong group of supporters advocating for them, but I am not convinced that more regulation of dogs and their owners is the answer and think that it will do more harm than good.

Current policies are not posted clearly or enforced. I have never seen a ranger at Fort Funston and I've been there almost three times a week for the past year. It is not clear where leashes may be required and where dogs shouldn't go (are those ice plants between the parking lots ok? The hanglider walkway? It's not clear). Crissy Field is actually really nicely marked with an explanation of the birds that the restrictions are there to protect, and I've noticed that dog owners are respectful of those restrictions.

Another situation that I've noticed taking an increased toll on the parks is an increase in unprofessional behaviors from dog walkers. I would argue that requiring a dog walker registration and limiting the number of dogs per dog walker would be a huge help in protecting our parks. I've witnessed dog walkers accidentally leaving a dog at the beach, missing lots of poops, abandoning a blind dog at the top of the cliffs, and more, all when they are obviously caring for more dogs than one person can possibly keep an eye on, which creates tension and frightening moments for people and dogs outside of the pack.

What concerns me most about the proposed policy, is the suggestion that further restrictions on dogs will become easier to make without public input. It is hard to imagine the toll that our government cuts are taking on the sustainability of our parks system. It appears that in many ways this approach to limiting use and limiting public input is a response to that. But is it short-sighted? What is the point of preservation if citizen's use is so severely limited that nobody cares to contribute to its preservation?

Correspondence: Hello,

I am a parent and a san francisco resident for 19 years and a dog owner. And

I strongly oppose this new plan to curb off-leash dog use in the GGNRA. In my opinion and in my experience, dogs become calmer and better socialized when they are regularly exercised with their owners off-leash in large open areas. Dogs that are cooped up all day, whose exercise amounts to a couple of short walks on leash through the neighborhood, and occasional visits to a dog park which will be cramped and chaotic are not happy well-adjusted dogs.

We already have a city filled with dogs. A third of us are dog owners. This is how we have chosen to live as a society, we allow pets. And as a society it is our responsibility to care for them. Their needs are important, as important as snowy plovers and having public space that is free of dogs for those who don't want to interact with them. Protecting the land and protecting the safe public use of that land is our duty. It is also our duty to care for our dogs. And if we want to live with happy, well-adjusted, friendly ones then they need be allowed large public areas of off-leash use.

The DEIS would not only further restrict what is already less than 1% of the entire GGNRA, but the "poison pill" included in the bill would virtually guarantee the complete elimination of off-leash use. It is unavoidable that there will always be some misconduct on the part of a few irresponsible dog owners. And those few incidents would allow the GGNRA to eliminate all off-leash use. It is a gross over-reaction to punish all the dog owners and their dogs for the negligence of a few when the vast majority of dog/people interactions in the GGNRA are entirely positive. In fact, most of the dog related incidents in the park are simply citations for dogs off-leash in restricted areas. Hysteria over dangerous and damaging interactions between off-leash dogs nature and the public are drowning out the clear benefits of all dogs getting room to roam. Responsibly exercising your dog off-leash in open spaces is what allows all of us to live with friendly sociable dogs. Restricting that will cause a glut of more troublesome dogs crowding out small inner city parks and play spaces.

My dog and I run trails. And I would especially like to make the case for trail use and off-leash dogs. The only trail that is even barely long enough to run is Land's End. And running trails off leash is much safer and more enjoyable for the both of us than when tied to each other, plunking along city streets. We have never had any negative interactions with people while doing this. He stays with me, follows my commands, and I pick up after him and watch him because he is my responsibility and I like so many other San Franciscans am a responsible dog owner.

The natural beauty of San Francisco is one of the biggest reasons to live here. We protect our open spaces and make them accessible. But with only 1% of GGNRA available to off-leash dogs, and almost no open space in Marin, why should we even consider restricting off-leash dog areas further?

It will make the outdoor spaces far less enjoyable for dog owners (a third of San Franciscans), and the many, many people who are not dog owners but still like having them here. It will make for crowded, poop-filled, over-run inner city parks. And it will make for more aggressive and less sociable pets. The DEIS is a giant over-reaction to a very small problem. One that is not good for dogs or people.

Correspondence: I am *very pleased* to see the continuance of ON LEASH requirements for dogs in almost all NPS trail areas. I did not see Mori Trail (not confused with Mori Point) listed but maybe it is already established as ON LEASH only which is just fine with me. Unfortunately there are no bad dogs, only bad owners. My small dog (25 lbs) and I have had numerous encounters with off-leash particularly larger dogs in on-leash areas (e.g. Mori Trail) that required me to pickup my dog to avoid him being attacked -- literally one lab mix attacked ME to get to my dog. The owners invariably state that their dog "just wants to play." I'm not sure which dog behavior school these owners attended, but any dog presenting raised hackles and bared teeth does NOT want to play. I have also seen dogs (both on and off leash) have barking/aggressive encounters with both bicyclists and horses (Mori Trail). I have also been attacked without my dog at Fort Funston -- the dog packing at Fort Funston is so far out of control that I'm surprised the NPS hasn't been sued.

I am very very very much in favor of leash laws in any park/public area, whether it be NPS, city, county, or state.

I heard about this public document from the posted sign at the trailhead.

Correspondence: I believe that all areas of the GGNRA should allow dogs, and allow them on voice control - no leash required. Education should be planned to educate owners about their surroundings in various areas of the park so that owners can act responsibly and keep their dogs on trails or next to them, with the use of voice control.

Correspondence: Dear Mr. Dean,

I am a frequent user of Baker Beach and would like to voice my support for Alternative A for Baker Beach (Map 12-A:Baker Beach). I have two dogs of my own and am sometimes providing foster care for a third through the SPCA. Baker Beach is a great alternative for me because I am a runner, usually running about five miles a day, and at Baker Beach I can accomplish this while simultaneously exercising my dogs. Baker Beach is uncrowded, and has great wide open spaces for dogs to to run and play without interacting with any wildlife or fragile plant life, more so than any other beach I am aware of in the area. My dogs are under voice control, but on Baker Beach they can proceed at their own pace, stopping to play with other dogs and then catching up again, making the whole run far more fun for them and for me. Regular dog walkers at Baker Beach are very careful about picking up their own dog's waste and any other waste that they see. I believe Alternative A takes into account the needs and interests of the majority of recreational users of Baker Beach without having a negative impact on any of these users, or perhaps more importantly, the environment.

Thank you, Sally Shapiro

Correspondence: Thank you for the hard and careful work to provide appropriate access to this regional treasure. I support the NPS preferred alternatives for dog management. Though now a senior citizen I have raised children, owned a dog and hiked in GGNRA for many years. I would not consider taking my dog into most of these areas.

I think you have identified the key issues and provided a balanced plan which protects the flora and fauna which use these open spaces and make them so unique. I want the ability to observe the birds, sketch the views and plants and feel safe. I fear for myself and children being knocked about, nosed and licked by frolicking dogs because I have seen this happen. Having approved areas where I can choose to be or not to be around dogs meets my needs. Thank you for the opportunity to comment.

p.s. I thought it was weird that your question about how did you hear about the document didn't let me choose TV. That's how I heard about the EIS being ready for comment.

Correspondence: Summary:

1. Dog walkers should be admitted to ROLAs for a fee, if they can demonstrate voice control by calling their dogs from a reasonable distance.
2. ROLAs make sense only where the vegetation is already degraded, such as lawns or expanses of introduced weeds, and in parking lots.
3. ROLAs must be clearly marked and get extra cleanup.

Discussion:

The National Parks are national, so people who happen to live nearby do not really rate more say in making rules than people who don't. The parks are here to preserve all Americans' natural resources and, secondarily, provide outdoor enjoyment and education. Since dogs need contact with nature and other dogs, it is only humane to allow some dog walking, but as a privilege, not a right.

Any healthy dog allowed to run off-leash is going to chase, dig, excrete, and otherwise damage the park on every visit. Most owners are careful to clean up pet feces when they can, but not all is removed, and there's no cleaning up urine. In addition, some overestimate their voice control. Too often I've seen dogs rush around a newly-planted area digging holes, chasing mice, and relieving themselves, while the owner shouts the dog's name to no avail.

Correspondence: As I San Francisco resident, I am offended to not be part of the "special class" that is apparently off leash dog walkers. Why do they get a special area to recreate? Having a dog is a choice and thus they should not be

treated like a protected class, especially at the expense of real protected classes, in particular the disabled and blind. If the GGNRA wants to make/continue to have any off leash dog walking land, then there must be land designated with signs for other recreation. I want to see hand glider land, runner land, bike land, walker land, bird watching land, plant observation/appreciation land, land for meditation, land for yoga, land for the disabled, etc (I am probably forgetting a lot of different recreation groups). Obviously this land would not be closed to people enjoying other recreation but rules must be put in place in each of these areas. For example, in the meditation area, no talking or making noise would be allowed. In the runner area, non-runners must stay to the left. In the bird watching land, no yelling or making loud noises. And in the dog off leash area, no complaining if dogs run up to you, nibble on you, lick you, disturb your activity or otherwise cause you harm. Again please create space designed for many types of recreation that happen in the park. Alternatively, if the GGNRA is on leash only and dog free where environmentally indicated, then it is fair to have the land be multi-use.

Correspondence: I am writing to oppose the proposed GGNRA Dog Management Plan. I am a long-time resident of San Francisco. My friends and I have been responsibly walking our dogs at Fort Funston, Crissy Field, Marin Headlands and other locations in the GGNRA for many years. Our dogs are always either on-lead or under voice control.

I am a long-time environmentalist and strongly support laws and regulations that protect the environment, just not this one.

Daily walks with my friends and our dogs in the GGNRA is an important part of my social life. It also plays a major role in my exercise program for

keeping healthy.

Wildlife in the GGNRA needs protection but the proposed GGNRA plan is too extreme. The San Francisco Bay Area is a heavily populated urban area where multiple needs have to be balanced. The proposed GGNRA plan does not sufficiently protect the needs of the people who regularly use the GGNRA.

I am writing S.F. Representative Nancy Pelosi, Senators Boxer and Feinstein plus the San Francisco mayor and board of supervisors and urging them to actively oppose this extreme proposal.

Best regards, Lynn MonSanto

Correspondence: While I feel that environmental protection is VITAL to our way of life I believe that the proposals here are unfair to the vast amount of dog owners in the Bay Area. There have been problems with dogs; dog walking groups and ugly people, but there are confrontations of all sorts anywhere we humans congregate. Often they are far more severe involving PEOPLE WITHOUT DOGS! I do agree with the proposal requiring permits for groups larger than 3 dogs, as I do feel that the groups/packs can be a bit too much(at times). I do STRONGLY believe that to punish the individual dog owner who enjoys a hike; jog or just a walk with their beloved friend is SO UNFAIR!!!! As far as people not wanting to be around dogs there are MANY MANY areas where they can enjoy themselves that do not allow dogs at all. So in fairness to all there MUST be a solution that will agree with all residents (human, canine and equine alike)of this beautiful area. On another note, where is the concern for the environmental impact of HUMANS and their garbage, bottles, cans, DIAPERS and various other debris left behind by PEOPLE! Thank You

Correspondence: I am an older, somewhat disabled dog owner, with a therapeutic need for a dog. I work full-time, pay more than my fair share of taxes, and respect the environment tremendously. I compost, recycle and have even adopted 4 children from the foster care system, so great is my interest in a sustainable world. All my dogs have been hard-to-adopt, meaning larger sized.

I need to have off-leash, dog-walking areas in some part because it hurts my back to be pulled by a dog on a leash. I wouldn't be honest if I didn't say that I also think dogs need to run and play un-fettered and I know from experience that dogs can be trained to follow oral commands and not interfere with other wildlife.

I promise to do my part to make sure my dog(s) leave other species alone--and of course, clean up after the dog(s)--and would like to ask you to leave off-leash dog areas so that people like myself can have dogs in our care.

Thank You.

Correspondence: I'm not a dog owner. I do enjoy regular strolls at Chrissie Field. No matter what mood I'm in when I arrive, I leave happy to be alive. The sea and the sky are great spirit boosters...but the best mood elevators are the (off-leash) dogs. Their joy is contagious. They are sometimes graceful, sometimes goofy, and for the most part, wonderfully welcoming. They often lope up to me, give me a friendly sniff, and then proceed to entertain and amuse in countless ways. It seems to be that the contested beach and park areas would be much less exuberant places without the bounding/boundless spirit of these creatures. Yours truly, Marny Hall

Correspondence: I want to say I appreciate your doing this survey. Please put me down as a park visitor who is adamantly against having dogs, on leash or off, in our parks. At Fort Point and Chrissy Field, as in Santa Cruz, I have encountered more examples of rude, self-righteous, law-breaking individuals walking dogs than I care to remember. First off, there is no such thing as a leash only area for dog walkers. Any area that is designated as such is a joke. I have never met a dog walker who, when no one is looking, can resist the temptation to remove the leash and let his/her dog run loose. In Santa Cruz the off leash dog advocates have clearly stated in their website, folf.org, that their followers should always carry a leash, but only use it when there are no rangers in sight. As soon as the ranger appears, they put the leash on until he is gone. This behavior is not peculiar to Santa Cruz. I believe the off leash advocates in San Francisco are even more recalcitrant. Voice control, as I

have seen it practiced in GGNRA, is a complete hoax. Having dog owners yelling at their dogs with no apparent effect is almost as disturbing as the out of control dog itself. Most dog owners I've witnessed at GGNRA have no concept, let alone ability, of how to train their dogs. Many dog owners, because of their small stature or youthfulness, or temperament have no ability to control their dogs even when they are on leash. Typical of this is the teenage girl with a pit bull on leash. Not even close to being able to control such an animal intent on taking down its next victim. These behavior short-comings are only one element in the matrix of dog/human interactions that result in people not going into our parks such as GGNRA. Nobody wants to go to a park and be faced with the uncertainty for their own safety that is posed by a poorly or untrained dog in the hands of a defensive, untrained human. When the dog in question is a labrador or collie it is one thing, but when we are talking about the ever-present pit bulls and rottweilers and dobermans then we have a legitimate life-safety concern. Talking about people who might be afraid of dogs, as though it is some phobia on their part or psychological short-coming, is an insult to ones intelligence. Meeting people while walking in the park who are carrying air-soft guns would be the equivalent of meeting toy poodles or chihuahuas. Running into pit bulls or rottweilers is like going up against people with AK-47s or Mac 9s. Injuries in the latter case could be life-threatening with broken bones, lacerations, etc. Anyone who is not afraid of fighting off one of these dogs is fooling themselves. As far as the environmental degradation goes....well, where does it stop? When the dog excrement is bagged, if it is even picked up, and then dropped in the garbage for transport to our landfills....shouldn't this material be going to the sewage treatment plant? When did it become alright for us to put human or animal waste into our landfills? Why are our beaches and parks, such as the GGNRA, subjected to constant inundation with canine fecal material and urine. I, for one, am sick of the stench of urine and feces at the beach. Is this where we want our children to play in the sand....where some dogs have been doing their business day in and day out? What about the effects of the feces-borne pathogens, and there are many of them, that become part of the habitat of our otters, seals, shorebirds, fish, etc.? I frequently witness, both at home and in the GGNRA, the dog owners who don't think anyone is looking so just walk away from their dogs poop pile. Or the ones who bag it and then just leave the bag of feces there on the ground for someone else to pick up. It is really way past time for responsible law enforcement to step up and slap these people with stiff fines on the first offense. I've watched these apologetic, half attempts to influence the dog peoples behavior with field contacts and warnings and educational encounters. It is pretty obvious that it is not working. In fact, behavior is getting worse because there is no penalty. Enforcement needs to be swift and sure. These parks are for people, not people with dune buggies or motorcycles or fireworks or guns or dogs. And since dog people seem to be unable to live with rules designed to protect other users from the excesses of their furry friends....they should be

excluded entirely from the GGNRA. Your idea of converting on leash only sites to no dogs at all when failure to abide by the rules is the norm strikes me as very effective. It eliminates the hide and seek merry-go-round between law enforcement and dog owners who only use their leashes when the ranger is in sight. Penalties should also escalate with repeated offenses. I'm not going to live long enough to ever see all the dog owners reach the point of obeying the law without being forced. This fight has to begin soon. Please take effective action as soon as possible to make our parks the enjoyable, stress-free, safe and healthy places that they were intended to be. If some provision for dog recreation must be provided then the only acceptable solution is fully fenced enclosures. This is the commonly found solution in most of our major metropolitan areas and it ensures the safety of the dog people and their pets while allowing the majority of park users to fully enjoy their park experience unfettered by unwelcome canine advances. Fences should be at least 4 feet in height. Once again, thank you, for this opportunity to express my feelings on this highly emotional topic.

Correspondence: I am in full support of the proposed leash requirement to protect GGNRA. As a long time home owner in Mill Valley, I and my children had encountered many unpleasant incidents with unleashed dogs at Muir Beach, Rodeo Beach, Stinson Beach, and at areas along SF Marina. These incidents prevented our family from frequenting these areas for the last 10 years. We also had to erect a fence around our yard to protect our garden because of the destruction of our garden by neighbor dogs and commercial dog-walker dogs. I also work at San Francisco General Hospital where we treated children and tourists who sustained dog bites when they are visiting San Francisco Beaches. In addition, we must not forget that more than 500,000 ED and urgent care visits for dog bites are reported every year in the US. Dogs are good human companions but we cannot and should not expect that dogs will behave as human. It is unrealistic to expect unleashed dogs to know where to run and not to trample into protected/fragile lands. It is unwise to expect unleashed dogs not to disrupt a pleasant picnic or not to lick off foods from small children. Please make this leash requirement a reality to protect our parks and to bring back the pleasure of living/walking in this beautiful area of the US. Thank you for bringing this regulation proposal to completion.

Type:**Correspondence:** Dear GGNRA:

I am a 52 year-old homeowner, practicing attorney, and mother living in the West of Twin Peaks area of San Francisco. I have been a GGNRA member for many years and feel especially fortunate to live near this wonderful open space. I also regularly visit Fort Funston, where I have walked my Australian Shepherds for over 15 years.

I support the maintenance of the status quo. Off-leash recreation is not just for dogs, but for people, too. Walking at Fort Funston provides essential, easy exercise for me, my daughter, and her friends, as well as for my well-behaved, well-trained dogs. In particular, closing off the area north of the water fountains -- the path that goes downhill and back uphill in a loop -- would be a terrible blow for walkers and seems tangential to the maintenance of wildlife and indigenous flora. And dog walkers respect the boundaries that now exist in that part of the park. For instance, when the Park Service fenced off a portion of that area many years ago to protect native plants, people kept (and do keep) their dogs out.

As I understand it, Fort Funston was given to the National Park Service years ago with the proviso that the area remain open to off-leash recreation. It should remain so.

Thank you --

Margaret Murray

Correspondence ID: 1256 **Project:** 11759 **Document:** 38106**Received:** Mar,14,2011 12:10:55**Correspondence Type:** Web Form**Correspondence:** This is a devastating idea. Crissy Field is the ultimate destination for dog-owners all around the city, and closing its off-leash privileges would leave the city destitute of one of the only places around where our furry family members can run free. Not once in my 4 years of living in SF and bringing my dogs here daily have I ever heard of a complaint from other beach-goers about off-leash dog behavior. The reasons for this seem completely unjustified, and the loss to the city absolutely devastating. On behalf of the many, many dog-owning residents of this city, I beg you to reconsider. Thank you.

Correspondence Web Form

Type:

Correspondence: Every weekday, around noon, I find myself cursing my clients' legal departments and barking at them over email. I am a self-employed marketing executive who left a corporate job in San Francisco to work from home in Montara, and be near my dogs. My job is very stressful; I work with CEOs and VPs of Marketing at busy corporations, and there is always more to do than any day allows. About the time I put my head in my hands out of frustration, my golden retriever Taylor, 3, jumps up, puts one paw on each of my shoulders, and gives me a kiss on the face. It is his way of saying, "enough stress, let's go for a walk." And out we go.

We walk out our door of our house on 4th street, turn right on Main, and walk two blocks down to the entrance to Rancho Corral de Tierra. The second I take the leashes off Bailey and Taylor, they begin to frolic, and I begin to smile. They chase balls and carry balls, they greet visitors, and they model a carefree and stress-resistant life for all the humans who see them. For me, this elicits my first (and often only) smile of the day. It is my form of exercise. It is my meditation. It is my joy.

I taught myself to run on these walks with my dogs. I taught myself to monitor my heart rate. I taught myself to hike. Or rather, my dogs taught me to do these things. They guided me. They helped me reclaim my life while breathing in the ocean air and taking in the gorgeous coastal views. On the way, I lost 40 pounds.

And this is the reason I moved to Montara, the reason I moved to Northern California (from LA, Chicago and Phoenix). If you take away the ability to enjoy nature, led by my dogs, I will most certainly leave this state. I will certainly have to sell my property in Montara, as house prices will plummet, and it will no longer work for my lifestyle. You see, I have no children. My entire existence is built around my dogs. And this is true of nearly everyone who uses the trails in Rancho Corral de Tierra in Montara. We all moved here so we could walk our dogs off-leash in the beautiful natural surroundings of Montara.

Coexisting with Nature and Other Users

We often see a Great Blue Heron on our walks at Rancho Corral de Tierra, and my dogs co-exist with him very peacefully. He is never bothered by us, and we never bother him. This is nature working as it should, and humans being allowed to enjoy the environment they live in. This is what I pay property taxes for.

When I walk my dogs at Rancho Corral and they are allowed to run off leash, they are my under voice control. When we see other people with dogs

on leash, I put mine on leash. When there are horses or people on bikes, I put them on leash. I have NEVER had a problem with anyone I have encountered on this trail in the TEN years I have been living here and walking my dogs each and every day. 3,650 times I have walked my dogs peacefully on these trails, with no negative encounters. We PICK UP litter and trash we see, and smile and greet every passer-by. It is a no-asshole zone ... and frankly the only one I know of.

Self Policing Community

Bill Bechtell has organized a fabulous community of responsible self-policing peers who reinforce picking up after our dogs and each other. We have photos of each other and our dogs on a website, so we know who the others are. There are weekend trail cleaning days, and self-maintained waste disposal cans and clean-up bags. Because we know each other, there is peer pressure not to let your dogs go to the bathroom without picking it up. **THIS AREA COULD BE A MODEL FOR HOW TO HANDLE THIS CONTROVERSIAL ISSUE PEACEFULLY, ASKING CITIZENS TO TAKE CONTROL**, or risk losing their rights. Our disparate land users (bikers, hikers, equestrians, and dog owners) all get along and share responsibility in self-policing the lands.

The Land

No scientific studies were done on this land to conclude that banning dogs is necessary. In fact, I bet you will do more harm to the environment if you ban dogs, because the pet owners will be angry and retaliative.

A complete ban on dogs is obviously extreme and would cause riots and mass exoduses. But your preferred Option D is also extreme. I would like to respectfully request that Alternative E be your preferred alternative for new lands. Alternative E states that "New lands begin as 36 CFR 2.15 (dogs allowed on 6 ft leash) and new lands with existing off leash use before acquisition may also be considered for voice and sight control in the future." This alternative is much less restrictive than your current preferred alternative.

There is so much space (tons of acreage) in Rancho Corral de Tierra. I hope you will consider that the percentage where we wish to walk our dogs is actually infinitesimal. Please think about creative multi-use solutions. Areas specified for off-leash walking. Or morning and evening hours for off-leash walking.

Public Comment?

And as for public involvement, our community has been purposely ignored

in this process. Without regard to the adverse affects on local residents, dogs are being banned because it is easier & cheaper for GGNRA. There was one public meeting, which I attended, a year ago in Montara. MANY dog owners attended -- it was amazing the large turn-out -- to voice community concerns and desires. But Park Service representatives refused to address the concerns of dog owners, referring us to the dog management plan and draft EIS under development .

Further meetings were promised; yet, no further public meetings have been held in our area. And the Montara Dog Group has never been contacted for input to the plan.

Nowhere Else to Go with Dogs: Montara

There is no community center or public park in Montara. For this reason, a whole community has formed around dog-walking: I have met neighbors I never would have otherwise. And people have moved here (myself included) specifically because Montara has a dog-friendly reputation.

I am sure you have read in others' comments the benefits of well-exercised dogs. A well-behaved dog is a tired dog. Plain and simple.

But the nearest off-leash dog walking area will be 15 miles north at Fort Funston beach. I will not have time to drive my dogs here during the workday. So dog interaction & socialization will be substantially reduced, and when considered in totality, this will produce a more aggressive dog population.

Montara residents will be forced to drive to parking lots at McNee Ranch or Montara Beach, and cross busy Highway 1 with their dogs, in order to access McNee Ranch, formerly a 10 minute walk through Rancho. Even more dangerous, Montara residents may elect to walk along Hwy 1 to get to McNee Ranch. A man walking along this route was recently hit by a car and severely injured, and his dog was killed. THIS IS NOT SAFE.

If dogs are banned from Rancho, hundreds of dogs will have to be walked on narrow rural streets with no sidewalks.

For all those reasons, I WOULD LIKE TO RESPECTFULLY REQUEST THAT Alternative E BE YOUR PREFERRED ALTERNATIVE FOR NEW LANDS.

With Great Concern & Heartfelt Request for Compassion,

Chelsea Hardaway Taylor Hardaway Bailey Hardaway

Correspondence: I lived in Mori Point area for over 33 years. My family love this are very much. And when we have our dog we always take them out for walk on Mori Point. We raised our dogs to be friendly and obeydience. We appreciate that GGNRA had re-adjust the whole Mori Point to be attractive for people from the other district too. Mori Point have attract many new people from all over the San Mateo county to come for walk, riding bicycle, even take their dogs for walk. Mori Point has bring lots of business for the local too. On top of that it brings up the value for our property. I would love to ask GGNRA to please consider leave Mori Point to be the open park for dogs so, they can run free and get good exercise and besides this park used to be open space for all the dogs and never have any regulation before. Please re-consider to keep this park to be the open park specially for the residence that live around Mori Point so we do not have to drive somewhere else to take our dog for walk.

Correspondence: Greetings,

As an avid GGNRA user and dog owner I sincerely believe that the Bay Area community is better served with the allowance of regular off-leash dog recreation.

Before adopting my dog 3 years ago, it was the rare occasion that I found myself using any portion of the GGNRA. But, I now routinely find myself at Fort Funston, Crissy Field, Baker Beach and Ocean Beach. The current off-leash policy is the sole reason that I spend so much time at these recreation areas. It is also the sole reason that I have discovered and enjoyed so much of the GGNRA. I have deep respect for these areas and am adamant about making sure my dog is well behaved and that I also behave in a responsible manner.

In the three years that I have frequented these areas I have not run into any more problems with dogs than I have with people. The beauty of the current arrangement is that there is so much space for everyone. I am certain that reducing the current allowable off-leash space will only create dog incidents.

Dogs are better behaved, less anxious, and happiest when they get appropriate exercise. I know that without appropriate off-leash activity I will not be able to properly exercise my dog. In addition, having this activity with my dog is one of the things I look forward to most. I believe that it creates a bond between myself and my dog that otherwise would not exist. While this is most enjoyable, it also helps reinforce trust between me and my dog...a benefit that helps my dog obey commands. On a side note - this type of recreation with my dog has helped me stay very active and fit.

