My dogs and I have enjoyed the natural and man-made beauty of Fort Funston for almost 40 years. It is a magnificent area for human and animal socializing. On days when I am working, it is comforting to me that my dog walkers are with my dog there to give her the exercise and additional socialization that she needs.

My profession is a scientific-based one. We would be unable to issue reports such as yours, with your vague claims and accusations such as "may", "could", "potential" and "possibly negative." Despite the length of your report, I do not see evidence of baseline surveys 07 control groups or any of the usual criteria used in scientific studies. And yet you demand that we be "specific" in our comments!

It is unrealistic to expect urban parks to be completely wild or `natural' Even if pets were banned, would you not have some concerns with feral cats, raccoons, etc.? You claim that dogs can frighten the snowy plover. I suppose people could frighten them also. Is the next step to ban people from walking through Fort Funston? Incidentally, have never seen any of my dogs at Fort Funston or at Ocean Beach harm a bird. Nor do they trample over any fence-protected plants.

Certainly everything affects urban parks when they are used by human beings and their pets: we walk,we talk, we generate some waste. The dog owners groups have worked very hard to encourage responsible dog ownership, to clean up after the minority of irresponsible dog owners, and to protect the parks for our own self-interest. We want to extend this opportunity to do so indefinitely. People and their pets are part of our culture. Unless you intend to eventually ban domestic pets, pets and their owners must be allowed to enjoy our environment and enjoy our lives.

I respectfully ask you to reconsider the preferred alternative.

Dear Mr. Dean:

I am writing in support of the proposed Dog Plan for the Fort Mason/Crissy

Field area.

As a dog owner who frequently walks our dog on Crissy field, I believe that requiring leashes for dogs walking on the Promenade is a plan that protects both dogs and other visitors. Also, I believe that allowing, dogs off lead on the center beach, provides a necessary, adequate and beautiful area for dogs to run free. I also agree that at least a portion of the eastern beach closest to the parking lot should not allow dogs off lead. This particularly true when in the summer months many families with small children use that beach.

Thank you for the opportunity to comment. By the way, I could never get the internet response site to work for me.

Sincerely,

John J. Phillips

RE: Dog Draft Management Plan Dear

Mr. Dean:

I believe United States Recreation Areas serve a multitude of purposes, from recreation to habitat preservation. For this reason, I support the most restrictive of the proposals regarding dog access to and freedom in the Golden Gate National Recreation Area. Dog access to public lands is a privilege, not a right. I believe dog owners' use of these lands are superseded by the general public and especially by native species for whom contact with dogs would be detrimental. For that reason, these strong restrictions are prudent for the safety of all - people, habitat and dogs.

Thank you for considering my view.

Best,

Marshall Newman

Correspondence: To whom it may concern:

I am writing to you to voice my **STRONG OPPOSITION** to the proposed restrictions on unleashed pets in the GGNRA. I am in the parks every single day as a committed runner and I walk my dog everyday. I have lived in San Francisco for over 15 years and have never seen a single incidence of a dog destroying any park property, and in fact I have seen the opposite- many times- dog owners picking up trash and taking care of the park land we all cherish. Because we have a unique situation of having access to park land in our city, I believe that is essential that we continue to encourage dog owners to use the parks to keep them safe- the proposed leash laws will have the opposite result. In addition, most of the dog owners I know, including myself, are large financial supporters of the Parks. I have served on the committee for the Trails Forever event organized by the Parks Conservancy for the past 5 years (which has raised millions of dollars for the Parks), and this year I am working with the William Kent Society on another large fundraiser for the Parks. I can assure you that any restrictions on the current leash laws will have a **HUGE** negative impact on the financial support so generously provided by dog owners like myself.

I would be happy to discuss this further if you would like. Karen Block

Re: Dog Management Plan Dear Mr. Dean:

Below are my comments regarding the "Dog Management Plan" that is currently available for public comment. I am not a dog owner. I am a resident of the Presidio of San Francisco, and regularly use GGNRA lands for hiking, biking, and bird watching.

In general, I agree with the preferred alternatives shown as shaded in Table ES-1 of the Executive summary. I feel these alternatives, if enforced, will prevent dog disturbance to wildlife in the most sensitive areas without

excluding dogs entirely from most areas.

At Crissy Field, I prefer Alternative B for the East and Central beaches because those beaches are currently receiving tremendous off-leash dog pressure, and because on-leash restrictions are more consistent with the preferred alternative along the promenade there. The decision to make the Crissy Field Wildlife Protection Area off limits to dogs is correct, and will be easier to enforce if dog use adjacent to this area is on-leash only.

For the Ocean Beach Snowy Plover Protection Area, an adjacent trail along the Great Highway is probably fine for dogs on-leash, but we must insure that this does not lead into off-leash dog use of the adjacent beach where the Plovers occur.

In general, enforcement is going to be challenging yet important. Off-leash is stated to mean under voice and sight control, but this is often not the case. Voice control is often lacking with many dog owners, and few dog owners act to prevent their dogs from chasing shorebirds, for example. For areas designated as regulated off-leash areas (ROLA), how do we define or maintain a "regulated" state if a dog does not respond to its owner?

One suggestion I have is to establish "dog-resistant" edges where a ROLA meets a more regulated site. Establishment of dense native coastal scrub and/or fencing can keep off-leash dogs within the desired area without much effort from the owner. This will prevent conflicts because dogs will be unable to easily stray into areas that are off limits.

Sincerely,

Ivan Samuels

Frank Dean, General Superintendent Golden Gate National Recreation Area
Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Superintendent Dean,

I am writing regarding the proposed resolution to ban all off-leash dog recreation at Crissy Field, Baker Beach, Ocean Beach and Fort Funston. I am thoroughly opposed to the proposed revisions to almost eliminate off-

leash dog use.

This land was turned over to the GGNRA from the City of San Francisco with the intent that the recreational use would continue as it did under the management of the City of San Francisco. This included off-leash dog use.

These areas are located in the middle of a big city. It is unreasonable to apply rules created for areas such as Yosemite and the Grand Canyon to a "national park" in a densely populated city. Bay Area residents have been coming to these areas with their dogs for as long as people have been using them.

There have been no significant problems associated with off-leash dogs. I've been going to these areas for the last 18 years with my dogs and my son from the time he was an infant. Why should this change?

Sincerely,

Anne Zelinsky

Correspondence: Banning dogs from national parks and trails is wrong. I understand having leash requirements in certain parks is necessary to maintain a sensitive eco system but to have a blanket rule of NO DOGS ALLOWED is discriminant towards each and every dog owner.

Pets are not only a responsibility they also become members of the family. And like any responsible parent it is imperative to provide a healthy rearing environment to ensure a happy and healthy existence. Part of the responsibility of having a dog as a pet is making sure your dog has regular, if not daily, exercise and most often that requires parental supervision. It is because of this relationship dynamic between a dog and their owner that discriminating against dogs implies discrimination against the owner.

The arguments proposed by proponents of NO DOGS ALLOWED are completely subjective and without factual content. We cannot continue to mandate laws based around individuals fears and personal bias' and to do so

is not only morally wrong but unconstitutional in its application.

I realize this comment is not complete in divulging all of the arguments that have been proposed thus far. However, I am happy to submit this comment as an opponent to NO DOGS ALLOWED in NPS and hope this only furthers the discussion and eventually leads to an amicable and pet-friendly resolution for both dogs and their owners.

Correspondence: Superintendent Dean,

I think dogs should be on leash at all times. They should not be allowed to destroy habitat or frighten people who are hiking.

I was knocked over by a large off-leash dog, one in a group of three, in Sorich Ranch Park. The owners did not offer to help me up out of the ditch, but just walked on.

Having a dog is a choice. Having it under control and on leash should not be a choice.

Protect wildlife, habitat, and hikers.

Thank you,

Correspondence: Frank Dean, General Superintendent Golden Gate National Recreation Area Bldg. 201 Fort Mason, San Francisco, 94123-0022

Dear Superintendent Dean,

I am writing regarding the recently proposed Dog Management Plan. My comments are based upon my experience in San Francisco (1948-52) and Marin County (1954-the present). I am a walker -- I walk all of the areas still.

I have experienced the increased numbers of people and dogs as I walk, as I sit, as I enjoy the area, sun myself, read a book, eat lunch...I have seen signs change regarding people and dog use in the various sites: signs protecting wildlife, signs warning of danger, signs directing the extent of dog use. I have seen many, often most, people oblivious to these signs -- dogs off leash in leash areas -- beach and trail. Dogs romping, digging, spraying, defecating; chasing birds, objects, children -- foraging from picknickers.

I wonder if people are deliberately defying restrictions or didn't observe their posting. When I have pointed out the restrictions I am often ignored.

My main position is: 1) beaches and land are primarily for wildlife 2) they are for human beings sensitive to wildlife 3) they are for humans and dogs who obey the rules.

Recently, in an area marked 'No Dogs on Beach' there were no dogs in the picnic area and 50+/- dogs and owners on the beach. There was not a Park official in sight.

Could an auxiliary (volunteer "rangers") be trained for this task?

Sincerely,

Dorothy E. Gibson

Correspondence: Frank Dean General Superintendent Golden Gate National Recreation Area Building 201, Fort Mason San Francisco, CA 94123-022

Dear Superintendent Dean:

As you debate the issue of dogs in environmentally sensitive parklands, please consider the issue of service animals. Over the last few months I have had several encounters with able-bodied hikers on the main Tennessee Valley trail that claimed that their pets were "service animals" or therapy dogs and therefore, permitted on the trail. I am aware that service animals exist for disabilities other than visual or hearing impairment. However, there seems to be no system to prevent persons from abusing the privilege and claiming that any old mutt is a "service animal."

Disabled persons requesting special parking accommodations are required to register with the DMV after obtaining written verification of need from their

physician. They must then display the special blue hangtag to utilize the special parking areas. It seems that a similar system of registration with physician verified need could be adapted for service animals. Once registered, the animal could wear a special jacket or leash that clearly identifies the animal as a service animal. Such identification of these animals would relieve the disabled person from the burden of having to justify the presence of their dog in a restricted area. It would also prevent non-disabled dog owners from thinking that it really is ok to have their pet there despite what the signs say.

Please consider implementation of a program to register and identify service animals in the GGNRA. If that is not possible, then consider posting signage defining acceptable service animals (ADA definition) and that it is illegal to misrepresent an animal as a service animal.

Sincerely,

Elizabeth Schriock Mill Valley

The DEIS Draft Proposal Fails to Document How The Costs for Each Alternative Were Calculated

Dear Mr. Dean,

I am late coming into this public debate about the draft DEIS Proposal and have not yet completed my reading of all 2400 (!) pages. However, I want to provide an immediate response to one obvious lack within in and to alert you to my intention to file letters that address with particularlity each failiure to provided substantial documentation on every point raised within its pages.

The immediate point on which I found no documentation or detail was on how the GGNRA arrived at the four different cost projections related to Alternatives A to E. The figures given were so specific this reader wonders where are the accounting breakdowns that would allow the public to

compare the fiscal impact on the GGNRA (tax dollars at work again) of each Alternative. And I at least was appalled to note that the difference between what is currently spent by the GGNRA under the current plan is less than any of the other Alternatives by between \$1,308,659 and \$881,748! Perhaps if budget for the current alternative GGNRA was increased, it would allow GGNRA to resolve some of the existing problems which exacerbate the singular issue on which the draft focuses. To name three that are obvious: failiure to maintain signs, post easy to read maps or maintain the protected areas with fencing that is cleared as needed of the sand that drifts constantly - courtesy of Mother Nature, not on or off leash dogs!

At a time when fiscal reassessments and budgetary limits are being forced on us right, left, and center, I seriously question the rationality or timeliness of your decision to overhaul the entire Recreational Area (note, not Wilderness National Park land) at this time.

Sincerely yours,

Judith Hedgpeth

Correspondence: Hello All-

This is the first time I have been so prompted to write members of government to be heard about the draft that has been created to prevent dogs from going on (leashed and/or unleashed) certain National Park Land. I have read the executive summary and really understand the conflicts that can arise from dog lovers, other civilians, children, older members of society, and the desire to keep wildlife available and cared for by the Parks and Recreation.

The issues I have seen are irresponsible dog owners who let their rambunctious barky dog run and jump on people and put their dogs in bad situations if the dog is in any way aggressive, or running into wetlands that need protection. We all want safety and all want everyone to work well with one another, right? It seems the logical solution no matter what: if a dog misbehaves then they will be sued by the victim and/or fined seriously by

the Parks and Recreation. If they don't get fined, they should. Serious repercussions should occur or someone won't learn the lesson. A formal complaint can be filed and dealt with. People are very good at handling their own squabbles in San Francisco and if it gets bad enough, the dog will be taken away from the owner or put down (god forbid). 99% of bad dog behavior is bad dog training. There are a lot of people who don't know anything about dogs, but love having them. It's their job to take care of their dogs properly, just like their children. I will admit that my dog started having aggressive behavior and I immediately nipped that in the bud with more formal training and actually working on getting my dog training certificate from ABC. Not all will ever go to those lengths, but dog owners have to be responsible or should not play the game.

So, here's the question: how can the responsible owners still get the use of these parks with their dogs and enjoy the day? In San Francisco there are few places where dogs can run, be free and play with their dog friends. They can't always keep their dog at home, cooped up, and owners don't always want to be strict and serious with the leash all the time, either. That isn't the point of having a dog. It's their companion and their buddy and they want to share in the experiences of the outdoors. Dogs need to run and be free and be properly trained for voice recall and non aggressive. If they can't do that: fine them seriously on a case by case basis. But please don't blanket limit the already limited places dogs and their owners can go. It's hard enough!

I have already found it quite limiting in Marin County, because of the many trails that don't allow dogs period, not even on leash. My dog is well mannered and if there is someone who comes by on a trail, I take hold of his collar and have them walk by. Not all people are dog lovers and one never always knows what any interaction will be between 2 beings. If something comes up, I take care of it with respect for others, grab his collar, let the people go by, and then when the coast is clear, let him run about, as he is supposed to do.

Suggestions:

On narrower trails to prevent dogs from causing erosion and nature disturbance, I understand to have a leash law. I would even ask to have all trails open to dogs with leash law. Tam valley is practically all off limits for me and Tucker on the trails.

On wider trails: fire roads, no leash but voice command required. If someone complains or is caught with a misbehaved dog: fine them!

On Crissy Field/beach areas: have an area for dogs, and maybe dogs only with adults. It is already hard enough to get to a place for them to roam without restrictions. All beaches should have an off leash law, in certain

areas. If a dog misbehaves: fine them!

As it has been already hard to enforce the already existing laws, it seems that more signs and more rules are expensive and are not working. So, if dog owners need to have a special dog ownership card and have them pay more for being in the parks, I am completely ok and happy to do it. \$200 a year or so is a small price to pay to keep things open and have fun with my dogs, and meet other dog people and be social. It is a lot of fun, and I have not found many instances where people have not been able to handle their differences directly. And if an area needs to be protected for hatching birds and the like: fence it off or have a sign and a big fine notice.

Money always talks and if people really want the privilege then why not have them pay for the costs associated with it?

I certainly will.

Thank you for reading!

Best,

Meredith

Ref: Dog Management Plan and Draft EIS.

Dear Mr. Dean:

For minimum public safety any dog in the National Park should be on a leash.

There should be no off leash areas for two reasons: first, as you know, many dog owners will abuse that privilege by allowing their dogs unleashed into leash areas.

Second, dogs are animals and therefore totally unpredictable, as anyone who has been around them and whether bitten or not, can attest. Even when on

leash they injure people, particularly large size dogs that owners cannot control. For that reason I believe the study is remiss in not addressing the hazard of large size dogs in the park.

Sincerely;

Charles P. Burns

Correspondence: Subject: Dog management plan/ draft environment impact statement

Thank you for sending me your report for me to review before presenting to the public for further comment. I have made a great effort to comprehend the large volume of text, plans, alternate plans and maps. I look forward to the public forum that will be held at different locations and plan to attend them and to comment on this report. Without wasting a great deal of time I must state that I find this report to be purposely written to confuse the general public and to present a predetermined plan prior to its release. I say this because I find several elements to be unfounded and actually inaccurate historically and scientifically. While I do not hold a degree from a University I have spent my life observing and exploring my environment and as a lifetime native of the Bay Area I feel I possess an actual knowledge of equal or superior ability from hands on experience.

While the bulk of the report deals with the conflict the park service has had with the difference of a newly formed recreation area and a national park it is apparent the park service has not recognized there is a significant difference. The GGNRA is in fact a park of the People and was formed to serve all of the people, dog owners, non owners, and general dog haters. Thus the issue came to a head in 1979 and as ordered by a Superior Judge a new dog management plan was adopted. Setting forth the recognition of the basic difference of the recreation area and the national parks. The basic problem became evident when the Judge observed the loss of liberty of some and the favorable treatment of others. It would now appear that while we have been living with each other we are now returning to basic point of who actually owns the GGNRA, the people or the park service.

The Judge made his decision on the basic language of the formation of the GGNRA by Rep. Burton and signed by President Carter that the encompassing area be left as is for perpetuity. And thus we have what is commonly known as the Grandfather Clause, and specifically interpreted that dog walkers would enjoy the privileges they historically had. It would

logically follow that any and all further acquisitions to be included in the GGNRA would also meet that mandate. This is addressed in this report that any new areas would fall under the national park service 36 code. This certainly violates the basic language and more specifically the spirit and intent of the law that formed the GGNRA. It is also not as encompassing a report of the areas in Pacifica because of the callus view of park rules and how the new addition of areas would be regulated. Thus eliminating the peoples right to use the Grandfather clause when they have historically enjoyed these lands. It further states that the area to be included have been under restrictive dog policies as to leach rules or off leach rules. This is absolutely inaccurate and a fallacy as I have hiked these hills and the San Pedro point for over 34 years. I and several generations of dogs have enjoyed off leach walking and would like to continue this privilege if these areas are included in the GGNRA. Thus I must demand that the Grandfather Clause be recognized in these additions as it has been since the formation of the GGNRA. I also must submit that the only viable alternative in the offering in the report be the alternative A or the basic 1979 park management plan as the best and least intrusive plan for the people and the environment. I also find it hard to comprehend that this abbreviated section for Pacifica has no other, alternative plans and refuses to consider our off leach rights we have enjoyed, again violating the intent and spirit of the formation of the GGNRA.

Thank you for allowing me the opportunity to help you with forming and managing our recreation area.

Dan Wells,

Dear Kind Folks at GGNRA,

First, I want to commend you on your good faith efforts to remain even handed and open minded regarding the allowance of dogs on GGNRA lands.

Second, I want to remain anonymous out of fear of some sort of backlash from those who are so determined to have dogs remain on these lands as at the present time.

I have lived in Marin County since 1992 and in San Francisco before that

since 1980. I can count on one hand the number of times I have frequented the beaches out of a fear of dogs either jumping on me or stepping in their poop. I don't doubt the sincerity their owners but voice command has not proven to be effective in my experience. Nor do I see owners offering to pay the cleaning bill for my clothes when soiled by their dogs as their owners cheerfully say, "Oh, he won't hurt you. He's friendly." That is immaterial to my experience as they jump on me.

More to the point, GGNRA does not belong to the Bay Area residents alone. We are hosts to the world and guardians of a very special place with unique flora, fauna and wildlife. As residents of our individual communities, it is our responsibility to attend to our unique needs as a community. We have no business encumbering the federal government with our personal desires.

Please file this letter in the pile in support of the fair-minded efforts of GGNR A regarding this matter. Hopefully the dog owners will not be successful in swaying you to reconsider all that you have done to come to the fair decision you have made on our(the public at large) behalf. Sincerely,

Anonymous Marin resident

Correspondence: March 5, 2011

Dear Mr. Dean, General Superintendent, GGNRA

This letter is in response to the proposals put forth by the GGNRA and NPS in the Draft Environment Impact Statement for the Dog Management Plan at 21 San Francisco Bay Area sites.

I thank you for taking such a long hard look at the issue of dog walking, on and off leash, at these sites. It is understood that the NPS does not generally allow dogs in its publically owned national park system. The GGNRA has been most generous to allow certain areas to be used by dog walkers for many years. I hope this proposal and attention you are giving the issue at present will be able to come up with a wonderful solution that makes the most people/dogs happy and will be both sustainable and practicle.

In that I am a tax payer, and a dog lover/owner, and that I have also been a member of the Audubon Society and Sierra Club, and in that I have observed both nature and the effects of humans on nature, I have to ask you to look closer at the conclusions you have made in your EIS. Many of your

assumptions are incorrect and many have been contradicted even within the statement itself.

I can fully understand the need to regulate and restrict off leash dog activity at such sites as Ocean Beach or Crissy field, where there are a great number of non-dog walking visitors who like to come to the site with a beach blanket, good book, picnic, small children and spend hours relaxing in peace. My focus is on the unique nature of a much more disagreeable terrain, Fort Funston.

Fort Funston is right now being used for exactly what it should be used for, a "Dog's Disneyland", a place for responsible guardians to take their dogs and let them run free for an hour or so, several times a week, and let them socialize with other dogs, to smell and romp and play and fetch and get exhausted! A tired dog is a good dog, a dog that is socialized around other dogs and people will be better behaved, this is logical, I do not need to have a doctor's study to tell me so. I have had children, and it is just the same with them, let them run outside, play in the sun, or fog or wind, and they will be better behaved and sleep better, grow stronger (even do better in school? Puppy classes?). And the beneficial effects are not limited only to the dogs, the owners, many of them seniors, also feel better for getting out there and walking and socializing with other dog owners, many of them becoming friends and being better people for the experience. Fort Funston is the one spot where this can happen without really any harm to any other entity.

We need to be realistic. I have actually read your entire 2400+ page DEIS. Within the redundancy and mistaken conclusions are some important facts regarding Fort Funston especially. Your preferred alternative will require an enormous layout of money and manpower to make it sustainable. Even then there is no proof and no logic in the assumption that the area will be able to sustain "restoration" attempts because the earth has already been so drained from the military base and from the climate out there naturally. Large fences will be needed to keep dogs in what you have designated a ROLA, then how do you envision numbers of dogs, on leash, marching down to the beach ROLA and back again, all using the small paved pathway, or are you intending to use more money and man power to enlarge that walkway? Then you will need a large amount of rangers stationed there to give out tickets to the people who will not comply, or is this how you intend to generate revenue?

Another contradiction can be found on page 1263, in the special-status species section. The only species you seem to think there is a problem with at Fort Funston is the bank swallow during nesting season. Yet, on that page your conclusions are contrary to your words. Note, " Closing the area through fencing and sign installation has been unsuccessful in preventing

recreational disturbance to the bank swallow colony, although the colony has persisted despite increased human/dog use in the area." We cannot and should not seek to create a "look-at nature" but don't touch quality to our national parks!

I also read the survey done in 2001-02, by the Northern Arizona University, in which they asked about visitation to all these cites here in the bay area. More than 56% of the respondents had either never been to Fort Funston or were not sure if they had ever been there. Not many people actually go out there, it is off the beaten path, it is usually in fog or bad weather, and other than hang-gliders, the only people to consistently go there ARE dog walkers. Why can't it remain that way? We have many, many acres of beautiful forest lands in this are that are already dog free, people use those areas now. There is no place like Fort Funston for dog lovers. Please keep it this way!

I could go on with many more issues, but I want to make this as succinct as possible. I would like to ask the Park Service to really do something great here, while you have the moment. Please have the creativity to think outside the box when it comes to Fort Funston. It is the perfect place to create an Official NPS sanctioned Designated Regulated Of Leash Area, with special provisions and signage that lets visitor know what they can expect in that area. It is not and NEVER will be an area for picnickers or leisure beach goers or children to build sand castles. The terrain is too rough and inhospitable for lovely meadow flowers, and the climate too disagreeable for long strolls at sunset. It is perfect for the rough and ready, hearty dogs and their guardians who wear layers of clothing against the fog or wind or blowing sand or hot sun or mist. They are out there all the time, everyday of the year, in all types of weather, enjoying the area for what it is, not what it was, or what we might think it should be! Please live up to your Mission Statement and provide the Adaptability and Flexibility by showing creativity in designating Fort Funston an Official Designated Of Leash Area, the first in the nation on our publically owned National Parks.

Please do the right thing. Thank you kindly,

Kathleen Klestoff, resident of San Francisco for 30 years, Fort Funston visitor only 4years with our beautiful Border Collie mix Zelda. She thanks you for your efforts and hopes you will do the right thing!

Correspondence: As a multi-year resident of the great highway (I live in between Judah and

Sloat), I can personally say that I witness dog owners walking their dogs off leash all the time during the snowy plover protection period. There is AMPLE education about this - signs posted everywhere - and yet dog owners continue to break the law.

Just this morning I witnessed two boxers off leash in front of moraga street, running up and down the beach chasing about 100 snowy plovers across the intertidal zone. The birds would land again, and the dogs would continue to chase.

A couple of weeks ago, I watched a lady's off leash dog chase a group of plovers into the sea; and a red-tailed hawk swooped down out of nowhere and attacked a plover, breaking its neck.

I hope that existing leash laws are more strongly enforced, that education around these leash laws is stronger, and that the ENTIRE OCEAN BEACH AREA from the cliff house to fort funston be made a leashed area.

Correspondence: My name is Mark Trautwein. For 16 years, I was responsible for all national parks legislation and policy as lead staffer on the US House of Representatives Interior/Natural resources Committee. In my tenure, we doubled the size of the parks system and tripled the wilderness system. The last legislation I managed established the Presidio Trust and completed the transfer of the Presidio to GGNRA, I say this to emphasize that I deeply respect the making of public policy and the difficult job of the NPS in refereeing fights between competing users of park lands. I devoted most of my professional life to the protection of park resources, and I'm very proud that I did. I represent no organization or interest.

Having said that, I also believe that the draft plan addressing dog management for the GGNRA is an abject failure. It makes the problem worse, not better. It resolves nothing. It is bad science and bad public policy. It is a betrayal of the best traditions of the Parks Service. This ponderous monster is built on a fundamentally false premise and represents a total failure of imagination.

That false premise is that in a place like GGNRA you can resolve differences between competing users by drawing lines on maps and imposing rules on those maps that say you can do this here but not there, you can do the other thing there but not here, except in the following cases, and you can't do any of it in this place and all of it in that place. It won't

work. It is horrifically complicated, too hard for the average park user to understand. It will encourage them to violate the rules when no one is looking and you can't possibly police this yourselves. The aggrieved parties at this site or the other will continue fighting to amend the rules and the lines -- forever -- so its a prescription for unending resentment and conflict. It is an attempt to solve by map-driven fiat what can only be solved by better behavior.

Most fundamentally, however, it violates the first principle of ecology: that everything is connected to everything else, that we must manage everything on our landscape for the system that it is. This landscape and everything on it includes people and their dogs. To chop and dice these lands into tiny bits and pieces is a 19th century management philosophy imposed on a 21st century landscape. It won't work because, by design, it can't.

Finally, the proposed program is a betrayal of the traditions of the Parks Service. It is written by a cop. The Parks Service is a lousy cop. At its best, it is a teacher, and a terrific one. Cops can't solve this problem. Only teachers can solve it. It saddens me, really, to see what's become of one of the truly unique and special institutions ever devised.

I would respectfully suggest that you rethink your entire approach here. Your problem is people. It is not dogs and it cannot be solved by your maps. Everyone must understand that we all need to respect each other for the different reasons we use these lands and behave accordingly. A truly ecologic approach would start with a premise that says people and their dogs are allowed everywhere, except places of truly critical environmental concern where neither people nor dogs are permitted. All dog owners are responsible for the behavior of their animals. That means that they are under control at all times and people are respectful of other park users and are partners in protecting park resources. The means of control are up to each owner and specific to each dog. To demonstrate that you, as a dog owner, meet these requirements every dog owner using the park is required to have a permit issued by the NPS, issued after successful completion of a program designed, constructed and operated by NPS in conjunction with relevant and responsible local organizations. That program will teach dog management and control, as well as knowledge and respect of park resources and the others who use and enjoy them.

In the end the only lasting solution to this problem in a crowded urban park is better human behavior -- more educated about people, about dogs and about the environment. Why not design a regime that addresses your real problem, human behavior, that is simple to understand and will succeed, instead of one with a proven track record of failure?

What you are doing won't make life better for people or dogs, won't make

life better for all the other users of the park, won't make life better for the ecology of that park that we all cherish and have such a profound responsibility to respect, and, frankly, won't make life better for you as park managers, either. There is a better way, rooted in the traditions of the Parks Service and the truth of what ecology means in an urban setting.

I beg you to have the courage to choose it.

Mark

Correspondence Type: Letter
Correspondence: March 4, 2011 To GGNRA Re: Comment on DEIS The assumption that shorebirds are disturbed by dogs is treated as fact in the DEIS. (DEIS p. 252) Yet, there is no evidence in the document to show that Ocean Beach and Fort Funston are critical habitat areas for the Western Snowy Plover. The DEIS should first prove the area in question is critical to the survival and breeding of the plover, then supply scientific evidence that there is a correlation between off-leash dogs and varying plover populations. The document should reconcile comments made by the Dept of US Fish and Wildlife (ie; "Western Snowy Plover will never nest and /or breed on Ocean Beach because there is not ample, suitable habitat.") and by the 1996 Hatch Report ("Factors other than the number of people or dogs, possible beach slope and width, appear to exert greater influence over Snowy Plover numbers on Ocean Beach.") to GGNRA's new stance that off leash dogs pose a threat to endangered species.

The DEIS fails to document the lack of restrictions on people in the Snowy Plover habitat by GGNRA. The report fails to describe the impact of sporting events on Ocean Beach and Crissy Field, like the 2006 Turkey Trot (1,500 people ran/walked on Ocean Beach through Snowy Plover protected areas with no restrictions in place), and like Fleet Week where on Crissy field hundreds of people gather to watch the show with no protection in place for the plover's protected area. The document fails to describe the extent of the impact of GGNRA's own insensitivity to the Western Snowy Plover protected areas. GGNRA routinely drives vehicles up and down Ocean Beach. What guidelines exist that provide protection from these vehicles, including the noise they create? Lastly, the DEIS should explain the rationale behind the 2007 plowing of the Western Snowy Plover habitat at Ocean Beach by GGNRA. Photos 1-4 (attached) record this destruction in film. The DEIS should quantify the impact of all these behaviors in comparison to the impact of off- leash dogs. This comparison should be

supported by facts, not anecdotes.

To single out off-leash recreation with the severe restrictions of the Preferred Alternative for Fort Funston is blatantly unfair. The current off leash policy should remain in place.

Correspondence Type: Letter
Correspondence: March 4, 2011 To the GGNRA: Re: Comment on DEIS I am a 64 year old retired high school English teacher, a resident and native of San Francisco. I strongly oppose the restrictions on off-leash dog walking recommended in the Preferred Alternative for Fort Funston.

The DEIS report fails to provide any hard data that dogs "degrade" the land. (DEIS, p. xii, p.225) The document fails to consider the extent of human recreational influences on the soil, and to what degree human non-dog activities and occurrences of nature "degrade" the soil. On any day a visitor to Fort Funston would see hikers, bikers, skaters, joggers, Families frolicking on the dunes, horse-back riders, surfers, and hang gliders. The document does not, and it should, quantify dog-users vs. other humans' activities' contribution to impact on the soil. Nor does it quantify the extent wind, rain, ravens, raccoons, seismic activity, and burrowing animals play upon the "degradation" of soil.

The document fails to provide any evidence the impact of off-leash dogs is any greater than any other probable source named above. The restriction of off leash recreation to approximately 3 acres is disproportionately severe, considering the lack of evidence and that other stewardship measures could be taken to preserve the land.

One such measure could be to improve the fencing around sensitive areas. Photos 1 - 2 attached show a cord strung between two posts acting as a boundary to fragile dunes and the Western Snowy Plover foraging area at Fort Funston, Anybody could step over this cord. Photos 3 - 4 show the long stretch of inadequate fencing , people climbing on the dunes, and a sign that says nothing. Photos 7 - 9 show contrasting stewardship practices at Pt. Isabel Dog Park in the East Bay Regional Park District. Fences are high and sturdy; signs are clear, frequent, and educational.

I recommend the current off leash dog walking policy remain in place. In

addition, the GGNRA should turn its energy to improved stewardship of this recreational area, not to turn it into a wilderness, but to provide guidance to citizens, clearly and often, how to enjoy the park to the benefit of all

Frank Dean, General Superintendent, Golden Gate National Recreation Area. Building 201. Fort Mason. San Francisco, CA 94123-0022

Dear Superintendent Dean:

I am writing in support of the GGNRA Dog Management Plan - Preferred Alternative.

I have lived near the Presido for over 35 years and frequently walk there for exercise, bird watching and enjoyment.

It is essential that a clear policy be implemented for dog management, Although I am a life- long dog lover, I have observed many abuses in the Park:

Observations ? Many professional dog walkers with 8 -12 dogs running around off leash. ? Dog feces on and beside the trails and in areas recently planted with native plants. ? Blue plastic bags filled with feces left on trails and signposts ? Off leash dogs that have pounced on me with muddy paws while their walkers proclaim "oh, don't worry, they are friendly" ? Friends who have been bitten by off leash dogs in the Presidio. ? Dogs running and damaging areas newly planted with native plants.

It is essential to establish and enforce a clear policy to protect native habitat and the enjoyment of all who frequent the Park,

Suggestions 1) Professional dog walkers should be licensed and pay a use fee as other vendors do 2) There should be a limit on the number of such licenses based on the "carrying capacity" 3) Professional dog walkers should be limited to a maximum of 4 dogs and all on leash. One person cannot manage properly more than 4 dogs at a time.. 4) Professional dog walkers who do not respect the policy should not be allowed to use the parks. 5) Post signs so that users cannot claim they do not know the regulations. 6)

Authorize and encourage all staff to enforce the policy 7) Consider authorizing park volunteers from existing programs to help in policy enforcement. 8) Consider establishing a fenced "dog run area" where dogs could run free. (perhaps also a use schedule for professional dog walkers). 9) Promote better understanding of the need for a Dog Management Plan and the restoration activities through signs and fliers distributed in the park and nearby neighborhoods.

Hopefully, implementation of a clear policy will eliminate the many abuses that have occurred and make the park pleasant and safe for all users as well as for the native habitat.

Sincerely, Jean G. Colvin SF 94115

Correspondence: I am for Alternative A, to keep the off leash laws as is, as per the Draft Dog Management Plan / Environmental Impact Statement. We created these animals who do so many things for our benefit: helping the disabled, protecting our houses and property, bomb and drug detection, finding missing persons and catastrophe victims, hunting, tracking criminals and other police work, entertainment. Above all is the love and companionship the 'family dog' provides to every family member. Medical studies repeatedly show having a dog eases the stresses and anxieties of modern day life. We take our dog out as often as we can, but we both work full time and we are concerned that our golden retrieve get dilay exercise to stay healthy and happy. So we use a dog walker twice a week who takes our golden retriever to Fort Funston and various other GGNRAs for off leash exercise. Currently, off leash areas for dogs are severely limited. I am against making leash laws more restrictive in any way. Don't our dogs deserve places to run free and get exercise to stay healthy? Don't we owe this to these breeds we created? Finally, I no longer use "dog parks". They are too small, often too crowded and do not provide necessary, varied stimuli for my dog.

Thank you.

RE: Proposed "Off-Leash" Ban - GGNRA

Dear Superintendent Dean:

First. I OPPOSE the proposed further restrictions on dog use of the GGNRA. Indeed, in my opinion, MORE area(s) should be set aside FOR dog use, NOT fewer!

Second. To the extent my brilliant "thinking"/"logic" might be considered.

A. How about JUST enforcing existing laws?

1. Yes, I suspect that, over the years, dogs have been a problem for people, the habitat and wildlife in GGNRA and that there have been (to quote the Independent Journal) "aggressive dogs attacking people and smaller animals scaring children and trampling on sensitive wildlife habitat"

2. However, I am certain that all of the dog problems have involved acts which are a-l-r-e-a-d-y illegal.

For example, I am certain that there are laws/rules against littering, destroying government property, etc.

3 I urge you to consider the fact that all that is actually necessary with respect to the alleged problems with dogs off-leash (or on-leash) is more enforcement of existing laws/regulations, not the implementation of new laws/regulations.

Yes, the new laws would be easier to enforce! For example, all a ranger would have to do to enforce an "on-leash" law, is arrest/cite little old men/ladies who let their dogs out to pee. That's a much easier task than actually responding to, seeking out and citing/arresting a dog destroying property or a dog that is truly out of control.

Indeed, I, personally, perhaps "over a beer or two," would love to prove the following proposition. That is almost certainly, the first person cited/arrested for violating the plan's new "on-leash"/"off-leash" law will be some 75 year old ex-nun with a 25 lb Tibetan terrier. The first person cited/arrested for violating the plan's new "on-leash"/"off-leash" law will not be some derelict with an out of control pit-bull. We both know this will be true because: (a) it will be too dangerous for a Ranger to confront the derelict with an out of control pit-bull; and (b) the derelict has rights (as a disabled person) the ex-nun doesn't have (and, moreover, will have, probably, got the pit-bull certified as a "therapy-dog"). Curiously (and I cannot resist saying so), I suspect that, people (defecating on trails,

assaulting each other, stealing from each other, littering, cutting switch backs, cutting down fire-wood, leaving kids diapers all over, scaring birds, surprising deer, whatever, etc.) have been a much greater problem in GGNRA. Indeed, my dog is, I guarantee, better behaved than 90% of the human visitors to the GGNRA!!!! Perhaps, the solution is further banning people, not dogs?

B. Beware of being manipulated/driven by "today's squeaky wheel."

1. No offense intended, again, but this whole drill appears (from the newspaper accounts) to be a response to complaints about dogs. This approach to GGNRA rule making suggests that you can be easily manipulated by those who have the most time or money to bitch and complain. Such a reactive (versus pro-active) approach is not the same as insuring public use of National Parks.

That is, I suspect for a lot of the dog owning public, the proposed rules appear to, merely, be a response to today's squeaky wheels." [See "C," below, for a better pro-active approach.]

2. It also appears that rather than recognize that there are also a number of "members of the public" who have dogs, and who like to walk with their dogs (off-leash) and attempt to accommodate everyone, you are going to (as they say) "throw out the bath with the bath water."

That is, the whole GGNRA now appears to be for the sole benefit of those who don't own dogs (and who bitch the most). [See "C," below for a better approach to this problem.]

The proposed plan would be much more "rational" (versus "reactive") IF additional "open space" (at a greater, perhaps, distance away from tour bus, and family, weekender areas) was opened up to dogs under control (see, for example BCDC open space "dogs under voice control" rules), or actually reserved for off-leash dog use. [See "C," below.]

C. WHY NOT, in fact, actually, ACCOMADATE everyone? THAT IS, dog owners are part of the "public" too!!!

1. A model accommodation for the dog owning public is Point Isabel in Richmond, California (East Bay Regional Park District). Pt. Isabel is an example of the use of some Bay Area "sacred shoreline" just for dogs (off-leash, mostly). To the extent you have not visited Pt. Isabel. I invite you to do so.

2. Why doesn't the current GGNRA "dog use" Plan" include some area(s) like Pt. Isabel? East Bay Regional Park folk probably have to deal with lots

fewer "off-leash" dog complaints at the other parks BECAUSE of the existence of Pt. Isabel. And, "the public," there has, even, organized a care-taking crew (FIDO) and there is even a coffee stand.

3. Really, you all could appear to be so brilliant and so "pro-active," (versus "re-active") with some "dogs only" areas in the plan.

Very truly yours,

David W. Walters

March 3, 2011

To whom it may concern,

I am a (soon-to-be senior) resident of Sausalito, Ca who goes to Rodeo Beach with my two dogs at least once a week during the winter and more often during the non-rainy season. I thoroughly enjoy time spent with my dogs at Rodeo Beach and, please note: I always clean up after my dogs, and have them under voice command at all times.

Please do not change the current policy at Rodeo Beach or in other areas governed by the GGNRA, for that matter. There has to be more space available for off-leash recreation, not less, given the huge demand for it in the Bay Area.

I believe that there is no factual basis for the argument that birds and other wild animals need to be protected from off-leash dogs. There seems to be no scientific consensus that severe restrictions on off-leash dogs are needed to protect natural resources and wildlife. Some of the most compelling research in the last few years has been by researchers such as Forrest and Cassidy St. Clair (2006) and Warren (2007) who admit that they expected to find that off-leash dogs had a major impact on the diversity, abundance, and feeding behaviors of birds and small mammals. However, when they did the actual research, they found no such impact.

It is my understanding that severe restrictions are not needed to protect other park visitors from dogs. Problems with dogs represent a tiny fraction of the

total incidents and citations issued by the GGNRA over the past decade. Of those incidents and citations issued to people with dogs, the majority were leash law violations, or being in a closed area, and did not reflect any safety issues between dogs and other park visitors. Target enforcement on the small number of people whose dogs misbehave, not on excluding the entire class of people with dogs from most of the GGNRA. Jean Donaldson, nationally recognized expert on dog behavior testified before the SF Animal Control and Welfare Commission on 2/8/07: "Self-selection operates strongly, i.e., people who take the time to get into their car or walk to a designated off-leash area to exercise their dogs tend not to be the type who are derelict in other areas of dog guardianship, such as training, socialization, or appropriate containment."

The Preferred Alternative severely restricts recreational access for people with dogs, a fundamental violation of the reason the GGNRA was created. In the legislation that created it, the reason for the creation of the GGNRA (NOT a national park!!) is listed as "the maintenance of needed recreational open space." Off-leash dog walking is among the recreational activities listed as

traditionally occurring in the land was to become the GGNRA.

In addition, the Preferred Alternative discourages cooperation between different park users and will increase conflict between park users, as more and more people are crammed into smaller and smaller spaces. Park user groups can work together to resolve problems when they come up.

Please note that a new plan needs to be developed that will be more balanced, supportive of recreation, and reflects San Francisco Bay Area's values of co-existence, shared use, collaboration, and education to solve problems.

Thank you for your attention.

To Whom It May Concern:

I am a dog owner and a San Francisco resident. For many years I have enjoyed taking my dog to Fort Funston where my dog could enjoy running free retrieving pine cones and getting the exercise she needs. My dog is well trained and completely compliant with voice commands. Because I am a responsible citizen, I always clean up after my dog whether on or off leash. In all the years that I have taken my dog to Fort Funston, I have not witnessed a single instance of a dog biting anyone. I have seen dogs playing and nipping at each other, but never have I seen a dog break another dog's skin or fight viciously. It is my observation that dogs off leash are less aggressive than dogs on leash. It may be related to their natural territorial instinct. As we walk along the trails at Fort Funston, I toss a pine cone and my dog runs and retrieves it and brings it back for another toss. I can't tell you how wonderful the ride home is with my dog panting loudly after getting her proper exercise.

For these reasons and many more, I would like to comment on the proposed

"Preferred Alternative" and ask you to reconsider and choose Alternative A.

In your EIS, under issues, you use terms such as:

Dogs may affect Dog use can damage resources Dog management policy may impact or influence

Yet for more than 30 years, dogs have been leash-less at Fort Funston and therefore there should be sufficient evidence of exactly what dogs actually do to the environment.

You even cite the possible sonic effects that dogs barking could have on bird-watchers or someone enjoying the sound of the surf or the croaking of frogs. If this were an important consideration, perhaps we should not allow people to speak except in a whisper.

You point out the percentage of minority groups such as Blacks or Asians that don't go to Fort Funston because they are frightened of dogs. I think that people who are afraid of dogs off leash are just as afraid of dogs on-leash. I observe that there are many Blacks and Asians enjoying Fort Funston and their enjoyment is enhanced because of the many dogs they see. I don't think that how we enjoy our parks should be limited by phobias that some people have.

You talk about the effect dogs may have on wildlife such as the Plover. If the Plovers are negatively affected by the presence of dogs, these effects should be scientifically demonstrated in your study since off-leash dogs have been in Fort Funston for more than 30 years.

The study is full of terms such as may affect, can damage, and may impact. What's missing is have affected, have damaged and have impacted.

The same arguments can be made if one wanted to ban human use of these parklands because people may affect the wildlife, can damage resources, and may impact or influence all the things that concern you about dogs. Finally the reports states that some people don't clean up or their dogs. This is true but is not the norm. You even stated that responsible dog owners have organized to clean up after irresponsible people. Since the vast majority of dog owners take their responsibilities seriously they should not be punished because of the few. It would cost the Park Service less to police and fine those few irresponsible owners rather that police the responsible owners that want to run their dogs. I should point out that a dog on leash still needs to go to the bathroom and Irresponsible people will still not clean up after their dogs.

I hope you will consider my comments and rethink your Preferred

Alternative.

Correspondence Type: Letter
Correspondence: Comments for the GGNRA:

I oppose your Preferred Alternative and believe that the status quo should be retained for the following reasons:

-You have not considered the impacts on city parks if people get kicked out of the GGNRA. According to the data in your 2002 Public Opinion Research Telephone Survey regarding GGNRA Pet Management Issues, there were 863,000 visits to Fort Funston, Crissy Field, and Ocean Beach per year. 20% of these people reported owning dogs, and dog owners are very frequent (5 or more times per year) visitors. This adds up to a very large number of people with dogs that need to go somewhere to walk them.

-Your own data do not support your claim that off leash dogs represent a safety concern and are a threat to non-dog people. From 2001-2006, the latest years for which data is available, there were only a total of 2,865 pet-related incidents recorded by the GGNRA; this is out of 226 MILLION dog visits during the same period. Clearly either dogs are not a problem or you are unable to enforce existing laws. In fact, dog-related incidents represent only about 3% of the incidents involving people.

-The clause which states that if compliance is not at 75%, then the area can become more restrictive without any notice or public comment is unacceptable. It only goes one way -- to more restrictive. It does not say, for example, that an on-leash area can revert to off-leash should compliance be at 100%. Also you do not state how you plan to monitor compliance, and that needs to be a part of the plan open to public comment.

-You suggest that dogs damage the environment, and that can be true. However, you should consider that much of the current off-leash areas at Fort Funston and Crissy Field are paved. It really doesn't help the environment much to restrict dogs in those areas. In fact, if dogs are all concentrated into small areas the damage will be greater than if the dogs are allowed to spread out. Fort Funston and Ocean Beach are not pristine areas anyway. Fort Funston is home to old military constructions and both Ocean Beach and Fort Funston have giant sewage pipes that take out treated

sewage out to sea.

-The Snowy Plover is not an excuse to ban dogs from Ocean Beach or Crissy Field. Plovers are threatened but they do not nest on Bay Area beaches. There is no conclusive evidence that dogs disturb Plovers. The 1996 and 2006 Hatch Reports showed that the numbers of Plovers went up during the periods when dogs were allowed off-leash. It concluded that, "Factors other than the number of people or dogs, possibly beach slope and width, appear to exert greater influence over Snowy Plover numbers at Ocean Beach." The 1996 Hatch Report also showed that only 6% of dogs chased birds and of those most were seagulls. 1/3 of 1% of dogs were found to chase Plovers. The 2009/2010 Golden Gate Audubon Society Report showed that about 1.5% of dogs chased plovers. Warren 2007 found that recreational disturbances did not change the feeding or behavior patterns of birds. Forrest and Cassidy St. Clair 2006 found that whether a site was on or off leash had "no measurable effect on the diversity or abundance of birds and small mammals.

-When the GGNRA took title of the beaches from the city of San Francisco in 1975, it promised to maintain the recreational use of the lands. However, this Dog Management Plan is just one more step in a strategy to manage the lands as a wilderness area or a national park rather than as a recreational area. This is not appropriate and is unfair to the citizens of the Bay Area.

-The Plan is full of impacts of dogs that "could" occur or "might" occur but there is little evidence that they actually do occur. Enforcement of this plan will cost money. With our current budget crisis, it is not appropriate to consider spending taxpayer dollars to fix a non or "possible" problem.

Correspondence: March 2, 2011

I have for the past 11 years lived on the edge (WUI) of the GGNRA National Park at the trailhead of the Miwok Trail. I walk with my dog JAX both on the Headlands on a daily basis and on weekends at Muir beach. In my many years of enjoying life in Marin with dogs and hiking with them on NPS trails, my encounters both with dog owners and with dog walkers, has been incredibly positive and in all those years I have only had one negative experience. Most dogs on NPS land and beachers are very happy dogs indeed -well exercised and therefore mellow and playful. Relating with them is part of the wonder of living so near to the GGNRA and NPS lands and beaches. I have never seen a dog hunting or destroying any of the public

lands in anyway in all the years I have lived here and walked these trails.

I feel strongly that singling out of dogs as the perpetrators of soil erosion and damage on NPS land is patently absurd. They no more erode the land and arguably do less damage than the myriad of daily sights of regular hikers, casual walkers, and the 20 odd mountain bicyclists storming down the paths every weekend and holiday, the equestrians of the Miwok Stable, the runners of the meets held multiple times a year on NPS land, the families that pollute the beaches and leave trash in their wake, the fishermen that line up their rods on the rocks and the NPS contractors who have plowed up great furrows of earth, disturbed wildlife, destroyed dens and native plants and rearranged water courses in a vain attempt to right the wrongs of bad policy management made years ago and that is similarly continue to be made today - and at what cost the the public coffers?

The absurdity of the current proposal to fund personnel to ticket dog owners to the tune of more than \$1,500,000 a yera is - in these times of recession cutbacks, threatened closures of parks and general neglect of existing parklands - an insult to tax payers and supporters of the NPS alike. Is this part of the management plan - a simple revenue stream?

It is an ongoing battle to get some kind of sanity regarding the unfettered walking of our dogs. What is the point of all the training we do with our dogs to get them to be good citizens in their world if they and we are only to be rewarded for our efforts by being forced to walk them - unnaturally - on leash? Dogs must run and play and socialize and smell the earth and be allowed to be dogs. Dogs on continuous leasn and not exercised enough are neurotic and very sad indeed...

Further, the proposed policy to restrict dogs only to certain areas will by definition force dog owners to congregate in very small areas which may in of itself cause problems and will create a false self-fulfilling prophecy currently engineered by the NPS that there are vast problems with dogs that require such draconian measures.

I urge the NPS to reconsider their plan and I request that the current rules relating to dogs - those of limited areas of leash control but mostly dogs under voice control - be upheld and left unchanged.

Thnak you for your attention,

Betsy de Fries + Jax

Type:

Correspondence: My Comments and questions on the GGNRA DEIS Dog Plan

I am a San Francisco Resident that has, since moving to San Francisco enjoyed a number of the GGNRA areas under consideration ' in Particular Rodeo Beach in Marin, Lands End, Baker Beach, Crissy Field, Ocean Beach and Fort Funston in San Francisco.

I am very much opposed to the changes proposed for both generic and specific reasons which I will try to address.

-I have a very active dog, a Border Collie rescue Mix, and being active it requires DAILY running. This running is done by myself and/or our Dog Walker. She is insured and Bonded and, and I am sure of her professionalism ' but more about dog walkers later. Everyone who knows dogs knows that a tired dog is a relaxed dog, and a relaxed dog is well behaved. Off Leash exercise is so much more than on leash exercise. On leash exercise limits the dog to my level of fitness, and that means that by forcing on leash requirements you are binding the exercise of many dogs to that of handicapped, and elderly owners. My dog "forces me" to go out every day and take a walk, and although that can be in my local neighborhood it is nothing like our walks in the Marin Headlands, or Lands End paths, or along Crissy Field. These moments when my dog runs back and forth with a stick in his mouth are the reason I get in my car and go the GGNRA controlled lands. Your preferred plan, as far as I can see eliminates ALL off leash circular trails. If there are any left please let me know

-The concept of Compliance Based ROLA is astonishing. As far as I can understand The NPS self appoints itself to monitor a compliance level of 75% based on total dogs observed not in compliance . Who does the observing? A third party? When do the observing? Of course, for it to be legal I presume it will be done for 365 days every day from 5 am to 10pm when the parks close, because, if there is no one there to observe and 100 dogs use the park, and are in compliance they will not be tallied, which means your data is invalid. As you can see ROLA is non-sensical in the way you define it, it the way you set it up to self police, but even more so in the way you ascribe to yourself the powers to make reductive changes to the use of the park without proper due process. The Poison pill has to be eliminated from the plan as it probably is illegal and will successfully be challenged in Court.

-Answer a question ' is dog ownership in San Mateo/San Francisco County/Marin increasing or decreasing? All the studies I have seen it is increasing. Therefore, as caretakers for lands given your trust for recreational purposes by those counties should you not take that in

consideration and offer an alternative where you INCREASE off leash areas? Off leash areas, at the time of the 1979 Pet Policy was limited to only 1% of all the lands you administer. Since then new land has been added but you have DECREASED the percentage of those lands to below 1%. Why is there no alternative where you reflect demographics and the desires of the citizens of those counties who gave you the land and offer another alternative where you increase these lands? -Your Preferred alternative states that all new land donated will not be for off leash purposes. This is draconian and simply unfair. Your purposes, for the GGNRA is for RECREATIONAL purposes. These lands are NOT National Parks ' they are ex army installations and they were given in trust for you to administer in keeping with the original deed.

-Why is the current system not working for you? Are you able to enforce the current No 'off leash zones? They are 99% of the lands you administer. If you can do it now why the need to change? If you cannot do it now, what additional funding will you require to ensure the new areas will be enforced?

-Snowy Plovers: Your own research (Forrest Cassidy St Clair and Warren all demonstrate that dogs do not actually impact the diversity, abundance and feeding behavior of the birds. The Hatch report observed 5692 dogs and only 19 chased plovers. Your own studies prove that parents with toddlers, surfers and other park users disturbed the plovers far more than dogs, yet I do not see anything in the DEIS that is further restricting their access. Why are dogs being singled out? Your environmental impacts are a whole bunch of "could occur" "may occur" but I do not see a single study that backs this up You mention Bank swallows, and their nests, but they burrow in the cliffs, areas that dogs simply do not go to.. Ultimately your environmental studies do not seem to support your conclusions and you can be taken to task on this.

- You TOTALLY ignore the impacts that these policies will have on the surrounding areas. If you squeeze dogs out of GGNRA lands where will they go? To overloaded City Parks (mmm, I think the City of San Francisco may have something to say about that..... You deny all off leash privileges to San Mateo County. That, per se is astonishing. Remember, and I know I am repeating myself. The GGNRA is NOT a national park or preserve.

IMy feeling is that you have been conducting a misguided battle to solve a issue that is simply not an issue. Your data simply does not support the existence of the problem, and your attempts to squeeze a NPS agenda on local parks is misguided and contrary to the spirit with which these lands were given to you.

I do not want to see a change to the status quo.

Correspondence: First, let me say that I am appalled that time, energy and resources have been spent by NPS staff to create a 2400 page document on this issue. I think it is unwarranted, and a complete misuse of public funds. Of course, that was only the beginning, subsequent public hearings and more deliberations will only run the final bill much higher.

And for what?

The Golden Gate National Recreation Area was established to be, and has become, an amazing resource for public recreation and enjoyment. NOTE: this was NOT established as the GG National Reserve or Environmental Preserve. For years, National Park rangers issued tickets (my wife received one for \$75) that were later judged ILLEGAL because the restrictions being enforced/imposed were NOT part of the original environmental impact statement (EIS).

Now, years later, and after years of "negotiated agreements," countless staff hours and much much more, your new "dog management proposal" has been released for public comment. In truth, I suspect that you've already decided and plan to enact the plans mapped out in the document, and this entire commenting exercise is ONLY to fulfill the legal requirement before enacting new ADMINISTRATIVE regulations.

I want to believe this is not the case. I want to believe that the public hue and cry will convince you to leave things as they are.

I truly want to believe that the original vision of the Burton Brothers, so fully enjoyed and realized by all the visitors and their dogs--not just kids--will continue to be the GGNRA reality.

And my fervent hope is that you will put this matter to rest, reassign the staff to more productive projects and leave two- and four-legged visitors to enjoy the GGNRA in exactly the way it was intended it should be!

There is NO need to impose the leash regulations on everyone because of the few situations cited. Let this unique, amazing and wonderful RECREATIONAL resource remain as it has been.

Correspondence: 1) In San Francisco county parks people and dogs interact fine. By limiting dog areas dogs and people will be more crowded causing tension and behavior problems which would impact the visitor experience. In order for dogs and people to get along there needs to be more space for dogs then the Pref. Alt.

2) I have never witnessed any harmful encounters between dogs and wildlife, or plant life and instead of restricting space for dogs should issue fines for incidents allowing visitor/people to report. Having such fines would motivate people/dogowners to respect the habitat. The responsible owner could still enjoy the unrestricted space.

3) In the pref alt for Fort Funston I cannot take my on my dog walk for she has a Back disability and would require paved access for both her and the dog. She needs the dog to be off leash for her back condition and cannot handle a dog pulling on the leash. The off leash areas are sand or would require going down a very steep beach access trail which would put great stress to her injury. As the pref. Alternative would restrict my mom from being able to come to For Funston on our dog walks, she will be left out of a very important part of her life. I would like to keep my mom a part of the walk and restricting her I feel is discriminating.

Correspondence: I am a dog walker who frequents Fort Funston. I pick up twice as much poop as dogs I walk almost every time I am there as well as plastic bags & other trash from people.

Dogs are my life & I do not want them to lose the freedom of being off leash at the beach. However, as a 54 year old woman I can not physically handle taking 6 dogs down to the beach via on leash walking. They are anxious to run & I tho very healthy I can't handle their pulling & excitedness. I do have them trained to come via voice control & this should be sufficient for them & me. Well behaved dogs & responsible owners/dog walkers will be punished by these plans. I think the best alternative is to NOT change the usage areas, rather to enforce the rules regarding picking up poop & managing dog behavior.

Correspondence: We should not confuse a National Park with a Recreational Area. A Recreational Area is a place to have fun. This includes playing on the beach with my dog. GGNRA is a Recreational site in a metropolitan area of some 7 million people. In San Francisco there are a massive number of single house-holds with dogs. Confiscating recreational rights on dog owners is no solution. Face it, the dogs don't care its the owners who feel their rights are violated. As both a parent and a dog owner I can testify that when my son was young he and his friends spent more time running through dunes, hooting and hollering, and havign sword fights (in what we now know as snowy plover habitat) than my dog ever does when she is off leash. Yet there is no child management plan.

On beach clean up days - I have never found dog feces, its all human detritus that fills the dumpsters.

The real solution is to fence off sensitive beach areas with snow fence and free the people, their childre and their dogs have a great recreational experience. Taking away dog owner rights only under mines respect for important ecological programs.

Correspondence: Thank you for at least letting me review your report. But I must say that it is over blown and to restrictive to peoplpe who have lived - a life time in this

area. I am a native and have enjoyed this area since childhood. The native species have not been affected since that time. The only adverse affect has been our failure to stop the onslaut of humans coming in. I have exercised my dogs off leach in all these areas, and will continue.

I love Sharp Park Gold Course and have let my dog swim in the lagune for many years and have not seen any reduction in the number of frogs or snakes. But an increase of wild cats, ravens, mud hens, egrets, herons. If these wacko evironmental want to save this, they got on the band wagon a little too late - it's ok! No body objects to restricting during breeding season but not at all times. I have walked off leach in the hills, beaches, and have only been welcomed by others enjoying the same.

Correspondence: Thank you to all the volunteers and staff for putting together the 3/2/2011 meeting at Tamalpais H.S.

The true issues with dog behavior begin and end with dog owners.

One suggestion to help would be to enforce stricter laws with respect to dog licensing in the city of San Francisco. This would allow there to be accountability for the dogs' actions and trace information back to the owner.

For example, if public awareness regarding licensing was achieved and dog owners and the public alike know there are consequences for dog behavior, enforcement at the GGNRA (and other local laws) could potentially be reinforced.

Correspondence:

1) Fort Funston beach should be no dogs. The shore birds have a difficult enough time and even dogs on-leash disturb them by barking and lunging at them.

2) Commercial dog walkers should not be allowed. The Park purposes do not include those activities.

3) ROLA's ought to be fenced. That at least precludes dogs extending a ROLA unintentionally.

4) Compliance for areas where dogs are allowed should be 95%. At 75% compliance, a significant amount of damage still can be done. Monitoring must be given priority, as well as clear signage.

5) A limit of 3 dogs per person ought to be maintained. More than that is difficult/impossible to control, especially in areas with other people or wildlife.

6) Baker Beach at Lobos Creek must be restricted, no dogs. It is a sensitive area and within 100 ft of it should be set off in some way.

Correspondence: Dogs are not the problem, people damage the environment more (out of 16 injured snowy plovers nest- only 1 was disturbed by a dog.)

Enforce current dog litter pickup + behavior control regulations - instead of restricting dog more.

Dogs restricted to small spaces will hurt the environment more than if they have a larger area. City parks can not handle the impact of 1000's of additional dogs that would result if people can use the GGNRA.

Correspondence: Upon reading the proposed plan I understand the concerns of the environment and the impact the dogs have on the land, as well as the general public. The reality of the situation, however, is that in Marin County there are more dogs per capita than any location in the U.S. That being said I am an avid hiker, and always have my dogs with me on the trails. Being an avid hiker on dog-friendly trails only (of which I am incredibly grateful for) approximately 90% of the other hikers I run into have dogs with them. There is plenty of open space in Marin County that hikers.bikers can use where dogs are not allowed and dogs have to be on leash.

Also, I own 3 dogs in Marin County, and often take care of a friend's dog as

a favor, although I appear to be a professional dog walker I simply have 3-4 dogs with me on a regular basis. Please don't take our dog friendly trails away from us. I donate to the GGNRA regularly and truly believe it is an incredible organization being an avid hiker and backpacker. If the dog friendly trails are taken away dogs will be consolidated to smaller spaces which will create more problems in the long run. When & if you are to impose the laws please allow 6 dogs (w/permit) off leash in proposed areas. Thank you!

Correspondence: I understand the need to preserve our wildlife areas, but at the expense of their utility to dog owners seems to be counterproductive. The SF & Marin County areas already have very restrictive limitations on where a dog can be off-leash. It's becoming harder & harder to go on walks in public rural areas where your dog can be off-leash. I recognize that dogs can't run free everywhere, but they should have the right to run free outside in appropriate places.

Correspondence ID: 1527 **Project:** 11759 **Document:** 38106

Correspondence: Many folks want to walk dogs in GGNRA. They pay the county to license their dogs. There is a reasonable expectation, especially in this financial climate, that a fee be paid to support their use of the resource.

Such a permit fee could be assessed per dog, with a higher fee for off-leash use or more than one or two dogs per person. Fees would help defray the costs of enforcing the regulations and maintaining the resource. NPS wouldn't quite see dog permit fees as a profit center, but they would certainly help.

The user community should be polled on suggested fee levels- it's probably best to present ranges of amounts, and an expense breakdown to justify them. Once users/visitors see where the expenses come from, they would be more ready to help arrive at a fee that represented a balance between a perceived unfair burden and a support of the resource.

Correspondence: The draft environmental impact study draws conclusions from little or contradictory information. For example, one study of the impact of dogs off leash in urban parks show no decrease in bird diversity, but the EIS concludes a negative impact.

Contrary to the gold standard of Adaptive Resource Management, the plan only proposes to collect data on dog compliance, ignoring the issues that are the goals of the plan such as the environmental impact of the changes. The plan only allows that "off leash areas" will be more restricted in teh event of non-compliance, not balanced since the less restricted option is not available in the event that it was determined that adding restrictions did not benefit environmental or safety issues.

Small business issues are dismissed by the report citing the low proportion of regional GDP, but any small business group will be a small proportion. Alternatives allowing for fees to support current use are ignored.

Having two off-leash areas connected by an on-leash areas as in Ft. Funston seemed designed to insure non-compliance.

Correspondence: I attended the event on March 2nd at Tamalpais H.S. It was very informative. Unfortunately much of the information was confusingly presented.

The maps in the black books were the easiest to understand, but members of the staff were not familiar with them.

I am particulrally in favor of maintaining and increasing areas available for dogs off-leash. Every alternative either maintained or reduced both on-leash and off-leash areas. The preferred alternatives presented all seemed to be the most restrictive alternatives.

At Stinson Beach Alternative A allows only for dogs on-leash in the parking areas. This is the best alternative presented, but there should be another alternative that allows dogs off leash on part of the beach.

At Muir beach Alternative A, current conditions, is my preferred alternative. Alternative E restricting dogs only to south of the path but calling it "most access" was very misleading.

At the other areas: Homestead, Oakwood, Alta, and Rodeo, maintaining current access - Alternative A is what I would prefer of the Alternatives presented. Even better would be more access.

The Park Service has not presented a compelling case for imposing new restrictions.

Correspondence: Re: Muir Beach & Dogs

Why not require dogs on leash in sensitive areas ex: keep away from creek at north end during salmon spawning and away from the sensitive areas for birds. Consider example of McClures Beach where birds' areas protected during nesting season.

Correspondence: As much open space running room for medium to large dogs is crucial for the safety and well-being of dogs and people. Limiting the space at Fort Funston for off-leash to the small top section and only the strip of beach will create a danger. The dogs will be unnaturally crowded together and will become more tense and more aggressive. Voice control will become more difficult. Dogs socialize best with the greatest possible space. Typically they run up on each other, take a quick sniff and move on. Too much crowding hurt their ability to quickly and easily separate from each other.

Correspondence: Re: Fort Funston

Elderly and disabled people will have great difficulty reaching the beach

section to allow their dogs to run off-leash. The most important area for them is the top section where the dogs can run around freely.

It is a discrimination against them to force them to walk all the way to the beach area to go off-leash. The dogs need the space and they need their dogs.

Correspondence: Sutro Hts.

Everyone dog + otherwise confined to trails only + no dogs in picnic areas.

Prefer Map 14D

Ocean Beach

No dogs on walkways, on beaches with possible exception for northern end at strwell 21

Voice control anywehre is a NO-NO

Prefer 15D but can live w/15C

Ft. Funston

No VC anywhere + esp. on trails - everyone (dogs, people, horses) controlled on trails. If what dog owners want is beach access, fine - but confined to smallest area possible.

Prefer 16D, Can live w/ only beach area on 16C

the "Community" of non dog-owning/beach loving humans + community of wildlife are priority to domesticated, pampered, out of control dogs.

Correspondence: 1) Would be best no commercial dog walkers. Voice control does not work. Walking 6-10 dogs a walker cannot keep up. I've watched dog defecate and walker not paying attention.

2) I, as a nature lover, should be able walk trail without dogs interfering everywhere. Should be no dogs on some trails, for my safety, relaxation, and enjoyment. I walked down the Pacheco trail and twice was nearly run over by dogs.

3) Number of dogs should be limited. Walking more than 3 dogs is usually difficult for all but the best trained dogs.

4) Compliance should be 95%. The 75% allows too much disturbance. Dog walkers (owners) on their web site admit 75% at some point disregard the on-leash signage.

5) Dogs should not be allowed on beaches. Shore-birds have no protection and dogs never miss a chance to chase them. Even on-leash they bark at them.

6) ROLAs should be fenced.

7) While dogs are important part of social fabric, they are just one of many, many animals in natural areas and have a negative impact on species that rely upon the park to survive.

Correspondence: I find it hard to believe that the number of conflicts in the GGNRA has escalated to the point where this shear volume of examination and

paperwork were really necessary. The amount of research into the minutiae of every detail that went into this 2,400 page document, while no doubt time-consuming and painstaking, is a classic example of something so overwritten it's barely understandable and certainly impractical for public users. Not to forget the unfortunate rangers that will have to thumb through regulations, trying to figure out which trail from parking lot to field, then field to beach, allows how many dogs per owner, on what day, at what time.

This unique National Recreation area is just that: a recreation area meant to be preserved for recreation, established to preserve the beauty of coastal living for all to enjoy even as the urban areas become more densely populated and suburbs stretch at the seams of growth limits. For every action, there is a reaction and the severe curtailing of the use these lands were designed for, will no doubt stress other open areas and parks, leading to other conflicts among groups of users. Plus many hundreds of small businesses that include pet walking would be affected-and I think it's a safe bet that those business owners are among the most conscientious users of the GGNRA lands because their very jobs depend upon the fact that they observe the rules and avoid tickets.

Surely there has got to be a better way to officially handle the actual conflicts that arise in the GGNRA lands than this unleashed wave of regulations, that insidiously changes the very nature of the purpose for which these areas were preserved; a last wild place for us, our children and our pets to roam.

Correspondence: To Whom It May Concern:

I have a female golden retriever (4 years old) currently and have had several of them through the years. I regularly (at least twice/month) take my dog to Fort Funston where she is off-leash. I take her from the parking lot to the beach and then we also hike around above the beach. I have reviewed the plan for Fort Funston and offer the following comments:

(1) It makes no sense to have an off-leash area at the top, a leashed area, and then an off-leash area down at the beach. The lack of continuity makes no sense and will encourage those who are not responsible to leave their dogs off-leash all over. There should be a way to get down to the beach that does not require a dog to be on-leash

(2) I understand the need to protect wild flora and fauna. A balance can be

achieved. It is not clear from the DEIS that any effort really was made to find a balance. Please keep in mind this is a national recreation area. It is not a national park. Dogs, as well as people, need exercise.

(3) A very close friend of mine is very afraid of dogs. I understand completely that dogs must be leashed in many areas all of the time. Owners are not responsible if they do not comply with that. With that written, however, dogs also need a place to be where they can run around off-leash. I expect, although I've never asked, that my close friend does not go to Fort Funston ever. That's fine. There are other parts of the GGNRA that she can use.

(4) The preferred alternative includes a "nuclear" option where the rules would be changed automatically if compliance is poor. Given, to my mind, the poor design of the off-leash dog area this is completely inappropriate.

Finally, I know this is a time when budgets are very tight. It is not the time to ruin a national recreation area that is so broadly supported in the community because dogs are welcome. These lands are in the public trust for everyone and all uses. If there are irresponsible dog owners and dangerous dogs, they should be treated accordingly. The vast majority of current park users are not.

Thank you for your time and consideration.

Correspondence: Hello

Obviously we are very frustrated by the direction the park service has taken on the off leash issue. Understandably we are all responsible for the

stewardship of our public parks, but I do not agree with the plan that has been put forth by the park service, and managers of the GGNRA

I believe that enforcing the current laws will allow for all parties to enjoy this very valuable piece of open space. If the park police find that people are allowing their dogs to run into sensitive areas of the park, they can be fined. If someone does not have voice command of their dog, then they should be required to keep the dog on leash, or if the dog runs into an area that has sensitive wild life, and flora, they can be ticketed. By banning all off leash dogs (which may turn out to violate the terms by which the land was given to the federal government to manage) you are including all dog owners who responsibly manage their pets into a small group who do not.

This is not an effective way to legislate behavior.

Thank you for your time.

Sincerely, Ryan Lugbauer. Tax Payer, voter, dog owner.

Correspondence: I've reviewed the draft plan for the GGNRA and appreciate that a number of spaces are suggested to be designated as on-leash areas. I'm commenting to encourage the GGNRA to both designate some on-leash areas and to enforce leash laws in these areas.

I'm the proud owner of an adult dog who struggles with leash reactivity. She is always great with people but has never lived in a place with so many dogs and is having to learn some new behaviors. I adopted her a few months ago and have been working to train her and better socialize her with other dogs, including work with a private trainer and classes at the SF SPCA. She is improving by leaps and bounds.

She loves hiking, but a lot of the accessible hiking areas are either legally off-leash, or the bulk of people who go there flagrantly violate leash laws. It becomes harder to train and manage her around dogs who are off leash, as it makes her feel more vulnerable and defensive to be the one who is on leash. While there are many people who train their dogs for good off-leash behavior, there are unfortunately many who do not, and these owners pose a continual struggle for dogs like mine. I'm eager to have more places to take my dog where we can train and have positive socialization experiences. I know if she has this she'll continue to progress.

A lot of dogs have special needs. Besides leash-reactive dogs who need some extra help and training, there are older dogs, disabled or physically challenged dogs, and even small breeds that can benefit from on-leash areas where approaches by other dogs are more controlled. When there are conversations about dog-friendly areas, our dogs are often the ones who are forgotten. I support off-leash areas for dogs that are comfortable in these spaces. But please, ensure that there is some space for dogs that do better when everyone is on leash, and make sure the laws are enforced so that everyone can have a good experience. The new rules for GGNRA are a great opportunity for dogs like mine.

Many thanks,

Jay

Correspondence: For Dog Sake, Don't put dogs on leash.

I am a dog trainer and handler. My observations during all these years of working with dogs of all ages and breeds has proven to me that dogs just like us enjoy the out doors with out leash and after a good run, and after burning all that cooped up energy because they live in apartments or if any luck, in the back yard waiting for they tired owners to come back from work and take them for a short walk so they don't poop in the house or the back yard. The dogs I take care of run and run and come when I tell them to. so they are under my control although off leash. That makes them happier, makes my clients happier and keeps the furniture happier too. Besides I need to remind every one that that GGNRA was created in the 1970's as the first urban recreation area, that hiking with our off-leash dogs is OUR form of recreation, and that severe restrictions are not justified by the Draft Environmental Impact Statement (DEIS).

Thank you for your time and attention and love for our best friends

Correspondence: I've lived in San Francisco for 16 years and am implicitly proud of this city's

rational, liberal and diplomatic policies. As a 5th generation San Fransiscan, I am connected to this city and the community in way that most people are not. A large part of what makes this city such as incredible place is it's sensitivity to critical cultural movements and to beings that are in need of a voice; animal rights is no exception, with one of the nation's best SPCA and ACC shelters. But it's not just the shelters. It's also the way the average person here treats animals and i encouraged to show compassion and freedom to their pets through the many, remarkable open, off leash areas available. This 'movement', the call and innate need for pets to run free, to give them their natural right to gallop, play, breath fresh air, is only a possibility and privilege because of the off-leash areas we are afforded here. If it were to be taken away, not only the pets would suffer, but so would the owners, and the sense of community and friendship that naturally arises when animals play and energy is released. The pet owners that walk their dogs in these are dignified people, who pick up after their pets, cater to the animals' every need and live for their companiohship and comfort. By imposing on-leash laws in some of our favorite places, I know Goblin, Bronson, my boyfriend, and our many friends will question this city and our place in it; we have a righ to run free.

Correspondence: I am commenting on the proposed changes to Baker Beach. I have lived in San Francisco all my life & have spent many glorious days at Baker Beach with the various dogs I've had.

I do understand that many people either do not like or are afraid of dogs. They, however, have many options, ie: China Beach - no dogs allowed.

This is an URBAN Recreation Area, not a wilderness area & people will always have dogs. A good dog is one who is able to socialize, run, play & get tired. You can't do that if your dog is always leashed.

My preference for Baker Beach is to leave it as is, however, I realize that is highly unlikely. One proposal seems to have approximately 1/2 the beach designated off leash. I feel that is an acceptable compromise.

Correspondence: Crissy Field:

No dogs at waters edge of Crissy Field. "Dogs allowed" in any area means "off leash" to owners. Preferred 10B if must allow. Forget Map 10, 10A, 10C, 10D, and 10E

Picnic areas are at 2 far ends of C.F. + are extremely crowded. Enhance that experience by increasing indiv. tables and group picnic areas on 2/3 of Crissy Air Field + reduce that area for dogs by that 2/3. This is an entirely too large area for off leashed dogs + will mean they will cross Promenade + dominate the coastal area on both sides of Pier with uncontrolled dogs.

Fort Mason - Upper:

Dogs should be o-leash only at Great Meadow + a much smaller area in Laguna Green designated. Preferred map 9-D.

Baker Beach:

One well defined/designated/(fenced) off-leash area at far northern end only. Forget maps 12A-B-C-D + esp. E Prefer Map 12 Voice control does not exist- forget this concept All of this is only as good as citations (not "warnings") issued to lawbreakers.

Correspondence: I am in favor of keeping the laws the way they are because there area already many restrictions on dog off leash areas. There are more dogs in San Francisco than children. Dogs are a huge part of SF culture and this willll not change it will only increase. The small majority of people in favor of adding more dog restricted areas are people who dislike dogs. Its not really about "wildlife concerns". By making these ridiculous laws, SF locals will be negatively affected. I think the green voice tags that are enforced in Boulder, CO are a better option. I think this would limit the so-called "aggressive dogs" from being off leash. I take my dog to Crissy Field all the time and I have never even seen a dog mess with wildlife. There was a headless dolphin at the beach in Pacifica and the dogs there couldn't have cared less. They just want to play with their frisbees and get energy out. By restricting dogs to be off leash, they will only become more aggressive. Lastly, I wish more residents knew about this initiative. I am positive that more dog owners would be concerned if they knew.

Correspondence: I am disabled. I am in a wheelchair. I too need somewhere I can go and let my dog run free and off leash so that he can get some real good exercise and fresh air. This makes for a happier, contented, well behaved, well balanced dog. Please do not make less off leash area available. Why not create more off leash areas? No one ever does this. It is always less, never more. Or one for one. As one place is restricted, open up some space elsewhere.

Looking at the maps provided the plan proposed is very restrictive to all current off leash areas.

Suggestions: Spend time to enforce the current areas and rules.

For every square foot of land restricted in one area, open up an equivalent amount of off leash in another area.

Allow people who walk their own dogs to have the freedom they currently have but place restrictions on the "Professional dog walkers" i.e numbers of dogs they can walk at one time together and where.

Correspondence: I have used Fort Funston to walk my dogs for over thirty years. My wife and I take our dog there twice a day. The area that will be excluded is paved. There is a dog watering station. 95% of the use I put the facility to will be eliminated. I am a local business owner, House to Home Remodeling. I am 58. Many days my knees will not allow me to walk on loose sand. My doctor says I should walk 1 mile daily. Many of the older and elderly people who walk their dogs at Fort Funston require this exercise for their health. HOW DO you intend to accomodate the disabled, elderly, young parents with strollers, people with canes in your new plan.

The notion that you would restrict the area of the park that has been altered the most from its native state lacks even the most basic logic. The area you intend to restrict dogs to being on leash (north from the parking lot to the beach access) is the area that would make the most sense to have the dogs off leash. This seems to be the type of decision that would only be made by a committee of insulated individuals without any public input.

Correspondence: Ocean Beach: NO CHANGE to current laws

This exemplifies compromise, as there are clear barriers for on leash and off-leash activity. People who do not want to be near dogs that are off leash can visit other areas that are restricted. People with dogs can enjoy off leash activity in a very small area.

Focus on enforcement fo current law rather than changing it. I am on the beach every day, 2x a day, and I rarely see park rangers.

In regards to environmental degradation, there are many contributors- not just dogs. #1) environmental/weather conditions #2) retaining wall repairs #3) children who run and play in dunes #4) the homeless encampments in dunes. You can't leash mother nature, children & homeless people, why punish dogs?

All areas: Compliance of 75% after 12 months this needs further definition. What is compliance? How do you measure it? Does it apply to tourists? Is that fair to Bay Area residents?

Correspondence: I walk my dog 2x a day at Fort Funston because I have plantar fasciitis, which does not allow me to walk on loose sand or unpaved ground. Funston has a lot of off-leash paved areas currently, where I am able to walk without pain. Over the years, I have observed many elderly and disabled people walking their dogs there because they are able to use their canes and walkers

on the paved path, while their dogs can exercise on the sand.

The new restrictions are clearly discriminatory towards disabled people. You propose to confine us to an area that is mostly loose sand. I believe that there are enough disabled dog owners that a class-action suit can be brought against you for violating the Americans with Disability Act. I am actually thinking about initiating a suit myself and am planning to talk to a friend who is a class-action attorney.

This idea/plan is poorly thought out, inappropriate for today's economy. I have suggested to Gov. Brown that budget cuts might start with the GGNRA. You are clearly out of touch with the desires of the citizens whose taxes pay your salary.

Correspondence: It appears that the purpose of all this planning is to limit off-leash areas. Why wasn't more effort made to seek out an enlarge off-leash areas. That would show a positive effort to accomodate the large dog-owning community. I see no thought given to this need.

There is a perception that the NPS does not recognize the dog-owning

community as either important or even a major user of this land.

The NPS should be permanently planning to accommodate this use as it would any other user group.

#3) Dog waste. When dogs are off leash (and often when on) their owners do not follow after them to clean up. People even let their dogs defecate on the beach.

#4) I do not visit the GGRNA to see dogs. I visit the GGRNA to enjoy natural beauty and wildlife unmolested.

#5) When dogs are present - you simply do not see wildlife.

#6) Dogs have dog parks to run in and exercise without bothering others.

Thank you very much.

p.s. I have witnessed Rangers cursed and screamed at for trying to enforce current restrictions. Thank you for your efforts.

Correspondence: I have submitted some comments on line, but since that time PE&E, while looking for their gas pipeline, as destroyed 10's of acres of natural habitat (coyote brush, toyon, oak etc) along Alta. THERFORE, this can not be considered prime habitat and in fact, signals that Alta is an INDUSTRIALIZED zone. I've walked on every dog-allowed trail in the Marin Headlands, walking my dog on Alta 2x per day, weekly on Oakwood Valley Trail and/or Fire road. I've spent 100+ hours/yr pulling broom etc for Park Stewardship much of last 5 years. The dog use on Alta and Oakwood Valley is the PRIME recreational use of these trails, no question about it - 75% of persons using it have dogs (off leash mostly, not including commercial walkers). Despite all of my time spent off trail (in Mission Blue habitat) only once have I ever encountered a dog that shouldn't have been there. 99.99999% stick to the trail/road.

On the basis of my experience (I am a wildlife ecologist, by profession) it appears to me that the decision to change the current dog policy on

Oakwood Valley and Alta Ave trails/fire roads is based on abstractions and no real data. It is a recreational area and people recreate on those trails walking with their dogs (off leash) - my survey 75% (not including commercial walkers) of users. There is also plenty of wildlife. I do not support allowing dogs (on leash) between Oakwood Valley pond and Alta. This would be consistent policy for use of Alta and Oakwood Valley. Therefore, Alternative A

Correspondence: It's very important to have a place that dogs can be properly exercised + walked. A well behaved dog is a tired dog. Dogs need to RUN + play in a safe open area. Ft Funston + Crissy Field provide just the place to achieve this in an urban setting.

San Francisco is unique! No where else is there access to open space right next to a busy city. The GGNRA is not the same as a Nat'l Park, like Yosemite. The original use for the land was an open space for everyone, DOG OWNERS INCLUDED! We pay taxes + will support an open space for our pets.

Correspondence: Essential to any plan of action or intervention is proof that the intervention has worked before. Is there adequate scientific evidence that dogs are the problem? Perhaps the National Parks could do a "clinical" trial as we do in medicine, implementing their intervention @ certain areas + then have other areas remain the same (placebo group). This trial could be done over 3-5 years period and then the outcomes could be compared (some member of wildlife preservation). If this data is already published or known it should be

displayed. Either way it is good science and would go along way with the citizens of San Francisco. Scientific discovery is the key and if a trial showed documented harm then legislation would be much easier to implement.

Correspondence: I am in favor of the Park's preferred Alternative Plan to reign in the 100,000 dogs that overrun (pardon spelling) so many of the cliffs and beaches of the GGNRA. I care about dogs and I love and care very much about migratory birds. I also care about safety of small children and small or frail or elderly adults. Dog owners either don't care or are kidding themselves that they have their dogs under control. I personally know otherwise - lovely people who don't want their dogs restricted in any way. They think it's so cool for their dogs to freely run into the birds and disperse them. I used to be the same way 30 years ago until I learned how that exhausts the birds. (Some of the same people don't even pick up after their dogs' feces).

Regarding the above-mentioned safety issue- On two occasions - 1 at Crissy Field and 1 at Ft. Funston steps, I was viciously agressed upon by a dog. I yelled for the owner's help, who, in each case was very non-chalant and when I asked "why is your dog ready to attack me like that?" each owner told me "it's because you're wearing a hat." I told the one at Funston, who was close enough, that on warm sunny days enough people weare a visor (which I was wearing) or sun hat for you to put your dog on a leash if your dog is spooked by a hat.

Another friend of mine, who is obsessed with her 3 dogs, had to admit that when they swirl around us playing when we walk that they are knee height + could crash into back of our knees toppling us over.

Sad thing is that the anti-leash side is so well-organized and the people who need dogs to be restrained are not.

Correspondence: Please do not make Fort Funston on leash. It is very important to me to be able to have a place where my dogs are able to enjoy a free area to stretch their legs, burn off energy, and socialize with other friendly dogs. Fort Funston being off leash also brings the community together. Everyone

respects Fort Funston and tries their best in cleaning after their dog. I will be very sad and disappointed if it becomes on leash. Dogs should have rights! They should be able to be off leash since they are well behaved. My dogs do not bother any wild life. Confined spaces are not healthy for people and their dogs. They need areas to run free to be healthy. I don't want my tax dollars to pay for national parks that are not for off leash dogs.

Correspondence: I'm writing about the proposed plan for Fort Funston. The only way for my two dogs and I to get any exercise is an off leash jog. I can't run with two leashes with the possibility of tripping. Many who have their dogs off leash is the only way to truly let their dogs free to explore. They are couped up in the house and it is only when they are at these off leash parks do they really feel free.

I pay my good tax dollars to enjoy they parks. Why would I have my tax dollars enforcing these ROLA areas that I did not want in the first place. Why don't we spend the money on education or other major issues, not to regulate dog parks. Please do not take this from my family, we go to Fort Funston every day.

Correspondence: 1) "Scientific" reports which are used to base a decision require a peer-review, per NPS Guidelines of Scientific Conduct. Daphne Hatch's Bank Swallow report 2006 makes conclusions which are not based on her data. She makes speculative statements about what dogs could do, but there is no evidence for damage, e.g., digging which leads to burrow collapse.

2) Crowding everyone into a small off-leash area will make it dangerous for people and dogs, i.e. increase aggression + conflicts with people-people and dog-dog.

Correspondence: The great outdoors were meant for EVERYONE TO SHARE, INCLUDING DOGS, who many people consider to be members of the family! Supporters of the new legislation that would limit areas where dogs can roam both on & off leash argue that it would make public spaces, such as parks & beaches, cleaner, but that is simply not the case, for it is not the dogs who are soiling the parks & beaches, but their irresponsible owners, who fail to pick up after their dogs. Even if dogs are not allowed to use these areas, it will not stop people from littering, doing graffiti & other acts of vandalism, or urinating & defecating in public. Thus, the ONLY solution to keeping public spaces sanitary is to ban HUMANS, which of course would never happen. My point is that dogs should not be punished for the actions/inaction of their irresponsible owners. They deserve to enjoy these public spaces too! To take away the already few places that dogs can roam freely is wrong & unfair!! All I have to say in terms of dogs attacking people, is that people attack people too. I think it's unfair to say that the threat posed by dogs is any greater than the threat posed by people. After all, compared to dog attacks, how many more crimes committed by humans have occurred!?! It's certainly possible to be attacked by a dog but then again, it's also possible to be murdered, raped, robbed and assaulted too!!

Correspondence: I support Alternative A (no change) for Fort Funston. Fort Funston is a very important park for me, my family and our dog. We enjoy walking on the paths and the beach. This is not a pristine park - it is an urban oasis. Fort Funston will never be Yosemite or Yellowstone. Walking at Fort Funston you can not forget you are in an urban area = you hear the traffic, the Pacific Gun Club and scores of folks walking together. Perhaps fencing the trail areas to keep dogs from the sensitive areas (suggestion).

The negative impact on the city parks will be enormous if off leash dog

walking is prohibited at GGNRA areas = where will all those dogs go? Stern Grove, Dubore Park, Golden Gate Park, etc. Those facilities cannot handle greater dog traffic. For this reason alone this policy should not be adopted.

Dogs need exercise. People need exercise. The GGNRA areas open to dogs + people are a much needed haven for city folks.

I have a dog. I vote. Please don't adopt this harsh anti-dog policy.

Last: I truly wonder if this comment process is a mere formality + the will of the people is irrelevant

Correspondence: Re: Ocean Beach - preferred alternative: Dogs and their owners should be allowed off-leash south of Sloat Blvd to Ft. Funston. This area is sparsely used by beach-goers and the bluffs are crumbling away & subject to much man-made intervention (rip rap-concrete, etc) to shore up the cliff. Further south the cliff swallows are up on the cliffs, not on the beach, so dogs do not disturb them. I believe this area is not populated by snowy plovers, and I doubt dogs could cause more destruction of the species than man has.

Correspondence: Dear GGNRA,

As a resident of 38 years, I have come to know San Francisco as an inclusive, tolerant place that respects its citizens and embraces their various life styles.

Adopting this exclusionary policy is a deleterious cultural shift away from what Makes this city, in part, one of the best places to live.

My place of work recently attempted to ban dogs in the work place after 32 years and moral took a noticeable turn for the worse. I was able to work with Human Resources to develop guidelines for dogs in the work place that successfully address the needs and concerns of everybody.

If the GGNRA is compelled to change the way dogs and their owners live within this city, please consider adopting guidelines that balance the needs of all our citizens, not just those with the loudest voices or strongest lobby.

Respectfully,

Eric Friedman

Correspondence: My comments are limited to the proposal to limit off-leash dog walking at Fort Funston. I discovered Ft. Funston 3 years ago when I first received out dog and have been going there every week since. From the beginning, I was amazed at how responsible the majority of dog owners are at cleaning up after their dogs. I see NO adverse affects from the dogs at this location. What I see is a vibrant community of dog owners who travel from all over to enjoy one of our last resources available to let our dogs run off leash. With our state in financial peril, I find it outrageous that taxpayer money is being spent on this proposal and that even more money will be spent enforcing the new leash requirements, I also find it extremely ironic that a ranger riding around on a horse can leave a large pile of shit on the trail without having to clean up after themselves while giving tickets to dog owners who do pick up after their pets.

Correspondence: As a San Francisco dog owner and dog supporter, I cannot agree w/ your proposed plan. Off-leash dog parks/areas are already difficult to come by and there is NO reason to restrict them even further. Dogs for the most part (grand majority) pose no threat to the habitat and outside visitors. It is extremely rare to see an aggressive or un-controlled dog running off leash or even being walked among other dogs on-leash.

The visitors have plenty of places to visit in Marin Headlands, San

Francisco, and San Mateo taht already do not allow dogs.

The bottom line is that dogs need exercise + socialization and not every dog owner is capable of Running at the dog's speed on-leash. Dogs will become unsocial and destructive if they are not allowed to properly exercise. Please allow the little area that they have in theis area.

I have not seen any scientific studies that prove that the natural environment has suffered because of dogs.

Correspondence: I have been a professional dog walker for 8 years. I am the owner of a

wonderful 6 year old labrador/border collie named Shilo. Shilo's breed requires lots of exercise including long distances of running. She is also very social and needs to play with other dogs. Exercise and socialization are extremely important, particularly for dogs who live in a dense urban environment as it helps them be relaxed and cooperative with all types of people and stimuly. Taking away the areas Shilo enjoys off leash as well as the dogs that belong to my clients (areas we go to are Crissy Field, Baker Beach and Fort Funston) will force us to go to the small, limited dog runs in city parks. The overall impact of this multiplied by many dogs will cause over-crowding leading to unsafe atmospheres for dogs and people.

I have over the years donated much of my time to volunteering at GGNRA and City parks working to keep them clean, planting plants, weeding etc.

I believe there needs to be a better balance in the GGNRA which compliments the vast number of dogs + dog owners in the area. Don't take away the 1% of off leash areas we so value and so need for our happiness + well being!

Correspondence: Re: Ft. Funston

I have been walking my dog(s) for more than 18 years and as I am now retired, I walk twice a day every day at Ft. Funston.

I would be willing to pay an annual fee to be able to walk my dog off leash. This could be a money making venture for the GGNRA - and, in this economy, why not?

Correspondence: -First of all - What is the urgency in which this needs to be implemented?

-Exactly how many snowy plovers have been killed by dogs - I'm willing to bet almost none.

-If you are going to take land away from the dogs - you need to give something in return to them. Compared to other large cities S.F. has the worst and smallest dog parks I have ever seen. There is no regular

maintenance done + the local dog park communities are the ones raising \$ to maintain + upgrade the existing parkls. IE: Upper Douglass dog park - the community raised the necessary money to build a front gate and put in a water fountain. Our parks for dogs should at least be maintained given we all pay taxes. That alone is unacceptable. We need more dog parks - the few we have are all ready full and overcrowded. - which leads to safety and sanitation issues. If you are going to take GGNRA land - you need to use the money raised to give back to the dog community.

-Your scientific data will not be relevant when you expect these changes to take place.

-Puts an unfair burden monetarily on dog walkers and those that own more than 3 dogs.

-Your commecial dog walking Alternatives will put a lot of people out of work - IE- 6 dog limit. This will impact the local economy- which I see is not noted anywhere.

Correspondence: Re: Fort Funston

Map 16-A largely preserves the 1979 Pet Policy and should be permanently adopted.

In the 15 years that NPS has been trying to limit off-lease dogs at Fort Funston, we dog owners have abided by the seasonal closures and illegal fencing of other areas. Since Judge Alsop's decision voiding your attempt to change the 1979 Pet Policy, the only changes to Fort Funston have been casued by Mother Nature. The "Habitat Protection Area" is now a huge sand dune, the cliffs above the "season closure" have eroded because of wind and the sea - the same seas that destroyed part of the Great Highway.

This map, 16-A, preserves the small area of GGNRA which will change because of weather and surf, dogs have NO adverse impact.

Correspondence: I myself am a dog walker and I agree with idea of needing to have a permit and having a maximum number of dogs.

Keeping a head count on the packs can help the land + also inforce fece issues. I never walk more than 6.

However, dogs need to be socialized and exersized to stay healthy. Walking them only on leash does NOT allow them the exersize they so deserve + need. Dog walkers should only take on well behaved + voice command dogs + keep packs small. With both of these in place, people w/out dogs can jog/run + not feel worried about out of control dogs. Any questionable dog stays leashed alll others should remain free! Thanks!

Correspondence: In the middle Ocean beach area there are drawings providing access at Judah Street and Quintara Street. As observation of snowy plovers have been primarily in the Noriega area and close proximity, if restrictions are necessary at all, they should be limited to Judah South to around Quintara, allowing regular historical access to off leash north of Judah Street and South of Quintara.

There is no shown benefit to complete exclusion of dogs for shorebird wildlife encouragement, these leashed walking areas should continue even where off leash is precluded.

In all the literatures and preferred analysis I have seen no sufficient basis for thinking dog walking is at all related to the problems with bank swallows.

If you wish to have an area for access by people without any presence of dogs at all, I recommend the area just south of the Cliff house and north of the beach Chalet (@ Stairwell 19) as such area is clearly seperable and more frequently visited by tourists.

In no case should the GGNRA block off the ability of the park users with dogs to take a long beach walk from the stairwell 21 anex south to the around Sloat.

Correspondence: The preferred alternative for Crissy Field fails to consider the shortage of parking near + adjacent to the field where dogs would be permitted off leash. The lack of parking would prevent many people, especially the disabled and seniors (like me) who cannot walk far, from exercising our dogs (e.g., throwing balls with Chuck-its). Our dogs badly need their exercise and cannot get needed exercise by extremely limited on-leash walking, because we cannot walk very far. We must have convenient off-leash areas. Please change the Preferred Alternative so we can exercise our dogs on the Crissy Field East Beach, where we can park our automobiles and not have to walk far.

Thank you

Correspondence: Professional dog walkers are the main abusers of the on-leash regulations. I have seen walkers with as many as 11 dogs off leash. The result is feces on trails, dogs trampling native plants and sensitive habitat and a threat (albeit uncommon) to the safety of park users, especially children.

Professional dog walkers should be limited to 4 dogs on leash and should be licensed and pay a fee as other vendors do - perhaps a fenced area could be designated for limited off leash dogs. I support the Preferred Alternative Plan

Correspondence: Fort Funston

Leave the 1979 Pet Policy in place. It preserve the recreational uses of Fort Funston from when the city of San Francisco deeded it to the NSP in 1969 (I think). San Francisco has a legal right to take Fort Funston back if NSP changes the use (right of reverter, in legal terms) and we will push the city hard to take the fort back if you restrict dog use. Also, we have complied with seasonal closures & fencing (though both are of dubious value) so what's the problem?

By the way, this "Draft Management Plan" is 14 lbs and nearly \$1 million spent on dubious and often plain wrong "science" is obscene.

Correspondence: As a resident of Marin County and a frequent visitor of Muir Beach and Baker Beach, I strongly oppose to the current proposal of NPS Plan Preferred Alternative D, making it illegal for dogs to be on these beaches. These beaches are special in that they both welcome dogs but also has a clothing-optional section. Making dogs illegal on Muir and Baker Beaches

will negatively affect many, many dog owners who know and love these beaches and care about the ability to share it with their 4-legged friends. The options for beaches to visit with our dogs are already limited and removing these beaches from those options is absolutely unnecessary. I urge you to rethink your proposal regarding these beaches and continue to allow them to be welcoming to dogs and their owners.

Correspondence: Dear Frank Dean.

I am a healthy and responsible 75-year-old single woman with two well-behaved dogs. I live in Mill Valley. My principal source of exercise is walking my dogs off leash twice a day, so I have a very strong vested interest in retaining access to off-leash fire roads and trails. I am also, of course, seriously interested in maintaining the habitat of wildlife and the integrity of the environment.

I assume that you wish to come up with a plan that will balance the needs of 1) citizens with dogs, 2) citizens who are afraid of dogs, 3) habitat that is endangered by dogs, 4) the ability of GGNRA to enforce its regulations. Here are my recommendations which are informed by my Mill Valley location but should also apply elsewhere.

1. Establish a "Voice and Sight" program that is in place in Boulder, CO, to give special identification and licensing to dogs that are under voice control. Here is the link:

http://www.bouldercolorado.gov/index.php?option=com_content&task=view&id=5562&Itemid=411 2. Ensure that all off-leash trails provide a continuous round-trip hike, eliminating arbitrary and confusing boundaries. E.g. Homestead Valley Land Trust trails should segue into GGNRA trails, Oakwood Valley should provide a sensible loop. 3. Protect wildlife when it needs protecting. It is my understanding that Redwood Creek, which empties into Muir Beach, provides spawning access to salmon and steelhead in winter months. If it is

concluded that dogs interfere with this access, ban dogs entirely for the spawning months and open the beach to dogs the rest of the year. This all-or-nothing plan would be easy to enforce and would be easily understood by dog owners.

I sincerely hope that GGNRA believes that dog owners want to be part of the solution and will work with you to arrive at a final plan that works for all of the stakeholders. I have been pondering this response ever since I got the initial mailing in January and attended the presentation at Tam High this month. I hope that my suggestions will be taken seriously.

Thanks ?

Correspondence: I support the preferred alternative. While my preference is to ban dogs from national parks as is the case elsewhere, I recognize that some dog owners feel "entitled" to run their dogs at the GGNRA. So, I am willing to support the preferred alternative. It balances the need to protect the park's resources, as required by law, and still provide more than adequate opportunity for dog owners to bring their dogs to the park. I would like to point out by the way, that I seldom see dog owners using the off-leash areas at Golden Gate Park. Please limit dog use and protect the park's precious natural resources for this and future generations of Americans. The GGNRA is public land - owned by all Americans, not a private dog run for San Francisco dog afficiandos. sincerely, Louis Blumberg, San Francisco resident and former dog owner.

Correspondence: Hello National Park Service/GGNRA,

I am a native San Franciscan, and one of the things I most appreciate about having grown up here is the existence of the GGNRA. I understand the need to balance land protection issues with land use by human and dog visitors, and I also understand that the fragility of much native habitat and the consequent need to protect it is part of a "long view" approach to husbanding our collective resources. All that said, as someone who takes great pleasure in hiking the Marin Headlands Trails with my dog (a dog who is voice-control trained), I do not understand in what way on-leash walking on the Coastal Trail would negatively impact habitat. And finally, in general, I wish to say that I think it is beyond too bad that responsible dog owners (that is, people who clean up after their dogs, people who do not let their dogs tear off through brush/habitat, people who have trained their dogs to respond to voice commands) should have to suffer the negative consequences of irresponsible dog owners, as I believe the majority of dog owners who enjoy the GGNRA are responsible.

Thank you for your time.

Correspondence: Thank you for extending the deadline.

Will you kindly place the sign that tells dog walkers of this proposal in a visible location near the trash cans and/or other hazard signs at Baker Beach? I only found out about this at Baker Beach where I walk my dog regularly because a fellow walker mentioned the sign at the restrooms where few will see and don't go.

I have yet to see the dog poo left behind by responsible dog owners in nearly a hundred days of visiting Baker Beach. I do however see trash left behind by people. Hope at least there will be a large enough section for dogs left to run freely on the beach because we are in the city not a remote parks area and too few places to do so.

Graciously,

Nancy Mondy

Correspondence: Preferred Alternative is much too restrictive in many areas. It seems designed to create non-compliance which will then be answered with even more restrictions. This would appear to be a marginally legal tactic. It's obvious that the NPS just doesn't want dogs in the park.

There doesn't really seem to be much thought given to compromise solutions. The committee would appear to have been a sham that was not really taken into the final consideration. For example there could have been restrictions based on day of the week, peak times, etc. that would be much more suitable and would be met with less resistance.

Overall a pretty poor job ot waste tax payers money to produce a 2400 page document just to achieve your own end goal.

Correspondence: Dogwalkers have become a major problem in the GGNRA because existing leash laws are generally ignored. There are simply too many dogs in the GGNRA to allow for offleash (unless there is a fenced-in dog-run).

Every time I walk on Ocean Beach, Crissy Field/Beach or the Presidio I encounter piles of dog-doo and plastic bags containing (presumably) dog doo. I also see dog guardians allowing their charges to chase shorebirds, which I find cruel.

On the beach at Crissy there must be a great deal of dog pee. That is utterly unappealing for a beach visit. (an pollutes the BAY + LAGOON). I went to Ft. Funston once but will not go back. The place is absolutely gorgeous but it is a reeking dog toilet.

I don't know of any GGNRA place I can visit without encountering dog feces or urine. (The same can be said of the City in general, but this is about the GGNRA)

Being approached by an off leash dog is an unpleasant experience for many, I would like to see Dedicated Enforcement of much more stringent leash laws.

I will leave this anonymously because I am frightened by the militant nature of the pro-off leash crowd.

-With respect-

Correspondence: The reason I rescued my dog was to walk with freedom on Ocean Beach, Crissy Field + Ft. Funston.

We have been doing so happily for 8 yrs. I am not able to run with my dog, due to a physical condition, but he runs with many of his pals almost every day at one of the above mentioned areas. There MUST be a place to let socialized, voice command behaved dogs to be able to run + swim in SF. We have millions of miles of trails + beach that non-dog people go to. I understand "sharing" of Crissy, and maybe Ocean Beach, to the dunes' anyway, and all non fenced areas at Ft. Funston.

Our dogs are part of our family. We don't have kids. The litter less than children + we pick up after them. We pay the highest rents + taxes in CA for the privledge of these off leash areas. They must not be taken away!

Correspondence: Keep it status quo. Improve signage and fences. Ticket the irresponsible dog owners.

People afraid of dogs ought to be educated to help them get over their fear. Dogs are incredible helpful companions - they are missing out on the joy.

All the money used to create these plans could have been spend on improving fences + signage.

Give the rangers the power to ticket offenders.

But do not decrease the off leash areas. Protect endangered species with better barracades.

It's irresponsible people not dogs is the issue.

Correspondence: I might (probably will) mail a letter with additional comments before May 29. But this is my insurance that my comments are in. (I won't be redundant).

I go to Ocean Beach 1-3/4 times a week at various times a day. I've NEVER been there to my recollection with out seeing at least one dog chasing shorebirds, often with the owners watching and doing nothing. Yes, I know this is a minority, but to the migrating birds who need to use their energy to feed, this means that large potential (non-native) predators can interrupt them at any time. The birds are declining as a result. Dogs have other places to go to build community. Frankly, it's not just the beach. I've heard from parents who don't want dogs in the playgrounds where dogs aren't supposed to be, etc.

The National Parks, wherever they are, are supposed to be protecting special status specie. Threatened species, wherever they area. Birds only have so much habitat. Dogs do have more choices. Let the birds have the little habitat we've left them. Let the dogs play elsewhere.

Correspondence: As a dog owner of a 4 year old lab who daily visits East Beach, what about the option of time restrictions for ROLA? No weekends, but M-F 6Am-9AM?

My dog adheres to voice control but needs more exercise than a walk. This is my neighborhood and where we spend hours.

I understand the tourists and beach goes and the problem with enforcement. It just seems like good signage could be an option.

Thank you for your consideration.

Correspondence: These plans are focusing too much on limiting dog off leash areas. If anything it ought to be kept the same or expanded. It's essential to quality of life.

Increased visits are not a problem to my mind as someone who visits 3x a week. If people have any altercation it's really rare.

People - tourists come to see the dogs free and running.

These GGNRA areas are used very heavily + devotedly by dog owners + dogs. It is often mostly this segment of society, these areas must be kept open as such.

Put up better barriers for protected areas. Post signs encouraging dog owners to be more responsible. Support + promote dog usage - and watch how well people respond. In kind, penalize the irresponsible.

Correspondence: I will keep these comments short and to the point.

I love dogs, and I enjoy seeing them run free in ROLAs and chase balls and frisbees.

I love birds, including shore birds and birds that are ground nesters.

In general, I am pleased with the plan and its balance.

I think the aims for dog companion human compliance with the regulation

should be higher than 75%. 90%, say, or 95%. 10% of those who use the parks with their dogs is still a LOT of people.

I think there should be more consideration of fencing, since not all humans love dogs the way I do. Some are afraid of large dogs, even well-behaved ones.

Thank you for all the work that went into the Plan and for the public comment period.

Correspondence: As a fairly new Bay Area resident (I moved to San Francisco almost two years ago), I have already come to love and depend on off-leash dog areas such as Bernal Heights Park, Ocean Beach, and Fort Funston Beach. I moved to the city with my boyfriend and our dog so that my boyfriend could start a company here. His company is based in SOMA in San Francisco and we live in the Mission. We are full-time city residents bringing jobs and our hard-earned money to this city.

And because we live in the city, we don't have any outdoor space for our 75-pound dog. Areas such as Bernal Heights Park and Fort Funston are our backyard. That's how it works for urban dog owners. And I treat these areas like I would my backyard - keeping them clean and picking up after my dog; not allowing my dog to dig or destroy plants or wildlife. And I treat the

other people in these parks like I would my neighbors - with respect.

We rely on these off-leash areas to provide recreation for ourselves and our dogs. You can't expect people to live in your cities and support the vibrancy and economy of your cities if you don't also provide them with easy access to outdoor areas where they can exercise their pets. Dogs who don't get real exercise (and a 30-foot enclosed dog park doesn't count as real exercise for big dogs), are restless, bored, and destructive. Having real outdoor space in which to run and play is a necessity.

I urge you to consider the thousands of responsible dog owners in the Bay Area, such as myself, who rely on these recreation spots on a daily and weekly basis.

Thanks for your time, Brandi

Correspondence: Other parts of the country seem to have found more creative solutions than taking the approach of restriction.

What about -->

- Making one of the sites like Ft Funston be a destination "center of excellence" ot dog mgmt. Bring in corporate america to help run in like curry village with 41 Billion spent on pets we can find someone.

-Create time restrictions in densely populated areas like Chrissy Field - weekends before 9 after 4.

restrict Ocean Beach during the summer time - have it people only like dog beach in San Diego.

With signs and clear rules "enforcement" will be just as difficult or easy as the current proposals.

Make this an opportunity to colloborate on a solution not dictate.

Correspondence: It is obvious by the attention this topic generates that the current plan threatens the quality of life of dog owners.

Walking my dogs is my form of recreation. And I abide to all the posted rules. The "poison pill" in the proposal is akin to saying of some toyota owners speed on the freeway then all toyota owners are banned. It isn't fair to those of us who do abide.

I also think that the core values of the governing body of GGNRA do not put people first, but natural resources. The national park system is critical + vital to our country, but this land is in a densely populated area and we need it to balance the needs of people.

This is not a "dog" issue, this is a "people" issue. I am a homeowner in SF, pay taxes, my employer pay taxes, it's important to me that my needs are met too!

Correspondence: The proposed GGNRA Dog Management Plan (the Plan) should NOT be allowed to go forward. The Plan is unscientific and does not take into account the impact on all constituents, in particular, the large number of area taxpayers that have historically exercised their pets off leash in various areas of the GGNRA.

For the last 10 years, I have run my two dogs off-leash every morning at Crissy Field and the West Beach. I am one of a group of regulars that are often out there every morning, sometimes well before dawn. We know and watch out for each other and care deeply about the area. Recognizing the great privilege it is to have access to this area, we clean up after our dogs, police the area for trash and ensure that our animals stay off the dunes and generally behave. It is usually one of us who notifies the authorities when a seal or other injured mammal washes up on the beach. When we spot the rare dog owner who does not know or is not respecting the rules, we are the ones who inform and enforce.

Under the Preferred Alternatives, many off-leash areas will be closed or become on-leash only. This will force larger numbers of people and dogs onto the West Beach and the portion of Crissy Field that will remain off-leash (more on that silly proposal later). Overcrowding will only serve to increase the number of incidents and contribute to a degrading of the environment. I suspect that the NPS is hoping this will happen and will use it as a reason in the future to close off even this last remaining off-leash area.

With regard to the proposed on-leash restriction of the east portion of Crissy Field, this seems very silly. I asked a park ranger at the open house to explain the logic behind this proposal. He said the NPS would like to host more events "such as weddings" in this area. Really, weddings? Occasional events are already hosted in this area (breast cancer walks, races, etc)with no

apparent conflict, so why close it off for the rare additional event.

Thank you for opportunity to comment and express my displeasure with the proposed Plan.

Correspondence: To Whom it May Concern,

Please do not adopt a policy that prevents people & their dogs from the freedom of walking without a leash. It is very important to consider that not only are dogs benefiting from the freedom but people too. I have lived here some 30 years and the freedom to walk has been limited to 1/3 of the space it was say 8 years ago.

I am psychologically benefited by my walks on the beach. I meet others like minded. If my dogs were on-leash - one I wouldn't be inclined to use the park and the park should be for the public for everyone to use. I wouldn't have to stay in my apt. or be relegated to using only the dog parks.

-Also, if the dogs are on leash - I - ME = I = Don't get to take in or appreciate the beauty of the park.

In all the years - all the times I've walked my dogs - usually every day - I've only had one problem with another dog.

Please don't do this - Don't ruin my freedom to use these lands in this city.

Correspondence: I have been walking on Crissy Field 5 days a week for almost 20 years. I believe the problem of off-leash dogs has escalated tremendously over the last 10 years since the Promenade Trail was refurbished. In my estimation, the professional dog walkers are not the biggest problem. Most of them have their animals on leash until they reach the water's edge. However individual dog walkers or runners or those who walk their dogs while chatting with friends are frequently not paying attention to their animals. Not a day goes by that I do not see a dog defecating while the caretaker is far ahead or behind the dog + does not see, or ignores, the dog's dropping + therefore does not clean up the mess.

Additionally, Crissy Field is used by the frail elderly; mothers with baby's in strollers, baby joggers or in arms; small children on bikes and people with canes, walkers, etc. Loose dogs can be a real hazard to these people. I have seen runners tripped by dogs. I, myself, have been jumped on, growled at and knocked into by dogs. Most owners appear not to understand the meaning of the phrase "Under Voice Control". I have also seen people take their dogs off leash, down to the restricted areas of the beach, chasing birds and even once, harassing an obviously sick harbor seal.

I would like to see dogs leashed at all times on the paths and also see rigorous enforcement of protected areas to keep them free of dogs.

Correspondence: As I long-time city resident and dog-owner, I ask that the Committee please rule out options B and D. Dog-run areas are a vital part of what makes San Francisco the fantastic, livable, vibrant city that it is. As the city has seen waves of new parents flee the city over the past few decades as housing prices elevated and school quality decreased, we could also see dog owners live in and visit the city far less should these areas be taken away. Commercial dog walkers are also vital to our lifestyle in San Francisco. Like many residents, my husband and I work full time and don't have a backyard. It's only through the services of responsible dog walkers that we are able to make the city work for us.

Correspondence: I am a long time resident of San Francisco. I love GGNRA and Ocean Beach in particular. It is one of the best attributes of the city. It absolutely should be protected as much as possible for the future enjoyment of the next generations. My comments here are pointed at the protected Ocean Beach area south of stairwell 21.

The principal manner in which residents and visitors alike enjoy Ocean Beach is through in person visits, not necessarily by walking their pets there. I say this as I would like to clarify that the future enjoyment of that part of GGNRA is not dependent on permitting access by dogs.

My main point is this: Dog owners have alternatives as to where to walk their dogs. The local wildlife does not have alternatives-the beach is their home.

This is a simple but powerful argument because it is true. Most dog owners can choose where to walk their pets. Snowy plover, common murre and other endangered birds do not have a choice. The beach is their home. Sea mammals also live there and are also affected by the waste dogs produce. Our enjoyment of the area is not necessary; our best efforts in preserving their home is.

The entire eco-system on Ocean Beach is already under pressure from the phenomenal amount of oil that can be found on the beach on most days. The amount of plastic on the beach is also heart-breaking. I walked there today and in five minutes had more plastic waste with me than I could carry. It does not make sense to deliberately create an environment which makes sustaining wildlife more difficult than it already is.

The birds are continuously being harrassed by unleashed dogs at Ocean Beach in the protected areas. I would contend that increased limitations on access is needed but **THEY MUST BE ENFORCED** diligently. Please step up enforcement of all regulations throughout the beach, not just in the parking lots. I see empty alcohol bottles regularly and under-aged drinking often. An un-enforced law or regulation promotes disdain for law in general and is counterproductive.

I saw today alone in 15 minutes over 10 different dogs off leash in the protected area. I remind folks that dogs should be on leash; this is not always well received. It seems like fining first or repeat offenders could easily generate enough revenue to pay for further law enforcement.

Thank you for considering my opinion.

Correspondence: I have read over the Executive Summary, and I strongly believe in the preservation of our national lands, especially because they were created to save what beauty is left for the public to enjoy. I am in agreement that dog management in the GGNRA has to become stricter. I live in Sausalito, and I am a regular visitor to Rodeo Beach. I run, bike, and hike in the Marin Headlands every week. I also want to make it clear that I love animal companionship; my family has 3 dogs and 1 cat. Our pets are near and dear to me as if they were my own children.

As far as dogs on the beach go, I feel dogs need to be leashed when they are outdoors - even more so when they are in protected public lands. Because I go to Rodeo Beach every week, I have seen how wild (and calm) dogs can be. Dogs cannot be blamed for their excitement; instead, dog owners need to take responsibility for their pets. Dogs cannot be trusted solely on voice-command, especially on the beach where the waves are loud and the wind makes it hard to even have a conversation, let alone yell instructions out to a dog.

These are the reasons I believe dog owners need to be accountable for their dogs, and why dogs need to be leashed at Rodeo Beach: - I regularly find poop bags right on the beach or right off the trails. Perhaps dog owners mean to pick up the poop bags on their way out after a walk, but often times they don't, so I end up picking up after dogs who aren't even my own. Many times these poop bags are just across the bridge from the "pet waste" container. - Some owners don't even bother to pick up after their dogs. I can't walk barefoot at the beach without watching my every step to make sure I don't walk on pet waste. - Dogs have eaten food right out of my hands when I'm picnicking on the beach. How can I have a picnic with my friends and family when dogs are always running up to us and taking food away from us? I don't feel safe with the children around unattended dogs. What if one of them gets bitten? This can be how children become fearful of dogs in the first place. - Dogs run right into the lagoon, disturbing and scaring away wildlife - ducks, cormorants, gulls, pelicans, etc. I have even seen people chase their dogs into the lagoon. This really upsets me. - Dogs run off trail, and onto the plants on the sand dunes, probably stepping on the nests and eggs of wildlife. I don't want to see the majestic Killdeer disappear because its young are being trampled by dogs. - Just a few days ago when there was finally sunshine after a week of rain, on Saturday March 19, I left my shoes and rain jacket on a piece of driftwood so I could walk in the waves. Then a schnauzer named Rocky peed on my belongings as Rocky's 5 adult

companions looked on, assuring me that everything was all right. How rude and disgusting. How would Rocky's owners have felt if I peed on Rocky, or if my dogs peed on their belongings? Rocky was not on a leash, nor were his owners even trying to use voice-command to control his behavior.

I love dogs, but dog owners need to be responsible for their pets. I believe dogs need to be leashed at Rodeo Beach, along with other places in the GGNRA. If there are dog-friendly, leash-free areas, that would be fine as long as dog owners pick up after their pets and they are obeying the leash law.

Correspondence: I am a dog owner (have 2 border collie mixes) and we live in Marin County. I walk my dogs twice a day, everyday, rain or shine and always off-leash.

1) There are many, many wilderness areas within GGNRA that are close to being pristine - with abundant wildlife and plant life that should be protected, with minimal impact by humans or domesticated animals, because un-fortunately these all do impact these areas negatively - these areas are so vast, it would be impossible for rangers & park police to patrol adequately.

2) GGNRA is actually being generous in providing ANY off-leash dog

areas at all. Most national parks do not do this.

3) There are AMPLE other off-leash areas in Marin & SF & the East Bay, e.g. almost ALL the fire roads within open space district parks. And there are numerous dog parks everywhere. I feel the combination of these & areas provided by GGNRA provide more than enough choices/variety for any dog owner.

4) The charges, I feel, are brought about by a few bad apples ruining it for other responsible dog owners - there needs to be more education of dog owners, especially those with poorly socialized/aggressive animals.

Correspondence: Hello, I am a dogwalker & also train dogs. I have been doing this for the past 13 years. I have been taking the dogs that I walk to Ft. Funston (mostly), Crissy Field, Ocean Beach, and Baker Beach for years and have discovered that dogs (when walked together and off leash, under voice control) behave so much better, as they become much more socialized with other dogs, people, children.

I believe that all of the San Francisco County should stay with Alternative A. I feel that cutting back the area we now have would be a disaster. There are almost 200,000 dogs in S.F. alone. We need more areas to walk dogs off leash, not less.

I have never seen any indication that dogs cause environmental damage. The only beings I see causing environmental damage are humans.

I also read a clause in the DEIS that states, when all of this goes through, of 25% of the people break a rule, it will default to the restrictive plan originally proposed. This is setting it all up for failure, as there is always one (or more) people who break rules. I believe that clause should be eliminated.

I am also happy to pay a yearly fee, as a dogwalker, to help the GGNRA.

Correspondence: My dog walks at least twice a week at Crissy Field - most of the time she is off leash. In all of our outings I have yet to see an off-leash dog interfering with the habitat. I have seen children chasing birds on the island in the lagoon and jumping on the dunes within the roped area but never a dog. I am always impressed by how well the dogs and their guardians behave. Dogs need to run not be restrained by leash to maintain their well being. Crissy Field has availed this opportunity while enabling me to enjoy the remarkable setting. I have bee using Crissy since 1976 when I moved to the area. I has always been a source of relaxation for me. The NPS is being short-sighted in trying to restrict access to a public and urban park that is funded by tax payers and private individuals as I have done through GGNRA. THE \$\$\$ that have been spent to promote this unnecessary legislative action could have been spent in a more beneficial way. I am completely opposed to the restrictive plan of the dog management plan.

Correspondence: I want to congratulate the Park Service for creating a meeting format that feels safe, secure, and gives a wonderful series of opportunities to express my opinion, both personally, in writing, on the easel boards, and on-line. I felt well briefed, given much personal time, and all questions were answered.

Because the "surfer" parking lot is being removed above Rodeo Beach by Fort Cronkite, it would be better for the future bird populations at that wetlands-to-be if the ROLA on Rodeo Beach were constrained from a further 50 meters on the north side. Preferrably, no dogs on the beach, but the preferred alternative could be improved if the northern boundary of that ROLA were moved south 50 meters.

Correspondence: I feel that the Ocean Beach issue is unrealisti - there is no evidence that the birds are undully disturbed by people or dogs - the vehicles may tho- it is

denying the residents that live in the Sunset the ability to use the beach - if the birds were nesting there it would be different.

At Ft. Funston it is a wild place weather wise most of the year + as an urban recreation area it does not need such major restrictions - if the professional dog walkers are going to be required to reduce the amount of dogs they walk the major objections will be taken care of - too many dogs at 1 time - the restrictions on the beach for the bird seem to be sufficient -

If the fort is taken back to 100 yrs ago - if will be blowing sand across the highway + into the apt complex + Olympic Club - I can't see where that benefits anyone.

Correspondence: -There is a huge population of responsible dog owners and their pets in Northern California. This plan seems to ignore this population, and their need for health, exercise, + enjoyment. There is already so little parkland that is available to dogs and their owners. And now that is going to shrink? Seems horribly restrictive + unfair. Many dogs need to run + play to get proper exercise, and that can't happen on a leash.

-What about seasonal restrictions vs. permanent?

-What about having designated dog areas (large areas) that are primarily for dog use? They could be maintained by a dog use fee. Personally, I would agree to pay a maintenance + restoration fee to continue to use these off-leash areas.

-People do far more damage to our environment than dogs. Look at the amount of natural resources that are destroyed + damaged by people - it's huge. Dogs don't do anywhere near that kind of damage.

-I always thought of this city (I've lived here for 17 years) as being a very liberal + compassionate city. But this changes that vision. This highly restrictive plan is really sad and will really hurt the joy + enjoyment for many people and dogs.

Type:

- Correspondence:**
- 1) The Compliance-Based Management Strategy is unfair and needs to go. It allows a relatively few bad dogs owners to determine how the rest of us get to use the GGNRA.
 - 2) When dogs are walked responsibly in areas under voice control there is no conflict with park rules and the enjoyment of the GGNRA by everyone.
 - 3) The proposed alternatives for Crissy Field Airfield is so arbitrary. It makes no sense. It is a "line" with no geographic meaning.
 - 4) Dog owners are currently able to only use 1% of the GGNRA. For people who want to enjoy the park dog free- they can go to the other 99% of the park. We dog owners can't with our dogs.
 - 5) Cliff swallows at Fort Funston: The nests of the bank swallows are way too high for a dog to bother. Reason for the on-leash does not make sense based on this reason.
 - 6) Lots of the data and studies faulty: Northern Arizona University and SF State data about minorities fear of dogs in parks. Do better studies with larger pools of respondents.
 - 7) Fence off areas where snowy plovers breed during nesting season. Don't use the blanket excuse that dogs bother them when the 1999 Hatch report observed a tiny number of dogs chasing birds.
 - 8) The park is for everyone to enjoy and you are creating much more restrictive rules for one class of people: dog owners and their dogs.

Correspondence: I am a dog walker who usually frequents the GGNRA lands known as Fort Funston. My dogs & I love it there. I keep them under voice control & out of areas that are indicated as protected. I pick up there poop, & as much as other poeple that I see. I do not take more dogs than I can handle. I try hard to be responsible.

I do not see all people doing this. Many people do not pick up after their own dog. People should be held responsible to the rules that already exist regarding picking up poop. Perhaps supplying more bags - biodegradable would be best - & more can would help. Also peer pressure could help.

I try to keep my dogs behaving properly & were permitted. However it is very difficult to tell regarding certain area if they are protected or not. The fencing is inadequate!! My dogs & I love to access the beach when weather & pack make-up permit. This includes me - a 50 plus year old female dogwalker. I manage my dogs by voice control - I do not believe I can safely manage 6 of them on leash going down hill on rocks & sand toward the beach they covet to be at. I am afraid I would be hurt regularly even attempting this - knee? Shoulder? Head? - who know?! So would other people. Many would not even consider attempting it, thus making this area less accessable! Less accessable = very bad!

Correspondence: I would like to see as many areas kept open to dogs + their owners as possible. I see the threat of human encroachment, pollution. + trash accumulation as greater threat than dogs. Therefore, in the spirit of Jogn Steinbeck, Jade London, + John Muir, I suggest keeping lands open to dogs - and if I could vote on these - I would recommend Alternative A (No Action) in the majorit of cases. If dogs are a problem to some areas, it's not the dogs, but the owners. For this I see several resolutions (1) provide more gated/fenced areas for people whose pets are not under voice control; (2) fines- fine those owners whose pets are aggressive, observed disturbing wildlife, + owners who do not pick up after their pets; (3) initiate a \$12-\$15 special tag for dogs + their owners to use areas - offleahs or on-leash (4) a certification (?) for dogs under voice command. Let's face it, dogs need space to run uninhibited. How has civilization gotten this far w/o so many rules + regulations? (Really, we need fewer laws and not more.) I'm all for

coastal preservation, but I also see rising sea level + natural erosion as greater threats to wildlife + the environment than peoples' dogs. One rep at this event told me that a dog's digging had contributed to a bunker's concrete fail. Really? A dog broke a bunker? I think the GGNRA should focus more on crime, trash + pollution in these areas - and less on trying to control people's lovable pets. I see on the "Elements common to All Action Alternatives - no dogs in campgrounds or public buildings." Really? So the family that travels w/ their pet can't have it in their campground? Are we to leave our pets at home or with dog walkers (who can only take 3 pets at a time to an area). Do you feel the absurdity?

Correspondence: OPPOSE Proposed Plans

Please keep existing (1979) plans and close/change rules only on a case-by-case basis after public hearings.

Specific Concerns:

Mori Point- keep Plan A - all trails open to leashed dogs. Proposed plan forces dogs onto trails most used by elderly + small children (low, flat) - and denies access to longer, more rugged trails needed for dog exercise.

Milagra Ridge- proposed plan essentially closes the entire park to dogs - the single open trail is inadequate

Fort Funston - proposed plan forces too many unleashed dogs in a small area - likely to increase conflict + problems

OPPOSE proposed plan Please keep Existing (Plan A) usage

Correspondence: I expressed these comments to a ranger and she asked me to write this short note. The everyday users of Fort Funston would like to see it remain as is. It is a safe place for both people and dogs and receives maximum usage. The parking area is full on the weekends, 75 percent full or more on the weekdays. Changing the policy will not increase the amount of use. Educating the users of the park in ways to preserve both the current use and the natural surrounds would be great. For many elderly people Fort Funston is great because they can walk themselves and their dogs. Many elderly have a difficult time leash-walking. I think more of the regular Fort Funstoners would be willing to stay out of a few sensitive areas as long as the majority of the park remains off-leash. Pacifica will be impacted negatively by any change to Fort Funston.

Lastly, I want to state that I do not believe Public Policy can be changed without having a public forum or public hearing, which this is not. That said, the rangers were great, but there was no room for debate. It seems to me the decision has been finalized without a true public hearing.

Correspondence: I live in the neighborhood of Mori Point-

Mori Point: First thank you for the excellent historical references done on signage about the Old Mori Inn and the Mori Family. I'm a member of the Pacifica Historical Society and you did a comendable job.

Mori Trails; I support Mapt 17-E for on leash dog walking, but want access to the bootleggers Steps as well as Lishumsha trail. Also, I'd like to continue walking my dog on leash out to the end ofthe Point at Sunset.

Lishumsha Trail in particular is very smooth for wheels. My neighbor uses an electric cart and occasioanlly comes out with us on walks. Keeping this section of the trail open to on leash dogs also keeps open a good access for disabled visitors with pets!

Bootlegger's Steps are easy for me to go up with my dog, but I can't go down them. Knee problems! Please keep the steps open to on leash too.

* If you post more (more than one) Coyote warning signs around Mori Point, people will be less tempted to let dogs off leash!

Fort Funston: Map 16-E would provide enough off-leash access and preserve natural settings too in my opinion.

I don't envy what your trying to do. You can't please everyone but hopefully your decisions will allow pet owners to still have access to these beautiful areas. And in the process pet owners gain a greater respect for these areas and abide by the rules a little better. Most alread do. More cyote warning signs should help with those who don't.

Thank you!

Correspondence: The Crissy Field planning is of central interest as I use it ever day with my dog. I have used the area daily for many years prior to the U.S. Army's departure. I begin with the thesis that most dogs have to run for the sake of their health and mental balance. Plan B denies this need completely. Alternatives D,C& A appear to distort the logic of sharing between people and dogs...a logic we must all respect. Why put the off leash space in the most people-crowded and busiest area for people? At the same time leave the least used and furthest from parking etc. as a leash area (the area of the field nearest the lagoon) and the most poorly maintained grassy area)? This eastern area does not affect the lagoon, it is broad and does not cramp running dogs the way having the off leash area at the other end would. In short these alternatives have it backward.

Give the children and families that cluster from the swimming pool, trampoline, picnic and other activities at the west end their space. Let dogs run in the wider, but lesser used eastern end of the field which is full of gopher holes.

Thank you, James Noyes

Correspondence: I am very disappointed with the proposed restrictions on dog walking. I contribute to the California Golden Gate & Ntl Park Services, primarily because I see the need for parks and can use them.

1) The ability to bring a dog w/me on my walks allows me to use the trails. It is safer on many levels..I wouldn't go on many trails alone without my dog.

2) Dogs have to be able to run. They are healthier, less aggressive, and better socialized if they are able to run free. On leash, many dogs become

territorial.

3) We have so few trails as it is. Why restrict them further. It would be nice to see some trails extended so you can go from point A to point B (ex Rodeo Beach to Tennessee Valley) or in a loop (Oak Valley Trail). Instead the trails seem to go from Point A up and back.

4) If the dog walkers are the problem, address the problem not the whole. Limit the number to 5 or 6, but don't punish all of us for a few's indiscretions!!

5) We live in an urban area. We have changing demographics. Dogs are part of the family and should be allowed to come with the family. You are limiting too many people with restrictive regulations.

continued

6) While the GGNRA is part of the Ntl. Parks, we need to acknowledge that the uses, maintenance, and funding is different.

I donate to the GGNRA because I want to keep the trails up and maintained - for hiking, biking, running & dogwalking.

If we were in Yosemite or Glacier I would understand the safety precautions associated w/keeping a dog on-leash - namely bears, cliffs and waterfalls.

We are not in Yosemite, rather in Marin. Let the dogs run freely as long as the behave and owners do as well.

Go ahead and fine people for not picking up the poop or for having 15 dogs off leash, but don't punish us for taking our 2 or 3 dogs for a run -

This is getting to be really stupid and makes me wonder how else is the government wasting my tax dollars - How much have we spent on this ridiculous decision already - what happened to the deficit and saving money.

Correspondence: Hi Frank and Dean,

Thank you for all your efforts today. It's very impressive!

Ft Funston: How about putting some \$ into making Sunset Trail - really fist rate - extending it out to old sunset trail repaving - maybe a railing for elderly, tourists, baby prams etc. This is the scenic sensational view + make it off limits to dogs, and then keep the traditional use of off leash to the rest of ft. Funston. In my 40 years in SF this is a treasured haven for dog walking community. We do cleanups, encourage good dog citizenship

continued

we must respect the intent + the spirit in which these urban recreation areas were handed over. Its a recreation area for SF residents. Rather than more limitations on off leash areas, we should be making more room.

Living at Ocean Beach. Except on beautiful weekends, we (dog walkers) are the only people at the beach. Enjoying the fog. We pick up broken bottles, beercans, trans. Call in about seal pups, dead seals, et... I have never seen a snowy plover + know they are plentiful in other areas + river beds + resent having our needs as residents being subverted - to a bird that is using an urban park - dogs that chase birds should be leashed, but not all of us responsible dog owners.

Correspondence: To Whom It May Concern,

Yesterday as my dog, Coco and I were walking to the beach at Fort Funston, I tried to count the number of people there without dogs. How do you count zero? If it weren't for Coco, I wouldn't frequent the wonderful Funston or developed great love for Ocean Beach. We love both beaches, but the freedom of Funston's off-leash policy rules.

Protecting wildlife and natural areas is absolutely essential. I only hope you understand how essential it is for our dogs to have LOTS of room to run and play off-leash. Coco really takes me for walks. Without her I would spend too much time inside, never having the healing experiences we share at the beach.

As for park personal's safety - I haven't seen a park ranger at Funston in over a year...unless the topless vagabond living on the beach like a castaway is the ranger? At Ocean Beach they drive in trucks, never getting close enough to be in danger of attack. In all of my experience of long walks at these two beaches I have seen maybe 5 doggie dookies. One of those may have been

human.

Please don't limit our dogs to leashes. We both need the space.

Best, Maria Gillespie

Correspondence: I have been walking on Rodeo Beach since I was 10 years old (1957) and since I was 20 I have been walking dogs there: Hottie, Reicher, Jet, Coco, Willies, Blue, Colby and Lola. I have never seen a dog fight that resulted in anything but a growl. I have never seen a person bitten. Any trace of these dogs is non-existent, and their impact is negligible. The human impact is enormous- constant waste washing up: medical, industrial, construction, fast food, maritime and food packaging. As such to judge the impact of dogs seems absurd and arbitrary. The entire time I have walked out there I have seen rangers (or in the 50's & 60's maybe an M.P.) a total of less than 10 times.

The experience of walking on that beach with one of my dogs is a spiritual experience - the absence of humans and the presence of a dog - in the mornings, between sun-up and 10 or 11p, maybe 10 of us walk our dogs - year round - there is infrequently anyone else there except surfers, bird watchers - maybe a grade school class once or twice a month. We have the beach to ourselves. We pick-up all dog waste and probably 15 cu yards of human trash a year. The dogs hurt nothing and the experience is wonderful.

Give the entire beach to dogs in the AM + divide the beach between dogs and humans during the middle of the day - again because by 5p everyone else is gone. At the times of year when one is able to walk the entire beach (both north and south) let dogs walk it. The entire beach is only open a few

weeks during the whole year - usually winter.

Thank you

Correspondence: I have been a dog walker + dog owner for 16 years + I need a place to take my dogs off leash. Not just in a little enclosed park area but a real hike. My dog owner clients need a place on the weekends to hike w/ their dogs + to enjoy the beautiful sights of Crissy Fields, Headlands, Muir Beach, etc.

I am a very responsible dog owner + dog walker only taking 6-8 dogs + respecting the environment. I make sure the dogs are all on voice control + stay near me at all times.

Please don't take our wonderful hikes away. On the weekends, my kids + I love to hike on the trails w/ our dogs in the Presidio or headlands. I think it is important to teach kids how everyone can coexist together.

We needs some off leash dog walking areas + real hiking areas not Mill Valley dogs parks.

In addition, I think limiting dogs in one area like dog walkers gathering should be stopped. I believe this is part of the problem when 3 dog walkers gather to chat you will see 18-21 dogs which is intimidating to some people. 6-8 dogs per dog walker is great but no gathering will probably alleviate the problems.

So in summary, please keep real hiking trails + beaches available for off leash dogs + limit gathering of dogs.

Correspondence: (1) Chapter 3 table 6 stated only 3 incidents @ Muir Beach. Yet you're closing the beach. Seems to me that the environmental impacts reported do not substantiate the recommend proposal.

(1a) Muir Beach has fewer incidents than Stinson yet is more restrictive. Don't understand logic.

(2) A management plan should propose managed spaces not prohibitive spaces. For instance allow diff. times of day when dogs can be off-leash, ie early morning when they wouldn't bother visitors.

(3) Muir beach should protect the lagoon but provide ROLA areas. Alt 5-E is more appropriate.

(4) Humans cause impacts at Muir Beach in fire pit & picnic areas more so than dogs.

(5) Dog owners @ Muir Beach pick up after out of town visitors.

(6) If NPS is advocate for: environment and people enjoying parks why would you force dogs into other parks, open spaces and trails? This will cause larger impacts at fewer places. This is a not in my backyard mentality.

NPS should evaluate habitat from a holistic stand point rather than through its own lens. Habitat moves through corridors and connections not in one, singular place.

Correspondence: Fort Funston: I prefer alternative A because I believe it is already a restricted areas. Fort Funston is a wonderful, iconic place, a place in which we take complete pride. 99% of the folks who go here stay on trail with their dogs, pick up poop and have good voice control. If they must increase restrictions than they should at least create an area where people can get a good walk and the dog can get exercise. At the very least make the off leash are from the parking lot all the way to the beach access trail and also from the staircase to the bottom of the beach trail.

