

Saguaro National Park - Saguaro Census Plot #18
 January 9 and January 11, 2009 – Park Staff and Volunteers

Saguaro Plot #18

In this figure, green columns are the number of saguaros counted in 1990, and blue columns are the ones we counted in 2010. Each column represents a size range, with small ones (less than 1 meter tall) on the far left side and large ones to the right, with the total number on the far right. There has been an increase of 92 saguaros since 1990.

Group photo for January 11, 2010.

Counting and measuring Saguaros of different sizes.

On this plot archeological artifacts were found. The image on the left is a photograph of grinding holes found on a slab of rock. The image on the right is a photograph of two metates and manos – these are stone tools used to grind food.