I cannot fathom how the DEIS thinks that eliminating almost three quarters of the current off-leash space is a good idea. That would force the thousands and thousands of dogs and people into too small a space. Harmful dog incidents (as well as harm to people) are bound to arise. It's a proposal that is set up to fail. With all due respect, I take issue with one of the main arguments used for reducing off-leash and leashed dog walking, which is: "it is inconsistent with NPS regulations." In 1978, the GGNRA took the position that "the ordinary guidelines outlined in the Code of Federal Regulations do not really apply in an urban area," and that "people and their animals have been visiting the park for too long to apply an all-inclusive arbitrary policy." Based on that position, the GGNRA, with a great deal of public input, drafted what is now known as the 1979 Pet Policy, which maintains the right for recreation with off-leash dogs at Fort Funston, Ocean Beach, Fort Miley, Baker Beach, Lands End, and Crissy Field. It seems to me that overriding the 1979 Pet Policy is a breach of contract and will result in public distrust of the GGNRA management and leaders.

I believe that the interests of all GGNRA users will be better served leaving the current pet policy in place.

Thank you, Kim McCalla

Correspondence Type: Web Form

Correspondence: I have lived in the Marin Headlands for 13 years and enjoy running and hiking the beautiful Alta Trail near my home. However, over the years this trail has been fouled with dog feces and overrun with dogs, all of them off leash. At the trail head, there is now a large kitchen trash can overflowing with bags of dog poop. On a recent 3-mile walk, I counted nine plastic bags of dog waste lying on the trail, but not an owner of dog-walker to be seen. And, of course, there is also the dog crap simply left in the middle of the trail.

As a person who is not comfortable with dogs, it is frightening to have a

Rottweiler or a pit bull or even a 70-pound Golden Retriever charge at me. Even worse is meeting up with a dog-walker, often with as many as a dozen dogs, and find myself surrounded.

My understanding is that if these dogs are off leash, they are required to be under voice control and within sight, but this is not the case. Sometimes the owner or dog-walker is no where to be seen. If they are, and I ask them to "Please call your dog," they invariably reply, "Don't worry, he's friendly." I wonder if they would think I was friendly if I charged at them? Very few of these dogs are trained at all to come when called, and the owner just stands there shouting, "Baxter, come here. Come here!" Perhaps they do not know that dogs don't speak English.

Recently, I was attacked by a very aggressive dog that was off leash. It snarled and leapt at me, all the while the owner cried "Jacob, no!" and tried to pull him off. I was left shaken and with deep scratches on my leg. The woman actually told me the dog didn't like people without dogs and that he was "more aggressive when he's on a leash."

I'm sure it is wonderful for people with dogs to let them run free. I'd like the same freedom, and to be able to run without being harrassed by dogs. As I said, voice control is a joke. I think it's great to have designated off-leash areas, but I think Alta Trail should not be one of them. I support Alternative C.

Correspondence: I just want to say that I am wholeheartedly OPPOSED to all the changes you are suggesting. I don't agree with any of the Preferred Alternatives. I want things to stay they are - actually, I would like to ask for more off-leash space for dogs and their owners. I have 2 dogs and they love every trail, every beach and every park that you now allow them to run off-leash and play. They are well-behaved and we follow all the rules you have posted. I would like you to add more signs, such as ones that reminds dog owners that it is a federal crime to let dogs chase after migratory birds, and that they are expected to pick up their poop, and that aggressive dogs are not allowed and must be leashed. These ideas are much more effective and fair than banning all dogs or even restricting them. I disagree with your restricting dogs to parts of certain beaches and then asking us to keep the dogs on a leash. That wont work; my dog will think he is being punished. It would be a form of inhumane treatment NOT to let my dogs play and romp. This dog socialization and activity is key to their well-being and mental health. Same for the owners. The socialization and community building, as well as the

exercise, is a net benefit for the humans and the the dogs. Please reconsider these bad proposals. I frequent many of your parks and my dogs would suffer if these changes were implemented. Please leave the GGNRA open to well-behaved dogs and responsible owners.

Correspondence: I have a good friend who lives in the Presidio portion of the GGNRA. He has a beautiful chocolate lab that he walks daily in various areas of the GGNRA dedicated to off-leash access. On a number of occasions I've accompanied him and his dog for walks... never have we had a problem and we (humans and canine) would have our enjoyment of the park greatly diminished if the new harsher restrictions to off-leash access were enacted. Yes, harsher penalties and stricter enforcement for irresponsible dog owners... but please don't punish the responsible for the uncommon actions of the few who are irresponsible. Thanks, Steve King

Correspondence: I would like to voice my support for reasonable restrictions on dogs and dog walkers in our national park. Because of the sensitive nature of a national park, in terms of environmental and wildlife issues, it is common sense that dogs should be kept on a leash at all times while in our national park. In certain areas, where specific threats to wildlife or the environment exist, such as Rodeo Beach or Muir Beach, dogs should not be allowed at all. One of the most important roles of national parks is to protect our natural resources for generations to come, and unrestricted dog running is contrary to this concept.

Dog owners and walkers should be expected to conduct themselves in a responsible manner while in our national park. This means having consideration for other people in the park, keeping their dogs under control, and cleaning up after them. A disturbing trend that I have been seeing in the past few years is that dog owners are leaving small plastic bags of dog excrement alongside trails. It is great that they cleaned up after their dog, but then for some reason, they have the idea that someone else can pick up the bag for them. In a half-day hike in the Marin Headlands last month, I saw five of these plastic bags of dog excrement alongside the trail.

Another issue is that of professional dog walkers, who are using our park as

their business location. Dog walkers with as many as 10-15 dogs have become a common sight in the Presidio, and often none of the dogs are on a leash. The dogs are tearing through sensitive environmental areas, and are beyond the control of their walkers. Excrement is left on the ground, fouling habitat and causing a nuisance for other people using our park. Professional dog walkers should be required to purchase a permit for the use of our park for business purposes. Taxpayers should not be forced to subsidize their businesses. At the same time, a strict limit on the number of dogs they can walk at a time should be enforced.

Correspondence: I am writing to comment on the GGNRA Draft Dog Management Plan. I will get right to it, I am against the preferred plan to ban dogs from Rancho Correl de Tierra. Off-leash dog use should continue to be allowed, as it has for decades. Now I will address my thoughts as to why.

I am a homeowner and resident in Montara, as well as a dog owner, both for 9 years. The natural open space between Montara and Pacifica is the primary reason my husband and I decided to buy a home in Montara. We are both avid about spending our recreation time outdoors and living in Montara affords us the ability to enjoy the outdoors within a few blocks of our home. We hike and mountain bike regularly in Rancho Correl de Tierra, Montara Mountain, and the other adjacent nature areas.

We rescued our dog, Dusty, within a few months of moving into our house and have been walking/hiking with Dusty in Rancho Correl de Tierra for over 9 years now, off leash. We take owning a dog very seriously and are diligent at ensuring Dusty gets appropriate exercise. After all a tired dog is a happy dog. We walk Dusty everyday, twice a day. On average we walk him in Rancho Correl de Tierra 5 days a week, at least once a day. Dusty loves the walks in nature, the different smells, friendly sniffing with other dogs, and pets from other walkers. We maintain this walking routing despite the rigors of both being full time working professionals while raising a son, Cody, who is now 4 and a half.

Dusty is Cody's best friend, or as he refers to him "his brother". Cody is also an avid outdoor enthusiast. Cody has been going out to Rancho Correl de Tierra since he was 6 weeks old in his infant seat in my off road stroller. Everyday for four and a half months while I was on maternity leave the three of us (myself, Cody and Dusty dog) spent hours in Rancho Correl de Tierra hiking around. It was a fantastic way to spend time together and get

exercise and fresh air for all.

As I understand the GGNRA Draft Dog Management Plan, the preferred option for Rancho Correl de Tierra is to ban dogs completely from Rancho Correl de Tierra. This seems appalling to me. This would mean my walking my son Cody and my dog Dusty was a crime and I would be penalized for doing what I have been doing for over nine years. I think you are failing to recognize that Rancho Correl de Tierra is an area adjacent to a suburban area where residents have been walking their dogs off-leash for decades.

I have mentioned to my son, who is the ripe age of 4, that Dusty may not be allowed in the open space anymore because the new owners were not going to allow dogs. Cody's response to me was, "Why do they hate Dusty?" And, Cody went on to state that all the dogs out in the field (which is how he refers to the open space) are nice and play with him. When I heard this I thought "have you considered the message this will send to our youth, the future of this country".

I am a rather disgusted that the nature I work to preserve is potentially to be taken away from me and my family, and the rest of the residents of Montara. The dog walkers and Montara Dog Group are who keep the trails in good shape overall. We spend our own time, money and resources to keep trails clear, to build bridges, and assist with drainage issues. We police ourselves and the dogs.

This is one place that I feel completely safe to be alone as a woman, and to have my son run free because everyone is very responsible and considerate.

As an avid mountain biker I have lived the impact of being banned from nature trails and now you want to ban my dog too. I thought the whole point of preserving our natural spaces was for people to enjoy and be enriched by nature. Well, if the preferred plan is adopted: ? I will lose the ability to walk my dog without committing a crime. ? I will have to spend money having others assist with walking Dusty. ? Cody will have less encounters with nature and his appreciation will diminish. ? I will receive less exercise myself and become less healthy. ? My dog Dusty will receive less exercise and become less healthy. ? My son Cody will receive less exercise and become less healthy. ? I will limit or eliminate my contributions to the park system, afterall I am not getting to use it for what I want to use it for. ? I will not spend my own time, effort and money to maintain the trails. Will you?

No wonder society is getting more obese. People cannot even walk their dogs except on roads where they are subject to drivers who are drunk, texting, talking on cell phones or otherwise distracted.

Now, as I stated in the beginning, I am against the preferred plan (D) to ban

dogs from Rancho Correl de Tierra. Off-leash dog use should continue to be allowed, as it has for decades. In the alternative, do not ban dogs, but allow them on-leash and consider off-leash use or an off-leash area.

Correspondence: I am writing you to voice my opinion on making the GGNRA Dog Management Proposal.

I am AGAINST restricting off leash walking in the GGNRA's. There are few venues where I can run the dog without issue and the GGNRA included several of those venues.

There is not reason that these parks should be restricting dogs. If there are issues with dogs defecating or destroying property the owners should be heavily fined and not be allowed to ruin the parks for other responsible owners.

In this time of budget cuts and a tanked economy it is very concerning that money is being spent to restrict this activity..it just doesn't make sense to me and I want you to be aware that as a resident and MAJOR tax payer in the City, I am not in agreement with the proposal to limit dog access to any GGNRA land.

Thank you Stephen J. Reilly

Correspondence ID: 1266 **Project:** 11759 **Document:** 38106
Received: Mar,15,2011 16:11:44
Correspondence Type: Web Form
Correspondence: I have just one question. Why are you doing this?

Please don't restrict dogs from having dog parks. I don't even own a dog, but I know how important it is for dogs, humans, cats, birds, and the like, to have exercise. Please don't take away these dog parks, it's unfair to take away something you've already given. Dogs (and animals as a whole) create less of an environmental impact than humans -- in fact, humans create severe problems with their poor environmental planning, their fossil fuel wastes, nuclear plants, over farming, strip mining, oil using transportation vehicles (cars, planes), etc, etc, etc, etc (the list is endless).

At the risk of seeming rude, it would be nice if you could find more

substantive, logical, practical, and useful things to do with your time and the taxpayers money.

Correspondence: Greetings,

The GGNRA DEIS is a very troubling document. The impact of the proposed changes on the City of San Francisco seem to have been completely disregarded. No doubt the statistics have been quoted already. 100,000+ dogs in the City. Dogs need somewhere to go. Historically, we have had such wonderful places as Fort Funston and Crissy Field where dogs can burn off energy while their owners get a respite from City living and enjoy California's beautiful coast. What is going to happen to my neighborhood park, Alamo Square, when the amount of land available for off leash recreation within the GGNRA is drastically reduced? No where within the DEIS is this impact even considered. The GGNRA is an urban park and the impact on the surrounding communities when changing park access regulations must be considered. One cannot manage an urban park the same way as a rural park. Dogs, especially in San Francisco, are an urban reality and must be considered when proposing use changes within our open spaces.

Recently, because of the tsunami created by the earthquake in Japan, Ocean Beach, Fort Funston and Crissy Field were closed. This created a severe overcrowding problem at neighborhood dog parks. Stern Grove, in particular, was very hard hit and required a Parking Officer to direct traffic. Needless to say, the City does not have the budget for Parking Officers to control traffic at neighborhood parks. All of the proposed alternative within the DEIS will put more strain on the budget of San Francisco. Like most cities in America, San Francisco is in a budget crisis, many city programs have been cut and the last thing the citizens of this city need is one more unnecessary, avoidable cost.

Why is it that there is no proposed alternative that increases the area within the GGNRA where dogs are allowed to play off leash? Less than 1% of the GGNRA is set aside for dog recreation, if the preferred alternative is approved that number will go down to 0.25%. 1 in 3 families in San Francisco own a dog. We need more space for our dogs to play, not less.

After reviewing the DEIS, none of the alternatives are appealing. A new alternative must be created. One that creates more off leash areas for dogs. It only seems fair that both sides of the issues are presented to the public. By

leaving out a pro-dog alternative, the public is forced to choose between bad and worse.

The wise citizen asks, "Is there another alternative, one that will maintain the status quo or even increase the area where dog recreation is allowed? "

Unfortunately, there is not. Please create a new alternative that champions off leash dog recreation. Then let us comment once again.

Thank you for your time.

Sincerely,

John Delaplane

Correspondence: Specifically, Proposals for Map 3, Homestead Valley:

Strongly advocate for Proposal Map 3-A, designating this area as a voice control zone.

Folks,

We have lived adjacent to GGNRA Parklands and some 50 yards from the Homestead Fire Trail trailhead for 15 years. Proximity to this resource was a primary attraction to us, as was the opportunity to exercise our dogs here. The trail is a meeting place for both local and professional dog walkers, who probably constitute 50% of the trail's users on any given day. Our dogs compel us to get out and appreciate the beauty and privilege of our

proximity to the GGNRA.

Let's remember that this isn't a wilderness preserve or a terrarium -- it's a recreation area with an urban interface. Please continue to permit liberal access by those who use it wisely and most often.

Thank you, Brendan Hickey

Correspondence: I would like to see more dog free zones created and enforced. My husband is disabled and it is important that he walks. He needs a cane because he is unstable and is easily caused to fall. He fell in the park because he a dog ran up to him and jostled his cane. Luckily he was on a soft surface and suffered no fractures. However, in a slightly different location the outcome would have been much worse. He no longer goes to the park for this reason.

Correspondence: To whom it may concern.

I've lived in San Francisco for 14 years and can't imagine living anywhere else. This city is my home and I cherish it.

I have owned a dog in San Francisco for 8 of those years. I live within walking distance of several on-leash parks and a bit farther from off-leash alternatives. My dog is not the kind of dog that can go without regular exercise. At roughly 60 pounds, she's very energetic and active. Without daily exercise my personal belongings are in serious jeopardy.

It may seem unreasonable to own an animal like that in the city. Where I in New York I'd probably agree with you. But in San Francsico, a city with more dogs than children, it's not only possible but pleasant. My dog is one of the reasons that I walk so much. Every day I head out and walk a few miles with her. This is part of what makes San Francsico *my* home - I cover a lot of it on foot each day.

The current plan to reduce off-leash dog areas in the city seems wrong headed to me. The city has so many dogs and already there are so few places where it's legal to let them run. The city needs more places not less.

The recent conversion of Duboce Park comes to mind. This park is in the middle of some nice neighborhoods and features a playground, an off leash dog area, and an area that is not for dogs. It's a vibrant part of the neighborhood, a nexus even. A new park side cafe opened around the same time and is thriving. On any given day one can pass through there and see a crowd of people on the benches, with their kids around the playground, and owners with their dogs playing in the dog area (which isn't fenced in but

rather bordered by an open chain rope that implies the dog limited area). This kind of cohabitation *improves* a park area and energizes more citizens to both use it and care for it.

If this plan were more widely circulated - on a city wide ballot initiative or something - I'm certain it wouldn't pass. I only found out about it because of my dog walkers who are some of the most awesome people I know. If the purpose of the parks is to care for the public commons, it makes little sense to me how it can clearly offer less value to the public and be a good plan.

Please reconsider this initiative.

Sincerely, Aaron Newton San Francisco resident since 1997 Dog owner since 2003

P.S. As I stated, I heard about this document via my dog walker. Your options in the form here ask how I would prefer to hear about NPS documents in the future. I wish you would consider a direct mailing (which I realize is expensive). This kind of decision that affects so many citizens needs to be more thoroughly distributed.

Correspondence: Hello, On the Sweeney Ridge Notch trail, I encountered two off leash Doberman's that tried to eat my sandwich. This was an egregious off leash violation, among other things. I do not own a dog. Having said that, I would still like to request that on leash dogs be allowed on the Notch trail and Mori point trail. I hike up Milagra and then complete my loop by hiking on Sweeney. It would be nice if dogs could also go on this long loop. I understand that there are endangered species on the Notch, but if the dogs are on leash, is there really a problem? The public may be more accepting of restrictions if they thought the reasons for them were valid.

Forgive me if I'm just being cynical, but is the real reason that some areas are to ban dogs is that the rangers don't want to get out of their cars and hike on the trails?

In any case, could we continue to allow dogs on such trails but have some sort of citizen monitoring to make sure that the ban is really justified? I would be happy to log in my experiences.

Thank you

Correspondence: Hello, Already we, dog owners are feeling the limits of public spaces where we can bring our dogs on or off leash. These new rules are unbearable. I have a friendly, loving golden retriever who thrives being off leash. He is voiced controlled and a joy to all who meet him(seriously). People light up when they see him and always ask to pet him.

Where can I take him? Hardly anywhere. He is well trained and I am a responsible owner. This is not right.

You nor I own this public land. It should be shared for all to use. Carmel does an excellent job of sharing public space with their dog lovers and non dog lovers. They have specific hours every day when dogs can be OFF leash on the BEACH and other hiking areas/open space areas. I am proposing that these exist in Pacifica(and other areas mentioned). Linda Mar Beach is long enough that the dogs could be restricted to a specific area of the beach.

Cutting off Mori Point and the area by the waster water treatment is unacceptable. This is a lovely area where we take him several times a week. Happy dogs are exercised ones. They are less barky and are well socialized. Dogs are meant to run! If we limit where we can take our dogs(EVEN MORE!) then we will have more problems b/c those areas will become so crowded that there will be more incidents of aggression. The same would exist for people too! Isn't there more crime in cities?

Anyway, we have limited space, it needs to be shared, not just given to one group for their priorities. We, dog owners need MORE not less space. I encourage you to accept a proposal for hours that each group can use the spaces and for dogs to have their off leash time!

Thank you.

Cordially, Marisa

Correspondence: This should be shared space by all, not just the priority of a few. Please allow our dogs to be OFF leash and on leash in the areas that you are proposing to restrict dogs.

We have these wonderful family pets to enjoy the outdoors with, not just sit at a dog park. My toddler can not walk around a dog park. That is not fun for her. It is healthy for our toddler to be taken on a hike with our dog. She loves him and he loves running. He can not run while on leash. Our backyard is not big enough for him to run.

Fort Funston is already too crowded and over run. We need MORE space, not less.

We want part of the beaches to be off leash every day. I am open to the dogs being leashed at certain times (like peak use times) and say between 8am to 11am it is off leash. 11am to 5pm on leash and 5-7 off leash.

Public land should be shared by all. It is not meant for one group to monopolize the space.

Sweeney Ridge, Mori Point, the area by the waste water plant needs to be off leash too for voice controlled dog.

Sincerely, Anthony George

Correspondence: As a dog walker and a dog lover, I support leash laws in the GGNRA. I have witnessed many unleashed dogs interfering with wildlife and leaving their pooh throughout the GGNRA. In many parts of the GGNRA, namely on the trails in the Tennessee Valley, I think that dogs should be required to be leashed and not allowed to run free chasing wildlife and damaging native plants.

In addition to dogs chasing wildlife in Tennessee Valley, I've also witnessed dogs chasing birds at Fort Funston and Ocean Beaches and am worried b/c I know that several endangered birds nest in the unfenced dunes that these dogs run through. I think it would be cheap to install fencing around these sand dunes and should be done no matter if dogs are put on leash or not b/c these birds need protection to be able to get their numbers up.

I think that the GGNRA should continue to provide fenced in off-leash areas and perhaps like Prospect Park in Brooklyn arrange specific times for dogs to run free, to manage the growth in dog ownership that occurs when cities increase housing as SF has done.

Thank you for all your hard work!

Sincerely yours,

Shani Heckman

Correspondence: I am an 84 year old resident and home owner in San Francisco. I've lived here for 50 years. For all that time, whatever dog I've had, I've enjoyed off-leash hiking at Fort Funston. Now, because of a physical disability, I use a cane or a walker and have trouble with uneven surfaces. The only way I can exercise my dog now is on the paved path of Sunset Trail. The Preferred Alternative described in the DEIS would exclude me from using Fort Funston in my life-long recreational activity. I believe under the Americans With Disabilities Act, this is illegal. The recommended off-leash areas described in the Preferred Alternative in the DEIS are not accessible to everyone, especially the mobility-impaired. The document needs to be revised to address and evaluate how the Preferred Alternative will impact mobility-impaired dog owners.

Correspondence: On page 228 of the DEIS, the extent of ocean pollution is discussed in relation to dog feces. No evidence is given that the ocean is polluted at all at Ocean Beach. To the contrary, the document describes "all beaches in San Francisco county except Baker Beach exhibited excellent water quality in 2008." (p. 228, para. 4) DEIS states that "runoff from creeks, rivers, or storm drains is the largest source of pollution to California beaches. (para. 1) The DEIS does not reconcile those statements with the conclusion: "A substudy of the San Francisco Sewage Master Plan determined that bacterial contamination of waters off Ocean Beach was significant due to dog fecal matter deposited along the shoreline." (p. 225, para.5) The document does not explain why the latter substudy contradicts the former reports. The document fails to show the evidence that substudy provided and how that evidence was collected. The document fails to analyze the impact of other sources of pollution, like the sewage treatment plant at Fort Funston, garbage from people thrown on the beach, horse manure, oil spills in the bay, chemical pollution from runoffs from creeks and rivers, and the dead seals, fish, and seagulls left to rot on the beach by GGNRA. The document

should analyze the effect of all this contamination on swimmers, children wading, and surfers, and explain why GGNRA has not issued warnings or restrictions against being in polluted waters, if, in fact, the waters are polluted. It seems like the GGNRA is manufacturing excuses to ban off-leash dogs from the mere 1% of the parks they now enjoy. The charge that dog feces are polluting the ocean is very disingenuous indeed, and give rise to distrust in me of GGNRA and its motives.

Correspondence: This poison pill that will allow the GGNRA to change the status of off-leash areas to on-leash or no dogs without additional public comment if there is not 100% compliance with the new restrictions will not work. The change would be permanent. A management plan should not come with a built-in nuclear option, which is what this is. It allows a relatively few bad players to undermine and destroy a traditional recreational use of the area. No number of responsible dog owners will stop what will become the inexorable removal of all off-leash access in the GGNRA if this strategy remains part of the plan. Tens or hundreds of thousands of hours of incident-free dog walking will not matter. There should be (and are) penalties for bad actors and these should be enforced. But the vast majority of people who do not act badly should not be penalized for the bad actions of a few. This strategy is unfair because off-leash status can be changed in only one direction (toward more restriction). It circumvents the legal requirement that management changes that are either significant or controversial must have a public process before they can be made. Critical information about how compliance will be determined ? by volunteers biased against dogs? by surveillance cameras? ? is not included in the DEIS.

Correspondence: I attended the public meeting at S.F. State earlier this month. In my discussions with GGNRA staff, they mentioned dog behaviors that were unwelcome -- namely digging, chasing birds and and disturbing habitat areas. My dog walks unleashed at Fort Funston, and she does not engage in these behaviors.

By requiring all dogs to be on a leash in most areas of Fort Funston, you are punishing all dogs and all dog owners for the actions of a few. Please focus your enforcement efforts on these behaviors and not on the leashed versus

unleashed issue. Yes, national parks require dogs to be on a leash, but Fort Funston has always been a special case and it should remain so.

Thank you,

Connie Vickroy

Correspondence: Since I got my dog Jake last year, he has lost 5 pounds, and I have lost 30 -- and kept it off. Dogs provide some of us less motivated people the energy and excuse to walk and hike every day. If you limit the areas that we can take dogs this is limiting our means of exercise. As a woman I would never go on these long hikes alone. I feel safer knowing that Jake is there to protect me.

If people are not given a reasonable amount of space to take their dogs, they will be forced to take them at unpredictable times to unpredictable places -- places that people who are not comfortable with dogs may not like. Providing places for dogs to run and continue their exercise keeps them off bike trails and hiking trails for people without dogs.

Please reconsider your plan and take in to account the many dog lovers in the area -- we need a place for our dogs to go!

Correspondence: I read that it will take one million dollars a year to enforce the so-called "Preferred" plan! One Million dollars a year at a time when all agencies and people are short on cash. One Million dollars to criminalize current law-abiding, open-space loving park users. One million dollars a year of PUBLIC money to PREVENT the PUBLIC from using PUBLIC land. One Million dollars a year to turn me into a criminal when all wanted to do was have a walk with my on-leash dog.

Perhaps the Park Service should use the one million dollars a year to provide, not prevent, the public access to public land!

The reported is deeply flawed on many levels. Why is the Park Service going to use my money to prevent me and my law-abiding on-leash dog

from accessing almost all the areas in and around Pacifica that I currently use? Why is Sweeny Ridge now totally off limits? This is a heavily impacted site with a long history of dog use. Why are New lands all, by default, "NO DOGS!?" There are almost no sites near Pacifica that allow on-leash dog access -- enacting the "Preferred" plan would remove most of the remaining ones. And why are the broad open trails perfect for dog-walking in the Marin Headlines excluded? This must change.

Unbalanced in the extreme. Enforcing the "Preferred" alternative will waste even more of my money to exclude me from my public lands.

Perhaps the Park Service needs to ask itself what its purpose in life is? Provide Access, or prevent it? And if the answer really is to provide access, then please try and do a better job than the near total blanket dog-ban proposed in this so-called "report". Consider the needs of the people that MOST OFTEN use the parks -- do not force the huge numbers of on-leash dog-walkers onto a tiny minority of over-used trails.

Correspondence: It would appear that the main argument for preventing dogs from using almost all areas of the GGNRA is that there might be the occasional problem with the dogs behavior.

That argument is exactly the same as saying we should prevent all cars and drivers from using all roads simply because we know one day an accident will harm a pedestrian.

The arguments in this "environmental" report are the most nonsensical pseudo-scientific garbage I have ever read. Government interference gone wild.

Rip it up and start again please. Let's try and use some logic, science, statistics, and balance in the next draft. Thanks.