Anything less than this is destroying what is wonderful about Fort Funston.

Leave the following area off leash: Entrie loop from stairs to beach access trail, in loop including beach. Then enforce the rule!

Correspondence: My husband + I are senior citizens, both with health conditions. 2 years ago we got a dog instead of going on medications - she was a young (18 mo) chow/shepard mix + she had transformed our lives! We take her to Fort Funston 3-4 days a week, + walk 2+ miles with her on + off leash. She loves to run, + socialize w/ other dogs + we've put a lot of time + energy into training her to be well-behaved around hang-glidgers, horses, + people as well as animal life including other dogs.

I was horrified when I saw the drastic reduction in on + off-leash area proposed in the DEIS - it's a recipe for failiure considering how many dogs there are in The City as well as San Mateo Count, which has very limited off-leash areas.

I am attaching the flyers which I brought with me today which contain other

criticisms of the draft.

Please help our dogs and us!! We need to play too, & space to do it in. Retain existing off-leash areas so we can provide proper exercise -- Can't fetch, run, play w/other dogs on-leash.

Enforcing this plan will waste precious tax dollars which should be devoted to the impacts of global warming on the GGNRA, including the reduction of snowy plover habitat at Ocean Beach & the cliff habitat of bank swallows.

Eliminating dogs from huge areas of the GGNRA will invite incursions of feral cats, homeless encampments, rats, and coyotes, all in residence 24/7. Is this really what we want?

This plan will drastically reduce access to the GGNRA for dogs and their owners, it will prevent 200,000+ dog owners from getting proper off-leash exercise with their companions. Please help!!!

Dogs, dog-owners and walkers have provided protection from inappropriate behaviors at the GGNRA, as well as participating in clean-ups and other environmental initiatives; this should be a model for the Park Service and not treated as a problem to be controlled and eventually eradicated.

Correspondence: I have been a citizen of San Mateo County for 12+ years, its the most wonderful place to live, with that being said, I would like to comment on "Rancho" in Montara. Rancho was known as McKnee Ranch which many still refer to as such, its a dog walking + horse back riding paradise in a area that is turning from rural agricultural to urban. I have walked + ridden there trails for all that time, lately however I am taking note of the amount of dog walkers on these trails. Dog walkers are the majority no doubt about it. People love their animals + they really are part of the family, therefore we enjoy our time with them + wish the GGNRA to consider our family members. Let is continue to enjoy, preserve, and maintain a most beautiful area of our county + coast line.

Please consider the majority + let us enjoy the trails either on or off leash.

One other point, recently someone was hit on the road walking their dog as well as a dog hit while ON leash. This is a dangerous situation don't let this be the only place to let a dog be a dog.

Thank you,

Dorothy Cendell Montara, CA

Correspondence: 1. Keep Fort Funston as is - i.e. off leash dog walking where it currently is allowed.

2. Do I understand that under your recommendations there is to be no unleashed areas in Pacifica?

3. This land belongs to us. We've just appointed you to manage it for us. Please remember this. To best serve all of the land's owners, make a few well defined parts of the GGNRA open to off-leash dogs (Fort Funston, Mori Point, and a few others). People who don't like dogs will have to limit themselves to the other 97% of the GGNRA - all the parks those of us with dogs will not be able to enjoy.

Correspondence: I am a dog owner currently living in Pacifica, and I used to live in San Francisco. I have owned and walked dogs in both places. Specifically, I enjoy Crissy Field, Ft. Funston, and the Linda Mar/Sharp Park beaches with my dog and child.

I feel very strongly about maintaining off-leash areas in these locations. Open lands and our natural resources belong to all of us, and as a law-abiding tax-payer, I wish to protest further restrictions in our beautiful wild places.

We need to find common ground - literally and figuratively- with our non-dog-owning neighbors on these issues. Satisfactory compromise is possible, and imperative.

Please keep our open spaces accessible and off-leash.

Thanks!

Correspondence: I am a Montara resident (a dog owner) who lives at the corner of the Rancho de Corral space at Tamarind + Edison Streets.

2 Issues- (1) Proposed parking lot at end of Le Conte by school w/connector road to the above corner (in heart of residential Montara) Cons: In heart of community, where children walk to + from school daily; this parking lot will be opportunistic for off-hours mischief (do you know how many condom wrappers are picked up daily at Mussel Rock? Do you want the children to walk through all this new trash?) and child predators, as most of the children walk to + from school without parents.

Also, connector will encourage more outsiders to community to walk through to the residential areas and on the trail to open space (technically a paper road + county land) beside our property, where I have built a bridge for community use. If this happens, I will remove the bridge which all of our neighbors use.

2nd Issue- dogs off leash - will be addressed in online comment

Correspondence: My main area of concern is Mori Point, because I live in Fairway Park. The availability of the trails as they are (Alt. A) is my strong choice. I walk one dog nearly every day, and access via Pollywog Path. My dog is always leashed. Most dogs I encounter are leashed as well. I have never seen an aggressive dog incident. "Pooper scooper" rules are well-followed. I see less dog waste on the trail than I do in the neighborhood! We, the dog-walking community, are remarkably respectful of the resource we have at Mori Point.

To restrict dogs from certain trails in Mori Point would (in my opinion) negatively impact the property values in Fairway Park. Lord knows we don't need THAT! Every time a home comes up for sale, the Real Estate agents make a big deal about the adjacency of GGNRA. If restrictions are imposed, would I then be required to disclose the restrictions upon sale? Something like "Yes, there's a real nice trail nearby, but you've got to go a mile out of your way if you have a dog...and don't climb those steps, to the point - that's a NO DOG area..." This is a bit silly, but it is not that far off!

I really dislike climbing "Boot leggers steps" but it's good for me to do so. Without my dog, I'd probably never climb them at all. Walking a dog is good for one's health. Please make it easy and enjoyable for us to do so.

"ALT-A YES!!"

Correspondence: Please keep our dogs able to go off leash. My dog has always been able to run free. She is the most well behaved dog you will ever see.

We take her everywhere. On all our trips. We shop, eat and stay only where dogs are allowed. You should learn to make money on dogs not shun them. Towns like Carmel have learned that dogs are money makers. We come into the city and spend our hard earned dollars. Please go with A in your plan. There may be a few (very few) like one bad apple who have caused problems but if anything make fines more or make more permits needed.

If you do this don't you think there will be more problems due to dogs that do not get enough exercise. Dogs help people keep active. People that are alone can go out more freely with their dog and socialize easier because they have something to talk about. I feel much more comfortable going out to eat with my dog than without. It gives people a way to connect. Please let me have a place to run my dog.

Correspondence: I support option A for allowing off leash dogs: the options listed in the executive summary do not include a proposal to license dog owner for a fee to walk their dogs on leash. I do support limiting commercial dog walkers to 3 dogs. Or a maximum of 6 dogs. I drive to San Francisco from the East Bay to go to restaurants, hotels, and other business.

I love visiting National Parks and have visited many. In San Francisco one of the travel advantages is the dog friendly attitude of the area.

Dogs are a part of the American tradition. San Francisco and the Bay Area helped start the off leash movement as the nation began implementing leash laws. People need places they can exercise with their dogs and protect the environment.

Let's keep option A and come up with better suboptions.

Correspondence: I have been taking my dogs to Fort Funston for 22 years. It is the only place that I can enjoy letting my dogs off leash. Some ideas:

(1) Limit the amount of dogs an individual can have at the park at any one time.

(2) Charge permit for professional dog walkers.

(3) For those families that fear dogs reserve the south side (of the parking) of the park for no dogs. I've been contributing to the GGNRA for many years. There should be some space for dog lovers to be able to enjoy the GGNRA lands.

This property belongs to the public + should be managed for all of the public to enjoy. The small percentage of GGNRA land that can be enjoyed by off leash dog walking should remain.

(4) Confining dogs to a smaller area will only cause more behavior problems at Fort Funston

Correspondence: If off-leash areas are restricted/reduced, people will all be forced into the same one area. This could create overcrowding and lead to other issues: environmental, dog behavioral, car traffic, etc...

Off-leash exercise is vitally important to a dog's health. Those who receive improper exercise are more likely to have behavioral issues. We, as dog owners, need to have areas to provide the appropriate exercise in order to continue to be responsible dog owners.

Correspondence: I am concerned about Rancho Corral de Tierra Area, especially the area that begins at the end of Farallone Avenue & up the mountain. This area has been predominately used by dog walkers. I moved here in 1996 and have walked the mountain on a daily basis since that time. I began walking my dog on leash but soon noted that almost all the dog owners let their animals loose. I have never observed a dog owner act irresponsibly. Not only do I walk my dog, I pick up my son's dogs (in Pacifica) and bring them to the mountain so they can run free. As far as use for this area, most bicyclists use the road & ride on Montara Mountain (not the POST land). There are some hikers, but compared to the dog people, they are few and far between. The weekends have a greater variety of use, including horses. I have walked 3x daily to once daily for the past several years as I am now retired I wander on the mountain even more. We are avid birders and I am a retired geologist. We care for the land, pick up trash and deposit waste in the proper receptacles (It is a pleasure to see to see the dog waste cans). The Montara group is responsible for well kept trails.

Correspondence: I am handicapped and have a hard time holding a leash and walking my dog. She happens to be a breed that needs lots of exercise. I have gone to many many dog training classes group and private so I have great voice control of my dog. I'm sure I can control her much more much more than most children. I take her out twice a day. She can go 12 mi. to my 1. She is in

great shape. Dogs that have had this much exercise are so much less aggressive. People talk about dog bites. Most of the ones you hear about are family pets that are not socialize and have pent up energy.

I some times would not leave the house, if it was not for my dog. Some days I am in so much pain I don't think I can get out of bed but I know my dog has to run. She has kept me going for 3 years now. I know many people with walkers and canes that would be dead today if not for being able to take their dogs off leash. I see them in the rain walking with their dogs.

I also notice that places where dogs are allowed off leash are much cleaner than streets where dogs are on leash. If you take away our right to walk our dogs of leash what do you think will happen to all the pent up energy of these dogs.

Correspondence: I have been a resident of San Mateo County for 19 years. As a taxpayer + a working nurse..I have a stressful occupation + hike with my dogs (2 that are now 4 1/2). George + Grace they are my life I have met friends; we go on "beach walks" together. So this is my social time, my mental health time + my physical activity. I now have to have knee surg March 31st. Many of the areas that you haven't banned dogs entirely, are leash walks - 2 dogs walking on leash, tires no one but me + it hurts! With voice commands we can walk a long distance, enjoying while watching dolphins + sunsets. They get exercises, get tired + a tired dog is a good dog. They don't bark in the yard + are good companions at home.

I could write a book on how important Ft. Funston has been in my life. When my last dog "Boo Boo" a rescue died suddenly of cancer (liver) that's what I did to "heel" my husband drove me to Ft. Funston to go on a walk + hug dogs + caring people. That is the community that will go away - such short trails + limited beach access will ruin this community.

I got my first dog because I was depressed + dogs have to go out, no matter what! They are my antidepressants!

PS- "The Format" of this meeting feels a lot like "divide + conquer."

Correspondence: Pacifica has struggled for years to get an off leash dog park. Approval was recently gotten to establish one on city property - however it is very small because Pacifica does not have a lot of available space. The only other area allowed in Pacifica for off-leash dogs is the Esplanade beach in the north end of the town- however due to the cliff erosion, there is NO access to the beach!

GGNRA has a huge amount of land in Pacifica.

Why can't one acre or maybe a half of an acre be provided for off leash dogs!

Fence it in and the dogs can be contained, so as not to roam areas of 'endangered species.

Correspondence: Mori Point was bought by Pacifica residents through the Pacifica land trust, at considerable expense, funded by donations - and given to the Park Service with the expectation of preserving existing use.

The proposed plan takes away what we fought so hard to save.

Keep ALL Mori Point trails open to leashed dogs.

Consider also creating some off-leash areas at the top of the ridge.

Keep in mind that the park has relatively low use by dogs + people, + lots of coyotes + bobcats running loose eating snakes + frogs.

Better signage + education is the answer - NOT restricted use.

Correspondence: Please consider putting up better barriers & fences to protect the land and plants that you (GGNRA) do not want harmed. A lot, if not all, barriers at Funston are insufficient & ineffective. Most are posts (low posts) with wires. When it's windy, a lot of these barriers are covered completely. Dogs AND people can easily cross these barriers. Its not only dogs that cross these barriers into plants. Many times at Funston, there are people who walk onto the protected plants & they're not even with a dog.

If you want to preserve plants please consider more effective barriers that will prevent dogs & humans from crossing. Humans are at fault too. Not just dogs.

Also, please replace the fence on the west end of the park. This fence has been down for about 1-2 years now & is a real safety hazard to all dogs AND people.

Correspondence: Fort Fuston

Plan 16E is the best of the group. I suggest making the wasteland between the parking lot and the waterfountain also off leash. Most of the time it is so blustery you need to cover your face to avoid getting sand in your face. That would be hard to do holding leashes.

The dogs often find this section the best areas for elimination and it is easiest to find and clean up (Mine like their privacy so they wouldn't do their business if they were on leash).

I also think the park should continue to be posted as a high dog use area so people can choose to hike elsewhere if they wish to avoid dogs. The trails don't need them to be on leash only.

Ft. Funston is at best use when used by dogwalkers and friends. Hardly a space is available to park on the holidays and weekends. The Army has

already caused harm to the environment. Why not preserve the Presidio and many other parts of the GGNRA and leave this for urban use.

Correspondence: I am writing to acknowledge my support to continuing the off-leash policy for dogs that currently exists at Fort Funston, in San Francisco. Fort Funston is unique in that it allows dogs the chance to run and roam freely. With no place else like it within many miles of San Francisco, dog owners will be denied the opportunity to exercise their dogs in a place that has successfully been used for this purpose for many years. Denying San Franciscans and their dogs this liberty strikes me as more punitive than stemming from any real grievance regarding nature's balance at Fort Funston- whatever others might claim.

Correspondence: After reviewing the preferred plans for all the counties I see only one area in Marin that would allow off leash voice command dog walking. This is unacceptable.

I walk in the areas that allow dogs to exercise under voice command because I feel the areas are safe. And the dog people make it safer by their presence. They also keep it clean.

Where will the money come from for more park police and more garbage pick up when the dog walkers go away? If you put in only dogs on leash the dog people will stop coming - why would they come they can walk their dogs on leash on the city street. You are alienating and losing an entirely group of free garbage collectors and safety people. Real shame. I won't come if you make these changes. I don't own a dog - never have. But I feel safe. I hope I don't have to be standing there saying I told you so as you start

dealing with gang fights, drug users, biohazardous waste and more. I'm very much afraid I will be.

I would be in favor of increasing the amount of off-leash space. Otherwise Plan A is the least offensive.

Thank you

P.S. You should thank the people who were here from the GGNRA tonight. They defused a lot of anger. And were knowledgeable. In turn Dent owes them by time.

Subject: Rancho Corral de Tierra Dog Management

I am Thelma French, a responsible tax-paying citizen residing in Montara with my husband, Art French, and our young daughter, Amelia, who regularly comes home to visit from college. My family and I have chosen to live in this community for its natural beauty in spite of the fallen trees, loss of power, closed highways, and other inconveniences that befall residents regularly because of the community's close proximity to the wilderness.

The area now in question is a big part of the life of my family that includes a dog. For the 2 decades that we have lived here, and the many more decades prior to our coming, the area has existed and remained as stable as it possibly could. The residents of this community have enjoyed the benefits and more importantly, have taken the responsibility of preserving it the way nature intended. Residents like us enjoy maintaining our health in the company of our pet dogs, at the same time ensuring the health and domesticated manner of our pets. Residents, some more so than others, individually take on manual and financial tasks to keep the area safe, healthy, and clean.

As a tax-paying citizen I am concerned that the GGNRA, an office created for the public, has taken over the land and have spent taxpayer money to

show reason to close off the land to the tax-paying community and their pet dogs. From a tax-payer's perspective, the formula the GGNRA follows is to take the land, close the gate, and let the daily fee payers come in. GGNRA may build infrastructure: clear the land for roads and trails to the mountains, clear vast areas for rest stops, and open up residential and school areas to build a parking structure to accommodate fee-paying tourists. Granted that the GGNRA's plan is well-intentioned, it is a divisive and an inefficient use of tax-payer money. Not all people like dogs, or bikers, or not even each other, if the basis for policy and practice is to be based on that. By closing the gate to specific groups, based on studies that have predetermined conclusions, the GGNRA is choosing to split the community and inciting hatred. The area in question is big enough for everyone. Residents with dogs have been going to a very small part of the area since early last century. We are not criminals. We do not deface the land. Our dogs are voice-controlled. We pick up after our dogs, even pick up any trash we see, simply because we love the area and feel responsible. The use of the small area we frequent with our dogs will not make a thundering, violent change in the ecosystem. In fact, that small area we dog owners use help in making us a cohesive community, responsibly caring for the land.

The Montara Dog Group is an example of that cohesive community I am proud to associate with. We do not have a rigid structure, no scheduled daily meetings, and no monetary backing. We are, however, united in our love for our dogs, our love for the nature walks with our dogs, and we are respectful of the needs of our beautiful, bountiful environment.

As a tax-paying community member, I ask for a disciplined use of tax-payer money in managing public land for the public, and an open-mind and open-heart policy in accommodating different groups of the community to enjoy the public land. There are benefits to the land and community for allowing owners and their dogs to the small area of Rancho corral de Tierra.

Thank you, Thelma French

Frank Dean, General Superintendent Golden Gate National Recreation Area
Building 201, Fort Mason San Francisco, CA 94123-0022

Dear Mr. Dean:

I am a resident of Berkeley but often walk on parts of the GGNARA, especially in the vicinity of the Golden Gate. I have reviewed with interest the posted Draft Environmental Impact statement for Dog Management at the GGNARA, and would like to offer the following comments:

Taken as a whole, the Preferred Alternative is the best of the plans offered. It balances the interests of the general public with those of dogs and their owners in a fair manner. It protects highly sensitive wildlife areas such as the nesting places of snowy plover and bank swallow, while providing ROLAs where dogs can run free within sight and voice range of their human companions. For example, it recognizes the importance of the recently restored area of Crissy Field, and at the same time provides a ROLA in part of the old airfield. It is a workable compromise.

An aspect of the DEI that I disagree with concerns walkers of groups of dogs. How can one person keep six off-leash dogs under voice control? At the very least, there should be a test on an individual basis before any license is granted. Also, it is possible that six dogs could frighten a child, even when the dogs are on a leash. I myself have been a dog lover from childhood, and have never had any fear of dogs, but we have a responsibility to protect children from what they may perceive as danger.

The Draft Environmental Impact statement provides an excellent basis for permanent GGNARA regulations.

Re: Dog Management Plan

Dear Mr. Dean,

I am writing this letter in response to the discussion about no longer allowing dogs to run free at Baker Beach and on the Land's End trail. I am against this proposal.

My dog and I have gone to Baker Beach twice daily for the last five years. It

has been a lifesaver not only for me because of the opportunity to exercise and socialize. But it has been equally vital for the dog, a rescue lab bordercollie mix, who needs to RUN and socialize to be healthy and to behave well in the apartment environment that I live in.

I am PASSIONATE about ENVIRONMENTAL issues and so understand your concern about protecting trails and beaches. Every day, I pick up bags full of trash at Baker Beach, mostly plastic, hoping that this might save a bird or mammal from suffocating. My dog has to hurt or scare a bird yet.

How will a leash law for dogs eliminate TRASH and disturbances by PEOPLE? Also, how will it prevent the hillside from being eroded by people running down the hill rather than using the steps and destroying habitat for birds and the plants they feed and rest on? How do dogs contribute to the vast areas of ocean that have become dead zones because of our trash?

Thank you for reading and considering my letter. I am confident that you will find a solution that will be of a much broader scope than confining dogs to leashes.

Sincerely,

Margrit Hall

Correspondence: February. 19, 2011 Frank Dean, General Superintendent Golden Gate National Recreation Area, Building 201, Fort Mason San Francisco, CA 94123-0022

Dear Mr. Dean,

As dog owners, environmentalists, and residents of San Francisco, we are very concerned about the proposal to limit off-leash dog walking in Ft. Funston and other parks.

The off leash areas of these parks contribute to the Bay Area's welcoming and diverse environment. The vast majority of the GGNRA is closed to dogs ' and as a recreation area in an urban environment, the GGNRA is absolutely vital as a multi-use area. The vast majority of dog owners are responsible, respectful, and integral to the thriving park system.

We urge you to implement the 1979 Pet Policy as a Special Regulation for the GGNRA. The 1979 Pet Policy was the product of extensive negotiation, and has served us well. It comprises less than 1% of the entire GGNRA acreage, and is the controlling legal authority of the GGNRA at this time.

Further, there are simply not enough off-leash areas in city parks, and the loss of the GGNRA for dogs would put incredible strain on already overloaded city parks. Dog owners want to use the GGNRA precisely because we respect and enjoy the environment ' and our dogs need off-leash exercise.

We are certain we can continue to protect native species and maintain off-leash access in the GGNRA.

Thank you for your time and consideration.

Sincerely , Genanne Walsh Lauren Whittemore

Correspondence: Maria L Rueda San Francisco, CA 94109 February 21, 2011

Dear Frank Dean,

I am writing in response to the GGNRA Dog Management Plan that is available for 90 day comment. While I appreciate the reasoning behind some of the proposed changes, I believe that we still need to keep a balance of leisure activities with our pets. There are limited areas in the San Francisco area where we can take our pets and enjoy some off-leash play with them and I'm concerned about further removing access to these areas. There are better ways to mitigating some of the concerns for which the plan was created: fines for not picking up dog waste, clearly delineated on-leash and off-leash areas where park visitors can choose their setting, more fenced-in dog play areas to protect wild life, etc.

I urge to please take into consideration the life style of pet owners, specifically those of us who always follow the rules, train our pets, and pick up after our pets. I urge to remember that some of us would like to continue to live in the city. I don't think it's right to send the message to citizens that the only way to play with our dogs, is to live in the suburbs and play in our back yards.

Thank you for your consideration, Maria L Rueda

Correspondence: Frank Dean, General Superintendent Golden Gate National Recreation Area Fort. Mason, Building 201 San Francisco, CA 94123

Dear Mr. Dean and colleagues:

I strongly oppose the proposed draconian restrictions on off-leash dogs on GGNRA lands! Although I don't have a dog myself, I am a frequent walker at Ocean Beach and Crissy Field, and it is a great joy to watch the dogs there running, swimming, fetching, digging, and otherwise having a wonderful time.

First, the unembarrassed happiness of dogs is a powerful reminder to us humans how easy (and wise) it is to enjoy life.

Second, dogs' openness to strange dogs and people is a valuable social link, a means for people to interact with each other, in a culture that increasingly (and perilously) encourages ignoring one's actual surroundings in favor of some invisible friend on a cell phone.

I can't see anything positive at all that would be accomplished by the proposed restrictions, whereas they would cause a serious reduction in the quality of recreation on GGNRA lands.

Sincerely, Carol Verburg

Re: Pet Policy: Muir Beach

Dear Mr. Dean:

I am writing simply to share my view that Muir Beach should remain open to dog owners and their pets. I have been walking my two dogs there for

over 10 years and I have never had any issues with wildlife or with other persons at this beach. Indeed, most beach goers seem to relish the presence of joyful dogs.

I am also confused with how these rules interface with retrievers being in the water at Muir Beach. Would this be off limits, too?

It seems such a shame to limit park use and exclude this happy & healthy form of exercise which has been permitted for decades.

Very truly,

Superintendent, GGNRA Attention ANPR Fort Mason, Building A San Francisco, CA 94123

Dear Sir:

Under no circumstances make an exception to your policy that forbids unleashed dogs.

It is a well-documented fact that unleashed dogs cause extensive damage to native plants and that they endanger the wildlife that live in these open space preserves and national parks. They also pose a danger to small children as well as adults. Not all dogs are gentle or friendly, some are more aggressive than others and could attack without provocation.

It is our opinion, that 98 percent of all dog owners do not have voice control of their dogs and have not trained them properly, if they have been trained at all. And they are often too busy socializing to be aware of where their dogs are or what they are doing.

Our dogs were always on a leash. It was mainly for their protection. We did not want any harm to come to our dogs because we loved them dearly, they were our children. A responsible parent does not put his or her child in

harms way.

Contrary to popular belief, dogs do not need to run free to enjoy themselves. Just being with their masters is reward enough. A leashed dog is a happy and safe dog.

It is the dog owner who enjoys the freedom of an unleashed pet because it frees him or her from having to hold onto a leash. The owners have, for all intent and purpose, relinquished control of their dogs when they are not on a leash, They absolve themselves of all responsibility for whatever damage they cause to the flora and fauna of a natural preserve or national park.

To make an exception to an established policy is to invite future problems. If you make an exception to your policy that forbids unleashed dogs, you will have opened "Pandora's Box."

Sincerely, Richard Pastor Natalie Pastor cc: File

Subject: Leash Law

I am writing to voice my desire that no changes be made in the "Leash Laws" that are current and already too restrictive in the GGNRA.

We've had dogs in our home since 1970. We've spent thousands of dollars making purchases for them. Our taxes on those purchases contribute to the GGNRA.

Dog walkers currently have enough restrictions. Adding more restrictions will cause many dog walkers to abandon San Francisco. These dog walkers also pay taxes and spend money in San Francisco.

Finally, restricting dog walkers to leash laws will force them to abandon the GGNRA and use more dog-friendly areas in San Francisco. This will place an unfair burden on the City Parks and Recreation Department.

To Whom It May Concern:

I have lived in San Francisco for 17 years and for the past 6 years have enjoyed the GGNRA off-leash dog areas with my dog. We go to Fort Funston or Crissy Field at least 2-3 times every week -- these trips are critical for the health and well being of my dog and myself. I feel that the Preferred Alternative outlined in your proposal is overly restrictive, unbalanced, and unfair.

The Preferred Alternative is not balanced. The Preferred Alternative allows dogs to be off-leash on even less land that provided for in the 1979 Pet Policy, including no off- leash anywhere on GGNRA land in San Mateo County. By denying the possibility of off- leash on any new lands that come into the GGNRA in the future, the Preferred Alternative will ensure there is no balance between recreation and protection of natural resources in the future One-third of San Francisco households have dogs but they can currently exercise and enjoy time with these companions on less than 1% of GGNRA land.

Severely restricts recreational access for people with dogs and is a

fundamental violation of the reason the GGNRA was created. In the legislation that created it, the reason for the creation of the GGNRA is listed as "the maintenance of needed recreational open space". Off-leash dog walking is among the recreational activities listed as traditionally occurring on the land that was to become the GGNRA. This new proposal is in direct violation of the GGNRA's original purpose.

Unfairly mandates that any new land that comes into the GGNRA cannot have dogs either on- or off-leash. This restriction goes against the recreational mandate that was a founding reason for the GGNRA. It is unfair, unneeded, and denies the traditional recreational activity of off-leash dog walking that has existed on many of these lands for decades. If new land is added to the GGNRA in the future, dogs must be allowed access both on and off-leash.

I have been a resident of San Francisco for 17 years and enjoying the GGNRA off-leash dog areas for the past 6 years. I go to either Fort Funston or Crissy Field at least 2-3 times every week with my Golden Retriever. These trips to run and swim are truly special occasions for both of us and by far the happiest times for my dog.

I have serious concerns about the GGNRA's off-leash proposal, particularly, the "poison pill" of the Compliance-based Management Strategy. A management plan should not come with a built in nuclear option, which is what this is. This strategy is fundamentally unfair and unbalanced since it - ? Allows the off-leash status to be changed in only one direction (toward more restriction) with no possibility of increased access in the future.

? Circumvents the legal requirement that management changes that are either significant or controversial must have a public process before they can be made.

? Omits critical information about how compliance will be determined, allowing room for misunderstanding and misinterpretation.

? Permits the GGNRA to change the status of off-leash areas to on-leash or no dogs without additional public comment if there is not 100% compliance

with the new restrictions.

? Makes the change permanent.

While there should be, and are, enforced penalties for bad actors, the vast majority of people who do not act badly should not be penalized for the bad actions of a few. No number of responsible dog owners will stop what will become the inevitable removal of all off-leash access in the GGNRA if this strategy remains part of the plan. This component **MUST** be removed from the proposal.

To Whom It May Concern:

I am very concerned about the upcoming vote to take place on April 14 concerning on/off leash dog areas in GGNRA. I am an avid walker and take my dog to many of the areas that are under consideration. I love living in SF partly because of how friendly and open the spaces are. I watch regularly how dog owners pick up litter as well as their dogs feces. We have happy dogs and people living here and I think that is really special. To take the off leash option away would change a lovely, unique culture that is not harming anyone.

I believe we are a respectful, thoughtful and caring group of dog owners in SF and what a shame it would be to not fully enjoy the areas we, and our dogs, have come to consider part of our daily lives. Thank you for your time.

Frank Dean, General Superintendent Golden Gate National Recreation Area
Building 201, Fort Mason San Francisco, CA 94123-0022

Mr. Dean,

We are writing to offer our reaction to the GGNRA Dog Management /Environmental Impact Statement (DMP-EIS) plan to exclude all dogs from

"New Lands" which would apply to Rancho Corral de Tierra property near Montara.

The Peninsula Humane Society & SPCA (PHS/SPCA) respectfully asks that GGNRA considers allowing off-leash play in the relatively small areas (of Rancho Corral de Tierra's total acreage) which have been used this way informally, but responsibly, for years.

Our position was reached with careful consideration, given that we are an advocate for dogs (and off-leash play) and local wildlife. While PHS/SPCA is a private, independent non-profit best known for sheltering San Mateo County's stray or unwanted domestic animals and finding new homes, we also provide wildlife rehabilitation for sick, injured and orphaned animals from San Francisco through Santa Clara County.

Our professional wildlife rehabilitation staff completed a review/analysis of the site and the proposal, and we believe that there is no observable reason related to the protection of native wildlife which would justify denying access to off-leash dogs in the area. If there was impact on wildlife, it happened long ago. Wildlife continuing to use this area are most likely well versed in people, bikes, and dogs and probably avoid the area during the day. The overall area is very large and wildlife have adequate space to avoid people and dogs.

We should add that we are San Mateo County's contracted provider of animal control work which includes enforcement of the leash law and response to dog bites and attacks. We cannot recall receiving complaints about off-leash dogs or dogs acting aggressively in these areas, which indicates dog owners are being responsible and that the larger area has supported multiple uses peacefully for years.

Please reconsider your plan to ban dogs and off-leash dog play from the small areas of Rancho Corral de Tierra which have informally allowed this use for years with no negative impacts.

Sincerely, Ken White, President Peninsula Humane Society & SPCA 12 Airport Blvd. San Mateo, CA 94401

Correspondence: Dear Superintendent,

Stop, look and listen. Stop the current mindset of prohibiting off and on

leash dog activity, particularly at Ocean Beach. There is no precedent for it. Look, at the reality of the current race to limit dog activity, a million dollars to enforce the ban, police should be used to diminish serious criminal activity not harass law abiding citizens. What's next no people on the beaches? Listen, these are slated for limitations are urban recreational sites not wilderness locations. We are city people who already live with many limitations, we don't need more. Lets revisit the proposed plan. Make reasonable compromises. There's plenty of room for all, animals (dogs) included.

Sincerely; Greg Fischer SF CA 94116

Correspondence: I have walked my dog off-leash at Fort Funston for a decade. Here are my concerns regarding the proposed dog management plan.

The plan is very ambitious in its attempt to accommodate birds, plants, hang-gliders, horses and dogs. Although the plan tries to give all of these aspects equal consideration, it is the dog people who use the area, fill the parking lot, and otherwise enjoy the Fort from the time it opens until the minute it closes. Fort Funston was placed under the purview of the GGNRA with the condition that it be maintained for the enjoyment of dogs and horses. The GGNRA has a legal obligation to honor this condition or return

the land to the city.

In this time of budgetary deficits, where will the money come from to implement any plan? As a taxpayer I object to my tax dollars being used to fund futile efforts. The enforcement costs of getting people to leash their dogs in certain areas would exceed any revenue collected from fines. A budget analysis of the proposed dog management plan would show the folly of trying to enforce restrictions on a waste land. Why are we arguing over a spit of land that buries or topples new fences within weeks? Mother Nature will undo any plan put in place.

Accommodations can be made to preserve the small patches of native plants and nesting areas. If dog owners have adequate areas for off-leash activities at Fort. Funston, they will be more respectful of the restricted areas. They will even self-police uninformed dog walkers who enter restricted areas, with the understanding that we can all lose our privileges if a few dogs are allowed in the habitat areas. In regard to hang-gliders, they are at the Fort only on certain days and times when the conditions are right. Moveable "Keep Out signs can restrict that area from dogs only when the hang-gliders are present.

In the decade it has taken to develop the dog management plan, it has become obsolete. This is due to deteriorating conditions at Fort Funston and the lack of funding. The easiest and cheapest solution is to do little, if anything, at the Fort. Yes, do what is practical to maintain the habitat areas, with the understanding that time and erosion will win in a few short decades. The highest and best use for most of Fort Funston is to leave it as it is for the enjoyment of the hundreds of dog people who use it every day.

Sincerely,

Connie Vickroy San Francisco, CA 94127

Correspondence: February 12, 2011 Mr. Frank Dean Superintendent, GGNRA Fort Mason, Bldg 201 San Francisco, CA 94123

Attn: Dog Management Plan Dear

Mr. Dean:

I am the owner of two small dogs. I have had the pleasure of taking them for

walks at Crissy Field and the adjacent area for the past twelve years. While I usually take them by myself, I sometimes have friends or family join me. Everyone has a great time (especially the pooches!).

I am careful to keep the dogs on their leashes when in the parking lot and until we have crossed the bridge. At that point, they are safe from automobiles. In addition, fencing and the beach itself provide boundaries within which they can run freely.

My dogs do not interfere with walkers, joggers or bicyclists. Whether on the beach or on the main path, they stick to themselves, much too interested in all the good smells around them. I am careful to pick up after them, so that the area remains pleasant for everyone using the area after us. I am greeted every day by people who recognize my two dogs, as well as by new people who make favorable comments about them.

This daily routine is healthy for me and is clearly the highlight of the day for my dogs. Being off-leash is far superior to being walked on-leash, because I cannot keep up with them when they run, which they love to do. Please note: they come when I call (it's the goodies), so I am able to keep them under control at all times.

We do not have a comparable place to walk safely off-leash. Joggers and bicyclists, on the other hand, have many other areas to go. Please preserve this very small part of the GGNRA for off-leash activities, as was intended when GGNRA was established.

Respectfully submitted,

Alan P Zimmerman

Correspondence:

I live in San Francisco because it's a city that is open to caring about world affairs and the environment. I am always surprised at how little some dog-owners care about what is left of our precious natural environment. This is even more true on Ocean Beach. I've seen the following: - Dog defecating on the beach and their owners kicking sand to cover it (instead of picking it up) - Dog owners encouraging their dogs to chasing after the protected snowy plovers. - Dog owners allowing their dogs to run without a leash in areas they shouldn't. - Dog owners encouraging their dogs to poop in their neighbors yard without picking after their dogs.

I have 2 small kids. I would love for them to play on Ocean Beach freely - without worrying about digging up dog poop while playing in the sand. I would like them to chase the waves without worrying they will be knocked over by big dogs running around. I would also like them to know what snowy plovers look like.

It is embarrassing that we should be asking other countries to not cut down their rain forests where we can't even protect the animals we said we would. It is embarrassing that we should be up on arms over taking bald eagles off the endangered lists - so long as it doesn't inconvenient our little pets.

I strongly support the GGNRA plan to protect our environment from devastation from dogs and their owners. I would also like to encourage that we enforce the laws once we have them in place. It is always disturbing how many times we have to yell at people for allowing their dogs off-leashed in non-off-leashed areas. It's an extremely unpleasant thing to have to do.

Just because we are not a part of a group like the "dog groups", doesn't mean we don't care about our parks and city. We are extremely frustrated by this problem.

Thanks for listening. I hope you have the courage to do what's right for our future. Josephine Chew

RE: Comments to the Dog Management Plan/Draft Environmental Impact Statement

Dear Mr. Dean:

These comments are in regards to the Dog Management Plan/Draft Environmental Impact Statement as applicable to GGNRA in San Francisco.

I live near Baker Beach, China Beach, Ocean Beach and Lands' End and I walk there often, without a dog. From my observations at the beaches, the use of Baker Beach by people without dogs probably has more impact on the beach than use by people with dogs on leash or under voice control. Fort Baker Beach, I suggest that you reconsider "the 1979 pet policy" as the Preferred Alternative for Baker Beach. Eliminating a Regulated Off-Leash Dog Area at Baker Beach would have the effect of limiting Regulated Off-Leash Dog Areas in San Francisco to Crissy Field, Ocean Beach, and Fort Funston. These three areas could then have increased density of people with dogs, and that could result in increased environmental degradation at these three areas due to overuse. Fort Funston is currently environmentally degraded and in need of environmental protection and restoration. The proposed Regulated Off-Leash Dog Area at Crissy Field is problematic due to its adjacency to a wildlife protection area. The proposed Regulated Off-Leash Dog Area at Ocean Beach is problematic due to its adjacency to a western snowy plover area. The north beach area of Baker Beach is an open strand bordered by a cliff and less prone to conflicting land use adjacencies or degradation from use by people with dogs. Continuing the use of "the 1979 pet policy" at Baker Beach could result in less cumulative impact to the GGNRA in San Francisco.

If you cannot reconsider "the 1979 pet policy" as the Preferred Alternate for Baker Beach, then "Alternative E" for Baker Beach should be chosen.

I appreciate the 90-day public comment period and trust the National Park Service will make the best decisions for the management of this unique urban recreation area.

To whom it may concern,

I would like to register my request to keep the 5 areas where dogs are allowed to be under voice control and or on leash free as they are now.

I walk every day and have never encountered any fights among dogs, the owners pick up litter in the provided receptacles to take it away.

There is plenty of space and room for many activities.. bike riding, jogging, baby strollers, and dogs. It works extremely well. Why change something that is working. The cost of the law enforcement will be significant and create a very hostile environment with the dog owners toward our National Parks. Who knows, maybe next you will ask for children to be on leash as well. Don't go there, please.

Thanks, Ann Hatch, Native San Franciscan. tax payer and dog owner

RE: GGNRA PROPOSED BAN ON OFF-LEASH RECREATION

February 21, 2011

Dear Superintendent Dean:

I regularly walk my dog at Fort Funston Recreational Center located in San Francisco. After a long difficult day at work, the exercise and ability to bond with my dog relieves my stress. It also keeps me healthy since walking my dog every day for at least 40 minutes is my regular exercise routine. My dog is very energetic and athletic and he also benefits because he gets the off-leash exercise he requires to reduce his anxiety and stress levels.

Unfortunately, dog parks can be crowded and small and don't have enough open space for many dogs to get maximum exercise. Also, the smaller space

in a dog park doesn't allow for enough space to escape from unsocialized dogs that unfortunately frequent dog parks. Overcrowding of dog parks will occur if the National Parks have off-leash restrictions ultimately causing more potential, unwelcome situations arising from unsocialized and possibly aggressive dogs. The safety of dogs and dog owners will be compromised along with losing the long-term health benefits of stress relief and exercise for dogs and dog owners.

My dog and I both have a better quality of life by being able to walk freely at Fort Funston Recreational Center. If the leash laws are enacted, our quality of life would be greatly reduced.

Sincerely,

Kimberly McNutt

Re: Dog Management Plan

Main Comment: I fully endorse and support the Preferred Alternative selected for the areas included in the plan/DEIS.

Reason: I have been involved, as a park volunteer, in habitat restoration projects in most of the areas addressed by the plan/DEIS. I have observed, on many occasions, clearly inappropriate dog behavior (off-leash) resulting in negative impacts to sensitive resources. I further believe that a clear and enforceable policy on dog use is urgently needed to bring together parties on both sides of the issue.

Correspondence: My family supports maintaining off-leash and voice-control for dogs at Fort Funston. Our reason is simple: it is the only off-leash area where we do not have to worry about cars or cyclists. Fort Funston is a beautiful location and we support all efforts to keep it that way. We understand the reasons for changes proposed in the GGNRA Draft Dog Management Plan / Environmental Impact Statement. We do think that the cure is worse than the complaint, in this case.

We urge that Fort Funston be maintained as an off-leash/voice-control area for dogs.

Thank you

Correspondence: GGNRA, I'm concerned with the proposed dog restrictions. I've been a resident of the former officer housing in Fort Mason for the past 4 years and I often visit the Fort Mason park as well as Chrissy Fields. I feel that any restrictive action against dogs in these areas would be very detrimental to the community. I've been a volunteer at the San Francisco SPCA for the past year visiting the dogs on medical quarantine and getting them outdoors for human interaction and exercise. In the executive summary of the proposed restrictions it is mentioned that worker and public safety is one of the primary concerns which is inciting the restrictions. I can tell you first-hand that dogs primarily become reactive and aggressive because of a lack of socialization with humans and other dogs. By preventing off-leash socialization you will be worsening the very problem you're attempting to correct, in effect hurting public safety. It is absolutely essential that dog owners are able to congregate to let their dogs exercise and play so they do not become reactive and aggressive. If we close the national parks in the city to these activities, where will the dog owners go? There are other parks but these restrictions will increase the number of dogs at those parks and create overcrowding which will result in dogs not getting outdoors as often which means the dogs in the community will be less socialized and therefore more reactive and aggressive. As a resident, an individual who frequents the parks and a regular financial donor to the GGNRA, I do not think these restrictions will be beneficial to the parks or the community. I urge you to also consider the comments submitted by the San Francisco SPCA and other knowledgeable dog groups in the community.

Kind Regards, Ed Meier

Correspondence: The Preferred Alternative is not acceptable. It is overly restrictive, and its restrictions are not justified by the totality of available data. It is based on separation and exclusion, a management philosophy that goes against the values of the Bay Area. It violates the mandate for the " maintenance of needed recreational open space" contained in the legislation that created the GGNRA. The DEIS is full of negative things that "might" or "could" happen if dogs are allowed off-leash at various sites. But there is very little evidence presented that these hypothetical impacts actually happen. Given the intense scrutiny of dogs by the GGNRA over the past decade and more, the fact that there is not more persuasive real data about significant impacts of off-leash

dogs means that there is no real justification for the proposed restrictions contained in the Preferred Alternative. The contraction of areas available for off-leash recreation will significantly compromise the park experience for people with dogs, and could lead to an increase in conflict as more and more people are forced into smaller and smaller areas. The impacts of people moving from the GGNRA into city parks is not adequately addressed in the DEIS.

Correspondence: I am writing to SUPPORT walking dogs off-leash in GGNRA. I understand there are occasional problems, but I think many, if not all, of them can be mitigated through slightly revised regulations.

I treasure the parks where I walk my dog off-leash (primarily Crissey Field and Rodeo Beach) and I don't think the areas where off-leash dog walking is allowed should be further restricted.

I have a few thoughts on what regulations could be added that might be a workable compromise for dog owners and help non-dog owners not feel intruded upon in the parks:

1. MOST IMPORTANTLY, create an online, off-leash dog behavior guide and then issue special tags to dogs that meet pre-determined good canine citizenship. Dogs WEARING these tags would then be able to be walked off-leash in GGNRA. This program would be on the honor system, require a fee, and more importantly a commitment on the owner's behalf to properly train their dogs. A program like this was implemented successfully in Boulder Colorado Mountain Parks and so I know it can be done. Dogs must come when called, not approach other people or dogs without permission,

not leave the trail without permission, and not chase wildlife. This is all easily accomplished with well-trained dogs. Dogs not wearing these "off-leash" tags would be fined. Yes, a part of the success of this type of program is creating a barrier to entry to off-leash dog walking ? much like any other type of license or fee. 2. Restrict off-leash dog walking in high-traffic parts of GGNRA to certain hours of the day and / or days of the week. Perhaps certain parts of the these most-congested areas could be off-leash until 9:00 am and then again after 5:00 pm? I wouldn't impose even my well-behaved off-leash dog to families having a picnic on a hot sunny day on Crissey Field. 3. Restrict off-leash dog walking to three dogs maximum. This limit should include ALL owners AND professional do-walkers. 4. License all professional dog walkers. 5. Increase enforcement and write tickets for owners that do not follow the rules. Use this money to increase awareness of responsible dog management in the parks.

Thank you for taking these comments into consideration.

Sincerely,

Brett Moyer

Correspondence: NPS Director Jon Jarvis's support of "Healthy Parks Healthy People" (<http://www.nps.gov/goga/parknews/2011-0330.htm>) is good.

What NPS and Jon Jarvis are not understanding is: People with dogs will get less exercise (i.e., will be less healthy) with every reduction in their dog's accessibility to open spaces such as GGNRA.

Here's why. Many non-dog don't understand that: 1) Dog owners will not leave their dogs cooped up at home while the owner goes out and exercise. Dog owners love their dogs like their own children. They will do whatever their dogs are allowed to do. 2) Dog "exercise" is not just physical. The outdoors socialization is critical to mentally healthy and socially amenable dogs. 3) On-leash dog interaction is NOT healthy dog socialization. When dogs are physically restrained, they are forced into complex social posturing...just as humans would be if we were in the same situation. 4) On-leash exercise alone is not sufficient for dogs. Owners cannot keep up with dogs that need to be off-leash.

A large percentage of Bay Area households (~33%) own dogs. If you truly want healthy people, then NPS must support in fact encourage more off-

leash dog areas.

Correspondence: My comments will be specifically in regards to the Mori Point. This is where I live, and this is where I walk my dog. Should I decide to dog-walk in other areas, I would abide by the rules, and if I didn't like those rules, I would dog-walk elsewhere.

I support on-leash dog-walking generally, and I always keep my dog on a leash when she isn't fenced in at home or at a dog park. I feel that many people who claim their dog is under "voice control" merely have a dog that will come when called most of the time. To me, true voice control is reserved for professional dogs, such as police canine units, and obedience champions. I worry that most off-leash dogs will ignore their owners in a stressful situation, where voice control would be most needed. Examples could be: Encounters with a wild animal, two intact males who suddenly decide to fight over a nearby female, or a dog who misreads the actions of child as that of a puppy who needs discipline. In any of these situations, I think even well-trained dogs might ignore their training.

Now, to Mori Point. As a resident of Fairway Park West, (which is surrounded in part by GGNRA) I appreciate what a rare location we have. The many trails within an easy walk, have long been a selling point for our homes. Imagine my shock, when I learned that I might be barred from walking my dog down Polliwog Path, a trail that backs up to a row of homes, many with dogs. How could my dog on a leash be a greater threat to the area than that of a dog inside a fence, just inches away? Truthfully, I feel that my dog poses less danger. I know where she is at all times on the trail. The dogs in the backyards might break, dig under or jump their fences, and be loose for hours while their owners are at work.

I was also dismayed to read that certain other trails and areas at Mori Point

could be designated dog-free. I began to think of how it could negatively impact the value of my property! Every time a home in our neighborhood comes up for sale, the description mentions the nearness of the GGNRA. Of course, that is a GGNRA without dog restriction.

I know that one goal of the Dog Plan is to reduce confusion. It is my opinion that allowing dogs on some parts of Mori Point, but not others, will only add to the confusion. My solution is this: Walk a dog on Mori Point? Leash it! That's the only rule you need. Well, that and the pooper-scooper rule...but often I find less dog waste on the trail than I do on the front lawn of my home. The Mori Point dog-walkers are a considerate group, and deserve full access. I support full access to leashed dogs on all other areas of GGNRA as well.

Correspondence:

What is the standard Law Enforcement or Park Operations staff will use to determine whether an off-leash dog is "Under Voice Control"? What will be the alternative(s) for a dog that does not meet the minimum standard?

A clear, easily understood standard of what is required to demonstrate that an off-leash dog is under control is necessary to mitigate the possible impacts of off-leash dogs under any of the proposed alternatives evaluated by this report.

I have a large dog that I walk on-leash in many of the parks. He is always on-leash because he sometimes does not respond immediately to my commands and is therefore, not always under my voice control. Often, off-leash dogs will approach me and my dog where there is no owner in sight. I also see people with leashes in their hands and no dog in sight. When I ask a dog walker to please keep a dog under control and not let him approach my dog I notice a wide array of responses by dogs to commands given by a dog walker. My dog, while not aggressive, isn't a particularly social animal, so I always try to manage his contacts with other dogs in parks. But I find it difficult when a walker is not able to control a dog and prevent it from approaching me and my dog despite my request. This, unfortunately, has led to a few unpleasant encounters that could have been avoided if off-leash dogs were under better control or required to be on-leash.

Correspondence: I urge you to leave the 1979 Pet Policy in place. The report does not document the need to change a policy that was put into place that allowed the NPS to administer these lands. The GGNRA is different from most national parks, and hence a dog policy at GGNRA that is different from the rest of the properties in the NPS system is appropriate. The data provided from 2007 and 2008 show very few incidents of misbehavior, such as biting or harassing wildlife, by off leash dogs. The 1979 policy is working, and does not need to be changed.

Correspondence: Having designated off leash areas for dogs is a very important need for the city of San Francisco. Living in a city environment, we need an area to take our dogs to release some energy. We are responsible dog owners who simply want to take our beloved friends out and enjoy public spaces. By restricting access to Golden Gate National Recreation Areas, we will be overwhelming other local parks that allow off leash access. Additionally, Golden Gate National Recreational Areas offer some of the safest places for us dog owners to bring our pets. Most local parks are too close in proximity to road traffic. Though the GGNRA may be designated as national parks, for those of us who live in the area, these are our local parks, and it is unfair to limit our enjoyment of them. I do not believe that restricting dog access will have a noticeable affect. The majority of us who enjoy the use of this area with our dogs are quite responsible in avoiding their impact on surrounding wildlife and picking up after them. Restricting use will not have an affect on the irresponsible pet owners who do not do the same. It will only generate more of them. I vote option A.

Correspondence: To Frank Dean GGNP General Superintendant.

Unfortunately I am unable to open the individual park documents. However my interest of concern is maintaining as much as possible if not entirely dog free Golden Gate National Parks. A exception being Fort Funston due to it's past practice designation.

I am a 40YR resident of Pacifica. I participated for many years on a GGNRA sub-committee attending many GGNRA Commission meetings at

Fort Mason. Additionally I was a participant on the Pacifica/GGNRA Advisory Committee for nearly four years as a Pacifica Planning Commission Liaison.

Currently my support for our Bay Area National Parks is expressed through my many years as a Conservancy Park Steward, Trail Keeper and conservator member.

In the end.....protecting natural resources, fauna and flora is of critical importance. The many years and many volunteers, staff, interns and students engaged in habitat restoration and enhancement of our National Parks provides thriving conditions for the bay-areas native bio-diversity. AS you know, the experience of wildlife for park visitors of all ages is a primary recreational experience. Not to mention that the health of the planet is determined by a thriving bio-diversity.

My familiarity as a volunteer and visitor of Mori Point, Milagra Ridge and Sweeney Ridge of the San Mateo County Parklands, prompts me to discourage any dog activity that would ultimately threaten these sensitive wildlife sanctuaries. In my opinion the benefit of any doubt regarding this canine conundrum should go to wildlife.

I recently attended a Pacifica/GGNRA Advisory Committee meeting to question their recommendation for allowing dogs on Mori Point's historically named Timigtac Trail. The history of the Ohlone Timigtac name that comes from the Timigtac people and village site just below the trail was not discussed prior to the recommendation. Nor was the coastal prairie, scrub flora and fauna adjacent to either side of the trail. The grassland adjacent to the south of the trail is habitat for Cal. brown racer snakes, gopher snakes, alligator lizards, voles, meadowlarks, a raptor roosting tree, seasonal barn/cliff swallows and a variety of invertebrates. Adjacent to north side of the trail is coastal scrub, habitat for various birds including Cal. Thrashers a species of concern, invertebrates and bush rabbits..... a favorite of dogs. The Timigtac Trail is also a favorite route for coyote's.

The inspiration for naming several trails at Mori Point was the result of a trail naming project sub-committee working out of the Pacifica/GGNRA Advisory Committee. Much effort went into researching unique and historically appropriate names for trails. The participants of the sub-committee should have been noticed about the dog trail discussions.

Consequently, as noted above, the Advisory Committee's discussion about dog walking on the Timigtac Trail was ill-advised and insensitive.

Dog walking should not be allowed on the Mori Point Timigtac Trail.

Lastly, the Pacifica Quarrylands adjacent to Mori Point is the un-official dog park of Pacifica. The majority of people that walk their dogs there, do so off-leash. Unfortunately these off-leash people with their code violation modality quite often spill into/onto Mori Point!

Respectfully

Ron Maykel Pacifica, Ca. 94044

Correspondence: I strongly urge you to:

1) adopt the use of Map 5A, in order to allow continued off-leash beach access for dogs;

2) adopt the use of Map 7A, which maintains the dog-friendly Coastal Fire Road & Trail adjacent to Muir Beach;

3) place a dog litter bag dispenser and waste receptacle at the footbridge entrance to the area;

4) increase signage and education efforts so that visitors are aware of the rules;

5) keep Muir Beach dog-friendly - the dogs deserve it!

Thank you for your consideration.

Correspondence: I am very upset to hear that dogs may be outlawed at yet another great beach and hiking area. It just means that instead of using the trails in Marin County, I will be driving great distances each Sat. and Sun. to find hiking trails and beaches to enjoy with my dog. As an avid hiker and beach lover, I wouldn't think of going without my little dog.

My dog is well-trained and I always pick up after him and dispose of the bag in a receptacle. I never leave the bag along the trail.

As it is, the only places for dog-lovers to go are in MMWD, Muir Beach, Rodeo Beach, and the northern part of Stinson Beach. They're not enough, but please don't take those beaches away!!

Correspondence: Dogs, both on leash and especially off leash, have negative impacts on birds and other wildlife. Off leash dogs can inhibit visitors from feeling comfortable and enjoying areas of the GGNRA, particularly the beach at Crissy Field, all of Fort Funston and most of Ocean Beach. Fort Funston is so totally overrun by dogs that it can no longer be enjoyed for hiking and bird watching. In the GGNRA dogs should always be on leash. Compliance needs to be strictly enforced, 100%. Commercial dog walking should not be allowed in the GGNRA. Habitat and wildlife preservation should always be the priority for the GGNRA. Greater restrictions on dogs are overdue and badly needed.

Correspondence: Dear NPS,

I fully and strongly support all aspects of the plan pertaining to Ft. Mason, Crissy Field, and the Presidio beaches. As Yogi Berra once said, "you can see a lot just by looking around". And what I see are various forms of irresponsible dog ownership: off-leash dogs behind their owners, who therefore can't possibly see what their dogs are doing; multiple off-leash dogs going off in different directions, so their owners can't possibly keep track of all of them; owners on the phone with their dog so far ahead of them it is unlikely they can see; etc.

I am not anti-dog. But I do not ever want to be approached by an unfamiliar animal off-leash. By enforcing leash laws and limiting access, a welcome secondary benefit should be less dog excrement everywhere. Most dog owners do tend to pick up what they actually see.

While the majority of dog owners are probably responsible, we have laws to protect us from the small minority of people who are criminals, not from our law-abiding fellow citizens. Similarly, it is appropriate to have rules to protect us from irresponsible dog owners, who may be a smallish minority

but are nonetheless significant in actual number.

I use the parks less, and don't go to the beach at all, because of irresponsible dog owners. I'd like for that to change. Thank you for your thoughtful, well-thought plan that fairly balances between dogs and people, while properly prioritizing people.

Very Truly Yours, Steven C. Seidman

Correspondence: I have lived near Fort Mason for over 20 years, and on weekends go running in Crissy Field. I have two major concerns with dogs.

a) Off leash must be restricted to specific areas. I have seen dogs inside the protected fencing of Crissy Field, had a dog eat my son's frisbee, and numerous times when running have collided with dogs.

b) Leashes must be restricted in length.

Thank you for your work.

Correspondence: May I ask that you keep all areas of the GGNRA which are currently open to off-leash dog walking, open to that usage.

I am a senior citizen. Walking with my dog in my own neighborhood is my primary exercise, and my dog needs off-leash running and socializing (as that is her natural way of moving and connecting with others).

These areas were given to the GGNRA with the understanding that traditional usages would be preserved. Those usages are of course different than those at say, Yellowstone. Attempting to recreate a dogless environment in an area in which dogs have run for years would be a violation of that agreement.

Thank you,

Birrell Walsh

Correspondence: The Honorable Lynn Woolsey Member of Congress, California 6th District
2263 Rayburn Building Washington, DC 20515

Dear Ms. Woolsey,

Re: Golden Gate National Recreation Area

You may remember when the late great Phil Burton, against all odds, passed legislation in 1972 establishing the GGNRA. The reference is Public Law 92-589 paragraph 1, October 27, 1972. Reference is made throughout this legislation that the main purpose of the GGNRA was to be recreation and education. A large part of the real estate was handed over by the City and County of San Francisco, under agreement that use was to remain mostly recreational'the beaches, after all, had been theirs.

Now The National Park Service, whose affairs are administered by the same division of the Department of the Interior as Fish and Wildlife, is proposing two probably related actions, (1) a Draft Environmental Impact Statement (DEIS) regarding re- regulation or banishment of dogs on most of the areas where voice-controlled animals are now permitted; and (2) renaming GGNRA to Golden Gate National Parks.

The latter of these two proposals was advanced in 2008 by none other than Nancy Pelosi, who was and remains a Congressional leader. Nonetheless, the proposal did not even get out of committee. One can hardly imagine how this had her support, but we all make mistakes. It is a suspiciously bureaucratic idea, particularly when seen in conjunction with various anti-dog remarks made by officials of the NPS, including the then head of it, Jon Jarvis. It is my very sincere hope that you and your staff will review any

proposals to rename the GGNRA, so as to honor the provisions of the enabling legislation, the agreement with the citizens of San Francisco, and the memory of Phil Burton.

As to the DEIS about dog walking, we hope someone on your staff will take a look at this document. It is two volumes, two thousand one hundred eighty-eight pages long, so please don't print it out. Permit me to say here that my main interest in this subject matter is dog-walking at Muir Beach, right here in your district. My wife and I are empty-nesters, aged 71 and 76 respectively, with a rescue dog who has been walking with us at Muir Beach, off-leash but under voice control, without incident, at least four times a week for the four years that he has been our companion. We live only four miles from the beach, and there are only one or two places to walk Robbie that are not in the GGNRA and also do not require miles of highway driving to access. The same can be said of the DEIS proposals to ban dogs on the Oak Valley trail, at Crissy Field, and others.

Ms. Woolsey, thanks for your years of service for us, especially as co-leader of the Progressive Caucus. We have voted for you in every Congressional election since 1992. We understand that you're thinking of retiring, but although you certainly deserve it, we sincerely hope you don't.

Very sincerely,

Wentworth Foster

Correspondence: To - Mr. Frank Dean, Superintendent Golden Gate National Recreation Service From ' Jo Kennedy, SF, CA 94123 Subject - Dog Rules

I've been a Cow Hollow resident and dog owner for 54 years and remember when there was a fence prohibiting access to east beach except at low tide. I do believe that everyone should be able to enjoy all the beaches and, certainly, with the number of dogs and dog walkers there should be sensible restrictions ' not a one rule fits all approach. This applies also to Ocean Beach but I know the Crissy Field beaches the best and first I'd like to take issue and question the wide berth of the excuse that you use, that is,

the dogs "harm the environment: To use "The Enviornment is being

harmed" is a questionable stretch when it refers to most sandy areas and particularly the East Beach along to the West Beach because one can legitimately ask what sensitive environment? Sand is indestructible and green growth is almost non-existent, particularly at Ocean Beach. There is some growth, sand, birds and marine animals but I would argue that the damage, if any, is minimal ' as questioned below.

a.. Most of the growth, except for a few old, wonderful wind-swept trees, was man-planted by the GGNRA all along the wide pedestrian/bike path and the northern-side plantings were promptly ruined by the tides which often sweep over the wide path and leave big puddles. This damage was not done by the dogs nor people, so, please, explain what damage the dogs do. HOWEVER, I do agree that dogs should be leashed on that path to protect walkers, families and cyclists. It is also correct that the already protected, fenced, gated, diagonal path that serves as a learning area that crosses from the main drive that parallels the northern line of the lagoon should be No Dogs.

b. The sand on the beaches is washed (or dirtied) twice a day and it is certainly true that a few dog owners give all of us a bad name when they don't pick up the shit ' but- they should be tagged so that others can enjoy the beach. The tides bring in a lot of debris that often has to be trucked away. What damage do the dogs do to the sand?

c. In the lifetime that I have spent at Crissy, I have seen very few dogs chase the birds and if they do their owners should be tagged because it is a danger to the other people on the beach. I have no patience with dogs unleashed that run wild. I have, however, never seen a dog catch a bird and when I had a dog that liked to swim I was afraid that a sea lion or shark might get her.

Some recommendations East Beach: Sat, Sun and holidays, allow dogs off leash at east beach until 10:00am then again at 4:00 and tag anyone who doesn't comply but make sure the signs are many and visible. San Diego apparently does this. Off-leash OK during the week when there are many fewer people unless we have a heat wave when there should be some restrictions so little ones aren't beset by dogs. BUT, there are so few of these days it shouldn't be a problem but should be included in signage. East Beach is the only place with easy parking so we neighbors meet and feel we live in a real neighborhood. It is also the point from which so many people begin their hike to the Warming Hut.

Middle Beach ' the area between both East and West beaches, paralleling the lagoon where the few big trees grow and the GGNRA plantings have been devastated by the tides. This is a difficult area to reach for families and the old people who are out for their exercise since the only parking and entrance is at East Beach. Leashes required on lagoon bridge (part of on-leash path)

and then off-leash on the beach at all times, possibly as far as the old Coast Guard pier. It is the young with and without dogs that, for the most part, inhabit this area.

West Beach and the original raised Crissy Field. The area at the beach and the raised area should have different rules: Off-leash on the raised area On-leash at the beach because it is so close to the newly expanded beach at the Coast Guard Station and just close enough to all the activity going on from there to the Hut. The problem for this whole area is the lack of parking, with the hangers now occupied and the Warming Hut so popular. For dog owners the iffyness of parking makes it a poor choice for most of us.

Most of us are responsible dog owners and what we have learned is that our dogs make us a stronger part of our neighborhood. Those of us who meet at the Lombard Gate, for example, have an e-mail list of "members" and we are ready to help each other as needed and celebrate each other's birthday despite being very young to very old. We understand that we must share our spaces but chafe at rules and words that don't make a lot of sense. There is no such thing as "a rule that its all" but there are "rules that should be adopted for each environment" which is what we hope that you will achieve.

Jo Kennedy

Correspondence: Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Bldg. 201 San Francisco, CA 94123

Dear Mr. Dean,

I am writing to comment on the plans put forward by the GGNRA which include the change of name and status of the Golden Gate National Recreation Area by dropping the word "recreation" and changing the area to a National Park. I would also like to comment on the dog mitigation proposal.

-The GGNRA was established in 1972, and evoked a great sense of relief for those who lived in or near the urban area of San Francisco and felt that the establishment of the GGNRA would halt further residential and commercial development of open areas that had always been used for recreation and outdoor experience. The new community of Marinello, which was in the advanced stages of planning at that time, is an example of what had been stopped. Some of the land set aside as the Golden Gate

National Recreation Area was acquired from the city of San Francisco, some from residents, and some from Federal and California state land. The plan was to protect this land from development and to keep it open for outdoor recreation and education for the residents of this urban area.

-In 2008 there was an attempt to change the GGNRA, as established by Phil Burton and other visionary members of Congress, to a National Park. Fortunately for the residents of this urban area, this attempt failed. Now, more than ever, the GGNRA is needed by urban and suburban residents of the San Francisco Bay area to protect areas for recreation, education and outdoor experiences.

-The Draft Environmental Impact Study (DEIS), the "dog mitigation" plan, is part of the current proposal by the GGNRA and is not in the best interests of those served by the GGNRA. The plan to ban dogs from Muir Beach, part of the Oak Valley trail, Crissy Field and other areas can only be seen in the context of changing the original Golden Gate Recreation Area to a National Park and make the administration of this area easier for you. Perhaps this entire dog issue is a "red herring" in a document that is over 2000 pages and unlikely to be read in full by very many of the constituents served by the GGNRA. It is not without note that dog owners see this issue as the most compelling, and it is an issue that will disappear if the area is turned into a National Park because, of course, dogs will be banned as they are at other National Parks.

-Much has been done to date to build and improve areas within the GGNRA for bikers. Nothing has been done for hikers who like to hike with their dogs. This is a large group within the GGNRA which has watched in dismay as more and more trails and areas are closed to dogs completely or to off-leash dogs. There are many dog owners within the GGNRA who see hiking as a huge health benefit for themselves as well as their dogs, and for whom the experience of hiking is their major recreation. These people cannot take their dogs hiking in National Parks, and to tell them to go to established dog parks is like telling them to go hiking at the mall. It is also like telling bikers to go round and round a track. It just isn't the same, as I am sure you know.

-The fact that you are only planning to have informational hearings about such a huge change in the nature of the GGNRA indicates that you don't welcome public input. Are you afraid that the people you serve won't like what you want to do? If so, perhaps you should reconsider.

Sincerely, Penelope Foster

Correspondence: Dear Frank Dean, GGNRA,

I am a 64 yr old retired native San Franciscan who owns her own house. 3 generations of my family have been walking our dogs at Fort Funston for 33 years. I want my next generation to enjoy it too. During these years 2 have seen many changes. The cliffs have eroded so much that many of the fort structures have fallen on to the beach, the swallows little nesting caves have all disappeared, and all those useless fences you put up are on the beach or dangling from the cliffs. This erosion is not due to dogs or people. It's due to Mother Nature. You have wasted our money on fences that are covered in sand or fallen over. Your rangers are never walking the paths. I go out there about 4 days a week for at least an hour or so, and only see rangers in SUV's. The paths are full of pot holes and sand is eroding away from under them. You have done nothing except put in some native plants that seem to be doing ok because we have respected them. Our dogs are not responsible for hunting birds or any animals. The only dead animals I have seen are on Skyline Blvd or on the beach. Don't think I don't like birds. I have a bird feeder in my backyard and many flowering plants that attract humming birds, bees, and butterflies. Even the famous parrots have come in my yard to feed off my junipers and pear tree. My dogs don't seem to be having any affect on them.

In your report you site resources being compromised, but all you site are value causes. The word "COULD" is used a lot. You don't prove anything. If you're concerned for our safety, put up a fence where people have gone over the cliff, or fill in the pot holes. How can you fear for the ranger's safety when they never leave their trucks? You also mention litigation. You are the ones being sued. In so far as dogs causing disease, I have never got a disease from my dogs and neither have the many people I know who have dogs. Dogs still deficate and urinate when on a leash! I feel safe at the Fort beacuse I have my dogs. Children want to pet them (especially when I walk my friend's chihuahua). The vast majority of people like my dogs and enjoy watching them play. A rare person who has a phobia may avoid my dogs. But there is plenty of room and miles and miles of beaches they can use. The more you crowd people and dogs the more problems you will have. The way it is now is perfect. No one I know has been bit. I heard of a few dog fights, but they are minimal for the number of dogs at Fort Funston. I've been out there thousands of days and its my most important recreation. It was my mothers only recreation. Small enclosed areas won't allow me and my dogs to exercise. I used to jog with my german shepard. You also mention NPS regulations. This is not Yosemite or Yellowstone. I believe

they can have loaded guns at those parks!

I was up there in 2001 when you tried to enforce your illegal rules on us. It was easy to avoid you. What makes you think you can enforce it now. You want one million dollars to do it. "Congratulation"! You can now waste more taxpayers money on giving yourselves some useless jobs.

I love Fort Funston, Lands End, and Crissy Field. I would donate money and time if you didn't own it. I have lots of money and time. The telephone survey on page 99 was statistically useless. 1700 calls is way too small and how do you know they even visit these places. There are more people on a sunny weekend at F.F. than you have talked to.

The changes I would like to see are a limit of 5-6 dogs per person because I don't believe you can control more than that many dogs. Permits for professional walkers is ok. Leash control in the parking lot is a good idea. I've almost hit dogs and had dogs jump on my car. Enforcement would be easy because rangers wouldn't have to leave the parking lot and it wouldn't cost 1 million dollars.

If your regulations were enforced, other S.F. parks will be adversely affected. Our people and dogs need exercise and that takes space. Dogs can't fetch, play and swim on a leash. One of my dogs is high energy and one is very old. Fort Funston is a very popular and happy place. Don't Ruin it!

Thank you,

Doreen Malaspina

Correspondence Type: Letter
Correspondence: February 14, 2011 Att: Frank Dean. Genneral Superintendent GGNRA. Fort mason, Bldg 201 San Francisco, CA 94123

Dear Mr. Dean,

My name is Gyle Hagerty and I am writing to you regarding the GGNRA proposed change/strategy to manage off leash dogs in your numerous San Francisco Parks. I have lived in San Francisco for 30 years. For 25 of those years I have had a dog and utilize several of your parks (Crissy Field and Fort Funston) on a near daily basis. Most of my visits to the parks are with my dogs off-leash. I'm writing to you because I feel the change in status and the proposed changes are both unfair and harmful to my quality of life and

my ability to enjoy these parks. While I understand that there are some people who feel that there are irresponsible persons and their pets ruining their experience of the parks I feel there is and must be a medium for all of us. Below I have a list of points and concerns that I feel need to be addressed:

1) The Compliance-Based Management Strategy must go. This poison pill that will allow the GGNRA to change the status of off-leash areas to on-leash or no dogs without additional public comment if there is not 100% compliance with the new restrictions will not work. The change would be permanent. A management plan should not come with a built-in nuclear option, which is what this is. It allows a relatively few bad players to undermine and destroy a traditional recreational use of the area. No number of responsible dog owners will stop what will become the inexorable removal of all off-leash access in the GGNRA if this strategy remains part of the plan. Tens or hundreds of thousands of hours of incident-free dog walking will not matter. There should be (and are) penalties for bad actors and these should be enforced. But the vast majority of people who do not act badly should not be penalized for the bad actions of a few. This strategy is unfair because off-leash status to be changed in only one direction (toward more restriction). It circumvents the legal requirement that management changes that are either significant or controversial must have a public process before they can be made. Critical information about how compliance will be determined ' by volunteers biased against dogs? by surveillance cameras? ' is not included in the DEIS.

2) The Preferred Alternative is not acceptable. It is overly restrictive, and its restrictions are not justified by the totality of available data. It is based on separation and exclusion, a management philosophy that goes against the values of the Bay Area in which it is fully immersed. It violates the mandate for the " maintenance of needed recreational open space" contained in the legislation that created the GGNRA. The DEIS is full of negative things that "might" or "could" happen if dogs are allowed off-leash at various sites. But there is very little evidence presented that these hypothetical impacts actually happen. Given the intense scrutiny of dogs by the GGNRA over the past decade and more, the fact that there is not more persuasive real data about significant impacts of off-leash dogs means that there is no real justification for the proposed restrictions contained in the Preferred Alternative. The contraction of areas available for off-leash recreation will significantly compromise the park experience for people with dogs, and could lead to an increase in conflict as more and more people are forced into smaller and smaller areas. The impacts of people moving from the GGNRA into city parks is not adequately addressed in the DEIS. Any alternative must address these impacts on city parks and ways to mitigate them.

3) The GGNRA should develop a new alternative, the A+ Alternative, that

will better balance the recreational needs of the Bay Area with protection of natural resources. The DEIS calls the "No Change" Alternative "A". This is the 1979 Per Policy with some restrictions, particularly restrictions on off-leash at Ocean Beach, Fort Funston, and Crissy Field because of the snowy plover and native plant restorations. More than one-third of Bay Area residents have dogs and we now know the importance of off-leash recreation for dog's physical and mental health, as well as the importance of the significant social communities that develop where people recreate with their dogs off-leash. This large segment of Bay Area residents should not be restricted to significantly less than 1% of GGNRA land (that is how much GGNRA land is available for off-leash recreation in Alternative A) to have a satisfactory park experience, especially since there is little scientific evidence supporting restrictions on off-leash. There has to be more space available for off-leash recreation, not less, given the huge demand for it in the Bay Area. The A+ Alternative would include everywhere that is currently off-leash, plus sufficient off-leash opportunities in San Mateo County to meet the demand, and more trails off-leash throughout the GGNRA. In addition, new land added to the GGNRA would include off-leash areas, especially in those areas where it has traditionally taken place. There would be no compliance-based management strategy in the A+ Alternative. Any dog management philosophy in the GGNRA, like that for any other recreation use, should be based on Bay Area values of co-existence, shared space, collaboration among park user groups, and education where problems arise. Enforcement of already existing regulations should target irresponsible dog owners who create the few problems documented by the GGNRA, while allowing responsible dog owners to continue their traditional off-leash recreation without harassment.

4) There are not enough trails available for off-leash recreation in the Preferred Alternative. We need more. Not everyone who goes to the GGNRA plays fetch with his or her dog. Many people enjoy hiking on trails with their dogs as their companions. There are not enough trails with off-leash access in the Preferred Alternative

5) The "Poison Pill" of a "Compliance-Based Management Strategy" is unfair since it can only reduce off-leash access and not increase access in the future, and is an attempt to circumvent the legal requirement: of a public process when management changes that are significant or highly controversial are made. It will not work and must be removed.

6) The Preferred Alternative severely restricts recreational access for people with dogs, a fundamental violation of the reason the GGNRA was created. In the legislation that created it, the reason for the creation of the GGNRA is listed as "the maintenance of needed recreational open space." Off-leash dog walking is among the recreational activities listed as traditionally occurring in the land that was to become the GGNRA. There is no off-leash access in

San Mateo County in the Preferred Alternative and that must be changed.

7) The Preferred Alternative is overly restrictive. The science and data do not support the level of restrictions on people with dogs included in the Preferred Alternative. When dogs are walked in a responsible way (as most are), there is no conflict with the environment or with other park users. Target people not walking their dogs responsibly, but leave the vast majority of us alone.

8) The Preferred Alternative unfairly mandates that any new land that comes into the GGNRA cannot have dogs either on- or off-leash. This restriction is unneeded, and denies the traditional recreational activity of off-leash dog walking that has existed on many of these lands for decades. It goes against the recreational mandate that was the reason the GGNRA was created. If new land is added to the GGNRA, off-leash access must be allowed on it.

9) The Preferred Alternative is not "balanced." The 1979 Pet Policy allowed dogs off-leash on less than 1% of GGNRA land. Given recent additions of large tracts in San Mateo County to the GGNRA, this number is now significantly less than 1%. Off-leash dog walking started from a position of great imbalance. One-third of San Francisco households have dogs, yet they can currently recreate with their dogs on less than 1% of GGNRA land. The Preferred Alternative allows off-leash on even less, including no off-leash anywhere on GGNRA land in San Mateo County. How is that balanced? By denying the possibility of off-leash on any new lands that come into the GGNRA in the future, the Preferred Alternative will ensure there is no balance between recreation and protection of natural resources in the future. We need more off-leash recreational open space, not less.

10) The Preferred Alternative is based on a philosophy of separation and exclusion. It denies that different park users can co-exist. Rather than share space between different park users, the Preferred Alternative carves up park space into separate areas for different park users. This basic philosophy is the exact opposite of the way we approach problems in San Francisco. It flies in the face of the unique social qualities of San Francisco. The GGNRA needs to develop a new Alternative that will better reflect San Francisco values such as co-existence, shared space, collaboration, and education to address problems should they occur.

11) The Preferred Alternative discourages cooperation between different park users and will increase conflict between park users, as more and more people are crammed into smaller and smaller spaces. Park user groups can work together to resolve problems when they come up. For example, Fort Funston Dog Walkers, SFDOG and the hang glider group Feathered Flyers of Fort Funston collaborated on a series of signs to warn dog owners to

keep their dogs out of the hang glider take-off area.

12) The Preferred Alternative condemns every dog owners for the actions of a very few irresponsible owners. According to the GGNRA's own statistics, 94% of dogs do not chase birds (and most of those who did chased seagulls). Yet, all people with clogs will be excluded from a majority of Ocean Beach to "protect" birds. . Focus enforcement on people who do not keep their dog from chasing birds rather than on excluding all people with dogs.

13) Dog owners are being held to a standard of behavior that is impossibly high, and significantly higher than any other park users. For example, studies by GGNRA staff routinely show people without dogs "disturb" plovers, but there is no attempt to restrict people without dogs from the beaches where plovers roost (not nest).

SUBSTANTIVE COMMENTS

The restrictions on access for people with dogs contained in the Preferred Alternative are not warranted. They cannot be used to justify a fundamental violation of the recreational mandate that formed the reason the GGNRA was created.

1) Severe restrictions are not needed to protect other park visitors from dogs. Problems with dogs represent a tiny fraction of the total incidents and citations issued by the GGNRA over the past decade. Of those incidents and citations issued to people with dogs, the majority were leash law violations, or being in a closed area, and did not reflect any safety issues between dogs and other park visitors. Target enforcement on the small number of people whose dogs misbehave, not on excluding the entire class of people with dogs from most of the GGNRA. Jean Donaldson, nationally recognized expert on dog behavior testified before the SF Animal Control and Welfare Commission on 2/8/07: "(Self-selection operates strongly, i.e., people who take the time to get into their car or walk to a designated off-leash area to exercise their dogs tend not to be the type who are derelict in other areas of dog guardianship, such as training, socialization, or appropriate containment."

2) The DEIS does not adequately address dispersion issues. The DEIS does not adequately address the environmental and social impact of forcing large numbers of people and dogs into much smaller areas. Reducing the amount of area available for off-leash will significantly degrade the park experience for people with dogs. It will increase conflicts. Even more importantly, the DEIS does not address the environmental and social impact on small, neighborhood parks in cities like San Francisco next to the GGNRA. Because the GGNRA is located immediately adjacent to one of the most

densely populated areas in the United States (San Francisco), it provides much needed recreational open space for Bay Area residents. If that open space is lost to recreational access, people and their dogs will move to the much smaller city parks and they will not be able to absorb the hundreds or thousands of people with dogs each day that will be kicked out of the GGNRA. As further proof that the GGNRA did not consider impacts on city parks in San Francisco, the Preferred Alternative suggests the nearest legal off-leash area in San Francisco to Fort Funston is Lake Merced. That off-leash area has been closed to off-leash for years and has been turned into a native plant restoration area and habitat for the endangered red-legged frog among other animals. Yet this is where the DEIS suggests people with dogs go.

3) The DEIS continues a trend of GGNRA claims about impacts by dogs on birds that are not supported by the data. It is based on bad science. There is no scientific consensus that severe restrictions on off-leash dogs are needed to protect natural resources and wildlife. Some of the most compelling research in the last few years has been by researchers such as Forrest and Cassidy St. Clair (2006) and Warren (2007) who admit that they expected to find that off-leash dogs had a major impact on the diversity, abundance, and feeding behaviors of birds and small mammals. However, when they did the actual research, they found no such impacts. This indicates that assumptions about impacts from off-leash dogs must be tested and proven to be true before they can be used to justify restrictions. Unfortunately, most of the assumptions cited by the GGNRA have not been adequately tested or proven. In addition, the GGNRA has repeatedly cited research that they claim shows major impacts from off-leash dogs. However, when the raw data from these studies is analyzed, it is clear the claimed conclusions are not supported by the data. This is highly reminiscent of the problems documented at the Point Reyes National Seashore, where claims by staff biologists about negative impacts from an oyster farm located within the park were proven to be baseless when the raw data was independently analyzed.

a) Severe restrictions are not needed to protect the snowy plover. The GGNRA's own data show that off-leash dogs have no impact on the numbers of snowy plovers, a threatened species that roosts only (does not nest or raise chicks) on relatively small parts of Ocean Beach and Crissy Field. Indeed, larger numbers of snowy plovers frequently coincided with times when dogs were allowed off-leash in the area. The 1999 Hatch Report observed 5,692 dogs at Ocean Beach and found that only 6% chased birds (mostly seagulls). Indeed, of these 5,692 dogs, a mere 19 were observed to chase plovers. That is one-third of 1% of the dogs observed. Target those dog owners for enforcement, but leave the other 99.66% of dogs that did not chase plovers alone. Some studies define "disturbance" of a bird so broadly as to include the fact that if a bird merely looked up when it heard a sound,

even if it took no further action, it was a disturbance. The GGNRA's own studies show that joggers and walkers, not to mention parents with toddlers, equestrians, surfers, and other park users "disturb" plovers, yet there is no attempt to restrict their access in the plover areas.

There are much less restrictive measures the GGNRA could take to protect snowy plovers, including the use of temporary "exclosure" fencing when the plovers are present. This would keep everyone, people as well as dogs, out of the area. Enforcement that targets people who intentionally disturb plovers would also help.

During a 2/17/07 Negotiated Rulemaking meeting, Barbara Goodyear, Field Solicitor for the NPS, said that deliberate behavior (e.g., training your dog to chase birds) should be the target of a management policy, but that incidental behavior (e.g., walking by a bird and causing it to flush) should not. Yet the Preferred Alternative cites incidental behavior as a justification for increased restrictions on off-leash dogs.

b) Severe restrictions are not needed to protect the bank swallow. The DEIS claims "continuing" impacts from dogs and/or humans that include digging at or collapsing the burrows of bank swallows, flushing the birds from nests, and causing active sloughing and landslides that may block or crush the burrows. However, there is no documentation that any of these impacts actually occur. Bank swallows burrow near the top (but not at the top) of sheer cliff faces at Fort Funston. There is no way dogs can access these burrows, so there can be no impact on them from the dogs. A GGNRA bank swallow report claimed that these impacts "could occur" even without proof that they actually do. This "could occur" has been changed in the DEIS, to "continuing impacts".

4) The DEIS is full of impacts of dogs on wildlife and other park visitors that "could" occur, but there is little evidence that these impacts actually do occur. After over ten years of intensive scrutiny of off-leash dogs in the GGNRA, it should be obvious if those impacts really do occur. The lack of data indicates they do not. For example, the DEIS mentions that disease "could" be transmitted to people from unpicked-up dog feces. However there has not been a single case of dog-feces-caused human illness reported by the San Francisco Department of Health for over 50 years. A management policy should not be based on hypothetical impacts. It should be based on actual, observed impacts. Hypotheticals that are not actually seen in the GGNRA cannot be used to justify restrictions on off-leash recreation in the GGNRA.

5) The claim that environmental justice requires severe restrictions on off-leash dogs is not supported by the studies cited in the DEIS.

a) The DEIS cites a 2007 SF State study that claims all Latinos and Asians surveyed said that dogs were a problem. However, the study itself was not about the "ethnic minority visitor use experience at the GGNRA" as claimed by the DEIS, but was actually intended to address ways to improve "connecting people to the parks." Off-leash dog walking connects all different kinds of people to the parks. In addition, the SF State study was not an extensive survey ' it interviewed less than 100 non-randomly people who were largely unfamiliar with the GGNRA (only 1/3 had visited at least one GGNRA site in the past year).

b) A second study cited by the DEIS (Northern Arizona University phone study) was a scientifically rigorous study that used random sampling in identifying who was interviewed for the survey. This study concluded that there was no real difference in attitudes between the various ethnic groups about dogs in the parks.

c) Indeed the restrictions on off-leash access supported by the Preferred Alternative will have a serious negative impact on the thousands of ethnic minorities who walk their dogs off-leash in the GGNRA, a point not addressed in the DEIS. Off-leash dog walking is the most diverse recreation activity in the GGNRA, enjoyed by the widest variety of people ' seniors, kids, the disabled, every ethnic group, every sexual orientation, and every social and economic class.

6) The claim in the DEIS that they have to manage the GGNRA in a manner similar to the way they manage parks like Glacier National Park or Yellowstone National Park is misleading and cannot be used to justify the restrictions called for in the Preferred Alternative.

a) The GGNRA is a National Recreation Area, not a National Park. The mandate for the GGNRA's creation was, according to the legislation that established the GGNRA in 1972, for the "maintenance of needed recreational open space". Off-leash dog walking was acknowledged at the time as one of the traditional recreational uses taking place in the GGNRA when it was created. In 1979, the US Congress passed a law that all national park units, including national recreation areas, national seashores, and national monuments have to be managed uniformly. But, concerned that the unique purposes for each park would be overlooked in this change, they added the following language to the law: "The authorization of activities shall be construed and the protection, management, and administration of these areas ... shall not be exercised in derogation of the values and purposes for which these various areas have been established". So there is no mandate to match the GGNRA's policies with National Park Service requirements that dogs not be allowed off-leash in a national park.

b) In 2002, a panel of senior National Park Service officials concluded, in

part, "[T]hat off-leash dog walking in GGNRA may be appropriate in selected locations where resource impacts can be adequately mitigated and public safety incidents, and public use conflicts can be appropriately managed." Adequate mitigations and management already exist 'target people whose dogs bother birds and wildlife or who jump on people, but leave the vast majority of responsible dog owners free to recreate off-leash with their dogs on the less than 1% of GGNRA land on which they've always been allowed off-leash.

c) Dogs are allowed off-leash to hunt in national preserves, and other units administered by the National Park Service. Surely, if it's okay for a dog to be off-leash while it helps chase, corner and kill a wild animal, it should be okay for a dog in the GGNRA to be off-leash to play with people and other dogs.

d) The GGNRA is located in the densely populated San Francisco Bay Area. It is in a major urban area. Much of the land was highly modified by the military when they controlled the land before the GGNRA was created. The GGNRA contains numerous missile silos, artillery batteries, and their assorted support structures. The military planted huge amounts of ice plant to stabilize the sand dunes at Fort Funston and elsewhere. Standards of management that treat much of the GGNRA, especially those parts in San Francisco, like pristine wilderness are misguided.

e) During 2/17/07 Negotiated Rulemaking meeting, Barbara Goodyear, the Field Solicitor for the NPS, made it clear that while all parks are managed to the same level (conservation of resources), there is flexibility in how that is done from park to park. She cited as an example, the fact that you don't manage Yosemite Valley with the expectation that people will have a solitary wilderness experience. You manage it with the knowledge that people will bump into each other in that part of Yosemite. The GGNRA, an urban park located in and immediately adjacent to a large city, does not have to be managed in the same way as Yellowstone or Glacier National. Parks.

7) The level of enforcement required by the Preferred Alternative is excessive and unsustainable. Targeting people walking their dogs irresponsibly and leaving responsible dog walkers alone would be a much more efficient use of GGNRA resources.

The DEIS states that it will cost nearly \$1million to enforce the Preferred Alternative, through the hiring of more Park Rangers or Park Police. In an era of shrinking federal budgets, this seems a poor use of scarce financial resources. Existing Park Rangers could easily enforce already existing rules such as picking up pet litter or no chasing of birds. These enforcement actions are all that are needed to ensure responsible dog walking and minimal impact on natural resources and other park visitors from off-leash

dogs.

8) The inclusion of a "poison pill" in the DEIS suggests the GGNRA will use it as an end run to ban off-leash dogs in the near future, bypassing the kind of public process such an action is normally required by law to follow. The DEIS includes a "compliance-based management strategy" that says that, if there is not enough compliance with the restrictions imposed by the Preferred Alternative, the GGNRA will change the management of the various areas to the next more restrictive level ' an off-leash area will become on-leash only, an on-leash area will become no dogs at all. This change will be permanent; with no chance to go back to less restrictive levels at any time in the future. This section must be removed from any final Dog Management Plan.

a) This compliance-based management strategy is decidedly unfair, because it can only be changed in one direction ' toward more restrictive levels of access for people with dogs.

b) There is no provision for public comment in the case of a change in status of an off- leash or on-leash area because of the compliance-based management strategy. The GGNRA has already lost two court cases (and one appeal) when it tried to make a significant and controversial policy change without going through a public process. The federal courts have routinely told the GGNRA that they have to hold public meetings and take public comments before making such changes. Clearly, a change in status of an off- leash area to leash-only would be both significant and very controversial; and therefore should require a period of public comment and public hearings before being implemented. The poison pill in the DEIS is an end run designed to allow the GGNRA to make such changes without having to go through a public process (they can claim the public process was the public comment on the DEIS itself, not on the changes it allows at a future time).

c) How will compliance be monitored? Who will do the monitoring? The GGNRA has repeatedly relied on poorly trained volunteers with a deep-seated bias against dogs to monitor the interactions between dogs and snowy plovers. Why would we expect these compliance monitors to be any less biased? Will their claims of non-compliance be valid? Will the GGNRA resort to the use of surveillance cameras to monitor compliance? While noting that there is no mention of surveillance cameras in the DEIS, GGNRA staff have refused to say they would never be used.

d) This allows a few bad actors to result in the removal off-leash access everywhere in the GGNRA, even if there are tens of thousands of hours of incident-free dog walking for every single incident. Including a "nuclear option" in a management plan is not good management policy. Regulations

already exist to target those who do not control their dogs when they are off-leash. Target enforcement at those bad actors, not at the huge numbers of dog walkers who do not cause problems.

9) Off-leash play decreases the likelihood of dog aggression in dogs. In comments to the SF Animal Control and Welfare Commission on 2/8/07, Jean Donaldson, then head of the Dog Training Program at the Sfy/SPCA and a nationally recognized author on dog behavior said: "There is not only no evidence that allowing dogs off-leash for play opportunities increases the incidence of aggression, to a person, every reputable expert in the field of dog behavior in the United States is of the opinion that it is likely that off-leash access decreases the likelihood. of aggression." She also said: "Interestingly, it could very well be that the safest dogs are those that attend off-leash dog parks." And she said: "There is no research demonstrating that dog parks or off-leash play contributes to any kind of aggression, including dog-dog aggression." 10) A well-exercised dog is a well-behaved dog. Dogs that are not adequately exercised can develop behavior problems such as barking, destroying property in the home, etc. Behavior problems are one of the primary reasons that people surrender dogs at shelters. San Francisco has a "No Kill" goal that no potentially adoptable animal in a city shelter (SF Animal Care and Control, SF/SPCA, Pets 'Unlimited). Representatives of the SF/SPCA have said that the Preferred Alternative will make it harder for the SF/SPCA to perform their mission to reduce surrenders to city shelters and make San Francisco a truly No Kill city.

In closing, I believe the above points and arguments are compelling enough that you and your office are mandated to revisit and re-strategize the manner in which you are proposing to address this situation. I can promise you that in the event that these concerns and arguments are not taken into consideration, I will be actively protesting your management program in its present state. I thank you in advance for taking my concerns into consideration and making the needed changes to your plan.

Sincerely,

Gayle Hagerty

Correspondence: As a life-time naturalist, animal and bird lover, I suggest that it would be irresponsible of the department, to choose any Alternative but A or instead to do nothing yet. This would provide additional time to create a more realistic and effective alternative than is proposed in DEIS Alternatives B-E.

GGNRA needs to rethink its victimization of off-leash dogs and any proposal that severely restricts the few off-leash dog areas left in the metropolitan areas. These areas are essential to the well being of thousands of citizens. Reduction of this space for off-leash dog enjoyment will not necessarily protect endangered species nor preserve areas for future generations. Constricting the space as much as most of these Alternatives propose is unacceptable.

It is widely suggested that the origin of these proposals are a result of the local Sierra club's refusal to agree with any proposal allowing dogs in recreation areas. If true, this perspective is fundamentally unbalanced and out of sync with the needs of many of this city's citizens. It is biased against dogs and owners and promotes the suppression of a huge part of our society. For the sake of possibly preserving the life of plants and animals that may or may not survive despite our best efforts; the DEIS Alternative complicates what could be a simpler, less expensive solution for enforcement. They would very likely lead to increased conflict as more and more people are forced into smaller and smaller areas. B-E Alternatives are all slanted to condemn dog-owners and therefore they do not appropriately serve a majority of the community .

Furthermore I question the victimizing of dog owners and their dogs as an effective and realistic solution to preserving endangered areas, providing a variety of visitor experiences, improving visitor and employee safety, reducing user conflicts, nor maintaining park resources and values for future generations. The level of enforcement required by Alternatives B-E would be much more excessive and create a resentful and antagonist atmosphere. Alternatives B-E blatantly lack many other possible solutions that would not require such extreme restrictions to people and their dogs.

In support of my thoughts, please understand that I regularly visit Crissy Field on a minimum bi-weekly basis, and have since its makeover. In all my hundreds and hundreds of walks at Crissy Field I have rarely seen an aggressive altercation between dogs, and dog owners or dogs and other people. Nor have I seen a person in danger from a dog. I imagine that altercations have occurred since they are proposed in the DEIS summary, yet I have not witnessed them.

My experience at Crissy Field includes weekdays (when dog walkers have their packs), mornings and dusk, and weekends, (when children and families are prevalent). The majority of my time there has been peaceful and positive and I have observed that other people are enhanced by the experience of interacting with unleashed dogs. Even before I adopted my dog I too would go to the Crissy Field to be around the joy of dogs and their owners experiencing the freedom of open space in a beautiful setting.

For those irresponsible dog owners I am not ignorant, oblivious nor in approval. In fact I would love to find a way to severely penalize those who disregard rules and responsibility and ruin a beautiful situation for the majority of the rest of dog owners. In all my time spent at Crissy Field, however, I have very rarely seen a park ranger or an enforcement of park rules. It took years for the GGNRA to put up a more substantial barricade to restrict the protected plover region of Crissy Field. Yet it resulted in an immediate and dramatic lessening of unleashed intruders. Why then hasn't this approach been more widely used through out all the proposal areas of the city and beyond?

The bottom line is that this recreation area exists as an antidote to city life for all it's citizens, their children and their dogs. Appropriate wild life restrictions are in place and it is up to the GGNRA to enforce these restrictions more effectively, rather than discriminating against dogs and dog owners with restrictive plans. More substantial barricades, more signage and dog owner education, more public awareness and, more frequent enforcement by park rangers would go a long way to correcting any of the proposed problems.

I appreciate your time and cooperation.

Sincerely,

Barbara Oplinger

Correspondence: Frank Dean General Superintendent GGNRA Fort Mason, Bldg 201 San Francisco, CA 94123-0022

Sir:

Re: GGNRA Draft Dog Management Plan

I don't know whose benefit would be served by revoking off-leash permission in GGNRA managed properties, but such an idea is ill conceived and would have many detrimental effects with little positive to show for it.

First, let us establish that rules for rural, destination national parks are inappropriate for urban parks. I speak particularly of Fort Funston. This is a property that is overwhelmingly used by locals and should therefore either serve that population properly or be returned to the city if the federal

government cannot satisfy local needs.

Fort Funston has evolved into one of the most magnificent off-leash areas imaginable, and that is what it should stay. The following considerations support leaving Fort Funston off-leash:

- 1) Off-leash is essential to providing many dogs sufficient exercise which humans don't have the foot speed to meet. Without such outlets for vigorous exercise, there will be an increase of aggressiveness incidents due to pent up aggression. Also, because these dogs would now spend more time on the sidewalks of the city and endure more provocative contacts, there will be more unwanted incidents again.
- 2) Dogs socialize better off leash. If forced onto the leash or onto the sidewalks, there will be more incidents of dog fights, with attendant consequences.
- 3) Owners take ownership of picking up after their dogs at Fort Funston, and there is remarkably little poop left behind given the huge number of dog visits to the park. When these dogs spend more time on the sidewalks, owners will feel less of a responsibility, and whatever feces left behind will be in more problematic locations and create greater public nuisance.
- 4) Fort Funston has access and parking unlike an other property for dog exercise.
- 5) Fort Funston is the only resource in SF that can accomodate hundreds of dogs at a time.
- 6) Concerns about flora and fauna are red herrings. Fort Funston is overwhelmingly in ice plant which is invasive. There are areas that are marked off for native habitat, and those areas are doing well, with the exception that there is invasion by ice plant on the edges of many of these areas. GGNRA is currently allowing this intrusion, so it is disingenuous to express concern about the habitat when the preservation effort is ineffectual. If you don't have the money for small maintenance, the public should be aware of any major expenditures to support proposed changes in rules.

In summary, it is a mistake to think that ending off-leash in these park areas will be a net benefit. People who dislike dogs should be happy that there are these somewhat segregated resources to create a healthier environment for all.

Sincerely,

Victor V. Cordell

I have tried on several days to access the plan online and to make comments there and have not been able to read the site. Any plan consideration should be deferred until the public has reliable access.

Correspondence: Frank Dean Superintendent GGNRA Fort Mason, Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean,

San Francisco shares its name with Saint Francis of Assisi, the patron saint of animals. Restricting the freedom of pets at Baker Beach, or any of the otehr GGNRA sites, would seem unfitting. Residents of Sea Cliff and neighboring areas of the City have been taking their dogs to Baker Beach and recreating for 40+ years, and we believe that the 1979 pet policy should be grandfathered into the current dog management plan. Traditional usage should play a crucial factor when drafting new policy, Baker Beach is a low conflict, moderate usage site.

The contiguous beach, China Beach, has a no dog restriction. I have been advised there are no endangered birds and no sensitive nesting habitat at Baker. Those whose dogs use the beach have been careful to keep their dogs off the fenced salt grass area. This ten-acre site has no snowy plovers. I consider myself an environmentalist, and there is no natural resource that is being damaged or destroyed at Baker. The dogs are running on sand. The dog owners pick up the trash on the beach and are not interfering with family activities (in comparison to the nude men running around at the far end of the beach). That overt behavior seems more disturbing to children than any dog. I have seen illegal camping with tents and fires, pot smoking, discarded cigarette butts and alcohol bottles (some broken and dangerous) at the beach which are cleaned up by dog owners.

There is a low level of visitor activity in the early hours when many people walk with their dogs on the beach in the early morning (especially as it is usually foggy). The only other people there are the occasional fisherman or surfers. How are dogs improper? Private dog owners are respectful of visitors, use voice control and generally avoid the beach at peak picnic/sunbathing hours.

The City has more pets than children. There is a valid fair argument for dogs

recreating off leash on the GGNRA. Where will all the local residents go? In addition to practicing good dog etiquette, they are good stewards of Baker Beach, Many clean up after high traffic weekends and party nights. One dog owner even facilitated the recovery of a drowning victim early one January morning. Baker has dangerous riptides..

I do not understand why dogs are singled out as a high profile controversy when natural resources are impacted in GGNRA by fireworks, Blue Angels, cargo ships spewing oil, cruise ships polluting the Bay, etc.

The key word in GGNRA is recreation. Walking with their dogs is how many get exercise and fresh air. It is a great tragedy that in the name of the National Park Service you would take away that privilege. San Francisco is a special case where these dog walking areas have become an integral part of the local and visitor experience.

Respectfully yours.

Jasmine Law-Keeney

Correspondence: Golden Gate National Recreation Area Fort Mason Building 201 San Francisco CA 94123

Dear Frank Dean,

We live in the Marina District and are concerned about the DEIS proposal. As the current owners of two golden doodles but with three other dogs as

well, we have walked off and on leash at Crissy field, on the beach and gravel paths twice daily for over 30 years. As you can tell this is a beloved and important activity for our family. This is the only way that the dogs can run free and its essential in a city to have access to this kind of positive exercise. We believe that Alternative A is the best choice and want to keep off leash dog walking in the Crissy field area. We understand that compromises must be made but feel that allotted times for off leash dog walking and seasonal off leash dog walking are better uses of the space than the other alternatives you've provided. We will be attending the meeting at Fort Mason and appreciate your consideration for our concerns.

Thank you,

Bethany Hornthal

Correspondence: To whom it concerns:

It is with great sadness and disappointment that I learned of the GGNRA's proposals and their preferred alternatives for dog off-leash rules around the city.

As a 20 year resident of this beautiful city, I would like to formally register my opposition to what consider to be an overly restrictive and heavy handed approach.

My wife and I have been taking my dog to Crissy field every weekend, ever since she was a puppy. She literally looks forward to this all week... so that she can run on the beach, paddle in the water and chase a stick. And I can say without hyperbole, that our dog is at her happiest when she is running freely on the beach at Crissy Field.

This city has always been known as a dog friendly place, and I would hope your organization has the wisdom to ultimately continue supporting the existing policies which strike a reasonable balance between protecting the environment and allowing 'mans best friend' to play as nature intended.

Sincerely

-Eoin Ryan

Correspondence: Frank Dean, General Superintendent Golden Gate National Recreation Area
Fort Mason, Bldg 201 San Francisco, CA 94123-0022

Dear Superintendent Dean,

I am writing to you to object to the new restrictions proposed for off leash dog recreation in GGNRA administered areas in San Francisco and San Mateo counties. First let me tell you who I am. I am a 79-year-old man who currently resides in San Mateo County. Before moving to San Mateo in 1978 I was a resident of San Francisco from 1946. I was an art teacher in San Francisco schools until I retired from City College in 1992. I have been a volunteer at The San Francisco Maritime National Park for about 10 years where I crew on the hay scow, "Alma" and also spend time doing her maintenance.

I have been walking dogs on San Francisco beaches since 1946. I was terribly disappointed when GGNRA made San Francisco Ocean Beach off limits to leash free dogs back in the 70's. So I moved my dog's recreation area to Fort Funston where we have been going for more than 20 years.

As a frequent visitor to Fort Funston, I have been observing the cliffs being eroded by the wind and waves. I have seen the road being washed away by the surf and tides. I have watched your fences falling down the cliffs and the pillboxes find their way to the beach below the cliffs. It seems to me that in another 100 years, Fort Funston might disappear completely into the ocean, then nobody would get to use it.

I have skimmed through your 1166 page document and studied your arguments for restricting off leash dog walking in Fort Funston to a couple of acres out of more than two hundred and seventy, I am more than appalled, I'm outraged.

I have seldom seen any visitor to Fort Funston without dogs except the hang glider folks. I have never seen a horse on those nicely marked horse trails and I have never encountered anyone whose fear of dogs made them feel deprived of the pleasure of strolling through the area. People without dogs have infinite beaches to stroll on where dogs are not allowed or under leash control. I have never seen a Snowy Plover. The Bank Swallows have more problems with the unstable cliffs than with dogs.

The chemical argument posited about the destruction of the soil by dog feces hasn't bothered the ice plant in the 20 years that I have been coming here. If you can imagine how the serious erosion taking place will eventually carry the whole fort away then the chemical argument has no merit.

In all the years that I have been walking my dogs in the Fort I have never laid eyes on a Ranger. Now the GGNRA intends to spend \$900,000 on policing dog walker leash violations? ...and with photo surveillance? May I humbly suggest that there are many physical problems with the Fort Funston environment that could better use the \$900,000. For starters why not put riprap in front of the disappearing roadway in front of the zoo?

The large community of dog owners in the San Francisco Bay Area has virtually no off leash dog walking opportunities other than Fort Funston. Should that tiny section you are proposing for Fort Funston be implemented it will create the congestion of hundreds of dogs confined in that small area which will become untenable. You will have a prison camp atmosphere with dogfights and owner disputes.

The beachfront your proposal allows is nice, thank you. However it is the only legal beach in the Bay area. California State Parks do not allow dogs at all and most municipal jurisdictions do not permit off leash activity. Since GGNRA now possesses so much of the San Francisco bay/ocean front lands, I mean all; my appeal to you is to continue the current off leash dog policy for the Fort Funston area forever. Respectfully,

John A. Brooks San Mateo, CA 94402

Correspondence: Dear Mr. Dean-

I hope that people will be able to continue walking their dogs, off leash, on the Oakwood Trail Fire Road, on Tennessee Valley Road in Mill Valley.

It is one of the few places left for me to take our dogs. I am 79 years old, with arthritic hips, which cause me to have poor balance. - Leash dog

walking is difficult for me.

The fire road was originally part of a military installation, I was told. It has been available for dogs + people for many years.

Thank you for considering my request.

Correspondence: The proposal to change the off leash regulations at various sites throughout the GGNRA has not been well-publicized. I take my dog to Crissy Field once a week when I work in San Francisco and there are no notices posted about this proposal. I have no idea if it has been posted at any of the other sites affected by the proposal, but I have asked friends who use Rodeo Beach, and they knew nothing about the proposed changes.

I've read through the proposal and am unable to find any reason for the recommendation of reducing the off leash use of the Crissy Field airstrip. (The proposal recommends reducing it by two thirds.) My dog needs a large space to exercise off leash and the airstrip is an ideal size and surface. I use off leash facilities in the East Bay - the dog park at Cesar Chavez Park in Berkeley, Point Isabel, and the East Bay Regional Parks. All of them have problems. In the summer, the wild areas are hazardous because of foxtails and other grass seeds. In the Regional Parks there are problems with ticks, rattlesnakes, and poison oak. I can understand that the needs of wildlife are important, but the airfield is not a wildlife habitat. It's irrigated and mowed and located in the middle of a developed area. I see no reason to change its usage from the current arrangement.

Correspondence: I commend the purpose and goals of this policy re-assessment. People and dogs are inseparable and any policy that addresses the need for people to be able to enjoy recreational opportunities must provide a reasonable opportunity to share that recreation with dogs. But dog owners must be responsible for managing and cleaning up after their dogs. I believe that clarity of rules will be a big help. I prefer alternative A and urge that changes be made in increments so that stricter rules can be evaluated

effectively to see what works and whether further restriction is really needed. Please do not over-react or over-regulate.

Thank you, Julie Allecta

Correspondence: Dear Mr. Dean,

I think that removing dogs from GGNRA parks and trails would be an absolutely ridiculous and unfair policy. Banning dogs from these trails would force an unecessary amount of people to have to change were they walk their dogs. This proposition is extremly unfair and allows horses to still use these trails. Horses are just as bad for the trails as dogs if not worse. Banning dogs from the trails does not make sense and will be extremly unfair to many dog walkers, and their dogs.

Sincerely,

Charles McMahon

Re: Dog Management Draft Plan/DEIS

Mr. Dean:

I would like to start by thanking you and your staff for the time and the great effort you have made in preparing the Dog Management Plan for GGNRA. I am a GGNRA Park Sponsor, Natural Resources Defense Council donor, and give generously to several other environmental conservation organizations. I am compassionate about protecting our lands and the native habits they support. This is why I am writing today in support of the most stringent controls on dog owners.

Of concern to me are animals under "voice control". I loved reading the idea in the plan to have dog/owner certified as being under voice control prior allowing them off leash. My experience with owners who say their dogs are under voice control is listening to them yell the same commands (usually, 'come here' and 'don't do that') time and time again without result. I like the serenity of a park stroll and this yelling does undermine my experience.

I would also like to see codified guidelines on what extra privileges "companion dogs" would have, if any. I do not believe they should have any extra privileges. Several dog owners bring their dogs into restaurants in San Francisco because their doctors have written them notes say that the dog is a "companion dog" and as such they get special dog tags. If dog owners only have to get a note from their doctors to have an untrained dog outside of the purview of your new rules, the rules themselves will rapidly become feckless.

I have always enjoyed and supported the national parks and will do so in the future months and years to come, hopefully with a little more serenity, on a beach free of dogs, and with a few more snowy plovers nearby.

Thank you again,

Kevin Day

RE: Dog Management Plan/ Draft EIS

Superintendent Dean:

I want to simply state that I am favor of Alternative D, as presented in the
Dog Management Plan EIS.

Having served for almost a decade on the Marin County Parks and Open
Space Commission, I can attest to the fact that I have heard almost every
excuse for bad dog behavior that could possibly be presented by the dog
owner. The bad behavior is usually blamed on any and all other factors,
other than the dog itself, or that of the dog owner.

I see no reason to allow off leash dogs to negatively influence the outdoor
experience of others. The dog is not an endangered species. But the dog
certainly can have a negative impact on those endangered species currently
found in the GGNRA.

I respectfully request that National Parks Service support Alternative D,
currently described in the GGNRA Dog Management Plan.

Sincerely, Richard Fraites Novato, CA 94947

Subject: Dog Management Plan (D.E.I.S.-G.G.N.R.A.)

Dear Superintendent Dean;

Please accept this plea for more restrictive dog-leashing regulations and for
their strict enforcement.

My wife and I are elderly with physician-prescribed walking to treat heart

disease, arthritis, knee-replacement, and other deficiencies.

For 40 years, we have made North Waterfront our home city the key to our required walking program. We use Municipal Pier and The Fort Mason Meadow three or more times per week for periods of 1.5 hours each.

Each passing year brings a rising number of law-breaking owners who use their dogs as tools of the owners' aggression and hostility. Thesedog-owners go far past "civil disobedience" to show satisfaction when sending their loose dogs to charge at us while barking, growling, and snapping.

Thesedog-owners will violate any limit on their own hostility but we hope regulations which require universal leashing will be enhanced and funded to support strict enforcement.

Enclosed is a contribution to be used for any purpose useful to Golden Gate National Recreation Area.

Sincerely,

Dennis C.B. McDaniel

Re: We strongly support the Dog Management Draft Plan

Dear Superintendent Dean,

We have owned dogs for most of my life and are huge dog lovers. But we are also a nature lover who respects the fact that our national parks' foremost mission is conservation. We also know that we have many highly-sensitive endangered plants and animals within Golden Gate National Recreation Area that are having a very hard time surviving given the chasing, running, and digging that occurs in areas where these species. There is such a huge population of dogs now that their impact is significant, which is why it's time to address their negative impacts.

We believe:

- All off-leash dog areas should be fenced for the protection of other park visitors and dogs. Park visitors should be given a choice about whether they will interact with off-leash dogs.
- There should be a limit of 3 dogs per person. It is not appropriate for the Park Service to create commercial permits for professional dog walkers. Also, it is unlikely that most visitors with dogs will be able to keep control of more than 3 dogs at one time.
- Leash and voice control requirements must be strictly enforced throughout the life of the policy. Otherwise proposed on-leash areas will become off-leash areas, as has already happened under the old rules.
- The goal of achieving 75% compliance with the leash and voice control requirements is far too low. The Park Service should not be creating a system that expects and tolerates failure by 25% of the dog walkers. Golden Gate Audubon recommends a goal of 95% compliance with leash and voice control requirements.

Sincerely, Marta and Drew Lindsey San Francisco 94122

Mr. Frank Dean General Superintendent Golden Gate National Recreation Area Building 201, Fort Mason San Francisco, CA 94123-0022

Dear Mr. Dean,

I am writing to you regarding the Dog Management Draft Plan/DEIS for Golden Gate National Recreation Area. I am requesting that you consider revising your recommendations to continue to allow on-leash dogs on the following Marin Headlands Trails: Coastal Trail (Hill 88 to Muir Beach) and (Golden Gate Bridge to Hill 88, including Lagoon Trail), Coastal, Wolf Ridge, Miwok Loop, South Rodeo Beach Trail, North Miwok Trail (from Tennessee Valley to Highway 1) and County View Trail.

I walk on those trails frequently with my dog and those hikes are an integral part of my life. Those trails are generally not crowded and there is a good mix of people with dogs and people walking without dogs. I have never

encountered any problems between people and dogs, nor have I seen dogs chasing birds or disrupting the environment. The dog walkers on these trails are responsible and clean up after their pets, based upon my observations.

I do think that it is important to limit the number of dogs that one person can walk in the GGNRA and agree with your recommendations on that point.

Sincerely, Kate Gruen

Re: GGNRA DEIS/Dog Management Plan and NPS Alternative

Superintendent Dean:

I recommend the Park Service adopt Alternate "A" which would allow the 1979 Pet Policy Act to remain in place. Furthermore, I support opening ROLA's in the San Mateo GGNRA Lands. As San Francisco residents, we have walked our dogs daily at Crissy Field, Ft. Funston and Baker beach for nearly 20 years without incident. I would suggest that responsibly walking dogs on these usually cold and windswept beaches is the highest and best use of these lands.

Why waste limited Park Police and Ranger resources ticketing off leash dog walkers when there are far greater life safety law enforcement issues to be addressed elsewhere in the Park? Speeding automobiles, bikers running stop signs, graffiti, aggressive exhibitionism at Baker Beach and other problems created by humans represent far bigger problems than off leash dogs.

Adopt Alternate "A", open the GGNRA Lands in San Mateo to ROLA's, and, by all means, hold a public hearing so that the people can speak and be heard on this important issue.

Sincerely, Colleen M. Kieselhorst San Francisco, California 94123

Correspondence: Dear Mr. Dean,

We strongly disagree with GGNRA's potential banning of off-leash dogs from the areas they are currently allowed. These places are the few left in San Francisco and Marin where we can run our dogs to properly exercise them. Well-exercised dogs are good citizens and good family members.

Please help everyone in the city, be they dog people or not, by maintaining the current ability for dogs and their people to appropriately enjoy the urban outdoors as we have been since the GGNRA came to our county.

As a native San Franciscan who grew up running all over the Presidio, Kimball can testify to how beautifully the GGNRA has restored the Presidio. We both have always admired how this restoration and rejuvenation have been accomplished while still giving generous access to the local inhabitants, be they human or canine. Please maintain this status.

Thank you very much.

Best regards,

Kimball Worcester Margarita Rhodes

Correspondence: Dear Mr. Dean,

We are not dog owners nor do we plan to be. But we love walking at Crissy Field on the beach amidst the doggies and their wonderful owners and dog walkers. We have been walking there for several years and never once had an issue with dog waste ; the owners and walkers are so diligent about cleaning up after their pooches. They are considerate of us, as walkers, and very friendly. It would be sad to force the dogs onto leashes when they so greatly enjoy running after balls, swimming, chasing each other and

providing such positive energy and amusement for all. We hope you will not take this freedom away from them, at least not on the beach at Crissy.

On the other hand, the bicycles on the path that runs parallel to the beach are a problem. No bells, no warnings . Unnerving on crowded days. They whizz by, perilously close to people. Scary.

Thanks for all you do for all of us who enjoy Crissy. And we do hope that the dogs will continue to be free to run on the beach. Patricia and John

To whom it may concern:

I am strongly against making Fort Funston dog owners keep their dogs on leashes. It has been an off leash area for decades, and you have no rational reason to change it now. I've reviewed your new Dog Management Plan, and it is an outrage. You intend to restrict off-leash walking to 2 small areas. It's quite apparent to me that you are caving in to the anti-dog faction, and using laughable evidence.

I just heard a report on the radio that gave an account of one of the public meetings you're holding concerning where your information officer, Howard Leavitt, stated that dog attacks on horses, humans, and other dogs are on the rise. This is patent nonsense. I've been out there with my dogs at least 4 times a week over the past few years and I've seen nothing like this Please furnish your data for arriving at this conclusion.

Should we ban people from the park? They've committed more violence than dogs have. Or have you forgotten the gun violence and murder that happened in 2006 at Ft. Funston? You're using the same tainted logic in your conclusions about restricting dogs. If you would bother to go out to Ft. Funston on any random day, you would find hundreds of people enjoying the beautiful spot with their families, including the four legged members.

I'm writing in hopes that you will leave the rules as they are. Fort Funston is one of the only places left in our urban environment where you can actually take your dog for a much needed run. I thoroughly enjoy taking my dog there and would be deeply wounded if I couldn't let them run to their heart's

content. I use the park several times a week.

The National Park Service already denies most of its beautiful hiking areas to dog owners who want to bring their best friends along; dog owners who pay taxes like everyone else and are cheated out of their right to enjoy the parks. Don't make your oppressive policies worse by extending them to Fort Funston.

Sincerely, Dan Gerson

Correspondence: I would like to see alternative A- no action. There is no need to restrict dogs any further than they are already restricted. The GGNRA has approximately 80,000 acres of land in its jurisdiction. Off- leash dog walking is allowed in only a very small portion of this. North of this is Pt. Reyes with thousands of acres off limits to people walking with dogs and Mt Tam Sate Park which is off-limits to people with dogs. To the south there are several state parks off-limits to walking with dogs and the very large San Francisco water district land which is maintained in a mostly natural state and is off limits to people. Fort Funston and Crissy Field are major recreation areas in a major city. You are attempting to manage them as if they were Yellowstone. This to me represents a rigid bureaucratic mindset. There is no science behind this. Dog walking is a major recreational use engaged in by people of all ages and there is no justification to restrict it further.

RE: Strong Opposition to GGNRA'S Dog Management Plan

To the GGNRA:

I am a resident of the state of Michigan. I come regularly several times a year to your city to care for an elderly ailing relative who has lived in San

Francisco for at least 50 years.

Hiking with my friend and her dog at Fort Funston is one of the main highlights of my trip. The stress of my visits dealing with my sick uncle's medical and personal needs is greatly relieved by these hikes. It's because of the dogs and being in nature with them that I enjoy it so much. So I was greatly dismayed to hear the GGNRA is recommending severe restrictions on off-leash recreation. One of the reasons given in the DEIS report is that dogs detract from visitors' experience of the park. (p. 279-280) My experience is just the opposite.

I'm always amazed at the hundreds of dogs I see at Fort Funston all getting along, playing, and socializing with people. I have seen people of all age groups and cultural backgrounds out there with their dogs. It would be heart-breaking if GGNRA ruins this for the citizens of San Francisco, the Bay Area, and indeed the whole country. Please let this 1% of GGNRA entrusted land remain off-leash.

Sincerely,

Janet Williams

Dear Mr. Dean,

I am very distressed by the proposed GGNRA "preferred option" to ban dogs on Muir Beach. We live in Muir Beach and are responsible dog owners. Our dogs are always greeted and fussed over by strangers on the beach. The dogs on Muir Beach help to make the beach a friendly, joyful experience for everyone. They create a feeling of neighborhood and community and are an indelible part of the experience of the beach.

There are many options for dog free beaches in Marin. There is only one dog friendly beach. There are other ways to protect sensitive habitat than to ban dogs altogether. The proposal to allow dogs on Little Beach but keep them off the main beach is not a feasible alternative. One of our dogs is fourteen years old. For several years he has not been able to scramble across the rocks to Little Beach. There is an occasional low tide that allows him to cross on the sand, but those times are few and far between. There is no

parking anywhere near Little Beach. As a resident living on Sunset Way, the access road to Little Beach, I can assure you that vehicular access and parking for access to Little Beach would cause a significant problem for the residents.

I strongly urge you to continue to use education rather than segregation. I am a birdwatcher and a naturalist and appreciate the work that has been done on the lagoon. I love to see the otters and look forward to a time when the salmon are breeding. I do not feel that banning dogs from the entire beach is necessary or warranted. Post more signs regarding the restoration of Redwood Creek and its sensitive habitat clearly stating the rules. There are usually more children than dogs playing in Redwood Creek. I support Map 5A which continues off leash beach access for dogs and Map 7A which keeps the Coastal Fire Rd and the Trail at Muir Beach open for dogs.

I find dog owners at Muir Beach to be very responsible. We always carry poop bags and rarely see dog poop that has not been taken care of...but on the rare occasion, I do collect any dog poop that I see. A receptacle at the beach would be helpful.

The cost to patrol the beach would be far more than the cost needed for signage and education. Do not put an end to this long tradition of playfulness and freedom in a community that prides itself on being inclusive and responsible. Sincerely,

Sarah Brightwood

Correspondence: March 10, 2011 Frank Dean, General Superintendent Golden Gate National Recreation Area Building 201, Fort Mason San Francisco, CA 94123-0022

Mr. Frank Dean, General Superintendent:

I am Betty Bozio a senior citizen who still works by walking dogs for other seniors that are unable to walk their dogs anymore. I also walk dogs of tax paying citizens who need their dogs exercised while they are at work. It makes for a more well-adjusted dog which makes it better for the owner, neighbors and society in general. I was born in San Francisco and have been very proud that we are such a caring society. I have met many visitors that have been impressed with the ability to let our dogs run and have a good time. They have also been impressed at how well behaved the dogs are. This is the City of St. Francis where we care about our animals as well as

ourselves. We are forward looking and care about the environment and have been in the forefront of much environmental legislation. I have walked dogs at Fort Funston, Lands End, Sutro Park and Ocean Beach for 35 yrs. The last 12 years I have walked dogs mostly at Fort Funston at least 3 days a week and many times 5 days a week.

I have noticed many changes over the years, the cliffs were damaged severely in the El Nino storms in the 90's and by people trampling the dunes while looking at a dead whale but very little change because of people walking dogs. I also noticed that the handicapped stopped coming after their wheelchair accessible path was dug up in the 90's. There was a little repair needed but most of the path was usable. I missed seeing them and they enjoyed visiting with the dogs and we enjoyed them. There has been a major increase in the raven population after trees were cut down along the cliffs and throughout the park. The small birds would take shelter in the trees and since that was taken away from them they were much more vulnerable to the predator ravens and hawks. I think that has done more harm than people and dogs walking and running around. I also observed that when management closed off one of the meadows, the birds moved over to where we were walking.

You say in your report that your purpose for the restrictive plan you propose is to preserve and protect natural and cultural resources and processes. Instead it severely restricts the "cultural" processes of our community by not allowing the public to use the park. The GGNRA's enabling legislation and it's legislative history are very clear that it's purpose was to "maintain needed recreational open space". Thus management policies that severely restrict recreational access in the GGNRA violate [16 U.S.C. Section 1a- 1], and should not be allowed. The "natural" processes have not been sufficiently researched. In fact I feel, the former actions by management have harmed the natural resources. I also feel it is foolish and dangerous to take the ice plant out of the sand dune areas of these parks, especially at Fort Funston. It has been done at Ocean Beach and the highway is constantly being closed due to blowing sand. They do have an alternate roadway there but there is not one for Highway 35 which goes right by Fort Funston. The winds are severe there many days and the Highway would be a mess. Is that serving the community?

Fort Funston is mostly wild wind and sand dunes, what variety of use is planned? What visitor or employees have been harmed by the current use. The men who pick up the garbage are very friendly and courteous and we seem to enjoy each others company. There has not been a single case of dog- feces-caused human illness reported by the San Francisco Department of Health for over 50 years. The volunteers that sweep the sand off the paths also have had good relations with all of us. I have never seen anyone harmed in my presence, in 35 years. I have heard of a few mishaps but they were

few and far between especially for all the people and dogs that use the park.

If you close the park to use how does that maintain it for future generations? Future generations won't be able to experience the urban recreation it was created for. There has already been restrictions to the handicapped, and to people without dogs also. Management closed off large areas with fences that were supposed to be "temporary" but they are still there a decade later. That means people with children can't play on Joey hill or fly a kite or just sit and watch the sunset on some of the other areas that have been blocked off from the public.

I also strongly object to the "Compliance-Based Management Strategy". I feel it is a self serving attempt to circumvent the legal requirement of a public process when management changes that are significant or highly controversial are made. We are supposed to be a government by the people and the people are objecting to the preferred alternative so this is a way to ignore the citizens of this community This is not serving our community in any way. It is a way for you to change these parks into something they are not. They are not National Parks in wilderness areas. They are urban parks that are badly needed to serve the communities they are near.

Sincerely,

Elizabeth (Betty) Bozio San Francisco, CA 94122

Subject: Dog Management in GGNRA

Dear Superintendent Dean,

Unable to connect with the proper link on the website of GGNRA, I write to comment on the Dog Management plan under review.

As a long time resident of Marin, who has enjoyed the beaches at Stinson and the trails on Mt. Tam for many years, I believe the dog population of this area has become an aggravation if not a hazard to residents. At Rodeo Beach I have had an off leash dog urinate on my head as I lay face down on a beach towel. "So sorry" was the apology of the owners. "Voice control" of pets is an illusion as a 100 pound animal bounds over to pedestrians and sometimes to children-"he's just friendly" says the owner.

There should be no dogs on beaches where humans swim because their feces do not disappear with the tide and is often under foot. The idea of dog walkers having 6 dogs "under control" even on leashes is an illusion, and of course the excrement left in their wake is a detriment to the environment, not to mention an annoyance to non-dog owning walkers who follow.

Please tighten up on the restrictions for dog owners and dog walkers in the GGNRA.

Sincerely yours, Gloria Neumeier

Correspondence: Dear Mr. Frank Dean,

Hikers seek beautiful areas to hike, and those hikers which do, are sometimes solitary individuals which do so with their canine companions. There is the idea of Leave No Trace, which a select few individuals acknowledge or are even aware of, but the main hiker enthusiast may pick leaves, flowers, remove wood, pee, widen paths due to "muddy" areas, and potentially seek "wilder" spots away from the beaten path, to roam on, and as such create trails, that over time become more organized trails that others follow. Humans leave a footprint, a large footprint on these natural areas, one larger than any dog could ever do. We smoke, drink, litter, pee, potentially take dumps in these wild areas. We widen paths, we have introduced thousands of exotic species of both plants and animals, such as scotch broom and ice plants. For you to tell me that the environmental impact that dogs have on these areas is "too large" or "large enough" is difficult for me to understand. In relation to the impact one human makes, 1000 dogs cannot even begin to compare.

Nevertheless, this isn't a comparison between humans and their animal

counterparts, the canine, the reality of the matter is that this is a superfluous request that is bit exaggerated. I am an environmental science teacher. I graduated with a degree in wildlife ecology and conservation, am a Leave No Trace trainer, a Wilderness First Responder, and I do understand the ecology of our systems. One can assess impacts when focusing solely on dog poop, but why not assess the larger scheme of things, why not kill the fallow deer, why not control cat populations, why not wipe out the eucalyptus groves? Do something about things more detrimental than a domesticated dog that hikes for an hour and then goes home with his/her owner. If you want to preserve, then removes humans, dogs, and horses alike. For dogs are no more of a hindrance than us humans.

If you would like, remove the people from the trails, and let the dogs roam for a couple of hours a day. I gurantee you would see less devastation. True, some dogs are crazier than others, but aren't some people, with their beer bottles left around, cigarette stubs which pollute the soil, plants that destroy native habitats. Please reflect on what is really hurting our environment, because if you think dogs are the problem, you are simply putting a Band-Aid on a wound that will not heal. The environment is too fragile and complex to ignore the fact that us humans are the ones that have lead to its degradation not the dogs. Sincerely,

Lyanne E. Abreu

Re: Draft Dog Management Plan/DEIS

Frank Dean:

I completely oppose the changes that either require dogs to be leashed or prohibited from being on public lands. With open space, beaches, parks and trails being overly restrictive already for dog owners/dogs, if this is allowed to pass it will only get more restrictive and before you know it, we won't even be able to walk our dogs down public sidewalks! Seriously!

Pet ownership should be encouraged as a way of removing feral cats and dogs from our communities, showing a little heart, and helping the economy. What happens when the next group decides to ban kids from parks, or restaurants or whatever. In our alienated society, pets are link of

compassion for many. Don't make it a hardship. You are creating a world where people will be incarcerated for recreating with their pets, and then not get jobs because they had felonies on their record.

As conscientious as I am, and all the pet owners that I know are, about our dogs public behavior and our clean up habits, the few loud voices that want EVERYTHING their way are winning the battle and dogs will be banned nearly everywhere if we dog owners don't voice our objection to such restrictive ordinances.

Correspondence: Dear Mr. Dean,

I am writing to say that I DO NOT SUPPORT the under handed efforts of the National Park Service to remove the designation "RECREATION" from the name of the Golden Gate National Recreation Area. These lands exist in an urban area and were intended for the recreational use of the citizens and taxpayers of San Francisco, San Mateo and Marin. I OPPOSE the renaming of the GGNRA and I OPPOSE the currently proposed "Dog Management Plan" Clearly, it is the intention of this plan to inhibit (and eventually terminate) my freedom to walk with my dog off-leash anywhere in the area. I have been in relationship to the GGNRA lands long before they were GGNRA. The currently proposed Dog Management Plan threatens to cut off my access to this fabulous urban recreational resource and one of the most important and beneficial aspects of my life. To me the resolution of this Dog Management Plan is a matter of life and death.

This GGNRA "Dog Management Plan" addresses 1% of 78,000 acres. It seems to me that off-leash dog walkers must be at least 1% of the people included in the definition of "recreational users" of the land. This being the case perhaps we could develop one or two more palatable alternatives that would serve the needs of all stakeholders. My choice would be to leave it well enough alone.

FORT FUNSTON, SAN FRANCISCO GGNRA Access to be denied the handicapped and aged

Many citizen dog walkers have been walking and exercising dogs at Ft. Funston for decades. We consider ourselves stewards of the land there. Most of us have one dog, some of us have two. We are older. Many of us walk

with the assistance of a cane, a walker and in some cases, a wheel chair. We depend on the paved pathways. Our dogs walk with us. The dogs are under voice control and are leashed if they are not. We often walk in the early morning, we are respectful of the environment and of one another and we appreciate and depend on the social, recreational and health benefits provided us by the privilege of exercising our dogs and ourselves while walking the loop of the Sunset Trail, coastal Trail and back to the parking lot. Many of us cannot possibly walk on the sand and in the sand dunes. We are puzzled by the severity of the proposals for Ft. Funston. The EIS "Incidents Involving Dogs in 2007 and 2008" table (pg. 130) clearly demonstrates that Ft. Funston is NOT a problem area in terms of closed area violations or disturbing wildlife. Why are we being threatened with punishment (ie; loss of the privilege of walking with our off-leash, voice controlled animals) when we have done nothing wrong?

VIABLE ISSUES Sensible Number of Animals

There is undoubtedly an issue to be addressed in terms of the number of dogs an individual can control off-leash at one time. We applaud the GGNRA effort to address this issue and suggest that a permitting policy limiting the number of dogs allowed one walker and linking that number to a usage fee could be a considered approach to controlling and financing problems that arise from public use of the facility. Citizen dog walkers (as opposed to commercial dog walkers) have long taken responsibility for the behavior of their off-leash, voice controlled pets. Citizen dog walkers not only clean up after their pets but also support the efforts of park staff with voluntary monthly clean-up of the area. Most citizen dog-walkers have one or two dogs.

Rude Pet Owners

There are undoubtedly some few rude, aggressive and out-of-control dog owners. Perhaps some of the \$1000000 allocated for implementation of this plan could be used to monitor and restrict this sort of behavior in much the same way that our city police must monitor the streets.

Personally, WHY DO I CARE?

My physical and spiritual health is directly correlated to the amount of time I can spend exercising outside in open, natural areas. I am infinitely thankful for the paved loop of the Sunset Trail because I couldn't walk without the pavement. I'm grateful for the Park Service folks who remove the trash every day and for the toilets that are clean and accessible. I'm grateful for my beautiful, long legged dog that runs and leaps and plays in a way that I no longer can and who immediately comes to my side if I am distressed or unable to move on. I don't want to lose my daily walk at Ft. Funston. If I

lose the companionship of the dog and I am constrained to the dunes and sandy areas I will be effectively denied access to one of the most enjoyable activities of my life. I need to be outside in open space. Here in the busy urban areas of San Francisco, Marin and San Mateo we are blessed with an abundance of open RECREATIONAL space and I'd like to see that land stay "open" for all of us. Respectfully,

Mary Ellen McDonnell

Correspondence: Re: Comments On Draft Dog Management Plan/Environmental Impact Statement Dear Mr. Dean,

I live in and am a resident of the City and County of San Francisco, own a dog who walk frequently, am a lawyer, pay taxes and I vote. Please consider the following comments concerning the Draft Dog Management Plan/Environmental Impact Statement ("Statement"), which comments will also be forwarded to Senators Feinstein and Boxer and Congresswoman Pelosi. It is impossible to address all of the flaws with the Statement in just a letter, but the two largest flaws are: 1) The conclusions are simply not supported by the alleged "facts" that claim to support them. The Statement suffers from expectancy bias. Expectancy bias is where a researcher expects a given result, and then manipulates, cherry-picks and/or misinterprets facts and data in order to reach the given result. This is simply bad science, and the opposite of what the scientific method requires, and

2) The results of restricting the same number of dogs on a much smaller area of land are simply not addressed. What exactly is going to happen when the same number of dogs continue to be walked on half the land (on leash) and one-third of the land (off leash)? Where is the discussion of what will certainly be exacerbated aggression, social, environmental and erosion issues that are inevitable when the same number of dogs are restricted to a much smaller area of land? Where is the discussion of the responsible dog owners and dog walkers who frankly comprise the majority of dog walkers in San Francisco? How is restricting the amount of available land going to make the minority of dog owners and walkers who are not responsible (e.g., those who don't pick up dog waste and don't monitor their dogs) magically start behaving in a responsible manner?

This is not to say that there are not issues that certainly can and should be appropriately addressed. This Statement, however, is no solution and will

only make any alleged problems worse.

Very truly yours, Andrea Huston San Francisco, CA 94117

Frank Dean, Superintendent, GGNRA Building 201, Fort Mason San Francisco, Ca. 94123

Re: GGNRA DEIS/ Dog Management Plan and NPS Alternative

Superintendent Dean:

We are long term residents of San Francisco who have been responsibly walking our dogs off leash in the areas of Crissy Field, Baker Beach, Fort Funston and at the Lombard Street entrance to the Presidio for decades. We have enjoyed this right to use our public land as a result of the 1979 Pet Policy. This policy established that approximately 1% of the area now managed by GGNRA would be set aside for responsible off leash dog walking (ROLA).

Our preference is that the Park Service adopt Alternate "A" leaving the 1979 Pet Policy in place without changes; it's the old saying, "If it ain't broke, don't fix it". It is a policy that has served us well until the Park Service assumed responsibility, and initiated its aggressive and inappropriate management of these areas. We also support opening ROLA's in the San Mateo GGNRA Lands.

Based on our many years of walking our dogs, we have seen very few and minor problems with unruly off leash dogs. In fact, given your reference to the many hundreds of thousands of visitors that frequent the Park in Table 9, page 271, it seems that pet related incidents are very small.

By contrast, problems created by poor human behavior are a much bigger issue. Specifically, litter, occasional reckless bikers, graffiti at the south end of Baker Beach and aggressive exhibitionist behavior at the north end of

Baker Beach represent far bigger public problems than off leash dogs.

My overall impression of the voluminous Dog Management Plan is that it represents yet another example of a Federal Agency burdening its citizens with overregulation that is neither needed nor wanted and will be costly to enforce. Furthermore, it will require a US Park Police or Ranger presence that would be oppressive. A return to the aggressive US Park Police or Ranger tactics of ticketing dog walkers would certainly further tarnish the image of the Park Service among dog walkers; we simply don't want the feeling of a police state in our parks. Surely the U.S. Park Police or the Rangers have higher life and safety priorities to attend to rather than committing their resources to ticketing responsible dog walkers.

The Park Service has already fenced off most, if not all, the planted areas channeling people along gravel footpaths, reducing the area for open recreation. This is an urban park, located in the City of San Francisco, not a wilderness park like Yellowstone or the Katmai in Alaska. The Park Service should recognize this and orient the park to recreational use by the millions of people who live nearby. Preservation actions that restrict public access by setting aside and fencing off large tracts of land and beaches for the exclusive use of wildlife will only lead to conflict in a dense urban setting.

I must say, I find your concept of "Compliance-Based Management Strategy" to be offensive. By adding this punitive, "poison pill" provision to the Plan, The Park Service is essentially acknowledging that it will be unable to enforce compliance, because people will simply flaunt unfair laws. Non compliance is a consequence of a strong central agency, in an abuse of its power, creating rules and regulations that do not represent the will of the people. If over restrictive regulations are adopted by the Park Service, I expect organized demonstrations will directly challenge the Park Police and Rangers, not a pretty sight in a national park.

Finally, having now attended your public comment event at Ft. Mason last week, I get the feeling the Service is "going through the motions" of engaging the public for its input, but the Service is going to restrict off leash dog walking despite the absence of facts and public sentiment for doing so. Furthermore, engaging the public at these hearings, posting written comments on bulletin boards, is not the same as holding a public hearing. Why won't the Park Service host a true public hearing where people are free to speak, and exchange views freely?

At the Ft. Mason meeting I asked a Park Service representative why the large grass field west of the lagoon at Crissy Field was designated "on leash" and not ROLA as the other field to the west is in the Preferred Alternative. I was told that off leash dogs on this field would create maintenance and erosion issues. Where is the science to support this

conclusion? If this is any indication of the thought process that led you to your other recommendations in the Preferred Alternative, the Park Service has failed us miserably.

In conclusion, I recommend that the Park Service leave us the open spaces along the beaches, and leave us alone to responsibly exercise our dogs off leash. Adopt Alternate "A" and leave the present 1979 Pet Policy unchanged. We also support ROLA's in the San Mateo GGNRA Lands. Finally, hold a public hearing on this very important issue.

