Collection Description

Title: *Acadia National Park Resource Management Records, 1903-2007*

Abstract: Acadia National Park Resource Management Records document the creation and administration of the park, its cultural and natural resources and the development of the historic motor and carriage road systems by philanthropist John D. Rockefeller Jr. The records detail legislative and administrative processes and procedures, the early park naturalist program, the protection and fire management program, research and natural resource management activities and road and bridge construction projects. The records are comprised of correspondence, project reports, research, newspaper clippings and publications.

Name and Location of Repository: Acadia National Park, National Park Service

Date (inclusive): 1903-2007 **bulk:** 1932-1984

Name of Creator: Acadia National Park

Catalog Number (Collection): ACAD 55259

Extent: 59 lf

Scope and Content:

The Acadia National Park Resource Management Records document the activities of park staff in managing and preserving the park's natural and cultural resources. In particular, the central files provide a framework for understanding the history of the park. George Bucknam Dorr, Acadia's first Custodian/Superintendent was the driving force behind the creation and evolution of the park. The "201-06 Superintendent's Correspondence" cover various topics including CCC camps, work projects, motor road construction and property acquisition. Information specific to the park's motor road design and development can be found in the "201-18 Rockefeller Correspondence" covering the period 1915-1953. Like Dorr, John D. Rockefeller Junior's contributions to Acadia National Park are immeasurable. The Rockefeller correspondences chronicle the success and tribulations associated with the design and construction of the motor and carriage road systems. Construction reports detailing work on the carriage and motor roads can be found in maintenance files as well as individual building data sheets for non-extant park structures. Similarly, the park narrative can be traced through the extensive newspaper clippings collection. Often highlighted are the activities of the dynamic park naturalists program.

The Park Naturalist records underscore the events and accomplishments of the early naturalist program. The first Park Naturalist, Arthur Stupka, kept an annotated journal of park weather observations and flora and fauna sightings that are also documented in a small collection of lantern slides. Also by Stupka, the “Nature Notes” series is a published newsletter highlighting program specifics such as ranger-led tours and campfire programs. Other research of interest is the 1935 list of mycology specimens collected from Mount Desert Island and Christmas Bird Count Lists. The Deer Management program records, held here, were conflated in 1982 from various division files. Initially, the Park Naturalists had oversight of the Deer program, later as culling was employed to control the park population, the program moved under the Protection division.

The Protection Division files hold monthly ranger reports, climatological observations, fire summaries and a history of the 1947 Bar Harbor fire. The monthly reports, submitted by the Eastern and Western District Rangers between 1953 and 1967 provide an overview of the protection program and park incidents. Under the auspice of the Protection Division, the Fire Management program records comprise weather observations, individual fire reports, annual fire summaries and Fire Control Plans (1927-1980). Additionally, records of the 1947 Bar Harbor Fire including photographs, reports, maps and newspaper clippings provide insight and an overview about containment efforts and extent of the fire. Newspaper clippings and articles about the 1947 fire can also be found in the Publications series. Also in the Publications series are nearly fifty years of park brochures, program flyers, early general information circulars and articles published by the Wild Gardens of Acadia in conjunction with Sieur de Monts National Monument.

While the Publication series consist of information developed for the public, the Research Project files hold park planning and project documents such as Cultural Landscape reports and Historic American Engineering Records. Of particular interest are records associated with the historic motor road and related structures such as the log book belonging to Leo Grossman, Bureau of Public Roads engineer for the Cadillac Mountain road construction project, 1928-1932 and a cost survey for the proposed motor and horse roads produced by Walter Kidde & Associates. Rockefeller and Dorr were sensitive to the road system and associated buildings blending with the environment. Specifications for the Brown Mountain Lodge and the Jordan Pond Gate Lodge designed by Grosvenor Atterbury demonstrate this ideal.

Five personal paper collections were also identified and during FY10 and have been described in separate finding aids: George Halcott Chadwick Compendium of the Geology of Mount Desert Island in Maine and Related Correspondence (ACAD 58812), Ornithological Papers of Effie A. Anthony (ACAD 58813), Ornithological Papers of Paul G. Favour, Jr. (ACAD 58814), Arthur Stupka Maine Papers (ACAD 58815), and the Leo Grossman Papers (ACAD 58816).