Correspondence: I support the most restrictive plan you've offered. If it were up to me, dogs wouldn't be in GGNRA at all. In my home town, we banned dogs from our beautiful Lithia Park, and it was just night and day, so much better! Complaints, confrontations, etc. all pretty much disappeared. Dog owners grumbled, but even they came to see the benefits in time, and now it is not a problem. In our town, dog owners have plenty of places to walk their dogs (on leash), and a couple of fenced areas to let them run free. Dogs are great in the right setting, (I grew up with dogs and have owned several), but in a place where wildlife, solitude, lots of people and kids are around they really don't belong. If they have to be allowed, they should, at the absolute minimum, be restricted to a few fenced areas if off leash, and definitely on leash wherever allowed, and the total area where they are allowed should be tiny.

GGNRA was not established to be a giant dog run or dog's toilet. There is more to the animal kingdom than dogs, and part of GGNRA's mission to to protect the wildlife that lives there. It would benefit all human visitors, and our animal cousin residents, if dogs were banned, or if not banned completely, severely restricted.

Good luck! This is not an easy subject for you I'm sure.

Correspondence: To: Frank Dean Re: GGNRA Draft Dog Mgt Plan

A review of the plan and related information/websites leads to a simple solution for this complex issue: Let sleeping dogs lie.

A host of reasonable, inexpensive and easy to administer changes have been proposed by interested groups supporting continuation of existing dog walking and off-leash parameters. These should be pursued, rather than the proposals recommended in the plan. The plan's proposals would adversely impact the experience of one set of users (dog owners), even though their numbers have grown and they pay the same taxes and fees as everyone else. We need and deserve a plan that treats all users equally.

Regards,

I am writing to acknowledge my support to continuing the off-leash policy for dogs that currently exists at Fort Funston, in San Francisco. Fort Funston is unique in that it allows dogs the chance to run and roam freely. With no place else like it within many miles of San Francisco, dog owners will be denied the opportunity to exercise their dogs in a place that has successfully been used for this purpose for many years. Also, as a man who walks his dog everyday and in all kinds of weather at Fort Funston, I can attest to the emptiness of this beautiful park on many days of the year by any persons who are not walking dogs. Indeed, there are numerous days during the year when I can count on my two hands the number of people I see walking along the cliffs and beaches here. Denying San Franciscans and their dogs this liberty strikes me as more punitive than stemming from any real grievance regarding nature's balance at Fort Funston- whatever others might claim.

Correspondence:

Last year my husband was attacked by 2 unleashed Huskies while we were hiking on Bolinas Ridge. Of course, the owner grabbed his dogs and ran away when he saw my husband's arm bleeding. So I have absolutely no sympathy for dog owners regarding this issue. Just yesterday, 3/16/11, we were walking at Crissy Field and saw one dog walker with 10 dogs. We then saw another dog walker with 6 dogs. Both within a few minutes of each other. We saw one of the 6 dogs poop and the dog walker just kept going. We also saw a Great Dane running, unleashed, along a planted area chasing some Egrets. In fact, we noticed quite a few dogs, mostly unleashed, running uncontrollably chasing whatever was in their path. It made the visit unpleasant because we had to worry that someone's dog or dogs might jump

at us. It was also disgusting to see dogs poop, creating a health hazard, and the owners just walk away creating. At no time did we notice any dog owner/walker pick up after their dog(s). By the way, this was in the area that was supposed to be the protected area. It's both our opinion that dogs do not belong in any of our parks leashed or unleashed. Period. They are destructive and, quite frankly, a nuisance. We both hike quite a bit and have witnessed on many occasions dogs either chasing after or attacking various wildlife. We both realize that the owners are directly responsible for the problems their dogs create. It's a privilege, not a right, to have access to our open space areas. We both think dog owners, for the most part, are disrespectful of the rights of others to enjoy our parks. And they are especially disrespectful and dismissive of the rights of the wildlife that need these areas to thrive. Thank you.

Correspondence: As a San Francisco resident living within walking distance of GGNRA land, I have seen the degradation of park lands and the peril put on wildlife from dogs and their owners. Every visit to Ocean Beach, I see countless off leash dogs chasing birds and owners either not caring or oblivious. I see dogs pooping in the sand, with no owner in sight to clean it up. I won't even visit Fort Funston anymore because I hate to see the land erosion caused by dogs rampaging off leash. My husband, Doug Kerr and I vote on Option D, the most restrictive and protecting of wildlife and environment.

I'd also like to comment on fires at the beach, which I oppose. Ocean Beach is filthy from fires. Fires do not stay within the rings, and people have fires outside the rings all the time. If it were just wood, it still would be bad for air quality. I regularly see people burning palettes and even sofas. Why can't San Francisco have regulations like Southern CA, where fires are banned on beaches and the quality of sand is clean and nice enough to lay on.

Correspondence: I own one, elderly dog. We walk her regularly and always keep her on a leash. She has obedience training, all of her shots, and, temperamentally, is a quiet animal. Each day we meet people on the trail walking their dogs. We often stop and talk. Most of the people we meet carry bags to pick up after their dogs. We also carry bags for the same reason. There are containers left to deposit the bags in. We use them. Mori point is posted with signs warning

visitors to beware of coyotes which are running wild. Coyotes hunt the other wild animals for food, defecate where ever they happen to be, are not trained, have not had any shots or vet care that I am aware of. They are, in fact, canines. There are also deer, bunnies, hawks, an occassional mountain lion and lots and lots of skunks. None are cared for in the slightest, all carry disease, none have had shots and they all defecate.

Yet our pets are perceived as a threat to people, the environment, and all of the animals in it? So much so that we have to spend money to study the environmental impact of one kind of animal, a dog. We have to modify rules already in existance because one type of animal, a dog, is owned and cared for by a private person?

I also have heard that some people who like to walk through the parks that are, hopefully, teeming with wild animals are afraid of the dogs. The current rules are enough. This effort is a waste of money that we, as a society, do not have and would be better spent improving things for all of us.

Correspondence: A park is not a storage place for nature. A park is meant to be enjoyed. A park is open space to run and play. For those of us confined in small confined man-made spaces all day it is a place to experience the sights and sounds of nature, breathe fresh air. Just like people dogs need parks, actually they need them even more. Dogs need to be able to run around freely and socialize with other dogs. They are fenced in all the time within their dwellings with their humans, don't fence them in at a national park.

Yes, dogs do damage to parks. So do children. So do adults. I have seen many more children digging on a beach than I have ever seen dogs do. Dogs sniff flowers and grass, sure they may nibble at them sometimes but people and children can do more damage when picking flowers or pulling out plants. People and animals need to be able to enjoy nature as nature but also need to respect it. A well behaved dog with a responsible dog owner respects the park s/he is in.

One way a responsible dog owner maintains their dogs good behavior is to give her/him plenty of exercise. With so many of us dog owners we need more space to do this, not less.

Thank you.

Correspondence: Please see my email conversation with a former member of PROSAC from 2009. It is an interesting discussion given my view as a human and hers as a dog lover. Her final suggestion to me is that the solution to the unfair situation of dogs off leash everywhere can be solved by my SUICIDE. I think her attitude, while shocking, accurately describes the view of many dog owners.

Thank you for your time and for considering this issue. I don't believe this type of behavior should be rewarded with lax laws and continued off leash areas. I would suggest enforcing the new (and old) leash laws with tickets that are difficult to contest. The revenue from these tickets should more than pay for patrols.

Mon, Jun 15, 2009:

Hello Felicia,

Thank you for your thoughtful response. I appreciate the time you took to consider my experiences and express your own. I think people that are comfortable with dogs have a different experience than people who are uncomfortable with dogs. I have also noticed that runners tend to have dogs come up to them much more frequently than non-runners. A dog owner once explained to me that dogs think you want to play with them if you run past them. I can't tell the difference between a dog that wants to play with me and a threatening dog. This may explain some of our different experiences.

I think you might be aware that San Francisco actually has the greatest area of unleashed space for dogs as compared to any other city in america. (this is not counting of course all the area that people choose to use as unleashed space) It baffles me why it is that dog owners complain of not enough space for their dogs. I fully support keeping the current unleashed areas (but not increasing the area) for dogs to play and as I said choose not to go to those places. For examples, I used to love running in Mountain Lake but no longer run there as it is an unleashed area. I agree that compromise is necessary and I am open to discussion with every dog owner I encounter if they are open to discussion.

As for native plant advocates, I can't really speak to that. I am not sure what their experiences have been but will look into that.

Thanks again for your response!

Wed, Jun 17, 2009:

Hello Felicia,

Thanks for your advise. Yes, you are right that I am not comfortable with dogs. I actually have tried to not show fear or change my feelings but it is not quite that simple. At this point, I can't expend any more energy trying to change myself. I really do believe that it is San Francisco's responsibility to provide recreational areas for those of us who do not want to encounter off leash dogs. At this time, there is no such area due to dog owners purposefully disobeying the law and acts of intimidation against those of us who speak up. If I were to bring well- trained de-fanged rattlesnakes to the park, I'm sure some people would be afraid and ask me to leash my rattlesnakes. And I would, because I respect people and Their differences.

Just today, I approached the dog walker who had threatened me about a week ago and asked her to sit down with me to talk. I'm willing to compromise and while it would be easier for her to just obey the law, I'm asking her to leash her dogs when I pass. She refused to talk yet again. And actually laughed when I jumped in response to her dogs barking at me. I will not stop running where I am allowed to run and therefore with continue to be treated with disrespect and disregard. So all I can do with these particular professional dog walkers is to continue to defend myself and try to avoid further confrontation. And at some point I hope that the law will be enforced.

This obviously is an issue with strong opinions on both sides and for various reasons. It doesn't seem like a resolution is near but I think there needs to be more open discussion and a safe place for everyone to share their opinion. It has been very difficult for me to confront these dog walkers and I am proud of myself for finally standing up for my rights. Hope you're having a good day!

Thu, Jun 18, 2009:

Hello Felicia,

Thanks again for taking all this time to talk with me. I do realize that our country is in trouble financially and that park patrol may not be possible for years and years. But for me I've been dealing with this for years upon years and for those years have been silenced by intimidation. In short, I'm definitely thinking long term. I agree that it's sad that we need to spend money when it seems like people should just be obeying the law. Just to put it out there, tickets could bring in revenue in order to pay for the extra patrols. One person gets bitten by a dog everyday in San Francisco, so dogs aren't exactly safe. The dog that bit me in the Presidio was barking at me

and not bearing its teeth or behaving in any of the ways you described. And on a bit of a separate point, the facts are that even other dog owners have problems with the professional dog walkers. Again, I find it difficult to understand the difference between me bringing well-trained de-fanged rattlesnakes to the park and dog walkers bringing their dogs to the park. What are your thoughts?

I'm not sure you understand quite how I feel and what I've been through. Let me try to help you understand with an analogy. You can compare it to going to war. Many of the men who fight for our country are never quite the same despite trying to get back to normal. I feel like that has been my experience. I love animals, but am scared of dogs. I don't hate dogs but I don't wish to interact or ever come near a leashed dog. There are many people who feel the same. We are the minority, but we deserve the right to recreate too! Don't you agree? I realize that banning dogs all together would make people unhappy. So I think a reasonable compromise is to have leashed areas where I and the many others who also feel strongly about this are allowed to go without fear.

I am asking PROSAC to provide a safe place for discussion. Please consider setting up meetings to discuss this issue of dogs for all of San Francisco's recreation areas.

Here's to a future of mutual understanding and protection of a silenced minority!

Correspondence: I oppose the decrease in off-leash areas in the GGNRA.

As a doctorally prepared nurse, I know that keeping the parks friendly to dogs is one of best public health policies to improve public health outcomes. The decrease in off-leash space is threat to that relationship and should not be pushed forward.

By merely caring for their pets, dog owners exercise more than the general population. Walking is the most recommended form of exercise for adults and seniors. In addition, the relationship between dog and owner enhances mental health outcomes. Owners and dogs care for each. A dog is always welcoming when you come home!

As a dog owner, I hike off leash at least once a week in Redwood Regional Park in Oakland. It is a wonderful experience for me and for my dog. Not

only we get great exercise, we also enjoy the beauty of the place.

During my 8 years visiting Redwood Park on a weekly bases, I have come to believe that the multi-user parks are important to keep. At redwood, bicyclist, hikers, campers, families and dog owners - all get along. The fact that there are so many interests, folks are flexible and nice about inconveniences. When you are there, you know you have to share the rode and you do just that gracefully. You become more tolerant.

As a resident of the Bay Area for 27 years, I ask for continue flexibility and inclusion in the regulations of the park - a hallmark of our local culture.

Please do not restrict the use of the Park by private citizens and their dogs.

Thank you for taking may opinions in consideration.

Sincerely

Michelle Tellez RN. MS. PhD.

Correspondence: I have been walking our dogs for years in the GGNRA, where it is permissible. I have never, never seen disruption by dogs, while citizens are walking their dogs. I have seen where trails are littered with horse manure. I have read about illegal drugs being farmed in our National Parks. I have read about wild animal poaching in our National Parks. I have read of rapes and murders in our National Parks. I feel safe when I have my dog with me. Dogs, like other animals are an integral part of our world. Personally, I feel that our tax payers money could be going towards preventing the things that I listed in paragraph two, not banning dogs from our National Park Lands. I have seen frequently seen Rangers in the Marin Headlands going after people that do not have their dog on a leash. I do agree that people should follow the rules, but I wonder how much time and expense the Rangers efforts cost the tax payer. In short, I think that the NPS should have the correct priorities. Respectfully yours, Sonja Dohse

Correspondence: I am writing to say that I DO NOT SUPPORT the under handed efforts of

the National Park Service to remove the designation "RECREATION" from the name of the Golden Gate National Recreation Area. These lands exist in an urban area and were intended for the recreational use of the citizens and taxpayers of San Francisco, San Mateo and Marin. I OPPOSE the renaming of the GGNRA. It was never intended to be a pristine wilderness or sanctuary.

I OPPOSE the currently proposed "Dog Management Plan"

I am 69 years old and I walk with a cane. I cannot walk in sand or up and down sand dunes. The GGNRA "Dog Management Plan" denies me access to off-leash dog walking and does nothing specific to address problems of anti-social dog owners and/or individuals with multiple animals.

Clearly, it is the intention of this plan to inhibit (and eventually terminate) our freedom to walk with off-leash dogs anywhere in the area.

I have been in relationship to the GGNRA lands (particularly Ft. Funston) long before they were GGNRA. The currently proposed Dog Management Plan threatens to cut off my access to this fabulous urban recreational resource and one of the most important and beneficial aspects of my life. To me the resolution of this Dog Management Plan is a matter of life and death.

Correspondence: I am writing to request that the Ft. Funston off-leash area for dogs to remain as is today. Ft. Funston is enjoyed as is by many including those of us with dogs. The dog walking community does an excellent job keeping Funston clean and we respect all (people, native plants and other animals) who call the park a home or home away from home. Reducing or eliminating open spaces for all San Franciscans to enjoy would be a serious mistake. Thank you. -shawn

Correspondence: To Whom It May Concern:

My roommate and I are both active community members. I am a plaintiffs' attorney and my roommate runs a small marketing agency in downtown San Francisco. We have lived in San Francisco for 5 years. Together we rescued

a 1-year old mixed-breed from ACC in February of 2010. Her previous owner had abandoned her and two other dogs at the shelter earlier that year. When we took her to the veterinarian to get her shots, we were told that because she is a younger dog, she needs a lot of exercise - at least one hour per day if possible.

This advice turned out to be great not only for our dog, Honey Belle, but also for us! We live in the Sunset District of San Francisco, so luckily for us we are close to both Ocean Beach and Ft. Funston - and Honey Belle gets almost daily walks off-leash at one or both of those places. The joy on her face when we finally come within designated areas and clip off the leash is indescribable. She happily trots in circles around us, bounds ahead to sniff at the grass and shrubs, and thoroughly enjoys her time socializing with other dogs. Since we spend the work day enslaved at our desks, we also enjoy our recreational time immensely.

Being dog owners has allowed us to finally get off the couch and explore this great city and all the beautiful outdoor adventure land that is available to us and our beloved dog, and helped make the decision to stay in San Francisco an easy decision. We have hiked in the Marin headlands, Glen Park, Ocean Beach, and Ft. Funston, among other areas. We choose these recreational areas specifically because they allow our dog to get off-leash exercise.

I urge you to consider the health and well-being of not only this city's canine population, but also its human citizenry as well, before allowing this atrocious law to pass. Currently, GGNRA only allows off-leash dog walking in less than one percent (1%) of its total area. The drastic restrictions that are proposed are preposterous and a thinly-disguised attempt to raise revenue through ticketing of people who MUST allow their dogs to get off-leash exercise or risk ill-behavior and other negative consequences. These beautiful areas were specifically designated as recreational area for the citizens to enjoy outdoor activity, and should remain that way forever.

Sincerely, Elina Agnoli

Correspondence: Muir Beach is one of the few places dogs are allowed to go and just be dogs. I'm not a dog owner, but I do live here and visit the beach regularly. The dogs look very happy when here and they rarely cause trouble. Watching them makes me happy too! Perhaps if Muir Beach was very congested, and dog owners weren't picking up after their dogs I would have a different

opinion on the matter, but this is not the case. Most people bringing their dogs to the beach live here in the community, and know how to be respectful of the surrounding environment. Muir Beach is small and usually very quiet with few people on the beach most days of the week. I'm writing a request that you continue to allow dogs on Muir Beach.

Sincerely, Muir Beach Resident

Correspondence: As an owner of an unruly, aggressive dog, I would LOVE to see leash laws enacted and enforced. Too often we have bad encounters because people

have their dogs off leash. More often than not, these off-leash dogs come barreling down the trail straight toward us and end up harassing my on-leash dog. And then WE get yelled at for having an aggressive dog. Hey folks, we know our dog has issues, that's why he's on a leash. If your dog can't listen and play nice (which is true for most of them), then they need to be leashed. Enacting and enforcing a leash law will keep everybody safe.

Also, off-leash dogs tend to run everywhere, thus disturbing wildlife and ruining the plant life. We stay on trails to protect nature, so it stands to reason that our dogs should too.

Sincerely,

Amanda F. Thompson

Correspondence: In the winter I travel across the bridge 2-4 times a week to take my dogs to Fort Funston. I love it because it's off leash and they are able to run out their energy and frolic in the ocean. I've met many wonderful people and great pets during this time. Everyone is very respectful of the habitat, cleaning up after themselves, and having good doggy manners. I've seen many more dog fights at Pt Isabel then I ever have at Fort Funston (I've seen none at Fort Funston). I'm at a loss for why such severe restrictions would come down when there is no cause. I shop in SF when I come over, I pay a bridge toll - I'm injecting cash into a city I don't live in- all for my dogs. If Fort Funston is restricted, I will no longer come over; as a consequence, my money will then stay in the East Bay.

These restrictions make no sense at Fort Funston, no sense at all. Please keep things how they are now.

Thank you Rebecca (Harley & Zeze)

Correspondence: I am a dog owner. Infact I own and walk 3 dogs. I am a dog walker at Guide Dogs for thr Blind in San Rafael. So I speak from much expirience. Dogs need to be leashed in a enviroment where others (dogs and humans) share. There is too much room for mishap when they run wild. I live where a levee is and

a dog off lesh jumped over the levee to chase a duck and got stuck in the mud. The owner tried to help rescue the dog and got stuck herself. This required the Police and Fire department to respond. A big waste of our tax dollars. The area is posted dogs on leash but many people do not comply to the posting. This is an example of what happens when domestic dogs are left to run wild. They are not safe because they have been domesticated. When a person walks down the street with their dog off leash and a cat or some other animal runs by they instincally take chase. I witnessed a dog in Fairfax get hit and killed by a car this way and the owner called out a command to the dog to no avail. The GGNRA has many delicate plants and animals that can be ruined by dogs running wild. As I said before I am a dog owner and walker and I have no problem what so ever walking my dogs on leash. In fact for their safety and the publics I do this. I take them to dog parks to run wild for fun and exercise. People who allow their dogs off leash are ignorent to the dangers or they would not do it. Unless they feel they are intitled and that is a whole different problem in society today. Thank You William Aldrich

Correspondence: I live within 2 miles of the Oakwood Valley trailhead and walk there with my dog at least once every weekend. In the 9 years I have lived here, I have never had a problem with anyone else's dog or had anyone have a problem with mine at this trail. It is very heavily used by those of us who live in the area, and we don't understand the need to make any changes here. I have not seen it to be a problem, but if you put a waste disposal can at the intersection of the fire road and the trail, it would probably improve dog waste pick-up if thats an issue.

I also noticed that in some of the alternatives, you allow no dogs on the link to Alta trail portion where dogs are allowed. Please dont do this - it is great to able to be take a nice loop hike, and when you eliminate linkages between dog allowed areas, it takes a lot of fun out of it. There are a number of trails I never hike on because there is no way to do a loop hike.

Mori Point - I took my dog there recently with my niece and nephew for a hike, largely because no dogs are allowed in the county parks there, even leashed. Please dont eliminate one of the few places people can actually hike in that county with their dogs. Fortunately, Marin County has more options, but by stringently reducing where dogs can be allowed and voice control areas, you are putting that much more pressure on areas where dogs are allowed and increasing the liklihood of problems there.

Crissy Field - I have no issues with all walking paths being restricted on leash. This is a great place, but after a couple of visits, I would never bring my dog there again unless very early am - way too many people to have to manage a pet. Muir Beach - I think a better solution with the beach area is to restrict dogs to certain hours - say before 10am and after 7pm. It is easier to enforce and provides a balance for the different stakeholders.

GGNRA is a recreation area, which means one of its purposes is for humans to use it for recreation - it is not a pristine wilderness. It is already severely restricted in allowing dog access (to the point where I almost never use it), so unless there is some compelling problem to be solved with regards to conflict between users or significant wildlife issues, you should refrain from additional restrictions. When new restrictions are needed, they should be targeted to solving these problems - so changes at Crissy Field make perfect sense, but not Oakwood Valley, for example.

Thank you.

Correspondence: First of all, our dogs are our children. 99% of dog owners are citizens that only pay into our financial system. We don't use welfare, food stamps, headstart, Medical, etc...All we ask is for a place for our children(dogs) to be able to run free for 15 minutes. Even the heaviest of the dogs do not do as much damage as a man who weighs 250 pounds, because the weight is distributed on four legs. I suggest that along with your ban on dogs, ban all human beings that weigh more than 200 pounds . Also, please shoot all bicyclists that ride in your pristine land. Not only they do not obey any traffic signs, they totally disregard any human and canine beings that cross their path. Instead of banning dogs, why don't you enforce laws such as dog licenses fees, vaccination proof and require that vicious dogs wear muzzles? San Francisco is a city full of young residents who have dogs, do you want them to leave the city because there is no place for their dogs? Of course, you don't care, you are federa!!!!

Correspondence: Dear GGNRA, As a lifetime, almost daily user of the GGNRA's magnificent lands, hiker, biker, and former dogwalker, I implore you to pursue option A. I find professional dogwalkers to be more responsible than ever before,

mostly insured, and generally in great control of their dogs. It is not in their interest to have conflict and they go to great length to be responsible. Option A leaves enormous areas wide open to those who specifically wish to avoid users with dogs. As someone who uses the GGNRA in most modes, in most places, over 35 years, I believe that user complaints against other user groups are almost universally based on intolerance rather than actual threat or safety. As a recreation area the GGNRA should encourage user-ship by all groups. I see no reason why a person should not be allowed to walk their companion dog absolutely anywhere on leash. Reading parts of these massive documents I am struck by the bureaucratic waste of resources which could have been better spent doing actual conservation, teaching, or other work in the GGNRA and supplied jobs to people who choose not to become lawyers. Thank You your consideration, Mark Diehnel

Correspondence: As a long time citizen of Pacifica, and a dog lover/owner, I feel that it is impairative for the guide lines set for dog owners who wish to walk/excercise their dogs be follow to the letter. It is the more sensible and safest way that will not only protect your dog, but also could protect a child or adult. So anyone who really cares about their dog/dogs should have no problem following these rules set for obvious reasons, and so we can have an open space to exercise our animals. People have a right to feel that their dog will be safe and not be attached by another dog. Not all dogs get alone

with each other, anyone with any brains should know that. This is why we have a LEASH LAW in this city.

Correspondence: As a long time resident of Marin County and the owner of two dogs, both of whom are trained with both hand and voice commands, I am not in support of the draconian, anti-dog laws under consideration. There are so few places left for dogs to run free, it is unfair to limit them to leashes on paved streets. Obviously they can not have unfettered access to every place, but those that are currently available (North Stinson, Rodeo Beach etc.) are wonderful for dogs and dog owners, people who like dogs.

There are so many places that people have access to that prohibit dogs, so please let the last remaining places that are currently dog friendly be allowed to stay.

BTW: There are scientists, throughout the world, who have determined that the evolution of mankind owes much to the domestication of the dog. It seems less evolved people managed to leave with dogs - without leashing them.

We are starting to ban so much, no biking, no dogs, no walking, no thinking. For once, let's have some sanity and accept that we can co-exist with dogs and people, peacefully and with respect for one-another and the environment.

Correspondence: I am deeply concerned about the proposed plan and further restrictions to the availability of off-lease areas in San Francisco. I am a 30 year resident of San Francisco and my dogs are daily users of multiple locations in the GGNRC. We have found the off-lease areas to be a key to our quality of life in the City and an essential component of the excellent socialization of our dogs. This socialization is a benefit to all of the community as our pets are well-behaved, non-agressive and welcome in all areas due to this extensive socialization with other dogs in a off-lease environment. There are significant limits already to the availability of such areas and we would find the proposed restrictions to be a huge mistake.

Correspondence: I am a dog trainer in the Bay Area and believe that off leash dog play and exercise is a huge part of a behaviorally well dog. Without off leash areas to roam and interact with other dogs and people, dogs will most likely develop many behavior concerns due to lack of contact, frustration from leash restraint and this may escalate to aggression. As a dog owner and someone that interacts with hundreds of dog owners every week, we need off leash areas in order to live harmoniously in this city.

Correspondence: I attended the meeting at SF State University and would like to say thank you for your efforts to educate the public and inspire people to get involved in the process.

I am a dog owner and my dog used to go to Fort Funston with his dog walker 5 days a week. I am at Fort Funston or Crissy Field with my dog on average of once a week or more, I have a friend that hang glides at the fort and have friends with kids who want to go to the beach without dogs there off leash so I feel I have a full grip on the situation in these area.

The plan for Crissy Field makes good sense and although it diminishes the area I can take my dog, it is a fair plan for all. In regards to the Fort Funston Preferred plan I see the following problems and would like to make the following suggestions:

The problems are that the plan forces a greater number of dogs into a smaller area where they are burning off energy. The volume of dogs is much greater than at Crissy Field and I would guess at other parks in general. I believe the reason there have been such few problems at the Fort, taking into account the volume of dog, is that there is enough land for dogs to not just interact, but to choose not to interact and just enjoy the territory. By putting all these dogs together on a smaller stretch of beach makes that difficult to spread out and I suspect would creat more problems.

Another problem is that there are many times the tide is too high to be on the beach in the zone proposed for the off lease zone and therefore is not usable. Keep the areas right of the parking lot and parking lot off leash.

For the hang gliding area (left of the parking lot) should be on leash until 1/3 way down the stairs when a glider is in the area. Have signs posted. This protects the hang gliders and makes it still creates an open area for the dogs.