Correspondence: Frank Dean, General Superintendent Golden Gate National Recreation Area, Building 201 Fort Mason, San Francisco, CA 94123-0022.

Subject: Declarations made against off-leash dogs in the GGNRA Dog Management Proposal are unsubstantiated allegations and do not justify implementation of proposed restrictions that will severely deprive the dog owning community of Bay Area Urban Neighborhood Parks.

General Superintendent Frank Dean,

I recently became aware of the distressing proposal made by the Golden Gate National Recreation Area (GGNRA) to severely restrict where dog owners may take their dogs for off-leash recreation in several Bay Area Parks, and in many cases, will not allow dogs at all (see reference 1: Dog Management Plan/Environmental Impact Statement).

I clearly recall when GGNRA unsuccessfully attempted autonomous enforcement of similar restrictions against dog owners that abruptly deprived dog owners the use of parks and beaches throughout the Bay Area several years ago. Although this time the GGNRA is supporting the agenda with environmental rationalization, the allegations in the report have not been proven and are not peer reviewed. In summary they are as follows:

1) The negative impact of off-leash dogs on the environment of these Bay Area parks due to accelerating erosion, and being destructive to the plants, animals,

diversity, and ground water.

2) Off-leash dogs represent a safety hazard to people using these parks.

After attending the Fort Mason Open House I'm convinced that nowhere in the GGNRA proposal are there substantive studies or proof for these allegations against off-leash dogs. In contrast, these allegations are refuted in studies such as those listed at the end of this letter: Reference 2 (Scientific Assessment of Impact of Dogs on Birds, Snowy Plovers, Small Mammals, Wildlife Diversity, Vegetation and Bodies of Water In Urban Recreational Parks of the Bay Area) and Reference 3 (Statistics and Analysis of Safety Issues Associated with Dogs in Bay Area Parks, and Comparison to Reported Incidents Not Involving Dogs).

My personal experience as a dog owner has been with Fort Funston, one of the parks slated for severe restrictions (see reference 4). For the past 20 years I have seen that the dog owning community is appreciative, responsible, self- policing, independently organizing efforts to clean the park, and skilled in preempting conflicts. The park has provided recreation, relaxation, solitude and fellowship amongst dog owners and their dogs for many decades. Enactment of the GGNRA Dog Management proposal would restrict off-leash activities to a small fenced-off area and take away most areas entirely from dogs, which would destroy the unique and serene ambience, as well as the fellowship amongst the dog owning community.

A final issue is that the GGNRA proposal did not consider the impact of depriving dog owners of these parks and forcing us to try finding alternative areas that may be less safe or even dangerous such as the deceptive and treacherous rip tides present along the coast of many beaches in the bay area. In the last two years two women have lost their lives trying to save their dogs caught in rip tides along Northern California beaches (see references 5 and 6).

As a local dog owner and frequent user of Fort Funston with my dog, I have concluded the severe restrictions delineated by the GGNRA Dog Management Proposal are being promulgated by unproven allegations, and therefore institution of this management plan is unwarranted. Please do not enact this oppressive and unjustified dog management proposal which will destroy the unique ambience and fellowship experienced in these parks amongst dog owners and dogs alike.

Sincerely, Mark Armanini Pacifica, CA 94044

Correspondence:

Dear Mr. Frank Dean and the rest of the members GGNRA,

We are writing to give our input to your proposal to limit off-leash dog areas: DON'T!!!

We pay \$6.00 bridge toll and spend money on gas, just to drive over from Oakland to walk our dogs @ Chrissy Field, Fort Funston and/or Muir Beach. Our dog owner friends do as well.

Then of course there is the \$4.00 specialty coffee, hot chocolate or juice we buy when in the city. There is of course a pastry involved, another \$3.00 or so. Often we decide to have lunch while we're there in S.F., or stop quickly @ Macy's to purchase something. All of this income generated to the city & county in the course of walking our dogs!

Please do not make the two things pictured on the front of this card archaic!

We vote and we pay taxes. Thank you for your consideration of our opinion in this matter.

Correspondence: Dear Superintendent Dean,

I have been following the story of restricting off leash dogs in the GGNRA. We live on Octavia St. + walk practically daily to Crissy Field + the Warming Hut, we drive out to Ocean Beach often + even to Ft. Funston. Those areas are magnificent open nature. GGNRA is a gem of a resource. It is our backyard + by "our" I mean man + dog. It is heartwarming to see the dogs run like crazy, chasing balls + frolicking in the water.

We do not have a dog but we love watching them and their people. It connects us to our humanity. I feel it is a pitiful excuse to restrict the off leash area even more than it is currently. As one ages it is good to be able to watch kids, dogs, adults pla and enjoy each other. It pulls us int othe greater family. I implore you NOT to restrict the off leash areas anymore than presently designated. It is recreations for all of us + YES we can all live together.

Correspondence: Dear Mr. Dean,

Here are my ideas for the G.G.N.R.A.,

- 1) Go after the 5% who are troublemakers. Its like "taking a cannon to destroy a quart otherwise".
- 2) Don't want Fort Funston again as it was in 1970's as a criminal hangout.
- 3) Bring back Fort Funston to S.F. and away from the Feds forever!!! I owe

this my long sheltie "Brandy". He & I both loved Fort Funston

4) No leashes for dogs.

5) The old commons were there in the 1930's and 1940's to protect us from the facist Japanese and the nuke missles where there in the 1960's to 1970's to save us from the Communist Russians - no more tyranny from anyone else please?

6) I never had problems with anyone else, dogs, plants, birds, etc...at Fort Funston (and I still go there alot!

7) I used to be a mail clerk at the Presidio and I really appreciate what the G.G.N.R.A. has done there and elsewhere, but don't go "overboard" with Fort Funston, Ocean Beach and Sutro Park.

Sincerely,

G.L. Hastings

Correspondence: Dear Mr. Dean and Mr. Jarvis,

I hope you will consider retaining off-leash access for dogs in GGNRA. I feel very strongly about this, not just for the health, safety, and well-being of our dogs, but also of our families.

Dogs provide tremendous service to many people and families, and to relegate them to on-leash walks at human place, with little opportunity for native interaction with nature and themselves is not adequate and not fair. Fort Funston in particular has been a fantastic place for my dog and my family. She has become socialized and ergo more safe, with people and dogs, and significantly more healthy. The small postage-stamp-sized dog parks we have simply do not cut it.

Furthermore, these areas were specifically set aside with this use in mind. It is unconscionable to further restrict the tiny amount of free space that we make available for those wonderful additions to our lives. Providing for off-leash access makes our dogs and our families healthier, happier, and safer.

Regards,

Sherry Listgarten

Correspondence: To whom it may concern,

I have recently become aware of the proposed legislation banning dogs from trails in the GGNRA. I cannot stress how ill advised this decision is. Dogs are an integral part of Marin County. From the Tennessee Valley- Muir Beach trail to Crissy field, dogs are a common sight. Quite frankly, if you ban them from the GGNRA, you will have a loss in profits. What dog owner wants to go for a walk to the Crissy Field warming hut or to any number of GGNRA sponsored vendors without their dog? And as to the fact that horses are still going to be allowed, I can't begin to explain why this is hypocritical. Horses tear up trails, eat vegetation and leave large piles of feces. If horses are allowed, dogs must also be allowed.

This letter is to comment on the proposal that would ban dogs in certain areas (21 sites in the GGNRA including those in Pacifica, CA..

First dogs serve as companionship to people, and are not part of the ecosystem. The coast birds are part of the ecosystem and must be protected and maintained. The coast in California is the habitats of birds and must be guarded. The coast birds that live, breed, and nest must be safe-guarded. This dog management plan is to help rescue these coast birds from extinction. The GGNRA has to be dedicated to conservation as a coast guard tradition. Dogs pose a threat to nesting on the Coast. Dogs need to keep distance during nesting seasons and the GGNRA must have a plan + a way to make sure nothing (dogs) do not threaten the birds. the GGNRA plan is good, before a force- a legal force is forced to guard the birds from dogs at gunpoint. the dogs are predators, and serve only as companionship. allowing

dogs to continue on bird nurseries is a threat to nature's birds, and coastal bird sanctuaries.

Sincerely,

Ramos

Correspondence: Dear Superintendent Frank Dean & Committee,

It feels to me as if the GGNRA Draft Environmental Impact Statement for dog management did not address the most important impact: how it will affect my rights as a citizen and lover of my parks and beaches in the Bay Area. In your 10 year project and all of the 60 pounds of papers your committee has submitted did you consider the impact on us as law abiding citizens? Have you considered how many dogs may be abandoned and no longer adopted to new owners? I recently received a letter asking for donations to keep our parks running. Your committee leaves me no choice but to stop all donations and any financial benefits given to preserve our parks! If I have no choice than no more money! This is NOT about our beloved dogs! It is bigger than that! It's about my personal right to enjoy my parks and beaches and enjoy my walks with whom I choose, and I choose my beautiful McNab/Greyhound mix Roxy Boots!

Thank you,

Miriam Browne

P.S.- the budget of \$900,000 - \$1,500,00 is criminal - just to put up signs? Why not ask us how we can make the parks a better place? 1) having more garbage cans available 2) removing dead seals + other animals 3) clean water and many more important issues!

Correspondence Type: Park Form

Correspondence: To whom it may concern,

As a resident of San Francisco I would like to plead with the powers that be to keep a portion of our beaches and all of Ft. Funston "off-leash" friendly.

I have a dog that lives to visit these places and run freely. With the help of a walking service our dog is at Ft. Funston at least 6 times a week.

Please keep our city dog friendly.

Such a small percentage of SF residents have a safe backyard. We need these parks desperately for the well-being of our dogs.

Thank you for your consideration,

Mary + Jordan Klineman SF, CA 94131

Correspondence Type: Park Form

Correspondence: We have a dog named Trekker. We take him off leash every day. We are Seniors and he keep us in shape. He has opened our eyes to lots of parks in the area. He gets us out of the house.

Young people have children. Everything seems to revole around kids. We have our dog to keep us busy.

If you take our right to take our dog off leash you will take our only source of exercize, fun, entertainment and love away.

We are very good about picking our dogs poop. Much better than most parents with there food wrappers and drink containers. Please opt for option A. How would you feel if you only got out with a leash around your neck?

STOP SPENDING so much on something that does not need to be fixed. It is already hard enough to find places to take your dog. Dogs did well for years. The dog (very few) that have ever had problems are dogs kept confined.

Correspondence Type: Park Form

Correspondence: Born and raised in the Bay Area I truly appreciate the GGNRA and have taken many hikes throughout the park boundaries. Indeed, my visits predated the birth of the GGNRA in 1972 as I visited Kirby Cove, Lands End, Ocean Beach, Fort Cronkite, Chirva Beach and Baker Beach in my childhood and through high school and college graduating in 1973.

As a long time resident I cherish these lands and the efforts of those who have set aside these lands for the enjoyment of all.

It is important that these areas are enjoyed not only by humans but other species as well. I believe strongly that these areas can be managed to the benefit of humans wildlife and dogs. To see a dog running free off lease enjoying the open space and company of other dogs is part of the well being of many many people. Ft. Funston is a perfect vnuce for this. I also believe wildlife should be protected. This can be done in a managed way with most of the GGNRA devoted to humans and wildlife. But we must keep some land open and available to all. A continuous path around the Ft. Funston area open to dogs off leash while protecting the Center and other sensitive area would afford this opportunity to serve all.

Thank you,

Jean Mecorney

This addresses Ft. Funston only, however we need other off lease and on leash areas in other parks as well.

Correspondence: Frank Dean General Superintendent Golden Gate National Recreation Area Building 201 Fort Mason San Francisco, CA 94123-0022

Dear Superintendent Dean; March 6, 2011

Enclosed please find my comments about the Draft Dog Management Plan/Environmental Impact Statement.

Personal Background:

I am a long time resident of San Francisco and a recently retired senior citizen. Since I was a child I have loved animals, walking outdoors and exploring nature. I am a great believer in parks- local, regional and national. I also support a variety of environmentally oriented organizations,

contributing money and, since my retirement, considerable time working as a volunteer. I spend many hours talking to the public about wildlife, habitats and the environment.

With my love of walking outside and my love of animals, it was short step to getting a dog when I retired. Like many residents in San Francisco, I live in an apartment style building with no yard. My only option for exercising her is to walk the city streets and to go to the local/regional parks and beaches. Since I cannot give her the exercise she needs everyday (my volunteer duties and other commitments get in the way) I also have her go to a commercial dog walker three days per week on average.

In the past five years in the company of my dog I have become very familiar with the San Francisco City Parks and the GGNRA lands in San Francisco and Marin, spending many hours each week visiting these areas. These sites provide us with a wonderful range of beaches, trails and open space to get exercise and play while enjoying the wonderful setting. As a senior retiree, my dog is a very important member of my family. She keeps me exercised, entertained and provides companionship while we explore the area. We visit on a weekly basis Crissy Field, Baker Beach, Fort Mason, Lands End and we are regular visitors to Fort Funston, Sutro Heights, and other GGNRA sites in San Francisco and Marin. For shorter, daily walks we also are regular visitors to the parks in the City of San Francisco, particularly the two parks nearest to me, Lafayette Park and Alta Plaza Park. As a result of our many hours each week spent in parks, I am quite familiar with the status of the facilities at these various parks and the usage patterns by dog walkers and others.

Personal Expectations for Dog Plan:

Since I greatly value my adventures with my dog and the environment, I looked forward with great interest to the Draft Dog Management Plan/Environmental Impact Statement (DEIS, EIS or Plan). The park resources (local and GGNRA) are treasures that should be preserved. The Bay Area's large urban population is heavily focused on outdoor recreation and puts a strain on park resources. Dogs and dog walkers are only one factor in the heavy demands made upon our park resources. A DEIS which examined dog walking in a balanced and appropriate manner within the context of all park use would be beneficial to all by:

- a) maximizing use of limited park resources while limiting conflicts between different users;
- b) identifying the problems that are primarily attributable to dog walking and addressing those specifically;
- c) providing recognition and rewards for responsible dog walkers thereby encouraging compliance and support for the Plan;
- d) removing dog walking privileges in GGNRA for irresponsible dog walkers.
- e) partnering with local Animal

Care and Control departments f) taking into account impact of proposed changes in GGNRA sites on local and state park resources.

I hoped for a thoughtful, innovative EIS and Plan that would take into account the unique urban location of GGNRA sites.

Overview of DEIS and Plan: To my great disappointment the NPS DEIS is deeply flawed. The supporting EIS document is characterized by poor research, faulty analysis, unfounded conclusions, and an obsession about the ill effects of dogs and dog walkers. (Since I have an M.Sc. and Ph.D. from the University of London, London School of Economics, I am familiar with standards for objective, thoughtful research and analysis of issues.) The DEIS should have focused on real, material problems with dog walking such as use of leashes in busy areas; collection of pet waste; dealing with aggression by some dogs; discomfort with dogs on the part of some visitors; and any significant environmental issues. Importantly, to provide a basis for the assessment of dog walking in the context of other activities, the preparers of the DEIS should have obtained (but failed to do so) some good, solid data on the overall number of visitors to each site and the breakdown of visitors by activity, including dog walking, as well as by domicile (San Francisco, Bay Area, etc.) Instead, the DEIS relies on qualitative estimates on level of activity by visitors. Moreover, in each section of the report, rather than identifying and documenting real issues with dog walking, the preparers of the DEIS highlight trivial problems and risks, often with no context and no support for claims. As a result, the DEIS does not accurately characterize the effects of dog walking on visitors and the environment. Due to these weaknesses the DEIS lacks credibility, and the resultant "Draft Dog Plan" lacks any foundation.

While the NPS's Plan contains a few proposals and concepts that I support, the Plan largely fails to offer a realistic approach to managing dogs and dog walking in the context of other activities in the GGNRA. The Plan's answer to balancing needs of dog walking with other activities is an arbitrary reduction in space in San Francisco permitted for dog walking by one half and a reduction in off leash play areas by two-thirds. With no numerical data on actual visitor use, the Plan does not address needs of conflicting user groups; does not consider the impact of the Plan on the City's parks and residents; does not address the real issues associated with dog walking; does not recognize the efforts made by most dog walkers to manage their dogs appropriately. The new restrictions placed on dog walking are so ill conceived that they will be very difficult for dog walkers to follow. In fact, the Plan seems designed to fail. Compliance/Enforcement provisions of the Plan foresee further restrictions based on almost unavoidable further infringement by dog walkers of unworkable rules put in place under the Plan. The underlying agenda seems to be to bring the GGNRA's dog policy into compliance with the National Park Service standard, where dogs are

restricted to on leash walking in very limited areas; are banned from off leash play, and are not allowed on beaches, grassy fields, trails, etc. This may be appropriate for pristine wilderness areas such as Yellowstone but is hardly suitable for the urban lands of San Francisco and the Bay Area.

Because the DEIS and proposed Plan are so deeply flawed, I believe the entire document should be rejected and a new approach to the problem undertaken with the help of outside consultants that will look at the role of dog walking with an innovative and practical approach that is not built on preconceived National Park Service views on the highly restricted role of dogs and dog walking in national parks. My detailed comments about the DEIS are contained in the attached document.

Sincerely,

Katherine Pattinson

Comments on the Draft Dog Management Plan/Environmental Impact Study (DEIS)

I) Purpose, Need for Action and Objectives of DEIS: a) In the Executive Summary on p. i, the DEIS includes the following statement:

"Purpose of the Golden Gate National Recreation Area" The purpose of the GGNRA is to offer national park experiences to a large and diverse urban population while preserving and interpreting its outstanding natural, historic, scenic, and recreational values.

Comment: As the DEIS states on p. ii of the Executive Summary, the lands of the GGNRA have a long tradition of dog walking, including off leash dog walking, which predates the formation of the GGNRA by decades. Dog walking is an historic, scenic and recreational value for many generations of residents who have walked dogs in these lands; enjoyed seeing their dogs at play in the GGNRA; and experienced delight in playing with a dog at the beach; having the companionship of a dog on the trails, and enjoying other forms of recreation at the GGNRA with dogs. The DEIS fails to consider fully the historic, scenic and recreational values of dog walking. The DEIS also fails to look at a "national park experience" as meaning something other than an all dogs on leash all the time in as few areas as possible. The DEIS should be revised to put appropriate emphasis on preserving the traditional values of dog walking at GGNRA and to look beyond the standard NPS dog policy for the meaning of a "national park experience."

b) Under the Need for Action on p. i Executive Summary, the DEIS states: "A plan/EIS is needed because GGNRA resources and values could be compromised to the extent that, without action, those resources and values

in some areas of the park might not be available for enjoyment of future generations.

Comment: The DEIS fails to characterize accurately the impact of dog walking on the resources and values of GGNRA lands and fails to provide evidence to support this statement. In fact, the DEIS does not take into account the damage done to traditional historic, scenic and recreational values associated with dog walking in the GGNRA as a result of the DEIS massive reduction in space available for dog walking. The DEIS should be revised to remove the negative description of dog walking from this statement and to take into account the negative effects of its Plan on the historic recreational resources and values of dog walking in the GGNRA.

c): Under the Need for Action the DEIS further states: "Additionally, a dog management policy inconsistent with NPS regulations and increased public expectations for use of the park for dog recreation have resulted in controversy, litigation, and compromised visitor and employee safety, affecting visitor experience and resulting in resource degradation. The conflicts will likely escalate if not addressed in a comprehensive plan/EIS."

Comment: The DEIS inappropriately suggests that a dog policy inconsistent with the standard NPS policy is the source of all dog problems in the GGNRA. There is no evidence to support that statement. The DEIS also fails to characterize accurately the effects on visitor and employee safety and resource degradation from current dog walking practices. The DEIS should be revised to delete the suggestion that the NPS standard dog policy would eliminate any dog related problems and the DEIS should remove the negative characterization of dog walking from the Need for Action, based on the following:

i) The National Park Service (NPS) has a long tradition of managing dogs by severely limiting access to dog walking in national parks, typically requiring leashes at all times and restricting dogs to parking lots and paved roads, while banning dogs from trails and beaches. Throughout the document, the DEIS interprets a "national park experience" as an experience without dogs. The DEIS fails to recognize the unique character of the GGNRA and its urban setting. The DEIS should be revised to recognize that there are other solutions to managing dogs than the NPS standard policy which is appropriate for wilderness parks such as Yellowstone or for historic parks such as Independence National Historic Park in Philadelphia but not for the GGNRA.

ii) The DEIS has no support for the statement about "increased public expectations for use of the park for dog recreation". The DEIS should be revised to remove that phrase based on the following: ? The DEIS states in the section on Visitation Trends, pp. 266-267 that the rate of visitation has been stable at approximately 14 million for the past thirty years and is

expected to remain at that level for the next twenty years. The DEIS has no data about the number of dog visits per annum. Based on the stable rate of visitation and the absence of any data on dog visitation, the DEIS can not make the claim of increased public expectation.

iii)The DEIS provides no support for a significant impact on visitor and employee safety from dog walking as indicated by the following: ? An extremely small amount of Law Enforcement (LE) time is currently devoted to dog management issues. The DEIS states (p. 283)that "Approximately 1 percent of LE (law enforcement) time is devoted to dog management-related issues." If dog walking is such a major issue for visitor and employee safety as suggested in the Need for Action, why is law enforcement only spending one percent of its time on dog management issues?

? To illustrate effort devoted by LE to pet related issues, the DEIS provides statistics on incidents and case reports related to dogs and visitors during 2007-2008 in table 9 provided in Appendix G. The data in this table reflect the heavy emphasis on leash law enforcement with over 70% of the 2,424 incidents defined as a leash law violation. In contrast, only 9% of the incidents reflected violations for serious infractions such as dog attacks/bites (2%), disturbing wildlife (2%), and hazardous conditions/pet rescue (5 %). Moreover, over one third of the incidents recorded in Table 9 were based on reports from the public, not on incidents where park service personnel were present at the time of the alleged violation. With only 1% of LE time devoted to dog management issues and with 70% of that time devoted to leash law violations, the portion of LE time devoted to health and safety issues for visitors and employees related to dogs (as well as wildlife disturbance) is less than three tenths of one percent.

? The DEIS does not provide any data on the number of dogs visiting the park. However, a conservative estimate of one million dog visits per annum seems appropriate in the context of 14 million visitors per annum. Assuming one million or more dog visits per annum, the number of all incidents (including those reported to park personnel by the public) represents a fraction of one percent of the total dog visits. With less than one percent of dogs cited for any problem (including 70% of incidents related to "leash law" violations), there is no support for the DEIS claim of significant safety and resource degradation issues related to the dog walking visitors.

ii Comment: The DEIS in the Need for Action also fails to characterize accurately the urgency for action in the following sentence. The DEIS should be revised to delete this sentence. "The conflicts will likely escalate if not addressed in a comprehensive plan/EIS." ? Statistics provided in table 9 on dog management issues reflect a significant decline in all forms of incident from 2007 to 2008. During that period, the number of all incidents declined by 42%. The most serious categories of incidents declined by 61%

while leash law violations declined by 39%, suggesting that dog bites/attacks and disturbance of wildlife showed a declining trend.

c) Objectives: The DEIS on pp i-ii lists the Objectives of the DEIS which include:

? Visitor Experience and Safety: ?Minimize conflicts related to dog use by providing a variety of safe, high quality visitor use experiences, including areas where dogs are allowed:

Comment: The DEIS lacks scientifically gathered data on the number of visitors to each site, the breakdown of visitors by county of domicile, by type of activity and by location at site where activity takes place. With no information on the actual number of dogs, visitors, activities and source of visitors, the DEIS has no foundation for designing an appropriate Plan. (It is ironic that as part of the Compliance Management Plan the DEIS foresees counting the number of dogs at each site.)The DEIS thus fails to meet the above Objective on Visitor Experience and Safety. The DEIS should be revised to address the following concerns regarding lack of information on visitation as support for DEIS.

? DEIS has no scientifically gathered information on number of dogs, visitors, activities and source of visitors, and there is no real basis for allocating space among user groups including dog walkers. ? Park Service relies on one phone survey sampling residents from San Francisco, Marin, San Mateo and Alameda who may/may not be regular park visitors and focus of survey was on attitude towards dogs. ? Park Service also relies on qualitative estimates from Park Service personnel and from "Negotiated Rule Making" exercise but provides no actual estimates of number of dogs and dog walkers, percentage of dog walkers relative to other visitors or even documentation supporting the qualitative estimates. By drawing on qualitative estimates from mixed sources the DEIS lacks reliable and effective data.

Natural Resources: ? Protect native wildlife and their habitat (including sensitive species and their habitat, and federally or state listed, unique, or rare species) from detrimental effects of dog use, including harassment or disturbance by dogs. ? Minimize degradation of soil and water resources by dog use. Comment: The DEIS fails to provide evidence for the detrimental effects of dog use noted above. The DEIS should be revised to evaluate the effects of dog use relative to the effects of other activities including human contribution to the disturbance and degradation of the environment from a variety of activities other than dog walking.

? Preserve opportunities for future natural resource restoration and

enhancement

Comment: The DEIS fails to provide evidence for impact of dogs on future plans for restoration and enhancement. The DEIS fails to demonstrate relevancy. Please remove this from objective.

Cultural Resources: ? Preserve opportunities for future cultural resource restoration and enhancement

Comment: The DEIS fails to prove relevance of future cultural projects. The DEIS should be revised to remove this as objective. ? Protect cultural resources from detrimental effects of dog use. Comment: The DEIS fails to show any detrimental effects. The DEIS should be revised to reflect lack of evidence.

2) Massive Reduction of Space for Dog Walking both on leash and off leash: The DEIS calls for eliminating over half of the total space in San Francisco currently allocated to dog walking and over two thirds of the space allocated to off leash dog walking based on maps provided in the document Appendix (comparing Alternative A with Preferred Alternative)

Comment: The DEIS fails to consider the following effects related to the massive reduction in dog walking areas in the GGNRA. The DEIS should address these effects as outlined below:

a) Severe Negative Impact on Parks in San Francisco: The proposed plan will place more stress on San Francisco city parks that cannot handle current need for dog walking and off leash play. While the GGNRA plan references map 27 showing 28 off leash dog areas in San Francisco, the referenced parks cannot support the added demand. i. The GGNRA manages approximately 942 acres in San Francisco with over 600 acres of that area currently available for dog walking and over 500 acres area available for off leash play, based on maps provided in DEIS. ii. The amount of space in city parks for dogs, particularly off leash play, is a small fraction of the GGNRA lands

? Less than 127 acres are designated for off leash dog play in San Francisco City parks while the GGNRA Plan would reduce off leash play areas by an estimated 300 acres. ? The city parks referenced in the DEIS Map 27 do not currently have adequate facilities for off leash play. For example, Park Merced no longer has a dog area. Moreover, the two parks referenced near me, Lafayette Park and Alta Plaza Park have off leash dog areas that are extremely unsafe with no barriers to prevent dogs chasing into nearby street. Most dog walkers chose not to let their dogs play in these areas as a result and seek other areas off leash play.

b) Failure to assess accurately impact of dogs in greatly reduced space in

GGNRA. A much higher concentration of dogs in permitted areas of GGNRA, particularly off leash areas, will result in overcrowding of those areas. Since the DEIS provides no data on the number of dogs currently visiting the park, it is not possible to anticipate the degree of overcrowding. The forced concentration of dogs with individual and commercial dog walkers in a severely limited space is likely to result in significant increase in conflicts between dogs/dog walkers, conflicts with other activities in the designated space, degradation of soil/vegetation in restricted space, and pressure to find other areas for off leash dog walking that are not permitted under Plan, Comment: The DEIS should address these concerns regarding concentration of dogs in sharply reduced space and the DEIS should provide some quantitative support for its analysis of the impact from overcrowding.

3) Severe Limitations on Commercial Dog Walking: The DEIS calls for major restrictions on commercial dog walkers, requiring permits for walking more than three dogs, limiting number of dogs and severely limiting access to space within the GGNRA. Comment: The concept of permitting commercial dog walking is appropriate, but the specifics of the DEIS plan lack scientific or other basis and are unworkable. The DEIS should be changed to address and reflect the following:

? Comment: The DEIS fails to provide any support for limiting the number of dogs per walker to six. The DEIS should be changed to permit up to eight dogs per walker, Most responsible commercial dog walkers can and do handle up to 8 dogs. ? Restricting number of dogs per walker unreasonably will result in higher fees charged by dog walkers and potentially fewer responsible, well trained dog walkers to handle the demand. ? Comment: The DEIS fails to provide support for limiting the space for commercial dog walking, particularly since the DEIS lacks any numerical assessment of number of dogs affected. The DEIS should be changed to give commercial dog walkers adequate dog exercise areas. The Plan provides very limited space for commercial dog walkers, contributing further to the overcrowding issues.

? Under Plan commercial dog walkers will be limited to on leash walking at Ft Mason and a portion of Baker Beach, while off leash walking will be limited to the Central Beach and to less than half of the grassy Airfield at Crissy Field as well as the sharply reduced off leash play areas at Ft Funston. Commercial and individual dog walkers will all have to share these highly restricted areas.

?Failure to put in place an appropriate policy to support responsible commercial dog walkers will have a severe impact on residents of San Francisco. Comment: The DEIS fails to address the severe effects on the local community from its commercial dog walking plan. The DEIS should be changed to address and to take into account the effects of its policy on

local residents.

? Commercial dog walking is an important business in San Francisco employing many residents. Access to commercial dog walking is also extremely important for many residents who work and cannot get home to exercise a dog(s) confined to an apartment and/or small back yard.

? Commercial dog walkers contribute to making good canine citizens since they provide exercise, socialization and training that are key components to a happy, relaxed and confident dog.

4) Massive Reduction in Beach Access for Dog Walkers: Beaches in San Francisco currently provide the vast majority of space available for safe off leash play in the City. Under the Plan, dogs would be completely banned from up to 50% of the beaches while off leash dog walking at the beaches will be reduced by over 50%.

a) Crissy Field Beaches and Grassy Airfield: Currently, dog walkers have access to the East Beach, the Tidal Marsh Inlet, the Central Beach and the entire grassy Airfield for off leash and on leash walking. Dogs are restricted to on leash walking in the Crissy Field Wildlife Protection Area (WPA) for most of the year.

The DEIS bans dogs entirely from East Beach located adjacent to nearby parking, picnicking, bathroom facilities and food vendor. The DEIS also bans dogs from the inlet to the Tidal Marsh. The DEIS further restricts off leash dog play to less than half of the grassy Airfield. The DEIS bans dogs entirely from the Crissy Field Wildlife Protection Area. i)Comment: In banning dogs from the East Beach, DEIS fails to take into account the negative effects and other factors outlined below. The DEIS should address these factors: ? Many families that have children also have a dog and would want access to nearby facilities at East Beach. ? Elderly or more handicapped individuals that want to take their dog to the beach would have access through East Beach. ? East beach sees a lot of activity from windsurfers/kite surfers who drag equipment across beach, making it less suitable for families with small children and beach picnics. ? In practice, fog, rain, and wind make beaches in San Francisco inhospitable for family beach play and picnics for much of the year. Among major U.S. cities San Francisco has the coldest daily temperatures (mean, minimum and maximum) in June, July and August. As a result, dogs would be banned from East Beach for no real purpose. ? Visitors seeking a dog free beach experience with nearby facilities will have access to the beach in the WPA near the Warming Hut.

Comment: The DEIS should be changed to permit dogs full access to the

East Beach for on and off leash play.

ii.)The DEIS also bans dogs from the inlet to the Tidal Marsh. Comment: The DEIS lacks scientific support for its identification of threats to health and safety from dogs with untreated medical conditions playing in the inlet. The DEIS should analyze the health and safety concerns from dogs relative to other, more significant health and safety risks from the following factors: ? Unvaccinated and untreated wildlife (birds, feral cats, raccoons, skunks, coyotes) that may carry avian flu, rabies, worms, etc. that regularly occupy the tidal marsh and beaches ? dead birds, seals and sea lions left to rot on beach by Park Service. ? debris from Bay (condoms, dental floss, etc. found on beach after tides/storms) ? Oil spills ? Run-off and sewage dumped into Bay waters that runs onto beaches and into Tidal Marsh with movement of tides Comment: The DEIS should be changed to permit dogs continued access to the Tidal Marsh inlet outside the protection area consistent with current practice.

ii)The DEIS restricts off leash dog play to the center portion of the Airfield and requires leashes on the eastern portion of the Airfield. Comment: The DEIS provides no scientific or other support for restricting off leash dog play on the eastern portion of the grassy Airfield. The DEIS fails to take into account the following factors that support maintaining the entire Airfield as a off leash dog play area. The DEIS should address these factors and should be changed to permit off leash dog walking on the entire Airfield. ? The Airfield is presently used primarily by dog walkers for on and off leash play and is not suitable for picnics and most other activities because it is often wet (poor drainage) and a distance from bathrooms, etc. It is also characterized by uneven ground with many gopher/vole holes and dirt mounds, patchy uneven grass reflecting impact of many events on natural grass planted at time of restoration of Airfield. ? During the spring, summer and fall months, many events are held on the central portion of the grassy field, making this area unavailable for off leash play. Under the Plan during these events, dogs would have no off leash play area on the entire northern side of the City except the central beach at Crissy Field. ? With a major reduction in other off leash play areas, keeping the entire field available makes sense. ? The Plan calls for making half the field available for off leash and half for on leash only but contemplates no barrier between the two areas. It will be very difficult for dog walkers to even see where the separation point occurs much less observe it.

iii The DEIS bans dogs entirely from the WPA at Crissy Field. Comment: The DEIS fails to provide scientific support for the claim that dogs are the only factor disturbing Snowy Plover and other shorebirds in these areas. The DEIS should examine the effects of human disturbance as well. The DEIS should also ban humans from the portion of the WPA that lies between Central Beach (where dogs are permitted) and the Coast Guard Station.

Human activity (children play, kite boarders practicing, etc) is regularly observed in this section of the WPA. If we really want to give the Snowy Plovers a chance, we should give them a place without human disturbance as well.

b) Baker Beach: Currently, dogs can play off leash on the entire Baker Beach. The beach has limited numbers of dog walkers, has some beach going family groups, has some nude sunbathers and, depending on conditions, some people fishing with surf casting and poles set into sand by waterline. Family groups may include a dog. Most of the groups sitting and playing on the beach as well as most of the people fishing are located in the area immediately down from the two parking lots.

The DEIS limits dogs to on leash walking in more populated area down from the two parking lots but bans dogs from the less visited northern section of the beach (currently occupied by nude sunbathers). Comment: The DEIS fails to provide support for the need to ban dogs from the northern section of the beach and fails to address the overcrowding and inherent conflicts from restricting dogs to the more populated areas of the beach. The DEIS fails to consider adequately the potential for increased dog walking at Baker Beach as a result of the sharp reduction of space available for dog walking at the nearby Crissy Field and other GGNRA sites due to increased restrictions on dog walking mandated in DEIS. The DEIS should be changed to analyze the above effects, and the DEIS should be changed to continue to allow off leash dog play on the northern section of the beach while requiring on leash walking in the more heavily used areas down from the parking lots.

c) Fort Funston: The DEIS continues to permit dogs to have off leash play in the area immediately north of the parking lot, as well as off leash play on a section of the beach below. Dogs will be required to be on leash in the rest of the site. Comment: The DEIS fails to provide scientific support for the drastic reduction in off leash play areas and fails to take into account the negative effects from the massive reduction in off leash dog play areas. The DEIS should address the following: i The area designated for off leash play near the parking lot is a small fraction of the former off leash play area. Severe overcrowding will result, with conflicts, damage to overcrowded area, and strong incentives for dog walkers to cheat in leash required areas. Comment: The DEIS should be changed to:

? provide more fenced in area for wildlife habitat, for equestrian trails and for protection of dogs at edge of bluffs, while continuing to provide additional off leash play areas. The DEIS fails to support claim that fencing will impede wildlife and will affect view.

? Take into account that many cannot make difficult walk up and down

steep, sandy trail to access beach. These folks are forced to rely on small off leash play area near parking lot.

d) Ocean Beach: The Plan calls for providing an off leash play area on a portion of the beach and banning dogs from the remainder of the beach which is a Wildlife Protection Area.

5) Proposed Compliance/Enforcement Approach Fails to Engage Responsible Dog Walkers and Will Fail to Eliminate Major Dog Walking Problems:

Current Situation: Currently the NPS approach to managing dog walking is heavily focused on enforcing leash law restrictions. This approach is consistent with NPS policy and practice in virtually all other national parks where dogs (if allowed at all) must be kept on leash and must be confined to highly limited areas within the given park. NPS staff including rangers and park police are heavily imbued with the NPS culture that a well behaved dog is one that is on leash, on paved surfaces, and not permitted on trails or beaches or in visitor centers, historic buildings, etc. a.) The DEIS on page 282 states: "Violations are handled using a reasonable enforcement response. Responses can range from a verbal or written warning, relying on education and deterrence to gain compliance, to written citations, up to custodial arrests as appropriate. LE officers are sensitive to the potential for confusion on the part of the general public and therefore make an effort to achieve compliance through educational contacts."

Comment: The DEIS fails to accurately characterize the approach of many LE officers to enforcement of leash law violations. In the cases that I have observed, LE officers have displayed anger and frustration from the outset of the encounter, despite the fact that the dogs/dog walkers were behaving in a completely appropriate manner while off leash. In two situations the officers approached yelling that dogs should be on leash, despite the reasonable expectation on the part of the dog walker that leashes were not required. Police then demanded identification, dismissed the dog walkers' explanation for why the dog was off leash, and issued a warning in a grudging manner. There was no acknowledgement on the part of the officer that the dog/dog walker was fully compliant with other regulations (i.e., staying out of restricted areas, not harassing wildlife, not bothering other visitors, not leaving pet waste behind.). The result is an angry and defiant dog walker, not more compliance.

? A much better approach would be to approach quietly, ask that dog be placed on leash, explain reasoning for this request; issue verbal or written warning with note of possible ticket in future but compliment dog walker on well behaved dog.

? I know that Park Rangers/Police can handle the public appropriately. When visiting Yellowstone last fall (without my dog), I had an extremely impressive experience with a Park official. Yellowstone is an area where Police/Rangers have their patience tried by difficult interactions with the public, yet this Officer at the end of the season still had a cheerful, positive manner with us. We had stopped on the road early one misty morning behind another car to watch a mother grizzly with her two cubs very near the side of the road. We had our car lights with flashers on and we were inside the car but we had not moved up to a pullout. The official stopped in his car, recognized that we were not blocking traffic, we were not harassing the bears and that we were fascinated by the bears. He started by acknowledging that it was a wonderful opportunity; he said take a couple more pictures, and then please move a little up the road to a pullout just on the left and stay by your car. We were completely won over with this approach.

b.)Compliance-Based Management Strategy: For future enforcement , the DEIS provides for monitoring of compliance by Park Service personnel who will count number of violations (including leash law violations) with a compliance level below 75% triggering further restrictions. Each site will be monitored over a twelve month period, and the number of violations recorded will be measured against the number of dogs walked to determine whether the 75% compliance ratio has been met. If the level is below 75%, more restrictive measures will be put in place. Given the dramatic change to current conditions lack of outreach to dog walkers and difficult for dog walkers to observe new restrictions for variety of reasons, as well as clear preference by Park Service for further reduction of dog activity, there is strong possibility that a "lack of compliance" finding will be made and it will trigger additional restrictions.

Comment: The DEIS in the Compliance-Based Management Strategy fails to provide a workable, effective plan for solving major dog walking issues in the GGNRA, as indicated by the following- Please address: i.The vast majority of dog walkers (individual and commercial) work hard to make sure dogs do not leave waste behind, do not disturb environment/wildlife, and do not disturb visitors. If compliance drops to 74% (including innocuous leash law violations) as measured by park service personnel, then the vast majority of dog walkers complying with plan would still be punished severely for failure of minority to observe new rules. ii.The DEIS has no detailed plan for outreach and education about new rules for dog walkers. Since the DEIS does not know where dog walkers are coming from or how many there are, it is hard to create a plan.

iii The new rules will be inherently difficult for dog walkers to follow, leading to inadvertent violations of dog rules. For example, at Crissy Field, Airfield will be divided into on and off leash areas but there will be no easy

way for dog walkers to see and observe boundaries.

Comment: The Compliance-Based Management Strategy should be removed from the DEIS. It should be replaced with a strategy that rewards responsible dog walkers and bans irresponsible dog walkers, as follows:

i. Set up a permit/color tag system that would be partnered with local Animal Care and Control Departments. Dogs that have licenses from local ACC could be issued a permit, renewable annually, to walk in GGNRA sites. A small fee could be charged to help pay for processing. This would help with getting dogs licensed locally and support GGNRA efforts as well. A brightly colored collar tag for dog and ID for owner could be provided and required for visits to GGNRA. Only dogs/dog walkers with these permits would be able to use off leash play areas, as well as on leash areas. Dog walkers/dogs visiting for one day could obtain one day only permit from Gift Shops and Ranger Stations with different color tag allowing them on leash only access to GGNRA sites. Failure to observe restrictions would result in loss of permit for dog walking in GGNRA.

ii. Provide a tip hot line for dog walkers to call in to report those chronic offenders in terms of leaving pet waste, disturbing habitat and wildlife, etc. The Park Service personnel would be better able to focus efforts on dealing with chronic offenders.

6) Public Outreach and Education Lacking: In the Executive Summary on pages i-ii, the six Objectives of the DEIS are stated and include one Objective related to public education as follows: Education ? Build community support for the plan to maximize management of dog walking use ? Increase public understanding of NPS policies

Comment: The DEIS does not fulfill this objective since there is no substantive plan in the few pages discussing education in the DEIS. The DEIS should address the lack of a plan and the lack of current outreach to dog walkers and other members of the public at GGNRA sites currently, as follows:

? The Park Service currently has no meaningful presence outdoors in the recreational areas at the GGNRA sites in San Francisco

? During my many hours spent walking in GGNRA sites the only Park Service personnel I see on a regular basis are maintenance workers driving their trucks along promenades and roads to empty garbage cans. ? Upon rare occasions I also see Park Police who are typically driving their patrol cars on Promenades used by dog walkers, bikers, walkers, etc. ? In five years I have seen fewer than five park service staff/ranger ? Volunteers are few and not well trained to deal with the public ? In encounters with volunteers they

have not been able to speak to progress on Snowy Plovers recovery or even type of assistance provided by State on recovery effort, such as requiring leashes on state beaches.

7.) Making Dogs and Dog Walkers Scapegoats for a Variety of Environmental, Health and Safety and Social Issues:

There are certainly issues to be addressed with a large number of dogs in the parks, including: impact on wildlife and habitats; aggression from some dogs; proper disposal of pet waste; fear of dogs on part of some visitors. While these are appropriate and legitimate issues, to make exaggerated and unsupported claims about negative effects from dogs and dog walkers is unfair to dogs; exacerbates alarm among public about dogs; and takes focus away from the real risks and problems from non-dog factors that need to be addressed.

Comment: The DEIS fails to provide scientific support, evidence and documentation for alleged material adverse effects from dogs and dog walking as shown in following examples, The DEIS should be revised to eliminate unsupported allegations and to put any effects into context with any other, more substantive factors, including but not limited to the following:

Water Quality: The Crissy Field tidal marsh (totaling 18 acres) together with adjacent grassy Airfield and dunes were part of a restoration of 100 acres at Crissy Field beginning in 1997 under the direction of the Park Service. According to the EIS "water quality monitoring of the marsh was conducted from 2000 through 2004. This monitoring revealed water quality issues in the marsh, including low dissolved oxygen levels (NPS 2006h, 16). Currently, the eastern third of Crissy Airfield., which drains into the Crissy Marsh, receives a moderate to high level of use by off-leash dogs and a substantial amount of pet waste." Comment: The DEIS fails to provide evidence for the attribution of poor water quality in the tidal marsh to pet waste in the eastern portion of the Airfield. The DEIS should remove the sentence regarding pet waste from this section and should address the following factors as more likely sources of poor water quality and low oxygen levels in the tidal marsh: ? Tidal marshes depend on daily tidal surges to reinvigorate the marsh (as explained in graphics near the tidal marsh). The Crissy Field "tidal marsh" does not benefit from the tidal effects because the inlet to the Bay is often closed for long periods of time, due to local conditions and, apparently, to failure by the Park Service to follow recommendations from designers on appropriate size for the marsh (minimum 30 acres versus actual 18 acres built). As a result, the shallow marsh tends to be stagnant and water quality becomes poor.

? The grassy Airfield is flat, covered with a thick coating of grass. After

heavy rain the Airfield is characterized by significant amounts of boggy ground and standing water, suggesting it is not draining anywhere. In any case, the Park Service oversaw design and construction of the Airfield in 1997, so why did they have it drain into the marsh?

? The grassy Airfield abuts the marsh on one end, representing less than 20% of the shoreline of the marsh. Along the long edges of the marsh accounting for at least 60% of the shoreline are Mason street on one side and the Golden Gate Promenade on the other side. There are drains (8-10) along the promenade that take runoff into the marsh from the promenade during rain. (I have seen them with water flowing through during a rainstorm.) There are also two culverts on the Mason Street side of the marsh that appear to allow run-off from somewhere up in the Presidio. Contaminants are likely coming from these other sources rather than the Airfield.

? There is vegetation around the marsh and there are significant numbers of birds in the marsh'all of these create material (decaying vegetation and bird "poop") that can directly affect water quality, leading to low oxygen levels if water is stagnant.

? There is no evidence or documentation for the "substantial" amount of pet waste claimed (As a person who walks the Airfield on a weekly basis with my dog, I personally have not observed substantial pet waste and I have not observed any dog walker leaving pet waste.). Dog walkers at Crissy Field are typically responsible about picking up pet waste. Ironically, in another section of the DEIS, the smell of dog waste deposited in garbage bins is cited as a problem for visitors, suggesting that dog walkers are in fact picking up pet waste and depositing it in garbage bins.

? Soundscape:

The DEIS states: "The natural sounds heard in the GGNRA are a positive and valued park resource, as well as an important component of the visitor experience, which dog presence or barking may interrupt. ... Potential disturbances from barking dogs may change the natural character of the area and the overall visitor experience." Comment: The DEIS has no evidence to support the above statement, and the DEIS fails to take into account the urban environment of the GGNRA site. The DEIS should be revised to reflect the following:

? For the most part, dogs walking or playing do not bark, and at Crissy Field a stroll along the Promenade or down the Central Beach will show that barking is very limited. Dog barking is a small fraction of the urban sounds heard at these sites. The visitor is far more likely to hear human verbalizations and other sounds from human activity unrelated to dog

walking.

? The sites are all within a very busy urban area so there are many urban sounds heard that compete with the "natural sounds." Sounds regularly heard include: ? Cars, motorcycles, radios, sirens from emergency vehicles ? park maintenance vehicles and park police vehicles ? Bicycles, runners, windsurfers sails and equipment, horses ? People talking and yelling, children screaming ? Planes overhead and Coast Guard and other helicopters ? Fog horns and ship horns ? Construction sounds from Doyle drive and elsewhere ? Back hoe used to clear tidal marsh inlet and run-off outlet in Crissy WPA ? Sound of gunfire at Ft Funston from shooting range

? Environmental Justice:

The DEIS states: "Some ethnic or low-income populations may be more negatively affected by off-leash dog walking." Comment: The DEIS fails to characterize accurately the reasons for low visitation rates to national parks by minorities.. The DEIS should be changed to take into account the following: ? The problem of low visitation rates by ethnic and low- income populations to national parks has been identified in a number of studies. For a survey of the literature, see "Rocky Mountain National Park: History and Meanings as Constraints to African-American Park Visitation, 2001, Elizabeth B. Erickson." The DEIS should address the 1997 studies on low minority visitation to six national parks conducted by the NPS. Since these other parks are all subject to the very strict control of dogs by Park Service policy, dogs are NOT a factor in low visitation. To imply that dogs are the problem keeping away visitors from GGNRA sites is not helping to deal with the real factors discouraging their presence. The DEIS should be revised to reflect the NPS data on low visitation by minorities to other national parks.

o Sources cited in support of DEIS statement include a phone survey by Northern Arizona University (NAU), as well as a small study done by San Francisco State (SFS). Comment: The DEIS fails to characterize accurately the results of the NAU survey and the relevance of the SFS study, and the DEIS should be revised to reflect the following:

? On p. 1404 the DEIS, referring to the NAU survey, states: " 41% of those who had taken dogs for a walk at GGNRA were racial minorities" The San Francisco State study was done with only 100 respondents and most were unfamiliar with GGNRA sites.

? Cultural Resources:

With regard to the U.S. Coast Guard Station at Crissy Field, the DEIS states: "In the past some of the individual juniper plantings within the U.S. Coast

Guard Station's perimeter hedge have died and dog urine is believed to have contributed to the loss of at least one plant." Comment: The DEIS fails to establish the materiality of one plant, the cause of death of one plant, and the relevance of one plant as a "cultural resource." The DEIS should be revised to remove the above reference entirely based on the following:

? The hedge is newly planted to replace the historic cypress hedge planted in 1915 that needed to be replaced due to age and effects of nearby remediation and renovation of Airfield, etc. The new plantings, particularly one plant, hardly fit into definition of a "cultural resource."

? Since more than one plant died, there were other factors at work than simply dog urine which is only cited as a possible contributing factor in the death of one plant.

? One of the buildings of the Coast Guard Station adjacent to the hedge has paint peeling down to the wood due to the weather effects that is a much more material problem with this cultural icon.

? There is ample evidence of "wear and tear" on grounds and facilities throughout the GGNRA lands due to the high level of use by people engaged in a variety of activities in this urban environment. The possible loss of one plant from dog urine should more appropriately be included in the general maintenance requirements for the area.

Aesthetics: The DEIS fails to document and to characterize accurately the impact of dog waste and pet urine on aesthetics, as follows:

"Dog waste can be found scattered throughout the high use dog walking areas ... the associated smell[of dog urine] can be very strong on hot summer days" Comment: The DEIS fails to provide any evidence or documentation for the above statement. The DEIS also fails to account for the lack of hot summer days in the GGNRA lands, based on the fact that San Francisco on average has only 28 days where temperatures are over 78 degrees Fahrenheit.

Areas of Conceptual Agreement and Disagreement with the Proposed Dog Plan:

? A dog plan should provide for a variety of users involved in different types of activities based on type of activity and extent of use. o Obtaining good data on actual number of visitors and breakdown on type of activity is critical to achieving appropriate allocation between users. o Consideration should be given to seasonal/weather/day of week/time of day patterns of use as well as spatial differences in patterns of use.

? A dog plan should require on leash walking in shared areas of high levels of activity by all user groups o Parking lots, promenades (e.g. Crissy Field), picnic areas should require on leash dog walking o A dog plan should require on leash dog walking in areas with more traditional "park type" settings more likely to have elderly, small children and strollers, etc (e.g. Sutro Heights) o A dog plan should prohibit dogs from entering historic buildings, visitor centers, etc.

? A dog plan should prohibit all dogs from entering Wildlife (snowy plover) Protection Areas (WPA) o The Plan provides for allocating at least half of all available beach space in San Francisco to Wildlife Protection areas and proposes to ban dogs from these areas o The WPA together with leash restrictions on all California beaches provides substantial habitat for all shore birds including Snowy Plover. o Since Human disturbance is also a factor in declining shorebird/Snowy Plover populations, a portion of the WPA on each of the GGNRA beaches should also ban people without dogs.

? A dog plan should have designated off leash play areas in areas o Off leash play areas should be large enough to accommodate number of dogs to avoid habitat destructions and minimize overcrowding and resultant conflicts o Off leash play areas should be segregated with easily seen, understood and manageable boundaries Aesthetics: The DEIS fails to document and to characterize accurately the impact of dog waste and pet urine on aesthetics, as follows:

"Dog waste can be found scattered throughout the high use dog walking areas ... the associated smell[of dog urine] can be very strong on hot summer days" Comment: The DEIS fails to provide any evidence or documentation for the above statement. The DEIS also fails to account for the lack of hot summer days in the GGNRA lands, based on the fact that San Francisco on average has only 28 days where temperatures are over 78 degrees Fahrenheit.

Areas of Conceptual Agreement and Disagreement with the Proposed Dog Plan:

? A dog plan should provide for a variety of users involved in different types of activities based on type of activity and extent of use. - Obtaining good data on actual number of visitors and breakdown on type of activity is critical to achieving appropriate allocation between users. - Consideration should be given to seasonal/weather/day of week/time of day patterns of use as well as spatial differences in patterns of use.

? A dog plan should require on leash walking in shared areas of high levels of activity by all user groups - Parking lots, promenades (e.g. Crissy Field), picnic areas should require on leash dog walking - A dog plan should

require on leash dog walking in areas with more traditional "park type" settings more likely to have elderly, small children and strollers, etc (e.g. Sutro Heights) - A dog plan should prohibit dogs from entering historic buildings, visitor centers, etc.

? A dog plan should prohibit all dogs from entering Wildlife (snowy plover) Protection Areas (WPA) - The Plan provides for allocating at least half of all available beach space in San Francisco to Wildlife Protection areas and proposes to ban dogs from these areas - The WPA together with leash restrictions on all California beaches provides substantial habitat for all shore birds including Snowy Plover. - Since Human disturbance is also a factor in declining shorebird/Snowy Plover populations, a portion of the WPA on each of the GGNRA beaches should also ban people without dogs.

? A dog plan should have designated off leash play areas in areas - Off leash play areas should be large enough to accommodate number of dogs to avoid habitat destructions and minimize overcrowding and resultant conflicts - Off leash play areas should be segregated with easily seen, understood and manageable boundaries

? A dog plan should look at inherent conflicts in activities between user groups and as much as possible segregate those groups. Unfortunately, under the Plan, dog walkers are often forced to use the same trails as mountain bikers and equestrians. - Bikers, particularly, mountain bikers can present significant hazards to dog walkers particularly when there is a group of bikers and/or a group of dogs -Horses can present a significant hazard to dog walkers particularly when there is a group of horses or group of dogs

Correspondence: I have been involved in these discussions as a member of the community for the past few years, and find it incredibly frustrating that the GGNRA continues to completely ignore the wishes of dog owners in their deliberations. It is almost a farce that you are once again asking for comments, when from the beginning the intent has been to ban or significantly restrict dogs in the GGNRA areas no matter what the majority wants. I am sure if this was San Francisco land and was put to a vote in an election, it would result in much greater freedom for dogs

I completely support creating areas for individuals who don't want to be around dogs. But does that mean that all areas have to be essentially off limits to owners and their dogs, or that all areas have to go to on-leash restrictions? I have walked my two dogs at Baker beach for years, and never

seen any instances of dogs harassing individuals. So why can't the GGNRA create restrictions such as follows, using Baker Beach as an example:

1) Split the Baker beach as suggested, but in the areas where dogs are allowed, at least let that area be a leash or voice control (aka off-leash) area. I do find it humorous that you are forcing the dog owners, many of whom have children, into the area where the nudists are allowed. 2) OR, make certain beaches available to dog owners before 10 am or after 4 pm, during the times that dogs are allowed let those areas be voice control areas so dogs can run free.

I am not sure why I am even writing this as the GGNRA has been deaf to the requests and efforts by the dog owners since the beginning. I do know if these recommendations go forward as-is, I won't be giving any more money to the GGNRA or National Parks, when I used to give quite a bit.

Correspondence: The GGNRA severe limits to on- and off-leash dog walking recreation is bad due to:

1. If people are not given a reasonable amount of area to take their dogs off-leash, they will take them everywhere. If given reasonable space, most people will prefer to not break the law and stick to those confines. This will help to keep dogs out of sensitive environmental habitat and give people afraid of dogs a greater assurance of not running in to them.

2. The entire plan views dogs from a negative perspective...what "dogs could or may do" is used over and over again. The research about dogs "will" do is not there. The plan doesn't include that dogs have been shown to help keep predators, such as ravens and raccoons, away that kill endangered species.

3. The plan does not look at the impact of people alone to the environment vs. people with dogs.

4. The plan does not take into account the needs of handicapped people.

5. The plan does not take into account the safety dogs provide, especially for single women.

6. The plan does not take into account the economical boost that dog-

friendly areas have by drawing in tourists, i.e. Carmel.

7. Dog walking is important to many people's physical and mental health. It provides life-long exercise. It is as important to more people and better for the environment than other outdoor recreation, such as golf courses, tennis courts and football, baseball or soccer fields that our taxes support.

8. San Mateo County only allows off-leash dog walking on a third of a mile of Pulgas Ridge and an inaccessible and dangerous beach. The GGNRA is currently the only entity that could change this.

9. Dog walking is important in bringing divergent cultures together to make a single community.

Correspondence: I favor alternative D in all cases.

I have just one variance. I favor allowing off-leash dogs at East Beach at Crissy Field and restricting them to leashes along the promenade and anywhere west of the promenade bridge. There is very little native presence at East Beach, but plenty of it west of the bridge -- those are the areas that need to be protected.

Correspondence: The proposed preferred alternative would be a drastic measure that takes away valued freedoms from an entire class of residents and visitors-people who have dogs. I would like to make a couple of points in opposition to the preferred alternative, as well as any alternative that bans on-leash dog walking in these areas. *In an urban environment, having access to open spaces is healthy for dogs and the people that walk them. A lot of people exercise more than they otherwise would by walking and playing with their dogs, a huge contribution to a healthy society. The dogs benefit from being able to run and fetch because they get more exercise than they would on a leash, making the dogs happier, mellower and less likely to be aggressive or destructive. *On the point of limited off-leash access for the safety of others, consider this: People who have aggressive dogs or who don't control their dogs will just walk their dogs elsewhere, perhaps in even more confined spaces where there is less distance between their dogs and other

people/dogs. The solution here is not limiting places people can walk their dogs off-leash, but rather imposing stricter penalties on people who don't control their dogs and cause injury to other people, regardless of whether they are in the GGNRA or not. These accidents can happen anywhere because the owners are irresponsible. Restricting access punishes a lot of people who have well-behaved, non-aggressive dogs. *On the point of environmental impact: The more time people spend in the GGNRA, the more they will feel compelled to protect it in the future. Limiting access to people with dogs will alienate dog owners, a large percentage of the population, whose support may be needed in the future. Wildlife Protection Areas have already been established to protect the most sensitive habitats. To truly protect the larger areas and make an impact, you would need to limit access to all humans, not just humans with dogs. Irresponsible people, whether they have dogs or not, negatively impact the environment. Although some people litter, we are not proposing a ban on people in the GGNRA. But some alternatives in this plan ban dogs entirely from large areas. *The GGNRA is an area that draws visitors and residents to the Bay Area. Keeping a large portion of these areas as dog friendly as possible means we will continue attracting visitors and residents, which in turn keeps our economy strong. Dogs are part of people's families so, for some, this is the equivalent of telling them they can't bring their kids to the park or can't let their kids run around.

Correspondence: GGNRA stands for recreation. Dogs are the major happiness factor for many urban dwellers including single people as well as the elderly, the disabled, the lonely, and the empty-nesters. These dogs need to run and socialize in order to be healthy, well adjusted, and safe. Many, if not most, urban living people do not have access to large spaces other than the GGNRA to accomplish this. High energy dogs need to exercise far more than many of these people are capable of doing on leash, especially our growing numbers of elderly and handicapped citizens. Without adequate exercise and socialization opportunities, some people will have to give up their animals and others will find their dogs less calm and harder to handle. Dogs ARE our recreation. We want to continue the partnership with them that we have enjoyed for years. The quality of life of our dogs and our people will suffer greatly if off-leash play is banned. Do not pass that restriction. Follow your mandate for recreation. Keep our dogs and people healthy.

Correspondence: I have had many conflicts (on the brink of violence) with many many dog walkers in San Francisco (marina green, ocean beach, fort point) and in the marin headlands. I have stayed away from some very attractive areas of San Francisco due to overly aggressive dog owners (lands end, fort funston, lake merced, the presidio). I feel that the preferred alternative is a reasonable compromise but anything that allows for more off leash dog areas than proposed in the preferred alternative would not be acceptable to me.

Correspondence: Please keep ggnra areas off leash. Our dogs need off leash exercise and dog walkers need to remain employed. I have enjoyed these areas responsibly with my dogs for decades. Having access to these areas remain at the top of the list for why I remain in the Bay Area. It would be an outrage to have these areas restricted in the manner proposed. Leashes will do nothing to clean up the environment. Lazy & inconsiderate dog owners are just as likely to leave a mess if their dogs are on leash as they would if the dogs were off leash. Please keep in mind that human beings are the "invasive species" here, not dogs.

Correspondence: I am writing to protest the GGNRA draft Dog Management Plan. This plan is unnecessary and violates the spirit that existed when San Francisco gave land to the GGNRA originally.

Currently less than 1% of the GGNRA is open to dogs, mostly requiring dogs on leash, with a very small percent of area open to off leash (mostly beaches).

Current restrictions and regulations are sufficient to enforce the regulations. The vast majority of dog owners are responsible and follow the regulations. The GGNRA has the authority to ticket and fine those who are not.

In a densely populated urban environment such as the SF Bay Area it is critical that there be places where responsible tax paying citizens can enjoy a high quality of life with there chosen canine family members. There are

actually more dogs in San Francisco than children and allowing areas for responsible on and off leash exercise is critical to maintaining that quality of life.

I urge the GGNRA to not implement the draft plan and to consider it's obligation to serving the whole community.

Thank you -

Anne Zeller

Correspondence: I completely support the guarding of truly sensitive habitats and systems. I understand the detrimental effects of canine predator behavior and markings. I also understand that people can also wreak damage. In those areas, I support severely restricting public access of all sorts.

But how can we think about not allowing general access to the great outdoors? It's skin to metering air or sunshine. People and animals, including domesticated dogs, have a right to live, and to breathe and to run, for pete's sake. This should be the default position of the management policies. It really seems that the current proposal is starting from the other end.

Because we are here in numbers, we've got to find ways of reining in offensive behavior, yes. So, yes, that may require more management to enforce actions against dog owners who are not controlling aggressive dogs nor cleaning up after them. Same thinking applies to drunkards and litterers.

There are complaints by members of the non-dog-owning public who dislike stepping in feces. That's a legitimate complaint; the source of the problem is not the dogs themselves. It's not legitimate therefore to remove them. (and one can hardly ban wild creatures from defecating, huh?). It's proper to deal with the folks who have failed to clean up after their animals.

Complaints about disliking dogs, being allergic to them, being frightened by them, run the gamut from legitimate to foolish. Those should not all be given equal weight. Sometimes people are attacked by dogs. Sometimes people are attacked by other people, or bugs, or snakes, or.....please let us act like reasonable adults who understand where the center of the universe lies.

Correspondence: Off-leash areas at parks and outdoor spaces are critical to the health of the canine population in an urban environment.

As a recent dog owner (1 month) and park runner I can comment of both sides of the argument. For over 3 years I have ran through parks with off-leash areas specifically to see the dogs and have not had a single bad incident due to unruly animals or pet "messes." I find it the exact opposite in San Francisco and specifically in my neighborhood where I have to watch out for canine feces on the neighborhood sidewalks as I run a walk. Owners that bring their dogs to parks seem to be much more responsible and that has not been a problem in those locations.

As a dog owner my wife and I have recently began bringing our 2 year old pug to off-lease park areas on a regular basis. Duboce Park, Fort Funston Park, GG Park and Chrissy Fields are our regular spots. We look forward to our time in these locations with our dog running for exercise since he is often stuck in the house while we work. We only get positive remarks and smiles with our pug off-lease even though he can be known as a "picnic crasher" as visits people relaxing on blankets and walking about.

The park at Fort Funston is one of those defining features of San Francisco for dog owners and those without alike. This park is unique in the level of freedom we can let the dog have - specifically on the beach where we don't need to worry about street traffic. The views and natural beauty are amazing features and I would hate to restrain a dog in this environment.

In summary, I request and recommend that off-lease policies not be impacted but rather address the direct concerns of dog feces and environmental damage with stiff fines for violators. Both issues can not be corrected by leashing a dog so let's correct the behavior of the irresponsible minority by citing violators.

Thanks for the time and review of my comments.

Sincerely,

Jeff Terlizzi

Correspondence: I feel that this plan is overly-restrictive and represents a major departure from the current, balanced use of the park. Currently, off-lead areas are restricted to less than 1% of park land. I am a responsible dog owner, my dog is a volunteer with the SPCA Puppy Dog Tails and Assisted Therapy programs. When we finish volunteering I love to take him somewhere without restrictions, where he can run on the beach or around the trails where allowed. He deserves this after behaving so well for people in need.

If this were to be taken away, what then? Did you know that Seeing Eye Dogs have a 3 year service lifetime- because they get overtaxed and just can't perform anymore? When dogs are restricted too much, they cannot be good pets or service animals. The 1% os space they are allowed, in areas like Chrissy field where the wildlife areas are fenced off, does not represent a threat to wildlife. In areas where you disagree, there should be similar fences added to keep dogs off sensitive areas. I am sure dog owners would be willing to fundraise to provide these fences.

We recognize there are owners whom we would like to be more responsible with their dogs. But they are few in number ? incidents involving dogs in GGNRA are less than 4% of all incidents in the park. Penalizing all dog owners for the behavior of a truly small minority is not the right approach. You penalize the dogs, too, and some dogs really need the freedom.

Regards,

Candace Bagley

Correspondence: Howdy,

I have lived in San Francisco for over 25 years and have always enjoyed the recreational opportunities as I like to hike and surf and just walk. I bought a dog 5 years ago so my son could grow up with a companion. My son is now in University and the dog is my close companion. We walk OFF LEASH every day mostly at Baker Beach or at Crissy Field. We have good friends among fellow dog walkers and non-dog walkers alike. When the weather is nice we share our walks with everyone on the beach, the very young , the young, the old and every age in-between. When the weather is not so nice we are still there and usually it is only the dog walkers that are there. People love watching my dog catch his frisbee and frolic in the water. We have

brought lots of smiles to lots of people. Dogs came over on the Mayflower and have been part of the American fabric of life ever since. Please do not take away our off leash areas. All of your plans are negative and will cost you/us even more money to enforce. Let the dog organizations help you craft a positive solution to your "supposed problem" with dogs in the GGNRecreationA. The NPS has a unique opportunity to find a solution that works for ALL of us. The world is full of pressing problems that demand our attention, don't derail people from concentrating on real problems. Sincerely, David Caldwell, dog owner, bird watcher, environmentalist

Correspondence: This proposal severely limits dog walking (even on leash). This city and the users of this park are historically very dog-friendly; even visitors from out of town bring their dogs to this park. Not only does this proposal remove something that all the dog-owning residents here love, it limits tourism. Sufficient off-leash and walking areas provide a large benefit for the welfare of our family member dogs and our neighbors: the animals are happier, less anxious and more trainable. Ultimately it contributes to a safer city environment, which everyone wants.

The dog owners here are for the most part responsible dog owners that keep the dogs trained, healthy, and pick up after them. Irresponsible dog owners-a small minority-can be dealt with under the law, without destroying access for the conscientious majority.

Correspondence: BELOW IS AN ARTICLE WRITTEN BY DR. JENNIFER SCARLETT, DVM. I AM SUBMITTING IT BECAUSE IT REFLECTS MY FEELINGS IN A WELL WRITTEN, PROFESSIONAL WAY.

MY HUSBAND AND I ARE, SADLY, CHILDLESS AT THIS TIME. OUR DOG IS NOT OUR CHILD BUT SHE IS SOMETHING WE LOVE, SHARE AND WE BOTH ARE COMMITTED TO HER WELL-BEING. THROUGH OUR DAILY OUTINGS WITH HER WE HAVE MET MANY OF OUR CURRENT CLOSE FRIENDS. HER DAILY OFF-LEASH EXERCISE GIVES US OUR DAILY EXERCISE AND DOSE OF

FRESH AIR.

I AM ALL FOR LEGAL ACTION BEING TAKEN AGAINST IRRESPONSIBLE DOG OWNERS AND DOG WALKERS. BUT I DO NOT WANT THE RESPONSIBLE DOG OWNERS AND DOG WALKERS TO BE JEOPARDIZED FOR THE THOUGHTLESS ACTIONS OF OTHERS.

PLEASE READ THE ARTICLE BELOW AND KNOW THAT DR. JENNIFER SCARLETT SPEAKS NOT ONLY FOR ME BUT FOR MANY OTHER DOG OWNERS, DOG AND ANIMAL LOVERS.

THANK YOU.

We city dwellers cherish variety. San Francisco is a kaleidoscope of people, viewpoints, geography, architecture, and activities. But our community is also densely populated, which can put our live-and-let-live to the test. I get around town by foot or bicycle, and at least once a week some motorist threatens my Zen (or my life). Drivers probably say the same about me and my bike. If you're not a dog person, perhaps you've had issues with your canine neighbors, or they with you.

Still, it shouldn't be too hard to find space for everybody in our great big living room. Today I'm thinking about how to make sure that people and their dogs have places to romp around outdoors.

That's the problem with the preferred proposal by the Golden Gate National Recreation Area (GGNRA), which wants to drastically limit the areas where people can bring their dogs. Currently less than 1 percent of the parkland is now available for off-lead activity, yet the proposal would not only reduce that space but could forbid even leashed dogs in some places people love to visit. Any new lands added to GGNRA, under this proposal, would prohibit dog walking (even leashed) by default, unless a specific exception was made.

Neighborliness works better than drawing up battle lines. It's not a question of pet owners vs. non-pet owners, hikers vs. walkers, or any other oversimplified interest group. Our shared space is exactly that-shared. There's room for everybody, within reason, and within balance.

Census data show that there are more dogs than children in San Francisco, but again, it's never either/or. This city has always recognized and embraced animal companionship. For many of our citizens, their pet companions are family.

The GGNRA Draft Dog Management Plan, released in January, is a major

departure from the established, balanced use of parklands that's prevailed here for forty years. Vastly reducing the off-leash areas in GGNRA would harm the quality of life of tens of thousands of dog guardians and, of course, the behavioral health of their dogs.

Dogs get the same benefits as people from playing outside. Companionship and exercise shape both dogs and owners into healthier, better urbanites. As a veterinarian, I know how vital it is that dogs have off-leash exercise and play time. You get a big payoff: the animals are happier, less anxious and more trainable. Ultimately it contributes to a safer city environment, which everyone wants.

The San Francisco Board of Supervisors understood the need for dog guardians to enjoy the outdoors with their companions when they made land available to GGNRA, and cited it specifically. So the Draft Plan's claim that "the quality of urban areas is not a significant factor in determining a dog management plan" violates the spirit under which GGNRA was created. I also fear that restricting dog-friendly spaces would discourage dog adoptions, not only subverting our animal-welfare goals but also threatening the ability of shelters such as the SF SPCA to continue rescuing dogs.

Responsible dog owners deserve continued access to GGNRA lands. And most owners are responsible: they scoop poop, control their dogs, keep them out of restricted or environmentally sensitive areas (the GGNRA draft environmental impact statement showed no direct link between dog walking and any environmental damage), and carry a leash for when others are uncomfortable with free-range dogs. They also take advantage of the many high-quality, low-cost training classes offered in their community.

Irresponsible dog owners-a small minority-can be dealt with under the law, without destroying access for the conscientious majority.

Urban recreation is a unique proposition, and those who manage a place like GGNRA have to mesh the diverse interests of a diverse clientele in a crowded world. People-all kinds of people-belong there. Thousands of your dog-owning neighbors have behaved themselves in GGNRA lands for decades, and I urge you to support the efforts to save this precious resource.

Correspondence: The majority of the population either owns dogs or wishes they could own dogs.

Many dog lovers who don't currently have a dog even go to dog parks to get "dog fixes" or dog loving while they are in a place in their lives where they cannot commit to the dedication that being a responsible dog parent requires.

Dogs, like children, can't be left at home alone all the time. Dogs who are not exercised a lot get psychological problems and become "problem dogs", becoming a noise nuisance for their neighbors, frequently becoming neurotic, and even becoming aggressive. Dogs need large places where they can get out and really run, as well as places where they can be social with other dogs and with new people. If dogs don't constantly interact with new people and new dogs, they stop being social and friendly and can become unfriendly and aggressive. Responsible dog parents are constantly looking for opportunities to keep their dogs social and friendly, even by traveling to new parks in different cities, when they can, to keep their dogs from becoming problems. Currently, it is difficult enough being a responsible dog parent. There are very few places where we can legally go with our dogs. Please don't take away more parks. Parks shouldn't be an us or them situation. Parks are for sharing with everyone! Even if that does mean that we all have to put up with people who don't take good care of their children.

Making more parks off-limits just makes life harder for the majority of the population. If you do this, the number of complaints of problem dogs will go up all across the city because people will have even less opportunities to

be responsible dog owners. (Irresponsible dog owners don't pay that much attention to the laws, so removing more dog usable parks won't have that much effect on them...)

I visit San Francisco frequently. Since it is a long drive for me I always have to have my dog with me since I can't leave her at home alone for that long and I can't afford to hire a dogsitter all the time. It is difficult enough finding places where she can get some energy out in a city that I am visiting, please don't make it more difficult for us tourists to come for a visit! I would really hate not being able to visit my favorite stores and restaurants because it is too difficult to care for my dog between shopping!

Sincerely, Jessie's mom, Autumn

P.S. However, if you want to start requiring Canine Good Citizen Certificates (CGC Certificates) in order to use parks, that is reasonable. All good dog parents prefer their dogs to be interacting with other well mannered dogs (just as good parents want their children to be interacting with "good" kids). Also, dogs and their parents who have worked their way through the CGC testing know how to interact with other people and other dogs, and by getting the CGC Certificate they have shown an interest in making certain that their dog is well mannered and courteous to people and other dogs.

Correspondence: My fiance and I have two dogs, one adopted from the SFSPCA and the other from the Marin Humane Society. My fiance and I met at Alta Plaza Park, after our dogs became best buddies upon first sight. We are both extremely responsible dog owners as well as tax-paying, law abiding citizens of this city (and the United States). I was thinking quite seriously about moving back to the East Coast (where I grew up) after living in the Bay Area for the majority of the last decade, but then I adopted my dog, and this city became a place I just couldn't leave. San Francisco has always been one of the most dog-friendly cities in this country, and after adopting my dog (Sarlat), I felt like a whole new world opened up to me. People smiled at me more and talked to me, I started meeting other people in my neighborhood and becoming good friends with them. I think that dogs make this city a friendlier place. Dogs foster a sense of community here, which is often a hard thing to find when dealing with some of the day-to-day urban struggles/hardships. We meet each other at the parks and beaches, and we make doggy play dates. I also became much healthier after adopting Sarlat, losing about 20 pounds due to walking her and going on jogs with her, as

well as just playing with her at the parks and beaches in the Bay Area. I think promoting dog-ownership is a great way to help San Franciscans improve their health. There are all of the technical problems with limiting dog access and off-leash activity--which is really the only way the dogs get proper exercise and thus are relaxed at home--that I know will be presented by the SPCA and other animal rights organizations, but I want to really impress upon you the detriment to humans living in San Francisco that this Proposal would result in if passed. I will seriously consider moving to a less expensive city/town, and perhaps this would be out of the State of California, if this Proposal were to pass, and I know I'm not alone in this thinking. There are always issues with dogs, there is no question in that, but I do not think these negative issues come anywhere near the magnitude of harm that will come to the vast majority of responsible and loving dog owners of this city, or the dog lovers who just enjoy their friends' dogs, should this Proposal pass. This proposal would transform San Francisco from one of the most dog-friendly and human-happy cities into one of the most unfriendly cities in this country, and maybe even the world. The negative impact on San Francisco, should it become hostile to dogs and their owners, has not been evaluated in any significant manner, and is not something that should be haphazardly tested, which is what I believe this proposal will beget if passed. Please help keep San Franciscans happy, healthy, neighborly, and in this city, and do not pass this proposal.

Correspondence: It disheartens me that dog walkers cannot see the other side of the "leash" so it seems. As much as I love animals, like many things human, dog-ownership and the vocation of dog-walking has gotten out of control with an often total disregard to other people and environment. I think it wise that GGNRA put clear boundaries in terms of policy and park areas to restrict if not eventually to eliminate unleashed dog-walking in major GGNRA parklands. I love animals which includes wildlife and the sensitive habitat that wildlife lives in. Dogs can destroy habitat and disturb wildlife as well as people who don't want to be disturbed by the over-abundance of dogs and their walkers. The critical point I am making is to enforce a policy that protects the land and wildlife from exceeding the land's carrying capacity. Dog-walkers who profit from walking more than three dogs at a time make an example of this. Dog-walkers who walk more than three dogs at a time are a disservice to the dogs (point of diminishing returns), the land they ruin, and people who need to have peace and quiet away from barking or nosy dogs. It not only disrupts people who enjoy peace and quiet but more importantly it disrupts the peace and calm of the land and wildlife. Lastly, dog-walkers are not always thoughtful about cleaning up their dog's waste

or having the dogs alleviate themselves in more appropriate places like their back yards. No body appreciates stinky dog urine or manure all over the place, I certainly don't. Thank you GGNRA for not allowing the land to be over-run with dogs and their walkers. Perhaps GGNRA can find a happy resolution to the needs of dog-walkers by requiring on-leash only areas or an open field for dog running.

Correspondence: As a veterinarian, I am well aware of the importance and benefits of exercise in animals. There is a clear relationship between exercise and maintaining a healthy weight; as well as good mental stability and much less of a tendency to bark excessively or be destructive. Dogs in general are able to interact with other dogs off leash in a non-protective and friendly manner. Dogs do not run and play on the end of a leash, in the same way that they are able to off leash. In addition, once you place them on a leash, dogs are more restrictive, and can often become protective.

The San Francisco area parks and beaches provide a wide variety of areas for canines to romp, play, and be themselves. To make these areas anything other than voice control, would ruin the atmosphere that has become known as a dog lovers haven. Most pet owners do not have enough property at their home to let their dogs freely frolic in the same way that they can in a park or on a beach. People rely on these traffic free areas to be able to let their dogs exercise, play, and socialize in a safe environment. The people also enjoy visiting with other pet lovers as well. Removing these off leash areas would greatly reduce the quality of life for both the canines and their human companions.

Correspondence: I hike extensively in teh Tenisee Valley GGNRA. I hike the Miwok trail and also enter the park from the end of County View Drive.

Summary: There are many great Dog owners but there are many that 1) allow their dogs to run off leash in restricted areas and 2) Leave Dog poop on the trail. 3) bag the dog poop but do not pick up the bag.

At one point in January, there were around 10-15 bags of poo at teh end of County View Drive and many scattered throughout the trail.

I think that Dogs need to be banned from open areas and restricted to limited areas of the park.

Mike

Correspondence: I am in support of curtailing dogs' off-leash access to GGNRA as outlined in the Management Plan. This is due to the multitude of problems that I have personally witnessed in the GGNRA while dogs have been off-leash, including destruction of wildlife habitat, hunting/killing wildlife, and menacing other visitors. The fact is that even in areas where dogs are currently mandated to be on-leash, many visitors believe it is their right to allow their dogs to run wherever off-leash. This must stop if we are to stop the further destruction of the wilderness in the GGNRA.

Correspondence: . I support the highest level of restrictions for dog access to the crucial habitat of our national parks. Will posterity blame us for prioritizing the pleasures of pet-owners over the survival of more than a dozen endangered species in the GGNRA and related areas? Will snowy plovers go extinct so that pet owners can live out their fantasy of rights and liberties?

Dogs are not endangered, and putting them on leashes in some areas and preventing them from going into others altogether is not a problem. There are plenty of places, including the city parks, for dogs. Last time I went to Ocean Beach's restricted area, I saw about a dozen off-leash dogs and then

on my way back saw the sign saying all these dogs had to be on leash. I would support stiff fines and enforcement too. So would every environmentalist on earth who actually cares about the Mission Blue or the coho in Redwood Creek.

With the rise of dogwalkers taking large groups of dogs out at once, the ability to control the dogs and keep them from widening trails is reduced, so the problem has grown worse. I have nothing against dogs. But I have everything against extinctions.

sincerely,

Rebecca Solnit

Correspondence: I strongly oppose the severe reduction in space allocated for recreation with dogs in the GGNRA. The land was given with the understanding that it would continue to be a recreation area. Dogs are only allowed on 1% of the land as it is. I am a responsible dog owner and do not allow my dogs into fenced off areas. I pick up after them and do not allow them to bother others. I support citing irresponsible dog owners. The other parks in the city would be overwhelmed by dogs if this plan passes. Most city dwellers do not have large yards and having this space for dogs to run off-leash is key to keeping them active and well socialized. I have written to my congressional representatives and also the SF City Council to express my views. I think the land should be given back to the city if the scope of use is changed in this way. I think that there can be balance where dog owners and non dog owners can all enjoy the GGNRA.

Correspondence: I am writing to register my opposition to the proposed ordinance restricting off-leash dog activity in the Golden Gate National Recreation Area. I am a San Francisco resident and longstanding dog owner who understands both the responsibility that dog ownership carries and the value that dogs derive from the ability to run, play and interact freely with other dogs in segregated natural spaces within the city. The natural preservation objectives of the GGNRA are not mutually exclusive with the ability of dogs to roam freely in these areas under proper owner supervision. San Francisco's long tradition of allowing dog owners to responsibly let their dogs enjoy these areas without the restriction of a leash stands as a testament to the viability of this practice. Dog owners using GGNRA overwhelmingly respect the established natural preservation boundaries that do exist, and these areas can continue to thrive as they coexist with dog-roaming areas.

Please do not curtail this privilege through the proposed legislation. Thank you for your consideration.

Correspondence: I ride my bike with my dog from Ocean Beach to North Beach daily to work and stop Crissy field 5X a week.

I am very disappointed and angered to hear that the Golden Gate Park Recreation Area is attempting to eliminate so much off leash dog area in San Francisco. As a responsible dog owner this is an attack on my rights as a dog owner and San Franciscian for 25 years. Dogs and their owners are an integral part of San Francisco and further limiting our rights to walk freely in parks is a horrible idea. I can only imagine this attack on such a large community of responsible people is a knee-jerk reaction to an irresponsible few. Why not prosecute bad dog owners instead of punishing everyone?!!!

Open space to walk my dog is one of few remaining the reasons why I like living and working in San Francisco. As a business person who has actively contributed to San Francisco's economy, I deeply condemn this proposal.

My name is Virginia Hoffmann. I am a Certified Pet Dog Trainer, certified by the Certification Council for Pet Dog Trainers (www.ccpdt.org), a Certified Dog Behavior Consultant and member of The International Association of Animal Behavior Consultants (www.iaabc.org), a former AKC Canine Good Citizen Evaluator (www.akc.org), a Professional Member of the Association of Pet Dog Trainers (www.apdt.com) and have served as a licensed pet therapy team evaluator for the Delta Society (www.deltasociety.org). I have been involved with dogs for more than 30 years and working professionally with people and their dogs in New York City for 15+ years. I have been a dog owner and off leash user of Central Park in New York City for 14 years. I am strongly in favor of off leash areas for dogs. In 2007 we almost lost off leash hours in Central Park but fortunately for the dogs and people who enjoyed them for years won the case and the ability to exercise dogs off leash in the park was maintained. I am also in favor of responsible dog ownership and the safety and education of the community as it relates to the behavior of people and their dogs. I am an educator of people and their dogs. My job is about keeping people and dogs safe and compatible. I believe we are throwing the baby out with the bath water. Rather than approaching this hysterically and emotionally the facts need to be assessed. We need to consider that education is the solution to any conflict regarding dogs recreating off leash in the parks. The dog owners and the general public would benefit from education regarding dog safety both on and off leash and understanding of the statistics with regard to same. I do not consider it acceptable for a dog to harass or bite a person or another dog. Nor is it acceptable for a person to be hit by a car, rollerblader, skateboarder, softball, soccer ball, running child, etc. I ask, however, because all of these things can and do occur should we ban all of them from our city parks? Should our parks be places that we admire passively from afar, from a bench or a sidewalk? Should the actions of an irresponsible few be the determining factor for removing the opportunities of the responsible majority? Those who are not responsible will not be hindered by the law and they are all that will be left in the parks. Let us consider the statistics. In 2007 dog bite incidents in the city parks represent slightly more than 2% of dog bites in New York City. I would urge the decision makers to avail themselves of a copy of the book *Dogs Bite: But Balloons and Slippers Are More Dangerous* by Janis Bradley so that statistics can be put into perspective. For example, according to statistics gathered by Ms. Bradley a person is 5xs more likely to be killed by a bolt of lightning than by a dog. It would also be of benefit, I believe, for all involved to better understand something of dog/human behavior. *The Other End of The Leash* by Patricia McConnell is an easy read on the topic.

If the issue here is public safety perhaps we need to provide opportunities

for education on dog bite safety. It is not, unfortunately, a priority in this country. However, when there is a media report of a dog attack it is a momentary, monumental outrage but still there are very few dog safety programs in schools or communities. According to an interview with Ken Phillips, the foremost dog bite attorney, most dog bite victims are children, because, he says, there is a lack of education on dog safety by parents and schools. He also states that there are 5 factors that contribute to dog bites: 1) Training, 2) Socialization, 3) Health of the dog, 4) Behavior of victim that prompts the bite, and 5) Breed and owner behavior in relation to understanding that breed.

Owning a dog requires responsibility and part of that responsibility is to become educated about dog behavior, training and appropriate conduct in public places. Allowing a dog off leash doubles that responsibility. My experience as a dog owner, trainer and behavior consultant is that the majority of the owners and dogs enjoying off leash exercise with their dogs are responsible. Those that are not need education and accountability. By defining off leash activity within the parks an opportunity for education and accountability will grow.

There is a serious oversight with regard to public education of dog bite safety in our communities across the country. There are strong community based organizations of dog owners putting their funds and energies into saving off leash privileges, these strong, devoted, responsible organizations could be freed of their current burden and be able to use their resources to promote community based activities and educational opportunities for public safety and awareness as it relates to dogs. I see boundless educational opportunities if dog owners and the parks could work together rather than continue to walk the tenuous tightrope that has previously existed.

Dogs are here to stay. In fact the relationship between dogs and mankind has existed for more than 10,000 years. If dogs were as dangerous as opponents of the off leash hours would have us believe, that relationship would have ended a very long time ago.

Let us look at that relationship over these last 10-14000+ years. Dogs serve mankind daily. In prehistory, as hunting assistants and sanitation workers. Today they are saving lives, guiding and aiding the handicapped, are prescribed by health professionals for emotional support, work in hospitals, nursing homes and other care facilities as therapy dogs to bring joy to the people there, they help children with difficulties improve their reading skills in the R.E.A.D. programs, and have served as search and rescue workers and emotional comfort in the aftermath of disasters. Most of these dogs are people's pets who in addition to their duties provide companionship and unconditional love to their guardians. Research has shown that petting an animal can reduce blood pressure and other ills. There are of course the

health benefits of exercise as well.

These are just some of the things we ask our dogs to do for us and the community in which we live. They ask very little in return. To have their basic needs met: to be sheltered, fed, and just to be allowed to be dogs for a small part of the day. What does it mean to allow a dog to be a dog? Not much really. Allow him or her to exercise freely, smell the ground, feel the grass under foot and socialize with his or her own kind in a natural way (not tied to a person with a cord or forevermore crowded together in overcrowded fenced areas).

Even when just being dogs they benefit man. They delight onlookers as well as their owners with the free abandon of their frolicking, their presence helps keep us safe in the dark of night or early hours of the morning, they improve our health as we walk briskly or run to keep pace with them for an oh so short hour or so.

Off leash activity benefits the human as well. The owners benefit greatly from the exercise as they move their dogs through the park, walking miles more than they ever would otherwise. Look at a dog run ? the people are sitting on benches! The people benefit from the social interaction with others. Dog people talk to each other, strangers talk to people with dogs. It is a social phenomenon. People benefit from the contact with the animal. I've seen those not accompanied by dogs linger and smile as they watch dogs play and run in the early morning hours in Central Park on their way to work. Moms with strollers cheer a crying child by pointing and saying, "Look at the doggies." I see seniors and handicapped owners walking briskly rather than sitting home alone. Research shows that petting an animal reduces blood pressure, owning a dog reduces cardiovascular problems, emotional imbalance and a number of other ills. This is a health benefit. People spend money on their dogs. This is an economic benefit. A well-trained and well-exercised dog is a good neighbor. These dogs aren't nuisance barkers or destructive. These dogs aren't relinquished for behavior problems into the city's already overburdened shelter system.

In the scheme of the long dog-human relationship leashes are a relatively new invention. They are most certainly necessary and appropriate in many situations. They are, however, unnatural. A dog's natural movement is primarily sprinting and trotting, they rarely walk in a slow plodding fashion. Can a dog receive maximum exercise, reach maximum training and socialization potential on a leash alone? I believe NOT. All dogs from tiny 4lbbers to majestic 120lbbers, purebreds and mixed breeds need this opportunity. The vast majorities of people, whose dogs exercise off leash lead their dogs well, teach their dogs and socialize their dogs. These are the dogs that fill dog events and pass canine good citizen tests. These are the behaviorally healthy dogs. Exercise, training and socialization produces a

behaviorally healthy dog who lives peaceably in society. The benefits to people and dogs of recreating off leash far outweigh the detriments.

As a trainer, I encourage owners of suitable dogs to train them to a level to be able to exercise off leash. The clients who want to exercise their dogs off leash are more motivated to train their dogs. These dogs train faster, to a higher level and at a younger age than those whose owners do not strive for this goal.

Is every dog capable of recreating off leash? NO. Should that prevent those, in the majority, that are from being able to enjoy the opportunity? Should their owners, who have worked diligently to raise and train a social, well-behaved dog from meeting the needs of that dog? I think not.

There are dogs of all ages, sizes, and types that can and should be off leash and those that should not. The majority of owners knows their dogs and act accordingly. There is a minority that does not. With a defined law regarding off leash access to the parks education and enforcement for those who need it will be more readily available and there are training and behavior elements that can be defined and evaluated accordingly. E.g.

| | | | |
|-------------------------------|------------------------------------|--|--------------------------|
| Should | Should not | Reliable voice control | Unreliable voice control |
| Socialized defense or offense | aggression | Comfortable with all people and | |
| dogs | High predatory drive toward | Mannerly in interactions with both other | |
| animals | Prone to chase fast moving objects | | |

Where will the thousands of owners and dogs who use the off leash hours in the parks go? Dog runs are already over-crowded, there is not enough open space in most cities to accommodate more appropriately sized runs. Dog runs are not the best option for many dogs but because all dogs need exercise and not all dogs are appropriate for unfenced areas dog runs are a necessity and we are grateful for them. As a trainer I do recommend dogs runs for young dogs still in training. However, they are not a realistic solution for exercising all of our dogs.

In my work I do everything from train young puppies to behavioral help for last chance aggression cases. Socialization and exercise are 2 crucial factors for a behaviorally healthy dog. Many dogs with problems are under-exercised and under-socialized to people and other dogs. There are other factors involved but these are important ones.

Despite media headlines, dogs rarely bite without provocation. The majority of dogs are not looking to attack people or other dogs. Biting is a last resort even for those who are abnormally reactive. They would prefer to remove themselves than fight or bite. Circumstances often prevent this first line of action. In relation to this leashes and dog park fences prevent desired escape

behavior, leashes and fences define territory and resources, which causes defensive biting. Most dogs just want to stay safe. My experience in my business is that the majority of the dogs I see for aggression problems with people or other dogs demonstrate this aggressive behavior on leash, often in small tight spaces or in the home. Dogs generally do much better off leash, as there is room to move, undefined space results in less guarding or territorial behavior. Resources are plentiful. A major cause of dog bites is a lack of education regarding dog safety. In my daily personal and professional experience it seems that the vast majority of New Yorkers LOVE dogs and sometimes too much. They are unknowingly inappropriate in their interactions with dogs. For example, most people are not educated in the appropriate way to greet a dog and, as such, many dogs are "attacked" daily by people. They are touched without introduction, approached and reached for from behind, pursued when they demur from interaction. Strange human faces coo in their faces, total strangers pick up puppies without permission. Dog owners don't consult each other before allowing leashed dogs to greet. These are the instances when most bites are likely to occur. All of these things occur most often when the dog is leashed. It happens in the elevator, the lobby, city street, etc. Looking at the statistics and the ratio of dog bites to dog population it is remarkable the tolerance of the canine species. That's why the relationship has lasted for thousands of years. Dog owners are being put in a position of us against them while the real issue is how can we, as a community, better the experience of the parks for all involved. To incorporate off leash use makes the most sense for the safety of all. I am a dog owner and a professional making my living working with dogs all day, yet I do not want myself or my dog, my clients or their dogs threatened or injured due to irresponsibility anymore than those who would ban off leash use of the park. But a leash law will not keep us safer. Education will keep us safer.

Educated people won't get bitten Educated dogs won't bite. Educated owners of potentially dangerous dogs won't be in public with their dogs off leash.

There is irresponsible behavior on bicycles, rollerblades, scooters, behind the wheel of a car, by people who disregard the designated areas for playing sports. These people should be guided by law enforcement. The alternative would be to ban all of these activities from the parks to prevent the occasional infraction or injury a few individuals may cause. I urge those in the decision making process to consider that an unacceptable solution.

In closing, I speak also as the person of a large mixed breed dog who lived to be 18yrs old and who until her last year ran in the park everyday. She was healthy, agile and mentally alert as a result. She never hurt a person or a dog. I would like to share with those who have never experienced the joy of hiking with a companion animal that no matter what side of the bed you get up on or how bad your day after a hike in the park with a free moving dog,

experiencing nature with a creature of nature, you leave the park a healthier, kinder person. To quote a client who has a lovely, sweet, well mannered dog: "I can't imagine not being able to do this everyday."

Thank you for the opportunity to express my views and share my experiences and information about dogs and their behavior.

Correspondence: I am a dog owner who would be affected by the proposed policy, but I object not only because it will affect me, but because it will prevent people of all ages from enjoying beaches and trails with their dogs with no sound basis for doing so. The management plan provides no support for its conclusion that exclusion of users with dogs is the best solution to occasional user conflict. Moreover, the study specifically cites concerns about habitat, particularly birds, but cites no studies to support those concerns.

Dogs get people outside walking and hiking, enhancing peoples' lives by making them healthier and happier. Why would we want to erect barriers to enjoyment of the outdoors with loved pets? I understand the need for rules that allow multiple users of different comfort levels to enjoy the outdoors together. I am open to time constraints, limits on the number of dogs that can accompany a single person, limits and fines for aggressive dog incidents, and hefty fines for those who do not clean up after their dogs. These are all solutions that seem not to have been carefully considered, even if a problem has been adequately documented.

I am confident that the ggnra can find a way to allow all users, including those with dogs, to enjoy the open space of San Francisco and Marin while also preserving the natural habitat and surroundings for future users. Please reconsider this plan.

Correspondence: Dogs are a threat to humans. Humans should be allowed to avoid this threat. In order to accomplish this, there should not be very much off leash space in the bay area and these spaces should be fenced off. Dogs are and owner's

friend and protection. Because they are for protection, they have a tendency to bite/be threatening. Walking a dog off leash is similar to carrying a gun fully loaded. Having a dog run up to you for some feels like having a gun held to your head. There are many events involving dogs that happen in the bay area each day, most of which are never reported. I believe that the NPS is vastly underestimating the effect of dogs of people and wildlife/the beauty of our park. There is a lot of evidence supporting more regulation in the parks. (while the regulations are not quite strict enough, no off leash dogs should be in an open area. all should be fenced off) Government regulations have shown to decrease hospitalizations due to dog bites in Spain and I believe it would be similar here. Most dog bites in public places are from off leash dogs so regulations that decreased off leash dogs and decreased people's interactions with off leash dogs would also decrease hospitalizations, health care costs, days lost at work etc.

References: "Decline in hospitalisations due to dog bite injuries in Catalonia, 1997-2008. An effect of government regulation?"
<http://injuryprevention.bmj.com/content/16/6/408.short?rss=1> This article shows that increased government regulation led to less dog bite hospitalizations.

"The problem of the danger of dogs; a study of incidents with dogs in a large city" <http://www.ncbi.nlm.nih.gov/pubmed/8261904> This article shows that the vast majority of dog bites in Germany were from off leash dogs (90%).

"The ecology of dog bite injury in St. Louis, Missouri."
<http://www.ncbi.nlm.nih.gov/pmc/articles/PMC1435667/> This article explains that often the victims are blamed for dog bites but are rarely acting in way that would provoke a dog.

For these reasons, I believe that all off leash areas should be regulated and all rules should be enforced. The preferred alternative could be changed in that the amount of off leash areas should be decreased by about half of what is proposed. Also all areas that are left for off leash use, should be fenced off.

Correspondence: I am deeply concerned about the proposed dog management plan. As one of thousands of responsible dog owners who choose to live in the Bay Area in part for its access to open space areas for my dog and annually contribute to the national parks, I am deeply dismayed by the short-sightedness of this proposal. One need only go to Fort Funston or Chrissy Field on a weekend

day to see that the vast majority of people using this space are responsible dog owners.

It's my understanding that the National Park Services is not the Nature Conservancy protecting areas against use, but rather promoting responsible use. Reducing off-leash areas is not responsible use it's mean-spirited and short-sighted. It will reduce the amount of people enjoying the parks, reduce revenues from contributing dog-owners, cause great animosity, and may reduce the tax base of people like me who feel that the expense of living in the Bay Area is outweighed by the natural resources available to us, as those resources will be reduced drastically.

Thank you,

Nada Djordjevich

| Correspondence: | The Compliance-Based Management Strategy must go. This poison pill that will allow the GGNRA to change the status of off-leash areas to on-leash or no dogs without additional public comment if there is not 100% compliance with the new restrictions will not work. The change would be permanent. A management plan should not come with a built-in nuclear option, which is what this is. It allows a relatively few bad players to undermine and destroy a traditional recreational use of the area. No number of responsible dog owners will stop what will become the inexorable removal of all off-leash access in the GGNRA if this strategy remains part of the plan. Tens or hundreds of thousands of hours of incident-free dog walking will not matter. There should be (and are) penalties for bad actors and these should be enforced. But the vast majority of people who do not act badly should not be penalized for the bad actions of a few. This strategy is unfair because off-leash status can be changed in only one direction (toward more restriction). It circumvents the legal requirement that management changes that are either significant or controversial must have a public process before they can be made. Critical information about how compliance will be determined ? | | |

by volunteers biased against dogs? by surveillance cameras? ? is not included in the DEIS.

The Preferred Alternative is not acceptable. It is overly restrictive, and its restrictions are not justified by the totality of available data. It is based on separation and exclusion, a management philosophy that goes against the values of the Bay Area in which it is fully immersed. It violates the mandate for the " maintenance of needed recreational open space" contained in the legislation that created the GGNRA. The DEIS is full of negative things that "might" or "could" happen if dogs are allowed off-leash at various sites. But there is very little evidence presented that these hypothetical impacts actually happen. Given the intense scrutiny of dogs by the GGNRA over the past decade and more, the fact that there is not more persuasive real data about significant impacts of off-leash dogs means that there is no real justification for the proposed restrictions contained in the Preferred Alternative. The contraction of areas available for off-leash recreation will significantly compromise the park experience for people with dogs, and could lead to an increase in conflict as more and more people are forced into smaller and smaller areas. The impacts of people moving from the GGNRA into city parks is not adequately addressed in the DEIS. Any alternative must address these impacts on city parks and ways to mitigate them.

The GGNRA should develop a new alternative, the A+ Alternative, that will better balance the recreational needs of the Bay Area with protection of natural resources. The DEIS calls the "No Change" Alternative "A". This is the 1979 Pet Policy with some restrictions, particularly restrictions on off-leash at Ocean Beach, Fort Funston, and Crissy Field because of the snowy plover and native plant restorations. More than one-third of Bay Area residents have dogs and we now know the importance of off-leash recreation for dog's physical and mental health, as well as the importance of the significant social communities that develop where people recreate with their dogs off-leash. This large segment of Bay Area residents should not be restricted to significantly less than 1% of GGNRA land (that is how much GGNRA land is available for off-leash recreation in Alternative A) to have a satisfactory park experience, especially since there is little scientific evidence supporting restrictions on off-leash. There has to be more space available for off-leash recreation, not less, given the huge demand for it in the Bay Area. The A+ Alternative would include everywhere that is currently off-leash, plus sufficient off-leash opportunities in San Mateo County to meet the demand, and more trails off-leash throughout the GGNRA. In addition, new land added to the GGNRA would include off-leash areas, especially in those areas where it has traditionally taken place. There would be no compliance-based management strategy in the A+ Alternative. Any dog management philosophy in the GGNRA, like that for any other recreation use, should be based on Bay Area values of co-existence, shared space, collaboration among park user groups, and

education where problems arise. Enforcement of already existing regulations should target irresponsible dog owners who create the few problems documented by the GGNRA, while allowing responsible dog owners to continue their traditional off-leash recreation without harassment.

There are not enough trails available for off-leash recreation in the Preferred Alternative. We need more. Not everyone who goes to the GGNRA plays fetch with his or her dog. Many people enjoy hiking on trails with their dogs as their companions. There are not enough trails with off-leash access in the Preferred Alternative.

There must be off-leash access in San Mateo County and on new lands as they come into the GGNRA. The Preferred Alternative has no off-leash on any GGNRA land in San Mateo County, even though much of the land allowed off-leash access before it became part of the GGNRA. Off-leash recreation is a traditional use of those lands, and it must be respected and maintained. That is in keeping with the GGNRA's mandate for the "maintenance of needed recreational open space" contained in the legislation that created the GGNRA. The refusal to consider off-leash recreation for any new land that might come into the GGNRA in the future is an additional violation of the GGNRA's recreational open space mandate. There needs to be a mechanism for additional off-leash recreational open space when new land comes into the GGNRA

Correspondence: We are highly opposed to having any of Crissy field closed to off-leash dogs. We have a new puppy who can be quite sluggish most of the time. The only time I can look at her and think she is truly happy is at Crissy field. She acts like it's the best day of her life every time we go. My fiance and I love going there with her together. It feels like a family event and it's something that we all really enjoy doing. It's our favorite outdoor event in San Francisco. It would be tragic to have this taken away from us.

Correspondence: To Whom it May Concern, I am a senior at SFSU studying Natural Resource Management and Conservation. One of my favorite recreational activities is hiking. As far as the GGNRA parkland is concerned, I particularly enjoy walking at Land's End, and Mori Point. Prior to studying

Natural Resource Management and Conservation I was unaware of the serious damage that off-leash dogs create in parks, but I can tell you that I NEVER liked off-leash dogs. I always had dogs as a child, and while I am not a dog lover per se, I am not opposed to dogs. I just do not enjoy strange dogs running up to me when I am trying to enjoy myself in parks. I have also worked as a day camp counselor in Tilden park and I can tell you that off-leash dogs are very scary for some children. I know that San Francisco is full of highly passionate and entitled dog owners, but I believe that while they may have a lot of power, they are NOT the majority of the population. I do not even visit Fort Funston because I am aware that it has basically become a dog park. The GGNRA is home to many sensitive, endemic species that need to be protected from off-leash dogs. I also feel that off-leash dogs present a threat to the elderly, who are in danger of being knocked down by uncontrolled dogs. I do not care if the dog owner tells me that "my dog is friendly", I still want their dog to stay out of my personal space. I am sure the same dog owners that let their dogs run up to people would be troubled if I ran up to them and stuck my nose in their crotch. Why is it okay for their dog to run up to me and invade my privacy? There is also evidence in a report by Dr. Nina Roberts to suggest that minority ethnic groups are disproportionately impacted by off-leash dogs as they are afraid of the dogs. Many people, including myself dog feces in the parks to be off-putting. I have noticed that some dog owners place their used dog-feces bags along the side of the trail. I also find it upsetting that someone's dog that might have been running through poison oak is allowed to run up to me and rub themselves on me, possibly giving me poison oak. Many studies have been done showing that off-leash dogs are not only a problem for wildlife and sensitive plants, but that there is also increased risk to the actual dogs themselves.

I strongly urge you NOT to allow off-leash dogs in the GGNRA, accept perhaps in fenced-in designated "dog park" areas. Please do not cave-in to the demands of the powerful dog-owner minority. You are mandated by Congress to prevent impairment of the Parklands. Allowing off-leash dogs will directly conflict with the non-impairment mandate.

Thank you, Ms. Cory S. Singer

Correspondence: I appreciate the efforts of the GGNRA to address growing community concern about dogs in parks, and I particularly appreciate that the preferred alternatives are those which are most protective of the natural environment. I am concerned, however, about the lack of discussion of and planning for dog waste in these parks.

On-leash, ROLA or off-leash, dogs accessing these parks will leave waste behind. The sheer volume of this waste, as well as the staying power of its odor, is a real problem. While many dog-owners will pick up after their pets, many still do not. Just this week, while walking at Crissy Field, I counted ten piles of dog waste on the promenade. And even conscientious dog-owners cannot remove every crumb of waste, especially in grassy areas. A visitor to Duboce or Dolores Park on a sunny day will be hard-pressed to find a spot to put a picnic blanket that doesn't smell of dog waste. The Airfield at Crissy Field is perhaps not in that category at this point, but as a mother of young children, I am dismayed that I cannot let my children run, play tag, fly kites, etc. on the Airfield without having them wander through dog waste. The beaches at Crissy Field, too - I struggle to avoid patches of sand that are soaked with and stinking of dog urine.

The last time I was at Crissy Field, I counted five commercial dog walkers in the space of an hour, each with at least ten dogs. All of these dogs will void their digestive systems into the park. Some of it winds up in garbage cans; much of it soaks into the pathways and beaches, and smells bad. The garbage cans, too, smell terrible. It's very sad to begin a walk at the Yacht Club, breathe in the smell of sage and lavender, and then have the fresh air carry the smell of dog waste, which intensifies at every garbage can, for the remainder of the walk.

The preferred alternatives will require dogs to be on-leash in more areas, and will require dog walkers to walk fewer dogs at a time. But they do not address the volume of dog waste being delivered to these parks on a daily basis, deposited indiscriminately onto pathways, fields and beaches. Particularly in a region where it doesn't rain for months at a time, we all have to live with the sight, smell and dirt of dog waste all summer and much of the fall.

I would think that Fort Funston would provide a cautionary tale - it is one of the most beautiful and scenic spots in this area, but it simply reeks of dog urine, especially on a warm day. I would not consider bringing visitors there

- despite the gorgeous views and historical significance, it would be like bringing guests to a bus station restroom. Please do not let Crissy Field go the same way.

Could there be a dog run area by the parking lot, where dogs are expected to deposit waste, and which is regularly sluiced off? Or some other solution? I think commercial dog-walkers should pay a fee for a permit to walk dogs at parks, to offset the cost of handling dog waste. And I would also be willing to pay a fee to use the park, to help offset that cost, so that my children and I could enjoy the area without stepping in and smelling dog waste during our visit.

Correspondence: After having lived at the top of county view road for the last three years and hiking on trails leading down to Tennessee valley nearly every day, I can say that I have never seen any enforcing agent talk to dog owners that allow their pets to run wild on leash restricted trails. At the top of county view road there is a short stretch of fire road dog walkers use regularly. Leash restrictions apply to this area but the vast majority of dog owners do no leash their pets or clean up after them. I have taken to advising them that there is a ranger giving out tickets at the trail head, and this works most of the time.

I am an avid wildlife viewer, runner, and general outdoor enthusiast. Dog owners should understand that their domesticated animals are destructive to wild areas and throw a finely balanced ecosystem out of it's natural processes. They should also recognize that although, "my dog is friendly" it does not make it ok for a muddy pet to jump up on other trail users.

The point I would like to make is that no matter what plan you come up with there needs to be a better enforcement methodology. I am all for multi use land management and do not feel over rigorous restrictions are beneficial to our society. Leash laws serve a founded scientific purpose but without any enforcement they are pointless. You have put in all the effort for this assessment and impact report, now please follow through and hold dog owners accountable to your implementations. Please consider a more systematic enforcement policy that let's pet owners who are unwilling to adhere to leash laws know that there are consequences and the laws actually hold merit.

Thank you, Ben Snead

Correspondence: Mr. Frank Dean, Superintendent Golden Gate National Recreation Area 201 Fort Mason San Francisco, CA 94123

Dear Superintendent Dean:

Thank you for your work in preparing the Dog Management Plan/Draft Environmental Impact Statement (DEIS) which was released in January. National Park Service staff put a considerable amount of effort into preparing a thoughtful document that explores five options, with a preferred alternative that attempts to balance protections for the park's natural resources with the public's right for exercise and recreation.

As an urban area park/recreation area, GGNRA has a unique mandate. The final plan must include options for public use, both with and without dogs, as well as safeguards for environmentally sensitive areas.

Many constituents in Marin County, however, have contacted me with concerns that the preferred alternative severely reduces the areas open to people with dogs. As you know, residents value the opportunity for exercise on the trails of Southern Marin with their canine companions. It is my understanding that several groups have put forward additional alternatives that they believe will protect the environment while allowing for greater recreational use with dogs. One proposal, for example, suggests using mostly existing fire trails near parking areas as well as a timed approach to some of the higher use areas.

I urge you to consider all these proposals as you work to finalize the Dog Management Plan. I am sure a plan can be developed that acknowledges both recreational and environmental requirements.

Sincerely, Lynn Woolsey Member of Congress

Correspondence: There are very few off leash areas left in GGNRA and in Marin county in general as it is. Very few parks allow dogs off leash as well. In many areas, like ours in central Marin, the vast majority of residents own and need to exercise dogs. It goes without saying that people need to train their dogs to

be on good voice command and also to clean up after their pets in public lands. Please do not create even fewer legitimate venues to walk and exercises our dogs. This would be a huge mistake for our county and would make it more difficult and community oriented to utilize and visit public lands.Thank you

Correspondence: I have been a nature lover all my life and spends a great deal of my leisure time walking with my dog all over the GGNRA. My dog is under voice control and perfectly well trained not to chase wild animals. I take pride in always picking up after her even in remote areas. I have also observed over the years that dog owners are by far the most frequent users of parks and are generally very responsible. On the other hand, I do understand the need to regulate the wilderness and irresponsible behavior that can be highly destructive. So instead of virtually locking us out of the parks and pissing off a lot of law abiding tax paying residents of the bay area, why not establish a licensing system for dog owners. It would generate money for the parks, bring work for dog trainers and more importantly place the responsibility to abide by the law on us. And any dog owner caught in destructive behavior would be at risk of paying a hefty fine and eventually losing their license! So don't push us out, just legislate! ie Dog walkers would have to be in a whole different class; they are running a business and rarely have their animals under control!

Correspondence: I am writing this letter as public commentary on the GGNRA Draft Dog Management Plan Environmental Impact Statement. I am homeowner who lives near Sweeney Ridge, and I often walk my dog there. Although I am writing this letter as a concerned citizen, professionally, I am a Professor of Environmental Sciences at the University of San Francisco. Due to the nature of my work, I have had ample opportunities to review various environmental policies and believe that experience gives me some insight into the evaluating the proposed changes here. Overall, I am concerned that the policy unfairly targets dogs and does not consider the consequences of restricting dogs to limited areas.

First, the justification for dog management plan is poorly thought out because impacts on the space and staffing are the result of multiple user

groups. The background of your executive summary notes that use of the GGNRA has increased, as the population of the San Francisco Bay Area has increased. The background then goes on to cite an increase in the staff time required to manage dog-related issues and use this as justification for the dog management plan. However, the problem with this argument is that if overall usage of the area has increased, you would expect a proportional increase in management of dogs, right along with a need for increased management of everything else- from parking to lost hikers. Why then is this proposal targeted at dogs, and not, say, bicyclists, whose use has presumably also increased? Or perhaps car-owners should be targeted, as parking can destroy habitat.

While I agree that an increased usage of an area can lead to environmental degradation, there is no reason to target dog owners as the specific cause. For example, the documentation of the preferred plan for Sweeney Ridge notes that "Alternative C protects the Mission Blue butterfly habitat and large area of undisturbed contiguous habitat that is rare and contains wildlife that could be disturbed by the presence of dogs." To point out the obvious, although protecting habitat is an important goal, my dog doesn't eat butterflies. Decisions should be based on carefully collected data, not just someone's feeling that a group "could" disturb the habitat. Walking beside me on the trail, my dog does not degrade the habitat any more than any other passerby. But who might really pose a risk to a butterfly? How about small children, trying to catch them? That could be a real threat, and surely the number of small children using the GGNRA has also increased, so perhaps the proposal should target them. Although I'm being a bit facetious, my point is that the impact statement needs to take into account the contribution of all of the different resource users, not just dog owners. If the habitat is so sensitive that someone walking through it might adversely impact it, then perhaps you need to consider closing it to everyone, not just targeting one user group.

Along these lines, I would also like to address the safety concerns that the report has brought up with regard to dogs. I would like to point out that owning a dog that bites people is illegal and addressed under other laws. It is not necessary to ban dogs to achieve the goal of having an area free of malicious dogs. This again bears on the idea of unfairly targeting dogs. To take this example of creating a safe environment by banning some groups to an extreme, you could argue that banning all men from the park could create a safer environment for children using the area, because the population contains some males that are criminals and may pose a particular danger to children. Luckily, our legal system protects all of us (say by criminalizing certain behaviors rather than discriminating against an entire group). I would also like to point out that I can walk my dog legally in my own neighborhood; why would the dog be more likely to bite when walking on Sweeney Ridge? Of course, it is possible that poor management could create

such a situation, by cramming all dogs into a single, overcrowded space.

Along those lines, these proposed changes may very well end up creating some of the very problems that the dog management plan is purportedly seeking to avoid. Again and again in the environmental field, we see this same story- that when spread over a large space, an impact can have very minimal effects, but when concentrated on a single area, the effects may overwhelm the local ecosystem. There are very few open spaces where dogs are allowed along the Peninsula. Sweeney Ridge is one of them. But the preferred plan concentrates dogs to a very small area of Cattle Hill. So if all of the dogs that are currently spread out over the entire area suddenly condense into a single spot, what will those impacts be? Certainly, for people who dislike dogs, the effect could be overwhelming. For instead of passing a dog once every five to ten minutes (current estimated rate for our usual walk from Sneath Lane/NPS easement to the Portola Discovery Site), these people now passed one dog every minute? Also, it is entirely possible that there would be conflicts between the dogs themselves in this new, overcrowded environment. Finally, from a broad environmental perspective, let me point out that if I drive elsewhere (say to the East Bay which has more dog-friendly parks), I will be increasing my global carbon footprint and thus degrading the environment in other ways. Think of the big picture before moving forward.

To conclude, I strongly oppose the preferred alternative for Sweeney Ridge. Enacting this plan means that I will no longer be able to go hiking along one of my favorite trails, which is in my community and readily accessible from my home. There is a severe shortage of open-space where I can walk with my dog in San Mateo County. Loss of this the Sweeney Ridge hiking trails would only exacerbate this problem, and would degrade the quality of life in this county. Needless to say, I prefer Alternative A or Alternative E, which would provide the most access. In moving this process forward, I would urge the decision makers to take a broader approach, which considers that any group of people using open space will leave some footprint. This problem is not unique to dogs. Removing any user group (say small children, who may have a tendency to catch insects) will obviously lighten the load on the environment, but may not be a fair or balanced approach to making good community decisions.

Correspondence: Dear Park Service,

As an owner of a certified Service Dog, I am particularly upset at the prospect of having her off-leash running activity curtailed or eliminated. For her to run unbridled is her only opportunity to be "off work," and is essential for her well-being. Obviously, this leads to my own well-being, as she takes care of me all day, every day. I must suggest you take into consideration the impact this management plan will have on the many of us who rely on the assistance of their service animals.

Thank you for your time.

Respectfully, Todd Ahlberg

Correspondence: This proposal will end virtually all off-leash dog recreation in San Francisco, meaning that no dogs will be able to go and run around on the beach.

Every day, hundreds if not thousands of San Francisco and Bay Area dog owners make use of the beaches and parks in this region to allow their dogs to exercise. Each and every one of us pay taxes and contribute to our national (public) parklands. Yet a large portion of us will be disenfranchised by this proposal. In addition, this will greatly decrease use of these parklands, which would affect future funding.

This proposal is extreme and it also purports to solve problems that do not exist. There is not a large issue with dog droppings. There are predators other than dogs that chase birds and dogs rarely catch birds. Nesting areas are no more threatened by dogs than they are by people.

Finally, it is cruel to the dogs. Dogs need space to run around and get exercise while off-leash. This proposal would relegate all dogs in the region to on-leash exercise only, which is simply not adequate. Tiny dog runs are not a valid alternative.

The parks belong to all of us, and the idea that some small minority of people want to ban an important source of recreation for the rest of us is offensive, draconian, and unnecessary. As a taxpayer and a San Francisco I object to this proposal in the strongest terms.

Correspondence: Dear Sir or Ms, Thank you for the opportunity to comment on this policy and, in addition, thanks for the many hours of work that have gone in to developing it. My comments are going to be general in nature, as I do not have in-depth knowledge of each area and of the potential impacts of off-leash dog activity in those areas.

I will start by saying that I have fond memories from the 1970s of bringing my roommates' lab-setter out to Ocean Beach and letting her run free, jump for frisbees, run in the waves, chase gulls, etc. But that was long before I became conscious of the fragility of natural resources in the area and of the need to protect them.

In more recent years, I have indeed witnessed off-leash dogs chasing after birds -- including snowy plovers on one occasion -- at Ocean Beach and Crissy Field. In those cases, the owners were either blissfully unaware or

negligently uncaring about the impact their dogs were having. Or occasionally, the dogs did not initially respond to voice commands to return.

I understand, therefore, the almost-inevitable conflict between dog owners wanting to have their canine companions share their outdoor recreation and the responsibility of the Park Service to be a good steward of the threatened natural resources under its purview. There's no "evil" side here; it is a matter of priorities and which value(s) should take priority in which places.

And, of course, this is an especially delicate and difficult issue in a heavily urbanized metropolitan area such as the Bay Area. We are fortunate to have a national park in our back yard, but it brings with it these very real conflicts between users and mandates. Over the years, however, I have come to see and understand the importance and privilege of having healthy habitat where wildlife can survive and thrive in proximity to such a large human population. This "coexistence" brings numerous mutual benefits, not the least of which is simply the survival of species that inhabited this region and depended on the habitat here long before humans and their dogs arrived in large numbers. We have taken over much of their home territory and we have some moral responsibility to respect their rights to what little of it remains unoccupied by our human structures. The other benefits include opportunities for passive recreation (such as birdwatching and nature photography) and environmental educational opportunities (both for adults and for urban youth).

So it does disturb me that many dog owners (or maybe just those with the loudest voices) seem to view off-leash dog access on national park land -- and beaches in particular -- as a right and not a privilege. And given the difficulty of educating and training all dog owners to keep their dogs under voice command and to recognize rare and endangered wildlife, it seems to me that there is a reasonable basis for banning off-leash access in areas that are determined -- by scientific study -- to serve as habitat for wildlife that would be adversely affected by the presence of such domesticated predators... i.e. off-leash dogs. In other areas, where human presence has so degraded habitat that coexistence with sensitive wildlife species is no longer likely or possible, then it seems to me that off-leash dog recreation should be considered, as long as it does not conflict with more passive recreation by other humans.

Thanks again for the opportunity to comment on this sensitive issue.

Correspondence: This report is another example of the national park service having an agenda and then developing a means to further it. The park service has lost the trust of The People in recent years because of their arrogant and bullying manner. The parks are for the People to use and enjoy and not the park service to police and control. There are too many rules and regulations already that inhibit the enjoyment and use of the parks. Please don't enact any more ways to stop People from the JOY of their rightful lands. We don't need any more cops in the parks creating revenue for the government. Is it no wonder that the park service is having trouble being funded by congress. When I was a kid, a ranger was a helpful person with useful information and advice to hand out , not one that hands out tickets. Walking a dog is a joyful experience. The park service personnel should try it sometime. The minimal impact that some dogs cause is no reason to ban all dogs and People from enjoying their parks.

Please don't enact any more rules that may ban dogs and People from enjoying the parks.

Correspondence: I'm most concerned about Ocean Beach, Chrissy Field, and Fort Funston and the impact of dogs, both leashed and unleashed, on threatened Snowy Plovers and Bank Swallows.

I would like to see the requirement that dogs must be on leash all 12 months of the year in the Snowy Plover Protection Areas. This will avoid the current confusion. I have talked to many people who were confused as to what time of year there was a leash requirement on Ocean Beach and who did not leash their dogs because of the confusion. The leash requirements must also be enforced, as they are not currently enforced in any adequate manner.

Also, on Rodeo Beach, I have on several occasions watched unleashed dogs chasing nesting and resting waterfowl and charge up and down through the incredibly sensitive lagoon edge and wetland plants. This should not be allowed. Dogs should be required to be on leash at all times in this sensitive area. Also, patrols and enforcement should regularly check on the disturbance created here by unleashed dogs. Also, on Rodeo Beach last year, a very scary, unleashed pit bull came running full speed and straight at me scaring the beejeezuss out of me. This was an incredibly disturbing event at a place the National Park Service should make accessible and safe to me.

I also feel that National Park lands are a place for people and wildlife, and dogs should not be allowed as they greatly disturb wildlife and, at times, frighten people. There are other, more appropriate places for dogs to be than in the Golden Gate National Recreation Area.

Correspondence: Dear commissioners,

Please keep all areas of the GGNRA accessible for dogs. As a third generation Californian, I grew up with our family taking dogs to the beach, be it city beaches like Baker and Ocean beaches, Fort Funston, and Muir Beach. I currently enjoy walking my chocolate lab Nessie at Crissy Field in San Francisco daily. Almost all the dog owners and dog walkers there are sensible to other recreational users during the peak hot days. Walkers and dog owners use the beach there rain or shine. The current plans for limited off-leash access at Fort Funston would cause even more crowding at the western beach, which can be quite narrow at high tide. The money used for all these hearings and reports would have been much better spent to repair the broken fences along the protected dune areas and educate dog owners and walkers about how best to share this wonderful resource.

A large dog like mine cannot get enough exercise by leash walking. She needs to run, chase other dogs, and swim. And she needs to do this every day. It would be shameful if the Park Service tried to impose a cookie-cutter approach to these unique urban parks, that always allowed dogs, on and off leash, when they were city and county property.

Sincerely,

Pia Hinckle San Francisco, CA

Correspondence: I found no data in the EIS report by a Park Ranger that specifically describes the nature of a "pet" related disturbance to wildlife. What does this mean- a barking dog? Killing? What plants were impacted? How were they impacted? Did they survive? The GGNRA proposal to change the rules related to where pets can be off leash/walked is faulty. It lacks specific data that would show the harm, if any, caused by pets and their owners. Park Rangers are not animal control officers. They should be on patrol to stop speeders, thieves, and drunken visitors who have the greatest potential to harm the GGNRA and its visitors. I support law enforcement when its applied appropriately, and where its needed the most. Do the proper research and you will see that pets are not a threat compared to people who speed, steal, fight, and become a nuisance to others in the Park. I do not support the EIS statement and its faulty conclusions to include missing data.

Correspondence: I am a San Francisco resident who enjoys walking and playing with my dog in various areas of the GGNRA. I have met many friends this way and I fell in love with the Bay Area largely based on the dog friendly character. This is a huge piece of the open, accepting, welcoming, liberal, diverse, and friendly character that San Francisco is so well known for. This area allows for coexistence of so many things - species, personalities, income brackets, politics, ethnicities, sports teams, colleges, music genres - all of which have found a way to live together and some would say makes this area better for it. This is a rare area accepting of anyone who accepts in return. San Francisco is famous for this reason.

So it seems that this plan, and particularly the overly restrictive preferred alternative is completely unacceptable. The issues are spawned by a need to protect the natural resources of the GGNRA, resources that 'could be' unavailable to future generations. I understand that and am in full agreement that these areas should be protected. That said, the analysis is not complete in determining that dogs are the sole culprit. There are less than conscientious dog owners. There are also less than conscientious people in general, who are not considered in this plan. The complete restriction of off leash dog parks and open areas does not stop less considerate people from disrespecting the environment. The difference is that the natural, wonderful, organic character of happy people and their dogs will not be part of these areas. In fact, there will be a void of opportunities in the Bay Area. This is

not a Yosemite, but rather a city full of people with their dogs who enjoy being active, being outside, and enjoying our beautiful environment.

With regard to the EIS itself, the P&N, or specifically the Need Statement, is incomplete and does not include the detail and clarity that NEPA requires. Stating that there "could be" a problem and then describing an element of what may be the problem is all too theoretical. Other than a conceptually 'good idea', as defined by a likely non-dog owner at some point in time, there is no real Need that is clearly defined. The Purpose however states that a clear, enforceable policy is needed. Well that makes sense. I don't disagree that in fact there 'could be' a problem in the future and we should, as with many issues related to the environment, do everything we can to be good stewards. But it is just lazy to state that the appropriate 'clear, enforceable policy' is just to overly restrict use of these parks. The fact is that the EIS did not look at a reasonable range of alternatives. There is not enough consideration of limited restrictions or, perhaps better, new opportunities, trails, resources for the dogs and owners. There is not consideration of maintaining the GGNRA as they are today, perhaps some minor fixes on specific parks based on local problems, BUT with better enforcement of current laws. Enforcement is largely limited (and would be still if any of the action alternatives were chosen) because there are very limited Park rangers and enforcement officers. This is a problem, I agree. The cost of this EIS could have been better put to the hiring or better pay for Park rangers. Ultimately, if enforcement officers are included in the plan, add those to a new alternative looking at fewer restrictions allowing dog owners to use these resources in a positive way.

In summary, the main problems to the EIS are incomplete and inadequate Need statement and Range of Alternatives. One of the many problems with the overall project is that it completely negates the character of the Bay Area based on a very limited consideration of the problem of resource protection. Many dog owners, including myself, are very interested in resource protection, saving our Bay, and community development. Those of us who are in this group, I would guess, spend more time than most outside in these environments and are devoted to finding a good solution to the issue of preserving our environment for the future. This just isn't it and it misses the target.

Correspondence: There are so few places left in the Bay Area that I can meet with other dog owners to take our dogs on off-leash walks. We pay taxes too, and I think many dog owners would agree that taking away off-leash sites would be a

real shame. I know my dog looks forward to her Sunday walks at Fort Funstun, and I'm able to get out and get some exercise as well. We live in an apartment and take our dog to the dog park daily- but it's small and basically a dirt field (mountain view shoreline park). Dogs need to be in an open, natural, off-leash environment. I find restricting owners and dog's access to these areas to be cruel, and since many people treat their dogs like members of the family- inhumane as well.

Correspondence: I can only ask, "when did dogs get a bad rap?" In this world of economic depression, natural and manmade disasters, pathology of all kinds including rampant mental illness, when did dogs become the enemy? We need them so much. Why are they not nature? I don't understand the whys although I've been following this snowy plover argument for almost 20 years now. I have to believe it's about money and tourism, not snowy plovers. I have never seen a dog chase a snowy plover and I have gone daily to Crissy Field for almost 20 years. I could write about the overly restrictive proposed policies but I'd rather focus on what you are taking away from humanity. We need dogs to keep us healthy and sane. ON leash dogs are more aggressive because they are less socialized and certainly less fun. More aggressive dogs mean more murders of dogs, more gassing. I have asked this question over and over but, "do any of you human beings behind these proposals actually have dogs?" I cannot believe that you do. A Samoyed dog like mine, for example, cannot be constrained to a dog park or small area. They are designed by nature to pull sleds over vast terrain. They need broad access to many miles to be fulfilled as a living being and work to their potential.

Potential. That's what we all should be striving toward. NOT just dog lovers and animal lovers but you, too, policymakers who draft these proposals. The snowy plovers are beautiful and they're doing just fine. The inns being built in the Precidio for tourists who will soon be coming in droves...well, we don't want off leash dogs discouraging the tourists, do we?

Correspondence: Below is the email I sent to all of San Francisco Supervisors concerning their hearing on "Off Leash Dogs in Federal Parks"

Dear Supervisors - I would like to comment on the scheduled upcoming hearing on "Off Leash Dogs in Federal Parks". I have been involved in this issue for many years now and have testified in front of other Supervisor hearings as they entertained the idea of reclaiming parts of the GGNRA so dog owners would be able to let their pets run free. I thought such efforts to degrade the GGNRA were misguided then as well as now. Supervisor Scott Wiener's expressed concerns that the GGNRA's proposed dog restrictions will lead to an increase in off-leash dogs in City-owned parks seems to recognize that San Francisco has an off-leash dog problem in dire need of correction. By any common measure, all parks in San Francisco are de facto off-leash parks, and the only people that don't think this is true are the dedicated off-leash activists in our city. Right now there are no parks in this city that a person can reasonably expect to be free from confrontations by off-leash dogs. Personally, I have had to deal with unpleasant off-leash dogs as I stood on a sidewalk stenciled signs imploring people to leash their dog. The fact that past San Francisco administrations have abdicated their responsibility to furnish all citizens with safe, clean parks free of unwanted assault by off-leash dogs is not a problem that should now be transferred to GGNRA management.

The task before the San Francisco Board of Supervisors is to take control of our city parks and address the rights of all of its citizens, not just the very vocal off-leash dog community. The second thing you can do is to allow GGNRA management to follow their mandate to "preserve and protect" park resources without encountering your interference.

Sincerely,

M. Bruce Grosjean San Francisco

County Park=San Pedro Valley park missing from map (San Mateo)

Maybe time of day & what day of the week should be considered. Week-ends or heavy use days - more restrictions. I should not be fined if my dog is not creating any problems.

I can walk my dog on just about any sidewalk on-leash. I need places that the dog can be off leash & safe (cars).

Type of dog should be considered before saying all dogs.

GGNRA- The largest landowner in Pacifica, can't designate 1 acre for off-leash dogs?!

The science in the plan is based on shore bird data; GGNRA land in Pacifica does not have shore birds. There is no data for butterflies, snakes, & frogs that says on-leash dogs are an issue so why would we close these parks to dogs based on an opinion???

Comments

Please leave Mori Point as it is (Alt. "A"). Many of the M.P. trails have already been closed, to protect wildlife. To restrict dogs on "Polliwog Path" in particular would negatively impact the property values of Fairway Park homeowners. The availability of GGNRA property with access AS IT IS NOW has long been a selling point of our community.

Handicap issues - not addressed!

No off-leash reasonable walking in San Mateo Count!

We are older people with dogs - we vote/pay taxes. Dog recreation important to Pacifica economy.

This whole study is a waste of tax payers \$. Put the same energy into doing more to fund schools!

Montara resdient who lives at edge of GGNRA space: I maintain a trail onto open space + built a bridge at my own expense to benefit community - 90% of users are dog owners not hikers, who typically park on Route 1. We dog owners are self-regulating and maintain clean up but only the few horse people have had representation. I will remove the bridge if the leash only rule is made.

Dogs need areas to run and socialize. They don't have that many areas to do this. Keep GGNRA areas that are open to dogs off leash keep it the way it is.

A non-dog owner cannot imagine the joy of walking a dog off-leash. The dog's strut, gait, wiggle & sense of curiosity along a 40 minute walk makes the walk worthwhile.

If I had to stope everytime my dog wanted to sniff something stops my momentum & diminishes the value of walk. Walking the dog is not all about the dog. He/She's a companion.

PEOPLE need these spaces to walk w/their dogs. To create health in themselves + the community fostered in the care of dogs. Alt A - No Action is the way to go.

Dogs are only as good as the people who train them, well trained dog is a good dog. This is a people problem not a dog problem!

Do not diminish the joy we all enjoy watching dogs off leash & people running free in our recreation areas! All areas of park.

East beach -Crissy Field

East Beach @ Crissy Field is also much better for the mobility impaired (handicapped) people that want to use the beach, see dogs running.

Off leash needs to be more in the mix - not whittled down to nothing in the areas of Fort Funston & Crissy Field! Compromise means to allow the elderly ROLA access too!

Correspondence: Ft Funston is one of the cleanest parks in SF because of the dog walkers. Also it is one of the only park in SF I feel safe in. The dog walker have a nice community out there.

If people are allowed to walk at Fort Funston, then why aren't their dogs? After all, humans cause more damage to the wildlife than our K-9 friends!

-I am unclear as to where stakeholders' input was included in the ROLA designation. -I would request an impact assessment beyond park boundaries, of implementation of these ROLA. -Society is also an evolving stakeholder in land use decisions. Urban areas have higher concentrations of park guardians & dog recreation is a significant part of the guardians socialization. For elders & the handicapped, such socialization lowers depression. Many working in therapy dogs use off leash recreation, as well.

These dogs are also stakeholders!

Correspondence: I have a concern about enforcement of the proposed leash laws for areas of the GGNRA, based on my experience of a similar situation in local parks. Especially with respect to the possibility of increased restrictions if we don't have 75% compliance in the first year. With the current budget crisis, will there be enough money for rangers to be out doing outreach and education while enforcing the policy. General canvassing of people at Fort Funston, where I take my dogs, reveals that most people are either unaware of the draft EIS, or are poorly informed about its goals. If there are not ample signs and rangers out there to inform people about any new restrictions, we have no hope of getting the compliance numbers the GGNRA is asking for. Plus there is no incentive if we do better in compliance.

In Dolores Park, where I also take my dogs, there was a decision some years ago to restrict off leash activity to two areas of the park. But there has been no signage and the Park and Rec people who work there are very unclear about where those areas are supposed to be. I have even been told, by a Park and Rec ranger to take my dogs into an area that I know is NOT a sanctioned off leash area.

How can you expect 75% compliance when no one is aware there are rules or what they are?

That being said, I am opposed overall to the more restrictive off-leash policy being recommended.

thank you Judith

Correspondence: Leashes should be required for all dogs in all areas of our National Park at all times.

To say that dogs should be under "voice command" is way too hazy, and it is my experience that dog owners have no idea what this means. Both myself and my young son have been jumped up on by dogs that were supposedly under voice command. I often hear: "Don't worry! He's

friendly!" but that's no consolation to someone like me, who is allergic to fur, or to my son, who is simply afraid of dogs.

One time while we were hiking with some other children on the trails in the Presidio, an off-leash dog froze and growled at us menacingly, essentially pinning us to the trail's fence. I politely asked the dog's owner to leash his dog, and he refused! He told us that we should move along! If we want to look at plants or bird watch, we shouldn't be at the mercy of a stranger's angry dog. The dog situation is so bad at Mountain Lake that, as a family, we don't even go there anymore. It's a dog free-for-all, ruining an otherwise beautiful spot.

Professional dog walkers are making money consuming National Park resources, and in my opinion should not be allowed to ply their trade in our park at all, any more than a logger should be allowed to cut down our trees. If a compromise must be reached with professional dog walkers, then the number of dogs per person should be capped at three. The average non-professional dog walker does not exceed this number.

Above all else, these conversations should revolve around preserving our National Park's very unique and precious natural resources. San Francisco Recreation and Parks manages 220 parks amounting to over 4,100 acres of recreational and open space. Let these spaces cater to the domestic pet crowd. Our National Park should be geared toward the protection of wild life, and the National Park Service is uniquely poised to protect and preserve our unique local fauna and flora. Fido and Lassie have a number of other places in San Francisco to run around, but the same is not true for the dozens of rare and endangered plants, bees, birds, butterflies and other wild life in this bio-region.

Please do not be afraid to acknowledge and limit the impact of dogs in our National Park. Dog interest groups may be vocal now, but there are many, many more of us in San Francisco that do not own dogs and will be negatively effected if dogs are not closely managed in our National Park.

Correspondence: Every time I hike at Mori Point, many dogs off-leash are visible. Even though signs says dogs should be on leash, dogs are permitted to be off leash. This is a terrible disruption of wildlife - in an ever-shrinking habitat. The dog owners who let their dogs run off leash need to understand that the additional stress or outright killing of wildlife by us and our dogs results in death to, and an ever shrinking population in bird populations - from a variety of causes.

