YOUR COMMENTS

- Are the oysters a native species?
- ~~With~~ the EIS, ^{should} study the ^{loss of beneficial} ecological services provided by the non-native oysters currently in Drakes Estero.
- Dr. Ben Becker's report is the best available science on harbor seal disturbance and clearly shows a correlation between DBOC and adverse impacts on seals.
- The negative acoustic/sound impacts to all species that utilize the estero & call it home must be considered in the EIS.

- ☒ Since the oyster co was there long before NPS and is a familiar part of the whole terrain, say nothing of the food + jobs, I would personally like to see the oyster farm/co. continue
- ☒ Food on earth is becoming a scarcer commodity, especially food production that is organic + environmentally neutral + extremely healthy. Keep the farm.
- ☒ If this area is wilderness, why aren't we restricting cattle grazing in the watershed? If don't restrict cattle, then what are we preserving? Mariculture is natural + compatible with env. ^{pres-} _{ment} cattle aren't.

- Would like park to consider that there is no such thing as wilderness, every place is impacted by humans. EIS needs to consider that this is an unrealistic expectation, particularly in a park whose mandate includes maintaining local agriculture and recreation.
- Wilderness is a very elitist concept. Favors just one kind of recreation.
- Wilderness is wonderful and belongs at Drakes Estero.
- Wilderness is defined by the absence of a profit motive, not the absence of people, + Drakes Estero without DBOC fully qualifies.

- Please investigate charges of scientific misconduct ^{against} ~~by~~ Dr. Corey Goodman. REI
MCC (4)
- Please investigate scientific misconduct by Dr. Corey Goodman.
- Wilderness permits + encourages many kinds of recreation, only excluding those that are mechanized + motorized.
- Please investigate the archeological resources that are currently hidden beneath the DBOC facility
- As part of the EIS process, please set up more cameras to document DBOC activity

- ❑ would like to see integrated cultural land management
- ❑ would like to see integrated pasture management so that the cattle wouldn't contribute coliforms and so oysters wouldn't have to clean up.
- ❑ Commercialization of the park is threatened by oyster farm.
Oyster farm opens the door to other commercial enterprises who cloak themselves as environmentally responsible, green, local, etc.

- When my family comes a long way to visit a national park, the last thing we want to see is a commercial enterprise. That's why we leave the urban areas. We come to the park for a unique experience, that is ruined, compromised by commercial operations.
- NPS should consider the effect that the permit extension would have on the public image of its integrity as the guardian of the revered tradition of America's non-commercial National parks.