Arrangement:

The records are arranged in seven series as follows:

Acadia National Park Resource Management Records, 1903-2007

I. Central Files and Park Reading Files

A. Pre-1953;

- 100 History and Legislation
- 200 Administration and Personnel
- 300 Appropriation, Finance and Accounts
- 500 Publicity and Statistics
- 600 Lands, Buildings, Roads, and Trails
- 700 Flora, Fauna, Natural Phenomena, Antiquities, and Sciences
- 800 Protection, Service to Public, and Forestry
- 900 Concessions

Post-1953;

- A Administration and Management
- D Development and Maintenance
- F Fiscal
- H Area and Service History
- L Lands, Water and Recreation Planning
- N Natural and Social Sciences
- S Supplies, Procurement and Property
- W Laws and Legal Matters, Reports
- Y Forestry

B. Park Reading Files, 1980-1995 (yellow/green carbon copies of park central files)

II. Park Naturalist Files

Naturalist Reports

- A. Nature Notes
- B. Arthur Stupka Nature Journal, 1932-1935 (photocopy) ACAD-318
- C. Photographs [Lantern slides] by A. Stupka ACAD- 640
- D. Visitor Programs
- E. Research
 - 1. Deer Management Program
 - 2. Ornithology
 - 3. Mycology
- F. Collection Inventory
- G. Reports

- H. Publications
- III. Protection Division Files
 - A. Ranger Monthly Reports
 - Eastern District
 - Western District
 - B. Fire Management Program
 - 1. Fire Reports
 - 2. Fire Plans
 - 3. Weather Observations
 - 4. 1947 Bar Harbor Fire
- IV. Maintenance Division Files¹
 - A. Building Files
 - B. Construction Reports
- V. Publications
 - A. NPS Publications
 - 1. Pamphlets
 - B. Non-NPS Publications
 - 1. Pamphlets
 - 2. Park-related Publications
- VI. Research Project Files (chronologically now, accrete overtime)
- VII. Resources (Research) from other Organization
 - Photocopies of records from Olmstead Associates for Acadia National Park
- VIII. Lands Files
 - Land Deeds – land donated to the Park by John D. Rockefeller, Jr. (ACAD-282) – *unprocessed*
- IX. Planning Division Files – *unprocessed*

Series Descriptions

Series I. Central Files

Central Files hold records from all park divisions documenting the administrative and decision making processes of staff from daily activities to complex projects. The records were arranged following existing NPS filing classifications schemes. Records created prior to 1953 were arranged based on a numeric decimal system (i.e. 620.). Whereas records created after 1953 were arranged following an alphanumeric system (H22). Remnants of an early numerical system (i.e. 2.6.1 or 13. 1.6) were identified and noted. Of particular interest are the correspondence held here between the first Superintendent George B. Dorr and John D. Rockefeller Jr. Both men were instrumental in shaping the park. The prominent role Dorr played in creating the park is visible throughout the records as is the overlap between his public and private life. To maintain context some of Dorr's personal records have been left in place, such as his cremation certificate. This series holds the park's reading file, 1980-1995. These records are copies of a portion of the park's central files. They are sometimes referred by color "Yellows" or "Greens," since they are often on colored carbon paper. The records are arranged chronologically.

Series III. Park Naturalist Files

Naturalist Reports, Nature Notes and Nature Journals (photocopies) of the prolific first Park Naturalist Arthur Stupka are located within this series as well as lantern slides taken by Stupka and a colleague. Received from Great Smokey Mountain National Park, the Nature Journals (ACAD-318) and lantern slides (ACAD-640) are included here as part of the park resource management records to identify provenance and maintain intellectual control. This series also contains programmatic research files, reports and publications. The Deer Management Program records, found under the sub-series Research, resulted from a conflation of divisional files, reports and central files that were compiled in 1982. The records have been left as they were found due to the difficulty in determining provenance.

Series IV. Protection Division Files

Protection Division Files are currently arranged in two sub-series; Ranger Reports and Fire Management Program. The Ranger reports present a monthly account of ranger activities by district. Fire program records hold fire reports and plans, weather observations and data on the 1947 Bar Harbor fire.