Please, keep your animals on leash, and in on-leash areas only.

-Beach at Ft. Funston is only available for off-leash when tide is out, which happens approximately every other week, assuming you walk the same time every day.

-Mori Pt. from March-August is not a good time to walk dogs because of prevalence of ticks.

Correspondence: Dogs are not meant to be in national parks. I'd like to enjoy the park w/out barking dogs running up to me.

Alternative 'A'+ The entire "Coastal Trail" needs to be a regulated off leash area..particularly since the trail is sparsely populated much of the day + night....

Dogs are trained by responsible owners to come when called and to be social. Individual dog owners should not be penalized to leash their dogs in some areas where there is plenty of open space and where dogs can meet and play with other dogs. It is commercial dog walkers with too many dogs to supervise who gibve dog visitors a bad rap. My dog is a gentle large dog who needs to be off leash a little every day to run and meet other dogs and people. The opportunity to go on the Coastal Trail give me the opportunity to practice commands, meet other resposible dog owners, and allow my dog to run (under voice control). Not having a car, I cannot drive my dog to a dog park that would be large enough to allow him some freedom and not be

confronted by too many dogs in one small fenced-in area. Keep the Coastal Trail ROLA, please!

Thank you to the GGNRA for doing such a thorough and thoughtful job. I appreciate all your hard work. You are all not thanked enough.

Correspondence: I am opposed to the proposed changes to the dog access to the Presidio and the Golden Gate National Recreation Area. One of the main purposes of the GGNRA is to provide recreational outlets to the urban residents of San Francisco and the Bay Area. The proposal would severely limit the ability of Bay Area residents to enjoy our public recreation area. Our national recreation area should be preserved for the use of the urban residents of San Francisco and the Bay Area. It is our backyard.

I have a dog and walk with her regularly in the parklands. During the course of our visits, I see many, many well-behaved dogs enjoying the outdoors with their owners. Some dogs are leashed and some are walking along with their owners unleashed. Every owner that I come across is courteous and cleans up after his or her dog. It is extremely rare to see dog feces in the parks.

Correspondence: I strongly support the Dog Management Plan to the extent that it further restricts off-leash dog use in San Francisco, specifically Ocean Beach, Crissy Field, and Fort Funston. I agree that the current situation is totally unsustainable, and more intensive and thoughtful management is necessary to preserve and maintain the endangered species and recreational benefits of these parks for all park users. As a non-dog owning San Francisco resident who uses these parks recreational and appreciates their ecology, I support any efforts to further restrain off-leash dog usage, including creating areas completely off-limits to dogs. In fact, most national parks and CA state parks that receive this level of visitation ban dogs completely in ecologically sensitive and heavily used trails.

Correspondence: I wanted to send a letter of support for your decision to ban dogs off leash in GGNRA. I support this because it will allow me to once again enjoy the park without the harassment of dog mobs and dog owners. I have been provoked twice by dog walkers with dog packs who treated me as if they owned the park. Both times I simply made comments about keeping the dogs away from me (I have been bitten once by a unleashed dog and am not comfortable around them...not in SF). I do not need to or want to be intimidated by roaming dogs and dog owners which seems to be the case, esp. at Ft Funston. Do not let the Board of Supes intimidate the National Park into changing this decision either. The National Park is FOR ALL but the dogs and their owners (or dog walkers) make it an extremely unpleasant experience and they seem to rule the parks these days.

Thank you. You folks do an awesome job!

Sincerely, STEVYN POLK

Correspondence: As a resident of the outer Sunset, a SanFranciscan for nearly 40years, I have had the utmost pleasure walking and running and surfing on Ocean Beach almost daily. For the past 15 years. I have been walking my retrievers here every day. There is no greater satisfaction than watching my dog run - it is the most natural and wonderful and organic activity- and it also enhances the beach experience for others. I have countlessly heard and watched others marvel at these incredible animals. Both my dogs have been very fast, and my current brown lab Carmen is an Olypian in spirt -and she exemplifies the freedom and wildness of this hallowed place. The bond bdetween dog and man is so full and wondrous - and your denial of a dog's most urgent need (to RUN) is indeed short sighted and just plain WRONG. When Ocean Beach was "created," it was meant to be a place where the free joys of nature could be experienced - and that intrinsically included the right to have a dog run free. You really need to be part of the solution to keeping Ocean Beach our national playground. You have to include off leash areas on this magnificent beach - please restore All of Ocean Beach to reponsible off leash use - and please remember that our dogs represent one the best

examples of coexistence between man and beast, and this bond needs your recognition and approval. Your philosophy and attitude concerning dogs is really not correct, and this document does us all a great disservice.

Correspondence: Please think long and hard about taking away off leash dog use of national park land. The off leash dog parks in San Francisco are crowded already, and if you take away use of these lands they will be much harder and more expensive for city parks to maintain. Also the parks in the city are mostly unfenced and are in high traffic areas, potentially hazardous for the dogs and automobile traffic.

Please vote to keep these areas open for dogs and dog walkers.

Correspondence: Dogs don't belong in flora or fauna habitat.

ALL dogs should be ON LEASH at all times on GGRNA land--and in all city parks and open spaces. Dog access should be limited.

People DO NOT train their dogs. In an urban environment, if people don't have room on their property for a pet to get exercise, they should leash their dog at all times, or not have a pet.

GGRNA land belong to the people, not to dogs.

Correspondence: There are so many wonder State and County parks in the Bay Area. Fort Funston is the ONLY ONE that allows dogs off leash over a large space. I feel like it is not too much to ask for those of us with dogs to be allowed on park out of the MANY on the Bay Area to let our dogs run free. I see that there are 38 park alone under the management of the Golden Gate National Parks Conservancy. It seems more that reasonable to allow dog owners ONE park they can use to let there dogs really run and stretch their legs and enjoy the ocean and sand off leash. Please DO NOT take away the one place in the Bay Area for us. People that want to walk, run or horseback ride can share the space with us or, if they prefer no dogs, have many many other choices. We do not. if you take this away from us we are back to only on leash park or much smaller "dog parks". That is just not fair.

Sincerely,

Leslie Leger Brunt

Correspondence: I was born and raised in San Francisco, I am a forever dog owner/guardian, and I have been an associate veterinarian at the San Francisco SPCA for the past 16 years. I feel strongly that the GGNRA lands that currently allow

dogs should not be further restricted. The San Francisco community has been a leader in advocating animal welfare and the human-animal bond, and taking away access to these areas would certainly have a negative impact. Because this is an urban area, there are very limited recreational areas where we can actively enjoy the outdoors and get the physical exercise we need. Our dogs are our families and as taxpayers and members of the community, we deserve the right to share these public areas. There are too few parks in the city and local Bay Area and the dog accessible and off-leash open areas are even more restricted. Taking into consideration the relatively large percentage of residents with dogs in San Francisco, there are not enough city parks and dog runs for us to take our dogs out to exercise. How can we adequately exercise and keep our dogs healthy if we must keep them on a 6-foot leash at all times when we're outside of our apartments and condominiums. Even the private backyards that some single family homes are fortunate to have are often too confining to actively exercise our dogs. Without recreational activity, just like children, our dogs will be more prone to boredom, anxiety, obsessive-compulsive, and other inappropriate behavior. What San Francisco and the GGNRA should enforce is the responsible use of these public lands. People should not litter and dog owners should clean up their dogs' waste. Parents should supervise their children and dog owners/caretakers should control their pets in public areas whether on leash or by voice control.

Correspondence: I beleive dogs sould be restricted from Muir Beach and Sweeney Ridge. Currently the leash rule is not being followed. In my opinion people bring their dogs to roam free and therefore are not in control of their dogs.

On Muir Beach, this winter, every visit I observed some dogs that were 50-100 yards away from there owners and thus were not in their control. This was on all 4 occasions that I visited. Even when it was raining. Some dogs also crossed into the protected area where people and pets were not allowed.

On Sweeney Ridge, last summer, I used the paved surface to train for a bicycle trip. What I observed was in the late evening, after 5 pm, those walking their dogs disregarded completely the leash rule and let their dogs free. During the morning and afternoon those with dogs free would put the leash on their dog or attempt to when they saw me. In my opinion the dog owners knew they would not get a ticket after 5 pm because the rules would only be inforced during the day, maybe. hence some owners during the day putting leashes on. I was there 20-25 times and this was the pattern I observed.

Correspondence: I commend the NPS for taking on this important and difficult topic.

I personally love dogs, but am very frustrated by irresponsible dog owners that continually ignore lease laws. My young children have been scared and

almost knocked over by dogs that run, well like dogs!, on the beach.

It's not the dogs fault, that's what they do. Its the dog owners that give no consideration for the safety of others, for the simple expectation that a bounding canine is not going to come galloping through peoples blanket and picnic, and for the fate of the Snowy Plover on Crissy Beach.

Give the dogs an area of the beach to run on that is not traveled heavily by others and that does not harm the Snowy Plover or other protected species. Let them go nuts there, but equally give families and their children the safety of a beach free from dogs.

I also challenge the NPS to enforce whatever laws come out of this process. With no enforcement will come no adherence to the boundaries set.

Correspondence: I am urging you not to stop our off lease rights in the San Francisco Area. I do believe that dog walkers should be licensed, and limited to the number of dogs they are allowed to have at one time. They are the biggest abusers of our parks. Due to the number of dogs they take out, they are not able to clean up all the waste the dogs leave behind as well as keep track of their dogs. I have rescued many a lost dog when at Fort Funston.

I also feel that many of the confrontations that happen within on many of our park are do to the increasing number of un-nutered dogs (primarily pit bulls) that are roaming the parks. One way to make money to continue to keep our parks maintained is to start ticketing these individuals as well as other responsible dog owners.

I walk my dog about 5 days a week at Fort Funston and all the people that I know are very good about policing other pet owners and dog walkers that do not monitor their dogs or pick up after themselves.

There are more dogs in SF than children. They need space to run & burn off energy -- proven to make them calmer and better behaved than walking on

leash alone. Please consider this statistic. The park is for all residents including dogs to enjoy.

Anectotal note: We go to Crissy field with our 2 dogs frequently and often interact w/th non-dog owners who enjoy the dogs that are there. We have never seen people upset by the dogs off leash and or seen a problem with "out of control" dogs.

It is a part of the unique S.F. culture that drew us in as visitors and made us want to move here.

PLease don't change the current rules! Please consider these comments together

Mill Valley + Sausalito have free dog runs

Mill valley--> poop scooping - County has paths - voice control

Sausalito --> fenced - seats for owners + poop scooping

Muir Beach a long time open ocean area - BUT so much time, energy + planning has gone into lagoon restoration & visitors are often folks who - not like most Marin residents - let dogs run free + they chase + destroy ground bird species.

Have a fenced beach area so dogs may run free. Plan a budget for "policing

of the very few who abuse all areas. It makes sense to have closures during Breeding season - nests disruption a real problem. But you will need education about ecosystem - fines not as effective as "perhaps" volunteer guardians or GGNRA personnel.

I think you have made an effort with selected preferred alternatives.

Dogs are many people's children - they are emotionally bound to their owners.

Where is the yellow?

Regarding Ft. Funston there should be an off-leash route to the beach so people don't get their arms pulled out. And who cares? Ft. Funston is littered w/ old weaponry that is certainly toxic. Also the "outflow pipe" is raw sewage.

Correspondence 1984 **Project:** 11759 **Document:** 38106**ID:****Received:** Apr,12,2011 00:00:00**Correspondence** Other**Type:****Correspondence:** San Francisco Comments!

The GGNRA was formed to protect urban land from being further developed. Land was set aside to provide open lands for education, recreation + outdoor experiences. Its constituents include bikers + hikers + hikers with dogs. Over the years many areas have been closed to dogs. To restrict this even further will result in too many dogs in the few remaining areas. An urban population has dogs!

Dogs need time off- leash! People need time off-leash, too. Dogs, people & nature can co-exist peacefully. If you need rules to protect us from bad dogs & bad owners - so be it. But don't punish all dogs and all people with dogs for the actions of a few. Always on leash is not an alternative.

Correspondence 1985 **Project:** 11759 **Document:** 38106**ID:****Received:** Apr,12,2011 00:00:00**Correspondence** Other**Type:****Correspondence:** Comments San Francisco

We all pay taxes - dog owners, hikers, bikers, horse people - and we all deserve equal access to our parks.

Places like Muir Beach, Fort Funston have been open (totally open) to dogs for years. Its all citizens' responsibility to be safe - be environmentally friendly and enjoy these beautiful places in common.

The Ft. Funston map is deceiving - it gives the impression of lots of off leash possibilities without being clear of the very challenging trails to the beach which will discourage most from being able to get down + back. And the lg. yellow area has dunes which are also difficult to navigate. This plan will effectively take most peoples ability to enjoy off leash experience despite the way it looks.

In Rocky Mt. National Park, Volunteer Rangers are stationed near entrances to provide maps of dog-friendly areas. Those who ignore the rules are informed that a ranger will be called if rules are ignored...Marin enforcement #: 561-5505, Emergency 501-5656

It would make more sense for Park Rangers to police dog owners or walkers who allow their pets to soil trails and then not remove the waste. Citing dog owners sporadically for off leash dogs is not addressing the issue. If dogs stay on trails, no more impact will result than humans hiking.

Most dog owners are sadly lacking in the impact their dogs have on wildlife. More education is needed. I hike the park areas north of Golden gate. Very few dog owners I speak with are aware that the wildlife are not making their presence known to the dog owner. Many dog breeds & cross breeds are very aware of the wildlife that are present. How can dog owners honor what is necessary for wildlife to remain not-harassed and continue their existence in the same manner we humans would like to be treated. Keep your dog on a leash if the dog travels beyond your immediate control. I always take my dog with me in all the parks north of gg Bridge for safety. Its a necessity especially on the Bolinas + Inverness Ridges.

Compliance basd management unfairly punishes many for the actions of a few - if a ROLA is changed to on leash wiht less than 75% compliance = simply unfair + possibly unconsitutional

It will be difficult to get non-biased park staff to do the monitoring

If compliance is excellent, rules should be loosened.

A huge staff would be required for enforcement round the clock

People with off leash dogs are park visitors.

Correspondence: Hello,

I've been going to Fort Funston for almost 20 years with my dogs. While there are many parks in SF - Fort Funston has always been the "go to" place for people who want to take their dog to the beach given that Ocean Beach doesn't allow dogs off leash nor do most other beaches within the City proper and up and down the CA coast.

In my experience - all of the dog owners are respectful of the beauty of Ft. Funston and keep their dogs in control. In addition - poorly behaved dogs are not tolerated by anyone.

While I appreciate the desire to preserve this stretch of beach and cliffs and keep them pristine and suitable for all types of wildlife - the reality is that this land sits at the edge of a very crowded City. There are hundreds of miles of coastline all along California that restrict access and don't allow dogs. I love birds and wildlife but as far as I can tell allowing dogs at Ft. Funston does not prevent nesting birds, foxes, ravens, dolphins, whales, seals and other wildlife from also using Ft. Funston.

I have also rarely seen people at Ft. Funston without dogs. The terrain is difficult, the beach is a little wild and families tend to go to Ocean beach or other more easily accessible beaches.

If the laws were to be changed to restrict dogs to specific areas rather than the current and preferable situation in which dogs are allowed everywhere under voice control it would require the park ranger to issue many citations and ultimately not be enforceable given the budget and priorities of the National Park Service (just a guess).

I feel strongly that Alternative A is the way to go.

Best,

Andrew Goldfarb San Francisco, CA 94114

Correspondence: Area available for off leash dogs at Ocean Beach should be more than just north of stairwell 21. This area is too small.

You can only stand with your dog off leash in the small yellow square - you can't walk with your dog off leash.

The NPS has confused the difficult application of its mandate in trying to increase usage of the park areas and then seeking restrictions of one user group based on the impact of the overall increase in human use. The NPS in its DEIS should consider whether it can possibly achieve attraction of the wildlife it is trying to encourage while at the same time increasing the confrontation of people. Assuming somewhere the NPS locates some competent evidence that dog walkers have greater impacts than others (which it has not to date) NPS should consider whether the marginal difference in impact is at all significant in comparison to the overall impact of the high user presence. (If for example we decide I have a bit more adverse impact when running rather than walking) should we preclude runners or simply conclude that the minor difference is not significant compared to allowing humans at all?).

Correspondence: Its counter productive to stop people from enjoying urban park areas to preserve wildlife that wouldn't thrive well next to a large city anyway + has lots of other shoreline. It alienates urban people from nature.

If wildlife seen, e.g. coyotes or lynx, they get rid of them from urban areas so its not going to be truly wild anyways letting people enjoy parks opens their hearts to nature...overall conservation is better served by letting people use urban parks

Many people won't go out without their dogs - self conscious seeking human company when along- dogs bring people from all social strata together in nature

Why are the dogs being singled out? I am more inclined to see people trashing the parks, defecating, littering. What is the proof that dogs are so destructive? Come on!

No dogs on our public beaches. Unhealthy, unclean, and unwanted by children, swimmers, and those who lie down on the sand.

Chrissy Field is one of few places to walk + have a dog without a lead, I've one complaint one year from a park flat hat, she yelled at anyone to get dogs (12 # + 8 "high on lead)" I would say she overreacted. I've seen walking, bike riders, runners, baby strollers, never seen a dog fight. Some thoughtless people have left dropping but that doesn't speak to dogs off lead. Calm down no ones perfect, what improve with dogs off lead. -Kevin Howard

Dogs' mouths are cleaner than humans'. We clean up our poop. Small children dirty water + are often dirty, rude, + unsupervised my dog is under my control. Do you control your kids?

-I wish everyone would be more reasonable. We can't ruin nature so some dogs can get exercise. Dog owners need to show more appreciation for being allowed in a national park w/dogs.

Correspondence: The preferred alternative attributes far too much damage to dogs and their owners. If anything, more acces should be available for responsible off leash activity.

There is much attributed to dogs with NO documentation at all! Or such a tiny amount that does not represent the average experience of off leash dogs. The restrictions will congest the off leash areas & make them miserably overcrowded!

The "Compliance-based management strategy" casts a long shadow over the rest of the plan

Correspondence: I am speaking for myself, not the Ocean Rider membership. We are located in Muir Beach, as you know, a popular local place for families to come with their pets. As a member and spokesperson for Ocean Riders, as well as my personal beliefs, I will say Natural Resources are the number one concern which must be protected. But my personal hope is there can be a compromise rather than an either/or decision for entirely restricting dogs at Muir Beach. I see the major issue is lack of funds and man power to enforce rules. It's easier to say no dogs and be done with it. Rather than start out with such severe restrictions I would love to see a trial where dog owners can police themselves to see if rules can be followed that will protect the natural resources yet keep the beach open to dogs. Many of us already

remind people to put their dogs on a leash when we are riding on the trails, saying privileges can be lost if the rules aren't respected. Some of our members spend time cleaning trash from Muir Beach while their dogs play. Promoting personal responsibility is key to success.

I would like to see the following: Dogs on leash in parking lot until they get to the open beach; barrier from bridge to the creek outlet along the sand dune protection area on beach side of the creek; doggy disposal baggies at the boardwalk crossing in parking lot; No dogs in creek (as is now the law); Possible limitations such as weekend exclusion or mornings only (no dogs); or alternate days for families who have children who fear dogs. If dog owners are given the opportunity to monitor and educate each other to keep the privilege of dogs on the beach some of the Park Service concerns might be addressed. If it doesn't work, then the natural consequences would be to move to the next step. At least you've given them an opportunity. Thank you for this opportunity to comment.

More rules and restrictions do not make a better society. Let those complainers go to a dedicated beach for dog-dislikers (and Audobon society too)

Rodeo Beach - It's too ambiguous "crest" of beach. Keep Alt. A as ROLA. Even without dogs on this beach stats show low shorebird use due to high #'s of people, kites, football games, etc. Beaches with more than 20 people/km and no dogs still have low shorebird use. DO ADD fence at lagoon keeps adults, children & dogs out of lagoon. Increase enforcement if necessary.

-Muir Beach -EIS doesn't substantiate recommended alternative environmental evidence should steer decision making.

-Homestead Valley trails have always been maintained by volunteers - not NPS - you ask the volunteers whether dogs are causing irreparable impacts.

Correspondence: I strongly support the national Park Service's dog management plan for the Gloden Gate National Recreation Area. Protecting the Snowy Plover and other fragile natural resources should be the top priority of the plan. There are already existing plenty of options for dog owners who want their dogs to be able to go off leash. And owners who want to bring their dogs to the National Recreation Area can live within the leash rules proposed in the new plan. I hope you will stick to your guns. This is a good plan which will preserve the great and fragile natural beauty of the coast for everyone. I strongly support the plan.

Compliance--> How will this be documented? 70% figure- how calculated? What's to stop NPS from making up numbers of non-compliance infractions?

-With all dogs on leash & regulated to specific trails, there is going to be more congestion & traffic (both humans and dogs) --> this will inevitable create more dog on dog incidents, dog leash reactivity & problems with non dog park users. Recipe for disaster for all the 100,000's of SF bay dogs & their owners.

What is next? A ticket for not wearing sunscreen? First, the deer kill, then the oyster farm. Leave our beaches alone!

So there's 100,000's of Bay area dogs. That means most of them are being kept happy NOT ON THE BEACHES. Shore birds ARE negatively impacted. Dogs can go other places.

If you plan to ban dogs from Baker Beach I wonder if you might also ban the naked people too!

KYE - I have a well trained 10-yr old lab + I walk her almost every day on Crissy Field. I pick up after her. She needs to run, so walking her on a leash wouldn't do it. I am a senior citizen + can't access (mobility issues) the proposed ROLA areas. Rental bikes on the Promenade are more of an issue + were not originally supposed to be there in the Crissy Field restoration plan.

KYE - I would like to see a certification program for having dogs on voice control, with tags + agreements signed by owners with hefty fines, to keep them responsible, out of WPAs + how about certain hours for off leash say 7-10 A.M.

Dog owners all say "my dog is friendly". Why did I get bitten by a "friendly" dog?

Incidents like you describe (being bitten) are a rare event. You can't punish 10,000 dogs for one unfortunate event. I got food poisoning from a takeout burrito place - I am not proposing all Mexican establishments are shuttered as a measure of safety.

One dog bite is too many.

Correspondence: Dear Superintendent Dean

I am writing to take issue not only with the proposed "preferred alternatives" in the DEIS, but to challenge comments of yours I read in SF Gate this morning, April 12th. You state that there is some sort of "untenable" problem that exists with off leash dog walking in the GGNRA. I have not seen evidence of that. You say that a bird is in peril, but I've seen no science on that in any of your supporting documentation for the DEIS plan. Where is the evidence for your claims??? There are more incident reports about people causing problems in the GGNRA than dogs. There is no science to support the draconian changes the park is proposing. None. This attempt to

take the GGNRA away from dog owners is reminiscent of the attempt to end oyster farming in Tomales Bay. The federal government is selectively using bogus science to support a desired end.

I live in Muir Beach, smack dab in the middle of the GGNRA. I interact with people in it every single day. I walk my dog off leash on the one single trail that still allows it, and I use the beach daily. I have never, not once ever had a problem with a person who was bothered. I've never seen or been involved in any conflict arising from dog lovers and non dog lovers using the GGNRA at the same time. I see how dogs and humans are getting along. There are never any problems, save maybe the person here and there who doesn't like dogs and has a difficult time being around them. There are plenty of places (99%) in the GGNRA that don't allow dogs for these people who don't like them. People who want a dog-free experience have 99% of the GGNRA at their disposal. Dog owners only have a measly 1% of the park!! The GGNRA needs to serve the recreational needs of a very densely packed urban area. It is not fair or sane or reasonable to take away the tiny 1% that dog owners are able to use for their enjoyment and the enjoyment of their families and pets.

I see the REAL impacts to my little corner of the GGNRA, and they are not from dogs. Those impacts are from HUMANS.

Every time I go to the beach, I witness people jumping the fences with their bags and backpacks and traipsing through the newly restored lagoon. They ignore signs. They set up camp within a seemingly closed area in the dunes. They take their children in to the bushes that surround the wetlands to urinate because there is not proper signage to keep them out and they are too lazy to walk back to the lot. There is NO ONE on the beach now enforcing existing laws that keep people and animals out of closed habitat. How can the GGNRA say that there is a failure of existing rules, when they don't enforce them in the first place??? People are dragging their kids on boogie boards in to the lagoon. It's people, not dogs, who are cutting limbs off of trees in the lagoon area to use for firewood. I watch kids kicking away at the hillsides and parents dragging their kids down eroding areas of dune and dirt just for fun. No one stops this activity. I have pictures of ALL OF IT, but this form doesn't allow for attachments. I suspect a court case would. My best friend's three year old got third degree burns on his feet from a fire that was left to smolder outside of the designated rings and buried in the sand. This poor little boy was just playing in the sand and walking and because of unregulated HUMAN activity, was severely burned. And it is naked men who are exposing themselves to young children on Muir Beach and making a big portion of the beach unusable for families. As someone who lives in Muir Beach, the biggest bummer here is BY FAR the naked people. Oh man.....

Any notion that dogs are causing problems that are bringing us to some sort of "untenable" crisis point, at least in Muir Beach, is absurd. It is abundantly clear to anyone paying attention that it is human activity that causes the problems of degraded environment and it's human activity that threatens wildlife and diminishes the natural beauty of the park. All it takes is a stroll from one end of the beach to the other on a busy weekend. Dogs-zero problems, Humans-multiple.

Your plan to send people to Little Beach is absurd as well, and I've seen no EIS for that plan. You cannot suggest as part of your DEIS that Little Beach is a reasonable alternative destination. It's only accessible by walking across Big Beach, or driving on private roads to an access that has NO PARKING, no facilities, no garbage cans and most of the time no sand. This alternative that is cited in your DEIS is completely unacceptable and needs an EIS of its own. It will be fought vigorously by the community of Muir Beach. Most of the beach is private property, up to the mean high tide.

I want to see SCIENCE. If the NPS is wanting to eliminate dogs from the picture, I want to see hard science that proves that there is a valid reason for this. And I want to add that the GGNRA was established and is supported by tax dollars to provide recreational activities to a very densely packed urban area. We all pay taxes to support this park system. This isn't a wildlife preserve or a pristine wilderness. It's an urban park. It is supported by all of our tax dollars. It's even supported by generous donations to the National Park by people like me and my husband. Those donations would stop altogether if the park makes these changes, because we will no longer feel like we have a responsibility to care for and provide for the park. The GGNRA established dog rules at the inception of the park that work beautifully. Just enforce the existing laws instead of spending a fortune to create new ones. What a waste of money!!!

Ok, that's enough for now. I'll probably have to write again.....

thanks for your time,

Laura Pandapas Muir Beach.

How many people use Ft. Funston w/out dogs? Will the use drop to 1% of what it is now? This is a park not a museum!!! I need this as much as my dog!

-I recommend leaving Ocean Beach south of Sloat to Ft. Funston off leash. There are very few people using the beach there except for people walking their dogs & there is no nesting/vegetation to disrupt; only manmade rip-rap (concrete, etc) & cliffs. The cliff swallows are in the cliffs, not on the beach.

Ditto to above.

I enjoy walking with my dog at F.F. Its much more fun than standing around in a dog enclosure.

Please leave Fort Funston exactly as it is. It's heaven for people and their dogs. Thank you.

Single people won't go without their dogs to connect with other dog people - especially elders.

Ocean Beach should have some sign or marker along beach (not just at stairwell) indicating boundary between on-leash & off-leash areas

Why not have TIMED sessions for dogs to be off leash at Baker Beach - say 7-10 A.M. only? Then maybe no dogs. That would give dog owners a chance to exercise their dogs, and then the beach is free of dogs the entire rest of the day. China Beach, next door, allows no dogs at all, so birds can go there. Better screens could easily be installed to keep dogs out of the vegetation next to parking lots

Thank you for holding these sessions. The "preferred alternative" is very limited. -Are there any dog avocates on the GGNRA board? -Human usage or monitoring i.e. garbage has substantial impact. Who monitors that? - Snowy plovers in Pt. Reyes didn't succeed due to mercury not dogs. -This is a recreation aras for humans + dogs

A recreation area for humans must include safety, especially for the disabled. Keep parks dog free.

So much land. It would be wonderful to have at least one large area where dogs + their humans can play- off leash.

My interest is in the entire GGNRA where less than 1% is currently open to dogs. As part of an urban area, dog walking areas, including off leash, are important for recreational benefits of people and their canines. Leave the current spaces available and clarify their use to reduce conflict. With over 18 years of recreating with my dog(s) under voice control, on a daily basis in the GGNRA, I don't believe that the conflicts are as egregious as reported by the GGNRA and that they can be remedied without leashing dogs.

NO DOGS and NO SMOKING as well on our Public beaches. Unhealthy

and unsanitary as well!

-Please create more dog free areas . (Enforced dog free areas) Much needed.

Please create/designate some area for ROLA rules, so dogs may have the access to RUN, EXERCISE, PLAY.

Improve barriers to protected areas. People have these impacts (noted) along with dogs. Focusing on banning dogs or reducing their areas to roam is missing the point. Yes. It's important to protect + maintain wild areas - natural plants, birds, however there must be a better solution than diminishing space. Dog-owners + dogs need these areas (together) to maintain health bodies + minds. There are many dog owners in this area. Would we ban families + children?

-Educate those afraid of dogs - they are missing out on the value + benefit of dog companionship.

As a nature lover- Audobon society person I support Plan A.

This plan is one-sided AGAINST dog owners. There should be beaches for both parties in this discussion! (or just drop this ill-advised plan).

GGNRA has not taken care of the land. They have - poor signage - bad fencing. Insufficient trash cans. So how much more will it cost Bay area taxpayers to care (properly) for this increased area to tend.

Please create a way to separate dogs from human that don't want to encounter dogs. Please also make it clear which areas are off leash w/signs + fences. Thanks :)

2 weeks ago. I went for a walk South of Sloat for 1 mile or more. Upon

return decided to count dogs last 1/4 mile. 54 dogs w/owners, no (rare) leasher and NO dog commercial walkers. It was too many dogs & not enough OCEAN.

If more of Ocean Beach & Fort Funston Beach was open to off-leash dogs, the density of dogs in any given area would be much less. Restricting off-leash dogs to small areza is not practical and will cause problems.

Beaches are, quite simply, no place for dogs. +

Beaches aer a classic place for dogs and people.

Correspondence: I fully support the proposed restrictions on off leash dogs in the GGNRA. It has been a long time coming.

I have 2 small children and I feel like I can't use the Chrissy field beach due to off leash and aggressive dogs. Dogs often bark and target small children--making the beach unusable. And, dog themselves get into brawls off leash and it is dangerous for nearby children and people.

Voice control is a joke. I have witnessed many incidents of people being

threatened and scared by off leash dogs. There is currently no place on Chrissy Field for people to go who do not wish to interact with off leash dogs. I have tried to go to the nature preserve area during certain times of the year where dogs are supposedly not allowed off leash and even there dogs are off leash.

How many people with feel scared and threatened and possibly bitten before this policy changes?

I currently live near a SF park with a fenced in dog area--this is the only way that this park is usable for people with small kids. Without a fenced in off leash dog area--most other parks in SF are unusable because people take their dogs off leash --whether it is permitted or not.

I would like to stress that the new policies must actually be enforced for people to feel safe from aggressive dogs.

I keep reading complaints from dog owners about the proposed changes--but they have no argument for why people who do not wish to interact with their off leash dogs should feel excluded from the GGNA. Every dog owner says--don't worry my dog won't bite you! I don't feel like that is a good answer when my children are being barked at and feel threatened. And, why should I have to take that risk?

Making East Beach totally barred to dogs is impractical & inappropriate. Go there early in the morning, 7 days a week, & 95%+ of the people using it have dogs!

-The beach at Crissy is presently not acceptable for enjoyment by non-dog walkers. ITS A TOILET!! -"This is a gross exaggeration!! and YOU know it!" -"Not true"

The East Beach is disgusting. Unusable for anything but dog walking. 3/4 mile long section right nearby!

-Even if "ideal alternatives" are adopted then dogs off leash have been given a bad alternative. More dogs in smaller areas will create more problems - not solve them. Eventually we will not be allowed to have our dogs off leash - ever- anywhere.

-Assume that off leash dog walking currently exists on all "new lands" because it does.

-I'd like to visit a park/beach and know that I would not encounter dogs or their urine + feces.

Please preserve our parks. If this means less dogs off leash, then that should happen. It seems unreasonable to destroy (possibly permanently) nature for off leash dog walking.

Marin County is 2/3 open space. I believe the birds are well represented. Dog owners, unfortunately, are not. This plan is unfair. -Every open space area isn't the same habitat, niche, or equally used.

It would appear that all alternatives were NOT considered. There are areas which would qualify as appropriate ROLA areas (ie no endangered species present) which have not been marked as ROLAs. For example, the mowed lawn on the Parade Ground of Fort Baker (which is entirely encircled by roadway. Why NOT add a ROLA here to preserve balance between dog-owners + non-dog owners in the GGNRA?

I don't even own a dog but I truly enjoy seeing dogs run off-leash at Fort Funston. It's a great place for them to socialize. I've gone daily for 5 years and never been attacked, even though I am a little afraid of dogs. Please

keep this great space open and don't waste our tax money on policing this silly new policy.

I have not seen any references (in th report) that GGRNA have for people (w/dogs) who have limited mobility (ADA). The map indicates the walkways are further away on the new plan.

WRT People of limited mobility: I recently had a stroke. It was very difficult to find a park free of dogs off leash where I could walk (unsteadily) with safety. Park are for people first (well or sick).

Financial impact: What does the report offer as documentation? 0

Those who fear dogs can have some beaches, but not every beach. This plan is WAY too extreme!

Correspondence: The GGNRA Draft Dog Management Plan / Environmental Impact Statement is an 1800 page, in depth review of the environment that makes up areas of the GGNRA.

It is NOT an indictment of the current dog walking situation or any type of meaningful support for changing the status quo.

For example on Page 230 of the Impact Statement is a chart showing RECORDED INCIDENTS INVOLVING DOGS IN 2007 AND 2008. For 12 different park sites over 2 years they show a total of 563 incidents. That is an average of 2 per month per site. If you remove Stinson Beach (338 incidents) and Tennessee Valley (109 incidents) from the total, there were on 116 incidents for the 10 remaining park sites over the 2 year period. That is an average of .5 incidents per month.

If the GGNRA want to preserve the pristine environment of these park sites, they should close them entirely. People do far more damage then dogs.

I strongly oppose the proposed GGNRA Draft Dog Management Plan.

Correspondence: I am a San Francisco resident, dog owner, and parent of two young children. We love to go to the beach with our dog. Crissy Field is one of our favorites because of the great views, relatively gentle waves, and lagoon for splashing around.

As a longtime dog owner, and someone who was actually among the crowd at the infamous meeting in the Presidio years ago, I appreciate the deliberation that went into your pet policy. That said, I'm still not happy with the options you've created for dog-owning families in the city. They're not realistic, you don't have the staff available to enforce them, and they just won't work for our city.

At Crissy Field, please don't ban dogs from East Beach, where we like to picnic with our kids. 10E seems more reasonable -- I hardly ever see humans or other wildlife using the vast, grassy former air strip. A version of 10E where dogs are allowed to swim along the shoreline of East Beach, but are on leash above the water line seems even better. Or, follow New York City's lead and have certain hours when dogs are restricted to leashed status, and others when they can frolic in the water.

At Fort Funston, where I'd estimate that 99% of the weekend visitors have either a dog or a glider in hand, you've barred off-leash dogs from the land surrounding the trails down to the beach. I would recommend a merger of 16E+C to more reasonably reflect the use of this park, and still enable a dog-free zone to protect wildlife and the occasional horse rider.

At Ocean Beach, I think your preferred option is reasonable, and balances wildlife protection with recreational opportunities.

Thank you for your consideration, Amanda Kahn-Kirby San Francisco

For the nondog people there could be small areas like the ones proposed for off leash - it would be more in keeping with population demographics to give them the small areas without dogs instead of the huge percentage with dogs along with dog tolerant people.

I agree that commercial dog walkers have a permit to walk their dogs, and use the money to maintain the parks.

Dogs do not interfere with the bank swallows they are up to high and do not use the beach. They (the birds) get their water and bugs at the lake. Why are you using this bullshit again?

Handicapped people need off-leash areas for their dogs. We need more areas not fewer!!!

Oakwood Valley To better accommodate more users and a longer walk, why not connect "Alta" and "Oakwood" Fire road?

Baker Beach Morning & evening weekday only off-leash would not conflict the visitor experience (busiest tourist time)

Crissy Field: (except promenade) Weekday only, 9:30 -11:30, 2-4 are least busy time with other users, therefore should be off-leash both on east central beaches and airfield.

Correspondence: -70% compliance is not very compliant. I would expect more restrictions if the compliance were to dip below 95%.

Most of the people complaining about off leash dogs have an irrational fear. Maybe the solution is to have dog education classe where people learn to hang out with friendly dogs. It seems this "fear" is the real problem. - Extremely true with last statement - the dog is not the problem.

-Your proposal fails to identify all things that impact the land such as very strong winds that blow away sand, rip out plants, and wash garbage ashore. Add a comparison of the other factors, not just dog impact.

-The dogs & people experience a lot of joy while appreciating the land. People are off-leash too - a greater sense of how beautiful it is happens then.

Birds also feel. When trying to get nourishment for long migrations and potential predators (dogs) chase them, they get scared, have to move, and living gets so much more difficult. Their numbers are declining.

People also feel. Let us all enjoy the parks without fear of dog attacks. People need to exercise somewhere safe and dog free.

Birds have much more freedom than dogs & their owners. People scared of dogs have plenty of places to go. What next? Tickets for not wearing sunscreen?

Comment on above: Dog owners routinely have dogs off lease in on-leash areas. Where are the "Plenty of places" we can go?

Former City gardener (14 years) says City should take back Fort Funston. I never had trouble with my sheltie - plants, birds, etc. even though he was off leash. Go after the trouble-makers and punish them. "Don't use a cannon on

a gnat."

Walking down the cliffs to the beach with a dog on leash would be dangerous to people.

How about parallel paths or dog paths & people paths -Build a new path for dogs)

I'd like to keep Ft. Funston as a recreation area with historic use, as legislation intended it to be.

I live on Great Hwy. + would like to at a minimum have NO ACTION.

Why do you have to punish the dogs + dog owners/walkers? The vast majority of dogs at these parks are under control and do not destroy the environment. Visitors already have plenty of places to visit where dogs aren't allowed. Can you just leave the dogs the little off-leash areas that they have left? If not properly exercised they become destructive : (

Correspondence: I like dogs, but as a parent of a young child in San Francisco I'm tired of not having anywhere to go and enjoy parks and beaches without a dog terrifying my child, stepping in feces, or having dogs pee all over our sand castles (happened 5 times in 15 minutes last week on east beach in crissy field). The message our children are getting is that dogs are more important than children, and that is unhealthy. Our local park (ESprit) is unusable by anyone by dogs, and that is unhealthy. I support a compromise that allows people and families (and poeple with allergies) to have certain areas off-limits to dogs and many more off-limits to off-leash dogs. My daughter just turned four and has been knocked down or chased in scary ways by untrained off-leash dogs a half dozen times.

Just because they are more vocal doesn't mean they carry the majority sentiment. If that were the case we would all be Tea-Partiers, wouldn't we?

Thank you!

I have been walking @ Ft. Funston & Ocean Beach for over 10 yrs. and have never seen a bank swallow or a snowy plover and I have been looking! My dog has certainly never disturbed those birds. I'd love to see them

After a lot of consideration we got a dog. Why? Because San Francisco is dog friendly. Because we live in the city & can go to the beach off leash. Our dog is 7. What do we do with her, now that we have her, if the off leash areas go away? If any changes occur, they should not be implemented for 15 yrs. (average dog life span) so that those of us who bought dogs under the current circumstances can let our urban dogs run.

Ocean Beach comments: re protecting snowy plovers: what keeps feral cats from colonizing near important ground-nesting habitat? Could dogs off-leash help discourage feral cat colonization? The issues for protecting snowy plovers must include the impact of dog management on unintended consequences, such as a potential rise in feral cat colonies. Recommend baseline studies now so future management is evidence-based.

Ft. Funston - what is being protected by closing paths to off leash?

How many of our tax dollars is being used since the 1970's to regulate these areas + get rid of off leash dog walking? Couldn't they be put to a better use?

Will you provide an accounting of the money spent???

Correspondence: I thoroughly enjoy walking my dog at Crissy Field, Ocean Beach, and Fort Funston. There is so little of GGNRA land devoted to dogs for off-leash walking, that this proposal is too restrictive. It seems like only 1% of GGNRA land is for off-leash walking. I am a 37 year lesbian with a 9 year old dog. My dog, Pele, who is 70 lb. lab mix has arthritis. What I love about these 3 places is the accessibility. I can drive up to the parking lot at any of the three locations I listed above to walk her, she can go swimming, and run through the meadows. Because of her arthritis, my dog cannot walk so many miles to enjoy GGNRA public land. Whereas people can drive and hike much farther than my dog to access 99% of hiking trails belonging to GGNRA in San Francisco and San Mateo counties.

I suffer from anxiety and depression and I am a graduate student studying Counseling specifically Gerontology at SFSU. I cannot afford to join a gym. I don't have kids. My dog is like my son and at the same time a dependable partner who offers me unconditional positive regard. She helps me with my depression issues and I offer her exercise and happiness in return.

She loves to swim more than anything in the world and grassy meadows at Crissy Field which is like dog heaven. She is a happy dog, well-socialized, and friendly to people and other dogs because of all three of these locations.

Fort Funston is like Disneyland for dogs. She can go swimming, wander around the dunes and I don't have to worry there will be scraps of food (like there are in gritty city parks) for her eat unless I watch her like a hawk. If she eats food scraps she finds on the ground, she will get diarrhea and throw up for days. She has a sensitive stomach, but loves to eat food scraps because she is a hunting dog by nature. Fort Funston is like her backyard. It is big enough for us to go on a 30 minute walk, run or hike.

I live 3 blocks from Ocean Beach and I can tell you the severe restrictions are not needed to protect the snowy plover. My dog does not chase birds. She chases balls and frisbees. I have seen so many joggers run right up to the plovers and then the plovers fly away, yet there is no attempt to restrict their access in the plover areas.

In the near future, 1 in 5 people in this country will be over 65 years old. Old people need touch. Studies show nursing home residents who received visits from pets were less depressed, anxious, and confused than those with no pets. (Pipher, M. Another Country, p.254).

Please don't not go through with these restrictions. It will not be good for the

mental health of many people.

Correspondence: I really appreciate that your concern is the environment-not the dogs! Seems like most dog owners do not appreciate it, as you can tell by their outcry! There are plenty of parks in SF and lots of sidewalks of which ALOT of dog owners take full advantage of-inc, NOT cleaning up after them!! After managing apt. buildings for years, I can see just how much respect dog owners have for the public. I constantly have to clean up their messes and I'm sure the same is true in the parks. The parks are supposed to be for plants and native animals-first-and people and dogs second. If dogs and their owners show such little respect for the city sidewalks, I'm sure that they feel even less in the parks. PLEASE do NOT let them ruin what few natural areas we have left. The city could appease them, if they really wanted to, by setting off leash dog areas in its' parks. For toooooo long, humans (and their animals) have abused the environment. As caretakers, I feel you need to do whatever is necessary to protect our parks and their resources (plants/animals)from human (and dog)destruction. Being born and raised in the wild in Montana, I know what value they hold. I do NOT think that dogs(or humans!) should be allowed to trample, terrorize or threaten the well being of the precious and few park areas left. PLEASE, please PROTECT our parks!! They were here first!

Correspondence: I fully support the Nps preferred alternative in this eis. There are plenty of places for dogs, but only a few for rare wildlife. Also, dogs detract from experiences in nature as their owners don't always pick up their waste and when they are off leash, they could be especially disruptive. Park services lands are the prize of the public lands system and the highest priority should be given to preserving wildlife and their habitats and conserving the natural elements that make experiences in the national parks so special for all.

Thank you,

Correspondence: I am a regular volunteer at the Presidio Park and am concerned about the Dog Management Plan for our National Parks. I strongly believe that all dogs should be on a leash and all times while in our National Parks.

As a volunteer, I help plant native plants in the park. Numerous times I have seen dogs disobey their owners while off-leash. For example: One day- a woman walking her dog off leash near our work site lost control of her dog. The dog ran into the sensitive planting area and began growling and barking at the volunteers. The woman was unable to capture her dog when she called for it. The dog ran away from her and then both she and the dog were trampling through the planting area. This wastes the National Park's money

and time. And several of the volunteers were upset by the dog's erratic behavior.

Not all dog owners are responsible dog owners. I strongly urge the National Park Service to enforce a leash law in our nation's parks.

Thank you.

Correspondence: I support a leash law for the GGNRA.

I frequent the parks of the GGNRA with my 7 year old son. Numerous times we have been confronted by off-leash dogs while enjoying the park. It is not comforting for a dog owner to say, "she won't bite" or "he's harmless" because even the most well behaved dogs can be unpredictable. I want to enjoy my time in the park, not worry about dogs.

The National Parks are for all to enjoy and are not for dogs to run free. There are dog parks or other open areas for dogs. The National Parks are delicate lands that we should protect. The human impact is already causing enough damage to these natural areas. We don't need off-leash dogs tramping through protected lands.

Please keep dogs on leashes in our parks!

If an area needs to be protected, fences could be actual fences that would keep dogs out of areas instead of the current low cable line they hop over without knowing they should not go there.

-How about working w/dog walkers & allowing them to form a coalition/committee w/ the NPS to oversee & regulate other dog owners & park users... -educational out reach by monthly volunteer open houses - better signage regarding park etiquette -volunteer monthly walk/foot patrol to enforce new off leash rules.

-Annual permit fee for all dog owners to use SF GGNRA lands \$50 a year x 150,000 dogs =7.5 million annually (similar to a fishing license) -Annual permit fee for commercial dog walkers

-What % of total GGNRA is now rola? What % is recommended by new proposal?

-Reducing the area dogs are allowed off-leash would likely result in highly impacted and overfilled areas where dogs would be allowed. There would likely be more incidents (dog-related) and the negative impact on that land would be exponentially worse.

-The # of dogs in the bay area (who utilize GGNRA land) will not change - overcrowding will become a problem not only in GGNRA parks, but also parks in the surrounding cities.

Correspondence: It seems like the plan doesn't really consider current public use for specific parks, but rather an overall desire to restrict/ban dogs in the name of wildlife conservation. Furthermore, there doesn't appear to be any scientific evidence that dogs are directly affecting the wildlife population. If it's the mere presence of dogs that disturbs the habitat then I would think that people and horses being there would cause the same disruption, but there has been no effort to try that approach. I visit the Fort Funston every week, I find that it contributes to the health and well being of dogs, as well as creates a sense of community in this more and more isolative society we live in. Dog owners are respectful and clean up after their dogs. Our visits to Fort Funston are

personally helpful because my dog is so happy when he runs on the beach and there really isn't a space where he can just have that opportunity outside of the park. Bc of the density of the neighborhood that I live in, it's difficult to do anything with the dog beyond leash walking. Finally, it is great exercise in a beautiful place, something the government should be promoting more of, instead of restricting access to. Please assess each park separately, and consider the limited open space we have in San Francisco to play and be in nature. Respectfully, Kat Ongbongan

Correspondence: Comments for New Lands

Default position regarding new park land should be the same as it is for 100% of national parks in the U.S. - no new dog areas.

We need parks for use, not museums. If the enviros don't want land used, they can buy it and take control themselves. Public land should be for the PUBLIC.

(1) Dog owners VOTE - in high number (2) There are more dogs than kids in SF- by far -and how many migrating birds? (3) Public rec areas should serve VOTERS/taxpayers (4) Dogs have plenty of alternatives - shorebirds don't.

This land was intended for the primary "use + enjoyment" for S.F. citizens and has always been dog + people friendly! Habitat etc is 2nd to people + the people of S.F. are dog friendly

-Middle aged women often have shoulder problems that make it hard to walk dogs on leash.

-NPS has not presented data on the number of dogs that use Ft. Funston

-Fort Funston is safer than Ocean Beach; doesn't have the juvenile delinquents or homeless. This makes Ft. Funston feel like a safe area.

-If you close Funston to those who currently use it, who will come?

-Offended at the amount of \$\$ spent on this plan when there are so many other problems.

Crissy Marsh is dead- need more water flow + plant life to encourage bird life - this is not a dog issue. If want more shorebirds need more decaying vegetation.

Why not convert Funston Horse trail to a ROLA? Majorit of Funston visitor walk dogs - they do not ride horses!

Why don't you protect the existing 12-acre wilderness area instead of taking away the other areas - which has NO federally endangered or threatened species?

Fort Funston is a prime gem of a location in SF that should be able to be

enjoyed by people who don't like/are afraid of dogs. The current plan has the prime beach front as off leash - reduce or move the off leash to different location.

Ft. Funston is cold, fogg, & windy. I don't believe it would be utilized by many people other than dogs & their owners. I've been going there since the '60s to walk my dog. I've met many older people who walk there because they feel safe with all the dogs & their owners. I do agree that limits on the # of dogs one person is walking is a good idea, however, to restrict the areas available for off-leash walks so drastically will only increase the possibility of dogs fighting & will greatly impact the parks within SF. This is an urban national park & there will always be a lot of dogs in SF. I don't want to feel like a criminal for letting my dog run & play.

Correspondence: I strongly support the dog plan. I have nothing against dogs, and I feel that they should have the opportunity to get unfettered exercise, but not at the expense of the rest of the world. At Crissy Field, even leashed dogs can be a major nuisance, or rather their owners can, when the owner walks down one side the walkway and his or her leashed pet prowls the other side. The limitations you plan to place on free running dogs are very reasonable, and only a dog nut can object to them Unhappily, we have a myriad of dog nuts in this city. Please, don't let yourselves be governed by a hysterical minority.

Correspondence: I endorse Alternative D, the most protective option identified in the process.

I respect the pragmatic compromises that are being suggested by the GGNRA in their preferred option recommendations, but I know that I, and many people that I know (not to mention the multitude of other impacted species, and the generations of the future) would be happiest with the most stringent protection of the remaining natural and public access areas around us.

As a parent of a young child I am frequently upset that the freedom of myself and my child to enjoy the recreation areas is marred by my child's natural fear of unknown dogs that are often larger than he is. Dogs on leash are intimidating enough when their human companions may not be fully attentive to the dogs' reach at all times, and can not stop the growling and barking which is inevitably a part of the nature of many dogs, but dogs off leash are a great concern to me in terms of worrying about my child's safety, and force me to have to regularly actively and defensively manage the distance between us, be on constant watch for approaching dogs, and to insert myself physically between dogs and my child.

I am also an advocate of the protection of natural areas and threatened species. These areas and species should be preserved as best we can: for the generations of the future; to maintain a balance of our environment as best we can; to serve as essential sites and features of education, spiritual and mental health connection with nature; and to be safeguarded as potential genetic and informaiotn for future needs. To the extent that dog access to the areas of the Golden Gate National Recreation Areas threatens and undermines the safety, enjoyment and protection of these important places - as I understand/experience to be significant - I fervently support restrictions which promote continued access of the many species who have these areas as their home, and the safety and enjoyment of the many people who wish to have their appreciation unmarred.

Thank you for your consideration, and I have my fingers crossed the rights and concerns of the rest of us, now and into the future, are not overrun by the selfish, narrow, and vocal interest of people whose love for animals and the rights of others to access public natural areas other ends with themselves and the single species that they choose to keep as companions.

(P.S. I heard about the EIS and the dog management plan from signs at Ocean Beach).

Correspondence: I am an environmental documentary filmmaker with extensive outdoor filming experience on public lands in the Bay Area. Although I love dogs, grew up with dogs, and am not anti-dog, I do feel that other species deserve respect and protection as well, especially smaller, more vulnerable species that do not have an enormous human lobby such as dog owners. Endangered species like snowy plovers, endangered plant life, even common plants and animals -- all can be harassed, damaged, and/or destroyed by dogs running wild in our public spaces. As a nature photographer, I've seen this happen too often. Please choose alternatives in each case that provide maximum protection for wildlife and plant life.

Correspondence: I am a San Francisco resident and a senior. As an urban dweller, there are few places to adequately walk your dog with out disturbing residents. The few "off leash" areas are about to be done away with with your dog management plan. The inconvenience is not only to the humans bit to the dogs. Have you ever gone to Fort Funston and witnessed the play and freedom of both dogs and humans? I have never seen an inappropriate interaction in all the time I have been walking dogs there. There are a lot of areas where dogs are not allowed and that is okay, as long as there is space for dogs in other areas. If this action is carried out, it will severely impact all other parks and areas. I think we need a balance and a place of all of us. Thank you.

"The Preferred Alternative is not "balanced."The 1979 Pet Policy allowed dogs off-leash on less than 1% of GGNRA land. Given recent additions of large tracts in San Mateo County to the GGNRA, this number is now significantly less than 1%. Off-leash dog walking started from a position of great imbalance. One-third of San Francisco households have dogs, yet they can currently recreate with their dogs on less than 1% of GGNRA land. The Preferred Alternative allows off-leash on even less, including no off-leash anywhere on GGNRA land in San Mateo County. How is that balanced? By denying the possibility of off-leash on any new lands that come into the GGNRA in the future, the Preferred Alternative will ensure there is no balance between recreation and protection of natural resources in the future. We need more off-leash recreational open space, not less."

Correspondence: I live in downtown San Francisco in a condo w/ my partner & a rat terrier named Felix. It's not easy for a little dog w/ lots of energy in an urban city. We don't have a back yard to let him run around. Sometimes I let him run down the hallway just to release some of that energy. I live 2 blocks from Huntington Park & try to take him there so that he can sniff & scratch in the grass but I can't let him off the leash. That's what's great about places like Fort Funston & Crissy Field. He can run freely & he's so happy. Please don't take that away from us. Besides it's great exercise for us too.

Correspondence: Dogs exist. They are a fact and a part of society. Until dogs are outlawed, they need to be taken care of. In a large city such as this, some dogs only alternatives to exercise and socialization is the public parks and spaces. If you minimize these, our dog friends will suffer. My dog is cleaner, more polite and quieter than most children, yet she is penalized because she has four legs. I am a long time visitor of public dog spaces, and I can say that 99% of dog owners are responsible, law abiding citizens where their dogs are concerned. Please don't penalize the dogs who have no voice! Save San Francisco's off leash areas! Thank you.

Correspondence: A trained dog (a dog that actually obeys) or a dog on a leash, is not much of a problem. I have a 3 year old daughter and I can not tell you how many times a strangers' "friendly" dog has knocked her down in their excitedness to jump on her and be friendly. She has been scared and hurt, and the owners think it is OK because their dog meant no harm (even though they caused harm/fear).

Imagine a 40 or 60 pound dog running towards you . . . or you and your 2 year old or 3 year old, and you hope it is friendly, but it is impossible to know the dog's history or intentions, right?

And then I know people who have told me their dog is trained, yet it does not obey them, so I wonder how loosely the word trained is interpreted by many dog owners.

Correspondence: I urge you to require all dogs on Ocean Beach be kept on leash at all times. Voice control has proven not to be effective.

I have run and walked on Ocean Beach for over 40 years. In recent years there have been an increased number of unleashed dogs on the beach. I have been bitten by an unleashed dog while running on Ocean Beach. When running with friends who have a dog on leash, their dogs have been attacked by unleashed dogs. Each of these behaviors is natural of dogs. By their very nature and breeding, they attack running prey, in this case me. A leashed dog appears to be in a weakened position and is fair game for an unrestrained dog.

Often the owners of unleashed dogs are hostile when I ask them to control their dog. When I ask them to restrain their dog, they are often openly hostile. I have been called crazy, cursed at, and given the "finger".

I should not have to take a subservient position to dogs. They should all be required to be on leash, not just voice control, while on Ocean Beach

Correspondence: I am a runner and cyclist who uses the Crissy Field promenade, East Beach, and Fort Mason areas several times per week. I have had several "near miss" encounters with both aggressive dogs and small yappy dogs off leash running at me, darting in front of me, and otherwise coming very close to injuring me both at Fort Mason and Crissy Field.

I also frequently launch my kayak off of East Beach, and have had negative and frightening labrador encounters. One time, a large dog swam up to my boat near shore and nearly capsized me, as the owner seemed unconcerned. I also regularly collect 3-4 gross abandoned dog-chewed tennis balls from the water when i'm out off east beach. This is yet another negative environmental impact that dogs are having. I 100% believe that the current situation is unsafe and inappropriate, and i fully support the Park Service's proposal to bring dogs under better management, while still allowing some areas for off-leash use.

Correspondence: Thank you very much for allowing the public to comment. I know how hard you all have worked to navigate a comprise and to weaving a way that allows very diverse groups to enjoy the all the beauty and splendor that is the GGNRA.

I strongly encourage you to restrict the access of dogs. I want to share a couple of stories that I hope will help you articulate why these measures are important.

I am a 50 year old 5'4" woman. One day a year or so ago, my husband and I were walking along Chrissy Field enjoying the sunshine. As we walked along, we came upon a 6' tall late 20 something male making like a litter box cat, flicking the beach sand with his shoe over his dog's warm turd. As my husband kept on walking, pretending not to know me, I went into Mom Mode and proceeded to discipline Mr. 20 Something Dog Turd Man. The crowd backed away and Mr. 20 Something Dog Turd Man stood stoically while I turned into a peri-menipausal maniac hell bent on publicly humiliating him. Fortunately, concealed weapons are not part of the culture for San Francisco-- he let me live--and I suspect that I humiliated him enough that he will forever carry a doggy bag. My point in telling this story is that there will always be a Mr. 20 Something Dog Turd Man, there may not always be 50 Something Peri-menipausal Maniac there to discipline him. More stringent rules restricting the access to dog owners need to be put

in place.

Another story did not occur in a GGNRA but it highlights a common problem. One day, as I rode my bike down the paved bike path I encountered a couple with a young pup. Thinking that they were doing their young dog a favor, they allowed the dog off the leash. He scampered to and fro and, in the process, the poor little thing dashed directly across my path. I slammed on my brakes, crashed to the ground, and injured my shoulder. Sadly, the owners, through their negligence, allowed the little 10-20 lb pup to be transformed into a speed bump for a 130 lb woman. If the poor little thing been on a leash, the owners could have ensured he stayed out of the path of my bike and both of us would have been able to enjoy the sun. Sometimes strict rules need to be enacted to protect the pets we love.

Sincerely, Kathy Schaefer

Correspondence: I agree wholeheartedly with the position of Golden Gate Audubon Society:
1. Off-leash areas should be fenced or well-marked to provide a clear boundary for off-leash activities. If installing a fence in an area would have an undue biological or aesthetic impact, then there should not be an off-leash area in that location. 2. The Park Service's proposed requirement of 75% compliance is too low. The Park Service should require a minimum of 95% compliance or should initiate measures to improve compliance. If one quarter noncompliance is tolerated, it will engender further noncompliance (noncompliance breeds more noncompliance). 3. Commercial dog-walking should not be permitted in the GGNRA. The Park Service is supposed to allow only commercial activities in the parks that further park visitors' experiences. Commercial dog walking does not enhance any person's experience of the parks. 4. At least some trails in San Francisco should be entirely closed to dogs. Under the current plan, nearly every trail in San Francisco is open to at least on-leash dogs, meaning no trails are available for people who prefer to enjoy the outdoors without interacting with dogs. 5. While they are important parts of our families and communities, dogs are just one species that is having a significant negative impact on thousands of other animals and plants that rely on the park to survive and many other human visitors. The parks should be maintained to be safe and accessible for all users and to protect their natural and cultural resources for future generations.

Correspondence: I have always been a dog lover. I volunteered for a while as a dog walker at the San Francisco SPCA so that I could be close to dogs.

However, I am also a bird spotter and enjoy seeing the many beautiful and unfortunately sometimes threatened species. These wild animals need secure places where they can feed and breed unmolested or they may not survive. Dogs are not threatened and live in comfort and security with humans. We need to keep wild areas that are free from domestic animals so that the birds may thrive and not be harassed.

Most of the GGNRA should be off limits to dogs, even supposedly leashed ones. I often visit Heron's Head Park where there are many very visible signs requesting that dogs be kept on leashes, yet every time I go there I see dogs running free, sometimes in the direction of nesting birds. Many dog owners are respectful of the ordinances about leash requirements, but many are not. Let there be areas in the GGNRA where leashed dogs are allowed, fenced areas where they may run free, but please keep most of the GGNRA free of pets.

Correspondence: I am in full agreement with the policies outlined in the draft environmental statement. Dogs need to be on-leash everywhere in National Park areas, if allowed at all. I have seen over the years substantial degradation by dogs running off-leash and out of sight of owners on many trails in the GGNRA, not to mention the nuisance to other users of these trails who are being molested or threatened by dogs running out of control. Fort Funston is a depressing sight since dogs were allowed to free there. I hardly go there any more because the land has been so devastated. The same goes for Ocean Beach.

The preservation of natural features and wild life in the GGNRA should be the overriding principle by which any other uses are being considered. Dogs do have a largely negative impact on these, and therefore their access needs to be strictly regulated.

Considering the fact that most dog owners I have met on trails are rudely disregarding the need to keep their dogs under control, and the park does not seem to have the resources to enforce adherence to their regulations on the trails, it is absolutely necessary to keep dogs out of all sensitive areas, and

where they are allowed, they need to be kept on a leash at all times. This is the only sensible solution.

Correspondence: The San Francisco city supervisors have made it clear that they will not enforce the leash laws in San Francisco. They do recognize that dogs are off leash everywhere but again intend to do nothing. This means off leash dogs will continue to be in on leash city parks and on the city streets. There is an off leash problem in city parks that has already made it so that I do not go to a single city park. I also have not been able to enjoy the ggnra due to the off leash dogs. I have hope that space in San Francisco and the greater bay area will be created by setting leash laws and dog free areas that will enforced by the ggnra. While the ggnra is not a lot of space compared to the rest of the bay area, I would be happy to have this little space to enjoy.

The KEY to appropriate CONTROL...is ADEQUATE, Communicative SIGNAGE! Like: "Entering Off-leash dog play area" Like: "Parking fo access to beach dog-play areas" Also: signs do not have to be made to last a century! Change signs to improve message every 5 yrs. Print on composition materials - not metal.

If you are going to enforce leash laws why not just enforce the more narrow laws we have now. Increase fines for not picking up after dog. Enforce walker license laws & restrictions on # of dogs they can take.

I am not comfortable with dogs (bitten twice, once in the GGNRA) and would like to see less off leash areas. In particular, I would like to enjoy the Fort Point area, lands end, and crissy field. At the moment, I feel like I can't go to these areas or really the majority of the GGNRA. Thank you.

Lands End should be closed to dogs and restored to its natural state -as a nesting area for migratory birds. -Same could be said for all of San Francisco! We live in 2011 - Adjustments must be made. Signed: The Adjustment Bureau

My dogs don't go in designated areas for birds

I work hard to train my dog. She is not aggressive (to people or other animals), she is properly trained to follow me on- or off-leash. Please do not punish me or her by taking away our limited recreation areas.

-Off leash access to the disabled access trails is critical to dog owning persons with some key access difficulties, where the individual has a well trained dogs that is necessary for enjoyment of the person on the walks and for safety reasons.

-Please do not limited off leash dog walking area. There is not enough off-leash dog walking area in San Francisco especially, but in all areas of the park.

Why can't we find a solution that allows everyone access to GGNRA lands, including having sufficient off-leash areas that are actually large enough that dogs can actually be exercised? Alternative C @ Ft. Funston is not large

enough ot actually exercise a dog.

The people that go to Ft. Funston every day are a community. For many of us, our whole social network is made up of people we see and know from Ft. Funston. We will lose our community if you restrict off-leash dog walking. I am losing my human friends if you restrict off-leash dog walking. I am crying for myself even more than my dog!

Anything that says dogs "are allowed" (on or off) will mean "dogs allowed however (the owner) pleases" = off-leashes + to do as they please.

"Voice control" is non-existent + very, very, very few owners can master the techniques.

Dog areas where allowed loose + uncontrolled (meaing "off leash") must be clearing defined, no ambiguity, + enforced.

Dogs are not human, children, or wildlife + owners must be held responsible for the impacts (negative) they can cause to all other users + wildlife.

Rules + regulations that are already in place should be enforced (as a helpful solution) instead of curtailing use to all- mostly responsible - people. I am a dogwalker + I am for requiring permits, requiring picking up poop & dog behavior management.

Guarantee access for handicapped walkers effective signage- no dogs, no poop etc.

We support the preferred alternative as being well-researched, thorough, and fair.

Timed use would be better than no dog use of the area

Correspondence: Comments

Many dog owners use Fort Funston because they are disabled and can walk only on paved paths. The new plan is discriminatory towards the disabled. You need to make sure there is sufficient access for the disabled and their dogs.

Please keep Coastal--> Wolf --> Miwok Loop open in Marin - It's the only long loop for dogs. Make section on-leash if needed to preserve habitat.

Fire roads are already intruding on wild space. Allowing rola is consistent with that.

Oakwood Valley - Fencing along ROLA will impeded wildlife movement

Old Bunker Fireroad, currently dogs under voice contril should remain dogs under voice control. It is a perfect spot for a morning dog run and there is usually almost no one on the road except for the occasional dogwalker.

Open areas need to be provded for off-leash running - like chasing tennis balls- that many dogs need just to be healthy, stornng and not overweight. At Baker used to be good for that.

As a runner the Marin Headlands preferred alternative is fine.

Documented problems/complaints at Muir Beach are very minimal + do not warrant the drastic changes being considered

Describe the impact on existing wildlife (coyotes, turkeys, rabbits, etc) of the continuous fencing and double-gates proposed for the oakwood valley

trail.

Continuous fencing on Oakwood Valley trail will significantly diminish enjoyment of the natural environment for all users including non-dog accompanied humans and horse back riders using this trail. Huge negative aesthetic impact.

Leave Oakwood Valley as it is- it isn't broken, so don't fix it. We don't need to spend money on this.

Alta Trail (ROLA) 15 dogs is too many Have ROLA from ~50' from trail head (Donahue)

-On many trails to Muir Beach, I have only met friendly dogs and have

thoroughly enjoyed their company. If it ain't broke, why fix it?

-We need a LONG WALK for dogs between the ridge (Miwok trail) to Muir and Rodeo Beach for dogs ON LEASH! This gives an outlet for dogs & dog people & takes pressure off existing short walk areas.

-Clear signage as to prohibited areas at Muir Beach, Redwood Creek and the Lagoon. A ticket or two to dog owners and families playing, swimming, and damming the creek!

-Muir Beach is what I refer to as "Beau's Beach" (my dog). This is one small beach that is perfect for dogs to run. The weather at Muir Beach is not typically conducive to folks laying out + enjoying the sun, nor is there a major need for habitat protection, except for the estuary. The proposed "Pacific Way Trail" has not yet been built, won't be for a few years, & doesn't even go to the beach. Dogs need to have a place to run & there are so few beaches where this is allowed. Please don't take Muir Beach away from Beau!

1% of GGNRA lands are available to off-leash dog walking, yet 60% of the population is obese. Dogs that are not adequately exercised can develop behavior problems - one of the primary reasons people abandon/surrender

dogs at over-crowded shelters. Thus there is more demand for recreation - not less in GGNRA.

Guns are ok in the National Parks, but not dogs? If the NRA wanted gos, I'm sure they'd be free to do what they want...it's politics. How about the styrofoam & plastics that irresponsible picnickers leave? Why target responsible dogs & their owners?

Muir Beach - where we walked our dogs + puppies off leash daily for 4+ years. We were the guardians of the beach - picking up litter + reporting injured animals whenever we saw them. Having dogs allowed only in the parking lot on leash??? Might as well shoot your dog or have it stay home. No sense whatsoever in bringing dogs to a beach PARKING LOT! Crissy Field has always been very amenable.

I have no prob. w/requiring on-leash on the ft. bridge to Rodeo Beach, but please don't limit off-leash enjoyment of the Beach! It's one of the only places our dogs can romp off-leash. We have dogs who do not do do well in

enclosed spaces. They need the freedom to run.

As environmentalists + dog owners, we do want to protect our resources but do not think dogs are inherently "bad" for the enviro. Beaches appear to be among the best places for dogs to be off leash as they can run and easily be kept tract off of + cleaned up after. Whether "pro" dog or "anti" dog, dogs are a real part of many families in our community and we need to provide space for them to be healthy.

Re: Marin Headlands. For years we have walked our dogs on leash up wolf ridge to hill 88. We love to share these beautiful views and spaces w/our dogs. Please don't limit us to the lower reaches of the headlands. It seems that existing trails are able to accomodate dogs w/o a negative impact on the flora and fauna.

Oakwood Valley - Gate area takes away from the sense of a park. Should remain an area with dogs under voice control.

Homestead Valley - This is a neighborhood trail with hardly any people on it - I live here a run this trail dailey with my dogs - Ridiculous to have a leash law especially when dogs are under voice control. I rarely see anyone else on this trail - at the same time.

Oakwood Valley - alway experience good dog owners + again this is such a wide fire road for 1/2 of it, I believe it should stay open to no leash w/ dogs under voice control.

MuBe - Support Alt. #A- There is NO possibility for uniform enforcement of the no-dog on the beach unless there is a permanent presence of L.E. rangers to fairly close the area.

What is the specific evidence to support a change in Muir Beach from ROLA to alt D? (I'll take my answer on your website please)

Outrageous! No dogs at Muir Beach?

Muir Beach - what will be the unattended consequences of dogs going to Stinson beach from Muir Beach - too many overflow onto Upton beach.

Where is the \$ coming from to enforce these ridiculous rules + regs...our tax \$?

Correspondence: I think it is unfair to everyone (except the dog people) to allow dogs everywhere. Since the dogs have taken over Ft. Funston, why not give it to them and not let dogs at Chrissy Field, Ocean Beach, and other places so that people can enjoy the experience and birds and landscape are not destroyed.

The dog people have never tried to comply with simple requests to control thier dogs, pick up after them, and stay out of sensitive habitat areas. I own a dog and it is the least one can do in a PUBLIC place. It is much more than a few bad owners.

I strongly encourage you to improve the plan by implementing the following steps:

1. All "Regulated Off-leash Areas" should be fenced, at least in areas where

fences do not pose risks to wildlife and habitats. Fences provide more security for all park users and create clearer boundaries so that dog owners are aware of how to comply with park rules. 2. The Park Service's proposed requirement of 75% compliance is too low. The Park Service should require a minimum of 95% compliance before initiating measures to improve compliance. 3. Commercial dog-walking should not be permitted in the GGNRA. This is a commercial activity in the park and the Park Service cannot legally permit it. 4. At least some trails in San Francisco should be entirely closed to dogs. Under the current plan, nearly every trail in San Francisco is open to at least on-leash dogs, meaning no trails are available for people who prefer to enjoy the outdoors without interacting with dogs. 5. While dogs are important parts of our families and communities, they are just one animal that is having a significant negative impact on thousands of other animals and plants that rely on the park to survive and many other human visitors. The parks should be maintained to be safe and accessible for all users and to protect their natural and cultural resources for future generations.

Thank you for this opportunity to comment on the Dog Management Plan. I encourage you to adopt the best measures to protect the National Park's valuable resources for everyone and for future generations.

Thank you,

llr

Correspondence: BG 3/2 Comments

Dog owners are environmentalists too. With a friend, I remove half a ton of trash from Rodeo Beach every year. Putting half the beach off limits to dogs would deter me from going there - meaning a much more trashy beach! Besides, it's mainly dog owners who visit the south beach in the morning- and it accumulates a lot of trash, too!

Dogs being allowed off-leash are better behaved, socialized, and there are less behavioral problems at home and in public. I don't see any evidence in the DEIS that supports that dogs are more destructive than people to the GGNRA.

The issue shouldn't be dogs, but responsible behavior. Why not restrict

irresponsible picnickers who leave more waste than dogs and their owners?

A "Punishment-Oriented" approach. How many people enjoy the parks with dogs vs. the number who stay away because of dogs?

-Don't forget dog owners and their pets need off leash exercise.

-Any Natural Resource Area where the potential for significant impacts from allowing dogs off-leash exists should be excluded from dog use, period. Allowing on-leash dog use in these areas requires constant monitoring to ensure that dogs are not released off-leash. Such oversight and enforcement is unlikely without an increase of ranger patrols which, in the past have been practically non-existent.

As a professional dog walker, I am personally invested in dogs having off leash access to these areas, with smaller groups, and well behaved dogs. There can be a middle ground reached which respects the habitat, visitors and the parks so all can enjoy & cooperate within reasonable guidelines. Walkers with 10-15 dogs should not be permitted in these areas. 6 dogs max, dogs under voice control!

Re: On-leash & dog aggression: dogs off leash are usually far less defensive or aggressive than when on leash, so the visitor experience could be argued

to be just as compromised if not more w/ dogs stuck on leash.

Pick up dog's toys, i.e. frisbies, tennis balls, etc.

Limiting/drastically reducing voice control areas for dogs will make the new off leash areasa incredibly overcrowded & miserable. We can all co-exist. There is no hard evidence of damages to the environment directly from off leash dog recreation - mostly from human use. Bird habitats are more affected by erosion or bulldosers trying to control erosion. Dog owners pay equal taxes & deserve recreation on park lands as well. Keep the voice control as it currently is. Thank you.

Humans - not dogs - create the greatest environmental damage & ecological concern.

The "official presentation" of the "dog problem" is greatly over-stated.

Correspondence: To the National Park Service: If the NPS decides against implementing the proposed restrictions on off-leash dogs, the NPS is essentially turning over the entire GGNRA to off-leash dog enthusiasts. On my twice weekly hikes in Land's End and the Marin Headlands, I see off-leash dogs running ahead of their owners by 20-30 feet, chasing birds, spooking marine mammals from their haul outs, and digging up vegetation. When a dog jumps on me, the owner (when s/he finally comes into view) thinks that calling out "he's friendly" negates the fear of a large dog leaping on me. A senior or guardian of a small child may refuse to return to the hiking trails after experiencing a number of such incidents. Birds seeking to court and nest in the urban oasis of the GGNRA may avoid it entirely after dogs repeatedly spook them out of cover. If the nestlings have fledged, curious dogs will cause the parents to abandon their young. Marine mammals may avoid preferred haul outs if canines continue to molest them. Native vegetation can disappear under the continued assault of dogs' paws. All users of the GGNRA, including other species who make it their home, will end up poorer due to the ignorance of off-leash dog enthusiasts and the refusal of the NPS to insist on proper stewardship of this unique, precious area. As reported in the San Francisco Chronicle, a small woman spoke up at a public meeting on the proposed dog plan, lamenting that her two dogs were so large and strong that she could not control them on a leash. This indicates that her dogs are not trained in obedience; they are certainly not "under voice control". This dog owner should not take her canines anywhere without further training, least of all off leash in the GGNRA. As the NPS arrives at a decision regarding the proposed dog plan, I beg you to consider the needs of seniors, children, hikers, birdwatchers, mountain bikers, equestrians, birds, marine mammals, vegetation, and urban dwellers seeking the peace of the outdoors. Please restrict off-leash dogs in the GGNRA. Sincerely, Wonder Gustafson

Please keep the Oakwood Valley F.R. and Oakwood Valley Trail/Alta Fire Road/loop open to dog walking - off- leash. But use a plan similar to the East Bay Parks which allows dogs off-leash under voice control. Also, consider electronic leashes as an alternative to physical leashes. E-leashes are an excellent control and help train dogs to behave properly off-leash. We have such limited access to off-leash areas in Southern Marin, don't take more away. Please consider adding more off-leash areasa, where appropriate.

How will GGNRA enforce or even know how to evaluate if a bitch is in heat? This is beyond the realm of expertise (+ should be) and knowledge of much of the employee base.

An in-heat dog can not be responsible for any more impact than a neutered or spayed dog. Do not incorporate no confuse in-tact or not intact dogs with leash laws!

Correspondence: There's no doubt that dogs are an "impact" to the "wild" environment. However, are they more substantial than people (building, poluting, walking, riding)? The benefits of responsible dog owners enjoying our parks while making sure that others can enjoy them far outweighs the drawbacks. Personally, I enjoyed the Presidio/Chrissy for many years before it became a Natl Park & subject to these new rules. The park was a far wilder & more natural habitat (albeit non-native) than it is today.

Please stop your heavy-handed management of our natural resources & leave room for all responsible dog owners to use the park. If you need money to fund education/enforcement you could consider licensing fees or fines. However, you need to develop reasonable rules (voice control) for dogs. Perhaps some areas need to be reserved for no entry by humans & dogs such as nesting areas, or feeding areas. However, dogs should be allowed to go wherever people can go.

Please be specific + substantive

Marin County has one of the highest adoption rates - For this reason, the shelters are able to rescue many dogs from all over California + even Mexico that would otherwise be euthanised! One of the main reasons that enables this invaluable service to continue is the Bay Area's love + compassion for dogs (animals). Many people are motivated to adopt (save) shelter dogs fro the animal's benefit + quality of life AS WELL AS their own - i.e. outdoor activities, social networking, fresh air on beautiful Marin County trails!! Dog-walking has become an important facet of managing depression, personal isolation + lack of social resources available. Being restricted from having a dog in some areas entirely as well as off-leash enforcement will, undoubtedly, affect that social bond + freedom we feel we must maintain at all costs. It is FAR MORE than a wildlife issue. We need these rights. Focus all this energy on the rainforests that are actually dying + disappearing as a result of human greed. Dog owners and dogs in Marin would suffer a lesser quality of LIFE!!

Having dogs on trails, especially off leash provides a strong social network of responsible owners. This is a necessary part of the social fabric of the entire Bay Area. As a new-comer to SF area, one reason I chose the area is due to dog friendly policys. It has been the best way for me to meet others and to participate in the social fabric of the area. Without these rights + privlages, there will be a decline of the social fabric of the entire Bay Area.

I have a dog to get outside, and to get exercise. I use the parks to enjoy this relationship. If dogs are banned from the parks, I would never use the park, is this what you are after?

The federal government will be funding a large initiative to bring people to

parks. This is a salient point. You are barring a primary population.

-NPS is taking info specific to one of the 21 areas + applying it to all of the areas. Aggregating + therefore fabricating evidence to support their closures.

-It is important that there be consistency between and amongst all the several agencies on road and trail use policies and standards because of the existence of a network of inter-connected roads + trails that are used by all sorts of users.

-Responsible dog owners spend more time, are more attentive, & are more aware of the riches of our natural resources. Please don't restrict their access because of a small minority of less responsible owners. (There are irresponsible campers, bikers, etc. in even larger numbers).

Correspondence: Comments Bkgd 3/2

You (NPS) can manage bad dog behaviour without kicking all dogs (and owners) out of federal park land. Why punish all for the actions of a few?

-The NPS needs to recognize that the dog owning community is a major user group and work to seek out and expand opportunities for such use rather than restrict them. This should be an ongoing purpose of the NPS. There is a perception that the NPS does not view this user group as important or significant.

Unintended consequences: dog shelters without exercise misbehaving dogs + owners Casar Millan say the most important thing for a dog is exercise. A lot of dogs can not be properly exercised on a leash.

Correspondence: I like dogs, but do not want them roaming free in the National Parks. All dogs should be on a leash at all times while in the park! I've been approached by off-leash dogs numerous times in the park and have been growled at and barked at. It's not fair that I should be afraid of someone's pet while I'm enjoying a National Park. There are plenty of Dog Parks here in San Francisco - let's not turn our National Parks into National Dog Parks.

Correspondence: I think that the City of San Francisco maintains a number of places that cater to dogs, but precious, precious few that protect native plants and animals. Really the National Park Service is the only organization in the City with the resources, expertise, and express mission to even consider ecology in its work. Much of the City's parks are more or less big lawns with little or no native ecology of which to speak.

Dog owners, in general, have no idea what areas in the park are ecologically sensitive (even when signs are posted, these are either overlooked or ignored). Dog owners, by and large, stay on trail like they should, but when dog owners see an open space, they let their dogs run through it. I've seen

dogs tear through sensitive plant communities (with federally listed native plants!) -- they're covered in weed seeds, they chase wild life, and they poop all over the place. It's a joke to say they're under voice command, especially considering that the owners are mostly clueless and have no idea that what the dogs are doing is ecologically devastating.

One of my buddies told me that he asked a dog owner the other day to leash his dog because it was chasing after and harassing a Great Blue Heron (a huge bird --- 65+ inch wingspan -- that hunts by standing still for long periods of time), and the dog owner refused, saying: "It's natural. Birds get chased. It's natural." This is not an uncommon scene. Without a clear policy that states that dogs in the park must be leashed, there is nothing to stop irresponsible dog walkers from disturbing wild life.

Dog owners do not understand that their domesticated animal is not a part of the local ecology, any more than a pig or a cow would be, and their dog is, in fact, a particularly disruptive kind of visitor to the landscape.

Correspondence: I know many areas are included in this plan, but I will speak specifically about Fort Funston, since that is the space I am most familiar with and can envision in this battle for off leash rules for dogs.

I understand that many species use this area as their habitat. But dogs are not the only culprits here. Climate, other creatures and humans also take their toll on these sanctuaries. Even if dogs are restricted to leash laws, these areas will not be left undisturbed. So now you will still have species that have a hard time surviving in the environment AND unexercised dogs. A dog that hasn't been properly allowed to run free is a frustrated nuisance. Is that what we want?

What about the humans need to connect with nature? You take away that stroll with your "best friend" and now we've gone against what Teddy Roosevelt said about keeping open space "as a beautiful natural

playground...for all those who have the love of adventure." Is the intent to keep our open space empty of humans too?

I know at Funston some of these areas have been loosely fenced off. It doesn't keep everydog out of there, but rarely do I see a violation. Please keep Funston as an area free for dogs to run. The number of places for dogs to release energy has already been confined too much. Dogs deserve protection too. Don't forget if dogs were not domesticated that these open spaces would be their natural habitat and it is not fair to take that away from them!

Correspondence: I'm a long-time San Francisco resident and I cherish the GGNRA. It's critical in a city to balance the use of public lands for citizens and for protection of our wildlife. As a frequent walker on Ocean Beach, I'm dismayed to see the number of off-leash dogs every time I walk in the Plover Protection area. Although it's quite well-signed there, I've never seen any citation or consequences for dog owners who ignore the regulations. If dog owners complied with the regulations or if there was active enforcement, some kind of consequence for their actions, I would feel better about them being there. But I would rather see dogs entirely excluded from Ocean Beach if their owners can't act in balance with the needs of the natural environment, and give the plovers and other shore creatures a safe place to live. Obviously, most dog owners are currently feeling quite comfortable ignoring the needs of the wildlife. I live along Glen Canyon and own three cats. I have had to make substantial accommodation for them to enjoy the outdoors, building an enclosure for them that lets them have a bit of sunshine without them being preyed upon by the coyotes in our canyon or themselves preying upon birds. To me, this is part of responsible urban pet ownership. I understand the frustration of dog owners at the limitations imposed on them by city life, but that's the point: we choose to live in a city and that choice limits our pet ownership options. It's not the responsibility of the city or GGNRA to provide enough parks so every city resident can have

a large dog and have a natural place to walk the dog where the dog can experience the excitement of chasing birds. There are limits. We MUST preserve the slim margins of natural habitats that contribute so much to the livability of our city.

Correspondence: I strongly oppose any dogs in the GGNRA. In this, I am supported by many others; seniors like myself, disabled people, blind people, many of whom have refrained from using the GGNRA where irresponsible dog owners refuse (and most often are not able) to control their dogs. Dogs are a huge liability. You cannot share spaces with them; they run all over everything -- including you -- they bark, whine, yap, thus destroying the beautiful sounds of nature with their angry, hostile noise. They urinate and defecate everywhere. Some of them are vicious, and attack people and other animals at will. Even the leashed ones befoul any area they are in.

Not only are dogs a huge headache for everyone and everything except their doting owners, they are lethal to wildlife, which the GGNRA is mandated to protect. Here is a link to a recent study that gives evidence for this:

Correspondence: Thanks for allowing me to comment.

San Francisco is not the Marin Headland, nor is it Yosemite. Though parts of SF are under the GGNRA, the needs of SF citizens and their pets are much different than other locations.

Please do not create a policy or impose policy that is suitable for rural Marin Headlands or Yosemite on the very urban SF.

SF needs to continue having places to allow their dogs to run off-leash.

Correspondence: To whom it may concern, I am writing my express my concern and opinion about the ban of dogs on Muir Beach and the coastal trail, because this is the area I am familiar with and will impact my daily life. I have grown up in Muir Beach since 1963 and I live there now. Muir beach has historically always been a "dog friendly" area and should remain that way. The current dog management rules from the GGNRA have been and are working fine. Reading the report the impact of dogs on the area is inconclusive, but the impact of people is not, people have a large impact on the area, from childhood till now I can testify from my own observations people have a larger impact on the area then do dogs. Dogs are not the reason for the dwindling population of the Coho Salmon in redwood creek, it has been and continues to be the humans, I have seen this historically and continue to see it daily. My parents fought hard to help create the GGNRA, please remember this was intended to be a National Recreational Area not a National Park. Because of the residential area connected to Muir Beach it is unfair for the National Park service to impose a complete dog ban from the historically "dog friendly" beach. Making Muir Beach the "gateway" to the GGNRA, as I was told by one of the park rangers, will increase the human visitors to the area thus increasing a much greater environmental impact to the area. Building a visitors center at Muir Beach is a bad idea. I recommend better education of the pubic. Visitors should understand were the "dog friendly" area are (less then 2% of the coastal areas) and we need better signage and enforcement at the sensitive area. Please do not change the existing dog rules for this area.

Thank You, Aran Moore Muir Beach CA 94965

Correspondence: Dear GGNRA:

Being a surfer, hiker, and avid outdoorsman, I'd like to be able to take my dog to places I enjoy doing these activities, whether it be Santa Cruz, San Mateo, Marin, or my home in San Francisco; therefore, I'd like to see current GGNRA parks kept open to dogs under voice command.

I've spent \$800 on my dog's continued obedience classes, and I feel that he is well-behaved dog on- and off-leash. However, like all dogs, he needs exercise and time and space to run. And let's face it-dogs need space to run.

I live nearby Ocean Beach, and it seems clear to me that the larger issues are natural erosion, pollution/trash, vandalism (by people), and urban sprawl. These are the greater threats, not dogs. I can't believe that any assessment would demonstrate that dogs pose a greater threat than the pollution from the ocean-going freighters, runoff from the Bay Area, or the constant onslaught of plastics and trash that wash up everywhere, not to mention the trash left behind by beachgoers.

Last weekend, I spent Sunday afternoon at Muir beach. I didn't observe any off-leash dogs being a nuisance or contributing to erosion; rather, it was children climbing the hillsides and youth and adults rearranging stones in the creek outlet to the ocean (which appears to change with tidal flow); if there was any threat to the natural environment, it was man-made, including trash on the beach and in the creek. I also noticed that the area appears to be undergoing renovations by the park service; I did not see any signs of dog disturbances to wildlife or local flora or fauna.

I understand the need to protect endangered species, but mankind is the bigger threat here. As a species, we encroach on native lands. I don't understand what feels like a witch hunt against dogs. John Muir, John Steinbeck, and Jack London traveled with their dogs. They are all local heroes who supported the natural environment, its preservation, and its enjoyment for all. We already have too many limitations on pet-accessible areas. We don't need more. I find it unfair that the GGNRA proposes to eliminate 90% of off-leash areas, areas that have been legally used for 40 years.

The following represent my recommendations for the GGNRA regarding dogs:

San Francisco: Ocean Beach: Alternative A; no action. (Stairwell 21 to Sloat is too limiting.) Lands End: Alternative A; no action. Fort Miley: Alternative A; no action. Baker Beach: Alternative A; no action. Fort Point: Alternative A; no action. Fort Mason: Alternative A; no action. Sutro

Heights: Alternative A; no action. Fort Funton: Alternative A; no action. However, I can see the need to protect the beach north of Ft. Funton for habitat protection, but that area appears to be extremely prone to erosion from wind and sea-as is the entire bluff area south to Daly City. Chrissy Field: Alternative A; no action. I understand that dog owners should exercise common sense on days when the eastern beach area is occupied by beachgoers; however, there are many times (as on the evening of March 7) that there is no one on the beach. It doesn't make sense to close a beach to dogs when no one is using it.

Marin: Stinson Beach: Alternative A; no action. Rodeo Beach: Alternative A; no action. I would very much like to see this kept as an off-leash area. Muir Beach: Alternative A; no action. I can't image dogs not being allowed off-leash here. I'm not sure that dogs do more habitat damage than the children and young adults who run through and over the brush, contributing to erosion. There are so few beaches on the rocky coastline north of San Francisco. We should NOT take away or change access for dogs or dog owners. Homestead Valley: Alternative A; no action. Oakwood Valley: Alternative A; no action. Alta Trail, Orchard, and Pacheco Fire Roads: Alternative A; no action. Voice command. Fort Baker: Allow dogs; Alternative A; no action. Kirby Cove: Allow dogs (I believe this site is currently off-limits to dogs).

San Mateo: Pedro Point Headlands: Please institute dog access. Mori Point: Alternative A to allow on-leash access. No action. Sweeney Ridge: Alternative A; no action. Sharp Park Beach: Allow dogs.

New Lands: Alternative A; no action. Allow dog walking on new lands under title 36 Code of Federal Regulations 2.15.

If I may make several suggestions: 1) A special GGNRA tag for dogs to utilize park areas to help offset costs (make this \$12 or \$15) 2) Fine owners whose dogs are aggressive, chase birds, and are seen destroying protected habitat areas-as well as those owners that don't pick up after their pets. 3) Provide more gated/fenced areas in the city and at these GGNRA locations for pet owners to exercise dogs that may not be under voice command. Perhaps even have pet owners apply for a voice command permit/certification. 4) We already have too many rules, regulations, and laws. We don't need more.

Lastly, I don't understand the GGNRA's policy on "no dogs in campgrounds." What are families to do when they travel with their dogs for a day's outing? Leave the dogs at home? In the car? Since the GGNRA is trying to limit the number of dogs (3) that dog walkers can bring to areas, it doesn't seem feasible to put them in the care of dogwalkers.

I understand that Congress could resolve this conflict by codifying the GGNRA's 1979 Pet Policy as a Section Seven Special Regulation, and mandate that all properties added to the GGNRA after 1979 maintain historical recreational access. If the proposed policy is an attempt to "return to nature," then we'd better start by handing back all the land to the Native American peoples and their tribes, not enforcing trite codes.

If severe dog limitations go into effect, I am going to be sure to contact my congressional representatives and local politicians, as well as find out who the policymakers are so that these individuals can be voted out of office.

Sincerely,

Bill R. San Francisco

Correspondence: Last week, while walking Ocean Beach, I noticed three young people, in their 20's or 30's, standing next to the shore, watching their three dogs, off leash, chasing the protected Snowy Plover flock some distance down the beach. The three young people felt this was good fun for their dogs and kept yelling encouragement, like, "get them". This was in a area very well marked.

The National Parks aren't for dogs, they are for people. I believe the National Park policy is no dogs allowed in National Parks.

Mr. O'Neill made a mistake years ago in allowing these morons on the Parks with their dogs. He shouldn't have done it, it is completely out of control, and now he has to correct his mistake. Relying on the dog owners is out of the questions. Just look at their letters to the Chronicle. If they bought a dog and the dog isn't happy in the city, why should the National Parks provide for them. I don't get it.

Also, why are dog walkers allowed on the Parks at all? This is a commercial endeavour. If I wanted to open a hot dog stand on Ocean Beach I would need a license and be subjected to regulations. Why would some idiot with a group of dogs not be required to obtain a license? After all, he's walking these beasts because their owners are too lazy to care for the dogs. So they hire a walker and tell him to take them onto a National Park and let them run free. The poor beasts have been cooped up all week.

Frankly, I don't like your plan at all. Dogs, and similar animals should be

banned in total from the Park property. Will the National Park accept responsibility when a person is bitten?

It's time for you to accept your responsibility to manage the Parks in the best interest of the people.

Thank you for your attention.

Correspondence: I would like to speak in favor of the GGNRA's preferred alternative in its draft DMP.

I and the members of my family are frequent visitors to and users of GGNRA owned and managed public lands. However, we are not able to use or enjoy, and are in fact completely excluded from, lands such as Muir Beach, Ft. Funston, and Crissy Field where unleashed dog use is currently allowed. The reason for this circumstance is that my 17-year-old son is afflicted with a childhood neurodevelopmental disability that has been variously diagnosed as either autism or Pervasive Developmental Disorder - Not Otherwise Specified (PDD-NOS). One of the most prominent and therapy-resistant symptoms or manifestations of my son's disorder is a fear of dogs. We believe this fear has its roots in a couple of regrettable incidents in early childhood when he was assaulted by aggressive dogs. (Fortunately the dogs involved in these assaults were on leash so they did not result in physical contact or injury.) Through work with therapy dogs and careful management of incidental dog contact in daily life my son has largely overcome this fear with respect to dogs on leash. However, his phobia remains undiminished with respect to off leash dogs, regardless of the degree of control of such dogs by their owners or companions .

The preferred alternative will make it possible for my son to visit portions of GGNRA lands where off leash dog use is currently allowed that we have never been able to visit. Such a change in land use management is fully consistent with and in fact mandated by federal law including but not limited to the Americans with Disabilities Act (ADA).

I would like to invite one or more GGNRA rangers or other personnel to accompany me and my son on a visit to one of the above-identified GGNRA sites where off leash dog use is currently allowed so that you can observe first hand how he reacts to off leash dogs. This first hand observation will

assist the GGNRA in understanding how off leash dog use effectively excludes a not insignificant portion of the disabled population from lands where such use is allowed.

Correspondence: Enforce the policies you have now instead of adding new ones that we don't need and can't afford. Let dogs run leash-free where they now do and police parts of the recreational areas where they are supposed to be on leash or not at all. Enough tickets given out in the forbidden areas will convince the dog people to stick to the legal areas for leash-free dog fun. Clear signs designating the leash-free areas will also keep non-dog people from venturing into these areas. Do this and everyone can enjoy the magnificent GGNRA lands equally.

Correspondence: I am a dog owner and a dog lover. I completely understand the need for some regulation of dogs in the GGNRA and also the need to clarify the rules and regulations.

My comment is addressed specifically to Fort Mason. On sunny weekends the Great Meadow fills up with people. At many other times, however, the field is essentially empty, except for people with dogs. This is especially true during the week and on those days that are too cool or windy for people to enjoy sitting outside. I understand that people would like to come to Fort Mason to enjoy picnics, games, etc. without worrying about dogs. But the

number of days that the weather allows picnics, games, etc. are relatively few. The people who use the field most consistently are those who come to exercise their dogs.

I would propose a compromise. Fort Mason would have limited ROLA hours to allow dog owners to have use of the Great Meadow but also allow other people the opportunity to enjoy the field without dogs. Sat/Sun/Holidays would be on-leash only times. During the week there could be ROLA hours of approximately 3 - 6 or 7pm (depending on time of year). If a warm, sunny day fell during the week and there were a significant number of people without dogs using the field, rangers could suspend ROLA for that day. This compromise would require less enforcement work for rangers, would allow non-dog people to take advantage of the park when weather permitted, and, would give dog owners the chance to let their dogs run at the Great Meadow at those times when few other people are using the meadow.

Correspondence: I stongly disagree with the Dog management plan in the GGNRA. I live in the outer sunset district and frequent Ocean Beach and Fort Funston a lot. I go with my Labrador dogs or to go surfing. OB and Ft Funston, for that matter, is rugged and cold. People don't frequent the beaches here nor swim in the 49 degree water and treacherous surf! I don't see the problem here. OB is not Malibu, crowded beaches in and out of the water. I think GGNRA should worry more about the beach erosion problem than wether a dog is on or off leash. It would sadden me and my family greatly if we couldn't enjoy our dogs at the beach off leash playing fetch in the water! I have never had an incident with my dogs and those of the dog walkers/owners in the GGNRA. Everyone seems to be careful and mindful to keep GGNRA open to dogs off leash. I can't say the same for the small neighborhood parks: (Stern Grove & Parkside Park)

Sincerely, Randy Reed

Correspondence: I agree that dog control policy is essential to protect wildlife and non-dog visitor experience. I applaud and thank GGNRA for tackling this difficult issue, applying national park standards to urban and close-by lands not

traditionally regulated according to such standards.

I don't use the whole GGNRA; will limit comments to areas I know and use.

1. Chrissy Field. I support the alternative selected.
2. Marin Headlands. I support the alternative selected. I am esp. glad for no dogs on the Bobcat and upper Miwok trails.
3. Rodeo Beach. I support the alternative selected.

I am not clear about Tenn. Valley and its tributary trails to the north (e.g. Foxx). Per Map 7, none of these permit dogs. If that is the case, I support this! Tenn Valley has become an off-leash dog walk, with signs prohibiting routinely ignored. Dogs run over the trail shoulders and on the beach, chasing birds. Let me urge a separate map for Tenn Valley to make this absolutely clear. Tenn Valley is popular with visitors from afar (judging from license plates and car stickers); maybe less so for local residents?; I'm speculating a lot of dogs in Tenn Valley come with occasional visitors who don't think rules apply to them.

Good signage will be critical. Let me urge that one big dog (Dane? Shepard?) and one small dog (those tiny ones popular with city dwellers, who may carry them or put them in baby carriages - have seen this!) be illustrated in whatever design states "not allowed." People with little dogs seem esp. impervious to the notion that they have a dog, not a child.

Thanks for listening and good luck with this! GGNRA should be a world heritage site, it's so unusual and so precious as example of total country experience within such short distance from total city.

PS: Concerning ? on this page for hearing about NPS in the future: add "postings at trailheads." I think that's where I learned of this proposed rule, or maybe a ranger told me.

Correspondence: Our National Parks are our treasures. We were the first country in the world to have the foresight to set aside natural places for future generations. I am so grateful for that.

My understanding is that the GGNRA is the only National Park that allows off-leash dogs at all. Back when the GGNRA was first established, I'm sure that there were far fewer dogs in the area served by the GGNRA than there are now. I would also guess that the profession of dog-walking was not as extensive as it seems to be now. That combination of circumstances puts severe pressure on the environment of any park.

When I visit any of our National Parks, I want to be in the park, with nature, enjoying what is there. I prefer not to hear anything other than the sounds of nature and those of my fellow park visitors. That includes the barking and play-noises of dogs greeting other dogs.

I would also prefer that the natural environment of the park not be torn up

by the rough-housing of dogs.

When dogs are allowed to run free, they understandably get excited. If I were a dog, I probably would too. I am 76, not really frail, but no match for an excited dog much larger than a chihuahua. Dogs are also territorial and, when I am in the same space with them, as far as they are concerned I am in their territory. Not all dogs react in the same way to that situation.

I know that dogs need a place to be dogs outside of the confines of their owner's homes. The solution to the dilemma seems to be to set aside specific places where dogs can be dogs and people can have the rest of the space to themselves, without interference or possible physical inconvenience of an unwanted interaction with an excited dog.

As for the professionals who want to use the GGNRA in their business of walking dogs. I think that there should be a specific fee for that privilege, to help defray the cost of the inevitable wear and tear on the natural environment due to their activities.

Correspondence: Dear National Park Service - I am in the process of putting my thoughts together on the dog issue at Ocean Beach. You will be getting many more of

my letters before the deadline. It is a very complicated and complex issue in itself - but I am starting to understand where this tempest in a teapot, this total overreaction, has come from. Three letters today in the SF Chronicle were screeds against dogs and their pitiful owners - and you have pretty much fallen for this attitude hook, line, and sinker. You have abandoned all pretense of objectivity and farsightedness in your document, and need to balance your own very antidog stance. I have been walking my dog at Ocean Beach nearly every day for the past 15 years - there is no huge problem that can't be worked out - but you have to have a stronger belief in the basic right to have unleashed dogs for portions of the beach. The anti-dog mentality is way too strongly addressed in your study - and you have given very short shrift to the totally civilized concept of the sacred bond between dogs/owners and their needs (yes, most dogs benefit greatly from being able to exercise and run unleashed). Please, open your eyes and mind to a more equitable balance - our beloved dogs deserve your understanding. Sincerely, Peter Munks

Correspondence: Hi,

My name is Antoinette Mogannam and I have boarded my horse at Mar Vista Stables in Daly City for 16 years.

My horse and I have been attacked by off leash dogs numerous times down on the beach below Fort Funston, once the police were involved as well as Chris Powell/GGNRA. One of the incidents, left my horse with numerous bites from an unleashed pit-bull, and a dog with a broken jaw - not the ending any animal owner wants. There have been other incidents such as these involving other equestrians, too many to count anymore.

My efforts in the way of phone calls to the rangers and letters to the GGNRA to do something about the growing off leash dog situation never seems to make a difference as enforcement stays minimal, phone calls to rangers ignored, and people and animals are still getting hurt.

I often feel a tragedy will have to occur before this problem gets resolved and the simple solution to keep dogs on leash finally gets implemented.

Thank you! Antoinette

Correspondence: I am in support of Alternative A for Ocean Beach and Fort Funston. I feel that the National Park Service has imposed ever increasing regulatory oversight of the area. I have been at Ocean Beach longer than the National Park Service, and I have seen your agency impose stricter regulations over time, while apparently unable to enforce the regulations most of the time. The area south of Sloat is probably not attractive to Snowy Plovers as there is no suitable nesting area around the concrete rip rap, dirt cliff and scoured beach area. I have accepted the fact that I am not allowed to walk, run, and exercise my dog as I did in the past north of Sloat, off leash. I also have seen many more Plovers in the last week than the report shows. I try to walk and exercise my labrador retriever every day in this area. She is a retriever, not a Plover enemy. She wants nothing to do with shorebirds.

I find it amazing that so much effort is wasted by your agency to impose these ridiculous laws in this heavy urban area. Here we are in the most populated area of Central California, and you choose to exclude varied use of this area based on Snowy Plovers, just like what happened in Oregon at the dunes north of Coos Bay, after the ship the New Carissa ran aground and it was then declared off limits to humans by the USF&WS. I see that you are trying to do the same here. I assume you will probably try to ban humans from the same area, because you think it is easier to impose more restrictions than managing the existing regulations.

Alternative A is my choice, because I assume you will not remove the current regulations.

Correspondence: I have owned 3 dogs, representing about 1/2 of my 64 years of life. I used to

run my dogs on beaches and in the street.

Now I see that dogs in parks are a big problem. Not just for wildlife, but also for children and adults. Just last weekend, I witnessed dogs overrunning an area of Crissy Field beach. Even though owners were picking up after their dogs, the area looked and felt unattractive to parents with children, not to mention wildlife. And on the Crissy Field grass, a blue heron stood at alert and quite concerned about the dogs off leash nearby.

I have reviewed the alternatives and the preferred plan, and basically agree with most of the preferred plan, although I would lobby for even more restrictive regulations at most locations. Actually, I prefer the most restrictive.

Correspondence: Thank you for addressing this issue.

On many hikes and visits to GGNRA parks, I and my two young children, have been approached by unleashed dogs. Both of my children are now terrified of dogs and the owners have little remorse or concern for the safety or well being of my children. I often ask owners to leash their dogs when my children are around. I receive rude comments and many times people ignore my requests and do not leash their dogs. As a parent and visitor to the GGNRA I need authority and enforcement to ensure that people keep their dogs on leashes to keep the rest of us safe and free to enjoy the parks.

These are animals, they are unpredictable and are not valued above humans.

Correspondence: Dogs are antithetical to preservation of natural and cultural resources which is the National Park's stated mission. So this plan is a failure to fulfill that mission in any meaningful way. No dogs should be allowed on national park lands except picnic areas and paved roads. To allow otherwise undermines the federal regulations on these lands and other national park lands.

Furthermore, even if it could somehow be justified to allow dogs on GGNRA land, this plan will be a complete failure without strict enforcement which is why this whole thing came about in the first place. With the federal government broke I can't see it dumping money on enforcing this complex dog rule proposal. So let's be realistic this plan is a loser. Who is going to pay for the hundreds of enforcers it would take to implement and enforce

this complex rule? Nobody that's who.

Correspondence: Dear NPS:

I live in Berkeley and cycle through Area A of the Presidio and Marin Headlands regularly with my 6-year son. It is vital to preserve and protect sensitive natural resources, particularly endangered bird species like the Snowy Plover and other animals. The proposed NPS plan for limiting dog walking within GGNRA should be adopted without change.

This plan offers a good balance of access to dog owners while protecting wildlife and the quality of park experience. I am disappointed that many dog owners opposed to the plan cannot recognize the importance of protecting all animals in the park.

Correspondence: I am the mother of a 13-year old daughter with serious learning disabilities. Like many children in her situation, she has a very difficult time socially. After receiving some good advice from my daughter's doctor, we brought a retriever into our family. The benefits to our daughter have been tremendous, as you might imagine. Of key importance is that our daughter routinely excercises our dog in the area bordering our home in Mill Valley, the Marin Headlands, and Muir Beach. This has been an incredible bonding experience for the two of them and a wonderful way for my daughter to safely hike on her own or with her other learning disabled friends. If the dog were not permitted to go with them, they would not be allowed to go for safety reasons. Getting learning disabled kids to feel motivated to venture into the world, let alone exercise independently, is a huge task which would be impossible without dog access to the GGNRA in our area.

It is my understanding that the GGNRA was established by Congress for use by urban residents for daily recreation, not as a protected wilderness. By eliminating dog access, you will be eliminating a HUGE part of the Mill Valley community's recreational opportunities. Our family, like countless others, moved to this area to take advantage of these opportunities. PLEASE don't take them away from us!!!

Correspondence: I wish to object to the new regulations proposed to restrict off-leash dogs in the parks of the Golden Gate National Recreation Area (GGNRA). Public parks are meant to be a shared resource for the community. Dogs are only allowed off-leash in a small portion of parkland, it seems fair and reasonable to allow this part of the community a chance to use the parks.

Dog owners are probably one of the heavier users of public parks where dogs are allowed. The vast majority of dog owners are highly responsible about supervising and cleaning up after their dogs. That there is an occasional miscreant is to be expected and should not reflect badly on the 99% of dog owners that are being good stewards. I think it is discriminatory to focus on dogs. I find cyclists do much more damage to trails in muddy

weather leaving large gouges and tracks. Horses leave big piles of horse poop (which unlike dog poop is not picked up). However this is the price we pay for a large, heavily used park in an urban area. We have to share and be tolerant to the varied needs of our community members.

There are already restrictions in place to protect wildlife. People who wish to avoid dogs can easily do so since most parkland is already closed to dogs. I think local parks could be overwhelmed by dogs if the GGNRA land is made unavailable.

I think it is cruel to always keep a well behaved dog on a leash. I think it is unfair to take away the small portion of parkland currently open to off-leashed dogs. I think in an urban area, with a lack of open areas for dogs, this lack must also be taken into consideration. I would expect that if off-leash dogs are banned from the GGNRA that horses and cyclists will be as well for the very same reasons. Please don't deprive your biggest supporters of access to parks. I have come to a new appreciation of nature through my walks with my dog and I walk in a off-leash dog park daily. Isn't this the point of a park?

Correspondence: As a frequent visitor to San Francisco, I have long enjoyed mine and my family's visits to the Presidio while we are in town. Recently, however, one such visit was severely disrupted when my 5 year old boy was terrorized by two dogs that had wandered out of sight of their owner. While we were cornered by the beasts, the only response of the owner was, "Oh, don't worry, they're friendly." Little consolation to a terrified little boy about to wet himself. I later witnessed other dogs rooting around, and defecating in one of the precious few areas that have undergone some native plant restoration work. Despite the presence of obvious signage illustrating the work that had taken place there, and several informative brochures noting just how rare of a micro-climate that portion of the S.F. peninsula provides, it almost seemed like the dogs were there specifically to undermine every attempt to give the part back to it's natural state. There are hundreds of acres available throughout the S.F. city park system available for dogs to play in, but only the National Parks have the purview of restoring native flora and fauna. Please limit the destructive potential of visiting dogs, by requiring dog owners to be just as responsible as they claim to be. Modern leashes still provide plenty of mobility, and it's not worth sacrificing the park's biodiversity, nor the hard work of the park employees and volunteers.

Correspondence: I would request that you insist that all areas on the listed parks be areas where leashes for dogs are required, and that you ban people with more than two dogs from the listed parks entirely. We have so few spaces in this city for wild animals, while this city has an abundance of homes, hotels, stores, restaurants, and more urbanized parks where dogs are welcome. Choosing the privilege of letting a dog off-leash in a particular area (when there are so many other environments for off-leash dogs) over the survival and well-being of a ground-nesting bird like the snowy plover strikes me as the worst kind of selfishness and entitlement, and not in keeping with the character of this city.

Correspondence: I have reviewed the GGNRA Draft Dog management plan and I am VERY CONCERNED about much of the plan particularly as it relates to Fort Funston. This park in particular (over Crissy Field and others) is particularly suited to off-leash dog walking. When the City of San Francisco turned the property over to the GGNRA I understand that it was with the plan to maintain it as a dog friendly park. You know the statistics of dogs per people in San Francisco and creating such SEVERE limits to the off-leash dog areas at Fort Funston is a very poor idea which will flood city parks. You are not balancing the best use and need for such a facility here in San Francisco. I believe that the native plant and bird advocates have overstepped reasonable bounds here as there are very few birds and plants native to this specific area (sand dunes next to the ocean) and the population of birds co-exists just fine with the dogs. I walk around the area on a regular basis. The people that both walk with dogs and by themselves currently co-exist very well and your recommendation DOES NOT address what the city wants and needs. To appeal to a small minority and reject the majority is in my opinion inappropriate and as such you have created a very flawed plan here. Poll the majority of San Francisco residents and voters and I believe that your proposal would be soundly rejected. Since we live in a democracy, I hope your final plan represents the wishes of the majority of San Francisco residents which is to leave off-leash dog walking as it has been in the past at Fort Funston.

Correspondence: GGNRA,

I wanted to take a moment to voice my support for the recommended changes to the current dog walking rules at Crissy field. I love Crissy field, but I don't like the dog owners and their dogs for turning into one big off-leash extravaganza. Instead of smelling like ocean air, the place smells of dog urine. My son has been scared multiple times by a wandering off-leash dog, with a surprised owner saying he won't bite, he's friendly. Not every body wants to know or be bothered by their animal. If dogs can come to Crissy field without rules, why can't horse owners do the same. Make rules and enforce them without hesitation.

Please don't be afraid of the canine bullies and their typical tactic of being loud and ready to speak into a television camera. The majority of people who enjoy the GGNRA, appreciate the natural setting and don't want to be bothered by this irritating and potentially deadly nuisance. Do we have to wait until one of these so-called friendly dogs attacks someone before action is taken.

Stand your ground, set policies for the majority, and continue to be a trend-setter instead of door mats for the canine collective. There are plenty of people like myself who support your efforts. If you made a request for the supporters of your efforts to hold a gathering to show their support, I would be there.

Correspondence: I have read your documents regarding the access by dogs for the Rodeo Beach and surrounding trails. I support plan 6A for the beach and 7A for the surrounding trails. Although I have never seen a dog near the lagoon area, I also support the proposed fence along the lagoon. I have hiked for 50 years in these areas, the most recent 15 years with my dogs. I have never had a negative incident regarding dogs in all that time. Rodeo Beach is the most accessible beach for me as I have a disability which limits my driving to West Marin. It is such a treat to take the dogs to Rodeo Beach. There are relatively few people on this beach and the gravel beach provides good footing for me. The dogs can run and play in the surf safely, chasing balls and sticks. The surrounding trails provide lovely views. No dog, mine or others, on or off leash, has ever been a problem for me in this area. In this

day of obese sedentary children and adults I would think you would have a mandate to encourage all forms of outdoor activity, including running with dogs in an open area. Many people will not take long walks if the dogs can not run free and will curtail their activity if they have to hold the dog on a leash. With my disability, it is difficult to go out walking with my dog on her leash. I have watched as year by year dogs are more and more restricted, more and more confined to sedate walks in limited areas. I hope you do not close off yet one more wonderful place to be free.

Correspondence: To Whom It May Concern

I am very sorry to see the plans the NPS has come up with to change the way dog owners can use the GGNRA. The plan is called "Dog Management Plan/Environmental Impact Statement". The purpose of the plan/DEIS are described in the following 4 points. 1. provide a clear, enforceable policy to determine the manner and extent of dog use in appropriate areas of the park; 2. promote the preservation and protection of natural and cultural resources and natural processes; 3. provide a variety of visitor experiences, improve visitor and employee safety, and reduce user conflicts; and 4. maintain park resources and values for future generations.

To organize my comments I will base my feedback on those four points.

My name is Jerry van de Beek. I have lived on the edge (WUI) of the GGNRA National Park at the trailhead of the Miwok Trail for the past 11 years. I walk with my dog on the Headlands on a daily basis and on weekends at Muir Beach. We share the trail with other hikers, mountain bikers and people on horses. This diversity is interesting and mostly fun. I can't see a reason why we need a specific dog management plan and the reasons as given by the NPS for this plan are not based on accurate research or fact.

1. I don't feel we need to add restrictions to the usage of the GGNRA, which we then have to spend money on to enforce, especially as the reasons for these restrictions are based on false facts and a specific skewing of the NPS's own scientific research. (See below for reference). Policing the GGNRA would create a very negative atmosphere. However, educating people and make them feel a part of and responsible for the well being of the GGNRA is I think a much better policy.

2. Dogs do not have a negative impact on the environment. I feel strongly that the singling out of dogs as the perpetrators of soil erosion and damage on NPS land is absurdly overstated. They no more erode the land and arguably do less damage than the daily sightings of hikers, casual walkers, horses, mountain bikers or fishermen. I think everyone using the GGNRA can do better, like encouraging families to pick up trash when leaving the beach, not throwing empty water bottles in the bushes and discouraging after sunset drinking on the beach but I cannot see that, specifically, people walking dogs are causing such excessive harm to our environment that there is need for this over-inflated and amazingly expensive draft. I would also like to add that I noticed the NPS always use pictures of people walking more than one dog. In fact you mostly show dog walkers with 4 or 5 dogs. This is an enormous misrepresentation of the vast majority of dog owners that use the GGNRA as a whole.

Repeated claims are put forward by the NPS that dogs, and especially off-leash dogs, pose a significant danger to plants, birds and other wildlife. These claims are stated as fact and are being used to justify the need for significant restrictions on access to beaches and other areas in the GGNRA by off-leash dogs. In fact the reverse is true. Assumptions about the effects of "disturbances" on Snowy Plovers and other shorebirds by off-leash dogs have also been disproved by many studies like the 2007 study by Megan Warren at Crissy Fields and two other sites at Point Reyes ? all NPS land. More excerpts of these studies are attached at the end of this letter.

3. A well-exercised dog is a well-behaved dog. Dog owners carry the responsibility for the actions of their dog. There is no evidence that allowing dogs to go off-leash, for play opportunities and socialization experiences, increases the incidence of aggression toward a person. Every reputable expert working in the field of dog behavior in the United States is of the opinion that it is likely that off-leash access decreases the likelihood of aggression. Again I have been on these very trails for the past 11 years, twice a day, and have never been attacked by a dog. Portraying dogs as aggressive and something to fear is just a tool to push the agenda of this extreme plan. Specific studies disproving that off-leash dogs are dangerous to visitors are attached at the end of this letter.

4. We all have to help maintain the parks for future generations. I can appreciate that especially as I use the GGNRA every day. Again, I see no reason to impose restrictions on people who want to walk their dog on the trails and beaches of the GGNRA as these restrictions do nothing to help to maintain the park. Moreover they are singling out one part of the urban population that uses the park for daily recreation as mandated by Congress when the GGNRA was established. NPS would do well to note that the GGNRA was specifically established by Congress as an area of urban recreation, for mixed use, and not as a protected wilderness.

I hope I will be able to continue to hike on the GGNRA and enjoy our beautiful landscape with my dog and all my neighbors and their dogs. Therefore I urge the NPS to reconsider their plan and I request that the current rules relating to dogs - those of limited areas of leash control but mostly dogs under voice control - be upheld and left unchanged as we, after all, talking about less than 1% of all the total acreage of the GGNRA.

Please see the research excerpts at the bottom of this letter.

Thank you for your attention,

Jerry van de Beek Mill Valley CA 94941 Research Addressing Point 2

The November 15, 1996 report "Western Snowy Plover (a Federally

Threatened Species) Wintering Population and Interaction with Human Activity on Ocean Beach, San Francisco, GGNRA, 1988 through 1996" by Daphne Hatch found that there was an increase of more than 100% in the number of snowy plovers in the years after the 1979 Pet Policy went into effect (allowing dogs off-leash on Ocean Beach and elsewhere). Hatch could not find any negative relationship between the number of dogs on the beach at a given time and the number of plovers on the beach at the same time.

A follow-up 2006 Hatch Report considers effects on the numbers of plovers after two Federal Court rulings reinstated the 1979 Pet Policy, allowing off-leash dogs back on Ocean Beach. The maximum number of plovers ever recorded was in 1994, a time there were no restrictions on off-leash dogs on Ocean Beach. Numbers have varied since then (from a low of 14 in 2000 to 35 in 2005), but there is no correlation between when numbers were low and when dogs were allowed off-leash. For comparison, there has been a similar change in plover populations at a no-dog beach at Half Moon Bay State Park (designated as Critical Habitat for the birds) (personal communication from plover monitoring group). At that beach, there was once a maximum of 60 plovers, but currently only 25-30 are present. This decrease cannot be blamed on dogs (since they're not there), and appears to mirror what Hatch reported at Ocean Beach. Therefore, it's possible that some larger issues are responsible for plover numbers, not the local conditions (dog or no dog) at each beach.

"Recreation Disturbance Does Not Change Feeding Behavior of the Western Snowy Plover", Megan Warren, UC Berkeley Environmental Sciences 196, Senior Research Seminar, May 7, 2007. Before beginning the study, the researchers "hypothesized that designated off-leash areas would represent comparatively poor habitat and would negatively influence diversity and/or abundance of birds and small mammals relative to nearby habitat where dogs were required to be leashed within the same urban park system? [On-leash sites] were believed by city officials to have high public compliance with leash laws. Off-leash sites were either in officially designated off-leash areas or, in two cases, in areas that were designated as on-leash but were known to experience frequent use by off-leash dogs and their owners." Researchers conducted bird surveys in all 56 sites (half off-leash, half on-leash) a total of three times between May and July 2002. Each survey involved a 5-minute, 100 m, fixed radius point count, followed by a 5-minute playback of a black-capped chickadee mobbing call (known to attract several bird species and used to increase detection of less vocal species). A 5-minute post-playback point count concluded the survey. Researchers recorded all birds that were seen or heard during the 15-minute period. They only counted birds if they interacted with the environment (that is, they did not count birds flying over the survey site). Small mammals were live-trapped at a randomly selected subset of 32 of the original 56

sites.

They found that "Designation of sites for dogs to be on- or off-leash had no measurable effect on the diversity or abundance of birds and small mammals within the sites that we surveyed in the Edmonton River valley. There was a similar lack of difference in bird abundance when we restricted analyses to only those species that appeared to be breeding, only those species that nest on the ground or in low shrubs, and only the most abundant

Research Addressing Point 3

During the course of Negotiated Rulemaking, claims have been made that "literally hundreds of off-leash dogs have been lost, injured, or killed while roaming the [GGNRA] off-leash." (Emergency Petition to the GGNRA, p.20) These claims have been used to justify restricting off-leash access ? it is necessary for the protection of the dogs. Is this accurate? Analysis of incident reports from 2001 to 2006 provided by the GGNRA yield the following information: There were a total of 62 incidents involving dogs over the course of the six years from 2001 to 2006. The claim of "hundreds" of incidents involving dogs in the GGNRA is, quite simply, false. When you consider that tens of thousands of dogs visit the GGNRA each day, the total number of incidents reported is miniscule. The incident report 4161 incidents involving people. The GGNRA is not an unsafe place for off-leash dogs. Interestingly, comparing the numbers in the table between dogs and people indicates that the GGNRA is significantly more unsafe for people than for dogs.

At the February 8, 2007 meeting of the San Francisco Animal Control and Welfare Commission, Jean Donaldson, the founder and director of the SF/SPCA Dog Training Academy, testified on this issue. Donaldson has over 30 years experience in dog behavior and training, and is the author of several books, including *The Culture Clash*, which was voted the Best Behavior Book of 1997 from the Dog Writers Association of America and is the #1 book recommendation for dog owners from the Association of Pet Dog Trainers. At the Commission meeting, Donaldson said (a complete transcript of her statement is at the end of this issue summary):

There is not only no evidence that allowing dogs off-leash for play opportunities increases the incidence of aggression, to a person every reputable expert in the field of dog behavior in the United States is of the opinion that it is likely that off-leash access decreases the likelihood of aggression. There is no research demonstrating that dog parks or off-leash play contributes to any kind of aggression, including dog-dog aggression. It was brought to my attention a couple of months ago, that claims were being made that such research existed. And so I did an exhaustive literature search as well as consulting at length numerous colleagues in dog behavior in the

United States. All were amazed at the suggestion in view of no such research. Trish King, my counterpart at the Marin Humane Society, has been publicly quoted several times as having authored research concluding off-leash play contributes to aggression. I spoke to her at length about this and we corresponded in the last couple of weeks. She has not performed or published such research. She is furthermore, and I quote, "mortified", unquote, that anyone would suggest or imply that. She believes off-leash access, if anything, prevents aggression. Priscilla Feral, the president of Friends of Animals, often has also been quoted as opposing off-leash access. I spoke to her this past Monday regarding Friends of Animals' position, and she was adamant that statements suggesting that Friends of Animals oppose off-leash access are false. The same holds true for Kathy Santo, a nationally recognized colleague of mine. I also spoke to her this week. She followed up the conversation with me with an email, which I will now quote: "Hi Jean. I wanted to email you and clarify my stance on dogs engaging in off-leash play. I strongly believe that it is good, or more accurately necessary for healthy dogs to play off-leash in safe areas while supervised by their owners. An exercised, socialized dog is a happy and well-adjusted dog." Clearly, there is no compelling reason concerning the safety of dogs themselves to restrict off-leash recreation in the GGNRA.

There is no public safety crisis involving dogs in San Francisco. According to SF Animal Care and Control, about one-quarter to one-third of all households in San Francisco have at least one dog. Therefore, ACC estimates the total number of dogs in the City to be about 120,000 to 140,000. The total number of dog bites reported in San Francisco in 2004 was 384, down 20% from the number in 2003 (SFPD testimony before SF Police Commission, and private communication; this is the last year for which I have information). But ? and this is a big "but" ? San Francisco does not separate incidents where dogs bite other dogs from incidents where dogs bite people when it reports the total number of dog bites. Since the vast majority of dog bites involve one dog biting another, the number of people bitten by dogs is actually significantly lower than the total number suggests. Considering the number of dogs in San Francisco, the number of bites is extremely small. Do the math: 120,000 dogs times 365 days a year equals the potential for a minimum of 44 million bites each year. The actual number is 384 (a significant number of which are dog-dog, not dog-people bites). Reports of serious dog bites and fatal dog attacks make the news precisely because they are unusual and rare. In one of the most comprehensive analyses of injuries due to dog bites, Canadian researchers searched a national database of all reports of injuries throughout Canada in 1996 (Canadian Hospitals Injury Reporting and Prevention Program, or CHIRPP; the study can be found at: http://www.phac-aspc.gc.ca/injury-bles/chirpp/injrep-rapbles/dogbit_e.html) Dog bites represented 1% of all injuries in the CHIRPP database. The CHIRPP analysis found that children between 2 and 14 years of age sustained over 70% of all bites. Most of the

dogs involved in bite incidents (65.2%) were either part of the family, part of the extended family, or part of a friend or neighbor's family. Only 12.2% were stray or unfamiliar dogs. The majority of the dog bites (64.5%) happened in someone's home (either the victim's or another person's home). Only 3.1% of dog bites (38 total) occurred in a public park. In other words, bites occurring in locations similar to the GGNRA accounted for a miniscule 0.02% (2/100th of one percent) of the total number of 188,717 injuries in the database that year. A majority (50.3%) of victims had been interacting with the dog before the bite: 19.3% were petting, handling, feeding, or walking with the dog; 17.5% were playing with the dog; 7.8% had hurt or provoked the dog; and 5.7% were disciplining the dog. The Canadian results are similar to those reported in the US. The Centers for Disease Control's MMWR weekly from July 4, 2003 says that 42% of all dog bites occurred among children under 14 years of age, and cites research that indicated that in children under 18 years old, 80% of bites were inflicted by the family's (30%) or a neighbor's (50%) dog. Children are primarily bitten by dogs they know, not unfamiliar or stray dogs that run up to them in a park.

In testimony before the San Francisco Animal Control and Welfare Commission on February 8, 2007, Jean Donaldson, the founder and director of the SF/SPCA Dog Training Academy said:

Off-leash play has not proven to be a factor in dog bites. According to both the Centers for Disease Control and Prevention and the American Veterinarian Medical Association, the majority of bites take place on the guardians' property. The remaining incidents involve dogs that are either restrained, i.e., leashed, or dogs that are "at large", [that is,] unsupervised dogs that have escaped confinement. Consider for example, the three highest profile serious dog attacks in the history of San Francisco. Those are Diane Whipple in 2001, Sean Jones in 2001, and Nicholas Faibish in 2005. In the first, the dogs were on-leash. In the second, the dogs had escaped confinement in the backyard and were at large. And in the third, the dog was confined in the guardian's home. I would add that in all these instances, the dogs were un-neutered. Interestingly, it could very well be that the safest dogs are those that attend off-leash dog parks. Shyan and cohorts published a research paper in 2003 in the Journal of Applied Animal Welfare Science, which looked at the prevalence of interdog aggression in dog parks. Dog-dog problems turned out to be minimal and of a non-serious nature. While the paper did not consider the question of dog-to-human aggression, the obvious interpretation of this low incidence of aggression was interesting and I think very relevant. They suggested that self-selection operates strongly, i.e., people who take their time to get into their car or walk to a designated off-leash area to exercise their dog tend to not to be the type who are derelict in other areas of dog guardianship, such as training, socialization

or appropriate containment.

As is clear from all of this, the chance of being bitten in a park by a strange dog that you have not interacted with is pretty slim.

Consider where dog bites rank in the context of accidental injuries for people in general. According to the Centers for Disease Control's WISQAR (Web-based Injury Statistics Query and Reporting System, accessible at: <http://www.cdc.gov/ncipc/wisqars>; this site tracks injuries treated in hospital emergency rooms) site. Dog bites represent 1.1% of all accidental injuries. At least four of the injuries on the list are not only more common than dog bites, but could easily happen to visitors in the GGNRA ? fall, overexertion, motor vehicles, and cyclist. If off-leash access is restricted in the GGNRA to "protect" the public, then walking, hiking, all motor vehicles, hang gliding, rock climbing, and bicycling should similarly be banned. These activities combined account for 52.8% of all accidental injuries. Once again, the low frequency of dog bites, especially when compared to other more common causes of injury, indicates that bites cannot be used to justify restricting off-leash access.

Correspondence: Dear Superintendent Dean,

I would like to express my very strong support for the NPS preferred alternative for dog management on the parklands of the GGNRA. Although I realize that dog owners are a very vocal segment of the park users, they are only one of many users and need to be more sensitive to the needs of the others -- in particular the native plant and animal species that are highly impacted and in some cases even endangered. The parks are one of the few refuges left for these species, and we cannot allow continuing disturbance of their habitats because of one vocal group's insistence on access.

Unfortunately dogs aren't really part of the natural ecosystem, and their presence is generally disruptive at best and quite destructive at worst when, for example, dogs go into fish bearing creeks with spawning redds, etc. As a hiker and park user, I would prefer to enjoy nature without dogs on the trails, but do not object to on-leash dogs in appropriate areas i.e., those without sensitive species and habitats. However, few owners comply with leash laws and, in my experience, "under voice command" is generally ineffective, with consequent concerns both for people (esp. children) and other dogs.

I believe the Park Service has done an excellent job of weighing data,

developing a sound plan, and providing opportunities for public comment. I hope you will consider the majority of us park users who are not dog owners, as well as holding to your mandate to protect the resources of the parklands for all and for future generations and will implement your plan as proposed.

Thank you for the opportunity to comment.

Correspondence: Enough is enough! It is tiresome to reopen this battle every few years. Please leave the access to this recreational land as it is currently. there is really no need to change the policy. In San Francisco, where we have more dogs than kids (and I have both) it is absurd to act like the needs of dogs and dog owners can be ignored. One of the great treasures of my life is walking with my dog at Fort Funston. As proposed, the rules would allow me to walk down to the beach on one of the parking lot, but if i came up the southern stairs to the parking lot i would get a ticket. This is insane. Please use your limited resources more efficiently and do not revisit this issue time and time again. How many times must we fight this proposal? I would much rather use my advocacy in other arenas, like fighting the lack of resources for the EPA or for education or health services.

Correspondence: I am saddened by the changes proposed for Crissy Field. I can live with most of them but the worst one is no dogs in the INLET between CENTRAL BEACH and EAST BEACH.

On any day whether high or low tide that is the dogs and owners favorite place. Dogs LOVE running through the water to retrieve balls or chase each other. That area is always different and creates a shallow area for running.

I feel that dog owners would be happy to follow the new rules were that area included for dogs under voice control. As things stand now, dogs will still want to claim that area which will lead to problems that could be avoided.

Children picnicking and boaters are never in that area. That beach has always been a haven for dogs ALL YEAR ROUND, if we are to lose it at

least don't take their favorite part. We are true lovers of the beach not just seasonal ones.

Thank you, Elizabeth Martin

Correspondence: After visiting Fort Funston, I came face to face with the enormous dog population there. If i saw 200 animals in 2 hours, only about 30 were humans! At the meetings we held, I repeatedly heard that reducing the off leash space at Fort Funston would cause an undue hardship on those owners who have bad knees, walk with canes or are otherwise debilitated in some fashion or another. The vast majority of those that I held long conversations with were adamant that access to the lower beach was prohibitive and unsafe for some and dangerous for others. So, I went there and walked down to the shoreline and I agree with their assessment. Some kind of new access should be formed there, a walkway, steps, sandladders or something. Making the beach unrestricted and accessible will take away the argument that "there is no other place for us to take our dogs to the water." It will also keep good faith between the Park Service and all those dog owners who want to be "cooperative". [and more obvious signage that spells-out the new rulings will eliminate guessing and confusion and make for easier 'compliance']

Type:

Correspondence: In the late 60's when I was a college student at the University of San Francisco I worked to establish the GGNRA. The vision to create an expansive wild space near such a dense urban environment that would provide a "lung" for urbanites and their families was realized in 1972.

The GGNRA has for decades provided open space for all to enjoy. And the "all" includes dogs because they are a part of families.

The small percentage of open space that allows dogs should be left unchanged because it provides for those of us who may not be able to otherwise use the area.

One of our sons and his family live in San Francisco. As families we frequent Crissy Field with our dogs. Those who are critics need only to observe the joy and happiness that prevails there. There have been several times when I have encountered dog-less families who go there to play with dogs or others there to scout out a particular breed. It has always been a civil and neighborly experience.

To remove these dog friendly areas as you propose is to deny the purpose for which the GGNRA was established and for which I so diligently volunteered.

Sincerely,

Barbara K. Westover, Architect

Correspondence: As a professional landscaper and gardener I feel very strongly that dogs should be kept on leashes to minimize their negative impacts in delicate areas. Even the most responsible of dog owners cannot prevent their dogs doing damage if they do not have constant control of the animal's whereabouts. The only way to achieve such control is by requiring that the animal be kept on a short leash. Many people may feel that their dog can't possibly do any damage but those people are wrong. All it takes to kill a small, delicate plant is the urine, feces, or trampling of one dog. When that is multiplied by hundreds or thousands of visitors per week then it comes as some surprise to me that dogs are allowed in areas such as the Presidio at all! Responsible dog owners already know all of this and they act accordingly. The employees of the Presidio should be empowered to prevent

the carelessness of the irresponsible owners. If left up to me, dog enthusiasts would be required to go to a different park altogether. There is really no place for pets in an area being so painstakingly restored!

Correspondence Type: Web Form
Correspondence: I am a resident of San Francisco, and I have walked my dogs in the GGNRA

since 1991. I completely opposed to the GGNRA's attempt to restrict current off-leash areas. I have 3 well socialized and well behaved dogs (2 small, one medium sized) that have been rescued from SF Animal Care and Control and local rescue groups.

I currently live in the Mission district, and at least five times a week I visit either Ft. Funston or Crissy Field. Occasionally I visit Lands End. I also frequent Pacifica's Mori Point area and Montara's Sweeney Ridge as well. Previously, I lived in the Sunset district, where I walked daily my dogs daily at Fort Funston.

One of the most important reasons I continue to live in San Francisco is the off-leash walks I can take with my dogs in various GGNRA locations. These walks provided fresh air, exercise, and opportunities for both human and canine socialization.

Currently less than 1% of the GGNRA allows off-leash recreation, and now the GGNRA wants to reduce that even further. Is it too much to ask that we retain the usage of this small amount of space as it has been for many, many years? I propose the GGNRA should develop a NEW alternative, that would not only KEEP the current areas off-leash, but also lead to development of ADDITIONAL off-leash areas in new land obtained by the GGNRA. The GGNRA should be expanding not reducing off-leash locations.

GGNRA is a RECREATION area. Off-leash areas provide much needed recreation to both dogs and humans living in the urban environment of San Francisco. When GGNRA was created in 1972, it was established with the intent to continue to provide needed recreational open space. Off-leash dog walking was acknowledged as one of the traditional recreational uses taking place in the GGNRA when it was created. By proposing to drastically diminish off-leash areas, GGNRA is not honoring the agreement by which it was handed over by the city. These off-leash areas are a part of the tradition of the Bay Area, they have been around for a very long time with support of the community.

There is a definite need and desire for off-leash space in the GGNRA. A visit to Fort Funston or Crissy Field on any weekend is proof of just how utilized these off-leash spaces are by the community. Has GGNRA done a study to see exactly how many people utilize these spaces for off-leash activity? I know the results of such a study would show A LOT of people and dogs. So many times I have been to Fort Funston on a weekend and the parking lot is packed. The majority of the people are there with a dog. If these spaces are taken away or even reduced, there really is no comparable alternative for people to turn to.

I attended a recent open house hosted by GGNRA, and was told by one of

the rangers that dog 'incidents' were one reason why they wanted to take away off-leash areas. However, this is not backed up by GGNRA's own statistics. Incidents involving dogs is extremely low, whereas incidents involving people (and no dogs) make up the majority of reports. Using the GGNRA's reasoning we should also ban people from these areas.

During the approximately 20 years that I have frequented the GGNRA with my off-leash dogs I have observed the following:

1. The majority of dogs are well behaved and enjoy interacting with one another.
2. Dog guardians tend to be responsible and pick up after their dogs.
3. Dog groups organize ongoing clean-ups to assist in the park upkeep.
4. Dog guardians often pick up trash left by people, in order to help maintain the parks.
3. Dog guardians care a lot about animals, nature, and conservation.
3. People use these areas to both walk dogs and socialize with friends and relatives.
5. Dogs that are well exercised are better behaved.
6. Dogs are social animals, and off-leash areas provide a way to dogs to socialize in a way that is natural to them.
7. City parks offer significantly smaller off-leash spaces. If GGNRA reduces the current off-leash space, off-leash city parks will be much, much too crowded.

Finally, I would like to say that the preferred proposal for Fort Funston is extremely drastic, especially considering this seems to be one of the most frequented locations of all. It would be completely unfeasible for many people who are elderly, disabled, or not physically fit enough to descend either of the extremely steep trails down to the beach to reach the off-leash areas. (Besides the fact that at high tide there can be little beach to even walk on.)