It should be required that if a dog owner see a horse that they must leash their dog, period. I'm not sure what my dog would do, but I'm not willing to find out and it is common sense. Just because ones dog is off leash does not relinquish an owners responsibility for that dog. The beach area where the

horses are should still be open to off leash dogs especially since that when the tide is high that section of the beach is the only usable beach!

The other option is to make no changes to off leash rules, but put a time limit on it. For example, only off leash from 6am-1pm. In fact, a horn could be placed to signal the time for on leash at 1 or 2 pm. An extreme measure would be to require off leash dogs to be muzzled after that time.

Thank you for your consideration!

Correspondence: My comments are with regard to Muir and Stinson beaches as these are the locations my family visits and tries to enjoy. I would like to go on record stating that I would like to see unleashed dogs banned from the beaches. My grandchildren love to walk on the beach with me but when a dog comes bounding along they become frightened and panicky. They tend to want to run away and this just makes the situation worse. Add to this that one of them has autism and she can easily have the whole experience of a day at the beach turn into a horror.

I realize that dog owners have rights but some of them feel they own all public lands with no regard to others. These beaches are a natural resource for all to enjoy and with these dogs running loose the beauty and pleasure the beaches afford is eradicated for many of us.

PLEASE.....BAN UNLEASHED DOGS FROM THE BEACH!!

Correspondence: I am writing to advocate for the preservation of off-leash dogwalking areas in the GGNRA. I am most concerned about the property in Montara that is about to be acquired. I have lived in Montara since 1978 and have walked a series of dogs there for more than three decades. Most of the people I encounter on the trails have canine companions, and most of the canines are unleashed. In all those years, there have been only a couple of instances when I might have preferred the other dog to have been leashed. The walks with a happy dog able to explore and follow his nose boost the morale of the walker and add to one's well-being.

I would like to add that the proposal to build a parking lot adjacent to Farallone View Elementary School is unwise. It seems to me the parking lot could become a magnet for pedophiles.

Americans are dog lovers. We consider our dogs members of the family. We spend time with them and want and need areas close to home where we can exercise with them. Please provide for this significant number of your tax-paying population by preserving and even carving out new territory for off-leash dogs.

Thank you, Diane Miles

Correspondence: As a long-time dog owner and dog walker I am very disappointed in the proposed leash restrictions for Oakwood Valley and the Alta Trail/Orchard Fire Road/Pacheco Fire Road. Please continue to allow dog voice control in these two areas. I can better understand the proposed leash restrictions for Muir Beach, where there are lots of picnickers, small children, and numerous encounters.

I have hiked with my dog under voice control extensively in the Oakwood Valley and Alta Trail/Orchard Fire Road/Pacheco Fire Road areas. I have not observed dogs under voice control causing issues for people without dogs, nor causing resource impacts. Almost all dog owners in these areas are considerate of others, and most everyone that I have seen who are regular hikers, with and without dogs, always get along fine. I think it's a really small minority of people who don't own dogs who complain, and it's probably people who rarely hike Oakwood/Alta/Orchard too. This is at the expense of the vast majority of us who actually hike there often with our dogs.

Correspondence: I go to places and parks now in Marin that leash laws are required in some parts of the area and in my experience those dogs off leash are under voice control, some more responsive than others. I believe that the dog owners in Marin are educated, savvy and considerate enough that the overwhelming majority are responsible, sensitive and considerate of others.

We can't make the rules/laws just for those few as the lowest common denominator.

If those considering these policies have or have had a dog then they know how important and gratifying from both the owners and the dogs perspective to be allow to run and enjoy themselves. Seeing a dog running, chasing a ball or another dog is truly uplifting.

I have looked at the alternatives and of course prefer those. If we are all involved in self policing and informing owners whose dogs aren't complying then we can all win.

Correspondence: I would like to support the current policy of allowing dogs to run on certain beaches without a leash. I feel strongly that people as well as dogs need to get exercise. There are very few places where a dog can actually run. Walking on a leash is not enough exercise for all dogs. Most neighborhood streets have too much traffic to allow a dog to run up and down. Most pet owners are responsible owners and keep their dogs under control. Unfortunately there are always a few irresponsible people who ruin things for everyone. It is not fair to take away a fun activity for so many people and dogs because a few cannot be considerate of others.

If the rules and expectations are clearly posted and enforced, I do not think there will be any big problems. As a suggestion, the Park Service may want to consider having trash cans and plastic doggie mitts available for pet owners to use to pick up after their dogs. San Rafael provides this service and I never see any dog "droppings" on the streets or in the grass at the parks where these mitts are available.

The Golden Gate National Recreation Area is a wonderful area that is used and enjoyed by many people. Dog owners and their pets should not be denied access to this area. There is more than enough space to meet the needs of everyone.

Thank you for your consideration in the matter.

Correspondence: I attended the 03/09/2011 Public Open-House Meeting at the Cabrillo School in Pacifica and was extremely disappointed in the information I learned there. I am retired and enjoy walking my one dog in many of the local parks run by the Golden Gate National Recreation Area. It is great exercise for me and my dog and is important to to both our mental and physical health. I had understood that we would see the new plans proposed and be able to express our opinions to the GGNRA staff who would be attending the meeting.

The meeting turned out to be a complete farce because all of the plans presented were incredibly more restrictive than what we enjoy now, and the staff would only talk to us about their different plans as though there were giving us a real choice. As I tried to discuss the plans for each of the parks I go to, it became obvious the staff had no intention of trying to understand how much was to be taken away from people by their so called competing plans, but only to make it seem that this was our chance to have some input. No one I talked to wanted to listen to my concerns only to spout each other's rhetoric as as though they had all memorized the same lines.

I heard over and over again the California State Parks are more restrictive than the National Parks. This is simply not true. Dogs on leash are allowed on fire roads in every State Park I have visited. In fact at the Redwood National and State Park a National Park Ranger told I could not take my dog on any fire road but two State Rangers said he was wrong and that I could. I noticed in several plans where roads that motor vehicles are sometimes driven, dogs on leash would be forbidden. For example the Mori Point Road and the Baquiano Trail where I saw a USGS vehicle in March 2011. Wouldn't a reasonable compromise be to allow dogs on leash on most roads where motor vehicles are allowed to drive?

Are there no dog lovers in the National Park Service? Is there no one there that understands the joy of enjoying the outdoors with your pet? It would not be such a hardship if there were a number other places in this area to go to but there are not. Can't your mission include finding a reasonable way to serve the needs of such a large portion of the people who live and visit this area.

It would seem to be a much more reasonable strategy to work with dog people, who I know could be an important resource for contributions and volunteers to help maintain the parks. Instead of alienating a large portion of the population why not work with them. Instead of having meetings where

there is no real discussion why not have meetings where all points of view are listened to. Making so many people so angry does no one any good.

Isn't it possible to have some of the plans discussed be at least remotely acceptable to dog lovers? The way it is now the Park Service is pretending to listen and to have public comment but you must know you are not fooling anyone. The way you are acting just doesn't seem like what I have always thought the Park Service to be. Are Park Rangers no longer the friendly and helpful people I have always known? How will I be able to be able to enjoy getting my national park passport stamped in parks across the country after being treated like this?

Please reconsider what you are doing and the way you are going about it. There has to be a better way.

Correspondence: The Compliance-Based Management Strategy must not be allowed! This poison pill that will allow the GGNRA to change the status of off-leash areas to on-leash or no dogs without additional public comment if there is not 100% compliance with the new restrictions will not work. It allows a relatively few bad players to undermine and destroy a traditional recreational use of the area. No number of responsible dog owners will stop what will become the inexorable removal of all off-leash access in the GGNRA if this strategy remains part of the plan. Tens or hundreds of thousands of hours of incident-free dog walking will not matter. There should be (and are) penalties for bad actors and these should be enforced. But the vast majority of people who do not act badly should not be penalized for the bad actions of a few. This strategy is unfair because off-leash status can be changed in only one direction (toward more restriction). It circumvents the legal requirement that management changes that are either significant or controversial must have a public process before they can be made.

Correspondence: The Preferred Alternative is not acceptable! It is overly restrictive, and its restrictions are not justified by the totality of available data. It is based on separation and exclusion, a management philosophy that goes against the values of the Bay Area in which it is fully immersed. It violates the mandate

for the " maintenance of needed recreational open space" contained in the legislation that created the GGNRA. The DEIS is full of negative things that "might" or "could" happen if dogs are allowed off-leash at various sites. But there is very little evidence presented that these hypothetical impacts actually happen. Given the intense scrutiny of dogs by the GGNRA over the past decade and more, the fact that there is not more persuasive real data about significant impacts of off-leash dogs means that there is no real justification for the proposed restrictions contained in the Preferred Alternative. The contraction of areas available for off-leash recreation will significantly compromise the park experience for people with dogs, and could lead to an increase in conflict as more and more people are forced into smaller and smaller areas. The impacts of people moving from the GGNRA into city parks is not adequately addressed in the DEIS. Any alternative must address these impacts on city parks and ways to mitigate them.

Correspondence: The GGNRA should develop a new alternative, the A+ Alternative, that will better balance the recreational needs of the Bay Area with protection of natural resources. The DEIS calls the "No Change" Alternative "A". This is the 1979 Pet Policy with some restrictions, particularly restrictions on off-leash at Ocean Beach, Fort Funston, and Crissy Field because of the snowy plover and native plant restorations. More than one-third of Bay Area residents have dogs and we now know the importance of off-leash recreation for dog's physical and mental health, as well as the importance of the significant social communities that develop where people recreate with their dogs off-leash. This large segment of Bay Area residents should not be restricted to significantly less than 1% of GGNRA land (that is how much GGNRA land is available for off-leash recreation in Alternative A) to have a satisfactory park experience, especially since there is little scientific evidence supporting restrictions on off-leash. There has to be more space available for off-leash recreation, not less, given the huge demand for it in the Bay Area. The A+ Alternative would include everywhere that is currently off-leash, plus sufficient off-leash opportunities in San Mateo County to meet the demand, and more trails off-leash throughout the GGNRA. In addition, new land added to the GGNRA would include off-leash areas, especially in those areas where it has traditionally taken place. There would be no compliance-based management strategy in the A+ Alternative. Any dog management philosophy in the GGNRA, like that for any other recreation use, should be based on Bay Area values of co-existence, shared space, collaboration among park user groups, and education where problems arise. Enforcement of already existing regulations should target irresponsible dog owners who create the few problems

documented by the GGNRA, while allowing responsible dog owners to continue their traditional off-leash recreation without harassment.

Correspondence: Severe restrictions are not needed to protect other park visitors from dogs. Problems with dogs represent a tiny fraction of the total incidents and citations issued by the GGNRA over the past decade. Of those incidents and citations issued to people with dogs, the majority were leash law violations, or being in a closed area, and did not reflect any safety issues between dogs and other park visitors. Target enforcement on the small number of people whose dogs misbehave, not on excluding the entire class of people with dogs from most of the GGNRA. Jean Donaldson, nationally recognized expert on dog behavior testified before the SF Animal Control and Welfare Commission on 2/8/07: "[S]elf-selection operates strongly, i.e., people who take the time to get into their car or walk to a designated off-leash area to exercise their dogs tend not to be the type who are derelict in other areas of dog guardianship, such as training, socialization, or appropriate containment."

Correspondence: The DEIS does not adequately address dispersion issues. The DEIS does not adequately address the environmental and social impact of forcing large numbers of people and dogs into much smaller areas. Reducing the amount of area available for off-leash will significantly degrade the park experience for people with dogs. It will increase conflicts. Even more importantly, the DEIS does not address the environmental and social impact on small, neighborhood parks in cities like San Francisco next to the GGNRA. Because the GGNRA is located immediately adjacent to one of the most densely populated areas in the United States (San Francisco), it provides much needed recreational open space for Bay Area residents. If that open space is lost to recreational access, people and their dogs will move to the much smaller city parks and they will not be able to absorb the hundreds or thousands of people with dogs each day that will be kicked out of the GGNRA. As further proof that the GGNRA did not consider impacts on city parks in San Francisco, the Preferred Alternative suggests the nearest legal off-leash area in San Francisco to Fort Funston is Lake Merced. That off-leash area has been closed to off-leash for years and has been turned into a native plant restoration area and habitat for the endangered red-legged frog among other animals. Yet this is where the DEIS suggests people with dogs go.

Correspondence: The DEIS continues a trend of GGNRA claims about impacts by dogs on birds that are not supported by the data. It is based on bad science. There is no scientific consensus that severe restrictions on off-leash dogs are needed to protect natural resources and wildlife. Some of the most compelling research in the last few years has been by researchers such as Forrest and Cassidy St. Clair (2006) and Warren (2007) who admit that they expected to find that off-leash dogs had a major impact on the diversity, abundance, and feeding behaviors of birds and small mammals. However, when they did the actual research, they found no such impacts. This indicates that assumptions about impacts from off-leash dogs must be tested and proven to be true before they can be used to justify restrictions. Unfortunately, most of the assumptions cited by the GGNRA have not been adequately tested or proven. In addition, the GGNRA has repeatedly cited research that they claim shows major impacts from off-leash dogs. However, when the raw data from these studies is analyzed, it is clear the claimed conclusions are not supported by the data. This is highly reminiscent of the problems

documented at the Point Reyes National Seashore, where claims by staff biologists about negative impacts from an oyster farm located within the park were proven to be baseless when the raw data was independently analyzed.

Correspondence Type: Web Form

Correspondence: The claim in the DEIS that they have to manage the GGNRA in a manner similar to the way they manage parks like Glacier National Park or Yellowstone National Park is misleading and cannot be used to justify the restrictions called for in the Preferred Alternative. a) The GGNRA is a National Recreation Area, not a National Park. The mandate for the GGNRA's creation was, according to the legislation that established the GGNRA in 1972, for the "maintenance of needed recreational open space". Off-leash dog walking was acknowledged at the time as one of the traditional recreational uses taking place in the GGNRA when it was created. In 1979, the US Congress passed a law that all national park units, including national recreation areas, national seashores, and national monuments have to be managed uniformly. But, concerned that the unique purposes for each park would be overlooked in this change, they added the following language to the law: "The authorization of activities shall be construed and the protection, management, and administration of these areas ? shall not be exercised in derogation of the values and purposes for which these various areas have been established". So there is no mandate to match the GGNRA's policies with National Park Service requirements that dogs not be allowed off-leash in a national park.

b) In 2002, a panel of senior National Park Service officials concluded, in part, "[T]hat off-leash dog walking in GGNRA may be appropriate in selected locations where resource impacts can be adequately mitigated and public safety incidents, and public use conflicts can be appropriately managed." Adequate mitigations and management already exist ? target people whose dogs bother birds and wildlife or who jump on people, but leave the vast majority of responsible dog owners free to recreate off-leash with their dogs on the less than 1% of GGNRA land on which they've always been allowed off-leash.

c) Dogs are allowed off-leash to hunt in national preserves, and other units administered by the National Park Service. Surely, if it's okay for a dog to be off-leash while it helps chase, corner and kill a wild animal, it should be okay for a dog in the GGNRA to be off-leash to play with people and other dogs.

d) The GGNRA is located in the densely populated San Francisco Bay Area. It is in a major urban area. Much of the land was highly modified by the military when they controlled the land before the GGNRA was created. The GGNRA contains numerous missile silos, artillery batteries, and their assorted support structures. The military planted huge amounts of ice plant to stabilize the sand dunes at Fort Funston and elsewhere. Standards of management that treat much of the GGNRA, especially those parts in San Francisco, like pristine wilderness are misguided.

e) During 2/17/07 Negotiated Rulemaking meeting, Barbara Goodyear, the Field Solicitor for the NPS, made it clear that while all parks are managed to the same level (conservation of resources), there is flexibility in how that is done from park to park. She cited as an example, the fact that you don't manage Yosemite Valley with the expectation that people will have a solitary wilderness experience. You manage it with the knowledge that people will bump into each other in that part of Yosemite. The GGNRA, an urban park located in and immediately adjacent to a large city, does not have to be managed in the same way as Yellowstone or Glacier National Parks.

Correspondence: The level of enforcement required by the Preferred Alternative is excessive and unsustainable. Targeting people walking their dogs irresponsibly and leaving responsible dog walkers alone would be a much more efficient use of GGNRA resources. The DEIS states that it will cost nearly \$1million to enforce the Preferred Alternative, through the hiring of more Park Rangers or Park Police. In an era of shrinking federal budgets, this seems a poor use of scarce financial resources. Existing Park Rangers could easily enforce already existing rules such as picking up pet litter or no chasing of birds. These enforcement actions are all that are needed to ensure responsible dog walking and minimal impact on natural resources and other park visitors from off-leash dogs.

Correspondence Type: Web Form
Correspondence: The inclusion of a "poison pill" in the DEIS suggests the GGNRA will use it as an end run to ban off-leash dogs in the near future, bypassing the kind of public process such an action is normally required by law to follow. The DEIS includes a "compliance-based management strategy" that says that, if there is not enough compliance with the restrictions imposed by the

Preferred Alternative, the GGNRA will change the management of the various areas to the next more restrictive level ? an off-leash area will become on-leash only, an on-leash area will become no dogs at all. This change will be permanent, with no chance to go back to less restrictive levels at any time in the future. This section must be removed from any final Dog Management Plan. a) This compliance-based management strategy is decidedly unfair, because it can only be changed in one direction ? toward more restrictive levels of access for people with dogs. b) There is no provision for public comment in the case of a change in status of an off-leash or on-leash area because of the compliance-based management strategy. The GGNRA has already lost two court cases (and one appeal) when it tried to make a significant and controversial policy change without going through a public process. The federal courts have routinely told the GGNRA that they have to hold public meetings and take public comments before making such changes. Clearly, a change in status of an off-leash area to leash-only would be both significant and very controversial, and therefore should require a period of public comment and public hearings before being implemented. The poison pill in the DEIS is an end run designed to allow the GGNRA to make such changes without having to go through a public process (they can claim the public process was the public comment on the DEIS itself, not on the changes it allows at a future time). c) How will compliance be monitored? Who will do the monitoring? The GGNRA has repeatedly relied on poorly trained volunteers with a deep-seated bias against dogs to monitor the interactions between dogs and snowy plovers. Why would we expect these compliance monitors to be any less biased? Will their claims of non-compliance be valid? Will the GGNRA resort to the use of surveillance cameras to monitor compliance? While noting that there is no mention of surveillance cameras in the DEIS, GGNRA staff have refused to say they would never be used. d) This allows a few bad actors to result in the removal off-leash access everywhere in the GGNRA, even if there are tens of thousands of hours of incident-free dog walking for every single incident. Including a "nuclear option" in a management plan is not good management policy. Regulations already exist to target those who do not control their dogs when they are off-leash. Target enforcement at those bad actors, not at the huge numbers of dog walkers who do not cause problems.

Correspondence: Off-leash play decreases the likelihood of dog aggression in dogs. In comments to the SF Animal Control and Welfare Commission on 2/8/07, Jean Donaldson, then head of the Dog Training Program at the SF/SPCA and a nationally recognized author on dog behavior said: "There is not only

no evidence that allowing dogs off-leash for play opportunities increases the incidence of aggression, to a person, every reputable expert in the field of dog behavior in the United States is of the opinion that it is likely that off-leash access decreases the likelihood of aggression." She also said: "Interestingly, it could very well be that the safest dogs are those that attend off-leash dog parks." And she said: "There is no research demonstrating that dog parks or off-leash play contributes to any kind of aggression, including dog-dog aggression."

A well-exercised dog is a well-behaved dog. Dogs that are not adequately exercised can develop behavior problems such as barking, destroying property in the home, etc. Behavior problems are one of the primary reasons that people surrender dogs at shelters. San Francisco has a "No Kill" goal that no potentially adoptable animal in a city shelter (SF Animal Care and Control, SF/SPCA, Pets Unlimited). Representatives of the SF/SPCA have said that the Preferred Alternative will make it harder for the SF/SPCA to perform their mission to reduce surrenders to city shelters and make San Francisco a truly No Kill city.

Correspondence ID: 1338 **Project:** 11759 **Document:** 38106

Received: Mar,20,2011 16:02:55

Correspondence Type: Web Form

Correspondence: 1) The "Poison Pill" of a "Compliance-Based Management Strategy" is unfair since it can only reduce off-leash access and not increase access in the future, and is an attempt to circumvent the legal requirement of a public process when management changes that are significant or highly controversial are made. It will not work and must be removed.

2) The Preferred Alternative severely restricts recreational access for people with dogs, a fundamental violation of the reason the GGNRA was created. In the legislation that created it, the reason for the creation of the GGNRA is listed as "the maintenance of needed recreational open space." Off-leash dog walking is among the recreational activities listed as traditionally occurring in the land that was to become the GGNRA. There is no off-leash access in San Mateo County in the Preferred Alternative and that must be changed.

3) The Preferred Alternative is overly restrictive. The science and data do not support the level of restrictions on people with dogs included in the Preferred Alternative. When dogs are walked in a responsible way (as most are), there is no conflict with the environment or with other park users. Target people not walking their dogs responsibly, but leave the vast majority of us alone.

4) The Preferred Alternative unfairly mandates that any new land that comes

into the GGNRA cannot have dogs either on- or off-leash. This restriction is unneeded, and denies the traditional recreational activity of off-leash dog walking that has existed on many of these lands for decades. It goes against the recreational mandate that was the reason the GGNRA was created. If new land is added to the GGNRA, off-leash access must be allowed on it.

5) The Preferred Alternative is not "balanced." The 1979 Pet Policy allowed dogs off-leash on less than 1% of GGNRA land. Given recent additions of large tracts in San Mateo County to the GGNRA, this number is now significantly less than 1%. Off-leash dog walking started from a position of great imbalance. One-third of San Francisco households have dogs, yet they can currently recreate with their dogs on less than 1% of GGNRA land. The Preferred Alternative allows off-leash on even less, including no off-leash anywhere on GGNRA land in San Mateo County. How is that balanced? By denying the possibility of off-leash on any new lands that come into the GGNRA in the future, the Preferred Alternative will ensure there is no balance between recreation and protection of natural resources in the future. We need more off-leash recreational open space, not less.

6) The Preferred Alternative is based on a philosophy of separation and exclusion. It denies that different park users can co-exist. Rather than share space between different park users, the Preferred Alternative carves up park space into separate areas for different park users. This basic philosophy is the exact opposite of the way we approach problems in San Francisco. It flies in the face of the unique social qualities of San Francisco. The GGNRA needs to develop a new Alternative that will better reflect San Francisco values such as co-existence, shared space, collaboration, and education to address problems should they occur.

7) The Preferred Alternative discourages cooperation between different park users and will increase conflict between park users, as more and more people are crammed into smaller and smaller spaces. Park user groups can work together to resolve problems when they come up. For example, Fort Funston Dog Walkers, SFDOG and the hang glider group Feathered Flyers of Fort Funston collaborated on a series of signs to warn dog owners to keep their dogs out of the hang glider take-off area.

8) The Preferred Alternative condemns every dog owner for the actions of a very few irresponsible owners. According to the GGNRA's own statistics, 94% of dogs do not chase birds (and most of those who did chased seagulls). Yet, all people with dogs will be excluded from a majority of Ocean Beach to "protect" birds. Focus enforcement on people who do not keep their dog from chasing birds rather than on excluding all people with dogs.

9) Dog owners are being held to a standard of behavior that is impossibly

high, and significantly higher than any other park users. For example, studies by GGNRA staff routinely show people without dogs "disturb" plovers, but there is no attempt to restrict people without dogs from the beaches where plovers roost (not nest).

Correspondence: I own two dogs and live Mill Valley. We visit the GGNRA at least four times a week. The Draft Dog Management Plan would reduce our enjoyment and use of the park considerably.

In the plan the enabling legislation for the GGNRA is quoted: "In order to preserve for public use and enjoyment certain areas of Marin and San Francisco counties, California, possessing outstanding natural, historic, scenic and recreational values and in order to provide for the maintenance of needed recreational open space necessary to urban environment and planning, the Golden Gate National Recreation Area is hereby established". The plan also discusses the long history of off-leash dog access before and after the creation of the park.

Because open space is so limited in Marin County and San Francisco, and because the GGNRA controls the entire coastline I strongly support continued access to provide reasonable exercise and recreation for dogs and their owners.

I'm very concerned about the tone of the plan and some of the specific provisions.

The objectives listed in the executive summary all relate to controlling, reducing and restricting dog access. Given the park's charter to provide 'public use and enjoyment' and 'needed recreation open space' an important objective should be to preserve sufficient space for off-leash dog access.

The plan exhaustively lists real and theoretical issues related to dog access however there is no comparable section discussing issues with prohibiting or restricting dog access. These include wasting limited park resources on restricting responsible dog owners rather than cautioning the irresponsible, forcing dog owners to travel further to take their dogs for a reasonable walk and increasing the likelihood of aggression by concentrating dogs in increasingly small designated areas.

The plan also continually discusses dog access in the context of park-wide regulations preventing any off-leash dog walking. San Francisco donated

properties to the GGNRA on the proviso that traditional recreation would be maintained. The tone suggests that leash-free access was a mistake, and that the park service is begrudgingly fulfilling the park's mission only when forced to do so. I'd have much more confidence in the process if the plan started from the position of accepting a variety of recreational activities, including off-leash dog walking, and then attempted to balance the varied needs of visitors, culture and wildlife from there.

Given this I find the adaptive management provision of the regulated off-leash areas (ROLAs) to be unacceptable. This provides the NPS with a mechanism to further erode dog access to on-leash only and even to prohibit dogs entirely without further consultation. The plan further states that under no circumstances will the reverse be true ? once dogs are banned the park will never consider opening up access again. This is a far greater threat to preserving the park for future generations than any amount of dog access.

Rather than penalizing the vast majority of responsible dog owners the Dog Management Plan should focus on enforcing existing rules and regulations.

Below I discuss the proposed plan for the sites we visit regularly:

Alta Trail, Orchard Fire Road, and Pacheco Fire Road

The preferred alternative is far too restrictive. This has long been an almost daily walk for us. To limit this trail to on-leash or eliminate dogs entirely would eliminate 90% of the current use of this space since there are so few areas to bring dogs to begin with.

Oakwood Valley

The preferred alternative is far too restrictive. This has recently been a daily walk for us. To limit this trail to on-leash or eliminate dogs entirely would eliminate 80% of the current use of this space since there are so few areas to bring dogs to begin with. The least behaved dogs I've seen on this trail are the ones that are on leash. If you require that all dogs are leashed, because the trail is so narrow in some areas, I predict that dog incidents will actually increase.

Marin Headlands / Rodeo Beach The preferred alternative massively reduces the trail available for hikers with a dog. We often complete the loop up the coastal trail to Hill 88 and then down Wolf Ridge / Miwok to return to Rodeo Beach. The trails are rarely crowded and a well behaved dog has no more impact than a person. The Hill 88 loop should be kept open to off-leash dogs. The preferred alternative for Rodeo Beach is acceptable.

Fort Funston The preferred alternative is far too restrictive. When the closed

section of trail to the north of Fort Funston is open again there should be off-leash access for the full length of the beach and alongside trails so that a loop can be made down the sand ladder and then returning via the central or northern access trails. Of all the GGNRA sites Funston would seem to be the best candidate for Alternative A ? maintaining current access ? especially if the preferred alternative is selected for restricting most of Ocean Beach. We visit Fort Funston weekly, rain or shine, and given how heavily the area is used I'm surprised at how rare it is to encounter any problems.