Series V. Maintenance Division Files

Currently, the Building files sub-series primarily holds records of buildings that are no longer extant. The sub-series Construction Reports holds final construction reports, progress views, photographic reports and inspections reports for roads and bridges in Acadia National Park dating from 1929-1995. These records are associated with those found in the *Finding Aid for Acadia National Park Maintenance Division Motor Road Construction Reports, 1933-1980* completed by the Northeast Museum Services Center in 2001.

Series VI. Publications

This series is divided into NPS publications and non-NPS publications. NPS publications were created by the park or within the Department of Interior and hold Unigrid brochures, general information pamphlets and park-related articles together with Sieur de Monts/Wild Garden of Acadia park publications and Lafayette National Park Museum Bulletins. Tourist visitor guides, maps and articles can be found in Non-NPS publications. The records here were gathered during previous surveys from various divisional files and the Vertical files.

Series VII. Research Project Files

This series holds project-related documentation resulting from planning and preservation projects at the park such as gatehouse construction specifications, commercial services planning documents, road construction surveys and reports as well as Cultural Landscape Reports and Historic American Engineering Reports (HAER).

Series VIII. Resources (research) from other Organization

Currently, this series holds photocopies of records of the Olmstead Associates regarding their work at Acadia National Park on the motor roads. The records were copied at the Library of Congress by a park volunteer and were subsequently given to the park for research.

Access: The Archives is open to researchers through scheduled appointments; please contact Park officials at 207-288-8728.

Publication Rights:

The copyright law of the United States (Title 17, *United States Code*) governs the making of photocopies or other reproductions of copyrighted materials. The Privacy Act of 1974 (*5 United States Code 552a*) governs the use of materials that document private individuals, groups and corporations.

Under certain conditions specified in the law, libraries and archives are authorized to furnish a reproduction if the document does not infringe the privacy rights of an individual, group or corporation. These specified conditions of authorized use include:

- non-commercial and non-profit study, scholarship, research or teaching
- criticism or commentary
- as a NPS preservation or security copy for research use
- as a research copy for deposit in another institution

If the researcher later uses a copy or reproduction for purposes in excess of "fair use," the researcher is personally liable for copyright, privacy, or publicity infringement and agrees to indemnify the NPS from any legal action as a result of the error. Permission to obtain a photographic, xerographic, digital or other copy of a document **doesn't** indicate permission to publish, exhibit, perform, reproduce, sell, distribute or prepare derivative works from the document without permission from the copyright holder and from any private individual, group or corporation shown or otherwise recorded.

Permission to publish, exhibit, perform, reproduce, prepare derivative works from, sell or otherwise distribute the item must be obtained separately in writing from the holder of the original copyright (or if the creator is dead from his/her heirs) as well as from any individual(s), groups or corporations whose name, image, recorded words or private information (e.g. employment information) may be reproduced in the source material. In the case of the Washington Association of New Jersey Records, the holders of the original copyright of most of the documents are the Association and private individuals, **not** the National Park Service. The National Park Service is not legally liable for copyright, privacy or publicity infringement when materials are wrongfully used after being provided to researchers for "fair use." Some published and unpublished material in the Records is in the public domain; the researcher should consult legal references such as the website "Copyright and Public Domain in the United States" at http://www.copyright.cornell.edu/public_domain/

This institution reserves the right to refuse to accept a copying order if fulfillment of the order is judged in violation of copyright or federal or state privacy or publicity law.

Additional Restrictions:

This institution also places restrictions on the use of cameras, photocopiers and scanners in the research room.

Custodial History (Provenance): Little or no original order was discernable. At some point in time, central files, park naturalist files and publications were incorporated into various divisional files, the vertical file or the library. In particular, the Interpretation division became the repository for many of the parks records. The park hired a fulltime curator in the mid-1990s. Beginning in 2000, the curator began to accession resource management records. Five personal paper collections were identified within the resource management records.

Indexing Terms:

The following are indexing terms related to the description of this collection.