I see many disabled and elderly people at Fort Funston with their dogs. The GGNRA's proposal to take away the majority of off-leash areas on the upper cliff tops would in essence make Fort Funston inaccessible to many populations. I myself have a permanent disability that makes reaching the beach very difficult, so I walk on the upper cliff areas. My elderly father, who has undergone quadruple bypass surgery and also suffered a stroke, still walks his two small dogs in the upper areas at Fort Funston. Yet, if GGNRA's proposal is passed, this would be an nonviable location for many people that currently go there.

The GGNRA tried to take off-leash areas away from the citizens of San Francisco once before and lost, and now they are trying to do it again. Enough is enough. We live in a highly populated urban area, and GGNRA is a recreation area, not a National Park. We need more recreational space, not less. Retaining < 1% of GGNRA for off-leash dog walking is not too much to ask for the citizens of the Bay Area.

Sincerely, Leigh Moyer

Correspondence: The proposed restrictions on off-leash and expanded leash required areas in the remaining one percent of the parks is an onerous burden to one of the largest historical and traditional users of the parks: Dogs and their owners.

By specifically targeting dogs and their owners/walkers, it violates the traditional use condition of the bequest of the land from the city to the park system.

The proposal also does not take into account the parks character as an urban recreation area that must reflect the existing users of the parks.

Further, the assumptions underlying the proposed restriction mis-characterize the facts and create the false finding that the existence dog walking within the parks is somehow in opposition to environmental goals. To the contrary, dog walkers are important eyes on the park and are vested in its protection as a natural resource.

Finally, the effect of restricting the 110,000 dogs from these areas will create an unsustainable burden on the city parks and lead to an exacerbation of behavioral problems for dogs within the city.

Thank you,

Jamie White

Correspondence: The GGNRA Dog Management Proposal is restricting access to taxpaying citizens who own dogs for political reasons. Dogs are not destroying the natural environment - people are - people who ride horses, ride bikes, hike etc.

It is a crime that the GGNRA is using my dog owners' tax paying dollars to fund the resources who have put together the 2500 page plan. The leaders within the GGNRA should be elected by the people - today they are clearly in the back pockets of some wealthy citizens who ride horses and just do not

want dogs in their way

Dogs and Dogs Owners deserve equal access to the the trails and beaches in the Bay Area

Furthermore the only official who bothered to contact us was Jared Huffman - the others sent back "canned" letters and Nancy Pelosi's web site would not even let us contact her so she is clearly behind the Dog Management Plan.

The GGNRA should revise their plan - dog owners deserve the same access as all other citizens

Correspondence: I believe the new rules the Park service is trying to implement are an attack on one demographic of individuals (dog owners), this attack is disguised behind the need to protect the environment of the parks and remove danger from dog bites/attacks.

If we were to look around at what causes natural degradation I would speculate as to say 99.99 percent is from humans, for example: Eucalyptus trees, roads (where animals are killed every day) going through the park, horses trampling endangered garter snakes (I have seen numerous trampled snakes), horses tearing up the landscape and leaving copious piles of dung, bikes tearing up trails and roads.

The danger from dog attacks/bites is certainly a possibility?never heard of anyone being killed by a dog in GGNRA. Anyway, if danger is an issue we need to eliminate everyone from going to GGNRA areas. Murders might be among park goers, bikes might hit and kill people, horses could trample someone, cars could and have killed people within park boundaries.

Why is this focus mostly on dog owners? I don't think blaming a few dogs for damages is a fair assessment of the problem and it looks more like an excuse to go after one type of park user in favor of another (horseback riders).

Thank you

William Bailey

Correspondence: I think dogs should always be on a leash. I have had a St. Bernards run up to a group of children I was taking to have a picnic with one of the children being fearful of dogs after having been beaten. It was difficult for me to stop the dog and I picked the child up (with a bad back) to calm the child. I experienced a dog knocking my child off his swing in a public park and the dog owner yelling at me about the her dog getting hit with the swing. I have witness a dog standing on its back legs leaning on a young child with its front legs on the child's chest barking into the child's face. I have had large dogs jump on me and I have a bad back. I find that everyone in the public is considered a toy for the dog's entertainment without permission from ourselves to be that toy. Owners always say their dog is friendly, but do I need to be the object of their personal habits (the pet) fun time? I have seen children slide through dog poop in public parks and walk through poop on school grounds. A dog is a choice of one persons habit/hobby, and like smoking, why should others have to suffer second hand hassles? I have had dogs growing up, I have adopted stray dogs and found homes for them, and I baby sit friends dogs. But dog needs should not equal the needs of humans. They should be respected but not treated as equals. I just for once would like to walk on the beach and not have a wet sandy dog run up and jump on me or run across my blanket while I am eating. Please help!

Correspondence: The proposal suggests that Crissy Field separate the family area and dog area by banning dogs from the beach located in front of the parking lot. When you visit Crissy Field today, the beach front at the parking lot is full of families and their dogs. Banning dogs from the area will also bann families from the area. This is unfair to our families who will be pushed

away from the bathrooms and be forced to lugg our family picnic supplies and strollers to a greater distance away from the parking lot. Banning dogs from the fore-beach area takes away from the purpose of the park as a city recreational space. This is unproductive and unfair.

Correspondence: I will start my comment off by first declaring that I have not read the document and that whom ever is reading this will most likely realize that I work for GOGA. That being said I am obviously not commenting as a government employee.

I would like to make a suggestion as a previous dog owner and who happens to love dogs. I can understand the issues on both sides realizing that dog owners want an area where Fido can run without a leash. On the other hand I also understand that others who don't care for dogs don't want to have a dog running up to them for either affection or growling at them.

This suggestion may be in the plan but if not perhaps it will have an impact on a solution to keep all happy. Currently there is an area down in San Mateo off of Third Avenue that has a large fenced area for dogs. In this area, there are a couple of places that are shaded where owners can sit while there dogs run to their hearts content. Since this area is not territorial to any specific dog, I have never seen dogs fighting for "thier space". The place is fenced and dirt so there is no grass to tend. Since the area is agacent to a public trail that goes from SFO down to Redwood City, there are garbage cans available for owners to deposit their dogs droppings. "Fire Hydrents" are available for well doing what male dogs do. The place always seems to have a substantial amount of happy dogs running "free". I have even had people tell me that they drive quiet a distance just to go to this dog park.

I also remember seeing something similar while visiting the Seattle area. A parking area was established and from that point, you entered a paved "trail" that was fenced on both sides. It went quite a distance with portable "doggie stations" where their were bags, trash, and water for the dogs. At the end of the trail was a small beach that lead down to the water that had bouyes (sp?) floating to mark off the area from boats. I can't begin to tell you the amount of happy dogs that were enjoying the water as they swam out to fetch tennis balls. It was actually kind of a family get together of the whole area as the dogs played.

So just a couple of suggestions that may or may not be feasible. It seems with the amount of land that GOGA has perhaps something could be done to

appease dog owners without endangering current habitat or species but I'll leave that one to those who are more knowledgeable regarding the terrain of the park.

If you are interested and since I go to my mothers every weekend and go walk there, I would be more than happy to take pictures of the dog area if you'd like. You can email at the above address or well...you know where to find me at the office!

Correspondence: Dear Sirs and Madams,

Thank you for allowing public comment on the GGNRA dog plan. Since 1991 I have been living a few blocks from Ocean Beach (at Riviera) in San Francisco and have been walking the beach -- both long distances north and south several times each and every week. Having that recreational place to escape the busyness of the city is most welcoming to me as a human being.

Over those many years, I have seen the difficulties that the snowy plover have had to endure with each passing year, as well as the almost unbearable changes that the shore line has gone through during that period. Like you, I wish the snow plover would never be too tired to mate and that the shoreline never be dug up and never change. I think we as a society need to protect these treasures.

Yet, focusing on eliminating the canine population is nothing but a red herring. Yes, I have seen the occasional hound chasing shore birds from their standing positions, but that pales in comparison of the constant racing east and west that the birds endure from the incessant crashing of the waves. Similarly, time and again I have seen Rover dig holes in the sand and toss piles of sand to one side or the other. Yet, that disruption of the shoreline is but a speck of sand on the beach compared to the vicious and violent pounding that winter storm tides have done to the shoreline. Many times the shoreline is unrecognizable from one day to the next after a particularly

cruel tide.

Therefore, I suggest that we as a people and you as the guardians toss aside the red herring of Fido and stand up with some backbone and determination to finally ban the waves and the tides. That kind of moxie will really bring the change we desire for the snowy plover and the shore line -- and that of course is no change at all.

Now, some of you may say, "but Mr. Perry, the waves and the tides are natural". To that I say, "as natural as people and dogs".

Thank you.

Correspondence: I want to start by saying that I believe in responsible dog ownership, and hope that a few people who aren't following the rules aren't going to mean that leash areas for those who are responsible are restricted.

I have owned a Beagle, Nora, for 5 years, and live in Pacifica. Since San Mateo County parks prohibit dogs, we go to Fort Funston frequently. I tend to use this time as my exercise time as well, and often hike for 2+ hours.

The time Nora has there is the high point of our week. She is able to run freely and play unrestricted -- something that gives us both great joy. Limiting the off leash areas at Ft Funston as radically as is proposed seems draconian and unnecessary. I would like to see Mori Point stay available for on leash walking as well.

Please don't take these recreational outlets away. I'm in an office all week and these outlets are good for our mental and physical health.

thank you.

Type:

Correspondence: As a native San Franciscan (50 years), I feel that this "debate" has gone on far too long. Animals and humans must share the limited space and resources available to us in this community.

Most people consider their "pets" family members, as much as their human family members. Most people are responsible parents for both their children and animals. Unfortunately, there are still many, many dog guardians who are not as responsible as they should be -picking up their poop, and managing their dogs in a respectful way when it comes to others who do not share the same adoration for canines. I would suggest these same people are irresponsible in other areas of their lives as well.

Rather than spend so much \$ to enforce and create the amended off leash areas, why not educate and ensure that people have well trained dogs? For dogs to be off leash anywhere at any time, they should have a rocket recall. If you call them, they will come away or off of something ie. people, picnics, flora and fauna and back to you.

In addition to a dog license, dogs can be issued a tag which indicates that have passed a Canine Good Citizen test, which means the dog/human have been trained/passed a number of tests to ensure appropriate behavior in public. This would make for better managed, happier dogs and a happier community.

Most young and adult dogs need off leash play with each other to burn off there excessive energy, and maintain overall well-being, which will be a preventative for more serious behavior problems. Sadly our city parks located in such densely populated areas with merchants and traffic, do not

allow for safe off leash activity.

Why can't we all just get along?

Correspondence: Frank Dean General Superintendent GGNRA Fort Mason, Bldg 201 San Francisco CA 94123

Re: GGNRA DEIS Dog Plan

Dear Superintendent, I am requesting that the GGNRA adopt the 1979 Pet Policy to control off-leash dog walking on Ocean Beach, Fort Funston, and Crissy Field because it is more balanced, longstanding, supports recreation, collaboration and shared use.

I started walking my first dog on Crissy Field in 1974 as a boy. During those days the beach from the St. Francis Yacht club to the bridge was a very different place and rarely visited. It is a valuable open place where local citizens go to walk, meet each other, exercise and play with their pets. Over the years and with the investment of private citizens and the takeover by the US Park Service, the Crissy Field beach area has improved. These improvements including better parking, restroom facilities, pathways, etc. attract a wide range of visitors on nice weekends. We all share this place today in a peaceful manner. The GGNRA's proposed dog plan targets citizens of San Francisco and dog owners to give up their long standing rights and those of future young boys and girls unfairly while doing nothing to restrict the potential damage caused by the increase in visitors i.e. runners, walkers, kite flyers, surfers, and bikers.

Today I walk my current dogs on the same beach every morning and often in the afternoon as well. During the week few visitors walk the beach. I don't understand why the GGNRA is considering such a blanket proposal to eliminate off-leash dog walking, especially during these times. The DEIS indicates the policy is needed because dogs might or could cause a negative impact to the areas they currently visit. There is no scientific fact to these claims. As a daily visitor to the park I see far more egregious acts against the environment performed by humans that negatively impact the enjoyment these areas seek to provide us all.

I also oppose the GGNRA's proposed Compliance-Based Management Strategy which will change the status of off-leash areas to on-leash or no dogs without a chance for me to comment. This is unprecedented and just

un-American. A sneaky trick that indicates GGNRA policy is being driven by an unfair, no dog agenda. It makes me concerned that my voice and this comment letter will be tossed aside and not fairly considered by your office.

The GGNRA policy needs to be very clear, fair and balanced between dog owners, runners, walkers, kite flyers, surfers, and bikers who have peacefully coexisted for many years before the GGNRA and your office existed. Please reconsider your preferred alternative and adopt the 1979 Pet Policy.

Thank you for your prompt attention to this matter. Please contact me for further questions.

Sincerely,

Curtice Smith

Correspondence: I would like to disagree with the proposed restrictions on dogs in GGNRA's Crissy Field. We humans are very good at advocating for our human species while consistently giving the short stick to the animals who don't have a voice. We need to take into account that animals, unlike plants, have feelings, emotions and highly intelligent thoughts just like humans do. In the case of San Francisco dwelling dogs their time spent on walks like at Crissy Field are typically the highlights of their short lives. Animals are also voiceless and don't get a vote at the ballot box or a chance to express their comments on the Internet. Therefore, it is the duty of us humans to act as impartial advocates for all animals on the planet and to put ourselves in their shoes, not to just serve the interests of humans.

Dogs are meant to run and love to do so, like fetching a ball. Our San Francisco dogs are on a leash or left couped up indoors within the vast majority of the city's houses and streets that are dedicated for the benefit of humans. The infrequent times dogs get to run around are when they get taken to a park such as Crissy Field. It is a really special time for them and you can see it from their faces.

The argument is made that dogs violate the areas which are dedicated to endangered plants. However, those plant areas are fenced off and in my years of visiting Crissy Field I don't recall seeing dogs violating the fenced areas. If this is a problem then can't we solve it by reinforcing the fences?

In summary, the benefit for dogs is so great and given we should advocate for the voiceless, in this case I feel we shouldn't further restrict dogs movement and instead reinforce the fences protecting the native plant areas.

I believe I am an impartial voice as I don't have a dog and neither do my friends and family. I don't belong to or participate with any dog or pet organization.

Correspondence: I am totally opposed to the restrictions on dogs outlined in this plan and strongly believe that the status quo should be maintained. There are plenty of places that the minority of people who do not like dogs can go. Options for dogs to run off-leash are limited as it is. Virtually all dogs that frequent these areas are well-behaved and their enjoyment should not be curtailed or eliminated just because of a few poorly behaved dogs.

If the Park Service feels that something must be done to address the problem of the few poorly behaved dogs in these parks, instead of closing these areas to dogs, a better approach would be more enforcement to minimize the occurrence of inappropriate behavior. Perhaps volunteers from area dog groups could be trained to help patrol areas to deal with the infrequent irresponsible dog owners.

Requiring dogs be on leash in the areas where they currently can run free is just not acceptable. Consider for a moment what life is like on the other end of the leash -- not many folks would enjoy the pull of a collar around their neck and neither do our canine companions. Dogs bring such joy to so many people -- and their therapeutic value is well documented -- and deserve a place to run free. Personally, I would be most affected by the closure of the off-leash areas in the Marin Headlands, Fort Funston, and Crissy Field, but think all off-leash areas should remain so. Crissy Field already has a large area where dogs are prohibited most of the year. If a compromise is necessary, perhaps extend that restriction year-round, but continue to allow dogs in the existing dog-friendly areas.

The dog-friendly nature of these parks is a huge part of the attraction of this area to me and so many other dog-owners. Please do not deprive us of the simple pleasure of walking with our dogs off-leash in these beautiful parks.

Thank you for considering these comments.

Gail Arnold

Correspondence: Dogs are an exotic species and are harmful to wildlife. Whenever two parties are in conflict, we need to support the weaker party. In this case, that is the wildlife. The wildlife MUST be given top priority, because they can't protect themselves from us (or from our pets). Dogs and other exotic species do not belong in our parks and other wildlife habitat. At a minimum, they should always be on a short 6 foot leash. But it is preferable to ban them from our national parks.

Correspondence: Dog ownership is an important facet to many Californian's lives, and has been shown to benefit health and happiness in dog owners. As residents of San Mateo County, we have enjoyed Fort Funston with our dog for many years.

I support continuance of the current conditions at Fort Funston. I think it is hard to argue that dogs have a more negative impact on the environment than do hanggliders, people drinking at the park after hours (as evidenced by broken bottles in and around the parking lot) and horses. Specific to the last point, the amount of visible dog feces on the beach pales in comparison to the amount of horse feces on any given weekend. I would also imagine that Horse trails in an among the bluffs contribute far more to shoreline erosion than any combined dog use.

I am supportive of encouraging more responsible dog ownership. I think that warnings/fines for not picking up after one's dog would achieve this purpose. I am also supportive of licensing professional dog walkers (but I think that limiting the number of dogs they are able to bring into the park is unnecessary).

Thank you for hearing my feedback.

Correspondence: Re: Map 10-Crissy Field. It is my fervent wish to support Alternative A - that map which continues to allow maximum access to beachfront off-leash activity, especially continued use of East Beach. We have attended GGNRA meetings and this plan - alternative A - seems the most widely accepted. We venture at least twice a week from Oakland to Crissy Field to enjoy the time with our golden retriever - nowhere in the Bay Area does she have the safe opportunity to run free on the beach, swim in clean, well-managed safe water, while we further enjoy our national park, regularly frequenting the Warming Hut, and Beach Hut. The exercise is superb for the three of us; we thoroughly enjoy spending our time (and money) in our national park. We joined Crissy Field Dog Group in order to support our favorite area. Our dog even has 8 pages in the recent publication, "San Francisco Dogs" submitted because of our love for Crissy Field.

Curtailing access in any other fashion would severely impact not only our health and well-being, but it would force more dogs to smaller, more confined places, hence posing serious dog health risks.

I implore you to maintain as much off-leash, beach access open space in all relevant GGNR areas. Thank you.

Correspondence: As I understand that compromise is always important, there are parts where compromise to the extent being requested by dog lovers is not an option. Every park needs to have areas where dogs can run free, but certain landscapes and their native animals and flora cannot withstand animals - 2-legged or 4-legged to run wild. This is why in countless parks like Muir Woods Nat'l Monument boardwalks have been constructed to limit our footprint. These extremely sensitive areas need to be identified and protected. And the more used and less sensitive areas can remain open to dogs. Respect for those who are afraid of dogs or who enjoy the peace of our parks without dogs is also essential. Thank you Gary Weiss

Correspondence: I am a dog owner and believe the park service's number one priority is to protect the habitat of the parks for the wildlife. As such, I think dog's should be on leash in these areas. The few times I have brought my dog to Fort Funston, I witnessed off leash dogs out of control. Many of them ran out of

sight of their owners and were destructive to the habitat and wildlife. Few owners picked up their dogs poop and there was dog shit everywhere. With so many off leash dogs, aggression among dogs occurred frequently and owners became argumentative and hostile too. I've always kept my dog on leash each time I've visited but after two visits I stopped the visitations. The wildlife in these areas have no chance against so many dogs. I think this initiative is long overdue. Dogs should be on leash and any off leash area should be severely restricted and fenced to minimize habitat destruction.

Correspondence: Professional dog walking in the GGNRA should be either banned or drastically limited.

---- You Should Not Be Able To Make Money Consuming National Park Resources ----

...and if you're bringing a pack of dogs into the park to root around, poop, and tear the place up then you are consuming park resources, plain and simple. I see it all the time: Professional dog walkers bring in these huge packs of dogs, sometimes 10 or more dogs running around, and dogs in general have a huge impact on the parklands, but magnify that impact by 10x, only with 1/10th of the supervision per dog and you get an idea of how much those professional dog walking services tear things apart.

Correspondence: This is to request that you please consider expanding the areas in the proposed plan where dogs are allowed off leash under voice control. In particular Muir Beach, Oakwood Valley and Cronkite Beach.

For many years I have enjoyed these areas (and others included in your plan) without a dog...and once or twice in all those years of hiking and beach going I was annoyed by an inconsiderate owner who allowed his/her dogs to bark continuously or more often who failed to clean up after his/her pet.

From what I have been able to observe - for the most part - the dog owners take care that their dog does not bother others - also for the most part, the dogs are not interested in other people - more interested in other dogs or

their balls or just the joy of running.

What having all dogs leashed does is takes away the joyfulness in bringing one's pet to a beach or a natural area (where endangering wild life is not an issue)

This joyful abandon is the reason you see so many pictures of dogs running free - the sight of a dog racing along freely resonates with us in some way that is hard to explain - but there is no denying it does.

Where there is an environmental issue (eg the breeding site of snowy plovers) - of course a leash law needs to be enforced during the nesting season

But where the issue is something else - perhaps the solutions can be less restrictive - eg required dog etiquette classes for owners against whom there is a complaint and a simple dog obedience test with the licencing process, and/or certain days of the week or hours of the day when dogs can be allowed to run free (under voice control)

I thank you in advance for your consideration.

Linda

Correspondence: To whom it may concern:

I am writing to urge necessarily strict dog control rules and enforcement. Although I admire and appreciate dogs as pets, I believe most people who seriously consider the issue would agree that dogs do not belong everywhere. Of course dogs enjoy running, but in the GGNRA unsupervised dogs take a toll on native bird, wildlife, and plant populations through harassment, flushing, and soil disturbances as well as direct killing. I'm reminded of the saying, "Your right to swing your fist ends where my chin begins." In this case the chin belongs to the sensitive native ecosystems of these parklands, and it's a part of the GGNRA's mission to protect them.

While native habitat and population decline is felt in the medium- or long-term, off-leash dogs create other problems which are felt immediately. Dogs under voice command spend much of their time out of direct site from their owners, creating an uncomfortable or even frightening experience for the park user who happens upon a dog that appears to be--and may actually be--

uncontrolled. Also as a result of poorer supervision, when leashless dogs leave droppings they are less likely to be removed. When people visit the GGNRA, that's not the kind of nature they're looking for.

Furthermore, dogs and their owners have abundant access to designated dog parks, where dogs can run free off-leash without causing these negative externalities.

For the sake of vulnerable native wildlife, birds, and plants, I urge the GGNRA to, at minimum, require and enforce on-leash rules for some sites and exclude non-service dogs from the more sensitive areas.

Sincerely,

Naomi Sorbet

Correspondence: Dear Park Service,

As the GGNRA new dog policy plan gets more widely publicized, there are several things that I am concerned about.

1. people who are against off leash dog access often suggest that we keep our dogs in our backyards. But a huge issue here is that the GGNRA lands ARE the back yard for many of us who live in apartments or houses with yards the size of a suburban bedroom. Sure, if I had lots of land, I would happily exercise my dog there, but I don't. And my dog would not be well socialized if she never met another dog.

2. I am self employed, so my primary socialization happens at the dog park, where I have met some of my best friends and even made some business connections. I don't belong to a church or go to bars to try to meet people, so this is it for me. My social life will be curtailed if my dog can only be on leash, since it will largely eliminate those social circles that form around happy playing dogs. You just don't strike up a conversation of any length if your dog is on leash because you are having to focus on keeping moving. I feel that my life beyond my dog is going to be penalized if this policy passes.

Correspondence: I am very concerned about the punitive measures proposed for non-compliance if the GGNRA dog policy passes. Canvassing people at Fort Funston and Crissy Field, it appears that 60 to 70% have either never heard about the proposed policy or have only a vague idea what it is about. The Park Service would need to do a huge outreach and education process and post many many signs in GGNRA lands to ensure that everyone is aware of the new rules. Otherwise it would appear that the GGNRA has set everyone up for failure. If the 25% of us who are aware of the new rules are the only ones who know the punishment for non-compliance, then punitive measures will assuredly be leveled against us anyway. This is grossly unfair and undemocratic.

thank you Judith

Correspondence: I object to all currently proposed (new) restrictions prohibiting off-leash dog running at Fort Funston and all GGNRA properties within the Pacifica city limits. There are already too few areas in the San Francisco Peninsula where off-leash dog use is allowed, and the new restrictions under consideration are far too excessive.

At Fort Funston, the largest area proposed for off-leash use is on the beach, which is simply the least accessible area to use given high tides and poor weather conditions.

Correspondence: Dear Sir or Madam,

The proposal to restrict dogs from running free (under voice command only) is outrageous! There are only a small number of open space areas where dogs are able to run free as it is. Dogs need to be socialized. Dogs need to be in a safe environment with their guardians. Dogs are restricted from almost every aspect of public life in the United States and this proposal would restrict them further. It has been proven that living with animals improves physical, mental and emotional health. Why must we punish them by not allowing them the space they require for their own mental, physical and emotional health?

Restricting dogs at Fort Funston into an unreasonably small area will create social tensions, not only among dogs, but among their guardians. Visiting Fort Funston, and watching as well as experiencing free roaming dogs adds to the education of children and anyone afraid of animals.

If this proposal passes, San Francisco would lose yet another claim to "progressive" thinking and living. LEAVE FORT FUNSTON FOR HUMAN RUNNERS AS WELL AS DOG RUNNERS! NO LEASH!

Correspondence: The GGNRA's proposal is a step backwards for animal welfare in the Bay Area. The Draft Dog Management Plan are overly-restrictive and represent a major departure from the current, balanced use of the park.

Currently, off-lead activity is restricted to less than 1% of the park's land. This proposal would drastically reduce the land available for off-lead recreation. The plan is difficult enough in San Francisco and Marin counties, where beloved areas like Fort Funston and Muir Beach will be restricted or off-limits to off-lead dogs. Worse, the plan leaves San Mateo with no GGNRA land that permits off-leash use.

Please revise your proposal as the current draft does not benefit the community.

Correspondence: Dear Park, I need to express my deep belief that you must provide off leash space on Ocean Beach for our wonderful canines. I actually moved into a house expressly so that my new dog could enjoy your lovely beach - then, it was all still city land - and the stipulation was that this land was for the recreation of all citizens. I have been to Ocean Beach nearly every day for the past 20 years. I did not own a dog then, but one of my early joys was watching these magnificent beasts romp and run to their heart's content. I have had two retrievers since, and both have loved their beach experience. These dogs need running areas - and as an owner, I am responsible for their "wild" life. Just as you are of yours - I too love the birds, the seals, and other marine life - all sacred and needing protection. I do believe that your singling out and making the western snowy plover the game changer was a grave error. This Park is not a traditional Park - we are an urban entity, and the rules have to be interpreted differently. Drawing the line with the snowy plover does not make sense - in addition, Ocean Beach is a notoriously harsh environment, especially for this endangered species. High winds, racoons, feral cats, raptors, and even horses make this area inappropriate for these birds - they can better thrive elsewhere. I was told the last count of snowy plovers was 16 - this number tells the story: you need to turn your resources and protective directives to better targets. Turning to another perspective, I have seen only a handful of dog "problems" in all my 20 years on the beach. There just are not that many people on the beach - it is vitrually empty most nights (I walk at around sunset), and there are not that many dogs. We do not have a problem as the great majority of dog owners are caring and responsible - we take our beach seriously, and that goes for the dogs too. The magnifent wildness of our dogs needs to be honored and treated as a natural resource - for all our enhancement. Peter Munks

Correspondence: As the NPS has extended the comment period, I wanted to express my enthusiastic support of the plan to restrict off-leash dogs in the GGNRA. Many Bay Area dog organizations have "fact and fiction" lists on their

websites, presenting the proposed Dog Management Plan as "fiction" and their views as "fact". One example from a Marin dog blog stated that dogs flushing birds from cover is harmless. During the breeding season, flighted adult birds may indeed flee a pursuing canine, leaving their eggs, nestlings, or fledgling young to die. The dog may emerge from cover quickly, leaving no obvious feathers behind, however, this "harmless romp", this beautiful "expression of instincts" can cause serious damage to the avian population. Fewer young will survive to reproductive age. Loss of the coastal avian population is a far greater wrong than the sensible request that people leash their dogs

To reach the off-leash enthusiasts, the NPS may wish to emphasize the potential harm that off-leash dogs can cause to other dogs, both running free and responsibly restrained. In a dog park, a dog owner (and small, shy, or submissive dogs) can easily see which dogs are in the area and new dogs as they enter. In the vastness of the GGNRA, an aggressive, off-leash dog can easily surprise (or be surprised by) another off-leash dog or a human and leashed dog team. A leashed dog (and the accompanying human) is at a terrible disadvantage in this situation, as are small or very submissive off-leash dogs. I've personally observed many off-leash dogs running 20 feet in front of their owners (or behind, or off in the bushes). An aggressive off-leash dog, running out of sight of his owner, can also seriously injure a person. The GGNRA is home to the tricky creature that should strike fear in every off-leash enthusiasts' heart: the wily, and wild, coyote.

As a great appreciator of our urban treasure, the GGNRA, I beg the NPS to implement this very sensible Dog Management Plan. The health and safety of Bay Area dogs depends upon it. Do it for the dogs! (And for the birds, small mammals, coyotes, marine mammals, flowers, vegetation, and, lest we forget, the people who visit the GGNRA to experience its precious splendor -- which will disappear without proper management. We're counting on you!)

Correspondence: I think the idea of holding dog owners accountable for their actions is a good one. We all know that dog owners have not been following the rules (they even boast about it) and have been making non-dog owners suffer for decades for their selfish actions. If they do not abide by the leash rules, it is reasonable to not allow dogs. However, the percent compliance is way too low. It should be 95% compliance. There should also be a mechanism for lay people to report dogs off leash as there are not always rangers around. In fact, I was surprised when I described a particular area that has a lot of dog

incidents and fights between humans over dogs that the rangers were not aware of how severe the problem is and even more surprised that the stats did not reflect the problems.

Correspondence:

In order to share space with other visitors, dog owners need to put their dogs on leash at all times in all places that allow dogs. When dogs are off leash, the space becomes a "special use area." Therefore, there should be no off leash dog areas. If the GGNRA wishes to have some space for off leash recreation, then there should be other special use areas also created to be fair. For example, there should be a handglider area designated with signs. I have heard from handgliders that they need an area for take-offs that is free from dog poo and also from dogs. After talking with them it is only dogs that cause problems for their activity so making this area dog free will allow for their recreation. Runners also need special trails designated for running or walking. After talking to runners, dogs also pose a problem in their recreation. Off leash dogs or dogs on long leashes often get in their way while running and cause them to stop or slow down to avoid the dogs. Others have reported bites and/or nips. There is no comparable problem other than dogs for runners. Keeping dogs on short leashes in runner and walker areas should be sufficient. However, no dogs would be ideal. Bird watchers also need designated bird watching areas. Dogs are again the biggest problem as their barking gets in the way of bird watching. Banning dogs from designated bird watching areas would be ideal. This area could also be a quiet zone. (i.e. no loud talking). This area could be combined with a yoga area or other recreations that require a peaceful surrounding. This would mean that this special use area could not have dogs in order to maintain the peace of the area. Bikers have a similar problem to runners in that dogs run in front of them. The bikers I have talked are road bikers so this is not as big of an issue. However, I imagine mountain bikers in marin and other places have issues with dogs. There should be mountain biking trails. Others enjoy skateboarding. This activity could happen in a limited area of the GGNRA that is dog free. Park preservation and planting native species is another popular activity. This activity should definitely be in a dog free area or at least dog on leash area as dogs tend to dig up and trample plants. It doesn't seem fair for someone's work to be ruined by another's recreation preference. Painting/drawing is another recreation. As long as dogs do not approach the painter/artist, this activity could occur with dogs off leash. Any sports that occur in the GGNRA should also have a designated area that is dog free. For example a space for soccer, volleyball etc could be designated by the beach or bay. Dogs get excited by people running around and try to place with people thus disrupting people and

driving them away from the park. These areas should be dog on leash. Surfing is another popular activity that is disrupted by dogs in the water. In surfing areas, no dogs off leash in the water should be allowed. Horseback riding is another recreation that occurs in certain areas of the GGNRA. Dogs often approach and agitate horses which is a safety problem. Again dogs are the major reported problem by horseback riders. These areas also require dog free or on leash dogs. I'm sure there are many other forms of recreation that take place in the GGNRA that I am not aware of and anything that I have missed should also be considered.

I think it is ok to share the space and not create various special use areas, but this would require dogs to be on leash and no dogs off leash anywhere. If special use areas are created/continued, it would not be fair to just create a special use dog area. Furthermore, all special use areas should be regulated. One idea is to have permits to use any of these special use areas. They could be very very low cost (so as to not exclude people based on finances) either yearly, monthly or day permits. I would suggest 20 dollar yearly, 10 dollar monthly and 5 dollar daily permits. You could also be eligible for a free yearly pass if you are over the age of 65, under age 13, disabled or earn below the poverty line. These special use areas should be not affect recreation in the surrounding areas. These should of course be rules for each special use area and fines for breaking the rules in a particular area.

Correspondence: I am happy the park service wants to regulate the activity of dogs in our parks. Dogs are a joy, and deserve exercise outdoors. However, the proposed plan does not yet strike a sustainable balance between dog's activities and the needs of wildlife, habitat, and other people.

1. Walking through parks in the Bay Area, I find there is almost nowhere to go that is not open to dogs. There ought to be at least a few places where people and other animals can enjoy the parks without dogs.

2. The tolerance for non-compliance of off-leash activities is FAR too low. Every single time I go out in our parks, I see them overrun with off-leash dogs, running directly under signs that say dogs should be on-leash. In general, I think the signage is good. It's just that no one enforces it. When one person lets his dog off-leash, other people want to, also. It's a spiral. The plan should strive for 95% compliance. There should be friendly tickets, and perhaps even warnings, or people around to verbally re-inforce the signage.

3. Off-leash areas should be well-marked to separate them from other areas.

People can be directed toward them when they're found running their dogs off-leash in on-leash areas. Fences around off-leash areas are desirable when they make ecological sense.

4. Commercial dog-walkers should not be allowed in the GGNRA. If they are, they should have a one-strike rule: if they're found letting their dogs off-leash in on-leash areas, they should be banned from the park.

Dogs have plenty of places where they can happily play outdoors in San Francisco. To let them run off-leash in sensitive areas does no one any good. It harms threatened species and native wildlife and plants.

I would hate, for example, to see the Snowy Plover go extinct because dog owners were simply not guided to play with their dogs in safer areas. And yet, this is the direction we are going.

Please consider adjusting your plan in such a way as to keep all the creatures who flourish in our parks content. We don't want to ruin some species forever, just for an extra-fun game of fetch.

Thank you.

Correspondence: We need more off leash territories in the city of San Francisco. Eliminating natural space for dogs to run around grass and sand, beach and trees will only lead to more dogs being off-leash in areas that concerned parties feel are safe as they are legally only on-leash. It is unreasonable to assume owners will drive 30-40 minutes to areas outside the city for dogs to roam daily, and it is also inhumane to expect dogs to be onleash at all times outside the home, excepting within muddy, sandy small dogpark enclosures. Rather chase dogowners who have untrained dogs, or don't clean up after them with hefty fines. But locking up dogs is not the answer.

Correspondence: Mr. Frank Dean General Superintendent, GGNRA, Blg 201 Fort Mason, SF CA 94123-0022

Dear Mr. Dean,

I am commenting today on the Dog Management in GGNRA as a member of the Conservation Committee of the 807 member Napa-Solano Audubon Society.

In general we agree with the National Park Service Preferred Alternatives, but we feel that there should be NO area in the National Park that dogs should be allowed to go off leash to protect wildlife, people, and the dogs themselves. We are sorry to take such a tough stance on this, but wildlife, especially those rare and endangered species are in your charter to protect. Dogs and cats have an excellent sense of smell and can find and disturb nesting birds and loafing animals. It is very unfortunate that these pets have been surrogate children for a lot of adults. They care more about them than anyone (wildlife, other people and other dogs). It is very understandable why they want their dog (who can do no harm) to go unleashed. But a responsible dog owner should take their dogs to a place where they are allowed to roam unleashed, not a National Park where they are not allowed Nationwide.

Perhaps an analogy might work in this case. How many humans would feel comfortable with a lion and/or tiger walking around unleashed? Probably NOT. Well, wildlife, certain visitors to the GGNRA, and certain dogs would most likely not feel comfortable with dogs roaming unleashed.

How your preferred alternative will be administered and enforced is another matter.

Sincerely,

Robin L. C. Leong Member of the Napa-Solano Audubon Society
Conservation Committee.

Correspondence: I have read the entire document as provided in the S.F. Chronicle and find it a fair approach to the problem. It should be noted that the ON leash areas (specifically Golden Gate Park) are usually ignored, so it is not entirely true that OFF leash areas are going to be so limited with the new plan. There are so many more natural areas that include plants, wildlife/birds than there are dogs to have recreation. I totally understand the point of view of dog owners who want as much freedom for them as we have, but it is not reasonable

considering all that we need to put in the mix.

A good comparison is the part of the plan that keeps dogs off of Ocean Beach when birds need it for nesting and not the rest of the year---sharing fairly.

Correspondence Type: Web Form

Correspondence: At best, this dog management plan is a bad solution looking for a non-existent problem. At worst it is a blatant, illegal power/land grab (pronounced "Compliance-Based Management") based on weak, shoddy science and the hope that no one will notice until it's too late.

As a Bay Area parent I first brought our son to Fort Funston when he was four years old, to meet and play with off-leash dogs belonging to the nicest, most diverse and conscientious group of people you could ever meet.

We have since joined one-third or so of San Francisco residents in adopting a dog of our own, and walk him there regularly, off-leash, without incident. It provides much needed exercise for the dog, a chance for us to do something as a family, and a great opportunity to meet and interact with a wonderfully varied community of both dog-owners AND non-dog-owners, who coexist and thrive there in peace.

Suddenly, along comes this plan, complete with a 2300+ page impact study (which has already been publicly ripped to shreds--fortunately you can't throw a stick in the Bay Area without hitting a scientist). Forgive my German, but the whole thing smells like dogsh#. And I should know, I responsibly pick it up every day.

Bottom line, restricting recreational access for people with dogs is a fundamental violation of the reason the GGNRA was created in the first place: "the maintenance of needed recreational open space." Off-leash dog walking has long been on the activity list in these areas, and pre-dates the GGNRA. Let's not forget this is "recreational area," not a national park. This would seriously hurt over 1/3 of our population, even more if you count all the non-dog folks who would be negatively affected.

And let's just call the "Compliance-Based Management" strategy what it really is: a sneaky, subversive poison pill that would allow off-leash shutdowns without further public process, dressed up in formal-sounding jargon. Lipstick on a Basset Hound.

In summary, Bad Plan + Bad Science = Bad for San Francisco. If anything, we need MORE off-leash areas, not fewer. Plan "A+" for me, thanks.

Correspondence: We're dog owners who support the plan. While we love our dog we also love the wild animals and having areas kept clean and safe for children and picnics. Off leash dogs are impossible to keep from interfering with the wild animals' breeding and living space. Additionally, it is problematic to clean up pet waste when they are able to roam at will, far from the owners control. Even on leash in areas where children play or families picnic dogs will soil the area.

We also wish that existing leash laws were enforced.

Thank you,

Ann and Glen

Correspondence: To: Frank Dean General Superintendent, GGNRA

Mr. Dean,

As a senior and somewhat disabled citizen of San Francisco, I am deeply concerned about the proposed new Dog Management Plan for the GGNRA. I've taken my dogs to Ft. Funston and Crissy Field for the last 20 years.

When I was younger it gave me the opportunity to run with my dogs. Now that I can no longer do that I still go to the GGNRA at least once a day to walk my dogs off leash. I get my exercise and they get theirs. I'm sure you've heard all the arguments against the proposal so I won't bother to repeat them. I will say, however, that with the vast land area the GGNRA covers, it seems only fair that the less than 1% that is now off leash for dogs continues to be so.

How about making some money for the GGNRA by setting up a snack and coffee bar along with a small dog supply store and dog bath as they have at Pt. Isabel in Richmond as part of the East Bay Park system? It's a win win situation for them.

Correspondence: I am writing to strongly oppose GGNRA's plan to sharply reduce off-leash areas in San Francisco. I have a 3-year-old yellow lab and, like a lot of other dogs in San Francisco, he (and I) depends on off-leash areas to get his our exercise and stay fit. There are very few spaces where we can do that now, but if these new regulations pass, there will be virtually NO space left to run free. This would have a terrible effect on my dog and me and thousands of other dogs and their owners. I was under the impression that GGNRA was established to provide urban recreation areas. This rule would have the exact opposite effect. There is plenty of room at Fort Funston and other off-leash areas for people and dogs to peacefully coexist. Please don't take these last remaining off-leash areas away from us!

Thank you,

Peter Kupfer

Correspondence 2262 **Project:** 11759 **Document:** 38106

ID:**Received:** Apr,21,2011 18:46:05**Correspondence** Web Form**Type:****Correspondence:** I am supportive of the dog plan; I find there are too many times especially at Crissy Field where, because of the dogs off leash, I am too fearful of walking. That becomes worse when I'm there with children.

I also think the negative impact of dogs to our environment is not limited to damage they may cause to the plants and animals living in the area but because of the vast amounts of waste they produce regardless of whether the owners pick it up or not.

Correspondence 2263 **Project:** 11759 **Document:** 38106**ID:****Received:** Apr,21,2011 19:33:16**Correspondence** Web Form**Type:****Correspondence:** We have long (more than 20 years) owned a house on the water at Stinson Beach, and we have always had a dog. We have never had a problem from dogs on the beach, and we are always happy to observe the happiness of the dogs in that environment and their owners. 90 percent of all owners seem to be aware of their dogs manners, clean up after them, and are cognizant of not letting them chase people, birds, or other wildlife. This is part of the unique pleasure of this area and should remain, as it seems to be doing no harm, for the many years we have participated in it and observed the freedom of dogs and owners at Stinson Beach.

Correspondence 2264 **Project:** 11759 **Document:** 38106**ID:****Received:** Apr,22,2011 11:46:45**Correspondence** Web Form**Type:****Correspondence:** While I'm a dog lover, I'm also a wildlife lover.

It disturbs me to go to wildlife-sensitive areas and see off-leash dogs running around, which happens in San Francisco on a regular basis. Whether in Golden Gate Park or marshland areas like Pier 94 or Heron's Head Park, more often than not I see at least one dog-owner violating leash regulations. It's nesting season now, and in the last month I've seen dogs romping through marshland and lakeside areas, potentially disrupting the breeding cycle. At Heron's Head, a great blue heron was recently killed, probably by a dog.

Dog owners have a choice as to whether to own a dog, and where to walk it. Birds and other wildlife do not have that choice. While dog owners are

emotional about their pets, a reasonable balance must be struck. Please restrict off-leash areas where wildlife and other park-users may be negatively impacted.

Correspondence: How much area in total does the GGNRA currently manage? To drastically limit the areas where people can bring their dogs less than the current 1 percent of the park that now available for off-lead activity, seems excessive. The GGNRA manages an urban recreational area - it is not a Yellowstone or a Yosemite. What are the populations of the surrounding areas of Yellowstone and Yosemite? What is it here in the Bay Area? They do not compare. Again we are an URBAN population, we, the population are a MUCH bigger factor than anything else. We are not asking for MORE land for off leash use.... we are just asking that it remain as is and not LESSEN.

Based on the census, there are more dogs than children in San Francisco. This city has always recognized and embraced animal companionship. For many of our citizens, their pet companions are family.

I can count the number of times I have been to a GGNRA park/area before my dog came into my life. She gets me out. She helps me enjoy recreation, and the GGNRA. I can count the number of people at Funston that I see without a dog on any given trip. It is not many. Where it is conversely in the midst of the Presido and a very nice mix at Chrissy Field.

To limit the off leash areas as the plan suggest is to drastically change my life, and my dog's life - both to our detriment.

Correspondence: Please do keep as much space as possible free of un-leashed dogs. I walk regularly in many of the GGNRA places, and strongly dislike being accosted by dogs, and having to make my way among them running free. I think it is terrible that dogs disturb the wildlife that was there long before there were dogs in the areas. I have seen dogs running under the bridge that goes across the lagoon outlet at Crissy Field, and up into the supposedly protected lagoon area! These were dogs that were being "controlled" by a dog-walker, but were obviously not under her control; she called after them but that did not work.

Thank you for your consideration. Joyce Lehmann

Correspondence: I am delighted that you are considering more restrictive dog rules as I am a frequent hiker who find dogs sniffing at me, barking at me, licking me all extremely noxious. I do not believe voice control is adequate in any event- it is not a reasonable alternative to dogs being on leash. If a spot is okay for off leash dogs, such as Crissy field, I will avoid that place. I hope you will make the requirement for dogs to either be outlawed or on leash as broad as possible so that people like me will not be imposed upon by the dogs of others. When I ask people to take charge of their dogs, the usual response is "he's friendly." I should not be required to make friends with other people's dogs against my wishes. Thank you for your assistance with this most unpleasant issue.

Correspondence: My wife and I have been living in Marin county for over 30 years.

We now have a new 6 month old rescue puppy.

Part of the reason we have this dog is that my wife is retired and loves to hike alone but is sometimes uneasy as a woman walking alone. We want the dog to be able to accompany her on all of her hikes to provide her with peace of mind.

It is more enjoyable for her and for the dog if the dog can be off the leash on under voice control - while my wife is a runner, there is no way she can run as hard and fast as a dog. The dog comes back on command, stays in sight and has been trained not to chase anything and not to jump up when she is greeting people, she does not bark.

My wife has let me know that she has met a number of women walking with dogs who say that they would not feel as comfortable and in some cases would curtail their walks if their dog companions could not be with them.

Older people owning dogs is a growing population in Marin - and these owners are becoming more and more responsible - not less. Everywhere you go you see people cleaning up after their dogs - something that was unheard of even in recent memory - and the dog owning community provides its own culture and standards of what is not acceptable in other dog owners - no chasing birds, barking is discouraged, ill-manner animals are not readily tolerated -- peer pressure is continuing to wake all of us to being responsible to the community for the impact of our dogs.

Please consider expanding rather than restricting the trails and beaches where dog can be taken and please expand, rather than decrease the places where dogs can be allowed off leash under voice control.

(cracking down on offenders rather than penalizing all dog owners would likely make a more positive difference for everyone)

Correspondence: I strongly support Alternative D, Most Protective Based on Resource Protection and Visitor Safety.

I feel that it is important to provide the maximum amount of protection for plant and animal species, including and especially endangered species, found in wildlife sites managed by GGNRA. Therefore, I feel that dogs should be excluded from these sites or, if permitted, always be on leash at all times. I feel that Alternative D is also important for protecting visitors, including myself, who frequent these wildlife sites and for reducing the cost to GGNRA for maintaining, restoring, and cleaning up these wildlife sites from the impacts caused by dogs. Although a "dog-lover" and former owner of dogs over many years, I realize the problems that dogs can create and I also feel that even well-behaved and well-trained dogs can behave unpredictably at times, even to the surprise of their owners. Therefore, every effort should be made to protect wildlife habitat and visitors to GGNRA

sites as outlined for Alternative D in the Executive Summary for the GGNRA Draft Dog Management Plan/Environmental Impact Statement.

Correspondence: Dear GGNRA Management: I hope you reconsider your ban on dogs in certain areas of your parklands especially Sweeney Ridge and Mori Point in Pacifica. I fail to see how well behaved dogs on or off leash make such a negative impact when I see the mess humans can make; for example, a soiled baby diaper in some bushes on Sweeney Ridge. The East Bay Regional Parks have no such restrictions and they continue to be lovely places to hike for everyone. Please don't make me drive one hour each to enjoy a day's hike with my dog, just think of the added congestion and pollution! Debora A Kane

Dear National Park Service and GGNRA near San Francisco, I am strongly in favor of the maximum restrictions on dogs being considered in the GGNRA.

I am a practicing MD and have lived in the Bay Area off and on since the mid-seventies. In my comments, please forgive me for not remembering exact dates, but my impressions are very strong nevertheless.

For 20-25 years I went to Rodeo Beach and it was my favorite place in the world. I moved away for a time, and after my return (maybe 10 years ago), something there changed - there were enormous numbers of dogs running around. The air actually smelled like dog feces. I sat on the beach with my wife, as I had done dozens of times in the past, and dozens of dogs were running all over. At one point a large golden retriever, apparently misidentifying us as its owners, ran to us and jumped on my wife, happily sinking its claw into her leg, which began oozing a trickle of blood. The owner ran over and apologized.

The experience was very disturbing and dramatically different from my earlier experiences there. We went to the security station and complained - the security officer agreed that the whole place had begun to have the odor

of feces, but said there was nothing they could do about it because of the rules allowing dogs.

I have not returned to Rodeo Beach since.

I realize that prohibiting dogs at Rodeo Beach specifically is not an option which is being proposed, but - extrapolating to all the other areas in question - the presence of large numbers of dogs in a concentrated area is a disaster for visitors - the dogs cannot be controlled - this is an undeniable fact, despite the often delusional claims of dog owners - and the owners do not clean after the animals, despite the owners claims.

Again, I am strongly in favor of the maximum restrictions on dogs being considered in the GGNRA. The smell of feces and experience of being physically injured are not the reasons I go to beautiful recreation areas.

Correspondence: Dear Superintendent Dean and GGNRA,

I am writing regarding the Dog Management Plan/DEIS for the GGNRA. I am concerned about the impact of off-leash dog activities on the habitat and wildlife of the GGNRA. I believe that all off-leash areas should be fenced. By fencing all areas where dogs run off-leash, plant life and wild life will be protected. In addition, fences provide security for all park users.

I support some trails being entirely closed to dogs. Other trails may be open to dogs on leash. And I believe that there should be areas, fenced in, for dog walkers and all others who desire to let their dogs run off-leash.

Thank you.

Sincerely,

Sandy Turk

Correspondence: To Whom It May Concern, I am a native San Franciscan. I currently reside in the Outer Sunset, a block away from Ocean Beach. I have been recreating

on GGNRA land since the late 1970's. I grew up enjoying all of the places that have been the topic of recent discussion. GGNRA land has always been an integral part of my life. I now have a small dog walking business because of which, I frequent Fort Funston ten times per week. I think it is one of the most beautiful places on earth, I cherish this land and pick up litter daily to help in its preservation (an overwhelming amount of trash exists due to humans, not dogs) ?being able to enjoy this land greatly enhances my life and those of my canine companions. As a result, the lives of my human clients are enhanced as they are the proud owners of exceptionally well exercised, socialized and well behaved dogs. Dogs that are not adequately exercised can develop behavioral problems such as barking, destroying property in the home, etc. This obviously creates a ripple effect, extending into the neighborhoods and communities throughout our fine city. If the few existing off leash areas were further prohibited as proposed by the GGNRA, the result would be devastating for all. All of the parks in San Francisco that are not part of GGNRA land, will be overrun by dogs. The DEIS does not adequately address dispersion issues. The DEIS does not adequately address the environmental and social impact of forcing large numbers of people and dogs into much smaller areas. Reducing the amount of area available for off-leash will significantly degrade the park experience for people with dogs. It will increase conflicts. Even more importantly, the DEIS does not address the environmental and social impact on small, neighborhood parks in cities like San Francisco next to the GGNRA. Because the GGNRA is located immediately adjacent to one of the most densely populated areas in the United States (San Francisco), it provides much needed recreational open space for Bay Area residents. If that open space is lost to recreational access, people and their dogs will move to the much smaller city parks and they will not be able to absorb the hundreds or thousands of people with dogs each day that will be kicked out of the GGNRA. As further proof that the GGNRA did not consider impacts on city parks in San Francisco, the Preferred Alternative suggests the nearest legal off-leash area in San Francisco to Fort Funston is Lake Merced. That off-leash area has been closed to off-leash for years and has been turned into a native plant restoration area and habitat for the endangered red-legged frog among other animals. Yet this is where the DEIS suggests people with dogs go. This exemplifies the lack of common sense and awareness present in these overly restrictive plans. For the sake of all San Franciscans, a better alternative must be reached. Furthermore, as an environmentalist, I believe there should be (and are) penalties for bad actors and these should be enforced. But the vast majority of people who do not act badly should not be penalized for the bad actions of a few. This strategy is unfair because off-leash status can be changed in only one direction (toward more restriction). It circumvents the legal requirement that management changes that are either significant or controversial must have a public process before they can be made. Critical information about how compliance will be determined ? by volunteers biased against dogs? by surveillance cameras? ? is not included in the DEIS.

This "Dog Plan" is an attempt to move green spaces away from recreational use and towards preservation, which reduces uses for people too. This is blatantly inappropriate, as these "recreational areas" were designed specifically for urban dwellers such as myself to enjoy. The GGNRA should develop a new alternative, the A+ Option that will better balance the recreational needs of the Bay Area with protection of natural resources. If this more fair and well balanced agreement cannot be reached, please choose Alternative A (no action). This meager 1% of GGNRA land available for off leash dog recreation is really important to those of us that cherish it. I pay taxes as both a resident and business of San Francisco and count on taking the dogs I care for off leash at Fort Funston. I am just one of many professional dog guardians, who act mindfully and responsibly while sharing the land. Conducting my business as well as recreating on this land means everything to me. I do not deserve to have it taken away. Thank you for considering my comments.

Sincerely, Rasan Lowell SF CA 94122

Correspondence: I am opposed to further restrictions on unleashed dogs at the various san francisco beaches including ocean beach. Dog owners are taxpayers who fund the ggnra. responsible dog owners are also citizens of this area and are already hugely restricted as to where their dogs may run freely. The eco systems of our city beaches are essentially a redundancy and the wear and tear they are subjected to by dogs is not much different than the wear and tear by the weather, children and many adults. It is unrealistic to preserve these areas as museums. They are natural beaches closely connected to a crowded city and as residents of this area, people should be able to enjoy them as such either with or without their canines. To the best of my knowlege there is no special nesting ground on the beaches included in this proposal. There are no rare plants that must be protected. The fact is the plants are common and they regrow quickly and birds can fly away if annoyed. San Franciscans need open space for their dogs.

Correspondence: I am shocked and disappointed that my tax dollars have been used to prepare a study that focuses on how to "protect" the parks from dogs. I find this to be hypocritical. The parks should be protected from humans, not from dogs.

I visit Crissy field almost every day, and almost every day I see humans littering there, making noise, and generally making a mess a hundred times greater than the dogs do. The author of this study should be deeply ashamed that they are going after the dogs instead of the true villains despoiling nature: humans.

I strongly oppose any changes in policy that make it harder for dogs to be off leash. I plan to do some research to find out which organization is best positioned to make a strong legal challenge to this evil plan, and to contribute generously to them. I will also vote against any officials who fail to oppose it and I will write my elected representatives asking they do everything in their power to get the people responsible for this horrible abortion fired. How do you guys sleep at night?

Correspondence: I have lived in Northern California for 37 years and became an active hiker in 2005 when a beautiful, active Vizsla named Bella came in to our lives. We became acquainted lots of hiking areas and particularly with the Fort Funston. My husband and I make the journey from Martinez to San Francisco to hike with Bella at the beach almost every weekend. We have commented often how lucky we are that "California" has been such avid protectors of all of this open space for ALL to enjoy. I have siblings and in-laws who live in other parts of the country who hike with us when they are visiting are in awe of the privilege as well. Please protect this for ALL. It is necessary for dogs to have a place to socialize with other people and their own kind and run FREE!! It is large part of what makes living in the Bay Area such a fantastic place to live.

In particular, Vizsla's are a breed that need to run big; perhaps not everyone with a dog has the same NEED but basic socialization is an important reality of our four legged friends.

If you are among the people making this decision, please make your way to Fort Funston on any Saturday or Sunday to see the pure joy of dogs and their families. We have met wonderful people, great dogs and enjoy beautiful hiking. This is a quality of life decision you are making for a lot of people in the Bay Area.

Please, please, please make this decision carefully.

Correspondence: To whom it may concern:

I live in Cow Hollow and I walk on Crissy Field at least 5 times a week. I am 69 years old. The dog problem there is not going to be solved by the recommended Alternative. Dogs and their owners will still make it unpleasant, unsafe, and unhealthy for adults and especially for children.

The beaches where dogs are allowed are awful. They are basically dog bathrooms. I am sure they are a public health hazard. Innocent children wander into these areas to play. They dig in the sand and put the sand in their mouths. I am horrified. I will not take my grand children anywhere near these places.

The leashes people use for their dogs are often 20 feet long. Virtually every time I walk there I have a dog run into me, wrap a leash around me, or accost me. I have grandchildren and I fear for their safety. Dogs bite children, even when they are on leashes.

These comments apply to all dog owners. Even the ones that comply with the law. Many, if not most, dog owners do not comply with the law.

If the NPS buckles to the interests of dog owners then the Park Service must enforce the laws strictly. This will cost money. My money. I do not want to pay for this.

I suggest that if you are going to allow dogs then dog owners should be licensed and there should be a large enough license fee to cover maintenance of the areas and enforcement. The fee should be of the order of \$500.00 annually with a discount for elderly and handicapped. Dog walkers should display the license prominently so the law is easily enforced. Dog access to Crissy Field is not a right, it is a privilege.

Thank you for seriously considering my comments and recommendations.

Correspondence: I have been going to Rodeo/Chronkite Beach for over 20 years. It's a great beach, and the closest and easiest to get to from Central Marin. Because of it's proximity to population centers it gets a lot of use from a wide variety of people.

I don't have a dog currently, but grew up with dogs and enjoy them. However, I agree with the plan to exclude dogs from Rodeo Beach, whether off or on leash. Dogs and their owners have reduced my activities and visits to this beach. After my youngest son was bitten by a dog (not at Rodeo) he was afraid of dogs for a few years and we stayed away from beaches that permitted dogs off leash. But my main objective is dog owners not cleaning up dog poop. By fall the beach sand at Rodeo is full of dog crap. There are also the wildlife protection issues, but others have addressed those.

On the days that are warm enough to lay down on a towel on Rodeo beach, you better check your area for dog feces first. I also body board but wouldn't want to swim here. Some years this beach is reported as having a high fecal count, possibly from dog activity. When dogs are off leash, many pet owners won't see their dogs poop and don't have an opportunity to pick it up. But even if they do or their dogs are on a leash, most pet owners won't pick up after their dogs. It is so much easier to kick some sand over the poop than carry a bag full of poop around.

It really is a shame that poor behavior by dogs and their owners ruins a good thing for other dog's and owners. If I had a dog, I would want a place to throw a ball into the water so my dog could chase it. But because of it's high use and National Park Status, I don't think Rodeo Beach is this place.

As the population of people and dogs increase, our parks get more use and the incompatibilities and conflicts between users become an issue. As dogs are excluded from some areas, other parks see an increase in dogs. Because of inconsiderate dog owners, heavy dog use and people use of parks are essentially incompatible. Ideally dogs will have a designated area to recreate with their owners. More dog parks are needed, but I don't think it is the National Park's duty to provide them.

Correspondence: Please tighten the controls on walking dogs in the GGNRA beyond those in the current draft plan. The population of dogs is too great for the area to bear without significant degradation of the environment and wildlife even if all dog walkers are responsible community members. Unfortunately, not all dog walkers are responsible in walking their dogs, making strict rules even more necessary.

Off-leash areas should be fenced; dogs and their owners will tend to overlook the boundaries otherwise. Scofflaws should face a realistic prospect of ticketing when they allow their dogs off-leash outside the permitted areas. The target should be nearly complete compliance with the rules, not merely 75%. Commercial dog walkers should be prohibited. Some trails should be closed to dogs, even on-leash. Dogs make some people anxious. Dogs whose owners do not properly clean up after their dogs foul the trail. People who do not care to have to deal with these problems should have some refuge.

Thank you for your consideration.

Correspondence: My recreation involves spending a lot of time in parks enjoying the wildlife, especially birds. In my experience, the negative impact of off-leash and even-on leash dogs is being vastly underestimated. No matter what the leash laws are, it seems people won't obey them. So, at a minimum any off-leash areas need to be fenced, to clearly demarcate the approved off-leash areas. There must be no confusion.

Second, there has to be HUGE FINES FOR BREAKING THE LEASH LAWS. THE LEASH LAWS HAVE TO BE 100% enforced, or people won't discontinue their old habits.

Third, commercial dog walkers should absolutely NOT be allowed in the GGNRA. Not only do they fail to control their pack of dogs adequately, but I do not think that the park should be for the recreation of the dogs. It should be for the conservation of the birds, plants and wildlife and those people (not dogs) who enjoy such natural resources. I pay taxes to support the parks, not to support other people's dog recreation areas as they are walked by professional dog walkers, who should be providing their own dog runs on their own property, not at my expense as a tax payer.

Sensitive areas should not permit any dogs, because the dogs even on a leash disturb nesting birds and quite frankly I am also tired of being harassed, sniffed, slobbered on, or growled at by dogs everywhere I go. Can't I go anywhere away from dogs and just enjoy the birds?

The preservation and conservation of the natural wildlife in our parks is far more important than the recreational life of our country's dogs. They don't belong in our national parks, at all. But, since I'm not going to win that battle, let's at least arrive at some decent enforcement and preservation of my right to enjoy our birds in our parks without disturbance and harassment from dogs.

A tax paying citizen,

Johanna van de Woestijne

Correspondence: Several comments: 1. Fort Funston. Much too small an off leash area in a park that has traditionally been off leash for the entire area except for areas that are under renovation. Fort Funston is a dog park. Keep it that way.

2. Sweeney Ridge: You need some off leash trails here. Of the alternatives offered, Alternative A is the best of a poor lot.

3. Pedro Point. Should be off leash. Great trail for dogs - you don't even have a trail for leashed dogs in your proposal.

4. Ocean Beach: Alternative A is the best option.

Basically, your plan looks like it was drawn up by people who hate dogs and dog owners.

Correspondence: I wish to ask that all dogs be kept on leash at all times. Everyone says their dog is friendly and they are friendly. But I have a bad back and ankles. I can't handle a dog running up to me rushing around and jumping up. I am on my own with the owner some what far away and not able to assist me from a jumping dog. Most dogs do not respond on the first or second command to go back to the owner. As the majority of the citizens age, there are more people now who would be stressed just thinking if a dog running up to them will jump on them. I had a large over weight dog running around me and keeping me from getting back to my car when I had a small emergency. How can we afford law enforcement in the parks to make sure owners of dogs are keeping their animals under voice control, at least if they are required to be on a leash, other owners will remind those breaking the law to do the right thing. In the IJ today, a gentleman had to climb down a hill to help an injured lady. His dog(on a leash) kept other dogs off leash from hassling the injured woman laying on the ground. The population of dog

owners is growing and a dog is an individuals choice of life style. It is not the duty of the general public to be on call to entertain other peoples life styles by being objects of their dog's fun time. It is bad enough dealing with second hand smoke, but I don't like being a dog's toy or stepping in their poop.

Correspondence: Dear Park managers,

I am writing to voice my support for dog management at Chrissy field. I write a a dog-owner and lover; however, Golden Gate National Recreation area is adversely impacted by large numbers of dog running off-leash. Visitors are often accosted by dogs. I have also witness many incidents of dogs chasing other wildlife and plants. Unfortunately, dogs are also allowed to foul the area without owners being responsible.

Visitors to this extraordinarily beautiful and singular place should be able to experience it without the environment being damaged and without other species being threatened.

I do not think off leash dogs belong in this area but please at least fence the off leash areas so people, wildlife and plants are protected. I also do not see any reason why commercial dog walkers should be allowed to come to this area. This had too much adverse impact. I would also like to see enforcement of these rules so that incidents other species are protected. Birds and other wildlife that is impacted cannot protect themselves.

Thanks you for your consideration.

Sincerely, Mary Krentz

Correspondence: I think that the impact of so many dogs and dog walkers could be nicely minimized by simply charging for parking. Most of the dog walkers seem to drive, which has an additional environmental impact (carbon pawprint?) beyond that of the dog and nature. If we charge to park a car maybe we can reduce the numbers of dogs and raise some money for upkeep.

Subject: Public Comments on the GGNRA Draft Dog Management
Plan/EIS

Dear Mr. Dean:

I hereby submit the following concerns and comments on the GGNRA Draft Dog Management Plan/EIS regarding the proposed Preferred Alternative for the Sweeney Ridge Trail System located in San Mateo County:

1) I am a Pacifica resident who has been using the Sweeney Ridge Trail System for over 3 years. I typically hike and run the trails 4 days a week with my dog on-leash (6 feet in length) between the Mori Ridge trailhead and Portola Discovery Site or SFPUC Portola Gate. I have also used the trail system for regular hiking with my family without dogs as well as mountain biking. I am fully in support of continued multi use of the Sweeney Ridge Trail System for all uses including dog walking (leash only), hiking, trail running, mountain biking, horseback riding, wildlife watching, etc. I am opposed to GGNRA Draft Dog Management Plan's Preferred Alternative, which would ban on-leash dog walking on the Sweeney Ridge Trail System.

My preference would be for Plan adoption of Alternative A (Map 19-A), which would allow continued multi use (including on-leash dog walking) throughout the Sweeney Ridge Trail System with the exception of the Notch Trail, which would allow hiking only. I would also support Plan adoption of Alternative A with Modification by also limiting use of the Meadow Loop Trail to hiking only. By providing two trails for hiking only, this would help reduce potential user conflicts while protecting the most sensitive habitats within the Sweeney Ridge Trail System. The Notch Trail is a narrow single track trail located within an identified sensitive Mission blue butterfly corridor. The Meadow Loop Trail is also a narrow single track trail located next to a sensitive fresh water wetland that likely supports California red-legged frog and potentially San Francisco garter snake. The rest of the trails within the Sweeney Ridge Trail System are wide enough (8-12+ feet) to allow continued multi use while avoiding user conflicts. Further, these trails are heavily degraded from a habitat standpoint since they are old ranch roads or paved roads that were used to access the old Nike Missile Site. Can you explain why Alternative A or Alternative A with Modification as described above would not be suitable to avoid use conflicts and protect sensitive habitat from trail user degradation? Please explain.

2) Please address the following observations that I've made based on my long term use of the Sweeney Ridge Trail System:

a) The trail system is made up of mostly wide dirt ranch roads and paved roads (8-12+ feet wide) that can easily accommodate multi use and allow for safe passing by users. These roads are wide enough to allow park ranger and CDF fire truck use. Please explain the reasons why this was not considered when deciding to ban dogs on-leash from the Sweeney Ridge Trail System.

b) Much of the trail system and surrounding area is degraded with abandoned and graffitied buildings, paved roads and ranch roads. These disturbed areas are not pristine in terms of sensitive habitat with the exception of the butterfly corridor at the Notch Trail and the freshwater wetland next to the Meadow Loop Trail. Please explain how banning dogs on-leash from the Sweeney Ridge Trail System would help reverse this existing degradation. There was no mention in the Dog Management Plan that the abandoned buildings would be removed and those areas restored with native vegetation. Wouldn't this be more effective in improving the trail user experience? Please explain.

c) The existing ranch and paved trails are surrounded by thick coastal scrub/chaparral vegetation (4-6 feet high in most places) with poison oak. It is highly unlikely that trail users with dogs on-leash would desire to go off trail or let their dogs off-leash so that the dogs could go off trail. Please explain why this was not considered in the Dog Management Plan.

- d) Most of the small offroad trails appear to be caused by wildlife (deer, coyote, etc.). Please explain why this was not considered in the Dog Management Plan.
- e) The Sweeney Ridge Trail System's topography is steep and rugged and is not suitable for beginner trail users, small children, or people with physical disabilities. This limits the number and diversity of users on the trail system and overall user conflicts. Please explain why this was not considered in the Dog Management Plan.
- f) In my experience, I have never had a conflict with another user while walking my dog on-leash and typically see between 0-20 people during my hikes on average. Considering this low number of user traffic, how can there be a case for significant user conflict to justify banning dogs on-leash from the Sweeney Ridge Trail System? Please explain.
- g) I have never observed professional dog walkers with multiple dogs (3 or more dogs) on the Sweeney Ridge Trail System. Please explain if this was a consideration in proposing to ban dogs on-leash from the Sweeney Ridge Trail System.
- h) The Sweeney Ridge Trail System is a multi-use trail system typically used by hikers, hikers with dogs on-leash, horseback riders, and mountain bikers. How can the EIS analyze the environmental impacts from hikers with dogs on-leash in isolation from the rest of the users? Please explain.
- i) The Dog Management Plan and EIS make the assumption that most hikers with dogs don't have dogs on-leash while on the Sweeney Ridge Trail System. However, in my observations, most hikers with dogs have their dogs on a 6 foot leash as required by GGNRA regulations. Please provide additional factual support for these assumptions.
- j) During my 3 years of use of the Sweeney Ridge Trail System and being on the trails approximately 4 days a week, I have observed park rangers only a handful of times. I think that additional ranger presence would help provide incentive for all users to follow the GGNRA regulations, including having dogs on a 6 foot leash. Please explain why this wasn't considered in the Dog Management Plan.
- k) There is limited signage at most of the trail heads. For example, there is not much signage at the Mori Ridge Trail entrance and the Portola Discovery Site area (intersection of Sweeney Ridge Trail, Baquiano Trail, and Sneath Lane Trail). There should be additional signage that explains the important rules and regulations applicable to all users similar to the signage installed at the Notch Trail entrance within Skyline College and the Milagra Ridge Trail System entrance. This would significantly help in reducing

potential user conflicts by educating trail users and reinforcing the regulations. Please explain why this wasn't considered in the Dog Management Plan for reducing user conflicts.

l) In order to protect the surrounding habitat and make sure trail users stay on the designated trails, there should be additional signage installed at the trail heads explaining w/illustrations the local habitat and wildlife. This signage should be similar to the signage installed at the Notch Trail entrance within Skyline College and the Milagra Ridge Trail System entrance. This would also help educate and reinforce GGNRA regulations. Please explain why this wasn't considered in the Dog Management Plan for reducing potential user conflicts within the Sweeney Ridge Trail System. m) Banning hikers with dogs on-leash would remove a significant user group from the Sweeney Ridge Trail System. Most of the hikers with dogs are local community residents and hike the trail often. Considering that the trails are steep and rugged and fairly remote, hikers with dogs serve as important eyes and ears on the trail system, especially since there is limited ranger presence. Please explain why this was not considered in the Dog Management Plan.

n) The Sweeny Ridge Trail System is one of the few trail systems left in the Bay Area to allow hiking with dogs on-leash. The trail system offers long and steep hikes that are great exercise for both the dog and dog owner. The Dog Management Plan does not provide an "apples to apples" analysis when describing alternative nearby locations to the Sweeney Ridge Trail System for hiking with dogs on-leash. Please explain this discrepancy.

3) Please address the following specific comments regarding sections of the Dog Management Plan/EIS:

a) Page 108, Chapter 2, the National Park Service Preferred Alternative section, Sweeney Ridge / Cattle Hill subsection ?

i) Please elaborate on how not allowing dog walking within the Sweeney Ridge area would protect Mission blue butterfly habitat? Dogs are required to be on a 6 foot leash per the regulations and most dog walkers using these trails have their dogs on a leash. Also, there are other users on the trail system, including hikers without dogs, mountain bikers and horseback riders. How is it that dog walking can cause impacts to Mission blue butterfly habitat but hiking without dogs, mountain biking and horseback riding doesn't? Please explain.

ii) Considering that the Sweeney Ridge Trail System is made up of wide dirt ranch roads and paved roads and includes numerous abandoned structures and debris, how is it that this portion can be considered undisturbed contiguous habitat that is rare and contains wildlife that could be disturbed

by the presence of dogs? Other areas outside of the designated trail system are inaccessible to hiker and dog alike due to the rugged topography and dense chaparral and poison oak vegetation. These are the areas that should be considered undisturbed contiguous habitat and by its very nature is already protected from degradation by humans and dogs. Please explain.

iii) The Sweeney Ridge / Cattle Hill subsection states that "this site is contiguous with the San Francisco watershed, which also does not allow dogs." This statement is misleading and incorrect. In fact, the Sweeney Ridge / Cattle Hill Trail System is contiguous to the San Francisco Public Utilities Commission Watershed Lands, which is predominantly off limits to the public, not just dogs, since these are pristine lands that provide the Bay Area with 15% of its drinking water source. Please explain why this incorrect comparative statement was made to support the Preferred Alternative?

iv) This subsection states that "Alternative C would be clear to the public and would be easily enforceable by park law enforcement staff." This statement is incorrect since it's not clear how the GGNRA will notify the public that dog walking is not allowed within the Sweeney Ridge area. Not to mention, other nearby San Mateo County and San Francisco County GGNRA sites are proposing their own site-specific areas where dog walking will be allowed, including such nearby sites as Mori Point and Milagra Ridge. Please consider that the public can access the Sweeney Ridge Trail System from multiple access points, and that there currently is limited signage to help educate the public to the GGNRA rules and regulations at the major trail heads within the Sweeney Ridge Trail System. This all seems like it will be a nightmare to effectively make clear to the public where dog walking is allowed/not allowed and to enforce. Wouldn't it be more effective to educate the public with appropriate signage and ranger presence while still allowing dog walking within the designated trails as is currently allowed? Please explain.

v) This subsection states that "Alternative C would allow multiple user groups to experience the trail and provide balance." This statement is incorrect. By not allowing hikers to walk with their dogs on-leash on most of the trail system, you are not allowing a significantly large user group from experiencing the trail. Please consider that many of the users of the Sweeney Ridge Trail System live locally and access the trail system from 3 very different geographical trail access points. These include the Mori Ridge Trailhead at Shelldance Nursery in North Pacifica, the Sneath Lane Trailhead in San Bruno, and the Baquiano Trail in South Pacifica. Please explain how this will allow multiple user groups to experience the trail system and provide balance?

b) P. 203-207, Chapter 2, Sweeney Ridge and Cattle Hill section of Table 5

?

i) There is a consistent argument made in this portion of Table 5 that Alternative C, the Preferred Alternative, which would not allow dog walking within the Sweeney Ridge Trail System, would have a negligible impact on most of the environmental resources because of the physical restraint of dogs via leash and dog walking only occurring on previously disturbed/designated trails. Why isn't this same argument made for Alternative A, the No Action Alternative? Under the No Action Alternative, dog walking with a leash would continue to be allowed throughout most of the Sweeney Ridge Trail System. The current GGNRA regulations require that dogs must be on a leash (6 feet in length) at all times and dog walking shall only occur on the previously disturbed/designated trails within the Sweeney Ridge Trail System. Per the GGNRA regulations for the Sweeney Ridge Trail System, off-leash dogs are prohibited. Therefore, wouldn't Alternative A have similar negligible impacts on most of the environmental resources because of the mandatory physical restraint of dogs via leash and dog walking only occurring on previously disturbed/designated trails? Please explain.

c) P. 273, Chapter 3, Table 9 ?

i) For the Sweeney Ridge / Cattle Hill site, the percentage of visitors walking dogs is described as Low to Moderate. However, it has been my experience (using the trail system approximately 4 days a week for at least 3 years) that the percentage of visitors walking dogs out of the total visitors (hikers, dog walkers, horseback riders, mountain bikers, etc.) is Moderate (10-30 percent) to High (> 30 percent). This means that visitors walking dogs represent a significantly large proportion of total visitors using the Sweeney Ridge Trail System. Please elaborate on how this visitor data was collected and why there seems to be a discrepancy in the proportion of visitors walking dogs?

d) P. 278, Chapter 3, Sweeney Ridge / Cattle Hill subsection ?

i) This subsection states that "Sweeney Ridge has low visitor use, consisting mostly of bikers and hikers, and low to moderate use by dog walkers (table 9)." Based on my experience using the Sweeney Ridge Trail System, I agree that Sweeney Ridge has low visitor use compared to other GGNRA sites. I disagree that visitor use is mostly bikers and hikers. In my experience, visitor use is mostly hikers and dog walkers. Please explain how this information was assessed and why it was assumed that bikers make up a large proportion of users on Sweeney Ridge? I also disagree that the proportion of dog walkers is low to moderate. Based on my experience, the proportion of dog walkers is moderate to high. Please explain this discrepancy. ii) This subsection states that "the closest off-leash dog

walking areas outside park property are Esplanade Beach in Pacifica and the San Bruno Dog Park." First, why are off-leash dog walking areas provided as examples when the Sweeney Ridge Trail System only allows on-leash dog walking? Other nearby examples should include on-leash dog walking areas. Second, even though the City of Pacifica allows dog walking on Esplanade Beach, for several years, Esplanade Beach has been completely inaccessible to the public, especially for dog walking, due to significant coastal erosion and storm destruction of coastal access points to this beach. Please explain these discrepancies.

e) P. 279-282, Chapter 3, Visitor Experience ?

i) This section provides a description and analysis of the visitor experience to the GGNRA sites relative to off-leash dogs. Please explain why this section does not also provide a description and analysis of the visitor experience relative to on-leash dogs? This would be especially applicable to the Sweeney Ridge Trail System (which currently allows dog walking on-leash only) since none of the Alternatives proposed for the Sweeney Ridge Trail System would allow off-leash dog walking. Please explain.

f) P. C-10, Paragraph 2, Appendix C, Potential Impacts to Vegetation from Dog Walking ?

i) This paragraph discusses that to minimize impacts to coastal scrub, chaparral, and grassland plant communities that are found at the GGNRA sites (including Sweeney Ridge / Cattle Hill), on-leash dog walking would be required at all sites except Oakwood Valley. It further discusses that by restricting dog walking to a 6-foot leash, the impacts would be limited to a 6-foot corridor immediately adjacent to the trails. This paragraph concludes by stating that "overall, impacts would be limited to the trail and the 6-foot corridor, which is a relatively small impacted area when compared to the size of each site." Based on my observations using the Sweeney Ridge trails, the trails are located predominantly within coastal scrub, chaparral, and grassland habitat. These trails consist of dirt ranch roads or paved roads that are approximately 8-12+ feet in width. Using the same logic and analysis described in Paragraph 2, one should conclude that since the Sweeney Ridge Trail System already requires dogs to be on-leash (6 feet in length), and since trails are 8-12+ feet in width, the impacts to the predominant habitat surrounding these trails would be negligible. Therefore, why does the Dog Management Plan's Preferred Alternative propose to not allow dog walking on-leash within the Sweeney Ridge Trail System? As described throughout the Dog Management Plan, physically restraining dogs on-leash would protect habitat and wildlife off trail and would eliminate chasing after wildlife. Please explain.

g) P. 293, Paragraph 4, Chapter 4, Potential Soil Impacts Common to all

Alternatives ? i) This paragraph states that "on-leash dog walking is based on an allowed 6-foot dog leash. In general, and assuming compliance, impacts as a result of the action alternatives (B?E) would be limited to the existing trails/roads and the 6-foot corridors of land adjacent to both sides of the trail ("limit of disturbance," or LOD; LOD = width of trail plus 12 feet). Restricting dogs to trails would concentrate impacts on the already compacted soils of trails/roads, whereas dog walking off-leash may cause more dispersed impacts over a wider area." Based on my observations using the Sweeney Ridge trails, the trails consist of already compacted dirt ranch roads or paved roads that are approximately 8-12+ feet in width. Using the same logic and analysis described in Paragraph 4, one should conclude that since the Sweeney Ridge Trail System already requires dogs to be on-leash (6 feet in length), and since trails are 8-12+ feet in width, the impacts to soils and erosion would be negligible. Therefore, why does the Dog Management Plan's Preferred Alternative propose to not allow dog walking on-leash within the Sweeney Ridge Trail System? Please explain.

h) P. 438-439, Chapter 4, Sweeney Ridge / Cattle Hill Alternative A: No Action ?

i) It is stated that "this site has documented high visitor use by dog walkers and 55 leash law violations were recorded in 2007/2008 (table 9); therefore, off-leash dog walking is currently occurring along the trails of Sweeney Ridge." I agree that there is high visitor use by dog walkers. Please make this correction in table 9 since it currently says low to moderate. I disagree with the assumption that because there were leash law violations over a two year period, that most dog walkers using the Sweeney Ridge Trail System have their dogs off-leash. Based on my experience of using the Sweeney Ridge Trail System (approximately 4 days a week for the past 3 years), I have observed that most dog walkers have their dogs on-leash. Rather than proposing to ban on-leash dog walking within the Sweeney Ridge area, wouldn't it be more effective to increase ranger presence (especially during busier times such as on weekends) and educate users of the GGNRA's on-leash rules in order to deter this behavior? Wouldn't it be more effective to provide better signage at the trail heads to explain the rules and regulations and why it's important to keep dogs on-leash and on trails in order to deter this behavior? Please explain. ii) What is the total number of dog walkers that visited the Sweeney Ridge Trail System during 2007/2008? Without knowing this number, it is impossible to know what percentage of total dog walkers were not obeying leash laws. This makes the 55 leash law violations meaningless without a total number of dog walkers to base it on. Please explain this discrepancy.

iii) Is there more comprehensive data over a longer time frame (10 years) that can be evaluated to determine dog walking trends within the Sweeney Ridge Trail System? Making off-leash dog walking assumptions based on

two years worth of incomplete data does not follow appropriate statistical methodology. Please explain. i) P. 440, Chapter 4, Sweeney Ridge / Cattle Hill Alternative C: Emphasis on Multiple Use, Balanced by County ?

i) It is stated that "under Alternative C, no dog walking would be allowed at Sweeney Ridge. Therefore, no impacts on soils from dogs would occur at this site, because dog use would be eliminated. Soil disturbance and compaction would no longer occur." I disagree with the statement that soil disturbance and compaction would no longer occur. Other users that would be allowed within Sweeney Ridge include hikers, mountain bikers, and horseback riders. These uses would surely cause further soil disturbance and compaction. Please explain this discrepancy.

j) P. 440, Chapter 4, Sweeney Ridge / Cattle Hill Alternative C: Emphasis on Multiple Use, Balanced by County ?

i) It is stated that "on-leash dog walking is based on an allowed 6-foot dog leash. Since dog walkers may walk along the edges of the trails, dogs would then have access to the adjacent land 6 feet in both directions, resulting in an LOD area for soils that would extend 6 feet out from both edges of the trails. In general, impacts on soils would be limited to the existing trails and the 6-foot corridors immediately adjacent to the trails." I disagree with the statement that there would be an LOD area for soils that would extend 6 feet out from both edges of the trails. The Sweeney Ridge Trail System consists of 8-12+ feet wide dirt ranch roads and paved roads surrounded predominantly by extremely dense chaparral and coastal scrub (poison oak) vegetation. In most places the chaparral and coastal scrub vegetation is at least 6 feet in height. This makes the side of these trails inaccessible to both humans and dogs. Please explain how there can be impacts within these 6-foot corridors immediately adjacent to the trails due to this natural vegetative obstacle?

k) P. 677, Chapter 4, Sweeney Ridge / Cattle Hill Alternative A: No Action ?

i) It is stated that "under Alternative A, dogs would continue to contribute to physical disturbance at both sites through trampling, digging, and dog waste. In addition, since off-leash dog walking currently occurs at the sites, it is likely that dogs would continue to walk or run through other undisturbed areas. Therefore, impacts on coastal scrub/chaparral/grassland vegetation as a result of Alternative A would continue to be long term, minor, and adverse at these sites because effects would be measurable and perceptible, but would be localized in a relatively small area." I disagree with this assessment. The Sweeney Ridge Trail System consists of 8-12+ feet wide dirt ranch roads and paved roads surrounded predominantly by extremely dense chaparral and coastal scrub (poison oak) vegetation. In

most places the chaparral and coastal scrub vegetation is at least 6 feet in height. This makes the side of these trails inaccessible to both humans and dogs. Further, on P. 540 of the Dog Management Plan, a study by Andrusiak (2003, 3.2) is cited that suggests that dogs traveling quietly along a trail with screening vegetation on both sides are unlikely to disturb or even encounter wildlife. This study along with other studies were summarized in this section to provide a basis for discussing impacts on vegetation. Since the dense and tall chaparral and coastal scrub vegetation within the Sweeney Ridge Trail System acts as barrier and screening vegetation, how can it be concluded that dogs would cause continued measureable and perceptible impacts to coastal scrub/chaparral/grassland vegetation if it's unlikely for dogs to trample through it or be triggered to trample through it by wildlife? Please explain.

l) P. 681, Chapter 4, Sweeney Ridge / Cattle Hill Alternative E ?

i) It is stated that "physically restraining dogs on-leash would protect vegetation off trail. Therefore, assuming compliance, the overall impacts on coastal scrub/chaparral/grassland vegetation from on-leash dog walking at Sweeney Ridge and Cattle Hill would be negligible because impacts would result in no measurable or perceptible changes in these plant communities." Why wasn't this same assessment made for Alternative A: No Action? Alternative A would continue to allow dog walking on-leash and similarly should assume compliance. Further, why isn't this 'physical restraint with a leash' argument not applied for all environmental resources under Alternative A with a conclusion that there would be negligible impacts on resources? Please explain.

m) P. 698, Chapter 4, Wetlands and Aquatic Habitats ?

i) Within the Sweeney Ridge Trail System, there is a freshwater wetland located adjacent to the Meadow Loop Trail. This section did not include an analysis for Sweeney Ridge and this freshwater wetland. Please address.

n) P. 1158-1159, Chapter 4, Part 2, Sweeney Ridge / Cattle Hill Alternative A ?

i) This section states that "Alternative A would continue to result in long-term minor adverse impacts on the Mission blue butterfly at Sweeney Ridge through damage to host plants and habitat in the trail beds and adjacent areas as a result of dogs." Please explain whether there is a high occurrence of lupine host plants and habitat within the trails beds. In my experience, the Sweeney Ridge Trail System is made up of wide dirt and paved roads/trails. The only vegetation observed within the dirt roads are invasive weedy species. Paved roads do not contain vegetation. Further, these roads/trails are used by park ranger vehicles, horseback riders, mountain bike riders, and

hikers without dogs. Wouldn't these other uses also have a damaging effect on host plants and habitat in the trails beds? Please explain.

o) P. 1162, Chapter 4, Part 2, Sweeney Ridge / Cattle Hill Alternative E ?

i) This section states "the long-term minor adverse impacts from dogs in the LOD would occur in a relatively small area when compared to the site as a whole; therefore, the overall impact on the Mission blue butterfly from on-leash dog walking at Sweeney Ridge would be negligible, assuming compliance." Why wasn't this assessment also applied to Alternative A? Please explain.

p) P. 1210-1211, 1213, Chapter 4, Part 2, Sweeney Ridge / Cattle Hill Alternative C / Preferred Alternative ?

i) This section states "at Cattle Hill, dogs would be allowed on-leash on the Baquiano Trail from Fassler Avenue up to and including the Farallons View Trail. Physically restraining dogs on-leash would not allow dog access to any water bodies that support the frogs or nonbreeding or critical habitat. Therefore, assuming compliance, Alternative C would result in negligible impacts on the frog at Cattle Hill because no measurable or perceptible changes in frogs or critical habitat or nonbreeding habitat would occur." Since Alternative A would also require all dogs to be on-leash, physically restraining dogs on-leash would also not allow dog access to any water bodies that support the frogs or nonbreeding or critical habitat located within the Sweeney Ridge Trail System and would therefore result in negligible impacts. Why wasn't this assessment made for Alternative A? Please explain.

q) P. 1231-1232, 1234 Chapter 4, Part 2, Sweeney Ridge / Cattle Hill Alternative C / Preferred Alternative ?

i) This section states that "although dogs would be allowed on the Cattle Hill trails, dogs would be physically restrained on-leash and the leash policy would be enforced. If dogs are physically restrained on-leash at this site, they should not gain access to dispersal habitat and should not affect the snake. Therefore, assuming compliance, alternative C would result in negligible impacts on the snake at Cattle Hill; no measurable or perceptible changes to individual snakes, the population, or designated critical habitat would occur." Since Alternative A would also require all dogs to be on-leash, physically restraining dogs on-leash would also not allow dog access to dispersal habitat located within the Sweeney Ridge Trail System and would therefore result in negligible impacts. Why wasn't this assessment made for Alternative A? Please explain.

r) P. 1545, 1548 Chapter 4, Part 2, Sweeney Ridge / Cattle Hill Alternative

C / Preferred Alternative ?

i) This section states that "impacts on visitors who would prefer to walk dogs at the park would be long term, minor, and adverse. Adverse impacts would occur since dog walkers would no longer be allowed in the Sweeney Ridge site. Visitors would no longer be able to enjoy exercising, socializing, and playing with their dogs at Sweeney Ridge. Impacts would be minor since this is a low to moderate use site for dog walkers. Some visitors in this user group may find a different area in GGNRA or a local city or county park to walk their dogs. As a result, visitation by local residents may decrease slightly in this area." Based on my experience using the Sweeney Ridge Trail System (approximately 4 days a week for the past 3 years), the proportion of dog walkers out of the total number of users is moderate to high and therefore adverse impacts should be moderate, not minor. Considering that most Bay Area state, county and local city parks do not allow dogs on-leash, there are not many options for dog walkers to choose from when they wish to hike with their dog on-leash. Dog parks are very limiting since they don't allow the owner to exercise with their dog. Other GGNRA sites are also limiting since they do not offer similar long and steep trails to hike that the Sweeney Ridge Trail System has to offer. Further, most dog walkers I've observed using the Sweeney Ridge Trail System are regular local community users. Therefore, visitation to Sweeney Ridge by local residents who wish to hike with their dogs on-leash would significantly decrease. Please explain how this information and analysis was derived since it conflicts with my experience and observations at Sweeney Ridge.

Please feel free to contact me via email at [redacted] if you have any questions regarding my concerns and comments. I would also like to request that you place me on your mailing list so that I may receive notifications of future public hearings and updates regarding the GGNRA Dog Management Plan/EIS.

Sincerely,

Brett Becker, AICP Sweeney Ridge Trail User

Correspondence: The Golden Gate National Recreation Area's Draft Dog Management Plan should be completely rejected because provides no objective or factual rationale for making any changes now (on this point alone, the entire plan should be rejected). Common sense will tell you that reducing off-leash dog

rights on 1% of GGNRA land that currently allows dogs off-leash cannot have much benefit (if any) compared to the negative impacts to 1 in 3 SF households with dogs, SF city dog parks and local dog shelters. This issue is not about dog rights vs. bird rights. This issue is about discrimination against dog owners. Limiting my dog's access limits my access because I do not leave my family member locked up at home while I go walk alone in GGNRA lands.

Correspondence: I support the preferred alternative. Today, the supervisors passed the weiner resolution which puts them on records as opposing this plan. However, I believe that they are not fully informed and have clearly not thought about any groups except dog walkers. The state of dog management in the city parks and public lands is that there is none, which is something the city needs to address rather than expecting other lands to be used for dogs. There are many off leash legal areas in san francisco and even more illegal off leash areas. This areas are currently not overcrowded with dogs, however they are already unpleasant areas for people like myself who do not want to encounter off leash dogs. If having less off leash dogs in areas of sf ggnra increases the number of dogs in city parks this would likely not affect city parks negatively or drastically. In fact, it would create a space for socialization of dogs, which is apparently an important part of dog walking for dog owners. Furthermore, the preferred alternative would create space in the ggnra for people who currently can't enjoy any parks due to off leash dogs. If the city can't provide this space, it would be nice to have someone provide it.

Correspondence: I have been walking at Fort Funston since I was a student at San Francisco State. I found this beautiful open space when I was walking around Lake Merced. Not knowing what it was I ventured across the street to discover this awesome piece of land full of happy people and happy off leash dogs! Little did I know that 4 years later I would make Fort Funston my home away from home. For the last 10 years I have been walking my packs of dogs twice a day on this awesome space. I have never worked in such a loving and supportive enviroment as I have these last 10 years. Not just with my colleagues but with private dog owners and even those that do not own dogs. There are many folks that come to the Fort that are elderly or have kids that do not own dogs but sure get their fill of tail wagging and licks by the time they leave. Knowing how much land the GGNRA has and that off leash dog recreation only encompasses 1% percent of that and now it is at risk saddens me. If the proposed plan passes, the inadequate small parcel of land allotted for "off leash" dog activity will create a dangerous and cramped atmosphere. The boundaries of bluffs, highway, and parking lot, will create a safety issue for dogs who need space to exercise and explore. This will adversely affect the quality of life at the surrounding local parks which can t provide the adequate space necessary for the hundreds of dogs banned fro Fort Funston. The ripple effect will be devastating on the local community, as well as the physical and mental health of our beloved canine family members. Fort Funston has been a dog friendly park even before it was ceded to the GGNRA, under certain conditions and requisites, back in 1979. The dogs are an intregral make up of the spirit, character, and landscape at Fort Funston.

Please leave us this 1% to have and enjoy with our canine kids.

Correspondence: I support the efforts to enforce dog owners having to walk their dogs on a leash while dogs still being allowed in the park. Unfortunately there have been too many times I have seen other dog owners allowing their dogs to roam off leash and out of sight or voice command range. I enjoy walking in the park with my small dog, but do not enjoy having someone else large dog jump on me or my dog. I've had other dogs jump on me and threaten my dog and it takes away from my experience in the park always having to watch out for someone else's dog who's owner is no where to be found. Plus, there are plenty of other dog owners who do not clean up after their dog making it less pleasant for all of us. By making other dog owners have to walk their dog on a leash and clean up after their dog, the park will be more enjoyable for me and my dog.

Making rules like this also only work if they are enforced and I've been to other parks where dogs are supposed to be on a leash, only to see plenty of dog owners ignoring the rules and walking with their dog off leash. So if the Park Service is not planning to enforce these rules, they may as well not bother because there will be plenty of people who will choose to ignore them.

Correspondence: I saw the sign posted at the Baker Beach picnic area, San Francisco, referring me to this forum. I have reviewed your plan for restricting dogs in currently allowed areas governed by NPS. I have, also, noted the vehement uproar of dog owners and dog owner associations. Some points that are noteworthy:

1) That there are dog owner associations at all. This city has more dogs than children. That these people feel that they need political representation for their animals is indicative of their underlying mental states. If they were talking about small breeds, more suited for dense urban environments, there wouldn't be much of an argument. But most contention involves those owners who have CHOSEN to get the biggest breeds their three-room apartments can hold. That, to me is a form of animal cruelty unto itself. That these owners then cry that their big dogs need "room to stretch their legs" and "calm down and be better behaved" reveals their non-savvy approach to dog ownership. Most vocal dog owners, also, do not raise children. This sad replacement therapy that they have chosen for themselves is reflected in their insistence that their animals be treated with the same respect as if the animals were actually human children.

2) These owners are predominantly upper social strata, living in the regal areas of the city most unprepared for dog ownership, mostly in the " _____ Heights" neighborhoods, where there is hardly room for the buildings, much less running spaces for dogs. The Dog Plan notes that there are many suitable alternate areas within 5 miles of the downtown area, easily accessed with a short car ride. Well, these people didn't buy that mansion on the hill to have to go to some NON-exclusive area to run their over-sized dogs.

3) These vocal owners are entrenched with the business and political power structure of San Francisco, and are used to doing as they please. The city of San Francisco has many beautiful parks, but only about 20 sanctioned areas (in a 49 square mile city) in which to run dogs off-leash. A lot of these areas are in obscure locations, unto themselves or in less than prime areas of the

parks that contain them. These owners flagrantly ignore all rules regarding Dog Play Areas (DPA's) as stated in The Recreation And Parks Department guidelines (Final Dog Policy 2002). Most illegal is these owners' use of dog-walking services. The guidelines clearly state no more than three dogs per person. "Professional" dog-walkers always have five or more. These dog owners, by the nature of their social status, do not feel at all bound by laws governing the "common" man.

4) The child-like spiteful nature of idle threats of the dog owner associations. One association has threatened to "take back" Ocean Beach from NPS regulation if the current Dog Plan is implemented. Ocean Beach is a protected habitat for sea-fowl. These owners have absolutely no regard for preserving the environments of threatened species. The ONLY feel that their privileged world's are threatened with what they see as undue regulation of the activities of the animals that they CHOSE to purchase and have in their lives. They do not appreciate, AT ALL, the penultimate threat to the very existence itself of these threatened species. These people are the Easter Islanders of our modern society here in San Francisco. They will not stop until it is too late for these poor creatures affected by our urban sprawl.

The NPS is tasked with the unpleasant duty of regulating people's otherwise random and usually destructive tendencies to conquer, utilize, and move on to other areas in the never ending "pursuit of happiness." But as We The People exhaust the areas of suitability for our homes and business ventures, we begin to encroach on wilderness areas which are essential havens for remaining wildlife, much of which is absolutely unique to the San Francisco peninsula, and cannot be found elsewhere. As the NPS Park Rangers and staff well know, ecological niches are not replaceable or relocatable. Birds have always been able to fly elsewhere, but some species only survive in singular locations. Dog owners, it seems, cannot see beyond their own selfish needs to share this world with other beings. And the dogs themselves CANNOT be blamed, for they are animals and are intrinsically selfish. We humans, with our amazing powers of forethought and reflection, MUST be the ones to stand up and protect dwindling habitats for lesser creatures from the factions of our society that pursue selfish aims for selfish goals. Big dogs belong on big properties, not perpetually on public property. Your Dog Plan certainly curtails usage throughout the Golden Gate NRA. And this will certainly "force" dog owners to misuse local parks, probably to the detriment of those city parks. But your domain at the NPS is to ensure the perpetuity of the National Park System. Please don't let the local bourgeois caste of the over-entitled bully you into non-sustainable policies. We have lost enough species on earth since the invention of the boat. Let's not lose anymore so that some rich people can fulfill their inner parent by supplanting a child with a dog. Let's reserve places for CHILDREN to run off leash; children can be taught not to harangue wildlife, and dogs can never be.

Correspondence: My comments are from my personal experience only. This last weekend, we were walking with our granddaughters, ages 7 and 9, where there were several dogs off leash. Although I have no doubt that the dogs were friendly enough, their enthusiasm scared both our girls, to the point of their wanting us to pick them up.

Additionally, I stepped in what should have been collected and thrown in the trash.

I also have significant allergies, that I can manage with daily medication. One close encounter with fur can set me back the rest of the day. I would like to have enjoyed our day without all the drama.

Correspondence: Dear Sirs,

I'm writing to commend you for your considered and fair-minded efforts at devising guidelines for dog owners on GGNRA which seek to balance the legitimate concerns of responsible dog enthusiasts with protection of this splendid place and the rights of human visitors not to be victimized by out-of-control canines rampaging its beaches, hills, meadows, brush, forests and the many other precious and fragile ecosystems that make out the GGNRA.

As a frequent user of the GGNRA, I can personally attest to packs of unleashed dogs harassing all manner of waterfowl at Ocean Beach (often under the amused eye of their owners); I've frequently witnessed large numbers of unleashed, uncontrolled dogs at OB and Fort Mason degrading the environment(i.e., crapping, digging, disturbing the underbrush, trampling sensitive areas, etc.) and generally making a nuisance of themselves (I'll note in passing that these often are brought there by professional dog walkers, who seem to mistake the GGNRA for their personal workplace).

I've been threatened by aggressive, unleashed dogs at Rodeo Beach, Tennessee Valley, and other locations. When asked to control their dogs, the owners often respond as aggressively as their pets.

I've seen dogs urinate in public playgrounds intended for children, while their owners looked on with amusement. Evidently, they thought it was funny. I think this is quite symptomatic of these people's mindset and attitude to others.

I've never seen a ranger, or any other authority figure, call these scofflaws to task. As long as there is little or no enforcement, they will continue to impudently flaunt the rules.

Please don't cave in to these fanatics who give responsible dog owners a bad name and to the SF supervisors who pander to them. They've turned just about every San Francisco park into a feces-strewn public toilet for the rest

of us; now, they want to do the same to the GGNRA! They respect nothing; they place their four-legged friends above the rights of their fellow citizens, including children, to clean, healthy, pristine outdoor recreational facilities. They claim to be animal lovers, but their behavior proves that they have neither understanding nor sympathy for the wild creatures, the fragile ecosystems their dogs destroy (let's face it: we all know dogs, especially unleashed, are deadly to these). Indeed, they are completely lacking in the crucial qualities needed to preserve this splendid environment: love of and respect for nature.

It is my fervent hope that because the GGNRA is under federal jurisdiction, the people who ultimately make the important decisions here will resist the pressure of parochial constituencies who seek to bend the rules to suit their narrow, ultimately destructive, interests, and instead take these above all on the basis of what's good for the health of the GGNRA as whole, for the preservation of this breathtaking, unique place for future generations and its enjoyment by all.

Best Regards,

Nicholas Marder

Correspondence: I am commenting on the GGNRA Draft Dog Management Plan/EIR. I cannot comment on all the parks in the plan, but in general I believe the stricter the regulations on dog walking on public land the better. It is an unfortunate fact that no matter what regulations you impose, there will be people who disregard them. Every time I go to the park I see dogs off leash where they are supposed to be leashed.

I frequently go to Ocean Beach and Fort Funston. Many times I have been harassed by unleashed large dogs that run up to me ferociously barking as if they are going to attack me, while the dog owner is unable to get the dog to back off. I have been scared so many times that my boyfriend thinks I should carry a weapon to the beach with me.

At Fort Funston and lower Ocean Beach I have seen solitary (professional, I presume) dog-walkers with 14-15 dogs off-leash. Usually the number is over ten dogs per dog-walker. They cannot control all those dogs and they don't watch them closely enough to pick up their feces. Many dog owners feel their dog's poop is "part of nature" so it's okay to leave it on the beach.

On at least two occasions I have also seen packs of big dogs running around in the cliffs in the succulents while I was walking down to the beach from the Fort Funston hang-glider launch, with no owner in sight. Also, people walk their dogs through the areas that are supposed to be protected, preferring to walk on the succulents than get their shoes sandy on the walking path.

I feel that I have a right, as a taxpayer, to access public beaches and parks without harassment from vicious barking dogs or even friendly/curious wet dogs splashing me. Furthermore, the dogs run after the birds in the surf. For these reasons I support the required leashing of dogs in all public parks and beaches.

You will certainly need more staff to catch violators; there will be many people who ignore whatever plan is chosen (I have never once seen a ranger on the beach or in the park - do you have them?)

| Correspondence: | When I think of the GGNRA, I think of how lucky we are to have beautiful natural open space next to a metropolitan area. My vision does not include off leash dogs. I am a dog owner. I walk my dogs in my neighborhood and take them to designated off leash areas within the city. The GGNRA should not be an escape valve for a dog population that is needlessly exploding. We are saving dogs by adopting them from the Central Valley, other states, Taiwan, etc... San Francisco is a city of 49 square miles and under one million people. It is not a big city. It is a small city with a big reputation. Maybe we should be limiting the dog population instead of having an over population of dogs impacting nature and natural open spaces. I support GGNRA's proposed dog management plan. | | |

AND I sincerely hope that the NPS doesn't give in to the all too powerful dog lobby of San Francisco. Quite frankly I think the recent SF Board of Supervisors decision is very misguided.Hold your ground and protect our wildlife, environment and public spaces.
(Note: public NOT animal/dog spaces)

Correspondence 2314 **Project:** 11759 **Document:** 38106**ID:****Received:** Apr,27,2011 18:31:29**Correspondence** Web Form**Type:****Correspondence:** As a dog lover myself, I nevertheless recognize many good reasons why dogs do NOT need free access to all parts of the GGNRA: 1. Dogs, especially unleashed dogs, can have a serious negative impact on other species in the parks, such as endangered birds (e.g., the Snowy Plover and other shorebirds). 2. Humans also have a right to enjoy at least some parts of the parks without having to interact with dogs. Not everyone enjoys dogs, or enjoys having dogs as part of their outdoor experience. 3. The existing leash

laws are widely ignored by dog owners, who seem to feel that their pets' need for off-leash time trumps any possible human wish or need not to have them around. 4. Professional dog walkers, with their large packs of dogs, are something of a plague already in parts of GGNRA. They dominate certain trails in the Presidio, for example, which is not necessarily a bad thing for people who like dogs, but can be unpleasant and even intimidating for non-dog people, or even those who do enjoy dogs in small numbers. The large packs of dogs also have a particularly strong negative impact on wildlife. 5. The fact that off-leash dogs have "traditionally" occupied many areas of GGNRA (Ocean Beach, Chrissy Field) does not imply that this tradition must continue. Such customs have to be constantly reevaluated in the light of new information about dog impacts on people and wildlife. The increasing numbers of dogs using these areas, for example, is in itself enough reason to reevaluate such practices.

Let's make sure that the needs and rights of both human beings and wildlife are considered on AT LEAST equal terms with those of dogs.

Correspondence: I support tight leash laws in the GGNRA and think that the preferred alternative creates too much off leash space in prime land. I think that other's comments on the recent article in the sfgate: "Supervisors growl at GGNRA dog proposal" shows that people feel the similar to the way I do. The vast majority of comments were for more leash laws and more enforcement. Therefore, it appears that the majority of people in SF want tighter leash laws and support the proposed dog management plan.

Here are some of the comments (not all consistent with my own opinion, but interesting and valid points.): 1. "Being that the City does NOT enforce the leash law in its own parks, having some dog-free federal property to go to will be a real relief." - Voice_of_reason

2. "That beach at Crissy is impossible to enjoy if you're not into masses of loose dogs. Most of the dog owners there do pick up the dog poo but what about all that dog pee? It is a lovely area that should be pleasant for all-not just dog owners." - Jarana

3. "As a dog owner who picks up after my dog, I blame a lot of this on irresponsible owners and dog walkers who don't bother picking up the poo, on sidewalks or in parks and open areas. It is just as disgusting to me as it is to non dog owners. Dog walkers should be licensed, as they are earning a good living, tax free, and a lot of them use our parks as public toilets and just walk away, leaving their mess behind." - Canthespam

4. "as a jogger for years, i have started carrying pepper spray after a couple bad incidents where dogs have run up to me growling and barking loudly. the owners in both cases basically told me to shove it when i complained to them. if your dog runs up to people without a leash, don't be surprised if they get a pepper blast to the face." - hela113

5. "I love to let my dog run off leash along the more remote parts of the beach and she is very obedient when called or told to stop. But dogs have destroyed Fort Funston's highlands in the last 15 years, and I have seen numerous people and animals terrorized by badly behaved off-leash dogs. Irresponsible dog owners are ruining the parks and city for everyone and reasonable limits need to be enforced. The GGNRA is right and the Supes, as usual, are just pandering." - citytrucker

6. "As a responsible dog owner, I applaud the GGNRA, Has anyone been to Ft. Funston of late? The place is overrun with dog poop! The flora and fauna are being trampled on incessantly. I cringe, every time I see a tourist go barefootin' on the beach. (Ocean Beach) All those dog owners (irresponsible) allowing their pets to major in Liberal Arts. Oy--the park rangers need to put up a sign. "Dog Poop Ahead." Can you say E.coli? Harvey Milk is rolling in his grave." - sabiane1776

7. "All you have to do is read recent stories about a woman killed by pit bulls or the article today concerning a dog attack in LA. How many people have to be killed or injured before we put muzzles on these dangerous animals. Put a leash on them at the very least. I know you owners thing they are people but they are not. They are barking, biting, peeing, pooping animals." - rnews

8. "i'm a dog lover... but if its not an approved dog park..dogs then need to be leashed or restricted. many dog owners just let their pets roam, dont pick up after them, do not have full control of their animal and not being very responsible." - SFGAL59

There were many more comments like this. On the other side the argument that was repeated over and over was that only 1% of the GGNRA is off-leash. In my opinion, 0% should be off leash in the GGNRA. So if it truly is 1%, I'd like to see it reduced by 1%. Secondly, this is inconsistent with my experience. If this is true that than 1% must be in SF and must be the most desirable land. This is not fair and it must change. I also wonder what percent is on leash. This should be no more than 3% and ideally also 0%.

Correspondence: Please do not allow unleashed dogs on GGNRA property. I used to love to hike all over the GGNRA but have stopped because of the irresponsibility of too many dog owners. I've had huge, unleashed dogs run up to me and the owners threaten me when I yell, "Control your dog!". A friend was bitten while riding her bike.(The owner put the dog on leash briefly and then released it again) Another friend was bitten while hiking. Three people I know have had their small dogs bitten by other dogs (one of the dogs died and another almost did). Once, when visiting the Pacifica Pier, I had to cross the street to avoid a man who was allowing his dog to lunge and bark at people. Voice control is a joke. It doesn't work unless a dog is well-trained. Drivers have to have a license as do gun owners. Why do I have to accept the actions of an irresponsible dog owner with a dangerous dog who doesn't really care what happens to anyone else? The problem is that you have to make the same laws for poodles as for pitbulls trained to fight and kill.People don't get that. They think they should just do what ever they want, no matter the consequences on others. You have to think of everyone and everything, including children, the elderly and handicapped people for whom unleashed dogs can be deadly. You have to think of sea birds and other life too. I don't envy you this decision. Dog owners are often selfish and very vocal. They think of their own and their dogs' pleasure and don't really care what happens to other people, other dogs or wildlife. You have to think of these things. Please don't allow unleashed doge in the GGNRA.

Correspondence: As a responsible dog owner and avid outdoors enthusiast, I understand the need to conserve our resources for future generations and to ensure our current actions do not adversely impact the environment. That said, certain alternatives presented here are somewhat drastic in their restrictions of voice control options. In a heavily urban area such as San Francisco and its bay,

where climate change, oil spills, supertankers and trash continue to take their toll on wildlife, it's hard to imagine an extremely adverse impact from canine companions if the current regulations continue. Again, while I certainly understand the sentiment of the plan, it seems to go too far in some of its formulations while not doing enough to address other environmental issues. That is, it singles out one group of NPS users who love the parks and want only the best for them while preserving a preservation/use balance.

If current regulations continue, the NPS could consider a day-use payment system to offset maintenance fees, if necessary, such as what's in place at Muir Woods. I would certainly pay a \$5 fee every time I used Crissy Field; professional dog walkers could be required to purchase permits as well, as one of the alternatives suggests.

If anything, I'd like to see a better balance. If some areas of GGNRA have to be closed to dogs/voice control, so be it. But for heavily urban areas like Ocean Beach and Crissy Field, I don't think the effects of shutting them down completely would be dramatic.

Thank you for considering my comments.

Correspondence: I am an active user of Crissy Field - I walk there, watch sailing & kiting, and drive thru pretty often. I ask you to keep it open to dogs, and let them run! Granted, there are some dog owners who need more training on how to control their pets while at the beach, but overall, everyone seems to be able to share the space & enjoy the great outdoors! We are an urban area, and the GGNRA is an amazing urban oasis - the priority really should be people, their kids, pets & desire to recreate! There are some beautiful restored areas, and spaces off limits to dogs/ etc for birds, let the rest of Crissy & the beach stay open to all. I don't have a dog, but have friends that do, so often walk with them. Overall, I've really very rarely seen badly behaved dogs. More often, I see a badly behaving child, or out of control tourist on a rental bike!

Thank you,

Correspondence: I would like to see data supporting the claim that there are increased problems with dogs in these areas.

Banning dogs or allowing on-leash dogs only in these wonderful parks punishes the majority of dogs and their owners because of the irresponsibility of a few owners. It would be like banning all cars because some drivers drive recklessly. Or banning all nightclubs because some people get drunk and violent. Fine the irresponsible people, not those who have well-behaved dogs and are doing nothing wrong. I hear the argument that there isn't the manpower to enforce the rules - well, the rangers are doing a pretty good job right now of enforcing the on-leash rules, and are very busy fining good people who are just minding their own business and taking their dog for a walk.

What alternatives are you offering to dog-walkers? Throwing a ball in a tiny dogpark? What is wrong with giving our dogs real exercise? Dogs who lack exercise are going to be less-well behaved, so any problems are going to get worse. I have been walking my dog at Fort Funston, and in various areas in Pacifica for the last 6 years. I have yet to witness a dog bite or attack anyone, or any serious misbehavior. I'm sure that problems occasionally happen, but is there real evidence of a major increase in the number of problems? Many dogs actually become more defensive - and therefore more aggressive - when they are on leash.

Make dog-walking more difficult, and fewer people will own dogs - leading to more strays and more dogs in shelters. There will be more unhealthy people who get less exercise. Responsible dog-owners will break the rules - it's just too important for them to be able to exercise their dogs properly. So the rangers will be fining these folks, when they could be taking care of other business, and just responding to occasional problems with irresponsible dog-owners.

These proposed restrictions just don't make sense. We live in one of the most beautiful areas in the world. Why should responsible dog-owners not be allowed to enjoy this with their pets?

Correspondence: I oppose the GGNRA draft management plan and all DEIS alternatives. The revised dog management plan needs to address:

?the erroneously stated justifications for the need for action with unsubstantiated claims when the main justification for this plan is a NPS regulation that discriminates against all people with dogs and minimizes the urban "recreation" mandate of the GGNRA

?the use of "hypothetical" adverse impacts instead of actual dog impacts on the specific GGNRA park units when justifying eliminating most off-leash dog recreation and banning dogs on most of the trails designated for dog walking in the 1979 compromise

?the inadequate evaluation of GGNRA dog recreation on the health and well-being of people and on adjacent areas

?the dismissal of suggested alternatives based on unsubstantiated adverse impacts from dog recreation

?the misrepresentations of the legality of dog recreation in the GGNRA and the failure to formally recognize dog recreation as a valued, safe, and healthy recreation enjoyed by many people in America and the Bay Area

?the unfairness of a 75% compliance rule of banning all people with dogs based on violations by a few and banning all people with dogs with no evidence of significant impacts on the park or other park users

?the failure to maintain any of the traditional off-leash dog hiking trails in San Mateo County despite the long history of off-leash dog walking and the high recreation demand which is indicated by the lack of other alternatives in San Mateo County, the high rate of leash law violations, the high concentration of San Mateo County residents in San Francisco off-leash parks, etc.

Correspondence: Fort Funston Specifically

Families + dogs + kids + education (and clear instructions on how to take care of nature) = the next generation of caretakers of GGNRA.

Use the existing community to help implement your goals of caretaking

By spending the budget on clear boundaries and education in the long run you will reach your goal of land and wildlife protection now and for generations to come at minimal expense. Use the existing community to implement these goals. Who I am - We are a family with children and 2 dogs. My kids have grown up hiking Fort Funston several times a week since they were infants - 1 week of age. We love the fact that we can be

close to "real nature" - versus a manmade park.

It is my premise that children who grow up with dogs have learned to think about and love another species. Those who are lucky enough to have the opportunity to hike in nature with them learn to love nature and care for it starting with picking up poop and garbage, etc. As it is now ? There are very few places in all of America where our families (which include dogs) can be together in nature.

At Fort Funston there is a small amount of visible signage to explain the wildlife situation. There are a few old, broken, and sand covered fences to delineate protected wildlife boundaries. The lack of clarity has led to a disregard. However, I have seen this disregard extend to all people not just people with dogs. I don't think dogs are really the problem - it is people. I am convinced that most people don't intend to be malicious or malfeasant they just don't understand how their behaviors effect the big picture. They see acres of sandy open space with military remains and can't understand how someone thinks they are doing damage. So what if my dog and my kid dig in the sand?

There are very few programs for adults, families and children to educate them regarding protecting the native flora and fauna, - so tell them.

History, Residue, & Considerations ? Fort Funston lands were ravaged for national security and never fully restored. It would take a very large budget to do real native restoration. Various groups have subsequently claimed the land, which all make their mark and leave their residue. Horses leave poop and are hard on trails; hang-gliders erode the cliffs and may compete for airspace with certain birds; remote aircraft flyers traumatize birds, people and dogs with the loud noise and flight patterns; fisherman leave hooks, line and nets that are dangerous to sea creatures and birds; hikers often leave garbage; bicyclists erode trails; beach goers leave garbage, dig in the sand and cart off buckets of shells; joggers frighten feeding seabirds; dogs leave poop and pee, bark, dig in the sand, and chase feeding sea birds and ravens. Storms and tides leave tons of unnatural waste (ocean garbage dumping? Cruise ship dumping?) which are damaging to wildlife. (Waste water disposal is near the protected cliffs and in the allowable off-leash area of beach.) There have been homeless indigent camps which make lots of garbage leave poop and pee and have threatened the safety of park goers. (this population has almost disappeared with the rise of the dog walking public.) A Valuable Resource - The dog walking public is the largest and most consistent group that uses this space. Conversations between strangers happen because of their dogs. This is grass roots community building. Currently there is a fairly cohesive core group of frequent dog walking park users who see this area as their home and /or workspace and are socially responsible caretakers of the land. (Picking up garbage, poop, rescuing dogs,

and informing officials of wildlife in trouble, keeping out the riff raff and taking care of each other.) The GGNRA proposal for land management has made them more cohesive. Your extreme proposal stands to pit this group against your goals instead of for them. Use this valuable resource ? don't disregard it. If we can work together for the land we love this resource of community could ultimately manifest the vision you have for this land.

Education - Increase Signage and boundary delineations for protected areas

1. Explain what nature is vulnerable and needs our protection ? help us be even prouder of our coast than we already are! 2. Expect - People behaviors and actions? specific guidelines ie: pack it in pack it out, keep out of certain areas 3. Expect - Canine behaviors and actions? specifics ie: pack it out ? the poop, keep out of certain areas, no digging in certain spots 4. Expect - Other park users behaviors and actions with specific guidelines ? bicycle, horse, hang gliding, picnickers, dune surfers, fisherman, joggers, remote flyers, etc 5. Community Service Projects so the youth can have education credits for helping snowy plover, native plant restoration or other wildlife. 6. Self Monitoring ? each one teach one - self policing of expectations

There are very few programs for adults, families and children to educate them regarding protecting the native flora and fauna, - so tell them.

Keep non critical areas open to off leash, then use boundaries, education and community to protect the rest.

Thank you,

Diane Neighbor

PS - Why did you allow bulldozers on the cliffs during the spring nesting season of the snowy plover? They had all winter to do their structural repairs. That probably did more damage than a year's worth of dog traffic.

Re: Draft Dog Management Plan / Environmental Impact Statement
Compliance-Based Management Strategy

To whom it May Concern:

RE: Compliance Based Management Strategy:

I am a senior and I have been using the beaches at Crissy Field, Baker Beach, Muir Beach, Ocean Beach, and the Marin Headlands for recreation with my dogs for over 25 years. For much of this time, plenty of off-leash and on-leash opportunities have existed for us.

I currently have a labradoodle named Izzy who is in training to be a Animal Assisted Therapy dog. She and I spend countless hours walking along the beaches and trails. We recognize that there are more dogs and more people in the Bay Area these days and can even understand that it is important to designate specific lands for off-leash and on-leash recreation. We are closely following the GGNRA process for hearing input about the possible new dog management plan.

What concerns us is that after these hearings are over and agreements have been made about leash laws and areas, the proposed option gives the GGNRA the opportunity to change these agreements without a further hearing. How is this fair? If this is the case, what is the purpose of the comment period? This Compliance-Based Management Strategy makes the whole process seem like a mere formality to keep us dog people in line and to gain the control that will eventually mean more and more restrictions. How can we enter into this process in good faith with this kind of strategy in place?

We believe this strategy should be removed from any option that is finally adopted.

Sincerely,

JoAnne Tybinka Blasko Izzy Blasko

To: GGNRA GGNRA Dog Management Plan Environmental Impact Statement

RE: Encouraging Cooperation; Developing an Alternative that Actually

Works

To Whom it May Concern:

I am a senior who finds great enjoyment recreating at Crissy Field, Baker Beach, Fort Mason, Ocean Beach, and the Marin Headlands with my dog,

I have spent time reading the GGNRA DOG DEIS and I am concerned about the tone of the report. It's not really a process for finding a way to provide a variety of high-quality visitor uses including areas where dogs are allowed or a way to discuss how to offer national park experiences to a large urban population.

Instead, the report seems to discourage cooperation between different park users and it fails to imagine that park user groups can work together to resolve problems when they come up. Instead, it could actually increase conflict between park users as more and more people and dogs are crammed into smaller and smaller spaces.

The report seems to be a way to circumvent the 1979 dog use policies or the 2005 ruling while bringing the dog people in line and eventually gaining full jurisdiction without the need for public input as to the way our Urban Park is used.

I believe the GGNRA should start all over and develop a new alternative, call it the A+ Alternative. This would be an alternative that will better serve the needs of the Bay Area. Instead of finding ways to restrict use, find ways to serve the population of the area.

You're right when you state that these parklands are our backyards (page 20). We do expect that public lands will be available for dog walking and other recreational activities because this has been the case over the years. Use by dog owners has not been "pushed" onto NPS lands. NPS has taken over management of lands that were already used for recreation by dog owners. Why not recognize this fact instead of fighting it? Why not try to find a way to actually serve this very urban population instead of a way to bring it in line with other national parks?

Sincerely,

Peter P. Blasko San Francisco resident for over 50 years

Correspondence: I have read the alternatives and think that your preferred alternative should be considered the most liberal, in terms of letting dogs run free in certain areas. I am in favor of leash control for all dogs, except in specific fenced areas. I think that we need to protect the wildlife, and pet dogs must be kept in control. "Voice control" is mostly a joke. When I visit parks, I often see owners calling to their dogs and the dogs ignore them. I -- and my children - - have been jumped on by dogs running around parks. We do not go to the parks to be jumped on by other people's dogs. I agree that commercial dog walkers should not be allowed in the parks. These businesses should manage the dogs in their own proprietary fenced areas, or they can walk them on the city streets.

Thank you for proposing that dogs will mostly be kept on leash. That is important for all the human visitors to the parks, and also for the wildlife.

Correspondence: I am very happy to see that the issue of dogs in the GG park is finally being addressed. I recently moved to Ocean Beach and was quite surprised to see the large number of dogs running free on the beach. I am a dog lover and have owned many dogs in the past but took the responsibility of ownership seriously which means following existing laws and making sure my pet does not disrupt others enjoyment or chase endangered wildlife. Unfortunately I have seen both infractions occur on almost a daily basis during my walks on the beach. It is too bad that a few repeat offenders are ruining a great resource for those law-abiding dog owners. I wholly endorse your plan to strictly limit off-leash dogs as this seems to be the only viable means to protect the Snowy Plover and other birds, meet the needs of many beachwalkers who do not appreciate a dog knocking them over, and still provide a large area for off leash use. I appreciate yo for taking this controversial issue on - especially in San Francisco!

Sincerely,

Kurt Kristensen

Correspondence: Please don't give into the dog fascists. I don't use this word lightly. I own a dog myself, and I am shocked by the privileges that people think should accrue to their dogs. They don't seem to realize that many birds lead very difficult lives and that their continued existence is fragile in a world such as ours. They seem to resent that their dogs may be restricted in the least bit. I have had experiences with many dog owners who really don't think about the larger picture, about protecting wildlife and having a great variety of wildlife here for our grandchildren to enjoy.

Are there any snowy plovers in the animal shelters? No, I don't think so. Yet there are many, many dogs. We have a huge overpopulation of dogs on this planet, and we shouldn't be thinking in terms of making more room for them. My dog gets to run free only when I take her to Point Isabel, a few times a year. Yet I don't think she leads a miserable existence. She leads a fine existence with many pleasant walks in our neighborhood.

So please stand your ground and don't give into these unreasonable dog owners. There are many of us who want to protect wildlife at all costs. I think walking my dog on a leash is a small price to pay for the right of future generations to enjoy the birds that I enjoy today.

Thank you.

Correspondence: I am afraid of all dogs, because all of them can potentially bite people. Dog owners are mostly of the belief that their dogs are tame. However, I was bitten by the dog of such an owner. Diane Whipple was killed by a dog whose owners did not understand they could not control their dogs off leash.

Dog walkers do what is forbidden by law. The way it is now, even in City parks where dogs must be kept on leash, the rule is not enforced, and dog walkers break the rule everyday. Yes, signs are clearly posted.

Dog walkers can be terribly rude. Upwards of 90% of dog owners I encounter tell me there's nothing to be afraid of, because their dogs are

gentle. (Less than 10% will actually hold their dogs.) Since I do not appreciate dogs running toward me, I always ask dog walkers to hold their unleashed dogs until I pass. When the dog walkers refuse to hold their dogs, the dogs may even charge at me; then, I would tell the approaching dog, "Sit" or "No," but sometimes I would have to run. One time, I told a passing dog walker (with her dog off leash) I had been bitten by a dog. In a rude tone, she said, "Oh. Get over it."

Dog walkers behave as though signs designating habitat restoration or other such sensitive areas do not apply to their dogs. This demonstrates a disregard for what nature existed here before hordes of humans and their pets came and a haughtiness than nature exists for their pleasure.

Because dog walkers are disobedient of laws and inconsiderate of people who do not like dogs, dog walking should be limited or forbidden. National parks should be welcoming places for everyone. Dog walkers have abused the law, individuals like me, and sensitive public spaces--enough already.

I will appreciate any rule that keeps commercial or other dog walking out of national parks--and enforcement of same. Thank you.

Correspondence: Regarding the proposed Dog Management Plan in the Golden Gate National Recreation Area:

-At least some if not all areas and trails of the GGNRA should be off-limits to dogs, whether leashed or not. There is far too much sensitive wildlife and habitat in many regions of the Area which are already too heavily impacted by human activity (and the introduction of dogs IS a human activity.)

-The Area should be COMPLETELY closed to commercial dog-walking. Taxpayer support of the GGNRA should NOT subsidize any commercial activity, not even with the mitigation of licensing and fee payments.

-The recent resolution of the SF Board of Supervisors expressing opposition to dog regulation or prohibition in the GGNRA merely represents an effort by the City & County of SF to shove their own dog-generated problems in City parks and other City properties onto the shoulders of the NPS. As such, the Board resolution lacks merit and is an unconvincing argument. It is the City's responsibility to solve its own dog problems.

-75% compliance is FAR too low a goal. NPS should set a benchmark of at

least 95% compliance. I don't know what the current level of compliance is, but i am willing to guess it is well below 50%. It might be an interesting experiment to just start *ENFORCING* the regs currently in effect, and then re-examine the results to determine whether in fact we really need any additional strictures.

Correspondence: I'm shocked at the idea of using the GGNRA as a dog's toilet! Commercial dog walkers are often the worse offenders of the pick up rule. Having so many dogs to manage, the ones off leash get away and poop without them even knowing. Also, having the pack mentality, dogs are more inclined to harrass the birds if one starts chasing. There are so many of the herding dogs, and dog owners act like its not thier fault, it's the dogs breeding!.

I resent that dogs bound up to me, sometimes almost bowling me over because their owner throws a ball in my direction.I have a small dog, and the large dogs often surround and intimidate her. Who knows if these dogs are friendly? Dogs can get out of hand if there is a ball or treat at stake.

Ironically, when the city is trying to increase revenues, there is no proposal for a dog walker's license, and a limit of how many dogs per person. Why isn't dog licenses required anyway? All owners should be required to pay a decent yearly fee-the vet should collect it before giving them the yearly shots. At least \$25 per dog per year, a dog does a lot of damage enviromentally. A city that requires fresh water and food daily certainly should demand owners keep current on the dog's shots.

Since Ft. Funston is already a pit, how about dogs there, only? Or, some parks are rarely used, like Juniper Sero, Sweeney Ridge. Why do the dogs get the nicest places? People can't enjoy Ocean Beach or Chrissy field in peace, not to mention the birds. BTW, I have never seen any dog owner make sure thier dog did not go thru the protected areas, and they are rude and don't care if you let them know.

Dog owners have shown great ability to curry favor with elected officials, but do they ever have a code of ethics for themselves or show up for clean up or restore days?*

I am a dog owner, a bird watcher, an environmentalist. I vote, and I am fed up with the GGNRA going to the dogs!

Correspondence: I am writing to support all regulations that dogs be restricted from sensitive wildlife areas at GGNRA. As a dog owner, I am not against dogs. But the natural wildlife needs protection from these dogs which frighten birds and compromise the ecosystem. Off-leash areas should be fenced. Commercial dog-walking should not be permitted. Some trails should be entirely closed to dogs. There should be 95 percent compliance with National Parks proposed requirements. Dogs should be heavily restricted and only allowed in determined areas.

In short the parks should be maintained as safe and accessible so that precious species can survive. Thank you.

Correspondence ID: 2337 **Project:** 11759 **Document:** 38106

Correspondence Type: Web Form

Correspondence: I agree that we need to revisit the dog management rules within GGNRA.

At this moment, there are virtually no parks in San Francisco that I've been in that don't have dogs running off-leash. I see off-leash dogs everywhere, and that includes the Wildlife Protection Area at Crissy Field, where the endangered Snowy Plover is trying to hang on. It includes places where children are playing--some of whom may be afraid of dogs--or people are trying to eat. It includes "protected" natural habitats, breeding ground for rare birds, and many other areas that might quite reasonably be better off with no off-leash dogs.

I think the GGNRA isn't going far enough. We have a terrific number of excellent places to walk and run dogs in this city. And we have almost no places where endangered wildlife can have a good chance at life.

I hope that we could see:

1. 100% compliance with signage and regulations.
2. Licenses for professional dog walkers.
3. Increased ticketing for noncompliance with regulations.
4. More signage that explains the restrictions and points dog

owners to the dog areas.

Thank you for your efforts.

Correspondence: Although your mission seems to be preserve native flora and fauna, this proposal goes into quite a bit of detail about canine incidents and behaviors. This is what I choose to comment on. Fort Funston -

I have been a 5 times a week visitor to Fort Funston off leash areas for over 7 years. In that time I have only witnessed 2 dog fights in which skin was broken. This is so amazing because we are talking about hundreds of dogs daily that are getting along amicably. Fort Funston dog community could be called the United Nations of people and dogs. I see people of many ethnicities and language with dogs of many sizes and breeds not only avoiding conflict but having a good time and visiting building friendships!

During one visit about 3 years ago I ran into some students from Japan that were filming and doing an article on the place because it is unique in its people dog diversity and it wild space beauty. We could have a national treasure in the way the land is being used - not just the beauty of the land.

Please find a way to continue off leash open space. Part of the reason it works is because the space is so large. Dogs of different temprements or sizes can find their own place to be. Most socialological studies show that crowding causes conflict in most any species. Your extreme proposal will cause crowding in the small remaining area. I am fearful that conflict will arise where nearly none existed before.

This park is very heavily used by the San Francisco and Peninsula population as well as outlying Bay Area regions. On good weather weekends parking lots are full to capacity and if you speak with people they have come from as far south as Santa Cruz and San Jose, as far North as Santa Rosa and as far east as Livermore. Most have come just to walk their dogs in a safe place where dogs have lots of room to run. We need this place. Please find a way to let us stay.

Correspondence: Thank you for understanding the needs of our community. My daughter is 5 years old and I began taking her to Crissy Field at the age of 1. I stopped at the age of 2. The first problem with Crissy Field is that the overwhelming smell of dog urine is nauseating and disgusting. Why would we want our children digging in this sand? The next issue is that the dogs were constantly running through my picnic blanket and sniffing my daughter. With the issues we've had in this town, we all know how scary and dangerous it can be when a big dog gets exciting around a small child.

Will the new regulations be enforced? Last summer we tried to go to the 'no dog' area near the Warming Hut. Well, I was not surprised to find dogs there! Dog owners have no respect for rules. When I told an owner that dogs were not allowed, he said that he couldn't control the dog and it will run where it will run.

Also, contrary to what dog owners are saying about children and bikers ruining endangered species areas, the truth is that I've seen many dogs inside the fenced areas.

Please go forward with your plan! Thank you for letting me comment.

Correspondence: If our dogs aren't able to have areas where they can run freely and swim, they won't be able to burn off the energy they need to be well mannered

animals. Due to injuries, I can't go run my dog to tire her out, but I can take her to the beach at Crissy Field and let her run up and down the beach playing with other dogs. We go to that beach at least once a week with our dog, year round. It's a meet up place for people with dogs. We can enjoy the beautiful scenery while our dogs get a chance to run and be free. We go there rain or shine, fog or sun, to let our dogs run. 95% of the year the only people at the beach are people with dogs. It's not fair that the few days of warmth and sun when people without dogs go to the beach would ruin the rest of the year for the many dog owners in the bay area. People come from all over the bay area to bring their dogs to the beach to play with other dogs.

Correspondence: To the National Park Service,

Dogs are a threat to the natural resources of the Golden Gate National Recreation Area. Ocean Beach is one of many areas in our park system that is spoiled by so many dogs. The beaches in Southern California are clean, comfortable and safe. Our family with young children can play on sand that is not contaminated by dog waste. They are safe from dogs. No dogs are permitted. It is lovely. Why are dogs permitted when they clearly harm the

Ocean Beach always has off leash dogs. Crissy Field always has off leash dogs, Golden Gate Park always has off leash dogs, Fort Funston, more off leash dogs. The last two times I attempted bird watching at Fort Funston I watched as one woman got out of her mini-van with 12 dogs - all off leash. While 12 is probably not typical, most dog walkers adhere to the rules, it happens. And there are other violations. I long ago gave up walking at Crissy Field. We no longer take visiting friends and family to most parts of the GGNRA. Last time I walked on JFK and throughout several trails for an hour and a half I counted 57 dogs. The time before that around Chain of Lakes I counted 63 in a two hour period. Now I don't go.

Urine drenched sand, fecal debris is not how the GGNRA can protect the environmental integrity and beauty of our shoreline. It is harmful to wildlife and people. The Dog Management Draft Plan does not propose enough protection.

Please, expand the vision. Dogs OFF the beach, better enforcement of leash laws, MORE NO DOGS PERMITTED places for people to walk, relax, bird, play and enjoy our natural resource. No dogs in the National Parks. Enforce it and make it happen. Thank you, Janet Harrison

Correspondence: Please keep Crissy Field as open as it is now for dogs. I've written before and nothing I've read or seen has caused me to change my view that dogs should be welcome there. I remember taking my grandchildren (2 boys who were skittish around dogs, perhaps even scared) there some years ago. They watched as the dogs played with each other, played in the water, romped on the shore with their human and dog friends, and then the children settled comfortably into their child activities. Neither were detrimental to people, animals, birds, the environment. One might as well keep children out of the same areas you suggest keeping dogs out of.

Correspondence: Dear Superintendent Dean,

I strongly support the Dog Management Draft Plan. Our national parks' foremost mission is conservation and there are endangered species at risk in San Francisco if we do not act.

I believe:

- All off-leash dog areas should be fenced for the protection of other park visitors and dogs. Park visitors should be given a choice about whether they will interact with off-leash dogs.

- There should be a limit of 3 dogs per person. It is not appropriate for the Park Service to create commercial permits for professional dog walkers. Also, it is unlikely that most visitors with dogs will be able to keep control of more than 3 dogs at one time.

- Leash and voice control requirements must be strictly enforced throughout the life of the policy. Otherwise proposed on-leash areas will become off-leash areas, as has already happened under the old rules.

- The goal of achieving 75% compliance with the leash and voice control requirements is far too low. The Park Service should not be creating a system that expects and tolerates failure by 25% of the dog walkers. Golden Gate Audubon recommends a goal of 95% compliance with leash and voice control requirements.

Correspondence: I am a home owner in Pacific Heights and we walk our dog in the parks daily! On the weekends, we love to take Biscuit to GGP and to the beach and other parks so that he can play off leash with other dogs. Not only is this good for making our little guy less aggressive, but any dog book that you read says that this is a vital part of the socialization process for the animals. In San Francisco, people, like us, consider their dogs to be their children and family memebers. This is one of the reasons that we decided to buy in San Francisco 5 years ago, because the city is so accepting of dogs and open to them being everywhere. Very European! Now, that seems to be changing into a political, closed minded agenda to end the freedom and charm that has brought so many people, like us to the city. Imagine not allowing your kindergartner to run and play on a playground unless they were on a leash. Do you think that would help them to grow up socially adjusted? Of course not! But,this is is what the city is proposing to our furry children! I feel very strongly that the city should reconsider their position on these leash laws...or else they may lose valuable tax dollars from people like us, who are less likely to stay in the city if there is no place for our 'kids' to roam free. We might as well move to the East Bay and buy a house with a yard.

Correspondence: I appreciate the enormous amount of work that the GGRNA staff and volunteers have done to create this draft dog management plan and to communicate with and educate dog owners and other members of the public.

I strongly urge that the NPS adopt option D for all new lands which may be acquired or managed by GGNRA, as recommended in the preferred alternative.