Correspondence: Continue the History Muir Beach was established as a residential community back in the 1920's, well before the stewardship of the Park Service. The locals consider Muir Beach and its surrounding trails to be their backyard and have been enjoying this land for recreation with their families and pets for almost a century. Historically, Muir Beach has always been a dog-friendly beach and a beloved destination for dog lovers throughout the Bay Area. Let's keep it that way.

Keep the "R" (Recreation) in GGNRA The Golden Gate National Recreation Area (GGNRA) was created by Congress in 1972 to: "provide for the maintenance of needed recreational open space necessary for urban environment and planning" and "to assure the preservation of open spaces ... to provide public access along the waterfront and to expand the maximum extent possible the outdoor recreation opportunities available to the region."

Muir Beach and its surrounding trails must remain open for multi-use recreational activities for all residents of Marin and surrounding Bay Area cities, as was mandated in the legislation that created the GGNRA. The proposed dog ban is in direct opposition to that mandate.

Alternative D is Not Viable The preferred plan states that "off-leash dog walking can occur at a small beach area on county property adjacent to the NPS beach". The area they refer to is called "Little Beach" and it is not accessible without crossing the main beach or driving along neighborhood private roads. Most of the time, the rocks are impassible because of surf and tides. The "social trail" from Pacific Way to the north end of Big Beach is a steep, hazardous, rocky pathway, with no handrails. There is no public parking on Sunset Way or Pacific Way. All spaces are on private property. All lanes are fire lanes. Extra and illegally parked cars would create a hazard for the surrounding community in terms of blocking access to emergency vehicles. For those who would arrive on foot via the road, there are no

amenities or services for Little Beach. No trash cans. No toilets. In addition, Little Beach oftentimes has no beach at all during the winter or at high tide. Squeezing people over to that beach for use with their dogs is not a reasonable alternative. Formally stating and implementing such a plan would require appropriate impact studies and input from the surrounding community. Protect Sensitive Habitats We recognize and support the protection of the newly restored Redwood Creek and lagoon areas with its sensitive habitat and wildlife. However, instead of spending 1 million dollars to enforce new dog rules, as is proposed in the NPS plan, we encourage a more cost-effective approach which would include stepping up educational efforts and increasing signage and boundary markings for all visitors.

Currently, there is only 1 large sign posted at the bridge access to the beach and 2 very small signs which indicate the dunes area and lagoon area restoration efforts. There is no "no swimming" sign posted to discourage people from swimming in the lagoon and creek areas. It is important that the NPS more clearly delineate these areas and then properly enforce the existing rules among all visitors so that these sensitive habitats can be protected.

Marin County residents supported the recent Redwood Creek restoration efforts with their volunteer hours and tax dollars. We do not, however, support environmental concerns that exclude the continued recreational use of the area for residents and visitors -- including those with dogs. Additionally, no data has been presented which proves that dogs are any more harmful to these sensitive areas than people, so it is unfair to restrict usage of the beach and its surrounding trails to this one group. Encourage Responsible Dog Ownership Admittedly, a few dog owners behave badly, but the idea of banning a whole group of people based on the sins of a few goes against the sense of fairness and seems like intrusive government. We believe that simple and cost-effective steps can be taken to mitigate these problems.

As is the case in most other dog-friendly parks throughout the Bay Area, a conveniently located dog litter bag dispenser and waste receptacle would be a simple way to encourage dog owners to pick up after their pets.

In addition, signage should be increased to educate people so that all visitors are clear on the existing rules. Just as the actions of a few irresponsible parents should not ban children entirely from the beach, so goes the logic for dog owners.

We can appreciate that some people desire a "dog-free" experience on local beaches and trails. That option is already available at 99% of GGNRA lands, with the larger public beach at Stinson and most of the surrounding

GGNRA trails already dog-free. In contrast, Muir Beach and the Coastal trails adjacent are the only dog-friendly options which remain in Southern Marin. Safe Hiking, Beyond the beach The preferred alternative would eliminate dog access to the Coastal Fire Road and Trail adjacent to Muir Beach. As it stands, these are the only remaining trails from Muir Beach that are open to dogs. For women who hike alone, this new rule presents a serious safety concern.

In addition, we believe that there should be a legal way for a person to walk between Muir Beach and the nearest community, Mill Valley. Currently, there is no continuous trail that allows this access with a dog. Adding a dog-friendly access of the Coyote Ridge Trail to Miwok Fire Road would allow hikers with dogs to cross from Muir Beach into Mill Valley.

Correspondence: Off-leash dog-walking areas are one of the great benefits of living in the Bay Area. Over more than 30 years, we have taken our dogs for exercise and recreation at Fort Funston.

The progressive limitation on areas where dogs can be off-leash is a great hardship to both dog-owners and dogs. Of all areas being addressed in the document, Ft. Funston is the one that has become a special treasure for those of us with dogs. In general, almost anyone who goes there expects to take a dog or to at least mix with dogs. So, while there are some who go there who might prefer not to encounter off-leash dogs, there are many more who enjoy seeing and interacting with the dogs.

Because of climate, most people who go to the beach in San Francisco do not intend to lie around on blankets in the sun. The beaches are mostly just another outdoor space, and an opportunity to be near the ocean. Dogs in no way impede the enjoyment of our beaches by people, with or without their own dogs. So there really is no reason or justification for a no-off-leash beach area, and especially not for a no-dog area. I have never seen a dog actually catch a wading bird by the ocean; the birds are much too fast for the dogs and easily outpace them in the water or fly away. Also, there is virtually no environment on the beaches that dogs can destroy or degrade.

I have much more often seen people without dogs, including large groups of children under the supervision of adults, in areas of dunes that are fenced off, sliding around on the sand and disturbing the environment, than dogs or people with dogs.

A fair compromise between people who have dogs and want to be able to let them run and play off-leash in the national parklands, and people without dogs who want to enjoy the parks without having to contend with off-leash dogs, ought to take into account that the balance at present greatly favors people without dogs. Even if all of Ft. Funston were open for off-leash dog-walking, without restriction, it would still not be fair to place so many restrictions on dogs in the other areas. But at the very least, Ft. Funston should allow the greatest possible off-leash dog use, so that there continues to be one place in the Bay Area where dogs can enjoy their natural way of life. Dogs are part of the environment too and they deserve to be treated equally with other animals.

Finally, dog-ownership is difficult enough in the city, with so many landlords unwilling to allow dogs in their buildings. Many dogs are cooped up in small spaces for most of the day. They need a place to get out and run and stretch their legs. The physical and mental health of hundreds of thousands of our residents are tied in with the time they can spend outside with their dogs. We need these open spaces where dogs can run free.

Thank you for your consideration.

Correspondence: To Whom it May Concern, As a concerned citizen and resident of the city of San Francisco, I am deeply troubled by the proposed plan to limit off-leash dog areas in the Bay Area. I have had my puppy for 8 months and I take her to Fort Funston every day. One of the most amazing and critical benefits of living in San Francisco is its perfect combination of nature and urban areas that allow us to live our city lives in a thriving metropolis but also maintain

our rural sensibilities. Dogs are a critical part of our link to nature. Taking my dog Cora to Fort Funston lets me connect with both the urban and rural aspects of San Francisco. The gorgeous city views in between the arboreal landscape while hiking with Cora make me appreciate every day I live in this city. If off-leash access to places like Fort Funston were limited, my dog's enrichment as well as my own would be severely curtailed. And the human canine bonding that we get to experience every day wouldn't exist to the extent that we are afforded today. I rescued Cora from a shelter with the intention of giving her a better life. That life needs to be free with exploration of nature and socialization. Keeping Bay Area recreation areas open to off-leash dogs is the most critical aspect of maintaining a healthy dog. I urge you to reconsider this proposal. Allowing this to pass would lower the quality of life for all San Francisco and Bay Area residents. I am proud to live in this area and enjoy the freedoms that come with it. This proposal makes me sad and embarrassed for us all.

Sincerely,

Ami Barzelay

Correspondence: Hello, As someone that enjoys hiking the trail above Marin City I have to say that the dog walkers that use these trails have behavior that is outrageous!! I have seen one dog walker with over 10 dogs all off leash, and never once did she pick up the poop from any dog in her her herd. I have seen other dog owners with several dogs off leash and again never picking up the poop their dogs leave behind for the rest of us. I think Dogs should be required to be on leash at ALL times! And only 2 dogs per person Thank you for the opportunity to voice my concerns Gail

Correspondence: I'm writing to express my strong view that Fort Funston and other areas of GGNRA should continue to allow for dogs to be off leash under voice control in designated areas. [Alternative A: No Action (36 CFR 2.15, 36 CFR 7.97 (d); 1979 PetPolicy; GGNRA Compendium)]

If the purpose of GGNRA is to serve a large and diverse urban population while preserving natural, historic, scenic, and recreational values, it is

essential to allow for some reasonable areas for dogs to be allowed off leash. Thousands of dog owners in the Bay Area are taxpaying citizens who depend on these areas to provide opportunities for recreation together with their pets. Dog owners understand and respect that there many places which prohibit dogs, or require them to be on leash. Certain areas of GGNRA--and particularly Fort Funston--have long served as havens for dog owners to enjoy the recreational and scenic beauty of the Bay Area with the companionship of their pets. One of the wonderful aspects of living in the Bay Area is that there are so many places to enjoy our scenic beauty. As a dog owners, we just need a few where we can recreate together.

Thank you for your consideration.

Sincerely,

Michael Chertok

| Correspondence: | As a San Francisco resident, dog owner, and outdoor enthusiast, I strongly urge you to keep GGNRA open to all in line with its mandate to serve as an urban recreation area with mixed uses. Off-lease exercise is important for dog health and better exercised dogs are better for everyone in the city. Moreover, take dogs on walks - both on leash and off-leash leads human residents to get out to enjoy the wonderful outdoor spaces in the Bay Area and to get beneficial exercise. Please consider the proven history of dogs coexisting with other activities and wildlife in the GGNRA for the past several decades and continue to let our parks be used as intended! | | | | |

Correspondence: I am writing to plead with the GGNRA to PLEASE keep the parks open to dogs and off-leash walking throughout the parks. This extreme proposal will completely change the way we experience the wonderful parks and beaches that have been such an asset to the people and dogs of San Francisco.

Congress could resolve this conflict by codifying the GGNRA's 1979 Pet Policy as a Section Seven Special Regulation, and mandating that all properties added to the GGNRA after 1979 maintain historical recreational access.

I moved here 8 months ago with my dog, and have been so happy with the parks and beaches because our dogs have the chance to get the proper exercise and socialization. San Francisco is so special because it is not like any other city, and it has always been so pet-friendly. Please do not take away our parks and beaches. The dogs deserve a place to be happy and exercise. People, dogs and the wildlife CAN share these parks, as they have for 25 + years.

THank you for your time and consideration.

Sincerely, Morgan Fauth (and my dog, Bodhi)

Correspondence: San Francisco parks & the GGNRA has a currently wonderful, working off-leash dog walking policy. "If it ain't broke, don't fix it." It would certainly be easier for the GGNRA to have "consistent" policies, but that is not the point. It's about access for thousands of urban dwellers to utilize their parks. When many of these lands were set aside, it was for mixed use, not pristine

wilderness restoration.

Recently returning from San Diego county, I was appalled by the lack of access that dog owners had to beaches there. DON't let that happen here--it would greatly change the quality of life for so many people. As a parent, a dog owner, and an employee of an environmental organization, I feel we have a great balance now for the parties involved. Chrissy Field is a fine example of protecting endangered species, while providing a place where a parent can take their dog & kids to the same park. (This is very hard to find, as most playgrounds do not allow dogs, and the smaller "dog parks" are not really a great place for young children on the ground.)

Please keep status quo, and work to preserve our status quo so we don't have to go through this process every few years when the governing entities want to take away our access. Thanks

Correspondence: Dear Mr. Dean, I am strongly in favor of keeping the GGNRA open to dogs and off-leash dog walking. I implore the GGNRA to stop pushing its extreme proposal that will negatively impact tens of thousands of tax-paying and voting residents living in San Francisco and Marin. I understand that Congress could resolve this conflict by codifying the GGNRA's 1979 Pet Policy as a Section Seven Special Regulation, and mandating that all properties added to the GGNRA after 1979 maintain historical recreational access. Please do NOT eliminate or restrict dogs or off-leash dog walking in San Francisco or Marin.

I lived on Chestnut Street in the Marina in San Francisco for 9 years and recently moved to Mill Valley in Marin County. I am the owner of two 13-year old, female Vizslas. I walk my dogs three times a day and send them out with a dog walker once a day while I am at work. Every day after work I take my dogs to Chrissy Field or the Oakwood Valley trail for a 30 minute off leash walk. On Saturday and Sunday I walk them at Chrissy Field in the morning and in the Presidio or the Oakwood Valley Trail in Marin in the afternoon.

I am from the East Coast and have lived in the Bay area for over 11 years. I consider myself fortunate to live in such a beautiful and historical city. Three of the areas I treasure are Chrissy Field, the Oakwood Valley Trail and the Presidio. There are few cities anywhere in the world where one can walk with their dog in a National Park or along a beach. Chrissy Field and the Presidio are two special places in that they are bursting with natural,

beauty and yet are also grounded in rich history. The same holds true for the Oakwood Valley trail, Baker Beach and Fort Funston.

Chrissy Field, the Oakwood Valley Trail, Fort Funston and the Presidio are perfect places to walk dogs off leash. At Chrissy Field the dogs can run on the beach and romp in the field. Few other places provide such diverse terrain and excellent play areas. The Oakwood Valley Trail is also an excellent place for dogs to walk off-leash as there are few people, no cars and ample trails. Other excellent off-leash dog walking areas are the Marin Headlands, Fort Funston and Baker Beach.

As I am sure you are aware, it is very important for a dog's mental and physical health that they get plenty of exercise. Some dog breeds require more exercise than others and it would be difficult for those breeds, such as the Vizsla, to get the proper exercise they require if they can not run and play off leash. My dogs are very high energy and need to exercise at least two hours a day. Exercise and socializing is critical to a dog's health and well-being. I make taking my dogs out for exercise my number one priority.

I am strongly in favor of allowing dogs off-leash in as many GGNRA areas as possible. The more places that one can walk their dog(s) off-leash, the better. I hope you will consider the impact on San Francisco if off leash dog walking is restricted or banned in the GGNRA. Banning or further limiting off leash dogs will have a significant negative impact on San Francisco and Marin county parks. At least 10,000 dogs visit the GGNRA every day. San Francisco city parks are much, much smaller than the GGNRA and will be unable to absorb the impact of all those dogs if they are forced out of the GGNRA. The negative impact on city parks far outweighs any potential negative impacts in the GGNRA.

Given that I walk my dogs several times a day, I am able to get out and meet many local friends and neighbors as well as tourists on my daily walks. Given my passion for the city and Marin, one of the things I am able to do is share stories and history with people who are visiting from out of town. One of the things that makes it easy for them to approach me is my dogs as they form a common bond between people. Every day I am out with my dogs I meet and socialize with people young and old; people gay and straight, people from the city and those visiting.

One of the nice things about Chrissy Field, The Oakwood Valley Trail and the Presidio is that they are multi-use areas. So on any given day one is apt to encounter joggers, walkers, cyclists, people flying kites, windsurfers, people picnicking, etc. One of the charms of the area is that they attract and support such as diverse group of people and wide range of activities. The community of people recreating with off leash dogs represents a tremendous cultural resource in San Francisco and the GGNRA. Where else can you see

people from nearly every ethnic background and race, all socio-economic levels, seniors, families with kids, etc. all getting together every day and every week to socialize together while their dogs play off leash. Walking and playing with off leash dogs brings together people who otherwise would rarely see or interact with one another.

Whenever I am out in Marin on the Oakwood Valley Trail or in San Francisco in the Presidio or Chrissy Field, safety is of utmost importance to me. I believe that banning or further limiting off leash dogs will have a negative impact on park safety. A well- used park is a safe park. Seniors and women, in particular, are often reluctant to walk alone in parks because of fears of muggings or rapes. The presence of people with well-behaved dogs off leash discourages rapists, muggers, homeless people and drug dealers from hanging out in parks. Many people, especially women like myself and elder folks, walk in the GGNRA precisely because there are so many people with off leash dogs there. The dogs provide a valuable sense of safety and security.

San Francisco and Marin residents have been walking dogs off leash in the GGNRA for decades and this is yet another valid consideration for maintaining off leash areas. Off leash dog walking is the status quo. Banning or further limiting where off leash dogs are allowed constitutes a change to the current and historical use of the park. Continuing to allow significant off leash recreation opportunities constitutes a "continuity of use" of park land. I implore you to maintain continuity of use. I am strongly in favor of allowing dogs off-leash in as many GGNRA areas as possible. The more places that one can walk their dog(s) off-leash, the better.

Please do NOT eliminate or restrict dogs of off-leash dog walking in San Francisco or Marin.

Thank you for your time. Sincerely,

Emily Church

Correspondence: Companion dogs are, by definition, socailized to interact with people and other animals. It is proven by experience and research that people who keep dogs are well informed about the best possible experience for the animal, the environment and other creatures. People with companion dogs re thoroughly experienced with regulations and manners (we pay license fees, etc). Because we keep dogs we should not be punished by arbitrary rules and

regulations that in the end serve only those loud enough to acheive their own ends, not for justice for all. Most areas of GGNRA, and other parks, open spaces, etc are on-leash only. Let those who object to sharing the earth with animals walk in their protected areas and keep what little slice is left for enjoying the area in our preferred way. Baseball, soccer,basketball players get free fields, horse people free trails, boaters get free waterways, everyone is served but people who only ask to enjoy their walks without the hassle, pressure and unanatural environment of leashed dogs.

Correspondence: To Whom It May Concern;

The proposal to essentially limit ALL areas in the GGNRA to on-leash or no dogs is not in keeping with the purpose of teh GGNRA to offer eperiences to a large and diverse urban population. In fact, it severely limits the experience of the residents who own dogs. Not only is there no evidence of dogs harming the experience of other visitors or significantly impacting wildlife/vegetation, but you would be doing a disservice to the animal shelters in our area. Th San Francisco Animal Control and Welfare Commission opposes your proposal becaeuse impacts to dog behavior (due to lack of exercise and over-crowding in city parks) and increases in animal surrenders and euthanasia at city shelters are not adequately studied.

Residents of the Bay Area choose to live here to experience all of the outdoor activities we are lucky enough to have available to us. It would be a shame to limit that experience for many with little to no evidence as to negative impacts of dog participation in the GGNRA. We should all learn to share our spaces and not restrict them to the few.

Thank you.

Correspondence: I've commented in the past and I have an update.

Yesterday, 3/20, I was at Fort Funston with my dogs. It was raining and 99% of the people there were dog owners. I only recall seeing one person (a bike rider) that was not associated with a dog. At any rate, it struck me that dog owners are really the folks that use Fort Funston the most. On rainy days at Fort Funston you typically don't see people just out walking, or out for a family event. So it seems ironic to me that the people that recreate at Fort Funston the most (rain or shine) are the ones being penalized by the proposed off leash restrictions. To me, it's like penalizing your "best customers".

Also, currently in the proposal, the beach area at Fort Funston is ROLA (as I understand it). Typically I don't take my dogs to the beach when I'm at Fort

Funston (I go to the beach probably 1 out of every 4 times I go to Fort Funston). However if the plan goes through I will start going to the beach more because it will be one of two ROLA areas. So the beach will now become more crowded with off leash dogs since it is only one of two ROLA places proposed at Fort Funston. It would not surprise me if non-dog owners then loudly complain because they cannot enjoy the beach due to more dogs on the beach. At that point, will the GGNRA simply take away that limited ROLA area as well?

As I've said in previous comments, I don't think the plan has taken into account all the social and economic issues associated with restricted off leash areas.

Correspondence: Dear National Park Service,

I have been a longtime lover of California National Parks and Recreations services but this new GGNRA Dog management program is deeply concerning for me. As a resident of Daly City and San Mateo county, I frequent Fort Funston and surrounding areas. I am a dog owner and consider my dog part of my family. Maxine is a personable, well trained and energetic mix of beagle and pug. And although, as a responsible dog owner, I walk her on-leash in my neighborhood, the HIGHLIGHT of her day is going to Fort Funston and getting to run free off-leash, with the wind flapping her cute floppy ears and her tail crazily wagging. Max and I respect the beautiful terrain, staying on assigned pathways and always picking up waste when necessary. Her most favorite experience is running down the cliff towards the beach, meeting other playful dogs and owners. Most dog

owners become sensitive towards reactions of how their own particular pet is feeling and I can tell every day we go to Fort Funston is the most wonderful day in the world for Max. I can tell by the pure smile on her face, the shake of her rump and the dangling tongue as she runs with a freedom like no other human can ever experience. PLEASE DO NOT TAKE THIS AWAY FROM HER!!!

There should be (and are) penalties for bad actors and these should be enforced. But the vast majority of people who do not act badly should not be penalized for the bad actions of a few. The GGNRA should develop a new alternative, the A+ Alternative, that will better balance the recreational needs of the Bay Area with protection of natural resources. The DEIS calls the "No Change" Alternative "A". This is the 1979 Pet Policy with some restrictions, particularly restrictions on off-leash at Ocean Beach, Fort Funston, and Crissy Field because of the snowy plover and native plant restorations. More than one-third of Bay Area residents have dogs and we now know the importance of off-leash recreation for dog's physical and mental health, as well as the importance of the significant social communities that develop where people recreate with their dogs off-leash. This large segment of Bay Area residents should not be restricted to significantly less than 1% of GGNRA land (that is how much GGNRA land is available for off-leash recreation in Alternative A) to have a satisfactory park experience, especially since there is little scientific evidence supporting restrictions on off-leash. There has to be more space available for off-leash recreation, not less, given the huge demand for it in the Bay Area. The A+ Alternative would include everywhere that is currently off-leash, plus sufficient off-leash opportunities in San Mateo County to meet the demand, and more trails off-leash throughout the GGNRA. In addition, new land added to the GGNRA would include off-leash areas, especially in those areas where it has traditionally taken place. There would be no compliance-based management strategy in the A+ Alternative. Any dog management philosophy in the GGNRA, like that for any other recreation use, should be based on Bay Area values of co-existence, shared space, collaboration among park user groups, and education where problems arise. Enforcement of already existing regulations should target irresponsible dog owners who create the few problems documented by the GGNRA, while allowing responsible dog owners to continue their traditional off-leash recreation without harassment.

Please, please, please do not take our off-leash parks away! Our best friends need them. Thank you for your time and consideration.

Sincerely,

Kimberley A. Humphrey

Correspondence: There is absolutely no reason to change the 1979 rules, which were meant to carry on permanently. It has been long established that these areas of the GGNRA under review have not had any significant detrimental environmental impact from having dogs off leash in the area. I live very close to Fort Funston and use the park twice a week. My dog visits with her walker another 3x a week beyond that. The draft plan will have a very direct and negative impact in my life and countless other just like me and I urge you to reconsider the scope of your proposals.

Thank you, Aaron Feibus

Correspondence: Please do not deprive us of the off-leash dog walking areas.

Since getting a dog, I am more fit and active than ever before. It is not just the dogs that will suffer but people living in urban areas in the Bay Area

who enjoy these outdoor spaces and frequent them regularly.

Keeping a dog cooped up in a city apartment amounts to cruelty and leads to unwanted aggressive and territorial behavior. City dogs should be socialized and these off-leash areas offer such an environment.

Please, please do not deprive us of these areas that provide so much healthy enjoyment for both people and their best canine friends.

Thank you for considering this request. Gina

Correspondence: The reason I rescued a dog was because of Crissy Field. I am in the neighborhood OF Crissy Field. We do not have large yards in SF.I would go Crissy, on a regular basis to dream about having a dog, and see how happy everyone is there, walking and wading with their companions. Having an off leash dog area helped me be able to keep a dog I took from an abuser. He is a large dog. There is no way I could run WITH him to get exercise. He and his buddies do that together at Crissy. They have never gone after birds. They are not bird dogs. They do not jump the small fences there. Periodically they enjoy a swim in the pretty calm waves there. We utilize the park space, and leave it better than we found it. I continue to pay the HUGE rent here in SF to be by Crissy Field. I have expanded my dog walking to Ft. Funston as well, and met wonderful people there, all dog people loving and caring for that piece of land. A SMALL piece of GGNRA. The park was deeded for the use of all, and I do not understand why we can not keep it as is. There has been no issues with dog vs human there to speak of. I go 2 X a day to Crissy, and week ends at Ft. Funston. PLEASE I urge you to leave it alone. Where would we all go? San Francisco is a special place, full of special circumstances which we all love it for. This is one. Come by! Come to one of the areas in jeopardy! SEE how wonderful it is. Thank you, Sandy Joachim

Correspondence: Please keep GGNRA open to dogs and off-leash dog walking.

There are so many dogs and their owners that use this area for their dogs

well being.

There are so few places to walk the dogs in an off-leash environment, which keep dogs healthy and fit and mentally stable.

As a dog owner I find this area so vital to myself and my dogs. Not allowing off-leash dog walking in the GGNRA would have such a negative impact on my life.

Please send the word to Congress to resolve this conflict by codifying the GGNRA's 1979 pet policy as a section Seven Special Regulations mandating all properties added to the GGNRA after 1979 maintain historical recreational access.

Thanks, Elissa Schwartz and Rene Terrazas

Correspondence: Please reject this plan and do not change existing allowance for off leash dogs.

Congress originally designated these GGNRA (Golden Gate National Recreational Area) for recreational use. These "recreational areas" were originally so designated by congress for urban areas; we are in an urban area.

There is far more destruction and waste left in these areas by people and children than dogs/dog owners.

Available off-leash areas are already very scarce. Dog owners are tax payers too and deserve equal use of these areas as do footballers, frisbee throwers, kite flyers, picnicians, etc.

Correspondence: I have reviewed the plan, listened to the various debates and, after a lot of discussion with other members of the community cannot see a valid reason for changing the current arrangement. We own a dog and live in Marin County. While I cannot comment on the impacts of the plan on many of the areas listed, we do use Muir Beach and Oakwood Valley extensively and

have enjoyed those areas with our dog (and our two children) often.

We have not had a single negative incident in either of those places as a result of having our dog off leash. Here are my thoughts on the benefits of allowing dogs off leash:

1. It encourages exercise by the families that own the dogs since it gets them out to walk, hike, run etc. in ways that is simply not possible with a dog on a leash.
2. The dog gets much better exercise as it can run at its own speed, explore and generally be a dog, rather than being tied to someone. A happy dog reduces the chances of problems.
3. Dogs are usually more easy going with both other dogs and people when they are off leash than when they are on leash since they have more freedom and feel less threatened.
4. All of our negative dog interactions have come from using "dog parks" where a lot of dogs are confined in a small space.
5. By far the majority of dog owners are responsible owners, pick up after their pets, and minimize any disruption.
6. There is already a huge portion of the GGNRA that is either entirely off limits to dogs or requires dogs to be on leash. Shrinking the areas where dogs can be off leash increases the chances that you will have more problems in the other areas since you will end up with a concentration of dogs in a smaller area. Plus, the people who dislike being where dogs are off leash already have a huge area in which they can go to enjoy the GGNRA.
7. The Oakwood valley is a much easier place to access then the proposed ridge area, especially with children.