Acadia National Park (Bar Harbor, ME)
Sieur de Monts National Monument
Lafayette National Park
George B. Dorr
John D. Rockefeller Jr.
Historic Motor Roads
Carriage Roads
1947 Bar Harbor Fire

Processing and Other Information:

Staff at the Northeast Museum Services Center (NMSC) processed the records at its Charlestown, Massachusetts offices. The first phase of the project involved processing 10.5 linear feet of records and was carried out during the summer of 2009 with FY09 Backlog Catalog funds. The second phase of the project took place from October 2009 to September 2010 with FY10 Backlog Cataloging funds. Twenty-four linear feet of resource management records and nine linear feet of personal papers collections were processed. During the third phase of the project (November 2010-September 2011), an additional 24.5 linear feet of resource management records were processed. Teri DeYoung, NMSC Museum Specialist arranged and described the records and wrote the finding aid.

During processing, materials were refoldered in acid-free folders, leaving the contents of the folder as found and transcribing the titles of the original folders to the new folders. Where existing titles did not accurately describe or reflect the contents of the box or folder, additional content information was added to the folder title and was shown enclosed in square brackets. Photographs and newsprint were found without enclosures and were rehoused in archival enclosures. The oversize items (larger than legal size) were removed, unfolded and rehoused in archival folders and flat boxes or map folders (where possible an archival copy of oversize newsprint was placed in the original location). Each item was replaced with an acid-free separation sheet indicating the original storage location, and a copy of the separation sheet was

placed with the oversized item to cross-reference the materials.

Finding aid prepared using *Describing Archives: A Content Standard* and *NPS Museum Handbook: Appendix D (Museum Archives and Manuscript Collections)*.

Administrative History

The following chronology and narrative do not represent a complete history of Acadia National Park merely a framework for understanding the context of the records in the current finding aid.

Chronology:

1901	Hancock County Trustee of Public Reservations formed (HCTPR)
1903	George B. Dorr elected Vice President HCTPR. 1913 John D. Rockefeller Jr. (JDR, Jr.) begins construction of carriage roads on his own land
1914	George B. Dorr and Edward Howe Forbush, Massachusetts State Ornithologist, urge Dept. of Interior to accept 5,000 acres of HCTPR land as national park.
1913-1940	JDR, Jr. begins constructing carriage roads on his own land several years later he is granted permission to construct carriage roads on HCTPR lands and later on ACAD park lands. He will continue construction until 1940, totaling 57 miles.
September 1915	JDR, Jr. makes first substantial gift of \$17,500 towards creation of a national monument in response to an appeal from Charles W. Eliot.
8 July 1916	Sieur de Monts National Monument established. George B. Dorr named “Custodian”
2 December 1916	Wild Gardens of Acadia, Inc. established. Principally owned and controlled by George B. Dorr, the tax-paying corporation promoted biological research and study on MDI
Summer 1917	Two Rangers employed
26 February 1919	Name changed to Lafayette National Park, Dorr named first superintendent
1922-1958	Planning and construction of the historic Motor Road System
Fall 1923	First park motor road (5 miles in length) under construction by John D. Rockefeller, Jr., extending from Bar Harbor (Rte. 233) to Jordan Pond.
1927	Park Master Plan
19 January 1929	re-designated Acadia National Park

1930	JDR, Jr. begins donating property to ACAD
1933-1942	3 CCC camps established: McFarland Field 154-NP-1, Eagle Lake 158-NP-2 "Camp Governor Brann" SP-1 at Ellsworth
1935	Otter Cliff radio station relocated to Schoodic Peninsula
1940	JDR Jr. ends carriage road construction (begun 1913)
1941	Dorr donates Old Farm to ACAD
1942	Seawall Naval Radio Station developed
1944	Isle au Haut parklands acquired
	August 7, Benjamin Hadley named Superintendent serving until March 31, 1953
	Thompson Island acquisition approved
17 October – 14 November 1947	1947 Mount Desert Island Fire, 17,188 total acres (8,730 park land)
1949	Saint Croix Island National Monument authorized
1964	ACAD Master plan approved
1965	Job Corps Center opens
1979	Jordan Pond House burns
25 September 1986	Park boundary established
1992	General Management Plan approved

Narrative:

The Hancock County Trustees for Public Reservations (HCTPR) 1903 charter states:

..to acquire, by devise, gift or purchase, and to own, arrange, hold, maintain or improve for public use, lands in Hancock County, Maine, which by reason of scenic beauty, historical interest, sanitary advantage, or other like reasons, may become available for such purpose."