I would like to see the NPS adopt the preferred alternative for all others areas under consideration as well, with one exception: there should be no exceptions to the three dogs per person limit, for either commercial or individual dog walkers, in the ROLAs. One person cannot reasonably be expected to keep more than three dogs under sight and voice control; allowing this even by permit is likely to cause the ROLAs to be revoked under the compliance procedures outlined in the draft document. It would probably be simpler to maintain the three-dog limit throughout the dog-walking areas, rather than allowing six dogs in the on-leash areas and only three in the ROLAs, but staff knows much better than I whether that is the case.

Thank you.

Martha Benioff

Correspondence: Dear NPS, I'm a 3-year resident of the Presidio, a 14-year resident of San Francisco and a lifelong resident of the Bay Area. I've used GGNRA areas to walk and run with my dog for 4 years, and we visit GGNRA areas every single day, given that we basically live in them. But we visit not only the GGNRA lands in our neighborhood, but also Fort Funston, Ocean Beach, Rodeo Beach, Muir Beach and many of the trails in the bluffs and hills above those places. I can't begin to imagine the huge negative impact the Preferred Alternative will have on my enjoyment of these areas. My dog is very active and requires at least some off-leash running to enjoy life. To keep him on-leash *all* the time, or to be forced to drive to small, crowded, enclosed off-leash areas in the SF city parks would seriously curtail my enjoyment of the GGNRA recreation areas as well as my dog's health and well-being. I believe that restricting and prohibiting off-leash dogs in so many GGRNA lands is not the solution to the perceived problem--rather, if there are issues with dogs on these lands (which I don't agree is the case), then the solution is better enforcement of current rules. My experience is that the vast majority of dog owners are responsible people who pick up after their pets and follow the rules. I have never witnessed anyone's dog chasing snowy plovers or harassing wildlife in any of the GGNRA lands that I have visited. The density of people in the surrounding cities have a far larger impact on wildlife in the GGNRA than does the occasional off-leash dog. Please count this letter as a vote against the Preferred Alternative.

Correspondence: 2 general comments. Many people come to the parks to exercise and recreate with their dogs. If you curtail spaces for such recreation, you will be denying citizens their choice to freely enjoy the park as they want. My husband and I walk Chrissy Field at least once every week and part of our enjoyment is being around and observing the dogs and their owners. 2nd comment: just because other national parks have a particular set of rules re dogs is no reason to force the same rules on an area which has a long history of dog-citizen usage. In fact, many of the people who count on the open space for themselves and their dogs to run freely, esp.the beaches, have been going to those places since before many of the staff of the GGNRA were born. There is a long tradition of this usage. None of the proposed plans is necessary to continue dog/citizens enjoyment of the national park. Please do

not adopt any of the plans.

As a California resident, I appreciate that the park's mission is to protect the natural and cultural resources, not allow recreational activities to undermine it.

Part of the reason I appreciate the park service is the preservation of endangered species native to California. Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the

compliance rate should be 95%, not 75% as outlined.

As someone without a dog, I sometimes find the presence of dogs somewhat threatening. The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by offering more than one trail and more beach areas free from dog recreation.

It would help with my issues if the park service were to require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs and limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Type:

Correspondence: Golden Gate National Recreation Area may be one of our country's boldest park experiments: setting aside highly-prized land to provide a national park experience near a heavily urbanized area. Indeed, the park is home to more endangered and threatened species than any other park in the continental U.S.--more than Yellowstone, Yosemite, and Sequoia & Kings Canyon combined!

To help protect these species and other protected wildlife, inappropriate activities such as motor vehicle use on beaches were banned. However, the park continues to permit unregulated activities that disturb wildlife like western snowy plovers and marine mammals. Wildlife take refuge on Golden Gate's beaches to rest, breed, and rebuild energy for survival, yet unregulated off-leash dog recreation in these areas has resulted in habitat encroachment and wildlife harassment by dogs. For example, the park has reported that unleashed dogs represent the most significant recreational threat to wintering western snowy plovers.

There is an urgent need for dog-free areas on the beach. I urge you to consider the greater priority of protecting wild species from domestic pets off leash.

Thanks for your attention.

Correspondence: The park's mission is to protect the natural and cultural resources, not allow recreation to undermine it. Our family has enjoyed the park on frequent occasions, and public use of our natural and cultural resources is always important. However, the preservation of those resources and their wildlife should be the most important consideration.

Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by offering more than one trail and more beach areas free from dog recreation.

Require all off-leash areas to have large enclosed areas to protect park users, wildlife, and other dogs. I am a big fan of off-leash recreation for my dogs. However, I believe that the times and areas should be regulated for the protection of all users. We need to limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats. Thank you for helping to create a better park experience at Golden Gate National Recreation Area, and for giving imperiled species a chance to survive.

Sincerely,

Sharron Thomas

Correspondence: I'm very concerned and confused at the outlined protection level of 75% in the plan. I believe a level of 95% would already be rather lax. My understanding is that the park's mission is to protect the natural and cultural resources, not allow recreation to undermine it.

--The park has a diverse user community and they should be better accommodated, by offering more than one trail and more beach areas free from dog recreation.

I believe that all off-leash areas should be enclosed to protect park users, wildlife, and other dogs and that off-leash recreation should be limited to areas where it will not have negative impacts on sensitive wildlife and habitats.

Correspondence: The Golden Gate National Recreation Area is home to more endangered and threatened species than any other park in the continental U.S.--more than Yellowstone, Yosemite, and Sequoia & Kings Canyon combined! The park's mission is to protect the natural and cultural resources, not allow recreation to undermine it. Although some efforts have been made to help protect these species and other protected wildlife, the park continues to permit unregulated activities that disturb wildlife like western snowy plovers and marine mammals. Wildlife take refuge on Golden Gate's beaches to rest, breed, and rebuild energy for survival, yet unregulated off-leash dog recreation in these areas has resulted in habitat encroachment and wildlife harassment by dogs. For example, the park has reported that unleashed dogs represent the most significant recreational threat to wintering western snowy plovers.

Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined. Additionally, the National Park Service should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by:

--Offering more than one trail and more beach areas free from dog recreation. --Requiring all off-leash areas to be enclosed to protect park users, wildlife, and other dogs. --Limiting off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Please regulate recreation in the Golden Gate National Recreation Area, creating a better park experience at Golden Gate National Recreation Area, and for giving imperiled species a chance to survive. Thank you.

Correspondence: Golden Gate National Recreation Area may be one of our country's boldest park experiments: setting aside highly-prized land to provide a national park

experience near a heavily urbanized area. Indeed, the park is home to more endangered and threatened species than any other park in the continental U.S.--more than Yellowstone, Yosemite, and Sequoia & Kings Canyon combined!

To help protect these species and other protected wildlife, inappropriate activities such as motor vehicle use on beaches were banned. However, the park continues to permit unregulated activities that disturb wildlife like western snowy plovers and marine mammals. Wildlife take refuge on Golden Gate's beaches to rest, breed, and rebuild energy for survival, yet unregulated off-leash dog recreation in these areas has resulted in habitat encroachment and wildlife harassment by dogs. For example, the park has reported that unleashed dogs represent the most significant recreational threat to wintering western snowy plovers.

I urge the National Park Service to protect Golden Gate's imperiled wildlife from harassment by unregulated recreation.

Correspondence: A number of organizations are advocating great restrictions to off-leash dog walking. They forget, it seems to me, that the GGNRA was created with a MANDATE and a CONTRACT, to preserve traditional uses. Off-leash dog walking is one of them.

It is a special park, with unusual origins and unusual requirements.

For me, as a senior, my only access to this traditional use is at GGNRA. Please help the people who want to take away this traditional use to realize that they must balance their ideologies with human uses.

They will tell you it is not possible. In the great tradition of Prohibition, they want to improve us by controlling us. Please, just gently fan them and send them home, lest they make adversaries of those who now wish the GGNRA well.

Thank you

Correspondence: Dear NPS--

I realize it is very difficult to balance the oft-time conflicting missions of recreation and conservation. However, more and more I see the louder voices of those desiring more and more recreation opportunities in habitats that are crucial to sensitive and endangered species.

--The park's mission is to protect the natural and cultural resources, not allow recreation to undermine it. IN ADDITION TO THE MEASURES LISTED BELOW, THIS COULD BE OFFSET BY DEVELOPMENT OF SPECIFIC RECREATION AREAS THAT ARE LOCATED IN LESS SENSITIVE HABITATS.

--Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

--The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by offering more than one trail and more beach areas free from dog recreation.

--Require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs.

--Limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Correspondence: I am both a strong supporter of the Golden Gate National Parks Conservancy and a dog owner who enjoys some of the designated off-leash areas of the GGNRA with my dogs. While I do not believe that we should put endangered species at risk, I do believe that there is a way to regulate

recreational use that would provide designated off-leash areas that do not threaten wildlife habitat and that a flat ban is an overreaction to the issue.

Currently, there is some regulation in the GGNRA that does prohibit dogs entirely or dogs off leash in specified areas. This is a perfectly appropriate regulation for sensitive habitat area, but I don't find it necessary to ban dogs in every place in the park, particularly in areas where there is urban infrastructure already in place that would theoretically not threaten wildlife either, otherwise it would not be there (e.g. parking lots, picnic areas, bathroom facilities, build structures, walking paths, etc.).

GGNRA is an urbanized park that is both an anomaly of other national parks as well as a pioneer in many regards. I would hope that innovative thinking on how to reconcile different uses of the urban recreation area should be an objective of the GGNRA in the same way it has made financial sustainability an objective, as an example. It has heavily used roadways that run through the territory, millions of human users, a variety of uses within the park, and I have the utmost confidence that the GGNRA staff can resolve the dog issues without banning dogs altogether, whether it be through creating additional funding streams that would help mitigate the impact by fencing off fragile areas, issuing tickets to dog owners who do not follow the rules, or to alternate days of use of specific areas to decrease overall use and impact.

In my experience as a dog owner, I find many people who walk their dogs in the GGNRA on a regular basis are often the people who tend to pick up human garbage on the ground and maintain dog congregating areas (e.g. water bowl areas).

While I certainly do not seek to negatively impact the natural environment and habitat of any species, the mere existence of dogs and humans absolutely has an impact so that impact should be regulated in some sensible way. I have been pleased to watch the numerous restoration projects in the GGNRA over the years and feel as though there has been quite a bit of thought and planning that has gone into making it more sustainable both financially and environmentally, but as highly varied asset in the area, I hope that a reasonable compromised solution can be found.

Correspondence: No offense to doggies, but they are plentiful (in fact overpopulated) and thier recreation does not take precedence to the welfare of endangered species.

One would think that dog owners, presumably animal lovers, would be

more responsible and sensitive to wildlife.

I would think that there are other leash free parks that do not imperil endangered species.

At the very least an area should be fence off, and within this area only, would dogs be able to go leash free. In addition this would make a contained area for dog waste, thus making it easier for clean-up.

Correspondence: I believe that dogs contribute to one's overall health. When one lives with a dog, regular exercise is required which benefits the human as well. For dogs to stay healthy, they need to run. When I lived in SF, I frequently visited Fort Funston with my dog and it benefited both of us, mentally and physically.

It sounds like the controversy has stemmed from some irresponsible dog owners who don't follow the basic rules of keeping one's dog under voice control, picking up after them and respecting the multi use aspect of our park system. I don't think that restricting dog access answers that problem. If someone is not going to pick up after their dog, requiring that dog to be on leash won't change that. And yet, keeping that dog on leash will lead other negative behaviors. A common problem with on leash dogs is leash aggression - this is a problem that disappears when dogs are off leash. I don't think the answer is to require leashes or ban dogs completely.

As a taxpayer and a supporter of our park system, I would like to see park police go after abusers of the public parks, whether it be a pet owner who does not control or pick up after the pet or a teenage vandal who is defacing park property. Those two examples fall into the same category in my opinion. Would you ban all teenagers from public parks because most of the vandals are teenagers? Of course not. So why would you impose restrictions on dogs when most of them are under control and their owners are following the rules?

Correspondence: I am writing as a biologist, an environmental attorney, and a long-time dog owner to comment on the proposed dog management plan for the Golden Gate NRA. As a dog owner, I am sympathetic to the need of pet owners for places where they can run leash-free. On the other hand, as a biologist and an environmental attorney, I am keenly aware of the limited remaining space available for natural habitat, especially in the highly-urbanized S.F. Bay Area. Given that a certain amount of balancing may be needed, it seems far easier to find alternative sites for off-leash dog play areas than it is to find alternative habitat, especially for rare, endangered, threatened, and other federally-protected species. These species have highly-specific habitat

needs, while dogs and their owners can use a variety of open space options.

Given this disparity, it seems obvious to me that the needs of the natural environment, and especially of species and ecosystems with limited available habitat, must come first.

While I appreciate that the NPS is developing rules for dogs and other pets in the GGNRA, it is crucial that these rules be enforceable and enforced. From that standpoint, the NPS' proposed 75% compliance rate is unacceptably low. A species such as the Western Snowy Plover, that may migrate thousands of miles, cannot afford to be chased by a dog even once. While there may be ecologically less-sensitive parts of GGNRA where less stringent enforcement standards may be acceptable, important habitat areas need to have strong rules and stringent enforcement, including fines that are stiff enough to act as deterrents to violation, and the potential for criminal prosecution for flagrant and/or repeated violators. As the saying goes, "extinction is forever." In particular, areas identified as habitat for federally protected species such as the Western Snowy Plover need to be kept stringently dog-free. Anything less than that would invite abuse as well as damage to the protected species, something prohibited under the Endangered Species Act.

In addition, designation of dog use areas, and especially leash-free areas, should take into account not only the needs of wildlife habitat, but also those of non-dog owners. Hikers, horseback riders, birders, runners, and picnickers need to have areas where they can, if they choose, be dog-free, as well as areas where dogs are allowed.

Correspondence: THE wildlife of the Golden Gate Recreational area are diverse and important to protect. I have lived in the bay area my whole life and know that this place is a wonderful climate for many animals to thrive considering we have such mild winters. The main issue I believe that needs to be addressed when working to protect wildlife is recreational vehicles. In my opinion people who love to use off road motorized vehicles with huge tires and loud engines are the ones who pose the biggest threat to the lives of animals. There are also issues with dogs harassing birds, but I believe that people are the ones who do the most damage. There are many dog owners, myself included, who are responsible and aware of how their dogs behave when they come upon wildlife. there should be designated areas that are for leashed dogs and some so dogs can run off leash like there are at Fort Funston. Trails should be well marked and there needs to be places where

birds and other wildlife are protected so no humans, dogs or off road vehicles are allowed. With these suggestions in mind I believe that we can protect wildlife in the Golden Gate recreational area safely and humanely and not have our beaches and tranquil places for reflection blasted with the sound of engines or backfire from vehicles so everyone feels safe and secure.

Correspondence: As an animal lover and dog owner, having a clean and safe place to have fun with my companions off leash is a wonderful treat.

The park's mission is to protect natural and cultural resources, at the same time allowing for recreational use that won't destroy it.

As much as I would love having more off leash spaces state-wide I also understand and feel that in a case like this that endangered species wildlife habitat deserves a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

Also, some people don't like to encounter free roaming pets and dogs can create a lot of stress for other wild animals, even though what are doing is all in good fun.

Because of this, off lease areas should be enclosed or separate in order to protect other visitors, wildlife, the terrain and other dogs. These areas should be placed where than will not have a negative impact on sensitive wildlife and habitats. This includes noise disturbance.

Thank you for considering these comments.

Correspondence: Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95% not 75% as outlined. As well as, the Parks Mission is to protect the natural and cultural resources, not allow recreation to undermine it. With these points in mind we must use all of our engery and resources to protect these Grand Areas of these United States of America!

Correspondence: I appreciate your time in considering our comments.

-The park's mission is to protect the natural and cultural resources, not allow recreation to undermine it.

--Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

--The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by offering more than one trail and more beach areas free from dog recreation.

--Require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs.

--Limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Correspondence: I live across the street from Ocean Beach, between Kirkham and Lawton. Somehow a bunch of dog owners decided that this National Park is their own private dog run, that the birds are there for their dogs' amusement, and that anyone who doesn't want to step in dog poop at the beach, or be hassled by or barked at or threatened by dogs while out walking is a Nazi.

Not only do birds get chased constantly, continuously, not only do the dog owners not pick up after their animals, not only do the dogs threaten people and each other, but dogs die out here. The owners for some reason think that fast currents, undertows and rip tides have no effect on dogs.

Please, this is a national park. I know there's no money for patrols, I know there's no money for anything, but couldn't you make some money off enforcement, enough to pay for the enforcement, at least for a while, at least until the dog owners get the hint and take their activities where they belong? Please.

Correspondence: I've followed this matter closely as I have lived in San Francisco over 40 years. I have owned dogs and understand it is necessary to give them places to roam freely. But I strongly support restricting dog activities in the GGNRA because of its unique place in our urban environment. The very beauty and rarity of some of the locations in the area puts them under increased pressure from the adjacent human population.

Humans are restricted to trails to protect plant and animal life and dogs must be similarly restricted. The only way to practically do that is with leashes and I support those restrictions. There is genuine wild life in the recreation area and it deserves to be protected and preserved.

Correspondence: It is a testament to our collective interest in preserving natural areas to enjoy that this park is even in existence. We need to carry forward with the necessary regulations for the protection of the animals and plants in the park to make it a worthwhile endeavor. Most parks have leash regulations. I can't imagine why this place that is so full of important species would ignore the need for some kind of rules for the dogs that visit the area. Maybe there should be a designated dog park in an area that doesn't impact the nesting areas. Any nature areas in urban settings are a precious resource for the calming effects and stress reduction of the population of that area. There are always ways to meet the needs of the people and preserve the natural resources. Some give and take and consideration of the most important needs on both sides seems like a simple enough problem to solve.

Correspondence: Why do humans think that they and their unleashed animals are entitled to trample every last shred of beautiful habitat left in this country? The NPS needs to exercise some policy changes quickly and protect these last sanctuaries from human impacts. In most cases, I am not a proponent of fines for minor infractions but pet owners need to be fined heavily for the damage their animals cause. It's bad enough that when I go hiking I have to be harrassed by dogs but it goes way beyond sanity when every other creature has to endure their ignorant curiosity. Leave your dogs at home, people! Let's have some peace and quiet in our natural places so we can

listen to the sounds of nature.

Correspondence: I am very familiar with Stinson Beach -- only slightly with one or two others. It is one of my greatest pleasures to allow my dog to run free on the sand and in the surf, and I see others doing likewise.

However, to my great regret, I believe that dogs should NOT be allowed off leash in any area where wildlife can be impacted -- and this seems to be the case in most areas of Golden Gate Park. If there is any way you can barricade off a few acres to make, as it were, a marine dog park, possibly where human recreational activity has already displaced the wildlife, I would be grateful. However, this would require policing, and I sincerely believe that any enforcement funds will have to be used to police areas where you allow ON-leash activities, since violations of this are already prevalent.

Limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

The delicate balance of nature as it occurs without man's interference should be preserved. We have a genuine responsibility to preserve these creatures for the generations who come after us to learn from and enjoy the peacefulness of their presence. The world is filled with ATVs, motorcycles, boom boxes, SUVs and trash. The National Park is not an amusement park; nor is it an arena for human beings to indulge their selfish desires and not take responsibility for the impact their dogs may have on vulnerable other animal species.

Correspondence: Golden Gate National Recreation Area may be one of our country's boldest park experiments: setting aside highly-prized land to provide a national park experience near a heavily urbanized area. Indeed, the park is home to more endangered and threatened species than any other park in the continental U.S.--more than Yellowstone, Yosemite, and Sequoia & Kings Canyon combined!

To help protect these species and other protected wildlife, inappropriate activities such as motor vehicle use on beaches were banned. However, the park continues to permit unregulated activities that disturb wildlife like western snowy plovers and marine mammals. Wildlife take refuge on Golden Gate's beaches to rest, breed, and rebuild energy for survival, yet unregulated off-leash dog recreation in these areas has resulted in habitat encroachment and wildlife harassment by dogs. For example, the park has reported that unleashed dogs represent the most significant recreational threat to wintering western snowy plovers.

Please protect Golden Gate's imperiled wildlife from harassment by unregulated recreation.

The park's mission is to protect the natural and cultural resources, not allow recreation to undermine it.

--Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as

Correspondence: As I understand it, the park's mission is to protect natural and cultural resources, and therefore, recreation should not be permitted to undermine that mission. In that regard, an endangered species wildlife habitat deserves a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

To make that goal a reality, the park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with

service animals, by offering more than one trail and more beach areas free from dog recreation. Moreover, all off-leash areas should be enclosed to protect park users, wildlife, and other dogs, and these off-leash areas should be located so as to not have a negative impact on sensitive wildlife and habitats.

Correspondence: Although I realize that dog-owners and dog-exercisers need a place where dogs can run free, it should not be a place where an endangered species is known to nest (or attempt to nest.) Also, though no-one talks about this very much, there are human beings who would just as soon be able to enjoy the out of doors without being annoyed or menaced by unleashed dogs. Please, don't allow dogs to run free on Ocean Beach!

Correspondence: We often enjoy the beach areas of the GGNRA and are upset when we see dogs running free in areas where we notice that flocks of beach birds must flee their approach.

I believe there should be areas where dogs may be allowed, similar to dogparks but larger, so that they may run free, but that dogs should be prohibited from other areas. They leave their scent behind and can cause disruption to native wildlife -- even if they don't chase it.

The park's mission is to protect the natural and cultural resources, not allow recreation to undermine it.

Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by offering more than one trail and more beach areas free from dog recreation.

Fences should restrict all off-leash dogs from encroaching on other areas and attacking properly restrained dogs.

Limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Correspondence: I too am a pet owner of both the four and two-legged variety. Also, I am a caretaker of not just my pets, but of the world in which we live. Alas, too many self-indulgent, and, I'm sorry to use this adjective, ignorant individuals really believe that it's part of the natural order to have their animals running rampant through critical habitat that is local and unique, unlike their beloved quadrupeds! Please, people, get a grip of what is best for all of the natural world in the long term.

Correspondence: Please limit dogs in Golden Gate National Recreation Area. I am tired of the trend in recent years for dog owners to successfully demand public places for their pets recreation. This has been detrimental to all the creatures that live in or visit the parks, including humans. I don't see that the public has any responsibility to provide this opportunity for pets.

I have owned dogs, and I have never expected anyone else to take any responsibility for their care. They should be greatly restricted in GGNRA, for the sake of the wildlife and of the area experience for humans.

Endangered species wildlife habitat deserves a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as proposed.

Thank you for your consideration.

Correspondence: I am writing to urge the National Park Service to protect the last few habitats for wildlife, including the western snowy plover, from human and domesticated animal disturbance.

As a frequent wildlife observer, jogger, and mother who takes her son out for walks in wilderness, I witness first hand the detriment dogs and their owners wreak on very sensitive areas. Besides failing to clean after their dog (or even another person's dog), I have witnessed dogs chasing wildlife, including shorebirds and foxes, because some dog owners have no control over their animals whatsoever. I have seen fences erected by park services torn down by dog owners. Worse, I have felt that my son was threatened by a dog, when an owner had let his dog off-leash and was out of proximity to

where his dog had wandered off to.

I like dogs, even love some of them, but I beseech the National Park Service to heed the substantial amount of research that shows the negative impact dogs have on wildlife habitat and insist on upholding the parks as somewhere where people are safe from harassment of unruly dogs, free from encountering dog feces -- and most of all a place to enjoy wilderness and wild animals without the intrusion of dogs, who are not part of the natural ecology.

Correspondence: Please help protect Golden Gate National Recreation Area. This park is one of our country's most meaningful endeavors to offer protection to endangered wildlife and increase appreciation of nature in a highly urbanized region. The park is home to more endangered and threatened species than any other park in the continental U.S.--more than Yellowstone, Yosemite, and Sequoia & Kings Canyon combined!

To help protect these species and other protected wildlife, inappropriate activities such as motor vehicle use on beaches were banned. However, the park continues to permit unregulated activities that disturb wildlife like western snowy plovers and marine mammals. The park's mission is to protect the natural and cultural resources, not allow recreation to undermine it. Endangered species wildlife habitat deserve a higher level of protection from human disturbance and activities.

The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by offering more than one trail and more beach areas free from dog recreation. Require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs. Limit off-leash recreation to areas where it will not have

negative impacts on sensitive wildlife and habitats.

Correspondence: Thank you for accepting comment on the GGNRA plan.

We need to keep in mind the overall goal, and not allow recreation to undermine it.

I suggest the endangered species protection compliance rate be 95%, not 75% as outlined.

I'd like to see the park better serve runners, horseback riders, families, and those with service animals. Would you please add in offering more than one trail and more beach areas free from dog recreation?

It seems very important that off-leash areas to be fully separate by physical barriers, such as fences, to protect park users, wildlife, and other dogs.

Would you please make sure to limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats?

Thank you for helping to create a better park experience at Golden Gate National Recreation Area, and for giving imperiled species a chance to survive.

Correspondence: RE: Dog Management in Golden Gate National Recreation Area

Dogs don't mix well with wildlife, especially in small areas and among small animals. No one would tolerate humans gratuitously disrupting the lives and life cycles of wildlife in a park or reserve, so why do we permit irresponsible individuals to do so through the pets they bring with them into such places? Dogs should be on leash to keep them away from vulnerable wildlife. If specific zones where off-leash activities would not imperil wildlife can be identified, then they should be so designated to accommodate dog owners.

Correspondence: Dear Sirs,

I urge you to keep in mind your duty to protect the wildlife in your care in the Golden Gate Recreation Area, in particular the endangered bird species that nest on the beach. The number one danger to these birds is unleashed dogs. This is natural - dogs by nature will chase birds. Their owners, even if aware of the presence of these endangered birds by reading signs, will not be able to keep their dogs away if the dogs are off leash. And many members of the public just refuse to leash their dogs anyway, feeling somehow that they have a right to use the beach as they please, uncaring of the consequences to wildlife. You probably know people with that mindset. But, YOU are in the position of being able to enforce a separation of endangered birds and dogs, whereas the rest of us can only fume in frustration. PLEASE, institute and enforce rules to keep dogs away from the beach nest sites of these endangered birds.

Correspondence: Greetings, I have hopes that this area could be managed to be an area where migratory birds are protected. I think that limiting the "off leash" activities of canines is imperative. I do not wish to ban dogs but I believe that area of impact should be limited by boundaries that should be enforced. (I don't

wish to see fences, but acceptable alternatives can be found.) For those of us that wish to walk on the beach and observe birds or other native wildlife undisturbed by boisterous or aggressive animals, having a feeling of being "safe" would be welcome.

Thank you

Correspondence: As a resident of the Bay Area, I would like to let you know the importance of keeping the Golden Gate Reserve as pristine as possible because it is a National Icon as well as a place for recreation, breathing fresh air, and gives nature lovers a place to go without driving out of the City. It is a unique mix of ocean and woods, all in a relatively urban area.

I have taken my family many times during our lives on family outings and it is surprising to see how the area is used by families. Today the options for working people are few and with the new generations that like to stay indoors, this is a place to keep as an option for the public and future generations, as previous generations did for us. We now have to think beyond the immediate future and keep areas the cement the nuclear family unit.

Thanks for taking the time to read what I have to say. Peter Montana

Correspondence: Golden Gate Park is a wonderful area, one I visit every time I'm in San Francisco. It's home to more endangered and threatened species than any other park in the continental U.S.--more than Yellowstone, Yosemite, and Sequoia & Kings Canyon combined.

The park's mission is to protect the natural and cultural resources, not allow recreation to undermine it. Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined. Recreation and wildlife can co-exist with more freedoms for both if a few simple changes are made. For example, the park could better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by offering more than one trail and more beach areas free from dog recreation.

Unregulated off-leash dog recreation in these areas has resulted in habitat encroachment and wildlife harassment by dogs. For example, the park has reported that unleashed dogs represent the most significant recreational threat to wintering western snowy plovers. Some simple solutions: 1) Require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs. 2) Limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Please protect a wonderful resource and make it available to both humans and wildlife to enjoy. Thank you for your consideration.

Correspondence: Please make efforts to protect the sensitive wildlife in the Golden Gate National Recreation area. Any reasonable compromise accommodating dog owners should be considered. I live in an urban area where dog owners are provided off-leash fenced parks in the communities. Our national parks and the natural resources within them should be safeguarded for generations to

come. It would be arrogant as humans to ignore our obligations to protect those resources that are vulnerable to the decisions of satisfying the interests of a few. We as citizens of the USA should not feel entitled or possessive towards Federally owned parks. NPS should act as stewards to preserve and protect our parks. I think this can be achieved without austere governing.

--The park's mission is to protect the natural and cultural resources, not allow recreation to undermine it.

--Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

Correspondence: It really is upsetting to hear people like Sarah Palin talk about not perserving wild life. It galls me that people who claim to be Christian only think of man never of animals who's life is also very precious. Who is to say, that it is okay for an entire species can be wiped out. People come here from other counties and destroy our fishing. They destroy our banks with shitty diapers, crap buckets, throw trash in the waters. We have that problem here where, 20 yrs ago the fishing was great, now it is a disaster. Although we have some home grown people doing it also. If it wasn't for the Forest Rangers there would be no wildlife. Oh, and people like Sarah Palin.

To help protect these species and other protected wildlife, inappropriate activities such as motor vehicle use on beaches were banned. However, the park continues to permit unregulated activities that disturb wildlife like western snowy plovers and marine mammals. Wildlife take refuge on Golden Gate's beaches to rest, breed, and rebuild energy for survival, yet unregulated off-leash dog recreation in these areas has resulted in habitat encroachment and wildlife harassment by dogs. For example, the park has reported that unleashed dogs represent the most significant recreational threat to wintering western snowy plovers.

Correspondence: In every other National Park I've ever visited (and that is quite a few of them), dogs are never allowed off of a leash. I was quite surprised to discover that they are allowed off of a leash in the GGNRA.

The point of course, is to protect the natural environment, wildlife, visitors, and the dogs themselves. So I don't understand why unleashed dogs are permitted in this particular park.

I don't want it to sound as if I don't like dogs. On the contrary... we are a dog owning family. And we take good care of our dog, and always work to keep her safe.

I would urge the NPS to keep the rules consistent across all parks, and require dogs to be leashed at all times. It's the safest thing for all involved.

thank you.

Correspondence: The Golden Gate Park system was not created to protect or provide recreation for dogs, as much as I like dogs. It was created, in part, to protect species such as the Snowy Plover and their nesting grounds. Dog owners yet louder than Snowy Plovers but the obligation is to the later. The two don't mix near the nesting grounds. Therefore, it is imperative for the park service to stand their ground on this issue as I don't believe there is any realistic "cutting the cake down the middle" option. It never works out that way anyway. Many dog owners think they had 'rights' and will expand on any liberties given to them in the national park. They often don't think their dogs should have to stay on leash and so decide which laws they will obey, as an example. Unless the park service has unlimited funding for enforcement and the guts to do so, dog rules need to be very clear, areas for the free running of dogs need to be very limited, and any rules established need to be enforceable with the manpower to do so.

Correspondence: My husband and I are against any UNLEASHED DOGS in GGNERA. We have had HORRIBLE experiences with unleashed dogs and their owners. We have owned beloved dogs.but can not today due to living in a small condo,which we feel to be unsuitable for dogs. At this point, I who have a bad back and orthotics in my shoes,am TERRIFIED to walk alone ...the last time we went to Chrissy Field,uncontrolled dogs were leaping all over the walking trail. This has also happened on the green in front of the old Officers' Club in the Presidio. There is NO SUCH THING as 'voice control",we have seen this over and over,people call to their dogs,nothing happens. Many ignore what they are doing,or laugh as their dogs threaten others. Someday,there will be a tragedy. I pay taxes. I am a FOURTH generation San Franciscan,who was brought up with manners and courtesy in the old refined days. Now I feel forgotten due to a group of loud mouthed selfish illogical dog owners. We have happily donated money to the Park-BUT --We will NOT donate another cent if this ridiculous loose dog situation continues. I feel threatened, stressed and frightened going there--and in what was once my city--feel afraid to go alone! Plus I do not want my tax dollars going to clean up after destruction caused by dogs, This is a NATIONAL PARK--our taxes pay for this. NO other park allows these pets! I can no longer even safely enjoy the places I loved as a child. This is immensely depressing to me. I know friends who would love to walk there - -some whose only joy is walking ---while recovering from chemotherapy--but they are afraid of loose dogs,it only takes one fall to ruin a senior citizen's life forever. I fear for the plants and wildlife. DO NOT listen to these screamers,and remember that I --and the many people I talk to --have financially supported you but will never again do so if these dog owners win. I fear THEY will not financially support you,but will simply ruin and take over the park. We thank you. Please consider seriously what we have said-for the safety of all-- and our beloved environment. Gerald and Nancy Wright

Correspondence: Please ensure that dogs be kept on leashes at all times in areas that are

important habitat for wildlife like the snowy plover. People will let their dogs chase these little birds without realizing that the birds have nowhere safe to get respite from the harassment, and thus are using precious energy in constant flying. Off leash dogs often defecate on the beach or bother people taking walks on the beach- to allow everyone to have a peaceful beach experience, it is imperative that off-leash sites for dogs be fenced in or kept separate from wildlife habitat, so that dogs are not allowed to menace animals or people who do not enjoy the company of dogs.

Correspondence: Dear Superintendent, Thank you for the opportunity to provide comments on the National Park Service's management at Golden Gate National Recreation Area. I think it is important that you consider short-term and long-term impacts in your decision making, and think about how to prevent impairment of your resources, which you are mandated to preserve. Allowing pet dogs to run amok-- and shirking your duty in an irresponsible public relations move-- is clearly not looking at the issue from a long-term perspective. Please consider the following points as you weigh your decision, and do the right thing: --The park's mission is to protect the natural and cultural resources, not allow recreation to undermine it.

--Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

--The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by offering more than one trail and more beach areas free from dog recreation.

--Require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs.

--Limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

In conclusion, I have faith that you will consider all of the park's resources over one narrow user group... and their dogs.

Thanks for your consideration, Mike Cipra

Correspondence: Everyone deserves the chance to experience nature in their everyday lives. Having this type of "open space" in urban areas is going to be what saves our sanity in the highly charged and ever-quickening pace of humanity. Preserving the flora and fauna in oases such as this should be a high priority if we are to exist in more than just a barren world in the future.

Correspondence: As the mother of a small child, my family often uses the West beach area near the Warming Hut. During the times of year when it is not snowy plover season, and thus leashes required, we often have dogs running around the beach without their owners closeby. The dogs frequently come right up to the small children and sometimes scare them, and their parents. I have even seen dogs fighting with one another around small children. Thankfully I have never seen anyone hurt, but it is very disconcerting and frightening for children. There is also the problem of dog poop on the family beach. Due to these reasons, I would support the separation of dogs and the requirement for leashes in most areas. There should be dog-free areas for those people, and of course for the endangered species, who do not enjoy being around dogs that are not on leash. San Francisco has plenty of dog-friendly parks. Thank you.

Correspondence ID: 2554 **Project:** 11759 **Document:** 38106**ID:****Received:** May,02,2011 00:00:00**Correspondence Type:** Web Form**Type:**

Correspondence: I used to live in San Francisco. And whether there or any other beach, wild or park I've been to when dogs are allowed to run freely and do what they want, dogs rule the day. I've never seen a bird nor any other creature but humans in a dog park. They're great companion animals, however endangered species and wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

The park's mission is to protect the natural and cultural resources, not allow recreation to undermine it. The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by offering more than one trail and more beach areas free from dog recreation.

I believe the park should require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs just like in any dog park you visit.

Limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Correspondence: I am in favor of your proposal.

I live directly across the street from an open space district which hosts dogs and walkers of all shapes and sizes. I put out a water dish and keep it filled, in an attempt to be friendly and neighborly to both dogs and walkers.

There is no such thing as voice control. Our weekends are punctuated by untrained dog walkers yelling for their dogs. Dogs routinely crash through the underbrush chasing deer and squirrels. We once had a dog chase our cat into our house through the front door.

At your beaches we have experienced, in addition to the above, untrained dog walkers watching their dog urinate on our family's toys spread on the sand. How do you explain that to a child?

You are wise to allocate a budget for enforcing your plan.

Please keep up the good work and implement your plan.

Correspondence: I believe the park's primary mission is to protect natural and cultural resources, recreation uses should not be allowed to compromise that mission. Allowing unleashed dogs within the park runs contrary to the parks mission and is inconsistent with the notion of making the park a place for wildlife. And it is not just about wildlife: Unleashed dogs are also sometimes a threat to people and other dogs, and they interfere with many visitors' enjoyment of the shoreline.

I have witnessed firsthand the damage that unleashed dogs can do at the Pillar Point Shoreline and Marsh in Half Moon Bay, CA. While there is a leash law in effect for this area, it is widely ignored by dog owners. Dogs are constantly running up and down the beach chasing shorebirds, and dogs routinely wander into the marsh damaging water bird habitat.

Therefore, I urge you to require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs and to limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Thank you for considering my views.

Correspondence: I have frequented the GGNRA for over 40 years. It is a great place to go to be in contact with nature and to observe the abundance of plant and animal life. I can appreciate that dog lovers might want their animals to run free BUT many do not and will not control their animals. There are many urban areas for these pets. I do not want to be bothered by other peoples pets and I do not want to see wildlife harassed by them. There is absolutely no reason for dogs to go free in these wildlife rich areas. Therefore I support:

--Requiring all off-leash areas to be enclosed to protect park users, wildlife, and other dogs. AND --Limiting off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Correspondence: Please do not permit dogs throughout the park, or restrict them to very small areas where one does not have to encounter them. In addition to their negative impacts on sensitive wildlife and habitats, they have extreme negative impacts on me. I am severely allergic to dogs AND their flees. There are very few areas I can go in the Bay Area for a wilderness walk (or any walk) without encountering not just dogs and their flees, but off leash dogs that bound straight for me. If I get within 6 feet of a dog, I end up with huge, painful welts from these dog-flee encounters that take over six months to heal.??? I have been disabled for 20 years with allergies. This proposal would accommodate my disability.

When I saw your proposal to limit dogs I felt like a miracle had happened. I could really, maybe, be able to take wilderness type walks again.

Thank you SO much for having the courage to deal with this issue.

Correspondence: Dear Lawmakers and Stewards of the National Parks: Recreational areas are ubiquitous, accessible and convenient to the freeways of this glorious land. A National Park is a bequest to the future, to our grandchildren and the non-human inhabitants of our land, in a gesture much more far sighted than our popular culture allows. You have a unique responsibility: preserving places of peace and quiet for the future, for our children. Allowing recreation is to allow exploitation by commercial and exclusive entities whose values are not in the long term interests of the environment that you have the responsibility to protect.

The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by offering more than one trail and more beach areas free from dog recreation. All off-leash dog areas should be enclosed to protect park users, wildlife, and other dogs.

Please, as custodians of our heritage, limit off-leash recreation to areas

where it will not have negative impacts on sensitive wildlife and habitats.

Thank you for helping to create a better park experience at Golden Gate National Recreation Area, and for giving imperiled species a chance to survive.

Correspondence ID: 2572 **Project:** 11759 **Document:** 38106

Correspondence Type: Web Form

Correspondence: Thank you for the opportunity to present comments related to the future uses of the Golden Gate National Recreation Area as it relates to the Dog Management Plan. This land is one of our nation's treasures and a place to be enjoyed by those privileged enough to live near it or visit it. However, with privilege comes the responsibility to respect the land and its natural and cultural resources so that those resources are protected and remain for future generations to come. It is the role of the National Park Service to protect the wildlife of the Golden Gate National Recreation Area as well as the habitat of that wildlife.

As is too often the case, those who seek to visit and "use" our parks, are not always sensitive to the fragility of the environment. They may never have been taught or have never stopped to think what kind of "footprint" they might be leaving behind as a result of their visit. While Smokey the Bear has taught most of us about the dangers of forest fires, how might we have learned about the need to protect the unique nesting places needed to sustain an endangered bird like the western snowy plover. The National Recreation Area is more than and deserves greater protections than does a local park where grasslands might be trampled in the pursuit of a soccer championship.

I would like to see a higher level of protection from human disturbance when it comes to protection of sensitive and endangered species wildlife habitat up from the outlined 75 percent to 95 percent.

While many urban residents have dogs and desire to share recreational opportunities with them, it is very important that the interests and desires of dog owners not overshadow environmental concerns and/or the recreational needs of other types of park users. The desires of any set of users should not be allowed to weigh heavily on the health of the endangered species in the park. The needs of dog users' should not overshadow the needs of other types of park users, including runners, bicyclists, walkers, etc. Unfortunately, members of my own family have been attacked by dogs off of leash while they (the family members) were running and biking. This is an unacceptable situation and speaks to limiting the amount of parkland where dogs can be allowed to be "off leash." Safety of park users must be a

primary concern of park officials when establishing new user policies. This is especially important knowing that small children will be frequenting the park and dogs may be in close proximity to them. Having dogs on leash on trails and roads is important but it is still not without danger. It will not stop the diggers from halting their digging. It will not ensure that the owners clean up after them, etc. There must be very clear policies and rules given to those who bring dogs into the parks. And it must be understood that all visitors, with canines or not, must not engage in any recreational activity that undermines the park's natural and cultural resources and has negative impacts on sensitive wildlife and habitats.

Because dogs tend to follow a scent (and cannot read signs designating off-leash areas), the off-leash areas should be enclosed. (This is also for the dogs' protection from animals that might otherwise harm them.) In addition, the off-leash areas should be limited to areas where they will not have negative impacts on sensitive habitats. Additional areas free from dog recreation should be provided in the park plan for the many different types of park users. In some parks, it may not be possible to provide a path where even dogs on leash can be walked. This is especially true where there are no alternate paths available.

Thank you for your consideration.

Correspondence: I am a dog lover and dog sitter. I especially appreciate the few areas where

dogs are permitted to be off leash on the beach. Dogs provide companionship to humans and exercise is an important part of that relationship. On leash areas provide little exercise for dogs and people in comparison. Have you ever watched the dog to person interaction or dog to dog interaction that happens on the beaches where dogs are off leash? It is quite a wonderful sight.

I am also a lover of wildlife and do many many things to protect it. Being a member of the Nat'l Parks Conservation Association I respect and understand the concern of protecting the wildlife from the dangers that dogs can pose. My recommendation is to limit off leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Correspondence: Hello People: As an operator of a public transport fixed route bus in Marin County I ask only that you take a good look at the traffic patterns, especially on weekends and especially during the summer months going to and from Stinson Beach. The number of people visiting the beach is increasing and the large free parking lot next to the beach is sometimes full, leaving many visitors to park where else they can, including but not limited to areas

designated "no parking"; because the cost of a ticket is worth the parking place. Better public transportation can make a difference. Marin County Transportation District's West Marin Stage Coach operates two buses on weekends and holidays, and I heard that this past weekend there were more passengers hoping to board than could be accommodated and were asked to wait for the next bus. I could spend pages describing the many facets of transportation to and from this increasingly more popular area, but you could see it for yourself and if you made a few sketches of the details involved I'm sure that better solutions would become clear to you. It's not complicated. Few would argue that fewer cars on the roads of the GGNRA would be a worthy goal. [Look at what has been happening in Yosemite these past years}. In closing let me tell you what I experienced a couple of years ago when I was driving one of the two weekend Stage Coaches during the summer: I was heading east toward Mill Valley and stopping in Stinson Beach to pick up visitors desiring to return to their homes after a day of the beach and the trails and Muir Woods sight-seeing. Among the crowd was an elderly woman traveling alone. When it became evident that many of the people would not be able to get on bus, for there were far too many, despite the good size of the bus [capable of holding 35 passengers more or less] a young man already on board graciously relinquished his seat that the older woman might ride. Since she was sitting near the front she was able to talk to me. We climbed the few miles out of Stinson Beach village up Panoramic Highway to the first stop at Pantoll Ranger Station and Camp area. About two-thirds of the bus-load got off. This is normal pattern. The woman said to me, in effect, "well, now we'll continue on all the way to Marin City with the bus only a third full and those twenty people we couldn't pick up are still standing at the bus stop four miles down the mountain!" She wasn't scornful; she was employing a little irony. The transportation scheme needs some attention from those concerned and capable of instating some systems. Thanks for all you do, George

Correspondence: Please keep GGNRA open to dogs and off-leash walking. GGNRA is one of the few areas with enough open space for people and their dogs to get out and jog or play frisbee.

The current proposal is extreme and not in the best interests of GGNRA wildlife or the citizens of California. A small percentage of people may allow their dogs to chase wildlife. These same people allow their children to chase the snowy plovers and other wildlife as well. However, it doesn't make sense to punish the majority of GGNRA users and their dogs with this extreme proposal. A much better solution would be to better educate people about the wildlife at GGNRA and create stiffer penalties for the people who allow their dogs or children to harass the wildlife in any way. Rather than leashing dogs and discouraging people from using the GGNRA let's educate people and ensure that the people causing the problems are held responsible

Correspondence: I am writing to urge you to protect Golden Gate's imperiled wildlife from harassment by unregulated recreation. The Golden Gate National Recreation Area may be one of our country's boldest park experiments: setting aside highly-prized land to provide a national park experience near a heavily urbanized area. I understand that the park is home to more endangered and threatened species than any other park in the continental U.S.--more than Yellowstone, Yosemite, and Sequoia & Kings Canyon combined!

These are my thought about the best uses for the park:

--The park's mission is to protect the natural and cultural resources, not allow recreation to undermine it.

--Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

--The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by

offering more than one trail and more beach areas free from dog recreation.

--Require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs.

--Limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Thank you for helping to create a better park experience at Golden Gate National Recreation Area, and for giving imperiled species a chance to survive.

Sincerely,

Bill Nolan

Correspondence: I am in favor of having leashed and unleashed areas set aside in National Parks for people to take their dogs. In general, dogs are much less of an issue than humans in parks.

I also believe that areas should be protected for endangered species. I urge you to do this while still allowing people to take their dogs with them where humans are allowed.

The vast majority of people in the US are dog owners and we are being excluded from our Parks. Closing all trails and the like to even dogs on leash puts dogs in danger if their owners what to even drive through a park. (How would you like to sit in a parked car on a sunny day or be chained to a picnic bench so your owners could view a site?)

Correspondence: Dear Park Service,

I am a resident of the Bay area, and visit & support the Golden Gate Recreation Area frequently. Although it is extremely important that people enjoy themselves in the park, especially in its most urban sites, the park's mission is to protect the natural and cultural resources, not allow recreation

to undermine it.

As a birder & wildlife enthusiast, one of the primary benefits I receive from the park is its function as a wildlife refuge. Endangered species wildlife habitat deserve a high level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined in current plans.

As much as I like dogs, I recognize that they can be dangerous to wildlife, small children, and each other. Also, many people are afraid of dogs, having been bitten or attacked at some time. The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by offering more than one trail and more beach areas free from dog recreation. Certainly, all off-leash areas should be enclosed to protect park users, wildlife, and other dogs. These off-leash recreation areas should be sited so as to not have negative impacts on sensitive wildlife and habitats.

Thank you for listening.

Andrea Kean

Correspondence: I rescue dogs and enjoy a beech run with my pups as much as anyone. However, on a recent visit, I was stunned that several owners disregarded their dogs chasing after birds in the area. 'Self-policing', as practiced in other dog parks, did not seem to apply here. Gentle words were responded with threatening behavior. In speaking with other dog owners there, I became informed the practice of letting dogs chase birds was common. As a hunter, trainer, scientist, I can't abide by that practice.

Please follow steps of other parks nearby where posting requires dogs stay on leash, an ENFORCE! That would be a help to all dog owners. If this step cannot preclude the damage; you should close off the area.

Sincerely

Kelly Burch

Correspondence: There are more than enough places for people to go to enjoy the outdoors. There are also plenty of places for people to allow their dogs to run around. Let's face it, dogs aren't endangered and probably never will be, do they really NEED to be able to run around in a protected wildlife area? NO. This is ridiculous. This place has been set aside for wildlife, ONLY wildlife. We have taken over 95% of what used to be "wild", can't we let the animals have their small chunk of space and leave it at that?

Correspondence: As a frequent visitor and birder, I am writing you to encourage restraint of animals within these fragile environments. Allowing off-leash dogs to engage in hunting behaviors with wildlife is a undue stressor for wildlife. Imagine it's as if a pack of several hundred foxes were let loose. They may not successfully hunt, but they flush and pursue birds, tiring them and wasting the resources they need to breed, rear and reproduce. When off-leash domestic animals are allowed to pursue wildlife, everyone loses.

Correspondence: The National Park Service has a responsibility, and actual mission, to protect natural and cultural resources, not allow recreation to undermine it. When considering that, one would want endangered species habitat to have a high level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

With any area where pets are allowed off-leash, you must be able to separate the general public from the pets and pet owners. I have seen many occasions where pets are truly not trained and become a threat to those around them. Even little dogs can bite! Off-leash areas should be enclosed to protect park users, wildlife, and other dogs.

The park should accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by offering more

than one trail and more beach areas free from dog recreation.

Please limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Correspondence: Thank you for reviewing my comments. As a long time hiker in wilderness areas I greatly appreciate the opportunities we Americans have to enjoy the natural world. I have seen the impact of dogs on wildlife. Whether leashed or not, their presence affects all the other animals present. I have witnessed off-leash dogs turn quiet, pristine woods and beaches into chaos, including habitat destruction. Clearly our burgeoning population wants and needs recreational opportunities, but that need cannot trump the parks main mission: to protect the natural and cultural resources. I believe that the park could and should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by offering more than one trail and more beach areas free from dog recreation and require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs. Given the very large number of endangered species in the GGNRA and the parks proximity to major population centers, wildlife, especially endangered species and their habitats must be accorded the maximum protection.

Correspondence: San Francisco, and in fact most of the North and South Bay areas, have some of the most liberal dog-friendly facilities in the country. This means, in short, that there are plenty of places for dogs to run off leash dog parks to

play in and areas to hike and walk on leash. Sensitive areas like the Bay Beaches should be off limits to off leash dogs because they harrass, interrupt breeding cycles and even kill, wildlife. Historically, Northern California residents are very firm in in their stance on protecting wildlife and enhancing the health of the Bay. There is no need for more "playgrounds" for dog, but there is a need to protect the birds and animals we love.

Please declare the Bays beaches off limits to dogs. If this is done it will also aid in educating the public about conservation and resource protection.

Correspondence: Golden Gate National Recreation Area may be one of our country's boldest park experiments: setting aside highly-prized land to provide a national park experience near a heavily urbanized area. Indeed, the park is home to more

endangered and threatened species than any other park in the continental U.S.--more than Yellowstone, Yosemite, and Sequoia & Kings Canyon combined!

To help protect these species and other protected wildlife, inappropriate activities such as motor vehicle use on beaches were banned. However, the park continues to permit unregulated activities that disturb wildlife like western snowy plovers and marine mammals. Wildlife take refuge on Golden Gate's beaches to rest, breed, and rebuild energy for survival, yet unregulated off-leash dog recreation in these areas has resulted in habitat encroachment and wildlife harassment by dogs. For example, the park has reported that unleashed dogs represent the most significant recreational threat to wintering western snowy plovers.

--The park's mission is to protect the natural and cultural resources, not allow recreation to undermine it.

--Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

--The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by offering more than one trail and more beach areas free from dog recreation.

--Require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs.

--Limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Thank you for helping to create a better park experience at Golden Gate National Recreation Area, and for giving imperiled species a chance to survive.

Correspondence: Golden Gate National Recreation Area is home to more endangered and threatened species than any other park in the continental U.S.--more than Yellowstone, Yosemite, and Sequoia & Kings Canyon combined!

For a better park experience and for giving imperiled species a chance to survive:

* Natural and cultural resources must be protected. Recreation should not undermine these main goals.

* Endangered species wildlife habitat need a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

* The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by offering more than one trail and more beach areas free from dog recreation.

* All off-leash areas should be enclosed to protect park users, wildlife, and other dogs. (A friend's dog, who was ON leash, was badly bitten by an off-leash dog and my friend was also bitten when he tried to save his dog. This occurred at the GGNRA beach.)

* Limit off-leash recreation to areas where it will not have negative impacts

on sensitive wildlife and habitats.

Thank you.

Correspondence: Dear National Park Service Staff -

I have recently become aware from the NPCA that there are problems in the Golden Gate National Recreation Area with endangered and threatened species. I am very concerned about the way human activities are impacting wildlife, and I feel we need to work more to protect threatened species than we have been doing.

I support the NPCA's position on the following points:

--The park's mission is to protect the natural and cultural resources, not allow recreation to undermine it.

--Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

--The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by offering more than one trail and more beach areas free from dog recreation.

--Require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs.

--Limit off-leash recreation to areas where it will not have negative impacts

on sensitive wildlife and habitats.

Please do all you can to make sure that people who are enjoying nature are not also damaging threatened species at the same time. I would like the future to include a rich diversity of wildlife for a healthy planet and for the enjoyment of future generations.

Thank you!

Diana Gillis

Correspondence: Although I am a hiker and wildlife watcher who is a member of several local environmental organizations, I am speaking only for myself and not representing any group with which I am affiliated. I do not have a dog, but I sympathize to a certain extent with dog "guardians" who seek a place to exercise their dogs and enjoy the outdoors with other dog owners. Yet I do not think that the national park lands in the Bay Area are the places to do that without restriction. After all, it is not the mission of national parks to provide dog-exercise areas.

Many residents of the Bay Area like myself want to visit the local national park lands to appreciate the natural resources--to botanize throughout the seasons, to observe the birds (especially the migratory shorebirds that rely on the coastal areas for refuge), and to be in the park environment as a counterpoint to the hectic quality of city life. As the population of residents and dogs has increased in the Bay Area, certain GGNRA areas have become much less enjoyable to visit. I live in the East Bay but like to come to San Francisco and Marin, as the GGNRA offers special places unequalled on my side of the bay.

The GGNRA made a serious mistake by seeming to "grandfather" the practice of allowing dogs off leash in areas like Crissy Field and Fort Funston. I'm well aware of the pressure put on the GGNRA by groups of dog walkers, but I feel that it's time to set restrictions. Therefore, I am completely in favor of the proposed plan. It is important to act now in order to protect park resources for everyone.

Furthermore, in my opinion, some off-leash areas should have fences or barriers of some type, a practice followed in some Bay Area cities. As a hiker, I'd like to see designated trails where dogs are not permitted, in the same way that some parks have hiker-only trails where bikes and horses are

prohibited.

I realize that the GGNRA is facing an enormous challenge here, but I urge the GGNRA to look to the future. Something needs to be done so that ten, twenty years from now the GGNRA lands are still a quality national park for people and wildlife, and even dog owners who adhere to the rules and understand why they are in place.

When I read an article on the policy changes in a recent SF Chronicle, I saw a quote that caught my eye and to me summed up the issue. In effect, the speaker said that we are all the guardians of the natural environment. That stayed with me. I hope that the GGNRA crafts a dog policy that puts the natural environment, not one constituency, first.

Thank you for reading this.

Correspondence: My sister lives in the Bay Area & whenever I visit I make sure to get some time in the beautiful space of the GGNRA. I am a walker & I enjoy the peace & the creatures & birds who live in the area. I am a dog owner & when I have him with me he is always on leash where he is supposed to be on leash. As one who follows the regulations it distresses me that other less respectful dog owners are ruining the area for the snowy plovers & for people (even those with dogs) like me. I have also been bitten by a dog so I don't feel comfortable in places where dogs are running free & without proper control from their owners. I know times are hard & there's not a lot of money to go toward protecting wildlife, but we need to do it for ourselves

too. Thank you for preserving such a gorgeous stretch of land!

Correspondence: I have been solicited to write and ask you to ban off leash dogs from areas where the snowy plover and other wildlife are found. BUT I prefer to ask you to look into the matter. I use our beaches quite a lot; I love California, I love our Coast, and I love all wildlife. I used to take my dogs to one beach in particular, several times a week. Then dogs were banned from that beach (and many others) due to the snowy plover. I miss that beach deeply; I knew every rock, cliff, spring and tidepool. But: the plovers were there first, so it's the way it has to be, and it is right. But then I read that it's NOT actually the dogs who disturb the birds, it's the humans. "Of course" they weren't going to prohibit humans using the beach, so I felt that dogs were scapegoated. I now must drive much farther to go to a beach where I can walk while my dogs run. There is a section of that beach posted as habitat for the plovers, and a request to keep dogs out. I never see any dogs in that area; but I see tons of humans there!!! So, in conclusion, I agree that the wildlife was here first, and has first rights for the necessary areas. But before banning dogs, please look into the real cause of disturbance, and address that. Thanks!

Correspondence: The National Park Service number one priority should be to the wildlife in the area. Please restrict off leash areas. Irresponsible dog owners have riddled the area with dog poop and made the area unpleasant for people who do not have dogs to visit. The few times I have visited Fort Funston I have been disgusted by the amount of dog poop on the grounds. I have not returned in over a year. It is too bad that a handful of irresponsible and unpleasant dog owners can ruin the area for everyone. I know a number of dog owner groups will fight these new restrictions but I hope the NPS prevails and make this area not only safe for the wildlife that calls this place home but for ALL visitors not just those with four legged companions.

Correspondence: I urge you to allow off-leash dogs in many areas of the GGNRA in order to provide the public with the recreation space they desire. While it may be appropriate to ban dogs from very sensitive areas to protect endangered species, dogs should not be subjected to blanket provisions that categorize them as destructive. For many thousands of years, wild coyotes and wolves were part of healthy California ecosystems. To single out canine impacts now as problematic is short-sighted and unfair; it is the irresponsible dog owners that need additional restraint and boundaries. Do not punish the masses for the mistakes of a few, we deserve the right to share public open space with our canine companions in a responsible manner.

Correspondence: I have been a San Franciscan resident since 1996 and am sincerely concerned about the proposed dog management plan. In addition, I am an Ecology Master's student at SFSU and feel I am uniquely qualified to comment on the state of dogs, people, and native species within GGNRA habitat. I have , botanized, bird watched, hiked, surfed, windsurfed, biked, and walked with dogs within GGNRA for the last 15 years. I currently visit Crissy Field around 3 times per week to walk with my dog. I also often visit Fort Funston and Muir Beach. I have witnessed a lot of the restoration work that has taken place at all these sites and am thrilled with a lot of the work that has been done but am also concerned with how some of these areas have been managed. Dog walking at Crissy Field and other GGNRA sites is an extremely important part of my life and I feel that the current proposed dog management plan would severely curtail my recreation options. I feel that the proposed plan is overly restrictive and is a draconian response to

problems that could be alleviated with small amounts of additional management effort. In addition, limiting the off leash options within the GGNRA will have a negative cascade for off leash dog walking within san francisco, as the limited space that already exists shrinks and becomes overcrowded. I'm concerned that the proposal bans off-leash dog walking in existing places while simpler solutions that would allow dogs and humans to continue to recreate have not been attempted. I have witnessed the non-existent maintenance of fence lines and signage that should protect restored and sensitive habitat. How are people to know which areas to avoid if there is no guidance? Many fences signs are currently deteriorating or covered up by sand dunes or non-existent. This leads to what I see as one of the biggest problems with the destruction of restored habitat, which is mostly people entering existing restored areas where they should not be. I see families set up with on restored dunes and watch as two and four-legged creatures dig into the dunes or trample over the native plants. People would be less apt to do this if there were signs letting them know the work that has been done to such areas and how sensitive the landscape is. The current signage and fences are insufficient. I think the destruction of this type of habitat, in turn, makes a lot of the native plant and bird fans over react and want to curtail dog activities at existing habitat that is optimal for dogs and people to recreate. Yes there should be dunes set aside for birds like the snowy plover but taking away the main beach at crissy field to off leash dog activities and shoreline at ocean beach seems to overreach in protecting habitat. I would like to see the existing space for off-leash dog activities maintained with the addition of better maintenance of signage and fence lines and better enforcement of the unofficial "dogs must be under voice command" policy. I also think, there needs to be people out there giving warnings to people who violate existing dog walking etiquette/policies before they start issuing citations. A lot of people are just not aware that they are not following guidelines and just need to be told how to act responsibly. With the amount of usage the beach areas get at crissy field, resources should be set aside to have a park ranger available at those locations during peak times such as weekends. Rangers could help with not only natural history interpretations, but also give guidance to park visitors as to park activities, and inform and reguide people, and people with dogs, who are acting in ways that is harmful to the habitat. The few times I see rangers at crissy field, they are usually just with groups of kids. There should be more of a ranger presence out there to help visitors actually identify snowy plovers and native plants. Why can there not be one ranger dedicated to beach patrol duty during the summer weekends? More needs to be done but the proposed plan is just not acceptable. It unfairly punishes many people who utilize park habitat responsibly. Don't let the negative actions of a few irresponsible people drastically affect those of us who rely on GGNRA habitat for our recreation.

Sincerely,

Stephen Ingalls

Correspondence: I am a dog owner and I do like to go to off-leash places where my small dogs can run free. BUT, just as I believe it is my responsibility to clean up after them, I also believe that there should be serious and effective protection of wildlife. So I think that Golden Gate Park should have off-leash areas, but fenced in such a way that the dogs, wildlife, and everyone else is protected.

The off-leash area should be in one that is not environmentally sensitive. And it should be large enough that it will accomodate the needs of pet owners. The rest of the park should be protected from off leash dogs.

The complilance rate as to the protection of wildlife should be approaching 100%, not a dismal 75%. This can happen with a proper set-up at the park.

Correspondence ID: 2656 **Project:** 11759 **Document:** 38106

Correspondence: As I understand it, the park's mission is to protect the natural and cultural resources, not allow recreation to undermine it. As such, endangered species wildlife habitats deserve a higher level of protection from human disturbance; the compliance rate should be 95% (not 75% as outlined).

In addition to the wild residents of the park, there are many different users who enjoy the resource. The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by offering more than one trail and more beach areas free from dog recreation.

I am not a dog owner, and I don't like to visit off-leash parks where lots of dogs roam free (like Fort Funston). I would love it if the Park Service were to require all off-leash areas to be enclosed to protect park users and wildlife. It also would be great if off-leash recreation were limited to areas where it will not have negative impacts on sensitive wildlife and habitats.

Thank you for considering our comments on this important issue.

Correspondence: Given that the park's mission is to protect the natural and cultural resources, it is not acceptable to allow any form of recreation to undermine that mission. However much some people may enjoy spending time with their dogs in the park, there has to be a balance of competing interests.

It is wholly unreasonable for the park to continue to permit unregulated activities that disturb wildlife like western snowy plovers and marine mammals. Wildlife take refuge on Golden Gate's beaches to rest, breed, and rebuild energy for survival; yet unregulated off-leash dog recreation in these areas has resulted in habitat encroachment and wildlife harassment by dogs. As a telling example, the park has reported that unleashed dogs represent the most significant recreational threat to wintering western snowy plovers.

In my view, the following conditions/limitations should be placed in any GGNRA dog management plan:

--Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

--The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by offering more than one trail and more beach areas free from dog recreation.

--Require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs.

--Limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Correspondence: I am writing to urge you to restrict off-leash dog activities in the Golden Gate Park National Recreation Area. The park exists to protect natural and cultural resources -- not to provide recreational activities that will harm them.

As you know, the Golden Gate is home to more endangered species than any other park in the continental United States. Their habitat requires the highest level of protection from human disturbance -- a compliance rate of 95%.

And among recreational uses, free running for pet dogs is a low priority. It should not be allowed to interfere -- as it now does -- with walkers and hikers, runners, horseback riders, families on outings, and handicapped individuals with service animals. Instead, current park management allows

only one trail and a few beach areas free from free-running dogs.

I request that all off-leash areas for dogs be enclosed to protect the park's wildlife, the vast majority of its human users -- and even other dogs.

Correspondence: I wholeheartedly support the GGNRA Draft Dog Management Plan. All dogs should be on-leash or in enclosed areas for their own safety and that of wildlife. Wildlife and their habitats, especially threatened and endangered species, in the GGNRA and greater area is under constant threat and protecting that wildlife must be a high Park Service priority and given sufficient funding. Thank you for the opportunity to comment.

Correspondence: I am a citizen of San Francisco and supporter of the National Parks. Unregulated, unleashed dogs in GGNRA is destructive to the environment and endangered species. It also creates problems for other users of the park, like me, who prefer peaceful enjoyment more than tripping over (and being bitten by) unleashed dogs.

The GGNRA should restrict unleashed dog areas in the parks. There is a

space for all sorts of activity in the park, and dog owners also need to respect use limits. I encourage you to designate limited and specific areas for unleashed dogs.

Thanks!

Correspondence: Hello,

I am a long time natural resources volunteer in the Presidio and especially at Crissy Field. I also am a Snowy Plover docent at Crissy Field. I speak with dog owners frequently in both these capacities.

I support the park's preferred alternative for Crissy Field with the following comments:

1. compliance requirements should be higher than 75 percent. Something more in line with 90 to 95 percent would make a better visitor experience and encourage less cheating. I appreciate that it may take some time to get to that compliance level, but it would help people like me work with the dog folks if it is that high.

2. commercial dog walking activity should not be allowed. While I appreciate that these folks are small businesses trying to make a living, the dogs beat up the environment, spook wildlife, and don't contribute to the visitor experience. At the very least, they should be licensed like any other business in the park and there should be a limited number of licenses.

3. WPA -- both the east and the west perimeters of the Crissy WPA should be fenced.

Thanks for your consideration.

Correspondence: Hi, my name is Wally - I'm a neighbor in Cow Hollow and strongly favor Alternative A (no change), especially for Crissy Field's East Beach.

Before explaining, I'd like to get something off my chest: On your (GGNRA's) website, the landing page for the Dog Management process (<http://parkplanning.nps.gov/projectHome.cfm?projectId=11759>) has a photo of two happy, off leash dogs romping on what is easily identified as the Crissy Field East Beach. The National Park Service and GGNRA are being a bit misleading on this, because under your preferred alternative, that beach would be off limits to unleashed dogs. Shame on the GGNRA for such duplicity! (If you were to put a big red "X" on that photo, it would be more truthful.)

As mentioned, I'm a neighbor and am fortunate to visit Crissy Field several times a week. Although I normally hike on the main path, I always see off-leash dogs on East Beach with their hosts and everyone is having a great time. On the East Beach, there is very little vegetation and, to my knowledge, no endangered wildlife, so I don't understand why you want to make East Beach off limits to unleashed dogs.

In my rather extensive experience at Crissy Field on a year-around basis, dogs and their hosts are easily the most frequent and enthusiastic users of East Beach. On windy days, windsurfers put time in down there, but they seem to be pleased with the company of other beach enthusiasts, including off-leash dogs.

I understand there are a few relatively warm, relatively windless days each year when sunbathers (not many swimmers!) like to use East Beach ? and yes, I appreciate that a sunbather may occasionally be slightly inconvenienced by a discourteous dog and/or host. For these rare days (in my experience, only 4-5/year), the GGNRA could easily implement a temporary restriction on off-leash dogs on East Beach and redirect their

hosts to the beach west of the lagoon's outlet.

If you at GGNRA make unleashed dogs at East Beach unlawful, who will use that beach? Hardly anybody. And you'll be making many of your neighbors very angry every time they see the beach they formerly enjoyed so much devoid of visitors. And what a waste of a nice, convenient beach that would be!

In summary, at East Beach there is no good reason to change things. Leave things the way they are ? the no change Alternative A. My peer group and I, along with our hosts, will be thankful.

Wally

Correspondence: Golden Gate National Recreation Area may be one of our country's boldest park experiments: setting aside highly-prized land to provide a national park experience near a heavily urbanized area. Indeed, the park is home to more endangered and threatened species than any other park in the continental

U.S.--more than Yellowstone, Yosemite, and Sequoia & Kings Canyon combined!

To help protect these species and other protected wildlife, inappropriate activities such as motor vehicle use on beaches were banned. However, the park continues to permit unregulated activities that disturb wildlife like western snowy plovers and marine mammals. Wildlife take refuge on Golden Gate's beaches to rest, breed, and rebuild energy for survival, yet unregulated off-leash dog recreation in these areas has resulted in habitat encroachment and wildlife harassment by dogs. For example, the park has reported that unleashed dogs represent the most significant recreational threat to wintering western snowy plovers.

I urge the National Park Service to protect Golden Gate's imperiled wildlife from harassment by unregulated recreation.

Correspondence: I strongly support the leash requirement for nearly all locations since off-leash dogs that owners "claim" to be voice-controlled can overcome this control and easily get away or be out of hearing distance. Also, the use of long, extendable leashes often results in uncontrolled dog behavior or they wrap around their owner (one recently died as a consequence of this) or other walkers and other dogs. I should not have to feel as if every time I walk that I have to plan for self-defense from the dogs, their long leashes if they have one, and in a number of cases, self-righteous dog-owners who view their "babies" as having more rights than any human, both adults and children.

In some areas of the GGNRA such as Fort Funston, it is now dangerous to bring young children given the large number of large dogs that are not sufficiently controlled. There are too many recent news items of unleashed dogs attacking adults, children and other dogs - with tragic consequences. Some dog owners respect other walkers and subordinate their dog's wants to be considerate to others. However, other dog owners feel that their dog's needs, and by extension their own, supersede and are more important than others. As a consequence, I feel like these owners are bullies and I have stopped going to some areas where I know dog owners fail to control their dogs for fear of being obliged to allow a dog to jump on me and slobber on me. In some cases, I feel the need to have pepper spray with me since the dog owner is obviously recalcitrant and I am afraid he will "sick" the dog on me. I am not even mentioning the lack of concern and the distribution of

dog feces on the beach, on lawns, fields, etc - these feces can easily carry a whole host of parasites and other infectious organisms that can be transmitted to children.

Correspondence: As someone who has had a dog for fifteen years, and who loves to be with my canine companion outdoors as possible, I am writing to express deep disapproval of any measures to encourage or enable commercial dog walking in any national parks, and especially in the GGNRA. There was a time when I felt my dog and I had carte blanche "rights" to be outdoors together on hiking trails and public beaches -- I have learned much during the last fifteen years which have enabled me to embrace new understandings of wildlife, ecology, and public use of open space. I encourage the Park Service not to enable commercial dog walking on our public beaches and public lands.

Correspondence: A dog is a pet, not wildlife. There are certain very important differences.

A pet must be fed and housed. It focuses on its "owner" to decide its mental health.

A member of wildlife does not need humans. It feeds and houses itself.

However, wildlife can have it's food and/or housing stolen or put in what amounts to a zoo.

Now: When the two meet, without humans, the pet is most likely to lose the interaction. I lived for 14 years in a place called Wildcat Canyon, in the hills behind Richmond. There were cougars and bobcats and coyotes there. I watched a cougar eat a deer. I watched the heads of cats in the gutters along the road.

So, to protect pets from wildlife, if possible, humans take over the territory, one way or another. Wildlife loses.

The GGNRA must remain firm in it's decision to keep unleashed dogs outside. Absolutely.

Correspondence: I write in general support of your proposals. I believe they strike a fair balance among the competing needs of dog owners, non-dog owning visitors, and the environment. Since I live in the City and primarily use those parts of the park in the City, my focus has been on them and I think they are fair and reasonable. Fort Funston is a good example; the current situation has made it so that I do not much enjoy visiting it anymore, since I am routinely being run down by off leash dogs, being hit by tennis balls thrown by owners, stepping on dog waste, and so forth. By combining an off leash area with on-leash and prohibited areas, there is room for all to enjoy.

In any event, I would strongly urge you to implement the compliance program you propose. The advocates for off-leash repeatedly make statements that suggest only a tiny minority of owners don't comply with relevant rules, but my experience at parks and other locations where dogs are prohibited or are required to be on-leash is that a large number of owners do not obey the rules. I think the advocates should encourage the responsible owners to self-police the less responsible, and this is a good way to do it.

Correspondence: National Park Service,

The Golden Gate National Recreation Area is home to more endangered and threatened species than any other park in the continental U.S. including Yellowstone, Yosemite, and Sequoia & Kings Canyon combined!

Unregulated off-leash dog recreation in these areas has resulted in habitat encroachment and wildlife harassment, for example, the park has reported that unleashed dogs represent the most significant recreational threat to wintering western snowy plovers.

The Park Service must require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs, and limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Please follow through on the National Park Service's mission to protect natural and cultural resources and not allow recreation to undermine it.

Thank You.

Sincerely, Jon Spitz Laytonville, CA 95454

Correspondence: The park's mission is to protect the natural and cultural resources, not allow recreation to undermine it.

Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by offering more than one trail and more beach areas free from dog recreation.

Require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs.

Limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Correspondence: Frank Dean General Superintendent, GGNRA Building 201, Fort Mason San Francisco, CA 94123-0022

RE: Dog Management Plan/Draft Environmental Impact Statement

Dear Superintendent Dean:

I am writing regarding the draft Dog Management Plan and Environmental Impact Statement (DEIS) for the Golden Gate National Recreation Area. I am a dog owner and a bird lover, and I also use and enjoy the GGNRA lands. Having worked in the animal care industry at a no-kill animal shelter, I am as pro-dog as they come. Above all, though, I advocate for responsible pet ownership, and much of the rhetoric I hear from dog-owners opposed to the proposed rules is extremely emotional, short-sighted, and irresponsible.

I am deeply concerned about impacts from dog-related recreation on the wildlife, habitats and other park users at the park. I strongly encourage you to adopt the proposed new rules. I even more strongly urge you to improve the plan by implementing the following steps:

1. All "Regulated Off-leash Areas" should be fenced, at least in areas where fences do not pose risks to wildlife and habitats. Fences provide more security for all park users and create clearer boundaries so that dog owners are aware of how to comply with park rules.
2. The Park Service's proposed requirement of 75% compliance is too low. The Park Service should require a minimum of 95% compliance before initiating measures to improve compliance.
3. Commercial dog-walking should not be permitted in the GGNRA. This is a commercial activity in the park and the Park Service cannot legally permit it.
4. At least some trails in San Francisco should be entirely closed to dogs. Under the current plan, nearly every trail in San Francisco is open to at least on-leash dogs, meaning no trails are available for people who prefer to enjoy the outdoors without interacting with dogs.
- 5.

While dogs are important parts of our families and communities, they are just one animal that is having a significant negative impact on thousands of other animals and plants that rely on the park to survive and many other human visitors. The parks should be maintained to be safe and accessible for all users and to protect their natural and cultural resources for future generations.

Thank you for this opportunity to comment on the Dog Management Plan. I encourage you to adopt the best measures to protect the National Park's valuable resources for everyone and for future generations.

Thank you,

Stephanie Strait Berkeley, CA 94702

Correspondence: I used to "guard" the seals at Jenner 's (Sonoma county) Goat Rock Beach birthing area. Every year the seals haul out to bear their young at the mouth of the Russian River. Common sense tells you that you must have either volunteers or park personnel on duty at this kind of sensitive area to enforce the leashing of dogs, and more important, clamp down on the often nasty cruel torment of the human (children specifically) element. I always had my own dog with me while on duty, and kept him on leash while there.

BUT there is a limit to how much dogs should be "punished" by not being allowed to dive into the waves to fetch sticks, for example (my guy was a Labrador Retriever, and it made our day to play in the sea, as he was made for). We went to a distant (from the seal nursery), inaccessible area of the coast for his (and my) pleasure and exercise. In my extensive experience with dogs, I can state, unequivocally, that they do not seek out birds' nests, nor other flying critters. And what other critter besides the birthing seals are there on our beaches? In all my years with dogs on beaches, none has ever gone after any animal. Nor, frankly, have I seen any animal other than beached seals and birds.

So think twice before you disallow off-leash areas for dogs. They are wonderful animals--protective and concerned. They are the companions made by the gods. They deserve the bit of pleasure and freedom a romp on a beach and into the waves gives them.

Thank you..... from someone who believes in the protection of all wildlife, but who also believes in the elimination of scape-goating the innocent -- the

dog.

Correspondence: Golden Gate National Recreation Area is one of our country's boldest park experiments: setting aside highly-prized land to provide a national park experience near a heavily urbanized area. Indeed, the park is home to more endangered and threatened species than any other park in the continental U.S.--more than Yellowstone, Yosemite, and Sequoia & Kings Canyon combined.

However, human activity and recreation is causing much damage to the park and the animals that inhabit it. To remedy this problem I urge that the following reforms be undertaken:

--Wildlife habitat deserves a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

--The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by offering more than one trail and more beach areas free from dog recreation.

--Require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs.

--Limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

These reforms will better protect the park and its natural beauty. Please enact them now.

Correspondence: Golden Gate National Recreation Area is one of the most important conservation areas in the United States. It possesses more endangered species than possibly any other single conservation area. yet as an urban retreat it is threatened.

Encroaching development needs to be addressed, as well as contained and restricted to peripheral areas of the park. There is also a need to control congestion and one way to resolve this issue is to build more paths and other facilities so that horse riders, et al would have their own facilities and there would thus be less congestion on the paths that support most of the visitor use.

Off-leash pets, especially dogs need to be controlled and restricted to designated areas, this would ease pressures on endangered species inhabiting the park, and which face declining populations (domestic pets sometimes prey on park wildlife).

Overall conservation measures need to be improved so that recreation does not undermine the park's ecological integrity and so that visitors will be assured of the same remarkable experience that has long been the hallmark of this gem of our park system.

Correspondence: I am a resident of San Francisco and I love the GGNRA. It is a very special place and a valuable natural resource for all Americans. I also am a dog lover and although I do not presently own a dog, I have had dogs all my life. I grew up in San Francisco and as a child I enjoyed walking Ocean Beach every weekend with my Cocker Spaniel.

I know full well how much dogs enjoy running on the beach. I also know, now that I am grown, that dogs are not loved by all. They can harm natural places and wildlife. They can scare children and older citizens. Most dog owners are responsible pet owners, but not all dog owners are. Those owners cause most of the problems that occur with dogs. Sadly the dogs have no say in who owns them. In an area as congested as SF, there are too many dogs and this also causes problems.

I do believe that dogs need places to run and play. I am not so sure that this should be unregulated and within one of our National Parks. We must do everything we can to protect the natural environment of the GGNRA. Areas like this are rare and need our protection. Dog owners must be helped to

understand that the GGNRA is not their personal playground.

I do not support off leash areas within the GGNRA.

Correspondence: The park's are public wealth. They have an important purpose and mission is to protect the natural and cultural resources. Recreation must not be allow undermine it.

Animal and plant life are public treasures representing gene pools and genomes humans can never recreate. Endangered species wildlife habitat deserve a higher level of protection from human activities; the compliance rate should be 98%, not 75% as outlined. PLants are a source of many pharmaceuticals and they and animals feed eco systems upon which people depend. We cannot afford to loose life forms and species.

The park must accommodate diverse park user groups, runners, horseback riders, families, and those with service animals, by offering more than one trail and more beach areas free from dog recreation. Dog owners are notorious for off leasing their dogs. The Department does not have the funds to supervise leash laws, so banning dogs on most trails makes good business

sense and protects seniors and children.

All off-leash areas should be enclosed to protect park users, wildlife, and other dogs. Limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats. Thanks! lm

The Golden Gate National Recreation Area is a wonderful place. I've been there several times and have happy memories. It should be kept and expanded for the betterment of the natural and cultural resources, and recreation should not be allowed to undermine the other uses for conservation, protection of endangered species, etc.

Since the park was created, there have been many diverse park user groups, such as runners, horseback riders, families, and those with service animals, plus many dog owners bring their pets for recreation. Sometimes the groups do not mix well and several alternate trails should be considered for the comfort and safety of the different groups (such as seniors and handicapped,

people with young children or service animals might prefer a slow moving easy walking path. Horseback riders, runners (with or without dogs) and young people would prefer the fast track. Also more beach areas should be free from dog recreation since dogs can be quite disturbing to others on the beach.

All off-leash areas should be enclosed to protect park users, wildlife, and other dogs. Some dogs are not disciplined enough to be off a leash anywhere but their own homes and there might be warnings and fines for those whose dogs injure or seriously disturb others. These paths should be where they will not have negative impacts on sensitive wildlife and habitats.

Correspondence: I live on Ocean Beach and visit the beach on a daily basis. I am not a dog owner, but I genuinely love and respect all animals. The issue involves, of course, the owner and not the owned.

Right now the vast majority of dogs run free on all sections of the beach. Dogs are not under control by their owners either by voice or leash. I've seen the signs posted to protect endangered species of birds on the beach, and the big metal bird, but these prohibitions are ignored by most owners. Further, I have never seen any attempt by a GGNRA officer to enforce the existing codes. Indeed, how can anyone stop a running dog not on a leash from violating the protected space in season? Or attacking another animal? Or worse, attacking children and others who want to enjoy the beach?

I have seen wildlife mutilated and killed by unleashed dogs. Not a day goes by when there is not conflict between unleashed dogs. On sunny, busy weekends the situation is anarchic. Now, dogs like me and I like them. But if I were someone who feared animals, taking a stroll on Ocean Beach surrounded by uncontrolled hounds the size of ponies would be daunting indeed. There are often very small children playing on the beach. Kids are in constant danger of being harmed either intentionally or unintentionally by uncontrolled animals.

I don't care how well trained a dog is, voice control is ineffective on crowded beaches with hundreds of other unleashed animals.

I think all dogs should be on leash in all areas of the beach. Uncomplicated. Clear to all concerned.

Those who do not own dogs, however, do not have attorneys or lobby to further their interests. I only found out about this comment period via a sign posted on a trail I use to walk to the beach. So all of the beaches, parks and other recreational areas now truly "belong to the dogs."

Correspondence: Golden Gate National Recreation Area land provides a unique and special national park experience near a heavily urbanized area. The park is home and habitat to more endangered and threatened species than any other park in the continental U.S.--more than Yellowstone, Yosemite, and Sequoia & Kings Canyon combined!

To help protect these species and other protected wildlife, inappropriate activities such as motor vehicle use on beaches were banned.

However, the park continues to permit unregulated activities that disturb wildlife like western snowy plovers and marine mammals. Wildlife take refuge on Golden Gate's beaches to rest, breed, and rebuild energy for survival, yet unregulated off-leash dog recreation in these areas has resulted in habitat encroachment and wildlife harassment by dogs. For example, the park has reported that unleashed dogs represent the most significant recreational threat to wintering western snowy plovers.

I have a dog and have had dogs during many periods of my life - my family as well - however, our recognition and respect for the other areas of Nature require us as owners and thinking, cognizant human beings to control our pets for the protection of those in Nature that cannot protect themselves.

That is our duty as aware and compassionate human beings with respect for what Nature has provided.

I Urge the National Park Service to protect Golden Gate's imperiled wildlife from harassment by unregulated recreation and development activities. We need to upgrade our compliance rate to 95%, not 75% as outlined.

The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by offering more than one trail and more beach areas free from dog recreation.

Require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs. This solution is perfectly all right for most if not all dog owners. They are grateful that their dogs are enclosed and protected as well. By Limiting off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats, this will allow delicate wildlife (hatchlings etc) to be protected during the time when they are small and vulnerable.

Thank you for giving imperiled species a chance to survive.

Sincerely, Portland H. Coates San Francisco, CA

ps My family first arrived in the Bay Area in 1840. We have always been here and always respected it. All through the Gold Rush and the Great Quake and Fire - and we have loved and protected the wildlife and natural areas of this State. We continue to do so. Thank you. phc

Correspondence: As a member of the Pacifica Shorebird Alliance I have tried to lend my support to the group in various ways including activities to monitor and protect the roosting colony of a federally listed threatened species of Snowy Plovers at Pacifica State Beach. This has involved periodic observations that included sending counts and related data to rangers at Half Moon Bay State Park. However our most extensive effort has been to try to convince the City of Pacifica to establish an effective protection program including dog restrictions near the roosting area, leash law enforcement, informational signs/kiosks, symbolic fencing, new permanent fencing to dissuade trespassing on the SP zone, etc. It has been an uphill battle as this is a popular beach with dog walkers, surfers, fisherman and the general public, and the city is reluctant to stir up public ire with any significant restrictions.

A reasonable, publicly accepted and scientifically defensible program re: dog management in GGNRA would certainly help us in our struggles with the powers that be.

Correspondence: Having off leash dog walking areas in San Francisco is imperative for dog owners, especially for those of us who live in apartments or flats without outdoor space. I think that Crissy Field, Baker Beach, Ocean Beach, Fort Funston and the trail between Ocean beach and the Golden Gate bridge should continue to be off leash areas.

The sensitive habitats should be clearly marked as the plover area is at Ocean Beach and areas along the beach at Crissy field. On the walking path above Sutro baths, dogs should be controlled so that they stay on the trail. Where sensitive habitats are concerned people should be cited if they are out of compliance.

My dog is about 10 pounds. I clean up after her 100% of the time and she is so small that her environmental footprint is close to negligible. We used to run around the dirt track at the polo field in GG Park (not an environmentally sensitive area), but recently rangers have begun giving warnings about off leash dogs. So I have now chosen to take her to the above mentioned areas where dogs can run off leash. I would hate to see our range of places limited even further.

Also, because my dog is so small, she needs to exercise in a large area where she can find space a good distance from big dogs who could injure her with their rouch play. Most dog parks do not have enough space to accomadate both large and small dog areas. The above mentioed sites are the only place that I know of with enough space for all to enjoy.

Correspondence: Dear Superintendent Dean, I am writing as a resident of San Francisco, someone who works in the GGNRA (in the Presidio), a member of the GGNPC and an animal lover.

I agree with you that it is possible to strike a balance between protection of native species such as the Snowy Plover and dog and dog owners. However, I feel that stronger measures can be taken to protect the park and its habitat.

Specifically, I believe that: 1) Off-leash areas should be fenced or at least well-marked and boundaried. 2) The proposed compliance level should be set at 95%, and measures to improve compliance should be instituted. 3) Commercial dog walking in the GGNRA should not be permitted. 4) At least some trails should be closed entirely to dogs, i.e. reserved for walkers. 5) It is important to take into consideration adults and small children who may not want to interact with dogs at every place in the GGNRA. The parks should be maintained to be safe and accessible for all users and to protect their natural and cultural resources for future generations.

Thank you very much for taking community input into consideration.

Sincerely yours, Tomi Nagai-Rothe

Correspondence: A lot of careful and responsible work has gone into this document and it shows. The preferred alternative appears to me to be the best choice in about every case, not surprisingly, considering the professional perspective and preparation of those developing the report. Thank you.

Particularly, the recommendation to limit off-leash dog walking is welcome.

Sadly, "voice-control" and "sight-control" turn out, in practice, to be overly-optimistic euphemisms for only slightly bridled off-leash activity. Anyone who is paying attention knows this results in routine violation of the environment and park visitors, despite the very best intentions of responsible dog owners. Also sadly, not all visiting dog owners are responsible, patently obvious to even the casual observer. The leash (with an owner on one end) is the only possible route to reasonable management of our canine friends in the GGNRA.

My only serious doubt about the preferred alternative is the permission of commercial dog-walking in the National Park period. Why on earth should commercial ventures be subsidized in this manner? Periodic field trips for students or a tour group of some type, or "Doggy Day at the Beach" I understand. . . whatever. But this kind of routine, daily wear and tear on the resource and its guardians? Commercial dog walking is too big of an impact on the GGNRA.

Thank you for your attention and efforts.

Correspondence: I greatly appreciate our national parks. I was a seasonal park ranger for 6 seasons, and I have come to understand the uniquely beneficent mission of the USNPS. Dogs have always been a problem with wildlife and habitat disturbance. There is no place for dogs in sensitive areas. Dogs are a threat to vegetation and wildlife. If dogs are allowed in recreation areas, they should be leashed or in controlled areas only, where risk to natural and cultural resources of our parks is not possible. Note that I am aware that dogs serving the blind are in an excluded category.

Protecting endangered species wildlife habitat should be a high priority for the management plan. Therefore, endangered species wildlife habitat deserves a higher level of protection from human disturbance. The compliance rate should be at least 95% or more, not 75% as outlined.

I also am not a big fan of horses in our parks, but that is another issue. Horses destroy the land and make a mess for hikers. They should be banned from National Parks, just like mountain bikes should be banned.

But back to the issue at hand, national parks and recreation areas are unique. They have a higher standard of protection than other managed resources in the US. It is important that the public understand such issues. Therefore, all the trails and beaches should be free from dog recreation. Do you remember the outrage when smoking was banned? Do you now appreciate the outrage expressed when people light up in public places? We must institute regulations so that people understand that dogs should be, like OHV's, restricted to sacrifice areas.

Therefore, it is imperative that all off-leash areas be enclosed to protect park users, wildlife, and other dogs. Additionally, off-leash recreation areas should be in areas where there is no risk of negative impacts to sensitive wildlife and habitats.

Golden Gate National Recreation Area serves millions of people, and management of the human users and natural resources is challenging. It is important to protect imperiled species, and it is important that the plan emphasize such protection as a priority.

I thank you for your dedication to the parks and to the protection of the biodiversity in the bay area.

Sincerely, John N. Nishio

Correspondence: The idea of placing limitations to beach areas for dogs bothers me greatly. I take my dog to Fort Funston from time to time, as it was one of the attracting reasons to move to the Bay Area in the first place. I am really disappointed in the city's consideration of disallowing canine exercise on these beaches. Being a conscientious dog owner, I always clean up after my dog and do not allow him to dig or carry out other destructive behaviors. I think regulations to limit access at certain times of the year for nesting birds is acceptable. But I really hope that Fort Funston can remain a wonderful visiting spot for my dog and I, even if it is at certain times of the year. Perhaps the city can increase ticketing on the beaches to non-compliant citizens in order to increase revenue. Our dogs are part of the natural environment too!

Correspondence: Nature, love, and the phenomenology of dog walking

It's hard to describe the feeling of freedom and joy I have when I'm out walking with Shadow off leash in the beautiful locations within the GGNRA. It's like we are two adventurers exploring our environment. Off leash, Shadow can trot a few feet ahead and sniff out seemingly unremarkable spots in the grass. Or he will follow a scent along the path, his nose guiding him in circles and curving patterns, until he comes to the spot he was looking for. I glance down - nothing is there. But I'm wrong, because Shadow, with his enhanced senses, told me that something was there , revealing an invisible world I never knew existed. The adventures I have with Shadow remind me, even if symbolically, that there is more to life than what we can see.

These nature walks with Shadow connect me to the natural world in a way I've never known. Before Shadow came into my life, I would never consider walking on the beach in the cold fog, yet the beauty of the fog, in its many forms, is awe-inspiring. Nor would I be out in extreme wind conditions, with sand racing across the beach, yet the intricate patterns formed in the sand are magnificent. Nor in the rain, walking among the dunes of Fort Funston, marveling at the mushrooms that exploded overnight - all the different shapes and colors. I had no idea there was such beauty! But

Shadow, my nature guide, got me out in this weather, and made me fall in love with these places and their magical hidden treasures. And the routine of going there regularly, day after day, instead of the occasional sunny day like I did before Shadow (that part of my life I now refer to as "BS" (before Shadow)), is that you can see the subtle beauty and changes, like getting to know its different moods.

And the happenings that can occur strike deep to the heart, like that time in an extreme wind at Fort Funston - one so strong that no reasonable person would be there. Except Shadow, my nature guide, insisted, so there we were. Bracing myself against its force, I ducked into the grove of trees on the horse trail and stood silently in refuge. Then in an instant, a great horned owl flew in and landed on a branch not 10 feet from me. It was incredible, its wing span at such close range, and the grace of its landing. It was also escaping the wind. Then he turned his head, his wild stunning face catching a glimpse of me, and flew off again. It was just a brief moment in time, but was timeless. We had an intimate shared experience; a magical interaction that left a permanent impression.

It's these moments that connect us to the beauty and profundity of nature - something we are losing in our increasingly digitized virtual worlds. They make us stop and catch our breath, and remember what it feels like to be alive. They are deeply meaningful. Yet I fear they are not captured in the NPS's current Environmental Impact Statement for its Dog Management Plan. My owl experience would probably be characterized as harassing wildlife, because my presence, even in my stillness, caused the owl to fly off. But we must remember that environmental stewardship depends on these experiences. For it is people who will save the earth. And like someone once said, you can't save what you don't love. Shielding us from these experiences, even in the name of protection, makes nature something of an abstraction. And I don't think people will be motivated to save an abstraction. So I want the NPS to know the good service my dog Shadow is providing as my nature guide, getting me off the couch and out into our parks, whether rain, wind or fog, and keeping me in love with our natural world.

Correspondence: I want to go on record that I am opposed to the new proposed plan which will restrict activities for dogs on some of the areas which fall under your jurisdiction.

I use these areas and very much appreciate the dog walking and off-leash

areas provided. From my personal experience people do clean up after their dogs and this is true even in very heavily used areas such as Fort Mason, Crissy field, etc.

I believe there may be more dogs than kids in San Francisco. The dogs should at least have the opportunity to run free in enough areas to keep them and their owners happy.

Keep the status quo!

Correspondence: Please retain these provisions in the plan:

7 limit off-leash recreation to areas where it will have no negative impacts on sensitive wildlife and habitats;

7 provide more trails that are free of dogs (currently, only 1 trail in San Francisco will be available for those who do not wish to interact with dogs);

7 limit dog walkers in the park to 3 dogs and do not permit commercial dog walking;

7 implement compliance-based adaptive management that requires at least 95% of dog walkers to comply with the new regulations.

While the voice of local dog owners has been loud and sometimes hysterical in influencing decisions about how open space is used in the SF Bay Area, it has never been clearly determined that they are the majority view. The guidelines above would accommodate the vast majority of those of us who wish to continue to enjoy the GGNRA as a natural area, not a wildlife-free dog park. If critical ecological damage is done to habitats or species from the excessive presence of dogs, the Park Service simply opens itself to hugely expensive remediation efforts and possibly even lawsuits as a result.

Correspondence: Please do not make it more difficult for dog lovers to utilize these areas. If

for no other reason evaluate the potential resources that you will lose. Despite the difficult economy that we have been struggling through, the pet industry has continued to grow! It is estimated that the Pet Industry will be a \$50 Billion Dollar industry this year. This means that even in economic down turns people continue to spend money on pets. People just simply love their pets. Therefore, if you make it difficult for people with dogs to visit your area you will be likely making it less desirable to travel to the Golden Gate Recreational Area, and therefore losing the revenue that they would spend. Our state has enough financial problems right now. Don't increase these problems by keeping the huge community of dog lovers away!

To get facts about the pet industry and its size and revenue please visit the American Pet Products Association's website at www.americanpetproducts.org.

To: GGNRA RE: GGNRA Dog Management Plan Environmental Impact Statement

RE: Dog Feces and Smells as mentioned in the report

To Whom It May Concern:

My name is JoAnne Tybinka Blasko. I am a senior living in San Francisco and I walk daily on Crissy Field with my dog, Izzy. We also spend time at Ocean Beach, Baker Beach, Fort Mason, and the Marin Headlands. We love the freedom that the Bay area offers us for both on-leash and off-leash recreation.

Now that freedom is in jeopardy and we are greatly worried. We have spent hours reading the GGNRA DEIS and believe that the Preferred Alternative is overly restrictive and that the restrictions are not justified by the available data. The report is full of negative things that might or could happen; yet there is little data over the past ten years to indicate that they have happened. I believe that the lack of data indicates that they do not occur. (For example, on pages 20 and 29, the report mentions that disease "could" be transmitted to people from unpicked-up dog feces. However, there has not been a single case of dog-feces caused human illness reported by the SF Department of Health for over 50 years.

I believe that the dog owners in the bay area are exemplary in taking care to be sure that dog feces are picked up and that the areas where we have the privilege of on-leash and off-leash recreation are kept very clean. There are the occasional slips and many of these are not from dog owners who visit the parks on a daily basis but are from visitors to the park from out of the area who care less about keeping the place clean and sanitary. We have more and more visitors as the park is advertised and used by large groups.

Nowhere is it mentioned that the owners of off-leash dogs on the SF beaches provide an important service to the daily users of the beach; we clean the beach of debris each morning. One doesn't see the runners cleaning the beach or the many hikers who are marching for the cure cleaning the beach or the people who attend the many large functions that are promoted by the GGNRA as money-makers. Yet the report states that the presence of dogs negatively impacts the visitors' experience because of smells etc. (Pg. 30) The visitors would be negatively impacted if the debris that is removed daily were still there when they arrive for their picnics and play.

I believe the GGNRA DEIS should provide a more balanced look at the real situation on San Francisco beaches. I wonder if it is written by people who actually spend time there.

Sincerely,

JoAnne Tybinka Blasko

TO: GGNRA

Re: Draft Dog Management Plan / Environmental Impact Statement Dog Owners held to Higher Standards than other User Groups

To Whom it May Concern:

I am Peter P. Blasko. I am a senior, resident of San Francisco for over 50 years, and I have a dog.

I believe that dog owners are being held to significantly higher standards than other GGNRA users. I see children running all over the plover restricted areas at Crissy Field but one dog running off-leash through that area is cause for great alarm. Another example: tourists renting bicycles zoom down the hills of Ft. Mason with no safety restrictions and no bike lanes and an accident is waiting to happen; yet dogs are assumed to be the big safety hazard.

The Preferred Alternative condemns every dog owner for the actions of a few irresponsible owners. For example, 94% of dogs do not chase birds (and

those that do mostly chase seagulls) yet all dogs are excluded from a majority of Ocean Beach to protect birds. I believe the GGNRA should focus on those dogs that do chase birds rather than all dogs. I also note that the 1999 Hatch Report observed 5,692 dogs at Ocean Beach and only 19 were observed to chase snowy plovers and that is one-third of 1%. Pg. 28.

San Francisco dog owners are responsible. Why not treat them that way and let us continue to have the privileges that we have had in the past and assume we will self-monitor? We've been doing this successfully for years. We do not have to be brought into line with other National Parks. We live in an urban area that must serve everyone and dog owners represent a large share of the park's constituency.

Sincerelly,

Peter P. Blasko San Francisco resident

Correspondence: To whom it may concern,

I would like to offer the following comments on Dogs in the National Parks and National Recreation Areas

First of all, I would like to state for the record that I am not an Anti-Dog person. I grew up with dogs, and although I don't presently have any, I have had for most of my life.

I do however think that Canine use of NPS areas should be heavily restricted or controlled.

A few observations:

Dogs are by nature, invasive. When Dogs are off leash, they will and do chase and disturb wildlife.

In many areas there are signs and fencing to restrict Human beings from going off trail so as not to disturb various nesting / resting/ breeding wildlife, et. al.

Yet easily 96% of the time I am in an area, I see dogs off leash, running through the "protected" areas. Whether it is forest, dunes, lava beds, etc,

chasing each other or wildlife.

Dogs destroy the landscape:

It's illegal to remove materials from NPS's and NRA's: Yet dogs are allowed to root, dig, and defecate freely. This is damaging to the areas flora and fauna.

Despite clearly posted signage stating that Dog owners must pick up after their dogs, I continually observe this being ignored.

As a point in fact, there are parts of Ft. Funston (GGNRA) in which smell of dog excrement is absolutely vile.

How can one enjoy the fresh salt air, and clean ocean breezes when one is trying not to retch?

We no longer allow smoking in Public areas. What's the difference? (I think I'd take being around cigarette smoke over this?and I don't smoke!)

Lastly, and I am quite upset about this: I am tired of being assaulted by dogs.

I like to run on average of 5 times a week. On average of about 1.5 times per week, when running, I get jumped on by one or more dogs. So far none have been overly aggressive. But I don't like it! (Usually this happens at Ft. Funston, GGNRA)

Professional dog walkers show up with literally a entire pack of dogs, I routinely see 5, 6, 7 at a time. Usually some are on leash and some are off leash, but even when they are all on-leash, it's still a mob. An obstacle that is difficult to avoid.

I don't want my tax dollars used to support private enterprise, that then however unintentionally, restricts the use of those areas which I am fully supportive of. Make the professional dog walkers go elsewhere. They are running a business. It's their problem. Again, there are Dog parks around. Go There.

Furthermore, if you have ever owned a dog or even two: That's easy. But after three, they develop the pack mentality. The dogs are in control at that point! I have yet to see a dog walker in complete control of their 5+ dogs.

Dogs are noisy. The "Quiet Enjoyment" of an area is essentially nonexistent when a great many dogs are about.

I realize that dog owners in the City want to take their dogs somewhere, other than around the block, But there are Dog Parks specifically for this. I think that is part of the responsibility of owning a dog in a big city.

Of course, I am from Eastern Washington State & Montana, so I don't think its very humane to even own a dog in a city. Which is precisely why I don't have a dog at the present time.

In any event irresponsible dog owners should not have the right to ruin those areas that are for all of us. The National Parks and national Recreation areas are for everyone, not just Dog owners.

In summation, I feel the following points would be fair to all:

1. Restrict the areas dogs are allowed. 2. Dogs should be on leash at all time in the NPS's & NRA's. 3. Toughen the fines and enforce the pickup of excrement. 4. Set the maximum number of dogs in an area or per person/group. (2?) Ban folks who show up with 4, 5, 6, + dogs. I love the National Parks System and while I understand that Dog owners want to enjoy these areas as well, they should not deter others the right to enjoy these areas as well.

Thank you for your time in reading this.

I am certainly happy to discuss this further if anyone should desire,

Sincerely,

Jeffrey L. Power

Correspondence: Dear GGNRA,

Dogs are a critical component to keeping our community vibrant and encouraging exercise and appreciation in the great outdoors. I urge you to continue to allow dogs in all current areas of the GGNRA jurisdiction and to

reject any additional restrictions.

Sincerely, Dana Gunders San Francisco, CA

Correspondence: I would like to see dogs to continue to be allowed in the parks. Our national parks are a treasure that should be able to be shared with all visitors including dogs. Dogs and people should be able to equally enjoy our national beach treasures.

I visit Muir Beach weekly with my dog and have been doing so for about 7 years. I pick up trash as well on this day. I've had many people thank me when I am picking up trash. I feel it's a priviledge to live in this community and to be able to walk my dog at the beach. This is my way of contributing to the beauty of the beach for us all.

I believe the beach belongs to all of us who wish to mindfully visit.

Correspondence: I support the Sierra Club's approach focusing on the most protective use of the land and natural environment. I believe that decisions on recreational use of the land should reflect a primary commitment to the flora and fauna of the natural habitat, and secondarily the convenience and desires of dog owners, or for that matter, cyclists, equestrians and hikers. With these principles in mind, I think we can manage to provide some degree of recreational use to all types of users.

"I support the National Park Service's Dog Management Plan, but hope the proposal would also require all off-leash areas be enclosed to protect park users, wildlife, and other dogs; limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats; provide more trails that are free of dogs; limit dog walkers in the park to three dogs;

and implement compliance-based management."

Thank you for your consideration of my opinion. Bob Kopelman

Correspondence: Dear Mr. Dean:

I'm writing to support the preferred alternative or stronger. Since the area I am the most familiar with is Ocean Beach, that's the area I'll speak about specifically but I support strong regulations in all areas..

I was at the SF Board of Supervisors meeting where we gave our comments and it didn't escape me that most of the speakers supported weaker regulations. I have to give it to the dog groups, they are very organized. They have the advantage of being single-issue focused. While it's good to listen to all sides, please don't give in too much to those who speak the loudest.

The dog groups claim that only a small minority are causing the problem, but they complain that 75% compliance is too high a bar. Every time I go to Ocean Beach, if shorebirds are there at least one dog is chasing them, usually more. There are so many dogs at the beach that a minority of those dogs are still enough to unnecessarily impact the birds. Even if they're not immediately dropping dead. As you know. Meanwhile the dogs go home and eat undisturbed.

A couple weeks ago I saw a dog owner deliberately throw a ball at a flock of shorebirds. Twice. .

Other cities in California and across the country have restrictions on dogs.

In most places there are no beaches for dogs to go to, and it doesn't seem to be an issue.

Thank you for reading this. I'm writing because the birds can't. Please keep the preferred alternative, or strengthen it.

Sincerely,

lyn

Correspondence: I own a dog and even I am appalled at the lack of concern that some dog owners have for the surrounding environment. I am a full supporter of dogs being on leashes. I also think that all dog owners should have to carry waste bags when they are with their dogs in public places. Maybe it's a good idea to register DNA of all dogs in the Bay Area and if dog poop is left behind, it can be tested and the owners can be fined. My dog is always on a leash and I ALWAYS pick up after her. If I can do it, so can every other dog owner.

Correspondence: I support Alternative A and E for the GGNRA Draft Dog Management Plan/EIS. As a former NPS employee (SER0), conservationist, and dog-owner, the alternative I absolutely oppose is Alternative D.

NPS policy on dogs in parks is discriminatory to tax-paying citizens who own dogs and based upon outdated and rigid management ideas geared toward the fact that the agency is historically poorly resourced. Thus, it is easier to ban troublesome practices than to manage for the benefit of the people. If usage of the park has increased, so should staffing. I certainly support increasing taxes or park fees to support adequate management, but not blanketly discriminating against an entire group of people (dog-owners) because that would reduce management's headaches.

Historically, people in SF walked their dogs in many areas before they came under NPS control and NPS made an agreement 20 years ago with those people to allow dog-walking and to back out of that agreement now for legalistic reasons or to suit management's interests is dishonorable. It is the reason many people have grown a negative view of GGNRA because of its

"BIG PARK" mentality. If you impose drastic restrictions on dog-owners you will be alienating many members of the public who would otherwise support increasing your resources. GGNRA is an URBAN park. Applying the same dog-policy as at Yosemite is ludicrous.

Correspondence: Dear Sir or Madam:

Golden Gate National Recreation Area park is home to more endangered and threatened species than any other park in the continental U.S.--more than Yellowstone, Yosemite, and Sequoia & Kings Canyon combined!

To help protect these species and other protected wildlife, inappropriate activities such as motor vehicle use on beaches were banned. However, the park continues to permit unregulated activities that disturb wildlife like western snowy plovers and marine mammals. Wildlife take refuge on Golden Gate's beaches to rest, breed, and rebuild energy for survival, yet unregulated off-leash dog recreation in these areas has resulted in habitat encroachment and wildlife harassment by dogs. For example, the park has reported that unleashed dogs represent the most significant recreational threat to wintering western snowy plovers.

--The park's mission is to protect the natural and cultural resources, not allow recreation to undermine it.

--Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

--The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by

offering more than one trail and more beach areas free from dog recreation.

--Require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs.

--Limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Thank you for helping to create a better park experience at Golden Gate National Recreation Area, and for giving imperiled species a chance to survive.

Correspondence: My vote is for Option A. It works if you have a friendly dog under voice

control. The key to making all of this work is moderation. If you have an aggressive dog or one you cannot call back to you, then use common sense and keep your dog on a leash. If you don't, you only give the non-dog folks plenty of reason to persist in restricting dogs in public places and prohibiting their freedom to run.

Correspondence: I fully support GGNRA 's current proposal to regulate dogs on GGNRA property. I am the Volunteer Steward for the Oak Woodlands Natural Area in GG Park and a member of Sutro Stewards. Our family has always owned a dog. However , the dog lives with my sister in rural New Mexico. In our urban environment the remnants of fragile green space are at a premium and our native habitats and animal species are under pressure from all sorts of human activity. We think it is very appropriate to leash dogs when in these areas. Dogs are bred to be dependent on humans. It is a choice and a privilege to have a dog in an urban area. It is not a ' right ' . Therefore , we fully support GGNRA's proposals for dog management and urge you to resist the unreasonable demands of the hard core dog lobby. ROB

Correspondence: Hello,

Points I want to make in regards to Sweeney Ridge. 1. The trails leading up to the nike site from Sneath at Sweeney ridge are paved and have daily truck traffic to service the water towers and antenna. I would imagine the environmental impact of the trucks would severely outweigh the small amount of k9 traffic. 2. The trails are very steep and there is no way for dogs to go off of the pavement. 3. The Sneath side of the park is very low foot

traffic which is mostly locals, many of which use the park to walk their dogs. 4. The majority of the paved lands at Sweeney ridge are owned by the water company, and are excluded from the GGNRA boundary map. What effect will this have on leash requirements.

What I want. Ideally for the current leash required laws at Sweeney Ridge to remain unchanged. Failing that, at least allow leashed dogs on the portion of the park that is paved.

RE: Comments on Dog Management Plan

I am responding to the dog management draft plan as an individual user of park areas.

I have read the plan carefully and am very disappointed in how far the plan accommodates dogs and their owners and walkers as against the interests of human beings without dogs. It is clear that the dog owners and walkers have prevailed.

I want to mention two particular recommendations concerning Crissy Field that I find really awful. One proposal is to continue to allow dogs off leash on Crissy Field Beach. The dogs have owned the beach for years. And that means that the rest of us cannot use the beach with any comfort. The dogs are aggressive, jumping, barking, running, making the beach unsafe. There is dog poop on the beach. Children use the beach. And this is the only beach in San Francisco that is closest to the largest urban concentration of people. How much more sensible it would be to ask that dogs not be allowed on this beach and that other beaches in less urban areas be designated for their use.

Secondly, the walking path that connects one end of Crissy Field to the warming but is infiltrated with large numbers of dogs. Even on leashes, they fight, bark, and are aggressive. This path should be for people. It is an insult to the plaque that reads "a place to dream" to allow dogs to own this path. I have seen children picking up poop, accidents between bikers and dogs, and elderly people scared. I find it very unpleasant when the dogs are aggressive. Again, this is an urban walk, extremely close to very large numbers of people, and it should be for people not dogs. Many other places can accommodate dogs without such infringement on people. In addition, it

is highly unlikely that dogs off leash on the airfield will suddenly be on leash on the path. Now, they run back and forth between the airfield and the path. It is a terrible recommendation to allow dogs to continue on the path.

Of all the areas included in the proposed plan, the Crissy Field path and the beach are urban and closest to tremendous numbers of people. Their interests and safety should be paramount not the interests of dogs and their walkers. There are so many other places where the dogs can roam in the plan.

The recommendations concerning these two places are very, very wrong. I hope that your group will carefully consider these comments. Thank you.

Sincerely, John Sampson, San Francisco March 19, 2011

Correspondence: Off-leash dogs should have a fenced in designated area away from scenic beaches and critical wildlife habitat.

I resent being out doors and having dogs out of control running past me, barking at me or sniffing. Most dog owners don't have them under voice control as they are supposed to be. The Snowy Plovers and other wildlife at Crissy Field beach need to be prote4cted by having dogs eliminated from that area. At the very least, the NPS should enforce the dog regulations they already have.

Correspondence: What about a Mountain Bike EIR / plan? Have you seen the destruction that mountain bikes cause in the parks, especially in wet weather!?!? It is likely 100 time more environmental impact / destruction than any number of dogs!

Having a ridiculously restrictive dog proposal is highly hypocritical and pointless unless a equally restrictive bike plan is also implemented.

Why not just charge for dogs and bikes as a way to generate revenue and cut down on the impact while still allowing reasonable access? To burden of

enforcement will be no greater than it will be for the dog plans.

Correspondence: March 21, 2011 Frank Dean, General Superintendent, Golden Gate NRA Fort Mason, Bldg. 201 San Francisco, CA 94123

Congress created the GGNRA in the 1970's as the first urban recreation area, that hiking with our off-leash dogs is OUR form of recreation, and that severe restrictions are not justified by the Draft Environmental Impact Statement (DEIS). Please help us keep our parks - Help

Argument in favor of the status quo with room for compromise. Please read on:

I believe that the GGNRA thought they did their best to try to meet the guidelines set forth to examine the environmental impact on these National Park Areas but I am not sure they considered the other possible problems that would occur if they go with their recommended options...outcomes that would likely have a more extensive negative impact. Please read on:

1. I have been visiting Fort Funston for 17 years, 10 without a dog and 7 with one. During that time, I have brought my children there to get exposed to dogs and develop affection for them as opposed to fear. The dogs there are so friendly and non aggressive that this was the perfect place. I have brought out of town guests and they have stood in awe and envy of this wonderful place to enjoy, nature, California vistas and dogs and people... in a City to boot. Cities tend to isolate people from one another and here is one of those rare, and special places where you almost feel like you live in a small town with a sense of community...everyone running free and getting along. I get to know people who live in completely different parts of the City and we get to greet one another like neighbors when we do our ritual dog walks. Do you really want to destroy a San Francisco icon? When is the

last time you visited?

2. One argument I have heard concerns the dangers of dog bites and dog fights. I am skeptical that the instances of dog bites are greater or worse than those in the community at large. Of course they are greater than in places where there are no dogs....but this is not grounds for eliminating off leash dogs. I mean do we restrict teenager; from parks because they create a risk of broken glass?, or men from the parks because they increase the chance of rapes occurring?, or restrict children because they chase birds (and they do) or because of the litter they leave behind? In fact I would argue that dogs who are socialized at places like Fort Funston...socialized off leash being key here...this opportunity for dogs to socialize with humans and other dogs makes them better canine citizens and reduces any potential dangers they might pose in the community. I feel pretty safe in saying that the "vicious dogs" are not dogs that are socialized at Fort Funston. It keeps our City safer and our people safer and healthier by providing a place for dogs and people to run free and get exercise. Dogs as pets improve the health of the people who own them...and it is the obligation of the community to provide a place for those dogs and people to exercise together. On leash exercise is often insufficient and holding a leash can cause elbow and shoulder problems for owners.

3. What will happen to Fort Funston if you put these restrictions in place...even the shared plan? Because of the wonderful opportunity it provides, Fort Funston is heavily utilized by people and their dogs. Given the numbers that enjoy this wonderful place, it is always relatively spotless, free of litter and safe. This is because canine owners are some of the most civic minded, environmentally aware, concerned, involved and caring citizens. They do their best to take care of the place that they use so that it will continue to be there, they take responsibility for their animals and they pick up the feces, they do

Re: Rancho Coral de Tierra dog policy

Dear Mr Dean:

I am a resident of Montara who lives on the North end near the Rancho Coral de Tierra (RCT) open space adjacent to Montara. I walk the trails on a regular basis and have personal experiences that are prompting me to express this opinion on the dog policy.

First and foremost the area is teeming with wildlife. The area near Highway One has a newly restored wetlands. I see Blue Herons and other large birds in the open space on a regular basis. Off leash dogs are not compatible with the wildlife. Two days ago I came upon a Great Blue Heron on the trail and had about 5 minutes to quietly observe before off-leash dog walkers came along and spooked it. They made no attempt to leash their dogs when they saw the Heron. I have also observed dogs chasing terrified deer with no responsible humans in sight.

I have been threatened by growling off-leash dogs numerous times on the trails. The owners seem to think THEIR dog is not frightening to others. "He doesn't mean anything by it" is a common response to my concern. Voice/sight control is a joke.

We already have many local dog owners who do not obey the existing leash laws. They are vocal and seem to think their rights supersede the wildlife and other residents. This is wrong. To lessen the restrictions would be a big mistake and invite other park users to join those already threatening wildlife and humans.

Please establish the "Environmentally Preferred" Policy that is most protective of the resources, neighbors and visitors safety in RCT lands. At minimum dogs should NOT be allowed off-leash in Rancho Coral de Tierra at any time.

Thank you for protecting our Parklands.

Sincerely, Deborah Lardie

Re: Comments on Dog Management Draft Plan/DEIS

Dear Superintendent Dean:

I am writing to support the new policy to restrict off-leash dog walking. The behavior of dogs at GGNRA beaches is not only disruptive to the enjoyment of the area but is also threatening and potentially hazardous to people, especially children.

I have visited GGNRA beaches regularly for the past thirty-two years. Since the birth of my children, I have been particularly aware of the problems dogs pose to other beach users. When my children were infants, they were routinely bothered, terrorized, or knocked down by dogs chasing a ball thrown by its master or by a pack of out-of-control, "happy" dogs playing. If, after such incidents, I had a dollar for every time an oblivious dog owner said that their dog was friendly and loved children, I would be a very rich man. I grew tired of having to console my crying daughter after she was chased and/or knocked over by a dog at the beach. This was especially problematic at Crissy Field, so much so that we had to stop using the park entirely. This is not a live and let live situation - there are victims here.

I think that dogs should be banned from the GGNRA beach areas or be required to be on a leash. There are hundreds of acres in the nearby parklands for clogs to run free. Unrestricted off-leash clog access to the beaches is unacceptable due to the disruption and hazard it poses to individual users (especially children) of these natural areas.

Sincerely,

Harold A. Ball

Re: Dogs

Dear Sir:

I find that the proposed "no dog" in portions of Pacifica to be stupid. I have a dog and walk him all the time. I also do beach cleanup three times a year.

Banning dogs from this area is really limiting to people with handicaps,

including my husband. Most of the areas are not very easy for handicapped people (parking or flat trails for walking).

You should leave things alone in Pacifica. They are fine the way they are. We don't need some government agency to tell us how to take care of our town. We do the cleanup, and are responsible dog owners.

Dear Mr. Dean:

We are a dog-loving family who live in Cupertino, and often set Fort Funston and Crissy Field as heavenly destinations for our energetic and friendly little cockapoo. The parks afford good exercise for us all and soul-refreshment for the humans.

In all the years we have been driving up to San Francisco to enjoy Fort Funston and Crissy Field, we have been impressed by the conscientiousness of the dog owners and the admirable behavior of their pets. The grounds are amazingly clean of doggy-doo, the dogs are encouraged to be friendly and obedient, and human conversations around the watering holes have been congenial.

To be frank, we do not understand why, after all these years of thoughtfully

sharing these resources, there is a movement to restrict these parks against dog owners and their pets.

We wish to register our strongest opposition to the proposed changes in access to and use of Fort Funston and Crissy Field and to add our voices to the hundreds of others who also value these resources for healthy and positive canine/ human interaction.

Cordially, Eleanor W. Dickman

Subject: Dog Management Plan

Mr. Dean,

As a very active 80 year old, I have been hiking in the Golden Gate National Recreation Areas for many years. However, over the past 10 years, I have given up walking in certain dog free areas for fear of being bumped or challenged by an off-leash animal. I just love the Crissy Field area but I must be realistic about these things and I now consider it off- limits for me.

I encourage you to return to the NPS guidelines. We don't allow dogs to run off-leash in our neighborhoods so why would we allow them to do so in these wonderful public areas?

Thank You,

Waldo Griffin

Dear Mr. Dean,

We are writing to oppose the proposed Dog Management Plan for the Golden Gate National Recreation Area. We are long-time residents of San Francisco. We have been responsibly walking our dogs at Fort Funston, Crissy Field, Marin Headlands and other locations in the GGNRA for many years. Our current dog has recently earned his Canine Good Citizen certification from the AKC. Our dog are always either on-lead or under voice control.

We are long-time environmentalists and strongly support laws and regulations that protect the environment, but not this one.

Daily walks with our family, friends and our dogs in the GGNRA is an important part of our social life. It also plays a major role in our exercise program for keeping healthy.

Wildlife in the GGNRA needs protection but the proposed GGNRA plan is too extreme. The San Francisco Bay Area is a heavily populated urban area where multiple needs have to be balanced. The proposed GGNRA plan does not sufficiently protect the needs of people compared to the needs of a relatively small number of birds.

In addition, prohibiting dogs in the GGNRA will force dog owners to use other dog parks in the city causing overcrowding in the dog parks and parking problems in surrounding neighborhoods.

We respectfully urge you to actively oppose this extreme and counterproductive proposal.

Sincerely,

Kevin and Beth Shannon

Correspondence: Dear Mr. Dean,

I am writing you to urge you not to implement any additional restrictions for dog walking in the new GGNRA dog management plan. My family frequently goes to Fort Funston, Ocean Beach and Crissy Field to walk our dogs. Being able to walk our dogs off leash makes the walk more enjoyable for both people and dogs. Doing this is important to our quality of life. If this opportunity is taken away from us it would have a big negative impact on our lives. When I go to the GGNRA I always see other people benefitting

from being able to walk dogs off leash as well. So I implore you to preserve the current off leash areas in the new management plan so I and many others will continue to benefit from them.

Sincerely,

Kenji Okamoto

Dear People:

This is regarding the Draft Dog Management Plan/DEIS

Dogs running around without a leash are a major problem in the Golden Gate National Recreation Area. Too often the dogs get too close to people who are afraid of them, barking wildly. I see them on trails, such as the Battery to Bluffs Trail, where they are not allowed. I would also like them to be required to be leashed in areas like Baker Beach where they share space with pedestrians enjoying the Coastal Trail. There are enough dog running areas where dogs may run unleashed in San Francisco that there is no reason they should be terrorizing pedestrians and wildlife in the Golden Gate National Recreation Area.

Please adopt a plan that regulates dogs more strictly and enforce it.

Sincerely, David Zebker

Correspondence: Re: GGNRA Dog Management Plan/Draft Environmental Impact Statement

Dear Mr. Dean;

As a resident and dog owner in the City of San Francisco, I have enjoyed hundreds of Saturday mornings walking my dog at Crissy Field. Crissy Field is one of the few clean, safe and open areas where dogs can run and

play off leash in the City. Being able to run and play off leash is essential to a dogs well being.

Over the years I have observed that most dog owners are responsible, maintain control of their dogs and clean up after them. Thus I believe the current arrangement works fairly well, and I prefer alternative A of the Draft Environmental Impact Statement. However I understand the desire for a better defined policy and greater restrictions and thus alternative E is my second choice. Given how muddy the Crissy Field air field is in the winter and how many burs and foxtails it has in the spring, a beach off leash option is important for dogs and central beach makes the most sense since east beach and the promenade are used by most other park visitors.

Sincerely, Laura Blake

Re: Dog Management Plan and Draft Environmental Impact Statement comments

Dear Mr. Dean:

I urge you to make no further restrictions on off-leash dog walking in the Golden Gate National Recreation Area. The opportunity to walk dogs off-leash provides a unique recreational opportunity for Bay Area residents such as me to exercise not only our dogs but also ourselves. In the process, we are able to meet and interact with diverse people from the community with whom we would not otherwise interact in our daily lives, such as at work or in our own neighborhoods.

Sincerely,

Robert J. Durham, Jr.

Correspondence: Dear National Park Service Administration, I am a Marin City homeowner

who lives just one block from the Pacheco fire road that connects to the Alta Trail and the GGNRA. I oppose the draft plan submitted by the Park Service that will change dog access to this trail and the the Oakwood Valley/Tennessee Valley areas. I am a former NPS employee and a current Sierra Club member. I have two border collies that I take up on Alta Trail nearly every day, under my strict voice control. In my experience, the dog owners and walkers who use the trail are very responsible and respectful of both the environment and the wildlife in this habitat. The erosion on Alta Trail is not due to dogs, or any animals for that matter, but hard rains combined with vehicular and bike traffic . The draft map makes a hodgepodge of local trails- Oakwood Valley is off leash and fenced, while Alta is not. This makes no sense at all. I believe that Alta Trail should remain off leash as it stands now on existing maps. Furthermore, the Park Service is incorrectly marking the stretch of trail from the Donahue parking lot to the GGNRA border as federal property. This is private property with a county and NPS easement- NPS will not be able to enforce any dog code on this stretch, and the draft maps should be corrected accordingly to show the proper boundaries. The proposed fence along Oakwood Valley will limit access of native wildlife to their main water source- the creek that runs the length of the valley (and trail). The EFFECTS OF PROPOSED FENCING WILL BE FAR MORE DAMAGING TO WILDFIRE THAN DOG USE. I cannot believe that this made it into a draft proposal that should have contained an EIA that looked at this potential impact, as well as the parallel impacts of mountain bikers and hikers on this same area.

To restate, I am opposed to the NPS draft plan, and would like dog access to remain unchanged from the current conditions.

Sincerely,

Laura Godwin

Correspondence: Dear Park Service,

I have put off writing for way too long, trying to organize cohesively my thoughts. Good thing the final deadline is approaching so I can be counted, so to speak. I am a 66 year old woman with 3 Westies whom I am afraid to walk in any of GGNRA areas because of out-of-control off-leash dogs. Two of my dogs have Obedience titles but still do not take kindly to a (usually) big dog running toward them. They feel threatened and so do I. I do not want to fall down and I definitely do not want them injured.

I can only imagine how the tiny birds might feel in this situation; they do not deserve to be harrassed, they are owed a calm and peaceful home.

I do not believe these dogs and their owners, or the dog walkers (and that is another whole topic that gets my Irish up) have any rights to run free in this special, lovely area that is the GGNRA.

Thank you for your time.

Correspondence: I wish to submit my comments regarding the GGNRA's draft dog management plan.

As a native San Franciscan and a resident of the Western part of the City, I

voted in the 1970's to deed some of our precious open spaces to the Federal Government with the hope that the lands would be protected from development. My goal was to ensure that these recreation areas would remain wild and free and available to San Francisco's residents and our neighboring communities for recreational use. At no time did I imagine that the Federal government's plan would evolve into one that would deny the citizens the freedoms they enjoyed when the City managed the land.

I am a single, middle-aged and physically disabled woman who walks at Fort Funston every morning before I go to work and several times each weekend. I feel safe walking there because of the presence of my own dog and the other dogs and their people. The dog management proposal suggests that many disabled people feel vulnerable around dogs. I do not; I feel protected. I believe that if someone disabled did feel at jeopardy in the presence of dogs, s/he should go to one of the many places in and around San Francisco where dog access is already limited rather than seeking to change the use of a recreation area to accommodate their fears.

Never have I seen at Fort Funston some of the intimidating people who frequent Golden Gate Park in the early morning and I believe that is a function of the area being frequented by the "dog community". My footsteps and those of the rest of the Fort Funston regulars are not creating the erosion that makes the cliffs topple; the forces of nature take care of that. I have never seen anyone there act irresponsibly about honoring the environment. Indeed; I've seen many people come up from the beach carrying bags of debris that they had voluntarily collected while they were down walking their dogs. I've also witnessed "dog people" making calls on the behalf of injured marine mammals and birds stranded on the beach.

Fort Funston serves as a great example of San Francisco values; everyone there coexists beautifully. Every age and race is represented. People far more disabled than I travel along on their scooters alongside their family members, human and canine alike.

My first degree was in Marine Biology and I am a strong supporter of environmental protection efforts. However; your agenda of moving toward the creation of some sort of Biosphere at the edge of a major metropolitan area is misguided. Those of us who live in urban centers, where stress and anxiety run high, value our connection to nature. Its impact on mental and physical health is crucial.

I am focusing on Fort Funston because that's the area I use most. But my concerns also apply to the extreme restrictions proposed for all the lands entrusted to the GGNRA. I am appalled that my tax dollars are funding an effort that attacks my fundamental rights to freedom and the pursuit of happiness. This effort to strip us of access to our own "backyard" is an

example of gross mismanagement. All stakeholders must be involved in decisions regarding the use of these well- loved areas. If the Federal government is incapable of that, I'd vote that the control be returned to the local governments. So Very Sincerely, Lauris Jensen San Francisco, CA 94116

Correspondence: Dog owners keep on citing the pet policy of 1979, a time when there were less people, less dogs and thus less conflicts. Times have changed and so must policies. It does not work to have off leash dogs in a dense urban setting and I feel that off leash recreation should be limited to private property. Meaning that the GGNRA should not allow any off leash dog areas. Many people including myself avoid areas with dogs but would enjoy them if there were no dogs.

Correspondence: Memorandum To: General Superintendent, National Park Service. Golden Gate National Recreation Area, Fort Mason San. Francisco, California

From: Assistant Field Supervisor. Sacramento Fish and Wildlife Office, Sacramento, California

Subject: Comments on the Draft Dog Management Plan and Environmental Impact Statement, Golden Gate National Recreation Area, California

The U.S. Fish and Wildlife Service's (Service), Sacramento Fish and Wildlife Office, is providing comments on the Draft Dog Management Plan / Environmental Impact Statement (Draft Plan/EIS) for Golden Gate National Recreation Area (GGNRA) under the authority of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 et seq.) (Act). At issue are the potential effects of the project on the federally threatened California red-legged frog (*Rana draytonii*), western snowy plover (*Charadrius alexandrinus nivosus*), northern spotted owl (*Strix occidentalis caurina*), and Marin dwarf-flax (*Hesperolinon congestum*); as well as the federally endangered San Bruno elfin butterfly (*Callophrys mossii hayensis*), mission blue butterfly (*Icaricia icarioides missionensis*), tidewater goby (*Eucyclogobius newherryi*), San Francisco garter snake (*Thamnophis sirtalis tetractenia*), Presidio manzanita (*Arctostaphylos hookeri ravenii*), San

Francisco lessingia (*lessingia germanorum*), California seablite (*Suaeda californica*), and Hickman's potentilla (*Potentilla hickmanii*).

This letter is based on: (1) A letter dated December 28, 2010 from the GGNRA to the Service requesting comments on their Draft Plan/EIS; (2) Draft Dog Management Plan / Environmental Impact Statement; and, (3) other information available to the Service.

The purpose of the Draft Plan/EIS is "to provide a clear, enforceable policy to determine the manner and extent of dog use in appropriate areas of the park". Objectives of the Dog Management Plan are: to preserve and protect natural and cultural resources and natural processes; provide a variety of visitor experiences; improve visitor and employee safety; reduce user conflicts; and to maintain park resources and values for future generations. The Draft Plan/EIS addresses dog management alternatives for 21 locations within GGNRA. One of the 21 locations is "new lands-. New lands are defined as "any land acquired by the park during the dog management planning process or after the plan/EIS and rule are finalized, unless specifically addressed by the plan." The 21 locations are within Marin, San Francisco and San Mateo Counties. The Draft Plan/EIS proposes 6 alternatives, with one being preferred and one being no-action, for each of the 21 locations. Each of the 21 locations within the Draft Plan/EIS was assigned a preferred alternative using a "modified Choosing by Advantages process". As part of their analysis, GGNRA identified the environmentally preferable alternative for all 21 sites. This alternative was identified as the one which would "cause the least damage to the biological and physical environment" and best promote the National Environmental Policy Act. The environmentally preferable alternative corresponded with the National Park Service preferred alternative at only 4 of the 21 locations. While not meeting the criteria for being the environmentally preferable alternative, the preferable alternative chosen for the other 17 locations adequately addresses the Service's concerns for threatened and endangered species and critical habitat.

The Service believes that the Draft Plan/EIS, as proposed, meets the goals and objectives of the project and adequately addresses federally threatened and endangered species and habitat within the project area so as to not jeopardize listed species or destroy or adversely modify critical habitat. In contrast to the current "dog policy" within GGNRA, the Draft Plan/EIS appears to promote a beneficial effect to listed species and critical habitat. The adoption of a compliance- based management strategy is viewed as an important component of the Draft Plan/EIS and instills confidence that GGNRA will continue to manage their lands with an emphasis on managing sensitive resources responsibly. Additionally, the proposed measures for increasing public awareness through education and standardized management is viewed as a key factor in the successful implementation of

this Draft Plan/EIS

The Service would like to thank GGNRA for the opportunity to comment on this Draft Plan/EIS Please contact Dan Cordova, Endangered Species Biologist, or Ryan Olah, Coast Bay Branch Chief, at the letter head address, via electronic mail (Dan_Cordova@fws.gov; Ryan Olah@fws.gov), or at telephone (916) 414-6600 if you have any questions.

Correspondence Type: Letter
Correspondence: Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Bldg. 201 San Francisco, CA 94123-0022 Attn: Dog Management Plan/DEIS March 21, 2011

Dear Mr. Dean,

I am strongly in favor of keeping the GGNRA open to dogs and off-leash dog walking. I implore the GGNRA to stop pushing its extreme proposal that will negatively impact tens of thousands of tax-paying and voting residents living in San Francisco and Marin. I understand that Congress could resolve this conflict by codifying the GGNRA's 1979 Pet Policy as a Section Seven Special Regulation, and mandating that all properties added to the GGNRA after 1979 maintain historical recreational access. Please do NOT eliminate or restrict dogs or off-leash dog walking in San Francisco or Marin.

I lived on Chestnut Street in the Marina in San Francisco for 9 years and recently moved to Mill Valley in Marin County. I am the owner of two 13-year old, female Vizslas. I walk my dogs three times a day and send them out with a dog walker once a day while I am at work. Every day after work I take my dogs to Chrissy Field or the Oakwood Valley trail for a 30 minute off leash walk. On Saturday and Sunday I walk them at Chrissy Field in the morning and in the Presidio or the Oakwood Valley Trail in Marin in the afternoon.

I am from the East Coast and have lived in the Bay area for over 11 years. I consider myself fortunate to live in such a beautiful and historical city. Three of the areas I treasure are Chrissy Field, the Oakwood Valley Trail and the Presidio. There are few cities anywhere in the world where one can walk with their dog in a National Park or along a beach. Chrissy Field and the Presidio are two special places in that they are bursting with natural, beauty and yet are also grounded in rich history. The same holds true for the

Oakwood Valley trail, Baker Beach and Fort Funston.

Chrissy Field, the Oakwood Valley Trail, Fort Funston and the Presidio are perfect places to walk dogs off leash. At Chrissy Field the dogs can run on the beach and romp in the field. Few other places provide such diverse terrain and excellent play areas. The Oakwood Valley Trail is also an excellent place for dogs to walk off-leash as there are few people, no cars and ample trails. Other excellent off-leash dog walking areas are the Marin Headlands, Fort Funston and Baker Beach.

As I am sure you are aware, it is very important for a dog's mental and physical health that they get plenty of exercise. Some dog breeds require more exercise than others and it would be difficult for those breeds, such as the Vizsla, to get the proper exercise they require if they can not run and play off leash. My dogs are very high energy and need to exercise at least two hours a day. Exercise and socializing is critical to a dog's health and well-being. I make taking my dogs out for exercise my number one priority.

I am strongly in favor of allowing dogs off-leash in as many GGNRA areas as possible. The more places that one can walk their dog(s) off-leash, the better. I hope you will consider the impact on San Francisco if off leash dog walking is restricted or banned in the GGNRA. Banning or further limiting off leash dogs will have a significant negative impact on San Francisco and Marin county parks. At least 10,000 dogs visit the GGNRA every day. San Francisco city parks are much, much smaller than the GGNRA and will be unable to absorb the impact of all those dogs if they are forced out of the GGNRA. The negative impact on city parks far outweighs any potential negative impacts in the GGNRA.

Given that I walk my dogs several times a day, I am able to get out and meet many local friends and neighbors as well as tourists on my daily walks. Given my passion for the city and Marin, one of the things I am able to do is share stories and history with people who are visiting from out of town. One of the things that makes it easy for them to approach me is my dogs as they form a common bond between people. Every day I am out with my dogs I meet and socialize with people young and old; people gay and straight, people from the city and those visiting.

One of the nice things about Chrissy Field, The Oakwood Valley Trail and the Presidio is that they are multi-use areas. So on any given day one is apt to encounter joggers, walkers, cyclists, people flying kites, windsurfers, people picnicking, etc. One of the charms of the area is that they attract and support such a diverse group of people and wide range of activities. The community of people recreating with off leash dogs represents a tremendous cultural resource in San Francisco and the GGNRA. Where else can you see people from nearly every ethnic background and race, all socio-economic

levels, seniors, families with kids, etc. all getting together every day and every week to socialize together while their dogs play off leash. Walking and playing with off leash dogs brings together people who otherwise would rarely see or interact with one another.

Whenever I am out in Marin on the Oakwood Valley Trail or in San Francisco in the Presidio or Chrissy Field, safety is of utmost importance to me. I believe that banning or further limiting off leash dogs will have a negative impact on park safety. A well- used park is a safe park. Seniors and women, in particular, are often reluctant to walk alone in parks because of fears of muggings or rapes. The presence of people with well-behaved dogs off leash discourages rapists, muggers, homeless people and drug dealers from hanging out in parks. Many people, especially women like myself and elder folks, walk in the GGNRA precisely because there are so many people with off leash dogs there. The dogs provide a valuable sense of safety and security.

San Francisco and Marin residents have been walking dogs off leash in the GGNRA for decades and this is yet another valid consideration for maintaining off leash areas. Off leash dog walking is the status quo. Banning or further limiting where off leash dogs are allowed constitutes a change to the current and historical use of the park. Continuing to allow significant off leash recreation opportunities constitutes a "continuity of use" of park land. I implore you to maintain continuity of use. I am strongly in favor of allowing dogs off-leash in as many GGNRA areas as possible. The more places that one can walk their dog(s) off-leash, the better.