Thank you.

Brandon Smith

Correspondence: Right now only one percent of the GGNRA is open to off-leash dog walking, and the plan will eliminate 90 percent of this area that has been legally used for decades in places like Ft. Funston, Ocean Beach and Crissy Field. There will be no off-leash access anywhere in San Mateo County and dogs will be outright banned from many parks in Marin. There is no justification for these extreme restrictions. I have been a responsible dog owner visiting many of these sites for 10 years and I have never had an issue like this before. We respect walkers, and designated native planting areas, and we co-exist with other recreational users in the areas.

Correspondence: As a responsible dog owner who values the GGNRA for the management of public open space that serves the community I support balanced and thoughtful guidelines to the use of GGNRA areas by persons with dogs. It is important to me that continued access for dogs off leash at certain locations is continued in order to meet the needs of urban dogs to be able to 'run free' under the control of their owners. I am extremely sensitive to the impact dogs may have on endangered species of all kinds and when visiting these areas make sure that my dogs do not adversely impact any posted sensitive areas. Other dog owners must be made aware that this is essential to allowing our pets to share these areas with us and the natural plant and animal wildlife.

Correspondence: I own a dog and live in San Francisco. My dog and I visit the GGNRA at least once a week. I am so thankful to have such wonderful resources for dogs -- the areas of the GGNRA are one of the things that makes the City truly remarkable. Not only does my dog get to enjoy the GGNRA, but I do as well. The Draft Dog Management Plan would reduce our enjoyment and

use of the park considerably. The more restrictive uses would definitely change my activities with my dog as I would imagine it would for other dog owners. There is tremendous value to going to off leash areas, such as Ocean Beach, with my dog. I urge the city not to change the current dog management rules.

Correspondence: I am not going to provide specific comments on specific plans for specific parks, but do want to provide the following perspective. As a woman and an avid runner/hiker who, prior to moving to California, had the constant companionship of my large breed dog while running by myself on isolated trails, the discovery that many of the trails in the Bay Area completely

prohibit dogs, even on leash, was very disturbing. An on leash dog provides little to no more risk to the habitat than the person using the trail but provides a huge measure of security and safety to a woman hiking on such a trail by herself. I am already unable to take advantage of many of the beautiful trails in the Bay Area for this reason and proposing further inhibitions of this type are extremely disappointing. In fact, I would not support any politician who proposed or supported such changes. I would avidly support laws enforcing existing rules such as heavy fines and enforcement of waste pick-up or ensuring dogs are on leash, but consider laws prohibiting leashed dogs on a trail both a safety issue for myself and not justifiable.

With regards to off-leash dogs, many communities find solutions to this issue that do not involve punishing responsible dog owners for the actions of irresponsible dog owners or irresponsible commercial dog walkers. For example, some communities allow dogs to be licensed to be under voice command of the registered owner. This requires a test to be administered on the owner and dog to obtain the license. This would not only reduce incidence but also reward responsible dog owners. Solutions such as these would be beneficial to both dog owners and non-dog owners.

With regards to dedicated off-leash areas, there are many solutions that do not prohibit dog owners from having a place to allow their dogs to run, play fetch, and otherwise enjoy being a dog. This is even more important in a city such as San Francisco where a privately owned yard is a luxury most cannot afford. Closing Golden Gate Park or Crissy Fields or Fort Funston (or other areas, these are just those I use most frequently) to off-leash dogs will place a huge burden on existing dog parks. These are the largest areas for off-leash dog play in the city. Although not conveniently located to where I live, I make it a point to allow my dog this activity at least once a week. Closure of these areas would place enormous stress on the system with a dog owning population the size of the Bay Area; in fact, the off-leash areas are already insufficient and therefore stressed and overused. I cannot recall a time, in 2 years of taking my dog on a weekly basis to these parks, where I have seen wildlife harassed or a person bitten or threatened by a dog. I am sure such incidence occurs, but am equally sure these are isolated and rare incidence as compared to the number of times a dog comes in contact with a person or with wildlife and should be governed as a rare incidence rather than a common problem. I would strongly support measures to enforce existing rules or strengthening of the rules to protect habitats and non-dog owners but strongly oppose measures to limit off-leash areas.

Finally, I must re-emphasize how upsetting I find the "no dogs" (even on leash) rules that are frequent in the State of California. While I do understand and in most cases support leash laws, the rules prohibiting me the companionship of my dog while running and hiking are both a safety

and quality of life issue, and I completely unclear why this would be so limited. If the same resources expended to limit on leash dogs were put towards enforcement and improvement of rules and regulations, the outcome for non-dog owners and the habitat would be the same but there would be enormous benefit for responsible dog owners.

Thank you, Becky

Correspondence: I strongly disagree with the EIS's call for leash-only dog walking areas and alternatives B through E. Allowing only 3 dogs per dog walker would apply a tourniquet to the income of these valued local, small businesses. If a number -must- be applied to limiting the amount of dogs to ease the burden of their environmental impact, I suggest the limit be increased to at least 6 dogs.

Limiting the amount of dog activity would severely impact the amount of people who can witness California's coastal beauty, therefore drastically decreasing support of the Bay Area's local 'wilderness' areas.

Correspondence: I am writing to say that I oppose the proposed "Dog Management Plan".

There are already so many restrictions to dog owners and dogs in California, we don't need to lose the few places we are actually allowed to go and allow our dogs some space to exercise and run. As a professional dog trainer and behavior consultant I can tell you that this is critical for the health and mental well being of many dogs in our community. How is it that responsible dog owners who train their dogs, take responsibility for their dogs and clean up after their dogs have rights stripped away from them just because we have dogs? It's just not a good plan. There are so many places available for people to go, do we really need to lose the few we have where dogs are still welcome?

Correspondence: My comments are directed at the plan for Ft. Funston, which we visit several times a week with our Labrador Retreiver, where we all get our exercise playing ball and fetch, and our dog socializes and plays with all the other dogs. As far as I know, Ft. Funston is the only legal off leash recreation area this side of Carmel, with the exception of Esplanade Beach in Pacifica, which is below the crumbling cliffs, with 70 steep stairs that wash away often, and a beach that all but disappears at high tide. We're in our 60's, so access is a big deal to us. The proposed off leash area on the beach below the sand ladder will not be of any use to us. Once you reach the bottom of the sand ladder, you have to climb down to the beach or slide down on your butt, and forget about trying to climb back up! The area near the parking lot is WAY too small to accomodate all of the people who use Ft. Funston!

If, as I suspect, the issue is with professional dog walkers with multiple dogs, why not address it without punishing those of us who enjoy off leash activities with our family pets? Everyone I know and see there, professional dog walkers included, pick up any dog doo we see, not just our own (good Karma so you don't step in someone else's mess). We stay out of fenced areas, discourage our dogs from digging, and fill any holes we see. We police ourselves, and I've never encountered an aggressive dog there in 5 years. This is not to say that there aren't people that don't follow the rules, there are ignorant people everywhere you look. But, we all are willing to speak up when we see someone behaving inappropriately; we don't want a few to spoil it for all of us.

The GGNRA is an URBAN RECREATION AREA! It's NOT a pristine wilderness, and the wildlife there are urban wild animals. I was the supervisor of the Peninsula Humane Society's Wildlife Care Center for many years, and I know that very few of the injuries sustained by wild birds

or mammals are caused by dogs, unless the animal is in the dog's yard of house. Many of the injured or oiled seabirds brought into the Wildlife hospital were brought in by people out with their dogs. I have personally picked up sick and injured birds on the beach at Ft. Funston with off leash dogs, including my own, all around. People call off or restrain their dogs. No one wants to see their dog harm anything living (not even the gophers that do more damage to the plant life than the dogs). Besides, much of Ft. Funston is iceplant!

Finally, in this economy and with the challenges the federal government faces, I think this whole "Dog Plan" is a colossal waste of taxpayer dollars. 10 years of staff time to prepare a 2400 page document designed to fix something that isn't broken seems just insane to me! Not to mention the cost of enforcement or restoring the native plants that were there....when??? With the sand that changes the landscape on a daily basis, good luck with that. PLEASE, PLEASE, PLEASE, do not take away the few recreational opportunities that exist for those of us who enjoy off leash activities with our dogs.

Correspondence: We live in an urban area where dogs play a critical role in our health and well being. This has been well documented in many peer-reviewed journals. There are many programs that integrate dogs into the health care system for the chronically ill, elderly, children with disabilities, mental disease and others. Being in nature is also critical to our health and well being and reciprocally is critical to the health and well being of our dogs. Not allowing our dogs to engage in free play is likely to have a very negative impact on their health and well being and again the corollary would be to expect it to severely negatively impact both their and our health and well-being. This is a poorly thought out policy that should be abolished before it is ever considered.

Correspondence: I feel very strongly and support Alternative A. The majority of dog park users respect the land, the people, and the environment. Not only do I not often see problems, but I believe that these parks are better off due to increased usage and greater visibility of all parts of the park. It will be a real shame if we lose one of the few freedoms left - to walk next to your dog, under voice command, in a natural and respectful way. The only thing rules do is make people try to hide what they're doing. It's far better to allow this to happen out in the open and handle disrespectful and dangerous dogs/owners on a case by case basis rather than a blanket shut down of off-leash walking.

Correspondence: I am truly upset over GGNRA's proposal for the allowance of dogs in park areas - specifically Mori Point, where I live.

When GGNRA took over the Mori Point areas, and started fixing the paths and restoring the natural habitat - some of my neighbors were dismayed, they mourned the loss of being "left alone" - they predicted the end of our way of life out here. I trusted GGNRA - their representatives and the idea that they were restoring a park to its natural state - but still preserving a way of life for the residents of Pacifica.

Now I am ashamed, I have to eat my words - GGNRA is proposing exactly the scenario I scoffed at when my neighbors suggested it. To not be able to even take dogs ON LEASH in areas of Mori Point trails - and further - to restrict off-leash areas... it is just too much. I am a fool, I trusted GGNRA - I trusted their plans and their assurance that this was for the better.

It isn't - if it drives the residents away. I use these trails every single day - every single day me and my children and my dogs will use the trails of Mori

Point. I guarantee you that more than half the people we run into are also walking dogs. To restrict these areas, under any guise - is to prohibit more than 50% of the current traffic at Mori Point.

This is an outrageous proposal - and is going a long way to convincing me that my neighbors were right - and we should have fought to keep this land out of GGNRA's hands altogether. That thought simultaneously saddens and sickens me, as I was the biggest cheerleader for their involvement in our back yard.

Correspondence:

As an aging ex-athlete with damaged joints, the only outdoor exercise that I can enjoy is walking my dog and all our favorite locations are in the GGNRC. Anyone who has walked a dog knows that a dog needs to stop, start, sit, turn, spin and sprint. I on the other hand need to stride at a sustained pace in order to get the cardiovascular exercise necessary to maintain good health. Given the differing needs of my dog and me it is amazing that we can enjoy the same outdoor space together ? but we do when we are able to walk untethered, off leash and at our own paces. Our off leash walks are the joy of my week and add greatly to both our quality of lives! Alternative locations in small city parks would not provide the necessary space for me to get the 20 minutes of sustained cardio exercise that is required to maintain heart health; for this we need long stretches of beaches or trails. My dog is the reason that I even bother to go for walks. While long walks are a bit painful for me this pain is completely offset by the enjoyment that I get from being with my dog and watching him revel in the outdoors, indulge in a spontaneous self performed back rub, smell all that the world has to offer and most importantly to run headlong into the ocean and body surf in and out with the waves!

Please do not further restrict my access to locations that allow my dog and I to enjoy the outdoors together!

I am familiar with six of the locations provided for on/off leash of dogs. I commend the areas that were picked for dog leashed or set loose. As we expect dog owners to respect and take care of the area they walk, I believe the dog when leashed will be able to do as well in critical area they are

sensitive to footsteps, trash, dog poop. For instance Crissey Field as marked for dogs set free is perfect for exercise and "fetch". Care can be taken with unobstructed view not to endanger other people or other animals.

I believe that new restrictions placed on dog owners will not be overwhelmingly obeyed; the present restrictions are either not known or obeyed by many dog owners. And I believe that those who observe dog transgressions will not respond by informing the owners; it just does not seem to be in our genes any more to reprimand another person's actions unless substantial and visible physical harm is noted. In other words, as much as I truly appreciate the time and hard work by those responsible for this document, I do not believe it will be obeyed unless a strong and effective educational program is directed to neighbors and businesses adjoining the leashed areas as well as hikers and other frequent users of the land in question. Vets and the Chamber of Commerce, TV/radio stations, coffee shops of close proximity, etc., should be informed by word and handouts.

Correspondence: In 1979 the GGNRA was given the management of these land areas with the PROMISE that the areas would retain their original uses as urban recreational areas.

The GGNRA is in the wrong for spending tax payers money on plans that CLEARLY victimize dog owners and their dogs. And these plans change the original agreement sealed in place years ago in the reestablishment of land management - these new proposals are in breach of that promise.

Maintaining park resources and values for future generations is what was intended before the land was handed over to the GGNRA. These areas merge with and surround congested urban land, therefore are essential as available contiguous open spaces.

Why is the executive summary suggesting that it wants to maintain park resources and values for future generations when clearly it is devaluing what has been established for the past 20 years? The land is recreational land and this includes people and their dogs.

But for Alternative A or doing nothing, all other plans including the preferred Alternative victimize and discriminate against dog owners and their ability to use these recreation areas. On the contrary, there is only 1%

of existing off leash dog areas currently available.

In Marin county the off leash areas are proportionally less than the 1%, yet the area is open extensively to horses and their people. These lands have become exclusive and in no way provide a variety of visitor experience.

Instead I would suggest increasing off-leash dog areas in the GGNRA to more than 1% not reducing them. Currently the GGNRA's limit deters dog owners and their friends from visiting these lands, which we ALL pay for in taxes, and should have right to access.

Furthermore but for Alternative A or doing nothing, all other plans including the preferred Alternative do not promote a variety of experiences as the executive summary suggests. Instead they promote exclusion to an already exclusive area of recreational land, by reducing the already limited ability for dog owners and friends of dog owners to use these lands.

But for Alternative A or doing nothing, all plans including the preferred Alternative would increase user conflict not reduce it. And do so not only in those GGNRA areas but in Rec and Park areas and through out the entire urban bay areas. This is a very serious consideration that has not been addressed in the executive summary. Furthermore there is no clear evidence given in the report that scientifically supports such extreme diminishment of off leash dog areas.

Correspondence: Hello,

I'm a native San Franciscan and I don't have a dog. I do take care of my daughter's dog (huskie mix) on occasion and I have family in the City with a dog. I love birds and am an avid bird watcher. I understand that the Audobon Society's interests in protecting local birds. I also understand that in the City and Marin County dogs need space to run off leash. These proposals seem overly stringent -- dogs need to run off leash. Asking people with dogs to make these sacrifices is as good as taking away physical education from their children; strange that people who care about birds don't care about dogs. There are plenty of places for people and birds to go where there are no dogs. I was very dismayed when I first starting walking my daughter's dog at how few places there are for dogs to be off leash. You can't take them hiking anywhere off leash in the hills of Novato (though we do have Indian Valley Road), nor Bear Valley, nor to any beach but Kehoe and then only to the right. Thank god for Rodeo Beach! I do hope that you

re-consider and leave things as they are. People and their dogs need a lot of off-leash areas. These areas are too limited as it is. Dog parks are awful places--dirty and too crowded. My daughter's dog does not run around there, he just stands around sniffing.

Thank you for your consideration of my comments.

Correspondence: Our family lives 1/2 block from Stern Grove. We frequently walk with our 2 small children around Pine Lake and Stern Grove Amphitheater. While many dog owners follow the rules posted around the recreational area, we are often disturbed to notice how many dog owners/walkers do not follow the rules resulting in unruly, unleashed dogs. The dogs run around unleashed in the Amphitheater, the leashed areas, Pine Lake (in the forested hilly area and in the lake itself) disturbing the wildlife and terrain. Dog owners/walkers often have several dogs unleashed and do not sufficiently supervise them resulting in the dogs' unruly behavior. Unleashed dogs have frequently rushed up to our children in the leashed areas of the park scaring them and us since we do not know the temperament of the dog and the owner is nowhere to be found. There is a very large unleashed grass area where dog owners can allow their dogs to run, play catch and roam freely where people without dogs do not even go. While this area is large it is often at capacity. I think reducing the number of unleashed dog areas in recreational areas of SF will pose a potential safety threat to non-dog owners and children and result in further damage to the terrain of our natural spaces which are so precious in an urban environment. An increase in the number of dogs to Stern Grove due to closures in other parks would increase all of the aforementioned concerns. Thank you for your time and consideration in this matter.

Correspondence: As a San Francisco resident, dog owner, and outdoor enthusiast, I am writing to urge you ask that the Golden Gate National Recreation Area abandon it's extreme proposal and instead to keep the GGNRA open to dogs and off-lease dog walking.

Off-lease exercise is important for dog health and better exercised dogs are better for everyone in the city. Moreover, take dogs on walks - both on leash

and off-leash leads human residents to get out to enjoy the wonderful outdoor spaces in the Bay Area and to get beneficial exercise. Please consider the proven history of dogs coexisting with other activities and wildlife in the GGNRA for the past several decades and continue to let our parks be used as intended!

Specifically, I understand that Congress could resolve this conflict by codifying the GGNRA's 1979 Pet Policy as a Section Seven Special Regulation, and mandating that all properties added to the GGNRA after 1979 maintain historical recreational access.

Thank you.

Correspondence: To whom it may concern:

As a proud dog owner, I am very concerned with further regulations limiting dog use within public parks. I use many of the parks covered within this document on a regular basis to get a little exercise and enjoy the environment with my canine companion. It is already difficult within the state of California to find areas that are dog friendly and many of the most impressive spectacles are already off limits. I believe it is my responsibility as a dog owner to pick up after my pet and ensure others safety relative to my pets behavior. Limiting use for all based on the behavior of a few is not an acceptable approach to any problem. We can never control all of the variables when it comes to the environment. If we are truly worried about the environment within these areas, then we should just completely shut them down to the public and hope that all of our pollution inducing activities do no affect them from afar. I would urge you please consider these comments as you make your decisions and if you are an elected official keep in mind San Francisco is home to 745,000 people and an estimated 110,000 dogs. I can not speak for all, but as a dog owner an

unfavorable result would surly make me reconsider who I elect in the future.

Thank you,

Trent

Correspondence: My husband and I have been walking various pet dogs all over the mountain and coastal trails in Northern San Mateo County for more than a quarter of a century. We have never caused damage to trails or had any of our dogs interact with or harm any wildlife in the process of this exercise. The ability to get out and enjoy our natural surroundings is paramount to our well-being and good health. It is inconceivable to me that any organization that is funded by tax-paying citizens would then proceed to restrict those said citizens from the land for which their taxes are being utilized. I have noticed a lot of "improvements" have been made in some of these park areas. While that could be construed as a positive measure, I am undeniably furious over these "anti dog owner" restrictions. I do not find it an improvement to have vast tracts of my available outdoor living space removed from my use. I have always supported the land trust measures over the years in hopes of preserving these areas of natural beauty and preventing ugly, scarring development. Yet, while the movement of my feet and my dog's paws across the hillside leaves only the narrowest trail, the GGNRA has proceeded to bulldoze and bring in hay and treated wood products, erecting signage and fences all over the hillsides. If I am going to be restricted from using my local trails simply because I have a dog I enjoy walking I am going to forced to start pushing for a different kind of stewardship. The tax money being used for the GGNRA could be better spent on education than on these limitless restrictions on OUR recreation areas. Stop this unnecessary punishment of dog owners and start realizing who the majority of the people are that are using this land- that is OUR LAND!

I have a dog AND I vote! Laura Arnaudo Pacifica, CA

Correspondence: Hello. I moved to the Bay Area about a year ago. I really enjoyed the fact that many parks included off leash areas.

My favorite spot to take my dog is Fort Funston. What an amazing place! It would be tragic to require dogs on leash at Fort Funston.

A dog walker emailed the information for me to comment about this issue. I decided to comment since this would effect many people and would greatly hurt tourism in SF and the Bay Area. Having dogs off leash is part of the culture in SF.

Thank you for your time, Chris wWehling

Correspondence: No doubt, dog lovers will overwhelm you with passionate pleas against any restrictions for their pets. I'd like to introduce a measure of reason, logic and intelligence.

The simple, basic facts in this situation are obvious - wherever there are dogs, there are filth and destruction.

1- Dogs dig, urinate and defecate, destroying vegetation and landscaping and leaving filth and disease behind.

2- Dogs alarm, terrify and even attack people, as evidenced in a myriad of news stories over the last few years.

3- Dogs bark, yip and howl, destroying the peaceful ambiance sought by the majority of park patrons.

4- Dogs chase and attack indigenous wildlife, including threatened species.

5- As anyone who has visited a park - local, state or national - will attest, there's no such thing as "voice control." I have never, ever seen a dog engaged in reckless or dangerous behavior restrained by a mere call or command from its owner.

6- Despite the widespread enactment of "pooper scooper" laws, compliance is spotty, at best. Although I believe that most dog owners are conscientious, there's a sizable minority who are not, ruining the environment for everyone.

7- An unfortunate percentage of dog owners possess an appalling arrogance and contempt of law and courtesy. For example, they let their dogs off-leash in leash-control areas. They train their dogs to be aggressive and laugh at

victims of aggression. They become obnoxious and combative while being cited for their dogs' vandalism or destruction. As already mentioned, they refuse comply with "pooper scooper" laws.

In short, in order to maintain our parks as treasures enjoyed by all, dogs must be banned completely. The enjoyment for the vast majority cannot be diminished by the actions of a vocal - even hysterical - minority. Parks are created and maintained as oases of peace, health and beauty for humans, NOT as open-air toilets and playgrounds for pets.

Thank you for the opportunity to comment.

Correspondence: I am a resident of San Francisco, a dog owner, and frequent visitor to the GGNRA with my dogs. We particularly enjoy For Funston for the off-leash beach walking.

We want to keep the GGNRA open to dogs and off-leash dog walking. Presently, only 1% of the GGNRA is open for off-leash dog walking, and this proposal would limit 90% of this already small portion of the area.

The GGNRA should stop pushing its extreme proposal, a plan that will negatively impact so many of us who live in the Bay Area, a unique part of the country that successfully balances park visitors of all kinds with the ecosystem. Please help us maintain what makes the Bay Area such a wonderful place to live. I personally moved here from the East coast in part to enjoy this lovely landscape with my dogs. This proposal will also harm San Francisco's reputation as a dog friendly city, which currently attracts tourists interested in dog-friendly destinations, and people like me, who relocated here for this perk, which is not taken for granted.

Correspondence: I think it's very impressive that the GGNRA and local communities went through this intense and lengthy process to develop a dog management strategy that would work for everyone. The Bay Area is incredibly lucky to have this beautiful park filled with spectacular habitats and wildlife right outside our doors. A national park must protect natural and cultural resources for generations to come; that's why the NPS system was

created. The GGNRA is very unusual and special in that it is also an urban park and provides recreation for a large population, and also for their dogs. I love seeing dogs in the park. But I also see a lot of dog owners who are disrespectful of other park users and of park resources. Most off-leash dogs are not being controlled by their owners. Sometimes they dig up plants, knock over children, and force runners and bikers onto trail shoulders. I think it is a good idea to have dogs on leash in most locations and to save some areas of beach for wildlife only. I do think that it's important to keep some of the more developed areas available for off-leash dogs, such as the Crissy Field lawn and Fort Mason's great lawn. Why not have these big lawns be available to dogs? I'd rather see dogs running there than through a pristine patch of coastal scrub in the Presidio. Lawns are huge wasters of water and fertilizer; if they can take some of the doggy need off of the beaches they will at least be serving some purpose. Thanks, Caroline

Correspondence: I am dog owner and park lover. I am glad to see NPS strive to strike a balance between all park visitors. One of the things that has always impressed me is that I could even bring my dogs onto the trails. I used to live in Sonoma county and most of the county and all the state parks did not allow pets. Although I love very much being able to enjoy the great outdoors with my four-legged friends, I understand not all dog owners are respectful of this right. From my brief look over the plan, I think most of the alternatives are reasonable. There are a few items that I am a bit hesitant about. I know you have been working hard to restore the Muir Beach area but I have to say I would greatly miss having this area available for off-leash fun. On top of that, not being able to bring my dogs there at all would be difficult to bear. I know that it is a challenge to keep dogs out of the creek and restoration area, but perhaps there can be some kind of alternative or compromise to no dogs at all? I am also concerned about no longer having the coastal trail to take my pups on a long "back country" hike. As far as I could tell, the only dog approved hikes would be the trail portions close to the roads. I understand the risk of people hiking the more remote areas and ignoring the leash rules by having their dogs off leash in sensitive habitat areas, but it would be a shame for responsible dog owners to suffer on behalf of the rotten ones. I know you all have a rough road ahead, and I hope you get many useful comments and not so many of the useless ones. Good luck!

Correspondence: I would like to express my extreme disappointment in and disapproval of your proposal to ban dogs or restrict their off-leash access to the GGNRA, an urban park.

I understand that dogs currently have access to less than 1% of the public park land and that only 4% of incidents in the GGNRA involve dogs.

You are doing a disservice to the many city dwellers who already have limited access to areas where they can exercise their dogs. I am fortunate enough to now live in the East Bay where we have many dog parks and off-leash trails on public lands. However, I enjoy bringing my dog to Crissy Field and watching the dogs romp on the beach.

The inclusion in your proposal to arbitrarily take away access if there is any violation of your proposed rules is incredibly harsh.

I strongly urge you to drop this onerous proposal.

Correspondence: Considering the already very limited off-leash space there is in SF, I find it astonishing that this proposal is even being seriously considered. I have a small to medium sized dog who LOVES being outside. With so few rental properties that have yard space, the open space at Ft. Funston is the only place she can really be free to be with other dogs.

When we're in the car and she figured out where we're going, she has the purest expression of joy on her face. That look and the lessons she learns from being around other dogs is valuable beyond measure.

Please don't take that joy from her.

Correspondence: We have been taking our dog to Rodeo Beach since we found out the leash rules were eased up. It is the one place she can run relatively free. She always responds to commands and has never been in any kind of altercation with anyone or any animal. She is kept on leash from the parking area, the

bridge, and to the top of the dune. She has never been off leash within 50 feet of the lagoon area. We always carry at least two bags for pick-up. I appreciate the concern for the wildlife, but how about the concerns of our not-so-wildlife. Just going through the tunnel whets her enthusiasm for her outing. It would be a shame to bar well behaved dogs from such an experience.