No member of the committee embraced the tenets set forth in the charter more than its Vice President, George B. Dorr. Conservation of scenic vistas and the area's natural resources spurred local residents like Dorr to find a way to preserve and protect the unique landscape. Between 1903 and 1916 when Sieur de Monts National Monument was created, the HCTPR had acquired by purchase or donation approximately 5,000 acres.² Much of the land bequests, title research and adoption of legislation to create the park were due to Dorr's lobbying. It was axiomatic that Dorr, with his personal investment in the park and his particular knowledge of the islands resources, was chosen as the Park's first Custodian and Superintendent. He would serve as Superintendent until his death in 1944.

The only park in the National Park Service to be created wholly from land donation, the newly established Sieur de Monts National Monument received little or no operating budget in its first year of operation.³ In 1916, no money was appropriated for the new site. Dorr created The Wild Gardens of Acadia Corporation in that year to promote wildlife conservation and education through environmental studies and publications.⁴ As President (and Treasurer) of the corporation, Dorr was able to promote the new Monument and circumvent its pecuniary difficulties through the use of his own resources. The following year, the entire \$150 allotment from congress went toward ranger services for wildlife protection.⁵ The park's first official ranger, seasonal ranger George King, was hired for the summer of 1917 at \$50 a month.⁶

In 1919 the recently renamed Lafayette National Park's budget had grown to \$10,000 and supported several administrative staff and rangers.⁷ In that year, approximately 7,000 automobiles entered the park. To recapture the tranquility of the island as it was known prior to the automobile, south shore resident John D. Rockefeller Jr. began constructing carriage roads. Like Dorr, Rockefeller was a passionate supporter of the national monument later becoming the park's greatest benefactor. Between 1918 and 1940, Rockefeller constructed 57 miles of carriage roads in the park.⁸ During planning and construction of the carriage roads, Rockefeller worked closely with Dorr. That relationship continued with the development of the motor road system. Both men "along with Charles W. Elliot of the HCTPR, agreed that automobiles were not a passing fashion and that their presence and access to park roads needed to be

carefully controlled.”⁹ Over the 35+ year period (1922-1958) of motor roads construction in the park, Rockefeller assumed most of the cost and design work engaging the services of landscape architect Fredrick Law Olmstead Jr. and architect Grosvenor Atterbury.

Like Rockefeller, NPS Director Steven Mather was concerned that the “overall visual and ecological effect of road construction...be minimized and...effectively harmonize with the natural environment.”¹⁰ To that end, the NPS entered into a cooperative agreement with the Department of Agriculture’s Bureau of Public Roads in 1926. This agreement, allowed park service engineers and landscape architects to oversee the planning and review process while the Bureau of Public Roads developed specifications and supervised construction.¹¹ As work on Acadia’s roads progressed, the dynamics between Rockefeller, the NPS and the Bureau of Public Roads evolved into a triumvirate where Rockefeller coordinated the activities of both agencies.¹² In 1929, the year the park was re-designated Acadia National Park; Superintendent Dorr approached Rockefeller to purchase a large sweep of land along the ocean from Sand Beach to Otter Cliffs.¹³ This impressive piece of land and the scenic town-built Ocean Drive would become part of the park motor road system creating an unbroken connection from Cadillac Mountain road to the ocean perimeter. Rockefeller’s stipulation of the purchase was that Otter Cliffs radio station be moved.¹⁴ NPS land on the Schoodic peninsula was chosen as the new site and the Thunder Hole demonstration segment of Ocean Drive was completed.