Please do NOT eliminate or restrict dogs of off-leash dog walking in San Francisco or Marin.

Thank you for your time.

Sincerely, Emily Church

Correspondence: Diane Kraft Ward San Francisco, CA 94115

March 24, 2011

Frank Dean General Superintendent Golden Gate National Recreation Area
Building 201 San Francisco, CA 94123-0022

Dear Mr. Dean:

When work first began to reclaim and recover Crissy Field, there were park rangers stationed at the path leading off from the parking lot. They were giving out dog biscuits and assurances that nothing would change in the way dogs would be treated after the renovation. However, after reading your GGNRA Draft Dog Management Plan, those assurances could not be further from the truth.

I am very opposed to the GGNRA adopting management plans that are intended to maintain uniformity among the diverse national parks operated by the National Park Service. The Crissy Field area is an urban park that bears no resemblance to Yellowstone, Yosemite or Death Valley. Nor does Crissy Field serve the same populations as other discrete (and relatively isolated) national park areas.

In a City in which one out of eight residents has a dog, it is short-sighted and cruel to limit the areas where dogs are allowed, either on or off leash. Where do you expect people to recreate with their dogs in a city as compact and densely populated as San Francisco if not in its limited open areas, which includes its beaches?

The San Francisco Supervisors, among others, consented to and supported the creation of the GGNRA with the understanding that the areas it ceded to the federal government would be primarily used for the recreational needs of City residents. Now, you propose to limit significantly the recreational options of those same residents, many of whom own dogs, forcing them to travel outside the city and county if they want to give their pets the daily exercise they require.

While San Francisco has always welcomed tourists from around the world, we (and that includes the GGNRA) need to make sure we give the citizens of San Francisco reasonable use of the limited park assets available to them. At both Crissy Field and Fort Funston, there have been understandings in place for the past twenty years giving dogs off-leash access. If there are so many people using these areas that you worry about accommodating them all, may I suggest that you grant dog owners off-leash access to beach and bluff areas in the early morning hours, perhaps from 5 am. to 10 am., when few other people are around, and again in the late afternoon and early evening, from 4:30 p.m. to 8:00 p.m., another time period when clashes between different user groups would not be expected.

The foregoing alternatives to what amounts to an outright ban on off-leash access for dogs in the GGNRA are just one possible way of making sure that all people have equal access to their national parks.

Sincerely,

Diane Kraft Ward

RE: Dog Management GGNRA

Dear Mr. Dean:

I have read the Executive Summary of the proposed new plan and am sorry to say that I feel the purpose of the study has been totally missed. Instead of looking for ways to include dog people in the safe and sustainable use of GGNRA, you have chosen, through this draft report, to do nothing substantive to protect our natural and cultural resources but instead, recommend a decreased opportunity for visitor experiences for a major portion of the population that currently utilizes the GGNRA; and it most certainly WILL NOT reduce user conflicts, in fact, I am sure it will increase them. Finally, I see nothing in the new plan that insures park resources and values for future generations that has anything much to do with dogs and the urban, multi use park and recreation activity that have been going on in most of the referenced dog sites for the past 40 years (I moved here from LA in 1966 for school so I have been around).

Where in the report are people and their dogs invited to more fully use the parks? Which sections have you intentionally made dog friendly to encourage more people to come to certain park areas? Where are you installing more poop bag containers and developing special play areas for dogs and people. The opportunities are limitless and what do we get?, more restrictions and an escalated war on dogs. You treat us like interlopers and criminals rather than the cultural mix of citizens who happen to like dogs. Honestly, the lack of any kind of creative thought in dealing with this difficult issue is astounding. All that can be said is go back to the drawing board and invite and welcome dog people into GGNRA (including off-leash) in a way that truly values the urban park resource in a way that will last for generations. Please keep in mind that these are urban parks, surrounded by millions of people, not wilderness (where you can apparently shoot anything

that moves outside of the Bay Area).

Let me know if we can help. Sincerely, Stephen S. Martin Douglas W.

Correspondence Type: Letter
Correspondence: April 4, 2011 Ms. Susan Langbehn Ott Daly City, CA 94015

Senator Dianne Feinstein One Post Street, Ste. 2450 San Francisco, CA
94104

Senator Feinstein:

The purpose of this letter is to express my grave concerns regarding the proposed plan by the Golden Gate National Recreation Area (GGNRA) to severely restrict off-leash dog walking. Currently GGNRA allows for less than 1% of its land to be used for off-leash dog recreation. They now want to greatly limit that tiny fraction and also ban off-leash dog recreation for all future GGNRA lands. The Bay Area needs your help to stop this extreme proposal, which has been given no public vote.

One of my concerns lies in the fact that I am physically challenged with arthritis, and need a paved path to walk with a surrounding area which also allows my dog to run ' such as Fort Funston. I cannot make it down to the beach, which is one of the two small areas that the GGNRA is proposing to leave open to off-leash dog walking within Funston. The proposed restrictions will not only affect handicapped people, but senior citizens and families with strollers. Their proposal is just not fair or sustainable.

The legislation that initially created GGNRA allowed for the "maintenance of needed recreational open space", specifically including off-leash dog walking. This has been favorable to property values in that the Bay Area is known for a dog-friendly atmosphere which attracts Homeowners like me as well as renters, because we are assured ample space to exercise our dogs. I am a fourth generation San Franciscan and my family has always had dogs,

enjoying areas that the GGNRA now has under attack throughout SF, Marin and San Mateo counties. I can't imagine how crowded the remaining open dog areas will be if this bogus plan is allowed to go into effect. This fact was proven out during the recent tsunami warning when Ocean Beach and Funston were closed ' areas in SF such as Stern Grove that typically have 20 dogs had almost 200. That will be the norm if the GGNRA is allowed to proceed.

I understand the need to raise maintenance funds for the GGNRA and am not opposed to paying annual permit fees for dog usage as well as parking fees. I agree with GGNRA's proposal requiring professional dog walkers to have permits and capping the number of dogs they can walk at one time. All of the local dog groups are willing to work with the GGNRA to protect environmental areas. But instead of working with the community the GGNRA wants to push through their plan to our detriment. Fort Funston and other sites within GGNRA are places where the community comes together old and young, gay and straight, singles and families, rich and poor of all ethnicities - united in their common love for dogs. Congress can help resolve this conflict by codifying the GGNRA's 1979 Pet Policy as a Section 7 Special Regulation, mandating all property added to GGNRA after 1979 maintain historical recreational access.

The GGNRA Dog Plan can be viewed at tinyurl.com/GGNRAplan. The deadline for comments has been extended to 05/29/11, but time is of the essence. It is my understanding that the SF Board of Supervisors plans to discuss this critical topic during their meeting on 4/11/11.

Please help to stop this extreme plan. I am copying your fellow CA law makers in the hopes you can work together to bring some fairness to this process. Thank you in advance for your consideration in helping to maintain this important quality of life for the people of the Bay Area.

Sincerely, Susan Langbehn Ott

Correspondence: March 17, 2011 Frank Dean, General Superintendent Golden Gate National Recreation Area Building 201 Fort Mason San Francisco, CA 94123-0022

Dear Superintendent Dean:

I am a parent, writing to tell you how important it is to both my family and me to preserve off-leash dog walking in its current form at Ft. Funston. In fact, with friends who drive up to Funston from towns as far away as Palo Alto and Portola Valley for their dogs to play, one of the best things the GGNRA can do to protect Funston's environment is to open space for off-leash recreation in San Mateo county.

Funston represents more than just dog exercise to us. It is family recreation. My kids love their computers, my husband his TV. But, early every weekend morning-8 to 10 times monthly my husband and I go hike around Funston with our athletic Australian Shepherd. These mornings have become the only peaceful time we have to touch base on the status of our family, to plan for the upcoming week, to think about the direction we must take for the health and well being of our children. Without our dog's need for exercise and the beauty of Funston to do it, I would sleep in.

On many weekends, say three monthly, we make a second trip with our kids and with friends. I believe I can accurately say that Funston is the only place where our entire household routinely has fun. We all love going out there and our beloved dog is the center of that. We play with her. We play with each other. We love the beauty of the beach, the dunes, and the trails. And we love being with each other there.

I understand that having so many dogs there creates a special kind of work for the park service. Our family is willing to help offset that in many ways: ? We would happily purchase a special off-leash license to allow our dog to run free in the park. This would help offset the costs of having dogs like her there.

? We would eagerly go through an authorized training program'say, with the SPCA'in appropriate manners in dealing with humans, other dogs, and even horses. And successful completion of this program (with appropriate tests) could be a requirement for the off-leash license. Our family is lucky enough to have sufficient free income to donate to charities. Were there a charitable fund to help offset costs for off-leash dogs at the GGNRA, we would happily make annual contributions to it.

? We have already participated in Funston clean-up days and expect to continue doing so. And we pick up on our own. We love the park, its beauty, and all it gives us. We want to help preserve it.

Unfortunately, we do not see the preferred option for Funston as way to help preserve all it gives us. With such a smaller space available to off-leash dogs, I feel that the consequent crowding ' were all of the current loyal vistors to squeeze into that space ' would chase us and many others away from using GGRNRA lands.

I'm sorry to say this, but I Have to wonder if that is the real objective of these proposals. By the Park Service's own statistics, dogs create a small disruption in operations. In all of 2007 and 2008, only 59 citations were issued for dog related incidents in Funston. That's a small percentage of dogs visiting the park in a single weekend, forget about two years. With dogs createing few seri,ous problems, I have to wonder if the the Park Service really wants fewer people there. For it is the people who trample and compact and create many of the environmental concerns in the report.

I wish that the Park Service appreciated the success that Funston represents. Many happy visitors, sharing the beauty, community, and exercise at the park. People so committed to the park that they clean up after others in an organized way every month and ad hoc every day. Funston is a wonderfully successful urban park, bringing great joy to many city residents.

I urge you to preserve that joy and community. I support. option A in your report. Please reconsider your preference and join me.

Thank you for your listening to me.

Best wishes,

Laurie Frankel

RE: Dog Management Plan

Dear Superintendent Dean,

I am a San Francisco resident who has been walking dogs in the GGNRA for 21 years primarily at Crissy Field and Baker Beach. I believe that the Preferred Alternatives cited in the DEIS are too restrictive, will result by design in an overflow into restricted areas and will not accomplish the goal of providing both protection of resources and recreation for all user groups.

Crowding will create problems The Preferred Alternative at Crissy Field, by eliminating dogs from the East Beach particularly during weekday hours, and the airfield also largely empty during the week, will force greater interaction between a greater number of dogs and their owners (especially during high tides) in a much smaller area. One reason that there are relatively few problems with dog aggression is that there is enough space at Crissy for everyone to interact when they wish to and not because density has been forced on them. Solution: Make the East Beach and parts of the Airfield off limits between 10 to 4 on weekends. Allow full use during the week.

The Preferred Alternative does not address needs of two user groups: seniors and families with children and dogs. Elderly people with dogs, and families with both children and dogs do not have a viable alternative in this plan. The distance to the Central Beach makes it difficult for frail seniors and impossible for families with kids and dogs to manage to move themselves and their gear (strollers, beach stuff) from the parking lot over the bridge to the beach. Solution: same as above: full weekday use and timed use on the weekends. Rotting Fences Allow Dogs to Enter Restricted Areas (see pp 569- 573) It is unfair to accuse dogs of entering the dune areas at Crissy Field when the existing fences are rusted, broken or down in many areas. The original design at Crissy Field of fencing at the dunes and double fencing on the path does work when they are properly maintained. The post and cable fence at the beginning of the Wildlife Protection area is a true success. The majority of owners and their dogs honor the fence line. Solution: Don't blame the dogs for park maintenance failures.

Why forbid dogs on the West Beach when the Snowy Plovers are not there for almost half the year! Last year the six Snowy Plovers on the West Beach departed in March and did not return until November. I am perfectly happy, as are most dog owners, to protect the birds WHEN THEY ARE THERE. I look forward to their return each winter. The post and cable fence at the beginning of the Wildlife Protection area is a true success. Ticket the dogs and their owners and other users who plant themselves in the middle of the plover area.

Solution: Ticket the dogs and their owners and other users and school groups who plant themselves in the middle of the plover area each winter. Provide volunteers on the weekends who can explain about the plovers to uneducated users. The only volunteer I ever see on the West Beach is there

during the week when the beach is walked on-leash by regulars who know and honor the WPA.

Prohibit dogs on the West Beach when the Snowy Plovers are actually there, then allow dogs the rest of the time. This beach is completely underused during the plover off-season and would provide an outlet for the overcrowding on the Central Beach. Also, at the Wildlife Protection area another sign should be placed on the last post before the Bay so that everyone can be alerted to the restrictions at low tide.

Do Not Move Post and Cable Fence East Show me the justification, scientific or otherwise, that the existing and successful fencing needs to be moved again! The plovers rest a third of a beach away from this fencing. Why increase crowding on an already overcrowded beach (by your design) by altering the size of the WPA.

Solution: Leave the post and cable fence where it is. Ticket the scofflaws.

No Dogs on Baker Beach is inconsistent with traditional use and there are no dune resources west of Lobos Creek The western end of Baker Beach has been an off leash area since the 1979 Pet Policy. There are no dunes or vegetation here. Very few picnickers use this end of the beach so there are no problems with conflict west of Lobos Creek. This beach is empty empty during the week. Solution: Allow off leash west of Lobos Creek on weekdays; perhaps timed use on weekends.

The Poison Pill is an end around the Public Process

I am appalled at this provision. Is it legal? It certainly isn't transparent. The GGNRA has been woefully inadequate through the years in providing education, materials and proper signage to users about rules, etiquette, etc.

How is this 75% to be measured and by whom? A ranger told me that it will be assessed not by number of citations, but by "observation". Forgive, me but this seems to be a sneaky, and not very transparent way of undercutting the process and eliminating off-leash. Without stipulating how this measurement is to be taken, there will be no trust in the numbers and an justified outcry, if off-leash is rescinded.

Solution: Don't rule by poison pill. Put rangers on the ground to educate the public, particularly on weekends. Provide good signage. Work with the public instead of threatening them.

I know that a management plan is necessary. I would like to see one that honors the longstanding off-leash recreational use of our coast and beaches as mandated in the turnover of this land to the GGNRA. If the plan is to

succeed, without the need for a poison pill and constant surveillance, it must be fair and provide adequate space for dog owners. Thank you for your attention to my response. Sincerely,

Sally Cancelmo

Correspondence: March 25, 2011 Mr. Frank Dean General Superintendent Golden Gate National Recreation Area Building 201 Fort Mason San Francisco, CA 94123-0022

Dear Mr. Dean,

I urge you to reconsider the current proposal to significantly limit dog walking areas in the Golden Gate National Recreation Area within San Francisco, particularly within Fort Funston.

I have worked downtown, in San Francisco's Financial District, for over thirty years. In all that time I have merely walked past the other pedestrians on the street. There is no reason to speak to them, no common interest to bring us together. In contrast, one of the wonderful things about Fort Funston is the feeling of community that exists. Everyone can enjoy the presence of the great number of dogs enjoying the ability to walk freely. Everyone has a reason to reach out other to other folks enjoying the park with a welcome and shared conversation; made possible by the common interest in and enjoyment of dogs.

In its current structure Fort Funston loosens the constraints of loneliness for many and, thus, Fort Funston improves the quality of life for dog owners and non dog owners alike. The new structure with its greatly reduced on and off leash dog walking areas would separate us yet again and thus weaken the quality of life for San Franciscans and others who visit this area.

Please reconsider and keep Fort Funston available as an off leash walking area in its current formation.

Sincerely, Lorraine R. Fleming San Francisco, CA 94134-1805

Correspondence: Dear Superintendent Dean,

My husband, Jerome Solari and I have resided in the Cow Hollow district for over fifty years. Our sons used the Marina Greens for various practices from St. Vincent De Paul School. My husband and I skated at the Greens on a daily basis until Crissy Field was redeveloped. At that time we skated to Fort Point and then walk our dog afterwards.

Due to a serious accident I can no longer skate or engage in strenuous activities and therefore the ambiance of Crissy Field has become even more important to our family. Our sons often bring our grandchildren to enjoy the space.

We walk our new dog, Chispa, there on a daily basis and enjoy watching her interact with friends, strangers and other dogs. We are members of the Crissy Field Dog Group and applaud the fact that a great deal of money is expended to provide plastic bags for users, as well as volunteers who daily provide additional bags.

In addition I have been a long time member of a local hiking group, we have supported the SPCA for more than 20 years, and are members of the Cow Hollow Home Owners Group. We also belong to the PRBO organization, and the Marine Mammal Center.

Over this period of years we have gained friends who also use a concerted effort to maintain a pristine beach. We all call attention to dog "poops" if someone else doesn't see or care to pick them up. Many of us do pick up and at the same time pick up harmful trash dropped by humans who use the beach plus objects which come ashore and are harmful to wild life. We see many people doing this on a daily basis even though we realize that there are thoughtless owners.

Dogs do not leave wrappers, bottles, oil cans, kites, but humans who share this space do!

We do feel that dogs are no longer bothering the restricted area where the Snowy Plover may come to rest. However, because the original signs were not placed correctly and inadequate from all directions it took two years before the area was properly delineated.

The recent distraction there was by humans flying kites. It truly is not always the dog or dog owner!

Perhaps an alternative way to command attention might be to have larger signs just before crossing the bridge near the Bag container. We know it is a

large job for park staff to clean up and we understand that staff is stretched at this time with limited budget. Perhaps this would remind the guilty. We are concerned that we are placed into the "bad dog owners" category and find no alternative to support our efforts and care.

We have never seen the horse droppings cleaned up when equestrian rangers appear.

It is vital that consideration be given to the amount and damaging use of all the many organizations using the area at Crissy. When the 3 day cancer walk event happens the tents are pitched on the grass for two nights which is hard on the grass area and expensive to restore. We dog owners would be asked to share that same space with our dogs leaving the rest of the vast area untouched. How can the dogs and large groups share this space?

There are thousands of people who would be asked to use this cramped area!

It is possible that Community organizations could be used to educate all of those concerned in use of the GGNRA areas. The possibility of combining could add needed funding. Many of these organizations are in a position to advise and help, the SPCA is one we could suggest.

Because of constant attendance we find little evidence of incidences where natural resources are being affected. Bird life seems unimpaired. Dogs cannot catch birds in the water!

One of the objections in the study is the noise level created by dogs. We would point out that bull-horns at running events, shouting or rooting, sirens, bird's sounds, construction, exercise commands are far more disturbing than the dogs.

Dogs need to run, and the Island/peninsula effect of San Francisco limits dog owners. Leashing of dogs should be mandatory the animal is not under voice control of it's owner.

As the proposed areas of elimination at Crissy field appear it would be almost impossible for a handicapped person with family and dog to get onto the beach. This has not been thought through. At the meeting at Fort Mason on 7 March 2011, the first display was of new lands hoped to be included in the GGNRA. There is already in place a no dog restriction. Granted, that could be changed, but is it fair to establish this without any actual alternative?

We support Alternative A, but suggesting leashing be required in the parking area which would be advantageous for visitors, other users, safety of

children and dogs as well.

Thank you for your consideration, Nancy and Jerome Solari San Francisco, CA 94123

Correspondence: As an environmentalist and a dog owner I find the new regulations on local parks to be over bearings. Living in San Francisco, often times in small apartments, makes it difficult to get proper exercise for our dogs. It is important that we be able to enjoy the great outdoors while sharing it with the pets in our lives. People will be less inclined to support outdoor areas if they are kept from enjoying it. As people become more disconnected from the world, it is important that love for the outdoors lives on.

Correspondence: As a member of more than one protected class in San Francisco and service dog owner, I'm writing against the proposed GGNRA Draft Dog Management Plan. I've been walking my dogs in GGNRA's off-leash dog areas for over 10 years (mostly Ft. Funston and Chrissy Field's off-leash area) multiple times a week. The Preferred Alternative is overly restrictive. The science and data do not support the level of restrictions on people with dogs included in the Preferred Alternative. When dogs are walked in a responsible way (as most are), there is no conflict with the environment or with other park users. Target people not walking their dogs responsibly, but leave the vast majority of us alone. I have yet to see park rangers ticketing people who are not in voice control of their dogs. A ban on off-leash dogs punishes the vast majority of citizens whose dogs and service animals are within voice control, stay within posted areas and are great citizens. Many of us participate in regular clean ups at Ft. Funston and clean up on regular days we're using the parks. Please do not pass this plan.

Correspondence: Thank you to the National Park Service for working to implement a Dog Management Plan. Please go further with this plan by ensuring the protection of wildlife in the area. This can be done by ensuring that all off-leash areas are enclosed. Such areas should also be limited to areas without sensitive wildlife. The Park Service should also ensure that rules of the park, particularly those that protect wildlife and people are enforce. Alternative D is the best one, and should be adopted.

Thank you.

Correspondence: It is part of responsible dog ownership to give one's dog adequate exercise every day. For dogs any bigger than pint size, this means they must be allowed to run off leash for part of that time. This is a simple need of the animals. Anything short of this is not humane. It must be our job to assure that there are places convenient to where people live where dogs can be exercised off leash. Dog parks are not the answer.

Just as parks and recreation authorities need to be sensitive to the needs of the dogs, so owners need to take responsibility for their dog's behavior. They must watch that their dog doesn't get into an altercation with another dog, clean up after it, leash it when near wildlife, and otherwise keep it on voice command when it is not on the leash.

All of this is common sense and should not require expensive studies.

Correspondence: Removing off-leash access from these is a horrible solution. I enjoy going to many of these places with my family (including my dog) because they are places we've come to know and enjoy spending time. Forcing people to keep their dogs on leash or not allowed at all takes away one's ability to even go to these locations to enjoy. There has got to be other alternatives like offering annual permits to allow responsible dog owners to take their dogs to these places UNLEASHED or restricted hours. Completely removing these as options and going for the ALL OR NONE approach is short sighted at best.

I am writing to say I whole heartedly disagree with the currently proposed changes. Keep these areas open to all to enjoy especially dogs who need to run free to stay healthy, social, and safe.

Correspondence: I am an environmentalist and a dog owner, and as someone who enjoys GGNRA on a daily basis, I think it is important to recognize the need to balance environmental protection with recreation in the park. Although GGNRA is a national park, it is also the main large park area for the whole city of San Francisco, which has quite a large number of dogs who need large, open, off leash areas. If I recall correctly, San Francisco has more dogs than children.

I disagree with attempts to require off leash dog areas to be fenced in. I think its unfeasible and really does not take into account the needs of dogs and dog owners in the Bay Area.

I also disagree with requiring dogs to be on leash at Ocean Beach, Crissy Field, Fort Funston, etc.

Yes, we should protect the GGNRA, but we also need to protect the ability of San Francisco dog owners to have ample open spaces to let our dogs exercise off leash.

Thanks for your consideration.

Correspondence Type: Web Form
Correspondence: Mr. Frank Dean, We're writing to you about saving dog access and about maintaining the existing access rules in the GGNRA and hope that you can help us keep these areas open for that purpose. The GGNRA already has rules to govern dog use in their parks. All it needs to do is enforce the existing rules to manage this situation with just a few minor adjustments (e.g. setting maximum number of dogs for dog-walkers, addressing the paraglider/dog overlap at Fort Funston, etc.). The few "bad apples" that own dogs and don't obey the rules can be readily addressed without adding yet another raft of draconian restrictions. We oppose treating these urban recreation areas as if they were wilderness, as that is not what these areas are or were intended to be. You cite protection of the snowy plover, but humans infringe on their habitat and disturb these birds 1000x more than the few dogs on the few remaining beaches that even allow dogs. If protection of the bird is imperative, then human access to all beaches in California (including the GGNRA) should be eliminated. Of course that proposal isn't on the table for obvious reasons. We fully believe that these areas can and should be preserved for responsible recreation from all perspectives.

Lets call this plan exactly what it is; an assault on the few remaining urban recreation areas in the Bay Area by person(s)/organization(s) that frankly just don't want dog access period! Whether that be personal bias guised under the cover of "habitat protection" or whatever, the result is thinly veiled.

Please vote to keep these wonderful few remaining areas open to responsible dog owners. Vote to keep the existing dog use rules intact and enforce these rules to address the few bad apples. We are responsible dog owners who want to keep these areas available for dogs. There are so few areas that even

allow leashed or off-leash access that it is important that we preserve them. We regularly take our dog to Milagra Ridge, Sweeney Ridge, Mori Point and Fort Funston, so we are personally vested in this decision. We're also ardent environmentalists with the belief that responsible use can be accomplished without draconian restrictions. We appreciate you working with the local communities that want these treasures available for all to enjoy.

Correspondence: I know this is a tough decision..but I am sure that it is quite clear how hard wildlife has to work to stay alive. There are no Vons or Albertson's for species...they must work hard day and night to eat and then to procreate. I watch how Los Angeles does not protect its wildlife. Certainly all off leash areas must be separate from wildlife areas. Dogs must be enclosed because they are predators, and people who have dogs forget that 'Fifi' is a killer. Dogs are fed from Vons and from Albertsons.

Also, endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined. The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by offering more than one trail and more beach areas free from dog recreation.

Please pay close attention to your wildlife and its protection.

Correspondence: Dear Sir or Madam:

I and others value a place, especially near an urban area, where dogs are free to be dogs, and that there are less restrictive ways to achieve better control over the situation.

We only use less than 1% of GGNRA's park system and the charter supports our position.

Respectfully,

Jill Knapp and Samson

Correspondence: I believe in year 2012 We will have drastic changes in our planet and already is happening. Animals are God's Divine Creation and God put his animals way before Adam and Eve. What is wrong with people that all they want is to destroy animals. How selfish people become and people are like cancer killing our nature, animals and our planet, building and building and taking animals habitat. Animals have all the right to live with us and We need to protect them. They are healers in our Planet. We will be so sorry!!!! when We don't heard birds singing, our squirrels and deers walking by our gardens, opossums and other wild life hanging in our backyards ext... Soon We will not have that anymore Why? because our planet is ill from too much sick, greedy and disgusting people. God had it! and it's time to clean up his planet earth again. We will have a world cataclysm and We will not have nothing, neither the richest men in the world will have nothing. people do not appreciate nothing anymore, everything is me, myself and I. If We have this cataclysm. This will be the biggest lesson ever. Wee need to protect our wildlife and mammals. If you see dogs unleashed, please call 911, Animal Humane so. or Animal Control. People has to be responsible with their dogs. Speak to the Mayor of this City and tell him to protect our wildlife, bring a law to this place. We need to protect what We have left. thank you.

Correspondence: I am a biologist by training and profession, work and live in Marin and have been living in the Bay Area for nearly 20 years.

I am distressed by what I perceive as an increase in off-leash dog use in many of the open space areas of the SF Bay Area, and particularly in the GGNRA. It is rare that I am in an area clearly marked 'dogs must be on leash' where I don't see violations of this rule. I have recently witnessed dogs chasing shorebirds along the western shore of Rodeo Beach lagoon, and have repeatedly seen dogs running free on Ocean Beach south of the Plover signs. I am concerned the what I perceive as an attitude of promoting dog access rights over the safety of native wildlife.

I grew up with dogs, and have no problem with them personally, as long as they are kept close to their owners--on leash--in National Park lands. But my wish is that you prioritize the health and safety of the plants and wildlife you are entrusted with stewarding for us. If that also means closing areas to human traffic, then I am very happy to defer to your judgement.

Please put the health of our parks first, human access second and keep dogs on leash in most areas of the park. If I understand the plan correctly, I would

choose Option D in most areas under consideration.

Yours truly,

Mr. Kerry Wilcox

Correspondence: Dear National Park Service,

As a dog owner and I speak in favor of protecting the snowy plover habitat. My dogs can be walked in a number of places and are. I would have deep remorse if my dogs disturbed endangered animal habitat.

Although I see many postings of material on the shoreline where I walk my dogs, I keep mine on leash and try to calm down those that have their dogs off leash. Just because something has been done for a long time doesn't

mean it is the right thing to do. Just witness the world prior to the Clean Air Act.

I support the National Parks in many ways, not the least of which is paying taxes to keep them open, attending them and paying fees, and renting campsites that permit animals (and paying extra for the privilege). Please on behalf of my children and their children, do the right thing even if it isn't popular.

Thank you,

Julie A. Dull

Correspondence: I have lived in the Marina neighborhood for almost 20 years, most of those years without a dog, and in the last 5 years with a dog. In all those years when I was not a dog owner, I was completely fine with people who had brought their dogs off leash and had not a single unpleasant incident on Crissy Field or a lot of the trails in Marin mentioned in this document. I have found almost universally that people have well behaved pets, and pick up after their dogs. I do not understand why there is any change in policy being contemplated - it seems that the various users of the park have co-existed quite harmoniously for all these years and this whole process of changing the policy is a waste of taxpayer time and money and should not be pursued.

I have several comments:

1. Changing the existing policy is not reasonable in an urban park in the middle of the city -- I am quite respectful of not taking my dog along or having him on a leash when I go to parks that are not city parks -- Yosemite, etc.
2. Today, as a dog owner I am aware of only a handful of places nearby where I can take my dog off leash to walk, hike, or play, and your change in policy would make such nearby options non-existent and significantly reduce the joy of many, many dogs and their owners
3. I read recently that there are more dogs than children in the city of SF -- so you should consider that many SF residents view their dogs as their children -- and I have to say that most dogs I have met are better behaved than some human children -- you don't dare make humans put rambunctious human children on a leash
4. Given the windy, and often cold nature of SF weather, in fact the most frequent use of many of these areas is humans walking their dogs, or walking by themselves and not picnickers or little children
5. It sounds like a few bad incidents are driving this change in policy - you

must keep in mind that whatever rule you implement, there are always going to be a few bad apples that spoil the lot -- I do not think that is valid reason to change an existing policy that has functioned without significant conflict for so many years

Correspondence: While the Golden Gate National Recreational Area is not a national park one of its missions is none the less to protect natural and cultural resources. Recreational activities must be compatible with this requirement not to negate it.

Endangered species should have a significant level of protection from human activities/disturbances. This degree of protection should be in the range of 90+%

It should be the goal of the recreational area to appropriate uses for all groups of users. Perhaps even separate trails for different uses, including dogs while also having some dog free beach areas.

Off-leash dog use areas should be fenced off for protection of the public and especially wildlife, so as not to have an adverse impact on sensitive habitat.

Correspondence: I am the owner of three scent hounds which love to be allowed to search and chase and I would love to allow them to do so, but I do not do so anywhere, as I value the sake of wildlife, far more than the pleasure of my hounds.

I visit GGNRA frequently, even though I live over an hour away; I make the effort to visit, because GGNRA is such a unique and special environment, but for years I have been distressed by the number of dogs which visitors/owners allow to either run about free or, are on long reel leashes and, therefore, have a wide enough radius to disturb wildlife.

Much as I'd like to bring my hounds with me on my visits to GGNRA, I never do so, simply because I believe that dogs are inappropriate anywhere within GGNRA; yet, on my visits, I witness everywhere I go, the seeming lack of restrictions (or the enforcement if such exist) on the presence of dogs and almost invariably, those dogs are making the lives of wildlife,

miserable!

This is not, of course, the fault of the dogs, but rather, that of insensitive and/or uncaring, owners who, may proclaim their devotion the cause of wildlife habitation, but when it comes to actually sacrificing a bit by curbing their dogs, selfishly do otherwise.

I urge NPS to restrict the presence of dogs within GGNRA, to the maximum extent possible, as the needs of wildlife, should predominate over the desires of humans and our dogs.

Correspondence: Please keep voice-control areas and off-leash dog areas as available as possible. As a dog owner, I always want to bring my dog with me when we go out on the weekends to the beautiful parks and fields that San Francisco has to offer. It is cruel and unfair to have to leave my dog in a small apartment on a beautiful weekend day if we decide to enjoy the weather. As a dog who loves to run and play fetch, it is almost as cruel to have him on a leash at all times and prohibit him from doing what he loves the most. From my experience at off-leash dog and voice control dog areas, dogs who consistently go to those areas and learn how to socialize with other dogs and different people grow up to balanced and stable dogs. There is nothing more enjoyable as hiking on a beautiful day with my dog or playing fetch at the beach. While I understand that the national parks must accomodate all types of people, it would be negligent to ignore the 60% of Americans who own dogs.

After a review of some of the proposed zoning areas, I would like to voice my support for plans with voice-control or designed off-leash areas. I would like to make a special plea for the Marin Headlands Trail proposed on Map 7-A that has voice-control and on-leash trails. The Marin headlands is an amazing place to hike in an astonishingly close proximity to the city - a combination that is rare in this country. Being able to hike there with my dog is sheer bliss. Additionally, please keep the Crissy Field zoning to the designation on Map 10-A. This public space is again unparalleled in this country in terms of dog friendliness. Even without my dog, the sight of dogs happily running and playing the grass and on the field never ceased to put a huge smile on my face. The field is the perfect place to play fetch my dog, and it is near impossible to get him out of the water to go home.

I used to live in Boston, MA, where dog friendly spaces are few and far between. We were limited to a small grassy field in the mornings, and

would often be kicked off the field for softball games. Since there was no where else to go in the area without a car, I would have to take my confused, energetic dog back home. The steps San Francisco and the National Park Service has put in place to open outdoor spaces to dogs and humans alike is amazing, and it would be a shame to take that away.

Correspondence: I want to comment about the DEIR on the issue of personal safety. I walk my dog about once a week on the Los Altos Trail and Oak Valley Trail. My wife and I are senior citizens and we gain benefit, both mentally and psychologically from these dog walks.

We would take these walks without our dog but we feel safer having her along. I think that our personal safety must be a real issue with the Park Service since you now allow people to carry concealed weapons for their personal safety, so I am appalled that there is no discussion in the Law Enforcement Appendix J detailing any law enforcement issues besides those associated with dogs. Should even untrained citizens carry weapons for personal safety?

In our area of walking I notice that Oak Valley Trail has no instances of citations or conflicts, yet the preferred alternative eliminates the possibility of walking in at the top of Donahue and exiting via Tennessee Valley. This is over reacting to an area that your own data shows not problems in the current usage pattern.

Finally in the appendix G showing other dog walking areas, there is a serious error concerning Ring Mountain, where dogs are only permissible on leash. This area is both an on leash area and carefully patrolled.

I am not familiar with the other areas in your DEIR but based on this review of the areas I know well, I believe you are becoming over restrictive and your policies will create law enforcement attention where no resources are needed. Please focus attention where there are real problems and conflicts, and please make an effort to remove concealed weapons from our parks and natural areas. Handguns are the real danger.

Thank you for your consideration,

Michael Sheats

Correspondence: I am concerned about the continuing negative impacts of allowing dogs full access to the entire area without designated no-dog areas and an enforced leash law. In the GGNRA we have already lost one species on the endangered species list, with other species threatened by dogs. Dogs are not a natural predator in the area, but rather a man-made one. Thus, it is imperative that the National Park keep its rules in place at ALL its sites in the country, including San Francisco. There are now more dogs than children in the city - with dog owners demonstrating a complete inability to provide balance and compromise to the dialogue on this issue. Since the public has demonstrated that they are incapable of policing themselves and their animals, it is up to the National Park Service and the City of San Francisco to enact and enforce these protections for whatever wildlife remains within the city. There seems to be no danger of the extinction of dogs, thus it is and will continue to be an issue that must remain high on the priority list for enforcement.

Correspondence: Dear Sir/Madam,

Under all of the proposed alternatives (except "maintain status quo") dogs will no longer be able to retrieve sticks from the ocean anywhere near the Bay Area. Since many breeds of dogs are genetically programmed to to play fetch at the water's edge, these animals are basically doomed, and the only humane response is to remove them from the Bay Area or euthanize them. I find it unacceptable and absolutely scandalous that after all the taxpayer money that the NPS has spent on this issue that every alternative on the table represents an existential threat to water oriented retrievers, and I will therefore vote for any politician who promises to wrest control of the

GGNRA away from the NPS. Anybody associated with the proposed plans should be deeply ashamed. Shame on you, shame on you, shame on you!

Correspondence: Although I am a member of the Wildlife Society and am presenting research in May to the 2011 International Wildlife Management and Planning Conference, I oppose the plan presented by the GGNRA.

1. The conclusions of the Environmental Impact Study do not follow from the data or cited research. For example in the environmental impact study, Executive Summary xxi (26/269) where they discuss Fort Funston they conclude that "Coastal community wildlife would experience long-term, moderate to major, adverse impacts from the no-action alternatives". No direct data really here. In Table 6 of chapter 4, very few incidents reported in all of GGNRA except for some in the snowy plover area for dogs disturbing wildlife. Only 2 at Fort Funston for the reporting period. p. 11/69. The literature they cite in the report in Chapter 4 around p. 1115 (9/714 in

pdf) notes that "A study by Forrest and St. Clair showed that 'off-leash dogs have no impacts on the diversity or abundance of birds and small mammals in urban parks' . . ."

2. The EIS fails to evaluate the impact on local parks by the displacement of dogs out of the traditional recreational areas into the city of San Francisco.

3. The plan is quite dismissive of the impact on small business, the professional dogwalkers, and a separate cost-benefit analysis must be conducted in this regard (see p. 24 of Chapter 1, (72/269)). They dismiss this socioeconomic impact since "Estimated total spending by all local visitors to GGNRA accounts for 0.0008 percent of total GDP for the San Francisco MSA . . ." Of course, any specific group of small business will account for a small proportion of the regional GDP. In terms of the number of jobs, this could be quite high.

4. The cost of the plan, focused on managing dogs, is quite high and could be better spent on improving the environmental quality of larger areas of GGNRA where current traffic is not as high, and for providing support for environmental groups engaged in specific activities related to managing habitat such as for the snowy plover. Although monitoring seems focused on dog compliance, in the spirit of Adaptive Resource Management, the GGNRA should monitor data related to specific goals relevant to environmental quality.

Correspondence: To Whom It May Concern:

I am appalled at the "Preferred Alternatives" that are being thrust upon us responsible dog owners living in Marin/San Francisco. We are not getting a fair shake. It sounds like the decision has already been made but that you are just "listening" to us (both in person and online/by mail) to appease us and make us feel that we were heard.

This morning my 11 year-old spaniel and I spent two hours walking at Crissy Field (off leash). I cleaned up after her, she went in the water and played with other dogs. I got to chat with friends. This may not change at Crissy Field, but what about other places and the impact it will have upon other parks? Fort Funston is a favorite of ours and I see lots of friendly, well-behaved dogs having fun with their owners.

Please understand that this decision will have far-reaching negative effects.

You cannot squeeze all the dog owners in to small areas. Instead, maybe the few who ruin it for others with their out-of-control dogs or owners who do not pick up should be cited. Please don't punish us all.

Thank you.

Sincerely, Wendy L. Jawor

Correspondence: I am in favor of as much off leash dog walking as possible. Since humans have domesticated dogs, we now have responsibility for them and need to allow them as much free running play time as possible. I don't own a dog myself but enjoy watching and inter-actling with dogs at parks and at beaches like Crissy Field. Of course provision should be made for protecting areas that are sensitive wildlife habitat. It seems to me this would have to be on a case by case basis as there are so many different GGNRA areas. But I think there is enough space to protect habitat and wildlife and still have a lot of space for off leash dogs. I have found most dog owners are responsible, clean up after their dogs, and train their dogs well to follow voice command. Irresponsible dog owners should, of course, be sited, rather than taking privileges from those who are responsible.

Correspondence: I have read the summary and the preferred alternative plan. I believe this is an excellent plan to adjust different priorities to different areas within the GGNRA. I believe the overall review and implementation of a revised plan is a good idea, but I do not like Alternatives C or D if they were to be implemented across the board. Your preferred alternative plan is an excellent compromise, recognizing areas such as Crissy Field and Stinson Beach as areas that need less stringent regulations than offered by Alternative D. As a dog owner I recognize my responsibilities, and certainly hope that there will be enforcement of the regulations on professional or amateur walkers of multiple dogs, who at times appear to have limited control of all the dogs in their care.

Correspondence: I have worked for the environment for over 20yrs professionally including in several state parks. I am also a responsible dog owner. This management plan further restricts access to areas that I can enjoy with our family dog. As a member of our family, we would no more go walking without our dog than we would without our children. People who do not have this kind of relationship with their dog will not understand, but I am sad for them. Dog management policies are being driven by people who do not understand that dogs are not just "pets", but family members and it angers us to see them treated unfairly. I understand there wildlife and public safety arguments for limiting dogs, but, aside from protecting listed species, where neither humans nor dogs should be allowed to do harm, it is wrong to cast all dogs as being dangerous when only a few are in the same way that with people, there are good ones and bad ones. Park access is not being limited to people because they are poorly behaved, and neither should dogs. Poorly behaved people are subject to tickets and arrest - dogs should face the same, but not be found guilty before having committed a crime. These policies are alienating some of the strongest advocates for parks - dog lovers probably love wildlife and open space more than the average visitors. So down the road, when you wonder why more people are not showing up to support the GGNRA you might look to your dog management policies as a group of people you lost. If you need to charge a fee for dogs- fine. I support access and if there is a reasonable charge for extra costs, I am fine with that though I personally think parks should be well funded and free to citizens - a perspective that I am sure GGNRA management would like to hear more of - only if they show they don't respect my family includes our dog, they will not have me as a vocal supporter.

Correspondence: Please do not allow dogs on Crissy Field or the East Beach there. A few

years ago, before I knew that the East Beach had been taken over by dogs, I thought I would show the incredible beach (newly available to the public) to some out of town guests. We bought some pizza, and with our young toddlers and children, sat down in the middle of the East Beach. Within minutes, dogs were howling at us, threatened our children, and only then, as we nearly ran out of the beach, did we notice the dog feces all over that beach! Millions of dollars were spent to bring to the public this INCREDIBLE beach-front property. Larry Ellison, in bringing America's Cup to the Bay area, has called this area "the best natural amphitheatre that God could have created." Do not let such a priceless area get ruined by dogs and over-run by dog feces. San Francisco has lots of city parks where dogs run free. Do not let them take over this incredible beach. Fort Funston has been completely LOST to dogs. Ever taken a child there for a walk? You are surrounded by hundreds of threatening dogs! We should all make a stand and take back our priceless ocean front parks! Thanks for your attention to this matter.

Correspondence: This is a very sad day. I will longer support the National Parks, the GGNRA, the Presidio Trust if this sweeping plan comes into affect.

People who own dogs and use the GGNRA to walk them are the eyes and ears for the park. We pick up trash, we report injured or washed up animals and mammals, we literally police the place regularly reporting any and all problems. The beaches are most often empty except for dog walkers with the exception of hot days and weekends. . The problem is not that dogs are off leash but that a tiny minority of dogs are not under control. You are throwing the baby out with the bath water! I do not allow my off leash dog into the protected cordoned off area of the beaches.

Training is the issue...so address that. It would be fine to require a license for having a dog off leash, we would all benefit from dogs that are well trained. It would also be fine to post signs requesting that dog owners are respectful when the beach is used by others and perhaps leash their dogs at that time. Also, that dog owners do not allow their dogs into nesting areas. Another idea would be to limit the number of dogs one person can have off leash in the GGNRA. Perhaps it is the professional dog walkers that are the problem here.

This is no ordinary National Park, GGNRA is an URBAN Park. People live here. Dogs are very important to many lonely people who rely on their dogs for comfort and company. You are discriminating against all those people

by such severe restrictions.

This is not a balanced approach but a response to a few noisy complainers and one issue voters. The Park has compared the impact of motor vehicles on beaches to the impact dogs have, such a comparison is ridiculous!! Even dog owners like the Western Snowy Plover and are concerned with it's survival. You would think we were all going about setting our dogs on the bird purposefully!!

More can be done with signs and raising public awareness. Isn't that better than more regulation and legislation? The GGNRA does not have the manpower to police the beaches, they need us to help and we are willing and enthusiastic. Just give us a chance. It is always better to teach people and use them to help instead of alienating people and there are many, many dog owners in the Bay Area. All those people can help protect wildlife with out draconian plans such as this one. Vivien MacDonald

Correspondence: I urge the National Park Service to protect Golden Gate's imperiled wildlife from harassment by unregulated recreation.

--The park's mission is to protect the natural and cultural resources, not allow recreation to undermine it.

--Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

--The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by offering more than one trail and more beach areas free from dog recreation.

--Require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs.

--Limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Thank you for your consideration.

Best regards,

Nancy Treffry

Correspondence: This plan is extreme to the point of ridiculousness. Dogs should be handled responsibly, just as children, vehicles, and camping should be. To prohibit so much recreation area from dogs would only prohibit responsible people from taking their dogs to those areas. The problem people (dog walkers, etc) would still continue as it is obvious this plan could not be adequately enforced. It is going from one end of a spectrum to the extreme other. How about making some areas off leash, but leaving the ones that already see great use as they are. "Recreation" is NOT defined as an activity excluding dogs! We hope you have the sense and decency to recognize that there are many, MANY of us with dogs who do NOT abuse the beautiful wild areas and will feel prohibited from even going into them if this silly plan passes. Please act from a sense of moderation and realism when going forward. Thank you!

Correspondence: I am in opposition to the proposed plan.

The plan is short-sighted, targeting responsible dog owners who present threats to the public's enjoyment of these areas. If implemented, this will divert significant amounts of very limited public safety officer time to what is at best a nuisance; distracting them from actually providing for public safety.

Ultimately, the plan is unenforceable as dog owners, who know that dogs

must be vigorously exercised to remain healthy, will default to keeping their pets happy and healthy. To enforce the plan, limited public dollars will need to be allocated to punishing owners of healthy, non-threatening dogs. For the elderly and disabled (those who cannot run or jog to exercise their dog) this is an especially heavy burden.

As the areas proposed for closing have been defacto off-leash areas for more than a generation, without significant user conflict or significant threat to wildlife or habitat, the proposed plan should be significantly revised.

Thank you.

Correspondence: Dear GGNRA,

My small family just moved to the Presidio and we love living in the park. We waited patiently, for a year and a half, for a place to become available that fit our lifestyle. My wife is a San Francisco native and has many wonderful stories about exploring the Presidio as a child. We can't wait for our children to have the same experience. Our move to the Presidio made perfect sense as we found that we were spending the majority of our recreation time in the park with our dog Hudson. "Huddy" is a pointer (a rescue pup) that needs lots of exercise. When we were living near the Panhandle we would run into Golden Gate park every morning. Running on-leash is a frustrating experience. Hudson is a hunting dog and needs to sprint much faster than I can move. Hudson has been trained by a professional birddog trainer to hunt and respond to voice control. Crissy field is the perfect place for us to train and exercise. We found that we were running on the field or swimming in the bay 3 or 4 times a week. Not only is this good for Hudson but it is good for me. I lost 20 lbs and am now competing in recreational road races. Crissy field is not only a special place for us. We meet lots of dogs and walkers in the GGNRA. It is a very rare occasion that we see a person on the field without a dog. My wife and I feel exceedingly lucky that we can walk out the backdoor into one of our national treasures. We are daily learning more about the flora and fauna, especially the birds, that we share our home with. We were devastated to learn of the Dog Management Draft and the preferred alternative to limit off leash recreation

to a fenced-in area. I am grateful that the comment period has been extended so that I may tell our story, respond to the draft and suggest a solution. It was my understanding that the 1979 Pet Policy designated Crissy field as a voice control area. Why not enforce that? If a dog is not under voice control they should be on a leash. Secondly, I think the post and cable fences work very well. I have only seen a dog inside of this area once in the 4 years we have been visiting Crissy field. Why not expand these areas? Not only do they work to keep dogs out but they also keep people off of the sensitive habitats. I would like to respond to the argument that the GGNRA should be consistent with NPS regulations. In brief, it is my opinion that the 1979 Pet Policy is good legislation and if it is not broke we don't need to fix it. In 1978, the GGNRA took the position that "the ordinary guidelines outlined in the Code of Federal Regulations do not really apply in an urban area," and that "people and their animals have been visiting the park for too long to apply an all-inclusive arbitrary policy." Based on that position, the GGNRA, with a great deal of public input, drafted what is now known as the 1979 Pet Policy; and it is working just fine. Finally, I know a number of off-leash dog walkers that plan on ignoring any legislation you put in place. Please consider how you will enforce new rules and how that will affect the residents and visitors of the Presidio. Thank you for providing a forum for comments on the changes you would like to make in the GGNRA. I have asked my friends and family to comment and hope they will support me in opposing the Dog Management Draft.

Sincerely, Brett Dewey

Correspondence: As a regular visitor to a number of national parks, particularly the Golden Gate National Recreation Area, I am appalled by what owners allow their dogs to do on- and off-leash at the parks: chasing wildlife, digging, jumping on people, etc. I enjoy animals very much, but do not like being disturbed by someone's dog while I am hiking or walking. I would like to see stricter restrictions on dogs. If owners want their dogs off-leash, they should take them to dog parks or other areas where they do not disturb people, plants and/or wildlife. While not all dogs and owners behave this way, unfortunately, too many do -- and ruin the experience for others.

Correspondence: Dear GGNRA,

I recently moved into the Presidio, and absolutely love the gift of getting to live in one of our National Parks. I grew up playing in the Presidio and truly believe it is one of the most special spots on earth. The geography, the landscape, the wildlife, the current native habitat restoration, the political history - it is most certainly a one of a kind. I also now enjoy easily walking to Crissy Field with my dog from our new home - a place I have been playing since I was a child - flying kites with my dad, watching the Blue Angels, and generally enjoying the beauty of the area over the years. And now I get to enjoy it with my dog, who also loves it! I am on Crissy Field with him daily and I continually notice that the majority of people there are other dog owners. I am constantly surprised that on even days of nicer weather there are not more people picnicking or generally taking advantage of the field. But the dog owners are! I also have had no bad experiences with other dog owners there. Everyone seems to be responsible, to pick up after their dogs and to generally have them under control. I also see them respecting the native habitat protection areas, as do I. (And for the few poorly behaved, irresponsible dog owners out there, I'm sure they certainly would not be inhibited by new park regulations that they would most likely ignore anyway).

Please reconsider your plan proposal. Living in an urban area there are so few open spaces that dog owners can enjoy and it will be a severe lifestyle detriment to those of us whose lives revolve around taking advantage of our beautiful parks and enjoying them with our dogs. I'm sure most dog owners reading this will admit that dogs can be and are important members of our families and recreating with them in these spaces is vital to all of us.

Thank you for considering my comment.

Kind Regards, Morgan Allen

Correspondence: To Whom It May Concern,

I am a recent resident to the Bay Area. I moved here from Southern California, and when I arrived I brought my dog, Etta, with me.

In Del Mar, we had "dog beach," where during certain times of the year dogs could run off-leash and enjoy the ocean and the company of other canines. But I have never experienced anything like Fort Funston in my

entire dog-owning life.

When I took Etta there for the first time, it was literally like we had arrived in dog heaven. The dogs - and their owners - were all ridiculously friendly and respectful, and Etta could finally run to her heart's content without the restrictions we've encountered in so many other places along California's coast.

As a travel writer, and the owner of a website with a section devoted specifically to traveling with pets, I can tell you that the appeal of having a place where dogs can run free is huge amongst dog-owning travelers. There are hundreds of thousands of people who make their decisions as to where to travel based on how pet-friendly a city is. San Francisco has set itself apart from other travel destinations for many reasons, but the availability of so many great leash-free zones for dogs is a significant contributor to the reputation of this city.

I have admitted that I am a recent transplant, but I can tell you that a huge part of the reason I brag about where I now live is because of all the great places I can enjoy with Etta.

At a time when there are so many budget constraints on not only the state, but the county and city as well, do we really need to be spending time, money and resources on cordoning off areas that are dog-friendly and utilized by so many? I'm not sure why we are even having this debate in the first place. Everyone at Fort Funston (and the other areas under consideration for regulation) seem exceedingly content at having these wide, open spaces to enjoy with their families and family pets. So what, exactly, is the reason for changing the status quo? If the system isn't broken, why is are you trying to "fix it"?

I am firmly committed to promoting the city as a dog-friendly city. But if that changes, then I will be just as committed to letting my readers know that it is no longer a pet-friendly town. So I remain hopeful that here in San Francisco, we will be allowed to have our outdoor spaces remain as they are so that we can continue to enjoy the 'great outdoors' together.

Sincerely,

Erin Caslavka

Correspondence: The proposed rule changes at Fort Funston are not supportable by the document produced by the park service. Restricting off leash use of the park to 10% of the land currently available is not supported by the science submitted here, and is in no way consistent with the historical use of this land. The park administration may wish that the park were different than it currently is but it has become a major drawing point for San Franciscans to recreate with each other and especially with their four legged companions.

The GGNR represents one of the last areas where inhabitants of the Bay Area can allow off leash recreation of their canine companions and the other areas are small fenced in patches of dirt distributed around the developed urban areas. When you are responsible for the care and exercise of one of the larger breeds of dog or, as in my case, a sight hound, areas large enough for our companions to break into a full run are essential.

This report lists every conceivable wild "critter" that resides or may transit through the park as if they are sacred -with one exception, dogs. The report refers to the animals that exist as parts of our families as if they are pests to be tolerated up to a point, and that is a very low point. There are stated concerns regarding the preservation of rusting, rotting World War II battlements (which of course have no actual involvement with the war other than as visible tributes to overly rampant paranoia as they were never close to the war front). These are referred to as cultural resources and presented as something to protect although the real threat to their continued degradation are the children that play in them not the dogs that pass by.

There are hundreds of pages describing soils, geological features, endangered and unendangered wildlife and plants and a lot of speculation as to how dogs might impact each of them - which on most counts is minimal even when theoretical; but there is almost no real science regarding the measured impact of dogs on any of these. The increasing presence of dogs is well documented and the authors of this proposition express a concern that the park resources and "values": "could be compromised to the extent that, without action, those resources and values in some areas of the park might not be available for enjoyment by future generations"

Could be? Might not? With the ongoing and increasing presence of canines in the park at least since the institution of the Pet Policy in 1979, there should be demonstrable proof of whether and to what degree dog presence impacts on the park. That evidence is lacking here. There is no evidence that dogs have impacted the "sensitive dune tops" at Ft Funston but the prediction is that they will if things continue as they are. OK then why can't we measure that impact yet? Humans digging at the cliff bases cause much more erosion than the few dogs on dune tops (because most owners keep their dogs away from the cliff edges).

The Snowy Plover and Bank Swallow populations have increased despite the increasing dog presence so why is a negative impact predicted? I have volunteered at the Marine Mammal Center for the past 4 years and I can assure that Guadalupe fur seals and Stellar Sea Lions are not endangered by the dogs in the park, they are already in dire straits when they beach and are swiftly identified and rescued. As for the flora of the GGNRA from the report it appears that the greatest threat to native flora is not dogs, it is the non-native species of plants planted by the park administration for various reasons but mostly to diminish erosion. So the record would suggest that machination by the park overseers is the most concerning threat where plants are concerned.

The views and opinions of those who would like to see dogs in the park and those who don't are presented as if equal here, but which population actually represents the vast majority of those utilizing the park? Shouldn't the views of those who actually visit the park be considered with more weight?

Of all the different benefits that the GGNRA can provide and promote, I would submit that the nurturing of the ongoing health and happiness of the Bay Area Canine population should be first not last in the list of aspirations for the park. Recent data indicates that the relationship between man and dog goes back not 10,000 years as once believed but at least 30,000 and more likely 100,000 years. Senior citizens with canine companions live longer and healthier lives. AIDS patients live longer and better quality lives with pets. Dogs provide sight for blind humans and hearing for deaf humans and rescue seizing humans from harm and can even prevent seizures. Dogs provide autistic children with an avenue for normalizing socialization, they benefit the severely mentally challenged, and improve the lives of those living with Bipolar disorder. Dog therapy in hospitals has been proven to lower blood pressure, diminish stress in patients as well as the nursing staff, identify dangerous sugar swings in diabetics and facilitate recovery. In almost every clinical situation studied the addition of the canine presence improves the health and well being of humans. Dogs can detect Breast, Lung and bladder cancer. And now it appears that dogs are useful in fighting terrorism as well.(In case you hadn't heard a vital member of the Seal Team Six that took out Bin Laden was a dog)

Last but not least dogs improve the quality of the lives of millions of regular folk in the U.S. The use of the GGNR to maintain the health and well being of these amazing creatures is a supportable and excellent use of the resource. Alternative "A" is the way to go.

Correspondence: I was living here in 1972 and supported turning the Presidio over to the National Park Service as a recreation area, where dogs could run and play. I think that the NPS is more interested in preservation than recreation and that is not the goal of Chrissy Field for most San Franciscans. When I look at Chrissy Field today - with the dogs, this is just what the community wants. I believe in preservation, but I don't believe that anything is going to become extinct just because dogs are allowed at Chrissy Field. And for those people who don't want to be around dogs, there are plenty of dog-restricted places nearby. Please DO NOT incorporate the dog management plan is now written. Thank you for your consideration.

Correspondence: I strongly oppose curtailing the off leash status of dogs at Crissy field and adjacent areas. This has been a historical precedent for many years, and this status allows San Franciscans to have one of the worlds best spaces for exercising their dogs. A leash law will require a large number of Park Service Staff to constantly remain on site to enforce the law, thus straining both staffing of the Park Service and the relationships between San Franciscans and the Park Service. I see no evidence of harm as a result of the long-term off leash status of dogs in these limited areas of the PARK, and do not feel that there is a benefit whatsoever to alter this historical precedent.

Thank you.

Correspondence: I enjoy walking Crissy Field on a regular basis. While many dog owners are respectful - there are many who allow their animals to run in areas clearly marked otherwise. I have had dogs off leash jump up on me, run into me - while the owner only offered a limp "sorry". All could have been avoided with a leash or taking the animal to a designated area to run free. I don't believe new regulation is needed - just enforce the laws all ready in place.

Correspondence: I see the problem as who is going to police these policies? With the parks strapped for cash there are not enough rangers to enforce the current "No Pet" locations. Yesterday, I was at the trail head at Tennessee Valley at 10 am. There was a bobcat right near the picnic tables. There was a group of women observing the bobcat. While they were doing this a friend of the group's was approaching with a small dog in a backpack which was not zipped up all the way. One of the group members noticed this and yelled to her friend to zip up the backpack quickly so that the dog would not jump out and get eaten by the bobcat. Once the bobcat moved on the group proceeded to ignore the signage and start hiking down the trail which is clearly marked NO PETS even after they had just observed a wild animal in it's natural habitat a light did not go on to say "This is why pets are not allowed here. This is someone's else's natural habitat." If only a ranger had been there. Today, I was once again out at Tennessee Valley. This time I was on the trail with a friend. A group was approaching us that had a white fluffy dog on a leash. My friend stopped to tell the group (politely) that dogs are not allowed on this trail, did they not see the sign? The women responded that a man had already told them that and that my friend should get a life. This was done in a rather angry tone. Again, if there had only been a ranger there. I am out on the trails regularly where I regularly see dog walkers disregarding the rules. Therefore, my concern is if we limit dogs even more, even though I agree with this policy, who is going to police and stop the rule breakers??

Correspondence: Hello,

Thanks for taking the time to view my email. I would like to introduce myself, Darcie DeLashmutt, a San Francisco resident, Landscape Architect, and owner of Roscoe the Doggie. I am writing to express my concern over the portions of the GGNRA Dog Management Plan which impact dog areas and leash requirements in San Francisco.

I am concerned for many reasons, some of which include: - Off leash dog areas are already highly utilized and will likely exceed capacity if the management plan is implemented. - Many dog owners will be required to drive great distances to properly exercise pets, which is not a positive thing all around or for NPS land. - Given our urban setting, the advantages in the Management Plan simply do not outweigh the constraints; it is not an appropriate plan to apply in an urban setting. While I agree with the basis of preservation outlined in the EIS, I feel that the plan is not balanced in a practical way with our urban environment. - As a dog owner I understand that there are very legitimate issues to integrate owner's needs with the needs of other uses, and feel that there are more effective ways to achieve this balance than through the plan.

I hope that all alternatives can be abandoned and current use continues. On a personal note, I had never been to most of the NPS land in the Bay Area after 8 years of residence until I became a dog owner. Now we frequently use the space in a healthful way for all. It has inspired me to volunteer on occasion and have a good impact. In many ways which can not be quantified in the EIS, good things happen as a result of all users enjoying and respecting NPS land. I appreciate your consideration and welcome any questions. I hope we can all work together to keep the plan appropriate for an urban environment and allow everyone to use these public spaces in a positive way. Sincerely, Darcie DeLashmutt Senior Associate

Type:

Correspondence: I would love to write a thorough, factual letter expressing my concern over the GGNRA Dog Management Plan, but the fact of the matter is, it is an overwhelming document and not feasible for the average citizen, which I hope the reviewers take into consideration :) Instead, I lend my practical observation and hope that it counts. I have been a San Francisco resident for 10 years, and a dog owner of a sweet rescue named Roscoe for 3 years. I am also a landscape architect who has worked with the NPS extensively, am familiar with environmental concerns and regulations, EIS jargon, etc. Getting a dog opened up a whole new world to me. People are more sociable, I have made lots of friends, I am healthier, and I frequent parks all around the city. It has been wonderful for us and many other people. If implemented, the dog management plan will change and alter that happiness. Roscoe is in the parks for at least two to four hours every day. In all that time, I have never witnessed a single dog attack. There are scuffles here and there, but never anything serious or involving a human. I know it must happen of course. I just feel that that in actuality, it is not of a severity that warrants a serious repercussion against all users. I acknowledge that there are issues with dogs on occasion. There are also issues with other uses. People sometimes trample vegetation, scare birds, or litter. But we recognize that in an urban environment we can't feasibly ban people. I feel the same holds true for dogs. It just isn't realistic in this particular setting. A more positive approach is working together to minimize impacts all around. Educational signage, more trash receptacles, huge fines for littering (how about \$500 for dog or other waste?) could help achieve these goals without restricting the use of people who respect the park land. I also acknowledge that there are good points, concerns and goals in the GGNRA proposal. If the lands involved were in pristine condition, never been used by dogs, and away from a high density of population, I would encourage their implementation. However, the proposal involves urban land. When you stop and think about it on a practical level it just doesn't work. The amount of dogs and people that will be displaced will have negative impacts elsewhere on the cultural and environmental resources. Given our dense urban setting, park lands will never be a truly undisturbed or natural environment with or without dogs. Finally, I acknowledge that some people don't like dogs and many have good reason. Maybe there are two hours of dog free time dedicated every other day so that those who wish to experience NPS land dog-free have that option. Banning and limiting dogs is a slippery slope. Where does it end? Strollers? Teenagers? I am joking of course, but I do feel that there is a more positive solution for all and I hope we can work together to find it. Let's all play together and be happy!

Correspondence: Dogs at Fort Funston should either be prohibited or restricted to on-leash use. This is a wonderful spot for hikes and picnics, but it has become a de facto dog run, overrun with off-leash dogs that tear up the area and leave their droppings everywhere, and they fight and scare older folks and children. Because it has become so overrun with dogs, others have largely been run out of the area as it is so inhospitable. There is no reason dogs should trump people in the enjoyment of this beautiful area. Anything other than a ban or a leash requirement is impossible to enforce, and those are the only fair and reasonable alternatives.

Correspondence: I completely oppose the idea of allowing dogs on trails, off trails, or on beaches in the Golden Gate National Recreation Area and all other wildlife habitats and refuges. Dogs are about as non-native, and non-natural as one can get. They devastate the fragile and highly sensitive wildlife that exists in our precious coastal and other habitats.

I used to go walking around Bair Island which is similar to many GGNRA sites and have seen dogs roaming free harassing shore birds during nesting season. It is absolute insanity and a crime against nature.

I urge the National Park Service to take its responsibility to restore, protect, and preserve our dwindling wildlife habitats as fully as possible and not cave in to the dog lobby, as vocal and vehement as they may be. Owning a dog is an option some people choose, however ill-advised the choice may be due to inability for the owner to provide a suitable environment for the health of the animal. The National Park Service and its managed wildlife areas should not be compensation for poor choices people have made who want to own dogs in an extremely dense urban area with precious little open space.

To appease dog owners and to minimize the complexity of managing such an issue, which could easily become a massive hassle for those responsible for implementing and enforcing whatever policies are chosen, I recommend the following:

A clearly demarcated area for dogs to play, which is surrounded by a fence, within which dogs are allowed to be off-leash. All other areas should be off limits to dogs with no exceptions.

Such a policy would be much easier to enforce than say require leashes in certain areas, existing rules for which are consistently broken by dog owners. Human nature and the tendency of owners to ignore dog regulations must be taken into account for a serious policy to work.

Having a clearly demarcated dog area that is fenced off from other areas would protect wildlife and also humans who do not want to be harassed by poorly controlled animals. Such a policy would be easy to enforce because there would be no grey areas which owners could attempt to exploit in their favor.

Correspondence: Dear Park Service, I am a dog owner who has been walking Ocean Beach from Taraval to the Cliff House every day for the past 15 years. There are very few problems with dogs on the beach - You have mischaracterized the issue - Ocean Beach is a very harsh environment - there are only a limited number of people and dogs on the beach when I go out there around sunset. Interestingly, when the "snowy plover" season has its 6 week window of not appearing - there are not any more dogs or people on the beach. Only a few people avail themselves of this wonderful resource - it is by no means overrun or inundated by dogs, even in this period. Check it out yourselves - there is no dog problem on this beach. In addition, I would like to add that you have royally given our wonderful pets a reputation they don't deserve - and they deserve to run this beach in all their glory - and with very little impactment to the shorebirds - just as its human companions. The amount of joy and exuberance that you are denying is very hurtful to our magnificent companions. Please see that major parts of Ocean Beach are still designated as off leash areas - this is nature conservancy at its best. Peter Munks

Correspondence: I strongly support the requirement that dogs be on-leash! As an asthmatic with severe allergies to dogs, I have been hospitalized in the past by "friendly" licks on the face by golden retrievers. In avoidance of dogs, I have had to abstain from many parks in San Francisco that allow dogs off-leash. I do support fenced areas for off-leash dogs to romp and play where they will not harm people like myself or small children or sensitive wildlife.

Correspondence: I am so pleased with the draft dog management plan as it allows places for me to take my family were I don't have to worry about dogs taking over our space, barking, going to the bathroom and otherwise having dog parties. Each time I take a walk in GGNA I am on defense of all the dogs running around and going to the bathroom. It is most intense when dog walkers have a large pack running free and the ratio of owner to pet is 8:1. I think the well planned areas allow for plenty of space for dogs to run free and more importantly allows space for people to enjoy the beautiful natural resources of GGNRA.

I am dissapointed in the SF Board of Supervisors' recent actions and want to thank you for developing such a comprehensive plan. I look forward to the implementation.

SF Resident

Correspondence: As a life-long San Franciscan, who has extensively walked/run/surfed/pic-nicked at Fort Funston, I strongly oppose the current proposal. The problems associated with dogs off leash are greatly exaggerated. Please don't ruin the enjoyment of using the beach as a place to run and play with a dog when the actual problems associated with dogs off leash can be handled in a less intrusive case-by-case manner. A blanket policy to require leashing pets on a huge open public beach is a bad policy.

Correspondence: Comments following are from Brad Meyer, Skateboarding dog walker, and specifically related to current issues and proposed changes to the Crissy Field section of the Presidio (Area A & B) & the full length of Ocean Beach (from the Cliff house to Ft. Funston)

In general, I believe that the vast majority if not all of bay area would like to observe their fellow citizens; whether they be dog owners, dog walkers, families, young adults, bikers, roller-bladers, nature lovers, seniors, and so

forth conducting themselves under the guise of strict urban etiquette. However, as people become far more self absorbed & entitled, it seems far easier to forgo common courtesy, consideration, & mutual respect when out and about in public. The Bay area seems blessed with a thriving culture spanning the entire economic spectrum and yet I feel that the concentration of affluence & intelligence can also play a huge role in those who feel they are not accountable to their fellow citizens or parks. To this point, if it is made easier for people to know what guidelines exist vis-a-vis park regulations, it should be easier for those who do not comply to the rules to be less complacent.

Therefore, regardless of what actions and changes are made, There should be several large signs placed with clear "magic" language stating usage guidelines at all GGNRA park locations. Specifically, at the highly populated multi-use areas, there could also be a "you are here" map & some directionals as to access to the spot's treasures. (ex. @ Crissy across from Stillwell parking lot there could be a sign directing bikers to bridge explaining they could go either left at the stop sign or continue along field and use driveway @ the tree line. that sign could be as simple as an arrow with bike and a picture of the bridge.) The wider point, and with regard to dog owners, is that there are currently no specific signs dictating off-leash guidelines. There could be a sign developed explaining that owners may only have dogs off-leash in a controlled manner and that this means the dog(s) must be under perfect voice command. The same sign could detail poop pick-up, no digging in the grass, steering packs or singular dogs away from young children, not letting dogs chase birds, that dogs must be leashed on sidewalks, specific dog-walker restrictions (# of dogs total, # of dogs off-leash),and any other prudent measure specifically related to that locale.

Training and empowering the existing Park Rangers with the knowledge and ability to enforce these regulations could also prove beneficial to engendering stability between the various users and habitat of the area. Without a regular foot patrol of Rangers engaging the the private dog owners and dog walker community, For years at Crissy, I have taken

Pursuant to Crissy Field:

Access & Safety Measures: 1. repaint crosswalks & include reflective yield to pedestrian / dogs signs for existing Mason Street crosswalks 2. Create two new crosswalks on Mason with reflective signs at mid-point of Crissy across from maintenance buildings & between parking lot on backside of Sports Basement and path at the western edge of the estuary Crissy field eastern edge * With so many commuters using Mason to access the bridge & all the dust from the construction, it has become hard & sometimes dangerous crossing the street to access the field.

3. Re-seal & Re-paint paved path along mason. It seems challenging for many of the tourists to understand where they should be biking on the path. Also, many a family walk side by side across this path daily. I have personally seen on many accounts regular bikers get pretty upset by the ensuing traffic jam. Also along paved path, there could be biker/walker/blader/stroller/ guidelines on signs. I do believe that all dogs on the paved path should be leashed. It is far easier for an oncoming biker to navigate around a dog on a fixed leash.

4. More plastic bag holders for dog poop. Perhaps at every trash can a box containing bags for dog poop should be located. These spots would also be great for dog owner use guidelines.

5. Create a "warning track" between paved path on mason & Crissy field grass. If there was a 10 ft gravel track between the paved path and the field there could be 2 benefits if a rule was also put into place stating that dogs must be leashed back up before crossing the warning track. Depending on construction, the gravel warning track may also provide great drainage support and open up some space for continued small native plant gardens. The usage guideline signs could also have historical, natural, botanical, info on them indicating what plants, birds, or sights one is observing at each spot.

6. Dog Walker Permitting & enforcement: Please start a program to only allow permitted dog walkers to use the Presidio. i.e. anyone with more than 3 dogs (regardless of whether their dogs are off leash or not) should have a dog walking permit in the future. Having been working with dogs professionally now for the last ten years and using the Crissy field area consistently for the last 7 years, I have gone through the learning curve of determining what techniques work well with dogs and how to behave in a manner conducive to calm assertive control of my dog packs and abiding to the best of my ability to this notion of strict urban etiquette. However, if a trained observer was to take a hard look over the span of a week at Presidio dog-walkers, one would find a vast difference in a handling abilities, manners, and conscious awareness. It should also be known that many regular dog-walkers are rather territorial in their use and with that a sense of entitlement exists where by certain areas of the Presidio are regularly used by the same sets of dog walkers. This has caused several issues in the past. Dog-walkers who walk together forming a huge group of dogs and then chatting it up amongst themselves miss dog poop and behavioral or locational changes in their dogs that may lead to an instance or altercation that could have been avoided. Sometimes one can also see dog walkers with dogs off-leash talking on their mobile phones at length. This behavior could be curbed with signs but also with enforcement. If there was a permitting program along with issuing guidelines as far as the total number of dogs allowed and behavioral guidelines, then we could all have a smoother park

experience. Dog-walkers could then be held accountable for negligent behavior and cited for non-compliance of the guideline rules. The park would then be able to collect fees for permits and for fines. Moreover, a database could be maintained to get a clear picture of the status of all Presidio dog-walkers. Private dog-owners and other park goers would also have an outlet for complaints. It may even be prudent for the permit to be specific to an area of the Presidio. This could avoid over-crowding in areas like the back road between mountain lake park and the golf course or the beach between Crissy field & the Yacht club.

7. Per dogs off-leash numbers and access: a. Please put an 8 dog total limit for dog-walkers into effect. I also support 6 dogs off leash max for two reasons. First, is the poop pick-up factor. It is so easy, and I also see it almost daily, to miss some poop with more than 6 dogs off leash. secondly is the transportation factor. I see far to many pick-up trucks jammed full of precious pooches. This is one of the personal preference and responsibility angles vs, profit potential that many dog-walkers are unabashed about when they sacrifice safety for dollars. Limiting the max-number of dogs will at fist deeply disappoint and possibly infuriate some singular dog-walkers and dog-walking companies, but the larger benefit of safety, park flow, and management will create a more cohesive community where everyone understands expectations and decorum.

b. Please keep current off leash areas as they are in the Presidio with the exception of the section of beach between the pier and the bird sanctuary. I think that this area should not be open to dogs any time of the year. But, I think it unfair to slice Crissy in half as far as dog access and that east of the estuary spit on the beach should also remain off-leash but again with stricter guidelines as to what that means to the public. With less dogs per dog-walker and other dog owners behaving responsibly, there should not be a need to restrict this area. The rolling grassy field at Ft. Mason as well should be an area to be used for restricted off-leash dog use.

8. For Ocean Beach, much of what was said above regarding usage guideline signs applies though it seems a small number of highly irresponsible dog owners frequent this area so specific dog behavior monitoring and enforcement of stated rules would be greatly appreciated by the general public. Especially on the weekends, rule enforcement would be greatly beneficial when the out-of-towners, locals, and tourists converge. Please keep the whole beach open but with temporary on-leash sections during plover nesting periods.

There is more to say as far as how to administer the dog-walker guidelines and permit structure but I'm sure that the GGNRA team have been working towards someting similar.

Please feel free to contact me for further elaboration on any of the above comments. Good luck and thanks for reading this, - Brad Meyer

Correspondence: I think it is important to keep areas open for off leash (voice control) pets. As you know, San Francisco is known for its small private yards but large open public spaces. These areas make it possible for simple things like playing fetch with a dog. If these areas are eliminated dog owners would be forced to be creative in where they can let their dogs off leash. This does not seem like a well thought out plan. If there is a legitimate concern about off leash dogs in the community then a better idea would be to gate off these areas so that off leash dogs can roam free without the fear.

Correspondence: I am very concerned about the fact that the current boundaries for the off-leash area are not currently being enforced. Young children and older adults should be able to use the area without concern of being attacked or even just knocked over by off-leash dogs. For the elderly, even a small misstep trying to get out of the way of a dog running around can cause a twisted ankle or a broken hip that can impact their lives (and their family's lives) for months if not years or forever.

there is already plenty of space for off-leash dog walking in the area, but there are boundaries and the boundaries should be enforced. Please respect the rights of human beings to enjoy our federal outdoor recreation areas too.

Correspondence: I am very concerned that San Francisco has the lowest per capita population of children in the United States and that several policies and practices in the City make it unfriendly to families with children. One problem is the domination of parks and open spaces by dogs. Please remove dogs from our open spaces and parks and make them safe and welcoming for people of all ages. We should not have to worry about dog feces, urine, and pets running wild and terrorizing our children. There is no reason why the City should be

turned over to dogs and families with children should feel forced to move to the suburbs. Children are much more appropriate in the City and people with pets would do their pets justice by moving somewhere with more open space. Just because families with children have less time for political activism doesn't mean that we should be pushed out of the most desirable areas of the City.

Re; Draft Dog Management Plan/Draft Environmental Impact Statement

Dear Superintendent Dean:

I have been a visitor and volunteer of all the GGNRA parklands for many years, and I am especially enthralled with Rodeo Lagoon. Although I am a proud dog owner, I am writing you to express my strong support of the GGNRA's proposed dog management plan, eliminating and/or restricting dog-walking access on existing and newly-acquired parklands.

Acknowledging there are responsible dog owners that wish to use the parks, this does not negate that the presence of dogs in sensitive habitats such as near faunal breeding habitats, creeks, lagoons, and coastal wetlands of the GGNRA creates an unsafe environment for wildlife and often an unpleasant experience for visitors seeking merely solace and communion with nature. Although much wildlife in busy parks has had to become somewhat habituated to human encroachment (we ourselves are not a good presence for wildlife), even a well-behaved dog presents an olfactory threat that may cause an endemic species to permanently abandon its food or shelter source, but often the harm is much greater than that:

Dog waste contains microbes that are not part of the biota of our naturally-evolved native ecosystems, and this waste enters terrestrial and aquatic life cycles. Dogs can flush out and chase fauna, harm native vegetation, and assist in spreading serious diseases (such as SOD), because most dogs do not maintain all feet on the provided trail at all times. Dogs can cause noise

pollution, run or jump at strangers, and impede forward progress of hikers, runners, bicyclists, and equestrians. These dog behaviors can severely scare nearby wildlife and many types of visitors. Dogs can sometimes "take" wildlife to the point of death.

As a visitor I have seen most of the above incidents occur first hand, and all of them happened with a dog still on a leash! And over time, I have seen the large stands of sand verbena that used to dot much of Rodeo Beach become reduced to a few patches sporadically found by the lagoon. So the idea of voice or sight control provides even less of an assurance of park protection. Witnessing the harm dogs sometimes cause to a park tarnishes one's experience in the wilderness.

This is why the GGNRA should educate the public on the necessity to keep areas dog-free and make it very clear where dogs are not allowed. Further, dog owners should be referred to nearby city, public, and municipal parks that are far less wild and afford the comforts of safety, convenience, dog waste management, and appropriate open space for the exercise of a pet. As a dog owner, these are the kinds of parks I use for my dog, and I leave the sensitive, pristine National Parks for the tranquility of wildlife and human visitors, such as me and my wife.

I completely agree with the GGNRA's current preferred alternative in the DEIS that eliminates off-leash dog walking in many areas within the GGNRA. I am aware that the proposed changes to the existing parks (1979 Pet Policy) and to the new lands in San Mateo County are based upon sound science and long-term monitoring of sensitive park habitats.

I am concerned about the long-term preservation of the GGNRA's native wildlife and want to protect its vitally important ecosystems. So I ask you to please educate visitors, improve dog signage, and move forward with the proposed dog management plan to restrict and/or eliminate dog-walking in GGNRA parklands, wherever your research has deemed it appropriate.

Sincerely,

Roman LoBianco

Correspondence: I have read in detail the Plan as it applies to areas within the city/county of

San Francisco.

I am strongly in favor of the proposed Plan as currently posited.

For many years, we walked our dog regularly at Crissy Field and at one time or another at virtually all GGNRA sites that allow dogs. We never had a problem keeping our dog on leash except when other violated the rules. Numerous times, our dog was accosted and sometimes violently challenged by others dogs illegally off leash.

I am also sensitive to the degradation wrecked by off leash dogs, both on wildlife and biologic diversity.

I find that the new plan strikes a measured and equitable balance between the interests of all and the GGNRA versus the self-entitled few opposers.

I encourage the adoption and enforcement of the Plan as published.

Correspondence: As an 11-year resident of the Marina District in San Francisco and frequent enthusiast of the GGNRA (as well as board member of regional environmental organization Save the Bay), I want to plead with the NPS to please hold fast to its current recommendations for reforming the dog rules.

In my time in SF, the dog situation seems to have gotten out of hand, particularly in Crissy Field, but also in surprising places like the hiking trails in the Marin Headlands, where I've been scared about getting attacked by off-leash dogs. In addition, while I am aware that lots of residents are lobbying for looser dog regulations (or at least the status quo), I'd like to ask the NPS to please consider (a) what a bad precedent an off-leash policy sets for other national parks (what if people lobby for off-leash rules in, say, Yellowstone, citing GGNRA?); (b) the potentially negative experiences for the many tourists who visit the GGNRA (especially since tourism represents such a big piece of the Bay Area economy and the resulting revenues to local governments); and (c) the value of protecting shorebirds (including, but not only, the Western Snowy Plover: dog owners, in my experience, seem to be ignoring the signage in Crissy Field, with seemingly little fear of enforcement), plants and wetlands (especially since the restoration took so much time, effort, and money), and marine mammals (it seems like I've spotted fewer and fewer sea lions off Crissy Field as the number of off-leash dogs has increased).

The national parks are a real treasure for our country, and I appreciate the NPS's thorough consideration of the most appropriate policy, regardless of any short-term complaints by a small group of people.

Correspondence: Dear Sirs:

I frequently visit the Sweeney Ridge Trail within the Sweeney Ridge/Cattle Hill Area and strongly encourage No action or Alternative E. I find the preferred alternative unacceptable and it would eliminate my ability to use the area. The preferred alternative will only allow on leash access on the Pacific side in a very small section of trail. Not worth the extra miles to drive around.

It is hard for me to believe that a leashed dog on a paved road could have such a negative impact on the environment. I thought the need for open recreational space would surely be more important than closing the whole area because of occasional dog leash violators. I truly enjoy Sweeney Ridge Trail and eliminating my access to myself and my dog violates the very principal of your mission. If preserving the natural resources of the area is the top priority, then perhaps no one should have access.

Your preferred alternative is too extreme and would only server the purpose of a very small minority. This trail is a paved road that has been ripped into the hill, the vegetation has been highly altered around it. A couple of leashed dogs a day is the least of it's challenges.

Correspondence: Dear Sirs:

Almost every weekend myself and my dog will head to one of the off leash area in the San Francisco Bay Area. I am very upset after reading the GGNRA DEIS Dog Plan. The authors seem out of touch with the recreational needs of urban dwellers.

The GGNRA is located in the densely populated San Francisco Bay Area. It

is in a major urban area. Much of the land was highly modified by the military when they controlled the land before the GGNRA was created. The GGNRA contains numerous missile silos, artillery batteries, highways and roads. The military planted huge amounts of ice plant to stabilize the sand dunes at Fort Funston and elsewhere. Standards of management that treat much of the GGNRA, especially those parts in San Francisco, like pristine wilderness are misguided and will satisfy a small minority. I and tens of thousands of other dog owners will be effected every day.

Closing the few off-leash areas will put more pressure on the County resources. The will further degrade my enjoyment of my recreational areas. The DEIS does not address this issue at all.

Hypothetical impacts of dog use should not be the reason for restricted dog access. There is no data in the DEIS that shows scientific proof of dog access impacts on the GGNRA wildlife. Birds fly away when disturbed by people, shouldn't we then restrict people from the same area? Why is there a compromise to allow people, but somehow dogs tip the balance?

What if the GGNRA suggested knocking down Doyle drive to save the Coyotes? Why was an expansive walking path built in Crissy field? This is because it is recognized that GGNRA is in an urban area, the landscape has already been highly altered, and proposals to preserve the land as if it was an alpine meadow are not appropriate.

Thanks

Correspondence: RE: Dog Management Plan/Draft Environmental Impact Statement

Dear Superintendent Dean:

I am writing as a concerned citizen regarding the draft Dog Management Plan and Environmental Impact Statement (DEIS) for the Golden Gate National Recreation Area. I use and enjoy the GGNRA lands and am concerned about impacts from dog-related recreation on the wildlife, habitats and other park users at the park.

I strongly encourage you to improve the plan by implementing the following steps:

1. All "Regulated Off-leash Areas" should be fenced, at least in areas where

fences do not pose risks to wildlife and habitats. Fences provide more security for all park users and create clearer boundaries so that dog owners are aware of how to comply with park rules.

2. The Park Service's proposed requirement of 75% compliance is too low. The Park Service should require a minimum of 95% compliance before initiating measures to improve compliance.

3. Commercial dog-walking should not be permitted in the GGNRA. This is a commercial activity in the park and the Park Service cannot legally permit it.

4. At least some trails in San Francisco should be entirely closed to dogs. Under the current plan, nearly every trail in San Francisco is open to at least on-leash dogs, meaning no trails are available for people who prefer to enjoy the outdoors without interacting with dogs.

5. While dogs are important parts of our families and communities, they are just one animal that is having a significant negative impact on thousands of other animals and plants that rely on the park to survive and many other human visitors. The parks should be maintained to be safe and accessible for all users and to protect their natural and cultural resources for future generations.

Thank you for this opportunity to comment on the Dog Management Plan. I encourage you to adopt the best measures to protect the National Park's valuable resources for everyone and for future generations.

Sincerely,

Daisy Chin

Correspondence: --The park's mission is to protect the natural and cultural resources, not allow recreation to undermine it.

--Endangered species wildlife habitat deserve a higher level of protection from human disturbance; the compliance rate should be 95%, not 75% as outlined.

--The park should better accommodate diverse park user groups, such as runners, horseback riders, families, and those with service animals, by

offering more than one trail and more beach areas free from dog recreation.

--Require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs.

--Limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Correspondence Type: Web Form

Correspondence: Dear Golden Gate National Park;

After much thought, I am submitting my comments regarding the new restrictions on dogs in the Park.

I am a dog owner and do use the Park for recreation both with and without my dog.

As I understand it, there are several key factors in the decision of the Park Service to restrict dogs:

1. **DEMOGRAPHICS OF DOGS AND THE BAY AREA:** Though it is impossible to do a census of dogs in the Bay Area, it is well known that it is a high number. Dogs are here to stay, and there are probably more living with their human companions here every day. Dogs and humans belong together, and we have become much more sophisticated as owners each year. We clean up after our dogs, we recognize their value in the family and social structure of our towns. We see the value of using dogs for therapy, search and rescue, and we are bound by heartfelt love of our dogs! Dog guardianship in the Bay Area is quite high and is evidenced by the large number of well funded rescue organizations and Humane Societies in the area. The quality of life in the Bay Area is enhanced by dog ownership, and the availability of open lands on which we can enjoy life with a dog is a treasure to most all dog guardians in the Bay Area. It is one of the most compelling reasons that I moved here. Currently the VAST majority of the Park is open to the public but closed to dogs either on or off leash in those areas. The areas open to dogs off leash represent a VERY SMALL fraction of the public lands. It is this small fraction that seems to be the issue.

2. **DAMAGE TO THE PARK LANDS:** Dogs are not responsible for the degradation of the park, nor its trails. The vast majority of damage is from humans. Soil compaction, waste, wildlife disturbances and resources are affected by people way more than by dogs. In reality, dogs are less of a

problem that the horses that are allowed on trails, the bicycles, and even by the Park Service vehicles on the fire roads! Even children who run around, up and down trails, off the trails, up and down the dunes and cliffs cause much more erosion and compaction than dogs! Dogs with their soft feet do less damage than ANY other form of impact! Based on the impact report provided by the Park Service, my proposal is that children be leashed, or barred from the majority of Parklands, and that horses, bicycles, and Park Service vehicles all be banned based on ecological damage caused to the Park.

3. PURPOSE OF PUBLIC LANDS: Since the purpose of GGNRA is to offer national park experiences to a large and diverse urban population while preserving and interpreting its outstanding natural, historic, scenic, and recreational values, it seems counter to deny access to those who enjoy the public lands while exercising and enjoying the Park with their dogs. Diversity includes all people and it includes dog owners as well. It is appropriate to close certain areas to dogs, such as Historic Buildings, but as far as recreation is concerned, what could be better for the urban population that a walk on the already compacted trails with a dog?

4. VISITOR EXPERIENCE AND SAFETY: Dogs CREATE safety! It is much safer for me to walk the trails with my dog than alone! And it enhances the experience I have in the Park! Regarding dog bites, an article by Linda Shore, Ed.D citing the GGNRA data on dog bites shows that off leash activity is actually very safe in the Parks. She indicates that falls, drowning, bicycle accidents, horseback riding accidents and vehicle accidents are much more common than dog bites. She also cites data that most dog bites are within the family or friends of the family that owns the dog. Furthermore she indicates that the GGNRA NPS web site in 2002 indicates that there is a greater chance of being struck by lightning than to be bitten by a stranger's dog! Here is part of her report from YOUR web site: "According to the GGNRA (GGNRA NPS Web Site, Park Facts, 2002), the parks had 13,994,614 "recreational visits" during FY 2001. Therefore, given there were 38 bites to bystanders in about 42,000,000 recreational visits to the GGNRA in the 3-year period , we can estimate the chance that a dog will bite a stranger at 1 in 1.1 million visits. (Compare this to the risk of being struck by lightning in the US ? which is 1 in 250,000). A summary of the risk of being bitten by a dog in the GGNRA is given in Table 3. Table 3: Risk of Dog Bite in the GGNRA Type of Bite Risk* Dog on Dog: 1 in 8,400,000 Dog on Owner or Friend: 1 in 1,105,263 Dog on Stranger: 1 in 1,135,135 * Based on GGNRA incident reports from 1999 to 2001 and 13,944,614 visits to the GGNRA per year

So, that's a one in a million, one hundred thousand chance of being bitten by a dog in the Park! But the rate of drowning is a lot higher and we are still allowed to swim! And you can't protect us from falling off the cliffs, or

being hit by a mountain biker, or getting caught in a storm, or being in a car accident while driving in the Park.

5. IT JUST DOES NOT MAKE LOGICAL SENSE! The Park Service has spent HUNDREDS of hours and a HUGE amount of taxpayer money on this project. And for what? Dogs don't hurt the Park as much as kids or people, dogs don't cause a safety risk as much as lightning, dogs add to the pleasure and the use of the Parks by the taxpayers who actually own the Parks, so why ban them? Why make a mess of what seems to be working quite well? In fact, by all rights, there should be MORE off leash areas, not fewer!

I PROPOSE THAT ADDITIONAL AREAS BE OPEN TO OFF LEASH RECREATION BASED ON THE EVIDENCE PROVIDED BY ALL THE SOURCES I HAVE FOUND. EITHER LEAVE THE CURRENT RULES ALONE OR BE REASONABLE AND ADD MORE AREAS FOR THOSE OF US WHO LOVE THE PARK AND OUR DOGS, AND USE THE PARK AS RECREATION!

Correspondence: We strongly object to the ban of off-leash recreation for dogs on any portion of Ocean Beach. We have lived across the street from Ocean Beach for over 30 years and feel like we have a significant stake in the outcome of the proposed changes. We are and have been members of Audubon, as well as the Golden Gate National Parks Conservancy, for many years and care very much for the welfare and continuation of wildlife like the Western Snowy Plover. However, we don't believe that the proposed changes as outlined in the Draft Dog Management Plan will significantly improve the habitat of the WSP and do believe the proposed plan, if enacted, will have a detrimental effect on the recreation and enjoyment not only for those of us who have dogs but also for those who appreciate a place where people and dogs can coexist. In our experience, Ocean Beach has always been about dogs and people. It's a recreation area and to ban dogs on the beach between Stairwell 21 and Sloat Boulevard feels particularly draconian. Instead of making significant changes to the current regulations it would be more appropriate to enforce those that do exist. The vast majority of those who live near Ocean Beach value it as a resource to be cherished. We help maintain it with periodic beach clean ups and by encouraging responsible use of that very special place. Dogs contribute to the pleasure and ambiance of the beach.

We also feel that Fort Funston is a wonderful resource for dogs and dog

lovers alike. We are continuously amazed at how well dogs of all types, shapes and sizes get along unleashed. It is our feeling that the pathway and coastal trails should be off leash areas as they are now.

Thank you for taking our wishes and comments seriously. It is a very important matter to us.

Type:

Correspondence: I want to strongly support the proposed GGNRA Dog Management Policy. The current situation on our federal shore lands is one where many off-leash dogs interfere with the wildlife and degrade the natural habitat. Additionally, the unruly behavior of some dogs combined with the inattention of their owners has created a situation where people that are physically challenged or in some way find themselves at a disadvantage, do not feel safe and secure enough to visit these federal lands. We all deserve access to these federal parklands. That is their intended purpose.

We love our pets, but there is a difference between our personal choices, and creatures that live in the wild, dependent upon the environment for survival.

I hope that, in addition to adopting the policy, there will be a strong attempt for actual compliance to an even greater degree than 75%. Park Services need to aim for high compliance every day, in order to change the habits formed by lack of enforcement in the past. Education alone has not worked.

I think the easiest, most practical way for optimum enforcement would call for clearly marked or fenced areas for off-leash dogs. This would indicate that beyond those boundaries, there is a secure area for human recreation and that wildlife will go unstressed.

Unfortunately, our municipal leaders have not, for many years, taken a strong stance with regard to controlling dogs in our green spaces. A certain number of pro-dog groups have used this to expect dogs off-leash everywhere. With the Dog Management Policy, GGNRA finds itself in a difficult place. However, although we may not act out or showcase our views at public meetings, many of us are firmly behind this new policy.

Correspondence: I urge you to reject the "preferred alternative. I do not presently have a dog, but join with my dog-walking friends in the GGNRA often. It is important to me that we retain RECREATIONAL spaces for dogs and people. People

who live in urban areas need places where we can be outside. As a disabled person, having the opportunity to walk a dog in a park with a good path provides me with needed recreational opportunities.

The proposed plan violates the mandate for the " maintenance of needed recreational open space" contained in the legislation that created the GGNRA.

I have been living in the Bay Area for over 30 years now, and it seems that we continue to try to convince GGNRA that this is OUR home, and we have a right to enjoy it, including the beautiful ocean. The high-handed attitude of GGRNA makes me question why we even support public lands -- clearly the public gets no control over them.

GGNRA has been opposing the presence of dogs in lands under its control for decades, and yet, where we have walked our dogs off-leash, we don't have the dire consequences that the proposal predicts. It is not acceptable to provide smaller and smaller areas for off-leash use.

GGNRA should abandon the principle of "collective punishment" in your statement that you will reduce or eliminate dog areas if people don't comply with your rules. Give me a break -- the vast majority of dogs and their people are well-behaved. People clean up after their dogs, people clean up after other people's dogs.

Perhaps it is time to take back the land from GGNRA and put it under local control.

Correspondence: To: Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Building 201 San Francisco, CA 94123-0022

From: Mark W. Eaton San Francisco, CA, 94122

Dear Superintendent Dean,

I write in support of adopting a Dog Management Plan for the GGNRA.

My interests in the GGNRA are as a San Francisco resident, a frequent park visitor and a volunteer participating in wildlife monitoring and stewardship activities. I enjoy the park for the unique opportunities to experience the natural and cultural resources and I appreciate the values of our National

Park System.

I concur with the assessment that the natural and cultural resources and park visitor experiences have been, and continue to be, negatively impacted by the presence of substantial quantities of domestic dogs, both on-leash and off-leash, within the GGNRA. On many occasions my own park experiences have been negatively affected by the presence of dogs. I have had personal conflicts with dogs and their owners/guardians as well as being witness to conflicts between dogs and wildlife.

While I am supportive of many aspects of the Preferred Alternative, I have the following comments to offer:

General Comments

Commercial dog walking should not be allowed. Commercial dog walking does not relate to the purpose and mission of the National Parks.

Commercial dog walking provides no service or benefit to park users, has negative impacts on park resources and park visitors, and serves only for the capital gain of private enterprises at the expense of the American public.

Commercial dog walking will require additional annual expenditures for administering and overseeing a permitting process, additional law enforcement, additional resource maintenance and additional public relations.

The DEIS estimates that over 1000 dogs will be commercially walked within the GGNRA daily (p. 63 p. 276). Commercial dog walkers, with up to six dogs, will negatively impact the experience of park visitors on trails and in other areas of the park. If permitted, commercial dog walking activity will increase within the GGNRA and will displace park visitors, of all legitimate user groups, from areas of the park. Commercial dog walkers will dominate the ROLAs, displacing other park visitors. Commercial dog walking vehicles will occupy parking spaces resulting in fewer spaces available for park visitors. If allowed, commercial dog walking operations will have a dominant presence in some areas of the park thus affecting the overall character and ambiance of those areas.

Currently, commercial dog walking is not permitted within the GGNRA or any other National Park unit and there is no justifiable reason to do so. The NPS is well within the scope of its management directives to not allow commercial dog walking and I support this position.

Park visitors should be limited to one dog per visitor. On trails, visitors with more than one dog have a wider space requirement and have the potential to impact other park visitors by impeding their progress along the trail. In

ROLAs, it is not practical to allow voice control of more than one dog per person. With few exceptions, dog handlers are not capable of managing more than one off-leash dog at a time.

The proposed compliance percentage of 75% is too low. Given that many hundreds of dogs are walked within the GGNRA daily, a 25% non-compliance tolerance would create a situation where park resources are significantly negatively impacted. The expectation should be that non-compliance is a rare occurrence and the compliance strategy should reflect that in its standard. The standard of compliance should be the same as for any other park rule or law. An acceptable rate of compliance is somewhere near 100%.

A simple and effective reporting system should be established. The dog management plan should include a means by which park visitors can easily and effectively report non-compliant behavior. Park visitors are sometimes reluctant to report observed violations due to the time involved in making the report. A public reporting system should be incorporated into the plan that will be user friendly and workable. Such a system should require only a few moments of time and be an effective documentation of the violation.

The plan does not provide an adequate amount of hiking trails and picnic areas where visitors can enjoy a dog-free, National Park quality experience. Within San Francisco, the plan provides no significant area where park visitors can spend the day hiking and/or picnicking in a dog free environment. A solution to this problem would be to designate all of the coastal bluff areas, from the Golden Gate Bridge to and including Baker Beach, as a dog-free zone.

Sites Specific Comments

Ft. Mason ? I support the Preferred Alternative with the following changes: no commercial dog walking, one dog per visitor, compliance rate of 95% or greater, and establishment of a simple and effective reporting system.

Crissy Field WPA ? The DEIS indicates that the east boundary fence will be relocated 200 feet eastward at a position 900 feet from the NOAA pier (p. 60). The language of the plan should allow the National Park Service flexibility in determining the exact location of the fence and consideration should be given to the visual penetration effect as well as the geographical conditions of the immediate area.

Under the preferred alternative, off-leash dog activity directly adjacent to the east boundary fence will pose a visual threat that will penetrate into the Wildlife Protection Area, effectively rendering a portion of the eastern WPA as non-viable habitat during daytime use hours. Given this concern, the

fence should be placed a reasonable distance eastward, beyond the actual 900 foot border line, to allow for an adequate buffer zone.

Additionally, the geography of the area of fence placement is somewhat complicated by non-uniform conditions which include a variety of substrates, varying elevations, several lobes of fenced dune habitat areas, and a variety of pedestrian pathways. Consideration should be given to all of these conditions and fence placement should be such that will accommodate ease of pedestrian traffic flow while maintaining adequate protection of the WPA. When installed, the fence should extend to the water at extreme low tide.

Crissy Central Beach ? The Central Beach ROLA should be fenced and gated. Fences at the west and east ends should extend to the water at extreme low tide. Adequate buffer zones (~300ft) should be included beyond the west and east boundary fences to protect the WPA and the lagoon outlet from the influences of excessive dog play activity. Access points from the promenade should be gated. Signs should be posted clearly identifying the area as an off-leash dog play area and stating the voice and sight control rules.

Crissy East Beach ? Fencing should be installed to protect the lagoon outlet zone. Outlet areas from bodies of water into bays or oceans are of high habitat value. The outlet zone should be included as part of the protected lagoon area and similarly fenced.

Crissy East of the Lagoon ? The Freshwater Swale should be designated on the area maps as a no dog zone.

Crissy Promenade ? I support the Preferred Alternative with the following changes: no commercial dog walking, one dog per visitor, compliance rate of 95% or greater, and establishment of a simple and effective reporting system.

Crissy Airfield ? The foot paths that cross the airfield are multi-use trails and should be designated as on-leash areas. Allowing off-leash dogs on the airfield trails will lead to user conflicts.

The airfield ROLA should have some type of physical barrier along the boundaries. A physical barrier will clearly define the ROLA area. Clearly defined boundaries will maximize compliance and minimize conflict. Consider a movable barrier that can be set up and taken down as needed. Signs should be posted clearly identifying the area as an off-leash dog play area and stating the voice and sight control rules.

The eastern portion of the airfield should be a no-dog area. The Crissy

airfield attracts a wide variety of grassland bird species, including rare vagrants, and is a popular venue for wildlife viewing.

Ft. Point ? I support the Preferred Alternative with the following changes: no commercial dog walking, one dog per visitor, compliance rate of 95% or greater, and establishment of a simple and effective reporting system.

Baker Beach ? The Preferred Alternative for Baker Beach is problematic for several reasons. Splitting the beach into leash-only and no-dog areas will lead to confusion, non-compliance, visitor conflict and continued management problems. Furthermore, allowing dogs near the creek outlet, an area often used by shorebirds, will increase the potential for wildlife conflicts. As a means of eliminating these problems and of creating more opportunities for visitors to enjoy dog-free National Park experiences, I suggest designating the entire Baker Beach area as a dog-free zone.

Lands End ? I support the Preferred Alternative with the following changes: no commercial dog walking, one dog per visitor, compliance rate of 95% or greater, and establishment of a simple and effective reporting system.

Sutro Heights Park ? I support the Preferred Alternative with the following changes: no commercial dog walking, one dog per visitor, compliance rate of 95% or greater, and establishment of a simple and effective reporting system.

Ocean Beach ? I support the Preferred Alternative for Ocean Beach. To improve upon the Preferred Alternative, I suggest using symbolic fencing and adequate signage to delineate the south border of the ROLA. A simple post and cable fence could be placed along the border from the sea wall to the plover sculpture. A well defined border will help to reduce compliance problems and visitor conflict. Additionally, I suggest changing the name "Snowy Plover Protection Area" to "Wildlife Protection Area". A designation of Wildlife Protection Area would be inclusive of all wildlife species that use the beach habitat area.

Ft. Funston ? I support the Preferred Alternative for Ft. Funston. To improve upon the Preferred Alternative, I suggest installing a fence, with access gates and adequate signage, along the border of the ROLA north of the main lot. A borderline fence will clearly delineate the boundary of the ROLA and will minimize compliance problems and visitor conflict. Signs should be posted clearly identifying the area as an off-leash dog play area and stating the voice and sight control rules.

Additionally, I suggest aggressively restoring the coastal scrub habitat throughout Ft. Funston. Plant and animal species, as well as park visitors, have been displaced from Ft. Funston over time as dog play activities have

increased. A proactive effort must be made to bring back the visitors who are interested in proper stewardship of this area of the park.

Correspondence: I have been a coastside resident for 25 years. I moved to Moss Beach from Belmont, California because of the open space, specifically the beaches and Montara Mountain and the Rancho Corral de Tierra lands . The coast is a GREAT place to live if you love animals. There is room for people and animals of all kinds.

For the past 7 years I have walked all of Montara Mountain with my dog, on and off leash. I have been a responsible dog owner, cleaning up after my dog, and having common sense as to when to have my dog on and off leash. I believe that if the Rancho Corral de Tierra lands are closed to dog owners then the Coastal residents will lose something very special.

I support Alternative E which states that "New Lands begin as 36 CFR 2.15 (dogs allowed on 6ft leash) and new lands with existing off leash use before acquisition may also be considered for voice and sight control in the future."

I hope that GGNRA takes into consideration that the Rancho Corral de Tierra lands have been used by the public for many years with few if any incidents regarding dogs. Restricting or removing dogs from the Rancho Corral de Tierra lands means that living here along the California Coast of San Mateo County is less because of GGNRA.

Sincerely,

Carl Meister

Correspondence: Dogs have been human companions since we evolved as a species. Many thousands of years ago there were only a few thousand humans remaining on earth and the dog was a key member of the clan. Humans relied on dogs to hunt prey and to protect the clan.

Presently the dog serves us in many ways as our affinity with the species has enabled us to rely on them to guide us when we lose our sight; to alert us

when we lose our hearing; to retrieve for us when we lose our ability to walk; to save us when we are trapped under rubble or snow; to protect us when we are threatened by aggression. Why does our federal government ignore the service this wonderful animal provides to us? Indeed, a dog helped us to kill the most dangerous man on the planet- Osama bin Laden. A service dog accompanied Seal Team 6 and guided the team into bin Laden's lair.

The beach is every dog's favorite play area. They are always on their best behavior as it is an environment without territorial threat- all scents are washed away by the sea and absorbed into the sand. Any dog owner will tell you that their dog is playful and happy on the beach, not aggressive or out of control. Do we have to treat this special pet as a pest? Indeed, dogs are a part of what makes us human. Certainly they have earned the pleasure- after thousands of years of service- to romp unfettered on the beach.

Correspondence: Please don't be influenced by an extreme "dog friendly" city. I don't dislike dogs, but I do believe they should be on leashes in some areas and not allowed in some areas. I have seen people ignore their off-leash dogs at Crissy Field, allowing them to defecate in the plants and not noticing how they might be adversely affecting the natural environment.

I support the GGNRA attempt control dogs in public park areas.

Correspondence: To Whom It May Concern,

I urge you to implement a plan that recognizes the safety of urban park users. Dog walkers and the presence of dogs add safety to an urban area like Fort Funston and Ocean Beach during the day and evening when it might not be occupied by other people. When there are dogs and dog walkers present, it encourages other people to use the space recreationally. Empty urban spaces are not inviting and feel less safe.

I realize that there will always be irresponsible pet owners who do not have their animals under voice control or do not pick up after their pets and these people are a danger to and a drain upon public spaces. But in my experience,

the majority of dog walkers are responsible for the animals in their care and do not cause a problem.

I encourage you to think about the public spaces that are connected to urban areas in a manner that is different than spaces that are more remote where the natural areas are not already compromised by urban life.

One suggestion would be to allow more off-leash and under voice control time during the week and off-peak hours in locations like Chrissy Field which are heavily populated during the weekends and at certain points of the day. Looking at how spaces are used throughout the week - which populations are typically present at which times - could be beneficial in determining your policy.

Thank you for your work on this project.

Best regards, Kate Haug

Correspondence: Please keep GGNRA open to voice control dogs. Dogs need to exercise and just can not get enough exercise on a leash. I can walk or run with my dog 6-8 miles a day and it is not enough for him. When he is off the leash, he can chase a ball, run around with other dogs (good for socialization), and run circles around me. So if I walk 6-8 miles he is getting at least twice that from running around me. GGNRA voice control areas allow dogs and their owners to exercise together. I understand there are some irresponsible dog owners but please do not let that ruin it for the majority of responsible dog owners. Also, there are so few places that do allow dogs off leash, please do not reduce it more.

Correspondence: I have been living in the San Francisco since 2004. I grew up in another great city, New York. I spent my life loving animals from afar as our parents wouldn't allow us to have a dog or cat. Instead, we had fish, birds and a turtle. When I moved out here, I began the search for our dog. We got him in 2009, but before that I volunteered at the SF ACC and played with dogs on Crissy Field, GG Park, Pt Isabel, Ocean Beach. The animals I encountered- both in the shelter and in these areas- continued my love of

dogs. In addition, I love using these areas and was not adversely affected when I went to these areas without a dog and was amongst those with dogs-unleashed or leashed. When we got our dog, we took him to Puppy I and II and are active members in our breeds regional club. I believe we are responsible owners. Our dog is registered in SF County, has all his updated shots and sees the vet once a yr for a check up. I groom him and brush his teeth regularly. We use many of the areas that would be affected by the proposed Dog Management Plan on a daily basis. We use Fort Funston on the weekend and Crissy, Ocean Beach, Land's End, and GG Park during the week. I firmly believe that as much as children and adults love and need playgrounds and areas in a natural setting to play in that dogs need those areas as well. Walking on a leash on cement is not comparable to running on the beach- feeling and smelling the sand, sun, sky, people, ocean. As a woman, an active voter, one of the few minorities in this city, and a member of the Humane Society, I can say that there is room for both birds and dogs. The few fenced in "dog run" areas in GG Park are not nearly enough. I believe that we can compromise and that a solution to share usage of the land can be found. There are not enough trails available for off-leash recreation in the Preferred Alternative. We need more. Not everyone who goes to the GGNRA plays fetch with his or her dog. Many people enjoy hiking on trails with their dogs as their companions. There are not enough trails with off-leash access in the Preferred Alternative. The Preferred Alternative severely restricts recreational access for people with dogs, a fundamental violation of the reason the GGNRA was created. In the legislation that created it, the reason for the creation of the GGNRA is listed as "the maintenance of needed recreational open space." Off-leash dog walking is among the recreational activities listed as traditionally occurring in the land that was to become the GGNRA. ?There is no scientific consensus that severe restrictions on off-leash dogs are needed to protect natural resources and wildlife. Some of the most compelling research in the last few years has been by researchers such as Forrest and Cassidy St. Clair (2006) and Warren (2007) who admit that they expected to find that off-leash dogs had a major impact on the diversity, abundance, and feeding behaviors of birds and small mammals. However, when they did the actual research, they found no such impacts. This indicates that assumptions about impacts from off-leash dogs must be tested and proven to be true before they can be used to justify restrictions. Unfortunately, most of the assumptions cited by the GGNRA have not been adequately tested or proven. In addition, the GGNRA has repeatedly cited research that they claim shows major impacts from off-leash dogs. However, when the raw data from these studies is analyzed, it is clear the claimed conclusions are not supported by the data. This is highly reminiscent of the problems documented at the Point Reyes National Seashore, where claims by staff biologists about negative impacts from an oyster farm located within the park were proven to be baseless when the raw data was independently analyzed. The DEIS states that it will cost nearly \$1million to enforce the Preferred Alternative, through the hiring

of more Park Rangers or Park Police. In an era of shrinking federal budgets, this seems a poor use of scarce financial resources. Existing Park Rangers could easily enforce already existing rules such as picking up pet litter or no chasing of birds. These enforcement actions are all that are needed to ensure responsible dog walking and minimal impact on natural resources and other park visitors from off-leash dogs. The DEIS includes a "compliance-based management strategy" that says that, if there is not enough compliance with the restrictions imposed by the Preferred Alternative, the GGNRA will change the management of the various areas to the next more restrictive level ? an offleash area will become on-leash only, an on-leash area will become no dogs at all. This change will be permanent, with no chance to go back to less restrictive levels at any time in the future. This section must be removed from any final Dog Management Plan.

a) This compliance-based management strategy is decidedly unfair, because it can only be changed in one direction ? toward more restrictive levels of access for people with dogs.

b) There is no provision for public comment in the case of a change in status of an off-leash or on-leash area because of the compliance-based management strategy. The GGNRA has already lost two court cases (and one appeal) when it tried to make a significant and controversial policy change without going through a public process. The federal courts have routinely told the GGNRA that they have to hold public meetings and take public comments before making such changes. Clearly, a change in status of an off-leash area to leash-only would be both significant and very controversial, and therefore should require a period of public comment and public hearings before being implemented. The poison pill in the DEIS is an end run designed to allow the GGNRA to make such changes without having to go through a public process (they can claim the public process was the public comment on the DEIS itself, not on the changes it allows at a future time).

c) How will compliance be monitored? Who will do the monitoring? The GGNRA has repeatedly relied on poorly trained volunteers with a deep-seated bias against dogs to monitor the interactions between dogs and snowy plovers. Why would we expect these compliance monitors to be any less biased? Will their claims of non-compliance be valid? Will the GGNRA resort to the use of surveillance cameras to monitor compliance? While noting that there is no mention of surveillance cameras in the DEIS, GGNRA staff have refused to say they would never be used.

d) This allows a few bad actors to result in the removal off-leash access everywhere in the GGNRA, even if there are tens of thousands of hours of incident-free dog walking for every single incident. Including a "nuclear option" in a management plan is not good management policy. Regulations already exist to target those who do not control their dogs when they are off-leash. Target enforcement at those bad actors, not at the huge numbers of dog walkers who do not cause problems. In comments to the SF Animal Control and Welfare Commission on 2/8/07, Jean Donaldson, then head of the Dog Training Program at the SF/SPCA and a nationally recognized author on dog behavior said: "There is not only no evidence that allowing

dogs off-leash for play opportunities increases the incidence of aggression, to a person, every reputable expert in the field of dog behavior in the United States is of the opinion that it is likely that off-leash access decreases the likelihood of aggression." She also said: "Interestingly, it could very well be that the safest dogs are those that attend off-leash dog parks." And she said: "There is no research demonstrating that dog parks or off-leash play contributes to any kind of aggression, including dog-dog aggression." Dogs that are not adequately exercised can develop behavior problems such as barking, destroying property in the home, etc. Behavior problems are one of the primary reasons that people surrender dogs at shelters. San Francisco has a "No Kill" goal that no potentially adoptable animal in a city shelter (SF Animal Care and Control, SF/SPCA, Pets Unlimited). Representatives of the SF/SPCA have said that the Preferred Alternative will make it harder for the SF/SPCA to perform their mission to reduce surrenders to city shelters and make San Francisco a truly No Kill city.

Correspondence: I am an "amateur" bird lover and I also like dogs. The Bay Area is undergoing an explosion in the dog population, as pet owners decide to house more and more dogs-often 2 or more in a dwelling. The impact of this explosion is manifesting itself in park redesigns (often leaving for children and adults less room in which to play), lots of feces in park areas that are not cleaned up, lots of unruly dogs not responsive to owners' voice commands, and an impact on wildlife.

I favor strict leash laws at all times on GGNRA lands to protect species that might be harassed by unleashed dogs, most of whom I see do not respond to immediate voice control when meandering in beach and trail areas. Many dogs run so far ahead of their owners that commands cannot be heard (especially with winds muting the sound), so it is unrealistic that most owners can control their dogs unleashed to adequately prevent harassment to the bird populations--or even humans. We have all witnessed owners who think their dogs will respond instantly to voice commands, only to see them have to run over to the dog to pull him off another dog or person (whether it's a menacing situation or not). Unleashed dogs on beaches or large park areas are typically less inclined to respond immediately, as they revel in the wide open freedom and react to tantalizing animal life that coastal areas offer. Most dogs cannot be expected to refrain from their instinctual behavior to explore or chase/attack wildlife. I am also concerned about joggers on beaches and small children who may find unleashed dogs somewhat intimidating

I believe that just to allow dogs on a 6-foot leash in the GGNRA is a worthy compromise itself. If dog owners feel that they must have free rein within public areas, such as the GGNRA because they have nowhere to go for extensive dog exercise, perhaps they should reconsider dog ownership in the first place. I do not mean this in an unkind way. But I feel this dog population explosion trend is steadily getting out of hand when there was, for example, opposition to protection of "naturally-occurring" wildlife, such as the snowy plover--so that dogs could have more recreation areas. Wildlife, such as the snowy plover cannot make other arrangements for its breeding locations and feeding. But domesticated dogs and their owners can.

In general, I urge you restrict dogs to on-leash at all times, at the very least, to maintain a sense of safety for all (including wildlife) those who wish to enjoy the GGNRA. I am also supportive of barring dogs from those areas that NPS has recommended.

Thank you.

Correspondence: I am very much concerned by the huge increase in the dog population and its impact on the fragile environment in San Francisco and in the the Golden Gate National Recreation Area. Besides it is becoming dangerous to have so many dogs OFF LEASH most of the time and with impunity. It is high noon for the Government to stand firm to protect our environment from so many dogs that roam wherever their masters wish, and to protect the people from dogs that are off leash.

Correspondence: I would not like to see regulations changed from the 1979 Pet Policy.

I hike on ocean beach and chrissy field with my dog every week year round, which is one of the big draws for me of living in San Francisco. We are respectful, well behaved, and we clean up after ourselves. The vast majority of other dog owners I encounter are the same. In fact, most days, the only other people we see on the beach are dog owners. I don't understand implementing a plan that would restrict access to the main group of people enjoying the recreation area. Federal regulations are useful, but in this case, the laws that were documented in the 1979 Pet Policy fit the community.

I believe the emphasis should be on issuing citations to the very small percentage of pet owners that allow their pets to be destructive to wildlife or a nuisance to other visitors. A compliance-based management strategy is unfair to respectful dog owners and their well-behaved pets. We would be punished by having our access to the GGNRA increasingly restricted because of the violations of others. In addition, it is likely to create even more confusion about different areas of the park and what level of access is allowed to pets, because it has the potential to change regularly.

Please issue citations for specific infractions of the rules to specific owners/dogs responsible for those infractions according to the 1979 Pet Policy.

Thank you for considering my use of the park in determining how to regulate access.

Cheers, Nicole Sullivan

I heard about this proposal via posted signs on the beach.

Correspondence: I think it is important to note that the proposed policies to restrict off leash dogs due to the perceived threat to endangered species is only that: a

perception of threat. Is the GGNRA basing this threat to endangered species on scientific data? I have yet to witness any dog harass any of the animals listed by the GGNRA, much less kill or injure one.

Also, why does the NPS and GGNRA ignore the mandate issued by our local Board of Supes who recognize that San Francisco welcomes dogs as loyal companions who are deserving of unfettered exercise on open land? Our city is known as a dog-friendly community and has established a long history of accommodating man's best friend.

San Francisco citizens share responsibility for our natural lands and which are used for enjoyment by all who have come to embrace the San Francisco way- inclusiveness. The GGNRA can impose higher fines for non-compliant dog owners who do not pick up waste or do not have voice command over their dogs.

Where else are dogs to go, who are always happiest when they are able to romp free with their mates and masters but open lands? If the GGNRA seeks to ban access to areas that have been historically available to dog owners, what lands are you replacing them with?

Where is the evidence that supports your conclusion that dogs are creating havoc among visitors and other animals visiting the area? I am convinced that those who complain about dog's off-leash in these areas are a substantial, but vocal, minority. It is shameful that a federal agency is imposing its own biased views and policies against a community that has clearly expressed its desire to enjoy the lands....some previously owned by the community....as it has been historically enjoyed.

Shame on the GGNRA and the NPS for ignoring our historical access and imposing their will against the responsible wishes of the local community.

Correspondence: April 7, 2011 Frank Dean, Gen. Superintendent Golden Gate National Recreation Area Building 201, Fort Mason San Francisco, CA 94123-0022

Dear Superintendent Dean,

I am writing in regards to the Draft Dog Management Plan/Environmental Impact Statement. I have lived in the San Francisco Bay area for nearly 30 years. During that time, the population of both humans and their pets have greatly increased. I visit Golden Gate National Recreation Area for hiking

and birdwatching. I have frequently witnessed dogs chasing shorebirds; gulls, and other species. This disturbance is harmful to the birds, and very disruptive to my recreation.

I write in support of Alternative D: Most Protective Based on Resource Protection and Visitor Safety the least environmentally damaging alternative. Frankly, I think that dogs should be eliminated from all of our federal lands. The problem, of course, is not so much the dogs but their owners. I frequently make polite comments that there is a leash law, that I would prefer that a dog, not jump on my clean pants with its muddy paws, or that having their dog lick my binoculars (yes, this has happened) is not conducive with nature observation and birding. I get a polite response only about 25% of the time, and of these responses often there is absolutely no attempt by the dog owner to regulate their dog's behavior. About 25% of the people do not respond at all, and I often get a rude to extremely rude response such as "shut up -- this is none of your business" (Bolin Ridge, GGNRA, March 2010). My response was that it was indeed my business as I was also there to enjoy OUR public lands and that one of the mandates of the National Park Service was to protect wildlife, which the dog in question was most definitely disturbing by running several hundred yards off leash at great speed.

In addition to recreating at GGNRA. I frequently hike on East Bay Regional Park lands. On EBRPD voice control is almost always ineffective. I emphatically urge GGNRA not permit any voice control of dogs as an acceptable alternative. Very few dogs are trained adequately these days to be controlled by voice. The screaming by dog owners attempting to call their dogs is quite disruptive to having a peaceful natural experience. Needless to say, considering allowing voice-control, as proposed under Alternative A. at Ocean Beach in the sensitive Snowy Plover area would be completely irresponsible and provision of habitat for this endangered species.

Allowing up to three dogs per commercial dog walker -- or private dog walker -- is absurd. Again, many impacts to the passive (non-dog) user as well as wildlife.

Not only do I endorse Alternative D, but I urge the Park Service to strictly and consistently enforce dog regulations. Thank you in advance for consideration of my views --

Re: Draft Dog Management Plan / Environmental Impact Statement

Save Our Seashore generally supports GGNRA's preferred Alternatives in Marin County, but we have several comments on the park-wide monitoring program that we believe needs significant strengthening and we have two comments on specific Marin areas that we believe need finer tuning.

COMMENTS RE PARK-WIDE MONITORING PROTOCOLS

In general, we urge that the park-wide GGNRA dog monitoring program be informed and strengthened by the dispute over the Drakes Estero Wilderness at Point Reyes National Seashore (PRNS). At PRNS, the oyster operation in the Estero and/or its supporters, lawyers, lobbyists, publicists, friendly media, and supporting elected officials have asserted that PRNS-monitored wildlife violations have been falsified and also that participating monitors, park scientists and park staff (including staff at the California Coastal Commission) have committed "scientific" or "ethical" fraud.

Thus the oyster company and its supporters have challenged every piece of unfavorable monitoring data while publishing their own (non-peer-reviewed) analyses of draft data that purport to exonerate the oyster operation. The oyster operation and its supporters have also obtained access to draft / non-public documents, either thorough "leaks," or passage from other governmental entities directly to the oyster company, and thus the oyster company and its supporters have been able to adjust their operations or lobbying efforts accordingly.

We urge that GGNRA prepare for such a worst-case scenario, make the peer reviewers fully aware of the PNRS situation, and urge them to propose and GGNRA to adopt measures to fully secure, bullet-proof and materially strengthen the monitoring program. To do otherwise will result in a waste of taxpayer money and will simply prolong a GGNRA dog dispute that has already gone on for almost a decade.

In that regard, we note that the Draft Environmental Impact Study (DEIS) Volume 2, Table 12, page 1568 estimates the cost for a program planned to run 5% years (Per page 1725) to be about \$1.5 Million under any action alternative. Given that DEIS Volume 1, page 66 notes that the proposed monitoring plan will be peer reviewed to insure statistical rigor and accuracy and training of monitoring staff to insure uniform measurement and interpretation of data," then in our opinion, that \$1.5M would appear to be a material under-estimate. Monitoring Team and Protocols

We predict that peer review suggestions to bullet-proof the monitoring program to a level of statistical significance needed make its results stick in court could double the DEIS \$1.5M estimate, given that

1. Monitoring Teams must arrive, work, depart, and remain confidential so as not to bias the data. There must be a method developed that could suggest when the security of any aspect of the Team's work or schedule has been compromised.
2. Several security cameras may be needed in order to provide a means of independently verifying the data and to protect the monitoring team from accusations of fraud.
3. The size of Monitoring Teams must be proportionate to the number of dogs expected to be monitored, otherwise the compliance ratio will be skewed higher (given that violations are more likely to be low-counted than the total). We note that commercial dog walkers are presumed to be able to monitor the activities of at most 6 dogs. Achieving statistical significant results may well require more monitors than are currently estimated.
4. The regulations must be specified much more precisely for monitoring than would be reasonably necessary for law enforcement purposes. We also suggest that several videos carefully vetted to determine the accurate number of violations and dog walkers (and thus compliance ratio) be used to train the Monitoring Team such that each individual's results do not vary excessively from the numbers previously determined to be correct.
5. In addition, we believe that the Monitoring Program should be materially adjusted to measure violations as follows: by Type (not equal weight); by Zone (not area); by Incident (not dogs or dog-walkers) as numerator; by Dog walkers

(not dogs) as denominator; and by Duration (not equal weight), as follows:

Measurement by Type

The 75% over-all compliance threshold is justified when "the benefits in allowing the use is outweighed by the NPS administrative burden required to manage the use." (DEIS Vol 1, pg 67). However, this overall 75% threshold ignores the every-day reality that limited administrative costs are necessarily prioritized as appropriate to the nature of the violation. The potential for more serious violations will necessarily receive more administrative attention and thus should mandate a higher compliance threshold to balance the higher administrative cost. We do not believe, for example, that it is reasonable to assume that an equal amount of administrative cost should be assigned to educating and enforcing a 75% compliance with 36 CFR 2.15 (a) (5) (Pet Excrement) as would be assigned to attaining a 75% compliance with 36 CFR 2.2 (a) (2) (Disturbance of Threatened and Endangered Species). We thus propose weighted violations that defacto prioritize compliance thresholds that average 75% but range from low to high, with Disturbance to Threatened and Endangered Species as the highest priority, and Disturbance and Damage to Wildlife and Vegetation as next highest priority.

An example of weights/thresholds (adapted from Table 4 DEIS-Volume 1 Page 65) TYPE OF VIOLATION WEIGHT THRESHOLD Disturbance to Threatened and Endangered (T&E)Species 4.0 95% Vegetation Damage 2.0 90% Wildlife Disturbance 2.0 90% Violation of Areas Closed to Dogs (T&E and Sensitive Habitat) 1.0 80% Violation of Areas Closed to All (T&E and Sensitive Habitat) 1.0 80% Hazardous Conditions (aggressive behavior, pet rescues)" 1.0 80% Violation of Areas Closed to Dogs (Safety) .75 70% Degree of Compliance with Special Regulation .75 70% Government Property Damage .5 60% Pet Excrement .5 60% Measurement by Zone (Not Area)

Page 66 states that "the number of incidents of non-compliance at any zone must be measured against the total number of dogs in the area during monitoring." For example, as written, an area with 76 dog walkers each with one well-behaved dog in an on-leash zone and 24 dog walkers each with one dog with one incident of harming wildlife in an off-leash zone would achieve a minimum 75% compliance ratio for the combined area (on-leash zone plus off-leash zone). instead, we believe that the compliance ratio should be measured by the number of non-compliance incidents at any zone against the total number of dog-walkers in that zone during monitoring." In this example, the off-leash zone should have a compliance ratio of 0% while the on-leash zone's compliance ratio should be 100%.

Furthermore, in measuring areas, there is a logical flaw if no-dog zones are included. It is certainly possible to measure violation incidents in a no-dog zone, but that number cannot be compared to the uncountable number of dogs that are

not present in that no-dog zone. instead, we propose that dogs observed in an area's no-dog zone be allocated as a violation to the on-leash zone in the same area if the observed violation is on-leash and if the no-dog violation is off-leash, then allocated as a violation to the off-leash zone in the same area.

Measurement by Incident (Not Dogs or Dog Walkers) as Numerator

Page 64 states that the program measures "the percentage of total dogs / dog walkers observed during the previous 12 months not in compliance with the regulations. Page 64's definition does not specify dogs vs. dog walker and thus results could vary by 600% when "total dogs" are used as the numerator vs. "total dog walkers" (each with 6 dogs). In contrast, page 66 states that "the number of incidents of non-compliance at any zone must be measured against the total number of dogs in the area during monitoring. We believe page 66 is correct in using incidents as the numerator (see Example A)

Measurement by Dog Walkers (Not Dogs) as Denominator

Page 66 states that "the number of incidents of non-compliance at any zone must be measured against the total number of dogs in the area during monitoring, We believe page 66 should use the number of dog-walkers (not the number of dogs) as the denominator in the compliance ratio. Dogs do not commit violations; the dog-walker commits the violation by not properly supervising their dog. (See Example A).

Measurement by Dog Walkers Monitored (Not Total Dog walkers) as Denominator

There is a problem if the total dog walkers observed are not fully observed through the visit to assess violations, for example, if there is a careful count of dog-walkers entering a ROLA, but then half of them walk out of sight of the monitors and thus only the visible half are monitored for violation, then the compliance ratio will have its denominator incorrectly inflated by 100%. Similarly if the Monitoring Team counts 100% of the dog-walkers but then is able to carefully monitor only half for possible violations, with the other half monitored for only a few minutes...then the denominator will be again be incorrectly inflated. The correct denominator should be the total number of dog walkers whose actions were monitored for violations over a reasonable period of time.

Measurement by Duration (Not Equal Weight)

The DEIS also does not acknowledge that violations that are not remedied "immediately" have more impact and thus should be weighted more than those that are remedied "immediately"...see:

<http://kron4.net/News/ArticleView/tabid/298/smId/1126/ArticleID/7904/reftab/215/t/Dogs%20Run%20Free>

% 20in% 20Areas% 20that% 20Require% 20Leashes% 20in% 20San% 20Francisco/D
efault.aspx). We believe that violations not corrected immediately and continue for
a duration should have a double weight (See Example B) For example, a wildlife
disturbance that is stopped immediately would have a weight (per adapted Table 4
above) of 2, but when allowed to continue unabated as in the referenced Channel
4 video would have its weight doubled to 4. Examples that Incorporate Suggested
Changes in Monitoring Measurements:

The Monitoring Program begins at 1pm and ends at 4pm, during which time 29
dog walkers (each with 3 dogs) visit an area, all without incident. However, the
30th dog walker allows three violations: first, their dog exhibits aggressive
behavior; second their dog enters a closed area but is noticed immediately and
recalled with an immediate return; third, their dog disturbs wildlife for several
minutes before being noticed and recalled with an immediate return. Example A
shows Monitoring Protocols we do not support.

A) By incident 4.- total dog walkers, the compliance ratio is $90\% = 1 - (3/30)$. By
violating dogs total dogs, the compliance ratio is $98.9\% = 1 - (1/88)$. By violating
dog walkers total dog walkers, the compliance ratio is $96.7\% = 1 - (1/30)$

B) By incidents weighted by type and duration, the aggressive behavior violation
would count as 1.0, the closed area violation would count as 1.0 and wildlife
disturbance violation would count as 2.0 (but would be doubled because it was
not corrected immediately). Thus our suggested Monitoring Protocol would have
a compliance ratio of $80\% = 1 - (6/30)$. Regulations that are Inconsistent or Lack
Necessary Specificity

1. First Bullet's (DEIS pg 62) use of the term "promptly" is inconsistent with
bullet two's use of the term "immediately." We suggest editing the phrase in bullet
one to read: "...meaning that dog walkers must be able to recall their dog
promptly, who shall respond immediately, and shall demonstrate..." and editing
the phrase in bullet two to read, "...when they have demonstrate the ability to
immediately return to their owner/guardian/handler when recalled."

2. Second Bullet's reference to "within the direct eyesight of the
owner/guardian/handler" should be further clarified to make clear that dog
walkers do not have eyes in the back of their heads, thus a violation occurs per se
when the angle between the line running from the leftmost dog to the
owner/guardian/handler and the line running from the rightmost dog to the
owner/guardian/handler exceeds 180 degrees.

3. Third Bullet's reference to "unwanted jumping" is an invitation for dispute.
How can the nature of the jumping be inferred with any certainty by distant
monitoring? Instead the regulation should simply prohibit "jumping" on any park
visitor other than the owner/guardian/handler. When any park visitor wishes to
more closely engage the dog, they should bend or kneel down for closer contact.

Furthermore, aggressive dog behavior (snarling, jumping, and lunging) should be a violation in on-leash areas, as well as ROLAs.

4. Fourth Bullet: (dogs under 4 months must be leashed), Fifth Bullet (Dogs in heat not allowed in ROLAs), and Sixth Bullet (Dogs must be licensed): It should be clear that while these are violations that may not be unequivocally determined by distant monitoring, yet nevertheless, when discovered by Law Enforcement during a monitoring event should count toward as a monitored violation. Also, dogs must be licensed in on-leash areas.

5. Seventh Bullet: dog walkers in ROLAs must have leashes. It should be clarified that the leashes must be functional (i.e. leashes designed to attach to a collar when the dog has no collar are not functional) and that functional leashes must be on the person of the dog walker (i.e. not at home or in the car). Also in an on-leash area, a functional leash attached to the dog but not simultaneously held by the dog walker is a violation.

6. Eighth Bullet: there is an inadvertent omission here, corrected as follows: "Dog walkers must keep dogs on-leash in parking lots and on paths that access ROLAs."

7. Ninth Bullet: There is a lack of specificity...does a dog's nose under an exclusion fence count as a monitored violation of an area closure, or is its one paw, two paws...? We suggest one paw. 8. Tenth Bullet: "Dog walkers must pick up their dogs' feces immediately and dispose of them in a garbage container." It should be clarified that the feces pick-up bag itself is not a "garbage container" and thus it is a violation to leave the "picked up" feces behind in the pick-up bag.

9. Last Bullet (DEIS Volume 1 page 62) and DEIS Volume 2 Exhibit "F" page F-2, #3 (Permit Design): The determination of what is "large easily legible font" on the permit should be from the perspective of the monitoring team to facilitate accurate recording from a distance.

10. Last Bullet (DEIS Volume 1 page 62) and DEIS Volume 2 Exhibit "F" page F-2, #4: (Enforcement / Revocation): "Third offense will result in suspension of commercial dog walkers permit for up to three months." We believe that penalty should apply to the second offence, not the third. Furthermore, regarding the statement that "NPS retains the right to permanently revoke for serious violation" ...we believe that revocation should also be a possibility for repeated violations as well as for serious violations.

11. Appendix "E" lists "General Use Guidelines" (Six Bullets) and then "Requirements" (Five Bullets). We believe these should all be requirements and all should be violations.

COMMENTS ON TWO SPECIFIC MARIN AREAS

Save Our Seashore generally supports GGNRA's Preferred Alternatives in Marin County, but we believe that dog walking opportunities could be better balanced by being less limited at Muir Beach and being more limited at Rodeo yet retaining off-leash opportunities at both areas.

The Muir Beach Preferred Alternative totally eliminates the former off-leash zone and replaces it with an on-leash Pacific Way trail that ends at the parking lot. We suggest instead that Preferred Alternative include the currently-signed NPS on-leash trail that completes a 3/4 mile loop from the parking lot around the Middle Green Gulch trail back to Pacific Way, the Pacific Way Trail and the parking lot. This loop runs on Green Gulch land that by informal agreement with NPS has long allowed emergency vehicles, bikes and dogs, including off-leash. However, we believe this loop was left off the "existing conditions" (Alternative A) because at the time the DEIS was developed, GGNRA had not yet consummated its easement with Green Gulch. Now that the easement is formal, the loop should be shown both as existing and in our opinion as the Preferred Alternative. Including the fire road portions of the loop as a ROLA would be consistent with Marin County Open Space rules that allow off-leash use of Fire Roads and would create a largely off-leash loop that would partially compensate dog walkers for the removal of the public beach as an off-leash area (residents still have "Little Beach" as an option). In our opinion, the topography of the road and the existing farm fences at Green Gulch provide adequate "fencing" and visual notice of an off-leash area.

The Rodeo Beach Preferred Alternative shows a ROLA on virtually of the beach. We do not agree with requiring families with kids and picnic baskets who don't want to deal with dogs to have to trudge to the far end of the beach. We suggest the ROLA should be limited to the half of the beach north of the Bridge as shown as an off-leash zone in Alternative D, using the bridge as a visual "fence" extended with post-and-cable or post-without-cable to more extensively demarcate the off-leash area.

Thank You for the opportunity to comment.

Correspondence: Dear Frank,

We do not know one another but I am writing to comment on the new Dog Leach Policy Plan. Without going into the specifics of the plan too much, I want to say that as much as I do appreciate a love for pets and people, I advance the cause for beleaguered wildlife.

I often walk the walk to the coast accessed by a dirt fire road from the parking lot at Tennessee Valley Road in Mill Valley. I am amazed and thrilled at the wildlife I am fortunate to see there. At close range I saw a large owl seated & blending in with the serpentine rocks, I saw a bobcat pursuing some prey, cat-like, I saw an active nest, of most likely native bees, in a giant tree, I saw a hawk feeding on its prey hidden in the brush, undisturbed by the constant stream of dogless passers-by.

An our later I peeked again to find the hawk still feeding. I chose not to linger and not to disrupt his or her mealtime. I've laid down on the grass on a quieter trail to soak in the rays of our ozone thin winter sun.

As a bit older person, I fear being knocked down by larger playful and careless dogs on a trail and in a park. There are some wonderful parks in our bay area that cater to dogs owners and the welcomed sociability that goes along with that. Some areas need to be set aside and catered to for dogs + dog owners.

As much as possible, at every opportunity, we need to provide safe, protected areas for our wildlife.