Thank You

Correspondence: I am a homeowner and taxpayer in SF, with 2 dogs. I utilize many park areas around the Bay Area, but very few of those trips do I include my dogs, since most have strict leash policies, with which I regularly comply. i am also an animal welfare activist for many years, and have worked with and supported many groups including the Toronto Wildlife Centre, PETA, Defenders and IFAW. Animals are my biggest passion. The GGNRA is meant as recreational spaces, and the few areas in the bay area that still have some off leash capacity, are a small fraction of all the parks, both urban and rural, that allow offleash. In most parks and open spaces there are very strict on leash or no dog rules. This is simply unfair and draconian. the latest proposals from the NPS, specifically for Funston and Crissy, eliminate over 90% of the off leash areas that currently exist, and I truly, have yet to see a valid reason. There are few altercations between man and dog relatvie to the number of people and dogs that use the facilities. (we dont ban cars because some people die in accidents). There are a small number of areas that serve endangered birds for small parts of the year: these can be properly fenced off either year round or for the specific time in question.

For the many years I have been going to the various parks in question, particularly Funston and Crissy, I have yet to see a single medium to major incident, and would posit these are rare given the high usage.

The proposal to eliminate over 90% of off leash space has not been well thought out, would severely impact us and our dogs, and would force hundreds if not thousands of dogs that currently use these spaces, to venture into much smaller city parks, and that will never be a positive outcome.

The GGNRA is meant to be used by both people and their dogs in a responsible manner, and the vast majority do.

If this plan is carried out, it will have a very negative impact on us dog guardians and our animals, and very much on the users of smaller city parks.

There are many intermediate solutions that are more fair, and would have far less impact, such as the couple i suggested above. The dog community must have more of a voice in this evaluation - if we are shut out of the process, there will be mass disobedience, and a much heavier impact, that ultimately will benefit no-one. we are tax payers here, and our voices deserve to be heard!

yours truly

val ornoy

Correspondence Type: Web Form

Correspondence: I am writing this letter to express my concern about the proposed DEIS Dog Plan for the Golden Gate National Recreation Area (GGNRA). As a local resident and weekly user of the GGNRA, I strongly feel that the proposed plan will negatively impact not only dog owners but other San Francisco and Bay Area residents as well. I strongly support keeping the GGNRA open to dogs and off leash walking. The option to not exercise one's animal simply does not exist, so responsible dog owners will be forced to use other options to give their dogs the exercise they need to be healthy and well adjusted members of society. Given that more than 1/3 of Bay Area residents have a dog, if the current proposal were to pass, we will see an extreme increase in the usage of local dog parks. The recent closure of Fort Funston and Ocean Beach due to the recent tsunami warning gave a preview of what would come if the proposal would pass. In Stern Grove alone, the dog and human traffic more than tripled in a single day due the unavailability of the GGNRA lands. Our local parks were not designed to accommodate the quantity of traffic that would result from the closure of the GGNRA to owners and their dogs. The proposal passing will cause overcrowding and tensions due to overuse. It will also degrade our city parks due to sheer numbers or users, further burdening a local Parks and Rec Department already facing budget constraints.

Currently, off-leash access is restricted to less than 1% of the park land and this access has served the park, its users and the environment well for over 30 years. This history demonstrates that it is possible for the park to responsibly serve all constituents, including the animals and vegetation that call the area home. The GGNRA's current proposal is extreme in the limits it seeks to impose, from the lack of trail access to the massive decrease in general dog access and off-leash access. Particularly disturbing is the Compliance Based Management provision that would allow the GGNRA to arbitrarily discontinue any type of on or off-leash access without any

defined metrics or any type of public input on the issue. The absence of a lack of guidelines for closure amounts to an arbitrary decision based on the sole opinion of the GGNRA which has already demonstrated a strong desire to limit dog and human access to the lands of the GGNRA. This 'poison pill' provision will not only decrease the quality of life for Bay Area residents but also deprive them of the right to express their opinions about policies that directly affect them. I understand and support the intentions to maintain a balance between recreational access for park visitors and the conservation of the land, however, the levels of restriction proposed in the GGNRA's proposed alternatives are not supported by scientific evidence. In a direct contradiction to the claims made in the DEIS, recent studies such as Forrest and Cassidy St. Clair (2006) and Warren (2007) show that off-leash dogs have no impact on the diversity, abundance, and feeding behaviors of birds and small mammals in the GGNRA. Far from being unbiased sources, the authors of these studies have admitted that at the inception of the studies, they expected to find that off-leash dogs had a large negative environmental impact and were surprised to find that no such impact existed. I encourage your team to avoid basing planning on hypothetical scenarios with worst case impacts but rather look at the science that shows it is possible for humans and canines to co-exist with environmental goals.

While I appreciate that the GGNRA staff would like to simplify their role by making the dog policy in the GGNRA match the no dog policy of the National Parks, the fact is that the GGNRA is NOT a National Park. It is a National Recreation Area and that designation was created with the intention of providing critically needed recreational open space in an urban environment. This designation and the assurances given to voters that turning the San Francisco properties over to the National Parks Service would not limit or change the recreational opportunities in the parks fundamentally change the issue and requires that the recreation needs and historical use strongly influence decisions about how the land is used.

I would like to provide specific feedback on the following sections of the DEIS and the GGNRA's Proposed Alternatives. First, the proposed alternative is unnecessarily restrictive in several ways. The contraction of off-leash lands will cause overcrowding in city dog parks and will deny a significant portion of the Bay Area residents access to the recreational open space that was defined in the legislation that created the GGNRA. As the area grows more populated and the GGNRA expands, we need more access to off-leash lands, not less. The proposed alternative also lacks any off-leash access in San Mateo County, where there was considerable access prior to the land's annexation to the GGNRA. Across the GGNRA, the proposed alternative does not provide sufficient access to hiking trails and the trails that are included in the proposal are functionally limiting due to the fact that they are not very long and many are not accessible due to connecting to

trails where trails are not canine friendly.

Second, as a taxpayer and contributor to the National Parks Foundation, I feel the funds required to enforce the Preferred Alternative are not a wise use of fiscal resources. In an era of shrinking federal budgets, directing over a million dollars per year to the enforcement of unnecessary restrictions on dog access is an irresponsible use of taxpayer and donor monies.

Finally, the Compliance-Based Management Strategy and the stated intentions to automatically deny canine access to any future lands annexed to the GGNRA are not only bad policy but also deny area residents the opportunity to exercise their right to comment on policies that directly impact them.

I do not find any of the proposed alternatives to be acceptable and as an alternative, I would like to see the GGNRA's 1979 Pet Policy continued to be enforced, with all properties added to the GGNRA after 1979 maintaining historical access. Unlike the overly restrictive proposals currently under consideration, the 1979 policy takes into account the needs of all constituents and balances environmental needs with the needs of humans and their canine companions. I appreciate that there should be access for people who are not fans of dogs and for the wildlife that would prefer not to interact with canines. The status quo provides those options in over 99% of the GGNRA park lands. The existing model has successfully worked for over three decades and attempts to significantly reduce the limited options currently available cause unnecessary conflict and enforcement wastes precious tax dollars that could be positively used elsewhere. I strongly urge the National Parks Service to abandon all proposed alternatives and allow the 1979 Pet Policy to continue. GGNRA holds a unique position as open space in a major urban area and further restrictions on its use will negatively impact the quality of life for all residents across the Bay Area, not just those who own pets. Please allow all Bay Area residents the opportunity to enjoy it equally.

Regards, Kathleen Flores San Francisco Resident

| Correspondence: | Please do not close or exclude large portions of the GGNRA to off-leash dog walking, as is now proposed in your 'preferred' scenarios. The ability to have my two dogs off-leash on the beaches of the Pacific Ocean in the Bay Area provides them and I with much-needed exercise, fresh air, and beautiful scenery - which makes us all better citizens in this busy world. | | |

Dogs and their people make up a very large portion of the number of people who go to each and every area targeted on your list for restrictions, and the vast majority of that group take proper care of their dogs, including waste pickup and proper conduct. The Bay Area is a special and unique place, and the ability to get outdoors with our animals is part of that. Please do not take that away from some of your most loyal advocates.

Correspondence: I am writing in response to the proposed changes limiting dogs in park areas. It has been increasingly difficult to find places to take my dog out with the entire family. Parks are an area where families go together and our dog is part of our family.

The more limits that are put on where dogs are allowed the less people take their dogs out to mix with other people. This only leads to dogs remaining locked up at home with no interaction with other people. Leading to dogs with bad social skills and making them more hostile when they do go out.

If dogs are not allowed outdoors in nature where is an appropriate place for them? This is a perfect world with many imperfections. If we continue limit rights little by little because of someone else's intolerance what are we left with.

Type:

Correspondence: Currently the main people that use Ocean Beach and Fort Funston are people with dogs. For the most part the beach is dirty due to human pollution. It would be a lot more helpful to the community to allocate money used for this type of survey to adding services to the beach areas, such as more public washrooms, better garbage management, and showers.

On another note, limiting where dogs can run off-leash will lead to more issues with dogs having pent up energy. Without proper exercise, there will be more dogs that become 'difficult' and end up in shelters. Everyone should have to volunteer in an animal shelter to become aware of what humanity has done to dogs.

This change to the use of public parks policy, is just a step in the wrong direction. Rather than making the parks more available to the people, you are taking away availability to areas that are managed by our tax payer dollars.

Thank you, Joanna Beskal

Correspondence: I really question the bay area when our residents are concerned about dogs getting enough exercise. Let's work on getting humans to get enough exercise first. One way of getting humans to exercise more would be to require leashes everywhere in the GGNRA. This would mean that if the owner wants the dog to get exercise, the owner would most likely have to get exercise. (or get a dog walker). At the moment, I observe dog owners sitting or standing in the park and not getting aerobic exercise while there dogs are wandering all over the park often off of voice control. Furthermore, dogs on leash would also allow people who have avoided the parks due to off leash dogs to get exercise as well. Overall, leash requirements would improve human health by increasing human exercise. Increased exercise leads to less diabetes, hypertension, heart disease and many more health problems. Leashes = one step to a healthier bay area.

Correspondence: Good Morning-

As a SF resident, avid surfer, and responsible dog owner; I anted to provide you my thoughts on any additional proposed dog bans at Ocean Beach.

I fully understand the need to protect the Snowy Plover, and the designated areas and time frames needed in order to do so. However it sickens me to think that a vastly unpopular and underutilized part of the city such as Ocean Beach is considering any further restrictions to pet owners.

I ensure I pick up after my dog and that we are only a value ad to any other potential beach goers.

Let's do the right thing for ALL Ocean Beach visitors, and allow our dogs to have an area where they can roam free.

Thanks

Correspondence: I spend quite a bit of time at Fort Funston and have seen many instances of problems with the off leash dogs out there. I support Alternative 'C' on map 16 as the best plan for the Fort. The dog owners of the San Fran area , as well as the dogs , need a good place for exercise , and the Fort may provide that, but the other users of the Park should not have to avoid Fort Funston because there are so many dogs in that one place. there are many people who simply don't go to the Fort because they are generally afraid of off leash dogs. My wife is one of these people. If alternative 'C' were implemented , my wife would visit the Fort. She has not been there in 8 years, though I go every week in order to enjoy some flying.

Correspondence: Greetings, I have seen some crazy things that people do with their dogs. I have watched a man throw a ball into the clearly marked restored dunes at Crissy Field, he throws his ball into the gated off dune repeatedly while his large chocolate lab chased it into these dunes several times. I think it is appalling that owners are so irresponsible! Furthermore, one day I was riding my bike at the Great Lawn at Fort Mason heading to the Crissy Field

Center and of course there were several dogs of leash, but one german shepard decided to run right in front of my bike. The owner wasnt even paying attention to their dog! I flew off my bike got many cuts and scrapes and had to seek treatment. This costed the NPS money, as it was classified under workers compensation. Insane! There are clear signs that say keep your dog on a leash! Also, have you ever seen the dog walkers at Alta Ave in marin city>? They listerally bring five plus dogs. These dogs are usually off leash, piss and crap everywhere, and the walkers do not have the dogs under voice control. Alta ave is at the top of mountain. All that piss and crap ends up in the watershed downhill, awful. And of course its a project area (marin city) that has to deal with that wafting smell of doody in the air! Also, alta ave has mission blue butterfly habitat that the park pays lots of money to protect. These dogs off leash come in and tear up the lupine plants. Atrocious.

In other words, there needs to be a strict enforcement of dog rules. Designate a place where dogs can be off leash, but make sure you can enforce the rules! Signs just don't work! There needs to be enforcement!

Correspondence: I support Preferred Alternative "C". I am an 11-year pilot who lives in SF flies at Fort Funston on a regular basis. It's the only place to fly in San Francisco County and the best place within an hour's drive for both pilots and spectators. I enjoy seeing the dogs around, but there have been too many problems with irresponsible owners and unchecked, professional dog-walkers. Nearly every time I visit I have to draw the attention of a dog owner to pick up their dog's droppings. More seriously, I have several friends who have been threatened or attacked by off-leash dogs. When you're coming in for a landing in the only spot available, a dog can mean the difference between a safe landing and a serious injury. The notion of dogs being under voice control is laughable. When there's a huge kite coming down out of the sky, off-leash dogs just aren't going to respond.

Thanks for your consideration,

Daniel

Correspondence: Although I live in the east bay, my dogs and I regularly drive an hour or more to access great beaches like Fort Funston and Stinson, and we can't overstate how important the off-leash areas are for dogs and their people. As a dog owner and as a veterinarian I know the health benefits of regular, off-leash activity and ocean swimming - both for my dogs and for myself. If we lost our access to these beautiful areas, not only would my dogs miss them, but by association I would be banned as well: where I go my dogs go so I know that these restrictions would limit my ability to enjoy and appreciate the gorgeous wilderness around SF - an enjoyment I feel that I'm entitled to just as much as the rest of the citizens and taxpayers here. Again, as a vet I've sutured up my fair share of dog fight wounds, and it's interesting to note that none of my cases have come from off-leash dog parks: they've all happened while on leash and on sidewalks, many times even in yards. Not to say that the risk of dog fights isn't higher in areas with higher dog density, just that the majority of owners who take the time to walk their dog off-leash in the areas in question are responsible and conscientious, and this leads to more happy, healthy, and mentally stable pets. I absolutely agree that dog droppings spoil the area and increase transmission of disease, which in rare cases can pose a zoonotic risk as well. By all means the parks dept should increase fines for irresponsible dog owners: those who don't pick up, those who don't license and provide appropriate health care for their pets, and especially those whose pets have behavioural issues. But please don't use those infrequent cases to take away our right to off-leash exercise and ocean swimming. Please feel free to contact me directly if you have any questions or comments.

Correspondence: Greetings ? Since you have extended the comment period until May 29, 2011, I have decided to continue working on my contribution, which will give me more time to gather material and to sort out my personal thoughts. I'm writing this now in order to recognize the very difficult situation that you, as the ultimate decision makers, are now inescapably saddled with. I have been involved in this controversy for many years now, primarily as a private citizen, but solidly aligned with those that recognize the environmental aspect of this issue as paramount.

Over the years I have talked to Rangers in the field that have confessed that they have gone home with knots in their stomach from all the verbal abuse they receive from irate dog owners and I completely sympathize and understand this aspect of your problem. I am also very much aware of just how well organized and effective the pro dog community has been in presenting their side of this discussion, which has garnered them, much

press and political attention most of which seems sympathetic to their position. I fear that these factors will end up playing a disproportionate role in how this controversy is finally resolved leaving the natural flora and fauna to fend for itself.

On January 24, 2011 the San Francisco Chronicle published this letter of mine that I think accurately expresses my feelings and concerns. They titled my letter:

Protect our precious parks from the dogs

Editor - As soon as I saw the headline suggesting that dogs may be banned from some GGNRA parks ("Federal plan would leash, ban dogs in many parks," Jan. 13), I could hear echoes of past public forum shouting matches, and judging by The Chronicle's unfortunate choice of letters on the subject, we can look forward to even more shouting.

Although I now have a much better understanding of just how impassioned and motivated dog owners really are, I remain bewildered by a Bay Area community that, while cherishing the mantle of enlightened environmentalism, still sees a dog chasing a bird into the sunset as wholesome, harmless recreation and an appropriate national park activity.

I sincerely hope that the National Park Service will demonstrate enough courage to follow its lawful mandate to preserve and protect our precious park resources. Once that happens, park visitors will be amazed at just how many wild and wonderful creatures will again appear as if to illuminate the original intent behind our parks.

M. Bruce Grosjean, San Francisco

| Correspondence: | I am writing concerning the Draft Dog Management Plan / Environmental Impact Statement. Based on my experiences at GGNRA and many other parks, I would like to see the plan improved as follows: | | |
| | 1. Increase the target compliance rate from 75% to at least 95%. Given the large number of dog owners who use the park, a 75% compliance rate will allow significant negative impacts to wildlife and other park users. | | |
| | 2. ROLAs should be fenced. If the boundaries are not clearly defined, there will be too many opportunities for straying outside the boundaries, either | | |

accidentally, intentionally, or through negligence.

3. Commercial dog walking should not be permitted in GGNRA. Business owners have other places they can walk dogs, and since commercial dog walkers generally have more than one dog, it makes it much more likely that they will have difficulty monitoring and controlling their dogs.

Correspondence: hello,

I believe that Preferred Alternative "C" is the best plan for Fort Funston. I fly hang gliders at the fort and have been charged by 3 dogs. It's kind of scary, my main concern is safety. Dog walker and dog owners need to be accountable for these dogs. It's a big park, there is plenty of room for us all, we must enforce some kind of regulation for tourist safety.

Another point is when dogs are on the edge of the cliff not on voice command, the dogs are advancing the erosion, we have place wood chips on the edge which seems to be holding the cliff edge well..

thanks,

Van Pelham

Correspondence: I am writing about the possible closure of unleashed dog walking areas in San Francisco. I am very concerned about this proposal as this is the only form exercise my dog Riley (Lab/Boxer/Rot/Ridgeback mix) has to go. There are literally no areas other than up at Fort Funston or The Grove to walk my dog. Where do these people trying to implement this proposal expect for us to walk/exercise our pets and ourselves for that matter? It's absolutely absurd!!

Pets deserve to have a place where they can go to walk freely (of course supervised), and to interact with other dogs and get their daily exercise just as much, if not more than human beings.

Please do not implement this proposal. Pick on someone else's rights. Leave

the dogs alone!!! My dog Riley can't speak for himself, but I sure as hell will!

Thank You

Correspondence: To Whom it May Concern: I have read parts of your EIS and tried to understand the Executive Summary, which baffles me. I live in Muir Beach and this has been a dog-friendly beach for many (40+) years. I have lived here for 16 years and can see the beach from my window. Most of the times I see dogs frolicking at the water's edge and swimming. They are having more fun than the people and they are far less destructive than the people also. If a dog wanders into the "new lands" area, it is the responsibility of their guardian to call them back....if that doesn't happen it is the person who is at fault since dog's can't read signs. On a nice weekend most of the playing in the creek mouth is by children who often build dams (mostly boys) across the endangered salmon habitat. After a big weekend there is also alot of trash that I pick up as do others in my community. I never saw a dog leave trash behind, unless you are talking about their feces and again, a responsible pet owner picks that up. There is definitely far more destructive behavior perpetrated on this area by humans than by dogs.

Muir Beach is a wonderful place to live - surrounded by open space and vast hiking trails....unfortunately we have only one trail (the coastal trail) where we can hike with our dogs and you want to take that away from us too. If I understand your position, the only place dogs would be allowed is on Pacific Way and the beach parking lot. Really, that is absurd. Muir Beach is a small beach that is dog-friendly. People who do not like dogs can go to one of the many beaches in the area that are already dog-free. Why would you want to take away the one beach left for people to recreate with their dogs. I thought Golden Gate Recreation Area was for recreating - and that means playing at the beach with your children and/or your pet. Children are far more noisy and destructive yet you wouldn't think of banning them....so why are you picking on dogs? Especially here in probably the most dog-friendly area of the country. From what I read in your EIS you are suggesting that people and their dogs go to Little Beach! This is ludicrous. The road to and from there (sunset way) is not equipped to handle any more traffic. It is basically a fire road and needs to remain that way. There is no parking and what little there is on the roadside is usually residential parking.

There are no facilities at Little Beach and during the winter months the beach is pretty much unusable as the sand washes out and it becomes just another bit of rocky coastline.

I read that 99% of GGNRA land is already dog-free - that means 1% is available for people and their dogs. If this is in response to people not liking dogs I find it difficult to believe that the NPS could not let us keep the measly 1% that we have to enjoy our pets. I actually feel that this whole issue should be turned around and dogs should have more off-leash areas when there is such a minute portion of federal lands where they are welcome. What's with the bad attitude toward dogs? I hope that the NPS and the GGNRA can see the error of this plan and continue the status quo here at Muir Beach or, better yet, open more of the trails to people and their faithful companions.

Correspondence: If the estimates are correct, there are over 100,000 dogs in San Francisco alone, with perhaps upward of a million in the greater Bay Area. Fortunately, only a very small fraction of them visit your parks, just as only a very small percentage of the general population do. The point is that dog owners constitute a substantial sub-set of the general population and, as such, they have rights to use the park as well. To ban their animals is to discriminate against them, denying them equal access.

Exaggerated complaints of problems will always happen. That is to be expected. The solution is to maintain the status quo. The small portion of the parks and few beaches under your care that allows dogs off-leash represents

a fair proportional distribution of the overall park lands. Between pedestrians, mountain bikers, horseback riders, and pet owners walking their dogs, a good mix prevails. Sure, because you can't please everyone all the time, there will be occasional bickering between horse riders and bikers, pedestrians and dog owners.

One argument that I've heard for banning dogs from Muir Beach, in particular, is that non-dog owners don't visit the park. My experience, to the contrary, is that both dog owners and non-dog owners equally joy the park. The presence of off-leash dogs offers an air of freedom consistent with the wilderness. There's even a section of the beach where clothing is frowned upon but that does not keep others away.

Another argument that has been forwarded is that dogs are bad for the environment. In my experience dog owners are overwhelmingly respectful of the environment. They religiously pick up after their pets. Their dogs are well-mannered and well-controlled. And owners are better than the general population at picking up litter and respecting sensitive areas.

In my experience that it's the people in parks and on beaches that are the problem, not the pets. People have fires, leave litter, go off trail, and impact flora and fauna more than dogs. Sure, a rare, few inconsiderate pet owners might not pick up after their charges but that is the rare exception, not the rule. Other owners often pick up their slack. Dogs exercising off-leash at the shoreline don't cause any problems at all, as far as I can see.

And remember, to their owners dogs are people, too, you know.

| Correspondence: | The attempt by the GGNRA to severely limit off-leash access in the San Francisco area is an altogether arbitrary, unwarranted and outrageous intrusion into the legitimate rights of taxpaying individuals, who are merely seeking out what little urban space remains in which to exercise their dogs responsibly. According to the Humane Society of the United States (HSUS), an estimated 39 percent of all American households own at least one dog. How, one may ask, does a government agency that purports to represent all citizens simply decree that canine family members are unwelcome? A recreational area, by definition, is not an exclusive space; rather, it is a managed region in which the inevitable competing interests are accommodated. Limiting dogs is the first step in banning dogs from GGNRA jurisdictions and this is not only reprehensible, but indefensible. I urge those of us who believe in off-leash access to fight the GGNRA | | |

vigorously. There is a dangerous Groupthink. If you love your dog, and your outdoors time together, get busy on the phones, write letters, and show up when the GGNRA toadies schedule a policy meeting. Sadly, it's now or never.

Correspondence: To Whom it May Concern,

I am writing to oppose any changes that move areas from being off-leash (and under voice control) to leash required.

I feel strongly that there are not enough areas in the SF Bay area for dogs to run freely and it is not natural or healthy for dogs to exercise and play constricted by a leash. We need more off-leash areas rather than restricting the ones that currently exist.

Having said that, dog owners should be fined if their dogs misbehave (fight with other dogs or threaten people) or if they do not dispose of poop in the required way.

Thanks for asking us to give input,

Teresa McGlashan

Correspondence:

I am a five year member and prior club officer of FF of Fort Funston. Over those five years I have witnessed numerous negative encounters between park patrons due to dogs being off leash. I have witnessed pilots being bitten by such dogs while attempting to land. I have personally been chased numerous times by dogs trying to catch my glider, putting my landings at risk. I have contacted park police because one patron became outwardly violent towards a dog owner he thought was not properly controlling her animal.

It has become very apparent to me that "voice control" of animals is ineffective.

I support any proposal that requires dogs to be either on leash or in a

specifically designated and properly enclosed play area. The current policy, and any policy that relies upon voice control to manage the animals within the park is in my opinion ineffective and creates unnecessary safety hazards to park patrons.

Correspondence: This DEIS is invalid because it fails to meet its legal obligation to take into consideration the negative effects the proposed changes would create for humans, their dogs and the surrounding environment (e.g. local parks). Further, the studies/science utilized to support allegations of damage to resources in the GGNRA are fatally flawed - the positive impacts are ignored and the negative impacts are unverified. Therefore, I believe the 1979 Pet Policy should be implemented in its original form with no restrictions on off-leash recreation at Ocean Beach, and it should be institutionalized as a Section Seven Special Regulation. Further, I believe that all properties added subsequent to the 1979 Pet Policy and in the future should have historical off-leash recreational usage allowed. This would accurately reflect the enabling legislation for this National Recreation Area which GGNRA management has held in disregard for quite some time. I also believe the GGNRA's inclusion of a Compliance-Based Management Strategy as well as the GGNRA's failure to commit to a Section Seven Special Regulation following this process indicates a lack of good faith and an intent to deceive the public as the GGNRA did following the implementation of the 1979 Pet Policy which the GGNRA later decried in Federal court as an "error".

Correspondence: Please do not restrict the off leash areas for our dogs any further. San Francisco has been such a fantastic place to live because of its natural beauty and its ability to be a family oriented place with dogs. I think we are like most people in this city in that our dogs are our kids. Unfortunately, most of our friends move out of the city when they have kids or get ready to have kids. Thus making San Francisco a city with more dogs than kids. If you are not only driving out families with children but also driving out families with dogs we are going to be left with a city that has a tough time moving forward. Dogs in the city and its parks have become a staple to the

atmosphere, economy, and social scene.

It is imperative to the health of the city to keep dogs welcome and encouraged for all they bring to our city and our economy!

Please do not limit the off leash areas for our dogs any further.

Thanks for your time

Johnny Eason

Correspondence: I am an outdoor person and I very often run at Crissy Field in S.F. As often I also take my kids there to walk on the beach or on the main path. The beach is full of dogs running around and their owners throwing the balls to them. It feels that we humans have been intruders. Some of the dogs are big and wild, I often fear for my kids' safety. Several years ago, while walking with my 4-year-old on my shoulders at Ocean Beach in S.F., a dog ran toward me and bit me. I received 5 stitches on my leg at the nearest emergency room and a \$500.00 bill. I am an Italian-born American citizen and I travel often back to Italy. There, dogs are kept on the leash in every public place and often restrained on beaches for sanitary reasons. I wish the same thing was happening here.

Correspondence ID: 1433 **Project:** 11759 **Document:** 38106
Received: Mar,24,2011 13:00:21
Correspondence Type: Web Form
Correspondence: Recently released research-based information about dog walking and health makes it clear there are real benefits to our well-being.

These two quotes from the 3/22 2011 NYT Health Update illustrate the point: Just last week, researchers from Michigan State University reported that among dog owners who took their pets for regular walks, 60 percent met federal criteria for regular moderate or vigorous exercise. Nearly half of dog walkers exercised an average of 30 minutes a day at least five days a week. By comparison, only about a third of those without dogs got that much regular exercise.

