Protecting the Habitat of Our Heritage

The Park Vital Signs Monitoring Program, established in the late 1990s, organized all national parks with significant natural resources into 32 networks. The Heartland Network monitors for key long-term indicators of change—“vital signs”—in the national parks of the central states. Such efforts will help provide early detection of potential problems and will enable park managers to take action to restore ecological health of park resources.

 Eastern bluebirds are cavity nesters, and use the nest boxes on the edges of the prairie.

Monitoring Birds at Herbert Hoover NHS

Birds perch, flutter, nest, hunt, and soar at Herbert Hoover National Historic Site. The park is on the Mississippi flyway, a major bird migration route. It offers an excellent grassland habitat teeming with insects and prairie plant seeds. Many species rest and take refuge in the park's reconstructed tallgrass prairie and along its quiet stream.

Birds' colors and songs add visible and audible vitality to the park's dignified commemorative setting. The presence or absence of grassland birds like sedge wrens, dickcissels, grasshopper sparrows, Henslow's sparrows, bobolinks, and eastern meadowlarks indicate the prairie's overall health. Populations of these species decline as prairies disappear from the landscape. Several species are of continental importance because of their dwindling numbers.

Volunteers survey breeding birds at Herbert Hoover National Historic Site using established scientific protocol. The findings supplement inventory and monitoring data collected by National Park Service biologists. Studying long-term changes in bird populations helps park managers evaluate prairie restoration efforts, the effectiveness of management methods (such as prescribed fire), and the quality of habitat the park provides.

Share Your Observations

This checklist is your own tool for measuring the vital signs of Herbert Hoover National Historic Site's natural areas. Visitors are always encouraged to share their observations with the park staff.

When reporting a sighting, please address the following:

1. Which bird did you see and how many?
2. What was it doing?
3. Where precisely did you see it (location and habitat)?
4. When did you see it (date and time of day?)
5. What was the weather?

Your Field Notes:

Key to the Checklist

Sp = Spring
S = Summer
F = Fall
W = Winter

A = Abundant, very numerous
C = Common, almost certain to be seen
U = Uncommon, present but not readily seen
O = Occasional, seen rarely

*Confirmed resident or breeder at Herbert Hoover NHS
