Date: August 22, 2007

### **Prescribed fire scheduled to occur on the South Rim of Grand Canyon National Park**

**Grand Canyon, Ariz.** – A prescribed fire is scheduled to take place in the Grandview burn unit on the South Rim of Grand Canyon National Park Friday, August 24, 2007 if conditions permit. The 1,800-acre Grandview burn unit is located 10 miles east of Grand Canyon Village on the north side of Highway 64 near Grandview Point.

Prescribed fires are ignited when environmental factors such as wind, temperature, and relative humidity are favorable, in order to meet specific resource objectives. They are one of the most effective tools available to resource managers for restoring fire-dependant ecosystems. The purpose of these fires is to achieve ecosystem stewardship goals that include reducing hazardous fuels that can lead to destructive wildfires; sustaining ecological processes like nutrient and biomass recycling; balancing plant regeneration and mortality; and providing a diversity of habitats for native plants and animals.

Thorough planning is used to minimize smoke impacts; however, it is impossible to predict weather patterns and smoke behavior with complete accuracy. Smoke impacts may be possible in the adjacent community of Tusayan. Smoke impacts may also occur along the Colorado River and in the inner canyon at night and during the early morning hours, since smoke settles when the air temperature cools and lifts during daylight hours when the air temperature warms. No park closures are anticipated at this time, but Grandview Point will have limited access for backcountry permit holders.