To the surprise of the researchers, the dog walkers showed a much greater improvement in fitness. Walking speed among the dog walkers increased by

28 percent, compared with just 4 percent among the human walkers."

So no question our dogs are very important to our health. That brings us to the question of our importance to our dogs health. Their exercise is essential to their mental and physical health. On leash and free play in dog parks are great benefits. But off leash walking is at least as important for their development and good health.

Like their owners, dogs require daily exercise and socialization for good mental and physical health. This cannot be achieved inside a house or apartment or, for most dogs, on a leash or in an enclosed dog pen. Responsible dog ownership requires teaching the dog to behave appropriately among other dogs and with people. And exercise means more than walking at human pace. Indeed, for the elderly or disabled, it is even more important to be able to exercise one's dog off-leash; it can be detrimental for both owner and pet to be restricted to on-leash activity only. Dogs behave entirely differently when they are restrained (think about how aggressive chained dogs are).

The SF Pet Owners have done an excellent job defining the various options for shared use of space by LL park users, debunking some of the myths about damage to habitat, etc., and proposing options for successful shared use policies.

I expect you to broaden your definition of park users to include dog owners, accept our interests as critical to your success as a community recreation area, and act accordingly, making sure our needs are met along with others'.

| Correspondence: | I object to the language usage in this document. The DEIS report consistently uses the word "may" in attempting to provide evidence to support reasons to restrict off-leash dog walking. For example: (p.281, para. 2) "The natural sounds heard in GGNRA are a positive and valued park resource, which dog presence or barking MAY interrupt." Page 281, para. 3 states: "Some ethnic or low-income populations MAY be more negatively affected by off-leash dog walking." The American Heritage Dictionary of the English Language, 3rd Edition, defines "may" as "an indication of a certain measure of likelihood or possibility." The DEIS fails to provide a description of what that possibility is and what evidence they have to support that likelihood. I recommend that every time the word "may" appears in the DEIS, it be changed to "will", and then cite factual data to support that assertion. | | |

Correspondence: San Francisco needs areas that allow dogs off leash. Running dogs on the beach is part of the SF experience. While we don't have a dog, we enjoy watching the big dogs run in the waves. I have a small child and we use the GGNRA regularly. I am very concerned that if you close the offleash areas then there will be more conflict between dogs and kids. As it is they are fairly separate, but make the dogs go on leash and they will move from the waters edge, and on to the walks with the strollers. NOT GOOD. I prefer the dogs playing with each other, tiring each other out, not on the paths getting tangled up and knocking my child over.

It works fine the way it is except for a few irresponsible individuals, and these won't stop because you change the rules. People on the beach always when the patrols are coming, you won't stop them.

So what is this all about anyway? Revenue? Anti-dog? Just to make the rules the same as other parks? GGNRA is NOT other parks. It is my understanding that free dog areas where part of the agreement that transferred the land to the GGNRA. Why renig on the deal?

I just don't get what you are trying to do.

Correspondence: I understand the need to balance the environment with needs of the dog owning population. Perhaps there even need to be some guidelines people should follow. But off leash areas on the beaches in other parts of the GGNRA lands is vital to the thousands of dogs and owners in San Francisco. I run with my dog, who happens to be blind, and that is the way he (and I) exercise. But he can't run on leash and so this restriction would be devastating. Also, there are many people who simply wouldn't get outside in nature without their dogs. it is vital for their physical and emotional well being. I urge you to use common sense and not take draconian measures.

Correspondence: I am writing to offer my reaction to the GNRA Dog Management/EIS plan to exclude all dogs from 'New Land" which would apply to Rancho Corral de Tierra property near Montara.

I am whole-heartedly against this policy. I live in Montara and part of the charm to this wonderful small town is the ability to take my dog for long walks in open space. This is where I see my neighbors and chat with friends. After a long day, my dog and I take our daily walk to enjoy the scenery and relax a little. What I'm trying to convey is that though this area is a part of the expansive GGNRA, it's not a densely packed urban area. Rather it is a large part of our small community where bikers, walkers, equestrians and dog walkers have successfully co-existed without government oversight for many years. A ban on dogs is plainly unfair and out of touch with the needs of our community.

I am asking you to please reconsider what appears to be very heavy-handed regulation of a local neighborhood treasure. 'Parks to the People' should include EVERYONE including those of us who own dogs.

Deborah Mortensen, Resident of Montara, CA

Correspondence: Thank you for the opportunity to comment on the GGNRA draft dog management plan.

I have a well-behaved young dog, who I have attended 5 obedience classes with, and with whom I am currently working to attain a Canine Good Citizen certificate, issued by the American Kennel Club. I have devoted many hours to the training of my dog so that our family has a reliable companion, and so that I know with confidence that he is trustworthy in public. Besides the daily interactions my dog experiences on the street with people and other dogs, my dog comes to work with me every day (we are small business owners in SF) and also to my son's school at drop-off and pick up time. It is extremely important to me that my dog is gentle, obedient and well-mannered in all situations. I'm proud to say that he is.

Part of the reason my dog has been so successful in his training is because he has had wonderful opportunities to be responsibly off leash. We walk twice a day, religiously, so that he gets plenty of exercise to be healthy and calm in all social situations. Off leash time is critical for a city dog; we don't have the luxury of a yard (as many people in San Francisco don't), so it is vitally important that I can take him to a place where he can run and play and be a dog. He is a one and a half year old standard poodle; he has lots of energy to burn! I know that I can call him and he will return to me immediately to walk at my side, wherever we are.

I don't take our off-leash privileges lightly; I always clean up after my dog, and make sure that my dog is entering a safe environment when I take him off leash. I ask him to sit when other people walking in the off leash areas stop to say hello to him (and many do). The GGNRA has provided all of the members of my family (human and canine) with a wonderful way to be in nature and appreciate the place we live even more. Please don't take that away from us.

Thank you.

Correspondence: We want the GGNRA to remain open for people with dogs and off-leash dog walking. The GGNRA needs to stop pushing its extreme proposal to cut nearly 90% of currently available off-leash areas.

The GGNRA is an urban recreation area, created for the "maintenance of needed recreational open space." This extreme proposal (Draft

Environmental Impact Statement) -- a plan that would eliminate a primary form of recreation from this "recreation area." The GGNRA has an obligation to respect the legislation that created it and manage the areas as an urban recreation areas, not a pristine wilderness.

Please follow the GGNRA's 1979 Pet Policy as Section Seven Special Regulation, mandating that all properties added to the GGNRA after 1979 should maintain historical recreational access.

Correspondence: Thumbs up on the Draft DMP! This is a comprehensive and well-thought-out plan worthy of adoption. I support the provisions called for in the plan, with the exception that I believe it makes sense to construct a fenced, rather than unfenced, off-leash area at Crissy Field. The "cultural preservation" argument to me carries little weight, considering the area was once marshland. True "preservation" would restore this area to its former marsh condition, but we all know that ain't happening! As the plan correctly points out, the area is currently underutilized and would make a good off-leash area. Fencing would help confine dogs to this less sensitive area and help keep rogue dogs out of the tidal and beach areas. Fencing would also offer an unambiguous delineation between off-leash and on-leash areas, making enforcement easier for park staff.

I am a beach & park user, bicyclist, jogger, kayaker, rollerblader parent and voter. I don't have a dog, but I still vote!

Correspondence: My wife and I are both seniors and one of our great joys is to take our well

trained Jack Russell Mix to Ocean Beach or Fort Funston to let her chase after a ball. It reminds us of when the kids were young.

Please don't take away our recreation, exercise and fun by severely restricting dogs from Ocean Beach and Fort Funston.

One of your proposals I strongly support and that is to control dog walkers. They bring 5 to 10 loosely managed dogs to Fort Funston. While some of the more responsible ones try to clean up after the dogs. Far too many look the other way.

I think dog walkers need to be licensed and required to attend classes on how to manage dogs in large packs. Limiting dog walkers to no more than 4 dogs would be a good first step plus requiring licenses and permits.

Correspondence: I love having the option of walking with our well trained small dog on the trails at Lands End. She does not bother other wild life, walkers, runners or bikers.

Lands End is a joyous place to walk with our dog. She gets a chance to smell flowers and walks close to our side. But at the same time she feels free not being on a 6 ft leash.

Please don't ban well behaved off leash dogs from the Land's End Coastal Trail. Maybe a occasional enforcement would help send the message to the few bad apples I have observed over the past years.

Correspondence: I have been a resident of San Francisco for 10 years and a dog owner in SF for almost 8 of them. I've always loved that San Francisco was 'dog friendly' and had off leash areas for dogs to run. I have a large dog who requires lots of running for exercise, which would be impossible on leash. I am a responsible dog owner and have taken him through two puppy training and one adult training class. And I clean up after my dog. I've read through the proposal; it is hard to follow, but it seems to restrict off-leash areas significantly. We regularly visit Fort Funston, Ocean Beach and Crissy Fields. While I understand there could be some environmental impact, if

dog owners are responsible, it should be minimal. In all my times to 'off-leash' areas, I've never witnesses any issues. Also, I am not a dog walker, but am a small business owner. Reading the restrictions of off-leash areas as well as the restrictions placed on dog-walking, I see an immediate negative economic impact. Dog Walkers are needed in San Francisco. Dog walking rates are signifcant and with the proposed restriction, you would see a significant increase in prices and also a decrease of dog walkers (or they will go out of business). Please keep the off-leash areas available!

Correspondence:

I am a native California that grew up on the coastside. I am a dog owner, donor to the parks, and a voter. When I was a kid, off-leash was not even something that was discussed because people and their dogs just simply "hung out" on the beach or at the park. For a state that has always had a reputation of being so laid back, I am appalled at all of our regulations that I have watched unfold over time. It has become so disheartening, that I have become another native Californian who is starting to think why do I want to live here or pay taxes to this state? There are other places much less regulated. You may be thinking so what? But what will happen when you start chasing out all of the middle class income earners? We are your tax base and you know it. The only tax increase I ever vote for is the parks. If you take away my motivation to use them, then why will I ever agree to give more?

My husband and I frequent many of the beaches throughout the summer and have never had a complaint about our dogs. If anything most people want to say hi. There is something very American about watching adults, children, and our beloved canines frolicking in the surf together. And from my experience dog owners are usually the most conscios about picking up after themselves. Have you noticed how many people are at these parks with their dogs? We are the ones that use them. Please keep the parks off-leash. Thank you!

This is very unfair because this is some of the only places a dog can swim, run, and socialize! Plus most of the time there are more dogs on the beaches then people! My dog loves it here and needs this place and so does every other dog. Also what you should realize is that this will make less supporters

for the GGNRA and the National Parks where the beaches are located. I also think that some other major things have not been thought about. One is that, can't humans hurt the birds too? But you wont ban people from the beaches will you? So why ban the dogs who seem to have more fun on the beaches? I hope whoever is deciding, that they own a dog and they know just how much this is going to hurt the society!

Correspondence: The GGNRA was created for urban recreation. It has a long tradition of promoting mixed-use activities. It is not a pristine wilderness.

We need places for healthy recreation around our cities, and this includes dogs. The existing regulations should be enforced without adding more restrictions on dogs.

The GGNRA already has large areas of land that are not near a trail, and those areas will remain undisturbed, even under present regulations.

Any new lands added to the GGNRA should also be designated to allow dogs on trails.

Correspondence: The GGNRA DEIS Dog Plan does not present an objective case for making any changes to existing dog policies. Thus, the entire DEIS should be rejected or completely re-done.

To suggest such impactful changes, GGNRA must, at a minimum, provide quantifiable data showing: a) why dogs (on or off-leash) are a priority problem (i.e., greater than the other impacts) b) the projected benefit of

GGNRA recommendations over other measures

Correspondence: I am a dog lover, a dog owner, and a birder. I have gotten many emails urging me to comment on this proposal, both from fellow dog owners and from fellow birders. My dog is very active and high-energy and does not get much exercise on-leash. She loves chasing tennis balls and frisbees and needs off-leash time.

However, I feel very strongly that wildlife protection is paramount. Humans and our pets have had devastating impacts on wildlife. The snowy plover, in particular, has suffered serious declines due to human activities. We residents of the bay area are fortunate to have many areas for recreation. In my view, preserving and protecting sensitive wildlife is far more important than providing a few additional recreational opportunities for humans and their pets.

I generally support the preferred alternative, with the following caveats. I would fence the areas where dogs are allowed off-leash, and I would provide for strict enforcement. The preferred alternative speaks of ease of enforcement, but I did not see any discussion of what enforcement efforts will be made, nor what resources will be provided for enforcement of regulations. Strict enforcement, particularly in the areas where dogs are prohibited, is essential for success of the proposal.

Knowing that there are far more dog owners and dog lovers than birders in the bay area, I fully expect that there will be many, many more comments urging fewer leash requirements and more off-leash areas, than those supporting wildlife protection. It is precisely that -- the huge numbers of dogs and dog lovers (not to mention cats) -- that has caused such severe impacts to wildlife, and to birds in particular. I trust that your decision will be based on the severity of impacts caused by off-leash dogs, and on the sensitivity of wild species to the presence of dogs, rather than on the number of comments supporting or opposing off-leash dog areas.

Thank you for consideration of my comments.

Correspondence: The restrictions on Fort Funston are too severe. Fort Funston is one of the precious few places the thousands of dog owners can currently take our dogs to exercise freely, and the proposed restrictions bans all dogs from over 80% of that area, concentrating us all in the remaining 15-20%, thus severely increasing the risk of conflict and overuse of the land.

The restrictions on Ocean Beach are too severe. The stretch of beach south of Judah and north of Sloat is used most heavily by local residents who exercise their dogs there (myself included), and should be included as a ROLA, as the potential for conflict with "those wanting a no-dog experience" is minimal.

As has been stated by others (and with which I wholeheartedly agree): The GGNRA is located in a major urban area with minimal open space, so these restrictions will have a dramatic impact. The plan ignores the negative impacts of the proposed changes on neighboring city parks, on the health and well-being of people who enjoy recreational dog walking, and ignores the recreational values that are part of the GGNRA's original mission ("to provide for the maintenance of needed recreational open space").

As a passionate San Francisco citizen and dog owner, I sincerely ask you to reconsider.

Correspondence: This is a ridiculous plan.

As a lover of the GGNRA and the amazing outlet it provides to all people and pets, and as the owner of one dog and two kids, I ask that you reconsider and amend this plan.

I am all for giving dogs the freedom to roam where people roam, and perhaps we just need to hold owners more accountable their dogs around more public areas. That doesn't mean that dogs should be prohibited from roaming free in certain areas. It just means that the owners should be held to higher standards (and greater consequences).

People should worry more about the bicyclists who come close to running over people in this town. Please don't turn SF into just another city.

Correspondence: In almost all areas the Park Service is proposing to force dogs (on and off leash) into smaller areas. Anyone knows that this will lead to an increase in the small number of dog-related issues. Hence the preferred plan is utterly illogical.

Why would the Park Service Prefer to see an increase in dog-related issues? I could cynically suggest that the Park Service wants to see an increase in dog related issues so that five years from now they can use those statistics as proof of the need to ban dogs entirely. If this really is the hidden agenda of this report then it is shameful.

In any event the preferred plan is utterly disrespectful of the access rights of a large proportion of the park-using public. The preferred plans take away huge amounts of access rights. This is totally against the mandate of the Park Service. Leave things they way they are please and stop eroding our access rights!

Correspondence: I am writing in support of the GGNRA Draft Dog Management Plan / Environmental Impact Statement. Specifically, my focus has been on Fort Funston. I attended the comment period at San Francisco State on March 5th and appreciated the time I had to meet and speak with rangers and professional dog walkers.

I ride horses out at Fort Funston and access the trails, beach and Fort

Funston three times a week. I grew up in San Francisco and walked our family dogs at Fort Funston in the 80s and 90s. Even now, I frequently dog sit for friends and visit Fort Funston on foot. The change in the habitat there is depressing. Seeing dogs harass the dwindling bird life is very sad; watching people not pick up after their dog is enough to make me go nuts. The lack of cooperation and understanding of shared open space has been a source of great frustration for me. Over the last ten years, I have witnessed three accidents involving dogs and horses. One involved the rider being hospitalized. One involved the death of the dog. For these reasons, I am firmly in support of all that the GGNRA Draft Dog Management Plan is attempting to do. I feel that Alternate C is a compromise for everyone but is much better than the status quo. I firmly support ongoing dialogue and clearer policy.

With that in mind, my biggest concern is a lack of signage that alerts people to the park's boundaries and the laws we all should follow. And what about charging people to park their cars at Fort Funston, a means to collect funds to help pay for signage and habitat restoration?

I am also in support of ROLAs being rotated so the land is not overused and if conflicts arise, an on-leash policy being implemented. That is safer for everyone. I am also in favor of fenced in dog run areas as an alternative but I feel that Alternate C is a much better direction to take.

Thank you,

Lisa Dunmeyer

Correspondence: I am commenting on the portion of the Dog Management Plan for Ocean Beach San Francisco. My wife and our two children have lived at 45th Avenue and Lawton for 15 years. I am strongly in favor of the preferred plan, where dogs are prohibited from the beach. Countless times, since my children were babies, we have had excursions to Ocean Beach ruined by dogs on and off leashes doing the following, among many other offenses:

1. Approaching us and angrily attacking us, running all over our beach blanket throwing sand in our faces and on our picnic food. My children were terrified while the owners look at us like it was our fault and do absolutely to control their dogs. Needless to say, our picnics were ruined.

2. Dogs approaching me with completely unknown intentions. I do not

know if they are playful or will bite me. Their owner is obviously walking hundreds of yards away, paying absolutely no attention to where their dog is located or what it is doing. Or the owner is close by looking at me like I'm a strange person to be scared of their dog.

3. Watching unleashed dogs chasing the protected snowy plover birds into the water, with, as usual, the owners not caring or calling or controlling at all. This is upsetting to me.

4. Countless times stepping on dog feces on the beach.

5. Constant loud and disturbing barking of dogs, ruining what I thought what a sensitive environmental area.

Every other national park and recreation area has strict restrictions on dogs. Why can't this be enforced on Ocean Beach? My understanding from the signs posted currently at every entrance to the beach is that for almost the entire year dogs are required to be leashed. Why is this rarely, if ever, enforced? This tells my children that laws can be fragrantly disobeyed by citizens with absolutely no consequences, day after day, year after year.

I think dogs need to be prohibited from the snowy plover protected area because if the law says a leash is required, dog owners will continue to disobey the law. Dog owners view themselves as being entitled to let their dogs run free in a beautiful San Francisco open space. I do not agree. Humans have priority over animals in our civilized society. Do we need to add this to the United States constitution to make it clear?

When illegal unleashed dogs attack humans, the owners inevitably say "oh, he's friendly, he never hurts anybody". But we have laws in this country for a reason. The vast majority of people don't drive cars drunk but it is illegal because of those who do, and the damage they cause. And most people pay attention and don't drink and drive, both for moral and legal reasons. Shouldn't dog owners obey the leash laws? They sure don't on Ocean Beach, only perhaps 10% of the dogs I see there are on a leash.

Finally, if GGNRA does implement a new dogs rule on Ocean Beach, please enforce it vigorously. Otherwise this entire process is a waste of time.

Thank you for the opportunity to comment,

I am withholding my name because I don't want angry dog owners contacting me.

Correspondence: As a daily user of Ft. Funston I will restrict my comments to the area, although they may be generally applied to other GGNRA lands. At present the park is host to a disparate range of activities from hang gliding to surfing to dog walking. The park is most heavily used by off leash dog walkers who will have no place to go if the "Preferred Options" are implemented. The DEIS has no analysis of the impact of this; it places the burden of providing exercise area for all these animals onto the city and county. The DEIS is driven by a policy exercise and minority interests. I would be in favor of Option A, no further restrictions for Ft. Funston.

Respectfully,

Steve Sowa

Correspondence: NO NO NO Do NOT prohibit dogs from our National Seashore. They belong here as much as do coyotes and foxes and children and hawks and eagles and osprey. Birds adapt to dogs as they do to humans and other predators and become stronger for it. I have witnessed this happen. (OVER) protecting the bird populations does NOT serve the birds nor does it serve we, the taxpayers and dog owners, who live near our parks and utilize these parks.

Prohibiting dogs from our parks will also create undue stress on park personnel who will have to devote all together too much time to enforcing these proposed dog restriction policies. Do Park personnel really want to become viewed more as police people than stewards for the Parks? Is delegating more time to law enforcement really they way park personnel want to spend their time? Don't let a few vocal yet organized people ruin it for the great majority who enjoy having pets in our Parks. These same up tight people will want to eliminate people from the parks, certainly children, for the same reasons they want to prohibit dogs from the Parks. Don't let

these people drive the park system into adopting over restrictive and unfair policies which will further make the Park system an unfriendly to people environment.

Correspondence: In order to protect the natural resources and make for a safe and enjoyable visitor experience I strongly support Alternative D (Most Protective Based on Resource Protection and Visitor Safety).

Dog threaten the fragile eco-system by digging up fragile plants and chasing native wildlife, as well as impacting the experience of the majority of users, which do not have dogs.

I urge you to impose the most restrictive set of rules for dogs with the appropriate enforcement measures.

Regards,

Philipp Borchard

Correspondence: Dear Mr.Dean. A short while ago I returned home from Ft. Funston, my almost daily destination to give our two dogs their needed exercise, and, also give me a chance to shake off the day. Funston is heaven for dogs and humans alike. I understand that you are trying to balance demands for preservation of natural resources with the desires of humans and their four-legged companions to retain a unique and stunning place for their recreation. Those of us who come out to Funston regularly respect the place for it's beauty and do all we can to protect it so that future generation will be able to enjoy this magnificent place as well. Please do not impose restrictions on the off-leash recreational use of Ft. Funston. We need a place like that. The city parks are not an alternative for providing us humans and our canines the exercise that we so badly need. Sincerely. Reinhold Gras

Correspondence: DO NOT restrict off-leash dog walking at Fort Funston and Ocean Beach. A healthy, well-socialized dog needs exercise: i.e. to be able to run, chase balls, meet other pets and owners, etc. This can't be done in backyards and on urban streets. I know you probably wish all the dogs would disappear, but that's not going to happen. There are more dogs in San Francisco than children. They, and their owners deserve to have a happy, healthy life, which includes plenty of exercise.

BTW, in the 70s Fort Funston was handed over to the GGNRA with the proviso that it would continue to allow off-leash recreation. It's not honorable for you to go back on your word like this. If no dogs are allowed off leash on any GGNRA land, than you should not have accepted management of Fort Funston in the first place.

Correspondence: Dear Sir or Madam,

We strongly support either on leash only or prohibited areas for dogs. Our experience has been that owners feel they have the right to run their animals off leash irrespective of existing law or ordinance. Off leash dogs threaten humans and other dogs and adversely affect wildlife and habitat.

Almost without exception they respond in an adversarial and occasionally

combative manner when asked to leash their animal(s). Even in those areas where signage of the on leash rule is clearly posted, non compliance is the rule rather than the exception. We would support an aggressive ticketing policy. Pacifica did this for just a short time and although there were the predictable howls of protest, compliance was noticeably improved. Sadly, once the ticketing program was abandoned, owners quickly reverted to type. Sincerely, Charles and Carol Parker P.S. Specific instances available upon request.

Correspondence: This issue is VERY important to me and to my family. Walking our dog in GGNRA (Fort Funston & Crissy Field) is as important to us as it is to our dog. It is one of the highlights of our week and a time that allows us to be together and to meet other members of our community. PLEASE do not make changes to the current leash laws in GGNRA. Changing the leash laws in GGNRA would have an immediate and lasting effect on our quality of life in San Francisco.

-Spencer Hooks

Correspondence: The off leash area is the only place where our dog can run full speed and play balls and get the exercise that he needs. Our dog is a rescued dog, so the off leashed parks allowed him to flourish and gain confidence as he meet other dogs,especially the people who understand dogs. We look forward to the parks each week because we live in a condo with no yard, the dog friendly parks really adds to our city lifestyle.

Correspondence:

Correspondence: I have often been to Ocean Beach with my dog and family and enjoyed having them all with me. We get out more because of our dog. The whole idea of open space is for people to get out and use it. Dog owners and their dogs use these areas and benefit from the exercise and beauty. Dog owners are appreciative of nature and sensitive to non-dog owners. Excluding dogs excludes their owners which generally are more likely to support open space. To restrict all dog owners because of a few insensitive ones is like making the area off limits to people cause other people weren't polite. I'm not even sure why there's a possibility of restricting dogs and their owners. Is there a real problem and if so than excluding dogs and their families is too harsh.

Correspondence: To Whom It May Concern: As a longtime dog owner, who enjoys walking dog friendly GGNRA trails, I am appalled that the interests of those like myself have been overridden by a minority of trail users. Most dog owners who use the trails pick up after their animals and are very courteous to other users such as hikers, bikers and equestrians. The actions of a few irresponsible dog owners should not be used to justify the severe proposed restrictions, just as the actions of a minority of irresponsible hikers, bikers or equestrians should not lead to curtailment of existing permitted trails for these users. I fully understand that trails close to urban areas see heavy use of sometimes competing interests, but heavy use does not justify restrictions such as those proposed by your agency. I question the validity of studies purporting to show out migration of certain species due to the perceived threat of dogs. Humans in general pose a much greater threat than any other species. I find it difficult to believe that horses, don't scare off other animals. Restricting dog friendly trails would also lead to overcrowding of the few remaining trails, leading other types of users to avoid such trails. I urge you therefore to reconsider the proposed restrictions and to develop a more inclusive option for all stakeholders.

Correspondence: To whom it may concern: Please allow dog owners to have a place where dogs can be dogs, where they can run and enjoy their lives. Almost all the dogs that live in San Francisco live in small homes without large yards so being able to run off leash with their responsible owners is greatly important to their health and happiness. Many dog owners take the responsibility of

tending to their dogs and to the areas that they get to enjoy seriously. We all want to keep areas safe for all animals and plant life. Please keep Fort Funston and Chrissy Fields as safe places where dogs can run free and people will be responsible stewards. If you really want to restore land then maybe the GGNR should also think about taking away the golf courses that use vast amounts of water and resources that do not allow birds and natural plant life to reinstate themselves. Regards, Suzanne Castillo

Correspondence: Here are several alternative solutions to closing trails and beaches. They are less expensive solutions for land management and people management:

1. Require and enforce people to CARRY leashes for their dogs. Monitor for voice control.
2. Require and enforce people to clean up after their dogs.
3. Limit professional dog walkers to three or four dogs per outing in all areas.
4. Add a fee onto dog licensure to pay for these services.
5. Use ticketing fees to deter irresponsible behavior. Put fees towards management.
6. Establish a complaint line.

Your proposed policies are in contradiction to the conclusions you draw in the study. To wit, you conclude that dogs have minimal impact on compacted trails. On the south loop of the Oakwood Valley Trail, where the GGNRA plans to mitigate dogs off-leash, the park service built a compacted trail (built by the Conservation Corps.) Also on the Oakwood Valley Trail, your policy indicates that you want to protect the Mission Blue Butterfly habitat. No lupine grows on either the north or south side of the loop (and I believe there was an attempt by the park service to grow lupine at that site.)