While visiting the beach at Fort Cronkite, I informed a family collecting large mussels off the rocks (for their eating, I imagine) that this was not allowed in the park. They stopped harvesting the protected wildlife, but I doubt they understand the implications and effect of their actions and may be inclined to do the same thing again.

Our resources are resilient, but overtaxed. If there is a way that I can be of assistance, as close to home as possible; I live in the Corte Madera, please let me know.

My name is Donna Calimpong. My home phone is and my email address is

I do not encourage a lot of information to be sent to me, but if you want to contact me, I am looking to see where I can be of help to nature, so please do.

Regards and thank you for taking the time to hear my voice.

Type:

Correspondence: Dear Superintendent Dean,

I am writing as a concerned citizen about the above matters. I hike in various parks around the Bay Area and I have the following comments regarding dogs in the parks. They can be detrimental to the basic ecology of the areas and off-leash dogs are frightening to some people. Over-friendly ones sometimes jump up on people knocking them over (especially small people). Specific areas should be clearly signed to accommodate 1) on-leash dogs, 2) off-leash dogs, 3) no dogs. Somehow these limits must be enforced. Why make rules and not follow through?

Certainly commercial dog-walking should not be permitted in the GGNRA as it is illegal according to Park Service rules. If OK, why not allow impromptu lemonade stands along the way? How control? Having to watch out for dogs on the trails makes one less free to enjoy the natural surroundings or to sit for a snack without having a dog coming to sniff!

Please keep working at having something for everyone!

Best regards,

Mildred Bennett

P.S. True, dogs have their place, but not all places are for dogs!

Correspondence: April 5th 2011,

Dear Mr Dean,

I imagine you have received lot of letters from concerned dog owners regarding the "preferred option" on the plan. The prospect of no place to let our dogs off leash, (except for dog parks) feels bleak.

However, I have a perspective to offer rather than a complaint to make a European perspective. In England, (where I come from), and on the

continent, dogs are loved. In many European cities they are allowed in cafe's, restaurants and shops, and across England they are allowed off leash in parks, woods and footpaths. They have space and freedom to play and it is my impression that the dogs are calmer and friendlier as a result.

I believe that society benefits from the smooth co-existence of man and dog, a reminder of our connection to nature. A society that is dog phobic and keeps dogs tethered at almost all times does not seem to be a happy, harmonious place to be, and in my opinion will only increase dog aggression and discord.

As it stands our off leash options currently stand at 1% of GGNRA space. Rather than cut this to nothing./ urge you to amend the plan to provide more off-lead recreation areas for dogs and open new lands to dog walking,

Yours sincerely,

Rachel Gaunt

Correspondence: I can only speak to the part of the plan that relates to Ocean Beach as that is my neighborhood. I would have no problem with the current seasonal restrictions if they were enforced and people followed them, but they are not. It is rare to see dogs on leash in the designated area during snowy plover nesting season and most of the dogs running around are not voice controlled and many chase after the birds, I have even witnessed dogs catching snowy plovers and killing them a couple times. Most dog owners either do not see the poor signage and are not aware of the seasonal leash law or intentionally ignore it, and are rude and entitled in their response if you nicely mention the law to them and the reasons for it. I have only twice seen people patrolling the beach informing dog owners they need to have dogs on leash in the year and a half I've lived there, this is obviously not sufficient and dog owners should be fined if they do not comply, otherwise what's the point of having the law at all. Making the on leash area a permanent rather than seasonal law will not help this issue if it is not stringently enforced and better marked. Therefore I would recommend leaving the current seasonal law in place with more active enforcement and signage, including signage posted at all the beach access points along great highway as well as posted along the beach at regular intervals. That is what is needed.

Restrictions on dog walking and off leash areas are not going to be effective

if they are not being enforced and there is no incentive for dog walkers/owners to follow them (or deterrent against breaking them,) this is as true of the current restrictions as it is of potentially more stringent ones. I suspect you will find that increasing many of these restrictions in the GGNRA is not what is needed, what is necessary is enforcement of the existing ones. By disregarding this and only working to pass tougher laws without looking at enforcement issues you risk not only not improving the problem but also pissing off a lot of dog owners.

Thank you for your consideration

Correspondence: Dear General Superintendent of Golden Gate Rec. Area,

I visit San Francisco with my dogs twice a year. I am concerned about future limits on dogs suggested in many of the plans. Our family would stop visiting the area if there are more restrictions.

After reviewing the plans I vote for the following.

b. controled by owner: voice control at all time c. voice control-flexible system may choose leash control too much.

Map 3 Alternative A (Homestead Valley) Map 4 (Oakwood Valley Alternative A Map 5 (Muir Beach) Alternative A Map 6 (Rodeo Beach) Alternative A voice control or alternative C with off leash area the same Alternative E more on leash along shore

Map 7 (Marin Headlands) Alternative A Map 8 Fort Baker Alternative s A or C (add off leash area) Map 9 Fort Mason Alternative E Map 10 Crissy Field Alternative A voice control + alt. E larger off leash area. Map 11 Fort Point A, B, C, E, all look the same Not D

Map 12 Baker Beach Alternative A voice control - Large area + Alternative E 1/2 beach off leash

Map 13 (Lands End) this map would not download

Map 15 Ocean Beach Alternative A voice control also free off leash area

Map 16 Fort Funston would not download for review

Map 17 (Mori Point) Alternative A - but why no off-leash Area?

Map 18 (Milagra Ridge) Alternative A

Map 19 Sweeney Ridge Alternative A Pedro Point needs more dog friendly area than any plan offers

I am sure you have spent a lot of time & money to make all of the "Alternative Plans" But us dog owners want more freedom, to have more off leash areas - then the areas would not get over-used because you provided alot of options.

We want to walk our dogs on trails even if in sensitive areas they need to be on a leash.

Correspondence: Dear Mr. Dean,

I am an eighty one year old widow and I live in the neighborhood close to the Presidio. I have walked on Crissy Field since 1969. I no longer drive and walking with my dog is one of the few pleasures left to me.

Since the Army left the Presidio, there have been many changes and despite the fact that the Haas Foundation stipulated that off leash dogs would be allocated some 70 acres (I believe it is) for this purpose, this is being totally ignored and ever since there has been an ongoing battle to change this.

There has been for some time an anti dog movement resulting in the situation we now find ourselves, by people who do not understand that dogs are members of the family by those who own + love them.

I do understand the need for an area for families to enjoy without dogs and the East Beach is a logical choice being close to the car park. A number of families combine dogs + children which means they will have to find an alternative.

I do not understand why the Airfield should be reduced to the scale suggested. The Air Field is a swamp inhabited by gophers. Events are rare + should there be one, it surely would not be difficult to keep the public away

temporarily.

Most of the fence protecting the Berm is almost none existent and getting worse. On otherhand the fence separating the West Beach is under constant discussion, should it be back to a few yards or not? I have never seen more than six snowy plovers who are not in leash bit troubled when we walk there with our dogs on leash!

I worry about the constant shrinking of space for dogs. This can only result in more people flocking to Crissy which also is being reduced giving those who only require any excuse to be rid of us all together.

Crissy is a joy to many, its true it can get crowded at peak hours and at week ends, on nice days, but frequently is very quiet-

I find it odd that nothing is ever said about people cycling in the promenade which is no different from a sidewalk- particularly since so many bike lanes have been made available to them.

Sincerely,

Lydia Floyd

Correspondence: Dear Mr. Dean,

I have enjoyed Fort Funston for many years - with and now without a dog. I cannot imagine limiting the areas where people can let their dogs go off-leash.

This is an "urban recreation area" intended for the enjoyment of all. It is my very favorite place to walk. Even without my dog, it gives me great pleasure to see and be in contact with people and their dogs.

I cannot understand why the rules there need to change after 40 years of off-leash freedom.

Please reconsider the proposed plan to eliminate the off leash areas.

Put Recreation First!

Conservation and restoration can easily be accomplished in conjunction

with traditional recreational activities.

Thank you for taking the time to read my letter. This issue means a lot to me.

Correspondence: I fully support the dog plan and welcome having dogs leashed. I walk many mornings along East and West beach. I love to walk in the sand but it is increasingly difficult with all of the unleashed dogs. These dogs continually approach me and jump on me which I do not appreciate. A large dog jumped on my 3 year old grandson one afternoon and when I asked the owner to call her dog, she unleashed a torrent of foul language. I have tripped over these dogs and been hit on the back of my head with tennis balls that owners are throwing on more than one occasion. Although most owners are responsible for cleaning up the dog poop, not all do. On many days my pleasureable walk is ruined and at times dangerous.

I realize that the more important issue is protection of the natural environment. I hate to see the bird life, other animal life, and ecology

threatened.

Correspondence: When trails that were previously opened to dogs get closed, then very often visitors will just make their own new informal trails to avoid the "No Dogs" sign. This effect has been very clear to see at Sweeney Ridge in recent years, for example. There is now a large networks of informal, unsigned, destructive trails where folks happily walk their dogs away from the newly designated "No Dogs" trails.

This is a huge negative environmental impact. In fact it is potentially the biggest environmental impacts of the preferred dog plans in this EIR -- networks on new trails blazed in untouched areas to avoid the restrictions.

Is the NPS ready for this? Seems to me that the EIR is rather pointless since it does not take this huge environmental effect into account. I recommended the EIR be rewritten with this impact taken into serious account. Until then the parks should be left exactly as they are, with enforcement increased as necessary.

Correspondence: Hello,

I have 2 dogs which I currently take to Fort Funston once or twice a week. I love the fact that there is a place to take my dogs to run, off-leash, that is so

accessible to San Francisco. We all enjoy it.

I, of course, would prefer that all of Fort Funston was available for off-leash dog walking. I respect the off-limits, native vegetation areas, and keep my dogs from running through them. I think that most others do as well, but know that it's not 100 percent.

I realize that people have different needs, and we all need to compromise. That said, we are fortunate in the Bay Area to have many areas where we can go to enjoy a walk in nature, and only a few where dogs can run off-leash. If the off-leash area needs to be restricted, then so be it. However, I feel the currently recommended area is much too small. I'm not sure of the reasoning for such a limited space and would hope for at least 2 to 3 times the area that is currently proposed.

As I said, Fort Funston is a place that both my dogs and I enjoy. Please don't put restrictions in place that will keep this San Franciscan from enjoying this unique bit of the Bay Area.

Thank you, Craig G.

Correspondence: I take my dog to Fort Funston weeknights and weekends and want you to continue to allow off-leash dog walking. In all the times we've been there, we've never run into a dog or an owner who wasn't well-behaved. Often there are also people there without dogs and again I've never seen an issue. It's a lovely community of users and a nice opportunity for urban and suburban dogs who don't have yards to get out, put their nose down and run and explore. I know that non-dog people who oppose allowing Fort Funston to remain a canine wonderland will point out that there are a number of dog parks where dogs can be offleash. But the difference between a dog park and Fort Funston is the difference, when I was a kid, between the asphalt playground where they held recess and you had to find someone you felt like playing with or stand alone waiting for it to be over because there was nothing intrinsically free or interesting about the playground and its enforced social scene and the Saturday morning walk through the woods behind the school, discovering fossils in the rocks, and noticing different leaves or flowers, and feeling like I'd had a wonderful adventure without leaving the neighborhood.

Please allow us to keep this place as an off-leash haven.

RE: Off-Leash Dog Walking Areas

DATE: March 9, Cabrillo High School Public Meeting

I am writing as a Disabled Senior Citizen who uses the public off-leash dog walking areas to exercise my service dog. I am requesting that you continue the current policies regarding dog use at public parks ? policies that have provided many otherwise unavailable opportunities for seniors and disabled people to use the beautiful, safe facilities..

Fort Funston provides one of the only opportunity for my service dog to get unleashed exercise. Also, like many other disabled seniors, I am able to enjoy being outdoors in our lovely ocean-side parks and to take advantage of the many social interactions we have while dog walking at Fort Funston. Many of the seniors who, like me, use Fort Funston several times a week, have found exercise and friendships along with a profound enjoyment of the outdoors and scenery ? opportunities we would not have without the current policies.

The professional dog walkers have provided me with much needed assistance on many occasions. For example, when I have been unable to exercise my own dog because I was either hospitalized or unable to leave my own house, the professional dog walkers took care of my dog. On days when I have gone to walk my dog, but had difficulty physically navigating the path, the professional dog walkers were always there to give me a hand. I have observed the professional dog walkers frequently encouraging seniors and providing a hand to older disabled people when needed.

There is absolutely no way any disabled senior could manage the steps down to the beach with a leashed dog. Well, there is no way we could

manage the steps without a dog, as the stairs are inaccessible to any of us who have trouble walking. You can take a cane, walker, or wheel chair along the path at Fort Funston, as many of us do, but a walker or wheel chair can not go up and down stairs. I don't know what the ADA requirements are for a public park, but Funston is currently accessible as it is now, and will be completely inaccessible if the plans change as proposed.

I read one comment opposing the current of-leash dog policy in which the writer stated that there was no need for such a policy because dog owners could simply take leashed dogs jogging with them. I think I do not need to point out the obvious ? that many of us simply cannot move as quickly as a running, happily exercising dog.

The parks provide many valuable uses for our community, including uses for the human community. I pick up after my dog, keep her out of fenced areas, and make sure she presents no harm to any wildlife (such as birds). There are many of us seniors who count on the dog parks for our personal recreation. It is safe, healthy, and beautiful. Please do not make Fort Funston inaccessible to me, to others like me, and to responsible dog owners and walkers in our community.

Seniors like myself are often living on restricted incomes, and it is important for our mental and physical health to have an opportunity to safely socialize with a like-minded community. Fort Funston has resources, such as plants and geologic resources, but it is equally important not to ignore the social resources; the human social resource should be of equal value as the geologic resources.

This, however, begs the point that we users of the park are in conflict with the environment peculiarities of the environment (bird safety, care of the dunes, growth opportunities for specialized plants). To argue that we are in conflict is a false assumption, and to conclude that off-leash dog use (and the people to whom the dogs are attached) are a danger to the flora and fauna of the park is a conclusion that is ineluctably drawn from a false premise. We all guard the plant life, we clean up after our animals, we value the wild animal life (i.e. the birds); in the 5 years that I have walked, limped, or rolled on the path at Fort Funston, I have never observed a dog harming a bird. Someone posted a picture of a dog chasing an injured bird by the beach. That is a peculiar and one-time activity ? an activity that neither I nor anyone I have ever asked has seen repeated. Please do not draw a false and harmful conclusion from a one-time, media seeking photo op provided by those who look for ways to cause the GGRNA to change its policy.

Please think of the many seniors and disabled people who happily, safely, and carefully utilize the park opportunity, and continue the current off-leash dog policies that have served many of us so well this past decade.

Re: Draft Dog Management Plan / Environmental Impact Statement

RE: Baker Beach

To Whom it May Concern

I am a dog guardian who loves to walk with my dog on Baker Beach every weekend. If the Preferred Alternative to the GGNRA DEIS becomes law, I will no longer be able to walk with my dog there.

In the mornings, the beach is full of dog guardians and their dogs and fishermen. We coexist there very nicely. Families with children go to this beach much later in the day than the fishermen and dog people.

Please help me understand what good it will do to have empty beaches in the mornings. The fishermen have learned to live with us dog people for years now. They are not complaining. They are the only other users in the morning.

In the GGNRA Deis, I notice that preliminary surveys and public debates have included suggestions for time-sensitive use by dogs and their guardians (i.e. dogs off-leash allowed until 10:00 a.m. etc). I even suggested this to one of the GGNRA counselors during one of your briefing meetings and she thought it was a great idea. Yet there is no consideration of this idea in the report and I have heard that the GGNRA considers this idea too hard to monitor. Huh? Why would this be hard to monitor?

When I asked why Baker Beach was not considered for off-leash dog play in the Preferred Alternative, I was told that there has to be one beach for people who do not like dogs. Yet, these people are not on the beach in the mornings.

Please modify the preferred alternative to include Baker Beach.

Sincerely,

JoAnne Tybinka Blasko

GGNRA DEIS RE: Protecting Park Visitors

I am a senior and a resident of San Francisco. I am also a dog guardian.

The GGNRA Deis states that one of the reasons for the proposed restrictions on dogs and their guardians is the need to protect park visitors from dogs.

I don't believe that the available data on dogs in the GGNRA supports the need to protect park visitors from dogs and their guardians. Most citations issued are leash law violations and do not include actual problems with dogs. Does the GGNRA need to be more restrictive than city streets? Isn't it supposed to be a park? And aren't San Francisco residents, 1/3 of whom have dogs, park visitors? We visit the GGNRA daily. We have demonstrated that we are responsible dog guardians.

Further, the claim that the GGNRA has to be managed in a manner similar to the management of other parks like Yellowstone and Yosemite seems inconsistent with the objectives for the GGNRA. At the time the GGNRA was established, off-leash dog walking was acknowledged as one of the traditional recreational uses taking place there.

Perhaps park visitors actually enjoy watching people recreate with their dogs. Many people come up to pet my dog, saying they had to leave theirs behind at home while they are on vacation in San Francisco. These people do not appear to need protection.

Sincerely,

Peter P. Blasko

Correspondence: To Whom it may concern,

NOTES ON OCEAN BEACH AND DOGS:

PLEASE STRENGTHEN ALL RULES CONTROLLING DOG BEHAVIOR AT OCEAN BEACH!!! THEY ARE A CONSTANT HAZARD FOR THE BIRDS ATTEMPTING TO FEED AND REST. I AM A DAILY WITNESS AT OCEAN BEACH!

I have lived in the Richmond District in San Francisco since 1960, moving here as a child. I have always been an active user of our beautiful parks and now live five blocks from Ocean Beach. Since we moved here four years ago, to this location near the beach, my husband and I walk daily on or near the Ocean Beach. Frankly, I have been appalled at the overwhelming presence of off-leash dogs and the immense damage that they bring to the bird life. I love watching the birds at the seashore, and yet, these birds almost never get a chance to rest or eat undisturbed. It is so very sad that people are indifferent or completely heedless of the damage that their dogs cause. Just today, while walking, every dog we saw was chasing the birds full time, and in our 45 minute walk we saw absolutely no shoreline birds feeding, the few that we did see were constantly fleeing the dog attacks. (Our walk started at Judah Street and included a large area of on-leash dog territory. The dogs were all unleashed!) I have learned not to speak with the dog walkers as they are completely unreasonable, often very nasty, if you point out the negative effects on the birds. I really love dogs and birds too, but they simply do not mix at all. I know quite a bit about birds, and their presence to me in their natural habitat at the beach is an extremely important part of my health and well-being...not to mention their ability to use the beach being essential to their health and well-being.

ABOVE ALL, DO NOT BELIEVE THE COMPLETE LIES THAT DOG PEOPLE PROMOTE; i.e. THE LIES THAT ONLY A FEW DOGS CHASE THE BIRDS!!! ALMOST ALL OF THE DOGS AT OCEAN BEACH CHASE BIRDS, UNLESS ON A LEASH!!!

NOTES ON SUTRO PARK AND DOGS:

SUTRO PARK IS OVERUSED BY DOGS DAILY AND OFTEN SMELLS LIKE A LARGE STINKING DOG TOILET, ESPECIALLY ON WARMER DAYS!!!

Sutro Park is another dog magnet location. Most dogs here are walked unleashed, but are relatively well behaved. A few are not. A larger problem here is the sheer number of dogs using this park. On warmer days, the entire park smells like a giant dog toilet, as the stench of dog urine and occasionally feces is overwhelming!!!

NOTES ON CHRISSY FIELD AND DOGS:

A few years ago, I took my family out to the beach at Chrissy Field for a picnic. We sat on the Beach sand to be near the soothing sounds of the water. After spreading out a nice repast on the picnic cloth, along come two huge dogs running right across the middle of our food, completely startling my parents and us and ruining our food. I said to the owner "call you dogs", she snapped at me, that this was a dog area and she could do what she wanted. She was very nasty, completely ruining our day. She acted as if she owned the beach and we did not belong there!!

ALL TOO FREQUENTLY, THE DOG OWNERS ACT AS IF THEY OWN THE PARKS AS WELL AND WE ARE INCONSEQUENTIAL INTERLOPERS ON THEIR TERRITORY!!!!

Is there any hope for all of these otherwise decent human dog owners to develop a more sensitive, ecologically in-tune, appropriate behavior for treating our Parks and other nature loving humans correctly? The ratio of dogs to other wildlife is extremely out of balance!

Thank you for your interest,

Linda Fries

Correspondence Type: Web Form
Correspondence: We have been frequent users of the GGNRA and financial contributors to the Golden Gate National Parks Conservancy since moving back to CA 5 years ago and settling in southern Marin County. We enjoy hiking, trail running, mountain and road biking, and walking our dog on leash through park lands. When we have out of town visitors we often show off our parks with a beautiful drive, a picnic, or by joining a ranger-led walk. We have truly appreciated that GGNRA has kept access to much of its land open to ALL users, including those with dogs. Although we occasionally see an irresponsible dog owner, or a distracted "professional" dog walker with far too many dogs to adequately supervise, we have experienced that the grand majority of people walking dogs on GGNRA land are just like us - tax paying, responsible, local residents who are enjoying our public lands and doing their part to keep the trails clean and safe for all.

It is shocking to us that in some National Parks and other public lands, firearms and "sport" hunting are allowed, yet the GGNRA is considering the exclusion of pet dogs due to a perceived danger to wildlife. We support

seasonal restrictions on dog and human use in areas of the park for breeding of sensitive species, but do find it ludicrous that the proposed "management" plan excludes dogs but continues to allow equestrian use and other hoofstock, with the damage that they cause to trails and other natural areas. We also support restrictions on the number of dogs controlled by any one person on the public lands. However, a complete restriction on dog use is completely unacceptable.

SF and Marin County have a very large dog population, who are accompanied by park users that enjoy the outdoors and in many cases chose to live in this area based on the range of options available for outdoor recreation. If dogs were to be excluded from the GGNRA lands, this would concentrate a large number of dogs and people in an increasingly small area of other local and regional parks that do embrace all types of users. This shift in usage would put an unacceptable strain on those resources, and likely result in more unfortunate dog-dog, dog-wildlife, and dog-human incidents.

Thank you for your consideration of ALL users in planning how to go forward with the GGNRA. We are hopeful that you will continue to embrace the large number of responsible users of park land that sometimes choose to have their dogs accompany them though this local, regional, and national treasure. We would like to continue to be supporters of this park.

Respectfully, Cheri Nielsen

Correspondence: I believe that there should be a manageable way for off-leash dog walking of behaved dogs to co-exist with other needs of the GGNRA. From recent news stories on NPR, I feel there is bias against off-leash dog walking by a small but vocal contingent that is overshadowing the entire forum. I feel, by my experiences on my own dog walks of 5-7 times per week rain or shine year round (yes, it is that many and no exaggeration), that most people however are agreeable and amiable to off-leash behaved dogs.

The following are my concerns why barring or limiting off-leash dog walking is unfeasible or unreasonable:

My 1st concern is that most people do not use the areas at all times and therefore there are periods of the day and week off-leash dog walking could be allowed and should not be banned for ALL periods. Currently, I walk my dog several times a week in the GGNRA. I often do this at non-peak times

in the evenings during daylight savings at Land's End and on Friday Morning at Chrissy field. Often times, my dog and I are the only users or of the few users of these places.

My 2nd concern relates to sizes and age of the dog. Are small and/or old well behaved dogs really a threat? Many large dogs and small dogs are not patently threatening-- barely straying from their owners. Again, a blanket ban concerning ALL dogs does not seem logical.

My 3rd concern is that off-leash dogs cannot practically be confined to a relatively few areas. I have not done a scientific study but there seems to be too many dogs in the city to be able to restrict them to limited areas and maintain a safe, happy experience. A dog run is of little fun nor do the dogs seem to actually benefit from them long term due to many limitations. Typically, in my experience, these are places where people with poor dog skills bring their dogs and those dogs instigate trouble. In fact, any off-leash dog aggression I've ever experienced has been at these locations. And confined spaces tend to foment instinctual pack behavior. I have seen this at the dog run at the end of 40th Ave and Fulton in Golden Gate Park. For this reason, I hired a trainer to help me work with recall with my dog so I could walk her off-leash away from the fenced dog run-- something that has become such a joy in my life. I've ever rarely seen any instance, if any, of bad behavior of any other dogs in the general areas. What I am saying is, controlled well behaved off-leash dogs are the norm and it would be unfair to punish owners and dogs that are well behaved. Has anyone done a valid statistical study of visitors on a given day who visited the GGNRA to determine what their experience has been regarding dogs. Is it only the vocal dog-opponents raising the issue? Is this anecdotal or based on evidence and analysis?

As a note for the record, I am in favor of keeping dogs out of sensitive areas but general human population should not be allowed to enter them as well.

In addition, I do believe there are times and places for putting dogs ON leashes. However, I believe this is case by case.

Also, I will say that fenced areas do have their place to allow people to initially train their dogs, however, it should be a goal of all dog owners to graduate to off leash in areas they feel is mutually comfortable and safe for dog, owner, and neighbor and environment alike.

In closing, the real issue is of training, behavior, and tolerance. There are many people I would LIKE to see banned from these places but I relent and co-exist. I feel off-leash well behaved dogs and people can coexist in the GGNRA. Let's help out "man's best friend".

Thanks

Correspondence: San Francisco was a common trip for my husband and I when we lived in the Central California area. Golden Gate Park was a planned day of activities because of the man-made and wild/wildlife events. Please protect and value the wild and its natural animals, not dogs and people, for now and in the future.

Correspondence: To Whom It May Concern,

As a 14-year resident of San Francisco, and having spent 5 years living at Ocean Beach with my two dogs, I would like to voice my opposition to the preferred alternative, and my support for a no-change policy or a new alternative, which would allow dogs everywhere that is currently off-leash, plus create sufficient off-leash opportunities in San Mateo County. Additionally, a new alternative should remove the compliance-based management strategy.

I appreciate the work of the National Park Service, its efforts to protect the plant, animal, and cultural resources of the GGNRA, and the privilege of living near and recreating in the GGNRA daily with my dogs. I am a responsible dog owner who obeys leash laws, keeps my dogs under control and away from wildlife and sensitive habitats when they are off-leash, and cleans up after them. I believe the preferred alternative would substantially change my quality of life, as well as that of my dogs, by removing social and exercise outlets.

I believe that the preferred alternative violates the mandate for the "maintenance of needed recreational open space" contained in the legislation that created the GGNRA. Not everyone who goes to the GGNRA plays fetch with his or her dog. Many people enjoy hiking on trails with their dogs as their companions. There are not enough trails with off-leash access in the Preferred Alternative. The contraction of areas available for off-leash recreation will significantly compromise the park experience for people with dogs, and contribute to crowding and traffic problems, especially in San Francisco's parks, as more and more people are forced into smaller and

smaller areas.

Additionally, I believe the preferred alternative holds dog owners to a standard of behavior that is impossibly high, and significantly higher than any other park users. For example, studies by GGNRA staff routinely show people without dogs "disturb" snowy plovers, but there is no attempt to restrict people without dogs from the beaches where plovers roost (not nest).

The GGNRA's own studies show that joggers and walkers, not to mention parents with toddlers, equestrians, surfers, and other park users "disturb" plovers, yet there is no attempt to restrict their access in the plover areas. As a frequent bystander in the dunes at Ocean Beach, I routinely observe people without dogs camping, sleeping, walking, and picnicking in plover habitat. Additionally, I have on multiple occasions observed SFPD officers riding dirtbike motorcycles through the dunes and over the length of the beach.

There are much less restrictive measures the GGNRA could take to protect snowy plovers, including the use of temporary "exclosure" fencing when the plovers are present. This would keep everyone, people as well as dogs, out of the area. Enforcement that targets people who intentionally disturb plovers would also help.

Severe restrictions are not needed to protect other park visitors from dogs. Problems with dogs represent a tiny fraction of the total incidents and citations issued by the GGNRA over the past decade. Of those incidents and citations issued to people with dogs, the majority were leash law violations, or being in a closed area, and did not reflect any safety issues between dogs and other park visitors. A new alternative should target enforcement on the small number of people whose dogs misbehave, rather than excluding the entire class of people with dogs from most of the GGNRA.

Finally, the level of enforcement required by the Preferred Alternative is excessive and unsustainable. Targeting people walking their dogs irresponsibly and leaving responsible dog walkers alone would be a much more efficient use of GGNRA resources. The DEIS states that it will cost nearly \$1million to enforce the Preferred Alternative, through the hiring of more Park Rangers or Park Police. In an era of shrinking federal budgets, this seems a poor use of scarce financial resources. Existing Park Rangers could more easily enforce already existing rules such as picking up pet litter or no chasing of birds. These enforcement actions are all that are needed to ensure responsible dog walking and minimal impact on natural resources and other park visitors from off-leash dogs.

Thank you for considering my comments. Here's to a continued dog-friendly GGNRA.

Correspondence: Having recently been set upon by an unleashed dog in the Presidio as I walked by the dog and owner on a paved road, I would like to say that any policy that does not require ALL dogs (whether nice, darling, or just plain mean, untrained, and uncontrolled) to be leashed in the park areas endangers those of us taxpayers who walk on your paths. I now understand why I see people my age (over 65) carrying golf clubs when they are on foot in your precincts and nowhere near a golf course. I certainly wish I had been carrying one when the dog in question decided to assault me. I'm sure you know more than I do about the dog manure issue arising from dog use of the park. But from my observation this is a problem you should address. I live near the Presidio and every day I see the neighbors walking their dogs over there to relieve themselves. Thank you. Harry Miller

Correspondence: As a dog owner and walker in San Francisco, I do not want to see more restrictions on off-leash areas in GGNRA. Already 1% of the recreation area is off limits to dogs. To restrict it further would be unfair to dogs AND their owners (tax payers that help fund the GGNRA). Dogs naturally need areas to roam free and run - this promotes a healthy mental state within the animal. By reducing this freedom, canines will be insufficiently exercised and will pose more of a threat to the local community as their stress levels increase. Dogs take stress out on humans and other dogs, which does not present a healthy situation for anyone existing in the bay area.

By restricting more off-leash areas within GGNRA, thousands of dogs and their owners will move to the city parks, which will effectively become destroyed. This is an obvious and hurtful implication of the new restrictions. Everyone has to make compromises in life, so why can't the GGNRA make one to allow dogs in the areas it always has? It is unethical to place this potential burden on the city parks, which hundreds of thousands in San Francisco enjoy.

Please don't restrict off-leash areas in the GGNRA!

Correspondence: I am a senior (AARP card carrying), Asian, single female. I am a native San Franciscan. I do not want you to take away or limit off-leash dog walking at Fort Funston. I tried walking at Fort Funston in the late 70's early 80's but stopped due to the type of people I encountered there. (Lewd behavior directed toward myself a single female just trying to get some outdoor exercise, and groups of young men drinking/smoking-making it quite uncomfortable). Revisiting the area in the late 80's to present time I am so happy that there are people there that proudly use the space. Off-leash dogs have made the area safe for people like me who just want to walk and not worry about crime. Dog people are friendly, conscientious and are always willing to help. The place is no longer isolated-making it a deterrent to those who would use it for unsavory activities (drugs, homeless encampments, etc.). The dogs being off-leash keep people from wanting to sleep in the bushes. The one person who does sleep there leaves before 8am. I feel SAFE walking at Fort Funston. If you limit off-leash dog walking at Fort Funston, you will also see a new problem at the Fort. Feral cats. Cats will come, stay, breed and soon the birds that exist there will be wiped out. Cats hunt and kill birds. Dogs may chase but I have never seen one catch a bird. I have seen cats kill birds and there have been numerous studies showing the negative impact on bird populations by cats. Finally, crime in the neighboring area will increase. The cars parked around the Lake will get broken into. I know most of Marin county's GGNRA do not have off leash dog access and there is no real problem with the above issues but Marin is isolated compared to Fort Funston. It is not easily accessible. There is a bus stop across the street from Fort Funston and it is walking distance from homes, shopping, BART etc. Take the dogs away and crime will come. Take the dogs away and the cats will come. Thank you for your time.

Correspondence: For many years I have seen hundreds, if not thousands, of dogs and their owners enjoying Fort Funston as a place for off leash walking. Random incidents of a dog creating a problem will happen, just as it does in the human population but that isn't a strong enough reason to remove areas like this that support the dog/man/family connection that is gained.

We can make places available for off leash enjoyment - please do not take them away.

Correspondence: I'm writing to request that you limit off leash recreation for dogs to areas that will not have negative impacts on indigenous and endangered species. I have personally witnessed, multiple times, off leash dogs chasing migrating shorebirds up and down the beach and effectively preventing them from feeding, and costing them vital energy in fleeing the dogs. The people with these dogs have watched, but done nothing to intervene.

I have friends who are dog owners and some are dog walkers, who strongly oppose any limitation on their recreational activities in the GGNRA. I explain to them that dogs are not indigenous to this area, dogs are not an endangered species and dogs can go elsewhere to run and play. Shorebirds don't have that option. They are indigenous to this area, many are endangered or threatened and they do not have the luxury of feeding or resting in any other area except the tidal zone where their food lives. Some friends can understand, some insist that it's a 'rights' issue and they should be able to run their dogs were they please.

As long as some people cannot understand the necessity of allowing safe spaces for other species who are completely dependent on those few spaces,

restrictions must be made to protect the voiceless from the the species with a very vocal and organized lobby.

I also feel that endangered species wildlife habitat protection should be 95% compliance, not the 75% that is currently outlined.

Thank you for considering my views.

Correspondence: I am very supportive of your plan to clearly define dog walking boundaries in the GGNRA. I love dogs. I've just been in Vancouver, B.C., walking dogs with my daughter on their doggie off-leash beach. It is a well contained beach, the dogs are so free and happy and the other beaches are safer for everyone. I used to walk in Fort Funston and have so many happy memories of that area but I never go there any more because of the dogs. I still walk on Ocean beach, but it is the nature of the beach that draws me, the birds and the quiet.

This is the first time I have every made a public comment about dog walking areas because I am hesitant to get in the cross hairs of the "I have a dog and I vote" folks. They are indeed rabid and it seems pretty impossible to have a polite disagreement with them.

Thank you for being firm.

Correspondence: I think there should be even more off leash areas for dogs in the parks, especially around Muir Beach and on Mt Tam. There are far more citizens who walk their dogs in the parks than mountain bikers who are a real danger and have taken over, ruining the serenity and natural environment of the parks. The vast, vast majority of dogs are well behaved and do not bother people or other dogs. Why should we citizens who have dogs be discriminated against? We should have the right to use the parks in the way we enjoy- with our dogs running free. Are dogs not to have any place where they can run and play, be off leash and get the exercise they need? It's extremely uncommon for dogs to disturb the natural environment of the parks. By contrast the mountain bikers are wrecking the roads and creating huge dust storms as well as creating hazards on the trails themselves by taking over the entire trails. They should have controls placed on them- not the dog owners.

People walking in nature with their dogs is natural and healthy. The relationship between dogs and humans goes back over 50,000 years. This is a natural relationship which naturally involves walking and playing in nature. The parks are places where citizens should have the full right to experience the beauty of the parks and open air activities with their dogs. Whatever dog haters there are on your staff should be fired, as they are

really out of touch with what most people want.

If you are so concerned about liability for the very few ill-behaved dogs that may be in the parks, buy insurance. That's what is it for. Or put signs up that warn that any problems created by dogs will be the financial responsibility of the dog owners- who would also obviously be sued by any person victimized by the dog involved. Problems with dogs biting people or harming them are so rare, I would bet there are more assaults by people on people in the parks than assaults by dogs. Does that mean you should ban people from the parks? Or maybe just young males?

Dogs and their owners should have access to parks and the dogs should be allowed off leash. Period.

Correspondence: I have lived in San Francisco for 40 years and have had several dogs and have always taken them with me to enjoy the outdoors in our city. The favorite outing has been Crissy Field and Fort Funston, as well as Ocean Beach. In this small congested city, it is crucial to have a place for a dog owner to take a canine friend to run and get fresh air. The GGNRA in the Bay Area is not a destination park like Yosemite or Yellowstone. It is an urban space which must be shared by all who live here as well as the visitors. I plead with you to allow more places for dogs, both leashed and unleashed. Thank you. Marjorie Johansen

Correspondence: My name is Deb. I am a 40 something college educated software professional, a home owner, living in Oakland. I accompanied a friend to Muir Beach with her rescue dog the other week and was horrified to learn that this perfect day we were having could soon become extinct.

I am deeply saddened to learn that the GGNRA board is seriously considering this drastic proposal to outlaw dogs in most of the few places people and dogs have left to roam freely here in the Bay Area.

I don't even have a dog myself at this time, but I love dogs and know many close friends who have dogs who depend on these areas for their primary means of recreation and exercise. My happiest days are spent with dogs on

beaches and all over the ggnra.

I've seen the maps of the proposal which show it's ok to have dogs on leash in the parking lot area, which is ludicrous and insulting and far from a reasonable and fair proposal. I don't understand at all why reducing the dog footprint is a goal at all. Personally I think it should be far expanded. Our world would be a better, saner place if dogs were included in more of our activities.

If the idea is to keep some areas where people go to recreate as adults and with children free of dogs, I do understand this need. Some people are allergic or afraid of dogs for various reasons of experience or inexperience or personal preference. However that does not preclude the rights of people with dogs, to enjoy the same areas responsibly.

I know many people, including myself, who don't have children have animal companions who are nothing short of family. To put the ggnra off limits to people with dogs is cruel and biased and insensitive to the quality of life we should be able to enjoy on this beautiful land. I don't buy that dogs are ruining it. I understand that some people with dogs are irresponsible and don't clean up after them or don't train or control them adequately but this is by far, far, far the exception rather than the rule. I know many people including myself that pick up extra waste if we see it because we love this land and want to share it with dogs for ever!

The dog community is a beautiful, essential one in the bay area where many people cannot afford to have children. Walking a dog on leash in urban neighborhoods is not a good life for a dog or the people who have them in their lives.

I think a society should be judged by how it treats its animals and leaving no public space for them to enjoy is very small minded, simplistic, soul-less and controlling. The proposal being considered doesn't take dogs and their families of humans into consideration at all. In my opinion, it is hurtful and mean spirited and undermines one of the most healthy communities in the bay area.

I urge you to use your power on this board for the good of our community which includes having thriving, beautiful places where dogs and humans alike can roam. Dogs are healing, spiritual creatures for the most part and there is no greater joy for many, many, many people than to spend time frolicking in the few open places we have left.

Please listen to the voices of the pro dog people like myself and leave this space open to all who want to enjoy it peacefully and responsibly.

Correspondence: I am a responsible dog owner, professional, working in SF and living in Oakland.

I recently became aware of this proposal to seriously limit the use of ggnra parks by dogs off leash.

I'm horrified and can't believe so much effort is going into this proposal which wouldn't be supported by ANYone who has a dog or loves a dog.

Having a dog on leash in these areas are contrary to why people with dogs go there! We're looking for and NEED an outlet from the urban landscape WITH our families which in our cases are our dogs!

I think this proposal is shameful. I've reviewed the statistics and see the majority of citations are for leash infractions. The number of people who've been bitten by a dog are exceedingly FEW ... and while it's unfortunate that some people have dogs who are not controlled, it's not a reason to end this amazing era of dog friendly community we enjoy regularly.

I'm downright disgusted this is even up for consideration and the breadth of this proposal.

Please rethink this policy of exclusion sharing our parks and beaches with dogs is one of the singular joys of my life and so many others.

Correspondence: I thoroughly support restrictions on dogs in GGNRA.

I have been a resident of Marin for 19 years and am an avid hiker. While I like dogs and appreciate good dog care, I have seen far too many dog owners allowing their dogs to run off leash in restricted areas. A few months ago, while on a walk on the Miwok trail, nearing the coast trail, I came across a young woman who was a professional dog walker. She had 10 large dogs in her care and all of them were running unleashed right in the midst of a no dog sign! One of the dogs jumped up on me and knocked me down. When I pushed the dog off of me, I went to check it's tag to see if I might be able to alert it's owner. The dog walker became belligerent and threatened to hit me! It was an unpleasant and totally unnessesary encounter. I see this aggresion mounting more and more. Many dog owners insist on letting their dogs off lease and are insulted if a hiker reminds them of rules. I have numerous encounters with dogs on the trail that are unpleasant, sometimes as simple as a muddy dog jumping up on me or 2 dogs suddenly wildly barking at each other. At Rodeo Beach dog owner flock to the beach to let their dogs run free, chasing birds and other wildlife. The owner have with no regard for other people who simply wish to enjoy nature as it is.

These dogs are running wild, tearing up the fragile plant life and hunting for quail and other wildlife. We have a precious resource of wildlife and a natural setting that is getting eroded by domestic pets. Pet owners need to consider responsible care for their environment and not assume that the parks are there for their exclusive use.

I would like to see a NO DOGS ALLOWED rule that is actively enforced. I would even be willing to help out with the enforcement.

thank you.

Correspondence: Good morning!

My group has been coming to Fort Funston for the past 6 years. Sometimes we have as few as 5 hounds, but we have had up to 20 at a time. The hounds LOVE running on the beach! They know when we pull onto The Great Highway and anxiously await our arrival!

I understand that not everyone is a dog person, but those of us who go to these off-leash parks are! There are a lot of parks in California, but not many allow your dogs to enter. After looking at the maps for Fort Funston, I would like to exclude plans 16-B and 16-D as these would not allow our

dogs to run and wrestle with each other (you can't wrestle on a leash!)! I prefer any plan that allows the dogs to run as much as possible. In my opinion, those would be 16-A, 16-C and 16-E. We generally go down the sand steps to the beach and follow the beach north to the incline and then follow the paved paths back to the parking lots. By the time we reach the paved areas again, our dogs are tired and are very unlikely to wander off the path. Having to leash them in the paved areas is not necessary for our dogs, but we will do it if we have the beach to run free!

The dogs that go to Fort Funston are all well behaved. I have never seen a fight amongst the dogs or the people in all the years that we have come here! The people that can't trust their dogs off-leash don't take their dogs off. Those of us who work with our dogs, do! Most dogs ignore the other dogs completely, focussing on their balls, or their friends! Big dogs; small dogs and medium sized - they all love coming and walking and running on the beach!

The hounds are exhausted by the time we get back to the parking lot, having the chance to rid themselves of the extra energy they had stored up during the week, and a tired dog is a good dog!!

Please keep the beaches leash-free!

Thank you! Gwenda G. Dossey BABH

Correspondence: Appendix J: "Adjacent Dog Walking Areas" is very misleading and is not good support for the EIR.

Firstly, many of the adjacent walking areas listed are Dog Parks. Dog Parks are NOT walking areas! They are normally little more than a few square yards of mud. Generally not suitable for many smaller dogs and absolutely in no way a good alternative to dog walking in open space.

Second: Several the State parks mentioned are now subject to semi-permanent closure.

Third: Several of the listings are incorrect / have changed status / access. For example, Esplanade Beach in Pacifica was once a great resource for off leash dogs. This resource is now completely inaccessible because of coastal erosion. No dog or person has been able to access this beach for years, and this is unlikely to change anytime in the future. The resource basically no

longer exists.

The GGNRA areas are some of the VERY FEW where On and Off leash dogs can be exercised. The enormously restrictive access proposed in the preferred plans would greatly diminish the recreation opportunity of a huge proportion of the local population, particularly in San Mateo county. The proposed changes are far far too restrictive at a time when people have less money to travel, and need free / cheap recreation alternatives. Please please please not not enact the preferred plans!!! Leave access the way it is PLEASE!

Correspondence: To Whom It May Concern, I would like to voice my opposition to the preferred alternative, and my support for a no-change policy or a new alternative, which would allow dogs everywhere that is currently off-leash, plus create sufficient off-leash opportunities in San Mateo County. Additionally, a new alternative should remove the compliance-based management strategy.

I appreciate the work of the National Park Service, its efforts to protect the plant, animal, and cultural resources of the GGNRA, and the privilege of living near and recreating in the GGNRA daily with my dog. I am a responsible dog owner who obeys leash laws, keeps my dogs under control and away from wildlife and sensitive habitats when they are off-leash, and cleans up after them. I believe the preferred alternative would substantially change my quality of life, as well as that of my dog, by removing social and exercise outlets.

I believe that the preferred alternative violates the mandate for the "maintenance of needed recreational open space" contained in the legislation that created the GGNRA. Not everyone who goes to the GGNRA plays fetch with his or her dog. Many people enjoy hiking on trails with their dogs as their companions. There are not enough trails with off-leash access in the Preferred Alternative. The contraction of areas available for off-leash recreation will significantly compromise the park experience for people with dogs, and contribute to crowding and traffic problems, especially in San Francisco's parks, as more and more people are forced into smaller and smaller areas.

Additionally, I believe the preferred alternative holds dog owners to a standard of behavior that is impossibly high, and significantly higher than any other park users. For example, studies by GGNRA staff routinely show

people without dogs "disturb" snowy plovers, but there is no attempt to restrict people without dogs from the beaches where plovers roost (not nest).

The GGNRA's own studies show that joggers and walkers, not to mention parents with toddlers, equestrians, surfers, and other park users "disturb" plovers, yet there is no attempt to restrict their access in the plover areas. As a frequent bystander in the dunes at Ocean Beach, I routinely observe people without dogs camping, sleeping, walking, and picnicking in plover habitat. Additionally, I have on multiple occasions observed SFPD officers riding dirtbike motorcycles through the dunes and over the length of the beach.

There are much less restrictive measures the GGNRA could take to protect snowy plovers, including the use of temporary "exclosure" fencing when the plovers are present. This would keep everyone, people as well as dogs, out of the area. Enforcement that targets people who intentionally disturb plovers would also help.

Severe restrictions are not needed to protect other park visitors from dogs. Problems with dogs represent a tiny fraction of the total incidents and citations issued by the GGNRA over the past decade. Of those incidents and citations issued to people with dogs, the majority were leash law violations, or being in a closed area, and did not reflect any safety issues between dogs and other park visitors. A new alternative should target enforcement on the small number of people whose dogs misbehave, rather than excluding the entire class of people with dogs from most of the GGNRA.

Finally, the level of enforcement required by the Preferred Alternative is excessive and unsustainable. Targeting people walking their dogs irresponsibly and leaving responsible dog walkers alone would be a much more efficient use of GGNRA resources. The DEIS states that it will cost nearly \$1million to enforce the Preferred Alternative, through the hiring of more Park Rangers or Park Police. In an era of shrinking federal budgets, this seems a poor use of scarce financial resources. Existing Park Rangers could more easily enforce already existing rules such as picking up pet litter or no chasing of birds. These enforcement actions are all that are needed to ensure responsible dog walking and minimal impact on natural resources and other park visitors from off-leash dogs.

Thank you for considering my comments. Here's to a continued dog-friendly GGNRA.

Correspondence: Frank Dean 5 May 2011 General Superintendent, GGNRA 201 Fort Mason
San Francisco, CA 94123-0022

Dear Superintendent Dean:

I am writing in support of the draft Dog Management Plan and Environmental Impact Statement (DEIS) for the GGNRA.

As a resident of San Francisco and as a once-ardent volunteer at Crissy Field, I have long been concerned about the impacts of dogs on the wildlife, habitats and visitors in the park.

Although a passionate bird watcher I quit visiting Ocean Beach a year ago because of constantly witnessing dogs chasing shorebirds ? there are few birds to see when there should be many. And it is miserable to see migratory birds molested by dogs.

I am thrilled by your proposed DEIS Preferred Alternatives for all the San Francisco sites. They would best maintain park resources and values for future generations, as well as provide clear enforceable policy for determining dog use in the park.

However, I do have several comments and suggestions to add:

General Comments

The specification that "no commercial dog walking would be allowed" at Crissy Field is especially appealing. Commercial dog walking has no place in a national park, a common property resource. Furthermore, the packs of (unleashed) canines brought to Crissy Field every day by commercial dog walkers destroy the serenity and character of that beautiful site.

Neither should more than one dog per visitor be allowed, either on trails or in ROLAs. On leash dogs fan out and block other users of the trails and it is unlikely that two or more off leash dogs will be kept under voice control.

The DEIS Preferred Alternatives also do not provide for enough hiking and picnicking experiences free of dogs. I would love to see the whole coastal bluffs area from Sutro Baths around to Ft. Point declared a no-dog zone. This is an especially scenic area and the trails are narrow.

The compliance level should be set at 100%, just as for enforcement of any other law where public property is being damaged and public safety threatened; off-leash dogs in prohibited area of GGNRA need to be treated seriously.

And of course, the no dog ban must be rigidly enforced, no ifs, ands or buts. A citation is worth a thousand words. Without tickets the NPS will just waste money, my money, patrolling in vain.

Park visitors need to be encouraged to report violations when the dog regs are enacted, to help reduce the NPS's cost of enforcement. Given the prevalence today of cell phones with cameras, a web site could be set up for visitors to file complaints and post photographs of recalcitrant dog owners and their pets.

My experience is that off-leash dog walkers get belligerent when confronted (even oh so nicely) at Ocean Beach. Filling out a report is cumbersome and useless after the fact. But a report posted on-line, accompanied by photographs of offenders, would help the NPS ID repeat violators and would be quicker and easier than a paper form. Too, it might shame violators into compliance; consumer feedback is a commonplace on the web. Why not for consumers of the GGNRA?

Also, the dog ban for Snowy Plover season needs to be year round ? specifying from July 1 to 15 May is too confusing.

More obvious signage is needed in Plover areas to help visitors comply with wildlife protection and understand that no dogs are allowed in the Area. Small wordy signs at trailheads are not gripping people's attention. A BIG logo of a Plover should be adopted for Crissy Field and Ocean Beach and used liberally to mark the sensitivity of the sites.

Crissy Field

Working on plans for Crissy Field (I chaired the Sierra Club's wetlands committee and advocated for the marsh alternative) I had the clear understanding that dogs would be banned entirely from the west end of the Promenade. Part of the tidal marsh was sacrificed to accommodate the grass Airfield, designated for doggy romps and to compensate dog people for loss of the western Promenade.

As you know, the tidal prism in the marsh is inadequate for good flushing and needs expanded. However, I rarely see people playing with their canine pals on the grassy field. I do see them walking their pet off-leash on the western end of the Promenade.

As a consequence, dogs keep running into the Wildlife Protection Area, off-leash and accompanied by their owners. The WPA has in recent years become a Snowy Plover hangout and needs more stringent protections than currently provided.

The Wildlife Protection Area at Crissy Field needs to be stoutly fenced off all the way around it and down to the low tide line. LARGE signs with a plover logo need to be plastered along the fence right down to the littoral zone. People walking along the beach often just do not see the signs down there.

Creating a ROLA in the center of the Airfield might bring more dogs down to the WPA. The ROLA needs to have fencing to mark its perimeter.

While the dog people at Crissy are considerably less scofflaw than at Ocean Beach and Ft Funston, they will take some time and some coaxing (plus enforcement) to avoid disturbances to the WPA wildlife.

Requiring that dogs be kept on leash in the central beach and promenade areas will hopefully keep dogs from running into the marsh through the channel under the bridge. But the tidal channel's proximity to the beach ROLA means problems.

I think the beach ROLA and its fencing need to be shifted further eastward to protect the WPA visually, as well as the marsh physically and create buffer zones.

And in hot weather the tidal channel is always full of mothers with toddlers splashing in the water ? probably the only place in S.F. where they can. Those users need shielded from off-leash dogs.

Now that a ROLA is designated for the central part of the Airfield can the eastern portion now be turned over to the marsh? I've never been able to see an outline of the old runways in the grasses there ? does anyone? The ROLA would seem to make the pattern even less obvious.

Originally there were plans to have an aeronautical museum with old planes parked around to evoke Crissy's original purpose; those plans never came to fruition and the whole thrust of the Crissy experience now is nature. Time to jettison the Airfield and enlarge the tidal marsh westward.

Certainly the eastern portion of the Airfield should be a no-dog area to protect the grassland birds that are frequently found there in migration.

And of course, enforcement of the leash laws on the Promenade should be 100%, with one dog per person and no commercial dog walking.

Ft. Funston - The Preferred Alternative is fine but the ROLA needs fenced with abundant signage to ensure that the dog play area is effectively delineated from other users.

Also, Ft. Funston is badly beaten up from dog activity and has lost its aesthetic appeal. Habitat restoration is badly needed to return its native plant and animal species, and its aesthetic appeal.

Baker Beach ? The entire Baker Beach area should be declared a dog-free zone to protect its shorebirds and to create a dog-free experience.

The Preferred Alternative advocates dividing the beach into leash-only and no-dog areas which can only generate confusion and enforcement costs.

Lands End ? As mentioned above, I want to see this portion of the coastal bluffs closed to dogs to create a true National Park hiking experience; too the trails are narrow and dogs create a user conflict.

Sutro Heights Park ? I support the Preferred Alternative with no commercial dog walking and one dog per visitor.

Ocean Beach ? Oh boy, is this place hard to patrol and enforce. I support the Preferred Alternative for Ocean Beach.

However, The term "Snowy Plover Protection Area" needs changed to "Wildlife Protection Area" to harmonize with Crissy Field and to acknowledge that this is an important shorebird area.

There also needs to be Plover signage painted on the beach side of the wall all along the WPA (i.e., Stairwell 21 to Sloat Blvd.), readily apparent to beachgoers, to help reduce compliance problems and avoid visitor conflict.

And did I mention enforcement? There is something in the Ocean Beach culture that thumbs its collective nose at leashing a dog. Even though the great stretch north from Stairwell 21 to the Sutro Baths will be open to running off-leash dogs, the NPS will face endless problems with the WPA.

Again, no commercial dog walkers and only one dog per visitor even in the northern stretch of Ocean Beach to maximize the National Park experience for all visitors and prevent conflict between users.

Back when the NPS did patrol dog walkers just carried their leash in case they saw the NPS driving down the beach; the same situation will doubtless prevail. That is why I advocate for making it easy for visitors to report violations; I would be thrilled to snitch and stool pigeon on-line, along with photographs taken from my cell phone.

And the NPS brochure for Ocean Beach could hardly be worse. It shows a vast empty beach. It needs the Plover logo in the foreground, looming over the whole picture.

Correspondence: Hello, here are my comments in regards to the Dog Management Plan for GGNRA

--The park's mission is and should continue to be to protect the natural and cultural resources, not allow recreation to undermine it. While I am a dog lover, I feel that wildlife in this case should be considered first.

--Endangered species wildlife habitat deserves a higher level of protection from human disturbance; the compliance rate should be 85% to 95%, not 75% as outlined.

--Require all off-leash areas to be enclosed to protect park users, wildlife, and other dogs.

--Limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats.

Thank you for considering my comments.

Correspondence: Hello: I think it would be a terrible thing to implement NO DOGS or NO OFF LEASH for dogs in our beautiful community. The Bay Area is a wonderful place to live that promotes a healthy, carefree lifestyle. By owning a dog it only complements to getting out and living this lifestyle. My three year old black lab is a former Guide Dog in training and has excellent off leash control. Her favorite thing to do is run at Baker Beach and chase the ball. As owners we are sensitive to the fact that not all people are "dog people" and make sure to respect others. It would be a shame to not be able to allow our dog the freedom to run around have to be penalized because there are dogs/dog owners that do not respect this. I strongly oppose this measure and believe there are other ways to go about trying to control bad dog owners.

Correspondence: Off-leash dog areas should be fenced or well-marked to provide a clear boundary for off-leash dog activities. If installing a fence in an area would have an undue biological or aesthetic impact, then there should be no off-leash area in that location. The Park Service should require a minimum of 95% compliance or should initiate measures to improve compliance. If 25% noncompliance is tolerated, it will engender further noncompliance and make the situation worse. Commercial dog-walking should not be permitted in the GGNRA. The Park Service is supposed to allow only commercial activities in the parks that further park visitors' experiences. Commercial dog walking does not enhance anyone's experience of the parks. While dogs are important parts of our families and communities, they are having a significant negative impact on thousands of other animals and plants that rely on the park to survive, as well as a negative impact on many human visitors. The parks should be maintained to protect their natural and cultural resources for future generations and to be safe and accessible for all users.

Thank you for the opportunity to comment on this issue. PLEASE take seriously the comments of all of us who want the Park Service to take responsibility and do its job to manage and control off-leash dogs in the GGNRA.

-Marjorie Blackwell

Correspondence: It is unfortunate that San Francisco dog groups and the GGNRA hasn't come to a meanful compromise for recreational off leash dog areas in the San Francisco BayArea. For 15 years I have walked at Ocean Beach and Fort Funston with dogs. I have enjoyed all the different seasons and wildlife, making my living in S.F. more torrable. In addition I have found friendships within the community of dog walkers that is very meaningful to my quality of life. I addopted my dogs because there was space for me and then too play and run, the new restrictions would deny me access to these areas because my dogs need to be able to be off leash in a responsible manner. This would create high use at other non GGNRA parks. I would urge the GGNRA to review it's lastest restrictions and propose a compromise that would allow all users the oppportunity for recreation in the GGNRA. One idea that works well in other major cities is the creation of dog walking hours (off leash)that would accomadate different people's desire to for multiple use of parks. Please don't shut out off leash dog walkers from GGNRA areas that have been traditionally accomodating for various recreational users.

Correspondence: Dogs belong on a leash. In order to give the widest range of interests the ability to share the park, dogs belong on a leash. Dogs cause significant environmental disruption when allowed to run freely. Not only that but, many people are afraid of dogs, and allowing the dogs free access to the park will essentially bar these same people from also enjoying the park.

We instituted the park system to protect the wildlife there, allowing off-leash dogs is counter to that protection.

Correspondence: I object to the reduction of "off leash" space for dogs. The current rules are fine. There is a balance so people can enjoy their dogs, or those who don't have very many other options on where to go. This is about balance for all. Also reduction of off leash space will push people to other parks. Like the city and county ones and overwell them.

Thank you for your consideration.

Correspondence: I think the proposed dog policy is a big mistake for the following reasons:

* San Francisco is a densely populated city, with many of its populace, dog owners. Every group has equal needs from the parks. The dog owners should not be less served. * There is a need to exercise dogs. Sidewalks are not sufficient. The existing "dog parks" are not sanitary and they are not conducive for good socialization.

* Dog and people socializing in the parks helps lower vandalism and crime.

Correspondence: Please use your time and money to punish those few dog owners who cause problems, not by preventing a great deal of the population from enjoying our walks with our dogs. Walking my dog is about the last thing I can afford to do for entertainment and there is no reason to put such egregious restrictions on those of us who clean up as we walk and leave the space in a better way than it was when we started. Is socail networking all that will be left for entertainment? Growing up in SF and spending my entire life in SF and Sausalito, I am educated and adult enough to make good decisions about my dog and myself and healthy and environmentally appropriate dog walking. So, what's up with the draconian proposal? Please reconsider so OUR space can be used by everyone. Thank you.

Correspondence: Greetings, I work with environmental education in the Marin Headlands and hope that the impact on groups of students visiting Rodeo Beach has been considered. We often have dogs (friendly or not) run up to and in the middle of student groups. This can be very distracting as well as upsetting for students who are afraid of dogs (which happens fairly often). It can be scary when a group is seated at the beach and a dog comes running up at the students' eye level. At times we have even had some aggressive dogs approach our groups. Additionally, it is challenging to teach students' to respect their parks when dogs are running into and along the edges of the lagoon, after birds or surfers or chasing other wildlife. Additionally, several of our staff witnessed a dog run a deer into the lagoon where the deer then drown. As an educator, I would rather have natural wildlife running free than dogs. It would be nice if perhaps from the lagoon bridge to the right dogs could be off leash- that way student groups could head left from the bridge to access trails and enjoy the beach. I'm writing this as an individual and not representing any organization or institution. Thank you.

Correspondence: Dear GNNR, I live on Sneath Lane in San Bruno and walk my little friendly terrier mix on Sweeny Ridge Trail all the time. I heard that this might not be allowed soon anymore?? I truly hope that this is not true. MY physical and

mental well being depends on this out- door activity. Some neighbors here and ourselves moved here to be close to nature AND to bring our dogs on walks in the back on Sweeney Ridge Trail. I have 4 children an THEY also go running there (teenagers). They always bring the dog with them as well. I feel it is safer for them as well. We leave our dog on leash and never ever had any trouble with any other dogs here! As the trail is paved and is lined and surrounded by thick brush and poison oak there is really no danger for the dogs who are off leash to cause any harm or go anywhere but stay on the trail. It would be very very sad for our family not to be able to use this wonderful trail WITH our dogs!

Correspondence: I am writing to oppose the GGNRA draft dog management plan and "all action alternatives" that further reduce or ban dogs. Please keep our open spaces dog-friendly and plentiful. The Park Service should revise the dog management plan to: 7 Recognize dog recreation as a safe and healthy recreational activity and as important to the health and well-being of people, dogs, and communities, especially those in densely populated urban areas 7 Justify any changes with objective, reasonable scientific studies and findings and remove the many exaggerations, speculations, and misleading statements. Don't treat dog recreation as a hazard and nuisance despite facts to the contrary; it's compatible with other urban recreation

I am a Latina dog owner who lives in SF and accesses parks such as Fort Funston, Ocean Beach and Crissy Beach at least 2-3 a week. Enjoying those parks with my dog significantly improves my quality of life in the city. I have been a dog owner in the city for over 8 years and find that the majority of dog owners / walkers use these parks responsibly and what the plan describes as hazards and nuisances are the exception and not the rule.

In my experience, there are regulations in place to protect the wildlife at both Crissy Beach/ Field and Ocean Beach, restricting dogs during key seasons. These regulations seem to be sufficient and seem to be respected by dog owners

Finally, given the current budget crisis both at a federal and state level, this amount of regulation and enforcement seems to me to be a misplaced use of our resources. There are already many beautiful areas within the GGNRA that are off limit to dogs (point reyes, muir woods). Imposing a ban on the few open areas that we still have available, will drive me not to visit any parks in the GGNRA and consequently not support any of the GGNRA's

efforts to raise funds or do any other type of positive civil action.

I sincerely hope you reconsider this unwelcomed dog ban and let me and Shiraz continue to enjoy nature in a responsible manner.

Sincerely.

Larissa Acosta

Correspondence: I would be willing to pay at least 5 dollars per visit to keep dog access to the current on-leash dog areas. I recommend you start charging.

Or, you will have to at least quadruple your enforcement budget because if you implement the suggested plans most people will ignore them because the plans are punitive to the point of insulting. Insulting to the tax payers that support the NPS.

So, either make money from access fees and and increase recreation access? Or spend all the public money on enforcement to exclude the public from public recreation land? Which will the NPS do? The answer to that will say a lot about the NPS and its role as a supposed public office.

Correspondence: I am writing to oppose the GGNRA draft dog management plan and "all action alternatives" that further reduce or ban dogs in open spaces. There are plenty of parks and spaces in this area where the dogs are not even allowed but only a very limited space that the dogs can walk off leash. Taking away this limited space from the people and the dogs is a bad policy and unfair. People benefit tremendously by walking their off leash. They are healthier and happier with this exercise. Also, well behaving dogs deserve to be off leash sometimes.

The best activity I can do, as an insulin diabetic for over 40 years, is to walk my dog at Ft Funston. Ft Funston has a special place in my heart. I have always taken my dogs there and enjoy seeing the bliss they have received frolicing with other dogs and the sense of freedom that they and I enjoy. My dogs have always been at their happiest there. When one passed away and I was given her ashes, I knew the best place for them was on the cliffs at Ft Funston. By not allowing dogs there you are not only my and my current dog of great times, but you will erase the great memories I have had in the past, knowing that others cannot enjoy what we previously experienced.

Please, do not let extremists take away a special place that dogs and dog lovers enjoy.

Correspondence: My wife and I are long term residents of San Francisco and we regularly use and enjoy portions of the Golden Gate National Recreation Area. Presently, we are around 70, but this enjoyment has gone on for many years. As others have, I am sure, we have noticed an increasing number of dogs, particularly off leash, interfering with what we believe to be the basic idea behind the park lands: the enjoyment of nature and the animal and plant life which so wonderfully populates it. Dogs, in a word, basically ruin the experience, and by running wild and being off leash add an entirely different element to the experience. One is no longer experiencing some kind of natural encounter, but put into some kind of whirling activity, balls being thrown, dogs running and barking, and the expected trampling of plants and attacks on wild life. We think dog owners basically have taken over the outdoor lands as if they are their own doggie playgrounds.

While it seems unrealistic to hope that dogs could be banned entirely from the national park experience, we think the dog plan that has been devised after extensive study is a good faith, fair, and relatively objective way of trying to control the most destructive aspects of running dogs and not banning them entirely. To be sure, any self-interested group could probably find reasons to dislike portions of the plan. But, overall it seems a rather excellent one. We heartily support it and hope that the national park service stands it ground and resists the efforts of dog owners to push their own agenda to the detriment of anyone who does not own one. We support the plan. David and Inge Nevins

Correspondence: This plan misses the real problem. The real problem is that in San Francisco there is a dangerous mixture of ignorant people and entitled people. People who think, for some ridiculous reason, that they are not responsible for what their dog does in a public space. The answer is not to take away the limited space that dog owners have left in which to let their dogs run, but to levy heavy fines against people who let their dogs run rampant and/or don't clean up after their dog. Fine these people. Fine them exorbitant sums (the state does need money, yes?) Until they realize that their mom is not around to pick after them...or their dog.

OR, if the snowy plover is really the issue, then the GGNRA is going to have to ban a lot more than dogs from their spaces. You'll have to figure out a way to keep the humans away from the parks as well. Who is doing the real damage to our natural parks? For the most part, it's the humans, not the dogs. All you need as evidence for this fact is to go visit Baker Beach, (where I take my dog five days a week), on two separate occasions. Go first on a gloomy/foggy weekday evening, when the majority of people you'll see will be people walking their dogs. Then go on a Sunday evening after a really nice and sunny weekend. The whole place is trashed, literally. The trash cans are overflowing with trash that the high tide is washing out to sea. The difference is shocking. Don't blame the dogs and don't punish the people who are good dog owners. Blame the idiots. Blame them and then fine them. If you need someone to hand out tickets, I'll be happy to go through a training session for it.

Sincerely, Kevin Rolston

Correspondence: I am writing to oppose the GGNRA draft dog management plan and "all action alternatives" that further reduce or ban dogs. Please keep our open spaces dog-friendly and plentiful. The Park Service should revise the dog management plan to:

- 7 Recognize dog recreation as a safe and healthy recreational activity and as important to the health and well-being of people, dogs, and communities, especially those in densely populated urban areas

7 Justify any changes with objective, reasonable scientific studies and findings and remove the many exaggerations, speculations, and misleading statements. Don't treat dog recreation as a hazard and nuisance despite facts to the contrary; it's compatible with other urban recreation

My boyfriend and I recently moved to the Outer Richmond specifically to be close to Ocean Beach. We have a 3 year old Husky who needs the open spaces such as Ocean Beach and Ft. Fuston for exercise. Just as we both place high importance on our own fitness, it is equally as important for Scando. It would be a travesty if beach and other recreation privileges were taken away for our canine friends. Please do not ban the dogs.

I am a tax payer who works in the high tech industry in Silicon Valley. I don't have children--I have dogs. Dogs reportedly outnumber children in SF, at least--I don't know about the rest of the Bay Area. The parks should serve the recreational needs of ALL citizens, including those of us who have dogs. My dogs are a lot less obnoxious and they have less of an impact on the land than most of the kids I see out there.

Furthermore, with the state's budgetary problems, who is going to enforce the new laws, and who is going to manage the sudden influx of dogs into city parks if dogs are banned in GGNRA lands?

GGNRA, you seem to have forgotten an important part of your charter-- RECREATION. I hope that one thing that comes out of this process is that you will be forced to have more accountability as an organization. You truly seem to have lost your way, and I will join any and all efforts to reign you in as an organization.

Correspondence: As a long time resident of San Francisco, voter, parent, environmentalist and dog supporter I strongly oppose the GGNRA's proposed policy to significantly restrict where dogs can walk off leash at Fort Funston, Crissy Field and several other federal parks accessible to San Francisco residents.

The GGNRA is not a wilderness area -- it is a recreation area. My understanding is that off leash areas in the GGNRA comprise less than 1% of the 78,000 acres managed by GGNRA. This recreation area is for people who live in an urban environment. The vast majority of San Franciscans have small or no yards and little public open space available for recreation. Many San Francisco residents have dogs and those dogs need exercise. The GGNRA's proposed policy completely fails to address both the needs of dogs and people who exercise with their dog.

Let's not try to fix what isn't broken. The 1979 Pet Policy is a proven model where people, dogs, wildlife and the environment successfully co-exist. My family of four recreate with our dog at Fort Funston so we ALL get exercise and ALL enjoy this wonderful park. The proposed policy will inevitably destroy the diverse sharing of these urban recreation areas.

This is an ill conceived plan. We need to make room for the plants, the animals, the people and the dogs. The GGNRA proposal fails to do that.

Correspondence: San Francisco is a unique place and the beautiful areas with off leash dogs are a wonderful thing. I am currently NOT a dog owner, but I have found that the majority of the time the dog owners in the off leash areas are very responsible for their dogs. There are a lot of dogs in the city that need a place to run. There are absolutely not enough viable places to do this if the new restrictions take place. There are plenty of places where there are already leash laws in place... Please allow dog owners and dog lovers to have the opportunity to continue to enjoy our part of the park, the way we have been able to in the past.

Correspondence: I am opposed to the new GGNRA dog management plan and any other plans that reduce or ban dogs from the open spaces or trails where they are currently allowed. There are so few places to exercise our dogs as it is, the huge reductions in allowable trails and areas will create overuse of remaining areas.

One of the things that makes the bay area such a desirable place to live is its number of recreational opportunities. Walking with my dog on a variety of trails and exploring new areas are part of the joy of living here. Recreational areas should be open to all.

Correspondence: I am writing as a voter, taxpayer, and responsible dog owner to oppose the GGNRA draft dog management plan. It goes too far in banning and restricting dogs. Walking and hiking with my dogs is one of my main forms of recreation. It's good for my physical and emotional health. Most of the California state parks and the federal parks are not dog friendly, which makes it more essential that the few places where dogs are allowed be maintained. I think the draft management plan greatly exaggerates the issues related to dogs in the GGNRA. To the extent that there are issues, these can be minimized by establishing different trails or parts of beaches where dogs are allowed and not allowed, so that RA users who don't like dogs can recreate without them being present. Most dog owners clean up after their dogs. Overall, I'd say dogs make less of an environmental impact than most humans. The presence of dogs also makes the beaches and trails feel safer and more family friendly. Thank you for considering my input. I hope the draft plan will be revised to reflect a more balanced view of the need for dog-friendly recreational space adjacent to the SF urban/suburban region.

Correspondence: I'm writing to oppose the GGNRA draft dog management plan and any additional limiting or banning of dogs in GGNRA parks. These parks are supposed to be for the public, by banning dogs, by limiting dogs, you are limiting citizens from enjoying these open spaces. Dog owners are citizens too. We pay taxes. I go to Fort Funston every week if you ban dogs I will no longer be able to use this space. I understand the need to require dog owners to abide by rules, but banning and limiting isn't an option.

Correspondence: I lived in San Francisco for a couple years with my rescue Border Collie pup and the open space available to dogs was such a wonderful asset. I actually chose my house because it was within walking distance of Fort Funston and I was able to walk/run with my dog before work. If she were leashed she certainly would not have been able to work off all her puppy energy. I attribute her off-leash romps as a primary reason along with training that she is such a well behaved adult.

Currently, I live on the peninsula and there are very few off-leash dog areas. I actually pay a substantial fee to hike off-leash with my dog locally, and would much prefer to pay GGNRA or another government agency rather than a private group.

Dog friendly areas are such a benefit to the community, it would be a great loss if dogs were restricted.

Correspondence: Please do not implement the content of the draft that will curtail recreation within the GGNRA of dog walking on or off leash. We have been enjoying these areas for many years with very little impact on wildlife or habitat of other species. Co-existence has been, and is, the key to civilized life. Dog owners comprise a huge percentage of the population. They are our companion animals and thus, help to make us more human by our relationships to them and how we care for them in an urban setting. The GGNRA is really an urban park and should have it's own unique rules by which we can all co-exist. It is not a wilderness park but is accessible by the population.

We live in the Soma neighborhood and there are very few places to take our basset hound to in the city. There's an off-leash park all the way across town in Golden Gate Park, and there's Chrissy Field and Fort Funston. Marley, our hound, loves Chrissy Field. He doesn't both any people, he doesn't go in the water, he doesn't go near the wildlife.... he just likes to say hello to the other dogs and to take in all the wonderful smells.

Almost all people with dogs control and pick-up after their dogs and walking with our dogs is good exercise and makes us and our dogs healthier and safer. On the whole, I find family dogs to be far better behaved than people and have seen no serious safety issue with a well exercised, socialized, and trained dog. This plan only makes it more difficult for people to responsibly care for their dogs and themselves.

Regards,

Mark Hunter

Correspondence: Dogs are a part of many families in our communities and our two dogs go everywhere with us. We do a lot of hiking and beach walking with our dogs and always follow all rules and pick up after our dogs. When I go running in Spring Lake Park, I bring my dog partially for protection--and will not enter the park for a run without him. Before you punish responsible pet owners, like myself, I would encourage you to do an indepth study of the effects that banning dogs from the parks would have on all involved. I have not read one compelling reason to ban dogs from the parks and feel that it is the effort of a few people who do not like or understand dogs. Please do not sign such a wide-stretching ban without a more indepth study to be fair to all involved.

Sincerely Annette Thomason

These dog facilities are critical to the Canine loving population and keep dogs out of our shelters. Taking these areas away from dogs will cause dogs

to have unspent energy, develop aggression, and separation anxiety issues causing their owners to decide they are more work than they bargain for and shelter dumping will skyrocket. Please leave these parks alone.

Correspondence: I oppose the GGNRA draft dog management plan. Humans walking/hiking with their dogs is a safe and healthy recreational activity. Don't treat dog recreation as a hazard and nuisance despite facts to the contrary; it's compatible with other urban recreation.

Fort Funston is the GGNRA space I visit with my dogs the most. Walking/hiking there is a pleasure. I am a long time dog professional (20 years experience - certified, etc) who deliberately avoids fenced in dog parks. Fenced in dog parks are where uneducated owners and uneducated dogs go - dogs with no training or discipline and owners who sit on benches yakking on cell phones and ignoring their dogs. Fenced in dog parks are a nuisance. They are noisy - often smell bad and create behavior problems.

Please keep GGNRA spaces open for human and dog use!

b

Correspondence: My suggestion, is that individuals may "earn credits" that would allow them to have off dog leash privileges. Using this scheme, one would enroll in a program. The program could be administered by a non-profit agency associated with GGNRA. The agency would on a regular basis conduct such activities as beach clean up, maintainance and environmental improvement. Those individuals who participate in the program would earn the right to have off-leash dog ability. These credits would not be able to be swapped [like carbon trade-offs], or sold. It is my opinion that this is a win-win solution. If you would like to hear more from me, please write me for additional comment.

Correspondence: Dear Superintendent Dean,

I love Crissy Field and Fort Funston and visit these places regularly. I no longer own dogs, but I used to walk my two Irish Setters on Crissy Field and the adjacent beach every day for 15 year. Their off-leash recreation contributed to their long lives and quality of life, as well as my own. Never once during that period did I encounter one negative impact to the environment from any dogs in the area. In fact, I saw countless snowy plovers and other birds along the shore in harmony with the dogs and humans nearby. I always cleaned up after my dogs, who were very well trained and socialized and always promptly responded to voice control. Like the vast majority of off-leash dog walkers, I was a responsible dog owner.

The GGNRA already has an extremely small amount of space set aside for off-leash dog walking as it is, and the proposed "Preferred Alternative" plan to limit the available space is draconian, pointless, absurd, unfair, and unrealistic. This plan would destroy the quality of life for thousands of people and dogs who deserve their continued enjoyment of and recreation in our open spaces. The limitations presented in the "Preferred Alternative" are way too radical in scope. This plan was obviously crafted by a very narrow minded small group biased against dogs, with little to no scientific evidence to justify their proposal.

The real impact to the environment of the GGNRA is from humans who do not pick up their trash. I have personally picked up huge amounts of food wrappers, plastic beach toys, cigarette butts, and other human trash.

The GGNRA needs to realize that these open spaces have always been used by the people of San Francisco and the Bay Area for recreation that includes off-leash dog walking, and to limit these spaces in such a myopic and draconian manner amounts to nothing more than environmental extremism. I am certain that a much more fair and balanced compromise can be reached than this ridiculous and misnamed "Preferred Alternative."

Sincerely,

Jonathan Maguire San Francisco

Correspondence: commenting on proposed dog laws for the park system. I dont think there is a problem with the current dog laws. I feel as long as the dog is under control or leashed it is not a problem. clearly some people are not very responsible for there dogs when there out walking them and that certainly can scare people alot. as long as the dogs are not chasing birds ect like at the lagoon at rodeo beach, its ok. I think the dog owners should be fined if they are causing problems. but I dont think the dog owner should be punished for a few bad owners. walking dogs is good exercise for the owners & the dogs. it also allows people to meet & pet the dog, and who knows maybe find a new friend. dont restrict the dog owners access. I currently do not have a dog. thank you jim clausen

Correspondence: I support these rules wholeheartedly. They still allow dogs to share our parks, but do so in a responsible way. I have been a volunteer in the Park since 1993, and have seen the damage that a small number of uncontrolled dogs can cause - along with the impact of the high numbers of dogs, even when they're under control. It's frustrating to see habitat restoration work destroyed by dogs digging and romping; as a bird lover, it's painful to watch dogs chase birds who are trying to rest or feed; it's annoying to encounter ill-behaved dogs who jump on people, tussle with other dogs and steal food from picnickers while their inattentive owners ignore the situation. There's the issue of dog-walkers running their businesses in the parks without any oversight or payment to the park (imagine the outcry if there were as many T-shirt vendors as professional dog walkers at Crissy Field). And of course, there's all of that not-picked-up dog waste...

I like dogs a lot, it's just the owners who can be problematic. We live in a densely populated area, and we have to be able to share these spaces. The dog owners have been dominating the discussion for years, and I'm glad that other voices are being heard. I don't mind sharing the park with dogs, but I

don't want them ruining the experience for others (including the wildlife).

Thanks for taking these sensible steps, and I wish the park good luck in enforcing the new rules... they'll need it.

Correspondence: Thank you for your requests for comments and the extended deadline.

I've been volunteering at the Marin Headlands once a week for much of the last 10 years (and enjoying the nearby trails between Rodeo and Tennessee Valley and Muir Beach, and the area around Bass Lake for much longer than that). While I understand the enjoyment people get from getting outside with their dogs, my concern and priority is for the wildlife and fragile soils and native plants growing in the Headlands and in other parts of the Park.

There are birds that nest on the ground in coastal scrub and riparian areas. Dune areas and their plants have been largely destroyed because of human use. Wild animals in parkland, and birds on beaches are killed or scared away by dogs off leash (and probably on leash as well). I'm very concerned about Muir Beach and Stinson Beach, because with the Headlands, those are places I'm most familiar with.

I notice that you have seasonal on leash restrictions for snowy plover areas and such. I have to trust that you have found that onleash is sufficient. I

mistrust dog owners enough that I'd ban them at such times altogether.

Finally, as a frequent volunteer/visitor, I get really disgusted and have zero tolerance for dog poo that's left behind, and just the possibility of it makes my visits to the beach much less enjoyable. For this reason alone, I think that at least half of your beaches should be dog-free.

Thanks so much for addressing this issue.

Sincerely, Allison Levin

Correspondence: I am writing to oppose the GGNRA draft dog management plan and "all action alternatives" that further reduce or ban dogs. Please keep our open spaces dog-friendly and plentiful. The Park Service should revise the dog management plan to: 7 Recognize dog recreation as a safe and healthy recreational activity and as important to the health and well-being of people, dogs, and communities, especially those in densely populated urban areas

7 Justify any changes with objective, reasonable scientific studies and findings and remove the many exaggerations, speculations, and misleading statements. Don't treat dog recreation as a hazard and nuisance despite facts to the contrary; it's compatible with other urban recreation!!

As the owner of two well behaved dogs (one is a service dog) I strongly oppose the GGNRA draft dog management plan. I work at the SFVA medical center as a professional health care worker and see on a daily basis the uncomparative value dogs provide to both Veterans and non Veterans alike, seeing eye dogs, seizure alert dogs, companionship dogs, etc... We need to recognize the insurmountable value service dogs provide, outside of even just a family relationship, and start to give back to those four legged animals that give so much to us through their endless service, loyalty and companionship...is 1% area really too much to say thanks?

This world is coming to be about nothing but GREED--are there those that are that shameless that even the dogs are embarrassed for us.

Correspondence: I think this is completely out of the rights of GGNRA to enforce this law. They will not only force people to move out of the city (in which I guarantee there are more people living in the city with dogs than with children)and

will also put small business owners at risk in an already deteriorating economical state in CA. Dogs are a part of peoples family. Some by choice, others b/c they need them for service issues, and others b/c they can't have children and need companionship. If you take away the places that make san francisco dog friendly and a desirable place to live therefore eliminating the amount of exercise for dogs - it will be more likely that dogs will be unhappy and act out. Also - does anyone remember that it was a Man who stabbed a DOG for no reason in fort funston months ago???? It wasn't a dog who attacked a person it was a person attacking a dog. So why aren't humans banned from the park - why is it dogs are? It's an outrage and frankly completely financially irresponsible and dumb for the city to enforce this new legislation There are 100's of people who dog walk as a job or a business and you will be helping to raise unemployment in the state of california and making a stand against loving dog owners who frankly are the ones who support and contribute to the park funds. It is not right and I guarantee noone will ever abide by the legislation - you will have to be able to ticket thousands of dog owners in one day b/c the owners will never give in.

Correspondence: I am writing to oppose the GGNRA draft dog management plan and "all action alternatives" that further reduce or ban dogs in open spaces.

My wife and I are both strong supporters of the park system and I can promise that our support will drop off precipitously if this and similar legislation is passed. I know that we, along with many other responsible dog owners, feel the same way. There is a saying of "don't bite the hand that feeds you". Surely, you must realize that pet owners are some of the highest utilizers of parks/park services. Logically, these same people are likely to be the parks departments greatest supporters. This bill is filled with erroneous conclusions, falsely stated "facts". As the parks department is under greater scrutiny than ever, you must realize that it is more important than ever to proceed carefully with these types of broad sweeping reforms. I for one can promise you I will not donate a single cent to the Parks department (currently, I contribute between 200-300 dollars/year) if this goes through. Please feel free to contact me regarding any questions or comments.

Correspondence: To Whom it May Concern,

I am writing this letter in support of dogs. As a lifetime dog lover, and current dog owner in the city of San Francisco, I am completely floored over the attempt to ban dogs from being off leash. I do understand the need to preserve wilderness, and I myself am an advocate for protecting land and animals. However, there must be balance, as with everything in life. If this land is taken from the dogs, they will have no where safe to play in the city. The land has been being shared with dogs, humans, plants and animals for the last 1,000 years. I do not want this plan to pass.

Correspondence: 20 April 2011

Mr. Frank Dean, General Superintendent GOLDEN GATE NATIONAL RECREATION AREA (GGNRA) Building 201, Fort Mason San Francisco, CA 94123-0022

SUBJECT: GGNRA LAND-USE POLICY / DRAFT ENVIRONMENTAL IMPACT STATEMENT for DOG MANAGEMENT IN GGNRA

Dear Superintendent Dean:

We are writing to comment on the above captioned Draft EIS. The "dog management" issue is emblematic of a much larger problem, in that there is a serious lack of understanding of appropriate land-use policy when formulating design-guidelines for our parklands.

Fundamentally, the GGNRA is composed of two distinct land-use patterns whose basic criteria are at direct odds with each other: urban & wilderness.

The Presidio & Ocean Beach areas of San Francisco are an integral part of the urban-parkland fabric, within the densest urban area west of the Hudson River. Conversely, areas of the GGNRA - north of the Golden Gate and south of Ft. Funston - are part of a rural-wilderness domain that is the polar opposite, as viewed in land-use planning.

Design priorities for wilderness parks are not design priorities for urban parks.

While parks do and should contain a variety of components for the pleasure & enjoyment of visitors, the emphasis on individual park elements should be based on the overriding requirements of appropriate land-use patterns.

Examples include the following contentious design issues: Dogs vs. Snowy Plovers; Exotic Plants vs. Native Plants. In the Wilderness Park (Pt. Reyes), Plovers & Native Plants would have priority and areas for Dogs & Exotic Plants would be contained in a few, small, isolated areas only. In the Urban Park (San Francisco) Dogs, Ice-plants & Monterrey Cypress would have priority over Plovers & native plants.

The emphasis in urban parklands would be: recreation, human (& canine) activities with a few, isolated, natural areas interspersed throughout. In the Wilderness Park, the emphasis would be: sustainable natural areas, native plant restoration, and protected habitat with a few, isolated, recreation spots interspersed throughout.

The mission statements of the National Park Service (NPS) & GGNRA address Wilderness and Historical Preservation issues only. The "dna" of these agencies renders them as not an appropriate steward for San Francisco's small and limited urban parklands. Every few years, over the past two decades, the GGNRA develops another policy-ban on dogs. After years of: meetings, studies and policy changes, the issue never goes away. The GGNRA will not allow dogs within their realm.

CONCLUSION: Either the GGNRA comes up with a strict 2-park policy employing proper land-use principles or the San Francisco portion should be returned to the San Francisco Recreation & Park Department for proper care & management.

Sincerely,

Stephen Massey & Patricia Luna-Massey San Francisco, CA 94110;

cc: Sen. Diane Feinstein; Rep. Nancy Pelosi; Hon. Ed Lee, Office of the Mayor; SF Bd. Of Supervisors Land- Use Committee; SF Rec. & Park Dept.; Ocean Beach Dog Group; SF Dog.

Correspondence: I am writing to oppose the GGNRA draft dog management plan and "all action alternatives" that further reduce or ban dogs in open spaces. I have been a resident in Montara for 14 years and initially moved here because of what the open space on and around Montara Mountain offered. Although I am happy that GGNRA is acquiring this space, I feel it is unfair to impose a ban on dogs as a blanket policy. We are a community of responsible dog owners: leash when necessary, pick up after our dogs, and co-exist peacefully with equestrians, wildlife, bikers and hikers. Please consider that this space is different, and less populated, than most other parks this will impact. There is not a one plan fits all solution, and I hope you will consider providing an alternate plan for this particular space. At minimum I would like to be able to walk my dog on leash; and off leash during less populated hours. If this space is eliminated as an option for dogs, we owners will be forced to walk on streets, where there have been several hit and runs.

Thank you for considering thoughts on this matter.

Best, Lisa Gilmour

Correspondence: "I am writing to oppose the GGNRA draft dog management plan and "all action alternatives" that further reduce or ban dogs in open spaces."

I am a 33 year old mother, who lives on the beach in Northern California. For most of my life, I have had at least one family dog. They have been part of our family, joining us in almost every outing, from daily beach walks to annual camp outs. They have also been the inspiration to be active in nature, during times I may not have been normally. On days where I may have been lazy or too stressed out, instead, my dogs have urged me to get outdoors, to breathe some fresh air, to appreciate my outdoor surroundings. In our hectic lives, it is these times that help keep us grounded, relieve our daily stresses and therefore allow us to become better people.

Although it has changed in more recent years, during most of my walks, my dogs have been off leash and under my voice control. They have been able to run freely and play, jump in the water, and meet other dogs. It is one of the most enjoyable parts of my day, and surely my dog's. I have met so many other dog walkers in my outings. We all carry poop bags to be sure to clean up after our dogs, and most of us carry litter bags as well, to pick up pieces of trash left by others, who apparently also enjoyed the outdoors, but didn't choose to keep it beautiful and litter free. More times than not, it is the dog walkers that do the majority of litter pickup. When you have a dog that urges you to get out each day (at least once) you become more in tune with nature, and in turn join hands in keeping it clean for others. It is very rare, that I see a dog fight, an aggressive or bothersome dog, or an irresponsible dog owner in my walks.

Closing or limiting the ability to bring dogs on trails, parks, and beaches is a heartbreaking thought. It means you are denying an important ritual, and depressing the psyche for many people. It means more stress, caused by not having the ability to walk easily and accessibly. It means declining health both mentally and physically by not getting daily exercise outdoors. It means less active people outdoors-those who care for our environment because we appreciate it on a daily basis.

I urge you to allow access for dogs and their owners on our beaches, trails and parks for the general health and sanity of our communities. It is crucial to our well being .We all need to be able to enjoy the outdoors with our best companions.

Correspondence: I'd like to start by asserting that I'm very fond of the Golden Gate National Recreation Area and of Point Reyes National Seashore, and support their it's goals of protecting those areas, including the land and adjacent sea, the animals and the biosphere in as natural a condition as possible, while allowing reasonable access to humans, while protecting the natural environment.

I visit the Monument and Seashore frequently, mostly in Marin County, but also in San Francisco and along the Peninsula. I frequently stroll, hike and picnic there, and occasionally backpack and ride horses there. And I have even bicycled there an rare occasions.

I like the quiet pleasure of observing and enjoying the natural environment and its population of animals on the ground, in the verdure, in the ponds and streams, and in the air, not to mention the scents of flowers and plants.

I am fond of dogs and other pets, but do not believe that they should be in the Monument ans Seashore except in a few places, and under strict on-leash

control, except in carefully designed enclosures. I see, almost every time I'm in the Monument and Seashore, a number of dogs off leash, both in areas where there are lots of people, and on trails and in the wilderness, where they should not be, either on or off leash. I understand that even the scent of dogs and other domestic animals can disturb the natural movement and life of wild animals, including people, even when on leash.

I hear a lot of vehement arguments put forth by people who want the maximum freedom for their pets and themselves, and feel that those people are extremely self-serving me-first-and-always types who care only for themselves. Dogs don't need to be everywhere.

Please consider this as a strong vote for preserving the natural and physical nature of the Monument and Seashore, and the strong restriction of pets, bikes and horses.

Thank you for planning for a balanced usage of these resources, and for eliciting, accepting and taking the time to read and consider everyone's input.

My best regards,

Richard

Correspondence: I am writing to oppose the GGNRA draft dog management plan and "all action alternatives" that further reduce or ban dogs from the park. Please keep our open spaces dog-friendly and plentiful. The Park Service should revise the dog management plan to: 7 Recognize dog recreation as a safe and healthy recreational activity and as important to the health and well-being of people, dogs, and communities, especially those in densely populated urban areas 7 Justify any changes with objective, reasonable scientific studies and findings and remove the many exaggerations, speculations, and misleading statements. Don't treat dog recreation as a hazard and nuisance despite facts to the contrary; it's compatible with other urban recreation and a necessity to the well-being of humans and dogs. I am a recent graduate of UC Berkeley that grew up in Montara, CA. My family moved from Simi Valley to Montara when I was young. A huge part of the reason why my family chose to live in Montara has to do with the beautiful open spaces available to recreational use in the area. We are animal and wildlife lovers and so were thrilled that Montara offered us the opportunity to get out in nature with our dogs everyday. Walking on Montara Mountain

with our dogs has provided both us and our dogs with great daily exercise and relief from everyday stress. Exercise is extremely important to me as I have a hip disability and need low impact regular exercise. Walking my dog is motivation to get outside and walk everyday. It also allows my family and I the opportunity to meet other community members and their dogs. I have never witnessed an off-leash dog on the mountain that I considered a nuisance or a danger. Such dogs are kept on leash by their owners so that they do not ruin the outdoor experience for other dogs and their owners. There are baggies and trash cans available to dog walkers that allow them to pick up after their dogs. Community members regularly take the trash home so that the dogs have a minimal impact on wildlife in the area. I feel that there is no factual basis for the move to exclude dogs from these areas. People living near parks typically do so by choice and so have a deep respect for the wilderness. They train their dogs to share this respect and do not allow their dogs to harm wildlife or ecosystems. It is essential that conservation and management plans take into account the interests of all stakeholders involved in an issue. The dog owners make up a significant majority of the stakeholders in this case. We are residents that chose to live where we do largely as a function of the availability of open spaces to us and our dogs. We are also some of the most frequent users of the park. Part of what defines this place to us is the ability to allow our dogs to run freely (as long as they are well behaved) while we hike freely in a place that has long been our home. This measure is in danger of pitting park managers against residents, which could be detrimental to all stakeholders involved in this issue. It is essential that the management of the park is respectful of the needs of neighboring community members because effective conservation requires the help of an entire community. For example: since I was in elementary school, my family, friends and I have engaged in "trail days" to help maintain the open spaces surrounding us and ensure that we have only a positive impact, rather than a negative one. I sincerely hope this measure is not passed. Montara Mountain had a huge role in allowing me to formulate my identity and my heart would break if I could no longer use the park as I have since I was a child. I have a deep respect for this place, as do all residents and we actively maintain the ecosystem rather than harming it. A closer examination of the park and its use by residents would surely reveal my testimony to be true and so I ask that this measure not be passed and that dogs and their owners be allowed to continue to use the park with the same love and respect that we have for years. Thank you.

| Correspondence: | I am strongly opposed to a change in the leash laws and any restrictions on dogs in park areas in Marin or trail areas. I know I voice this same thought with many others who have pets and use the trails and open spaces and parks in a responsible manner. As in any case, sometimes there is a special case, but the vast majority of pet owners in Marin are responsible and the rules need to favor the vast majority of people. thank you. | | |

The San Francisco Bay Area is home to many people who share their lives with dogs. We enjoy the open spaces. That enjoyment is multiplied many fold when our dogs enjoy them with us. Well behaved dogs and owners, who respect and take care of the environment, need access to GGNRA trails and parks. Peaceful coexistence in the park lands is possible.

Correspondence: I'm writing with a heavy heart to object to the GGNRA draft dog management plan and other such plans that limit our access to GGNR areas with our dogs. Our family lives in SF, and our dog is a very important member of our family. Off-leash recreation in the beautiful parks and beaches is an important part of our lives - immeasurably contributing to feelings of community and well-being. We have found the vast majority of dogs and dogowners to be respectful of the land and of each other. Restricting access will have profoundly negative effect on our quality of life, and the overall quality of our citizens. I'm deeply concerned that this plan might be implemented.

As a scientist, I find the report fraught with unsubstantiated and ill-considered conclusions. I urge that a reasoned and considered approach to land management be proposed and implement rather than the one offered currently.

Thank you for the opportunity to comment. I hope you take my comments into consideration.

Correspondence: I am writing to oppose the GGNRA draft dog management plan and "all action alternatives" that further reduce or ban dogs in open spaces.

I have spent the last 10 years running nearly always with my dog through the Marina Green and along Crissy Field. This dog has never once set foot on any cordoned-off area or crossed into any out-of-bounds territory. She has also never once been confrontational with any stranger or dog while off leash. In my mind the idea that it improves the habitat and usage of the area to heavily restrict HER is tantamount to the idea that it improves the habitat

and usage of the area to heavily restrict ME.

In my experience, dogs on leash are far more likely to be confrontational with other dogs and with people than dogs off-leash. Most dog owners take this for granted. Putting dogs on leash will do nothing to improve the safety of the area. In my experience, the least safe area for my dog to meet another dog is when both are on-leash on a city street. Don't turn what's left of the dog-friendly territory in the GGNRA into such an unsafe place.

Exercise is a core part of my life. Exercise happens with my dog. My dog is unleashed as much as possible during that exercise. I would likely vote with my feet and leave the city altogether if this plan goes through. And I would advise strongly against anybody I know visiting a GGNRA property ever again. Please reconsider this ill-advised plan.

Correspondence: I am writing to oppose the GGNRA draft dog management plan and "all action alternatives" that further reduce or ban dogs in open spaces. I own a year and a half old American Bulldog and know a LOT of people that care about their dog's freedom to run around certian parks without having to worry about what "could" happen or anything like that. My dog is trained by a animal behaviorist thru PETCO in San Mateo, CA. I am a Dog Trainer also and know that this "Ban" is rediculous to me and to my students and especially to my DOG! If people are worried about "vicious dog's" or

anything ridiculous like that, then maybe there should be a sign saying 'off-leash dogs permitted, if you are afraid of being licked to death or dont like having happy wagging tails and drooling faces near you....find another place to walk' sounds silly right? almost as silly as "off leash dogs not allowed because people are afraid of 'potential problems' caused by THE OWNER not following simple rules to lead to a happy and kind dog" I dont think that dogs should get the short end of the 'bone' because they might not have been trained well. most owners know that if thier dog isnt trained properly then they can put the leash on him, or DONT GO TO AN OFF LEASH DOG PARK.

Correspondence: The new rulings by the GGNRA regarding limiting friendly dogs and their responsible owners is outrageous and without merit... It is too restrictive! I speak for everyone, esp. disabled seniors...who are very limited as to where they can access recreation areas and get exercise. The terrain is very limiting any way. It is unpresidented to disallow mindful well-behaved people with dogs, who are following the environmental safety issues. Very specfically....do not take away The Mori Point walk-way from our Pacifica Pier, and the off-leash areas of Fort Funston and The Great Highway in S.F. These are only truly accessible for the handicapped, who also need freedom, recreation rights and access without parking hassels and increased stress. The new "proposed rules" are Draconian and totally too harsh. Please modify these plans and keep our freedoms from being crushed. Thank you for reconsidering the benefits to all, they should not be shortsighted and cruel. From Alexandra..who is 64 w/ limited mobility and her grandchildren...Angelina and Sophia, we want to run free with our little non-threatening dogs who are 80% maintained on their leashes....Thank You.

Correspondence: I am writing to ask you to please not limit the dog-friendly areas within the GGNRA, especially Fort Funston. Areas where I can exercise with my dog are LIMITED enough as it is! The GGNRA is supposed to be a RECREATION area for ALL Americans. Although almost 50% of Americans own dogs and pay taxes to support the GGNRA, less than 20% of the area is currently available to those of us with dogs, and only 1% available for dogs under voice control. And ALL the proposed alternatives,

based on very a faulty DEIS, propose limiting them even farther!

I am disabled and therefore unable to exercise my dog on a leash. Fort Funston is just about the ONLY place on the peninsula where my dog and I can get the exercise we need. I have never seen problems with dogs there, despite the fact that I am very unstable walking and there are lots of dogs each time I go. The dog owners tend to police themselves as well as their dogs, realizing what a precious resource we have in an off-leash area like Fort Funston. I'd estimate that over 90% of the users of Fort Funston are dog owners. I can't imagine what it would be like if all those dogs were limited to a much smaller area as proposed in the new guidelines. I would no longer be able to take my dog because I cannot get down to the beach area where they would be allowed and the other area is too small and close to the parking lot.

Dogs are like children; they are much better behaved when they get enough exercise. That is very difficult for families in urban areas and even more so for someone with disabilities. PLEASE don't take away the few places where my dog and I can get our needed exercise in a responsible manner. The 1979 option has worked well for years; why cannot it continue to do so? If small modifications are necessary, meet with responsible dog owners to work them out.

I am an environmentalist. I support the EIS PROCESS and protecting wildlife and ecosystems and the efforts at Fort Funston to rehabilitate the dunes. But I do NOT support the draft DEIS for the GGNRA; it doesn't seem to be based on good science or even on good observation. Besides that, Fort Funston was a FORT; there is already huge human environmental impact from it being a fort, and I don't see them talking about removing the concrete bunkers. The paved paths at Fort Funston make it possible for someone like me to walk there, and my dog does no more than leave footprints! Many recreation areas allow trail bikes, motorcycles and horses, all of which leave more environmental damage than dogs.

Please do not limit the off-leash and dog-friendly areas within the GGNRA. THANK YOU for listening.

Correspondence: Please reconsider your plan to end off leash dogs areas in the GGNRA. I think if you ever went to any of the GGNRA recreation areas on a regular day, you would see that dogs and dog lovers are your main users. Please consider ticketing people for littering cigarette butts in our parks. Cigarette

butts contain over 4000 chemicals that are toxic to the environment, causing much more damage to wildlife than dogs. Dogs need exercise. It would take very little enforcement on your part to solve any of the problems that dogs actually cause. You could ticket people who don't clean up after their dogs and then use that revenue to pay for other improvements like signs and additional enforcement. There is a much better solution to whatever you are thinking is the problem that dogs cause than just outright banning them. Please consider thinking a little bit. Andrea S. San Francisco native and property tax payer. Major donor to animal rights issues.

Correspondence: I am a frequent visitor to the area and to Ft. Funston and am writing to oppose the GGNRA draft dog management plan and "all action alternatives" that further reduce or ban dogs. Please keep our open spaces dog-friendly and plentiful.

Dog recreational areas are not hazards. In all the times I've been to Ft. Funston, I've never seen an "altercation" - "Altercations" referred to by Park officials. It just doesn't happen. Dog parks are more civilized places of recreation than any other park I've been to. No loud boom boxes, no unruly groups of kids hovering around, no one scoping out the parking lot for purposes of theft. People who use GGRNA are civilized, keep the park well-maintained, clean and SAFE.

The Park Service needs to revise the dog management plan to: 7 Recognize dog recreation as a safe and healthy recreational activity and as important to the health and well-being of people, dogs, and communities, especially those in densely populated urban areas

7 Justify any changes with objective, reasonable scientific studies and findings and remove the many exaggerations, speculations, and misleading statements. Don't treat dog recreation as a hazard and nuisance despite facts to the contrary; it's compatible with and even better than other urban recreation areas.

Thank you for your consideration.

Correspondence: Please keep the lands in the GGNRA dog friendly, by this I mean off-leash. I am a 70 year old woman with two dogs. My exercise consists of walking my dogs off-leash in area where there are no cars. My dogs are well socialized and friendly to all people and dogs. I get great enjoyment seeing my dogs run and play in these areas. A walk with dogs on leash does not give the same benefits to either myself or the dogs. Typically dogs that are on leash are much more aggressive because they feel handicapped. I live in Montara because I love the outdoors and the opportunities it affords me with my dogs. In unincorporated areas most people have dogs. I have been walking on trails in the area for more than 6 yrs. and I attribute my good physical health to the fresh air and exercise I get and I also attribute my good mental health to my quiet times walking and reflecting on nature. Most of the people I meet on the trails have dogs. The people that use the trails should have more consideration than people that don't use them. I clean up after my pets; do horseback riders do the same? Do gophers replace the dirt displaced by them? Those answers are no. These areas under control of the GGNRA are not pristine areas and should not be treated as such. Let those that use these areas have the freedom to enjoy them. The dogs do not harm or dig up these areas and they certainly can't catch the birds. You have not been elected, however, your paycheck comes from the citizens that you wish to take away enjoyment from. In this time when everything is going up in price a peaceful walk which is free is one of the best things in life. Don't take it away please.

Correspondence: Dear Sir or Madam: Please do all you can to limit the damage done to bird and other wildlife habitats by dogs on leash and off leash. My experience has been that a very large number of dog owners are irresponsible in managing their animals. National parks and recreation areas should embrace and protect the dwindling natural resources and wildlife. Dog owners needn't be given the right to despoil these rare places. Thank you for your attention to this matter. David A. Gannon

Correspondence: I am writing to oppose the GGNRA draft dog management plan and "all action alternatives" that further reduce or ban dogs in open spaces. As a recent resident to the area, I was frustrated at how many places had "no dogs allowed" signs. Even on the beaches. It was so disappointing. And then I

found Fort Funston! What a thrill for both of my dogs as well as our family! We could walk the paths, walk up on the "tundra" (I moved from Alaska!), as well as go down to the beach. The freedom to run, walk, play ball, or just sit and look at all of the different breeds of dogs - and owners - has been wonderful. Please do not take this away. There are plenty of places for folks who don't have or like dogs to go, believe me I have seen most of them. Please leave this area as it is. It's works, no need to "fix" it. Thank you so much for your consideration.

Correspondence: I'd like to commend the GGNRA for putting forth so much effort to provide site prescriptions that address the multitude of concerns a National Park needs to address. I'd also like to commend the GGNRA for the great effort made to engage the public and solicit constructive comments--not an easy task!

I personally, and in no way representing the organization for which I work, offer the following recommendations:

1) No commercial dog walking should be allowed inside the National Parks. If an individual owns more than 3 dogs, then s/he should be granted a special permit to walk them all at once. This opportunity should not be extended to for-profit individuals.

2) At Mori Point, the Pollywog Path should be open to on-leash dogs. The maps in the document show a pond adjacent to the trail; however, this location was not selected during the pond creation project in 2007, creating a larger buffer between this trail and the ponds, which is the area considered the most sensitive habitat. Furthermore, the impact of dog "scents" (urine, feces, body odor) is not introduced to this area by allowing dogs on trails. The yards on the other side of the fence adjacent to this trail house several dogs which release scents constantly.

3) At Sweeney Ridge, I propose that any paved trail that routinely supports

service vehicular traffic allow on-leash dogs. The impact of dogs versus vehicles seems somewhat minute. I wonder what impact vehicular traffic has on surrounding wildlife.

4) I agree that no new off leash dog areas be created inside the GGNRA. In my opinion, off leash dog recreation is a need that should be met by city and county parks.

5) I agree with the document that attempts to create easy to understand/enforce areas for dog-focused recreation and other forms of recreation. This is the only way that the public can understand closures, as the seasonal closures at areas like Ocean Beach and Crissy Field have been so poorly complied with.

6) I agree with the compliance based management described in the plan. Allowing park users opportunities to improve their behavior before more restrictions are placed appears more than fair, and a 75% compliance level is a very generous level to expect.

7) I think that the Pedro Point prescriptions were based on very little information, as the park is currently relatively unfamiliar with the trail systems and resource issues at this site. I propose that the park revoke this prescription and consider the site a "New Land" and follow the prescription provided for such areas.

8) I do not agree with the New Lands prescription, which precludes dogs entirely from New Lands until opened in the Compendium. This puts the Park in a very difficult place when dealing with new communities. I propose that the Park approach the situation in a more realistic way to allow for the Park to make informed decisions without isolating entire communities. In new park lands with unorganized tangles of trail systems, designating "trails" versus "social trails" takes time--let alone determining which designated trails should allow dogs and which shouldn't. Perhaps the language could read something like "Polygons shall be drawn inside new Park lands that designate where dogs are and are not allowed based on the current understanding of sensitive areas. In polygons allowing dogs, on-leash dogs shall be allowed on trail features within those trails, but not in any off trail areas within that polygon." This would be easier to sign and enforce, as many new sites have large numbers of redundant trails that are not worth signing independently AND allows for law enforcement officers and park users to understand which "trails" are allowed and are not.

Correspondence: Hello GGNRA Dog & People Management Powers That Be:

One of the reasons I tell everyone who will listen that the Bay Area is the best place in the world to live is because of its love for dogs who coexist beautifully with all human residents.

Dogs make people better people and our community a better place. Dogs, like people, need to run and be free. This is inarguable.

Please consider Alternative A (the most dog friendly) for all the parks listed in the document.

Thanks for listening.

Annie Sammis

Correspondence: This DEIS is invalid because it fails to meet its legal obligation to take into consideration the negative effects the proposed changes would create for humans, their dogs and the surrounding environment (e.g. local parks). Further, the studies/science utilized to support allegations of damage to resources in the GGNRA are fatally flawed - the positive impacts are ignored and the negative impacts are unverified. For example, this DEIS omits the Warren study of the snowy plover which concluded recreation of dogs and their owners does not negatively affect the feeding of the plover. Instead the DEIS relies on a study performed by Audubon activists who recommend Draconian restrictions which are unjustified in areas that are not critical habitat. Therefore, I believe the 1979 Pet Policy should be implemented in its original form with no restrictions on off-leash recreation at Ocean Beach, and it should be institutionalized as a Section Seven Special Regulation. Further, I believe that all properties added subsequent to the 1979 Pet Policy and in the future should have historical off-leash

recreational usage allowed. This would accurately reflect the enabling legislation for this National Recreation Area which GGNRA management has held in disregard for quite some time. I also believe the GGNRA's inclusion of a Compliance-Based Management Strategy as well as the GGNRA's failure to commit to a Section Seven Special Regulation following this process indicates a lack of good faith and an intent to deceive the public as the GGNRA did following the implementation of the 1979 Pet Policy which the GGNRA later decried in Federal court as an "error".

This is Golden Gate National Recreation Area which is close to urban areas. The NPS should be making weighing this heavily. Teddy Roosevelt would support dogs in the GGNRA. BTW, I saw 2 of your police officers in The Presidio hiding with a radar gun in a speed trap. They were later seen dining together for lunch on Chestnut Street at the same time! Surely, they have better things to do.

Correspondence: Healthy, happy dogs rarely bite anyone. The ability to enable a dog to run off-leash and play with other dogs contributes to the dog's overall well being, enabling them to contribute to society in all the ways the loving pets provide joy to their owners and others.

For the greatest adherence to the guidelines and policies, certain "leash only" designated areas should have off-leash times like 6-9am and 5pm and later, allowing 9am-5pm for leash only use. One such area is the East Beach of Crissy Field, where dogs and their owners have enjoyed play time for

decades. Who cares if the dogs run free from 6-9am on this part of the beach, when the dog people are the only people who use the beach at this time? Another area would be the fire trails on the Presidio. I have run my dogs on these trails for over 40 years. During 6am-9am, dog owners and their pets make up the majority usage of these trails. Dogs need to run free and be socialized to enable us to coexist without incident. It is cruel to only walk your dog on leash or to force them to exercise at speed that is not comfortable to them.

I imagine there are other areas on your GGNRA map that would benefit from more off-leash designated times during times when only pet owners use those spaces. This is a very heated issue that I have been engaged in my entire life. As a dog owner, I am happy to support a plan that meets everyone's needs, as long as I have assessable places to run and socialize my dogs off-leash. Having actively participated in this debate over the past 2 decades, I am certain that other dog owners will comply if you don't strip them of their ability to use areas like East Beach of Crissy Field during dog walking times i.e. before 9am and after 5pm. We can all get along.

Correspondence: I currently live in San Francisco in the SOMA district with my boyfriend and 2 beagles named Beans and Garbonzo.

There are numerous dog owners in the SOMA district. However, there are no legal off-leash parks in the SOMA district, so we make use of the off-leash park at Fort Funston at least once each weekend. This allows Beans & Garbonzo to run around, play with other dogs, check out lots of scents, run through the surf, and just run. My dogs love going to Fort Funston and so do we. My dogs never chase the birds (not even the scary crows) nor do they go into any restricted areas. We have also used Fort Funston as a place for picnics with friends and have been able to bring along our dogs which makes it more enjoyable.

The GGNRA is a National Recreation Area, not a National Park. The mandate for the GGNRA's creation was, according to the legislation that established the GGNRA in 1972, for the "maintenance of needed recreational open space". Off-leash dog walking was acknowledged at the time as one of the traditional recreational uses taking place in the GGNRA when it was created and it is still a past-time of thousands of people in our community.

The GGNRA proposed Dog Management Plan violates the mandate for the

"maintenance of needed recreational open space." Further, off-leash parks constitute only 1% of GGNRA land, and by restricting it further, it will severely compromise our and other dog lover's enjoyment and experience in the park areas. There has to be more space available for off-leash recreation, not less, given the huge demand for it in the San Francisco Bay Area. The impacts of people moving from the GGNRA into city parks is not adequately addressed in the Draft Environmental Impact Statement ("DEIS"). Further, the SOMA district does not have at its disposal in the concrete jungle that it is any city parks that it can adequately convert into an off-leash area to accommodate those affected by the proposed Dog Management Plan. If the open space in the GGNRA further restricts off-leash dogs it will also limite our use of it, which is unacceptable.

Much of the GGNRA land was highly modified by the military when they controlled the land before the GGNRA was created. The GGNRA contains numerous missile silos, artillery batteries, and their assorted support structures. The military planted huge amounts of ice plant to stabilize the sand dunes at Fort Funston and elsewhere. Standards of management that treat much of the GGNRA like "pristine wilderness" are misguided. However, it is fair to expect visitors to treat the area with respect and follow the signs and pick up all pet litter so that there is minimal further impact on the area.

The proposed plan that restricts off-leash dogs on the Chip Trail at Fort Funston does not make any sense as this area is not near the area where the bank swallows nest. If the bank swallow is the basis for restricting dogs in that area, then more attention needs to be paid to the defficits in the DEIS as it does not address the fact that a GGNRA study by researcher Nola Chow has been ignored. Her study showed that that dogs do not distrub the bank swallows.

The DEIS states that it will cost nearly \$1 million to enforce the proposed Dog Management Plan, through the hiring of more Park Rangers or Park Police. In an era of shrinking federal, city and local budgets, this seems a poor use of scarce financial resources. Existing Park Rangers could easily enforce already existing rules such as picking up pet litter or no chasing of birds. These enforcement actions are all that are needed to ensure responsible dog walking and minimal impact on natural resources and other park visitors from off-leash dogs.

If the GGNRA has \$1 million to spend, it should be using that money instead to update the infrastructure at the park, park benches, toilet areas, etc. the GGNRA should not be using that money to restrict the enjoyment of its patrons.

Correspondence: I'm writing to oppose the GGNRA draft dog management plan that reduces opportunities to enjoy hiking in open spaces with my good dog companion Luke. Having my dog accompany me on the Coastal Trail makes me feel safe and secure when we encounter homeless denizens of the Trail, take a twilight stroll, or visit the trail during inclement weather and few other people. Sometimes I allow Luke to exercise under voice control and he is very well-behaved while he's sniffing around, meeting and greeting other dogs, and basking under the admiring pets of other walkers of the Trail. Everyone likes him and to hike the Trail under the constraints of his being on a leash at all times would hinder our ability to meet other people and dogs. There would be no reason to go on the Trail if he had to be left at home. AS a homeowner who pays taxes, I don't want to see my tax dollars go towards limiting options to physical exercise and healthier choices, because it's far better to get outside and play rather than sit at home and mope. That's exactly what we would do, Luke and I, since we don't have a car and cannot drive to a park far away that permits a dog to run and frolic with other dogs. Please keep the Coastal Trail a place where I can go with my dog and get away from the stress of the city.

Correspondence: I am a San Francisco resident who happens to have a dog as a member of my family. We take our dog to Baker Beach about 5-6 times a week. In addition our dog trainers take him there several times a week for pack walks. When he is off leash he is under good voice control and within sight at all times. We clean up after him and do not allow him to dig or otherwise disturb wildlife or the ecosystem. Dogs (and people) that are adequately socialized are usually happier and healthier. Baker Beach offers city dwellers the opportunity to allow their dogs to socialize and run in a safe environment. We are respectful of the ecological sensitivity of the area. It has been my experience that caretakers of animals are usually more aware of their environment and the environments' potential effect on the health and well being of their animals. As a result they tend to be more cognizant of how their behavior(s) may effect the environment and take greater care to have minimal environmental impact. I for one think those annoying "Go-Cars" (i.e., two seated motor-scooters) should be banned from Baker Beach, all GGNRA land and residential areas. Their noise polluting, obnoxiously loud. recorded self tours auditorily assault everyone. Please continue to allow dogs to be exercised both on and off leash in GGNRA areas. Dog walkers provide a valuable service and should not bear an unfair burden of fees and taxes. There are enough restrictions in place already. Please do not add more. Sincerely, Richard Dunckel

Correspondence: Hello:

I've read the executive summary, and scanned the EIR.

PLEASE just keep the regulations as they currently are, and use whatever resources available to better enforce existing law. If some stricter permits for "commercial" dog walkers are warranted, I'd support that much. But otherwise, the proposed changes strike me as unnecessary.

Respectfully,

SH

Correspondence: May 16, 2011 Dear National Park Service, I am writing to you on behalf of the American Society for the Prevention of Cruelty to Animals (ASPCA) and our 1.5 million members and donors in the United States. Our organization has concerns about the Draft Dog Management Plan

Environmental Impact Statement, and in particular the preferred alternative that is set forth in this plan. The following comments summarize our concerns. The preferred alternative includes only one fully enclosed off-leash dog play area (or as referred to in the plan, a "regulated off-leash area"). This sole fully enclosed off-leash dog play area in the preferred alternative was the product of a multi-year negotiated rulemaking process between off-leash advocates, environmentalists, and other user groups. Yet despite this being the sole point of consensus across these diverse groups, the National Park Service has not attempted to provide additional enclosed off-leash play areas anywhere else in the GGNRA: all the remaining areas proposed for off-leash dog play are not enclosed. The ASPCA supports the development of dog parks. However, we believe it is imperative to have secure fencing and gates. It is also best if the park enclosure incorporates double gates or an interior "holding pen" at the entrance, so people and their dogs can enter and exit without accidentally letting other dogs slip out of the park. In the absence of physical barriers around an off-leash dog play areas, dogs may be lost, injured or killed. This is why a cornerstone of good off-leash park design is to enclose the area: not merely for the protection of other users, but also for the safety of our dogs. As mentioned in the proposed plan, dogs continue to be lost, injured or killed at the GGNRA because the off-leash areas at the Park presently are not enclosed. A simple enclosure would remedy this problem, while ensuring that all park users get to choose the kind of experience they desire by choosing to either enter, or not, these fully enclosed areas. Outside of these enclosed areas, our organization supports the enforcement of leash laws in general because such laws provide important safeguards for people, our pets, wildlife, and parks. Enforcement of the National Park System's leash law and the creation of enclosed off leash play areas for dogs would insure dogs have reasonable access to the Park without jeopardizing the safety of anyone. If you have any questions or concerns regarding this letter, please do not hesitate to contact me. Sincerely,

Jill A. Buckley, Esq. Senior Director Government Relations & Mediation
Training P.O. Box 48 Pismo Beach, CA 93448 www.asPCA.org

Correspondence: I do not support the GGNRA plan to severely limit off-leash exercise & play. It does not make sense from an environmental or public safety perspective and will ruin an incredible resource now available to dog owners. The problems caused by off-leash dogs are over stated & the proposed solution is overly punitive to the majority of dogs & dog owners who act responsibly. Please scrap this ill conceived plan.

Correspondence: The news media has been highlighting the protests of dog owners regarding possible changes to off-leash access. I can't tell if you are hearing from anyone else. I have raised two children in San Francisco, and while I have never owned a dog, due mostly to landlord issues, I worked and volunteered in animal shelters and pet hospitals for more than ten years before my children were born. I am not a dog-hater. However, I am a mother and an environmentalist, and my attitude towards off-leash dogs is formed by those two considerations.

My experience with off-leash dogs has occurred mostly in San Francisco and in the Tennessee Valley area. I have never been bitten, but one of my children has. In the neck. The dog was just playing, but it was very big and the child was very small. The owner was not in control. I have no serious safety concerns now that the children are grown, but when they were small, it was a constant concern, whenever they were in a park, to protect them from dogs. Carrying them in backpacks was not always helpful, as some dogs took exception to what they seemed to view as a threatening two-headed monster. Owners would calmly explain that their huge, barking dog was "friendly." There were also numerous encounters between unsuspecting children and dog poop. All these incidents occurred in areas where dogs were required to be leashed at all times.

What I'm getting at is that enforcement has got to work or there's no point in having any rules at all. It may be necessary to ban dogs from sensitive areas if people can't be induced to keep them on a leash. I almost never saw a leashed dog in Tennessee Valley; owners would carry a leash to put on if a ranger showed up, but they were pretty certain not to get caught out on the trails. I was always amazed that they did this, considering the risk of the dog coming back covered with poison oak. I think people have gotten used to being able to let their dogs loose in wild areas, and it's going to be hard for them to change. I hope there is some way to make it happen, because we have to share these areas with each other and with the wildlife that was here before we came.

Correspondence: Thank you for your hard work and consideration of the many viewpoints

related to allowing dogs in Golden Gate National Recreation Area. I visit Golden Gate NRA and other national park lands frequently and cherish our National Park System as a treasure for all Americans to enjoy.

I would like to point out the importance of Golden Gate National Recreation Area to the many children who live in San Francisco and the Greater Bay Area and how their use of the park is impacted by dogs. The importance of children having access to open space and nature has been written about extensively in the past several years, most notably in the book "Last Child in the Woods" by Richard Louv. Mr. Louv details the many important benefits that children gain from exposure to and experiences in nature.

For many, many of the children in the San Francisco Bay Area, Golden Gate NRA provides one of the only chances they have to experience nature. Unfortunately -- as I have witnessed countless times -- these experiences are too frequently disrupted when children encounter dogs. I have seen both on-leash and off-leash dogs jump on children, bark at children, lunge at children, and even take food out of the hands of children. This type of encounter can taint a young person's view of nature and of their National Parks for years ? if not decades ? to come.

While I think the preferred alternatives presented in the dog management plan will help decrease the number of disruptive encounters that children have with dogs, I believe there is still room for improvement in this area. Specifically, it appears that there are several park areas where there aren't any trails that will be "dog-free." An example of this is Crissy Field; the preferred alternative calls for a beach area that doesn't allow for dogs but it seems that all the pathways leading to that beach do allow for dogs. I would support some access points that would allow families to reach the beach without having to deal with dogs.

I believe that there should be some trails and/or paths that do not allow dogs (on-leash or off) in each area of the park. The park is a shared resource and adults who do not wish to encounter dogs and/or do not want their children to encounter dogs during their park visits should have that opportunity.

With the small exception of designating a few more trails and paths where dogs are not allowed, I support the general balance between on-leash, ROLA and dog-free areas in the preferred alternatives. Thank you.

Correspondence: Please excuse my brevity:

The entire process, though well intentioned, is tedious and a waste of community resources.

I am a "superuser" of many GGNRA areas, primarily on foot and by bike, and have had extended periods of use both as a dog owner and non-dog owner.

Like most reasonable people, I see both sides of the issue: I greatly enjoyed having the ability to bring my dog with me on my outings in the GGNRA, but have been bothered and inconvenienced by plenty of dog owners in the very same places.

Fundamentally, the problem comes down to ineffective enforcement of existing laws. Anyone who uses the GGNRA on a regular basis sees many dogs clearly not under "voice control" even under the most generous interpretation of the phrase. Dog owners who would be appalled to find animal feces on the sidewalk outside their house find it completely acceptable to let their dog go just about anywhere without proper cleanup.

If all owners knew that there was the real and probable threat of enforcement of laws already on the books, people who could not reliably control their dogs would cease to burden the GGNRA with their presence, and just about every piece of poop would get picked up.

I do not question the effectiveness (ok, I guess I do) of law enforcement in the GGNRA. As I said, I use one unit or another of the system nearly every day of the week, but could count on one hand the number of LEOs I see outside of their patrol cars in one year.

Enforce the laws we have. Let owners know that they will be cited and fined if they cannot call their nuisance dog to heel when asked to do so by a LEO. Have LEO's writing tickets, publicly and visibly, in high-use areas (crissy field, etc.) for failure to clean up poop.

Right now, the situation fails because the threat of enforcement is not credible, not for lack of existing laws.

Correspondence: The proposal goes much further than is necessary. I would be happy to consider some reasonable changes that are supported by evidence. As a dog guardian who uses the GGNRA, I am open to changes that may provide a

benefit to some users without going too far in hurting others. This is not such a plan. It seems to be based more upon some anti-dog prejudice than upon reason and fairness.

I live right near a San Francisco public park and it already has about as many dogs in it at popular times as it can contain. This proposal would push my city park to overflowing with dogs and their guardians, while GGNRA space goes wasted and empty. We have a limited amount of open space in the Bay area and we should be able to use what we have. Extreme restrictions for no good reasons would cause the GGNRA to be of considerably less value to the people of the area. Why waste these lands? Let's have reasonable uses of them instead.

Please reconsider this proposal beginning with the current usage and suggesting modifications to that usage based upon facts and reason. I'm sure that a new proposal that is fair and wise would be well received. I don't insist upon things being left exactly as they are; I'm willing to compromise. I'm not willing to be marginalized for its own sake.

Be reasonable, and I will be too.

Thank you very much.

Correspondence: As a resident of San Francisco, I have seen the damage people have made along the Great Highway. This includes people who do not pick up after their dogs and people who litter and leave trash along the curbs. Should we disallow people to use the beach and walkways? I frequent Fort Funston regularly - a wonderful place where you can walk with your dogs in a safe environment leash free. There are very few places you can do that. I have heard your staff say that they think Fort Funston has been destroyed from the dogs. If you walk around Fort Funston, you can see that it is the wind, sand and weather that has changed the landscape - NOT the dogs. I would like to see the Ocean Beach from Sloat to Lincoln to be leash free also. I don't believe that dogs pose a problem for them at all. I don't know who has done your '10' year study, but I cannot believe that the stretch of Ocean Beach will be the demise of the Snowy Plover.

Type:

Correspondence: As a photographer, I visit Ocean Beach at least 50 times per year, where I have observed first-hand the damaging impact of dogs on this area's wildlife and environment. On almost every visit I observe several dog owners allowing their off-leash dogs to run freely through the Snowy Plover protection areas, which are clearly marked as areas closed to dogs. The owners often allow or encourage their dogs to chase the sea-birds. The dogs unleashed also roam the littoral areas, which the plovers use for nesting as explained on signs throughout the area. A few times I have politely asked dog-owners to leash their dogs but this is nearly always met with hostility. In all the years I have visited Ocean Beach I have never seen any officials enforce the limitations on dogs. It is obvious that stronger regulations and enforcement are needed. There are miles of Ocean Beach where leashed dogs are permitted, but many dog owners obviously feel they should be able to take their dogs anywhere, usually unleashed, despite endangered species, laws, and the rights of others who want to enjoy GGNRA lands without interacting with domestic animals. If we must have "off-leash areas" they should be fenced off to protect people, dogs, and habitat. I also agree with those asking for full compliance, and a ban on commercial dog-walking (which is already supposed to be illegal).

I know dog-owners are a vociferously organized group. They threaten mass demonstrations to "show us what it will be like" if their animals are banned from a few public areas. You have surely received many letters from them. I hope you will consider the rights and concerns of those of us who are not part of some organized pressure group, but care about the GGNRA and its mandate to protect wildlife habitat. We all deserve recreational opportunities as much as that small minority of visitors who choose to bring their domesticated animals onto our wonderful GGNRA lands. Thank you for your attention.

Type:

Correspondence: I am writing to oppose the GGNRA draft dog management plan and "all action alternatives" that further reduce or ban dogs. Please keep our open spaces dog-friendly and plentiful. The Park Service should revise the dog management plan to:

- 7 Recognize dog recreation as a safe and healthy recreational activity and as important to the health and well-being of people, dogs, and communities, especially those in densely populated urban areas

- 7 Justify any changes with objective, reasonable scientific studies and

findings and remove the many exaggerations, speculations, and misleading statements. Don't treat dog recreation as a hazard and nuisance despite facts to the contrary; it's compatible with other urban recreation Example Personal Story to Add (it doesn't have to be long): I am a disabled senior, with grandchildren, that lives in Oklahoma and want more parks in America to accommodate well-behaved dogs and their families, particularly parks with long hiking trails. We travel with our dog and grandchildren and can't go places that don't allow dogs so we certainly don't go to the typical National Parks. It is horrible that so few parks allow dogs on hiking trails when dogs make so many of us happier and get us out to exercise on a daily basis. Almost all people with dogs control and pick-up after their dogs and walking with our dogs is good exercise and makes us and our dogs healthier and safer. On the whole, I find family dogs to be far better behaved than people and have seen no serious safety issue with a well exercised, socialized, and trained dog. This plan only makes it more difficult for people to responsibly care for their dogs and themselves.

Correspondence: Hello Park Folks.

I am a Pacifica resident and regular recreationalist at Mori Point, Milagra Ridge, and Sweeney Ridge.

I have attended several Pacifica/GGNP Liaison Committee meetings and read thier letter of recomendations to GGNP's DEIS regarding future pet management. Additionally I scoped out the GGNP two volume DEIS at our local library.

I believe that the GGNP DEIS prefferred alternative "C" is a reasonable and balanced alternative for Pacifica's National Parks. I feel strongly about protecting natural, and cultural resources with wildlife getting the benefit of any doubt regarding pet disturbances.

Having had the opportunity to grow with the restoration/transformation of Pacifica's National Parks, I regard these parks to be wildlife sanctuary's for many migratory and sedentary species.

Historically a Noel Blincoe, Paul Jones and I were the initiators of the Pacifica/GGNP Liasison Committee. I continued as a participant for some years following.

A final note.....I disagree with the P/GGNPLC's recomendation for the

Mori Point Timigtac Trail to be a dog walking trail. It is very narrow, a foot path and people walking in opposite directions require one or the other to move to the side. It is currently used much by coyotes and is lined by purple needle grass (ca. state grass). The coastal prairie, and scrub habitats where it is located are host to much biodiversity. Flocks of meadow larks, and a solitary singer are an occasional favorite of mine.

Much of the character of the Timigtac Trail, if one might imagine, is like it might have been when the Ohlone "Muwekma" people walked the ridgeline toward the oak groves to the east in the fall.

For Pacifica's National Parks.....Alternative "C" Please.

Thank You

Respectfully

Ron Maykel

Correspondence: Dear Superintendent Dean:

I am writing regarding the draft Dog Management Plan and Environmental Impact Statement for the GGNRA. I would like to use and enjoy the GGNRA lands. I have resided in San Francisco since 1981. I no longer go to the Crissy Fields/GGNRA area as it is overrun by dogs and dog owners. It is very clear that a person out to enjoy and observe nature is not able to relax and enjoy the park area. It is necessary constantly to get out of the way of the dogs. The owners leave the dogs off leash. The dogs run wild; the owners go to the shore for a social outing. I have gone there with friends who are dog owners. I grew up with pet dogs. I used to love dogs. The situation in our parks and in this urban area has become intolerable. I do not wish to go to a beautiful natural setting to watch dogs defecate, to see them chase the few shorebirds left, to have to avoid them as they run wild. Animal and plant life of the area are obviously endangered by the dogs' waste. The park lands are a "public convenience" for dog owners who feel they are in a natural setting, that their dogs are part of it, and that they are released from responsibility.

Years ago, it was considered polite for smokers to ask if others "minded" if they smoked. It was thought rude to say, "yes;" everyone had to breathe the second hand smoke. I believe we face a similar situation with the pressure

group of dog owners now. A small, well-organized pressure group is able to exert force on the general public. I am saddened to think that a decision will be made according to how many letters or comments you receive on one side versus another. A group with a focus and organization will always make a bigger noise than the general public, which takes a while to bestir itself. It worked for smokers for decades.

I would also like to share with you the truth about the "voice control" myth. On three occasions, I have narrowly missed hitting a dog with my car near the GGNRA and the Marina. This does not include my visits to Ocean Beach or Alta Plaza Park near my apartment. Twice the owners did not even realize that the dog was running in traffic because the owner was busy chatting with other owners. They then started yelling for the dog. The dog, being a dog, kept running. The other time, the owner ran into traffic while calling for the dog. The dog kept changing directions to get away. The owner told me that she always had her dog under voice control! It was extremely upsetting to be forced to steer around the human and the dog wondering how I managed not to be killed by other cars while saving the dog's life.

I feel that it is a great loss in my life not to be able to use the parks with the frequency or freedom of the dogs. I chose to live in this place because of my desire to be close to nature and yet I'm the one being fenced in.

I strongly encourage you to adopt the plan and consider improving it by implementing the following steps: ? All "Regulated Off-leash Areas" should be fenced, at least in areas where fences do not pose risks to wildlife and habitats. Fences provide security for all park users and create clear boundaries so that dog owners are aware of how to comply with park rules. I have ONLY ONCE seen someone with a dog on a leash at Ocean Beach. The dogs do not know about limitations and the owners do not care. An "in your face" attitude has developed which seems to flaunt itself and dare people to say anything. Of course, no one says anything. It is very intimidating to try to speak to someone who has dogs running wild. ? The Park Service's proposed requirement of 75% compliance is too low. The Park Service should require a minimum of 95% compliance before initiating measures to improve compliance. ? Commercial dog-walking should not be permitted in the GGNRA. This is a commercial activity in the park and the Park Service cannot legally permit it. It is a convenience for the dog-walkers--one of the most beautiful spots on earth an open porta-potty. ? At least some trails in San Francisco should be entirely closed to dogs. Under the current plan, nearly every trail in San Francisco is open to at least on-leash dogs, and those dogs are rarely on a leash. This means no trails are available for people who prefer to enjoy the outdoors without interacting with dogs and often being forced off the path by the dog. ? Pets are important to some families and communities, but dogs are just one animal

that is having a significant negative impact on thousands of other animals and plants, and on many other human visitors. Dogs, no matter how loveable, are not a natural part of the GGNRA ecosystem. The parks should be safe and accessible for all users and protect their natural and cultural resources for the future.

Finally, I must comment on what I have read to be the plan of the off-leash agitators. Their plan is to take their dogs, off leash, into the streets in a "poop in." They intend to make the streets and sidewalks so disgusting that everyone will have to let them have their way. These are the actions of self-indulgent bullies. Only two-year-olds can do that with impunity. The future of a delicate ecosystem like that of the plants and animals of the GGNRA should not be decided in order to appease self-indulgent bullies. I have heard a lot about the dogs' need for great freedom. People who live in an urban area and choose to own dogs should not then impose on everyone else's freedom to enable them to do what they like with their pets. I would like to see the shorebirds back on the beaches in the numbers they used to have. I would like to feel as though I had as much right to walk or run on the beach as my neighbors' dogs. However, I do not have that right. I cannot take visitors to GGNRA. They don't get to run free with the wind in their hair, but the dogs do.

Thank you for the opportunity to comment on the Dog Management Plan. Please continue to be a good steward for the parklands and the myriad life forms that live there.

Correspondence: Dear Sir, I am writing to express my profound surprise and disappointment with the proposed changes to the Fort Funston recreational area. Both of the access trails to the beach require a high level of fitness and mobility. Because the new plan restricts off leash activities exclusively to the beach, and a small section on the bluff it essentially takes away the opportunity for the elderly or disabled to let their dogs run free. I would also like to point out that there are many times at high tide when there is simply no beach. I also find it curious that part of the reasoning was concern for safety on the cliff, yet the only trail that would remain open to unleashed dogs (the sunset trail) is the very trail where accidents are most likely to occur. Finally, I am sure that most of the local electorate would agree that the 1.5 million dollars required to police the changes could (and should) be spent on more worthy projects. I have been a regular user of the park for four years and can attest that it is used in an overwhelmingly responsible manner and is integral to the lives of many of its visitors. Please reconsider this proposal.

Correspondence: dogs have accompanied humans into the wilderness since before this country was founded. Your continued waste of resources to limit and restrict both humans and their best friends, dogs is wasteful. how long before you start requiring humans be on leash at the hands of 'staff' to promote your supposed goals? Why not completely restrict access like the state parks propose by 'closing' these areas in the name of your supposed 'goals' or maybe even budgetary constraints? Apparently you are top heavy in 'administration' and we need to cut back your wasteful use of resources by attempting to continually restrict use of this country's natural resources in the name of your 'goals'? You people dont work for the public, you are starting a war against us, and a way of life older than this once great country. Your beaurocracy is a black mark on all americans as you continually strive to eliminate our basic tenant-"the land of the free" The land of beaurocracy is more like it. I am embarrassed to include you and your staff in the group we call Americans. Stop your wasteful restrictions and allow us to practice human decency on our own. We dont need to pay your ridiculous salaries and pensions so you can eventually put us all in a corral as you lead us to slaughter our American Freedoms. The power of the people will ultimately prevail, and our best friends will be there with us-dogs. And you and your staff will be evicted, not us. STOP with the regulations!!!

Correspondence: I encountered a number of off leash dogs at ocean beach in an area that is supposed to be on leash this morning. It significantly decreased that enjoyment of my walk. I had a number of dogs run up to me and interfere with my walk with no apologies from the owners. They seemed to think I would like their dogs to interact with me. I did not complain to them because I have not had success with talking to owners before. In the past, I have had responses that ranged from anger to denial. Owners often claim they do not know that area is on leash but I have seen these people again even after having told them before. I really believe that off leash areas need to be enclosed by some kind of physical barrier. This way there will be no confusion or claimed confusion. The amount of area that will be off leash in the preferred alternative is in my opinion too much but if this area is fenced off than it would be ok.