Road construction progressed during the New Deal “primarily from and making use of Emergency Conservation Work funds.”¹⁵ The Bureau of Public Roads oversaw the Acadia Roads and Trails program to reroute existing roads and construct new ones. CCC crews in collaboration with WPA and PWA crews “contributed much of the skilled labor needed on complex construction jobs.”¹⁶ Work crews provided thousands of hours of labor. In an August 21, 1934 letter Superintendent Dorr writing to Acting Director Demaray outlined supplementary work projects noting that construction of a two-mile long trail along Great Pond would require approximately 1,000 “man days.” Besides road construction, work projects involved building paths and access roads, campground and picnic areas, laying topsoil, woods cleanup, tree surgery and pruning and Blister Rust control. Occasionally, crew members assisted the park naturalist. During the summer of 1935 “when the park lacked the funds to hire naturalist Arthur Stupka, a CCC student enrollee gave walking tours to visitors at Sieur de Monts Spring.”¹⁷ Again in 1939 “enrollees acted as assistants to the Junior Park Naturalists... preserving and filing plant and

animal specimens collected by the naturalists and typing excerpts from scientific books and magazines...¹⁸

The park's first naturalist, Arthur Stupka, initiated an ambitious naturalist program. A graduate of the Yosemite School of Field Natural History, Stupka employed the principles he learned in the intensive seven-week summer program of the importance of studying living organisms in their natural environment.¹⁹ In 1932 the first summer of his employment, Stupka conducted a host of campfire talks, illustrated lectures; nature walks, and hikes to Cadillac summit as well as deep sea fishing excursions. In an annual report for 1933, Stupka wrote:

“[i]t was fitting that Acadia, the first area of land east of the Mississippi River to become a National Park, should be the first of the eastern parks to offer Ranger-Naturalist Service. This service, inaugurated on June 13, 1932, was an experimental undertaking which has proved successful. In 1932 the nature-guide work was restricted to the summer season; this year the Ranger-Naturalist was recalled to resume the work beginning May 1.”²⁰

In 1933 the seasonal ranger-naturalist position became a permanent year-round Junior Park Naturalist position.²¹ As with other national park sites where the naturalist was in charge of educational activities, Stupka issued “each month an attractively illustrated mimeographed publication known as *Nature Notes*.”²² The *Nature Notes* “series of short articles on natural-history subjects...served to acquaint the visitor with the interesting features of the park.”²³ Besides visitor services, the naturalist conducted research and surveys of the park's flora and fauna. Records of deer management, a mycology survey and Christmas Bird Counts indicate an active program. Research of the park's deer population illustrates an evolution of management; from protection to culling. When the herd became too large, the Deer Management Program became a joint effort between the Naturalist division and the Protection division.

A primary function of the Protection division was the Fire Management Program with one ranger serving as park fire chief.²⁴ Beginning in 1926, the division actively recorded weather conditions for the park. These observations helped determine fire danger conditions and were part of fire reports and summaries. Annual fire summaries dating to 1930 provide detailed summaries about

fires within the park. Until 1947, the fires were relatively small and manageable due in part to CCC fire hazard reduction work.²⁵ A combination of dry conditions and strong winds fueled the 1947 Bar Harbor fire as it raced across the island burning more than 17,000 acres. The fire started adjacent to Dolliver's Dump outside the park boundary on the afternoon of October 17. When it was over, nearly one-third of the park's total area (8,750 acres) had been burned and fifteen park structures were razed as a result of the fire.²⁶ Local, state, federal and civilian deployments joined forces to battle the blaze with NPS overhead personnel directing the effort. Park Naturalist Paul Favour participated in a fly-over of the fire on the afternoon of October 24 sketching the fire boundary onto topographical maps and annotating the map with observations.²⁷ By November 14 when the fire was officially declared out, damage estimates outside the park were \$11,000,000 and inside the park almost \$600,000.²⁸

Damage from the fire to park roads and trails was extensive.²⁹ The maintenance division played an important role in the clean-up and reconstruction. Road construction reports, progress views and bridge inspection reports held by the park's Maintenance Division may have aided the reconstruction efforts. Similarly, research projects with their associated photographs, architectural drawings, maps and field notes such as Leo Grossman's field log for the Cadillac Mountain Road project would have significant value for the management of park resources providing a firsthand account of the project and decision making process at the time the road was being built. As in the past, current project files and reports are the permanently valuable program records that document the management of the park's cultural and natural resources and are necessary for the ongoing preservation and protection of the parks' heritage.
